- B. Kit: Complete system, [**ASTM A 959, Type 29-4C**] stainless steel, pipe, vent terminal, thimble, indoor plate, vent adapter, condensate trap, and sealant.
- C. Combustion-Air Intake: Stainless steel, pipe, vent terminal with screen, inlet air coupling, and sealant.

2.5 CAPACITIES AND CHARACTERISTICS

- A. Heating Medium: [**Hot water**] [**Steam**].
- B. Design Pressure and Temperature Rating: [**160 psig (1100 kPa), 250 deg F (120 deg C)**] <Insert values>.

- C. Design Pressure Rating: [60 psig (420 kPa)] [100 psig (690 kPa)] [140 psig (966 kPa)] [160 psig (1100 kPa)] <Insert value>.
- D. Design Pressure Rating: [15 psig (104 kPa)] [150 psig (1035 kPa)] [250 psig (1725 kPa)] <Insert value>.
- E. Safety Relief Valve Setting: <Insert psig (kPa).>
- F. Entering-Water Temperature: <Insert deg F (deg C).>
- G. Leaving-Water Temperature: <Insert deg F (deg C).>
- H. Design Water Flow Rate: <Insert gpm (L/s).>
- I. Design Pressure Drop: <Insert psig (kPa).>
- J. Steam Operating Pressure: <Insert psig (kPa).>
- K. Steam Flow Rate: <Insert lb/h (kg/s).>
- L. Minimum Efficiency AFUE: <Insert number> percent.
- M. Minimum Thermal Efficiency: <Insert number> percent.
- N. Minimum Combustion Efficiency: <Insert number> percent.
- O. Number of Passes: [One] [Two] <Insert number>.
- P. AGA Input: <Insert MBh (kW).>
- Q. I=B=R Input: <Insert MBh (kW).>
- R. Gas Input: <Insert cfh (mL/s).>
- S. Oil Input: <Insert gph (mL/s).>
- T. DOE Output Capacity: <Insert MBh (kW).>
- U. AGA Output Capacity: <Insert MBh (kW).>
- V. Net I=B=R Output Capacity: <Insert MBh (kW).>
- W. Gross I=B=R Output Capacity: <Insert MBh (kW).>
- X. Equivalent Direct Radiation: <Insert EDR (W).>
- Y. Tankless Water Heater:
 - 1. Design Water Flow: <Insert gpm (L/s).>
 - 2. Design Pressure Drop: <Insert psig (kPa).>
 - 3. Entering-Water Temperature: <Insert deg F (deg C).>

4. Leaving-Water Temperature: <Insert deg F (deg C).>

Z. Burner Blower:

1. Motor Horsepower: <Insert value.>
2. RPM: <Insert value.>

AA. Electrical Characteristics:

1. Volts: [115] [208] [230] [460] <Insert value> V.
2. Phase: [Single] [Three].
3. Hertz: [50] [60].
4. Full-Load Amperes: <Insert value.>
5. Minimum Circuit Ampacity: <Insert value.>
6. Maximum Overcurrent Protection: <Insert amperage.>

2.6 SOURCE QUALITY CONTROL

- A. Test and inspect factory-assembled boilers, before shipping, according to ASME Boiler and Pressure Vessel Code.
- B. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.
- C. Allow Owner access to source quality-control testing of boilers. Notify DEN Project Manager 14 days in advance of testing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before boiler installation, examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting boiler performance, maintenance, and operations.
 1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BOILER INSTALLATION

- A. Equipment Mounting:

1. Install boilers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- B. Install gas-fired boilers according to NFPA 54.
- C. Install oil-fired boilers according to NFPA 31.
- D. Install in accordance with manufacturer's instructions.
- E. Assemble boiler tubes in sequence and seal each tube joint.
- F. Assemble and install boiler trim.
- G. Install electrical devices furnished with boiler but not specified to be factory mounted.
- H. Install control wiring to field-mounted electrical devices.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas train connection. Provide a reducer if required.
- D. Connect oil piping full size to burner inlet with shutoff valve and union.
- E. Connect hot-water piping to supply- and return-boiler tappings with shutoff valve and union or flange at each connection.
- F. Connect steam and condensate piping to supply-, return-, and blowdown-boiler tappings with shutoff valve and union or flange at each connection.
- G. Install piping from safety relief valves to nearest floor drain.
- H. Install piping from safety valves to drip-pan elbow and to nearest floor drain.
- I. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.
- J. Boiler Flue Venting:

1. Install venting kit and combustion-air intake.
 2. Connect full size to boiler connections. [**Comply with requirements in Section 235123 "Gas Vents."**]
- K. Connect breeching to full size of boiler outlet. Comply with requirements in Section 235116 "Fabricated Breechings and Accessories" for venting materials.
- L. Install flue-gas recirculation duct from vent to burner. Comply with requirements in Section 235123 "Gas Vents." for recirculation duct materials.
- M. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- N. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- 3.4 FIELD QUALITY CONTROL
- A. Perform tests and inspections and prepare test reports.
1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
1. Perform installation and startup checks according to manufacturer's written instructions.
 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Burner Test: Adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency.
 - b. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level, and [**water temperature**] [**steam pressure**].
 - c. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Occupancy Adjustments: When requested within [**12 months of date of Substantial Completion**] <Insert time period>, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other than normal occupancy hours for this purpose.
- E. Performance Tests:

1. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.
2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment in order to comply.
3. Perform field performance tests to determine the capacity and efficiency of the boilers.
 - a. For dual-fuel boilers, perform tests for each fuel.
 - b. Test for full capacity.
 - c. Test for boiler efficiency at [**low fire 20, 40, 60, 80, 100, 80, 60, 40 and 20**] **<Insert range>** percent of full capacity. Determine efficiency at each test point.
4. Repeat tests until results comply with requirements indicated.
5. Provide analysis equipment required to determine performance.
6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are not adequate.
7. Notify DEN Project Manager in advance of test dates.
8. Document test results in a report and submit to DEN Project Manager.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain boilers. [**Video training sessions.**] Refer to Section 017900 "Demonstration and Training."
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235233

SECTION 235239 - FIRE-TUBE BOILERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes packaged, factory-fabricated and -assembled boilers, trim, and accessories for generating [**hot water**] [**steam**] with the following configurations and burners:
 - 1. [**Horizontal, fire-tube**] [**Vertical, fire-tube**] [**Fire-box**] boiler.
 - 2. [**Gas**] [**Oil**] [**Combination gas and oil**] burner.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: Provide data indicating general assembly, components, controls, safety controls, and wiring diagrams with electrical characteristics and connection requirements, and service connections.
 - 1. Include performance data, operating characteristics, furnished specialties, and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For boilers, boiler trim, and accessories. Include plans, elevations, sections, details, and attachments to other work.

Professional engineer qualifications are specified in Section 014000 "Quality Requirements."

- 1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
 - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 - b. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails and equipment mounting frames.

2. Include diagrams for power, signal, and control wiring.
3. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer Seismic Qualification Certification: Submit certification that boiler, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Source quality-control reports.
- C. Manufacturer's Certificate: Certify that units meet or exceed specified requirements.
- D. Field quality-control reports. Indicate condition of equipment after start-up including control settings and performance chart of control system.
- E. Test Reports: Indicate specified performance and efficiency is met or exceeded. Provide factory combustion test data for substantially identical unit that includes boiler firing rate, overfire draft, gas flow rate, heat input, burner manifold gas pressure, percent carbon monoxide (CO), percent oxygen (O), percent excess air, flue gas temperature at outlet, ambient temperature, net stack temperature, percent stack loss, percent combustion efficiency, and heat output.
- F. Warranty: Special warranty specified in this Section.
- G. Other Informational Submittals:

1. ASME Stamp Certification and Report: Submit "A," "S," or "PP" stamp certificate of authorization, as required by authorities having jurisdiction, and document hydrostatic testing of piping external to boiler.
2. Startup service reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boilers, components, and accessories to include in emergency, operation, and maintenance manuals.
 1. Include manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIALS

- A. Provide wire brush and [**one piece**] [**hinged**] handle for tube cleaning.

1.7 MAINTENANCE SERVICE

- A. Provide service and maintenance of boilers for [**one (1)**] <Insert number> year from Date of Substantial Completion.

1.8 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum of five (5) years documented experience.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.
- D. ASHRAE/IESNA 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- E. UL Compliance: Test Boilers for compliance with [**UL 726, "Oil-Fired Boiler Assemblies."**] [**UL 726, "Oil-Fired Boiler Assemblies"** and **UL 795, "Commercial-Industrial Gas Heating Equipment."**] [**UL 795, "Commercial-Industrial Gas Heating Equipment."**] Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.

1.9 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.10 DELIVERY, STORAGE AND PROTECTION

- A. Deliver, store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Protect units before, during, and after installation from damage to casing by leaving factory shipping packaging in place until immediately prior to final acceptance.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace front- and rear-door refractories and heat exchangers of boilers that fail in materials or workmanship within specified warranty period.
 - 1. Horizontal, Fire-Tube and Fire-Box Boilers: Refractory in front and rear doors, minimum **[ten (10)] <Insert number>** years from date of startup by factory-authorized personnel.
 - 2. Vertical, Fire-Tube Boilers and Heat Exchanger: Minimum**[five (5)] <Insert number>** years from date of Substantial Completion, if following water-treatment program recommended by manufacturer.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 HORIZONTAL, FIRE-TUBE BOILERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [AESYS Technologies, LLC.](#)
 - 2. [Burnham Hydronics.](#)
 - 3. [Cleaver-Brooks.](#)
 - 4. [Hurst Boiler & Welding Company, Inc.](#)
 - 5. [Iron Fireman Combustion Products.](#)
 - 6. [Lattner Boiler Manufacturing.](#)
 - 7. [L.E.S., Inc.](#)

8. [Sellers Engineering Co.](#)
 9. [Superior Boiler Works, Inc.](#)
 10. <Insert manufacturer's name>.
 11. or approved equal.
- B. Description: Factory-fabricated, -assembled, and -tested, horizontal, fire-tube boilers with heat exchanger sealed pressure tight, built on a steel base; including insulated jacket, flue-gas vent, water supply and return connections, and controls.
- C. Pressure Vessel Design: Straight, steel tubes [**rolled**] [**welded**] into steel headers. [**Three**] [**Four**] passes with [**dry**] [**wet**]-back design. Minimum heat-exchanger surface of 5 sq. ft./bhp (2.1 sq. m/10 kW). Include the following accessories:
1. Handholes for water-side inspections.
 2. Lifting lugs on top of boiler.
 3. Minimum NPS 1 (DN 25) hose-end drain valves at shell low point.
 4. Tappings or flanges for supply- and return-water piping.
 5. Built-in air separator.
 6. Accessible drain and blowdown tappings, both high and low, for surface and mud removal.
 7. Tappings for steam supply, makeup, level controls, and chemical treatment.
- D. Front and Rear Doors:
1. [**Bolted**] [**Hinged**] [**Davited**], sealed with heat-resistant gaskets and fastened with lugs and cap screws.
 2. Designed so tube sheets and flues are fully accessible for inspection or cleaning when doors are open.
 3. Include observation ports in doors at both ends of boiler for inspection of flame conditions.
 4. Door [**refractory**] [**insulation**] shall be accessible for inspection and maintenance.
- E. Casing:
1. Insulation: Minimum 2-inch- (50-mm-) thick, mineral-fiber insulation surrounding the boiler shell.
 2. Flue Connection: Flange at top of boiler.
 3. Jacket: [**Galvanized sheet**] [**Sheet**] metal, with screw-fastened closures and [**baked-enamel**] [**powder-coated**] protective finish.
 4. Mounting base to secure boiler to concrete base.
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.
 5. Control Compartment Enclosure: NEMA 250, Type [1] [4] [4X] [12] <Insert type>.

- F. Barometric Damper: Galvanized-steel assembly with flue-gas thermometer having a minimum **3-1/2-inch-** (89-mm-) diameter dial.

2.2 VERTICAL, FIRE-TUBE BOILERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Columbia Boiler Company.](#)
2. [Fulton Boiler Works, Inc.](#)
3. [Hurst Boiler & Welding Company, Inc.](#)
4. [L.E.S., Inc.](#)
5. [Lattner Boiler Manufacturing.](#)
6. [Lochinvar Corporation.](#)
7. [Patterson-Kelley.](#)
8. [PRECISION Boilers, LLC.](#)
9. [PVI Industries, LLC.](#)
10. **<Insert manufacturer's name>.**
11. or approved equal.

- B. Description: Factory-fabricated, -assembled, and -tested, vertical, fire-tube boilers with heat exchanger sealed pressure tight, built on a steel base; including insulated jacket, flue-gas vent, water supply and return connections, and controls.

- C. Pressure Vessel Design: Straight, steel pipe welded in a concentric pattern to separate flue-gas and heating media to form **[two]** **[four]** passes with welded fins to improve heat transfer in secondary flue-gas passages. Include the following accessories:

1. Handholes for water-side inspections.
2. Lifting lugs on top of boiler.
3. Minimum **NPS 1 (DN 25)** hose-end drain valves at water passage low point.
4. Tappings or flanges for supply- and return-water piping.
5. Built-in air separator.
6. Accessible drain and blowdown tappings, both high and low, for surface and mud removal.
7. Tappings for steam supply, makeup, level controls, and chemical treatment.

- D. Combustion Chamber: Equipped with flame retainer to lengthen flame-residence time.

- E. Casing:

1. Insulation: Minimum **4-inch-** (100-mm-) thick, mineral-fiber insulation surrounding the heat exchanger and combustion chamber.
2. Flue Connection: Top connection, constructed of **[aluminized]** **[stainless]** steel.
3. Jacket: Mirror-finish stainless steel with screw-fastened closures.
4. Jacket: **[Galvanized sheet]** **[Sheet]** metal, with screw-fastened closures and **[baked-enamel]** **[powder-coated]** protective finish.
5. Mounting base to secure boiler to concrete base.

- a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.
6. Control Compartment Enclosure: NEMA 250, Type [1] [4] [4X] [12] <Insert type>.
- F. Barometric Damper: Galvanized-steel assembly with flue-gas thermometer having a minimum 3-1/2-inch- (89-mm-) diameter dial.

2.3 FIRE-BOX BOILERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Hurst Boiler & Welding Company, Inc.](#)
 2. [L.E.S., Inc.](#)
 3. <Insert manufacturer's name>.
 4. or approved equal.
- B. Description: Factory-fabricated, -assembled, and -tested, fire-box boilers with heat exchanger sealed pressure tight, built on a steel base; including insulated jacket, flue-gas vent, water supply and return connections, and controls.
- C. Pressure Vessel Design: Straight, steel tubes **[rolled]** **[welded]** into steel headers. Three passes with wet-back design. Minimum heat-exchanger surface of 5 sq. ft./bhp (2.1 sq. m/10 kW). Include the following features and accessories:
 1. Tube Size and Thickness: **[Minimum NPS 2 (DN 50), minimum 0.105 inch (2.667 mm) thick]** <Insert size and thickness>.
 2. Brass washout plugs.
 3. Steel turbulators.
 4. Lifting lugs on top of boiler.
 5. Minimum **NPS 1 (DN 25)** hose-end drain valves at shell low point.
 6. Tappings or flanges for supply- and return-water piping.
 7. Built-in air separator.
 8. Accessible drain and blowdown tappings, both high and low, for surface and mud removal.
 9. Tappings for steam supply, makeup, level controls, and chemical treatment.
- D. Combustion Chamber: Welded steel, **[waterwall and -floor design]** **[water-leg design with refractory insulation poured in the floor]**. Flame observation port.
- E. Casing:
 1. Insulation: Minimum **2-inch- (50-mm-)** thick, **[foil-backed,]** mineral-fiber insulation surrounding the boiler shell.

2. Insulated removable smoke boxes and reversing chamber cover.
3. Flue Connection: Steel **[top]** **[rear]**.
4. Jacket: Sheet metal, with screw-fastened closures and **[baked-enamel]** **[powder-coated]** protective finish.
5. Control Compartment Enclosure: NEMA 250, Type **[1]** **[1A]** **[4]** **[4X]** **[12]** **<Insert type>**.
6. Mounting base to secure boiler to concrete base.
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

- F. Barometric Damper: Galvanized-steel assembly with flue-gas thermometer having a minimum **3-1/2-inch-** (89-mm-) diameter dial.

2.4 FORCED-DRAFT GAS BURNERS

- A. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser for **[natural]** **[propane]** gas. **[Mount burner on hinged access door to permit access to combustion chamber.]**
- B. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor; with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
1. Motors: Comply with requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- C. Gas Train: Control devices and **[modulating]** **[on-off]** **[low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1]** **[FMG]** **[IRI]** **[UL]**.
- D. Pilot: **[Intermittent]** **[Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.
- E. Flue-Gas Recirculation: Burner connections shall be equipped for recirculating flue gas.
1. Maximum Oxides of Nitrogen Emissions: **[20]** **[30]** **<Insert value>** ppm.

2.5 OIL BURNERS

- A. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser for fuel oil. **[Mount burner on hinged access door to permit access to combustion chamber.]**

- B. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor; with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
1. Motors: Comply with requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- C. Oil Supply: Control devices and **[modulating]** **[on-off]** **[low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1]** **[FMG]** **[IRI]** **[UL]**.
1. Oil Pump: Two-stage, gear-type oil pump **[integral to and directly driven by blower]** shall be capable of producing **300-psig** (2070-kPa) discharge pressure and **15-inch Hg** (50.7-kPa) vacuum.
 2. Oil Piping Specialties:
 - a. Suction-line, manual, gate valve.
 - b. Removable-mesh oil strainer.
 - c. **0- to 30-inch Hg** (0- to 101.3-kPa) vacuum; **0- to 30-psig** (0- to 207-kPa) vacuum-pressure gage.
 - d. **0- to 300-psig** (0- to 2070-kPa) oil-nozzle pressure gage.
 - e. Nozzle-line, solenoid-safety-shutoff oil valve.
- D. Pilot: **[Intermittent]** **[Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff solenoid with **[cadmium sulfide]** **[UV scanner]** flame-safety control.
- E. Flue-Gas Recirculation: Burner connections shall be equipped for recirculating flue gas.
1. Maximum Oxides of Nitrogen Emissions: **[30]** **<Insert value>** ppm.

2.6 COMBINATION GAS AND OIL BURNERS

- A. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser for fuel oil and **[natural]** **[propane]** gas. **[Mount burner on hinged access door to permit access to combustion chamber.]**
- B. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor; with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
1. Motors: Comply with requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

- C. Oil Supply: Control devices and **[modulating] [on-off] [low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1] [FMG] [IRI] [UL]**.
1. Oil Pump: Two-stage, gear-type oil pump **[integral to and directly driven by blower]** shall be capable of producing **300-psig (2070-kPa)** discharge pressure and **15-inch Hg (50.7-kPa)** vacuum.
 2. Oil Piping Specialties:
 - a. Suction-line, manual, gate valve.
 - b. Removable-mesh oil strainer.
 - c. **0- to 30-inch Hg (0- to 101.3-kPa)** vacuum; **0- to 30-psig (0- to 207-kPa)** vacuum-pressure gage.
 - d. **0- to 300-psig (0- to 2070-kPa)** oil-nozzle pressure gage.
 - e. Nozzle-line, solenoid-safety-shutoff oil valve.
- D. Gas Train: Control devices and **[modulating] [on-off] [low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1] [FMG] [IRI] [UL]**.
- E. Gas Pilot: **[Intermittent] [Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.
- F. Oil Pilot: **[Intermittent] [Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff solenoid with **[cadmium sulfide] [UV scanner]** flame-safety control.
- G. Flue-Gas Recirculation: Burner connections shall be equipped for recirculating flue gas.
1. Maximum Oxides of Nitrogen Emissions: **[20] [30] <Insert value>** ppm.

2.7 TRIM

- A. Include devices sized to comply with **[ANSI B31.1, "Power Piping] [ANSI B31.9, "Building Services Piping]."**
- B. Aquastat Controllers: Operating[, **firing rate,**] and high limit.
- C. Safety Relief Valve: ASME rated.
- D. Pressure and Temperature Gage: Minimum **3-1/2-inch- (89-mm-)** diameter, combination water-pressure and -temperature gage. Gages shall have operating-pressure and -temperature ranges so normal operating range is about 50 percent of full range.
- E. Boiler Air Vent: **[Automatic] [Manual]**.
- F. Drain Valve: Minimum **NPS 3/4 (DN 20)** hose-end gate valve.
- G. Tankless Heater: **[Carbon-steel] [Bronze]** header with copper-tube heat exchanger, mounted in a port of upper drum and sealed with fiber gasket.

1. Tappings **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.
2. Tappings **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

2.8 TRIM

- A. Include devices sized to comply with [**ANSI B31.1, "Power Piping]** [**ANSI B31.9, "Building Services Piping]."**
- B. Pressure Controllers: Operating[, **firing rate,**] and high limit.
- C. Safety Relief Valve:
 1. Size and Capacity: As required for equipment according to ASME Boiler and Pressure Vessel Code.
 2. Description: Fully enclosed steel spring with adjustable pressure range and positive shutoff; factory set and sealed.
 - a. Drip-Pan Elbow: Cast iron and having threaded inlet and outlet with threads complying with ASME B1.20.1.
- D. Pressure Gage: Minimum **3-1/2-inch (89-mm)** diameter. Gage shall have normal operating pressure about 50 percent of full range.
- E. Water Column: Minimum **12-inch (300-mm)** glass gage with shutoff cocks.
- F. Drain Valves: Minimum **NPS 3/4 (DN 20)** or nozzle size with hose-end connection.
- G. Blowdown Valves: Factory-installed bottom and surface, slow-acting blowdown valves same size as boiler nozzle. [**Blowdown valves shall be combination of slow and quick acting as required by ANSI B31.1.]**
- H. Stop Valves: Boiler inlets and outlets, except safety relief valves or preheater inlet and outlet, shall be equipped with stop valve in an accessible location as near as practical to boiler nozzle and same size or larger than nozzle. Valves larger than **NPS 2 (DN 50)** shall have rising stem.
- I. Stop-Check Valves: Factory-installed, stop-check valve and stop valve for field installation at boiler outlet with free-blow drain valve for field installation between the two valves and visible when operating stop-check valve.
- J. Tankless Heater: Carbon-steel header with copper-tube heat exchanger, mounted in a port of upper manifold and sealed with fiber gasket.
 1. Tappings **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.

2. Tappings **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

2.9 CONTROLS

- A. Refer to Section 230923 "Direct Digital Control (DDC) System for HVAC."
- B. Boiler operating controls shall include the following devices and features:
 1. Control transformer.
 2. Set-Point Adjust: Set points shall be adjustable.
 3. Operating Pressure Control: Factory wired and mounted to cycle burner.
 4. Low-Water Cutoff and Pump Control: [**Cycle feedwater pump(s)**] [**Operate feedwater pump(s) continuously and modulate valve**] for makeup water control.
 5. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain space temperature in response to thermostat with heat anticipator located in heated space.
 6. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to reset supply-water temperature inversely with outside-air temperature. At [0 deg F (minus 17 deg C)] **<Insert temperature>** outside-air temperature, set supply-water temperature at [200 deg F (93 deg C)] **<Insert temperature>**; at [60 deg F (15 deg C)] **<Insert temperature>** outside-air temperature, set supply-water temperature at [140 deg F (60 deg C)] **<Insert temperature>**.
 7. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain a constant steam pressure. Maintain pressure set point plus or minus 10 percent.
 - a. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
- C. Burner Operating Controls: To maintain safe operating conditions, burner safety controls limit burner operation.
 1. High Cutoff: [**Manual**] [**Automatic**] reset stops burner if operating conditions rise above maximum boiler design [**temperature**] [**pressure**].
 2. Low-Water Cutoff Switch: [**Electronic**] [**Float and electronic**] probe shall prevent burner operation on low water. Cutoff switch shall be [**manual**] [**automatic**]-reset type.
 3. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.
- D. Building Automation System Interface: Factory-install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.
 1. Hardwired Points:

- a. Monitoring: On/off status, [**common trouble alarm**] [**low water level alarm**] <Insert monitoring>.
 - b. Control: On/off operation, [**hot water supply temperature set-point adjustment**] [**steam pressure adjustment**] <Insert control>.
2. A communication interface with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed, locally at boiler control panel shall be available through building automation system.

2.10 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.
- B. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.
1. House in NEMA 250, Type [1] [4] [4X] [12] <Insert type> enclosure.
 2. Wiring shall be numbered and color-coded to match wiring diagram.
 3. Install wiring outside of an enclosure in a [**metal**] raceway.
 4. Field power interface shall be to [**wire lugs**] [**fused disconnect switch**] [**nonfused disconnect switch**] [**circuit breaker**].
 5. Provide branch power circuit to each motor and to controls[**with a disconnect switch or circuit breaker**].
 6. Provide each motor with overcurrent protection.

2.11 CAPACITIES AND CHARACTERISTICS

- A. Heating Medium: [**Hot water**] [**Steam**].
- B. Design Pressure Rating: [30 psig (207 kPa)] [60 psig (420 kPa)] [100 psig (690 kPa)] [125 psig (860 kPa)] [140 psig (966 kPa)] [160 psig (1100 kPa)] <Insert value>.
- C. Design Pressure Rating: [15 psig (104 kPa)] [150 psig (1035 kPa)] [200 psig (1380 kPa)] [250 psig (1725 kPa)] [300 psig (2070 kPa)] [350 psig (2415 kPa)] <Insert value>.
- D. Safety Relief Valve Setting: <Insert psig (kPa).>
- E. Entering-Water Temperature: <Insert deg F (deg C).>
- F. Leaving-Water Temperature: <Insert deg F (deg C).>
- G. Design Water Flow Rate: <Insert gpm (L/s).>
- H. Design Pressure Drop: <Insert psig (kPa).>

- I. Steam Operating Pressure: <Insert psig (kPa).>
- J. Steam Flow Rate: <Insert lb/h (kg/s).>
- K. Minimum Efficiency AFUE: <Insert number> percent.
- L. Minimum Thermal Efficiency: <Insert number> percent.
- M. Minimum Combustion Efficiency: <Insert number> percent.
- N. Number of Passes: [Two] [Four] <Insert number>.
- O. AGA Input: <Insert MBh (kW).>
- P. I=B=R Input: <Insert MBh (kW).>
- Q. Gas Input: <Insert cfh (mL/s).>
- R. Oil Input: <Insert gph (mL/s).>
- S. AGA Output Capacity: <Insert MBh (kW).>
- T. DOE Output Capacity: <Insert MBh (kW).>
- U. Equivalent Direct Radiation: <Insert EDR (W).>
- V. Tankless Water Heater:
 - 1. Design Water Flow: <Insert gpm (L/s).>
 - 2. Design Pressure Drop: <Insert psig (kPa).>
 - 3. Entering-Water Temperature: <Insert deg F (deg C).>
 - 4. Leaving-Water Temperature: <Insert deg F (deg C).>
- W. Burner Blower:
 - 1. Motor Horsepower: <Insert value.>
 - 2. RPM: <Insert value.>
- X. Electrical Characteristics:
 - 1. Volts: [115] [208] [230] [460] <Insert value> V.
 - 2. Phase: [Single] [Three].
 - 3. Hertz: [50] [60].
 - 4. Full-Load Amperes: <Insert value.>
 - 5. Minimum Circuit Ampacity: <Insert value.>
 - 6. Maximum Overcurrent Protection: <Insert amperage.>

2.12 SOURCE QUALITY CONTROL

- A. Test and inspect factory-assembled boilers, before shipping, according to ASME Boiler and Pressure Vessel Code.
- B. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.
- C. Allow Owner access to source quality-control testing of boilers. Notify DEN Project Manager 14 days in advance of testing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before boiler installation, examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting boiler performance, maintenance, and operations.
 - 1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BOILER INSTALLATION

- A. Equipment Mounting:
 - 1. Install boilers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- B. Install gas-fired boilers according to NFPA 54.
- C. Install oil-fired boilers according to NFPA 31.
- D. Install in accordance with manufacturer's instructions.
- E. Assemble and install boiler trim.

- F. Install electrical devices furnished with boiler but not specified to be factory mounted.
- G. Install control wiring to field-mounted electrical devices.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas train connection. Provide a reducer if required.
- D. Connect oil piping full size to burner inlet with shutoff valve and union.
- E. Connect hot-water piping to supply- and return-boiler tapplings with shutoff valve and union or flange at each connection.
- F. Connect steam and condensate piping to supply-, return-, and blowdown-boiler tapplings with shutoff valve and union or flange at each connection.
- G. Install piping from safety relief valves to nearest floor drain.
- H. Install piping from safety valves to drip-pan elbow and to nearest floor drain.
- I. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.
- J. Connect breeching full size to boiler outlet. Comply with requirements in Section 235116 "Fabricated Breechings and Accessories" for venting materials.
- K. Install flue-gas recirculation duct from vent to burner. Comply with requirements in Section 235123 "Gas Vents" for recirculation duct materials.
- L. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- M. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

If retaining second option in "Testing Agency" Paragraph or if retaining "Manufacturer's Field Service" or "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

- A. Testing Agency: **[Owner will engage]** **[Engage]** a qualified testing agency to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Perform installation and startup checks according to manufacturer's written instructions.
 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Burner Test: Adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency.
 - b. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level, and [**water temperature**] [**steam pressure**].
 - c. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.
- F. Occupancy Adjustments: When requested within [**12 months of date of Substantial Completion**] <Insert time period>, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**] <Insert number> visits to Project during other than normal occupancy hours for this purpose.
- G. Performance Tests:
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.
 2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment in order to comply.
 3. Perform field performance tests to determine the capacity and efficiency of boilers.
 - a. For dual-fuel boilers, perform tests for each fuel.
 - b. Test for full capacity.
 - c. Test for boiler efficiency at [**low fire, 20, 40, 60, 80, 100, 80, 60, 40 and 20**] <Insert range> percent of full capacity. Determine efficiency at each test point.
 4. Repeat tests until results comply with requirements indicated.
 5. Provide analysis equipment required to determine performance.

6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are not adequate.
7. Notify DEN Project Manager in advance of test dates.
8. Document test results in a report and submit to DEN Project Manager.

3.5 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train] Owner's maintenance personnel to adjust, operate, and maintain boilers.[Video training sessions.]** Refer to Section 017900 "Demonstration and Training."

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235239

SECTION 235313 - BOILER FEEDWATER PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Feedwater pumps and receivers.
 - 2. Vacuum-type feedwater pumps and receivers.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITION

- A. NPSH: Net-positive suction head.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacity, temperature and NPSH required, pump performance curves with selection points clearly indicated, and furnished specialties and accessories.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Include plans, elevations, sections, details, dimensions, weights, loadings, required clearances, method of field assembly, and attachments to other work.
 - 1. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
 - 2. Wiring Diagrams: Power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Manufacturer Seismic Qualification Certification: Submit certification that feedwater equipment, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
1. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Definition varies with type of building and occupancy and is critical to valid certification. Second definition is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means, "The unit will remain in place without separation of internal and external parts during a seismic event."
 - b. The term "withstand" means, "The unit will remain in place without separation of internal and external parts during a seismic event and the unit will be fully operational after the event."
2. Dimensioned Outline Drawings of Equipment: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which certification is based and their installation requirements.
- B. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For feedwater equipment to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Minimum one or 10% of quantity pumps delivered.

1.8 QUALITY ASSURANCE

- A. Source Limitations: Obtain hydronic pumps through one source from a single manufacturer.

- B. Regulatory Requirements: Fabricate and test unit according to ASME PTC 12.1, "Closed Feedwater Heaters."
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. ASME Compliance: **[ASME B31.1, "Power Piping," for systems more than 15 psig (104 kPa)] [ASME B31.9, "Building Services Piping," for systems equal to or less than 15 psig (104 kPa)]**. Safety valves and pressure vessels shall bear the appropriate ASME label.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Preparation for Shipping: Clean flanges and exposed-metal surfaces and treat with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.
- B. Store units in dry location.
- C. Retain protective flange covers and machined-surface protective coatings during storage.
- D. Protect bearings and couplings against damage from sand, grit, and other foreign matter.
- E. Comply with manufacturer's written rigging instructions.

1.10 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.11 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Mechanical Requirements".

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FEEDWATER UNITS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [AESYS Technologies, LLC; Boiler Div.](#)
2. [Alyan Pump.](#)
3. [Aurora Pump; Pentair Pump Group.](#)
4. [BFS Industries, LLC.](#)
5. [Bryan Boilers; Bryan Steam, LLC.](#)
6. [Cleaver-Brooks; Div. of Aqua-Chem, Inc.](#)
7. [Deaerating Designs; a division of Precision Boilers, Inc.](#)
8. [Domestic Pump; a unit of ITT Fluid Technology.](#)
9. [Eastern Industrial Products, Inc.; Smith-Koch, Inc. Div.](#)
10. [Flotronics, Inc.](#)
11. [Gerow Equipment Co.; Pump & Hydraulic Division.](#)
12. [Hurst Boiler & Welding Company, Inc.](#)
13. [Industrial Steam.](#)
14. [Lattner Boiler Manufacturing.](#)
15. [Lockwood Products, Inc.; Sub. of John L. Underwood Co., Inc.](#)
16. [MEPCO \(Marshall Engineered Products Co.\).](#)
17. [Parker Boiler Co.](#)
18. [PVI Industries, LLC.](#)
19. [Roth Pump Company; a subsidiary of Roy E. Roth Co.](#)
20. [Sellers Engineering Co.](#)
21. [Shippensburg Pump Co., Inc.](#)
22. [Skidmore.](#)
23. [Stickle Steam Specialties Co., Inc.](#)
24. [Superior Boiler Works, Inc.](#)
25. [U.S. Deaerator Co.](#)
26. [US Filter.](#)
27. **<Insert manufacturer's name.>**
28. or approved equal.

B. Description: Factory-assembled and -tested unit consisting of a receiver, **[simplex]** **[duplex]** feedwater pumps, controls, and the following features and accessories:

1. **[Liquid-filled industrial][Bimetal dial-type]** thermometer graduated in **[Fahrenheit] [Celsius] [both Fahrenheit and Celsius]**.
2. Level gage glass[, **reflex flat type,**] with stops at top and bottom.
3. Lifting eyes.
4. Companion flanges.
5. Pump, suction and discharge isolation valve, inlet strainer, discharge check valve, and liquid-filled pressure gage.
6. Makeup Water Assembly: **[Float operated with integral valve] [Electric level controller and valve]**; with inlet strainer and three-valve bypass.
7. Feedwater Heater: Sparge tube, thermostat, and control valve.

8. Factory-Installed Pipe, **NPS 2-1/2 (DN 65)** and Smaller: ASTM A 53/A 53M, Type S (seamless), Grade B; or ASTM A 106, Type S, Grade B, Schedule **[40] [80]**; with threaded joints and fittings.
 - a. Cast-Iron Threaded Fittings: ASME B16.4; Class **[125] [250]**.
 - b. Malleable-Iron Threaded Fittings: ASME B16.3, Class **[150] [300]**.
 - c. Forged-Steel Fittings: ASME B16.11, Class 3000.
 - d. Malleable-Iron Unions: ASME B16.39; Class **[150] [300]**.
 - e. Forged-Steel Unions: MSS SP-83, Class 3000.
 9. Factory-Installed Pipe, **NPS 3 (DN 80)** and Larger: ASTM A 53/A 53M, Type E (electric-resistance welded), Grade B; or ASTM A 106, Type S, Grade B, Schedule **[40] [80]**; with welded joints and carbon-steel fittings and flanges.
 - a. Wrought-Steel Fittings: ASME B16.9, wall thickness to match adjoining pipe.
 - b. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, Class **[150] [300]**, including bolts, nuts, and gaskets.
- C. Receiver:
1. Material: **[Close-grain cast iron] [Welded carbon steel] [Welded carbon steel galvanized after fabrication] [Stainless steel]**.
 2. Additional corrosion protection:
 - a. **[0.07-inch (1.8-mm)] [0.13-inch (3.3-mm)] [0.19-inch (4.8-mm)] <Insert thickness>** thickness allowance.
 - b. Electrolytic corrosion-inhibitor anode.
 3. Finish: **[Primer] [Primer under enamel topcoat] [Primer under epoxy topcoat]**.
 4. Factory-Applied Insulation and Jacket: Minimum thickness of **[2 inches (50 mm)] <Insert thickness>** for mineral-fiber pipe and tank insulation. Cover insulation with **[painted steel] [stucco-embossed aluminum] [stainless-steel]** jacket.
 5. Mounting Arrangement: **[Recessed below floor] [Floor mounted]**.
 6. Mounting Frame: Structural-steel stand to support receiver and pumps. **[Fabricate stand with bracing adequate for seismic forces according to authorities having jurisdiction and to allow anchoring mounting frame to floor.]**
- D. Vertical Feedwater Pump: Flange-mounted, close-coupled, **[single-stage,] [multistage,]** radially split-case-design centrifugal pump; rated for **[175-psig (1205-kPa)] <Insert pressure>** minimum working pressure and a continuous water temperature of at least **[225 deg F (107 deg C)] <Insert temperature>**; with the following features:
1. Impeller: **[Bronze] [Stainless steel]**.
 2. Seals: Mechanical.

3. Motor: **[Open dripproof] [Totally enclosed] [Totally enclosed fan-cooled]** enclosure. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- E. Horizontal Feedwater Pump: Base-mounted, **[single-stage,] [multistage,]** radially split-case-design centrifugal pump; rated for **[175-psig (1205-kPa)] <Insert pressure>** minimum working pressure and a continuous water temperature of at least **[225 deg F (107 deg C)] <Insert temperature>**; with the following features:
1. Impeller: **[Bronze] [Stainless steel]**.
 2. Coupling: **[Close] [Flexible]**.
 3. Seals: Mechanical.
 4. Motor: **[Open dripproof] [Totally enclosed] [Totally enclosed fan-cooled]** enclosure. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- F. Control panel shall be unit mounted and factory wired and include the following:
1. NEMA 250, Type **[1] [4] [4X] [12] <Insert type>** enclosure.
 2. Single-point field power interface to **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker]**.
 - a. Branch power circuit to each motor and to controls **[with a disconnect switch or circuit breaker]**.
 3. NEMA-rated motor controller for each motor, and include a hand-off-auto switch and overcurrent protection.
 - a. Alternating controls for duplex units with intermittent operation as indicated by control sequence.
 4. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 5. Wiring outside of an enclosure in a **[metal]**raceway. Make connections to motor with liquidtight conduit.
 6. Removable control mounting plate.
 7. Visual indication of status and alarm **[with momentary test push button]**.
 8. Audible alarm and silence switch.
 9. Visual indication of elapsed run time, graduated in hours.
 10. Fused control-circuit transformer.
 11. Microprocessor-based controller.
- G. Feedwater Simplex-Pump Control Sequence:
1. Boiler water-level controller starts and stops pump to maintain boiler water-level set point.
 2. Visual indication of pump on **[and off]** status.
 3. Visual **[and audible]** alarm indication of pump failure.
- H. Feedwater Duplex-Pump Control Sequence:

1. Boiler water-level controller starts and stops lead pump to maintain boiler water-level set point.
 2. Lead and lag pumps alternate [**after each start**] [**to equalize run time**].
 3. Lead pump failure, lag pump [**automatically starts if lead pump cannot maintain set point**] [**is started manually**].
 4. Visual indication of pump on[**and off**] status.
 5. Visual indication of pump lead/lag status.
 6. Visual[**and audible**] alarm indication of pump failure.
- I. Feedwater Duplex-Pump Control Sequence:
1. Pump runs continuously while boiler operates. Electric interlock with boiler control starts lead pump when boiler starts.
 2. Boiler water-level controller modulates feedwater control valve to maintain boiler water-level set point. Valve closes when boiler is off.
 3. Lead and lag pumps alternate [**after each start**] [**to equalize run time**].
 4. Lead pump failure automatically starts lag pump.
 5. Feedwater pressure controller starts and stops lag pump to maintain feedwater pressure set point.
 6. Visual indication of pump on[**and off**] status.
 7. Visual indication of pump lead/lag status.
 8. Visual[**and audible**] alarm indication of pump failure.
- J. Receiver Makeup Water Control Sequence:
1. Electric level controller operates electric control valve to maintain receiver water-level set point.
 2. Mechanical float operates integral valve to maintain water-level set point.
 3. Visual[**and audible**] alarm indication of low[**and high**] receiver-water level.
- K. Building Management System Interface: Factory install hardware to enable building management system to monitor and display points.
1. Hardwired Monitoring Points: On/off status for each pump[, **failure alarm for each pump**] [, **receiver low-water-level alarm**] [, **receiver high-water-level alarm**] [, **feedwater temperature**] <Insert monitoring>.
- L. Capacities and Characteristics:
1. Condensate Receiver:
 - a. Volume: <Insert gal. (L).>
 - b. Diameter: <Insert inches (mm).>
 - c. Length: <Insert inches (mm).>
 - d. Height to Condensate Inlet: <Insert inches (mm).>
 - e. Condensate Return Minimum Inlet Size: <Insert NPS (DN).>
 - f. Makeup Water Minimum Inlet Size: <Insert NPS (DN).>
 - g. Sparge-Tube Steam Supply: <Insert lb/h (kW).>
 2. Feedwater Pumps:

- a. No. of Pumps: [**Simplex**] [**Duplex**] <Insert number>.
- b. Flow Rate: <Insert **gpm** (L/s).>
- c. NPSH Required: <Insert **psig** (kPa).>
- d. Rated Operating Temperature: <Insert **deg F** (deg C).>
- e. Head Pressure: <Insert **psig** (kPa).>
- f. Horsepower: <Insert **horsepower**.>
- g. Speed: <Insert **value**> RPM.
- h. Volts: [**115**] [**208**] [**230**] [**460**] <Insert **value**> V.
- i. Phase: [**Single**] [**Three**].
- j. Hertz: 60.

2.2 FEEDWATER UNIT WITH VACUUM PRODUCER

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Alyan Pump.](#)
2. [Domestic Pump; a unit of ITT Fluid Technology.](#)
3. [Flotronics, Inc.](#)
4. [Lockwood Products, Inc.; Sub. of John L. Underwood Co., Inc.](#)
5. [MEPCO \(Marshall Engineered Products Co.\).](#)
6. [Shippensburg Pump Co., Inc.](#)
7. [Skidmore.](#)
8. [U.S. Deaerator Co.](#)
9. <Insert **manufacturer's name**.>
10. or approved equal.

- B. Description: Receiver mounted, consisting of multijet vacuum producer, centrifugal pump and motor assembly mounted on separation chamber, and automatic pressure and water temperature controls. Include the following accessories:

1. [**Liquid-filled industrial**] [**Bimetal dial-type**] thermometer graduated in [**Fahrenheit**] [**Celsius**] [**both Fahrenheit and Celsius**].
2. Vacuum Gage: Dial-type register in **inches of mercury** (kPa).
3. Level Gage Glass: Stops top and bottom.
4. Air-suction check valve.
5. Lifting eyes.
6. Companion flanges.
7. Low-water cutoff switch.
8. Cooling-Water Control: Aquastat, inlet strainer, and electric valve.
9. Air vent.
10. Overflow drain from vacuum-producer receiver.
11. Factory-Installed Pipe, **NPS 2-1/2** (DN 65) and Smaller: ASTM A 53/A 53M, Type S (seamless), Grade B; or ASTM A 106, Type S, Grade B, Schedule [**40**] [**80**]; with threaded joints and fittings.
 - a. Cast-Iron Threaded Fittings: ASME B16.4; Class [**125**] [**250**].
 - b. Malleable-Iron Threaded Fittings: ASME B16.3, Class [**150**] [**300**].
 - c. Forged-Steel Fittings: ASME B16.11, Class 3000.

- d. Malleable-Iron Unions: ASME B16.39; Class [150] [300].
 - e. Forged-Steel Unions: MSS SP-83, Class 3000.
12. Factory-Installed Pipe, NPS 3 (DN 80) and Larger: ASTM A 53/A 53M, Type E (electric-resistance welded), Grade B; or ASTM A 106, Type S, Grade B, Schedule [40] [80]; with welded joints and carbon-steel fittings and flanges.
- a. Wrought-Steel Fittings: ASME B16.9, wall thickness to match adjoining pipe.
 - b. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, Class [150] [300], including bolts, nuts, and gaskets.
- C. Vacuum-Producer Reservoir and Vacuum Receiver:
1. Material: [Close-grain cast iron] [Welded carbon steel] [Welded carbon steel galvanized after fabrication] [Stainless steel].
 2. Additional corrosion protection:
 - a. [0.07-inch (1.8-mm)] [0.13-inch (3.3-mm)] [0.19-inch (4.8-mm)] <Insert thickness> thickness allowance.
 - b. Electrolytic corrosion-inhibitor anode.
- First option is most common.
3. Finish: [Primer] [Primer under enamel topcoat] [Primer under epoxy topcoat].
- Consult manufacturer.
4. Factory-Applied Insulation and Jacket: Minimum thickness of [2 inches (50 mm)] <Insert thickness> for mineral-fiber pipe and tank insulation. Cover insulation with [painted steel] [stucco-embossed aluminum] [stainless-steel] jacket.
 5. Mounting Arrangement: [Recessed below floor] [Floor mounted].
 6. Mounting Frame: Structural-steel stand to support receiver and pumps.[Fabricate stand with bracing adequate for seismic forces according to authorities having jurisdiction and to allow anchoring mounting frame to floor.]
- D. Vertical Vacuum-Producer Pump: Flange-mounted, close-coupled, single-stage, radially split-case-design centrifugal pump; rated for [175-psig (1205-kPa)] <Insert pressure> minimum working pressure and a continuous water temperature of at least [225 deg F (107 deg C)] <Insert temperature>; with the following features:
1. Impeller: Bronze.
 2. Shaft: Stainless steel.
 3. Seals: Mechanical.
- Some pump configurations may exclude the third option and necessitate the second.
4. Motor: [Open dripproof] [Totally enclosed] [Totally enclosed fan-cooled] enclosure. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

- E. Horizontal Vacuum-Producer Pump: Base-mounted, single-stage, radially split-case-design centrifugal pump; rated for [175-psig (1205-kPa)] <Insert pressure> minimum working pressure and a continuous water temperature of at least [225 deg F (107 deg C)] <Insert temperature>; with the following features:
1. Impeller: Bronze.
 2. Shaft: Stainless steel.
 3. Coupling: [Close] [Flexible].
 4. Seals: Mechanical.

Some pump configurations may exclude the third option and necessitate the second.

5. Motor: [Open dripproof] [Totally enclosed] [Totally enclosed fan-cooled] enclosure. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- F. Vertical Feedwater Pump: Flange-mounted, close-coupled, [single-stage,] [multistage,] radially split-case-design centrifugal pump; rated for [175-psig (1205-kPa)] <Insert pressure> minimum working pressure and a continuous water temperature of at least [225 deg F (107 deg C)] <Insert temperature>; with the following features:
1. Impeller: [Bronze] [Stainless steel].
 2. Seals: Mechanical.

Some pump configurations may exclude the third option and necessitate the second.

3. Motor: [Open dripproof] [Totally enclosed] [Totally enclosed fan-cooled] enclosure. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- G. Horizontal Feedwater Pump: Base-mounted, [single-stage,] [multistage,] radially split-case-design centrifugal pump; rated for [175-psig (1205-kPa)] <Insert pressure> minimum working pressure and a continuous water temperature of at least [225 deg F (107 deg C)] <Insert temperature>; with the following features:
1. Impeller: [Bronze] [Stainless steel].
 2. Coupling: [Close] [Flexible].
 3. Seals: Mechanical.

Some pump configurations may exclude the third option and necessitate the second.

4. Motor: [Open dripproof] [Totally enclosed] [Totally enclosed fan-cooled] enclosure. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- H. Control panel shall be unit mounted and factory wired and include the following:
1. Vacuum Switches for Simplex Vacuum-Producer Pumps: Include pressure adjustment, and test push button. Factory set to operate pump between 3 and 6 inches of mercury (10.1 and 20.2 kPa).
 2. Vacuum Switches for Duplex Vacuum-Producer Pumps: Include pressure adjustment, and test push button. Factory set so one pump operates for 3 to 5

inches of mercury (10.1 to 16.9 kPa) and both pumps operate for 4 to 6 inches of mercury (13.5 to 20.2 kPa).

Type 12 is second most common. Type 4X is used primarily in corrosive environments.

3. NEMA 250, Type [1] [4] [4X] [12] <Insert type> enclosure.
 4. Single-point field power interface to [fused disconnect switch] [nonfused disconnect switch] [circuit breaker].
 - a. Branch power circuit to each motor and to controls[with a disconnect switch or circuit breaker].
 5. NEMA-rated motor controller for each motor and include a hand-off-auto switch and overcurrent protection.
 - a. Alternating control for units with intermittent operation as indicated by control sequence.
 6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 7. Wiring outside of an enclosure in a [metal]raceway. Make connections to motor with liquidtight conduit.
 8. Removable control mounting plate.
 9. Visual indication of status and alarm[with momentary test push button].
 10. Audible alarm and silence switch.
 11. Visual indication of elapsed run time, graduated in hours.
 12. Fused control-circuit transformer.
- I. Vacuum-Producer Control Sequence:
1. Cycle pumps to maintain vacuum-pressure set point.
 2. Visual indication of pump on[and off] status.
 3. Visual[and audible] alarm indication of pump failure.

Retain first for simplex feedwater system with single feedwater pump. Retain second for duplex-pump units with operating and standby pump. Retain third for duplex-pump units with continuous pump operation and modulating control valve. Coordinate with boiler operation and controls. See Evaluations for further discussion.

- J. Feedwater Simplex-Pump Control Sequence:
1. Boiler water-level controller starts and stops pump to maintain boiler water-level set point.
 2. Visual indication of pump on[and off] status.
 3. Visual[and audible] alarm indication of pump failure.
- K. Feedwater Duplex-Pump Control Sequence:
1. Boiler water-level controller starts and stops lead pump to maintain boiler water-level set point.
 2. Lead and lag pumps alternate [after each start] [to equalize run time].
 3. Lead pump failure, lag pump [automatically starts if lead pump cannot maintain set point] [is started manually].

4. Visual indication of pump on[**and off**] status.
5. Visual indication of pump lead/lag status.
6. Visual[**and audible**] alarm indication of pump failure.

L. Feedwater Duplex-Pump Control Sequence:

1. Pump runs continuously while boiler operates. Electric interlock with boiler control starts lead pump when boiler starts.
2. Boiler water-level controller modulates feedwater control valve to maintain boiler water-level set point. Valve closes when boiler is off.
3. Lead and lag pumps alternate [**after each start**] [**to equalize run time**].
4. Lead pump failure automatically starts lag pump.
5. Feedwater pressure controller starts and stops lag pump to maintain feedwater pressure set point.
6. Visual indication of pump on[**and off**] status.
7. Visual indication of pump lead/lag status.
8. Visual[**and audible**] alarm indication of pump failure.

M. Makeup Water Control Sequence:

1. Electric level controller operates electric control valve to maintain water temperature set point.
2. Visual[**and audible**] alarm indication of low[**and high**] water level.

N. Building Management System Interface: Factory install hardware to enable building management system to monitor and display points.

1. Hardwired Monitoring Points: On/off status for each pump[, **failure alarm for each pump**] [, **receiver low-water-level alarm**] [, **receiver high-water-level alarm**] [, **feedwater temperature**] <Insert monitoring>.

If retaining below, retain the "Basis-of-Design Product" Paragraph at the beginning of this Article and insert manufacturer's name and product name or designation there.

O. Capacities and Characteristics:

1. Vacuum-Producer Reservoir:
 - a. Volume: <Insert gal. (L).>
 - b. Diameter: <Insert inches (mm).>
 - c. Length: <Insert inches (mm).>
 - d. Cooling Makeup Water Supply: <Insert NPS (DN).>
 - e. Overflow Drain: <Insert NPS (DN).>
2. Vacuum-Producer Pumps:
 - a. No. of Pumps: [**Simplex**] [**Duplex**] <Insert number>.
 - b. Air Capacity: <Insert cfm (L/s).>
 - c. Head Pressure: <Insert inches of mercury (kPa).>
 - d. Horsepower: <Insert horsepower.>
 - e. Speed: <Insert value> RPM.

- f. Volts: [115] [208] [230] [460] <Insert value> V.
 - g. Phase: [Single] [Three].
 - h. Hertz: 60.
3. Vacuum Receiver:
- a. Volume: <Insert gal. (L).>
 - b. Diameter: <Insert inches (mm).>
 - c. Length: <Insert inches (mm).>
 - d. Height to Condensate Inlet: <Insert inches (mm).>
 - e. Condensate Return Minimum Inlet Size: <Insert NPS (DN).>
4. Feedwater Pumps:
- a. No. of Pumps: [Simplex] [Duplex] <Insert number>.
 - b. Flow Rate: <Insert gpm (L/s).>
 - c. NPSH Required: <Insert psig (kPa).>
 - d. Rated Operating Temperature: <Insert deg F (deg C).>
 - e. Head Pressure: <Insert psig (kPa).>
 - f. Horsepower: <Insert horsepower.>
 - g. Speed: <Insert value> RPM.
 - h. Volts: [115] [208] [230] [460] <Insert value> V.
 - i. Phase: [Single] [Three].
 - j. Hertz: 60.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before feedwater unit installation, examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting feedwater unit performance, maintenance, and operations.
 - 1. Final feedwater unit locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Equipment Mounting:
 - 1. Install feedwater units on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]

2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

- B. Install unit to permit access for maintenance.
- C. Support piping independent of pumps.
- D. Install base-mounted pumps on concrete bases with grouted base frames.
- E. Install parts and accessories shipped loose.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect makeup water piping and cooling-water piping with reduced-pressure backflow preventers.
- D. Install overflow drain piping to nearest floor drain.
- E. Install vents and extend to outdoors; terminate with elbow turned down and an insect screen.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Perform tests and inspections and prepare test reports.
 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
 1. Inspect field-assembled components, equipment installation, and piping and electrical connections for compliance with manufacturer's written instructions.
 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 3. Check bearing lubrication.
 4. Verify proper motor rotation.
 5. Start up service.

6. Report results in writing.

D. Remove and replace malfunctioning units and retest as specified above.

3.5 ADJUSTING

A. Adjust boiler water-level controls to properly stage unit.

B. Set field-adjustable, makeup water and cooling-water controls.

3.6 CLEANING

A. Clean equipment internally; remove coatings applied for protection during shipping and storage, foreign material, and oily residue according to manufacturer's written instructions.

B. Clean strainers.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain feedwater units. Refer to Section 017900 "Demonstration and Training."

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235313

SECTION 235316 - DEAERATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes packaged, factory-assembled deaerators.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Feedwater Pump: Pump that moves feedwater from the deaerator to the boiler.
- B. Transfer Pump: Pump that moves feedwater from the surge tank to the deaerator.
- C. NPSH: Net-positive suction head.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated makeup water, feedwater, and steam flow rates; working pressure; tank capacities; storage capacity in minutes; temperature and NPSH required; pump performance curves with selection points clearly indicated; furnished specialties; and accessories.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For deaerators, signed and sealed by a qualified professional engineer; include plans, elevations, sections, details, dimensions, weights, loadings, required clearances, and attachments to other work.
 - 1. For installed products indicated to comply with design loads, include structural analysis data.
 - 2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing deaerator bases.
 - 3. Wiring Diagrams: Power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Manufacturer Seismic Qualification Certification: Submit certification that deaerators, accessories, and components will withstand seismic forces as indicated in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For deaerators to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASME Compliance: **[ASME B31.1, "Power Piping," for systems more than 15 psig (104 kPa)] [ASME B31.9, "Building Services Piping," for systems equal to or less than 15 psig (104 kPa)]**. Safety valves and pressure vessels shall bear the appropriate ASME label.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Protect flanges, pipe openings, nozzles, bearings, and couplings from damage during shipping and storage.

- B. Comply with manufacturer's written rigging instructions.
- C. Deliver deaerators as factory-assembled units with protective crating and covering.

1.9 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.10 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Gaskets: Furnish [**one (1)**] <Insert number> replacement gasket(s) for each gasketed opening.
 - 2. Gage Glass: Furnish [**one (1)**] <Insert number> replacement glass(es) for each gage glass.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [AESYS Technologies, LLC; York Shipley Global Div.](#)
 - 2. [Ambassador Heat Transfer Company.](#)
 - 3. [Bethlehem Corporation \(The\).](#)
 - 4. [Bryan Steam LLC.](#)
 - 5. [Cleaver-Brooks; Div. of Aqua-Chem Inc.](#)
 - 6. [Cochrane, Inc.; a Crane Co. Company.](#)
 - 7. [Deaerating Designs; a division of Precision Boilers, Inc.](#)
 - 8. [Eastern Industrial Products, Inc.; Smith-Koch, Inc., Div.](#)
 - 9. [Ecodyne Limited; Graver Water Conditioning Subsidiary.](#)
 - 10. [Enpro, Incorporated.](#)
 - 11. [Industrial Steam; Custom Steam and Pressure Vessel Systems.](#)
 - 12. [International Boiler Works Co. \(The\).](#)
 - 13. [Kansas City Deaerator Company.](#)

14. [Lockwood Products, Inc.; Sub. of John L. Underwood Co., Inc.](#)
15. [Nationwide Boiler Incorporated.](#)
16. [PVI Industries, LLC.](#)
17. [Sellers Engineering Co.](#)
18. [Skidmore.](#)
19. [Sterling Deaerator Co.](#)
20. [U.S. Deaerator Co.](#)
21. **<Insert manufacturer's name.>**
22. or approved equal.

2.2 MANUFACTURED UNITS

- A. **[Horizontal] [Vertical], [packed-column] [spray] [tray]**, single-compartment deaerator[, **and a separate packaged surge tank with transfer and feedwater pumps and controls to supply feedwater to deaerator**].
- B. **[Horizontal] [Vertical], [packed-column] [spray] [tray]**, two-compartment deaerator. One compartment for deaeration and one for surge volume, each with its own transfer and feedwater pumps and controls.
- C. **[Horizontal] [Vertical], [packed-column] [spray] [tray]**, single-compartment deaerator and separate surge tank, both mounted on same factory-fabricated stand with necessary transfer and feedwater pumps and controls.
- D. Material for Wetted Components: Components in contact with water that has not been deaerated shall be made of Type **[304] [316]** stainless steel.
- E. Adjustable Spray Valves: Type 316 stainless steel. Arrange spray valves for counterflow of steam and condensate and so corrosive gases being vented do not contact deaerator's head or shell.
- F. Vent Condenser: Stainless steel, with automatic and manual vent valves.
- G. Deaerator and Storage Tank:
 1. Material: **[Welded carbon steel] [Welded carbon steel galvanized after fabrication] [Stainless steel]**.
 2. Additional Corrosion Protection:
 - a. **[0.07-inch (1.8-mm)] [0.13-inch (3.3-mm)] [0.19-inch (4.8-mm)] <Insert thickness>** thickness allowance.
 - b. Electrolytic corrosion-inhibitor anode.
 3. Access: Manhole in deaerator and storage tank for access to internal components for inspection and service.
 4. Factory-Applied Insulation and Jacket: Minimum thickness of **[2 inches (50 mm)] <Insert thickness>** for mineral-fiber pipe and tank insulation. Cover insulation with **[painted steel] [stucco-embossed aluminum] [stainless-steel]** jacket.

5. Factory-Installed Pipe, **NPS 2-1/2 (DN 65)** and Smaller: ASTM A 53/A 53M, Type S (seamless), Grade B; or ASTM A 106, Type S, Grade B, Schedule **[40] [80]**; with threaded joints and fittings.
 - a. Cast-Iron Threaded Fittings: ASME B16.4, Class **[125] [250]**.
 - b. Malleable-Iron Threaded Fittings: ASME B16.3, Class **[150] [300]**.
 - c. Forged-Steel Fittings: ASME B16.11, Class 3000.
 - d. Malleable-Iron Unions: ASME B16.39, Class **[150] [300]**.
 - e. Forged-Steel Unions: MSS SP-83, Class 3000.

6. Factory-Installed Pipe, **NPS 3 (DN 80)** and Larger: ASTM A 53/A 53M, Type E (electric-resistance welded), Grade B; or ASTM A 106, Type S, Grade B, Schedule **[40] [80]**; with welded joints and carbon-steel fittings and flanges.
 - a. Wrought-Steel Fittings: ASME B16.9, wall thickness to match adjoining pipe.
 - b. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, Class **[150] [300]**, including bolts, nuts, and gaskets.

H. Accessories:

1. Lifting eyes.
2. Companion flanges.
3. Pump suction piping with vortex breaker, isolation valve, strainer, and flexible connector.
4. Pump discharge piping with check valve, isolation valve, and liquid-filled pressure gage graduated in **[pounds force per square inch] [kilopascals] [both pounds force per square inch and kilopascals]**.
5. Pump-discharge bypass **[relief valve] [orifice plate] [relief valve with orifice plate]**.
6. Makeup Water Assembly:
 - a. Factory-mounted modulating valve with mechanical level control, external float cage, and stainless-steel float.
 - b. **[Factory] [Field]**-mounted, electric, **[pilot-operated, solenoid] [modulating]** valve with factory-mounted, **[probe-type]** water-level controller.
 - c. **[Factory] [Field]**-mounted, pneumatic modulating valve with factory-mounted water-level controller.
 - d. **[Factory] [Field]**-mounted, three-valve bypass and inlet strainer.
7. Steam Pressure-Reducing Valve(s): **[Steam] [Electric] [Pneumatic]** operated **[with three-valve bypass]**, and sized to reduce boiler outlet pressure to the deaerator design pressure.
8. Tank Overflow Drain: Sized to relieve full capacity at operating pressure.
9. Safety Valve(s): ASME labeled and sized to relieve full capacity of pressure-reducing valve.
10. Vents: Manual and automatic vent valves.
11. Vacuum breaker.
12. Meters and Gages:

- a. Full-height, water-level gage glass[, **reflex flat type**,] and stop valve set.
 - b. [**Liquid-filled industrial**] [**Bimetal dial-type**] thermometer graduated in [**Fahrenheit**] [**Celsius**] [**both Fahrenheit and Celsius**] mounted to measure temperature in storage [**and steam**] section of tank.
 - c. Pressure gage graduated in [**pounds force per square inch**] [**kilopascals**] [**both pounds force per square inch and kilopascals**] mounted to measure pressure in steam section of tank.
13. Provision for chemical injection quill.
 14. Chemical injection quill.
 15. Sampling connection with valve.
 16. Tank drain connection with valve.
 17. Oxygen test kit.
- I. Support Frame: Structural-steel frame for supporting tank and pumps. Weld or bolt to tank.
1. Fabricate support frame with bracing adequate for seismic forces according to authorities having jurisdiction and to allow installation by anchoring deaerators to floor only.
- J. Feedwater Pump : Cast-iron, [**flange**] [**base**]-mounted volute; with [**bronze**] [**stainless-steel**], [**multistage centrifugal**] [**turbine**] impeller, renewable bronze case ring, and stainless-steel shaft.
1. Seals: Mechanical, suitable for [**250 deg F (121 deg C)**] **<Insert temperature>**.
 2. Pump Motor: [**Vertical**] [**Horizontal**], [**open dripproof**] [**totally enclosed**] [**totally enclosed fan-cooled**] enclosure, [**close**] [**flexible**] coupled to pump. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- K. Feedwater Pump Control Panel: Factory mounted and wired and including the following:
1. NEMA 250, Type [**1**] [**4**] [**4X**] [**12**] **<Insert type>** enclosure.
 2. Single-point, field power connection to [**fused disconnect switch**] [**nonfused disconnect switch**] [**circuit breaker**].
 - a. Branch power circuit to each motor and to controls[**with a disconnect switch or circuit breaker**].
 3. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor.
 - a. Alternating control as indicated by control sequence for each pump.
 4. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 5. [**Metal raceway**] [**Raceway**] for factory-installed wiring outside of enclosures. Make connections to motor with liquidtight conduit.
 6. Removable control mounting plate.

7. Visual indication of status and alarm[**with momentary test push button**].
 8. Audible alarm and silence switch.
 9. Visual indication of elapsed run time, graduated in hours.
 10. Fusible, control-circuit transformer.
 11. Microprocessor-based controller.
- L. Feedwater Pump Start-Stop Control Sequence:
1. Boiler water-level controller starts and stops lead pump to maintain boiler water-level set point.
 2. Lead and lag pumps alternate [**after each start**] [**to equalize run time**].
 3. Lead pump failure, lag pump [**automatically starts if lead pump cannot maintain set point**] [**is started manually**].
 4. Visual indication of pump on[**and off**] status.
 5. Visual indication of pump lead/lag status.
 6. Visual[**and audible**] alarm indication of pump failure.
- M. Feedwater Pump Continuous Control Sequence:
1. Pump runs continuously while boiler operates. Electric interlock with boiler control starts lead pump when boiler starts.
 2. Boiler water-level controller modulates feedwater control valve to maintain boiler water-level set point. Valve closes when boiler is off.
 3. Lead and lag pumps alternate [**after each start**] [**to equalize run time**].
 4. Lead pump failure automatically starts lag pump.
 5. Feedwater pressure controller starts and stops lag pump to maintain feedwater pressure set point.
 6. Visual indication of pump on[**and off**] status.
 7. Visual indication of pump lead/lag status.
 8. Visual[**and audible**] alarm indication of pump failure.
- N. Makeup Water Control Sequence:
1. Electric level controller operates electric control valve to maintain tank water-level set point.
 2. Pneumatic level controller operates pneumatic control valve to maintain tank water-level set point.
 3. Mechanical float operates valve to maintain water-level set point.
 4. Visual[**and audible**] alarm indication of low[**and high**] tank water level.
- O. Building Management System Interface: Factory install hardware to enable building management system to monitor and display points.
1. Hardwired Monitoring Points: On/off status for each pump[, **failure alarm for each pump**] [, **low-water level alarm**] [, **high-water level alarm**] [, **feedwater temperature**] <Insert monitoring>.

2.3 SURGE TANK

- A. Description: Factory-assembled and -tested unit consisting of a condensate receiver, transfer pumps, and controls.
- B. Accessories:
1. **[Liquid-filled industrial] [Bimetal dial-type]** thermometer graduated in **[Fahrenheit] [Celsius] [both Fahrenheit and Celsius]**.
 2. Level gage glass[, **reflex flat type,**] with stops at top and bottom.
 3. Lifting eyes.
 4. Companion flanges.
 5. Pump suction piping with vortex breaker, isolation valve, strainer, and flexible connector.
 6. Pump discharge piping with check valve, isolation valve, and liquid-filled pressure gage graduated in **[pounds force per square inch] [kilopascals] [both pounds force per square inch and kilopascals]**.
 7. Pump-discharge bypass **[relief valve] [orifice plate] [relief valve with orifice plate]**.
- C. Factory-Installed Pipe, **NPS 2-1/2 (DN 65)** and Smaller: ASTM A 53/A 53M, Type S (seamless), Grade B; or ASTM A 106, Type S, Grade B, Schedule **[40] [80]**; with threaded joints and fittings.
1. Cast-Iron Threaded Fittings: ASME B16.4, Class **[125] [250]**.
 2. Malleable-Iron Threaded Fittings: ASME B16.3, Class **[150] [300]**.
 3. Forged-Steel Fittings: ASME B16.11, Class 3000.
 4. Malleable-Iron Unions: ASME B16.39, Class **[150] [300]**.
 5. Forged-Steel Unions: MSS SP-83, Class 3000.
- D. Factory-Installed Pipe, **NPS 3 (DN 80)** and Larger: ASTM A 53/A 53M, Type E (electric-resistance welded), Grade B; or ASTM A 106, Type S, Grade B, Schedule **[40] [80]**; with welded joints and carbon-steel fittings and flanges.
1. Wrought-Steel Fittings: ASME B16.9, wall thickness to match adjoining pipe.
 2. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, Class **[150] [300]**, including bolts, nuts, and gaskets.
- E. Tank:
1. Material: **[Welded carbon steel] [Welded carbon steel galvanized after fabrication] [Stainless steel]**.
 2. Additional Corrosion Protection:
 - a. **[0.07-inch (1.8-mm)] [0.13-inch (3.3-mm)] [0.19-inch (4.8-mm)] <Insert thickness>** thickness allowance.
 - b. Electrolytic corrosion-inhibitor anode.
 3. Access: Manhole in tank for access to internal components for inspection and service.

4. Factory-Applied Insulation and Jacket: Minimum thickness of [2 inches (50 mm)] <Insert thickness> for mineral-fiber pipe and tank insulation. Cover insulation with [painted steel] [stucco-embossed aluminum] [stainless-steel] jacket.
- F. Support Frame: Structural-steel frame for supporting tank. Weld or bolt to tank.
1. Fabricate support frame with bracing adequate for seismic forces according to authorities having jurisdiction and to allow installation by anchoring deaerators to floor only.
- G. Transfer Pump: Vertical, flange-mounted, close-coupled, [single-stage] [multistage], radially split-case centrifugal pump; rated for [175-psig (1205-kPa)] <Insert pressure> minimum working pressure and a continuous water temperature of [225 deg F (107 deg C)] <Insert temperature>; with the following features:
1. Impeller: [Bronze] [Stainless steel].
 2. Seals: Mechanical.
 3. Motor: [Open dripproof] [Totally enclosed] [Totally enclosed fan-cooled] enclosure. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- H. Transfer Pump: Horizontal, base-mounted, [single-stage] [multistage], radially split-case centrifugal pump; rated for [175-psig (1205-kPa)] <Insert pressure> minimum working pressure and a continuous water temperature of [225 deg F (107 deg C)] <Insert temperature>; with the following features:
1. Impeller: [Bronze] [Stainless steel].
 2. Coupling: [Close] [Flexible].
 3. Seals: Mechanical.
 4. Motor: [Open dripproof] [Totally enclosed] [Totally enclosed fan-cooled] enclosure. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- I. Transfer Pump Control Panel: Factory mounted and wired and including the following:
1. NEMA 250, Type [1] [4] [4X] [12] <Insert type> enclosure.
 2. Single-point, field power connection to [fused disconnect switch] [nonfused disconnect switch] [circuit breaker].
 - a. Branch power circuit to each motor and to controls [with a disconnect switch or circuit breaker].
 3. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor.
 - a. Alternating control indicated by control sequence for each pump.
 4. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 5. [Metal raceway] [Raceway] for factory-installed wiring outside of enclosures. Make connections to motor with liquidtight conduit.

6. Removable control mounting plate.
 7. Visual indication of on/off status and pump failure alarm[**with momentary test push button**].
 8. Audible alarm and silence switch.
 9. Visual indication of elapsed run time, graduated in hours.
 10. Fusible, control-circuit transformer.
 11. Microprocessor-based controller.
- J. Transfer Pump Start-Stop Control Sequence: Deaerator water-level controller controls lead pump; alternator switches lead and lag pump(s) [**after each start**] [**to equalize run time**]; failure of lead pump switches to lag pump[**and sounds audible alarm**].
- K. Transfer Pump Continuous-Run Control Sequence: Lead pump runs continuously while deaerator is operating; deaerator water-level controller modulates water-level-control valve; lead and lag pump(s) switch to equalize run time; lag pump operates if lead pump fails[; **pump failure sounds audible alarm**].
- L. Building Management System Interface: Factory install hardware to enable building management system to monitor and display points.
1. Hardwired Monitoring Points: On/off status for each pump[, **failure alarm for each pump**] [, **low-water level alarm**] [, **high-water level alarm**] <Insert monitoring>.
- 2.4 CAPACITIES AND CHARACTERISTICS
- A. Feedwater Flow Rate: <Insert **gpm** (L/s).>
 - B. Steam Flow Rate: <Insert **lb/h** (kg/h).>
 - C. Makeup Water Flow Rate: <Insert **gpm** (L/s).>
 - D. Makeup Water Temperature: <Insert **deg F** (deg C).>
 - E. Capacity: Capable of raising temperature of condensate and makeup water to within [**3 deg F** (2 deg C)] <Insert **temperature**> of saturated steam temperature.
 - F. Minimum Working Pressure: [**50 psig** (345 kPa)] <Insert **value**>.
 - G. Operating Pressure Range: [**Atmospheric**] [**From 2 to 15 psig** (14 to 104 kPa)] <Insert **pressure range**>.
 - H. Resultant Oxygen Content: Not more than [**0.03**] [**0.005**] **cc/L** through an operating range between [**0**] [**3**] [**5**] <Insert **value**> and 100 percent of full load.
 - I. Storage Tank:
 1. Tank Capacity to Overflow: <Insert **gal. (L)**.>
 2. Storage Time: [**10**] <Insert **number**> minutes.

J. Feedwater Pumps:

1. No. of Pumps: **[Duplex]** <Insert quantity>.
2. Flow Rate: <Insert gpm (L/s).>
3. NPSH Required: <Insert psig (kPa).>
4. Rated Operating Temperature: <Insert deg F (deg C).>
5. Head Pressure: <Insert psig (kPa).>
6. Horsepower: <Insert hp (kW).>
7. Speed: <Insert rpm.>
8. Volts: **[115] [208] [230] [460]** <Insert value> V.
9. Phase: **[Single] [Three]**.
10. Hertz: 60.

K. Surge Tank:

1. Tank Capacity to Overflow: <Insert gal. (L).>
2. Storage Time: <Insert number> minutes.

L. Transfer Pumps:

1. No. of Pumps: **[Duplex]** <Insert quantity>.
2. Flow Rate: <Insert gpm (L/s).>
3. NPSH Required: <Insert psig (kPa).>
4. Rated Operating Temperature: <Insert deg F (deg C).>
5. Head Pressure: <Insert psig (kPa).>
6. Horsepower: <Insert hp (kW).>
7. Speed: <Insert rpm.>
8. Volts: **[115] [208] [230] [460]** <Insert value> V.
9. Phase: **[Single] [Three]**.
10. Hertz: 60.

2.5 FACTORY FINISHES

- A. Manufacturer's standard prime-coat finish ready for field painting.
- B. Manufacturer's standard paint in standard colors, applied to factory-assembled and -tested unit before shipping.
- C. Do not paint aluminum, galvanized-steel, and stainless-steel surfaces.

2.6 SOURCE QUALITY CONTROL

- A. Fabricate and label deaerator tanks according to ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.
- B. Factory install and test piping that connects pumps to tanks according to **[ASME B31.1, "Power Piping] [ASME B31.9, "Building Services Piping]."**

- C. Factory test performance and certify test results on packaged deaerator units, according to ASME PTC 12.3, before shipping to Project.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before deaerator installation, examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting performance, maintenance, and operations.
 - 1. Final deaerator locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Equipment Mounting:
 - 1. Install deaerators on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- B. Install deaerators to permit access for service and maintenance.
- C. Support piping independent of pumps.
- D. Install base-mounted pumps on concrete base with grouted base frame.
- E. Install all parts and materials not factory installed.
- F. Extend overflow drains to floor drains.
- G. Extend vent piping to outside and terminate with manufacturer-approved cap furnished with deaerator.
- H. Install piping adjacent to machine to allow service and maintenance.

3.3 CONNECTIONS

- A. Steam and condensate piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect steam and condensate piping to tank tappings with shutoff valves and unions or flanges at each connection.
- C. Connect condensate drains, pump-discharge piping, vents, overflow drains, makeup water, steam supply, and cooling water piping.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Perform tests and inspections and prepare test reports.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
 - 1. Inspect field-assembled components and equipment installation, including piping and electrical connections, for compliance with requirements.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Verify bearing lubrication.
 - 4. Verify proper motor rotation.
 - 5. Test Reports: Prepare a written report to record the following:
 - a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- D. Remove and replace malfunctioning equipment and retest as specified above.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
- B. Complete installation and startup checks according to manufacturer's written instructions and do the following:
 - 1. Set deaerator makeup water-level controls.

2. Verify bearing lubrication.
3. Verify proper motor rotation.
4. Start pumps according to manufacturer's written instructions.

3.6 ADJUSTING AND CLEANING

- A. Adjust initial temperature and pressure set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges.
- C. Clean strainers.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain deaerators. Refer to Section 017900 "Demonstration and Training."
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235316

SECTION 235413 - ELECTRIC-RESISTANCE FURNACES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Electric furnaces and accessories complete with controls.
 - 2. Air filters.
 - 3. Air cleaners.
 - 4. UV germicidal lights.
 - 5. Humidifiers.
 - 6. Ventilation heat exchangers.
 - 7. Refrigeration components.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 - 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
 - 3. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.
 - 4. Laboratory Test Reports for Credit IEQ 4: For solvent cements and adhesive primers, documentation indicating that products comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing

and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

C. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each furnace to include in emergency, operation, and maintenance manuals:

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Furnace and accessories complete with controls.
 - b. Air filter.
 - c. Air cleaner.
 - d. UV germicidal light.
 - e. Humidifier.
 - f. Ventilation heat exchanger.
 - g. Refrigeration components.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Disposable Air Filters: Furnish **[two (2)] <Insert number>** complete sets.
2. Disposable Air-Cleaner Media: Furnish **[one (1)] <Insert number>** complete set(s).
3. Fan Belts: Furnish **[one (1)] <Insert number>** set(s) for each furnace fan.
4. Disposable Humidifier Media: Furnish **[one (1)] <Insert number>** set(s).

1.7 QUALITY ASSURANCE

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

- B. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- C. Comply with NFPA 70.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace the following components of furnaces that fail in materials or workmanship within specified warranty period:
 - 1. Warranty Period, Commencing on Date of Substantial Completion:
 - a. Furnace Heat Exchanger: Minimum **[ten (10) years] [twenty (20) years] [Lifetime] <Insert value>**.
 - b. Integrated Ignition and Blower Control Circuit Board: Minimum **[five (5) years] <Insert value>**.
 - c. Draft-Inducer Motor: Minimum **[five (5) years] <Insert value>**.
 - d. Refrigeration Compressors: Minimum **[ten (10) years] [Lifetime] <Insert value>**.
 - e. Evaporator and Condenser Coils: Minimum **[five (5)years] <Insert value>**.
 - f. **<Insert components requiring extended warranty>**.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Broan Nu-Tone Canada Inc.](#)
 - 2. [Fedders North America Inc.](#)
 - 3. [Intertherm Heating and Cooling.](#)
 - 4. [Wellman Furnaces, Inc.](#)
 - 5. [York International Corp.; a Johnson Controls company.](#)
 - 6. **<Insert manufacturer's name>**.
 - 7. or approved equal.

2.2 ASSEMBLY DESCRIPTION

- A. Factory assembled, piped, wired, and tested.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a qualified testing agency, and marked for intended location and application.

2.3 FURNACES

- A. Cabinet: Steel, with duct liner[**downstream from cooling coil**].
 - 1. Duct Liner: Fiberglass, minimum [1/2 inch (13 mm)] [3/4 inch (19 mm)] thick, complying with ASTM C 1071 and having a coated surface exposed to airstream complying with NFPA 90A or NFPA 90B and with NAIMA's "Fibrous Glass Duct Liner Standard."
 - a. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
 - 2. Factory paint external cabinets in manufacturer's standard color.
- B. Fan: Centrifugal, factory balanced, resilient mounted, direct drive.
 - 1. Fan Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - 2. Special Motor Features: Single speed, premium efficiency, as defined in Section 230513 "Common Motor Requirements for HVAC Equipment," and with internal thermal protection and permanent lubrication.
 - 3. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.
 - 4. Special Motor Features: Electronically controlled motor (ECM) controlled by integrated furnace/blower control.
- C. Electric-Resistant Heating Elements: Helix-wound, nickel-chromium wire-heating elements in ceramic insulators mounted on steel supports.
- D. Heating-Element Control: Sequencer relay with relay for each element; switches elements on and off, with delay between each increment; initiates, stops, or changes fan speed.
- E. Summer Fan Switch: Connected to permit independent on-off switch of unit fan.
- F. Capacities and Characteristics:
 - 1. Airflow Configuration: [**Upflow**] [**Counterflow**] [**Horizontal**].
 - 2. Electric Heating Element:
 - a. Capacity: <Insert MBh (kW)>.
 - b. Number of Steps: <Insert number>.
 - c. Volts: <Insert value>.
 - d. Phase: <Insert value>.
 - e. Hertz: <Insert value>.
 - f. Full-Load Amperes: <Insert value>.

- g. Minimum Circuit Ampacity: **<Insert value>**.
 - h. Maximum Overcurrent Protection: **<Insert amperage>**.
3. Fan:
- a. Airflow: **<Insert cfm (L/s)>**.
 - b. External Static Pressure: **<Insert inches wg (Pa)>**.
 - c. Motor:
 - 1) Size: **<Insert horsepower>**.
 - 2) Speed: **<Insert rpm>**.
 - d. Volts: **<Insert value>**.
 - e. Phase: **<Insert value>**.
 - f. Hertz: **<Insert value>**.
 - g. Full-Load Amperes: **<Insert value>**.
 - h. Minimum Circuit Ampacity: **<Insert value>**.
 - i. Maximum Overcurrent Protection: **<Insert amperage>**.
4. Furnace Electrical Connection:
- a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.4 THERMOSTATS[**AND HUMIDISTATS**]

- A. Controls shall comply with requirements in ASHRAE/IES 90.1, "Controls."
- B. Solid-State Thermostat: [**Wall-mounted**] [**Freestanding**] [**Wireless**], programmable, microprocessor-based unit with [**automatic**] [**manual**] switching from heating to cooling, preferential rate control, seven-day programmability with minimum of four temperature presets per day, [**vacation mode**,]and battery backup protection against power failure for program settings.
- C. Single-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.
- D. Two-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.
- E. [**Single**] [**Two**]-Stage, Heating-Only Thermostat: Wall-mounted unit with fan on-automatic selector.
- F. Solid-State, Combination Thermostat and Humidistat: [**Wall-mounted**] [**Freestanding**] [**Wireless**], programmable, microprocessor-based unit with automatic switching from heating to cooling and humidifying to dehumidifying, preferential rate control,

seven-day programmability with minimum of four temperature presets per day, [**vacation mode**,]and battery backup protection against power failure for program settings.

G. Humidistat: Adjustable, [**wall**] [**duct**]-mounted unit.

H. Control Wiring: Unshielded twisted-pair cabling.

1. No. 24 AWG, 100 ohm, four pair.
2. Cable Jacket Color: [**Blue**] <Insert color>.

2.5 AIR FILTERS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Aprilaire; a division of Research Products Corp.](#)
2. [Filtrete Home Filtration Products; a division of 3M.](#)
3. [General Filters, Inc.](#)
4. [Permatron Corporation.](#)
5. <Insert manufacturer's name>.
6. or approved equal.

B. Washable Filters: **1-inch-** (25-mm-) thick urethane pad.

C. Disposable Filters: [**1-inch-** (25-mm-)] <Insert dimension> thick fiberglass media[**with ASHRAE 52.2 MERV rating of 6 or higher,**] in sheet metal frame.

D. Charged Media Air Filters: Sheet metal housing arranged to be ducted in return-air duct connection to furnace; generates electrostatic charge; MERV 10 rating.

E. HEPA Air-Filter Units: Sheet metal housing with fan arranged to be ducted to return-air duct connection to furnace, with activated carbon prefilter[, **carbon VOC,**] and high-efficiency particulate air (HEPA) disposable filter. HEPA shall be as follows:

1. Standard: UL 586.
2. Rating: ASHRAE 52.2, 99.97 percent efficiency to 0.30-micrometer particle size.

2.6 AIR CLEANERS

A. Electronic Air Cleaners: Packaged system, including sheet metal housing, prefilter, power supply, and automatic control device, arranged for mounting in return-air duct at furnace; equip with on-off and test switches and pilot light.

1. Standard: UL 586.
2. Rating: ASHRAE 52.2, particle size to 0.01 micrometer.
3. Static Pressure Drop: Maximum **0.14-inch wg** (35 Pa) at **300-fpm** (1.52-m/s) air velocity.

B. Capacities and Characteristics:

1. Volts: **<Insert value>**.
2. Phase: **<Insert value>**.
3. Hertz: **<Insert value>**.
4. Minimum Circuit Ampacity: **<Insert value>**.
5. Maximum Overcurrent Protection: **<Insert amperage>**.

2.7 UV GERMICIDAL LIGHTS

- A. Description: Lighting unit in metal housing arranged for installation in supply-air duct and controlled to cycle on and off with furnace fan, with **[one]** **[two]** 75-W UV-light bulb(s).

2.8 HUMIDIFIERS

- A. Minimum capacity rating indicated according to AHRI 610.
- B. Media-wheel bypass type with bypass damper and motor-driven media wheel in reservoir with float-valve level control; arranged for mounting on return duct or plenum with bypass connection to supply duct.
- C. Wetted-pad, continuous-drain, bypass type with bypass damper and water-flow control orifice; arranged for mounting on return duct or plenum with bypass connection to supply duct.
- D. Fan-powered, wetted-pad, continuous-drain type with water-flow control orifice and motor; arranged for mounting on duct or plenum.
- E. Pumped, fan-powered, wetted-pad type with reservoir-level control and pump and fan motors; arranged for mounting on duct or plenum.
- F. Steam type with electric heating element in stainless-steel reservoir with float-valve level control; arranged for attachment to duct or plenum and for control by humidistat.
- G. Comply with applicable requirements in ASHRAE 62.1.
- H. Capacities and Characteristics:
1. Type: **[Steam]** **[Media wheel]** **[Wetted pad with reservoir]** **[Wetted pad with continuous drain]** **[Wetted-pad bypass]**.
 2. Steam Capacity: **<Insert lb/h (kg/h)>**.
 3. Water Connection Size: **<Insert NPS (DN)>**.
 4. Drain Connection Size: **<Insert NPS (DN)>**.
 5. Volts: **<Insert value>**.
 6. Phase: **<Insert value>**.
 7. Hertz: **<Insert value>**.
 8. Minimum Circuit Ampacity: **<Insert value>**.
 9. Maximum Overcurrent Protection: **<Insert amperage>**.

2.9 VENTILATION AIR HEAT EXCHANGERS

- A. Cabinet: Steel, with factory-installed interior insulation and manufacturer's standard factory finish. Fabricate with space for piping and electrical conduits.
- B. Heat-Recovery Device: Fixed-plate, polypropylene copolymer (high-density plastic) heat-exchanger plates evenly spaced and sealed and arranged for counter airflow.
- C. Supply and Exhaust Fans: Forward curved centrifugal with direct drive. Motors comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- D. Filters: **1-inch- (25-mm-)** thick disposable type[**with ASHRAE 52.2 MERV rating of 6 or higher**], in galvanized-steel frame, mounted upstream of unit in both supply and exhaust airstreams.
- E. Wiring: Wire motors and controls so only external connections are required during installation.

2.10 REFRIGERATION COMPONENTS

- A. General Refrigeration Component Requirements:
 - 1. Refrigeration compressor, coils, and specialties shall be designed to operate with CFC-free refrigerants.
 - 2. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IES 90.1.
- B. Refrigerant Coil: Copper tubes mechanically expanded into aluminum fins. Comply with AHRI 210/240. Match size with furnace. Include condensate drain pan with accessible drain outlet[**complying with ASHRAE 62.1**].
 - 1. Refrigerant Coil Enclosure: Steel, matching furnace and evaporator coil, with access panel and flanges for integral mounting at or on furnace cabinet and galvanized sheet metal drain pan coated with black asphaltic base paint.
- C. Refrigerant Line Kits: Annealed-copper suction and liquid lines factory cleaned, dried, pressurized with nitrogen, sealed, and with suction line insulated. Provide in standard lengths for installation without joints, except at equipment connections.
 - 1. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534/C 534M, Type I, [**1/2 inch (13 mm)**] [**1 inch (25 mm)**] **<Insert dimension>** thick.
- D. Refrigerant Piping: Comply with requirements in Section 232300 "Refrigerant Piping."
- E. Air-Cooled Compressor-Condenser Unit:
 - 1. Casing: Steel, finished with baked enamel, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.

2. Compressor: Hermetically sealed [**reciprocating**] [**or**] [**scroll**] type.
 - a. Crankcase heater.
 - b. [**Restrained vibration**] [**Vibration**] isolation mounts for compressor.
 - c. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - d. Two-speed compressor motors shall have manual-reset high-pressure switch and automatic-reset low-pressure switch.
 - e. Refrigerant Charge: [**R-22**] [**R-407C**] [**R-410A**] <Insert type>.
 - f. Refrigerant: R-407C or R-410A.
3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with AHRI 210/240, and with liquid subcooler.
4. Heat-Pump Components: Reversing valve and low-temperature air cutoff thermostat.
5. Fan: luminum-propeller type, directly connected to motor.
6. Motor: Permanently lubricated, with integral thermal-overload protection.
7. Low Ambient Kit: Permits operation down to 45 deg F (7 deg C).
8. Mounting Base: Polyethylene.

F. Capacities and Characteristics:

1. Refrigerant Coil:
 - a. Total Cooling Capacity: <Insert Btu/h (kW)>.
 - b. Sensible Cooling Capacity: <Insert Btu/h (kW)>.
 - c. Heating Capacity: <Insert Btu/h (kW)>.
 - d. Maximum Air Pressure Drop: <Insert inches wg (Pa)>.
 - e. Condensate Drain Size: <Insert NPS (DN)>.
2. Compressor-Condenser Unit:
 - a. Cooling Energy Efficiency[(**EER**)] [(**SEER**)]: <Insert value>.
 - b. Heating Coefficient of Performance: <Insert value>.
 - c. Volts: <Insert value>.
 - d. Phase: <Insert value>.
 - e. Hertz: <Insert value>.
 - f. Full-Load Amperes: <Insert value>.
 - g. Minimum Circuit Ampacity: <Insert value>.
 - h. Maximum Overcurrent Protection: <Insert amperage>.
 - i. Fan Motor Full-Load Amperes: <Insert value>.
 - j. Compressor Running-Load Amperes: <Insert value>.
 - k. Compressor Motor Full-Load Amperes: <Insert value>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine factory-installed insulation before furnace installation. Reject units that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for refrigerant piping systems to verify actual locations of piping connections before equipment installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Suspended Units: Suspend from structure using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.
 - 1. Install seismic restraints to limit movement of furnace by resisting code-required seismic acceleration.
- B. Base-Mounted Units: Secure units to substrate. Provide optional bottom closure base if required by installation conditions.
 - 1. Anchor furnace to substrate to resist code-required seismic acceleration.
- C. Controls: Install thermostats and humidistats at mounting height of **60 inches (1500 mm)** above floor.
- D. Wiring Method: Install control wiring in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal control wiring except in unfinished spaces.
- E. Install ground-mounted, compressor-condenser components on **4-inch- (100-mm-)** thick, reinforced concrete base; **4 inches (100 mm)** larger on each side than unit. Concrete, reinforcement, and formwork are specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**] Coordinate anchor installation with concrete base.
- F. Install ground-mounted compressor-condenser components on polyethylene mounting base.
- G. Install roof-mounted compressor-condenser components on equipment supports specified in Section 077200 "Roof Accessories." Anchor units to supports with removable, cadmium-plated fasteners.

3.3 CONNECTIONS

- A. Install piping adjacent to equipment to allow service and maintenance.
- B. Water piping installation requirements are specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties. Connect water piping with union and ball valve.
- C. Connect ducts to furnace with flexible connector. Comply with requirements in Section 233300 "Air Duct Accessories."
- D. Connect refrigerant tubing kits to refrigerant coil in furnace and to air-cooled compressor-condenser unit.
 - 1. Flared Joints: Use ASME B16.26 fitting and flared ends, following procedures in CDA's "Copper Tube Handbook."
 - 2. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
 - 3. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
- E. Comply with requirements in Section 232300 "Refrigerant Piping" for installation and joint construction of refrigerant piping.

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Perform electrical test and visual and mechanical inspection.
 - 2. Leak Test: After installation, charge systems with refrigerant and oil and test for leaks. Repair leaks, replace lost refrigerant and oil, and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation, product capability, and compliance with requirements.
 - 4. Verify that fan wheel is rotating in the correct direction and is not vibrating or binding.
 - 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

3.5 STARTUP SERVICE

- A. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

1. Inspect for physical damage to unit casings.
2. Verify that access doors move freely and are weathertight.
3. Clean units and inspect for construction debris.
4. Verify that all bolts and screws are tight.
5. Adjust vibration isolation and flexible connections.
6. Verify that controls are connected and operational.

B. Adjust fan belts to proper alignment and tension.

C. Start unit according to manufacturer's written instructions and complete manufacturer's operational checklist.

D. Measure and record airflows.

E. Verify proper operation of capacity control device.

F. After startup and performance test, lubricate bearings[**and adjust belt tension**].

3.6 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Set controls, burner, and other adjustments for optimum heating performance and efficiency. Adjust heat-distribution features, including shutters, dampers, and relays, to provide optimum heating performance and system efficiency.

3.7 CLEANING

A. After completing installation, clean furnaces internally according to manufacturer's written instructions.

B. Install new filters in each furnace within 14 days after Substantial Completion.

3.8 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain condensing units. Refer to Section 017900 "Demonstration and Training."

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235413

SECTION 235416.13 - GAS-FIRED FURNACES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Gas-fired, [**noncondensing**] [**condensing**] furnaces and accessories complete with controls.
 - 2. Air filters.
 - 3. Air cleaners.
 - 4. UV germicidal lights.
 - 5. Humidifiers.
 - 6. Ventilation heat exchangers.
 - 7. Refrigeration components.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 - 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
 - 3. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.
 - 4. Laboratory Test Reports for Credit IEQ 4: For solvent cements and adhesive primers, documentation indicating that products comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing

and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

C. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.
3. Prepare the following by or under the supervision of a qualified professional engineer:
 - a. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.
 - b. Mounting Details: For securing and flashing roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
 - c. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
 - d. Wiring Diagrams: Power, signal, and control wiring.
4. Startup service reports.

1.4 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each furnace to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Furnace and accessories complete with controls.
 - b. Air filter.
 - c. Air cleaner.
 - d. UV germicidal light.
 - e. Humidifier.
 - f. Ventilation heat exchanger.
 - g. Refrigeration components.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Disposable Air Filters: Furnish **[two (2)] <Insert number>** complete sets.
 2. Disposable Air-Cleaner Media: Furnish **[one (1)] <Insert number>** complete set(s).
 3. Fan Belts: Furnish **[one (1)] <Insert number>** set(s) for each furnace fan.
 4. Disposable Humidifier Media: Furnish **[one (1)] <Insert number>** set(s).

1.7 QUALITY ASSURANCE

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- B. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- C. Comply with NFPA 70.

1.8 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3.

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace the following components of furnaces that fail in materials or workmanship within specified warranty period:
1. Warranty Period, Commencing on Date of Substantial Completion:
 - a. Furnace Heat Exchanger: Minimum **[ten (10) years] [twenty (20) years] [Lifetime] <Insert value>**.
 - b. Integrated Ignition and Blower Control Circuit Board: Minimum **[Five (5) years] <Insert value>**.
 - c. Draft-Inducer Motor: Minimum **[Five (5) years] <Insert value>**.
 - d. Refrigeration Compressors: Minimum **[ten (10) years] [Lifetime] <Insert value>**.
 - e. Evaporator and Condenser Coils: Minimum **[Five (5) years] <Insert value>**.
 - f. **<Insert components requiring extended warranty>**.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a qualified testing agency, and marked for intended location and application.
- B. General Requirements for Noncondensing Gas-Fired Furnaces: Factory assembled, piped, wired, and tested; complying with ANSI Z21.47/CSA 2.3 and NFPA 54.

2.2 GAS-FIRED FURNACES, NONCONDENSING

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Adams Manufacturing Company.
 2. Amana Heating & Air Conditioning; under license to Goodman Company, L.P.
 3. Arcoaire Air Conditioning & Heating; an International Comfort Products brand; a unit of United Technologies Corp..
 4. Bard Manufacturing Company.
 5. Bryant Heating & Cooling Systems; a unit of United Technologies Corp.
 6. Carrier Corporation; a unit of United Technologies Corp.
 7. Comfort-Aire; a division of Heat Controller, Inc.
 8. Comfortmaker Air Conditioning & Heating; an International Comfort Products brand; a unit of United Technologies Corp.
 9. Dornback Furnace.
 10. Goodman Manufacturing Company, L.P.
 11. Heil Heating & Cooling Products; an International Comfort Products brand; a unit of United Technologies Corp.
 12. Lennox Industries Inc; Lennox International.
 13. Luxaire Corporation; a division of Unitary Products Group of Luxaire; a Johnson Controls company.
 14. Rheem Manufacturing Company; Heating and Cooling Products.
 15. Ruud Air Conditioning Division.
 16. Tempstar Heating & Cooling Products; an International Comfort Products brand; a unit of United Technologies Corp.
 17. Thermo Products, Inc.; a division of Burnham Holdings Inc.
 18. Trane.
 19. York International Corp.; a Johnson Controls Company.
 20. **<Insert manufacturer's name>.**

21. or approved equal.
- B. Cabinet: **[Steel]** **[Galvanized steel]**.
1. Cabinet interior around heat exchanger shall be factory-installed insulation.
 2. Lift-out panels shall expose burners and all other items requiring access for maintenance.
 3. Factory paint external cabinets in manufacturer's standard color.
 4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- C. Fan: Centrifugal, factory balanced, resilient mounted, **[direct drive]** **[belt drive]** **[direct or belt drive]** **[drive type indicated on Drawings]**.
1. Fan Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Special Motor Features: Single speed, premium efficiency, as defined in Section 230513 "Common Motor Requirements for HVAC Equipment," and with internal thermal protection and permanent lubrication.
 3. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.
 4. Special Motor Features: Electronically controlled motor (ECM) controlled by integrated furnace/blower control.
- D. Type of Gas: **[Natural]** **[Propane]**.
- E. Heat Exchanger: **[Aluminized]** **[Stainless]** steel.
- F. Burner:
1. Gas Valve: 100 percent safety **[two-stage]** **[modulating]** main gas valve, main shutoff valve, pressure regulator, safety pilot with electronic flame sensor, limit control, transformer, and combination ignition/fan timer control board.
 2. Ignition: Electric pilot ignition, with hot-surface igniter or electric spark ignition.
- G. Gas-Burner Safety Controls:
1. Electronic Flame Sensor: Prevents gas valve from opening until pilot flame is proven; stops gas flow on ignition failure.
 2. Flame Rollout Switch: Installed on burner box; prevents burner operation.
 3. Limit Control: Fixed stop at maximum permissible setting; de-energizes burner on excessive bonnet temperature; automatic reset.
- H. Combustion-Air Inducer: Centrifugal fan with thermally protected motor and sleeve bearings prepurges heat exchanger and vents combustion products; pressure switch prevents furnace operation if combustion-air inlet or flue outlet is blocked.
- I. Furnace Controls: Solid-state board integrates ignition, heat, cooling, and fan speeds; and adjustable fan-on and fan-off timing; terminals for connection to accessories.

- J. Vent Materials: Comply with requirements in Section 235123 "Gas Vents" for Type B metal vents.
- K. Capacities and Characteristics:
1. Airflow Configuration: [**Upflow**] [**Counterflow**] [**Horizontal**].
 2. Gas:
 - a. Type: [**Natural**] [**Propane**].
 - b. Venting Type: [**Power venter**][**with combustion-air intake**].
 - c. Minimum Efficiency AFUE: <Insert number> percent.
 - d. Minimum Thermal Efficiency: <Insert number> percent.
 - e. Minimum Combustion Efficiency: <Insert number> percent.
 - f. Input: <Insert MBh (kW)>.
 - g. Heat Output: <Insert MBh (kW)>.
 - h. Gas Connection Size: <Insert NPS (DN)>.
 - i. Draft-Inducer Motor:
 - 1) Size: <Insert horsepower>.
 - 2) Speed: <Insert rpm>.
 - j. Combustion-Air Inlet Size: <Insert inches (mm)>.
 - k. Combustion-Air Inlet Material: [**Galvanized steel**] [**Stainless steel**] [**PVC**].
 - l. Heat-Exchanger Condensate Drain Size: <Insert NPS (DN)>.
 - m. Vent Size: <Insert inches (mm)>.
 3. Fan:
 - a. Airflow: <Insert cfm (L/s)>.
 - b. External Static Pressure: <Insert inches wg (Pa)>.
 - c. Motor:
 - 1) Size: <Insert horsepower>.
 - 2) Speed: <Insert rpm>.
 - d. Volts: <Insert value>.
 - e. Phase: <Insert value>.
 - f. Hertz: <Insert value>.
 - g. Full-Load Amperes: <Insert value>.
 - h. Minimum Circuit Ampacity: <Insert value>.
 - i. Maximum Overcurrent Protection: <Insert amperage>.
 4. Furnace Electrical Connection:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

2.3 GAS-FIRED FURNACES, CONDENSING

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. Adams Manufacturing Company.
2. Amana Heating & Air Conditioning; under license to Goodman Company, L.P.
3. Arcoaire Air Conditioning & Heating; an International Comfort Products brand; a unit of United Technologies Corp.
4. Bryant Heating & Cooling Systems; a unit of United Technologies Corp.
5. Carrier Corporation; Div. of United Technologies Corp.
6. Comfort-Aire; a division of Heat Controller, Inc.
7. Comfortmaker Air Conditioning & Heating; an International Comfort Products brand; a unit of United Technologies Corp.
8. Dornback Furnace.
9. Goodman Manufacturing Company, L.P.
10. Heil Heating & Cooling Products; an International Comfort Products brand; a unit of United Technologies Corp.
11. Lennox Industries Inc; Lennox International.
12. Luxaire Corporation; a division of Unitary Products Group of Luxaire; a Johnson Controls company.
13. Rheem Manufacturing Company; Heating and Cooling Products.
14. Ruud Air Conditioning Division.
15. Tempstar Heating & Cooling Products; an International Comfort Products brand; a unit of United Technologies Corp.
16. Thermo Products, Inc.; a division of Burnham Holdings Inc.
17. Trane.
18. York International Corp.; a Johnson Controls Company.
19. **<Insert manufacturer's name>.**
20. or approved equal.

B. Cabinet: **[Steel] [Galvanized steel]**.

1. Cabinet interior around heat exchanger shall be factory-installed insulation.
2. Lift-out panels shall expose burners and all other items requiring access for maintenance.
3. Factory paint external cabinets in manufacturer's standard color.
4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Fan: Centrifugal, factory balanced, resilient mounted, direct drive.

1. Fan Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Special Motor Features: Single speed, premium efficiency, as defined in Section 230513 "Common Motor Requirements for HVAC Equipment," and with internal thermal protection and permanent lubrication.
3. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.

4. Special Motor Features: Electronically controlled motor (ECM) controlled by integrated furnace/blower control.
- D. Type of Gas: **[Natural]** **[Propane]**.
- E. Heat Exchanger:
1. Primary: **[Aluminized]** **[Stainless]** steel.
 2. Secondary: **[Polyethylene-coated]** **[Stainless]** steel.
- F. Burner:
1. Gas Valve: 100 percent safety **[two-stage]** **[modulating]** main gas valve, main shutoff valve, pressure regulator, safety pilot with electronic flame sensor, limit control, transformer, and combination ignition/fan timer control board.
 2. Ignition: Electric pilot ignition, with hot-surface igniter or electric spark ignition.
- G. Gas-Burner Safety Controls:
1. Electronic Flame Sensor: Prevents gas valve from opening until pilot flame is proven; stops gas flow on ignition failure.
 2. Flame Rollout Switch: Installed on burner box; prevents burner operation.
 3. Limit Control: Fixed stop at maximum permissible setting; de-energizes burner on excessive bonnet temperature; automatic reset.
- H. Combustion-Air Inducer: Centrifugal fan with thermally protected motor and sleeve bearings prepurges heat exchanger and vents combustion products; pressure switch prevents furnace operation if combustion-air inlet or flue outlet is blocked.
- I. Furnace Controls: Solid-state board integrates ignition, heat, cooling, and fan speeds; adjustable fan-on and fan-off timing; terminals for connection to accessories[; **diagnostic light with viewport**].
- J. Accessories:
1. Combination Combustion-Air Intake and Vent: PVC plastic fitting to combine combustion-air inlet and vent through **[outside wall]** **[roof]**.
 2. CPVC Plastic Vent Materials:
 - a. CPVC Plastic Pipe: Schedule 40, complying with ASTM F 441/F 441M.
 - b. CPVC Plastic Fittings: Schedule 40, complying with ASTM F 438, socket type.
 - c. CPVC Solvent Cement: ASTM F 493.
 - 1) CPVC solvent cement shall have a VOC content of 490 g/L or less.
 - 2) Adhesive primer shall have a VOC content of 550 g/L or less.
 - 3) Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic

Chemical Emissions from Indoor Sources Using Environmental Chambers."

3. PVC Plastic Vent Materials:
 - a. PVC Plastic Pipe: Schedule 40, complying with ASTM D 1785.
 - b. PVC Plastic Fittings: Schedule 40, complying with ASTM D 2466, socket type.
 - c. PVC Solvent Cement: ASTM D 2564.
 - 1) PVC solvent cement shall have a VOC content of 510 g/L or less.
 - 2) Adhesive primer shall have a VOC content of 550 g/L or less.
 - 3) Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

K. Capacities and Characteristics:

1. Airflow Configuration: **[Upflow]** **[Counterflow]** **[Horizontal]**.
2. Gas:
 - a. Type: **[Natural]** **[Propane]**.
 - b. Venting Type: **[Power venter]** **[Power venter with combustion-air intake]**.
 - c. Minimum Efficiency AFUE: **<Insert number>** percent.
 - d. Minimum Thermal Efficiency: **<Insert number>** percent.
 - e. Minimum Combustion Efficiency: **<Insert number>** percent.
 - f. Input: **<Insert MBh (kW)>**.
 - g. Heat Output: **<Insert MBh (kW)>**.
 - h. Gas Connection Size: **<Insert NPS (DN)>**.
 - i. Draft-Inducer Motor:
 - 1) Size: **<Insert horsepower>**.
 - 2) Speed: **<Insert rpm>**.
 - j. Combustion-Air Inlet Size: **<Insert inches (mm)>**.
 - k. Combustion-Air Inlet Material: **[CPVC]** **[PVC]**.
 - l. Heat-Exchanger Condensate Drain Size: **<Insert NPS (DN)>**.
 - m. Vent Size: **<Insert inches (mm)>**.
 - n. Vent Material: **[CPVC]** **[PVC]**.
3. Fan:
 - a. Airflow: **<Insert cfm (L/s)>**.
 - b. External Static Pressure: **<Insert inches wg (Pa)>**.
 - c. Motor:

- 1) Size: **<Insert horsepower>**.
- 2) Speed: **<Insert rpm>**.

- d. Volts: **<Insert value>**.
- e. Phase: **<Insert value>**.
- f. Hertz: **<Insert value>**.
- g. Full-Load Amperes: **<Insert value>**.
- h. Minimum Circuit Ampacity: **<Insert value>**.
- i. Maximum Overcurrent Protection: **<Insert amperage>**.

4. Furnace Electrical Connection:

- a. Volts: **<Insert value>**.
- b. Phase: **<Insert value>**.
- c. Hertz: **<Insert value>**.
- d. Full-Load Amperes: **<Insert value>**.
- e. Minimum Circuit Ampacity: **<Insert value>**.
- f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.4 THERMOSTATS[**AND HUMIDISTATS**]

- A. Controls shall comply with requirements in ASHRAE/IES 90.1, "Controls."
- B. Solid-State Thermostat: [**Wall-mounted**] [**Freestanding**] [**Wireless**], programmable, microprocessor-based unit with [**automatic**] [**manual**] switching from heating to cooling, preferential rate control, seven-day programmability with minimum of four temperature presets per day, [**vacation mode**,]and battery backup protection against power failure for program settings.
- C. Single-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.
- D. Two-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.
- E. [**Single**] [**Two**]-Stage, Heating-Only Thermostat: Wall-mounted unit with fan on-automatic selector.
- F. Solid-State, Combination Thermostat and Humidistat: [**Wall-mounted**] [**Freestanding**] [**Wireless**], programmable, microprocessor-based unit with automatic switching from heating to cooling and humidifying to dehumidifying, preferential rate control, seven-day programmability with minimum of four temperature presets per day, [**vacation mode**,]and battery backup protection against power failure for program settings.
- G. Humidistat: Adjustable, [**wall**] [**duct**]-mounted unit.
- H. Control Wiring: Unshielded twisted-pair cabling.
 1. No. 24 AWG, 100 ohm, four pair.

2. Cable Jacket Color: **[Blue]** <Insert color>.

2.5 AIR FILTERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Aprilaire; a division of Research Products Corp.](#)
 2. [Filtrete Home Filtration Products; a division of 3M.](#)
 3. [General Filters, Inc.](#)
 4. [Permatron Corporation.](#)
 5. <Insert manufacturer's name>.
 6. or approved equal.
- B. Washable Filters: **1-inch-** (25-mm-) thick urethane pad.
- C. Disposable Filters: [**1-inch-** (25-mm-)] <Insert dimension> thick fiberglass media[**with ASHRAE 52.2 MERV rating of 6 or higher,**] in sheet metal frame.
- D. Charged Media Air Filters: Sheet metal housing arranged to be ducted in return-air duct connection to furnace; generates electrostatic charge; MERV 10 rating.
- E. HEPA Air Filter Units: Sheet metal housing with fan arranged to be ducted to return-air duct connection to furnace, with activated carbon prefilter[, **carbon VOC,**] and high-efficiency particulate air (HEPA) disposable filter. HEPA shall be as follows:
1. Standard: UL 586.
 2. Rating: ASHRAE 52.2, 99.97 percent efficiency to 0.30-micrometer particle size.

2.6 AIR CLEANERS

- A. Electronic Air Cleaners: Packaged system, including sheet metal housing, prefilter, power supply, and automatic control device, arranged for mounting in return-air duct at furnace; equip with on-off and test switches and pilot light.
1. Standard: UL 586.
 2. Rating: ASHRAE 52.2, particle size to 0.01 micrometer.
 3. Static Pressure Drop: Maximum **0.14-inch wg** (35 Pa) at **300-fpm** (1.52-m/s) air velocity.
- B. Capacities and Characteristics:
1. Volts: <Insert value>.
 2. Phase: <Insert value>.
 3. Hertz: <Insert value>.
 4. Minimum Circuit Ampacity: <Insert value>.
 5. Maximum Overcurrent Protection: <Insert amperage>.

2.7 UV GERMICIDAL LIGHTS

- A. Description: Lighting unit in metal housing arranged for installation in supply-air duct and controlled to cycle on and off with furnace fan, with **[one]** **[two]** 75-W UV-light bulb(s).

2.8 HUMIDIFIERS

- A. Minimum capacity rating indicated according to AHRI 610.
- B. Media-wheel bypass type with bypass damper and motor-driven media wheel in reservoir with float-valve level control; arranged for mounting on return duct or plenum with bypass connection to supply duct.
- C. Wetted-pad, continuous-drain, bypass type with bypass damper and water-flow control orifice; arranged for mounting on return duct or plenum with bypass connection to supply duct.
- D. Fan-powered, wetted-pad, continuous-drain type with water-flow control orifice and motor; arranged for mounting on duct or plenum.
- E. Pumped, fan-powered, wetted-pad type with reservoir-level control and pump and fan motors; arranged for mounting on duct or plenum.
- F. Steam type with electric heating element in stainless-steel reservoir with float-valve level control; arranged for attachment to duct or plenum and for control by humidistat.
- G. Comply with applicable requirements in ASHRAE 62.1.
- H. Capacities and Characteristics:
1. Type: **[Steam]** **[Media wheel]** **[Wetted pad with reservoir]** **[Wetted pad with continuous drain]** **[Wetted-pad bypass]**.
 2. Steam Capacity: **<Insert lb/h (kg/h)>**.
 3. Water Connection Size: **<Insert NPS (DN)>**.
 4. Drain Connection Size: **<Insert NPS (DN)>**.
 5. Volts: **<Insert value>**.
 6. Phase: **<Insert value>**.
 7. Hertz: **<Insert value>**.
 8. Minimum Circuit Ampacity: **<Insert value>**.
 9. Maximum Overcurrent Protection: **<Insert amperage>**.

2.9 VENTILATION AIR HEAT EXCHANGERS

- A. Cabinet: Steel, with factory-installed interior insulation and manufacturer's standard factory finish. Fabricate with space for piping and electrical conduits.
- B. Heat-Recovery Device: Fixed-plate, polypropylene copolymer (high-density plastic) heat-exchanger plates evenly spaced and sealed and arranged for counter airflow.

- C. Supply and Exhaust Fans: Forward curved centrifugal with direct drive. Motors comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- D. Filters: 1-inch- (25-mm-) thick disposable type[**with ASHRAE 52.2 MERV rating of 6 or higher**], in galvanized-steel frame, mounted upstream of unit in both supply and exhaust airstreams.
- E. Wiring: Wire motors and controls so only external connections are required during installation.

2.10 REFRIGERATION COMPONENTS

- A. General Refrigeration Component Requirements:
 - 1. Refrigeration compressor, coils, and specialties shall be designed to operate with CFC-free refrigerants.
 - 2. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IES 90.1.
- B. Refrigerant Coil: Copper tubes mechanically expanded into aluminum fins. Comply with AHRI 210/240. Match size with furnace. Include condensate drain pan with accessible drain outlet[**complying with ASHRAE 62.1**].
 - 1. Refrigerant Coil Enclosure: Steel, matching furnace and evaporator coil, with access panel and flanges for integral mounting at or on furnace cabinet and galvanized sheet metal drain pan coated with black asphaltic base paint.
- C. Refrigerant Line Kits: Annealed-copper suction and liquid lines factory cleaned, dried, pressurized with nitrogen, sealed, and with suction line insulated. Provide in standard lengths for installation without joints, except at equipment connections.
 - 1. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534/C 534M, Type I, [1/2 inch (13 mm)] [1 inch (25 mm)] <Insert dimension> thick.
- D. Refrigerant Piping: Comply with requirements in Section 232300 "Refrigerant Piping."
- E. Air-Cooled Compressor-Condenser Unit:
 - 1. Casing: Steel, finished with baked enamel, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
 - 2. Compressor: Hermetically sealed [**reciprocating**] [**or**] [**scroll**] type.
 - a. Crankcase heater.
 - b. [**Restrained vibration**] [**Vibration**] isolation mounts for compressor.
 - c. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - d. Two-speed compressor motors shall have manual-reset high-pressure switch and automatic-reset low-pressure switch.

- e. Refrigerant Charge: **[R-22] [R-407C] [R-410A] <Insert type>**.
 - f. Refrigerant: R-407C or R-410A.
3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with AHRI 210/240, and with liquid subcooler.
 4. Heat-Pump Components: Reversing valve and low-temperature air cut-off thermostat.
 5. Fan: Aluminum-propeller type, directly connected to motor.
 6. Motor: Permanently lubricated, with integral thermal-overload protection.
 7. Low Ambient Kit: Permits operation down to **45 deg F (7 deg C)**.
 8. Mounting Base: Polyethylene.
- F. Capacities and Characteristics:
1. Refrigerant Coil:
 - a. Total Cooling Capacity: **<Insert Btu/h (kW)>**.
 - b. Sensible Cooling Capacity: **<Insert Btu/h (kW)>**.
 - c. Heating Capacity: **<Insert Btu/h (kW)>**.
 - d. Maximum Air Pressure Drop: **<Insert inches wg (Pa)>**.
 - e. Condensate Drain Size: **<Insert NPS (DN)>**.
 2. Compressor-Condenser Unit:
 - a. Cooling Energy Efficiency[**(EER)**] [**(SEER)**]: **<Insert value>**.
 - b. Heating Coefficient of Performance: **<Insert value>**.
 - c. Volts: **<Insert value>**.
 - d. Phase: **<Insert value>**.
 - e. Hertz: **<Insert value>**.
 - f. Full-Load Amperes: **<Insert value>**.
 - g. Minimum Circuit Ampacity: **<Insert value>**.
 - h. Maximum Overcurrent Protection: **<Insert amperage>**.
 - i. Fan Motor Full-Load Amperes: **<Insert value>**.
 - j. Compressor Running-Load Amperes: **<Insert value>**.
 - k. Compressor Motor Full-Load Amperes: **<Insert value>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine factory-installed insulation before furnace installation. Reject units that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for gas[**and refrigerant**] piping systems to verify actual locations of piping connections before equipment installation.

- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install gas-fired furnaces and associated fuel and vent features and systems according to NFPA 54.
- B. Suspended Units: Suspend from structure using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.
1. Install seismic restraints to limit movement of furnace by resisting code-required seismic acceleration.
- C. Base-Mounted Units: Secure units to substrate. Provide optional bottom closure base if required by installation conditions.
1. Anchor furnace to substrate to resist code-required seismic acceleration.
- D. Controls: Install thermostats and humidistats at mounting height of **60 inches** (1500 mm) above floor.
- E. Wiring Method: Install control wiring in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal control wiring except in unfinished spaces.
- F. Install ground-mounted, compressor-condenser components on **4-inch-** (100-mm-) thick, reinforced concrete base; **4 inches** (100 mm) larger on each side than unit. Concrete, reinforcement, and formwork are specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**] Coordinate anchor installation with concrete base.
- G. Install ground-mounted compressor-condenser components on polyethylene mounting base.
- H. Install roof-mounted compressor-condenser components on equipment supports specified in Section 077200 "Roof Accessories." Anchor units to supports with removable, cadmium-plated fasteners.

3.3 CONNECTIONS

- A. Gas piping installation requirements are specified in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**] Drawings indicate general arrangement of piping, fittings, and specialties. Connect gas piping with union or flange and appliance connector valve.
- B. Install piping adjacent to equipment to allow service and maintenance.

- C. Water piping installation requirements are specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties. Connect water piping with union and ball valve.
- D. Vent Connection, Noncondensing, Gas-Fired Furnaces: Connect Type B vents to furnace vent connection and extend outdoors. Type B vents and their installation requirements are specified in Section 235123 "Gas Vents."
- E. Vent and Outside-Air Connection, Condensing, Gas-Fired Furnaces: Connect plastic piping vent material to furnace connections and extend outdoors. Terminate vent outdoors with a cap and in an arrangement that will protect against entry of birds, insects, and dirt.
1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
 2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
 3. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 - b. CPVC Piping: Join according to ASTM D 2846/D 2846M, Appendix.
 - c. PVC Pressure Piping: Join schedule number ASTM D 1785 PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
 - d. Requirements for Low-Emitting Materials:
 - 1) CPVC solvent cement shall have a VOC content of 490 g/L or less.
 - 2) PVC solvent cement shall have a VOC content of 510 g/L or less.
 - 3) Adhesive primer shall have a VOC content of 550 g/L or less.
 - 4) Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Slope pipe vent back to furnace or to outside terminal.
- F. Connect ducts to furnace with flexible connector. Comply with requirements in Section 233300 "Air Duct Accessories."
- G. Connect refrigerant tubing kits to refrigerant coil in furnace and to air-cooled compressor-condenser unit.
1. Flared Joints: Use ASME B16.26 fitting and flared ends, following procedures in CDA's "Copper Tube Handbook."
 2. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's

- "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
3. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
- H. Comply with requirements in Section 232300 "Refrigerant Piping" for installation and joint construction of refrigerant piping.

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
1. Perform electrical test and visual and mechanical inspection.
 2. Leak Test: After installation, charge systems with refrigerant and test for leaks. Repair leaks, replace lost refrigerant, and retest until no leaks exist.
 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation, product capability, and compliance with requirements.
 4. Verify that fan wheel is rotating in the correct direction and is not vibrating or binding.
 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

3.5 STARTUP SERVICE

- A. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
1. Inspect for physical damage to unit casings.
 2. Verify that access doors move freely and are weathertight.
 3. Clean units and inspect for construction debris.
 4. Verify that all bolts and screws are tight.
 5. Adjust vibration isolation and flexible connections.
 6. Verify that controls are connected and operational.
- B. Adjust fan belts to proper alignment and tension.
- C. Start unit according to manufacturer's written instructions and complete manufacturer's operational checklist.
- D. Measure and record airflows.
- E. Verify proper operation of capacity control device.
- F. After startup and performance test, lubricate bearings[**and adjust belt tension**].

3.6 ADJUSTING

- A. Adjust initial temperature and humidity set points.
- B. Set controls, burner, and other adjustments for optimum heating performance and efficiency. Adjust heat-distribution features, including shutters, dampers, and relays, to provide optimum heating performance and system efficiency.

3.7 CLEANING

- A. After completing installation, clean furnaces internally according to manufacturer's written instructions.
- B. Install new filters in each furnace within 14 days after Substantial Completion.

3.8 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain condensing units. Refer to Section 017900 "Demonstration and Training."
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235416.13

SECTION 235416.16 - OIL-FIRED FURNACES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Oil-fired furnaces and accessories complete with controls.
 - 2. Air filters.
 - 3. Air cleaners.
 - 4. UV germicidal lights.
 - 5. Humidifiers.
 - 6. Ventilation heat exchangers.
 - 7. Refrigeration components.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 - 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
 - 3. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.
 - 4. Laboratory Test Reports for Credit IEQ 4: For solvent cements and adhesive primers, documentation indicating that products comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing

and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

C. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.
3. Prepare the following by or under the supervision of a qualified professional engineer:
 - a. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.
 - b. Mounting Details: For securing and flashing roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
 - c. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
 - d. Wiring Diagrams: Power, signal, and control wiring.
4. Startup service reports.

1.4 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each furnace to include in emergency, operation, and maintenance manuals.
1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Furnace and accessories complete with controls.
 - b. Air filter.
 - c. Air cleaner.
 - d. UV germicidal light.
 - e. Humidifier.
 - f. Ventilation heat exchanger.
 - g. Refrigeration components.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Disposable Air Filters: Furnish **[two (2)] <Insert number>** complete sets.
 2. Disposable Air-Cleaner Media: Furnish **[one (1)] <Insert number>** complete set(s).
 3. Fan Belts: Furnish **[one (1)] <Insert number>** set(s) for each furnace fan.
 4. Disposable Humidifier Media: Furnish **[one (1)] <Insert number>** set(s).

1.7 QUALITY ASSURANCE

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- B. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- C. Comply with NFPA 70.

1.8 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3.

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace the following components of furnaces that fail in materials or workmanship within specified warranty period:
1. Warranty Period, Commencing on Date of Substantial Completion:
 - a. Furnace Heat Exchanger: Minimum **[ten (10) years] [twenty (20) years] [Lifetime] <Insert value>**.
 - b. Integrated Ignition and Blower Control Circuit Board: Minimum **[five (5) years] <Insert value>**.
 - c. Draft-Inducer Motor: Minimum **[five (5) years] <Insert value>**.
 - d. High-Efficiency Oil Furnace Burner: Minimum **[three (3) years] <Insert value>**.
 - e. Refrigeration Compressors: Minimum **[ten (10) years] [Lifetime] <Insert value>**.
 - f. Evaporator and Condenser Coils: Minimum **[five (5) years] <Insert value>**.
 - g. **<Insert components requiring extended warranty>**.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. Adams Manufacturing Company.
2. Arcoaire Air Conditioning & Heating; an International Comfort Products brand; a unit of United Technologies Corp.
3. Bard Manufacturing Company.
4. Carrier Corporation; Div. of United Technologies Corp.
5. Comfort-Aire a division of Heat Controller, Inc.
6. Comfortmaker Air Conditioning & Heating; a division of International Comfort Products, LLC.
7. Dornback Furnace.
8. Heil Heating & Cooling Products; a division of International Comfort Products, LLC.
9. Lennox Industries Inc.
10. Luxaire Corporation; a division of Unitary Products Group.
11. Rheem Manufacturing Company; Air Conditioning Division.
12. Ruud Air Conditioning Division.
13. Thermo Products, Inc.; a division of Burnham Holdings Inc.
14. York International Corp.; a Johnson Controls Company.
15. **<Insert manufacturer's name>.**
16. or approved equal.

2.2 ASSEMBLY DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a qualified testing agency, and marked for intended location and application.
- B. Manufactured Units: Factory assembled, piped, wired, and tested; complying with UL 727 and with NFPA 31.

2.3 FURNACES

- A. Cabinet: **[Steel] [Galvanized steel]**.
1. Cabinet interior around heat exchanger shall be factory-installed insulation.

2. Lift-out panels shall expose burners and all other items requiring access for maintenance.
 3. Factory paint external cabinets in manufacturer's standard color.
 4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- B. Fan: Centrifugal, factory balanced, resilient mounted, **[direct drive] [belt drive] [direct or belt drive] [drive type indicated on Drawings]**.
1. Fan Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Special Motor Features: Single speed, premium efficiency, as defined in Section 230513 "Common Motor Requirements for HVAC Equipment," and with internal thermal protection and permanent lubrication.
 3. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.
- C. Heat Exchanger: Welded steel with **[ceramic-fiber liner] [refractory insert]** at the burner in the combustion chamber. Minimum **2-inch- (50-mm-)** diameter access ports in heat exchanger to permit access for cleaning.
- D. Burner: High-pressure atomizing type, with rubber-mounted, adjustable, combustion-air blower; integrated fuel pump; hinged, flame-inspection port; cadmium-sulfide flame sensor; electrodes; ignition transformer; and oil nozzle.
1. Time-Delay Relay: Limits time for establishing main flame.
 2. Flame Sensor: Monitors flame and stops burner on flame failure.
 3. Limit Control: Fixed stop at maximum permissible setting; de-energizes burner on excessive bonnet temperature; automatic reset.
- E. Barometric Draft Regulator: Match furnace; for mounting in flue.
- F. Furnace Controls: Solid-state board integrates ignition, heat, cooling, and fan speeds; and adjustable fan-on and fan-off timing; terminals for connection to accessories.
- G. Vent Materials: Comply with requirements in Section 235123 "Gas Vents" for Type B metal vents.
- H. Capacities and Characteristics:
1. Airflow Configuration: **[Upflow] [Counterflow] [Horizontal]**.
 2. Minimum Efficiency AFUE: **<Insert number>** percent.
 3. Minimum Thermal Efficiency: **<Insert number>** percent.
 4. Oil:
 - a. Input: **<Insert gph (L/s)>**.
 - b. Heat Output: **<Insert MBh (kW)>**.
 - c. Burner Motor:
 - 1) Size: **<Insert horsepower>**.

- 2) Speed: **<Insert rpm>**.
- d. Vent Size: **<Insert inches (mm)>**.
5. Fan:
 - a. Airflow: **<Insert cfm (L/s)>**.
 - b. External Static Pressure: **<Insert inches wg (Pa)>**.
 - c. Motor:
 - 1) Size: **<Insert horsepower>**.
 - 2) Speed: **<Insert rpm>**.
 - d. Volts: **<Insert value>**.
 - e. Phase: **<Insert value>**.
 - f. Hertz: **<Insert value>**.
 - g. Full-Load Amperes: **<Insert value>**.
 - h. Minimum Circuit Ampacity: **<Insert value>**.
 - i. Maximum Overcurrent Protection: **<Insert amperage>**.
6. Furnace Electrical Connection:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.4 THERMOSTATS[**AND HUMIDISTATS**]

- A. Controls shall comply with requirements in ASHRAE/IES 90.1, "Controls."
- B. Solid-State Thermostat: [**Wall-mounted**] [**Freestanding**] [**Wireless**], programmable, microprocessor-based unit with [**automatic**] [**manual**] switching from heating to cooling, preferential rate control, seven-day programmability with minimum of four temperature presets per day, [**vacation mode**,]and battery backup protection against power failure for program settings.
- C. Single-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.
- D. Two-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.
- E. [**Single**] [**Two**]-Stage, Heating-Only Thermostat: Wall-mounted unit with fan on-automatic selector.
- F. Solid-State, Combination Thermostat and Humidistat: [**Wall-mounted**] [**Freestanding**] [**Wireless**], programmable, microprocessor-based unit with automatic switching from

heating to cooling and humidifying to dehumidifying, preferential rate control, seven-day programmability with minimum of four temperature presets per day, [**vacation mode**,]and battery backup protection against power failure for program settings.

- G. Humidistat: Adjustable, [**wall**] [**duct**]-mounted unit.
- H. Control Wiring: Unshielded twisted-pair cabling.
 - 1. No. 24 AWG, 100 ohm, four pair.
 - 2. Cable Jacket Color: [**Blue**] <**Insert color**>.

2.5 AIR FILTERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Aprilaire; a division of Research Products Corp.](#)
 - 2. [Filtrete Home Filtration Products; a division of 3M.](#)
 - 3. [General Filters, Inc.](#)
 - 4. [Permatron Corporation.](#)
 - 5. <**Insert manufacturer's name**>.
 - 6. or approved equal.

Retain one or more of paragraphs below. If Project has more than one filter type, indicate filter type for each unit on Drawings.

LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, in which a MERV rating of 6 or higher is required. "Washable Filters" Paragraph below does not comply; "Disposable Filters" Paragraph complies.

- B. Washable Filters: **1-inch-** (25-mm-) thick urethane pad.
- C. Disposable Filters: [**1-inch-** (25-mm-)] <**Insert dimension**> thick fiberglass media[**with ASHRAE 52.2 MERV rating of 6 or higher,**] in sheet metal frame.
- D. Charged Media Air Filters: Sheet metal housing arranged to be ducted in return-air duct connection to furnace; generates electrostatic charge; MERV 10 rating.
- E. HEPA Air Filter Units: Sheet metal housing with fan arranged to be ducted to return-air duct connection to furnace, with activated carbon prefilter[, **carbon VOC,**] and high-efficiency particulate air (HEPA) disposable filter. HEPA shall be as follows:
 - 1. Standard: UL 586.
 - 2. Rating: ASHRAE 52.2, 99.97 percent efficiency to 0.30-micrometer particle size.

2.6 AIR CLEANERS

If Project uses both air filters and air cleaners, indicate type for each unit on Drawings.

- A. Electronic Air Cleaners: Packaged system, including sheet metal housing, prefilter, power supply, and automatic control device, arranged for mounting in return-air duct at furnace; equip with on-off and test switches and pilot light.
1. Standard: UL 586.
 2. Rating: ASHRAE 52.2, particle size to 0.01 micrometer.
 3. Static Pressure Drop: Maximum **0.14-inch wg (35 Pa)** at **300-fpm (1.52-m/s)** air velocity.
- B. Capacities and Characteristics:
1. Volts: **<Insert value>**.
 2. Phase: **<Insert value>**.
 3. Hertz: **<Insert value>**.
 4. Minimum Circuit Ampacity: **<Insert value>**.
 5. Maximum Overcurrent Protection: **<Insert amperage>**.

2.7 UV GERMICIDAL LIGHTS

- A. Description: Lighting unit in metal housing arranged for installation in supply-air duct and controlled to cycle on and off with furnace fan, with **[one]** **[two]** 75-W UV light bulb(s).

2.8 HUMIDIFIERS

- A. Minimum capacity rating indicated according to AHRI 610.
- B. Media-wheel bypass type with bypass damper and motor-driven media wheel in reservoir with float-valve level control; arranged for mounting on return duct or plenum with bypass connection to supply duct.
- C. Wetted-pad, continuous-drain, bypass type with bypass damper and water-flow control orifice; arranged for mounting on return duct or plenum with bypass connection to supply duct.
- D. Fan-powered, wetted-pad, continuous-drain type with water-flow control orifice and motor; arranged for mounting on duct or plenum.
- E. Pumped, fan-powered, wetted-pad type with reservoir-level control and pump and fan motors; arranged for mounting on duct or plenum.
- F. Steam type with electric heating element in stainless-steel reservoir with float-valve level control; arranged for attachment to duct or plenum and for control by humidistat.
- G. Comply with applicable requirements in ASHRAE 62.1.
- H. Capacities and Characteristics:

1. Type: [**Steam**] [**Media wheel**] [**Wetted pad with reservoir**] [**Wetted pad with continuous drain**] [**Wetted-pad bypass**].
2. Steam Capacity: <Insert lb/h (kg/h)>.
3. Water Connection Size: <Insert NPS (DN)>.
4. Drain Connection Size: <Insert NPS (DN)>.
5. Volts: <Insert value>.
6. Phase: <Insert value>.
7. Hertz: <Insert value>.
8. Minimum Circuit Ampacity: <Insert value>.
9. Maximum Overcurrent Protection: <Insert amperage>.

2.9 VENTILATION AIR HEAT EXCHANGERS

- A. Cabinet: Steel, with factory-installed interior insulation and manufacturer's standard factory finish. Fabricate with space for piping and electrical conduits.
- B. Heat-Recovery Device: Fixed-plate, polypropylene copolymer (high-density plastic) heat-exchanger plates evenly spaced and sealed and arranged for counter airflow.
- C. Supply and Exhaust Fans: Forward curved centrifugal with direct drive. Motors comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- D. Filters: 1-inch- (25-mm-) thick disposable type[**with ASHRAE 52.2 MERV rating of 6 or higher**], in galvanized-steel frame, mounted upstream of unit in both supply and exhaust airstreams.
- E. Wiring: Wire motors and controls so only external connections are required during installation.

2.10 REFRIGERATION COMPONENTS

- A. General Refrigeration Component Requirements:

Also, LEED Prerequisite EA 3 requires using CFC-free refrigerants in new HVAC&R systems.

1. Refrigeration compressor, coils, and specialties shall be designed to operate with CFC-free refrigerants.

Also, LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1.

2. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IES 90.1.

- B. Refrigerant Coil: Copper tubes mechanically expanded into aluminum fins. Comply with AHRI 210/240. Match size with furnace. Include condensate drain pan with accessible drain outlet[**complying with ASHRAE 62.1**].

1. Refrigerant Coil Enclosure: Steel, matching furnace and evaporator coil, with access panel and flanges for integral mounting at or on furnace cabinet and galvanized sheet metal drain pan coated with black asphaltic base paint.

- C. Refrigerant Line Kits: Annealed-copper suction and liquid lines factory cleaned, dried, pressurized with nitrogen, sealed, and with suction line insulated. Provide in standard lengths for installation without joints, except at equipment connections.
1. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534/C 534M, Type I, [1/2 inch (13 mm)] [1 inch (25 mm)] <Insert dimension> thick.
- D. Refrigerant Piping: Comply with requirements in Section 232300 "Refrigerant Piping."
- E. Air-Cooled Compressor-Condenser Unit:
1. Casing: Steel, finished with baked enamel, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
 2. Compressor: Hermetically sealed [reciprocating] [or] [scroll] type.
 - a. Crankcase heater.
 - b. [Restrained vibration] [Vibration] isolation mounts for compressor.
 - c. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - d. Two-speed compressor motors shall have manual-reset high-pressure switch and automatic-reset low-pressure switch.
 - e. Refrigerant Charge: [R-22] [R-407C] [R-410A] <Insert type>.
 - f. Refrigerant: R-407C or R-410A.
 3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with AHRI 210/240, and with liquid subcooler.
 4. Heat-Pump Components: Reversing valve and low-temperature air cut-off thermostat.
 5. Fan: Aluminum-propeller type, directly connected to motor.
 6. Motor: Permanently lubricated, with integral thermal-overload protection.
 7. Low Ambient Kit: Permits operation down to 45 deg F (7 deg C).
 8. Mounting Base: Polyethylene.
- F. Capacities and Characteristics:
1. Refrigerant Coil:
 - a. Total Cooling Capacity: <Insert Btu/h (kW)>.
 - b. Sensible Cooling Capacity: <Insert Btu/h (kW)>.
 - c. Heating Capacity: <Insert Btu/h (kW)>.
 - d. Maximum Air Pressure Drop: <Insert inches wg (Pa)>.
 - e. Condensate Drain Size: <Insert NPS (DN)>.
 2. Compressor-Condenser Unit:
 - a. Cooling Energy Efficiency[(EER)] [(SEER)]: <Insert value>.
 - b. Heating Coefficient of Performance: <Insert value>.
 - c. Volts: <Insert value>.

- d. Phase: **<Insert value>**.
- e. Hertz: **<Insert value>**.
- f. Full-Load Amperes: **<Insert value>**.
- g. Minimum Circuit Ampacity: **<Insert value>**.
- h. Maximum Overcurrent Protection: **<Insert amperage>**.
- i. Fan Motor Full-Load Amperes: **<Insert value>**.
- j. Compressor Running-Load Amperes: **<Insert value>**.
- k. Compressor Motor Full-Load Amperes: **<Insert value>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine factory-installed insulation before furnace installation. Reject units that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for oil[**and refrigerant**] piping systems to verify actual locations of piping connections before equipment installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install oil-fired furnaces and associated fuel and vent piping according to NFPA 31.
- B. Suspended Units: Suspend from structure using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.
 - 1. Install seismic restraints to limit movement of furnace by resisting code-required seismic acceleration.
- C. Base-Mounted Units: Secure units to substrate. Provide optional bottom closure base if required by installation conditions.
 - 1. Anchor furnace to substrate to resist code-required seismic acceleration.
- D. Controls: Install thermostats and humidistats at mounting height of **60 inches (1500 mm)** above floor.
- E. Wiring Method: Install control wiring in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal control wiring except in unfinished spaces.

- F. Install ground-mounted, compressor-condenser components on 4-inch- (100-mm-) thick, reinforced concrete base; 4 inches (100 mm) larger on each side than unit. Concrete, reinforcement, and formwork are specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."] Coordinate anchor installation with concrete base.
- G. Install ground-mounted compressor-condenser components on polyethylene mounting base.
- H. Install roof-mounted compressor-condenser components on equipment supports specified in Section 077200 "Roof Accessories." Anchor units to supports with removable, cadmium-plated fasteners.

3.3 CONNECTIONS

- A. Oil piping installation requirements are specified in Section 231113 "Facility Fuel-Oil Piping." Drawings indicate general arrangement of piping, fittings, and specialties. Connect oil piping with union or flange and [ball] [gate] valve.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Water piping installation requirements are specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties. Connect water piping with union and ball valve.
- D. Vent Connections: Connect Type L vents to furnace vent connection and extend outdoors. Type L vents and their installation requirements are specified in Section 235123 "Gas Vents."
- E. Connect ducts to furnace with flexible connector. Comply with requirements in Section 233300 "Air Duct Accessories."
- F. Connect refrigerant tubing kits to refrigerant coil in furnace and to air-cooled, compressor-condenser unit.
 - 1. Flared Joints: Use ASME B16.26 fitting and flared ends, following procedures in CDA's "Copper Tube Handbook."
 - 2. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
 - 3. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
- G. Comply with requirements in Section 232300 "Refrigerant Piping" for installation and joint construction of refrigerant piping.

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
1. Perform electrical test and visual and mechanical inspection.
 2. Leak Test: After installation, charge systems with refrigerant and oil and test for leaks. Repair leaks, replace lost refrigerant and oil, and retest until no leaks exist.
 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation, product capability, and compliance with requirements.
 4. Verify that fan wheel is rotating in the correct direction and is not vibrating or binding.
 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

3.5 STARTUP SERVICE

- A. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
1. Inspect for physical damage to unit casings.
 2. Verify that access doors move freely and are weathertight.
 3. Clean units and inspect for construction debris.
 4. Verify that all bolts and screws are tight.
 5. Adjust vibration isolation and flexible connections.
 6. Verify that controls are connected and operational.
- B. Adjust fan belts to proper alignment and tension.
- C. Start unit according to manufacturer's written instructions and complete manufacturer's operational checklist.
- D. Measure and record airflows.
- E. Verify proper operation of capacity control device.
- F. After startup and performance test, lubricate bearings[**and adjust belt tension**].

3.6 ADJUSTING

- A. Adjust initial temperature and humidity set points.
- B. Set controls, burner, and other adjustments for optimum heating performance and efficiency. Adjust heat-distribution features, including shutters, dampers, and relays, to provide optimum heating performance and system efficiency.

3.7 CLEANING

- A. After completing installation, clean furnaces internally according to manufacturer's written instructions.
- B. Install new filters in each furnace within 14 days after Substantial Completion.

3.8 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain condensing units. Refer to Section 017900 "Demonstration and Training."
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235416.16

SECTION 235513.16 - GAS-FIRED DUCT HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes gas-fired duct heaters.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of gas-fired duct heater.
 - 1. Include rated capacities, operating characteristics, and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For gas-fired duct heaters[; **signed and sealed by a qualified professional engineer**]. Include plans, elevations, sections, and attachment details.
 - 1. Prepare by or under the supervision of a qualified professional engineer detailing fabrication and assembly of gas-fired duct heaters, as well as procedures and diagrams.
 - 2. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.
 - 3. Mounting Details: For securing and flashing roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
 - 4. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
 - 5. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 6. Startup service reports.
 - 7. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Structural members to which equipment will be attached.
 2. Items penetrating roof and the following:
 - a. Duct, vent, and gas piping rough-ins and connections.
 - b. **<Insert item>**.
- B. Seismic Qualification Certificates: For gas-fired duct heaters, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.
- D. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For gas-fired duct heaters to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.7 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace heat exchanger of gas-fired duct heater that fails in materials or workmanship within specified warranty period.
1. Warranty Period: Minimum **[two (2)] [five (5)] <Insert number>** years from date of Substantial Completion.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Lennox Industries, Inc.; Lennox International.](#)
 2. [Modine Manufacturing Company.](#)
 3. [Reznor/Thomas & Betts Corporation.](#)
 4. [Sterling HVAC Products; Div. of Mestek Technology Inc.](#)
 5. **<Insert manufacturer's name>.**
 6. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. **Seismic Performance:** Gas-fired duct heaters shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] **<Insert requirement>.**
1. **Seismic Fabrication Requirements:** Fabricate and reinforce suspension attachments of gas-fired duct heaters, accessories mountings, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when gas-fired duct heater is anchored to building structure.
 2. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
 3. **<Insert requirements for Component Amplification Factor and Component Response Modification Factor>.**
- B. **Electrical Components, Devices, and Accessories:** Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. **Capacities and Characteristics:**
1. Heat Exchanger: **[Aluminized] [Stainless]** steel.
 2. Burner Material: **[Aluminized steel with stainless-steel inserts] [Stainless steel]**.
 3. Venting: **[Gravity] [Power]** vented.
 4. Venting: Indoor, separated combustion, power vented.

- a. Concentric, Terminal Vent Assembly: Combined combustion-air inlet and power-vent outlet with wall or roof caps. Include adapter assembly for connection to inlet and outlet pipes, and flashing for wall or roof penetration.
5. Flue Outlet: <Insert inches (mm)> in diameter.
6. Gas Input: <Insert Btu/h (kW)>.
7. Gas Output: <Insert Btu/h (kW)>.
8. Gas Control Valve: [**Single stage**] [**Two stage**] [**Modulating**].
9. Annual Fuel Utilization Efficiency: [**80**] <Insert number> percent.
10. Minimum Airflow: <Insert cfm (L/s)>.
11. External Static Pressure: <Insert inches wg (kPa)>.

2.3 MANUFACTURED UNITS

- A. Description: Factory assembled, piped, and wired; and complying with ANSI Z83.8/CSA 2.6.
- B. Fuel Type: Design burner for [**natural**] [**propane**] gas having characteristics same as those of gas available at Project site.
- C. Indoor External Housing: Steel cabinet with integral support inserts and removable bottom arranged to serve as drain pan.
 1. External Casings and Cabinets: [**Baked enamel**] [**Powder coating**] over corrosion-resistant-treated surface.
- D. Outdoor External Housing: Weatherproof steel cabinet with integral support inserts and removable bottom arranged to serve as drain pan.
 1. External Casings and Cabinets: [**Baked enamel**] [**Powder coating**] over corrosion-resistant-treated surface.
- E. Internal Casing: Aluminized steel, arranged to contain airflow, with duct flanges at inlet and outlet.
- F. Power Venter: Integral, motorized centrifugal fan interlocked with gas valve.
- G. Controls: Regulated redundant gas valve containing pilot solenoid valve, electric gas valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
 1. Ignition: [**Standing pilot**] [**Electronically controlled electric spark with flame sensor**].
 2. Fan Thermal Switch: Operates fan on heat-exchanger temperature.
 3. Vent Flow Verification: [**Flame rollout switch**] [**Differential pressure switch to verify open vent**].
 4. Control transformer.
 5. High Limit: Thermal switch or fuse to stop burner.
 6. Thermostat: Devices and wiring are specified in Section 230923.27 "Temperature Instruments."

7. Thermostat: Single-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.
8. Thermostat: Two-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.
9. Thermostat: Single-stage type with duct-mounted sensor and 50 to 90 deg F (10 to 32 deg C) operating range.
10. Thermostat: Two-stage type with duct-mounted sensor and 50 to 90 deg F (10 to 32 deg C) operating range.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install and connect gas-fired duct heaters and associated fuel and vent features and systems according to [NFPA 54] [CSA B149.1], applicable local codes and regulations, and manufacturer's written instructions.
- B. Suspended Units: Suspend from substrate using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.
 1. Spring hangers are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
 2. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for spring hangers and seismic restraints.
 3. Restrain the unit to resist code-required horizontal acceleration.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to gas-fired duct heaters, allow space for service and maintenance.
- C. Gas Piping: Comply with [Section 231123 "Facility Natural-Gas Piping."] [Section 231126 "Facility Liquefied-Petroleum Gas Piping."] Connect gas piping to gas train inlet; provide union with enough clearance for burner removal and service.
- D. Vent Connections: Comply with Section 235123 "Gas Vents."
- E. Duct Connections: Comply with [Section 233113 "Metal Ducts."] [Section 233116 "Nonmetal Ducts."]
- F. Electrical Connections: Comply with applicable requirements in electrical Sections.
 1. Install electrical devices furnished with heaters but not specified to be factory mounted.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 2. Verify bearing lubrication.
 - 3. Verify proper motor rotation.
 - 4. Test Reports: Prepare a written report to record the following:
 - a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- C. Gas-fired duct heater will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Adjust initial temperature and humidity set points.
- B. Adjust burner and other unit components for optimum heating performance and efficiency.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain gas-fired duct heaters.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235513.16

SECTION 235523.13 - LOW-INTENSITY, GAS-FIRED, RADIANT HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes low-intensity, gas-fired, [**forced-draft**] [**draft-induced**] [**multiple-burner**] radiant heaters.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's literature and data indicating rated capacities, operating characteristics, electrical characteristics and wiring diagrams, weights, electrical nameplate data, and furnished specialties and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Signed, sealed, and prepared by or under the supervision of a qualified professional engineer.
 - 2. Include plans, elevations, sections, and [**mounting**] [**attachment**] details.
 - 3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 4. Detail fabrication and assembly of high-intensity, gas-fired, radiant heaters, as well as procedures and diagrams.
 - 5. Include diagrams for power[, **signal, and control**] wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Structural members to which equipment will be attached.
2. Gas piping to heater installations
3. Thermostats and wiring to heaters.
4. Heater locations and clearance requirements.
5. Other suspended ceiling components including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Sprinklers.
 - d. **<Insert item>**.

B. Field quality-control reports.

C. Sample Warranty: For manufacturer's special warranties.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For gas-fired, radiant heaters to include in emergency, operation, and maintenance manuals.

1. Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listing.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Igniter: Provide **[One (1)] <Insert number>** hot-surface burner igniter(s) for each style of high-intensity, gas-fired, radiant heater furnished.

1.7 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of radiant heaters that fail in materials or workmanship within specified warranty period.

1. Warranty Period: All warranty periods listed below are from date of Substantial Completion.
 - a. Burner Assembly: Minimum **[three (3)] [five (5)] [ten (10)] <Insert number>** years.
 - b. Combustion and Emitter Tubes: Minimum **[two (2)] [three (3)] [five (5)] <Insert number>** years.

- c. Heater Controls: One (1) <Insert number> year(s).

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. CSA certified, with CSA Seal and certification number clearly visible on units indicating compliance with ANSI Z83.20/CSA 2.34.
- B. UL listed and labeled, with UL label clearly visible on units indicating compliance with ANSI Z83.20/CSA 2.34.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 FORCED-DRAFT HEATERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Calcana Industries Ltd.](#)
 2. [Combustion Research Corporation.](#)
 3. [Detroit Radiant Products Company.](#)
 4. [Roberts-Gordon, LLC.](#)
 5. [Schwank Inc.](#)
 6. [Solaronics, Inc.](#)
 7. [Space-Ray; Division of Gas Fired Products, Inc.](#)
 8. [Sterling HVAC Products; a Mestek company.](#)
 9. [Thomas & Betts Corporation; a member of the ABB Group.](#)
 10. <Insert manufacturer's name>.
 11. or approved equal.
- B. Description: Factory-assembled, [**indoor**] [**outdoor**], overhead-mounted, electrically controlled, low-intensity, infrared radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup.
- C. Fuel Type: Design burner for [**natural**] [**propane**] gas having characteristics same as those of gas available at Project site.

D. Burner Assembly:

1. Combustion-Air Inlet: Non-ducted, unvented.
2. Combustion-Air Inlet: Ducted horizontal to outdoors through sidewall with vent caps.
3. Combustion-Air Inlet: Ducted vertical to outdoors through roof with vent caps.
4. Burner Control Housing: **[Stainless steel] [Corrosion-resistant, aluminized steel] [Steel]**.
 - a. Totally enclosed with **[stainless-steel] [steel]** access cover.
 - b. Sight glass for visual inspection of burner.
 - c. Finish: **[Enameled finish] [or] [powder-coated finish]**.
5. Burner: **[Stainless steel] [One-piece cast iron]**.
6. Ignition System: **[Silicon carbide hot-surface igniter] [Direct spark] [24/25-V ac] [115/120-V ac]** with flame rod sensing capabilities[**and self-diagnostic control module**].
7. Combustion Blower Fan: Dynamically balanced, direct-driven, forward-curved fan with **[cast-aluminum-alloy] [stainless-steel]** <Insert material> impeller and **[aluminized-]steel** housing, with a minimum temperature rating of **450 deg F** (232 deg C).
8. Motors: General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor: Resilient-mounted, capacitor-start-capacitor-run type with sealed ball bearings; totally enclosed, nonventilated type with internal thermal protection.
 - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

E. Combustion Chamber: **4-inch-** (100-mm-) diameter, **[12] [16]**-gage, **[aluminized] [titanium-coated aluminized] [stainless] [hot-rolled]**-steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish. Chambers shall be equipped with sight glass for burner and pilot flame observation.

F. Emitter Tube: **4-inch-** (100-mm-) **[3-inch-** (76-mm-)] diameter, **[12] [16]**-gage, **[aluminized] [hot-rolled] [stainless] [titanium-coated aluminized]**-steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish.**[Emitter tubing shall be equipped with baffles to maximize heating efficiency.]**

1. Tubing Connections: **[Stainless-steel threaded couplings] [Interlocking flare joints with stainless-steel draw bolts] [Compression couplings made from aluminized or stainless steel]**.
2. **[90] [180]**-degree-bend emitter steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish.
3. Exhaust Vent Termination: **[Vertical through roof] [Horizontal though side wall]** with vent caps.

- G. Reflector: **[Polished aluminum] [Polished stainless steel] [High-grade steel with a heat- and corrosion-resistant, hot-bonded, aluminum-silicon alloy coating]**, with end caps. Shape to control radiation from tubing for uniform intensity at floor level with 100 percent cutoff above centerline of tubing. Reflectors or entire heater shall accommodate rotational adjustment from horizontal to a minimum 30-degree tilt from vertical.
- H. Accessories:
1. Reflector Extension Shields: Same material as reflectors, arranged for fixed connection to lower reflector lip and rigid support to provide 100 percent cutoff of direct radiation from tubing at angles greater than 30 degrees from vertical.
 2. Protective grilles mounted to reflectors to protect emitter tubing.
 3. Stainless-steel flexible connector with manual valve for gas supply.
 4. Hanger chain with "S" hooks.
 5. **3/16-inch- (5-mm-)** diameter, **[galvanized][aluminized]**-steel wire tubing hangers and reflector supports.
 6. Rigid mounting kits.
 7. Outdoor use conversion kit.
 8. Clearance warning plaque.
- I. Capacities and Characteristics:
1. Gas Input: **<Insert Btu/h (kW)>**.
 2. Gas Output: **<Insert Btu/h (kW)>**.
 3. Fuel-Supply Connection: **<Insert inches (mm)>**.
 4. Combustion-Air Fan Motor Size: **<Insert value>** hp.
 - a. Volts: **[120] [208] [230] <Insert value>** V.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.3 DRAFT-INDUCED HEATERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Combustion Research Corporation](#).
 2. [Detroit Radiant Products Company](#).
 3. [Roberts-Gordon, Inc.](#)
 4. [Schwank Inc.](#)
 5. [Solaronics, Inc.](#)
 6. [Space-Ray; Division of Gas Fired Products, Inc.](#)
 7. **<Insert manufacturer's name>**.
 8. or approved equal.

- B. Description: Factory-assembled, [**indoor**] [**outdoor**], overhead-mounted, electrically controlled, low-intensity, infrared radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup.
- C. Fuel Type: Design burner for [**natural**] [**propane**] gas having characteristics same as those of gas available at Project site.
- D. Burner Assembly:
1. Combustion-Air Inlet: Non-ducted, unvented.
 2. Combustion-Air Inlet: Ducted horizontal to outdoors through sidewall with vent caps.
 3. Combustion-Air Inlet: Ducted vertical to outdoors through roof with vent caps.
 4. Burner Control Housing: [**Stainless steel**] [**Corrosion-resistant, aluminized steel**] [**Steel**].
 - a. Totally enclosed with [**stainless-steel**] [**steel**] access cover.
 - b. Sight glass for visual inspection of burner.
 - c. Finish: [**Enameled finish**] [**or**] [**powder-coated finish**].
 5. Burner: [**Stainless steel**] [**One-piece cast iron**].
 6. Ignition System: [**Silicon carbide hot-surface igniter**] [**Direct spark**] [**24/25-V ac**] [**115/120-V ac**] with flame rod sensing capabilities[**and self-diagnostic control module**].
 7. Combustion Blower Fan: Dynamically balanced, direct-driven, forward-curved fan with [**cast-aluminum-alloy**] [**stainless-steel**] <Insert material> impeller and [**aluminized-**]steel housing, with a minimum temperature rating of 450 deg F (232 deg C).
 8. Motors: General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor: Resilient-mounted, capacitor-start-capacitor-run type with sealed ball bearings; totally enclosed, nonventilated type with internal thermal protection.
 - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- E. Combustion Chamber: 4-inch- (100-mm-) diameter, [**12**] [**16**]-gage, [**aluminized**] [**titanium-coated aluminized**] [**stainless**] [**hot-rolled**]-steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish. Chambers shall be equipped with sight glass for burner and pilot flame observation.
- F. Emitter Tube: [4-inch- (100-mm-)] [3-inch- (76-mm-)] diameter, [**12**] [**16**]-gage, [**aluminized**] [**hot-rolled**] [**stainless**] [**titanium-coated aluminized**]-steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish.[**Emitter tubing shall be equipped with baffles to maximize heating efficiency.**]

1. Tubing Connections: [**Stainless-steel threaded couplings**] [**Interlocking flare joints with stainless-steel draw bolts**] [**Compression couplings made from aluminized or stainless steel**].
 2. [**90**] [**180**]-degree-bend emitter steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish.
- G. Vacuum Exhaust Fan: Dynamically balanced, direct-driven, [**cast-aluminum-alloy**] [**stainless-steel**] impeller in aluminized-steel housing, isolated from emitter tubing exhaust system by high-temperature flexible vibration isolation connector. Fan and connector to have a minimum temperature rating of **450 deg F** (**232 deg C**).
1. Motors: General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor: Resilient-mounted, capacitor-start-capacitor-run type with sealed ball bearings; totally enclosed, nonventilated type with internal thermal protection.
 - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 2. Balancing Dampers: Plate type, mounted in cast, double-flange fitting with vacuum test plug.
 3. Filter: Cartridge type for mounting on burner housing.
 4. Exhaust Vent Termination: [**Vertical through roof**] [**Horizontal though side-wall**] with vent caps.
- H. Reflector: [**Polished aluminum**] [**Polished stainless steel**] [**High-grade steel with a heat- and corrosion-resistant, hot-bonded, aluminum-silicon alloy coating**], with end caps. Shape to control radiation from tubing for uniform intensity at floor level with 100 percent cutoff above centerline of tubing. Reflectors or entire heater shall accommodate rotational adjustment from horizontal to a minimum 30-degree tilt from vertical.
- I. Accessories:
1. Reflector Extension Shields: Same material as reflectors, arranged for fixed connection to lower reflector lip and rigid support to provide 100 percent cutoff of direct radiation from tubing at angles greater than 30 degrees from vertical.
 2. Protective grilles mounted to reflectors to protect emitter tubing.
 3. Stainless-steel flexible connector with manual valve for gas supply.
 4. Hanger chain with "S" hooks.
 5. **3/16-inch-** (**5-mm-**) diameter, [**galvanized**][**aluminized**]-steel wire tubing hangers and reflector supports.
 6. Rigid mounting kits.
 7. Outdoor use conversion kit.
 8. Clearance warning plaque.
- J. Capacities and Characteristics:

1. Gas Input: <Insert Btu/h (kW)>.
2. Gas Output: <Insert Btu/h (kW)>.
3. Fuel-Supply Connection: <Insert inches (mm)>.
4. Combustion-Air Fan Motor Size: <Insert value> hp.
 - a. Volts: [120] [208] [230] <Insert value> V.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
5. Vacuum Exhaust Fan Motor Size: <Insert value> hp.
 - a. Volts: [120] [208] [230] <Insert value> V.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

2.4 MULTIPLE-BURNER HEATERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Combustion Research Corporation](#).
 2. [Detroit Radiant Products Company](#).
 3. [Roberts-Gordon, Inc.](#)
 4. <Insert manufacturer's name>.
 5. or approved equal.
- B. Description: Factory-assembled, [indoor] [outdoor], overhead-mounted, electrically controlled, low-intensity, infrared radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup.
- C. Fuel Type: Design burner for [natural] [propane] gas having characteristics same as those of gas available at Project site.
- D. Burner Assembly: <Insert drawing designation>.
1. Combustion-Air Inlet: Non-ducted, unvented.
 2. Combustion-Air Inlet: Ducted horizontal to outdoors through sidewall with vent caps.
 3. Combustion-Air Inlet: Ducted vertical to outdoors through roof with vent caps.
 4. Burner Control Housing: [Stainless steel] [Corrosion-resistant, aluminized steel] [Steel].

- a. Totally enclosed with **[stainless-steel]** **[steel]** access cover.
 - b. Sight glass for visual inspection of burner.
 - c. Finish: **[Enameled finish]** **[or]** **[powder-coated finish]**.
5. Burner: **[Stainless steel]** **[One-piece cast iron]**.
6. Ignition System: **[Silicon carbide hot-surface igniter]** **[Direct spark]** **[24/25-V ac]** **[115/120-V ac]** with flame rod sensing capabilities **[and self-diagnostic control module]**.
7. Combustion Blower Fan: Dynamically balanced, direct-driven, forward-curved fan with **[cast-aluminum-alloy]** **[stainless-steel]** **<Insert material>** impeller and **[aluminized-]**steel housing, with a minimum temperature rating of **450 deg F (232 deg C)**.
8. Motors: General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- a. Motor: Resilient-mounted, capacitor-start-capacitor-run type with sealed ball bearings; totally enclosed, nonventilated type with internal thermal protection.
 - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- E. Combustion Chamber: **4-inch- (100-mm-)** diameter, **[12]** **[16]**-gage, **[aluminized]** **[titanium-coated aluminized]** **[stainless]** **[hot-rolled]**-steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish. Chambers shall be equipped with sight glass for burner and pilot flame observation.
- F. Emitter Tube: **[4-inch- (100-mm-)]** **[3-inch- (76-mm-)]** diameter, **[12]** **[16]**-gage, **[aluminized]** **[hot-rolled]** **[stainless]** **[porcelain-lined]** **[titanium-coated aluminized]**-steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish. **[Emitter tubing shall be equipped with baffles to maximize heating efficiency.]**
1. Tubing Connections: **[Stainless-steel threaded couplings]** **[Interlocking flare joints with stainless-steel draw bolts]** **[Compression couplings made from aluminized or stainless steel]**.
 2. **[90-degree bends]** **[180-degree bends]** **[Tee fittings]** **[Cross fittings]** made from **[stainless steel]** with corrosion-resistant, high-temperature black coating.
 3. Condensing Tubing: **4-inch- (100-mm-)** diameter, stainless-steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish.
- G. Vacuum Exhaust Fan: Dynamically balanced, direct-driven, **[cast-aluminum-alloy]** **[stainless-steel]** impeller in aluminized-steel housing, isolated from emitter tubing exhaust system by high-temperature flexible vibration isolation connector. Fan and connector to have a minimum temperature rating of **450 deg F (232 deg C)**.
1. See **[Section 230548 "Vibration and Seismic Controls for HVAC"]** **[Section 230548.13 "Vibration Controls for HVAC"]** for mounting vacuum exhaust fan.
 2. Motors: General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

- a. Motor: Resilient-mounted, capacitor-start-capacitor-run type with sealed ball bearings; totally enclosed, nonventilated type with internal thermal protection.
 - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
3. Balancing Dampers: Plate type, mounted in cast, double-flange fitting with vacuum test plug.
 4. Filter: Cartridge type for mounting on burner housing.
 5. Exhaust Vent Termination: **[Vertical through roof] [Horizontal though side wall]** with vent caps.
- H. Reflector: **[Polished aluminum] [Polished stainless steel] [High-grade steel with a heat- and corrosion-resistant, hot-bonded, aluminum-silicon alloy coating]**, with end caps. Shape to control radiation from tubing for uniform intensity at floor level with 100 percent cutoff above centerline of tubing. Reflectors shall accommodate rotational adjustment from horizontal to a minimum 30-degree tilt from vertical.
- I. Accessories:
1. Reflector Extension Shields: Same material as reflectors, arranged for fixed connection to lower reflector lip and rigid support to provide 100 percent cutoff of direct radiation from tubing at angles greater than 30 degrees from vertical.
 2. Protective grilles mounted to reflectors to protect emitter tubing.
 3. Stainless-steel flexible connector with manual valve for gas supply.
 4. Hanger chain with "S" hooks.
 5. **3/16-inch- (5-mm-)** diameter, **[galvanized][aluminized]**-steel wire tubing hangers and reflector supports.
 6. Rigid mounting kits.
 7. Outdoor use conversion kit.
 8. Clearance warning plaque.
- J. Capacities and Characteristics:
1. Gas Input: **<Insert Btu/h (kW)>**.
 2. Gas Output: **<Insert Btu/h (kW)>**.
 3. Fuel-Supply Connection: **<Insert inches (mm)>**.
 4. Combustion-Air Fan Motor Size: **<Insert value>** hp.
 - a. Volts: **[120] [208] [230] <Insert value>** V.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
 5. Vacuum Exhaust Fan Motor Size: **<Insert value>** hp.
 - a. Volts: **[120] [208] [230] <Insert value>** V.

- b. Phase: [**Single**] [**Three**].
- c. Hertz: 60.
- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

2.5 CONTROLS AND SAFETIES

- A. Gas Control Valve: [**Single**] [**Two**]-stage, regulated redundant 24-V ac gas valve that contains pilot solenoid valve, electric gas valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
- B. Failure Safeguards: 100 percent shutoff of gas flow in the event of flame or power failure.
- C. Prepurge of [**15**] [**30**] [**45**] seconds of air control system prior to burner ignition.
- D. Safety lockout of burner after [**three consecutive ignition failures**] [**flame is not reestablished within trial ignition period**].
- E. Blocked Vent Safety: Differential pressure switch in burner safety circuit to stop burner operation with high discharge or suction pressure.
- F. Control Panel Interlock: Stops burner if panel is open.
- G. Indicator Lights: ["**Airflow-on**"] [**and**] ["**burner-on**"] indicator lights.
- H. Thermostat: Devices and wiring are specified in Section 230923.27 "Temperature Instruments."
- I. Thermostat: Single-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.
 - 1. Control Transformer: Integrally mounted.
- J. Thermostat: Two-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.
 - 1. Control Transformer: Integrally mounted.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that space is ready for installation of systems and openings are as indicated on shop drawings.
- B. Verify that proper power supply is available.

- C. Examine structures, substrates, areas and conditions, with Installer present, for compliance with requirements for installation tolerances, required clearances, and other conditions affecting performance of the Work.
- D. Examine roughing-in for fuel-gas piping to verify actual locations of piping connections before equipment installation.
- E. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Equipment Installation: Install gas-fired, radiant heaters and associated gas features and systems according to **[NFPA 54] [CSA B149.1]**.
- B. Suspended Units: **[Suspend from substrate using chain hanger kits and building attachments] [Mount to substrate using manufacturer's rigid mounting kits or custom fabricated brackets]**.
 - 1. Restrain the unit to resist seismic acceleration. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- C. Maintain manufacturers' recommended clearances for combustibles.

3.3 CONNECTIONS

- A. Gas Piping: Comply with **[Section 231123 "Facility Natural-Gas Piping."]** **[Section 231126 "Facility Liquefied-Petroleum Gas Piping."]** Connect gas piping to gas train inlet; provide union with enough clearance for burner removal and service.
 - 1. Gas Connections: Connect gas piping to radiant heaters according to **[NFPA 54] [CSA B149.1]**.
- B. Where installing piping adjacent to gas-fired, radiant heaters, allow space for service and maintenance.
- C. Vent Connections: Comply with Section 233113 "Metal Ducts" and with Section 235123 "Gas Vents."
- D. Electrical Connections: Comply with applicable requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - 1. Install electrical devices furnished with heaters but not specified to be factory mounted.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 2. Verify bearing lubrication.
 - 3. Verify proper motor rotation.
 - 4. Test Reports: Prepare a written report to record the following:
 - a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- C. Gas-fired, radiant heaters will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Adjust initial-temperature set points.
- B. Adjust burner and other unit components for optimum heating performance and efficiency.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain gas-fired, radiant heaters.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235523.13

SECTION 235523.16 - HIGH-INTENSITY, GAS-FIRED, RADIANT HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. High-intensity, infrared, gas-fired, radiant heaters.
 - 2. Gas-fired, outdoor, infrared patio heaters.
- B. Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Signed, sealed, and prepared by or under the supervision of a qualified professional engineer.
 - 2. Include plans, elevations, sections, and [mounting] [attachment] details.
 - 3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 4. Detail fabrication and assembly of high-intensity, gas-fired, radiant heaters, as well as procedures and diagrams.
 - 5. Include diagrams for power[, **signal, and control**] wiring.

- C. Delegated-Design Submittal: For gas-fired, radiant heaters.
 - 1. Include design calculations for seismic restraints.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Structural members to which equipment will be attached.
 - 2. Gas piping to heater installations
 - 3. Thermostats and wiring to heaters.
 - 4. Heater locations and clearance requirements.
 - 5. Other suspended ceiling components:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Sprinklers.
 - d. <Insert item>.
- B. Field quality-control reports.
- C. Sample Warranty: For manufacturer's special warranties.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For gas-fired, radiant heaters to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Igniter: Provide [**One (1)**] <Insert number> hot-surface burner igniter(s) for each style of high-intensity, gas-fired, radiant heater furnished.

1.7 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of radiant heaters that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods.

1. Warranty Period: All warranty periods listed below are from date of Substantial Completion.
 - a. Ceramic Tiles: Minimum **[three (3)] [five (5)] [ten (10)] [fifteen (15)] <Insert number>** years.
 - b. Heater Components: Minimum **[one (1)] [three (3)] [five (5)] [ten (10)] <Insert number>** year(s).

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Comply with **[ANSI Z83.19A/CSA 2.35A] [ANSI Z83.26/CSA 2.37]**.
 1. CSA certified, with CSA Seal and certification number clearly visible on units.
 2. UL listed and labeled, with UL label clearly visible on units.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 HIGH-INTENSITY, INFRARED, GAS-FIRED, RADIANT HEATERS **<Insert drawing designation>**

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Combustion Research Corporation.](#)
 2. [Detroit Radiant Products Company.](#)
 3. [Roberts-Gordon Inc.](#)
 4. [Schwank Inc.](#)
 5. [Solaronics, Inc.](#)
 6. [Space-Ray; Division of Gas Fired Products, Inc.](#)
 7. [Sterling HVAC Products; a Mestek company.](#)
 8. [Thomas & Betts Corporation.](#)
 9. **<Insert manufacturer's name>**.
 10. or approved equal.

- B. Factory-assembled, [**indoor**] [**outdoor**], overhead-mounted, electrically controlled, high-intensity, infrared, radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup.
- C. Fuel Type: Design burner for [**natural**] [**propane**] gas having characteristics same as those of gas available at Project site.
- D. Main Housing: Continuous, one-piece, [**aluminized**] [**stainless**]-steel unit without gaps between housing and reflectors.
- E. Burner Assembly:

Either material may be obtained with or without third option.

- 1. Modular, [**aluminized steel with powder-coat or similar finish**] [**stainless-steel**] plenum chamber [**coated with ceramic fiber insulation**] secured with stainless-steel retainers.
- F. Emitter: Perforated ceramic tiles.
- G. Reflector: [**One-sided, bright-polished aluminum**] [**High-grade steel with cold-bonded, polished-aluminum layer**] [**Aluminized steel**].
- H. Ignition:
 - 1. Manual Pilot: Self-energizing with no external power connection.
 - 2. Direct Spark: [**24/25**] [**115/120**]-V ac, solid-state ignition module with spark electrode and flame sensor.

Consult manufacturers for applications in environments with high humidity or moisture levels.

- 3. Potted circuitry.
- I. Accessories:
 - 1. [**Parabolic reflector**] [**Reflector extensions**].
 - 2. Wire grid or expanded metal secondary emitter for increased efficiency.
 - 3. Protective screen and heat-deflector shield.
 - 4. Stainless-steel flexible connector with manual valve for gas supply.
 - 5. Hanger chain with "S" hooks.
 - 6. Preassembled chain suspension kit.
 - 7. Rigid mounting kits.
 - 8. Clearance warning plaque.
 - 9. Two-stage operation.
- J. Capacities and Characteristics:
 - 1. Gas Input: <Insert Btu/h (kW)>.
 - 2. Gas Output: <Insert Btu/h (kW)>.
 - 3. Electrical Characteristics:

- a. Volts: [**Millivolt**] [24/25] [115/120] <Insert value>.
- b. Phase: Single.
- c. Hertz: 60.
- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

Delete paragraph if angle is indicated on Drawings. Heaters can be mounted horizontal or to any angle up to and including 35 degrees from horizontal.

- K. Mounting Angle: <Insert value> degrees.

2.3 GAS-FIRED, OUTDOOR, INFRARED PATIO HEATERS <Insert drawing designation>

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Combustion Research Corporation.](#)
2. [Detroit Radiant Products Company.](#)
3. [Roberts-Gordon, Inc.](#)
4. [Schwank Inc.](#)
5. [Solaronics, Inc.](#)
6. [Space-Ray; Division of Gas Fired Products, Inc.](#)
7. [Sterling HVAC Products; a Mestek company.](#)
8. [Thomas & Betts Corporation.](#)
9. <Insert manufacturer's name>.
10. or approved equal.

- B. Factory-assembled, [**indoor**] [**outdoor**], overhead-mounted, electrically controlled, high-intensity, infrared, radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup.

- C. Fuel Type: Design burner for [**natural**] [**propane**] gas having characteristics same as those of gas available at Project site.

- D. Main Housing: Continuous, one-piece, [**aluminized**] [**stainless**]-steel unit without gaps between housing and reflectors.

1. Air vents with cooling channels.
2. Air louvers.
3. Decorative grill.

- E. Burner Assembly:

Either material may be obtained with or without third option.

1. Modular, [**aluminized-steel with powder-coat or similar finish**]
[**stainless-steel**] plenum chamber [**coated with ceramic fiber insulation**]
]secured with stainless-steel retainers.

F. Emitter: Perforated ceramic tiles.

G. Reflector: [**Polished stainless steel**] <Insert material>.

H. Ignition:

1. Direct Spark: [**24/25**] [**115/120**]-V ac, solid-state ignition module with spark electrode and flame sensor.

Consult manufacturers for applications in environments with high humidity or moisture levels.

2. Potted circuitry.

I. Accessories:

1. Wire grid or expanded metal secondary emitter for increased efficiency.
2. Protective screen and heat-deflector shield.
3. Stainless-steel flexible connector with manual valve for gas supply.
4. Hanger chain with "S" hooks.
5. Preassembled chain suspension kit.
6. Rigid mounting kits.
7. Clearance warning plaque.

J. Capacities and Characteristics:

1. Gas Input: <Insert Btu/h (kW)>.
2. Gas Output: <Insert Btu/h (kW)>.
3. Electrical Characteristics:
 - a. Volts: [**24/25**] [**115/120**] <Insert value>.
 - b. Phase: Single.
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

K. Mounting Angle: <Insert value> degrees.

2.4 CONTROLS AND SAFETIES

A. Failure Safeguards: 100 percent main gas shutoff on [**pilot**] [**pilot or power**] failure.

B. Thermostat: Devices and wiring are specified in Section 230923.27 "Temperature Instruments."

C. Thermostat: Single-stage, wall-mounted type with **50 to 90 deg F** (10 to 32 deg C) operating range and fan on switch.

1. Control Transformer: Integrally mounted.
- D. Thermostat: Two-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.
1. Control Transformer: Integrally mounted.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine structures, substrates, areas and conditions, with Installer present, for compliance with requirements for installation tolerances, required clearances, and other conditions affecting performance of the Work.
- B. Examine roughing-in for fuel-gas piping to verify actual locations of piping connections before equipment installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Equipment Mounting: Install gas-fired, infrared heaters with continuous-thread hanger rods and spring hangers[**with vertical-limit stop**] of size required to support weight of heaters.

Retain first for projects in seismic areas; retain second for projects not in seismic areas. Indicate vibration isolation and seismic-control device type and minimum deflection in supported equipment schedule on Drawings.

1. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 2. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
 3. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Equipment Installation: Install gas-fired, radiant heaters and associated gas features and systems according to **[NFPA 54] [CSA B149.1]**.
- C. Suspended Units: **[Suspend from substrate using chain hanger kits and building attachments] [Mount to substrate using rigid mounting kits or brackets, supplied by manufacturer or manufactured].**

1. Restrain the unit to resist seismic acceleration. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- D. Maintain manufacturers' recommended clearances for combustibles.

3.3 CONNECTIONS

If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Gas Piping: Comply with [Section 231123 "Facility Natural-Gas Piping."] [Section 231126 "Facility Liquefied-Petroleum Gas Piping."] Connect gas piping to gas train inlet; provide union with enough clearance for burner removal and service.
1. Gas Connections: Connect gas piping to radiant heaters according to [NFPA 54] [CSA B149.1].
- B. Where installing piping adjacent to gas-fired, radiant heaters, allow space for service and maintenance.
- C. Electrical Connections: Comply with applicable requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
1. Install electrical devices furnished with heaters but not specified to be factory mounted.

3.4 ADJUSTING

- A. Adjust initial-temperature set points.
- B. Adjust burner and other unit components for optimum heating performance and efficiency.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 2. Verify bearing lubrication.
 3. Verify proper motor rotation.

4. Test Reports: Prepare a written report to record the following:

- a. Test procedures used.
- b. Test results that comply with requirements.
- c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

C. Gas-fired, radiant heaters will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 ADJUSTING

A. Adjust initial-temperature set points.

B. Adjust burner and other unit components for optimum heating performance and efficiency.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain gas-fired, radiant heaters.

- 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235523.16

SECTION 235700 - HEAT EXCHANGERS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes [**shell-and-tube**] [**and**] [**plate**] heat exchangers.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. TEMA: Tubular Exchanger Manufacturers Association.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Provide data with dimensions, locations, and size of tapings and performance data.
 - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Design Calculations: Calculate requirements for selecting seismic restraints and for designing bases.
 - 2. Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
 - 3. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

4. Test Reports: Indicate tube bundle pressure tests.

C. Delegated-Design Submittal: Details and design calculations for seismic restraints for heat exchangers.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Equipment room, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Tube-removal space.
2. Structural members to which heat exchangers will be attached.

B. Seismic Qualification Certificates: For heat exchanger, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Heat Exchanger: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of heat exchanger anchorage devices on which certification is based and their installation requirements.

C. Product Certificates: For each type of shell-and-tube heat exchanger. Documentation that shell-and-tube heat exchangers comply with "TEMA Standards."

1. Certificates: Certify that [**Products**] <Insert item> meet or exceed [**specified requirements.**]

D. Source quality-control reports.

E. Field quality-control reports.

F. Sample Warranty: For manufacturer's warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For heat exchangers to include in emergency, operation, and maintenance manuals.

1. Include start up and shut down instructions, assembly drawings, and spare parts lists.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, handle and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1
- B. Protect internals from entry of foreign material by temporary caps on flanged openings.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of domestic-water heat exchangers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Structural failures including heat exchanger, storage tank, and supports.
- b. Faulty operation of controls.
- c. Deterioration of metals, metal finishes, and other materials beyond normal use.

2. Warranty Periods: From date of Substantial Completion.

a. Shell-and-Tube, Domestic-Water Heat Exchangers:

- 1) Tube Coil: Minimum **[one (1)] <Insert number>** year(s).
- 2) Other Components: Minimum **[one (1)] <Insert number>** year(s).

b. Plate, Domestic-Water Heat Exchangers:

- 1) Brazed-Plate Type: Minimum **[one] <Insert number>** year(s).
- 2) Plate-and-Frame Type: Minimum **[one] <Insert number>** year(s).

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic restraints for heat exchangers.
- B. Seismic Performance: Heat exchangers shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
2. Component Importance Factor is [**1.5**] [**1.0**].
3. **<Insert requirements for Component Amplification Factor and Component Response Modification Factor>**.

2.2 SHELL-AND-TUBE HEAT EXCHANGERS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [API Heat Transfer Inc.](#)
2. [Armstrong Pumps, Inc.](#)
3. [ITT Corporation; Bell & Gossett.](#)
4. [TACO Incorporated.](#)
5. [Thrush Company, Inc.](#)
6. **<Insert manufacturer's name>**.
7. or approved equal.

B. Description: Packaged assembly of tank, heat-exchanger coils, and specialties.

C. Construction:

1. Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1.
2. Fabricate and label shell-and-tube heat exchangers to comply with "TEMA Standards."

D. Configuration: [**U-tube with removable**] [**Straight tube with removable**] [**Straight tube with fixed**] bundle.

E. Shell Materials: [**Steel**] [**Stainless steel**].

F. Head:

1. Materials: [**Cast iron**] [**Cast stainless steel**] [**Fabricated steel**] [**Fabricated steel with removable cover**] [**Fabricated stainless steel**] [**Fabricated stainless steel with removable cover**].
2. Flanged and bolted to shell.

G. Tube:

1. [**Seamless copper**] [**Steel**] [**Stainless-steel**] [**Cupronickel**] [**Admiralty-metal**] tubes.
2. Tube diameter is determined by manufacturer based on service.

H. Tubesheet Materials: [**Steel**] [**Stainless steel**].

I. Baffles: [**Steel**] [**Stainless steel**].

- J. Piping Connections: Factory fabricated of materials compatible with heat-exchanger shell. Attach tapings to shell before testing and labeling.
1. NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
 2. NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
- K. Support Saddles:
1. Fabricated of material similar to shell.
 2. Fabricate foot mount with provision for anchoring to support.
 3. Fabricate attachment of saddle supports to pressure vessel with reinforcement strong enough to resist heat-exchanger movement during seismic event when heat-exchanger saddles are anchored to building structure.
- L. Capacities and Characteristics:
1. General:
 - a. Shell Diameter: <Insert NPS (DN)>.
 - b. Heat-Exchanger Length: <Insert inches (mm)>.
 - c. Heat-Exchanger Surface Area: <Insert sq. ft. (sq. m)>.
 - d. Number of Passes: <Insert number>.
 - e. Heat Exchanged: <Insert Btu/h (kW)>.
 - f. Operating Weight: <Insert lb (kg)>.
 2. Shell Side:
 - a. Fluid: [Water] [Steam] <Insert type>.
 - b. Working Pressure: <Insert psig (kPa)>.
 - c. Supply Pressure: <Insert psig (kPa)>.
 - d. Steam Flow Rate: <Insert lb/h (kg/h)>.
 - e. Water Flow Rate: <Insert gpm (L/s)>.
 - f. Pressure Drop: <Insert psig (kPa)>.
 - g. Inlet Temperature: <Insert deg F (deg C)>.
 - h. Outlet Temperature: <Insert deg F (deg C)>.
 - i. Fouling Factor: <Insert value>.
 - j. Inlet Size: <Insert NPS (DN)>.
 - k. Outlet Size: <Insert NPS (DN)>.
 3. Tube Side:
 - a. Fluid: [Water] [Steam] <Insert type>.
 - b. Working Pressure: <Insert psig (kPa)>.
 - c. Supply Pressure: <Insert psig (kPa)>.
 - d. Steam Flow Rate: <Insert lb/h (kg/h)>.
 - e. Water Flow Rate: <Insert gpm (L/s)>.
 - f. Pressure Drop: <Insert psig (kPa)>.
 - g. Inlet Temperature: <Insert deg F (deg C)>.

- h. Outlet Temperature: <Insert deg F (deg C)>.
- i. Fouling Factor: <Insert value>.
- j. Inlet Size: <Insert NPS (DN)>.
- k. Outlet Size: <Insert NPS (DN)>.

2.3 GASKETED-PLATE HEAT EXCHANGERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Alfa Laval Inc.](#)
 - 2. [API Heat Transfer Inc.](#)
 - 3. [APV; a brand of SPX Corporation.](#)
 - 4. [Armstrong Pumps, Inc.](#)
 - 5. [Delta T Heat Exchangers.](#)
 - 6. [ITT Corporation; Bell & Gossett.](#)
 - 7. [Mueller, Paul, Company.](#)
 - 8. [Polaris Plate Heat Exchangers.](#)
 - 9. [SEC Heat Exchangers.](#)
 - 10. [TACO Incorporated.](#)
 - 11. [Thermo Dynamics Ltd.](#)
 - 12. [Tranter, Inc.](#)
 - 13. <Insert manufacturer's name>.
 - 14. or approved equal.
- B. Configuration: Freestanding assembly consisting of frame support, top and bottom carrying and guide bars, fixed and movable end plates, tie rods, individually removable plates, and one-piece gaskets.
- C. Construction: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1.
- D. Frame:
 - 1. Capacity to accommodate [20] <Insert number> percent additional plates.
 - 2. Painted carbon steel with provisions for anchoring to support.
- E. Top and Bottom Carrying and Guide Bars: Painted carbon steel, aluminum, or stainless steel.
 - 1. Fabricate attachment of heat-exchanger carrying and guide bars with reinforcement strong enough to resist heat-exchanger movement during seismic event when heat-exchanger carrying and guide bars are anchored to building structure.
- F. End-Plate Material: Painted carbon steel.
- G. Tie Rods and Nuts: Steel or stainless steel.

- H. Plate Material: [0.024 inch (0.6 mm)] [0.031 inch (0.8 mm)] [0.039 inch (1 mm)] <Insert thickness> thick before stamping; [Type 304] [Type 304L] [Type 316] [Type 316L] stainless steel.
- I. Gasket Materials: [Glued] [Glue free] [Nitrile rubber] [EPDM rubber] <Insert material>.
1. Glue: Chlorine free.
- J. Piping Connections: Factory fabricated of materials compatible with heat-exchanger shell. Attach tapings to shell before testing and labeling.
1. NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
 2. NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
- K. Enclose plates in solid [aluminum] [stainless-steel] removable shroud.
- L. Capacities and Characteristics:
1. General:
 - a. Heat-Exchanger Surface Area: <Insert sq. ft. (sq. m)>.
 - b. Number of Plates: <Insert number>.
 - c. Number of Passes: [One] <Insert number>.
 - d. Heat Exchanged: <Insert Btu/h (kW)>.
 - e. Operating Weight: <Insert lb (kg)>.
 2. Hot Side:
 - a. Fluid: [Water] [Steam] <Insert type>.
 - b. Working Pressure: <Insert psig (kPa)>.
 - c. Supply Pressure: <Insert psig (kPa)>.
 - d. Steam Flow Rate: <Insert lb/h (kg/h)>.
 - e. Water Flow Rate: <Insert gpm (L/s)>.
 - f. Pressure Drop: <Insert psig (kPa)>.
 - g. Inlet Temperature: <Insert deg F (deg C)>.
 - h. Outlet Temperature: <Insert deg F (deg C)>.
 - i. Fouling Factor: <Insert value>.
 - j. Inlet Size: <Insert NPS (DN)>.
 - k. Outlet Size: <Insert NPS (DN)>.
 3. Cold Side:
 - a. Fluid: [Water] [Steam] <Insert type>.
 - b. Working Pressure: <Insert psig (kPa)>.
 - c. Supply Pressure: <Insert psig (kPa)>.
 - d. Steam Flow Rate: <Insert lb/h (kg/h)>.
 - e. Water Flow Rate: <Insert gpm (L/s)>.

- f. Pressure Drop: **<Insert psig (kPa)>**.
- g. Inlet Temperature: **<Insert deg F (deg C)>**.
- h. Outlet Temperature: **<Insert deg F (deg C)>**.
- i. Fouling Factor: **<Insert value>**.
- j. Inlet Size: **<Insert NPS (DN)>**.
- k. Outlet Size: **<Insert NPS (DN)>**.

2.4 BRAZED-PLATE HEAT EXCHANGERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Alfa Laval Inc.](#)
2. [API Heat Transfer Inc.](#)
3. [APV; a brand of SPX Corporation.](#)
4. [Armstrong Pumps, Inc.](#)
5. [GEA PHE Systems North America Inc.](#)
6. [ITT Corporation; Bell & Gossett.](#)
7. [Mueller, Paul, Company.](#)
8. [Polaris Plate Heat Exchangers.](#)
9. [Tranter, Inc.](#)
10. **<Insert manufacturer's name>**.
11. or approved equal.

- B. Configuration: Brazed assembly consisting of embossed or pressed stainless-steel plates brazed together and two end plates, one with threaded nozzles and one with pattern-embossed plates.

- C. Construction: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1.

- D. End-Plate Material: Type 316 stainless steel.

- E. Threaded Nozzles: Type 316 stainless steel.

- F. Plate Material: Type 316 stainless steel.

- G. Brazing Material: **[Copper] [or] [nickel]**.

- H. Capacities and Characteristics:

1. General:

- a. Heat-Exchanger Surface Area: **<Insert sq. ft. (sq. m)>**.
- b. Heat Exchanged: **<Insert Btu/h (kW)>**.
- c. Operating Weight: **<Insert lb (kg)>**.

2. Hot Side:

- a. Fluid: **[Water] [Steam] <Insert type>**.

- b. Working Pressure: <Insert psig (kPa)>.
- c. Supply Pressure: <Insert psig (kPa)>.
- d. Steam Flow Rate: <Insert lb/h (kg/h)>.
- e. Water Flow Rate: <Insert gpm (L/s)>.
- f. Pressure Drop: <Insert psig (kPa)>.
- g. Inlet Temperature: <Insert deg F (deg C)>.
- h. Outlet Temperature: <Insert deg F (deg C)>.
- i. Fouling Factor: <Insert value>.
- j. Inlet Size: <Insert NPS (DN)>.
- k. Outlet Size: <Insert NPS (DN)>.

3. Cold Side:

- a. Fluid: **[Water] [Steam]** <Insert type>.
- b. Working Pressure: <Insert psig (kPa)>.
- c. Supply Pressure: <Insert psig (kPa)>.
- d. Steam Flow Rate: <Insert lb/h (kg/h)>.
- e. Water Flow Rate: <Insert gpm (L/s)>.
- f. Pressure Drop: <Insert psig (kPa)>.
- g. Inlet Temperature: <Insert deg F (deg C)>.
- h. Outlet Temperature: <Insert deg F (deg C)>.
- i. Fouling Factor: <Insert value>.
- j. Inlet Size: <Insert NPS (DN)>.
- k. Outlet Size: <Insert NPS (DN)>.

2.5 ACCESSORIES

A. Hangers and Supports:

- 1. Custom, steel **[supports] [cradles]** for mounting on **[floor] [wall] [structural steel]**.
 - a. Minimum Number of Cradles: <Insert number>.
- 2. **[Factory] [Field]**-fabricated steel **[supports] [cradles]** to ensure both horizontal and vertical support of heat exchanger. Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

B. Shroud: **[Steel] [Stainless-steel] [Aluminum]** sheet.

C. Miscellaneous Components for High-Temperature Hot-Water Unit: Control valve, valves, and piping. **[Include components fitted for pneumatic control.]**

D. Miscellaneous Components for Steam Unit: Strainers, steam-control valve, steam trap, valves, pressure gage, thermometer, and piping. **[Include components fitted for pneumatic control.]**

E. Pressure Relief Valves: **[Cast iron] [Steel] [Bronze] [Brass]**, <Insert NPS (DN)>, ASME rated and stamped.

1. Pressure relief valve setting: <Insert psig (kPa)>.

2.6 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect heat exchangers according to ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1. Affix ASME label.
- B. Hydrostatically test heat exchangers to minimum of one and one-half times pressure rating before shipment.
- C. Heat exchangers will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas for compliance with requirements for installation tolerances and for structural rigidity, strength, anchors, and other conditions affecting performance of heat exchangers.
- B. Examine roughing-in for heat-exchanger piping to verify actual locations of piping connections before equipment installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SHELL-AND-TUBE HEAT-EXCHANGER INSTALLATION

- A. Install in accordance with manufacturers instructions.
- B. Install to permit removal of tube bundle with minimum disturbance to installed equipment and piping.
- C. Equipment Mounting:
 1. Install heat exchangers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Install heat exchangers on saddle supports.

- E. Heat-Exchanger Supports: Use factory-fabricated steel cradles and supports specifically designed for each heat exchanger.

3.3 GASKETED-PLATE HEAT-EXCHANGER INSTALLATION

- A. Install in accordance with manufacturers instructions.
- B. Install to permit removal of plates with minimum disturbance to installed equipment and piping.
- C. Install gasketed-plate heat exchanger on custom-designed wall supports anchored to structure as indicated on Drawings.
- D. Install metal shroud over installed gasketed-plate heat exchanger according to manufacturer's written instructions.

3.4 BRAZED-PLATE HEAT-EXCHANGER INSTALLATION

- A. Install in accordance with manufacturers instructions.
- B. Install brazed-plate heat exchanger on custom-designed wall supports anchored to structure as indicated on Drawings.

3.5 CONNECTIONS

- A. Comply with requirements for piping specified in other Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements for steam and condensate piping specified in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties."
- C. Maintain manufacturer's recommended clearances for tube removal, service, and maintenance.
- D. Install piping adjacent to heat exchangers to allow space for service and maintenance of heat exchangers. Arrange piping for easy removal of heat exchangers.
- E. Install shutoff valves at heat-exchanger inlet and outlet connections.
- F. Install relief valves on heat-exchanger heated-fluid connection and install pipe relief valves, full size of valve connection, to floor drain.
- G. Install vacuum breaker at heat-exchanger steam inlet connection.
- H. Install hose end valve to drain shell.

- I. Install thermometer on heat-exchanger and[**inlet and**] outlet piping, and install thermometer on heating-fluid[**inlet and**] outlet piping. Comply with requirements for thermometers specified in Section 230519 "Meters and Gages for HVAC Piping."
- J. Install pressure gages on heat-exchanger and heating-fluid piping. Comply with requirements for pressure gages specified in Section 230519 "Meters and Gages for HVAC Piping."

3.6 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Heat exchanger will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.7 CLEANING

- A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain heat exchangers.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235700

SECTION 236200 - PACKAGED COMPRESSOR AND CONDENSER UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes packaged, refrigerant compressor and condenser units.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Compressor and condenser units shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.4 ACTION SUBMITTALS

- A. Product Data: For each compressor and condenser unit. Include rated capacities, operating characteristics, and furnished specialties and accessories. Include equipment dimensions, weights and structural loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with applicable requirements in ASHRAE/IESNA 90.1.
 - 2. Product Data for Credit EA 4: Documentation indicating that compressor and condenser units and refrigerants comply.
- C. Shop Drawings: For compressor and condenser units. Include plans, elevations, sections, details, and attachments to other work.

1. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
 2. Wiring Diagrams: For power, signal, and control wiring.
- D. Delegated-Design Submittal: For compressor and condenser units indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
 2. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Structural members to which compressor and condenser units will be attached.
 2. Liquid and vapor pipe sizes.
 3. Refrigerant specialties.
 4. Piping including connections, oil traps, and double risers.
 5. Compressors.
 6. Evaporators.
- B. Seismic Qualification Certification: For compressor and condenser units, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.
- D. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For compressor and condenser units to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 EXTRA MATERIALS

- A. Provide [**two (2)**] <Insert number> sets of fan belts.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Fabricate and label refrigeration system according to ASHRAE 15, "Safety Standard for Refrigeration Systems."
- C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6, "Heating, Ventilating, and Air-Conditioning."
- D. ASME Compliance: Fabricate and label water-cooled compressor and condenser units to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-In-Place Concrete" and Section 033053 "Miscellaneous Cast-In-Place Concrete."
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077200 "Roof Accessories."
- C. Coordinate location of piping and electrical rough-ins.

1.10 DELIVERY, STORAGE, AND PROTECTION

- A. Section 230400 "Basic HVAC Requirements" and Division 1: Transportation, delivery, handling, storage, and protection of products.
- B. Comply with manufacturer's installation instruction for rigging, unloading and transporting units.

- C. Protect units on site from physical damage. Protect coils.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of compressor and condenser units that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Compressor failure.
 - b. Condenser coil leak.
 2. Warranty Period: Minimum **[five (5)] [ten 10] <Insert number>** years from date of Substantial Completion.
 3. Warranty Period (Compressor Only): Minimum **[five (5)] [seven (7)] [ten (10)] <Insert number>** years from date of Substantial Completion.
 4. Warranty Period (Components Other Than Compressor): Minimum **[five (5)] [ten 10] <Insert number>** years from date of Substantial Completion.
 5. Warranty Period (Condenser Coil Only): Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 COMPRESSOR AND CONDENSER UNITS, AIR COOLED, 1 TO 5 TONS (3.5 TO 17.6 kW)

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Carrier Corporation; Commercial HVAC Systems.](#)
 2. [Lennox International Inc.](#)
 3. [Rheem Air Conditioning Division.](#)
 4. [Ruud Air Conditioning Division.](#)
 5. [Trane; a business of American Standard Companies.](#)
 6. [YORK; a Johnson Controls company.](#)
 7. **<Insert manufacturer's name>.**
 8. or approved equal.
- B. Description: Factory assembled and tested; consisting of compressor, condenser coil, fan, motors, refrigerant reservoir, and operating controls.

- C. Compressor: Scroll, hermetically sealed, with rubber vibration isolators.
1. Motor: [**Single**] [**Two**] speed, and includes thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 2. Two-Speed Compressor: Include manual-reset, high-pressure switch and automatic-reset, low-pressure switch.
 3. Accumulator: Suction tube.
- D. Refrigerant: [**R-22**] [**R-407C**] [**R-410A**] <Insert type>.
- E. Refrigerant: R-407C or R-410A.
- F. Condenser Coil: Seamless copper-tube, aluminum-fin coil; circuited for integral liquid subcooler, with removable drain pan and brass service valves with service ports.
- G. Condenser Fan: Direct-drive, aluminum propeller fan; with permanently lubricated, totally enclosed fan motor with thermal-overload protection[**and ball bearings**].
- H. Accessories:
1. Coastal Filter: Mesh screen to protect condenser coil from salt damage.
 2. Crankcase heater.
 3. Cycle Protector: Automatic-reset timer to prevent rapid compressor cycling.
 4. [**Electronic programmable thermostat**] [**Low-voltage thermostat and subbase**] to control compressor and condenser unit and evaporator fan.
 5. Evaporator Freeze Thermostat: Temperature-actuated switch that stops unit when evaporator reaches freezing temperature.
 6. Filter-dryer.
 7. High-Pressure Switch: Automatic-reset switch cycles compressor off on high refrigerant pressure.
 8. Liquid-line solenoid.
 9. Low-Ambient Controller: Cycles condenser fan to permit operation down to [**30 deg F (minus 1 deg C)**] [**0 deg F (minus 18 deg C)**] [**with time-delay relay to bypass low-pressure switch**].
 10. Low-Ambient Controller: Controls condenser fan speed to permit operation down to **minus 20 deg F (minus 29 deg C)**[**with time-delay relay to bypass low-pressure switch**].
 11. Low-Pressure Switch: Automatic-reset switch cycles compressor off on low refrigerant pressure.
 12. PE mounting base.
 13. Precharged and insulated suction and liquid tubing.
 14. Sound Hood: Wraps around sound attenuation cover for compressor.
 15. Thermostatic expansion valve.
 16. Time-Delay Relay: Continues operation of evaporator fan after compressor shuts off.
 17. Reversing valve.
 18. <Insert accessories>.

- I. Unit Casing: Galvanized steel, finished with baked enamel; with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Mount service valves, fittings, and gage ports on exterior of casing.
 - J. Capacities and Characteristics:
 1. Compressor and Condenser Unit:
 - a. Full-Load Cooling Capacity: <Insert MBh (kW)>.
 - b. Energy-Efficiency Ratio (EER): <Insert value>.
 - c. Seasonal Energy-Efficiency Ratio (SEER): <Insert value>.
 - d. Coefficient of Performance (COP): <Insert value>.
 - e. Compressor Suction Temperature: <Insert deg F (deg C)>.
 - f. Capacity Steps: <Insert number>.
 2. Refrigerant Connections:
 - a. Liquid Pipe Size: <Insert NPS (DN)>.
 - b. Suction Pipe Size: <Insert NPS (DN)>.
 3. Compressor:
 - a. Rated-Load Amperes: <Insert value>.
 - b. Locked-Rotor Amperes: <Insert value>.
 - c. Power Input: <Insert kilowatts>.
 4. Air-Cooled Condenser:
 - a. Ambient-Air Temperature: <Insert deg F (deg C)>.
 - b. Airflow: <Insert cfm (L/s)>.
 - c. Number of Condenser Fans: <Insert number>.
 - d. Condenser Fan Motor Size: <Insert horsepower>.
 5. Electrical Characteristics:
 - a. Kilowatt Input: <Insert value>.
 - b. Volts: <Insert value>.
 - c. Phase: <Insert value>.
 - d. Hertz: <Insert value>.
 - e. Maximum Circuit Amperes: <Insert value>.
 - f. Maximum Instantaneous Current Flow during Startup: <Insert value>.
 - g. Maximum Overcurrent Protection: <Insert amperage>.
- 2.2 COMPRESSOR AND CONDENSER UNITS, AIR COOLED, 6 TO 120 TONS (21 TO 422 kW)
- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Carrier Corporation: Commercial HVAC Systems.](#)

2. [Continental Products.](#)
 3. [Dunham-Bush, Inc.](#)
 4. [Engineered Air.](#)
 5. [Lennox International Inc.](#)
 6. [McQuay International.](#)
 7. [Rheem Air Conditioning Division.](#)
 8. [Ruud Air Conditioning Division.](#)
 9. [Trane; a business of American Standard Companies.](#)
 10. [YORK; a Johnson Controls company.](#)
 11. **<Insert manufacturer's name>.**
 12. or approved equal.
- B. Description: Factory assembled and tested, air cooled; consisting of casing, compressors, condenser coils, condenser fans and motors, and unit controls.
- C. Compressor: Hermetic scroll compressor designed for service with crankcase sight glass, crankcase heater, and backseating service access valves on suction and discharge ports.
1. Capacity Control: [**On-off compressor cycling**] [**Hot-gas bypass**].
- D. Compressor: Hermetic or semihermetic rotary screw compressor designed for service with crankcase sight glass, crankcase heater, and backseating service access valves on suction and discharge ports.
1. Capacity Control: [**On-off compressor cycling**] [**Modulating slide-valve assembly or port unloaders**] [**Variable-frequency controller**] [**Hot-gas bypass**].
- E. Refrigerant: [**R-22**] [**R-407C**] [**R-410A**] [**R-134a**] **<Insert type>.**
- F. Refrigerant: R-407C, R-410A, or R-134a.
- G. Condenser Coil: Seamless copper-tube, aluminum-fin coil, including subcooling circuit and backseating liquid-line service access valve. Factory pressure test coils, then dehydrate by drawing a vacuum and fill with a holding charge of nitrogen or refrigerant.
- H. Condenser Fans: Propeller-type vertical discharge; either directly or belt driven. Include the following:
1. Permanently lubricated, ball-bearing[**totally enclosed**] motors.
 2. Separate motor for each fan.
 3. Dynamically and statically balanced fan assemblies.
- I. Operating and safety controls include the following:
1. Manual-reset, high-pressure cutout switches.
 2. Automatic-reset, low-pressure cutout switches.
 3. Low-oil-pressure cutout switch.
 4. Compressor-winding thermostat cutout switch.

5. Three-leg, compressor-overload protection.
6. Control transformer.
7. Magnetic contactors for compressor and condenser fan motors.
8. Timer to prevent excessive compressor cycling.

J. Accessories:

1. **[Electronic programmable thermostat] [Low-voltage thermostat and subbase]** to control compressor and condenser unit and evaporator fan.
2. Low-Ambient Controller: Cycles condenser fan to permit operation down to **0 deg F** (minus 18 deg C) **[with time-delay relay to bypass low-pressure switch]**.
3. Low-Ambient Controller: Controls condenser fan speed to permit operation down to **minus 20 deg F** (minus 29 deg C) **[with time-delay relay to bypass low-pressure switch]**.
4. Gage Panel: Package with refrigerant circuit suction and discharge gages.
5. Hot-gas bypass kit.
6. Part-winding-start timing relay, circuit breakers, and contactors.
7. Reversing valve.
8. **<Insert accessories>**.

K. Unit Casings: Designed for outdoor installation with weather protection for components and controls and with removable panels for required access to compressors, controls, condenser fans, motors, and drives. Additional features include the following:

1. Steel, galvanized or zinc coated, for exposed casing surfaces; treated and finished with manufacturer's standard paint coating.
2. Perimeter base rail with forklift slots and lifting holes to facilitate rigging.
3. Gasketed control panel door.
4. Nonfused disconnect switch, factory mounted and wired, for single external electrical power connection.
5. Condenser coil **[hail guard] [grille]**.

L. Capacities and Characteristics:

1. Compressor and Condenser Unit:
 - a. Full-Load Cooling Capacity: **<Insert MBh (kW)>**.
 - b. Energy-Efficiency Ratio (EER): **<Insert value>**.
 - c. Seasonal Energy-Efficiency Ratio (SEER): **<Insert value>**.
 - d. Coefficient of Performance (COP): **<Insert value>**.
 - e. Compressor Suction Temperature: **<Insert deg F (deg C)>**.
 - f. Capacity Steps: **<Insert number>**.
2. Refrigerant Connections:
 - a. Liquid Pipe Size: **<Insert NPS (DN)>**.
 - b. Suction Pipe Size: **<Insert NPS (DN)>**.
3. Compressors:

- a. Number of Compressors: **<Insert number>**.
 - b. Rated-Load Amperes: **<Insert value>**.
 - c. Locked-Rotor Amperes: **<Insert value>**.
 - d. Power Input: **<Insert kilowatts>**.
4. Air-Cooled Condenser:
- a. Ambient-Air Temperature: **<Insert deg F (deg C)>**.
 - b. Airflow: **<Insert cfm (L/s)>**.
 - c. Number of Condenser Fans: **<Insert number>**.
 - d. Condenser Fan Motor Size: **<Insert horsepower>**.
5. Electrical Characteristics:
- a. Kilowatt Input: **<Insert value>**.
 - b. Volts: **<Insert value>**.
 - c. Phase: **<Insert value>**.
 - d. Hertz: **<Insert value>**.
 - e. Maximum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Instantaneous Current Flow during Startup: **<Insert value>**.
 - g. Maximum Overcurrent Protection: **<Insert amperage>**.

2.3 COMPRESSOR AND CONDENSER UNITS, WATER COOLED

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Carrier Corporation; Commercial HVAC Systems.
 2. McQuay International.
 3. Trane; a business of American Standard Companies.
 4. YORK; a Johnson Controls company.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Description: Factory assembled and tested, consisting of compressors, water-cooled condensers, bases, and unit controls.
- C. Compressor: Hermetic or serviceable hermetic type; with oil pump, operating oil charge, and suction and discharge shutoff valves. Factory mounted on base using spring isolators. Include the following:
1. Thermally protected compressor motor.
 2. Crankcase heater.
 3. Capacity control using cylinder unloading, suction pressure controlled and discharge pressure operated, designed for unloaded start.
- D. Refrigerant: **[R-22] [R-407C] [R-410A] [R-134a] <Insert type>**.
- E. Refrigerant: R-407C, R-410A, or R-134a.

- F. Condenser: Single-pass, tube-in-tube, coaxial type; with seamless, integral-finned, copper tube and steel outer shell with water-regulating valve.
- G. Condenser: Multipass, shell-and-tube type; with replaceable, seamless, integral-finned copper tubes; positive-liquid subcooling circuit; pressure relief device; liquid-level test cock; purge connection; liquid-line shutoff valve; and angle valve for connection of water-regulating valve.
1. Unit Construction: ASME stamped for refrigerant-side working pressure of **385 psig** (2650 kPa) and water-side working pressure of **250 psig** (1720 kPa).
- H. Condenser: Plate type, with brazed assembly of two end plates, one with threaded nozzles and pattern-embossed plates.
- I. Accessories:
1. Discharge-line muffler.
 2. Gage panel containing gages for suction, discharge, and oil pressure.
 3. Electric solenoid cylinder unloaders.
 4. Pump-down relay package.
 5. Crankcase cover plates with equalizer connections.
- J. Controls: Factory-mounted and -wired panel with the following:
1. Timer to prevent short cycling.
 2. High- and low-refrigerant-pressure safety controls.
 3. Power- and control-circuit terminal blocks.
 4. Compressor motor starter.
 5. Control-circuit on-off switch.
 6. Control-circuit fuse.
- K. Unit Casings: Galvanized steel, finished with baked enamel; with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Mount service valves, fittings, and gage ports on exterior of casing.
- L. Capacities and Characteristics:
1. Compressor and Condenser Unit:
 - a. Full-Load Cooling Capacity: **<Insert MBh (kW)>**.
 - b. Energy-Efficiency Ratio (EER): **<Insert value>**.
 - c. Seasonal Energy-Efficiency Ratio (SEER): **<Insert value>**.
 - d. Coefficient of Performance (COP): **<Insert value>**.
 - e. Compressor Suction Temperature: **<Insert deg F (deg C)>**.
 - f. Capacity Steps: **<Insert number>**.
 2. Refrigerant Connections:
 - a. Liquid Pipe Size: **<Insert NPS (DN)>**.
 - b. Suction Pipe Size: **<Insert NPS (DN)>**.

3. Compressors:
 - a. Number of Compressors: **<Insert number>**.
 - b. Rated-Load Amperes: **<Insert value>**.
 - c. Locked-Rotor Amperes: **<Insert value>**.
 - d. Power Input: **<Insert kilowatts>**.

4. Water-Cooled Condenser:
 - a. Condenser Temperature: **<Insert deg F (deg C)>**.
 - b. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 - c. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
 - d. Water Flow: **<Insert gpm (L/s)>**.
 - e. Water Pressure Drop: **<Insert feet of water (kPa)>**.
 - f. Fouling Factor: **<Insert number>**.
 - g. Pipe Connection Size: **<Insert NPS (DN)>**.

5. Electrical Characteristics:
 - a. Kilowatt Input: **<Insert value>**.
 - b. Volts: **<Insert value>**.
 - c. Phase: **<Insert value>**.
 - d. Hertz: **<Insert value>**.
 - e. Maximum Circuit Amperes: **<Insert value>**.
 - f. Maximum Instantaneous Current Flow during Startup: **<Insert value>**.
 - g. Maximum Overcurrent Protection: **<Insert amperage>**.

2.4 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2.5 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate compressor and condenser units according to **[ARI 206/110] [ARI 306/110]**.
- B. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IESNA 90.1, "Energy Efficient Design of New Buildings except Low-Rise Residential Buildings," Section 6, "Heating, Ventilating, and Air-Conditioning."
- C. Test and inspect shell and tube condensers according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

- D. Testing Requirements: Factory test sound-power-level ratings according to **[ARI 270]** **[ARI 370]**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of compressor and condenser units.
- B. Examine roughing-in for refrigerant piping systems to verify actual locations of piping connections before equipment installation.
- C. Examine walls, floors, and roofs for suitable conditions where compressor and condenser units will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install units level and plumb, firmly anchored in locations indicated.
- C. Install roof-mounting units on equipment supports specified in Section 077200 "Roof Accessories."
- D. Equipment Mounting:
1. Install compressor and condenser units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete. "] [Section 033053 "Miscellaneous Cast-in-Place Concrete. "]**
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- E. Maintain manufacturer's recommended clearances for service and maintenance.
- F. Loose Components: Install electrical components, devices, and accessories that are not factory mounted.

3.3 CONNECTIONS

- A. Comply with requirements for piping in other Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.
- C. Connect precharged refrigerant tubing to unit's quick-connect fittings. Install tubing so it does not interfere with access to unit. Install furnished accessories.
- D. Connect refrigerant piping to air-cooled compressor and condenser units; maintain required access to unit. Install furnished field-mounted accessories. Refrigerant piping and specialties are specified in Section 232300 "Refrigerant Piping."
- E. Connect refrigerant and condenser-water piping to water-cooled compressor and condenser units. [**Maintain clear tube removal space.**] Refrigerant piping and specialties are specified in Section 232300 "Refrigerant Piping" and condenser-water piping and specialties are specified in [**Section 221116 "Domestic Water Piping."**] [**Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties.**] Install shutoff valve and union or flange at each water supply connection; install balancing valve and union or flange at each return connection.

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect, test, and adjust components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection and electrical test. Certify compliance with test parameters.
 - 2. Leak Test: After installation, charge system with refrigerant and oil and test for leaks. Repair leaks, replace lost refrigerant and oil, and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor operation and unit operation, product capability, and compliance with requirements.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 5. Verify proper airflow over coils.
- C. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.
- D. Compressor and condenser units will be considered defective if they do not pass tests and inspections.

- E. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 - a. Inspect for physical damage to unit casing.
 - b. Verify that access doors move freely and are weathertight.
 - c. Clean units and inspect for construction debris.
 - d. Verify that all bolts and screws are tight.
 - e. Adjust vibration isolation and flexible connections.
 - f. Verify that controls are connected and operational.
- B. Lubricate bearings on fan motors.
- C. Verify that fan wheel is rotating in the correct direction and is not vibrating or binding.
- D. Adjust fan belts to proper alignment and tension.
- E. Start unit according to manufacturer's written instructions and complete manufacturer's startup checklist.
- F. Measure and record airflow and air temperature rise over coils.
- G. Verify proper operation of condenser capacity control device.
- H. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.
- I. After startup and performance test, lubricate bearings.
- J. Provide cooling season start-up, winter season shut-down service, for first year of operation.
- K. Shut-down system if initial start-up and testing takes place in winter and machines are to remain inoperative. Repeat start-up and testing operation at beginning of first cooling season.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain compressor and condenser units.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven

(7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236200

SECTION 236313 - AIR-COOLED REFRIGERANT CONDENSERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes packaged, air-cooled refrigerant condensers for [outdoor] [indoor] installation.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Air-cooled refrigerant condensers shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.4 ACTION SUBMITTALS

- A. Product Data: For each air-cooled refrigerant condenser. Include rated capacities, operating characteristics, furnished specialties, and accessories. Include equipment dimensions, weights and structural loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with applicable requirements in ASHRAE/IESNA 90.1.
 - 2. Product Data for Credit EA 4: Documentation indicating that air-cooled refrigerant condensers and refrigerants comply.
- C. Shop Drawings: For air-cooled refrigerant condensers. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
 3. Wiring Diagrams: For power, signal, and control wiring.
- D. Delegated-Design Submittal: For air-cooled refrigerant condensers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
 2. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Structural members to which air-cooled refrigerant condensers will be attached.
 2. Liquid and vapor pipe sizes.
 3. Refrigerant specialties.
 4. Piping including connections, oil traps, and double risers.
 5. Evaporators.
- B. Seismic Qualification Certificates: For air-cooled refrigerant condensers, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-cooled refrigerant condensers to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 EXTRA MATERIALS

- A. Provide [**two (2)**] <Insert number> sets of fan belts.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Fabricate and label refrigeration system according to ASHRAE 15, "Safety Standard for Refrigeration Systems."
- C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.9 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077200 "Roof Accessories."
- C. Coordinate location of refrigerant piping and electrical rough-ins.

1.10 DELIVERY, STORAGE, AND PROTECTION

- A. Section 230400 "Basic HVAC Requirements" and Division 1: Transportation, delivery, handling, storage, and protection of products.
- B. Comply with manufacturer's installation instruction for rigging, unloading and transporting units.
- C. Protect units on site from physical damage. Protect coils.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Carrier Corporation; Commercial HVAC Systems.](#)
2. [Colmac Coil Manufacturing, Inc.](#)
3. [Coolenheat Inc.](#)
4. [Dunham-Bush, Inc.](#)
5. [Engineered Air.](#)
6. [Heatcraft Refrigeration Products LLC.](#)
7. [McQuay International.](#)
8. [Trane; a business of American Standard Companies.](#)
9. [USA Coil & Air.](#)
10. [YORK; a Johnson Controls company.](#)
11. **<Insert manufacturer's name>.**
12. or approved equal.

2.2 MANUFACTURED UNITS

- A. Description: Factory assembled and tested; consisting of casing, condenser coils, condenser fans and motors, and unit controls.
- B. Refrigerant: [R-22] [R-407C] [R-410A] **<Insert type>.**
- C. Refrigerant: R-407C or R-410A.
- D. Condenser Coil: Factory tested at 425 psig (2930 kPa).
1. Tube: [1/2-inch- (13-mm-) diameter seamless copper.] [3/8-inch- (10-mm-) diameter seamless copper.] [5/8-inch- (16-mm-) diameter seamless copper.] [5/8-inch- (16-mm-) diameter steel.]
 2. Coil Fin: [Aluminum] [Steel].
 3. Coating: [Thermoplastic vinyl] [Epoxy] [Zinc] [Synthetic resin] [Phenolic] [Polytetrafluoroethylene] [Vinyl ester] [Hot-dip galvanized] [Powder-baked enamel]; **<Insert manufacturer's name; trade name>.**
 4. Circuit: To match compressors[**with liquid subcooling coil**].
- E. Condenser Fans and Drives: Propeller fans with [aluminum or galvanized-steel] [galvanized-steel] [stainless-steel] fan blades, for [vertical] [horizontal] air

discharge; directly driven with **[permanently lubricated]** **[grease-lubricated]** ball-bearing motors with integral current- and thermal-overload protection.

1. Weather-proof motors with rain shield and shaft slinger.
2. Extend grease lines to outside of casing.

F. Condenser Fans and Drives: Forward-curved centrifugal fans for **[vertical]** **[horizontal]** air discharge.

1. Fan on steel shaft with self-aligning ball bearings.
2. V-belt drive with minimum of two belts; variable pitch drive pulley.
3. Motor mounted on adjustable slide base.

G. Operating and Safety Controls: Include condenser fan motor thermal and overload cutouts; 115-V control transformer, if required; magnetic contactors for condenser fan motors and a nonfused factory-mounted and -wired disconnect switch for single external electrical power connection.

1. Fan Cycling Control: **[Head pressure switches]** **[Ambient thermostats]**.

H. Casings: **[Galvanized or zinc-coated steel treated and finished with manufacturer's standard paint coating]** **[Aluminum]** **[Stainless steel]**, designed for **outdoor installation with weather protection for components and controls**, and with the following:

1. Removable panels for access to controls, condenser fans, motors, and drives.
2. **[Plated]** **[Stainless]**-steel fan guards.
3. Lifting eyes.
4. Removable legs, **[20 inches (500 mm)]** **[30 inches (760 mm)]** **[36 inches (910 mm)]** **[42 inches (1060 mm)]** high.

2.3 CAPACITIES AND CHARACTERISTICS

A. Heat-Rejection Capacity: **<Insert MBh (kW)>**.

B. Condensing Temperature:

1. Saturated Discharge Temperature: **<Insert deg F (deg C)>**.
2. Saturated Suction Temperature: **<Insert deg F (deg C)>**.
3. Subcooling Temperature: **<Insert deg F (deg C)>**.

C. Ambient-Air Temperature: **<Insert deg F (deg C)>**.

D. Refrigerant Pipe Connections:

1. Number of Connections: **<Insert number>**.
2. Liquid Pipe Size: **<Insert NPS (DN)>**.
3. Suction Pipe Size: **<Insert NPS (DN)>**.

E. Coils:

1. Arrangement: **<Insert description>**.
2. Number of Rows: **<Insert number>**.
3. Fin Spacing: [12 fins/inch (2 mm)] **<Insert value>**.
4. Total Face Area: **<Insert sq. ft. (sq. m)>**.

F. Fans:

1. Number of Condenser Fans: **<Insert number>**.
2. Diameter: **<Insert inches (mm)>**.
3. RPM: **<Insert number>**.
4. Total Airflow: **<Insert cfm (L/s)>**.
5. Condenser Fan Motor Size: **<Insert horsepower>**.

G. Electrical Characteristics:

1. Kilowatts: **<Insert value>**.
2. Volts: **<Insert value>**.
3. Phase: **<Insert value>**.
4. Hertz: **<Insert value>**.
5. Maximum Circuit Ampacity: **<Insert value>**.
6. Maximum Instantaneous Current Flow during Startup: **<Insert value>**.
7. Maximum Overcurrent Protection: **<Insert amperage>**.

2.4 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure Type: Totally enclosed, fan cooled.
2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
3. Mount unit-mounted disconnect switches on [exterior] [interior] of unit.
4. **<Insert unique motor characteristics>**.

2.5 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate air-cooled refrigerant condensers according to ARI 460.
- B. Testing Requirements: Factory test sound-power-level ratings according to ARI 270.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of air-cooled refrigerant condensers.
- B. Examine roughing-in for refrigerant piping systems to verify actual locations of piping connections before equipment installation.
- C. Examine walls, floors, and roofs for suitable conditions where air-cooled condensers will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install units level and plumb, firmly anchored in locations indicated; maintain manufacturer's recommended clearances.
- B. Equipment Mounting:
 - 1. Install air-cooled condenser refrigerant condensers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- C. Maintain manufacturer's recommended clearances for service and maintenance.
- D. Loose Components: Install electrical components, devices, and accessories that are not factory mounted.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Refrigerant Piping: Connect piping to unit with pressure relief, service valve, filter-dryer, and moisture indicator on each refrigerant-circuit liquid line. Refrigerant piping and specialties are specified in Section 232300 "Refrigerant Piping."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect, test, and adjust components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Perform electrical test and visual and mechanical inspection.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Complete manufacturer's starting checklist.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 5. Verify proper airflow over coils.
- C. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.
- D. Air-cooled refrigerant condensers will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 - a. Inspect for physical damage to unit casing.
 - b. Verify that access doors move freely and are weathertight.
 - c. Clean units and inspect for construction debris.
 - d. Verify that all bolts and screws are tight.
 - e. Adjust vibration isolation and flexible connections.
 - f. Verify that controls are connected and operational.
 - 2. Lubricate bearings on fan motors.
 - 3. Verify that fan wheel is rotating in the correct direction and is not vibrating or binding.
 - 4. Adjust fan belts to proper alignment and tension.
 - 5. Start unit according to manufacturer's written instructions and complete manufacturer's startup checklist.
 - 6. Measure and record airflow and air temperature rise over coils.

7. Verify proper operation of capacity control device.
8. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.
9. After startup and performance test, lubricate bearings.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain air-cooled refrigerant condensers.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236313

SECTION 236333 - EVAPORATIVE REFRIGERANT CONDENSERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes: Factory-assembled and -tested, **[forced]** **[induced]**-draft evaporative refrigerant condensers.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. DDC: Direct digital control.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design evaporative refrigerant condenser support structure[**and seismic restraints**] [**and wind restraints**], including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Evaporative refrigerant condenser support structure shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. Dead Loads: **<Insert loads>**.
 - 2. Live Loads: **<Insert loads>**.
 - 3. Roof Loads: **<Insert loads>**.
 - 4. Snow Loads: **<Insert loads>**.
 - 5. Seismic Loads: **<Insert loads>**.
 - 6. Wind Loads: **<Insert loads>**.
 - 7. **<Insert loads or load combinations>**.
 - 8. Deflection Limits: Design system to withstand design loads without deflections greater than the following:
 - a. **<Insert deflection limits>**.

C. Wind-Restraint Performance:

1. Basic Wind Speed: <Insert value>.
2. Building Classification Category: [I] [II] [III] [IV].
3. Minimum 10 lb/sq. ft. (48.8 kg/sq. m) multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

D. Seismic Performance: Evaporative refrigerant condenser shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, pressure drop, fan performance data, installation instructions, furnished specialties, and accessories.

1. Maximum flow rate.
2. Minimum flow rate.
3. Drift loss as percent of design flow rate.
4. Volume of water in suspension for purposes of sizing a remote storage tank.
5. Sound power levels in eight octave bands for operation with fans off, fans at minimum speed, and fans at design speed.
6. Performance curves for the following:
 - a. Varying entering-water temperatures from design to minimum.
 - b. Varying ambient wet-bulb temperatures from design to minimum.
 - c. Varying water flow rates from design to minimum.
 - d. Varying fan operation (off, minimum speed, and design speed).
7. Fan airflow, brake horsepower, and drive losses.
8. Pump flow rate, head, brake horsepower, and efficiency.
9. Motor amperage, efficiency, and power factor at 100, 75, 50, and 25 percent of nameplate horsepower.
10. Electrical power requirements for each evaporative refrigerant condenser component requiring power.
11. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.

C. Shop Drawings: For evaporative refrigerant condensers. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field piping and wiring connection.
 2. Wiring Diagrams: Power, signal, and control wiring.
 3. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
- D. Delegated-Design Submittal: For evaporative refrigerant condensers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail mounting, securing, and flashing of roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
 2. **[Wind-] [and] [Seismic-]Restraint Details:** Detail fabrication and attachment of restraints and snubbers. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.
 3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include handrails, ladders, and equipment mounting frame.
 4. Design Calculations: Calculate requirements for selecting vibration isolators **[and seismic restraints]** and for designing vibration isolation bases.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved.
1. Structural supports.
 2. Piping and wiring roughing-in requirements (determine spaces reserved for electrical equipment).
 3. Access requirements for service and maintenance.
- B. Seismic Qualification Certificates: For evaporative refrigerant condensers, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- C. Warranties: Sample of special warranties.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For evaporative refrigerant condensers to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 EXTRA MATERIALS

- A. Provide [**two (2)**] <Insert number> sets of fan belts.

1.9 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label heat-exchanger coils to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- C. Comply with NFPA 70.
- D. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning" and Section 10 - "Other Equipment."

1.10 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.11 DELIVERY, STORAGE, AND PROTECTION

- A. Section 230400 "Basic HVAC Requirements" and Division 1: Transportation, delivery, handling, storage, and protection of products.

- B. Comply with manufacturer's installation instruction for rigging, unloading, and transporting units.
- C. Protect units on site from physical damage. Protect coils.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of evaporative refrigerant condensers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Fan, motor, drive shaft, bearings, and motor supports.
 - b. Tube bundle.
 - c. External-circuit circulating pump.
 - d. **<Insert failure modes>**.
 - 2. Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FORCED-DRAFT EVAPORATIVE REFRIGERANT CONDENSERS

- A. **Products:** Subject to compliance with requirements, provide one of the following:
 - 1. [Baltimore Aircoil Company](#); Series V.
 - 2. [EVAPCO, Inc](#); Models LSCB.
 - 3. [Recold](#); Series JC.
 - 4. **<Insert manufacturer's name; product name or designation>**.
 - 5. or approved equal.
- B. Fabricate evaporative refrigerant condenser mounting base with reinforcement strong enough to resist evaporative refrigerant condenser movement during a seismic event when evaporative refrigerant condenser is anchored to field support structure.
- C. Evaporative refrigerant condenser designed to resist wind load of **[30 lbf/sq. ft. (1.44 kPa)] <Insert value>**.
- D. Casing and Frame:

1. Casing[**and Frame**] Material: [**FRP with UV inhibitors**] [**Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating**] [**Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating**] [**Polymer-coated galvanized steel**] [**Stainless steel**].
 2. Frame Material: [**FRP with UV inhibitors**] [**Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating**] [**Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating**] [**Polymer-coated galvanized steel**] [**Stainless steel**].
 3. Fasteners: [**Galvanized**] [**Stainless**] steel.
 4. Joints and Seams: Sealed watertight.
 5. Welded Connections: Continuous and watertight.
- E. Collection Basin: Configure evaporative refrigerant condenser for installation with a field-constructed collection basin.
- F. Collection Basin:
1. Material: [**FRP with UV inhibitors**] [**Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating**] [**Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating**] [**Polymer-coated galvanized steel**] [**Stainless steel**].
 2. Strainer: Removable[**stainless-steel**] strainer with openings smaller than nozzle orifices.
 3. Overflow and drain connections.
 4. Makeup water connection.

Not all listed manufacturers offer basin sweeper distribution piping. Consult evaporative refrigerant condenser manufacturers.

5. Basin Sweeper Distribution Piping and Nozzles:
 - a. Pipe Material: [**PVC**] <Insert material>.
 - b. Nozzle Material: [**Plastic**] <Insert material>.
 - c. Configure piping and nozzles to minimize sediment from collecting in the collection basin.
- G. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.
- H. Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, [**Type 4**] [**Type 4X**] <Insert type>.
 2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to provide [**control of water makeup valve**] [**control of water makeup valve and low-level alarm**] [**control of water makeup valve and low- and high-level alarms**] [**control of water makeup valve, low- and high-level alarms, and output for shutoff of pump on low level**].
 3. Electrode Probes: Stainless steel.
 4. Water Stilling Chamber: [**Corrosion-resistant material**] [**FRP**] [**Galvanized steel**] [**PVC pipe**] [**Stainless steel**].
 5. Solenoid Valve: Slow closing[**with stainless-steel body**]; controlled and powered through level controller in response to water-level set point.
 6. Electrical Connection Requirements: 120 V, single phase, 60 Hz.

- I. Electric Basin Heater:
1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
 2. Heater Control Panel: Mounted on the side of each evaporative refrigerant condenser cell.
 3. Enclosure: NEMA 250, **[Type 3R] [Type 4] [Type 4X]**.
 4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor evaporative refrigerant condenser water level and de-energize the heater when the water reaches low-level set point.
 5. Control-circuit transformer with primary and secondary side fuses.
 6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 7. Single-point, field-power connection to a **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker]** and heater branch circuiting complying with NFPA 70.
 8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.
- J. Hot-Water-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- K. Steam-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- L. Steam-Injector Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- M. Water Distribution Piping: Main header and lateral branch piping designed for even distribution over heat exchanger coil throughout the flow range without the need for balancing valves and for connecting individual, removable, nonclogging spray nozzles.

Other requirements may require use of other materials.

1. Pipe Material: **[Fiberglass] [PVC] [Galvanized steel] <Insert material>**.
 2. Spray Nozzle Material: **[Plastic] [Polypropylene] [PVC] <Insert material>**.
 3. Piping Supports: Corrosion-resistant hangers and supports designed to resist movement during operation and shipment.
- N. Recirculating Piping: **[PVC] <Insert pipe material>[, with connections for separately provided, remote spray pump]**.
- O. Spray Pump: Close-coupled, end-suction, single-stage, bronze-fitted centrifugal pump; with suction strainer and flow balancing valve, and mechanical seal suitable for outdoor service.
1. General Requirements for Spray Pump Motor: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.

2. Motor Enclosure: [**Totally enclosed**] [**Totally enclosed nonventilated (TENV)**] [**Totally enclosed fan cooled (TEFC)**] [**with epoxy or polyurethane finish**].
3. Energy Efficiency: [**Comply with ASHRAE/IESNA 90.1**] [**NEMA Premium Efficient**].
4. Service Factor: [**1.0**] [**1.15**] <Insert value>.

P. Heat-Exchanger Coils:

1. Tube and Tube Sheet Materials: [**Copper tube with stainless-steel sheet**] [**Stainless-steel tube and sheet**] [**Prime-coated steel tube and sheet with outer surface of tube and sheet hot-dip galvanized after fabrication**].
2. Heat-Exchanger Arrangement: [**Serpentine tubes**] [**Serpentine tubes with removable cover plate on inlet and outlet headers**] [**Straight tubes with removable header cover plate on both ends of heat exchanger for straight-through access to each tube**]; and sloped for complete drainage of fluid by gravity.
3. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and bearing ASME "U" stamp; and sloped for complete drainage of fluid by gravity.
4. Field Piping Connections: Vent, supply, and return[**suitable for mating to ASME B16.5, Class 150 flange**].

Q. [**Removable**] Drift Eliminator:

1. Material: [**FRP**] [**PVC**] [**FRP or PVC**] <Insert material>; with maximum flame-spread index of [**5**] [**25**] <Insert value> according to ASTM E 84.
2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.

R. [**Removable**] Air-Intake Screens: [**Galvanized**] [**Polymer-coated, galvanized**] [**Stainless**]-steel wire mesh.

S. Centrifugal Fan: Double-width, double-inlet fan with forward-curved blades; and statically and dynamically balanced at the factory after assembly.

1. Number of Fans: Each evaporative refrigerant condenser cell shall have a single fan or multiple fans connected to a common shaft.
2. Fan Wheel and Housing Materials: Galvanized steel.
3. Fan Shaft: Steel, coated to resist corrosion.
4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.
5. Fan Shaft Bearings: Self-aligning, grease-lubricated ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of [**40,000**] [**50,000**] <Insert value> hours.
6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.

T. Belt Drive:

1. Service Factor: **[1.5]** <Insert value> based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of **[cogged]** belts.
4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.

U. Fan Motor:

1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
2. Motor Enclosure: **[Totally enclosed]** **[Totally enclosed air over (TEAO)]** **[Totally enclosed fan cooled (TEFC)]** **[with epoxy or polyurethane finish]**.
3. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1]** **[NEMA Premium Efficient]**.
4. Service Factor: **[1.15]** <Insert value>.
5. Insulation: **[Class F]** **[Class H]** <Insert class>.
6. Variable-Speed Motors: Inverter-duty rated per NEMA MG-1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
7. Severe-duty rating with the following features:
 - a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
 - b. Double-shielded, vacuum-degassed bearings lubricated with premium moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C).
 - c. Internal heater automatically energized when motor is de-energized.
8. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.

V. Discharge Hoods:

1. Hood Configuration: **[Tapered]** **[Straight]**; totally surrounding drift eliminators and constructed of same material as casing; and having factory-installed **[insulation and]**access doors.
2. Discharge Dampers: Positive-closure, automatic, isolation dampers with electric actuators.
 - a. Provide field power and controls to open dampers when pump is energized and close dampers when pump is de-energized.

W. Capacity-Control Dampers: **[Galvanized-steel]** **[Stainless-steel]** <Insert material> dampers, with linkages, electric operator, controller, limit switches, transformer, and weatherproof enclosure.

X. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, **[Type 4] [Type 4X] <Insert type>**.
 2. Vibration Detection: Sensor with a field-adjustable acceleration sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Evaporative refrigerant condenser manufacturer shall recommend switch set point for proper operation and protection.
 3. Provide switch **[with manual-reset button]** for **[field connection to a DDC system for HVAC and]**hardwired connection to fan motor electrical circuit.
 4. Switch shall, on sensing excessive vibration, **[signal an alarm through the DDC system for HVAC and]** shut down the fan.
- Y. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
- Z. Control Package: Factory installed and wired, and functionally tested at factory before shipment.
1. NEMA 250, **[Type 3R] [Type 4] [Type 4X]** enclosure with removable internally mounted backplate.
 2. Control-circuit transformer with primary and secondary side fuses.
 3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
 4. Microprocessor-based controller for automatic control of fan **[and spray pump]** based on evaporative refrigerant condenser leaving-water temperature with control features to improve operating efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.
 5. Fan motor sequencer for multiple-cell and two-speed applications with automatic lead-stage rotation.
 6. Collection basin, electric/electronic level controller complying with requirements in "Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve" Paragraph.
 7. Electric basin heaters with temperature control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph.
 8. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph.
 9. Controls and wiring for "two-motor, single-fan drives" shall be same as two-speed, two-winding motor.
 10. Power and controls to open discharge hood dampers when pump is energized and close dampers when pump is de-energized.
 11. Single-point, field-power connection to a **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker] [for each evaporative refrigerant condenser cell]**.
 - a. Branch power circuit to each motor and electric basin heater and to controls **[with a disconnect switch or circuit breaker]**.
 - b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller with manual bypass and line reactors for each variable-speed motor indicated.
 12. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquidtight conduit.

13. Visual indication of status and alarm[**with momentary test push button**] for each motor.
14. Audible alarm and silence switch.
15. Visual indication of elapsed run time, graduated in hours for each motor.
16. Evaporative refrigerant condenser shall have hardware to enable DDC system for HVAC to remotely monitor and display the following:
 - a. Operational status of each motor.
 - b. Position of dampers.
 - c. Evaporative refrigerant condenser leaving-fluid temperature.
 - d. Fan vibration alarm.
 - e. Collection basin **[high] [low] [high- and low]**-water-level alarms.
 - f. **<Insert conditions to be monitored>**.

AA. Personnel Access Components:

1. Doors: Large enough for personnel to access evaporative refrigerant condenser internal components from **[both]** evaporative refrigerant condenser end walls.[**Doors shall be operable from both sides of the door.**]
2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless-steel, fixed ladders with ladder extensions to access external platforms and top of evaporative refrigerant condenser from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.
3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at evaporative refrigerant condenser access doors when evaporative refrigerant condensers are elevated and not accessible from grade.
4. Handrail: Aluminum, galvanized steel, or stainless steel complete with kneerail and toeboard at platforms and around top of evaporative refrigerant condenser. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.
 - a. Spanning the collection basin from one end of evaporative refrigerant condenser to the other and positioned to form a path between the access doors. Platform shall be elevated so that all parts are above the high water level of the collection basin.

BB. Capacities and Characteristics:

1. Number of Cells: **<Insert quantity>**.
2. Maximum Drift Loss: **[0.005] <Insert number>** percent of design water flow.
3. Heat-Exchanger Coil(s):

Retain second, third, or fourth option in first subparagraph or retain second subparagraph if required for LEED-NC, LEED-CS, and LEED for Schools Credit EA 4.

- a. Refrigerant Type: **[R-22] [R-407C] [R-410A] [HFC-134a] <Insert type>**.
- b. Refrigerant Type: R-407C, R-410A, or HFC-134a.
- c. Minimum Heat Rejection: **<Insert Btu/h (kW)>**.
- d. Condensing Temperature: **<Insert deg F (deg C)>**.
- e. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.

4. Fan Location: [**Bottom**] [**Side**].
5. Fan Motor:
 - a. Type: [**Single speed**] [**Two speed, single winding**] [**Two speed, two winding**] [**Variable speed**].
 - b. Horsepower/Cell: <Insert horsepower>.
 - c. Full-Load Ampacity: <Insert value>.
 - d. Minimum Circuit Ampacity: <Insert value>.
 - e. Maximum Overcurrent Protection Device: <Insert amperage>.
 - f. Electrical Characteristics: [**208**] [**240**] [**480**] <Insert value>-V ac, 3 phase, 60 Hz.
6. Spray Pump and Motor:
 - a. Water Flow/Cell: <Insert **gpm** (L/s)>.
 - b. Horsepower/Cell: <Insert horsepower>.
 - c. Full-Load Ampacity: <Insert value>.
 - d. Minimum Circuit Ampacity: <Insert value>.
 - e. Maximum Overcurrent Protection Device: <Insert amperage>.
 - f. Electrical Characteristics: [**120**] [**208**] [**240**] [**277**] [**480**] <Insert value>-V ac, [**single**] [**3**] phase, 60 Hz.
7. Sound Pressure Level: <Insert **dba**> at <Insert distance in **feet** (m)> [**when measured according to CTI ATC 128**].
8. Basin Heater:
 - a. Basin Water Temperature: [**40 deg F** (5 deg C)] <Insert value>.
 - b. Outdoor Ambient Temperature: [**0 deg F** (Minus 18 deg C)] [**Minus 20 deg F** (Minus 29 deg C)] <Insert value>.
 - c. Capacity/Cell: <Insert **kilowatts**>.
 - d. Full-Load Ampacity: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection Device: <Insert amperage>.
 - g. Electrical Characteristics: [**208**] [**240**] [**480**] <Insert value>-V ac, 3 phase, 60 Hz.
 - h. Capacity/Cell: <Insert **MBtu/h** (kW)>.
 - i. Entering-Fluid Temperature: <Insert **deg F** (deg C)>.
 - j. Fluid Flow Rate: <Insert **gpm** (L/s)>.
 - k. Fluid Pressure Drop: <Insert **psig** (kPa)>.
 - l. Capacity/Cell: <Insert **MBtu/h** (kW)>.
 - m. Steam Flow: <Insert **lb/h** (L/s)>.
 - n. Steam Pressure: <Insert **psig** (kPa)>.

2.2 INDUCED-DRAFT EVAPORATIVE REFRIGERANT CONDENSERS

A. Products: Subject to compliance with requirements, provide one of the following:

1. [Baltimore Aircoil Company](#); Series CXV.
2. [EVAPCO, Inc](#); Models ATC.

3. **Recold**; Series MC.
 4. **<Insert manufacturer's name; product name or designation>**.
 5. or approved equal.
- B. Fabricate evaporative refrigerant condenser mounting base with reinforcement strong enough to resist evaporative refrigerant condenser movement during a seismic event when evaporative refrigerant condenser is anchored to field support structure.
- C. Evaporative refrigerant condenser designed to resist wind load of [30 lbf/sq. ft. (1.44 kPa)] **<Insert value>**.
- D. Casing and Frame:
1. Casing[and Frame] Material: [FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Stainless steel].
 2. Frame Material: [FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel].
 3. Fasteners: [Galvanized] [Stainless] steel.
 4. Joints and Seams: Sealed watertight.
 5. Welded Connections: Continuous and watertight.
- E. Collection Basin: Configure evaporative refrigerant condenser for installation with a field-constructed collection basin.
- F. Collection Basin:
1. Material: [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Stainless steel].
 2. Overflow and drain connections.
 3. Makeup water connection.
- G. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.
- H. Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, [Type 4] [Type 4X] **<Insert type>**.
 2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to provide [control of water makeup valve] [control of water makeup valve and low-level alarm] [control of water makeup valve and low- and high-level alarms] [control of water makeup valve, low- and high-level alarms, and output for shutoff of pump on low level].
 3. Electrode Probes: Stainless steel.
 4. Water Stilling Chamber: [Corrosion-resistant material] [FRP] [Galvanized steel] [PVC pipe] [Stainless steel].
 5. Solenoid Valve: Slow closing[with stainless-steel body]; controlled and powered through level controller in response to water-level set point.

6. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- I. Electric Basin Heater:
 1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
 2. Heater Control Panel: Mounted on the side of each evaporative refrigerant condenser cell.
 3. Enclosure: NEMA 250, **[Type 3R] [Type 4] [Type 4X]**.
 4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor evaporative refrigerant condenser water level and de-energize the heater when the water reaches low-level set point.
 5. Control-circuit transformer with primary and secondary side fuses.
 6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 7. Single-point, field-power connection to a **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker]** and heater branch circuiting complying with NFPA 70.
 8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.
 - J. Hot-Water-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
 - K. Steam-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
 - L. Steam-Injector Basin Heater: Manufacturer's standard offering to provide capacity indicated.
 - M. Pressurized Water Distribution Piping: Main header and lateral branch piping designed for even distribution over heat-exchanger coil throughout the flow range without the need for balancing valves and for connecting individual, removable, nonclogging spray nozzles.
 1. Pipe Material: **[Fiberglass] [PVC] [Galvanized steel] <Insert material>**.
 2. Spray Nozzle Material: **[Plastic] [Polypropylene] [PVC] <Insert material>**.
 3. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.
 - N. Recirculating Piping: **[PVC] <Insert pipe material>[, with connections for separately provided, remote spray pump]**.
 - O. Spray Pump: Close-coupled, end-suction, single-stage, bronze-fitted centrifugal pump; with suction strainer and flow balancing valve, and mechanical seal suitable for outdoor service.

1. General Requirements for Spray Pump Motor: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
2. Motor Enclosure: [**Totally enclosed**] [**Totally enclosed nonventilated (TENV)**] [**Totally enclosed fan cooled (TEFC)**] [**with epoxy or polyurethane finish**].
3. Energy Efficiency: [**Comply with ASHRAE/IESNA 90.1**] [**NEMA Premium Efficient**].
4. Service Factor: [**1.0**] [**1.15**] <Insert value>.

P. Heat-Exchanger Coils:

1. Tube and Tube Sheet Materials: [**Copper tube with stainless-steel sheet**] [**Stainless-steel tube and sheet**] [**Prime-coated steel tube and sheet with outer surface of tube and sheet hot-dip galvanized after fabrication**].
2. Heat-Exchanger Arrangement: [**Serpentine tubes**] [**Serpentine tubes with removable cover plate on inlet and outlet headers**] [**Straight tubes with removable header cover plate on both ends of heat exchanger for straight-through access to each tube**]; and sloped for complete drainage of fluid by gravity.
3. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and bearing ASME "U" stamp; and sloped for complete drainage of fluid by gravity.
4. Field Piping Connections: Vent, supply, and return[**suitable for mating to ASME B16.5, Class 150 flange**].

Q. [**Removable**] Drift Eliminator:

1. Material: [**FRP**] [**PVC**] [**FRP or PVC**] <Insert material>; with maximum flame-spread index of [**5**] [**25**] <Insert value> according to ASTM E 84.
2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.

R. Air-Intake Louvers:

1. Material: [**FRP**] [**PVC**] [**Matching casing**].
2. UV Treatment: Treat louvers with inhibitors to protect against damage caused by UV radiation.
3. Louver Blades: Arranged to uniformly direct air into evaporative refrigerant condenser, to minimize air resistance, and to prevent water from splashing out during all modes of operation including operation with fans off.

S. Axial Fan: Balanced at the factory after assembly.

1. Blade Material: [**Aluminum**] [**FRP**] [**Galvanized steel**].
2. Hub Material: [**Aluminum**] [**FRP**] [**Galvanized steel**].
3. Blade Pitch: Field adjustable.
4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.

5. Fan Shaft Bearings: Self-aligning, grease-lubricated ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of **[40,000] [50,000] <Insert value>** hours.
6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.

T. Belt Drive:

1. Service Factor: **[1.5] <Insert value>** based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of **[cogged]** belts.
4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.

U. Fan Motor:

1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.

Third option provides highest degree of protection and must be used when motor is not located in the airstream.

2. Motor Enclosure: **[Totally enclosed] [Totally enclosed air over (TEAO)] [Totally enclosed fan cooled (TEFC)] [with epoxy or polyurethane finish].**
3. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1] [NEMA Premium Efficient].**
4. Service Factor: **[1.15] <Insert value>**.
5. Insulation: **[Class F] [Class H] <Insert class>**.
6. Variable-Speed Motors: Inverter-duty rated per NEMA MG-1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
7. Severe-duty rating with the following features:
 - a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
 - b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C).
 - c. Internal heater automatically energized when motor is de-energized.
8. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.

V. Fan Discharge Stack: Material shall match casing, **[manufacturer's standard] [velocity recovery]** design.

1. Stack Extension: Fabricated to extend above fan deck **<Insert distance>** unless otherwise indicated.

2. Stack Termination: Wire-mesh, galvanized-steel screens; complying with OSHA regulations.

W. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, [Type 4] [Type 4X] <Insert type>.
2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Evaporative refrigerant condenser manufacturer shall recommend switch set point for proper operation and protection.
3. Provide switch[with manual-reset button] for [field connection to a DDC system for HVAC and]hardwired connection to fan motor electrical circuit.
4. Switch shall, on sensing excessive vibration,[signal an alarm through the DDC system for HVAC and] shut down the fan.

Retain second paragraph if controls are provided with evaporative refrigerant condenser.

X. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

Not all manufacturers offer factory-installed control packages; those that do offer control packages have limited features available with the package. Consult manufacturers for additional information.

Y. Control Package: Factory installed and wired, and functionally tested at factory before shipment.

Retain applicable subparagraphs, based on Project conditions, to require these features and to correspond with components retained in paragraphs above.

1. NEMA 250, [Type 3R] [Type 4] [Type 4X] enclosure with removable internally mount backplate.
2. Control-circuit transformer with primary and secondary side fuses.
3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
4. Microprocessor-based controller for automatic control of fan[and spray pump] based on evaporative refrigerant condenser leaving-water temperature with control features to improve operating efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.
5. Fan motor sequencer for multiple-cell and two-speed applications with automatic lead-stage rotation.
6. Collection basin electric/electronic level controller complying with requirements in "Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve" Paragraph.
7. Electric basin heaters with temperature control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph.
8. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph.
9. Single-point, field-power connection to a [fused disconnect switch] [nonfused disconnect switch] [circuit breaker] [for each evaporative refrigerant condenser cell].

- a. Branch power circuit to each motor and electric basin heater and to controls[**with a disconnect switch or circuit breaker**].
 - b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller with manual bypass and line reactors for each variable-speed motor indicated.
10. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquidtight conduit.
 11. Visual indication of status and alarm[**with momentary test push button**] for each motor.
 12. Audible alarm and silence switch.
 13. Visual indication of elapsed run time, graduated in hours for each motor.
 14. Evaporative refrigerant condenser shall have hardware to enable DDC system for HVAC to remotely monitor and display the following:
 - a. Operational status of each motor.
 - b. Evaporative refrigerant condenser leaving-fluid temperature.
 - c. Fan vibration alarm.
 - d. Collection basin [**high**] [**low**] [**high- and low**]-water-level alarms.
 - e. **<Insert conditions to be monitored>**.

Z. Personnel Access Components:

1. Doors: Large enough for personnel to access evaporative refrigerant condenser internal components from both evaporative refrigerant condenser end walls. Doors shall be operable from both sides of the door.
2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless-steel, fixed ladders with ladder extensions to access external platforms and top of evaporative refrigerant condenser from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.
3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at evaporative refrigerant condenser access doors when evaporative refrigerant condensers are elevated and not accessible from grade.
4. Handrail: Aluminum, galvanized steel, or stainless steel, complete with kneerail and toeboard at platforms, and around top of evaporative refrigerant condenser. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.
 - a. Spanning the collection basin from one end of evaporative refrigerant condenser to the other and positioned to form a path between the access doors. Platform shall be elevated so that all parts are above the high-water level of the collection basin.
 - b. Elevated internal platforms with handrails accessible from fixed vertical ladders to access the fan drive assembly when out of reach from collection basin platform.

AA. Capacities and Characteristics:

1. Number of Cells: **<Insert quantity>**.
2. Maximum Drift Loss: [**0.005**] **<Insert number>** percent of design water flow.

3. Heat-Exchanger Coil:
 - a. Refrigerant Type: [R-22] [R-407C] [R-410A] [HFC-134a] <Insert type>.
 - b. Refrigerant Type: R-407C, R-410A, or HFC-134a.
 - c. Minimum Heat Rejection: <Insert Btu/h (kW)>.
 - d. Condensing Temperature: <Insert deg F (deg C)>.
 - e. Entering-Air Wet-Bulb Temperature: <Insert deg F (deg C)>.

4. Fan Motor:
 - a. Type: [Single speed] [Two speed, single winding] [Two speed, two winding] [Variable speed].
 - b. Horsepower/Cell: <Insert horsepower>.
 - c. Full-Load Ampacity: <Insert value>.
 - d. Minimum Circuit Ampacity: <Insert value>.
 - e. Maximum Overcurrent Protection Device: <Insert amperage>.
 - f. Electrical Characteristics: [208] [240] [480] <Insert value>-V ac, 3 phase, 60 Hz.

5. Spray Pump and Motor:
 - a. Water Flow/Cell: <Insert gpm (L/s)>.
 - b. Horsepower/Cell: <Insert horsepower>.
 - c. Full-Load Ampacity: <Insert value>.
 - d. Minimum Circuit Ampacity: <Insert value>.
 - e. Maximum Overcurrent Protection Device: <Insert amperage>.
 - f. Electrical Characteristics: [120] [208] [240] [277] [480] <Insert value>-V ac, [single] [3] phase, 60 Hz.

6. Sound Pressure Level: <Insert dBA> at <Insert distance in feet (m)> [when measured according to CTI ATC 128].

7. Basin Heater:
 - a. Basin Water Temperature: [40 deg F (5 deg C)] <Insert value>.
 - b. Outdoor Ambient Temperature: [0 deg F (Minus 18 deg C)] [Minus 20 deg F (Minus 29 deg C)] <Insert value>.
 - c. Capacity/Cell: <Insert kilowatts>.
 - d. Full-Load Ampacity: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection Device: <Insert amperage>.
 - g. Electrical Characteristics: [208] [240] [480] <Insert value>-V ac, 3 phase, 60 Hz.
 - h. Capacity/Cell: <Insert MBtu/h (kW)>.
 - i. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 - j. Fluid Flow Rate: <Insert gpm (L/s)>.
 - k. Fluid Pressure Drop: <Insert psig (kPa)>.
 - l. Capacity/Cell: <Insert MBtu/h (kW)>.
 - m. Steam Flow: <Insert lb/h (L/s)>.
 - n. Steam Pressure: <Insert psig (kPa)>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for concrete bases, anchor-bolt sizes and locations, piping systems, and electrical systems to verify actual locations and sizes before evaporative refrigerant condenser installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Equipment Mounting:
 - 1. Install evaporative refrigerant condensers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete."]** **[Section 033053 "Miscellaneous Cast-in-Place Concrete."]**
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- B. Maintain manufacturer's recommended clearances for service and maintenance.
- C. Loose Equipment: Install electrical components, devices, and accessories that are not factory mounted.

3.3 CONNECTIONS

- A. Install piping adjacent to evaporative refrigerant condensers to allow service and maintenance.
- B. Install flexible pipe connectors at final connection of evaporative refrigerant condensers mounted on vibration isolators.
- C. Run overflow, drain, and bleed lines to sanitary sewage system.
- D. Domestic Water Piping: Comply with requirements in Section 221116 "Domestic Water Piping." Connect to water-level control with shutoff valve and union or flange at each connection.
- E. Refrigerant Piping: Comply with requirements in Section 232300 "Refrigerant Piping." Connect to evaporative refrigerant condenser coil with isolation valves at each connection.
- F. Hot-Water Piping: Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Connect to supply and return

basin-heater tappings with shutoff valve, strainer, control valve, and union or flange on supply connection and union or flange and balancing valve on return connection.

- G. Steam and Condensate Piping: Comply with requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties." Connect steam supply to basin heater with shutoff valve, strainer, control valve, and union or flange and condensate piping with union or flange, shutoff valve, strainer, and an appropriate steam trap.
- H. Ducts: Comply with requirements in Section 233113 "Metal Ducts." Connect ducts to evaporative refrigerant condenser inlet and outlet, full size of outlet, with flexible duct connection.

3.4 STARTUP SERVICE

- A. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- B. Obtain performance tables from manufacturer.
- C. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Clean entire unit including basins.
 - 3. Verify that accessories are properly installed.
 - 4. Check makeup water float.
 - 5. Verify clearances for airflow and for evaporative refrigerant condenser servicing.
 - 6. Check for vibration isolation and structural support.
 - 7. Lubricate bearings on fans and shafts.
 - 8. Verify fan wheel rotation for correct direction and for vibration or binding. Correct vibration and binding problems.
 - 9. Adjust belts to proper alignment and tension.
 - 10. Operate variable-speed fans through entire operating range and check for harmonic vibration imbalance. Set motor controller to skip speeds resulting in abnormal vibration.
 - 11. Check vibration switch setting. Verify operation.
 - 12. Verify water level in basin. Fill to proper startup level. Check makeup water-level control and valve.
 - 13. Start external-circuit circulating pumps.
 - 14. Verify operation of evaporative refrigerant condenser basin, makeup line, automatic freeze protect dump, and controlling device. Replace defective and malfunctioning units.
 - 15. Verify operation of basin heater and control thermostat. Replace defective and malfunctioning units.
 - 16. Verify that evaporative refrigerant condenser discharge is not recirculating into air intakes. Recommend corrective action.

17. Check HVAC water treatment system for proper operation, and measure chemical treatment levels. Verify operation of evaporative refrigerant condenser basin automatic blowdown and of controlling device.

3.5 ADJUSTING

- A. Adjust water-level control for proper operating level.
- B. Occupancy Adjustments: When requested within [**twelve (12)**] <Insert number> months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain evaporative refrigerant condensers.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236333

SECTION 236413.13 - DIRECT-FIRED ABSORPTION WATER CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Packaged, water-cooled, direct-fired absorption chillers.
 - 2. Heat-exchanger, brush-cleaning system.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. BAS: Building automation system.
- B. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- C. IPLV: Integrated part-load value. A single-number, part-load efficiency figure of merit calculated per the method defined by ARI 560 and referenced to ARI standard rating conditions.
- D. NPLV: Nonstandard part-load value. A single-number, part-load efficiency figure of merit calculated per the method defined by ARI 560 and intended for operating conditions other than the ARI standard rating conditions.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Direct-fired absorption chillers shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified **and the unit will be fully operational after the seismic event**."
- B. Condenser-Fluid Temperature Performance:

1. Startup Condenser-Fluid Temperature: Chiller shall be capable of starting with an entering condenser-fluid temperature of [60 deg F (16 deg C)] <Insert temperature> and providing stable operation until the system temperature is elevated to the minimum operating entering condenser-fluid temperature.
 2. Minimum Operating Condenser-Fluid Temperature: Chiller shall be capable of continuous operation over the entire capacity range indicated with an entering condenser-fluid temperature of [70 deg F (21 deg C)] <Insert temperature>.
 3. Make factory modifications to standard chiller design if necessary to comply with performance indicated.
- C. Site Altitude: Chiller shall be suitable for altitude at which it is installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.
- D. Performance Tolerance: Comply with the following in lieu of ARI 560:
1. Allowable Capacity Tolerance: [Zero] <Insert number> percent.
 2. Allowable IPLV/NPLV Performance Tolerance: [Zero] <Insert number> percent.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Indicate valves, strainers, and thermostatic valves required for complete system. Include rated capacities, operating characteristics, furnished specialties and accessories, and the following:
1. Performance at ARI standard conditions and at conditions indicated.
 2. Performance at ARI standard unloading conditions.
 3. Minimum evaporator flow rate.
 4. Absorbent capacity of chiller.
 5. Refrigerant capacity of chiller.
 6. Fluid capacity of evaporator and condenser.
 7. Fluid capacity of generator.
 8. Characteristics of safety relief devices.
 9. Minimum entering condenser-fluid temperature.
 10. Performance at varying capacities with constant design condenser-fluid temperature. Repeat performance at varying capacities for different condenser-fluid temperatures from design to minimum in [5 deg F (3 deg C)] <Insert temperature> increments.
 11. If equipped, fluid capacity of dedicated hot-water heater exchanger.
 12. Combustion-air flow.
 13. Exhaust gas airflow.
 14. Exhaust gas minimum and maximum operating temperature.
 15. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with applicable requirements in ASHRAE/IESNA 90.1.

2. Product Data for Prerequisite EA 3: Documentation indicating that refrigerants comply.
 3. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, load distribution, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
 3. Insulated Surface Diagrams: Indicating cold and hot surfaces requiring field-applied insulation with area tabulated for each.
 4. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Structural supports.
 2. Piping roughing-in requirements.
 3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 4. Access requirements, including working clearances for mechanical controls and electrical equipment, and clearances for tube pull and service.
- B. Certificates: For certification required in "Quality Assurance" Article.

Verify availability with manufacturers and retain below if required by seismic criteria applicable to Project. See "Seismic Considerations" Article in the Evaluations. Coordinate below with Section 230548 "Vibration and Seismic Controls for HVAC." See ASCE/SEI 7 for certification requirements for equipment and components.

- C. Seismic Qualification Certificates: For chillers, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
 - D. Manufacturer's Certificate: Certify that components of package not furnished by manufacturer have been selected in accordance with manufacturer's requirements.
 - E. Source quality-control reports.
 - F. Startup service reports.
 - G. Warranty: Sample of special warranty.
- 1.7 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For each chiller to include in emergency, operation, and maintenance manuals.
 - B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.8 MAINTENANCE MATERIALS
- A. Provide [**two (2)**] <Insert number> containers of [**lubricating oil**] [**refrigerant**].
- 1.9 QUALITY ASSURANCE
- A. ARI Rating: Rate chiller performance according to requirements in ARI 560.
 - B. ASHRAE Compliance:
 1. ASHRAE 15 for safety code for mechanical refrigeration.
 2. ASHRAE/IESNA 90.1.
 - C. ASME Compliance: Fabricate and label chiller pressure vessels to comply with applicable portions of ASME Boiler and Pressure Vessel Code.
 - D. Comply with NFPA 70.
 - E. Comply with requirements of UL and UL Canada, and include label by a qualified testing agency showing compliance.
 1. **UL Compliance: [UL 726, "Oil-Fired Boiler Assemblies."] [UL 726, "Oil-Fired Boiler Assemblies"; and UL 795, "Commercial-Industrial Gas Heating Equipment."] [UL 795, "Commercial-Industrial Gas Heating Equipment."]**

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Ship chillers factory charged with nitrogen.
- B. Ship absorbent and refrigerant in chillers or in containers separate from chillers.
- C. Ship **[absorbent] [and] [refrigerant]** in containers separate from chillers.
- D. Package chiller for export shipping in totally enclosed **[bagging] [crate] [crate with bagging]**.
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.
 - 1. Extended warranties include, but are not limited to, the following:
 - a. Complete chiller.
 - b. **[Pumps and motors] [Purge unit] [Burner assembly] <Insert components>**.
 - c. **[Absorbent] [Absorbent and refrigerant]** only.
 - d. Parts **[only] [and labor]**.
 - e. Loss of absorbent and refrigerant for any reason.
 - 2. Warranty Period: Minimum **[two (2)] [three (3)] [four (4)] [five (5)] <Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Section 016000 "Product Requirements."

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Trane; a division of American Standard.
 2. YORK; a Johnson Controls company.
 3. or approved equal.
 4. **<Insert manufacturer's name>.**
 5. or approved equal.

2.2 MANUFACTURED UNIT

- A. Description: Factory-assembled and -tested, hermetic-design chiller complete with absorber, evaporator, condenser, generator, solution heat exchanger, controls, absorbent solution pump with motor, refrigerant pump with motor, purge unit with motor, burner assembly, motor controllers, rupture disk, interconnecting unit piping and wiring, indicated accessories, and mounting frame.
1. Disassemble chiller into major assemblies, as required by the installation, after factory testing and before packaging for shipment.
- B. Absorbent and Refrigerant:
1. Absorbent: Lithium bromide solution with corrosion inhibitor.
 2. Refrigerant: Deionized [**or distilled**]water.
 3. Performance Enhancer: Heat and mass transfer enhancer to improve performance.
- C. Seismic Fabrication Requirements: Fabricate mounting base and attachment to chiller, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

2.3 PUMPS

- A. Hermetically sealed, self-lubricating, and fitted with self-adjusting, spring-loaded, wear-compensating, tapered carbon bearings.
- B. Pump motor assembly shall be designed to operate for not less than 50,000 hours between inspections.
- C. Pump motors shall be cooled and bearings lubricated, either by fluid being pumped or by a filtered supply of liquid refrigerant.

- D. Pump suction and discharge shall be equipped with isolation valves.
- E. Absorbent solution and refrigerant shall have separate and dedicated pumps.
 - 1. Absorbent solution and refrigerant flow-control method shall be manufacturer's choice to comply with operating requirements indicated.
- F. Purge System: Unit mounted and factory wired, equipped with controls and a pump to automatically remove noncondensable vapors.
 - 1. Purge Pump Motor: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: **[Open dripproof] [or] [totally enclosed]**.

2.4 HEAT-EXCHANGER SHELLS

- A. Configuration: Two shells; one shell consists of the absorber/evaporator, low-stage generator/condenser and the other shell consists of the high-stage generator. Where indicated, equip chiller with a dedicated hot-water heat exchanger.
- B. Construction: Fabricated from continuously welded carbon-steel sheet or plate, or from seamless pipe.
- C. Design Pressure and Temperature Rating: Comply with applicable requirements in ASME Boiler and Pressure Vessel Code.
- D. End Tube Sheets: Carbon-steel plates continuously welded to each end of shell; drilled and reamed to accommodate tubes, with positive seal between fluid in tubes and refrigerant in shell.
- E. Intermediate Tube Sheets: Carbon-steel plates installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid tube contact resulting in abrasion and wear.
- F. Generator/Condenser Shell Pressure Relief Device: Manufacturer's standard rupture disk complying with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code.

2.5 ABSORBER

- A. Nozzle or Dispersion Trays: Designed to evenly distribute absorbent solution over tubes; constructed of brass, stainless steel, or another material that will not corrode.
- B. Tubes:
 - 1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end without damage to tube sheets and other tubes.

2. Material: [**Copper**] [**or**] [**copper-nickel alloy**] <Insert material>.
3. Minimum Wall Thickness: [**Manufacturer's choice**] [**0.025 inch (0.6 mm)**] [**0.028 inch (0.7 mm)**] [**0.035 inch (0.9 mm)**] <Insert dimension>.
4. External Finish: Manufacturer's standard.
5. Internal Finish: [**Enhanced**] [**or**] [**smooth**].

C. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. [**Standard**] [**Marine-type**] water box with piping connections.
 - a. Water boxes [**and marine-type water-box covers**] shall have lifting lugs or eyebolts.
 - b. [**Hinged**] [**or**] [**davited**] water boxes.
 - c. [**Hinged**] [**or**] [**davited**] marine-type water-box covers.
3. Standard water box without piping connections.
 - a. Water boxes shall have lifting lugs or eyebolts.
 - b. [**Hinged**] [**or**] [**davited**] water boxes.
4. Nozzle Pipe Connections: [**Welded, ASME B16.5, flat-face flange**] [**Welded, ASME B16.5, raised-face flange**] [**Grooved for mechanical-joint coupling**] [**Grooved with mechanical-joint coupling and flange adapter**].
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with [**3/4-inch (19-mm)**] [**or**] [**1-inch (25-mm)**] <Insert dimension> drain connection at low point and vent connection at high point, each with threaded plug.

D. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

E. Absorber/Condenser Crossover Piping: Factory-furnished and -installed piping connecting fluid connection of absorber discharge to condenser inlet.

2.6 EVAPORATOR

- A. Nozzle or Dispersion Trays: Designed to evenly distribute refrigerant over tubes; constructed of brass, stainless steel, or another material that will not corrode.
- B. Refrigerant Holding Pan: Steel or stainless steel.
- C. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end without damage to tube sheets and other tubes.
2. Material: **[Copper]** **[or]** **[copper-nickel alloy]** **<Insert material>**.
3. Minimum Wall Thickness: **[Manufacturer's choice]** **[0.025 inch (0.6 mm)]** **[0.028 inch (0.7 mm)]** **[0.035 inch (0.9 mm)]** **<Insert dimension>**.
4. External Finish: Manufacturer's standard.
5. Internal Finish: **[Enhanced]** **[or]** **[smooth]**.

D. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. **[Standard]** **[Marine-type]** water box with piping connections.
 - a. Water boxes **[and marine-type water-box covers]** shall have lifting lugs or eyebolts.
 - b. **[Hinged]** **[or]** **[davitd]** water boxes.
 - c. **[Hinged]** **[or]** **[davitd]** marine-type water-box covers.
3. Standard water box without piping connections.
 - a. Water boxes shall have lifting lugs or eyebolts.
 - b. **[Hinged]** **[or]** **[davitd]** water boxes.
4. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange]** **[Welded, ASME B16.5, raised-face flange]** **[Grooved for mechanical-joint coupling]** **[Grooved with mechanical-joint coupling and flange adapter]**.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with **[3/4-inch (19-mm)]** **[or]** **[1-inch (25-mm)]** **<Insert dimension>** drain connection at low point and vent connection at high point, each with threaded plug.

2.7 CONDENSER

A. Refrigerant Holding Pan: Steel or stainless steel.

B. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end without damage to tube sheets and other tubes.
2. Material: **[Copper]** **[or]** **[copper-nickel alloy]** **<Insert material>**.
3. Minimum Wall Thickness: **[Manufacturer's choice]** **[0.025 inch (0.6 mm)]** **[0.028 inch (0.7 mm)]** **[0.035 inch (0.9 mm)]** **<Insert dimension>**.
4. External Finish: Manufacturer's standard.
5. Internal Finish: **[Enhanced]** **[or]** **[smooth]**.

C. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.

2. **[Standard] [Marine-type]** water box with piping connections.
 - a. Water boxes **[and marine-type water-box covers]** shall have lifting lugs or eyebolts.
 - b. **[Hinged] [or] [davited]** water boxes.
 - c. **[Hinged] [or] [davited]** marine-type water-box covers.
 3. Standard water box without piping connections.
 - a. Water boxes shall have lifting lugs or eyebolts.
 - b. **[Hinged] [or] [davited]** water boxes.
 4. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange] [Welded, ASME B16.5, raised-face flange] [Grooved for mechanical-joint coupling] [Grooved with mechanical-joint coupling and flange adapter]**.
 5. Thermistor or RTD temperature sensor factory installed in each nozzle.
 6. Fit each water box with **[3/4-inch (19-mm)] [or] [1-inch (25-mm)] <Insert dimension>** drain connection at low point and vent connection at high point, each with threaded plug.
- D. Additional Corrosion Protection:
1. Electrolytic corrosion-inhibitor anode.
 2. Coat wetted surfaces with a corrosion-resistant finish.
 3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.8 FIRST-STAGE GENERATOR

A. Tubes:

1. **[Replaceable,]**straight, or U tubes expanded into tube sheets.
2. Material: **[Manufacturer's standard] [steel] <Insert material>**.
3. Minimum Wall Thickness: **[Manufacturer's choice] <Insert dimension>**.
4. External Finish: Manufacturer's standard.
5. Internal Finish: Manufacturer's choice; enhanced or smooth.

B. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard water box.
3. Water boxes shall have lifting lugs or eyebolts.
4. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange] [Welded, ASME B16.5, raised-face flange] [Grooved for mechanical-joint coupling] [Grooved with mechanical-joint coupling and flange adapter]**.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.

6. Fit each water box with [3/4-inch (19-mm)] [or] [1-inch (25-mm)] <Insert dimension> drain connection at low point and vent connection at high point, each with threaded plug.

2.9 SECOND-STAGE GENERATOR

A. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end without damage to tube sheets and other tubes.
2. Material: [**Copper**] [or] [**copper-nickel alloy**] <Insert material>.
3. Minimum Wall Thickness: [**Manufacturer's choice**] [0.025 inch (0.6 mm)] [0.028 inch (0.7 mm)] [0.035 inch (0.9 mm)] <Insert dimension>.
4. External Finish: Manufacturer's standard.
5. Internal Finish: Manufacturer's standard.

B. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type.
3. Water boxes shall have lifting lugs or eyebolts.
4. Nozzle Pipe Connections: [**Welded, ASME B16.5, flat-face flange**] [**Welded, ASME B16.5, raised-face flange**] [**Grooved for mechanical-joint coupling**] [**Grooved with mechanical-joint coupling and flange adapter**].
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with [3/4-inch (19-mm)] [or] [1-inch (25-mm)] <Insert dimension> drain connection at low point and vent connection at high point, each with threaded plug.

2.10 DEDICATED HOT-WATER HEAT EXCHANGER

A. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end without damage to tube sheets and other tubes.
2. Material: [**Copper**] [or] [**copper-nickel alloy**] <Insert material>.
3. Minimum Wall Thickness: [**Manufacturer's choice**] [0.025 inch (0.6 mm)] [0.028 inch (0.7 mm)] [0.035 inch (0.9 mm)] <Insert dimension>.
4. External Finish: Manufacturer's standard.
5. Internal Finish: Manufacturer's standard.

B. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type.
3. Water boxes shall have lifting lugs or eyebolts.

4. Nozzle Pipe Connections: [**Welded, ASME B16.5, flat-face flange**] [**Welded, ASME B16.5, raised-face flange**] [**Grooved for mechanical-joint coupling**] [**Grooved with mechanical-joint coupling and flange adapter**].
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with [**3/4-inch (19-mm)**] [**or**] [**1-inch (25-mm)**] <Insert dimension> drain connection at low point and vent connection at high point, each with threaded plug.

2.11 SOLUTION HEAT EXCHANGER

- A. Description: Shell-and-tube or brazed-plate heat exchanger, an integral part of chiller, increases cycle efficiency by preheating the weak solution on its way to the generator while precooling the strong solution returning from the generator.

2.12 BURNER ASSEMBLY

- A. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser suitable for [**natural gas**] [**propane**] [**and**] [**fuel oil**]. [**Mount burner on hinged access door to permit access to combustion chamber.**]
- B. Blower: Centrifugal fan integral to burner, directly driven by motor; with adjustable damper assembly and locking quadrant to set air-fuel ratio.
 1. Motors: Comply with requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- C. Oil Supply: Control devices and modulating control sequence shall comply with requirements of [**ASME CSD-1**] [**FMG**] [**IRI**] [**UL**].
 1. Oil Pump: Two-stage, gear-type oil pump shall be capable of producing **300-psig (2070-kPa)** discharge pressure and **15-in. Hg (50.7-kPa)** vacuum.
 2. Oil Piping Specialties:
 - a. Suction-line, manual, gate valve.
 - b. Removable-mesh oil strainer.
 - c. **0- to 30-in. Hg (0- to 101.3-kPa)** vacuum; **0- to 30-psig (0- to 207-kPa)** vacuum-pressure gage.
 - d. **0- to 300-psig (0- to 2070-kPa)** oil-nozzle pressure gage.
 - e. Nozzle-line, solenoid-safety-shutoff oil valve.
- D. Oil Pilot: [**Intermittent**] [**Interrupted**]-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff solenoid with [**cadmium sulfide**] [**UV scanner**] flame-safety control.

- E. Gas Train: Control devices and modulating control sequence shall comply with requirements of **[ASME CSD-1] [FMG] [IRI] [UL]**.
- F. Gas Pilot: **[Intermittent] [Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.
- G. Burner assembly shall be equipped to limit nitrogen oxide emissions to **[20] [30]** **<Insert value>** ppm.

2.13 ELECTRICAL

- A. Factory installed and wired, and functionally tested at factory before shipment.
- B. Single-point, field-power connection to **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker]**. Minimum withstand rating shall be as required by electrical power distribution system, but not less than **[42,000] [65,000]** **<Insert value>** A.
 - 1. Branch power circuit to each motor, dedicated electrical load, and to controls **[with disconnect switch or circuit breaker]**.
 - a. NEMA KS 1, heavy-duty fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - b. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.
 - 2. NEMA ICS 2, Class A, full-voltage, nonreversing motor controller, hand-off-auto switch, and overcurrent protection for each motor.
 - 3. Control-circuit transformer with primary and secondary side fuses.
- C. Terminal blocks with numbered **[and color-coded]** wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
- D. Wiring Outside of Enclosures: Factory installed in metal raceway except make terminal connections with not more than a **24-inch (610-mm)** length of **[liquidtight] [or] [flexible metallic]** conduit.

2.14 CONTROLS

- A. Chiller control panel shall be separate from burner control panel.
- B. Burner Control Panel: Factory **[or field]** mounted. Maintains safe operating conditions, burner safety limits, burner operation, and interface with chiller controls; include the following components:
 - 1. On-off switch.
 - 2. Flame safeguard.
 - 3. Contacts for remote monitoring of flame failure.

4. Contacts for proof of combustion air.
 5. Exhaust gas temperature limit switch.
 6. Control-circuit transformer.
 7. Burner motor controls.
 8. Fuel-oil pump controls, if chiller is equipped with fuel-oil pump.
 9. Visual indication of on/off status of ignition, blower, and main fuel.
 10. Alarm bell.
- C. Control: Standalone and microprocessor based, with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.
- D. Enclosure: Unit mounted, NEMA 250, **[Type 1] [Type 4] [Type 4x] <Insert type>**, hinged or lockable.
- E. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. Display the following information in either imperial or metric units selectable through the interface:
1. Date and time.
 2. Operating or alarm status.
 3. Operating hours.
 4. Outdoor-air temperature if required for chilled-water reset.
 5. Temperature and pressure of operating set points.
 6. Entering and leaving temperatures of chilled and condenser water.
 7. Refrigerant temperature.
 8. Solution concentration and temperature.
 9. Indication of solution and purge-pump operation.
 10. Generator shell pressure.
 11. Number of starts.
 12. Number of purge cycles.
 13. Entering and leaving hot-water temperatures.
 14. Burner firing rate displayed in percent.
 15. **<Insert status display items>**.
- F. Control Functions:
1. Manual or automatic startup and shutdown time schedule.
 2. Automatic cycle to prevent crystallization.
 3. Entering and leaving chilled-water temperatures and control set points. Chilled-water temperature shall be reset based on **[return-water] [outdoor-air] [space] <Insert condition>** temperature.
 4. Entering and leaving hot-water temperatures and control set points. Hot-water temperature shall be reset based on **[return-water] [outdoor-air] [space] <Insert condition>** temperature.
 5. Condenser-fluid temperature.
 6. Cooling provided and heating energy used within programmable time periods, minimum monthly.
 7. Heating provided and heating energy used within programmable time periods, minimum monthly.

8. **<Insert control functions>**.
- G. Capacity Control: Automatically controls burner firing rate to maintain chilled-water temperature set point for cooling loads and heating-water temperature set point for heating loads ranging from [30] **<Insert number>** to 100 percent.
- H. Safety Shutdowns: Chiller shall automatically shut down and require manual restart. Display a message following each safety shutdown.
1. Crystallization.
 2. Low refrigerant temperature.
 3. Loss of chilled- or condenser-water flow.
 4. Low leaving chilled-water temperature[, 2 deg F (1 deg C) **below set point**] **<Insert condition>**.
 5. First-stage generator low-solution level.
 6. First-stage generator high temperature or pressure.
 7. Burner alarm or control malfunction.
 8. Power failure.
 9. Solution pump overloads.
 10. External auxiliary safety shutdown.
 11. High solution concentration.
 12. Incomplete dilution cycle.
 13. **<Insert conditions>**.
- I. Warning Conditions: Chiller shall remain operational but inhibit burner firing rate to prevent safety shutdown. Control panel shall close warning contacts and generate a message when one of the following operating conditions is detected:
1. Low refrigerant temperature.
 2. High generator temperature or pressure.
 3. High or low entering condenser-water temperature.
 4. Solution temperature sensor failure.
 5. Low chilled-water flow.
 6. Purge-pump current overload.
 7. **<Insert warning conditions>**.
- J. Cycling Shutdowns: Permit automatic restart when preprogrammed limits are reached. Display a message following each cycle shutdown.
1. Cooling Mode:
 - a. Loss of condenser-water flow.
 - b. Low leaving chilled-water temperature.
 - c. Power failure.
 - d. **<Insert conditions>**.
 2. Heating Mode:
 - a. Loss of hot-water flow.
 - b. High leaving hot-water temperature.

- c. Power failure.
 - d. **<Insert conditions>**.
- K. Trending: Capability to trend analog data up to five parameters simultaneously over an adjustable period and frequency of polling.
- L. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.
- M. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.
- N. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer **[and a notebook computer]**.
- O. BAS Interface: Factory-installed hardware and software to enable the BAS to monitor, control, and display chiller status and alarms.
- 1. Hardwired Points:
 - a. Monitoring: On-off status, **[common trouble alarm] <Insert monitoring point>**.
 - b. Control: On-off operation, **[chilled-water, discharge temperature set-point adjustment] [hot-water, discharge temperature set-point adjustment] <Insert control point>**.
 - 2. **[ASHRAE 135 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol] <Insert type of interface>** communication interface with the BAS shall enable the BAS operator to remotely control and monitor the chiller from an operator workstation. Control features and monitoring points displayed locally at chiller control panel shall be available through the BAS.
- 2.15 FINISH
- A. Paint chiller, using manufacturer's standard procedures, except comply with the following minimum requirements:
- 1. Provide at least one coat of primer with a total dry film thickness of at least **2 mils (0.05 mm)**.
 - 2. Provide at least two coats of **[alkyd-modified, vinyl enamel] [epoxy] [polyurethane]** finish with a total dry film thickness of at least **4 mils (0.10 mm)**.
 - 3. Paint surfaces that are to be insulated before applying the insulation.
 - 4. Paint installed insulation to match adjacent uninsulated surfaces.
 - 5. Color of finish coat to be **[manufacturer's standard] [custom color selected by DEN Project Manager] <Insert color description>**.

2.16 ACCESSORIES

- A. Sight Glasses: Equip unit with sight glasses for visual inspection of absorbent solution and refrigerant levels. Provide at least one sight glass in absorber and evaporator sections.
- B. Flow Switches:
1. Chiller manufacturer shall furnish a switch for each [**condenser**] [**evaporator and condenser**] and shall verify field-mounting location before installation.
 2. Paddle Flow Switches:
 - a. Vane operated to actuate a double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the BAS.
 - b. Contacts: Platinum alloy, silver alloy, or gold-plated switch contacts with a rating of 10 A at 120-V ac.
 - c. Pressure rating equal to pressure rating of heat exchanger.
 - d. Construct body and wetted parts of Type 316 stainless steel.
 - e. House switch in an NEMA 250, [**Type 4**] <Insert type> enclosure constructed of die-cast aluminum.
 - f. Vane length to suit installation.
 3. Pressure Differential Switches:
 - a. Construction: Wetted parts of body and trim constructed of Type 316 stainless steel.
 - b. Performance: Switch shall withstand, without damage, the full-pressure rating of the heat exchanger applied to either port and exhibit zero set point shift due to variation in working pressure.
 - c. Set Point: Screw type, field adjustable.
 - d. Electrical Connections: Internally mounted, screw-type terminal blocks.
 - e. Switch Enclosure: NEMA 250, [**Type 4**] <Insert type>.
 - f. Switch Action: Double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the BAS.
- C. Vibration Isolation:
1. Chiller manufacturer shall furnish neoprene-pad vibration isolation for each chiller.
 - a. Two layers of 0.375-inch- (10-mm-) thick, ribbed- or waffle-pattern neoprene pads separated by a 16-gage, stainless-steel plate.
 - b. Fabricate pads from 40- to 50-durometer neoprene.
 - c. Provide stainless-steel square bearing plate to load the pad uniformly between 20 and 40 psig (138 and 276 kPa) with a 0.12- to 0.16-inch (3- to 4-mm) deflection.

2.17 CAPACITIES AND CHARACTERISTICS

- A. Capacity: <Insert tons (kW)>.
- B. Full-Load Efficiency (COP): <Insert number>.
- C. Part-Load Efficiency [(IPLV)] [(NPLV)]: <Insert number>.
- D. Evaporator:
1. Pressure Rating: [150 psig (1035 kPa)] [300 psig (2070 kPa)] <Insert psig (kPa)>.
 2. Number of Passes: [Two] [Three] [Four].
 3. Fluid Type: [Water] <Insert fluid type>.
 4. Design Fluid Flow Rate: <Insert gpm (L/s)>.
 5. Minimum Fluid Flow Rate: <Insert gpm (L/s)>.
 6. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 7. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
 8. Fluid Pressure Drop: <Insert feet of head (kPa)>.
 9. Fluid Velocity: <Insert fps (m/s)>.
 10. Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)]
[0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W)] [0.0005 sq. ft. x h x
deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>.
- E. Absorber/Condenser:
1. Pressure Rating: [150 psig (1035 kPa)] [300 psig (2070 kPa)] <Insert psig (kPa)>.
 2. Number of Passes: [One] [Two] [Three].
 3. Fluid Type: [Water] <Insert fluid type>.
 4. Design Fluid Flow Rate: <Insert gpm (L/s)>.
 5. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 6. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
 7. Fluid Pressure Drop: <Insert feet of head (kPa)>.
 8. Fluid Velocity: <Insert fps (m/s)>.
 9. Fouling Factor: [0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W)]
[0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] [0.001 sq. ft. x h x deg
F/Btu (0.00022 sq. m x deg C/W)] <Insert value>.
- F. Dedicated Hot-Water Heat Exchanger:
1. Capacity: <Insert MBtu/h (kW)>.
 2. Pressure Rating: [150 psig (1035 kPa)] [300 psig (2070 kPa)] <Insert psig (kPa)>.
 3. Number of Passes: [One] [Two] [Three] [Four].
 4. Fluid Type: [Water] <Insert fluid type>.
 5. Design Fluid Flow Rate: <Insert gpm (L/s)>.
 6. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 7. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
 8. Fluid Pressure Drop: <Insert feet of head (kPa)>.
 9. Fluid Velocity: <Insert fps (m/s)>.

10. Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)]
[0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W)] [0.0005 sq. ft. x h x
deg F/Btu (0.00011 sq. m x deg C/W)] **<Insert value>**.

G. Burner Blower:

1. Motor Horsepower: **<Insert value>**.
2. RPM: **<Insert value>**.

H. Pump Horsepower:

1. Purge: **<Insert value>**.
2. Refrigerant: **<Insert value>**.
3. Solution: **<Insert value>**.

I. Chiller Control Electrical Requirements:

1. Power Input: **<Insert kilowatts>**.
2. Minimum Circuit Ampacity: **<Insert value>**.
3. Maximum Overcurrent Protection Device: **<Insert amperage>**.
4. Characteristics: [120] **<Insert value>**-V ac, single phase, 60 Hz.

J. Chiller Electrical Requirements:

1. Power Input: **<Insert kilowatts>**.
2. Minimum Circuit Ampacity: **<Insert value>**.
3. Maximum Overcurrent Protection Device: **<Insert amperage>**.
4. Characteristics: [208] [240] [480] **<Insert value>**-V ac, three phase, 60 Hz.

K. Natural-Gas Heating Value: **<Insert Btu/cu. ft. (kJ/L)>**.

L. Gas Input: **<Insert cfh (mL/s)>**.

M. Fuel-Oil Heating Value: **<Insert Btu/gal. (MJ/L)>**.

N. Oil Input: **<Insert gph (mL/s)>**.

O. Noise Rating: [80] [85] **<Insert dBA>** sound power level when measured according to ARI 575. Provide factory-installed sound treatment if necessary to achieve the performance indicated.

2.18 HEAT-EXCHANGER, BRUSH-CLEANING SYSTEM

A. Furnish for field installation a brush-cleaning system on each chiller [condenser] **<Insert heat exchanger>** for tube cleaning and improved heat transfer.

B. System shall maintain tube fouling at or below design conditions without interrupting normal equipment operation.

- C. System shall consist of a brush inserted in each tube and a catch basket attached to each end of the tube. A four-way valve shall operate to reverse the direction of water flow to push the brush through the tube while removing tube deposits. Four-way reversing valve's actuator shall be controlled by a preset time cycle that provides regular tube brushing during equipment operation. Frequency of the brushing cycle shall be set up to match Project requirements.
- D. Components:
1. Brush: Each brush shall have nylon bristles, titanium wires, and polypropylene tips. Brush interference fit with the ID of the tube shall not exceed **0.025 inch** (0.6 mm).
 2. Basket: Single-piece polypropylene basket with neck OD to press fit inner diameter of tube. Design shall provide for insertion of eddy current probe or removal of brushes without removing baskets from the valve.
 3. Four-Way Valve:
 - a. Construct valve body of carbon steel with internal sealing parts of hard rubber and Type 304 stainless steel.
 - b. Configure valve with parallel flow connections to minimize field installation piping.
 - c. Construct valve to comply with ASME Boiler and Pressure Vessel Code , at a system working pressure equal to condenser.
 - d. Pipe connections shall be flanged.
 - e. Valve manufacturer to test and certify a maximum leakage rate of less than 0.05 percent of the design flow rate at operation conditions of maximum differential pressure.
 - f. Hydrostatically test valve to 1.5 times the design working pressure.
 - g. Design the valve to cause no more than **0.5-psig** (3-kPa) pressure drop at design flow conditions.
 - h. Provide valve with valve-mounted indicating/warning light, which shall light before the valve begins rotation.
 - i. Valve Actuator: Mount electric actuator to operate valve.
 - j. Valve Actuator: Mount pneumatic piston-type actuator to operate valve. Actuator shall be suitable for operation using field-supplied air pressure.
 - k. Position Switches: Factory mount microswitches on valve to indicate the complete turn of valve in both normal and reverse flow.
 4. Control Panel: Factory or field mount a control panel on chiller. Control panel shall include the following features:
 - a. NEMA 250, **[Type 1]** **[Type 4]** **[Type 4x]** **[Type 12]** enclosure.
 - b. Timer to automatically initiate the cleaning cycle over a 24-hour period.
 - c. Manual override of preset cleaning cycle.
 - d. Visual indication of "Power On," "Diverter Position," "Normal Flow," "Reverse Flow," and "Valve Malfunction" indicating a slow or incomplete valve turn.
 - e. For pneumatic actuators, mount four-way solenoid valve for actuator operation in the control panel.
 - f. Flow-switch bypass.

- g. Unloading signal to chiller.

2.19 SOURCE QUALITY CONTROL

- A. Perform functional **[run]** tests of chillers before shipping.
- B. Factory test and inspect absorber, generator, evaporator, and condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Pressure test tube-side of heat exchangers, including water boxes, to 1.5 times the rated pressure. Vacuum and pressure test shells for leaks.
- C. Rate sound power level according to ARI 575.
- D. Burner Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion requirements indicated.
- E. Factory performance test chillers, before shipping, according to ARI 560.
1. Test the following conditions:
 - a. Design conditions indicated.
 - b. Reduction in capacity from design to minimum load in steps of **[10] [25] [33]** **<Insert number>** with condenser fluid at design conditions.
 - c. Reduction in capacity from design to minimum load in steps of **[10] [25] [33]** **<Insert number>** with varying entering condenser-fluid temperature from design to minimum conditions in **[5 deg F (3 deg C)] <Insert temperature>** increments.
 - d. At **[one] [two] [three] [four] [five] [10]** **<Insert number>** point(s) of varying part-load performance to be selected by Owner at time of test.
- F. Factory sound test chillers, before shipping, according to ARI 575.
1. Test the following conditions:
 - a. Design conditions indicated.
 - b. Chiller operating at calculated worst-case sound condition.
 - c. At **[one] [two] [three] [four] [five]** **<Insert number>** point(s) of varying part-load performance to be selected by Owner at time of test.
- G. Allow **[Owner]** **<Insert entity>** access to place where chillers are being tested. Notify DEN Project Manager **[14]** **<Insert number>** days in advance of testing.
- H. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine chillers before installation. Reject chillers that are damaged.
- B. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting chiller performance, maintenance, and operations before equipment installation.
 - 1. Final chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CHILLER INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install chillers on support structure indicated.
- C. Equipment Mounting:
 - 1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Maintain manufacturer's recommended clearances for service and maintenance.
- E. Charge chiller with absorbent and refrigerant if not factory charged.
- F. Install separate devices furnished by manufacturer and not factory installed.
- G. Insulate hot and cold chiller surfaces that are recommended by chiller manufacturer to be insulated. Comply with requirements in Section 230716 "HVAC Equipment Insulation."
- H. Install electrical devices furnished with chiller but not specified to be factory mounted.
- I. Install control wiring to field-mounted electrical devices.
- J. Provide connections to chilled water piping.

1. On inlet, provide:
 - a. Thermometer well for temperature controller.
 - b. Thermometer.
 - c. Strainer.
 - d. Flow switch.
 - e. Flexible pipe connector.
 - f. Pressure gage.
 - g. Shut-off valve.
2. On outlet, provide:
 - a. Thermometer.
 - b. Flexible pipe connector.
 - c. Pressure gage.
 - d. **[Shut-off] [Balancing]** valve.

3.3 HEAT-EXCHANGER, BRUSH-CLEANING SYSTEM INSTALLATION

- A. Install brush-cleaning system control panel adjacent to chiller control panel.
- B. Arrange piping to provide service access to four-way valve assembly without affecting access to chiller. Secure valve to prevent lateral movement and vibration during operation.
- C. Provide field electric power, as required, to each system control panel and electric-actuated valve.
- D. Provide pneumatic piping with pressure regulator and an isolation valve to each pneumatic supply connection. Coordinate field source of air with manufacturer to ensure that requirements are satisfied for proper valve operation.
- E. Interconnect brush-cleaning system controls with chiller controls. Coordinate requirements to ensure safe, trouble-free operation.
- F. Functionally test the entire brush-cleaning system, including the valve, actuator, position indicator, and control panel, with chiller in operation.

3.4 CONNECTIONS

- A. Comply with requirements for hydronic piping in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements for gas piping in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Connect gas piping full size to gas-train inlet with shutoff valve and union.

- D. Install gas-fired boilers according to NFPA 54.
- E. Comply with requirements for fuel-oil piping in Section 231113 "Facility Fuel-Oil Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- F. Connect oil piping full size to burner inlet with shutoff valve and union.
- G. Install oil-fired boilers according to NFPA 31.
- H. Install piping adjacent to chiller to allow service and maintenance.
- I. Hot-Water Heat-Exchanger Connections: Connect to heat-exchanger inlet with shutoff valve, [**strainer,**] [**flexible connector,**] thermometer, and plugged tee with shutoff valve and pressure gage. Connect to heat-exchanger outlet with shutoff valve, check valve, balancing valve,[**flexible connector,**] flow switch, thermometer, plugged tee with shutoff valve and pressure gage,[**flow meter,**] and drain connection with valve. Make connections to chiller with a [**flange**] [**or**] [**mechanical coupling**].
- J. Evaporator-Fluid Connections: Connect to evaporator inlet with shutoff valve, [**strainer,**] [**flexible connector,**] thermometer, and plugged tee with shutoff valve and pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve,[**flexible connector,**] flow switch, thermometer, plugged tee with shutoff valve and pressure gage,[**flow meter,**] and drain connection with valve. Make connections to chiller with a [**flange**] [**or**] [**mechanical coupling**].
- K. Absorber/Condenser-Fluid Connections: Connect to inlet with shutoff valve, [**strainer,**] [**flexible connector,**] thermometer, and plugged tee with shutoff valve and pressure gage. Connect to outlet with shutoff valve, balancing valve,[**flexible connector,**] flow switch, thermometer, plugged tee with shutoff valve and pressure gage,[**flow meter,**] and drain connection with valve. Make connections to chiller with a [**flange**] [**or**] [**mechanical coupling**].
 - 1. If not factory furnished or installed, provide pipe connecting fluid connection of absorber discharge and condenser inlet.
- L. Refrigerant Pressure Relief Device Connections: Extend [**vent piping**] [**separate vent piping for each chiller**] to the outdoors without valves or restrictions. Comply with ASHRAE 15. Connect to chiller pressure relief device with flexible connector and dirt leg with drain valve.
- M. Extend [**purge vent piping**] [**separate purge vent piping for each chiller**] to the outdoors. Comply with ASHRAE 15.
- N. Connect each chiller drain connection with a union and drain pipe, and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection.
- O. Comply with requirements for chimney system in Section 235133 "Insulated Sectional Chimneys" and Section 235116 "Fabricated Breechings and Accessories." Drawings indicate general arrangement of pipe, fittings, and specialties. Connect chimney system to chiller burner outlet and extend to the outdoors.

- P. Connect fuel-fired burner assembly and blower and associated damper for combustion air.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service. Supply service of factory trained representative for a period of **<Insert number>** days to supervise testing, dehydration and charging of machine, start-up, and instruction on operation and maintenance.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Operate chiller for run-in period.
 3. Verify that absorbent and refrigerant charge is sufficient and chiller has been leak tested.
 4. Verify that pumps are installed and functional.
 5. Verify that thermometers and gages are installed.
 6. Operate chiller for run-in period.
 7. Verify that refrigerant pressure relief device is vented to the outdoors.
 8. Verify proper motor rotation.
 9. Verify proper fuel supply. Adjust air-fuel ratio and combustion.
 10. Verify proper combustion-air source.
 11. Verify proper exhaust emissions.
 12. Verify static deflection of vibration isolators including deflection during chiller startup and shutdown.
 13. Verify and record performance of fluid flow and low-temperature interlocks for evaporator and condenser.
 14. Verify and record performance of chiller protection devices.
 15. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
 16. Burner Test: Adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.
- C. Prepare test and inspection startup reports.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain chillers. [**Video record the training sessions.**]
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236413.13

SECTION 236413.16 - INDIRECT-FIRED ABSORPTION WATER CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Packaged, water-cooled, [~~single-~~] [~~and~~] [~~double-~~]effect absorption chillers.
 - 2. Heat-exchanger, brush-cleaning system.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- B. DDC: Direct digital control.
- C. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 560 and referenced to ARI standard rating conditions.
- D. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 560 and intended for operating conditions other than the ARI standard rating conditions.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Indirect-fired absorption chillers shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
- B. Condenser-Fluid Temperature Performance:

1. Startup Condenser-Fluid Temperature: Chiller shall be capable of starting with an entering condenser-fluid temperature of [60 deg F (16 deg C)] [55 deg F (13 deg C)] [40 deg F (4.4 deg C)] <Insert temperature> and providing stable operation until the system temperature is elevated to the minimum operating entering condenser-fluid temperature.
 2. Minimum Operating Condenser-Fluid Temperature: Chiller shall be capable of continuous operation over the entire capacity range indicated with an entering condenser-fluid temperature of [65 deg F (18 deg C)] [60 deg F (16 deg C)] [55 deg F (13 deg C)].
 3. Make factory modifications to standard chiller design if necessary to comply with performance indicated.
- C. Site Altitude: Chiller shall be suitable for altitude at which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.
- D. Performance Tolerance: Comply with the following in lieu of ARI 560:
1. Allowable Capacity Tolerance: [Zero] <Insert number> percent.
 2. Allowable IPLV/NPLV Performance Tolerance: [Zero] <Insert number> percent.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Indicate valves, strainers, and thermostatic valves required for complete system. Include rated capacities, operating characteristics, furnished specialties and accessories.
1. Performance at ARI standard conditions and at conditions indicated.
 2. Performance at ARI standard unloading conditions.
 3. Minimum evaporator flow rate.
 4. Absorbent capacity of chiller.
 5. Refrigerant capacity of chiller.
 6. Fluid capacity of evaporator and condenser.
 7. Fluid capacity of generator.
 8. Characteristics of safety relief devices.
 9. Minimum entering condenser-fluid temperature.
 10. Performance at varying capacities with constant design condenser-fluid temperature. Repeat performance at varying capacities for different condenser-fluid temperatures from design to minimum in [5 deg F (3 deg C)] <Insert temperature> increments.
 11. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with ASHRAE 90.1.
 2. Product Data for Prerequisite EA 3: Documentation indicating that refrigerants comply.

3. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, load distribution, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
 3. Insulated Surface Diagrams: Indicating cold and hot surfaces requiring insulation with area tabulated for each.
 4. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Structural supports.
 2. Piping roughing-in requirements.
 3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- B. Certificates: For certification required in "Quality Assurance" Article.
- C. Seismic Qualification Certificates: For chillers, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Manufacturer's Certificate: Certify that components of package not furnished by manufacturer have been selected in accordance with manufacturer's requirements.
- E. Source quality-control reports.

- F. Startup service reports.
- G. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each chiller to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIALS

- A. Provide [**two (2)**] <Insert number> containers of [**lubricating oil**] [**refrigerant**].

1.9 QUALITY ASSURANCE

- A. ARI Rating: Rate chiller performance according to requirements in ARI 560.
- B. ASHRAE Compliance:
 - 1. ASHRAE 15 for safety code for mechanical refrigeration.
 - 2. ASHRAE/IESNA 90.1.
- C. ASME Compliance: Fabricate and label chiller pressure vessels to comply with applicable portions of ASME Boiler and Pressure Vessel Code.
- D. Comply with NFPA 70.
- E. Comply with requirements of UL and UL Canada, and include label by a qualified testing agency showing compliance.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Ship chillers factory charged with nitrogen.
- B. Ship absorbent and refrigerant in chillers or in containers separate from chillers.
- C. Ship [**absorbent**] [**and**] [**refrigerant**] in containers separate from chillers.
- D. Package chiller for export shipping in totally enclosed [**bagging**] [**crate**] [**crate with bagging**].
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

- F. Protect units from physical damage.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.

1. Extended warranties include, but are not limited to, the following:

- a. Complete chiller.
- b. **[Pumps and motors] [Purge unit] <Insert components>.**
- c. **[Absorbent] [Absorbent and refrigerant] only.**
- d. **Parts [only] [and labor].**
- e. Loss of absorbent and refrigerant for any reason.

- B. Warranty Period: Minimum **[two (2)] [three (3)] [four (4)] [five (5)] <Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. Carrier Corporation; a United Technologies company.
2. Trane; a division of American Standard.
3. YORK; a Johnson Controls company.
4. **<Insert manufacturer's name>.**
5. or approved equal.

2.2 MANUFACTURED UNIT

- A. Description: Factory-assembled and -tested, hermetic-design chiller complete with absorber, evaporator, condenser, generator, solution heat exchanger, controls, absorbent solution pump with motor, refrigerant pump with motor, purge unit with motor, motor controllers, rupture disk, interconnecting unit piping and wiring, indicated accessories, and mounting frame.
1. Disassemble chiller into major assemblies as required by the installation after factory testing and before packaging for shipment.
- B. Absorbent and Refrigerant:
1. Absorbent: Lithium bromide solution with corrosion inhibitor.
 2. Refrigerant: Deionized **[or distilled]**water.
 3. Performance Enhancer: Heat and mass transfer enhancer to improve performance.
- C. Seismic Fabrication Requirements: Fabricate mounting base and attachment to chiller, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

2.3 PUMPS

- A. Hermetically sealed, self-lubricating, and fitted with self-adjusting, spring-loaded, wear-compensating tapered carbon bearings.
- B. Pump motor assembly shall be designed to operate for not less than **[25,000] [50,000]** hours between inspections.
- C. Pump motors cooled, and bearings lubricated, either by fluid being pumped or by a filtered supply of liquid refrigerant.
- D. Pump suction and discharge equipped with isolation valves.
- E. Separate and dedicated pumps for absorbent solution and refrigerant.
1. Absorbent solution and refrigerant flow-control method shall be manufacturer's choice to comply with operating requirements indicated.
- F. Purge System: Unit mounted and factory wired, equipped with controls and a pump to automatically remove noncondensable vapors.
1. Purge Pump Motor: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: **[Open dripproof] [Totally enclosed] [Open dripproof or totally enclosed]**.

2.4 HEAT-EXCHANGER Shells

- A. Configuration for Single-Effect Chillers: Two shells; one shell consists of the absorber/evaporator and the other shell consists of the condenser/generator.
- B. Configuration for Double-Effect Chillers: Two shells; one shell consists of the absorber/evaporator, low-stage generator/condenser and the other shell consists of the high-stage generator.
- C. Construction: Fabricated from continuously welded carbon-steel sheet or plate, or from seamless pipe.
- D. Design Pressure and Temperature Rating: Comply with applicable requirements in ASME Boiler and Pressure Vessel Code.
- E. End Tube Sheets: Carbon-steel plates continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between fluid in tubes and refrigerant in shell.
- F. Intermediate Tube Sheets: Carbon-steel plates installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.
- G. Generator/Condenser Shell Pressure Relief Device: Manufacturers standard rupture disk complying with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

2.5 ABSORBER

- A. Nozzle or Dispersion Trays: Designed to evenly distribute absorbent solution over tubes. Constructed of brass, stainless steel, or another material that will not corrode.
- B. Tubes:
 - 1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes.
 - 2. Material: [**Copper**] [**Copper-nickel alloy**] [**Stainless steel**] [**Titanium**] [**Copper, copper-nickel alloy, stainless steel, or titanium**] <Insert material>.
 - 3. Minimum Wall Thickness: [**Manufacturer's choice**] [**0.025 inch (0.6 mm)**] [**0.028 inch (0.7 mm)**] [**0.035 inch (0.9 mm)**] <Insert dimension>.
 - 4. External Finish: Manufacturer's standard.
 - 5. Internal Finish: [**Enhanced**] [**Smooth**] [**Enhanced or smooth**].
- C. Water Boxes:
 - 1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
 - 2. [**Standard**] [**Marine**] type for water box with piping connections.

- a. Water boxes [**and marine water-box covers**] shall have lifting lugs or eyebolts.
 - b. [**Hinged**] [**or**] [**davited**] water boxes.
 - c. [**Hinged**] [**or**] [**davited**] marine water-box covers.
3. Standard type for water box without piping connections.
- a. Water boxes shall have lifting lugs or eyebolts.
 - b. [**Hinged**] [**or**] [**davited**] water boxes.
 - c. [**Hinged**] [**or**] [**davited**] marine water-box covers.
4. Nozzle Pipe Connections: [**Welded, ASME B16.5, flat-face flange**] [**Welded, ASME B16.5, raised-face flange**] [**Grooved for mechanical-joint coupling**] [**Grooved with mechanical-joint coupling and flange adapter**].
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with [**3/4-inch (19-mm)**] [**1-inch (25-mm)**] [**3/4- or 1-inch (19- or 25-mm)**] **<Insert dimension>** drain connection at low point and vent connection at high point, each with threaded plug.

D. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

E. Absorber/Condenser Crossover Piping: Factory [**furnished**] [**installed**] piping connecting fluid connection of absorber discharge to condenser inlet.

2.6 EVAPORATOR

- A. Nozzle or Dispersion Trays: Designed to evenly distribute refrigerant over tubes. Constructed of brass, stainless steel, or another material that will not corrode.
- B. Refrigerant Holding Pan: [**Steel**] [**Stainless steel**] [**Steel or stainless steel**].
- C. Tubes:
1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes.
 2. Material: [**Copper**] [**Copper-nickel alloy**] [**Stainless steel**] [**Titanium**] [**Copper, copper-nickel alloy, stainless steel, or titanium**] **<Insert material>**.
 3. Minimum Wall Thickness: [**Manufacturer's choice**] [**0.025 inch (0.6 mm)**] [**0.028 inch (0.7 mm)**] [**0.035 inch (0.9 mm)**] **<Insert dimension>**.
 4. External Finish: Manufacturer's standard.
 5. Internal Finish: [**Enhanced**] [**Smooth**] [**Enhanced or smooth**].
- D. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. **[Standard] [Marine]** type for water box with piping connections.
 - a. Water boxes **[and marine water-box covers]** shall have lifting lugs or eyebolts.
 - b. **[Hinged] [or] [davited]** water boxes.
 - c. **[Hinged] [or] [davited]** marine water-box covers.
3. Standard type for water box without piping connections.
 - a. Water boxes shall have lifting lugs or eyebolts.
 - b. **[Hinged] [or] [davited]** water boxes.
 - c. **[Hinged] [or] [davited]** marine water-box covers.
4. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange] [Welded, ASME B16.5, raised-face flange] [Grooved for mechanical-joint coupling] [Grooved with mechanical-joint coupling and flange adapter]**.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with **[3/4-inch (19-mm)] [1-inch (25-mm)] [3/4- or 1-inch (19- or 25-mm)]** **<Insert dimension>** drain connection at low point and vent connection at high point, each with threaded plug.

2.7 CONDENSER

- A. Refrigerant Holding Pan: **[Steel] [Stainless steel] [Steel or stainless steel]**.
- B. Tubes:
 1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes.
 2. Material: **[Copper] [Copper-nickel alloy] [Stainless steel] [Titanium] [Copper, copper-nickel alloy, stainless steel, or titanium]** **<Insert material>**.
 3. Minimum Wall Thickness: **[Manufacturer's choice] [0.025 inch (0.6 mm)] [0.028 inch (0.7 mm)] [0.035 inch (0.9 mm)]** **<Insert dimension>**.
 4. External Finish: Manufacturer's standard.
 5. Internal Finish: **[Enhanced] [Smooth] [Enhanced or smooth]**.
- C. Water Boxes:
 1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
 2. **[Standard] [Marine]** type for water box with piping connections.
 - a. Water boxes **[and marine water-box covers]** shall have lifting lugs or eyebolts.
 - b. **[Hinged] [or] [davited]** water boxes.
 - c. **[Hinged] [or] [davited]** marine water-box covers.
 3. Standard type for water box without piping connections.

- a. Water boxes shall have lifting lugs or eyebolts.
 - b. **[Hinged]** **[or]** **[davitd]** water boxes.
 - c. **[Hinged]** **[or]** **[davitd]** marine water-box covers.
4. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange]** **[Welded, ASME B16.5, raised-face flange]** **[Grooved for mechanical-joint coupling]** **[Grooved with mechanical-joint coupling and flange adapter]**.
 5. Thermistor or RTD temperature sensor factory installed in each nozzle.
 6. Fit each water box with **[3/4-inch (19-mm)]** **[1-inch (25-mm)]** **[3/4- or 1-inch (19- or 25-mm)]** **<Insert dimension>** drain connection at low point and vent connection at high point, each with threaded plug.

D. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.8 GENERATOR FOR SINGLE-EFFECT CHILLERS

A. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes.
2. Material: **[06/11 copper-nickel alloy]** **[Stainless steel]** **[Titanium]** **[06/11 copper-nickel alloy, stainless steel, or titanium]** **<Insert material>**.
3. Minimum Wall Thickness: **[Manufacturer's choice]** **[0.035 inch (0.9 mm)]** **<Insert dimension>**.
4. External Finish: Manufacturer's standard.
5. Internal Finish: **[Smooth]** **[Enhanced or smooth]**.

B. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type water box.
3. Water boxes shall have lifting lugs or eyebolts.
4. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange]** **[Welded, ASME B16.5, raised-face flange]** **[Grooved for mechanical-joint coupling]** **[Grooved with mechanical-joint coupling and flange adapter]**.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with **[3/4-inch (19-mm)]** **[1-inch (25-mm)]** **[3/4- or 1-inch (19- or 25-mm)]** **<Insert dimension>** drain connection at low point and vent connection at high point, each with threaded plug.

C. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.9 FIRST-STAGE GENERATOR FOR DOUBLE-EFFECT CHILLERS

A. Tubes:

1. Replaceable, straight, or U tubes expanded into tube sheets.
2. Material: **[Manufacturer's standard] [06/11 copper-nickel alloy] [Type 409 stainless steel] [Titanium] [06/11 copper-nickel alloy, Type 409 stainless steel] <Insert material>**.
3. Minimum Wall Thickness: **[Manufacturer's choice] [0.028 inch (0.7 mm)] [0.035 inch (0.9 mm)] <Insert dimension>**.
4. External Finish: Manufacturer's standard.
5. Internal Finish: **[Smooth] [Enhanced or smooth]**.

B. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type water box.
3. Water boxes shall have lifting lugs or eyebolts.
4. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange] [Welded, ASME B16.5, raised-face flange] [Grooved for mechanical-joint coupling] [Grooved with mechanical-joint coupling and flange adapter]**.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with **[3/4-inch (19-mm)] [1-inch (25-mm)] [3/4- or 1-inch (19- or 25-mm)] <Insert dimension>** drain connection at low point and vent connection at high point, each with threaded plug.

C. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.10 SECOND-STAGE GENERATOR FOR DOUBLE-EFFECT CHILLERS

A. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes.

2. Material: [**Copper**] [**Copper-nickel alloy**] [**Copper or copper-nickel alloy**] [**Stainless steel**] [**Titanium**] <Insert material>.
3. Minimum Wall Thickness: [**Manufacturer's choice**] [**0.025 inch (0.6 mm)**] [**0.028 inch (0.7 mm)**] [**0.035 inch (0.9 mm)**] <Insert dimension>.
4. External Finish: Manufacturer's standard.
5. Internal Finish: [**Smooth**] [**Enhanced or smooth**].

B. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type water box.
3. Water boxes shall have lifting lugs or eyebolts.
4. Nozzle Pipe Connections: [**Welded, ASME B16.5, flat-face flange**] [**Welded, ASME B16.5, raised-face flange**] [**Grooved for mechanical-joint coupling**] [**Grooved with mechanical-joint coupling and flange adapter**].
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with [**3/4-inch (19-mm)**] [**1-inch (25-mm)**] [**3/4- or 1-inch (19- or 25-mm)**] <Insert dimension> drain connection at low point and vent connection at high point, each with threaded plug.

C. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.11 SOLUTION HEAT EXCHANGER

- A. Description: Shell-and-tube or brazed-plate heat exchanger; integral part of chiller to increase cycle efficiency by preheating the weak solution on its way to the generator while precooling the strong solution returning from the generator.

2.12 STEAM CONDENSATE DRAIN COOLER

- A. Description: Shell-and-tube heat exchanger constructed of carbon-steel shell and copper-nickel-alloy or stainless-steel tubes.

2.13 FACTORY-APPLIED INSULATION

- A. Factory-Applied Insulation on Cold Surfaces:

1. Closed-cell, flexible elastomeric thermal insulation complying with ASTM C 534, Type I for tube and Type II for sheet materials.
 - a. Thickness: [**3/4 inch (19 mm)**] [**1-1/2 inches (38 mm)**] <Insert dimension>.

2. Adhesive: As recommended by insulation manufacturer.
3. Factory apply insulation over all cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator shell and end tube sheets; evaporator water boxes including nozzles; refrigerant pump; cold surfaces of motor; and cold piping.
 - a. Apply adhesive to 100 percent of insulation contact surface.
 - b. Before insulating steel surfaces, prepare surfaces for paint, and prime and paint as indicated for other painted components. Do not insulate unpainted steel surfaces.
 - c. Seal seams and joints to provide a vapor barrier.
 - d. After adhesive has fully cured, paint exposed surfaces of insulation to match other painted parts.

B. Factory-Applied Insulation on Hot Surfaces:

1. Mineral-fiber board, pipe or tank insulation complying with one of following:
 - a. ASTM C 547, Type I or Type II, Grade A.
 - b. ASTM C 612, Type IB.
 - c. ASTM C 1393, Type II or Type IIIA, Category 2.
 - d. Thickness: [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension>.
2. Adhesive: As recommended by insulation manufacturer.
3. Factory apply materials over all hot surfaces to provide smooth, straight, and even surfaces; free of voids.
 - a. Apply adhesive to insulation contact surface as recommended by insulation manufacturer.
 - b. Install insulation anchor pins and washers if required by insulation manufacturer to secure insulation to surfaces to be insulated.
 - c. Completely encapsulate insulation with metal jacket, leaving no exposed insulation. Provide removable jacket on components requiring access for service and inspection.
 - d. Paint exposed surfaces of metal jacket to match other painted parts unless jacket material is aluminum or stainless steel.

2.14 ELECTRICAL

- A. Factory installed and wired, and functionally tested at factory before shipment.
- B. Single-point, field-power connection to [**fused disconnect switch**] [**nonfused disconnect switch**] [**circuit breaker**]. Minimum withstand rating shall be as required by electrical power distribution system, but not less than [**42,000**] [**65,000**] <Insert value> A.
 1. Branch power circuit to each motor, dedicated electrical load, and controls[**with disconnect switch or circuit breaker**].

- a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - b. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.
2. NEMA ICS 2, Class A, full-voltage, nonreversing motor controller, hand-off-auto switch, and overcurrent protection for each motor.
 3. Control-circuit transformer with primary and secondary side fuses.
- C. Terminal blocks with numbered [**and color-coded**] wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
- D. Wiring Outside of Enclosures: Factory installed in metal raceway except make terminal connections with not more than a **24-inch** (610-mm) length of [**liquidtight**] [**or**] [**flexible metallic**] conduit.

2.15 CONTROLS

- A. Control: Standalone and microprocessor based, with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.
- B. Enclosure: Unit mounted, NEMA 250, [**Type 1**] [**Type 4**] [**Type 4x**] **<Insert type>**, hinged or lockable.
- C. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units selectable through the interface, display the following information:
1. Date and time.
 2. Operating or alarm status.
 3. Operating hours.
 4. Outdoor-air temperature if required for chilled-water reset.
 5. Temperature and pressure of operating set points.
 6. Entering and leaving temperatures of chilled and condenser water.
 7. Refrigerant temperature.
 8. Solution concentration and temperature.
 9. Indication of solution and purge-pump operation.
 10. Generator shell pressure.
 11. Number of starts.
 12. Number of purge cycles.
 13. Hot-water valve actuator potentiometer position (percentage).
 14. Entering and leaving hot-water temperatures.
 15. Steam demand limit.
 16. Inlet steam pressure and temperature.
 17. Steam valve actuator potentiometer position (percentage).
 18. First-stage generator pressure and temperature.
 19. **<Insert status display items>**.

D. Control Functions:

1. Manual or automatic startup and shutdown time schedule.
2. Automatic cycle to prevent crystallization.
3. Entering and leaving chilled-water temperatures and control set points.
Chilled-water temperature shall be reset based on [return-water] [outdoor-air] [space] temperature.
4. Condenser-fluid temperature.
5. Cooling provided and heating energy used within programmable time periods, minimum monthly.
6. <Insert control functions>.

E. Capacity Control: Automatically controls input flow rate of heat source to maintain chilled-water temperature set point for cooling loads ranging from 10 to 100 percent.

F. Control Valve Package: [Factory-furnished, for field installation,] [Factory-installed] control valve package suitable for energy source indicated.

1. Body: Cast-iron, carbon-steel, or stainless-steel body with flanged connections.
2. Type: [Manufacturer's choice] [V-notch ball] [Butterfly] [Globe style with cage-guide plug] <Insert type> constructed of stainless steel.
3. Rating: Pressure and temperature rating to match heat exchanger.
4. Shutoff: Capable of bubble-tight shutoff against maximum system pressure.
5. Size: Determined by chiller manufacturer.
6. Modulation: [Two] [Three]-way.
7. Turndown: As required to achieve stable control through the indicated operating range.
8. Actuator: Electric powered from chiller control panel and installed on valve.

G. Safety Shutdowns:

1. Crystallization.
2. Low refrigerant temperature.
3. Loss of chilled- or condenser-water flow.
4. Low leaving chilled-water temperature[, 2 deg F (1 deg C) below set point].
5. First-stage generator low-solution level.
6. First-stage generator high temperature or pressure.
7. Power failure.
8. Solution pump overloads.
9. External auxiliary safety shutdown.
10. High solution concentration.
11. Incomplete dilution cycle.
12. High entering-water temperature.
13. High inlet steam pressure and temperature.
14. <Insert conditions>.

H. Warning Conditions: Control panel shall close warning contacts and generate a message when one of the following operating conditions is detected:

1. Low refrigerant temperature.

2. High generator temperature or pressure.
 3. High entering generator-water temperature (single-stage generator only).
 4. High or low entering condenser-water temperature.
 5. Solution temperature sensor failure.
 6. Low chilled-water flow.
 7. **<Insert warning conditions>**.
- I. Trending: Capability to trend analog data of up to five parameters simultaneously over an adjustable period and frequency of polling.
- J. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.
- K. Control Authority:
1. At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.
- L. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer **and a notebook computer**.
- M. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display chiller status and alarms.
1. Hardwired Points:
 - a. Monitoring: On-off status, **[common trouble alarm] <Insert monitoring point>**.
 - b. Control: On-off operation, **[chilled-water, discharge temperature set-point adjustment] [generator heat source capacity limiting] <Insert control point>**.
 2. **[ASHRAE 135 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol] <Insert type of interface>** communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the chiller from an operator workstation. Control features and monitoring points displayed locally at chiller control panel shall be available through the DDC system for HVAC.
- 2.16 FINISH
- A. Paint chiller, using manufacturer's standard procedures, except comply with the following minimum requirements:
1. Provide at least one coat of primer with a total dry film thickness of at least **2 mils (0.05 mm)**.
 2. Provide at least two coats of **[alkyd-modified, vinyl enamel] [epoxy] [polyurethane]** finish with a total dry film thickness of at least **4 mils (0.10 mm)**.

3. Paint surfaces that are to be insulated before applying the insulation.
4. Paint installed insulation to match adjacent uninsulated surfaces.
5. Color of finish coat to be **[manufacturer's standard] [custom color selected by DEN Project Manager] <Insert color description>**.

- B. Provide Owner with quart container of paint used in application of topcoat to use in touchup applications after Project Closeout.

2.17 ACCESSORIES

- A. Sight Glasses: Equip unit with sight glasses for visual inspection of absorbent solution and refrigerant levels. Provide at least one sight glass in absorber and evaporator sections.

- B. Flow Switches:

1. Chiller manufacturer shall furnish a switch for each **[condenser] [evaporator and condenser]** and verify field-mounting location before installation.

2. Paddle Flow Switches:

- a. Vane operated to actuate a double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.
- b. Contacts: Platinum alloy, silver alloy, or gold-plated switch contacts with a rating of 10 A at 120-V ac.
- c. Pressure rating equal to pressure rating of heat exchanger.
- d. Construct body and wetted parts of Type 316 stainless steel.
- e. House switch in a NEMA 250, **[Type 4] <Insert type>** enclosure constructed of die-cast aluminum.
- f. Vane length to suit installation.

3. Pressure Differential Switches:

- a. Construction: Wetted parts of body and trim constructed of Type 316 stainless steel.
- b. Performance: Switch shall withstand, without damage, the full-pressure rating of the heat exchanger applied to either port and exhibit zero set-point shift due to variation in working pressure.
- c. Set Point: Screw type, field adjustable.
- d. Electrical Connections: Internally mounted screw-type terminal blocks.
- e. Switch Enclosure: NEMA 250, **[Type 4] <Insert type>**.
- f. Switch Action: Double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.

- C. Vibration Isolation:

1. Chiller manufacturer shall furnish neoprene-pad vibration isolation for each chiller.

- a. Two layers of 0.375-inch- (10-mm-) thick, ribbed- or waffle-pattern neoprene pads separated by a 16-gage, stainless-steel plate.
- b. Fabricate pads from 40- to 50-durometer neoprene.
- c. Provide stainless-steel square bearing plate to load the pad uniformly between 20 and 40 psig (138 and 276 kPa) with a 0.12- to 0.16-inch (3- to 4-mm) deflection.

D. Lithium Bromide Filter:

1. Factory install a filter, isolation valves, and associated piping.
2. Filter shall consist of a stainless-steel body, with removable and cleanable 150-micron, stainless-steel element.
3. Isolation valves shall provide isolation for filter servicing without disturbing operation of chiller.

2.18 CAPACITIES AND CHARACTERISTICS

A. Capacity: <Insert tons (kW)>.

B. Full-Load Efficiency (COP): <Insert number>.

C. Part-Load Efficiency [(IPLV)] [(NPLV)]: <Insert number>.

D. Evaporator:

1. Pressure Rating: [150 psig (1035 kPa)] [300 psig (2070 kPa)] <Insert psig (kPa)>.
2. Number of Passes: [One] [Two] [Three] <Insert number>.
3. Fluid Type: [Water] <Insert fluid type>.
4. Design Fluid Flow Rate: <Insert gpm (L/s)>.
5. Minimum Fluid Flow Rate: <Insert gpm (L/s)>.
6. Entering-Fluid Temperature: <Insert deg F (deg C)>.
7. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
8. Fluid Pressure Drop: <Insert feet of head (kPa)>.
9. Fluid Velocity: <Insert fps (m/s)>.
10. Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>.

E. Absorber/Condenser:

1. Pressure Rating: [150 psig (1035 kPa)] [300 psig (2070 kPa)] <Insert psig (kPa)>.
2. Number of Passes: [One] [Two] [Three].
3. Fluid Type: [Water] <Insert fluid type>.
4. Design Fluid Flow Rate: <Insert gpm (L/s)>.
5. Entering-Fluid Temperature: <Insert deg F (deg C)>.
6. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
7. Fluid Pressure Drop: <Insert feet of head (kPa)>.
8. Fluid Velocity: <Insert fps (m/s)>.

9. Fouling Factor: [0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] [0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W)] <Insert value>.

F. Hot-Water Generator:

1. Capacity: <Insert MBtu/h (kW)>.
2. Pressure Rating: [150 psig (1035 kPa)] [300 psig (2070 kPa)] <Insert psig (kPa)>.
3. Number of Passes: [One] [Two] [Three].
4. Fluid Type: [Water] <Insert fluid type>.
5. Design Fluid Flow Rate: <Insert gpm (L/s)>.
6. Entering-Fluid Temperature: <Insert deg F (deg C)>.
7. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
8. Fluid Pressure Drop: <Insert feet of head (kPa)>.
9. Fluid Velocity: <Insert fps (m/s)>.
10. Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>.

G. Steam Generator:

1. Capacity: <Insert MBtu/h (kW)>.
2. Flow Rate: <Insert lb/h (L/s)>.
3. Pressure: <Insert psig (kPa)>.
4. Pressure Rating: [15 psig (104 kPa)] [150 psig (1035 kPa)] <Insert psig (kPa)>.

H. Pump Horsepower:

1. Purge: <Insert value>.
2. Refrigerant: <Insert value>.
3. Solution: <Insert value>.

I. Chiller Control Electrical Requirements:

1. Power Input: <Insert kilowatts>.
2. Minimum Circuit Ampacity: <Insert value>.
3. Maximum Overcurrent Protection Device: <Insert amperage>.
4. Characteristics: [120] <Insert value>-V ac, single phase, 60 Hz.

J. Chiller Electrical Requirements:

1. Power Input: <Insert kilowatts>.
2. Minimum Circuit Ampacity: <Insert value>.
3. Maximum Overcurrent Protection Device: <Insert amperage>.
4. Characteristics: [208] [240] [480] <Insert value>-V ac, three phase, 60 Hz.

- K. Noise Rating: [80] [85] <Insert dBA> sound power level when measured according to ARI 575. Provide factory-installed sound treatment if necessary to achieve the performance indicated.

2.19 HEAT-EXCHANGER, BRUSH-CLEANING SYSTEM

- A. Furnish for field installation a brush-cleaning system on each chiller [**condenser**] <**Insert heat exchanger**> for tube cleaning and improved heat transfer.
- B. System shall maintain tube fouling at or below design conditions without interrupting normal equipment operation.
- C. System shall consist of a brush inserted in each tube and a catch basket attached to each end of the tube. A four-way valve shall operate to reverse the direction of water flow to push the brush through the tube while removing tube deposits. Four-way reversing valve's actuator shall be controlled by a preset time cycle that provides regular tube brushing during equipment operation. Frequency of the brushing cycle shall be set up to match Project requirements.
- D. Components:
1. Brush: Each brush shall have nylon bristles, titanium wires, and polypropylene tips. Brush interference fit with the ID of the tube shall not exceed **0.025 inch** (0.6 mm).
 2. Basket: Single-piece polypropylene basket with neck OD to press fit inner diameter of tube. Design shall provide for insertion of eddy current probe or removal of brushes without removing baskets from the valve.
 3. Four-Way Valve:
 - a. Construct valve body of carbon steel with internal sealing parts of hard rubber and Type 304 stainless steel.
 - b. Configure valve with parallel flow connections to minimize field installation piping.
 - c. Construct to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, at a system working pressure equal to condenser.
 - d. Pipe connections shall be flanged.
 - e. Valve manufacturer to test and certify a maximum leakage rate of less than 0.05 percent of the design flow rate at operation conditions of maximum differential pressure.
 - f. Hydrostatically test to 1.5 times the design working pressure.
 - g. Design the valve to cause no more than **0.5-psig** (3-kPa) pressure drop at design flow conditions.
 - h. Provide valve with valve-mounted indicating/warning light, which shall light before the valve begins rotation.
 - i. Valve Actuator: Mount electric actuator to operate valve.
 - j. Valve Actuator: Mount pneumatic piston-type actuator to operate valve. Actuator shall be suitable for operation using field-supplied air pressure.
 - k. Position Switches: Factory mount microswitches on the valve to indicate the complete turn of valve in both normal and reverse flow.
 4. Control Panel: Factory or field mount a control panel on chiller. Control panel shall include the following features:
 - a. NEMA 250, [**Type 1**] [**Type 4**] [**Type 4x**] [**Type 12**] enclosure.

- b. Timer to automatically initiate the cleaning cycle over a 24-hour period.
- c. Manual override of preset cleaning cycle.
- d. Visual indication of "Power On," "Diverter Position," "Normal Flow," "Reverse Flow," and "Valve Malfunction" indicating a slow turn or incomplete valve turn.
- e. For pneumatic actuators, mount four-way solenoid valve for actuator operation in the control panel.
- f. Flow-switch bypass.
- g. Unloading signal to chiller.

2.20 SOURCE QUALITY CONTROL

- A. Perform functional **[run]** tests of chillers before shipping.
- B. Factory test and inspect absorber, generator, evaporator and condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Pressure test tube-side of heat exchangers, including water boxes, to 1.5 times the rated pressure. Vacuum and pressure test shells for leaks.
- C. Rate sound power level according to ARI 575.
- D. Factory performance test chillers, before shipping, according to ARI 560.
 1. Test the following conditions:
 - a. Design conditions indicated.
 - b. Reduction in capacity from design to minimum load in steps of **[10] [25] [33]** **<Insert number>** with condenser fluid at design conditions.
 - c. Reduction in capacity from design to minimum load in steps of **[10] [25] [33]** **<Insert number>** with varying entering condenser-fluid temperature from design to minimum conditions in **[5 deg F (3 deg C)] <Insert temperature>** increments.
 - d. At **[one] [two] [three] [four] [five] [10]** **<Insert number>** point(s) of varying part-load performance to be selected by Owner at time of test.
- E. Factory sound test chillers, before shipping, according to ARI 575.
 1. Test the following conditions:
 - a. Design conditions indicated.
 - b. Chiller operating at calculated worst-case sound condition.
 - c. At **[one] [two] [three] [four] [five]** **<Insert number>** point(s) of varying part-load performance to be selected by Owner at time of test.
- F. Allow **[Owner]** **<Insert entity>** access to place where chillers are being tested. Notify DEN Project Manager**[14]** **<Insert number>** days in advance of testing.
- G. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one (1) week of test date.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine chillers before installation. Reject chillers that are damaged.
- B. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting chiller performance, maintenance, and operations before equipment installation.
 - 1. Final chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CHILLER INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install chillers on support structure indicated.
- C. Equipment Mounting:
 - 1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Maintain manufacturer's recommended clearances for service and maintenance.
- E. Charge chiller with absorbent and refrigerant if not factory charged.
- F. Install separate devices furnished by manufacturer and not factory installed.
- G. Insulate hot and cold chiller surfaces that are recommended by chiller manufacturer to be insulated, and are not factory insulated. Comply with requirements in Section 230716 "HVAC Equipment Insulation."
- H. Provide connections to chilled water piping.
 - 1. On inlet, provide:
 - a. Thermometer well for temperature controller.
 - b. Thermometer.

- c. Strainer.
 - d. Flow switch.
 - e. Flexible pipe connector.
 - f. Pressure gage.
 - g. Shut-off valve.
2. On outlet, provide:
- a. Thermometer.
 - b. Flexible pipe connector.
 - c. Pressure gage.
 - d. **[Shut-off] [Balancing]** valve.

3.3 HEAT-EXCHANGER, BRUSH-CLEANING SYSTEM INSTALLATION

- A. Install brush-cleaning system control panel adjacent to chiller control panel.
- B. Arrange piping to provide service access to four-way valve assembly without affecting access to chiller. Secure valve to prevent lateral movement and vibration during operation.
- C. Provide field electric power, as required, to each system control panel and electric actuated valve.
- D. Provide pneumatic piping with pressure regulator and isolation valve to each pneumatic supply connection. Coordinate field source of air with manufacturer to ensure that requirements are satisfied for proper valve operation.
- E. Interconnect brush-cleaning system controls with chiller controls. Coordinate requirements to ensure safe, trouble-free operation.
- F. Functionally test the entire brush-cleaning system, including the valve, actuator, position indicator, and control panel, with chiller in operation.

3.4 CONNECTIONS

- A. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties" for hydronic piping. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties" for steam and condensate piping. Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to chiller to allow service and maintenance.
- D. Generator Steam Piping Connections:

1. Connect steam piping with trapped drip leg, gate valve, strainer, control valve, and pressure gage. Install pressure reducing valve and safety relief valve upstream from steam-control valve to protect control valve from excessive steam pressure. Make connections to chiller with a **[flange] [or] [union]**.
 2. Connect steam condensate piping with vacuum breaker, trapped drip leg, gate valve, strainer, float and thermostatic trap(s), **[condensate cooler,] [condensate receiver,] [condensate receiver and pump,]** and check valve. Make connections to chiller with a **[flange] [or] [union]**.
- E. Generator Hot-Water Connections: Connect to generator inlet with shutoff valve, **[strainer,] [flexible connector,]** control valve, thermometer, and plugged tee with shutoff valve and pressure gage. Connect to generator outlet with shutoff valve, check valve, balancing valve, **[flexible connector,]** flow switch, thermometer, plugged tee with shutoff valve and pressure gage, **[flow meter,]** and drain connection with valve. Make connections to chiller with a **[flange] [or] [mechanical coupling]**.
- F. Evaporator-Fluid Connections: Connect to evaporator inlet with shutoff valve, **[strainer,] [flexible connector,]** thermometer, and plugged tee with shutoff valve and pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve, **[flexible connector,]** flow switch, thermometer, plugged tee with shutoff valve and pressure gage, **[flow meter,]** and drain connection with valve. Make connections to chiller with a **[flange] [or] [mechanical coupling]**.
- G. Absorber/Condenser-Fluid Connections: Connect to inlet with shutoff valve, **[strainer,] [flexible connector,]** thermometer, and plugged tee with shutoff valve and pressure gage. Connect to outlet with shutoff valve, balancing valve, **[flexible connector,]** flow switch, thermometer, plugged tee with shutoff valve and pressure gage, **[flow meter,]** and drain connection with valve. Make connections to chiller with a **[flange] [or] [mechanical coupling]**.
1. If not factory furnished or installed, provide pipe connecting fluid connection of absorber discharge and condenser inlet.
- H. Refrigerant Pressure Relief Device Connections: Extend **[vent piping] [separate vent piping for each chiller]** to the outdoors without valves or restrictions. Comply with ASHRAE 15. Connect to chiller pressure relief device with flexible connector and dirt leg with drain valve.
- I. Extend **[purge vent piping] [separate purge vent piping for each chiller]** to the outdoors. Comply with ASHRAE 15.
- J. Connect each chiller drain connection with a union and drain pipe, and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection.
- ### 3.5 STARTUP SERVICE
- A. Engage a factory-authorized service representative to assist Contractor and perform startup service. Supply service of factory trained representative for a period of **<Insert**

number> days to supervise testing, dehydration and charging of machine, start-up, and instruction on operation and maintenance.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Operate chiller for run-in period.
3. Verify that absorbent and refrigerant charge is sufficient and chiller has been leak tested.
4. Verify that pumps are installed and functional.
5. Verify that thermometers and gages are installed.
6. Operate chiller for run-in period.
7. Verify that refrigerant pressure relief device is vented outside.
8. Verify proper motor rotation.
9. Verify static deflection of vibration isolators including deflection during chiller startup and shutdown.
10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator and condenser.
11. Verify and record performance of chiller protection devices.
12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.

C. Prepare test and inspection startup reports.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain chillers. [**Video record the training sessions.**]

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

A. No separate payment will be made for work under this Section. The cost of the work

described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236413.16

SECTION 236416 - CENTRIFUGAL WATER CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Packaged, water-cooled, electric-motor-driven centrifugal chillers.
 - 2. Packaged, portable refrigerant recovery units.
 - 3. Heat-exchanger, brush-cleaning system.
- B. Related Section:
 - 1. Section 283500 "Refrigerant Detection and Alarm" for refrigerant monitors, alarms, supplemental breathing apparatus, and ventilation equipment interlocks.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- B. DDC: Direct digital control.
- C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.
- D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 506/110 and referenced to ARI standard rating conditions.
- E. kW/Ton (kW/kW): The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons (kW) at any given set of rating conditions.
- F. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 506/110 and intended for operating conditions other than the ARI standard rating conditions.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Centrifugal chillers shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
- B. Condenser-Fluid Temperature Performance:
1. Startup Condenser-Fluid Temperature: Chiller shall be capable of starting with an entering condenser-fluid temperature of **[60 deg F (16 deg C)] [55 deg F (13 deg C)] [40 deg F (4 deg C)] <Insert temperature>** and providing stable operation until the system temperature is elevated to the minimum operating entering condenser-fluid temperature.
 2. Minimum Operating Condenser-Fluid Temperature: Chiller shall be capable of continuous operation over the entire capacity range indicated with an entering condenser-fluid temperature of **[65 deg F (18 deg C)] [60 deg F (16 deg C)] [55 deg F (13 deg C)]**.
 3. Make factory modifications to standard chiller design if necessary to comply with performance indicated.
- C. Site Altitude: Chiller shall be suitable for altitude at which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.
- D. Performance Tolerance: Comply with the following in lieu of ARI 506/110:
1. Allowable Capacity Tolerance: **[Zero] <Insert number>** percent.
 2. Allowable IPLV/NPLV Performance Tolerance: **[Zero] <Insert number>** percent.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.
1. Performance at ARI standard conditions and at conditions indicated.
 2. Performance at ARI standard unloading conditions.
 3. Minimum evaporator flow rate.
 4. Refrigerant capacity of chiller.
 5. Oil capacity of chiller.
 6. Fluid capacity of evaporator, condenser[, **and heat-reclaim condenser**].
 7. Characteristics of safety relief valves.
 8. Minimum entering condenser-fluid temperature.
 9. Performance at varying capacities with constant design condenser-fluid temperature. Repeat performance at varying capacities for different condenser-fluid temperatures from design to minimum in **[5 deg F (3 deg C)] <Insert temperature>** increments.

10. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, load distribution, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
 3. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
- D. INFORMATIONAL SUBMITTALS
- E. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Structural supports.
 2. Piping roughing-in requirements.
 3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- F. Certificates: For certification required in "Quality Assurance" Article.
- G. Seismic Qualification Certificates: For chillers, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- H. Manufacturer's Certificate: Certify that components of package not furnished by manufacturer have been selected in accordance with manufacturer's requirements.
- I. Source quality-control reports.

- J. Startup service reports.
- K. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each chiller to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIALS

- A. Provide [**two (2)**] <Insert number> containers of [**lubricating oil**] [**refrigerant**].

1.8 QUALITY ASSURANCE

- A. ARI Certification: Certify chiller according to ARI 550 certification program.
- B. ARI Rating: Rate chiller performance according to requirements in ARI 506/110.
- C. ASHRAE Compliance:
 - 1. ASHRAE 15 for safety code for mechanical refrigeration.
 - 2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
- E. ASME Compliance: Fabricate and label chillers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1[, **as applicable to chiller design**]. For chillers charged with R-134a refrigerant, include an ASME U-stamp and nameplate certifying compliance.
- F. Comply with NFPA 70.
- G. Comply with requirements of UL and UL Canada, and include label by a qualified testing agency showing compliance.
- H. Green Seal Compliance: Signed by [**manufacturer**] [**Green Seal**] certifying compliance with GS-31.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Ship chillers from the factory fully charged with refrigerant.

- B. Ship each chiller with a full charge of refrigerant. Charge each chiller with nitrogen if refrigerant is shipped in containers separate from chiller.
- C. Ship each oil-lubricated chiller with a full charge of oil.
 - 1. Ship oil **[factory installed in chiller] [in containers separate from chiller]**.
- D. Package chiller for export shipping in totally enclosed **[bagging] [crate] [crate with bagging]**.
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage.

1.10 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.
 - 1. Extended warranties include, but are not limited to, the following:
 - a. Complete chiller including refrigerant and oil charge.
 - b. Complete compressor and drive assembly including refrigerant and oil charge.
 - c. Refrigerant **[and oil]** charge.
 - d. Parts **[only] [and labor]**.
 - e. Loss of refrigerant charge for any reason.
 - 2. Warranty Period: Minimum **[two (2)] [three (3)] [four (4)] [five (5)]** <Insert **number**> years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Carrier Corporation](#).
 2. [McQuay International](#).
 3. [Trane](#).
 4. [York International Corporation](#).
 5. **<Insert manufacturer's name>**.
 6. or approved equal.

2.2 MANUFACTURED UNIT

- A. Description: Factory-assembled and -tested chiller complete with compressor, compressor motor, compressor motor controller, [**lubrication system**] evaporator, condenser, [**heat-reclaim condenser as indicated**,] controls, interconnecting unit piping and wiring, and indicated accessories.
1. Disassemble chiller into major assemblies as required by the installation after factory testing and before packaging for shipment.
 2. For chillers with dual compressors, provide each compressor with a dedicated motor and motor controller, and provide for continued operation when either compressor-drive assembly fails or is being serviced.
- B. Fabricate chiller mounting base with reinforcement strong enough to resist chiller movement during a seismic event when chiller is anchored to field support structure.

2.3 COMPRESSOR-DRIVE ASSEMBLY

- A. Description: Single-stage or multistage, variable-displacement, centrifugal-type compressor driven by an electric motor.
1. Where indicated, provide oil-free compressor technology using a permanent magnet synchronous motor, magnetic bearings, integral variable frequency controller, and digital electronic controls.
- B. Compressor:
1. Casing: Cast iron, precision ground.
 2. Impeller: High-strength cast aluminum or cast-aluminum alloy on carbon- or alloy-steel shaft.
- C. Drive: [**Direct-drive, hermetic**] [**Gear-drive, hermetic**] [**Gear-drive, open**] [**Direct- or gear-drive, hermetic**] [**Direct- or gear-drive, open or hermetic**] design using an electric motor as the driver.

1. Gear Drives: For chillers with gear drives, provide single- or double-helical gear design continuously coated with oil while chiller is operating. Gears shall comply with American Gear Manufacturer Association standards.
 2. Drive Coupling: For chillers with open drives, provide flexible disc with all-metal construction and no wearing parts to ensure long life without the need for lubrication.
 3. Seals: Seal drive assembly to prevent refrigerant leakage.
- D. Compressor Motor:
1. Continuous-duty, squirrel-cage, induction-type, two-pole motor with energy efficiency required to suit chiller energy efficiency indicated.
 2. Factory mounted, aligned, and balanced as part of compressor assembly before shipping.
 3. Motor shall be of sufficient capacity to drive compressor throughout entire operating range without overload and with sufficient capacity to start and accelerate compressor without damage.
 4. For chillers with open drives, provide motor with **[open-dripproof]** **[weather-protected, Type I]** **[weather-protected, Type II]** **[totally enclosed]** enclosure.
 5. Provide motor with thermistor or RTD in **[single motor winding]** **[each of three-phase motor windings]** to monitor temperature and report information to chiller control panel.
 6. Provide motor with thermistor or RTD to monitor bearing temperature and report information to chiller control panel.
 7. Provide open-drive motor with internal electric heater, internally powered from chiller power supply.
- E. Vibration Balance: Balance chiller compressor and drive assembly to provide a precision balance that is free of noticeable vibration over the entire operating range.
1. Overspeed Test: 25 percent above design operating speed.
- F. Service: Easily accessible for inspection and service.
1. Compressor's internal components shall be accessible without having to remove compressor-drive assembly from chiller.
 2. Provide lifting lugs or eyebolts attached to casing.
- G. Economizers: For multistage chillers, provide interstage economizers.
- H. Capacity Control: Modulating, variable-inlet, guide-vane assembly combined with hot-gas bypass, if necessary, to achieve performance indicated.
1. Maintain stable operation that is free of surge, cavitation, and vibration throughout range of operation. Configure to achieve most energy-efficient operation possible.
 2. Operating Range: From 100 to **[15]** **[10]** **[5]** **[zero]** **<Insert number>** percent of design capacity.

3. Condenser-Fluid Unloading Requirements over Operating Range:
[Constant-design entering condenser-fluid temperature] [Drop-in entering condenser-fluid temperature of 2.5 deg F (1.4 deg C) for each 10 percent in capacity reduction] <Insert conditions>.
 4. Chillers with variable frequency controllers shall modulate compressor speed with variable-inlet, guide-vane control to achieve optimum energy efficiency.
- I. Oil Lubrication System: Consisting of pump, filtration, **[heater,]**cooler, factory-wired power connection, and controls.
1. Provide lubrication to bearings, gears, and other rotating surfaces at all operating, startup, coastdown, and standby conditions including power failure.
 2. **[Manufacturer's standard method] [Thermostatically controlled oil heater properly sized]** to remove refrigerant from oil.
 3. **[Oil filter] [Dual oil filters, one redundant,]** shall be the easily replaceable cartridge type, minimum 0.5-micron efficiency, with means of positive isolation while servicing.
 4. **[Refrigerant] [Water] [Refrigerant- or water]-**cooled oil cooler.
 5. Factory-installed and pressure-tested piping with isolation valves and accessories.
 6. Oil compatible with refrigerant and chiller components.
 7. Positive visual indication of oil level.

2.4 REFRIGERATION

- A. Refrigerant:
1. Type: **[R-123; ASHRAE 34, Class B1] [or] [R-134a; ASHRAE 34, Class A1]**.
 2. Compatibility: Chiller parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
- B. Refrigerant Flow Control: Manufacturer's standard refrigerant flow-control device satisfying performance requirements indicated.
- C. Pressure Relief Device:
1. Comply with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 2. For Chillers Using R-123: **[Rupture disc constructed of frangible carbon] [Spring-loaded, pressure relief valve; single- or multiple-reseating type]**.
 3. For Chillers Using R-134a: ASME-rated, spring-loaded, pressure relief valve; single- or multiple-reseating type. Pressure relief valve(s) shall be provided for each heat exchanger. Condenser shall have dual valves with one being redundant and configured to allow either valve to be replaced without loss of refrigerant.
- D. Refrigeration Transfer: Provide service valves and other factory-installed accessories required to facilitate transfer of refrigerant from chiller to a remote refrigerant storage and recycling system. Comply with requirements in ASHRAE 15 and ASHRAE 147.

- E. Refrigerant Isolation for Chillers Using R-134a: Factory install [**positive shutoff, manual**] isolation valves in the compressor discharge line to the condenser and the refrigerant liquid line leaving the condenser to allow for isolation and storage of full refrigerant charge in the chiller condenser shell. [**In addition, provide isolation valve on suction side of compressor from evaporator to allow for isolation and storage of full refrigerant charge in the chiller evaporator shell.**]
- F. Purge System:
1. For chillers operating at subatmospheric pressures (using R-123 refrigerant), factory install an automatic purge system for collection and return of refrigerant and lubricating oil and for removal of noncondensables including, but not limited to, water, water vapor, and noncondensable gases.
 2. System shall be a thermal purge design, refrigerant or air cooled, equipped with a carbon filter that includes an automatic regeneration cycle.
 3. Factory wire to chiller's main power supply and system complete with controls, piping, and refrigerant valves to isolate the purge system from the chiller.
 4. Construct components of noncorrodible materials.
 5. Controls shall interface with chiller control panel to indicate modes of operation, set points, data reports, diagnostics, and alarms.
 6. Efficiency of not more than **0.02 lb of refrigerant per pound of air** (9 g of refrigerant per gram of air) when rated according to ARI 580.
 7. Operation independent of chiller per ASHRAE 147.
- G. Positive-Pressure System:
1. For chillers operating at subatmospheric pressures (using R-123 refrigerant), factory install an automatic positive-pressure system.
 2. During nonoperational periods, positive-pressure system shall automatically maintain a positive pressure for atmosphere in the refrigerant pressure vessel of not less than **0.5 psig (3 kPa)** adjustable up to a pressure that remains within the vessel design pressure limits.
 3. System shall be factory wired and include controller, electric heat, pressure transmitter, or switch.

2.5 EVAPORATOR

- A. Description: Shell-and-tube design with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from condenser.
- B. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.
- C. Designed to prevent liquid refrigerant carryover from entering compressor.
- D. Provide evaporator with sight glass or other form of positive visual verification of liquid-refrigerant level.
- E. Tubes:

1. Individually replaceable from either end and without damage to tube sheets and other tubes.
 2. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
 3. Material: [**Copper**] [**Copper-nickel alloy**] [**Stainless steel**] [**Titanium**] [**Copper, copper-nickel alloy, stainless steel, or titanium**] <Insert material>.
 4. Nominal OD: [**Manufacturer's choice**] [**3/4 inch (19 mm)**] [**1 inch (25 mm)**] [**3/4 or 1 inch (19 or 25 mm)**].
 5. Minimum Wall Thickness: [**Manufacturer's choice**] [**0.025 inch (0.6 mm)**] [**0.028 inch (0.7 mm)**] [**0.035 inch (0.9 mm)**] <Insert value>.
 6. External Finish: Manufacturer's standard.
 7. Internal Finish: [**Enhanced**] [**Smooth**] [**Enhanced or smooth**].
- F. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between fluid in tubes and refrigerant in shell.
- G. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.
- H. Water Box:
1. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
 2. [**Standard**] [**Marine**] type for water box with piping connections. Standard type for water box without piping connections.
 3. Provide water boxes [**and marine water-box covers**] with lifting lugs or eyebolts.
 4. [**Hinged**] [**Davited**] [**Hinged or davited**] water boxes.
 5. [**Hinged**] [**Davited**] [**Hinged or davited**] marine water-box covers.
 6. Nozzle Pipe Connections: [**Welded, ASME B16.5, flat-face flange**] [**Welded, ASME B16.5, raised-face flange**] [**Grooved for mechanical-joint coupling**] [**Grooved with mechanical-joint coupling and flange adapter**].
 7. Thermistor or RTD temperature sensor factory installed in each nozzle.
 8. Fit each water box with [**3/4-inch (19-mm)**] [**1-inch (25-mm)**] [**3/4- or 1-inch (19- or 25-mm)**] <Insert size> drain connection at low point and vent connection at high point, each with threaded plug.
- I. Additional Corrosion Protection:
1. Electrolytic corrosion-inhibitor anode.
 2. Coat wetted surfaces with a corrosion-resistant finish.
 3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.
- ## 2.6 CONDENSER
- A. Description: Shell-and-tube design with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from evaporator.

- B. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.
- C. Designed to prevent direct impingement of high-velocity hot gas from compressor discharge on tubes.
- D. Provide condenser with sight glass or other form of positive visual verification of refrigerant charge and condition.
- E. Tubes:
1. Individually replaceable from either end and without damage to tube sheets and other tubes.
 2. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
 3. Material: [**Copper**] [**Copper-nickel alloy**] [**Stainless steel**] [**Titanium**] [**Copper, copper-nickel alloy, stainless steel, or titanium**] <Insert material>.
 4. Nominal OD: [**Manufacturer's choice**] [**3/4 inch (19 mm)**] [**1 inch (25 mm)**] [**3/4 or 1 inch (19 or 25 mm)**].
 5. Minimum Wall Thickness: [**Manufacturer's choice**] [**0.025 inch (0.6 mm)**] [**0.028 inch (0.7 mm)**] [**0.035 inch (0.9 mm)**] <Insert value>.
 6. External Finish: Manufacturer's standard.
 7. Internal Finish: [**Enhanced**] [**Smooth**] [**Enhanced or smooth**].
- F. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between fluid in tubes and refrigerant in shell.
- G. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.
- H. Water Box:
1. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
 2. [**Standard**] [**Marine**] type for water box with piping connections. Standard type for water box without piping connections.
 3. Provide water boxes [**and marine water-box covers**] with lifting lugs or eyebolts.
 4. [**Hinged**] [**Davited**] [**Hinged or davited**] water boxes.
 5. [**Hinged**] [**Davited**] [**Hinged or davited**] marine water-box covers.
 6. Nozzle Pipe Connections: [**Welded, ASME B16.5, flat-face flange**] [**Welded, ASME B16.5, raised-face flange**] [**Grooved for mechanical-joint coupling**] [**Grooved with mechanical-joint coupling and flange adapter**].
 7. Thermistor or RTD temperature sensor factory installed in each nozzle.
 8. Fit each water box with [**3/4-inch (19-mm)**] [**1-inch (25-mm)**] [**3/4- or 1-inch (19- or 25-mm)**] <Insert size> drain connection at low point and vent connection at high point, each with threaded plug.
- I. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.7 HEAT-RECLAIM CONDENSER

- A. Description: Shell-and-tube design with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from evaporator and condenser.
- B. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.
- C. Designed to prevent direct impingement of high-velocity hot gas from compressor discharge on tubes.
- D. Tubes:
1. Individually replaceable from either end and without damage to tube sheets and other tubes.
 2. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
 3. Material: [**Copper**] [**Copper-nickel alloy**] [**Stainless steel**] [**Titanium**] [**Copper, copper-nickel alloy, stainless steel, or titanium**] <Insert material>.
 4. Nominal OD: [**Manufacturer's choice**] [**3/4 inch (19 mm)**] [**1 inch (25 mm)**] [**3/4 or 1 inch (19 or 25 mm)**].
 5. Minimum Wall Thickness: **Manufacturer's choice** [**0.025 inch (0.6 mm)**] [**0.028 inch (0.7 mm)**] [**0.035 inch (0.9 mm)**] <Insert value>.
 6. External Finish: Manufacturer's standard.
 7. Internal Finish: [**Enhanced**] [**Smooth**] [**Enhanced or smooth**].
- E. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between fluid in tubes and refrigerant in shell.
- F. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.
- G. Water Box:
1. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
 2. [**Standard**] [**Marine**] type for water box with piping connections. Standard type for water box without piping connections.
 3. Provide water boxes [**and marine water-box covers**] with lifting lugs or eyebolts.
 4. [**Hinged**] [**Davited**] [**Hinged or davited**] water boxes.
 5. [**Hinged**] [**Davited**] [**Hinged or davited**] marine water-box covers.

6. Nozzle Pipe Connections: [**Welded, ASME B16.5, flat-face flange**] [**Welded, ASME B16.5, raised-face flange**] [**Grooved for mechanical-joint coupling**] [**Grooved with mechanical-joint coupling and flange adapter**].
7. Thermistor or RTD temperature sensor factory installed in each nozzle.
8. Fit each water box with [**3/4-inch (19-mm)**] [**1-inch (25-mm)**] [**3/4- or 1-inch (19- or 25-mm)**] <Insert size> drain connection at low point and vent connection at high point, each with threaded plug.

H. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.8 INSULATION

A. Closed-cell, flexible elastomeric thermal insulation complying with ASTM C 534, Type I for tubular materials and Type II for sheet materials.

1. Thickness: [**3/4 inch (19 mm)**] [**1-1/2 inches (38 mm)**] <Insert thickness>.

B. Adhesive: As recommended by insulation manufacturer.

C. Factory-applied insulation over all cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator shell and end tube sheets, evaporator water boxes including nozzles, refrigerant suction pipe from evaporator to compressor, cold surfaces of compressor, refrigerant-cooled motor, and auxiliary piping.

1. Apply adhesive to 100 percent of insulation contact surface.
2. Before insulating steel surfaces, prepare surfaces for paint, and prime and paint as indicated for other painted components. Do not insulate unpainted steel surfaces.
3. Seal seams and joints to provide a vapor barrier.
4. After adhesive has fully cured, paint exposed surfaces of insulation to match other painted parts.

2.9 ELECTRICAL

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Single-point, field-power connection to [**fused disconnect switch**] [**nonfused disconnect switch**] [**circuit breaker**]. Minimum withstand rating shall be as required by electrical power distribution system, but not less than [**42,000**] [**65,000**] <Insert value> A.

1. Branch power circuit to each motor, electric heater, dedicated electrical load, and controls[**with disconnect switch or circuit breaker**].
 - a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - b. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.
 2. NEMA ICS 2-rated motor controller for auxiliary motors, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller for each variable-speed motor furnished.
 3. Control-circuit transformer with primary and secondary side fuses.
- C. Terminal blocks with numbered [**and color-coded**]wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
- D. Factory-installed wiring outside of enclosures shall be in metal raceway except make terminal connections with not more than a **24-inch** (610-mm) length of [**liquidtight**] [**flexible metallic**] [**liquidtight or flexible metallic**] conduit.
- E. Factory install and wire capacitor bank for the purpose of power factor correction to [**0.95**] <Insert value> at all operating conditions.
1. If capacitors are mounted in a dedicated enclosure, use same NEMA enclosure type as motor controller. Provide enclosure with service entrance knockouts and bushings for conduit.
 2. Capacitors shall be non-PCB dielectric fluid, metallized electrode design, low loss with low-temperature rise. The kVAR ratings shall be indicated and shall not exceed the maximum limitations set by NFPA 70. Provide individual cells as required.
 3. Provide each cell with current-limiting replaceable fuses and carbon-film discharge resistors to reduce residual voltage to less than 50 V within one minute after de-energizing.
 4. Provide a ground terminal and a terminal block or individual connectors for phase connection.
- 2.10 MOTOR CONTROLLER
- A. Enclosure: [**Factory installed, unit mounted**] [**Factory furnished, field mounted**], [**NEMA 250**] [**NEMA ICS 6**], [**Type 1**] [**Type 4**] [**Type 4X**] [**Type 12**] <Insert type>, with hinged full-front access door[**with lock and key or padlock and key**].
- B. Control Circuit: Obtained from [**integral control power transformer**] <Insert source of control power> with a control power [**transformer**] [**source**] of enough capacity to operate connected control devices.
- C. Overload Relay: Shall be sized according to UL 1995 or shall be an integral component of chiller control microprocessor.

- D. Across-the-Line Controller: NEMA ICS 2, Class A, full voltage, nonreversing; include isolation switch and current-limiting fuses.
- E. Star-Delta, Reduced-Voltage Controller: NEMA ICS 2, closed transition.
- F. Autotransformer Reduced-Voltage Controller: NEMA ICS 2, closed transition; include isolation switch and current-limiting fuses.
- G. Solid-State, Reduced-Voltage Controller: NEMA ICS 2.
 - 1. Surge suppressor in solid-state power circuits providing three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
 - 2. Visual indication of motor and control status, including the following conditions:
 - a. Controller on.
 - b. Overload trip.
 - c. Loss of phase.
 - d. Starter fault.
- H. Accessories: Devices shall be factory installed in controller enclosure unless otherwise indicated.
 - 1. Externally Operated[, **Door-Interlocked**] Disconnect: [**Fused disconnect switch**] [**Nonfused disconnect switch**] [**Circuit breaker**]. Minimum withstand rating shall be as required by electrical power distribution system, but not less than [**42,000**] [**65,000**] <Insert value> A.
 - 2. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.
 - 3. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
 - 4. Control Relays: Time-delay relays.
 - 5. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
 - 6. Number-of-Starts Counter: Numerical readout on face of enclosure.
 - 7. Meters: Panel type, [**2-1/2 inches** (64 mm)] [**4-1/4 inches** (108 mm)] with [**90**] [**120**] [**270**]-degree scale and [**1**] [**2**] percent accuracy. Where indicated, provide transfer device with an off position. Meters shall indicate the following:
 - a. Ammeter: Output current for each phase, with current sensors rated to suit application.
 - b. Voltmeter: Output voltage for each phase.
 - c. Frequency Meter: Output frequency.
 - d. Real-time clock with current time and date.
 - e. Total run time.
 - f. <Insert features>.
 - 8. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:

- a. Selectable, digital display of the following:
 - 1) Phase Currents, Each Phase: Plus or minus 1 percent.
 - 2) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - 3) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - 4) Three-Phase Real Power: Plus or minus 2 percent.
 - 5) Three-Phase Reactive Power: Plus or minus 2 percent.
 - 6) Power Factor: Plus or minus 2 percent.
 - 7) Frequency: Plus or minus 0.5 percent.
 - 8) Integrated Demand with Demand Interval Selectable from Five to 60 Minutes: Plus or minus 2 percent.
 - 9) Accumulated energy, in megawatt hours (joules), plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.
 - b. Mounting: Display and control unit flush or semirecessed in instrument compartment door.
9. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
 10. Power Protection: Chiller shall shut down within six cycles of power interruption.

2.11 VARIABLE FREQUENCY CONTROLLER

- A. Motor controller shall be factory mounted and wired on the chiller to provide a single-point, field-power termination to the chiller and its auxiliaries.
- B. Description: NEMA ICS 2; listed and labeled as a complete unit and arranged to provide variable speed by adjusting output voltage and frequency.
- C. Enclosure: Unit mounted, NEMA 250, **[Type 1] [Type 4] [Type 4x] [Type 12]**, with hinged full-front access door with lock and key.
- D. Integral Disconnecting Means: **[Door-interlocked]**, NEMA AB 1, instantaneous-trip circuit breaker with lockable handle. Minimum withstand rating shall be as required by electrical power distribution system, but not less than **[42,000] [65,000] <Insert value>** A.
- E. Technology: Pulse width modulated (PWM) output with insulated gate bipolar transistors (IGBT); suitable for variable torque loads.
- F. Controller shall consist of a rectifier converter section, a digital/analog driver regulator section, and an inverter output section.
 1. Rectifier section shall be a full-wave diode bridge that changes fixed-voltage, fixed-frequency, ac line power to a fixed dc voltage. Silicon controller rectifiers, current source inverters, and paralleling of devices are unacceptable. Rectifier shall be insensitive to phase rotation of the ac line.

2. Regulator shall provide full digital control of frequency and voltage.
 3. Inverter section shall change fixed dc voltage to variable-frequency, variable ac voltage, for application to a squirrel-cage motor. Inverter shall produce a sine-coded, pulse width modulated (PWM) output wave form and shall conduct no radio-frequency interference back to the input power supply.
- G. Output Rating: Three phase; with voltage proportional to frequency throughout voltage range.
- H. Operating Requirements:
1. Input AC Voltage Tolerance: **[460-V ac, plus 10 percent or 506 V maximum] <Insert voltage and tolerance>**.
 2. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
 3. Capable of driving full load, without derating, under the following conditions:
 - a. Ambient Temperature: 0 to 50 deg C.
 - b. Relative Humidity: Up to **[90] [95]** percent (noncondensing).
 - c. Altitude: **[3300 feet (1005 m)] [6600 feet (2010 m)]**.
 4. Minimum Efficiency: 96 percent at 60 Hz, full load.
 5. Minimum Displacement Primary-Side Power Factor: 95 percent without harmonic filter, 98 percent with harmonic filter.
 6. Overload Capability: 1.05 times the full-load current for 7 seconds.
 7. Starting Torque: As required by compressor-drive assembly.
 8. Speed Regulation: Plus or minus 1 percent.
 9. Isolated control interface to allow controller to follow control signal over a 10:1 speed range.
 10. To avoid equipment resonant vibrations, provide critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
 11. Capable of being restarted into a motor coasting in either the forward or reverse direction without tripping.
- I. Internal Adjustability Capabilities:
1. Minimum Output Frequency: 6 Hz.
 2. Maximum Output Frequency: 60 Hz.
 3. Acceleration: 2 seconds to a minimum of 60 seconds.
 4. Deceleration: 2 seconds to a minimum of 60 seconds.
 5. Current Limit: 30 percent to a minimum of 100 percent of maximum rating.
- J. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:
1. Overtemperature.
 2. Short circuit at controller output.
 3. Ground fault at controller output. Variable frequency controller shall be able to start a grounded motor.
 4. Open circuit at controller output.

5. Input undervoltage.
 6. Input overvoltage.
 7. Loss of input phase.
 8. Reverse phase.
 9. AC line switching transients.
 10. Instantaneous overload, line to line or line to ground.
 11. Sustained overload exceeding 100 percent of controller rated current.
 12. Starting a rotating motor.
- K. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.
- L. Automatic Reset and Restart: Capable of [**three**] <Insert number> restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction. Controller shall be capable of automatic restart on phase-loss and overvoltage and undervoltage trips.
- M. Visual Indication: On face of controller enclosure or chiller control enclosure; indicating the following conditions:
1. Power on.
 2. Run.
 3. Overvoltage.
 4. Line fault.
 5. Overcurrent.
 6. External fault.
 7. Motor speed (percent).
 8. Fault or alarm status (code).
 9. DC-link voltage.
 10. Motor output voltage.
 11. Input kilovolt amperes.
 12. Total power factor.
 13. Input kilowatts.
 14. Input kilowatt-hours.
 15. Three-phase input voltage.
 16. Three-phase output voltage.
 17. Three-phase input current.
 18. Three-phase output current.
 19. Three-phase input voltage total harmonic distortion.
 20. Three-phase input current total harmonic distortion.
 21. Output frequency (Hertz).
 22. Elapsed operating time (hours).
 23. Diagnostic and service parameters.
- N. Operator Interface: At controller or chiller control panel; with start-stop and auto-manual selector with manual-speed-control potentiometer.
- O. Control Signal Interface:

1. Electric Input Signal Interface: A minimum of two analog inputs (0 to 10 V or 0/4-20 mA) and six programmable digital inputs.
 - P. Active Harmonic Distortion Filter: Factory mounted and wired to limit total voltage and current distortion to [5] <Insert number> percent.
 - Q. Input Line Conditioning: <Insert requirements>.
 - R. Cooling: [Air] [Refrigerant] [Water] [Air, refrigerant, or water] cooled.
 - S. Accessories: Devices shall be factory installed in controller enclosure unless otherwise indicated.
 1. Control Relays: Auxiliary and adjustable time-delay relays.
 - T. Chiller Capacity Control Interface: Equip chiller with adaptive control logic to automatically adjust the compressor motor speed and the compressor pre-rotation inlet vane position independently to achieve maximum part-load efficiency in response to sensor inputs that are integral to the chiller controls.
- 2.12 CONTROLS
- A. Control: Standalone and microprocessor based, with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.
 - B. Enclosure: Unit mounted, NEMA 250, [Type 1] [Type 4] [Type 4x] [Type 12] <Insert type>, hinged or lockable; factory wired with a single-point, field-power connection and a separate control circuit.
 - C. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units selectable through the interface, display the following information:
 1. Date and time.
 2. Operating or alarm status.
 3. Fault history with not less than last 10 faults displayed.
 4. Set points of controllable parameters.
 5. Trend data.
 6. Operating hours.
 7. Number of chiller starts.
 8. Outdoor-air temperature or space temperature if required for chilled-water reset.
 9. Entering- and leaving-fluid temperatures of evaporator and condenser.
 10. Difference in fluid temperatures of evaporator and condenser.
 11. Fluid flow of evaporator and condenser.
 12. Fluid pressure drop of evaporator and condenser.
 13. Refrigerant pressures in evaporator and condenser.
 14. Refrigerant saturation temperature in evaporator and condenser shell.
 15. Compressor refrigerant suction and discharge temperature.

16. Compressor bearing temperature.
17. Motor bearing temperature.
18. Motor winding temperature.
19. Oil temperature.
20. Oil discharge pressure.
21. Phase current.
22. Percent of motor rated load amperage.
23. Phase voltage.
24. Demand power (kilowatts).
25. Energy use (kilowatt-hours).
26. Power factor.
27. For chillers equipped with variable frequency controllers and harmonic filters, include the following:
 - a. Output voltage and frequency.
 - b. Voltage total harmonic distortion for each phase.
 - c. Supply current total demand distortion for each phase.
 - d. Inlet vane position.
 - e. Controller internal ambient temperature.
 - f. Heatsink temperature.
28. Purge suction temperature if purge system is provided.
29. Purge elapsed time if purge system is provided.
30. **<Insert status display items>**.

D. Control Functions:

1. Manual or automatic startup and shutdown time schedule.
2. Entering and leaving chilled-water temperatures, control set points, and motor load limits. Evaporator fluid temperature shall be reset based on [**return-water**] [**outdoor-air**] [**space**] temperature.
3. Current limit and demand limit.
4. Condenser-fluid temperature.
5. External chiller emergency stop.
6. Variable evaporator flow.
7. Thermal storage.
8. Heat reclaim.
9. **<Insert control functions>**.

E. Manually Reset Safety Controls: The following conditions shall shut down chiller and require manual reset:

1. Low evaporator [**pressure**] [**temperature**] [**pressure or temperature**]; high condenser pressure.
2. Low evaporator fluid temperature.
3. Low oil differential pressure.
4. High or low oil pressure.
5. High oil temperature.
6. High compressor-discharge temperature.
7. Loss of condenser-fluid flow.

8. Loss of evaporator fluid flow.
 9. Motor overcurrent.
 10. Motor overvoltage.
 11. Motor undervoltage.
 12. Motor phase reversal.
 13. Motor phase failure.
 14. Sensor- or detection-circuit fault.
 15. Processor communication loss.
 16. Motor controller fault.
 17. Extended compressor surge.
 18. Excessive air-leakage detection for chillers using R-123 refrigerant.
 19. **<Insert manually reset safety controls>**.
- F. Trending: Capability to trend analog data of up to five parameters simultaneously over an adjustable period and frequency of polling.
- G. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.
- H. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.
- I. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer **and a notebook computer**.
- J. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display chiller status and alarms.
1. Hardwired Points:
 - a. Monitoring: On-off status, **[common trouble alarm] [electrical power demand (kilowatts)] [electrical power consumption (kilowatt-hours)] [power factor] <Insert monitoring point>**.
 - b. Control: On-off operation, **[chilled-water, discharge temperature set-point adjustment] [electrical power demand limit] <Insert control point>**.
 2. **[ASHRAE 135 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol] <Insert type of interface>** communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the chiller from an operator workstation. Control features and monitoring points displayed locally at chiller control panel shall be available through the DDC system for HVAC.

2.13 FINISH

- A. Paint chiller, using manufacturer's standard procedures, except comply with the following minimum requirements:
1. Provide at least one coat of primer with a total dry film thickness of at least **2 mils** (0.05 mm).
 2. Provide at least two coats of [**alkyd-modified, vinyl enamel**] [**epoxy**] [**polyurethane**] finish with a total dry film thickness of at least **4 mils** (0.10 mm).
 3. Paint surfaces that are to be insulated before applying the insulation.
 4. Paint installed insulation to match adjacent uninsulated surfaces.
 5. Color of finish coat to be [**manufacturer's standard**] [**custom color selected by Architect**] <Insert color description>.
- B. Provide Owner with quart container of paint used in application of topcoat to use in touchup applications after Project Closeout.

2.14 ACCESSORIES

- A. Flow Switches:
1. Chiller manufacturer shall furnish a switch for each [**condenser**] [**evaporator and condenser**] and verify field-mounting location before installation.
 2. Paddle Flow Switches:
 - a. Vane operated to actuate a double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.
 - b. Contacts: Platinum alloy, silver alloy, or gold-plated switch contacts with a rating of 10 A at 120-V ac.
 - c. Pressure rating equal to pressure rating of heat exchanger.
 - d. Construct body and wetted parts of Type 316 stainless steel.
 - e. House switch in a NEMA 250, [**Type 4**] <Insert type> enclosure constructed of die-cast aluminum.
 - f. Vane length to suit installation.
 3. Pressure Differential Switches:
 - a. Construction: Wetted parts of body and trim constructed of Type 316 stainless steel.
 - b. Performance: Switch shall withstand, without damage, the full-pressure rating of the heat exchanger applied to either port and exhibit zero set-point shift due to variation in working pressure.
 - c. Set Point: Screw type, field adjustable.
 - d. Electrical Connections: Internally mounted screw-type terminal blocks.
 - e. Switch Enclosure: NEMA 250, [**Type 4**] <Insert type>.
 - f. Switch Action: Double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.

B. Vibration Isolation:

1. Chiller manufacturer shall furnish vibration isolation for each chiller.
2. Neoprene Pad:
 - a. Two layers of 0.375-inch- (10-mm-) thick, ribbed- or waffle-pattern neoprene pads separated by a 16-gage, stainless-steel plate.
 - b. Fabricate pads from 40- to 50-durometer neoprene.
 - c. Provide stainless-steel square bearing plate to load the pad uniformly between 20 and 40 psig (138 and 276 kPa) with a 0.12- to 0.16-inch (3- to 4-mm) deflection.
3. Spring Isolator:
 - a. Stable in operation and designed for not less than 30 percent reserve deflection beyond actual operating conditions. Isolators shall be designed so that the Kx/Ky ratio shall be 1.0 or more for stability.
 - b. Provide PVC or neoprene-coated springs and hot-dip, galvanized-steel components. Aluminum components shall be etched and painted. Nuts, bolts, and washers shall be zinc electroplated.
 - c. Isolators shall be adjustable and with an open spring, having one or more coil springs attached to a top compression plate and a baseplate. An elastomeric pad with a minimum thickness of 0.25 inch (6 mm) shall be bonded to the baseplate.
 - d. Spring assembly shall be removable and shall fit within a welded steel enclosure consisting of a top plate and rigid lower housing, which serves as a blocking device during installation. Isolated restraining bolts shall not be engaged during normal operation and shall connect the top plate and lower housing to prevent the isolated equipment from rising when drained of fluid.
 - e. Isolators shall be selected for a nominal [1-inch (25-mm)] [2-inch (50-mm)] <Insert dimension> deflection.

C. Sound Barrier:

1. Furnish removable and reusable sound-barrier covers over the compressor housing, hermetic motor, compressor suction and discharge piping, and condenser shell.
2. Provide for repeated installation and removal without use of tape or calk.
3. Inner and outer cover shall consist of a PTFE-impregnated fiberglass cloth enclosing heavy-density, needled fiberglass insulation material with a mass-loaded vinyl acoustic barrier.
4. Covers shall be double sewn and lock stitched with edges folded and sewn so no raw cut edges are exposed.
5. Form covers around control devices, gages, conduit, piping, and supports without degrading sound-barrier performance.
6. Continuously lap all exposed seams at least 2 inches (50 mm) for better sound containment.
7. Permanently label each section of cover to indicate its location, description, size, and number sequence.

8. Randomly place stainless-steel quilting pins to prevent covers from shifting and sagging.

D. Tool Kit: Chiller manufacturer shall assemble a tool kit specially designed for use in serving the chiller(s) furnished. Include special tools required to service chiller components not readily available to Owner service personnel in performing routine maintenance. Place tools in a lockable case with hinged cover. Provide a list of each tool furnished and attach the list to underside of case cover.

2.15 CAPACITIES AND CHARACTERISTICS

A. Capacity: <Insert tons (kW)>.

B. Full-Load Efficiency:

1. COP: <Insert value>.
2. EER: <Insert value>.
3. Power Input/Cooling Output: <Insert kW/ton (kW/kW)>.
4. Comply with GS-31.
5. Comply with FEMP.

C. Part-Load Efficiency:

1. IPLV: <Insert value>.
2. NPLV: <Insert value>.
3. Comply with GS-31.
4. Comply with FEMP.

D. Evaporator:

1. Pressure Rating: <Insert psig (kPa)>.
2. Number of Passes: [One] [Two] [Three].
3. Fluid Type: [Water] <Insert fluid type>.
4. Design Fluid Flow Rate: <Insert gpm (L/s)>.
5. Minimum Fluid Flow Rate: <Insert gpm (L/s)>.
6. Entering-Fluid Temperature: <Insert deg F (deg C)>.
7. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
8. Fluid Pressure Drop: <Insert feet of head (kPa)>.
9. Fluid Velocity: <Insert fps (m/s)>.
10. Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>.

E. Condenser:

1. Pressure Rating: <Insert psig (kPa)>.
2. Number of Passes: [One] [Two] [Three].
3. Fluid Type: [Water] <Insert fluid type>.
4. Design Fluid Flow Rate: <Insert gpm (L/s)>.

5. Entering-Fluid Temperature: <Insert deg F (deg C)>.
6. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
7. Fluid Pressure Drop: <Insert feet of head (kPa)>.
8. Fluid Velocity: <Insert fps (m/s)>.
9. Fouling Factor: [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] [0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W)] <Insert value>.

F. Heat-Reclaim Condenser:

1. Pressure Rating: <Insert psig (kPa)>.
2. Number of Passes: [One] [Two] [Three].
3. Fluid Type: [Water] <Insert fluid type>.
4. Design Fluid Flow Rate: <Insert gpm (L/s)>.
5. Entering-Fluid Temperature: <Insert deg F (deg C)>.
6. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
7. Fluid Pressure Drop: <Insert feet of head (kPa)>.
8. Fluid Velocity: <Insert fps (m/s)>.
9. Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>.

G. Compressor:

1. Number of Compressors: [One] [Two].
2. [First]Compressor Rated Load Amperes: <Insert value>.
3. [First]Compressor Locked-Rotor Amperes: <Insert value>.
4. Second Compressor Rated Load Amperes: <Insert value>.
5. Second Compressor Locked-Rotor Amperes: <Insert value>.

H. Chiller Control Electrical Requirements:

1. Power Connections: [Integral] [Field].
2. Power Input: <Insert kilowatts>.
3. Minimum Circuit Ampacity: <Insert value>.
4. Maximum Overcurrent Protection Device: <Insert amperage>.
5. Volts: [120] <Insert value>-V ac.
6. Phase: [Single] [Three].
7. Hertz: 60.

I. Chiller Electrical Requirements:

1. Power Input: <Insert kilowatts>.
2. Power Factor: [0.90] [0.95] <Insert value>.
3. Minimum Circuit Ampacity: <Insert value>.
4. Maximum Overcurrent Protection Device: <Insert amperage>.
5. Volts: [208] [240] [480] [600] [2300] [4160] <Insert value>-V ac.
6. Phase: Three.
7. Hertz: 60.

- J. Noise Rating: **[85] <Insert dBA>** sound power level when measured according to ARI 575. Provide factory-installed sound treatment if necessary to achieve the performance indicated.

2.16 PACKAGED REFRIGERANT RECOVERY UNITS

- A. Packaged portable unit consisting of compressor, air-cooled condenser, recovery system, tank pressure gages, filter-dryer, and valving that allows for switching between liquid and vapor recovery mode. Refrigerant recovery unit shall be factory mounted on an ASME-constructed and -stamped refrigerant storage vessel that is sized to hold the full refrigerant charge of the largest chiller furnished.

2.17 HEAT-EXCHANGER, BRUSH-CLEANING SYSTEM

- A. Furnish for field installation a brush-cleaning system on each chiller **[condenser] <Insert heat exchanger>** for tube cleaning and improved heat transfer.
- B. System shall maintain tube fouling at or below design conditions without interrupting normal equipment operation.
- C. System shall consist of a brush inserted in each tube and a catch basket attached to each end of the tube. A four-way valve shall operate to reverse the direction of water flow to push the brush through the tube while removing tube deposits. Four-way reversing valve's actuator shall be controlled by a preset time cycle that provides regular tube brushing during equipment operation. Frequency of the brushing cycle shall be set up to match Project requirements.
- D. Components:
1. Brush: Each brush shall have nylon bristles, titanium wires, and polypropylene tips. Brush interference fit with the ID of the tube shall not exceed **0.025 inch (0.6 mm)**.
 2. Basket: Single-piece polypropylene basket with neck OD to press fit inner diameter of tube. Design shall provide for insertion of eddy current probe or removal of brushes without removing baskets from the valve.
 3. Four-Way Valve:
 - a. Construct valve body of carbon steel with internal sealing parts of hard rubber and Type 304 stainless steel.
 - b. Configure valve with parallel flow connections to minimize field installation piping.
 - c. Construct to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, at a system working pressure equal to condenser.
 - d. Pipe connections shall be flanged.
 - e. Valve manufacturer to test and certify a maximum leakage rate of less than 0.05 percent of the design flow rate at operation conditions of maximum differential pressure.
 - f. Hydrostatically test to 1.5 times the design working pressure.

1. Test the following conditions:
 - a. Design conditions indicated.
 - b. Chiller operating at calculated worst-case sound condition.
 - c. At [**one**] [**two**] [**three**] [**four**] [**five**] <Insert number> point(s) of varying part-load performance to be selected by Owner at time of test.
 2. Allow [**Owner**] <Insert entity> access to place where chillers are being tested. Notify DEN Project Manager [**14**] <Insert number> days in advance of testing.
 3. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.
- D. For chillers using R-134a refrigerant, factory test and inspect evaporator [**and condenser**] [, **condenser, and heat-reclaim condenser**] according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- E. For chillers using R-123 refrigerant, factory test and inspect evaporator [**and condenser**] [, **condenser and heat-reclaim condenser**] according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Pressure test fluid side of heat exchangers, including water boxes, to 1.5 times the rated pressure. Pressure proof test refrigerant side of heat exchangers to a minimum of 45 psig (310 kPa). Vacuum and pressure test for leaks.
- F. For chillers located indoors, rate sound power level according to ARI 575.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine chillers before installation. Reject chillers that are damaged.
- B. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting chiller performance, maintenance, and operations before equipment installation.
 1. Final chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CHILLER INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install chillers on support structure indicated.
- C. Equipment Mounting:

1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Maintain manufacturer's recommended clearances for service and maintenance.
- E. Charge chiller with refrigerant and fill with oil if not factory installed.
- F. Install separate devices furnished by manufacturer and not factory installed.
- G. Provide connections to chilled water piping.
1. On inlet, provide:
 - a. Thermometer well for temperature controller.
 - b. Thermometer.
 - c. Strainer.
 - d. Flow switch.
 - e. Flexible pipe connector.
 - f. Pressure gage.
 - g. Shut-off valve.
 2. On outlet, provide:
 - a. Thermometer.
 - b. Flexible pipe connector.
 - c. Pressure gage.
 - d. [**Shut-off**] [**Balancing**] valve.

3.3 HEAT-EXCHANGER, BRUSH-CLEANING SYSTEM INSTALLATION

- A. Install brush-cleaning system control panel adjacent to chiller control panel.
- B. Arrange piping to provide service access to four-way valve assembly without affecting access to chiller. Secure valve to prevent lateral movement and vibration during operation.
- C. Provide field electric power, as required, to each system control panel and electric actuated valve.
- D. Provide pneumatic piping with pressure regulator and isolation valve to each pneumatic supply connection. Coordinate field source of air with manufacturer to ensure that requirements are satisfied for proper valve operation.

- E. Interconnect brush-cleaning system controls with chiller controls. Coordinate requirements to ensure safe, trouble-free operation.
- F. Functionally test the entire brush-cleaning system, including the valve, actuator, position indicator, and control panel, with chiller in operation.

3.4 CONNECTIONS

- A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping," Section 232116 Hydronic Piping Specialties," and Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to chiller to allow service and maintenance.
- C. Evaporator Fluid Connections: Connect to evaporator inlet with shutoff valve, [**strainer,**] [**flexible connector,**] thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve, [**flexible connector,**] flow switch, thermometer, plugged tee with shutoff valve and pressure gage, [**flow meter,**] and drain connection with valve. Make connections to chiller with a [**flange**] [**mechanical coupling**] [**flange or mechanical coupling**].
- D. Condenser-Fluid Connections: Connect to condenser inlet with shutoff valve, [**strainer,**] [**flexible connector,**] thermometer, and plugged tee with pressure gage. Connect to condenser outlet with shutoff valve, balancing valve, [**flexible connector,**] flow switch, thermometer, plugged tee with shutoff valve and pressure gage, [**flow meter,**] and drain connection with valve. Make connections to chiller with a [**flange**] [**mechanical coupling**] [**flange or mechanical coupling**].
- E. Heat-Reclaim Condenser-Fluid Connections: Connect to condenser inlet with shutoff valve, [**strainer,**] [**flexible connector,**] thermometer, and plugged tee with pressure gage. Connect to condenser outlet with shutoff valve, balancing valve, [**flexible connector,**] flow switch, thermometer, plugged tee with shutoff valve and pressure gage, [**flow meter,**] and drain connection with valve. Make connections to chiller with a [**flange**] [**mechanical coupling**] [**flange or mechanical coupling**].
- F. Refrigerant Pressure Relief Device Connections: For chillers installed indoors, extend [**vent piping**] [**separate vent piping for each chiller**] to the outdoors without valves or restrictions. Comply with ASHRAE 15. Connect to chiller pressure relief device with flexible connector and dirt leg with drain valve.
- G. For chillers equipped with a purge system, extend [**purge vent piping**] [**separate purge vent piping for each chiller**] to the outdoors. Comply with ASHRAE 15 and ASHRAE 147.
- H. Connect each chiller drain connection with a union and drain pipe, and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service. Supply service of factory trained representative for a period of **<Insert number>** days to supervise testing, dehydration and charging of machine, start-up, and instruction on operation and maintenance.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Verify that refrigerant charge is sufficient and chiller has been leak tested.
 3. Verify that pumps are installed and functional.
 4. Verify that thermometers and gages are installed.
 5. Operate chiller for run-in period.
 6. Check bearing lubrication and oil levels.
 7. Verify that refrigerant pressure relief device is vented outside.
 8. Verify proper motor rotation.
 9. Verify static deflection of vibration isolators, including deflection during chiller startup and shutdown.
 10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator[**and condenser**] [, **condenser, and heat-reclaim condenser**].
 11. Verify and record performance of chiller protection devices.
 12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.
- C. Prepare test and inspection startup reports.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain chillers.[**Video record the training sessions.**]
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236416

SECTION 236419 - RECIPROCATING WATER CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Packaged, water-cooled, electric-motor-driven, reciprocating water chillers.
 - 2. Packaged, air-cooled, electric-motor-driven, reciprocating water chillers.
 - 3. Packaged refrigerant recovery units.
- B. Related Sections:
 - 1. Section 283500 "Refrigerant Detection and Alarm" for refrigerant monitors, alarms, supplemental breathing apparatus, and ventilation equipment interlocks.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- B. DDC: Direct digital control.
- C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.
- D. IPLV: Integrated part-load value. A single number part-load efficiency figure of merit calculated per the method defined by ARI 506/110 and referenced to ARI standard rating conditions.
- E. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.
- F. NPLV: Nonstandard part-load value. A single number part-load efficiency figure of merit calculated per the method defined by ARI 506/110 and intended for operating conditions other than the ARI standard rating conditions.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Reciprocating water chillers shall withstand the effects of earthquake motions determined according to [SEI/ASCE 7] <Insert requirement>.
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.5 ACTION SUBMITTALS

- A. Product Data: Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories. Indicate valves, strainers, and thermostatic valves required for complete system.
1. Performance at ARI standard conditions and at conditions indicated.
 2. Performance at ARI standard unloading conditions.
 3. Minimum evaporator flow rate.
 4. Refrigerant capacity of water chiller.
 5. Oil capacity of water chiller.
 6. Fluid capacity of evaporator.
 7. Fluid capacity of condenser.
 8. Characteristics of safety relief valves.
 9. Minimum entering condenser-water temperature.
 10. Performance at varying capacity with constant-design entering condenser-water temperature. Repeat performance at varying capacity for different entering condenser-water temperatures from design to minimum in [5 deg F (3 deg C)] <Insert deg F (deg C)> increments.
 11. Minimum entering condenser-air temperature.
 12. Performance at varying capacity with constant-design entering condenser-air temperature. Repeat performance at varying capacity for different entering condenser-air temperatures from design to minimum in [10 deg F (6 deg C)] <Insert deg F (deg C)> increments.
 13. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:
1. Assembled unit dimensions.
 2. Weight and load distributions.
 3. Required clearances for maintenance and operation.
 4. Sizes and locations of piping and wiring connections.
 5. Wiring Diagrams: For power, signal, and control wiring.
 6. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be

installed, including adjacent equipment not specified by this Section.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Structural supports.
 - 2. Piping roughing-in requirements.
 - 3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 - 4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- B. Certificates: For certification required in "Quality Assurance" Article.
- C. Seismic Qualification Certificates: For water chillers, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Manufacturer's Certificate: Certify that components of package not furnished by manufacturer have been selected in accordance with manufacturer's requirements.
- E. Source quality-control test reports.
- F. Startup service reports.
- G. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each water chiller to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIALS

- A. Provide [**two (2)**] <Insert number> containers of [**lubricating oil**] [**refrigerant**].

1.9 QUALITY ASSURANCE

- A. ARI Certification: Certify chiller according to ARI 590 certification program.
- B. ARI Rating: Rate water chiller performance according to requirements in ARI 506/110, "Water Chilling Packages Using the Vapor Compression Cycle."
- C. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.
- D. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.
- F. Comply with NFPA 70.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Ship water chillers from the factory fully charged with refrigerant and filled with oil.
- B. Package water chiller for export shipping.
- C. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- D. Protect units from physical damage.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of water chillers that fail in materials or workmanship within specified warranty period.
 - 1. Compressor Warranty Period: Minimum [**five (5)**] <Insert number> years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PACKAGED WATER-COOLED WATER CHILLERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Carrier Corporation](#).
 2. [McQuay International](#).
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. Description: Factory-assembled and run-tested water chiller complete with compressor(s), compressor motors and motor controllers, evaporator, condenser where indicated, electrical power, controls, and indicated accessories.
- C. Fabricate water chiller mounting base with reinforcement strong enough to resist water chiller movement during a seismic event when water chiller is anchored to field support structure.
- D. Compressors:
1. Description: Positive-displacement direct drive with semihermetically sealed and accessible bolted casings.
 2. Each compressor provided with suction and discharge service valves, crankcase oil heater, and suction strainer.
 3. Operating Speed: 1750 rpm for 60-Hz applications.
 4. Capacity Control: Combinations of cylinder unloading and on-off compressor cycling[**of multiple compressors**][, **plus hot-gas bypass**]. Compressor shall be capable of operating at part-load conditions without increased vibration over normal vibration at full-load operation and shall be capable of continuous operation at its lowest step of unloading.
 5. Oil Lubrication System: Automatically reversible, positive-displacement pump with strainer, sight glass, filling connection, filter with magnetic plug, and initial oil charge.
 6. Vibration Isolation: Mount individual compressors on either neoprene or spring isolators.
 7. Sound-reduction package shall consist of acoustic enclosures around the compressors that are designed to reduce sound level without affecting performance.
- E. Compressor Motors:

1. Hermetically sealed and cooled by refrigerant suction gas.
2. High-torque, four-pole induction type with inherent thermal-overload protection on each phase.

F. Compressor Motor Controllers:

1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.
2. Part-Wind Start: NEMA ICS 2, Class A, reduced voltage, nonreversing.

G. Refrigeration:

1. Refrigerant: R-22. Classified as Safety Group A1 according to ASHRAE 34.
2. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
3. Refrigerant Circuit: Each circuit shall include [a thermal] [an electronic] expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.
4. Refrigerant Isolation: Factory install positive shutoff isolation valves in the compressor discharge line and the refrigerant liquid-line to allow the isolation and storage of the refrigerant charge in the chiller condenser.

H. Evaporator:

1. Brazed-plate or shell-and-tube design, as indicated.
2. Shell and Tube:
 - a. Description: Direct-expansion, shell-and-tube design with fluid flowing through the shell and refrigerant flowing through the tubes within the shell.
 - b. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
 - c. Shell Material: Carbon steel.
 - d. Shell Heads: Removable carbon-steel heads with multipass baffles designed to ensure positive oil return and located at each end of the tube bundle.
 - e. Shell Nozzles: Fluid nozzles located along the side of the shell and terminated with mechanical-coupling end connections for connection to field piping.
 - f. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
3. Brazed Plate:
 - a. Direct-expansion, single-pass, brazed-plate design.
 - b. Type 316 stainless-steel construction.
 - c. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.

- d. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.

I. Condenser:

1. Shell and tube, brazed plate, or without integral condenser; as indicated.
2. Shell and Tube:
 - a. Description: Shell-and-tube design with refrigerant flowing through the shell and fluid flowing through the tubes within the shell.
 - b. Provides positive subcooling of liquid refrigerant.
 - c. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
 - d. Shell Material: Carbon steel.
 - e. Water Boxes: Removable, of carbon-steel construction, located at each end of the tube bundle with fluid nozzles terminated with mechanical-coupling end connections for connection to field piping.
 - f. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
 - g. Provide each condenser with a pressure relief device, purge cock, and liquid-line shutoff valve.
3. Brazed Plate:
 - a. Single-pass, brazed-plate design provides positive subcooling of liquid refrigerant.
 - b. Type 316 stainless-steel construction.
 - c. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
 - d. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.
 - e. Provide each condenser with a liquid-line shutoff valve.
4. Provide water chiller without an integral condenser and design chiller for field connection to remote condenser. Coordinate requirements with Section 236313 "Air-Cooled Refrigerant Condensers."

J. Electrical Power:

1. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to water chiller.
2. House in a unit-mounted, NEMA 250, **[Type 1] <Insert type>** enclosure with hinged access door with lock and key or padlock and key.
3. Wiring shall be numbered and color-coded to match wiring diagram.
4. Install factory wiring outside of an enclosure in a raceway.
5. Field power interface shall be to **[wire lugs] [NEMA KS 1, heavy-duty, nonfused disconnect switch]**.
6. Provide branch power circuit to each motor and to controls with one of the following disconnecting means:

- a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - b. NEMA KS 1, heavy-duty, nonfusible switch.
 - c. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
7. Provide each motor with overcurrent protection.
 8. Overload relay sized according to UL 1995, or an integral component of water chiller control microprocessor.
 9. Phase-Failure and Undervoltage: Solid-state sensing with adjustable settings.
 10. Controls Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
 11. Control Relays: Auxiliary and adjustable time-delay relays.
 12. Indicate the following for water chiller electrical power supply:
 - a. Current, phase to phase, for all three phases.
 - b. Voltage, phase to phase and phase to neutral for all three phases.
 - c. Three-phase real power (kilowatts).
 - d. Three-phase reactive power (kilovolt amperes reactive).
 - e. Power factor.
 - f. Running log of total power versus time (kilowatt hours).
 - g. Fault log, with time and date of each.
 - h. **<Insert features>**.

K. Controls:

1. Stand-alone, microprocessor based.
2. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure of matching construction.
3. Operator Interface: Keypad or pressure-sensitive touch screen. Multiple-character, backlit, liquid-crystal display or light-emitting diodes. Display the following:
 - a. Date and time.
 - b. Operating or alarm status.
 - c. Operating hours.
 - d. Outside-air temperature if required for chilled-water reset.
 - e. Temperature and pressure of operating set points.
 - f. Entering and leaving temperatures of chilled water.
 - g. Entering and leaving temperatures of condenser water.
 - h. Refrigerant pressures in evaporator and condenser.
 - i. Saturation temperature in evaporator and condenser.
 - j. No cooling load condition.
 - k. Elapsed time meter (compressor run status).
 - l. Pump status.
 - m. Antirecycling timer status.
 - n. Percent of maximum motor amperage.
 - o. Current-limit set point.

- p. Number of compressor starts.
 - q. **<Insert items>**.
4. Control Functions:
- a. Manual or automatic startup and shutdown time schedule.
 - b. Entering and leaving chilled-water temperatures, control set points, and motor load limit. Chilled-water leaving temperature shall be reset based on **[return-water] [outside-air] [space]** temperature.
 - c. Current limit and demand limit.
 - d. Condenser-water temperature.
 - e. External water chiller emergency stop.
 - f. Antirecycling timer.
 - g. Automatic lead-lag switching.
 - h. **<Insert functions>**.
5. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:
- a. Low evaporator pressure or high condenser pressure.
 - b. Low chilled-water temperature.
 - c. Refrigerant high pressure.
 - d. High or low oil pressure.
 - e. High oil temperature.
 - f. Loss of chilled-water flow.
 - g. Loss of condenser-water flow.
 - h. Control device failure.
 - i. **<Insert items>**.
6. Interface with DDC System for HVAC: Factory-installed hardware and software to enable DDC system for HVAC to monitor, control, and display water chiller status and alarms.
- a. Hardwired Points:
 - 1) Monitoring: On/off status, **[common trouble alarm] [electrical power demand (kilowatts)] [electrical power consumption (kilowatt hours)] <Insert monitoring point>**.
 - 2) Control: On/off operation, **[chilled-water discharge temperature set-point adjustment] [electrical power demand limit] <Insert control point>**.
 - b. **[ASHRAE 135 (BACnet)] [LonTalk] [Industry-accepted open-protocol] <Insert type of interface>** communication interface with DDC system for HVAC shall enable DDC system for HVAC operator to control and monitor the water chiller from a remote operator workstation. Control features and monitoring points displayed locally at water chiller control panel shall be available through DDC system for HVAC.

L. Insulation:

1. Material: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C 534, Type I, for tubular materials and Type II, for sheet materials.
2. Thickness: [3/4 inch (19 mm)] <Insert thickness>.
3. Factory-applied insulation over cold surfaces of water chiller components.
 - a. Adhesive: As recommended by insulation manufacturer and applied to 100 percent of insulation contact surface. Seal seams and joints.
4. Apply protective coating to exposed surfaces of insulation.

M. Accessories:

1. Factory-furnished, chilled-[**and condenser-**]water flow switches for field installation.
2. Individual compressor suction and discharge pressure gages with shutoff valves.
3. Factory-furnished spring isolators for field installation.

N. Capacities and Characteristics:

1. Capacity: <Insert tons (kW)>.
2. Full-Load Efficiency:
 - a. COP: <Insert number>.
 - b. EER: <Insert number>.
 - c. Power Input/Cooling Output, kW/ton (kW/kW): <Insert value>.
3. Part-Load Efficiency:
 - a. IPLV: <Insert number>.
 - b. NPLV: <Insert number>.
4. Evaporator Type: [**Brazed plate**] [**Shell and tube**].
5. Evaporator Pressure Rating: <Insert psig (kPa)>.
6. Evaporator Fluid Type: [**Water**] <Insert fluid type>.
7. Design Evaporator Fluid Flow Rate: <Insert gpm (L/s)>.
8. Minimum Evaporator Fluid Flow Rate: <Insert gpm (L/s)>.
9. Evaporator Entering-Fluid Temperature: <Insert deg F (deg C)>.
10. Evaporator Leaving-Fluid Temperature: <Insert deg F (deg C)>.
11. Evaporator Fluid Pressure Drop: <Insert feet of head (kPa)>.
12. Evaporator Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert factor>.
13. Condenser Type: [**Brazed plate**] [**Shell and tube**] [**Chiller without integral condenser**].
14. Condenser Pressure Rating: <Insert psig (kPa)>.
15. Condenser Fluid Type: [**Water**] <Insert fluid type>.
16. Condenser Fluid Flow Rate: <Insert gpm (L/s)>.
17. Condenser Entering-Fluid Temperature: <Insert deg F (deg C)>.
18. Condenser Leaving-Fluid Temperature: <Insert deg F (deg C)>.
19. Condenser Fluid Pressure Drop: <Insert feet of head (kPa)>.

20. Condenser Fouling Factor: [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] [0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W)] <Insert factor>.
21. Number of Refrigeration Circuits: [One] [Two].
22. Compressor Rated Load Amperes: <Insert value>.
23. Compressor Locked-Rotor Amperes: <Insert value>.
24. Controls Power Connection: [Fed through integral transformer] [Separate field power connection].
 - a. Controls Power Input: <Insert kilowatts>.
 - b. Controls Minimum Circuit Ampacity: <Insert value>.
 - c. Controls Maximum Overcurrent Protection Device: <Insert amperage>.
 - d. Controls Electrical Characteristics: [120] <Insert value>-V ac, [single] [three] phase, 60 Hz.
25. Chiller Power Input: <Insert kilowatts>.
26. Chiller Minimum Circuit Ampacity: <Insert value>.
27. Chiller Maximum Overcurrent Protection Device: <Insert amperage>.
28. Chiller Electrical Characteristics: [208] [240] [480] [600] <Insert value>-V ac, three phase, 60 Hz.
29. Noise Rating: <Insert dBA> at <Insert distance in feet (m)> when measured according to ARI 575.

2.2 PACKAGED AIR-COOLED WATER CHILLERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. Carrier Corporation.
 2. <Insert manufacturer's name>.
 3. or approved equal.
- B. Description: Factory-assembled and run-tested water chiller complete with base and frame, condenser casing, compressors, compressor motors and motor controllers, evaporator, condenser coils, condenser fans and motors, electrical power, controls, and accessories.
- C. Fabricate base, frame, and attachment to water chiller components strong enough to resist movement during a seismic event when water chiller base is anchored to field support structure.
- D. Cabinet:
 1. Base: Galvanized-steel base extending the perimeter of water chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit. Base shall be designed to limit deflection to L/200 and shall be a minimum of 4 inches ((100 mm))high.
 2. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly

- supported from base.
 - 3. Casing: Galvanized steel.
 - 4. Finish: Coat base, frame, and casing with a corrosion-resistant coating capable of withstanding a [500] <Insert hours>-hour salt-spray test according to ASTM B 117.
 - 5. Sound-reduction package consisting of the following:
 - a. Acoustic enclosure around compressors.
 - b. Reduced-speed fans with acoustic treatment.
 - c. Designed to reduce sound level without affecting performance.
 - 6. Security Package: Provide security grilles with fasteners for additional protection of compressors, evaporator, and condenser coils. Grilles shall be coated for corrosion resistance and shall be removable for service access.
- E. Compressors:
- 1. Description: Positive-displacement direct drive with semihermetically sealed and accessible bolted casings.
 - 2. Each compressor provided with suction and discharge service valves, crankcase oil heater, and suction strainer.
 - 3. Operating Speed: 1750 rpm for 60-Hz applications.
 - 4. Capacity Control: Combinations of cylinder unloading and on-off compressor cycling of multiple compressors[, **plus hot-gas bypass**]. Compressor shall be capable of operating at part-load conditions without increased vibration over normal vibration at full-load operation and shall be capable of continuous operation at its lowest step of unloading.
 - 5. Oil Lubrication System: Automatically reversible, positive-displacement pump with strainer, sight glass, filling connection, filter with magnetic plug, and initial oil charge.
 - 6. Vibration Isolation: Mount individual compressors on spring isolators with an isolation efficiency of 95 percent.
- F. Compressor Motors:
- 1. Hermetically sealed and cooled by refrigerant suction gas.
 - 2. High-torque, four-pole induction type with inherent thermal-overload protection on each phase.
- G. Compressor Motor Controllers:
- 1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.
 - 2. Part-Wind Start: NEMA ICS 2, Class A, reduced voltage, nonreversing.
- H. Refrigeration:
- 1. Refrigerant: R-22. Classified as Safety Group A1 according to ASHRAE 34.
 - 2. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.

3. Refrigerant Circuit: Each circuit shall include **[a thermal] [an electronic]** expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.
4. Refrigerant Isolation: Factory install positive shutoff isolation valves in the compressor discharge line and the refrigerant liquid-line to allow the isolation and storage of the refrigerant charge in the chiller condenser.

I. Evaporator:

1. Description: Direct-expansion shell-and-tube design with fluid flowing through the shell and refrigerant flowing through the tubes within the shell.
2. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
3. Shell Material: Carbon steel.
4. Shell Heads: Removable carbon-steel heads with multipass baffles designed to ensure positive oil return and located at each end of the tube bundle.
5. Shell Nozzles: Fluid nozzles located along the side of the shell and terminated with mechanical-coupling end connections for connection to field piping.
6. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
7. Heater: Factory-installed and -wired electric heater with integral controls designed to protect the evaporator to **minus 20 deg F (minus 29 deg C)**.
8. Remote Mounting: Designed for remote field mounting where indicated. Provide kit for field installation.

J. Air-Cooled Condenser:

1. Plate-fin coil with integral subcooling circuit, leak tested at **150 psig (1034 kPa)**.
 - a. Construct coils of copper tubes mechanically bonded to **[aluminum] [aluminum with precoated epoxy-phenolic] [copper]** fins.
 - b. Coat coils with a baked epoxy corrosion-resistant coating after fabrication.
 - c. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.
2. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades, arranged for vertical air discharge.
3. Fan Motors: Totally enclosed air over (TEAO) enclosure, with permanently lubricated bearings, and having built-in overcurrent- and thermal-overload protection.
4. Fan Guards: Steel safety guards with corrosion-resistant coating.

K. Electrical Power:

1. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to water chiller.

2. House in a unit-mounted, NEMA 250, **[Type 3R] [Type 4] <Insert type>** enclosure with hinged access door with lock and key or padlock and key.
 3. Wiring shall be numbered and color-coded to match wiring diagram.
 4. Install factory wiring outside of an enclosure in a raceway.
 5. Field power interface shall be to **[wire lugs] [NEMA KS 1, heavy-duty, nonfused disconnect switch]**.
 6. Provide branch power circuit to each motor and to controls with one of the following disconnecting means:
 - a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - b. NEMA KS 1, heavy-duty, nonfusible switch.
 - c. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
 7. Provide each motor with overcurrent protection.
 8. Overload relay sized according to UL 1995, or an integral component of water chiller control microprocessor.
 9. Phase-Failure and Undervoltage: Solid-state sensing with adjustable settings.
 10. Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
 - a. Power unit-mounted controls where indicated.
 - b. Power unit-mounted, ground-fault interrupt (GFI) duplex receptacle.
 11. Control Relays: Auxiliary and adjustable time-delay relays.
 12. Indicate the following for water chiller electrical power supply:
 - a. Current, phase to phase, for all three phases.
 - b. Voltage, phase to phase and phase to neutral for all three phases.
 - c. Three-phase real power (kilowatts).
 - d. Three-phase reactive power (kilovolt amperes reactive).
 - e. Power factor.
 - f. Running log of total power versus time (kilowatt hours).
 - g. Fault log, with time and date of each.
 - h. **<Insert features>**.
- L. Controls:
1. Stand-alone, microprocessor based.
 2. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure of matching construction.
 3. Operator Interface: Keypad or pressure-sensitive touch screen. Multiple-character, backlit, liquid-crystal display or light-emitting diodes. Display the following:
 - a. Date and time.
 - b. Operating or alarm status.
 - c. Operating hours.

- d. Outside-air temperature if required for chilled-water reset.
 - e. Temperature and pressure of operating set points.
 - f. Entering and leaving temperatures of chilled water.
 - g. Refrigerant pressures in evaporator and condenser.
 - h. Saturation temperature in evaporator and condenser.
 - i. No cooling load condition.
 - j. Elapsed time meter (compressor run status).
 - k. Pump status.
 - l. Antirecycling timer status.
 - m. Percent of maximum motor amperage.
 - n. Current-limit set point.
 - o. Number of compressor starts.
 - p. **<Insert items>**.
4. Control Functions:
- a. Manual or automatic startup and shutdown time schedule.
 - b. Entering and leaving chilled-water temperature, control set points, and motor load limit. Chilled-water leaving temperature shall be reset based on **[return-water] [outside-air] [space]** temperature.
 - c. Current limit and demand limit.
 - d. External water chiller emergency stop.
 - e. Antirecycling timer.
 - f. Automatic lead-lag switching.
 - g. **<Insert functions>**.
5. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:
- a. Low evaporator pressure or high condenser pressure.
 - b. Low chilled-water temperature.
 - c. Refrigerant high pressure.
 - d. High or low oil pressure.
 - e. High oil temperature.
 - f. Loss of chilled-water flow.
 - g. Control device failure.
 - h. **<Insert items>**.
6. Interface with DDC System for HVAC: Factory-installed hardware and software to enable DDC system for HVAC to monitor, control, and display water chiller status and alarms.
- a. Hardwired Points:
 - 1) Monitoring: On/off status, **[common trouble alarm] [electrical power demand (kilowatts)] [electrical power consumption (kilowatt hours)] <Insert monitoring point>**.
 - 2) Control: On/off operation, **[chilled-water discharge temperature set-point adjustment] [electrical power demand limit] <Insert control point>**.

- b. **[ASHRAE 135 (BACnet)] [LonTalk] [Industry-accepted open-protocol]** <Insert type of interface> communication interface with DDC system for HVAC shall enable DDC system for HVAC operator to control and monitor the water chiller from a remote operator workstation. Control features and monitoring points displayed locally at water chiller control panel shall be available through DDC system for HVAC.

M. Insulation:

1. Material: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C 534, Type I, for tubular materials and Type II, for sheet materials.
2. Thickness: **[3/4 inch (19 mm)] <Insert thickness>**.
3. Factory-applied insulation over cold surfaces of water chiller components.
 - a. Adhesive: As recommended by insulation manufacturer and applied to 100 percent of insulation contact surface. Seal seams and joints.
4. Apply protective coating to exposed surfaces of insulation.

N. Accessories:

1. Factory-furnished, chilled-**[and condenser-]**water flow switches for field installation.
2. Individual compressor suction and discharge pressure gages with shutoff valves.
3. Factory-furnished spring isolators for field installation.

O. Capacities and Characteristics:

1. Capacity: **<Insert tons (kW)>**.
2. Full-Load Efficiency:
 - a. COP: **<Insert number>**.
 - b. EER: **<Insert number>**.
 - c. Power Input/Cooling Output, **kW/ton (kW/kW): <Insert value>**.
3. Part-Load Efficiency:
 - a. IPLV: **<Insert number>**.
 - b. NPLV: **<Insert number>**.
4. Low Ambient Operation: Chiller designed for operation to **minus 20 deg F** (minus 29 deg C).
5. High Ambient Operation: Chiller designed for operation to **125 deg F** (52 deg C).
6. Evaporator Configuration: **[Integral to chiller] [Shipped loose for remote field installation]**.
7. Evaporator Pressure Rating: **[300 psig (2068 kPa)] <Insert value>**.
8. Evaporator Fluid Type: **[Water] <Insert fluid type>**.
9. Design Evaporator Fluid Flow Rate: **<Insert gpm (L/s)>**.
10. Minimum Evaporator Fluid Flow Rate: **<Insert gpm (L/s)>**.
11. Evaporator Entering-Fluid Temperature: **<Insert deg F (deg C)>**.

12. Evaporator Leaving-Fluid Temperature: <Insert deg F (deg C)>.
13. Evaporator Fluid Pressure Drop: <Insert feet of head (kPa)>.
14. Evaporator Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>.
15. Condenser Entering-Air Temperature: <Insert deg F (deg C)>.
16. Site Altitude: <Insert feet (m)>.
17. Condenser Fan External Static Pressure: [0.4-inch wg (100 Pa)] [1.0-inch wg (250 Pa)].
18. Number of Refrigeration Circuits: Two.
19. Compressor Rated Load Amperes: <Insert value>.
20. Compressor Locked-Rotor Amperes: <Insert value>.
21. Controls Power Connection: [Fed through integral transformer] [Separate field power connection].
 - a. Controls Power Input: <Insert kilowatts>.
 - b. Controls Minimum Circuit Ampacity: <Insert value>.
 - c. Controls Maximum Overcurrent Protection Device: <Insert amperage>.
 - d. Controls Electrical Characteristics: [120] <Insert value>-V ac, single phase, 60 Hz.
22. Chiller Power Input: <Insert kilowatts>.
23. Chiller Minimum Circuit Ampacity: <Insert value>.
24. Chiller Maximum Overcurrent Protection Device: <Insert amperage>.
25. Chiller Electrical Characteristics: [208] [240] [480] [600] <Insert value>-V ac, three phase, 60 Hz.
26. Noise Rating: <Insert dBA> at <Insert distance in feet (m)> when measured according to ARI 370.

2.3 PACKAGED REFRIGERANT RECOVERY UNITS

- A. Packaged portable unit shall consist of compressor, air-cooled condenser, recovery system, tank pressure gages, filter-dryer, and valving that allows for switching between liquid and vapor recovery mode. Refrigerant recovery unit shall be factory mounted on an ASME-constructed and -stamped refrigerant storage vessel that is sized to hold the full refrigerant charge of the largest water chiller.

2.4 SOURCE QUALITY CONTROL

- A. Perform functional test of water chillers before shipping.
- B. Factory performance test water chillers, before shipping, according to ARI 506/110, "Water Chilling Packages Using the Vapor Compression Cycle."
 1. Allow [Owner] <Insert entity> access to place where water chillers are being tested. Notify DEN Project Manager [14] <Insert number> days in advance of testing.

- C. Factory test and inspect evaporator [**and water-cooled condenser**] according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Stamp with ASME label.
- D. For water chillers located indoors, rate sound power level according to ARI 575 procedure.
- E. For water chillers located outdoors, rate sound power level according to ARI 370 procedure.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before water chiller installation, examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting water chiller performance, maintenance, and operations.
 - 1. Water chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WATER CHILLER INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install water chillers on support structure indicated.
- C. Equipment Mounting:
 - 1. Install water chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Maintain manufacturer's recommended clearances for service and maintenance.
- E. Charge water chiller with refrigerant if not factory charged and fill with oil if not factory installed.
- F. Install separate devices furnished by manufacturer and not factory installed.

- G. Provide connections to chilled water piping.
1. On inlet, provide:
 - a. Thermometer well for temperature controller.
 - b. Thermometer.
 - c. Strainer.
 - d. Flow switch.
 - e. Flexible pipe connector.
 - f. Pressure gage.
 - g. Shut-off valve.
 2. On outlet, provide:
 - a. Thermometer.
 - b. Flexible pipe connector.
 - c. Pressure gage.
 - d. **[Shut-off] [Balancing]** valve.

3.3 CONNECTIONS

- A. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements in Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to chiller to allow service and maintenance.
- D. Evaporator Fluid Connections: Connect to evaporator inlet with shutoff valve, **[strainer,] [flexible connector,]** thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve, **[flexible connector,]** flow switch, thermometer, plugged tee with pressure gage, **[flow meter,]** and drain connection with valve. Make connections to water chiller with a **[union] [flange] [mechanical coupling] [union, flange, or mechanical coupling]**.
- E. Condenser Fluid Connections: Connect to condenser inlet with shutoff valve, **[strainer,] [flexible connector,]** thermometer, and plugged tee with pressure gage. Connect to condenser outlet with shutoff valve, balancing valve, **[flexible connector,]** flow switch, thermometer, plugged tee with pressure gage, **[flow meter,]** and drain connection with valve. Make connections to water chiller with a **[union] [flange] [mechanical coupling] [union, flange, or mechanical coupling]**.
- F. Refrigerant Pressure Relief Valve Connections: For water chillers installed indoors, extend vent piping to the outside without valves or restrictions. **[Comply with ASHRAE 15.]**
- G. Connect each drain connection with a union and drain pipe, and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection if required.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service. Supply service of factory trained representative for a period of **<Insert number>** days to supervise testing, dehydration and charging of machine, start-up, and instruction on operation and maintenance.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 - 1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
 - 2. Verify that pumps are installed and functional.
 - 3. Verify that thermometers and gages are installed.
 - 4. Operate water chiller for run-in period.
 - 5. Check bearing lubrication and oil levels.
 - 6. Verify that refrigerant pressure relief for chillers installed indoors is vented outside.
 - 7. Verify proper motor rotation.
 - 8. Verify static deflection of vibration isolators, including deflection during water chiller startup and shutdown.
 - 9. Verify and record performance of chilled-[**and condenser-**]water flow and low-temperature interlocks.
 - 10. Verify and record performance of water chiller protection devices.
 - 11. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- D. Prepare a written startup report that records results of tests and inspections.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain water chillers.[**Video record the training sessions.**]
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236419

SECTION 236423 - SCROLL WATER CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Packaged, water-cooled, electric-motor-driven, scroll water chillers.
 - 2. Packaged, air-cooled, electric-motor-driven, scroll water chillers.
 - 3. Packaged refrigerant recovery units.
- B. Related Sections:
 - 1. Section 283500 "Refrigerant Detection and Alarm" for refrigerant monitors, alarms, supplemental breathing apparatus, and ventilation equipment interlocks.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- B. DDC: Direct digital control.
- C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.
- D. IPLV: Integrated part-load value. A single number part-load efficiency figure of merit calculated per the method defined by ARI 506/110 and referenced to ARI standard rating conditions.
- E. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.
- F. NPLV: Nonstandard part-load value. A single number part-load efficiency figure of merit calculated per the method defined by ARI 506/110 and intended for operating conditions other than the ARI standard rating conditions.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Scroll water chillers shall withstand the effects of earthquake motions determined according to **[SEI/ASCE 7] <Insert requirement>**.
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Indicate valves, strainers, and thermostatic valves required for complete system. Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.
1. Performance at ARI standard conditions and at conditions indicated.
 2. Performance at ARI standard unloading conditions.
 3. Minimum evaporator flow rate.
 4. Refrigerant capacity of water chiller.
 5. Oil capacity of water chiller.
 6. Fluid capacity of evaporator.
 7. Fluid capacity of condenser.
 8. Characteristics of safety relief valves.
 9. Minimum entering condenser-water temperature.
 10. Performance at varying capacity with constant design condenser-water temperature. Repeat performance at varying capacity for different condenser-water temperatures from design to minimum in [5 deg F (3 deg C)] **<Insert deg F (deg C)>** increments.
 11. Minimum entering condenser-air temperature
 12. Performance at varying capacity with constant design entering condenser-air temperature. Repeat performance at varying capacity for different entering condenser-air temperatures from design to minimum in [10 deg F (6 deg C)] **<Insert deg F (deg C)>** increments.
 13. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
- C. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:
1. Assembled unit dimensions.
 2. Weight and load distribution.
 3. Required clearances for maintenance and operation.
 4. Size and location of piping and wiring connections.
 5. Wiring Diagrams: For power, signal, and control wiring.

6. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 1. Structural supports.
 2. Piping roughing-in requirements.
 3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- B. Certificates: For certification required in "Quality Assurance" Article.
- C. Seismic Qualification Certificates: For water chillers, accessories, and components from manufacturers.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Manufacturer's Certificate: Certify that components of package not furnished by manufacturer have been selected in accordance with manufacturer's requirements.
- E. Source quality-control test reports.
- F. Startup service reports.
- G. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each water chiller to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300

"Submittal Procedures".

1.8 MAINTENANCE MATERIALS

- A. Provide [**two (2)**] <Insert number> containers of [**lubricating oil**] [**refrigerant**].

1.9 QUALITY ASSURANCE

- A. ARI Certification: Certify chiller according to ARI 590 certification program.
- B. ARI Rating: Rate water chiller performance according to requirements in ARI 506/110, "Water Chilling Packages Using the Vapor Compression Cycle."
- C. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.
- D. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.
- F. Comply with NFPA 70.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Ship water chillers from the factory fully charged with refrigerant and filled with oil.
- B. Package water chiller for export shipping.
- C. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- D. Protect units from physical damage.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of water chillers that fail in materials or workmanship within specified period.
1. Compressor Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PACKAGED WATER-COOLED WATER CHILLERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [McQuay International](#).
 2. [Trane](#).
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. Description: Factory-assembled and run-tested water chiller complete with compressor(s), compressor motors and motor controllers, evaporator, condenser where indicated, electrical power, controls, and indicated accessories.
- C. Fabricate water chiller mounting base with reinforcement strong enough to resist water chiller movement during a seismic event when water chiller is anchored to field support structure.
- D. Compressors:
1. Description: Positive-displacement direct drive with hermetically sealed casing.
 2. Each compressor provided with suction and discharge service valves, crankcase oil heater, and suction strainer.
 3. Operating Speed: Nominal 3600 rpm for 60-Hz applications.
 4. Capacity Control: On-off compressor cycling[, **plus hot-gas bypass**].
 5. Oil Lubrication System: Automatic pump with strainer, sight glass, filling connection, filter with magnetic plug, and initial oil charge.
 6. Vibration Isolation: Mount individual compressors on vibration isolators.
 7. Sound-reduction package shall consist of acoustic enclosures around the compressors that are designed to reduce sound level without affecting performance.

E. Compressor Motors:

1. Hermetically sealed and cooled by refrigerant suction gas.
2. High-torque, two-pole induction type with inherent thermal-overload protection on each phase.

F. Compressor Motor Controllers:

1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.

G. Refrigeration:

1. Refrigerant: R-22. Classified as Safety Group A1 according to ASHRAE 34.
2. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
3. Refrigerant Circuit: Each circuit shall include a thermal-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.
4. Refrigerant Isolation: Factory install positive shutoff isolation valves in the compressor discharge line and the refrigerant liquid-line to allow the isolation and storage of the refrigerant charge in the chiller condenser.

H. Evaporator:

1. Brazed-plate or shell-and-tube design, as indicated.
2. Shell and Tube:
 - a. Description: Direct-expansion, shell-and-tube design with fluid flowing through the shell and refrigerant flowing through the tubes within the shell.
 - b. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
 - c. Shell Material: Carbon steel.
 - d. Shell Heads: Removable carbon-steel heads with multipass baffles designed to ensure positive oil return and located at each end of the tube bundle.
 - e. Shell Nozzles: Fluid nozzles located along the side of the shell and terminated with mechanical-coupling end connections for connection to field piping.
 - f. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
3. Brazed Plate:
 - a. Direct-expansion, single-pass, brazed-plate design.
 - b. Type 316 stainless-steel construction.
 - c. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.

- d. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.

I. Condenser:

1. Shell and tube or without integral condenser; as indicated.
2. Shell and Tube:
 - a. Description: Shell-and-tube design with refrigerant flowing through the shell and fluid flowing through the tubes within the shell.
 - b. Provides positive subcooling of liquid refrigerant.
 - c. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
 - d. Shell Material: Carbon steel.
 - e. Water Boxes: Removable, of carbon-steel construction, located at each end of the tube bundle with fluid nozzles terminated with mechanical-coupling end connections for connection to field piping.
 - f. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
 - g. Provide each condenser with a pressure relief device, purge cock, and liquid-line shutoff valve.
3. Provide water chiller without an integral condenser and design chiller for field connection to remote condenser. Coordinate requirements with Section 236313 "Air-Cooled Refrigerant Condensers."

J. Electrical Power:

1. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to water chiller.
2. House in a unit-mounted, NEMA 250, [Type 1] <Insert type> enclosure with hinged access door with lock and key or padlock and key.
3. Wiring shall be numbered and color-coded to match wiring diagram.
4. Install factory wiring outside of an enclosure in a raceway.
5. Field power interface shall be to [wire lugs] [NEMA KS 1, heavy-duty, nonfused disconnect switch].
6. Provide branch power circuit to each motor and to controls with one of the following disconnecting means:
 - a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - b. NEMA KS 1, heavy-duty, nonfusible switch.
 - c. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
7. Provide each motor with overcurrent protection.
8. Overload relay sized according to UL 1995, or an integral component of water chiller control microprocessor.

9. Phase-Failure and Undervoltage: Solid-state sensing with adjustable settings.
10. Controls Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
11. Control Relays: Auxiliary and adjustable time-delay relays.
12. Indicate the following for water chiller electrical power supply:
 - a. Current, phase to phase, for all three phases.
 - b. Voltage, phase to phase and phase to neutral for all three phases.
 - c. Three-phase real power (kilowatts).
 - d. Three-phase reactive power (kilovolt amperes reactive).
 - e. Power factor.
 - f. Running log of total power versus time (kilowatt hours).
 - g. Fault log, with time and date of each.
 - h. **<Insert features>**.

K. Controls:

1. Stand-alone, microprocessor based.
2. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure of matching construction.
3. Operator Interface: Keypad or pressure-sensitive touch screen. Multiple-character, backlit, liquid-crystal display or light-emitting diodes. Display the following:
 - a. Date and time.
 - b. Operating or alarm status.
 - c. Operating hours.
 - d. Outside-air temperature if required for chilled-water reset.
 - e. Temperature and pressure of operating set points.
 - f. Entering and leaving temperatures of chilled water.
 - g. Entering and leaving temperatures of condenser water.
 - h. Refrigerant pressures in evaporator and condenser.
 - i. Saturation temperature in evaporator and condenser.
 - j. No cooling load condition.
 - k. Elapsed time meter (compressor run status).
 - l. Pump status.
 - m. Antirecycling timer status.
 - n. Percent of maximum motor amperage.
 - o. Current-limit set point.
 - p. Number of compressor starts.
 - q. **<Insert items>**.
4. Control Functions:
 - a. Manual or automatic startup and shutdown time schedule.
 - b. Entering and leaving chilled-water temperatures, control set points, and motor load limit. Chilled-water leaving temperature shall be reset based on **[return-water] [outside-air] [space]** temperature.
 - c. Current limit and demand limit.

- d. Condenser-water temperature.
 - e. External water chiller emergency stop.
 - f. Antirecycling timer.
 - g. Automatic lead-lag switching.
 - h. **<Insert functions>**.
5. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:
- a. Low evaporator pressure or high condenser pressure.
 - b. Low chilled-water temperature.
 - c. Refrigerant high pressure.
 - d. High or low oil pressure.
 - e. High oil temperature.
 - f. Loss of chilled-water flow.
 - g. Loss of condenser-water flow.
 - h. Control device failure.
 - i. **<Insert items>**.
6. Interface with DDC System for HVAC: Factory-installed hardware and software to enable DDC system for HVAC to monitor, control, and display water chiller status and alarms.
- a. Hardwired Points:
 - 1) Monitoring: On/off status, [**common trouble alarm**] [**electrical power demand (kilowatts)**] [**electrical power consumption (kilowatt hours)**] **<Insert monitoring point>**.
 - 2) Control: On/off operation, [**chilled-water discharge temperature set-point adjustment**] [**electrical power demand limit**] **<Insert control point>**.
 - b. [**ASHRAE 135 (BACnet)**] [**LonTalk**] [**Modbus**] [**Industry-accepted open-protocol**] **<Insert type of interface>** communication interface with DDC system for HVAC shall enable DDC system for HVAC operator to remotely control and monitor the water chiller from an operator workstation. Control features and monitoring points displayed locally at water chiller control panel shall be available through DDC system for HVAC.
- L. Insulation:
1. Material: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C 534, Type I, for tubular materials and Type II, for sheet materials.
 2. Thickness: [**3/4 inch (19 mm)**] **<Insert thickness>**.
 3. Factory-applied insulation over cold surfaces of water chiller components.
 - a. Adhesive: As recommended by insulation manufacturer and applied to 100 percent of insulation contact surface. Seal seams and joints.
 4. Apply protective coating to exposed surfaces of insulation.

M. Accessories:

1. Factory-furnished, chilled-[**and condenser-**]water flow switches for field installation.
2. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigeration circuit.
3. Factory-furnished [**neoprene**] [**spring**] [**neoprene or spring**] isolators for field installation.

N. Capacities and Characteristics:

1. Capacity: <Insert tons (kW)>.
2. Full-Load Efficiency:
 - a. COP: <Insert number>.
 - b. EER: <Insert number>.
 - c. Power Input/Cooling Output, kW/Ton (kW/kW): <Insert value>.
3. Part-Load Efficiency:
 - a. IPLV: <Insert number>.
 - b. NPLV: <Insert number>.
4. Evaporator Type: [**Brazed plate**] [**Shell and tube**] [**Brazed plate or shell and tube**].
5. Evaporator Pressure Rating: <Insert psig (kPa)>.
6. Evaporator Fluid Type: [**Water**] <Insert fluid type>.
7. Design Evaporator Fluid Flow Rate: <Insert gpm (L/s)>.
8. Minimum Evaporator Fluid Flow Rate: <Insert gpm (L/s)>.
9. Evaporator Entering-Fluid Temperature: <Insert deg F (deg C)>.
10. Evaporator Leaving-Fluid Temperature: <Insert deg F (deg C)>.
11. Evaporator Fluid Pressure Drop: <Insert feet of head (kPa)>.
12. Evaporator Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>.
13. Condenser Type: [**Shell and tube**] [**Chiller without integral condenser**].
14. Condenser Pressure Rating: <Insert psig (kPa)>.
15. Condenser Fluid Type: [**Water**] <Insert fluid type>.
16. Condenser Fluid Flow Rate: <Insert gpm (L/s)>.
17. Condenser Entering-Fluid Temperature: <Insert deg F (deg C)>.
18. Condenser Leaving-Fluid Temperature: <Insert deg F (deg C)>.
19. Condenser Fluid Pressure Drop: <Insert feet of head (kPa)>.
20. Condenser Fouling Factor: [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] [0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W)] <Insert factor>.
21. Number of Refrigeration Circuits: [**One**] [**Two**].
22. Compressor Rated Load Amperes: <Insert value>.
23. Compressor Locked-Rotor Amperes: <Insert value>.
24. Controls Power Connection: Fed through integral transformer.
25. Chiller Power Input: <Insert kilowatts>.

26. Chiller Minimum Circuit Ampacity: **<Insert value>**.
27. Chiller Maximum Overcurrent Protection Device: **<Insert amperage>**.
28. Chiller Electrical Characteristics: **[208] [240] [480] [600] <Insert value>**-V ac, three phase, 60 Hz.
29. Noise Rating: **<Insert dBA>** at **<Insert distance in feet (m)>** when measured according to ARI 575.

2.2 PACKAGED AIR-COOLED WATER CHILLERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Carrier Corporation](#).
 2. [McQuay International](#).
 3. [Trane](#).
 4. [York International Corporation](#).
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Description: Factory-assembled and run-tested water chiller complete with base and frame, condenser casing, compressors, compressor motors and motor controllers, evaporator, condenser coils, condenser fans and motors, electrical power, controls, and accessories.
- C. Fabricate base, frame, and attachment to water chiller components strong enough to resist movement during a seismic event when water chiller base is anchored to field support structure.
- D. Cabinet:
 1. Base: Galvanized-steel base extending the perimeter of water chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit.
 2. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly supported from base.
 3. Casing: Galvanized steel.
 4. Finish: Coat base, frame, and casing with a corrosion-resistant coating capable of withstanding a **[500] <Insert hours>**-hour salt-spray test according to ASTM B 117.
 5. Sound-reduction package consisting of the following:
 - a. Acoustic enclosure around compressors.
 - b. Reduced-speed fans with acoustic treatment.
 - c. Designed to reduce sound level without affecting performance.
 6. Security Package: Provide security grilles with fasteners for additional protection of compressors, evaporator, and condenser coils. Grilles shall be coated for corrosion resistance and shall be removable for service access.

E. Compressors:

1. Description: Positive-displacement direct drive with hermetically sealed casing.
2. Each compressor provided with suction and discharge service valves, crankcase oil heater, and suction strainer.
3. Operating Speed: Nominal 3600 rpm for 60-Hz applications.
4. Capacity Control: On-off compressor cycling[, **plus hot-gas bypass**].
5. Oil Lubrication System: Automatic pump with strainer, sight glass, filling connection, filter with magnetic plug, and initial oil charge.
6. Vibration Isolation: Mount individual compressors on vibration isolators.

F. Compressor Motors:

1. Hermetically sealed and cooled by refrigerant suction gas.
2. High-torque, two-pole induction type with inherent thermal-overload protection on each phase.

G. Compressor Motor Controllers:

1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.

H. Refrigeration:

1. Refrigerant: **[R-22] [R-407c] [or] [R-410a]**. Classified as Safety Group A1 according to ASHRAE 34.
2. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
3. Refrigerant Circuit: Each circuit shall include a thermal-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.
4. Refrigerant Isolation: Factory install positive shutoff isolation valves in the compressor discharge line and the refrigerant liquid-line to allow the isolation and storage of the refrigerant charge in the chiller condenser.

I. Evaporator:

1. Brazed-plate or shell-and-tube design, as indicated.
2. Shell and Tube:
 - a. Description: Direct-expansion, shell-and-tube design with fluid flowing through the shell and refrigerant flowing through the tubes within the shell.
 - b. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
 - c. Shell Material: Carbon steel.
 - d. Shell Heads: Removable carbon-steel heads with multipass baffles designed to ensure positive oil return and located at each end of the tube bundle.

- e. Shell Nozzles: Fluid nozzles located along the side of the shell and terminated with mechanical-coupling end connections for connection to field piping.
 - f. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
3. Brazed Plate:
- a. Direct-expansion, single-pass, brazed-plate design.
 - b. Type 316 stainless-steel construction.
 - c. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
 - d. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.
4. Heater: Factory-installed and -wired electric heater with integral controls designed to protect the evaporator to **minus 20 deg F** (minus 29 deg C).
5. Remote Mounting: Designed for remote field mounting where indicated. Provide kit for field installation.
- J. Air-Cooled Condenser:
1. Plate-fin coil with integral subcooling on each circuit, rated at **450 psig** (3103 kPa).
 - a. Construct coils of copper tubes mechanically bonded to **[aluminum]** **[aluminum with precoated epoxy-phenolic]** **[copper]** fins.
 - b. Coat coils with a baked epoxy corrosion-resistant coating after fabrication.
 - c. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.
 2. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades, arranged for vertical air discharge.
 3. Fan Motors: Totally enclosed nonventilating (TENV) or totally enclosed air over (TEAO) enclosure, with permanently lubricated bearings, and having built-in overcurrent- and thermal-overload protection.
 4. Fan Guards: Steel safety guards with corrosion-resistant coating.
- K. Electrical Power:
1. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to water chiller.
 2. House in a unit-mounted, NEMA 250, **[Type 3R]** **<Insert type>** enclosure with hinged access door with lock and key or padlock and key.
 3. Wiring shall be numbered and color-coded to match wiring diagram.
 4. Install factory wiring outside of an enclosure in a raceway.
 5. Field power interface shall be to **[wire lugs]** **[NEMA KS 1, heavy-duty, nonfused disconnect switch]**.
 6. Provide branch power circuit to each motor and to controls with one of the following disconnecting means:

- a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - b. NEMA KS 1, heavy-duty, nonfusible switch.
 - c. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
7. Provide each motor with overcurrent protection.
 8. Overload relay sized according to UL 1995, or an integral component of water chiller control microprocessor.
 9. Phase-Failure and Undervoltage: Solid-state sensing with adjustable settings.
 10. Provide power factor correction capacitors to correct power factor to **[0.90] [0.95]** **<Insert value>** at full load.
 11. Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
 - a. Power unit-mounted controls where indicated.
 - b. Power unit-mounted, ground fault interrupt (GFI) duplex receptacle.
 12. Control Relays: Auxiliary and adjustable time-delay relays.
 13. Indicate the following for water chiller electrical power supply:
 - a. Current, phase to phase, for all three phases.
 - b. Voltage, phase to phase and phase to neutral for all three phases.
 - c. Three-phase real power (kilowatts).
 - d. Three-phase reactive power (kilovolt amperes reactive).
 - e. Power factor.
 - f. Running log of total power versus time (kilowatt hours).
 - g. Fault log, with time and date of each.
 - h. **<Insert features>**.
- L. Controls:
1. Stand-alone, microprocessor based.
 2. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure of matching construction.
 3. Operator Interface: Keypad or pressure-sensitive touch screen. Multiple-character, backlit, liquid-crystal display or light-emitting diodes. Display the following:
 - a. Date and time.
 - b. Operating or alarm status.
 - c. Operating hours.
 - d. Outside-air temperature if required for chilled-water reset.
 - e. Temperature and pressure of operating set points.
 - f. Entering and leaving temperatures of chilled water.
 - g. Refrigerant pressures in evaporator and condenser.
 - h. Saturation temperature in evaporator and condenser.
 - i. No cooling load condition.
 - j. Elapsed time meter (compressor run status).

- k. Pump status.
 - l. Antirecycling timer status.
 - m. Percent of maximum motor amperage.
 - n. Current-limit set point.
 - o. Number of compressor starts.
 - p. **<Insert items>**.
4. Control Functions:
- a. Manual or automatic startup and shutdown time schedule.
 - b. Entering and leaving chilled-water temperatures, control set points, and motor load limit. Chilled-water leaving temperature shall be reset based on **[return-water] [outside-air] [space]** temperature.
 - c. Current limit and demand limit.
 - d. External water chiller emergency stop.
 - e. Antirecycling timer.
 - f. Automatic lead-lag switching.
 - g. **<Insert functions>**.
5. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:
- a. Low evaporator pressure or high condenser pressure.
 - b. Low chilled-water temperature.
 - c. Refrigerant high pressure.
 - d. High or low oil pressure.
 - e. High oil temperature.
 - f. Loss of chilled-water flow.
 - g. Control device failure.
 - h. **<Insert items>**.
6. Interface with DDC System for HVAC: Factory-installed hardware and software to enable DDC system for HVAC to monitor, control, and display water chiller status and alarms.
- a. Hardwired Points:
 - 1) Monitoring: On/off status, **[common trouble alarm] [electrical power demand (kilowatts)] [electrical power consumption (kilowatt hours)] <Insert monitoring point>**.
 - 2) Control: On/off operation, **[chilled-water discharge temperature set-point adjustment] [electrical power demand limit] <Insert control point>**.
 - b. **[ASHRAE 135 (BACnet)] [LonTalk] [Industry-accepted open-protocol] <Insert type of interface>** communication interface with DDC system for HVAC shall enable DDC system for HVAC operator to remotely control and monitor the water chiller from an operator workstation. Control features and monitoring points displayed locally at water chiller control panel shall be available through DDC system for HVAC.

M. Insulation:

1. Material: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C 534, Type I, for tubular materials and Type II, for sheet materials.
2. Thickness: [3/4 inch (19 mm)] [1-1/2 inches (38 mm)] <Insert thickness>.
3. Factory-applied insulation over cold surfaces of water chiller components.
 - a. Adhesive: As recommended by insulation manufacturer and applied to 100 percent of insulation contact surface. Seal seams and joints.
4. Apply protective coating to exposed surfaces of insulation.

N. Accessories:

1. Factory-furnished, chilled-[**and condenser-**]water flow switches for field installation.
2. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigeration circuit.
3. Factory-furnished [**neoprene**] [**spring**] [**neoprene or spring**] isolators for field installation.

O. Capacities and Characteristics:

1. Capacity: <Insert tons (kW)>.
2. Full-Load Efficiency:
 - a. COP: <Insert number>.
 - b. EER: <Insert number>.
 - c. Power Input/Cooling Output, kW/Ton (kW/kW): <Insert value>.
3. Part-Load Efficiency:
 - a. IPLV: <Insert number>.
 - b. NPLV: <Insert number>.
4. Low Ambient Operation: Chiller designed for operation to [0 deg F (minus 18 deg C)] <Insert value>.
5. High Ambient Operation: Chiller designed for operation to [115 deg F (46 deg C)] <Insert value>.
6. Evaporator Configuration: [**Integral to chiller**] [**Shipped loose for remote field installation**].
7. Evaporator Pressure Rating: [150 psig (1034 kPa)] [300 psig (2068 kPa)] <Insert value>.
8. Evaporator Fluid Type: [**Water**] <Insert fluid type>.
9. Design Evaporator Fluid Flow Rate: <Insert gpm (L/s)>.
10. Minimum Evaporator Fluid Flow Rate: <Insert gpm (L/s)>.
11. Evaporator Entering-Fluid Temperature: <Insert deg F (deg C)>.
12. Evaporator Leaving-Fluid Temperature: <Insert deg F (deg C)>.
13. Evaporator Fluid Pressure Drop: <Insert feet of head (kPa)>.

14. Evaporator Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>.
15. Condenser Entering-Air Temperature: <Insert deg F (deg C)>.
16. Site Altitude: <Insert feet (m)>.
17. Number of Refrigeration Circuits: [One] [Two].
18. Compressor Rated Load Amperes: <Insert value>.
19. Compressor Locked-Rotor Amperes: <Insert value>.
20. Controls Power Connection: [Fed through integral transformer] [Separate field power connection].
 - a. Controls Power Input: <Insert kilowatts>.
 - b. Controls Minimum Circuit Ampacity: <Insert value>.
 - c. Controls Maximum Overcurrent Protection Device: <Insert amperage>.
 - d. Controls Electrical Characteristics: [120] <Insert value>-V ac, single phase, 60 Hz.
21. Chiller Power Input: <Insert kilowatts>.
22. Chiller Minimum Circuit Ampacity: <Insert value>.
23. Chiller Maximum Overcurrent Protection Device: <Insert amperage>.
24. Chiller Electrical Characteristics: [208] [240] [480] [600] <Insert value>-V ac, three phase, 60 Hz.
25. Noise Rating: <Insert dBA> at <Insert distance in feet (m)> when measured according to ARI 370.

2.3 PACKAGED REFRIGERANT RECOVERY UNITS

- A. Packaged portable unit shall consist of compressor, air-cooled condenser, recovery system, tank pressure gages, filter-dryer, and valving that allows for switching between liquid and vapor recovery mode. Refrigerant recovery unit shall be factory mounted on an ASME-constructed and -stamped refrigerant storage vessel that is sized to hold the full refrigerant charge of the largest water chiller.

2.4 SOURCE QUALITY CONTROL

- A. Perform functional test of water chillers before shipping.
- B. Factory performance test water chillers, before shipping, according to ARI 506/110, "Water Chilling Packages Using the Vapor Compression Cycle."
 1. Allow [Owner] <Insert entity> access to place where water chillers are being tested. Notify DEN Project Manager [14] <Insert number> days in advance of testing.
- C. Factory test and inspect evaporator [and water-cooled condenser] according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Stamp with ASME label.

- D. For water chillers located indoors, rate sound power level according to ARI 575 procedure.
- E. For water chillers located outdoors, rate sound power level according to ARI 370 procedure.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before water chiller installation, examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting water chiller performance, maintenance, and operations.
 - 1. Water chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WATER CHILLER INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install water chillers on support structure indicated.
- C. Equipment Mounting:
 - 1. Install water chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Maintain manufacturer's recommended clearances for service and maintenance.
- E. Charge water chiller with refrigerant if not factory charged and fill with oil if not factory installed.
- F. Install separate devices furnished by manufacturer and not factory installed.
- G. Provide connections to chilled water piping.
 - 1. On inlet, provide:

- a. Thermometer well for temperature controller.
- b. Thermometer.
- c. Strainer.
- d. Flow switch.
- e. Flexible pipe connector.
- f. Pressure gage.
- g. Shut-off valve.

2. On outlet, provide:

- a. Thermometer.
- b. Flexible pipe connector.
- c. Pressure gage.
- d. **[Shut-off] [Balancing]** valve.

3.3 CONNECTIONS

- A. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements in Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to chiller to allow service and maintenance.
- D. Evaporator Fluid Connections: Connect to evaporator inlet with shutoff valve, [**strainer,**] [**flexible connector,**] thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve, [**flexible connector,**] flow switch, thermometer, plugged tee with pressure gage, [**flow meter,**] and drain connection with valve. Make connections to water chiller with a [**union**] [**flange**] [**mechanical coupling**] [**union, flange, or mechanical coupling**].
- E. Condenser Fluid Connections: Connect to condenser inlet with shutoff valve, [**strainer,**] [**flexible connector,**] thermometer, and plugged tee with pressure gage. Connect to condenser outlet with shutoff valve, balancing valve, [**flexible connector,**] flow switch, thermometer, plugged tee with pressure gage, [**flow meter,**] and drain connection with valve. Make connections to water chiller with a [**union**] [**flange**] [**mechanical coupling**] [**union, flange, or mechanical coupling**].
- F. Refrigerant Pressure Relief Valve Connections: For water chillers installed indoors, extend vent piping to the outside without valves or restrictions. [**Comply with ASHRAE 15.**]
- G. Connect each drain connection with a union and drain pipe and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection if required.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service. Supply service of factory trained representative for a period of **<Insert number>** days to supervise testing, dehydration and charging of machine, start-up, and instruction on operation and maintenance.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 - 1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
 - 2. Verify that pumps are installed and functional.
 - 3. Verify that thermometers and gages are installed.
 - 4. Operate water chiller for run-in period.
 - 5. Check bearing lubrication and oil levels.
 - 6. Verify that refrigerant pressure relief device for chillers installed indoors is vented outside.
 - 7. Verify proper motor rotation.
 - 8. Verify static deflection of vibration isolators, including deflection during water chiller startup and shutdown.
 - 9. Verify and record performance of chilled-[**and condenser-**]water flow and low-temperature interlocks.
 - 10. Verify and record performance of water chiller protection devices.
 - 11. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- D. Prepare a written startup report that records results of tests and inspections.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain water chillers.[**Video record the training sessions.**]
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236423

SECTION 236426 - ROTARY-SCREW WATER CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Packaged, water-cooled, single-compressor chillers.
 - 2. Packaged, water-cooled, multiple-compressor chillers.
 - 3. Packaged, air-cooled chillers.
 - 4. Packaged, portable refrigerant recovery units.
 - 5. Heat-exchanger, brush-cleaning system.
- B. Related Section:
 - 1. Section 283500 "Refrigerant Detection and Alarm" for refrigerant monitors, alarms, supplemental breathing apparatus, and ventilation equipment interlocks.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- B. DDC: Direct digital control.
- C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.
- D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 506/110 and referenced to ARI standard rating conditions.
- E. **kW/Ton (kW/kW)**: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in **tons (kW)** at any given set of rating conditions.

- F. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 506/110 and intended for operating conditions other than ARI standard rating conditions.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Chillers shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
- B. Condenser-Fluid Temperature Performance:
1. Startup Condenser-Fluid Temperature: Chiller shall be capable of starting with an entering condenser-fluid temperature of [60 deg F (16 deg C)] [55 deg F (13 deg C)] [40 deg F (4 deg C)] <Insert temperature> and providing stable operation until the system temperature is elevated to the minimum operating entering condenser-fluid temperature.
 2. Minimum Operating Condenser-Fluid Temperature: Chiller shall be capable of continuous operation over the entire capacity range indicated with an entering condenser-fluid temperature of [65 deg F (18 deg C)] [60 deg F (16 deg C)] [55 deg F (13 deg C)].
 3. Make factory modifications to standard chiller design if necessary to comply with performance indicated.
- C. Site Altitude: Chiller shall be suitable for altitude in which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.
- D. Performance Tolerance: Comply with the following in lieu of ARI 506/110:
1. Allowable Capacity Tolerance: [Zero] <Insert number> percent.
 2. Allowable IPLV/NPLV Performance Tolerance: [Zero] <Insert number> percent.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Indicate valves, strainers, and thermostatic valves required for complete system. Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.
1. Performance at ARI standard conditions and at conditions indicated.
 2. Performance at ARI standard unloading conditions.
 3. Minimum evaporator flow rate.
 4. Refrigerant capacity of chiller.
 5. Oil capacity of chiller.
 6. Fluid capacity of evaporator.
 7. Characteristics of safety relief valves.

8. Fluid capacity of condenser[**and heat-reclaim condenser**].
9. Minimum entering condenser-fluid temperature.
10. Performance at varying capacities with constant-design entering condenser-fluid temperature. Repeat performance at varying capacities for different condenser-fluid temperatures from design to minimum in [5 deg F (3 deg C)] **<Insert temperature>** increments.
11. Minimum entering condenser-air temperature.
12. Maximum entering condenser-air temperature.
13. Performance at varying capacities with constant-design entering condenser-air temperature. Repeat performance at varying capacities for different entering condenser-air temperatures from design to minimum in [10 deg F (6 deg C)] **<Insert temperature>** increments.
14. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, load distribution, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.
3. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Structural supports.
2. Piping roughing-in requirements.
3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.

B. Certificates: For certification required in "Quality Assurance" Article.

- C. Seismic Qualification Certificates: For chillers, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Manufacturer's Certificate: Certify that components of package not furnished by manufacturer have been selected in accordance with manufacturer's requirements.
- E. Source quality-control reports.
- F. Startup service reports.
- G. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each chiller to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIALS

- A. Provide [**two (2)**] <Insert number> containers of [**lubricating oil**] [**refrigerant**].

1.9 QUALITY ASSURANCE

- A. ARI Certification: Certify chiller according to [**ARI 550**] [**and**] [**ARI 590**] certification program(s).
- B. ARI Rating: Rate chiller performance according to requirements in ARI 506/110.
- C. ASHRAE Compliance:
 - 1. ASHRAE 15 for safety code for mechanical refrigeration.
 - 2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

- E. ASME Compliance: Fabricate and label chiller to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and include an ASME U-stamp and nameplate certifying compliance.
- F. Comply with NFPA 70.
- G. Comply with requirements of UL and UL Canada and include label by a qualified testing agency showing compliance.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Ship chillers from the factory fully charged with refrigerant.
- B. Ship each chiller with a full charge of refrigerant. Charge each chiller with nitrogen if refrigerant is shipped in containers separate from chiller.
- C. Ship each oil-lubricated chiller with a full charge of oil.
 - 1. Ship oil [**factory installed in chiller**] [**in containers separate from chiller**].
- D. Package chiller for export shipping in totally enclosed [**crate**] [**and**] [**bagging**].
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.
 - 1. Extended warranties include, but are not limited to, the following:
 - a. Complete chiller including refrigerant and oil charge.

- b. Complete compressor and drive assembly including refrigerant and oil charge.
 - c. Refrigerant [**and oil**] charge.
 - d. Parts [**only**] [**and labor**].
 - e. Loss of refrigerant charge for any reason.
2. Warranty Period: Minimum [**two (2)**] [**three (3)**] [**four (4)**] [**five (5)**] <Insert number> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PACKAGED, WATER-COOLED, SINGLE-COMPRESSOR CHILLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Carrier Corporation](#).
 2. [Dunham-Bush](#).
 3. [Trane](#).
 4. [York International Corporation](#).
 5. <Insert manufacturer's name>.
 6. or approved equal.
- B. Description: Factory-assembled and [**run**]-tested chiller with compressor, compressor motor, compressor motor controller, lubrication system, evaporator, condenser, [**heat-reclaim condenser as indicated**], controls, interconnecting unit piping and wiring, and indicated accessories.
1. Disassemble chiller into major assemblies as required by the installation after factory testing and before packaging for shipment.
- C. Fabricate chiller mounting base with reinforcement strong enough to resist chiller movement during a seismic event when chiller is anchored to field support structure.
- D. Compressor:
1. Description: [**Hermetic**] [**or**] [**open**], positive displacement, and oil lubricated.
 2. Casing: Cast iron, precision machined for minimum clearance about periphery of rotors.
 3. Rotors: Manufacturer's standard one-, two-, or three-rotor design.
 4. Drive Coupling: For chillers with open drives, provide flexible disc with all-metal construction and no wearing parts to ensure long life without the need for lubrication.
 5. Seals: Seal drive assembly to prevent refrigerant leakage.
- E. Compressor Motor:
1. Continuous-duty, squirrel-cage, induction-type motor with energy efficiency required to suit chiller energy efficiency indicated.

2. Factory mounted, aligned, and balanced as part of compressor assembly before shipping.
 3. Motor shall be of sufficient capacity to drive compressor throughout entire operating range without overload and with sufficient capacity to start and accelerate compressor without damage.
 4. For chillers with open drives, provide motor with **[open-dripproof]** **[weather-protected, Type I]** **[weather-protected, Type II]** **[totally enclosed]** enclosure.
 5. Provide motor with thermistor or RTD in **[single motor winding]** **[each of three-phase motor windings]** to monitor temperature and report information to chiller control panel.
 6. Provide motor with thermistor or RTD to monitor bearing temperature and report information to chiller control panel.
 7. Provide open-drive motor with internal electric heater, internally powered from chiller power supply.
- F. Vibration Balance: Balance chiller compressor and drive assembly to provide a precision balance that is free of noticeable vibration over the entire operating range.
1. Overspeed Test: 25 percent above design operating speed.
- G. Service: Easily accessible for inspection and service.
1. Compressor's internal components shall be accessible without having to remove compressor-drive assembly from chiller.
 2. Provide lifting lugs or eyebolts attached to casing.
- H. Capacity Control: Modulating slide-valve assembly or port unloaders combined with **[a variable frequency controller, if applicable, and]**hot-gas bypass, if necessary, to achieve performance indicated.
1. Maintain stable operation throughout range of operation. Configure to achieve most energy-efficient operation possible.
 2. Operating Range: From 100 to **[20]** **[15]** **[10]** **[5]** **[zero]** **<Insert number>** percent of design capacity.
 3. Condenser-Fluid Unloading Requirements over Operating Range: **[Constant-design entering condenser-fluid temperature]** **[Drop-in entering condenser-fluid temperature of 2.5 deg F (1.4 deg C) drop for each 10 percent in capacity reduction]** **<Insert conditions>**.
- I. Oil Lubrication System: Consisting of pump if required, filtration, heater, cooler, factory-wired power connection, and controls.
1. Provide lubrication to bearings, gears, and other rotating surfaces at all operating, startup, shutdown, and standby conditions including power failure.
 2. Thermostatically controlled oil heater properly sized to remove refrigerant from oil.
 3. **[Oil filter]** **[Dual oil filters, one redundant,]** shall be the easily replaceable cartridge type, minimum 0.5-micron efficiency, with means of positive isolation while servicing.

4. **[Refrigerant] [Water] [Refrigerant- or water]**-cooled oil cooler.
5. Factory-installed and pressure-tested piping with isolation valves and accessories.
6. Oil compatible with refrigerant and chiller components.
7. Positive visual indication of oil level.

J. Refrigerant Circuit:

1. Refrigerant: Type as indicated on Drawings.
2. Refrigerant Type: **[R-22] [R-134a] [or] [any HFC] <Insert type>**. Classified as Safety Group A1 according to ASHRAE 34.
3. Refrigerant Compatibility: Chiller parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
4. Refrigerant Flow Control: Manufacturer's standard refrigerant flow-control device satisfying performance requirements indicated.
5. Pressure Relief Device:
 - a. Comply with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - b. ASME-rated, spring-loaded pressure relief valve; single- or multiple-reseating type. Pressure relief valve(s) shall be provided for each heat exchanger. Condenser shall have dual valves with one being redundant and configured to allow either valve to be replaced without loss of refrigerant.
6. Refrigeration Transfer: Provide service valves and other factory-installed accessories required to facilitate transfer of refrigerant from chiller to a remote refrigerant storage and recycling system. Comply with requirements in ASHRAE 15 and ASHRAE 147.
7. Refrigerant Isolation: Factory install positive shutoff isolation valves in the compressor discharge line to the condenser and the refrigerant liquid line leaving the condenser to allow for isolation and storage of full refrigerant charge in the chiller condenser shell. **[In addition, provide isolation valve on suction side of compressor from evaporator to allow for isolation and storage of full refrigerant charge in the chiller evaporator shell.]**

K. Evaporator:

1. Description: Shell-and-tube design with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from condenser.
2. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.
3. Designed to prevent liquid refrigerant carryover from entering compressor.
4. Provide evaporator with sight glass or other form of positive visual verification of liquid-refrigerant level.
5. Tubes:
 - a. Individually replaceable from either end and without damage to tube sheets and other tubes.

- b. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
 - c. Material: **[Copper]** **[Copper-nickel alloy]** **[Copper or copper-nickel alloy]** **<Insert material>**.
 - d. Nominal OD: **[Manufacturer's choice]** **[3/4 inch (19 mm)]** **[1 inch (25 mm)]** **[3/4 or 1 inch (19 or 25 mm)]**.
 - e. Minimum Wall Thickness: **[Manufacturer's choice]** **[0.025 inch (0.6 mm)]** **[0.028 inch (0.7 mm)]** **[0.035 inch (0.9 mm)]** **<Insert dimension>**.
 - f. External Finish: Manufacturer's standard.
 - g. Internal Finish: **[Enhanced]** **[Smooth]** **[Enhanced or smooth]**.
 6. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between fluid in tubes and refrigerant in shell.
 7. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.
 8. Water Box:
 - a. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
 - b. **[Standard]** **[Marine]** type for water box with piping connections. Standard type for water box without piping connections.
 - c. Provide water boxes **[and marine water-box covers]** with lifting lugs or eyebolts.
 - d. **[Hinged]** **[or]** **[dovetailed]** water boxes.
 - e. **[Hinged]** **[or]** **[dovetailed]** marine water-box covers.
 - f. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange]** **[Welded, ASME B16.5, raised-face flange]** **[Grooved for mechanical-joint coupling]** **[Grooved with mechanical-joint coupling and flange adapter]**.
 - g. Thermistor or RTD temperature sensor factory installed in each nozzle.
 - h. Fit each water box with **[3/4-inch (19-mm)]** **[1-inch (25-mm)]** **[3/4- or 1-inch (19- or 25-mm)]** **<Insert size>** drain connection at low point and vent connection at high point, each with threaded plug.
 9. Additional Corrosion Protection:
 - a. Electrolytic corrosion-inhibitor anode.
 - b. Coat wetted surfaces with a corrosion-resistant finish.
- L. Condenser:
 1. Description: Shell-and-tube design with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from evaporator.
 2. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.
 3. Designed to prevent direct impingement of high-velocity hot gas from compressor discharge on tubes.

4. Provide condenser with sight glass or other form of positive visual verification of refrigerant charge and condition.
5. Tubes:
 - a. Individually replaceable from either end and without damage to tube sheets and other tubes.
 - b. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
 - c. Material: **[Copper]** **[Copper-nickel alloy]** **[Copper or copper-nickel alloy]** **<Insert material>**.
 - d. Nominal OD: **[Manufacturer's choice]** **[3/4 inch (19 mm)]** **[1 inch (25 mm)]** **[3/4 or 1 inch (19 or 25 mm)]**.
 - e. Minimum Wall Thickness: **[Manufacturer's choice]** **[0.025 inch (0.6 mm)]** **[0.028 inch (0.7 mm)]** **[0.035 inch (0.9 mm)]** **<Insert dimension>**.
 - f. External Finish: Manufacturer's standard.
 - g. Internal Finish: **[Enhanced]** **[Smooth]** **[Enhanced or smooth]**.
6. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between fluid in tubes and refrigerant in shell.
7. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.
8. Water Box:
 - a. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
 - b. **[Standard]** **[Marine]** type for water box with piping connections. Standard type for water box without piping connections.
 - c. Provide water boxes **[and marine water-box covers]** with lifting lugs or eyebolts.
 - d. **[Hinged]** **[or]** **[davited]** water boxes.
 - e. **[Hinged]** **[or]** **[davited]** marine water-box covers.
 - f. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange]** **[Welded, ASME B16.5, raised-face flange]** **[Grooved for mechanical-joint coupling]** **[Grooved with mechanical-joint coupling and flange adapter]**.
 - g. Thermistor or RTD temperature sensor factory installed in each nozzle.
 - h. Fit each water box with **[3/4-inch (19-mm)]** **[1-inch (25-mm)]** **[3/4- or 1-inch (19- or 25-mm)]** **<Insert size>** drain connection at low point and vent connection at high point, each with threaded plug.
9. Additional Corrosion Protection:
 - a. Electrolytic corrosion-inhibitor anode.
 - b. Coat wetted surfaces with a corrosion-resistant finish.

M. Heat-Reclaim Condenser:

1. Description: Shell-and-tube design with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from evaporator and condenser.
2. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.
3. Designed to prevent direct impingement of high-velocity hot gas from compressor discharge on tubes.
4. Tubes:
 - a. Individually replaceable from either end and without damage to tube sheets and other tubes.
 - b. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
 - c. Material: **[Copper]** **[Copper-nickel alloy]** **[Copper or copper-nickel alloy]** **<Insert material>**.
 - d. Nominal OD: **[Manufacturer's choice]** **[3/4 inch (19 mm)]** **[1 inch (25 mm)]** **[3/4 or 1 inch (19 or 25 mm)]**.
 - e. Minimum Wall Thickness: **[Manufacturer's choice]** **[0.025 inch (0.6 mm)]** **[0.028 inch (0.7 mm)]** **[0.035 inch (0.9 mm)]** **<Insert dimension>**.
 - f. External Finish: Manufacturer's standard.
 - g. Internal Finish: **[Enhanced]** **[Smooth]** **[Enhanced or smooth]**.
5. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between fluid in tubes and refrigerant in shell.
6. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.
7. Water Box:
 - a. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
 - b. **[Standard]** **[Marine]** type for water box with piping connections. Standard type for water box without piping connections.
 - c. Provide water boxes **[and marine water-box covers]** with lifting lugs or eyebolts.
 - d. **[Hinged]** **[or]** **[dovetailed]** water boxes.
 - e. **[Hinged]** **[or]** **[dovetailed]** marine water-box covers.
 - f. Nozzle Pipe Connections: **[Welded, ASME B16.5, flat-face flange]** **[Welded, ASME B16.5, raised-face flange]** **[Grooved for mechanical-joint coupling]** **[Grooved with mechanical-joint coupling and flange adapter]**.
 - g. Thermistor or RTD temperature sensor factory installed in each nozzle.
 - h. Fit each water box with **[3/4-inch (19-mm)]** **[1-inch (25-mm)]** **[3/4- or 1-inch (19- or 25-mm)]** **<Insert size>** drain connection at low point and vent connection at high point, each with threaded plug.
8. Additional Corrosion Protection:
 - a. Electrolytic corrosion-inhibitor anode.
 - b. Coat wetted surfaces with a corrosion-resistant finish.

N. Electrical Power:

1. Factory installed and wired, and functionally tested at factory before shipment.
2. Single-point, field-power connection to **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker]**. Minimum withstand rating shall be as required by electrical power distribution system, but not less than **[42,000] [65,000] <Insert value>** A.
 - a. Provide branch power circuit to each motor, electric heater, dedicated electrical load, and controls **[with disconnect switch or circuit breaker]**.
 - b. NEMA- and ICS 2-rated motor controller for auxiliary motors, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller for each variable-speed motor furnished.
 - c. Control-circuit transformer with primary and secondary side fuses.
3. Terminal blocks with numbered **[and color-coded]** wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
4. Factory-installed wiring outside of enclosures shall be in metal raceway except make connections to each motor and heater with not more than a **24-inch (610-mm)** length of liquidtight conduit.
5. Factory install and wire capacitor bank for the purpose of power factor correction to **[0.95] <Insert value>** at all operating conditions.
 - a. If capacitors are mounted in a dedicated enclosure, use same NEMA enclosure type as motor controller. Provide enclosure with service entrance knockouts and bushings for conduit.
 - b. Capacitors shall be non-PCB dielectric fluid, metallized electrode design, low loss with low-temperature rise. The kVAr ratings shall be indicated and shall not exceed the maximum limitations set by NFPA 70. Provide individual cells as required.
 - c. Provide each cell with current-limiting replaceable fuses and carbon-film discharge resistors to reduce residual voltage to less than 50 V within 1 minute after de-energizing.
 - d. Provide a ground terminal and a terminal block or individual connectors for phase connection.

O. Motor Controller:

1. Enclosure: **[Factory installed, unit mounted] [Factory furnished, field mounted], [NEMA 250] [NEMA ICS 6], [Type 1] [Type 4] [Type 4X] [Type 12] <Insert type>**, with hinged full-front access door **[with lock and key or padlock and key]**.
2. Control Circuit: Obtained from **[integral control power transformer] <Insert source of control power>** with a control power **[transformer] [source]** of enough capacity to operate connected control devices.
3. Overload Relay: Shall be sized according to UL 1995 or shall be an integral component of chiller control microprocessor.
4. Across-the-Line Controller: NEMA ICS 2, Class A, full voltage, nonreversing; include isolation switch and current-limiting fuses.

5. Star-Delta, Reduced-Voltage Controller: NEMA ICS 2, closed transition.
6. Autotransformer Reduced-Voltage Controller: NEMA ICS 2, closed transition; include isolation switch and current-limiting fuses.
7. Solid-State, Reduced-Voltage Controller: NEMA ICS 2.
 - a. Surge suppressor in solid-state power circuits providing three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
 - b. Visual indication of motor and control status, including the following conditions:
 - 1) Controller on.
 - 2) Overload trip.
 - 3) Loss of phase.
 - 4) Starter fault.
8. Accessories: Devices shall be factory installed in controller enclosure unless otherwise indicated.
 - a. Externally Operated[, **Door-Interlocked**] Disconnect: [**Fused disconnect switch**] [**Nonfused disconnect switch**] [**Circuit breaker**]. Minimum withstand rating shall be as required by electrical power distribution system, but not less than [**42,000**] [**65,000**] <Insert value> A.
 - b. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.
 - c. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
 - d. Control Relays: Time-delay relays.
 - e. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
 - f. Number-of-Starts Counter: Numerical readout on face of enclosure.
 - g. Meters: Panel type, [**2-1/2 inches (64 mm)**] [**4-1/4 inches (108 mm)**] with [**90**] [**120**] [**270**]-degree scale and [**1**] [**2**] percent accuracy. Where indicated, provide transfer device with an off position. Meters shall indicate the following:
 - 1) Ammeter: Output current for each phase, with current sensors rated to suit application.
 - 2) Voltmeter: Output voltage for each phase.
 - 3) Frequency Meter: Output frequency.
 - 4) Real-time clock with current time and date.
 - 5) Total run time.
 - 6) <Insert features>.
 - h. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:
 - 1) Selectable, digital display of the following:
 - a) Phase Currents, Each Phase: Plus or minus 1 percent.

- b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d) Three-Phase Real Power: Plus or minus 2 percent.
 - e) Three-Phase Reactive Power: Plus or minus 2 percent.
 - f) Power Factor: Plus or minus 2 percent.
 - g) Frequency: Plus or minus 0.5 percent.
 - h) Integrated Demand with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
 - i) Accumulated energy, in megawatt hours (joules), plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.
- 2) Mounting: Display and control unit flush or semirecessed in instrument compartment door.
- i. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
 - j. Power Protection: Chiller shall shut down within six cycles of power interruption.

P. Variable Frequency Controller:

1. Motor controller shall be factory mounted and wired on the chiller to provide a single-point, field-power termination to the chiller and its auxiliaries.
2. Description: NEMA ICS 2; listed and labeled as a complete unit and arranged to provide variable speed by adjusting output voltage and frequency.
3. Enclosure: Unit mounted, NEMA 250, **[Type 1] <Insert type>**, with hinged full-front access door with lock and key.
4. Integral Disconnecting Means: **[Door-interlocked,]**NEMA AB 1, instantaneous-trip circuit breaker with lockable handle. Minimum withstand rating shall be as required by electrical power distribution system, but not less than **[42,000] [65,000] [100,000] <Insert value> A**.
5. Technology: Pulse width modulated (PWM) output suitable for constant or variable torque loads.
6. Output Rating: Three phase; with voltage proportional to frequency throughout voltage range.
7. Operating Requirements:
 - a. Input AC Voltage Tolerance: **[460-V ac, plus 10 percent or 506 V maximum] <Insert voltage and tolerance>**.
 - b. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
 - c. Capable of driving full load, without derating, under the following conditions:
 - 1) Ambient Temperature: 0 to 40 deg C.
 - 2) Relative Humidity: Up to **[90] [95]** percent (noncondensing).
 - 3) Altitude: **[3300 feet (1005 m)] [6600 feet (2010 m)]**.

- d. Minimum Efficiency: 96 percent at 60 Hz, full load.
 - e. Minimum Displacement Primary-Side Power Factor: 98 percent.
 - f. Overload Capability: 1.05 times the full-load current for 7 seconds.
 - g. Starting Torque: As required by compressor-drive assembly.
 - h. Speed Regulation: Plus or minus 1 percent.
 - i. Isolated control interface to allow controller to follow control signal over a 10:1 speed range.
 - j. To avoid equipment resonant vibrations, provide critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
 - k. Capable of being restarted into a motor coasting in either the forward or reverse direction without tripping.
8. Internal Adjustability Capabilities:
- a. Minimum Output Frequency: 6 Hz.
 - b. Maximum Output Frequency: 60 Hz.
 - c. Acceleration: 2 seconds to 60 seconds.
 - d. Deceleration: Zero seconds to 60 seconds.
 - e. Current Limit: 30 to a minimum of 100 percent of maximum rating.
9. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:
- a. Overtemperature.
 - b. Short circuit at controller output.
 - c. Ground fault at controller output. Variable frequency controller shall be able to start a grounded motor.
 - d. Open circuit at controller output.
 - e. Input undervoltage.
 - f. Input overvoltage.
 - g. Loss of input-phase.
 - h. Reverse phase.
 - i. AC line switching transients.
 - j. Instantaneous overload, line to line or line to ground.
 - k. Sustained overload exceeding 100 percent of controller rated current.
 - l. Starting a rotating motor.
10. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.
11. Automatic Reset and Restart: Capable of **[three]** <Insert number> restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction. Controller shall be capable of automatic restart on phase-loss, and overvoltage and undervoltage trips.
12. Visual Indication: On face of controller enclosure or chiller control enclosure; indicating the following conditions:
- a. Power on.

- b. Run.
 - c. Overvoltage.
 - d. Line fault.
 - e. Overcurrent.
 - f. External fault.
 - g. Motor speed (percent).
 - h. Fault or alarm status (code).
 - i. Motor output voltage.
 - j. Input kilovolt amperes.
 - k. Total power factor.
 - l. Input kilowatts.
 - m. Input kilowatt-hours.
 - n. Three-phase input voltage.
 - o. Three-phase output voltage.
 - p. Three-phase input current.
 - q. Three-phase output current.
 - r. Output frequency (Hertz).
 - s. Elapsed operating time (hours).
 - t. Diagnostic and service parameters.
13. Operator Interface: At controller or chiller control panel; with start-stop and auto-manual selector with manual-speed-control potentiometer.
14. Harmonic Distortion Filter: Factory mounted and wired to limit total voltage and current distortion to [5] <Insert number> percent.

Q. Controls:

- 1. Standalone and microprocessor based with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.
- 2. Enclosure: Unit mounted, NEMA 250, [Type 1] [Type 4] [Type 4x] [Type 12] <Insert type>, hinged or lockable; factory wired with a single-point, field-power connection and a separate control circuit.
- 3. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units, display the following information:
 - a. Date and time.
 - b. Operating or alarm status.
 - c. Fault history with not less than last 10 faults displayed.
 - d. Set points of controllable parameters.
 - e. Trend data.
 - f. Operating hours.
 - g. Number of chiller starts.
 - h. Outdoor-air temperature or space temperature if required for chilled-water reset.
 - i. Temperature and pressure of operating set points.
 - j. Entering- and leaving-fluid temperatures of evaporator and condenser.
 - k. Difference in fluid temperatures of evaporator and condenser.
 - l. Fluid flow of evaporator and condenser.

- m. Fluid pressure drop of evaporator and condenser.
 - n. Refrigerant pressures in evaporator and condenser.
 - o. Refrigerant saturation temperature in evaporator and condenser.
 - p. Pump status.
 - q. Antirecycling timer status.
 - r. Percent of maximum motor amperage.
 - s. Current-limit set point.
 - t. Compressor bearing temperature.
 - u. Motor bearing temperature.
 - v. Motor winding temperature.
 - w. Oil temperature.
 - x. Oil discharge pressure.
 - y. Phase current.
 - z. Percent of motor rated load amperes.
 - aa. Phase voltage.
 - bb. Demand power (kilowatts).
 - cc. Energy use (kilowatt-hours).
 - dd. Power factor.
 - ee. **<Insert items>**.
4. Control Functions:
- a. Manual or automatic startup and shutdown time schedule.
 - b. Entering and leaving chilled-water temperatures, control set points, and motor load limits. Evaporator fluid temperature shall be reset based on **[return-water] [outdoor-air] [space]** temperature.
 - c. Current limit and demand limit.
 - d. Condenser-fluid temperature.
 - e. External chiller emergency stop.
 - f. Antirecycling timer.
 - g. Variable evaporator flow.
 - h. Thermal storage.
 - i. Heat reclaim.
 - j. **<Insert control functions>**.
5. Manually Reset Safety Controls: The following conditions shall shut down chiller and require manual reset:
- a. Low evaporator pressure or temperature; high condenser pressure.
 - b. Low evaporator fluid temperature.
 - c. Low oil differential pressure.
 - d. High or low oil pressure.
 - e. High oil temperature.
 - f. High compressor-discharge temperature.
 - g. Loss of condenser-fluid flow.
 - h. Loss of evaporator-fluid flow.
 - i. Motor overcurrent.
 - j. Motor overvoltage.
 - k. Motor undervoltage.
 - l. Motor phase reversal.

- m. Motor phase failure.
 - n. Sensor- or detection-circuit fault.
 - o. Processor communication loss.
 - p. Motor controller fault.
 - q. Extended compressor surge.
 - r. **<Insert manually reset safety controls>**.
6. Trending: Capability to trend analog data of up to five parameters simultaneously over an adjustable period and frequency of polling.
 7. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.
 8. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.
 9. Communication Port: RS-232 port or equivalent connection capable of connecting a printer **[and a notebook computer]**.
 10. Interface with the DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display chiller status and alarms.
 - a. Hardwired Points:
 - 1) Monitoring: On-off status, **[common trouble alarm] [electrical power demand (kilowatts)] [electrical power consumption (kilowatt-hours)] [power factor] <Insert monitoring point>**.
 - 2) Control: On-off operation, **[chilled-water, discharge temperature set-point adjustment] [electrical power demand limit] <Insert control point>**.
 - b. **[ASHRAE 135 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol] <Insert type of interface>** communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the chiller from an operator workstation. Control features and monitoring points displayed locally at chiller control panel shall be available through the DDC system for HVAC.

R. Insulation:

1. Material: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
2. Thickness: **[3/4 inch (19 mm)] [1-1/2 inches (38 mm)] <Insert thickness>**.
3. Adhesive: As recommended by insulation manufacturer and applied to 100 percent of insulation contact surface. Seal seams and joints.
4. Factory-applied insulation over cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator shell and end tube sheets, evaporator water boxes including nozzles, refrigerant suction pipe from evaporator to compressor, cold surfaces of compressor, refrigerant-cooled motor, and auxiliary piping.

- a. Before insulating steel surfaces, prepare surfaces for paint, and prime and paint as indicated for other painted components. Do not insulate unpainted steel surfaces.
- b. Seal seams and joints to provide a vapor barrier.
- c. After adhesive has fully cured, paint exposed surfaces of insulation to match other painted parts.

S. Finish:

1. Paint chiller, using manufacturer's standard procedures, except comply with the following minimum requirements:
 - a. Provide at least one coat of primer with a total dry film thickness of at least **2 mils** (0.05 mm).
 - b. Provide at least two coats of **[alkyd-modified, vinyl enamel] [epoxy] [polyurethane]** finish with a total dry film thickness of at least **4 mils** (0.10 mm).
 - c. Paint surfaces that are to be insulated before applying the insulation.
 - d. Paint installed insulation to match adjacent uninsulated surfaces.
 - e. Color of finish coat to be **[manufacturer's standard] [custom color selected by DEN Project Manager] <Insert color description>**.
2. Provide Owner with quart container of paint used in application of topcoat to use in touchup applications after Project Closeout.

T. Accessories:

1. Flow Switches:
 - a. If required and not factory installed, chiller manufacturer shall furnish a switch for each **[condenser] [evaporator and condenser]** and verify field-mounting location before installation.
 - b. Paddle Flow Switches:
 - 1) Vane operated to actuate a double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.
 - 2) Contacts: Platinum alloy, silver alloy, or gold-plated switch contacts with a rating of 10 A at 120-V ac.
 - 3) Pressure rating equal to pressure rating of heat exchanger.
 - 4) Construct body and wetted parts of Type 316 stainless steel.
 - 5) House switch in a NEMA 250, **[Type 4] <Insert type>** enclosure constructed of die-cast aluminum.
 - 6) Vane length to suit installation.
 - c. Pressure Differential Switches:
 - 1) Construction: Wetted parts of body and trim constructed of Type 316 stainless steel.

- 2) Performance: Switch shall withstand, without damage, the full-pressure rating of the heat exchanger applied to either port and exhibit zero set-point shift due to variation in working pressure.
- 3) Set Point: Screw type, field adjustable.
- 4) Electrical Connections: Internally mounted screw-type terminal blocks.
- 5) Switch Enclosure: NEMA 250, [Type 4] <Insert type>.
- 6) Switch Action: Double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.

2. Vibration Isolation:

- a. Chiller manufacturer shall furnish vibration isolation for each chiller.
- b. Neoprene Pad:
 - 1) Two layers of 0.375-inch- (10-mm-) thick, ribbed- or waffle-pattern neoprene pads separated by a 16-gage, stainless-steel plate.
 - 2) Fabricate pads from 40- to 50-durometer neoprene.
 - 3) Provide stainless-steel square bearing plate to load the pad uniformly between 20 and 40 psig (138 and 276 kPa) with a 0.12- to 0.16-inch (3- to 4-mm) deflection.
- c. Spring Isolator:
 - 1) Stable in operation and designed for not less than 30 percent reserve deflection beyond actual operating conditions. Isolators shall be designed such that the Kx/Ky ratio shall be 1.0 or more for stability.
 - 2) Provide PVC or neoprene-coated springs and hot-dip, galvanized-steel components. Aluminum components shall be etched and painted. Nuts, bolts, and washers shall be zinc electroplated.
 - 3) Isolators shall be adjustable and with an open spring, having one or more coil springs attached to a top compression plate and a baseplate. An elastomeric pad with a minimum thickness of 0.25 inch (6 mm) shall be bonded to the baseplate.
 - 4) Spring assembly shall be removable and shall fit within a welded steel enclosure consisting of a top plate and rigid lower housing, which serves as a blocking device during installation. Isolated restraining bolts shall not be engaged during normal operation and shall connect the top plate and lower housing to prevent the isolated equipment from rising when drained of fluid.
 - 5) Isolators shall be selected for a nominal [1-inch (25-mm)] [2-inch (50-mm)] <Insert dimension> deflection.

3. Sound Barrier:

- a. Furnish removable and reusable sound-barrier covers over the compressor housing, hermetic motor, compressor suction and discharge piping, and condenser shell.

- b. Provide for repeated installation and removal without use of tape or caulk.
 - c. Inner and outer cover shall consist of a PTFE-impregnated fiberglass cloth enclosing heavy-density, needled fiberglass insulation material with a mass-loaded vinyl acoustic barrier.
 - d. Covers shall be double sewn and lock stitched with edges folded and sewn so no raw cut edges are exposed.
 - e. Form covers around control devices, gages, conduit, piping, and supports without degrading sound-barrier performance.
 - f. Continuously lap all exposed seams at least **2 inches (50 mm)** for better sound containment.
 - g. Permanently label each section of cover to indicate its location, description, size, and number sequence.
 - h. Randomly place stainless-steel quilting pins to prevent covers from shifting and sagging.
4. Tool Kit: Chiller manufacturer shall assemble a tool kit specially designed for use in serving the chiller(s) furnished. Include special tools required to service chiller components not readily available to Owner service personnel in performing routine maintenance. Place tools in a lockable case with hinged cover. Provide a list of each tool furnished and attach the list to underside of case cover.

U. Capacities and Characteristics:

1. Capacity: **<Insert tons (kW)>**.
2. Full-Load Efficiency (COP): **<Insert value>**.
3. Full-Load Efficiency (EER): **<Insert value>**.
4. Full-Load Efficiency (Power Input/Cooling Output): **<Insert kW/ton (kW/kW)>**.
5. Part-Load Efficiency (IPLV): **<Insert value>**.
6. Part-Load Efficiency (NPLV): **<Insert value>**.
7. Evaporator:
 - a. Pressure Rating: **<Insert psig (kPa)>**.
 - b. Number of Passes: **[One] [Two] [Three]**.
 - c. Fluid Type: **[Water] <Insert fluid type>**.
 - d. Design Fluid Flow Rate: **<Insert gpm (L/s)>**.
 - e. Minimum Fluid Flow Rate: **<Insert gpm (L/s)>**.
 - f. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - g. Leaving-Fluid Temperature: **<Insert deg F (deg C)>**.
 - h. Fluid Pressure Drop: **<Insert feet of head (kPa)>**.
 - i. Fluid Velocity: **<Insert fps (m/s)>**.
 - j. Fouling Factor: **[0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>**.
8. Condenser:
 - a. Pressure Rating: **<Insert psig (kPa)>**.
 - b. Number of Passes: **[One] [Two] [Three]**.
 - c. Fluid Type: **[Water] <Insert fluid type>**.
 - d. Design Fluid Flow Rate: **<Insert gpm (L/s)>**.

- e. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 - f. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
 - g. Fluid Pressure Drop: <Insert feet of head (kPa)>.
 - h. Fluid Velocity: <Insert fps (m/s)>.
 - i. Fouling Factor: [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] [0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W)] <Insert value>.
9. Heat-Reclaim Condenser:
- a. Pressure Rating: <Insert psig (kPa)>.
 - b. Number of Passes: [One] [Two] [Three].
 - c. Fluid Type: [Water] <Insert fluid type>.
 - d. Design Fluid Flow Rate: <Insert gpm (L/s)>.
 - e. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 - f. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
 - g. Fluid Pressure Drop: <Insert feet of head (kPa)>.
 - h. Fluid Velocity: <Insert fps (m/s)>.
 - i. Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] <Insert value>.
10. Compressor:
- a. Rated Load Amperes: <Insert value>.
 - b. Locked-Rotor Amperes: <Insert value>.
11. Chiller Electrical Requirements:
- a. Power Input: <Insert kilowatts>.
 - b. Power Factor: [0.90] [0.95] <Insert value>.
 - c. Minimum Circuit Ampacity: <Insert value>.
 - d. Maximum Overcurrent Protection Device: <Insert amperage>.
 - e. Volts: [208] [240] [480] [600] [2300] [4160] <Insert value>.
 - f. Phase: Three.
 - g. Hertz: 60.
12. Noise Rating: [85] <Insert dBA> sound power level when measured according to ARI 575. Provide factory-installed sound treatment if necessary to achieve the performance indicated.

2.2 PACKAGED, WATER-COOLED, MULTIPLE-COMPRESSOR CHILLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1. [Carrier Corporation](#).
 - 2. [Dunham-Bush](#).
 - 3. [McQuay International](#).

4. [York International Corporation](#).
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Description: Factory-assembled and **[run]**-tested chiller with compressor(s), compressor motors and motor controllers, evaporator, condenser where indicated, electrical power, controls, and indicated accessories.
1. Disassemble chiller into major assemblies as required by the installation after factory testing and before packaging for shipment.
- C. Fabricate chiller mounting base with reinforcement strong enough to resist chiller movement during a seismic event when chiller is anchored to field support structure.
- D. Compressors:
1. Description: Positive displacement, hermetically sealed.
 2. Casing: Cast iron, precision machined for minimum clearance about periphery of rotors.
 3. Rotors: Manufacturer's standard one- or two-rotor design.
- E. Service: Easily accessible for inspection and service.
1. Compressor's internal components shall be accessible without having to remove compressor-drive assembly from chiller.
 2. Provide lifting lugs or eyebolts attached to casing.
- F. Capacity Control: On-off compressor cycling and modulating slide-valve assembly or port unloaders combined with hot-gas bypass, if necessary, to achieve performance indicated.
1. Maintain stable operation throughout range of operation. Configure to achieve most energy-efficient operation possible.
 2. Operating Range: From 100 to **[20] [15] [10] [5] [zero] <Insert number>** percent of design capacity.
 3. Condenser-Fluid Unloading Requirements over Operating Range:
[Constant-design entering condenser-fluid temperature] [Drop-in entering condenser-fluid temperature of 2.5 deg F (1.4 deg C) drop for each 10 percent in capacity reduction] <Insert conditions>.
- G. Oil Lubrication System: Consisting of pump if required, filtration, heater, cooler, factory-wired power connection, and controls.
1. Provide lubrication to bearings, gears, and other rotating surfaces at all operating, startup, shutdown, and standby conditions including power failure.
 2. Thermostatically controlled oil heater properly sized to remove refrigerant from oil.
 3. Factory-installed and pressure-tested piping with isolation valves and accessories.
 4. Oil compatible with refrigerant and chiller components.

5. Positive visual indication of oil level.

H. Vibration Control:

1. Vibration Balance: Balance chiller compressor and drive assembly to provide a precision balance that is free of noticeable vibration over the entire operating range.

a. Overspeed Test: 25 percent above design operating speed.

2. Isolation: Mount individual compressors on vibration isolators.

I. Sound Control: Sound-reduction package shall consist of removable acoustic enclosures around the compressors and drive assemblies that are designed to reduce sound levels without affecting performance.

J. Compressor Motors:

1. Hermetically sealed and cooled by refrigerant suction gas.

2. High-torque, induction type with inherent thermal-overload protection on each phase.

K. Refrigerant Circuits:

1. Refrigerant: Type as indicated on Drawings.

2. Refrigerant Type: **[R-22] [R-134a] [or] [any HFC] <Insert type>**. Classified as Safety Group A1 according to ASHRAE 34.

3. Refrigerant Compatibility: Chiller parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.

4. Refrigerant Circuit: Each shall include a thermal- or electronic-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor[**suction**] and discharge shutoff valves, a liquid-line shutoff valve, a[**replaceable-core**] filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.

5. Pressure Relief Device:

a. Comply with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

b. ASME-rated, spring-loaded pressure relief valve; single- or multiple-reseating type.

6. Refrigerant Isolation: Factory install positive shutoff isolation valves in the compressor discharge line to the condenser and the refrigerant liquid-line leaving the condenser to allow for isolation and storage of full refrigerant charge in the chiller condenser shell.

L. Evaporator:

1. Description: Shell-and-tube design.

- a. Direct-expansion (DX) type with fluid flowing through the shell, and refrigerant flowing through the tubes within the shell.
 - b. Flooded type with fluid flowing through tubes and refrigerant flowing around tubes within the shell.
2. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 3. Shell Material: Carbon steel.
 4. Shell Heads: Removable carbon-steel heads with multipass baffles, and located at each end of the tube bundle.
 5. Fluid Nozzles: Terminated with mechanical-coupling or flanged end connections for connection to field piping.
 6. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
- M. Condenser:
1. Shell and tube, or without integral condenser; as indicated.
 2. Shell and Tube:
 - a. Description: Shell-and-tube design with refrigerant flowing through shell, and fluid flowing through tubes within shell.
 - b. Provides positive subcooling of liquid refrigerant.
 - c. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - d. Shell Material: Carbon steel.
 - e. Water Boxes: Removable, of carbon-steel construction, located at each end of the tube bundle with fluid nozzles terminated with mechanical-coupling end connections for connection to field piping.
 - f. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
 - g. Provide each condenser with a pressure relief device, purge cock, and liquid-line shutoff valve.
 3. Provide chiller without an integral condenser and design chiller for field connection to remote condenser. Coordinate requirements with Section 236313 "Air-Cooled Refrigerant Condensers."
- N. Electrical Power:
1. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a **[multipoint] [single-point]**, field-power connection to chiller.
 2. House in a unit-mounted, NEMA 250, **[Type 1] <Insert type>** enclosure with hinged access door **[with lock and key or padlock and key]**.
 3. Wiring shall be numbered **[and color-coded]** to match wiring diagram.
 4. Install factory wiring outside of an enclosure in a raceway.
 5. Field-power interface shall be to **[wire lugs] [NEMA KS 1, heavy-duty, nonfused disconnect switch] [NEMA AB 1, instantaneous-trip circuit breaker with lockable handle]**.

- a. Disconnect means shall be interlocked with door operation.
 - b. Minimum withstand rating shall be as required by electrical power distribution system, but not less than [42,000] [65,000] [100,000] <Insert value> A.
6. Provide branch power circuit to each motor and to controls with one of the following disconnecting means:
- a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - b. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.
7. Provide each motor with overcurrent protection.
8. Overload relay sized according to UL 1995 or an integral component of chiller control microprocessor.
9. Phase-Failure and Undervoltage Relays: Solid-state sensing with adjustable settings.
10. Control Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
11. Control Relays: Auxiliary and adjustable time-delay relays.
12. For chiller electrical power supply, indicate the following:
- a. Current and phase to phase for all three phases.
 - b. Voltage, phase to phase, and phase to neutral for all three phases.
 - c. Three-phase real power (kilowatts).
 - d. Three-phase reactive power (kilovolt amperes reactive).
 - e. Power factor.
 - f. Running log of total power versus time (kilowatt-hours).
 - g. Fault log, with time and date of each.
 - h. <Insert features>.
- O. Compressor Motor Controllers:
1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing[, **or solid state**].
 2. Star-Delta, Reduced-Voltage Controller: NEMA ICS 2, closed or open transition[, **or solid state**].
- P. Controls:
1. Standalone and microprocessor based.
 2. Enclosure: Share enclosure with electrical-power devices or provide a separate enclosure of matching construction.
 3. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units, display the following information:

- a. Date and time.
 - b. Operating or alarm status.
 - c. Fault history with not less than last 10 faults displayed.
 - d. Set points of controllable parameters.
 - e. Trend data.
 - f. Operating hours.
 - g. Number of chiller starts.
 - h. Outdoor-air temperature or space temperature if required for chilled-water reset.
 - i. Temperature and pressure of operating set points.
 - j. Entering- and leaving-fluid temperatures of evaporator and condenser.
 - k. Difference in fluid temperatures of evaporator and condenser.
 - l. Refrigerant pressures in evaporator and condenser.
 - m. Refrigerant saturation temperature in evaporator and condenser.
 - n. No cooling load condition.
 - o. Elapsed time meter (compressor run status).
 - p. Pump status.
 - q. Antirecycling timer status.
 - r. Percent of maximum motor amperage.
 - s. Current-limit set point.
 - t. Number of compressor starts.
 - u. Compressor refrigerant suction and discharge temperature.
 - v. Oil temperature.
 - w. Oil discharge pressure.
 - x. Phase current.
 - y. Percent of motor rated load amperes.
 - z. Phase voltage.
 - aa. **<Insert items>**.
4. Control Functions:
- a. Manual or automatic startup and shutdown time schedule.
 - b. Entering and leaving chilled-water temperatures, control set points, and motor load limits. Chilled-water leaving temperature shall be reset based on **[return-water] [outdoor-air] [space]** temperature.
 - c. Current limit and demand limit.
 - d. Condenser-fluid temperature.
 - e. External chiller emergency stop.
 - f. Antirecycling timer.
 - g. Automatic lead-lag switching.
 - h. Variable evaporator flow.
 - i. Thermal storage.
 - j. **<Insert control functions>**.
5. Manually Reset Safety Controls: The following conditions shall shut down chiller and require manual reset:
- a. Low evaporator pressure, or high condenser pressure.
 - b. Low chilled-water temperature.
 - c. Refrigerant high pressure.

- d. High or low oil pressure.
 - e. High oil temperature.
 - f. Loss of chilled-water flow.
 - g. Loss of condenser-fluid flow.
 - h. Control device failure.
 - i. **<Insert manually reset safety controls>**.
6. Trending: Capability to trend analog data of up to five parameters simultaneously over an adjustable period and frequency of polling.
 7. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.
 8. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.
 9. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display chiller status and alarms.
 - a. Hardwired Points:
 - 1) Monitoring: On-off status, [**common trouble alarm**] [**electrical power demand (kilowatts)**] [**electrical power consumption (kilowatt-hours)**] **<Insert monitoring point>**.
 - 2) Control: On-off operation, [**chilled-water, discharge temperature set-point adjustment**] [**electrical power demand limit**] **<Insert control point>**.
 - b. [**ASHRAE 135 (BACnet)**] [**LonTalk**] [**Modbus**] [**Industry-accepted, open-protocol**] **<Insert type of interface>** communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the chiller from an operator workstation. Control features and monitoring points displayed locally at chiller control panel shall be available through the DDC system for HVAC.

Q. Insulation:

1. Material: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
2. Thickness: [**3/4 inch (19 mm)**] **<Insert thickness>**.
3. Adhesive: As recommended by insulation manufacturer and applied to 100 percent of insulation contact surface. Seal seams and joints.
4. Factory-applied insulation over cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator shell and end tube sheets, evaporator water boxes including nozzles, refrigerant suction pipe from evaporator to compressor, cold surfaces of compressor, refrigerant-cooled motor, and auxiliary piping.
 - a. Before insulating steel surfaces, prepare surfaces for paint, prime and paint as indicated for other painted components. Do not insulate unpainted steel surfaces.

- b. Seal seams and joints to provide a vapor barrier.
- c. After adhesive has fully cured, paint exposed surfaces of insulation to match other painted parts.

R. Finish:

1. Paint chiller, using manufacturer's standard procedures, except comply with the following minimum requirements:
 - a. Provide at least one coat of primer.
 - b. Provide finish coat of **[alkyd-modified, vinyl enamel]** <Insert type>.
 - c. Paint surfaces that are to be insulated before applying the insulation.
 - d. Paint installed insulation to match adjacent uninsulated surfaces.

S. Accessories:

1. Factory-furnished, chilled-[**and condenser-**]water flow switches for field installation.
2. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigerant circuit.
3. Factory-furnished **[neoprene]** [or] **[spring]** isolators for field installation.
4. Tool Kit: Chiller manufacturer shall assemble a tool kit specially designed for use in serving the chiller(s) furnished. Include special tools required to service chiller components not readily available to Owner service personnel in performing routine maintenance. Place tools in a lockable case with hinged cover. Provide a list of each tool furnished and attach the list to underside of case cover.

T. Capacities and Characteristics:

1. Capacity: <Insert tons (kW)>.
2. Full-Load Efficiency (COP): <Insert value>.
3. Full-Load Efficiency (EER): <Insert value>.
4. Full-Load Efficiency (Power Input/Cooling Output): <Insert kW/ton (kW/kW)>.
5. Part-Load Efficiency (IPLV): <Insert value>.
6. Part-Load Efficiency (NPLV): <Insert value>.
7. Evaporator:
 - a. Pressure Rating: <Insert psig (kPa)>.
 - b. Number of Passes: **[One]** **[Two]** **[Three]**.
 - c. Fluid Type: **[Water]** <Insert fluid type>.
 - d. Design Fluid Flow Rate: <Insert gpm (L/s)>.
 - e. Minimum Fluid Flow Rate: <Insert gpm (L/s)>.
 - f. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 - g. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
 - h. Fluid Pressure Drop: <Insert feet of head (kPa)>.
 - i. Fluid Velocity: <Insert fps (m/s)>.
 - j. Fouling Factor: **[0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)]** **[0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)]** **[0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)]** <Insert value>.

8. Condenser:
 - a. Pressure Rating: <Insert psig (kPa)>.
 - b. Fluid Type: **[Water]** <Insert fluid type>.
 - c. Design Fluid Flow Rate: <Insert gpm (L/s)>.
 - d. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 - e. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
 - f. Fluid Pressure Drop: <Insert feet of head (kPa)>.
 - g. Fluid Velocity: <Insert fps (m/s)>.
 - h. Fouling Factor: [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] [0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W)] <Insert value>.
9. Number of Refrigerant Circuits: **[One]** **[Two]**.
10. Compressors:
 - a. Number of Compressors: <Insert number>.
 - b. Rated Load Amperes: <Insert value>.
 - c. Locked-Rotor Amperes: <Insert value>.
11. Control Electrical Requirements:
 - a. Power Connection: **[Fed through integral transformer]** **[Separate field-power connection]**.
 - b. Power Input: <Insert kilowatts>.
 - c. Minimum Circuit Ampacity: <Insert value>.
 - d. Maximum Overcurrent Protection Device: <Insert amperage>.
 - e. Volts: **[120]** <Insert value>-V ac.
 - f. Phase: **[Single]** **[Three]**.
 - g. Hertz: 60.
12. Chiller Electrical Requirements:
 - a. Power Input: <Insert kilowatts>.
 - b. Power Factor: <Insert value>.
 - c. Minimum Circuit Ampacity: <Insert value>.
 - d. Maximum Overcurrent Protection Device: <Insert amperage>.
 - e. Volts: **[208]** **[240]** **[480]** **[600]** <Insert value>.
 - f. Phase: Three.
 - g. Hertz: 60.
13. Noise Rating: <Insert dBA> sound power level when measured according to ARI 575. Provide factory-installed sound treatment if necessary to achieve the performance indicated.

2.3 PACKAGED, AIR-COOLED CHILLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Carrier Corporation.](#)
 2. [Dunham-Bush.](#)
 3. [McQuay International.](#)
 4. [Trane.](#)
 5. [York International Corporation.](#)
 6. **<Insert manufacturer's name>.**
 7. or approved equal.
- B. Description: Factory-assembled and run-tested chiller complete with base and frame, condenser casing, compressors, compressor motors and motor controllers, evaporator, condenser coils, condenser fans and motors, electrical power, controls, and accessories.
- C. Fabricate base, frame, and attachment to chiller components strong enough to resist chiller movement during a seismic event when chiller base is anchored to field support structure.
- D. Cabinet:
1. Base: Galvanized-steel base extending the perimeter of chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit.
 2. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly supported by base.
 3. Casing: Galvanized steel.
 4. Finish: Coat base, frame, and casing with a corrosion-resistant coating capable of withstanding a [500] [1000] **<Insert number>**-hour salt-spray test according to ASTM B 117.
 5. Sound-reduction package designed to reduce sound level without affecting performance and consisting of the following:
 - a. Acoustic enclosure around compressors.
 - b. Reduced-speed fans with acoustic treatment.
 6. Security Package: Provide removable [**grilles**] [**louvered panels**] with fasteners for additional protection of compressors, evaporator, and condenser coils without inhibiting service access. Finish to match cabinet.
- E. Compressors:
1. Description: Positive displacement, hermetically sealed.
 2. Casing: Cast iron, precision machined for minimum clearance about periphery of rotors.
 3. Rotors: Manufacturer's standard one- or two-rotor design.
 4. Each compressor provided with[**suction and**] discharge shutoff valves, crankcase oil heater, and suction strainer.
- F. Service: Easily accessible for inspection and service.

- G. Capacity Control: On-off compressor cycling and modulating slide-valve assembly or port unloaders combined with hot-gas bypass, if necessary, to achieve performance indicated.
1. Maintain stable operation throughout range of operation. Configure to achieve most energy-efficient operation possible.
 2. Operating Range: From 100 to [20] [15] [10] [5] [zero] <Insert number> percent of design capacity.
 3. Condenser-Air Unloading Requirements over Operating Range:
[Constant-design entering condenser-air temperature] [Drop-in entering condenser-air temperature of 5 deg F (3 deg C) drop for each 10 percent in capacity reduction] <Insert conditions>.
 4. For units equipped with a variable frequency controller, capacity control shall be both "valveless" and "stepless," requiring no slide valve or capacity-control valve(s) to operate at reduced capacity.
- H. Oil Lubrication System: Consisting of pump if required, filtration, heater, cooler, factory-wired power connection, and controls.
1. Provide lubrication to bearings, gears, and other rotating surfaces at all operating, startup, shutdown, and standby conditions including power failure.
 2. Thermostatically controlled oil heater properly sized to remove refrigerant from oil.
 3. Factory-installed and pressure-tested piping with isolation valves and accessories.
 4. Oil compatible with refrigerant and chiller components.
 5. Positive visual indication of oil level.
- I. Vibration Control:
1. Vibration Balance: Balance chiller compressors and drive assemblies to provide a precision balance that is free of noticeable vibration over the entire operating range.
 - a. Overspeed Test: 25 percent above design operating speed.
 2. Isolation: Mount individual compressors on vibration isolators.
- J. Compressor Motors:
1. Hermetically sealed and cooled by refrigerant suction gas.
 2. High-torque, induction type with inherent thermal-overload protection on each phase.
- K. Compressor Motor Controllers:
1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing[, **or solid state**].
 2. Star-Delta, Reduced-Voltage Controller: NEMA ICS 2, closed transition[, **or solid state**].

3. Variable Frequency Controller:

- a. Motor controller shall be factory mounted and wired on the chiller to provide a single-point, field-power termination to the chiller and its auxiliaries.
- b. Description: NEMA ICS 2; listed and labeled as a complete unit and arranged to provide variable speed by adjusting output voltage and frequency.
- c. Enclosure: Unit mounted, NEMA 250, [**Type 3R**] <Insert type>, with hinged full-front access door with lock and key.
- d. Integral Disconnecting Means: [**Door-interlocked**,]NEMA AB 1, instantaneous-trip circuit breaker with lockable handle. Minimum withstand rating shall be as required by electrical power distribution system, but not less than [**42,000**] [**65,000**] [**100,000**] <Insert value> A.
- e. Technology: Pulse width modulated (PWM) output suitable for constant or variable torque loads.
- f. Motor current at start shall not exceed the rated load amperes, providing no electrical inrush.

L. Refrigerant Circuits:

1. Refrigerant: Type as indicated on Drawings.
2. Refrigerant Type: [**R-22**] [**R-134a**] [**R-407c**] [**or**] [**any HFC**] <Insert type>. Classified as Safety Group A1 according to ASHRAE 34.
3. Refrigerant Compatibility: Chiller parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
4. Refrigerant Circuit: Each shall include a thermal- or electronic-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor[**suction**] and discharge shutoff valves, a liquid-line shutoff valve, a [**replaceable-core**]filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.
5. Pressure Relief Device:
 - a. Comply with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - b. ASME-rated, spring-loaded pressure relief valve; single- or multiple-reseating type.

M. Evaporator:

1. Description: Shell-and-tube design.
 - a. Direct-expansion (DX) type with fluid flowing through the shell, and refrigerant flowing through the tubes within the shell.
 - b. Flooded type with fluid flowing through tubes and refrigerant flowing around tubes within the shell.
2. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
3. Shell Material: Carbon steel.

4. Shell Heads: Removable carbon-steel heads located at each end of the tube bundle.
5. Fluid Nozzles: Terminated with **[mechanical-coupling] [flanged]** end connections for connection to field piping.
6. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
7. Heater: Factory-installed and -wired electric heater with integral controls designed to protect the evaporator to **minus 20 deg F** (minus 29 deg C).
8. Remote Mounting: Designed for remote field mounting where indicated. Provide kit for field installation.

N. Air-Cooled Condenser:

1. Plate-fin coil with integral subcooling on each circuit, rated at **450 psig** (3103 kPa).
 - a. Construct coil casing of **[galvanized] [or] [stainless]** steel.
 - b. Construct coils of copper tubes mechanically bonded to **[aluminum] [aluminum with precoated epoxy-phenolic] [copper]** fins.
 - c. Coat coils with a baked-epoxy, corrosion-resistant coating after fabrication.
 - d. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.
2. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades, arranged for vertical air discharge.
3. Fan Motors: Totally enclosed nonventilating (TENV) or totally enclosed air over (TEAO) enclosure, with permanently lubricated bearings. Equip each motor with overload protection integral to either the motor or chiller controls.
4. Fan Guards: Steel safety guards with corrosion-resistant coating.

O. Electrical Power:

1. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a **[multipoint] [single-point]**, field-power connection to chiller.
2. House in a unit-mounted, NEMA 250, **[Type 3R] <Insert type>** enclosure with hinged access door **[with lock and key or padlock and key]**.
3. Wiring shall be numbered **[and color-coded]** to match wiring diagram.
4. Install factory wiring outside of an enclosure in a raceway.
5. Field-power interface shall be to **[wire lugs] [NEMA KS 1, heavy-duty, nonfused disconnect switch] [NEMA AB 1, instantaneous-trip circuit breaker with lockable handle]**.
 - a. Disconnect means shall be interlocked with door operation.
 - b. Minimum withstand rating shall be as required by electrical power distribution system, but not less than **[42,000] [65,000] [100,000] <Insert value> A**.
6. Provide branch power circuit to each motor and to controls with one of the following disconnecting means:

- a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - b. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.
7. Provide each motor with overcurrent protection.
 8. Overload relay sized according to UL 1995 or an integral component of chiller control microprocessor.
 9. Phase-Failure and Undervoltage Relays: Solid-state sensing with adjustable settings.
 10. Provide power factor correction capacitors to correct power factor to **[0.90] [0.95]** **<Insert value>** at full load.
 11. Control Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
 - a. Power unit-mounted controls where indicated.
 - b. Power unit-mounted, ground fault interrupt (GFI) duplex receptacle.
 12. Control Relays: Auxiliary and adjustable time-delay relays.
 13. For chiller electrical power supply, indicate the following:
 - a. Current and phase to phase for all three phases.
 - b. Voltage, phase to phase, and phase to neutral for all three phases.
 - c. Three-phase real power (kilowatts).
 - d. Three-phase reactive power (kilovolt amperes reactive).
 - e. Power factor.
 - f. Running log of total power versus time (kilowatt-hours).
 - g. Fault log, with time and date of each.
 - h. **<Insert features>**.

P. Controls:

1. Standalone and microprocessor based.
2. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure[**for remote mounting in the field**].
3. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units, display the following information:
 - a. Date and time.
 - b. Operating or alarm status.
 - c. Operating hours.
 - d. Outdoor-air temperature if required for chilled-water reset.
 - e. Temperature and pressure of operating set points.
 - f. Entering and leaving temperatures of chilled water.
 - g. Refrigerant pressures in evaporator and condenser.
 - h. Saturation temperature in evaporator and condenser.

- i. No cooling load condition.
 - j. Elapsed time meter (compressor run status).
 - k. Pump status.
 - l. Antirecycling timer status.
 - m. Percent of maximum motor amperage.
 - n. Current-limit set point.
 - o. Number of compressor starts.
 - p. **<Insert items>**.
4. Control Functions:
 - a. Manual or automatic startup and shutdown time schedule.
 - b. Entering and leaving chilled-water temperatures, control set points, and motor load limits. Chilled-water leaving temperature shall be reset based on **[return-water] [outdoor-air] [space]** temperature.
 - c. Current limit and demand limit.
 - d. External chiller emergency stop.
 - e. Antirecycling timer.
 - f. Automatic lead-lag switching.
 - g. Variable evaporator flow.
 - h. Thermal storage.
 - i. **<Insert control functions>**.
5. Manually Reset Safety Controls: The following conditions shall shut down chiller and require manual reset:
 - a. Low evaporator pressure or high condenser pressure.
 - b. Low chilled-water temperature.
 - c. Refrigerant high pressure.
 - d. High or low oil pressure.
 - e. High oil temperature.
 - f. Loss of chilled-water flow.
 - g. Control device failure.
 - h. **<Insert manually reset safety controls>**.
6. Trending: Capability to trend analog data of up to **[five] <Insert number>** parameters simultaneously over an adjustable period and frequency of polling.
7. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.
8. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.
9. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display chiller status and alarms.
 - a. Hardwired Points:

- 1) Monitoring: On-off status, [**common trouble alarm**] [**electrical power demand (kilowatts)**] [**electrical power consumption (kilowatt-hours)**] <Insert monitoring point>.
- 2) Control: On-off operation, [**chilled-water, discharge temperature set-point adjustment**] [**electrical power demand limit**] <Insert control point>.

- b. [**ASHRAE 135 (BACnet)**] [**LonTalk**] [**Modbus**] [**Industry-accepted, open-protocol**] <Insert type of interface> communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the chiller from an operator workstation. Control features and monitoring points displayed locally at chiller control panel shall be available through the DDC system for HVAC.

Q. Insulation:

1. Material: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
2. Thickness: [**3/4 inch (19 mm)**] [**1-1/2 inches (38 mm)**] <Insert thickness>.
3. Factory-applied insulation over cold surfaces of chiller components.
 - a. Adhesive: As recommended by insulation manufacturer and applied to 100 percent of insulation contact surface. Seal seams and joints.
4. Apply protective coating to exposed surfaces of insulation to protect insulation from weather.

R. Accessories:

1. Factory-furnished, chilled-water flow switches for field installation.
2. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigerant circuit.
3. Factory-furnished [**neoprene**] [**or**] [**spring**] isolators for field installation.
4. Tool Kit: Chiller manufacturer shall assemble a tool kit specially designed for use in serving the chiller(s) furnished. Include special tools required to service chiller components not readily available to Owner service personnel in performing routine maintenance. Place tools in a lockable case with hinged cover. Provide a list of each tool furnished and attach the list to underside of case cover.

S. Capacities and Characteristics:

1. Capacity: <Insert tons (kW)>.
2. Full-Load Efficiency (COP): <Insert value>.
3. Full-Load Efficiency (EER): <Insert value>.
4. Full-Load Efficiency (Power Input/Cooling Output): <Insert kW/ton (kW/kW)>.
5. Part-Load Efficiency (IPLV): <Insert value>.
6. Part-Load Efficiency (NPLV): <Insert value>.
7. Low Ambient Operation: Chiller designed for operation to [**0 deg F (minus 18 deg C)**] <Insert temperature>.

8. High Ambient Operation: Chiller designed for operation to [115 deg F (46 deg C)] **<Insert temperature>**.
9. Evaporator:
 - a. Configuration: [Integral to chiller] [Shipped loose for field installation].
 - b. Pressure Rating: [150 psig (1034 kPa)] [300 psig (2068 kPa)] **<Insert value>**.
 - c. Fluid Type: [Water] **<Insert fluid type>**.
 - d. Design Fluid Flow Rate: **<Insert gpm (L/s)>**.
 - e. Minimum Fluid Flow Rate: **<Insert gpm (L/s)>**.
 - f. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - g. Leaving-Fluid Temperature: **<Insert deg F (deg C)>**.
 - h. Fluid Pressure Drop: **<Insert feet of head (kPa)>**.
 - i. Fluid Velocity: **<Insert fps (m/s)>**.
 - j. Fouling Factor: [0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W)] [0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W)] [0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W)] **<Insert value>**.
10. Condenser Entering-Air Temperature: **<Insert deg F (deg C)>**.
11. Condenser Fan External Static Pressure: **<Insert wg (Pa)>**.
12. Site Altitude: **<Insert feet (m)>**.
13. Number of Refrigerant Circuits: [Two] [Each compressor on an independent circuit] **<Insert requirement>**.
14. Compressor:
 - a. Number of Compressors: **<Insert number>**.
 - b. Rated Load Amperes: **<Insert value>**.
 - c. Locked-Rotor Amperes: **<Insert value>**.
15. Control Electrical Requirements:
 - a. Power Connection: [Fed through integral transformer] [Separate field-power connection].
 - b. Power Input: **<Insert kilowatts>**.
 - c. Minimum Circuit Ampacity: **<Insert value>**.
 - d. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - e. Volts: [120] **<Insert value>**-V ac.
 - f. Phase: Single.
 - g. Hertz: 60.
16. Chiller Electrical Requirements:
 - a. Power Input: **<Insert kilowatts>**.
 - b. Power Factor: **<Insert value>**.
 - c. Minimum Circuit Ampacity: **<Insert value>**.
 - d. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - e. Volts: [208] [240] [480] [600] **<Insert value>**.
 - f. Phase: Three.
 - g. Hertz: 60.

17. Noise Rating: **<Insert dBA>** sound power level when measured according to ARI 370. Provide factory-installed sound treatment if necessary to achieve the performance indicated.

2.4 PACKAGED REFRIGERANT RECOVERY UNITS

- A. Packaged portable unit consisting of compressor, air-cooled condenser, recovery system, tank pressure gages, filter-dryer, and valving that allows for switching between liquid and vapor recovery mode. Refrigerant recovery unit shall be factory mounted on an ASME-constructed and -stamped refrigerant storage vessel that is sized to hold the full refrigerant charge of the largest chiller furnished.

2.5 HEAT-EXCHANGER, BRUSH-CLEANING SYSTEM

- A. Furnish for field installation a brush-cleaning system on each chiller **[condenser]** **<Insert heat exchanger>** for tube cleaning and improved heat transfer.
- B. System shall maintain tube fouling at or below design conditions without interrupting normal equipment operation.
- C. System shall consist of a brush inserted in each tube and a catch basket attached to each end of the tube. A four-way valve shall operate to reverse the direction of water flow to push the brush through the tube while removing tube deposits. Four-way reversing valve's actuator shall be controlled by a preset time cycle that provides regular tube brushing during equipment operation. Frequency of the brushing cycle shall be set up to match Project requirements.
- D. Components:
 1. Brush: Each brush shall have nylon bristles, titanium wires, and polypropylene tips. Brush interference fit with the ID of the tube shall not exceed **0.025 inch (0.6 mm)**.
 2. Basket: Single-piece polypropylene basket with neck OD to press fit ID of tube. Design shall provide for insertion of eddy current probe or removal of brushes without removing baskets from the valve.
 3. Four-Way Valve:
 - a. Construct valve body of carbon steel with internal sealing parts of hard rubber and Type 304 stainless steel.
 - b. Configure valve with parallel flow connections to minimize field installation piping.
 - c. Construct to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, at a system working pressure equal to condenser.
 - d. Pipe connections shall be flanged.
 - e. Valve manufacturer to test and certify a maximum leakage rate of less than 0.05 percent of the design flow rate at operation conditions of maximum differential pressure.
 - f. Hydrostatically test to 1.5 times the design working pressure.

- g. Design the valve to cause no more than **0.5-psig (3-kPa)** pressure drop at design flow conditions.
 - h. Provide valve with valve-mounted indicating/warning light, which shall light before valve begins rotation.
 - i. Valve Actuator: Mount electric actuator to operate valve.
 - j. Valve Actuator: Mount pneumatic piston-type actuator to operate valve. Actuator shall be suitable for operation using field-supplied air pressure.
 - k. Position Switches: Factory mount microswitches on valve to indicate the complete turn of valve in both normal and reverse flow.
4. Control Panel: Factory or field mount a control panel on chiller. Control panel shall include the following features:
 - a. NEMA 250, [**Type 1**] [**Type 4**] [**Type 4x**] [**Type 12**] enclosure.
 - b. Timer to automatically initiate the cleaning cycle over a 24-hour period.
 - c. Manual override of preset cleaning cycle.
 - d. Visual indication of "Power On," "Diverter Position," "Normal Flow," "Reverse Flow," and "Valve Malfunction" indicating a slow turn or incomplete valve turn.
 - e. For pneumatic actuators, mount four-way solenoid valve for actuator operation in the control panel.
 - f. Flow switch bypass.
 - g. Unloading signal to chiller.

2.6 SOURCE QUALITY CONTROL

- A. Perform functional tests of chillers before shipping.
- B. Factory run test each air-cooled chiller with water flowing through evaporator.
- C. Factory performance test water-cooled chillers, before shipping, according to ARI 506/110.
 1. Test the following conditions:
 - a. Design conditions indicated.
 - b. Reduction in capacity from design to minimum load in steps of [**10**] [**25**] [**33**] **<Insert number>** with condenser fluid at design conditions.
 - c. Reduction in capacity from design to minimum load in steps of [**10**] [**25**] [**33**] **<Insert number>** with varying entering condenser-fluid temperature from design to minimum conditions in [**5 deg F (3 deg C)**] **<Insert temperature>** increments.
 - d. At [**one**] [**two**] [**three**] [**four**] [**five**] [**10**] **<Insert number>** point(s) of varying part-load performance to be selected by Owner at time of test.
 2. Allow [**Owner**] **<Insert entity>** access to place where chillers are being tested. Notify DEN Project Manager [**14**] **<Insert number>** days in advance of testing.
 3. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

- D. Factory performance test air-cooled chillers, before shipping, according to ARI 506/110.
1. Test the following conditions:
 - a. Design conditions indicated.
 - b. Reduction in capacity from design to minimum load in steps of [10] [25] [33] <Insert number> with condenser air at design conditions.
 - c. At [one] [two] [three] [four] [five] <Insert number> point(s) of varying part-load performance to be selected by Owner at time of test.
 2. Allow [Owner] <Insert entity> access to place where chillers are being tested. Notify DEN Project Manager [14] <Insert number> days in advance of testing.
 3. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.
- E. Factory sound test [water-cooled chillers, before shipping, according to ARI 575] [air-cooled chillers, before shipping, according to ARI 370].
1. Test the following conditions:
 - a. Design conditions indicated.
 - b. Chiller operating at calculated worst-case sound condition.
 - c. At [one] [two] [three] [four] [five] <Insert number> point(s) of varying part-load performance to be selected by Owner at time of test.
 2. Allow [Owner] <Insert entity> access to place where chillers are being tested. Notify DEN Project Manager [14] <Insert number> days in advance of testing.
 3. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.
- F. Factory test and inspect evaporator[and condenser] [, condenser, and heat-reclaim condenser] according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- G. For chillers located indoors, rate sound power level according to ARI 575.
- H. For chillers located outdoors, rate sound power level according to ARI 370.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine chillers before installation. Reject chillers that are damaged.
- B. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting chiller performance, maintenance, and operations before equipment installation.

1. Final chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CHILLER INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install chillers on support structure indicated.
- C. Equipment Mounting:
1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Maintain manufacturer's recommended clearances for service and maintenance.
- E. Charge chiller with refrigerant and fill with oil if not factory installed.
- F. Install separate devices furnished by manufacturer and not factory installed.
- G. Provide connections to chilled water piping.
1. On inlet, provide:
 - a. Thermometer well for temperature controller.
 - b. Thermometer.
 - c. Strainer.
 - d. Flow switch.
 - e. Flexible pipe connector.
 - f. Pressure gage.
 - g. Shut-off valve.
 2. On outlet, provide:
 - a. Thermometer.
 - b. Flexible pipe connector.
 - c. Pressure gage.
 - d. [**Shut-off**] [**Balancing**] valve.

3.3 HEAT-EXCHANGER, BRUSH-CLEANING SYSTEM INSTALLATION

- A. Install brush-cleaning system control panel adjacent to chiller control panel.
- B. Arrange piping to provide service access to four-way valve assembly without affecting access to chiller. Secure valve to prevent lateral movement and vibration during operation.
- C. Provide field electric power, as required, to each system control panel and electric actuated valve.
- D. Provide pneumatic piping with pressure regulator and isolation valve to each pneumatic supply connection. Coordinate field source of air with manufacturer to ensure that requirements are satisfied for proper valve operation.
- E. Interconnect brush-cleaning system controls with chiller controls. Coordinate requirements to ensure safe, trouble-free operation.
- F. Functionally test the entire brush-cleaning system, including the valve, actuator, position indicator, and control panel, with chiller in operation.

3.4 CONNECTIONS

- A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping," Section 232116 Hydronic Piping Specialties," **[and] [Section 232300 "Refrigerant Piping"]**. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to chiller to allow service and maintenance.
- C. Evaporator Fluid Connections: Connect to evaporator inlet with shutoff valve, **[strainer,] [flexible connector,]** thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve, **[flexible connector,]** flow switch, thermometer, plugged tee with shutoff valve and pressure gage, **[flow meter,]** and drain connection with valve. Make connections to chiller with a **[flange] [or] [mechanical coupling]**.
- D. Condenser Fluid Connections: Connect to condenser inlet with shutoff valve, **[strainer,] [flexible connector,]** thermometer, and plugged tee with pressure gage. Connect to condenser outlet with shutoff valve, balancing valve, **[flexible connector,]** flow switch, thermometer, plugged tee with shutoff valve and pressure gage, **[flow meter,]** and drain connection with valve. Make connections to chiller with a **[flange] [or] [mechanical coupling]**.
- E. Heat-Reclaim Condenser Fluid Connections: Connect to condenser inlet with shutoff valve, **[strainer,] [flexible connector,]** thermometer, and plugged tee with pressure gage. Connect to condenser outlet with shutoff valve, balancing valve, **[flexible connector,]** flow switch, thermometer, plugged tee with shutoff valve and pressure gage, **[flow meter,]** and drain connection with valve. Make connections to chiller with a **[flange] [or] [mechanical coupling]**.

- F. Refrigerant Pressure Relief Device Connections: For chillers installed indoors, extend **[vent piping] [separate vent piping for each chiller]** to the outdoors without valves or restrictions. Comply with ASHRAE 15. Connect vent to chiller pressure relief device with flexible connector and dirt leg with drain valve.
- G. Connect each chiller drain connection with a union and drain pipe, and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service. Supply service of factory trained representative for a period of **<Insert number>** days to supervise testing, dehydration and charging of machine, start-up, and instruction on operation and maintenance.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Verify that refrigerant charge is sufficient and chiller has been leak tested.
 - 3. Verify that pumps are installed and functional.
 - 4. Verify that thermometers and gages are installed.
 - 5. Operate chiller for run-in period.
 - 6. Check bearing lubrication and oil levels.
 - 7. For chillers installed indoors, verify that refrigerant pressure relief device is vented outdoors.
 - 8. Verify proper motor rotation.
 - 9. Verify static deflection of vibration isolators, including deflection during chiller startup and shutdown.
 - 10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator[**and condenser**] [, **condenser, and heat-reclaim condenser**].
 - 11. Verify and record performance of chiller protection devices.
 - 12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.
- C. Prepare test and inspection startup reports.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain chillers.[**Video record the training sessions.**]
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236426

SECTION 236500 - COOLING TOWERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Closed-circuit, forced-draft, counterflow cooling towers.
 - 2. Closed-circuit, induced-draft, combined-flow cooling towers.
 - 3. Closed-circuit, induced-draft, counterflow cooling towers.
 - 4. Open-circuit, forced-draft, counterflow cooling towers.
 - 5. Open-circuit, induced-draft, counterflow cooling towers.
 - 6. Open-circuit, induced-draft, crossflow cooling towers.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. BMS: Building management system.
- B. FRP: Fiber-reinforced polyester.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design cooling tower support structure[**and seismic restraints**] [**and wind restraints**], including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Cooling tower support structure shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to [SEI/ASCE 7] <Insert requirement>.
 - 1. Dead Loads: <Insert loads>.
 - 2. Live Loads: <Insert loads>.
 - 3. Roof Loads: <Insert loads>.
 - 4. Snow Loads: <Insert loads>.
 - 5. Seismic Loads: <Insert loads>.

6. Wind Loads: **<Insert loads>**.
7. **<Insert loads or load combinations>**.
8. Deflection Limits: Design system to withstand design loads without deflections greater than the following:

- a. **<Insert deflection limits>**.

- C. Seismic Performance: Cooling towers shall withstand the effects of earthquake motions determined according to [SEI/ASCE 7] **<Insert requirement>**.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, dimensions, weights and point loadings, required clearances, electrical requirements and wiring diagrams, location and size of field connections, pressure drop, fan performance data, rating curves with selected points indicated, furnished specialties, and accessories. Submit schematic indicating capacity controls.

1. Maximum flow rate.
2. Minimum flow rate.
3. Drift loss as percent of design flow rate.
4. Volume of water in suspension for purposes of sizing a remote storage tank.
5. Sound power levels in eight octave bands for operation with fans off, fans at minimum, and design speed, at a distance of 10 feet from the tower on all sides and above.
6. Performance curves for the following:
 - a. Varying entering-water temperatures from design to minimum.
 - b. Varying ambient wet-bulb temperatures from design to minimum.
 - c. Varying water flow rates from design to minimum.
 - d. Varying fan operation (off, minimum, and design speed).
7. Fan airflow, brake horsepower, and drive losses.
8. Pump flow rate, head, brake horsepower, and efficiency.
9. Motor amperage, efficiency, and power factor at 100, 75, 50, and 25 percent of nameplate horsepower.
10. Electrical power requirements for each cooling tower component requiring power.
11. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: Complete set of manufacturer's prints of cooling tower assemblies, control panels, sections and elevations, and unit isolation. Include the following:

1. Assembled unit dimensions.
2. Weight and load distribution.
3. Required clearances for maintenance and operation.

4. Sizes and locations of piping and wiring connections.
 5. Wiring Diagrams: For power, signal, and control wiring.
 6. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
- C. Delegated-Design Submittal: For cooling tower support structure indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of support structure.
 2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
 3. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] [**and wind restraints**] and for designing vibration isolation bases.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
1. Structural supports.
 2. Piping roughing-in requirements.
 3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- B. Certificates: For certification required in "Quality Assurance" Article.
- C. Manufacturer's Certificate: Certify that cooling tower performance, based on [**CTI ATC-105**] [**CTI STD-201**] [**or**] [**ASME PTC-23**] meet or exceed specified requirements and submit performance curve plotting leaving water temperature against wet bulb temperature.
- D. Seismic Qualification Certificates: For cooling towers, accessories, and components, from manufacturers.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- E. Source quality-control reports.
- F. Field quality-control reports.
- G. Startup service reports.
- H. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each cooling tower to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 EXTRA MATERIALS

- A. Provide [**two (2)**] <Insert number> sets of matched fan belts.
- B. Provide [**two (2)**] <Insert number> spray nozzles for each cell.
- C. Provide [**one (1)**] <Insert number> valve seat for each make-up or control valve.

1.9 QUALITY ASSURANCE

- A. Testing Agency Qualifications: [**Certified by CTI**] [**An NRTL**].
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- D. ASME Compliance: Fabricate and label heat-exchanger coils to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- E. CTI Certification: Cooling tower thermal performance according to CTI STD 201, "Certification Standard for Commercial Water-Cooling Towers Thermal Performance."
- F. FMG approval and listing in the latest edition of FMG's "Approval Guide."

1.10 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.11 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver, store, handle and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Factory assemble entire unit. For shipping, disassemble into as large as practical sub-assemblies so that minimum amount of field work is required for re-assembly.
- C. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace the following components of cooling towers that fail in materials or workmanship within specified warranty period:
 - 1. Fan assembly including fan, drive, and motor.
 - 2. All components of cooling tower.
 - 3. **<Insert components requiring extended warranty>**.
 - 4. Warranty Period: Minimum [**five (5)**] **<Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CLOSED-CIRCUIT, FORCED-DRAFT, COUNTERFLOW COOLING TOWERS

- A. **Products: Subject to compliance with requirements, provide one of the following:**
 - 1. **Baltimore Aircoil Company**; Models VFL and VF1.

2. [Delta Cooling Towers, Inc](#); Model Pioneer.
 3. [EVAPCO, Inc](#); Models LSWA and LRW.
 4. [Recold](#); Models JM and JW.
 5. **<Insert manufacturer's name; product name or designation>**.
 6. or approved equal.
- B. Fabricate cooling tower mounting base with reinforcement strong enough to resist cooling tower movement during a seismic event when cooling tower is anchored to field support structure.
- C. Cooling tower designed to resist wind load of [30 lbf/sq. ft. (1.44 kPa)] **<Insert value>**.
- D. Casing and Frame:
1. Casing[and Frame] Material: [FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel].
 2. Frame Material: [FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel].
 3. Fasteners: [Galvanized] [Stainless] steel.
 4. Joints and Seams: Sealed watertight.
 5. Welded Connections: Continuous and watertight.
- E. Collection Basin: Configure tower for installation with a field-constructed collection basin.
- F. Collection Basin:
1. Material: [FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel].
 2. Strainer: Removable[stainless-steel] strainer with openings smaller than nozzle orifices.
 3. Overflow and drain connections.
 4. Makeup water connection.
 5. Basin Sweeper Distribution Piping and Nozzles:
 - a. Pipe Material: [PVC] **<Insert material>**.
 - b. Nozzle Material: [Plastic] **<Insert material>**.
 - c. Configure piping and nozzles to minimize sediment from collecting in the collection basin.
- G. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.
- H. Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, [Type 4] [Type 4X] **<Insert type>**.

2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to provide **[control of water makeup valve] [control of water makeup valve and low-level alarm] [control of water makeup valve and low- and high-level alarms] [control of water makeup valve, low- and high-level alarms, and output for shutoff of pump on low level]**.
 3. Electrode Probes: Stainless steel.
 4. Water Stilling Chamber: **[Corrosion-resistant material] [FRP] [Galvanized steel] [PVC pipe] [Stainless steel]**.
 5. Solenoid Valve: Slow closing **[with stainless-steel body]**, controlled and powered through level controller in response to water-level set point.
 6. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- I. Electric Basin Heater:
1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
 2. Heater Control Panel: Mounted on the side of each cooling tower cell.
 3. Enclosure: NEMA 250, **[Type 3R] [Type 4] [Type 4X]**.
 4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
 5. Control-circuit transformer with primary and secondary side fuses.
 6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 7. Single-point, field-power connection to a **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker]** and heater branch circuiting complying with NFPA 70.
 8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.
- J. Hot-Water-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- K. Steam-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- L. Steam-Injector Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- M. Water Distribution Piping: Main header and lateral branch piping designed for even distribution over fill throughout the flow range without the need for balancing valves and for connecting individual, removable, nonclogging spray nozzles.
1. Pipe Material: **[Fiberglass] [PVC] [Galvanized steel] <Insert material>**.
 2. Spray Nozzle Material: **[Plastic] [Polypropylene] [PVC] <Insert material>**.
 3. Piping Supports: Corrosion-resistant hangers and supports designed to resist movement during operation and shipment.

- N. Recirculating Piping: **[PVC] <Insert pipe material>[, with connections for separately provided, remote spray pump].**
- O. Spray Pump: Close-coupled, end-suction, single-stage, bronze-fitted centrifugal pump; with suction strainer and flow balancing valve, and mechanical seal suitable for outdoor service.
1. General Requirements for Spray Pump Motor: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
 2. Motor Enclosure: **[Totally enclosed] [Totally enclosed nonventilated (TENV)] [Totally enclosed fan cooled (TEFC)] [with epoxy or polyurethane finish].**
 3. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1] [NEMA Premium Efficient].**
 4. Service Factor: **[1.0] [1.15] <Insert value>.**
- P. Heat-Exchanger Coils:
1. Tube and Tube Sheet Materials: **[Copper tube with stainless-steel sheet] [Stainless-steel tube and sheet] [Prime-coated steel tube and sheet with outer surface of tube and sheet hot-dip galvanized after fabrication].**
 2. Heat-Exchanger Arrangement: **[Serpentine tubes] [Serpentine tubes with removable cover plate on inlet and outlet headers] [Straight tubes with removable header cover plate on both ends of heat exchanger for straight-through access to each tube];** and sloped for complete drainage of fluid by gravity.
 3. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and bearing ASME "U" stamp; and sloped for complete drainage of fluid by gravity.
 4. Field Piping Connections: Vent, supply, and return **[suitable for mating to ASME B16.5, Class 150 flange].**
- Q. **[Removable]** Drift Eliminator:
1. Material: **[FRP] [PVC] [FRP or PVC] <Insert material>**; with maximum flame-spread index of **[5] [25] <Insert value>** according to ASTM E 84.
 2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
 3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.
- R. **[Removable]** Air-Intake Screens: **[Galvanized] [Polymer-coated, galvanized] [Stainless]-steel wire mesh.**
- S. Centrifugal Fan: Double-width, double-inlet, forward-curved blades, and statically and dynamically balanced at the factory after assembly.
1. Number of Fans: Each cooling tower cell shall have a single fan or multiple fans connected to a common shaft.
 2. Fan Wheel and Housing Materials: Galvanized steel.
 3. Fan Shaft: Steel, coated to resist corrosion.

4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.
5. Fan Shaft Bearings: Self-aligning, grease-lubricated ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of **[40,000] [50,000] <Insert value>** hours.
6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.

T. Belt Drive:

1. Belt-Drive Service Factor: **[1.5] <Insert value>** based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of **[cogged]** belts.
4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.
7. Two-Motor, Single-Fan Drive:
 - a. Two single-speed motors per fan, one sized for full speed and load, and the other sized for **[67] <Insert value>** percent of full-load speed.
 - b. Belt Drives: Each motor shall have belt drive complying with requirements for belt drives and configured for operation when other motor fails.
 - c. Motor controller and wiring same as two-speed, two-winding motor.

U. Fan Motor:

1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
2. Motor Enclosure: **[Totally enclosed] [Totally enclosed air over (TEAO)] [Totally enclosed fan cooled (TEFC)] [with epoxy or polyurethane finish]**.
3. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1] [NEMA Premium Efficient]**.
4. Service Factor: **[1.15] <Insert value>**.
5. Insulation: **[Class F] [Class H] <Insert class>**.
6. Variable-Speed Motors: Inverter-duty rated per NEMA MG-1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
7. Severe-duty rating with the following features:
 - a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
 - b. Double-shielded, vacuum-degassed bearings lubricated with premium moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C.)
 - c. Internal heater automatically energized when motor is de-energized.

8. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
- V. Discharge Hoods:
1. Hood Configuration: **[Tapered]** **[Straight]**; totally surrounding drift eliminators and constructed of same material as casing; and having factory-installed **[insulation and]**access doors.
 2. Discharge Dampers: Positive-closure, automatic, isolation dampers with electric actuators.
 - a. Provide field power and controls to open dampers when pump is energized and close dampers when pump is de-energized.
- W. Capacity-Control Dampers: **[Galvanized-steel]** **[Stainless-steel]** **<Insert material>** dampers, with linkages, electric operator, controller, limit switches, transformer, and weatherproof enclosure.
- X. Vibration Switch: For each fan drive.
1. Enclosure: NEMA 250, **[Type 4]** **[Type 4X]** **<Insert type>**.
 2. Vibration Detection: Sensor with a field-adjustable acceleration sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
 3. Provide switch **[with manual-reset button]** for **[field connection to a BMS and]**hardwired connection to fan motor electrical circuit.
 4. Switch shall, on sensing excessive vibration, **[signal an alarm through the BMS and]** shut down the fan.
- Y. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
- Z. Control Package: Factory installed and wired, and functionally tested at factory before shipment.
1. NEMA 250, **[Type 3R]** **[Type 4]** **[Type 4X]** enclosure with removable internally mount backplate.
 2. Control-circuit transformer with primary and secondary side fuses.
 3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
 4. Microprocessor-based controller for automatic control of fan **[and spray pump]** based on cooling tower leaving-water temperature with control features to improve operating efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.
 5. Fan motor sequencer for multiple-cell and two-speed applications with automatic lead stage rotation.
 6. Collection basin, electric/electronic level controller complying with requirements in "Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve" Paragraph.

7. Electric basin heaters with temperature control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph.
8. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph.
9. Controls and wiring for "two-motor, single-fan drives" shall be same as two-speed, two-winding motor.
10. Power and controls to open discharge hood dampers when pump is energized and close dampers when pump is de-energized.
11. Single-point, field-power connection to a **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker] [for each cooling tower cell]**.
 - a. Branch power circuit to each motor and electric basin heater and to controls **[with a disconnect switch or circuit breaker]**.
 - b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller with manual bypass and line reactors for each variable-speed motor indicated.
12. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquidtight conduit.
13. Visual indication of status and alarm **[with momentary test push button]** for each motor.
14. Audible alarm and silence switch.
15. Visual indication of elapsed run time, graduated in hours for each motor.
16. Cooling tower shall have hardware to enable BMS to remotely monitor and display the following:
 - a. Operational status of each motor.
 - b. Position of dampers.
 - c. Cooling tower leaving-fluid temperature.
 - d. Fan vibration alarm.
 - e. Collection basin **[high] [low] [high- and low]-water-level** alarms.
 - f. **<Insert conditions to be monitored>**.

AA. Personnel Access Components:

1. Doors: Large enough for personnel to access cooling tower internal components from **[both]cooling tower end walls.[Doors shall be operable from both sides of the door.]**
2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless-steel, fixed ladders with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.
3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at cooling tower access doors when cooling towers are elevated and not accessible from grade.
4. Handrail: Aluminum, galvanized steel, or stainless steel complete with kneerail and toeboard at platforms and around top of cooling tower. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.

- a. Spanning the collection basin from one end of cooling tower to the other and positioned to form a path between the access doors. Platform shall be elevated so that all parts are above the high water level of the collection basin.

BB. Capacities and Characteristics:

1. Number of Cells: **<Insert quantity>**.
2. Maximum Drift Loss: **[0.005]** **<Insert number>** percent of design water flow.
3. Heat-Exchanger Coil:
 - a. Fluid Type: **[Water]** **<Insert type>**.
 - b. Fluid Flow/Cell: **<Insert gpm (L/s)>**.
 - c. Minimum Fluid Flow/Cell: **<Insert gpm (L/s)>**.
 - d. Fluid Pressure Drop: **<Insert psig (kPa)>**.
 - e. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - f. Leaving-Fluid Temperature: **<Insert deg F (deg C)>**.
 - g. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
4. Economizer Mode:
 - a. Fluid Flow/Cell: **<Insert gpm (L/s)>**.
 - b. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - c. Leaving-Fluid Temperature: **<Insert deg F (deg C)>**.
 - d. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
5. Fan Location: **[Bottom]** **[Side]**.
6. Fan Motor:
 - a. Type: **[Single speed]** **[Two speed, single winding]** **[Two speed, two winding]** **[Variable speed]**.
 - b. Horsepower/Cell: **<Insert horsepower>**.
 - c. Full-Load Ampacity: **<Insert value>**.
 - d. Minimum Circuit Ampacity: **<Insert value>**.
 - e. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - f. Electrical Characteristics: **[208]** **[240]** **[480]** **<Insert value>**-V ac, 3 phase, 60 Hz.
7. Spray Pump and Motor:
 - a. Water Flow/Cell: **<Insert gpm (L/s)>**.
 - b. Horsepower/Cell: **<Insert horsepower>**.
 - c. Full-Load Ampacity: **<Insert value>**.
 - d. Minimum Circuit Ampacity: **<Insert value>**.
 - e. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - f. Electrical Characteristics: **[120]** **[208]** **[240]** **[277]** **[480]** **<Insert value>**-V ac, **[single]** **[3]** phase, 60 Hz.
8. Sound Pressure Level: **<Insert dBA>** at **<Insert distance in feet (m)>** **[when measured according to CTI ATC 128]**.

9. Basin Heater:

- a. Basin Water Temperature: [40 deg F (5 deg C)] <Insert deg F (deg C)>.
- b. Outdoor Ambient Temperature: [0 deg F (minus 18 deg C)] [Minus 20 deg F (Minus 29 deg C)] <Insert deg F (deg C)>.
- c. Capacity/Cell: <Insert kilowatts>.
- d. Full-Load Ampacity: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection Device: <Insert amperage>.
- g. Electrical Characteristics: [208] [240] [480] <Insert value>-V ac, 3 phase, 60 Hz.
- h. Capacity/Cell: <Insert MBtu/h (kW)>.
- i. Entering-Fluid Temperature: <Insert deg F (deg C)>.
- j. Fluid Flow Rate: <Insert gpm (L/s)>.
- k. Fluid Pressure Drop: <Insert psig (kPa)>.
- l. Capacity/Cell: <Insert MBtu/h (kW)>.
- m. Steam Flow: <Insert lb/h (L/s)>.
- n. Steam Pressure: <Insert psig (kPa)>.

2.2 CLOSED-CIRCUIT, INDUCED-DRAFT, COMBINED-FLOW COOLING TOWERS

A. Products: Subject to compliance with requirements, provide one of the following:

1. [Baltimore Aircoil Company](#); Model FXV.
2. [Marley Cooling Technologies](#); Model MH.
3. <Insert manufacturer's name; product name or designation>.
4. or approved equal.

B. Fabricate cooling tower mounting base with reinforcement strong enough to resist cooling tower movement during a seismic event when cooling tower is anchored to field support structure.

C. Cooling tower designed to resist wind load of [30 lbf/sq. ft. (1.44 kPa)] <Insert value>.

D. Casing and Frame:

1. Casing[and Frame] Material: [FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel].
2. Frame Material: [FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel].
3. Fasteners: [Galvanized] [Stainless] steel.
4. Joints and Seams: Sealed watertight.
5. Welded Connections: Continuous and watertight.

E. Collection Basin: Configure tower for installation with a field-constructed collection basin.

- F. Collection Basin:
1. Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel]**.
 2. Strainer: Removable **[stainless-steel]** strainer with openings smaller than nozzle orifices.
 3. Overflow and drain connections.
 4. Makeup water connection.
 5. Basin Sweeper Distribution Piping and Nozzles:
 - a. Pipe Material: **[PVC] <Insert material>**.
 - b. Nozzle Material: **[Plastic] <Insert material>**.
 - c. Configure piping and nozzles to minimize sediment from collecting in the collection basin.
- G. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.
- H. Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, **[Type 4] [Type 4X] <Insert type>**.
 2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to provide **[control of water makeup valve] [control of water makeup valve and low-level alarm] [control of water makeup valve and low- and high-level alarms] [control of water makeup valve, low- and high-level alarms, and output for shutoff of pump on low level]**.
 3. Electrode Probes: Stainless steel.
 4. Water Stilling Chamber: **[Corrosion-resistant material] [FRP] [Galvanized steel] [PVC pipe] [Stainless steel]**.
 5. Solenoid Valve: Slow closing **[with stainless-steel body]**, controlled and powered through level controller in response to water-level set point.
 6. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- I. Ultrasonic Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, **[Type 4] [Type 4X] <Insert type>**.
 2. Controller: Ultrasonic level sensor/transmitter and relays factory wired to a terminal strip to control water makeup valve and signal a level alarm. Controller shall provide continuous level indication through a 4- to 20-mA signal **[for connection to BMS]**.
 3. Water Stilling Chamber: **[Corrosion-resistant material] [FRP] [Galvanized steel] [PVC pipe] [Stainless steel]**.
 4. Solenoid Valve: Slow closing **[with stainless-steel body]**, controlled and powered through level controller in response to water-level set point.
 5. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- J. Electric Basin Heater:
1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.

2. Heater Control Panel: Mounted on the side of each cooling tower cell.
 3. Enclosure: NEMA 250, **[Type 3R]** **[Type 4]** **[Type 4X]**.
 4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
 5. Control-circuit transformer with primary and secondary side fuses.
 6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 7. Single-point, field-power connection to a **[fused disconnect switch]** **[nonfused disconnect switch]** **[circuit breaker]** and heater branch circuiting complying with NFPA 70.
 8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.
- K. Hot-Water-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- L. Steam-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- M. Steam-Injector Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- N. Gravity Water Distribution Basin: Nonpressurized design with head of water level in basin adequate to overcome spray nozzle losses and designed to evenly distribute water over fill throughout the flow range indicated.
1. Material: **[FRP with UV inhibitors]** **[Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating]** **[Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating]** **[Polymer-coated galvanized steel]** **[Stainless steel]**.
 2. Location: Over each bank of fill with easily replaceable **[plastic]** **<Insert material>** spray nozzles mounted in bottom of basin.
 3. Joints and Seams: Sealed watertight.
 4. Partitioning Dams: Same material as basin to distribute water over the fill to minimize icing while operating throughout the flow range indicated.
 5. Removable Panels: Same material as basin to completely cover top of basin. Secure panels to basin with removable **[corrosion-resistant]** **[stainless-steel]** hardware.
 6. Valves: Manufacturer's standard valve installed at each inlet connection and arranged to balance or shut off flow to each gravity water distribution basin.
- O. Pressurized Water Distribution Piping: Main header and lateral branch piping designed for even distribution over heat-exchanger coil or fill throughout the flow range without the need for balancing valves and for connecting individual, removable, nonclogging spray nozzles.
1. Pipe Material: **[PVC]** **[Galvanized steel]** **<Insert material>**.
 2. Spray Nozzle Material: **[Plastic]** **[Polypropylene]** **<Insert material>**.

3. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.
- P. Recirculating Piping: **[PVC] <Insert pipe material>[, with connections for separately provided, remote spray pump].**
- Q. Spray Pump: Close-coupled, end-suction, single-stage, bronze-fitted centrifugal pump; with suction strainer and flow balancing valve, and mechanical seal suitable for outdoor service.
1. General Requirements for Spray Pump Motor: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
 2. Motor Enclosure: **[Totally enclosed] [Totally enclosed nonventilated (TENV)] [Totally enclosed fan cooled (TEFC)] [with epoxy or polyurethane finish].**
 3. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1] [NEMA Premium Efficient].**
 4. Service Factor: **[1.0] [1.15] <Insert value>.**
- R. Fill:
1. Materials: **[PVC] <Insert material>**, with maximum flame-spread index of **[5] [25] <Insert value>** according to ASTM E 84.
 2. Minimum Thickness: **[15 mils (0.4 mm)] [20 mils (0.5 mm)] <Insert value>**, before forming.
 3. Fabrication: Fill-type sheets fabricated, formed, and bonded together after forming into removable assemblies that are factory installed by manufacturer.
 4. Fill Material Operating Temperature: Suitable for entering-water temperatures up through **[120 deg F (49 deg C)] <Insert temperature>.**
- S. Heat-Exchanger Coils:
1. Tube and Tube Sheet Materials: **[Copper tube with stainless-steel sheet] [Stainless-steel tube and sheet] [Prime-coated steel tube and sheet with outer surface of tube and sheet hot-dip galvanized after fabrication].**
 2. Heat-Exchanger Arrangement: **[Serpentine tubes] [Serpentine tubes with removable cover plate on inlet and outlet headers] [Straight tubes with removable header cover plate on both ends of heat exchanger for straight-through access to each tube];** and sloped for complete drainage of fluid by gravity.
 3. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1 and bearing ASME "U" stamp; and sloped for complete drainage of fluid by gravity.
 4. Field Piping Connections: Vent, supply, and return **[suitable for mating to ASME B16.5, Class 150 flange].**
- T. Drift Eliminator:
1. Material: **[FRP] [PVC] [FRP or PVC] <Insert material>**; with maximum flame-spread index of **[5] <Insert value>** according to ASTM E 84.

2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
 3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.
 4. Fill Drift Eliminators: **[Integral to] [Separate and removable from]** fill.
 5. Heat-Exchanger Coil Drift Eliminators: Located on discharge side and removable.
- U. Air-Intake Louvers:
1. Material: **[FRP] [PVC] [Matching casing]**.
 2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
 3. Louver Blades: Arranged to uniformly direct air into cooling tower, to minimize air resistance, and to prevent water from splashing out of tower during all modes of operation including operation with fans off.
 4. Location: **[Integral to] [Separate from]** fill.
- V. **[Removable]** Air-Intake Screens: **[Galvanized] [Polymer-coated, galvanized] [Stainless]**-steel wire mesh.
- W. Axial Fan: Balanced at the factory after assembly.
1. Blade Material: **[Aluminum] [FRP]**.
 2. Hub Material: **[Aluminum] [FRP]**.
 3. Blade Pitch: Field adjustable.
 4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.
 5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of **[40,000] [50,000] <Insert value>** hours.
 6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.
- X. Belt Drive:
1. Service Factor: **[1.5] <Insert value>** based on motor nameplate horsepower.
 2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
 3. Belt: Multiple V-belt design with a matched set of **[cogged]** belts.
 4. Belt: One-piece, multigrooved, solid-back belt.
 5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
 6. Belt-Drive Guard: Comply with OSHA regulations.
 7. Two-Motor, Single-Fan Drive:
 - a. Two single-speed motors per fan, one sized for full speed and load and the other sized for **[67] <Insert value>** percent of full-load speed.
 - b. Each motor with belt drive and configured for operation when other motor fails.
 - c. Controls and wiring same as two-speed, two-winding motor.

- Y. Gear Drive: Right angle, reduced speed, and designed for cooling tower applications according to CTI STD 111. Motor and gear drive shall be aligned before shipment.
1. Gear Drive and Coupling Service Factor: **[2.0] <Insert value>** based on motor nameplate horsepower.
 2. Housing: Cast iron, with epoxy or polyurethane finish, beveled high-strength steel gears continuously bathed in oil, and with lubrication to other internal parts at all operating speeds.
 3. Mounting: Directly mounted to fan hub and connected to motor so motor shaft is in horizontal position.
 4. Operation: Able to operate both forward and in reverse.
 5. Drive-to-Motor Connection: **[Close coupled to motor using a flexible coupling] [Connected to motor located outside of cooling tower casing by a full-floating drive shaft].**
 6. Drive Shaft Material: **[Corrosion resistant] [Stainless steel]**, and fitted with flexible couplings on both ends. Provide exposed shaft and couplings with guards according to OSHA regulations.
 7. Extend oil fill, drain, and vent to outside of cooling tower casing using galvanized-steel piping. Provide installation with oil-level sight glass.
- Z. Fan Motor:
1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
 2. Motor Enclosure: **[Totally enclosed] [Totally enclosed air over (TEAO)] [Totally enclosed fan cooled (TEFC)] [with epoxy or polyurethane finish].**
 3. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1] [NEMA Premium Efficient].**
 4. Service Factor: **[1.15] <Insert value>**.
 5. Insulation: **[Class F] [Class H] <Insert class>**.
 6. Variable-Speed Motors: Inverter-duty rated per NEMA MG-1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
 7. Motor Location: Mounted outside of cooling tower casing and cooling tower discharge airstream.
 8. Severe-duty rating with the following features:
 - a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
 - b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C.)
 - c. Internal heater automatically energized when motor is de-energized.
 9. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
- AA. Fan Discharge Stack: Material shall match casing, **[manufacturer's standard] [velocity recovery]** design.

1. Stack Extension: Fabricated to extend above fan deck **<Insert distance>** unless otherwise indicated.
 2. Stack Termination: Wire-mesh, galvanized-steel screens; complying with OSHA regulations.
- BB. Vibration Switch: For each fan drive.
1. Enclosure: NEMA 250, **[Type 4] [Type 4X] <Insert type>**.
 2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
 3. Provide switch **[with manual-reset button]** for **[field connection to a BMS and]**hardwired connection to fan motor electrical circuit.
 4. Switch shall, on sensing excessive vibration, **[signal an alarm through the BMS and]** shut down the fan.
- CC. Gear-Drive, Oil-Level Switch: Low-oil-level warning switch **[for connection to a BMS]**.
1. Switch shall, on reaching a low-oil-level set point recommended by cooling tower manufacturer, signal an alarm **[through the BMS]**.
- DD. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
- EE. Control Package: Factory installed and wired, and functionally tested at factory before shipment.
1. NEMA 250, **[Type 3R] [Type 4] [Type 4X]** enclosure with removable internally mount backplate.
 2. Control-circuit transformer with primary and secondary side fuses.
 3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
 4. Microprocessor-based controller for automatic control of fan **[and spray pump]** based on cooling tower leaving-water temperature with control features to improve operating efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.
 5. Fan motor sequencer for multiple-cell and two-speed applications with automatic lead stage rotation.
 6. Collection basin level controller complying with requirements in **["Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve"] ["Ultrasonic Collection Basin Water-Level Controller with Solenoid Valve"]** Paragraph.
 7. Electric basin heaters with temperature control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph.
 8. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph.
 9. Oil-level switch for each fan with a gear drive, complying with requirement in "Gear-Drive, Oil-Level Switch" Paragraph.

10. Single-point, field-power connection to a **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker] [for each cooling tower cell]**.
 - a. Branch power circuit to each motor and electric basin heater and to controls **[with a disconnect switch or circuit breaker]**.
 - b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller with manual bypass and line reactors for each variable-speed motor indicated.
11. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquidtight conduit.
12. Visual indication of status and alarm **[with momentary test push button]** for each motor.
13. Audible alarm and silence switch.
14. Visual indication of elapsed run time, graduated in hours for each motor.
15. Cooling tower shall have hardware to enable BMS to remotely monitor and display the following:
 - a. Operational status of each motor.
 - b. Position of dampers.
 - c. Cooling tower leaving-fluid temperature.
 - d. Fan vibration alarm.
 - e. Oil-level alarm.
 - f. Collection basin **[high] [low] [high- and low]-**water-level alarms.
 - g. **<Insert conditions to be monitored>**.

FF. Personnel Access Components:

1. Doors: Large enough for personnel to access cooling tower internal components from both cooling tower end walls. Doors shall be operable from both sides of the door.
2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless-steel, fixed ladders with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.
3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at cooling tower access doors when cooling towers are elevated and not accessible from grade.
4. Handrail: Aluminum, galvanized steel, or stainless steel complete with kneerail and toeboard, around top of cooling tower. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.
 - a. Spanning the collection basin from one end of cooling tower to the other and positioned to form a path between the access doors. Platform shall be elevated so that all parts are above the high water level of the collection basin.
 - b. Elevated internal platforms with handrails accessible from fixed vertical ladders to access the fan drive assembly when out of reach from collection basin platform.

GG. Capacities and Characteristics:

1. Number of Cells: **<Insert quantity>**.
2. Air-Inlet Arrangement: **[Single side] [Two sides] [Sides and top]**.
3. Maximum Drift Loss: **[0.005] <Insert number>** percent of design water flow.
4. Heat-Exchanger Coil:
 - a. Fluid Type: **[Water] <Insert type>**.
 - b. Fluid Flow/Cell: **<Insert gpm (L/s)>**.
 - c. Minimum Fluid Flow/Cell: **<Insert gpm (L/s)>**.
 - d. Fluid Pressure Drop: **<Insert psig (kPa)>**.
 - e. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - f. Leaving-Fluid Temperature: **<Insert deg F (deg C)>**.
 - g. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
5. Economizer Mode:
 - a. Fluid Flow/Cell: **<Insert gpm (L/s)>**.
 - b. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - c. Leaving-Fluid Temperature: **<Insert deg F (deg C)>**.
 - d. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
6. Fan Drive: Belt or gear.
7. Fan Motor:
 - a. Type: **[Single speed] [Two speed, single winding] [Two speed, two winding] [Variable speed]**.
 - b. Horsepower/Cell: **<Insert horsepower>**.
 - c. Full-Load Ampacity: **<Insert value>**.
 - d. Minimum Circuit Ampacity: **<Insert value>**.
 - e. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - f. Electrical Characteristics: **[208] [240] [480] <Insert value>**-V ac, 3 phase, 60 Hz.
8. Spray Pump and Motor:
 - a. Water Flow/Cell: **<Insert gpm (L/s)>**.
 - b. Horsepower/Cell: **<Insert horsepower>**.
 - c. Full-Load Ampacity: **<Insert value>**.
 - d. Minimum Circuit Ampacity: **<Insert value>**.
 - e. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - f. Electrical Characteristics: **[120] [208] [240] [277] [480] <Insert value>**-V ac, **[single] [3]** phase, 60 Hz.
9. Sound Pressure Level: **<Insert dBA>** at **<Insert distance in feet (m)>** **[when measured according to CTI ATC 128]**.
10. Basin Heater:
 - a. Basin Water Temperature: **[40 deg F (5 deg C)] <Insert deg F (deg C)>**.

- b. Outdoor Ambient Temperature: [0 deg F (minus 18 deg C)] [Minus 20 deg F (Minus 29 deg C)] <Insert deg F (deg C)>.
- c. Capacity/Cell: <Insert kilowatts>.
- d. Full-Load Ampacity: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection Device: <Insert amperage>.
- g. Electrical Characteristics: [208] [240] [480] <Insert value>-V ac, 3 phase, 60 Hz.
- h. Capacity/Cell: <Insert MBtu/h (kW)>.
- i. Entering-Fluid Temperature: <Insert deg F (deg C)>.
- j. Fluid Flow Rate: <Insert gpm (L/s)>.
- k. Fluid Pressure Drop: <Insert psig (kPa)>.
- l. Capacity/Cell: <Insert MBtu/h (kW)>.
- m. Steam Flow: <Insert lb/h (L/s)>.
- n. Steam Pressure: <Insert psig (kPa)>.

2.3 CLOSED-CIRCUIT, INDUCED-DRAFT, COUNTERFLOW COOLING TOWERS

A. Products: Subject to compliance with requirements, provide one of the following:

- 1. [EVAPCO, Inc](#); Models ATW, ESW, and UBW.
- 2. [Recold](#); Model MW.
- 3. <Insert manufacturer's name; product name or designation>.
- 4. or approved equal.

B. Fabricate cooling tower mounting base with reinforcement strong enough to resist cooling tower movement during a seismic event when cooling tower is anchored to field support structure.

C. Cooling tower designed to resist wind load of [30 lbf/sq. ft. (1.44 kPa)] <Insert value>.

D. Casing and Frame:

- 1. Casing[and Frame] Material: [FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Stainless steel].
- 2. Frame Material: [FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel].
- 3. Fasteners: [Galvanized] [Stainless] steel.
- 4. Joints and Seams: Sealed watertight.
- 5. Welded Connections: Continuous and watertight.

E. Collection Basin: Configure tower for installation with a field-constructed collection basin.

F. Collection Basin:

1. Material: [**Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating**] [**Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating**] [**Stainless steel**].
 2. Overflow and drain connections.
 3. Makeup water connection.
- G. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.
- H. Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, [**Type 4**] [**Type 4X**] <Insert type>.
 2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to provide [**control of water makeup valve**] [**control of water makeup valve and low-level alarm**] [**control of water makeup valve and low- and high-level alarms**] [**control of water makeup valve, low- and high-level alarms, and output for shutoff of pump on low level**].
 3. Electrode Probes: Stainless steel.
 4. Water Stilling Chamber: [**Corrosion-resistant material**] [**FRP**] [**Galvanized steel**] [**PVC pipe**] [**Stainless steel**].
 5. Solenoid Valve: Slow closing[**with stainless-steel body**]; controlled and powered through level controller in response to water-level set point.
 6. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- I. Electric Basin Heater:
1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
 2. Heater Control Panel: Mounted on the side of each cooling tower cell.
 3. Enclosure: NEMA 250, [**Type 3R**] [**Type 4**] [**Type 4X**].
 4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
 5. Control-circuit transformer with primary and secondary side fuses.
 6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 7. Single-point, field-power connection to a [**fused disconnect switch**] [**nonfused disconnect switch**] [**circuit breaker**] and heater branch circuiting complying with NFPA 70.
 8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.
- J. Hot-Water-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- K. Steam-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.

- L. Steam-Injector Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- M. Pressurized Water Distribution Piping: Main header and lateral branch piping designed for even distribution over heat-exchanger coil or fill throughout the flow range without the need for balancing valves and for connecting individual, removable, nonclogging spray nozzles.
1. Pipe Material: **[Fiberglass] [PVC] [Galvanized steel] <Insert material>**.
 2. Spray Nozzle Material: **[Plastic] [Polypropylene] [PVC] <Insert material>**.
 3. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.
- N. Recirculating Piping: **[PVC] <Insert pipe material>[, with connections for separately provided, remote spray pump]**.
- O. Spray Pump: Close-coupled, end-suction, single-stage, bronze-fitted centrifugal pump; with suction strainer and flow balancing valve, and mechanical seal suitable for outdoor service.
- P. General Requirements for Spray Pump Motor: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
1. Motor Enclosure: **[Totally enclosed] [Totally enclosed nonventilated (TENV)] [Totally enclosed fan cooled (TEFC)] [with epoxy or polyurethane finish]**.
 2. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1] [NEMA Premium Efficient]**.
 3. Service Factor: **[1.0] [1.15] <Insert value>**.
- Q. Heat-Exchanger Coils:
1. Tube and Tube Sheet Materials: **[Copper tube with stainless-steel sheet] [Stainless-steel tube and sheet] [Prime-coated steel tube and sheet with outer surface of tube and sheet hot-dip galvanized after fabrication]**.
 2. Heat-Exchanger Arrangement: **[Serpentine tubes] [Serpentine tubes with removable cover plate on inlet and outlet headers] [Straight tubes with removable header cover plate on both ends of heat exchanger for straight-through access to each tube]**; and sloped for complete drainage of fluid by gravity.
 3. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1 and bearing ASME "U" stamp; and sloped for complete drainage of fluid by gravity.
 4. Field Piping Connections: Vent, supply, and return **[suitable for mating to ASME B16.5, Class 150 flange]**.
- R. **[Removable]** Drift Eliminator:
1. Material: **[FRP] [PVC] [FRP or PVC] <Insert material>**; with maximum flame-spread index of **[5] [25] <Insert value>** according to ASTM E 84.

2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.

S. Air-Intake Louvers:

1. Material: **[FRP] [PVC] [Matching casing]**.
2. UV Treatment: Treat louvers with inhibitors to protect against damage caused by UV radiation.
3. Louver Blades: Arranged to uniformly direct air into cooling tower, to minimize air resistance, and to prevent water from splashing out during all modes of operation including operation with fans off.

T. Axial Fan: Balanced at the factory after assembly.

1. Blade Material: **[Aluminum] [FRP] [Galvanized steel]**.
2. Hub Material: **[Aluminum] [FRP] [Galvanized steel]**.
3. Blade Pitch: Field adjustable.
4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.
5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of **[40,000] [50,000] <Insert value>** hours.
6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.

U. Belt Drive:

1. Service Factor: **[1.5] <Insert value>** based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of **[cogged]** belts.
4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.
7. Two-Motor, Single-Fan Drive:
 - a. Two single-speed motors per fan, one sized for full speed and load and the other sized for **[67] <Insert value>** percent of full-load speed.
 - b. Each motor with belt drive and configured for operation when other motor fails.
 - c. Controls and wiring same as two-speed, two-winding motor.

V. Fan Motor:

1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.

2. Motor Enclosure: [**Totally enclosed**] [**Totally enclosed air over (TEAO)**] [**Totally enclosed fan cooled (TEFC)**] [**with epoxy or polyurethane finish**].
 3. Energy Efficiency: [**Comply with ASHRAE/IESNA 90.1**] [**NEMA Premium Efficient**].
 4. Service Factor: [**1.15**] <Insert value>.
 5. Insulation: [**Class F**] [**Class H**] <Insert class>.
 6. Variable-Speed Motors: Inverter-duty rated per NEMA MG-1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
 7. Severe-duty rating with the following features:
 - a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
 - b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** ((minus 29 and plus 149 deg C).)
 - c. Internal heater automatically energized when motor is de-energized.
 8. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
- W. Fan Discharge Stack: Material shall match casing, [**manufacturer's standard**] [**velocity recovery**] design.
1. Stack Extension: Fabricated to extend above fan deck <Insert distance> unless otherwise indicated.
 2. Stack Termination: Wire-mesh, galvanized-steel screens; complying with OSHA regulations.
- X. Vibration Switch: For each fan drive.
1. Enclosure: NEMA 250, [**Type 4**] [**Type 4X**] <Insert type>.
 2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
 3. Provide switch[**with manual-reset button**] for [**field connection to a BMS and**]hardwired connection to fan motor electrical circuit.
 4. Switch shall, on sensing excessive vibration,[**signal an alarm through the BMS and**] shut down the fan.
- Y. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
- Z. Control Package: Factory installed and wired, and functionally tested at factory before shipment.
1. NEMA 250, [**Type 3R**] [**Type 4**] [**Type 4X**] enclosure with removable internally mount backplate.
 2. Control-circuit transformer with primary and secondary side fuses.
 3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.

4. Microprocessor-based controller for automatic control of fan[**and spray pump**] based on cooling tower leaving-water temperature with control features to improve operating efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.
 5. Fan motor sequencer for multiple-cell and two-speed applications with automatic lead stage rotation.
 6. Collection basin electric/electronic level controller complying with requirements in "Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve" Paragraph.
 7. Electric basin heaters with temperature control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph.
 8. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph.
 9. Single-point, field-power connection to a [**fused disconnect switch**] [**nonfused disconnect switch**] [**circuit breaker**] [**for each cooling tower cell**].
 - a. Branch power circuit to each motor and electric basin heater and to controls[**with a disconnect switch or circuit breaker**].
 - b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller with manual bypass and line reactors for each variable-speed motor indicated.
 10. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquidtight conduit.
 11. Visual indication of status and alarm[**with momentary test push button**] for each motor.
 12. Audible alarm and silence switch.
 13. Visual indication of elapsed run time, graduated in hours for each motor.
 14. Cooling tower shall have hardware to enable BMS to remotely monitor and display the following:
 - a. Operational status of each motor.
 - b. Cooling tower leaving-fluid temperature.
 - c. Fan vibration alarm.
 - d. Collection basin [**high**] [**low**] [**high- and low**]-water-level alarms.
 - e. **<Insert conditions to be monitored>**.
- AA. Personnel Access Components:
1. Doors: Large enough for personnel to access cooling tower internal components from both cooling tower end walls. Doors shall be operable from both sides of the door.
 2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless-steel, fixed ladders with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.
 3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at cooling tower access doors when cooling towers are elevated and not accessible from grade.

4. Handrail: Aluminum, galvanized steel, or stainless steel complete with kneerail and toeboard, around top of cooling tower. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.
 - a. Spanning the collection basin from one end of cooling tower to the other and positioned to form a path between the access doors. Platform shall be elevated so that all parts are above the high water level of the collection basin.
 - b. Elevated internal platforms with handrails accessible from fixed vertical ladders to access the fan drive assembly when out of reach from collection basin platform.

BB. Capacities and Characteristics:

1. Number of Cells: **<Insert quantity>**.
2. Maximum Drift Loss: **[0.005] <Insert number>** percent of design water flow.
3. Heat-Exchanger Coil:
 - a. Fluid Type: **[Water] <Insert type>**.
 - b. Fluid Flow/Cell: **<Insert gpm (L/s)>**.
 - c. Minimum Fluid Flow/Cell: **<Insert gpm (L/s)>**.
 - d. Fluid Pressure Drop: **<Insert psig (kPa)>**.
 - e. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - f. Leaving-Fluid Temperature: **<Insert deg F (deg C)>**.
 - g. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
4. Economizer Mode:
 - a. Fluid Flow/Cell: **<Insert gpm (L/s)>**.
 - b. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - c. Leaving-Fluid Temperature: **<Insert deg F (deg C)>**.
 - d. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
5. Fan Motor:
 - a. Type: **[Single speed] [Two speed, single winding] [Two speed, two winding] [Variable speed]**.
 - b. Horsepower/Cell: **<Insert horsepower>**.
 - c. Full-Load Ampacity: **<Insert value>**.
 - d. Minimum Circuit Ampacity: **<Insert value>**.
 - e. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - f. Electrical Characteristics: **[208] [240] [480] <Insert value>**-V ac, 3 phase, 60 Hz.
6. Spray Pump and Motor:
 - a. Water Flow/Cell: **<Insert gpm (L/s)>**.
 - b. Horsepower/Cell: **<Insert horsepower>** .
 - c. Full-Load Ampacity: **<Insert value>**.
 - d. Minimum Circuit Ampacity: **<Insert value>**.

- e. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - f. Electrical Characteristics: **[120] [208] [240] [277] [480] <Insert value>**-V ac, **[single] [3]** phase, 60 Hz.
7. Sound Pressure Level: **<Insert dBA>** at **<Insert distance in feet (m)>** **[when measured according to CTI ATC 128]**.
8. Basin Heater:
- a. Basin Water Temperature: **[40 deg F (5 deg C)] <Insert deg F (deg C)>**.
 - b. Outdoor Ambient Temperature: **[0 deg F (minus 18 deg C)] [Minus 20 deg F (Minus 29 deg C)] <Insert deg F (deg C)>**.
 - c. Capacity/Cell: **<Insert kilowatts>**.
 - d. Full-Load Ampacity: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - g. Electrical Characteristics: **[208] [240] [480] <Insert value>**-V ac, 3 phase, 60 Hz.
 - h. Capacity/Cell: **<Insert MBtu/h (kW)>**.
 - i. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - j. Fluid Flow Rate: **<Insert gpm (L/s)>**.
 - k. Fluid Pressure Drop: **<Insert psig (kPa)>**.
 - l. Capacity/Cell: **<Insert MBtu/h (kW)>**.
 - m. Steam Flow: **<Insert lb/h (L/s)>**.
 - n. Steam Pressure: **<Insert psig (kPa)>**.

2.4 OPEN-CIRCUIT, FORCED-DRAFT, COUNTERFLOW COOLING TOWERS

A. Products: Subject to compliance with requirements, provide one of the following:

- 1. [Baltimore Aircoil Company](#); Models VTL, VTO, and VT1.
- 2. [Delta Cooling Towers, Inc](#); Model Pioneer.
- 3. [EVAPCO, Inc](#); Models LRT and LSTA.
- 4. [Tower Tech, Inc](#); Model TTXE.
- 5. **<Insert manufacturer's name; product name or designation>**.
- 6. or approved equal.

B. Fabricate cooling tower mounting base with reinforcement strong enough to resist cooling tower movement during a seismic event when cooling tower is anchored to field support structure.

C. Cooling tower designed to resist wind load of **[30 lbf/sq. ft. (1.44 kPa)] <Insert value>**.

D. Casing and Frame:

- 1. Casing[and Frame] Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel]**.

2. Frame Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel].**
 3. Fasteners: **[Galvanized] [Stainless]** steel.
 4. Joints and Seams: Sealed watertight.
 5. Welded Connections: Continuous and watertight.
- E. Collection Basin: Configure tower for installation with a field-constructed collection basin.
- F. Collection Basin:
1. Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel].**
 2. Strainer: Removable **[stainless-steel]** strainer with openings smaller than nozzle orifices.
 3. Overflow and drain connections.
 4. Makeup water connection.
 5. Basin Sweeper Distribution Piping and Nozzles:
 - a. Pipe Material: **[PVC] <Insert material>**.
 - b. Nozzle Material: **[Plastic] <Insert material>**.
 - c. Configure piping and nozzles to minimize sediment from collecting in the collection basin.
- G. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.
- H. Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, **[Type 4] [Type 4X] <Insert type>**.
 2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to provide **[control of water makeup valve] [control of water makeup valve and low-level alarm] [control of water makeup valve and low- and high-level alarms] [control of water makeup valve, low- and high-level alarms, and output for shutoff of pump on low level].**
 3. Electrode Probes: Stainless steel.
 4. Water Stilling Chamber: **[Corrosion-resistant material] [FRP] [Galvanized steel] [PVC pipe] [Stainless steel].**
 5. Solenoid Valve: Slow closing **[with stainless-steel body]**, controlled and powered through level controller in response to water-level set point.
 6. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- I. Electric Basin Heater:
1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
 2. Heater Control Panel: Mounted on the side of each cooling tower cell.
 3. Enclosure: NEMA 250, **[Type 3R] [Type 4] [Type 4X].**

4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
 5. Control-circuit transformer with primary and secondary side fuses.
 6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 7. Single-point, field-power connection to a **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker]** and heater branch circuiting complying with NFPA 70.
 8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.
- J. Hot-Water-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- K. Steam-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- L. Steam-Injector Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- M. Pressurized Water Distribution Piping: Main header and lateral branch piping designed for even distribution over heat-exchanger coil or fill throughout the flow range without the need for balancing valves and for connecting individual, removable, nonclogging spray nozzles.
1. Pipe Material: **[Fiberglass] [PVC] [Galvanized steel] <Insert material>**.
 2. Spray Nozzle Material: **[Plastic] [Polypropylene] [PVC] <Insert material>**.
 3. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.
- N. Fill:
1. Materials: **[PVC] <Insert material>**, with maximum flame-spread index of 5 according to ASTM E 84.
 2. Minimum Thickness: **[15 mils (0.4 mm)] [20 mils (0.5 mm)] <Insert value>**, before forming.
 3. Fabrication: Fill-type sheets, fabricated, formed, and bonded together after forming into removable assemblies that are factory installed by manufacturer.
 4. Fill Material Operating Temperature: Suitable for entering-water temperatures up through **[120 deg F (49 deg C)] <Insert temperature>**.
- O. **[Removable]** Drift Eliminator:
1. Material: **[FRP] [PVC] [FRP or PVC] <Insert material>**; with maximum flame-spread index of **[5] [25] <Insert value>** according to ASTM E 84.
 2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
 3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.

- P. **[Removable]** Air-Intake Screens: **[Galvanized]** **[Polymer-coated, galvanized]** **[Stainless]**-steel wire mesh.
- Q. Centrifugal Fan: Double-width, double-inlet, forward-curved blades, and statically and dynamically balanced at the factory after assembly.
1. Number of Fans: Each cooling tower cell shall have a single fan or multiple fans connected to a common shaft.
 2. Fan Wheel and Housing Materials: Galvanized steel.
 3. Fan Shaft: Steel, coated to resist corrosion.
 4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.
 5. Fan Shaft Bearings: Self-aligning, grease-lubricated ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of **[40,000]** **[50,000]** **<Insert value>** hours.
 6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.
- R. Axial Fan: Balanced at the factory after assembly.
1. Blade Material: **[FRP]** **<Insert material>**.
 2. Hub Material: **[Aluminum]** **[FRP]** **<Insert material>**.
 3. Blade Pitch: Field adjustable.
 4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.
 5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of **[40,000]** **[50,000]** **<Insert value>** hours.
 6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.
- S. Belt Drive:
1. Service Factor: **[1.5]** **<Insert value>** based on motor nameplate horsepower.
 2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
 3. Belt: Multiple V-belt design with a matched set of **[cogged]** belts.
 4. Belt: One-piece, multigrooved, solid-back belt.
 5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
 6. Belt-Drive Guard: Comply with OSHA regulations.
 7. Two-Motor, Single-Fan Drive:
 - a. Two single-speed motors per fan, one sized for full speed and load and the other sized for **[67]** **<Insert value>** percent of full-load speed.
 - b. Each motor with belt drive and configured for operation when other motor fails.
 - c. Controls and wiring same as two-speed, two-winding motor.

- T. Direct Drive: Fan hub directly connected, and properly secured, to motor shaft.
- U. Fan Motor:
1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
 2. Motor Enclosure: **[Totally enclosed] [Totally enclosed air over (TEAO)] [Totally enclosed fan cooled (TEFC)] [with epoxy or polyurethane finish].**
 3. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1] [NEMA Premium Efficient].**
 4. Service Factor: **[1.15] <Insert value>.**
 5. Insulation: **[Class F] [Class H] <Insert class>.**
 6. Variable-Speed Motors: Inverter-duty rated per NEMA MG-1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
 7. Severe-duty rating with the following features:
 - a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
 - b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between **minus 20 and 300 deg F** (minus 29 and 149 deg C.)
 - c. Internal heater automatically energized when motor is de-energized.
 8. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
- V. Discharge Hoods:
1. Hood Configuration: **[Tapered] [Straight];** totally surrounding drift eliminators and constructed of same material as casing; and having factory-installed **[insulation and]** access doors.
 2. Discharge Dampers: Positive-closure, automatic, isolation dampers with electric actuators.
 - a. Provide field power and controls to open dampers when pump is energized and close dampers when pump is de-energized.
- W. Capacity-Control Dampers: **[Galvanized-steel] [Stainless-steel] <Insert material>** dampers, with linkages, electric operator, controller, limit switches, transformer, and weatherproof enclosure.
- X. Vibration Switch: For each fan drive.
1. Enclosure: NEMA 250, **[Type 4] [Type 4X] <Insert type>.**
 2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
 3. Provide switch **[with manual-reset button]** for **[field connection to a BMS and]**hardwired connection to fan motor electrical circuit.

4. Switch shall, on sensing excessive vibration, [**signal an alarm through the BMS and**] shut down the fan.

- Y. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

- Z. Control Package: Factory installed and wired, and functionally tested at factory before shipment.
 1. NEMA 250, [Type 3R] [Type 4] [Type 4X] enclosure with removable internally mount backplate.
 2. Control-circuit transformer with primary and secondary side fuses.
 3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
 4. Microprocessor-based controller for automatic control of fan based on cooling tower leaving-water temperature with control features to improve operating efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.
 5. Fan motor sequencer for multiple-cell and two-speed applications with automatic lead stage rotation.
 6. Factory-installed and -wired, collection basin electric/electronic level controller.
 7. Collection basin electric/electronic level controller complying with requirements in "Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve" Paragraph.
 8. Electric basin heaters with temperature control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph.
 9. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph.
 10. Controls and wiring for "two-motor, single-fan drives" shall be same as two-speed, two-winding motor.
 11. Single-point, field-power connection to a [fused disconnect switch] [nonfused disconnect switch] [circuit breaker] [for each cooling tower cell].
 - a. Branch power circuit to each motor and electric basin heater and to controls [**with a disconnect switch or circuit breaker**].
 - b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller with manual bypass and line reactors for each variable-speed motor indicated.
 12. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquidtight conduit.
 13. Visual indication of status and alarm [**with momentary test push button**] for each motor.
 14. Audible alarm and silence switch.
 15. Visual indication of elapsed run time, graduated in hours for each motor.
 16. Cooling tower shall have hardware to enable BMS to remotely monitor and display the following:
 - a. Operational status of each motor.
 - b. Position of dampers.

- c. Cooling tower leaving-fluid temperature.
- d. Fan vibration alarm.
- e. Collection basin **[high]** **[low]** **[high- and low]**-water-level alarms.
- f. **<Insert conditions to be monitored>**.

AA. Personnel Access Components:

1. Doors: Large enough for personnel to access cooling tower internal components from both cooling tower end walls. Doors shall be operable from both sides of the door.
2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless-steel, fixed ladders with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.
3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at cooling tower access doors when cooling towers are elevated and not accessible from grade.
4. Handrail: Aluminum, galvanized steel, or stainless steel complete with kneerail and toeboard, around top of cooling tower. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.
 - a. Spanning the collection basin from one end of cooling tower to the other and positioned to form a path between the access doors. Platform shall be elevated so that all parts are above the high water level of the collection basin.
 - b. Elevated internal platforms with handrails accessible from fixed vertical ladders to access the fan drive assembly when out of reach from collection basin platform.

BB. Capacities and Characteristics:

1. Number of Cells: **<Insert quantity>**.
2. Air-Inlet Arrangement: **[Single side]** **[Four sides]**.
3. Maximum Drift Loss: **[0.005]** **<Insert number>** percent of design water flow.
4. Water Flow/Cell: **<Insert gpm (L/s)>**.
5. Minimum Water Flow/Cell: **<Insert gpm (L/s)>**.
6. Water Pressure Drop: **<Insert psig (kPa)>**.
7. Entering-Water Temperature: **<Insert deg F (deg C)>**.
8. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
9. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
10. Economizer Mode:
 - a. Water Flow/Cell: **<Insert gpm (L/s)>**.
 - b. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 - c. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
 - d. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
11. Fan Location: **[Bottom]** **[Side]** **[Bottom or side]**.
12. Fan and Drive Type: Axial with direct drive or centrifugal with belt drive.
13. Fan Motor:

- a. Type: **[Single speed] [Two speed, single winding] [Two speed, two winding] [Variable speed]**.
 - b. Horsepower/Cell: **<Insert horsepower>**.
 - c. Full-Load Ampacity: **<Insert value>**.
 - d. Minimum Circuit Ampacity: **<Insert value>**.
 - e. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - f. Electrical Characteristics: **[208] [240] [480] <Insert value>**-V ac, 3 phase, 60 Hz.
14. Sound Pressure Level: **<Insert dBA>** at **<Insert distance in feet (m)>** **[when measured according to CTI ATC 128]**.
15. Basin Heater:
- a. Basin Water Temperature: **[40 deg F (5 deg C)] <Insert deg F (deg C)>**.
 - b. Outdoor Ambient Temperature: **[0 deg F (minus 18 deg C)] [Minus 20 deg F (Minus 29 deg C)] <Insert deg F (deg C)>**.
 - c. Capacity/Cell: **<Insert kilowatts>**.
 - d. Full-Load Ampacity: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - g. Electrical Characteristics: **[208] [240] [480] <Insert value>**-V ac, 3 phase, 60 Hz.
 - h. Capacity/Cell: **<Insert MBtu/h (kW)>**.
 - i. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
 - j. Fluid Flow Rate: **<Insert gpm (L/s)>**.
 - k. Fluid Pressure Drop: **<Insert psig (kPa)>**.
 - l. Capacity/Cell: **<Insert MBtu/h (kW)>**.
 - m. Steam Flow: **<Insert lb/h (L/s)>**.
 - n. Steam Pressure: **<Insert psig (kPa)>**.

2.5 OPEN-CIRCUIT, INDUCED-DRAFT, COUNTERFLOW COOLING TOWERS

A. Products: Subject to compliance with requirements, provide one of the following:

1. [Amcot Cooling Tower Corp](#); Model ST.
2. [Delta Cooling Towers, Inc](#); Model Paragon, Premier, TM Series.
3. [EVAPCO, Inc](#); Models AT, ICT, REP, UBT, and USS.
4. [Protec Cooling Towers, Inc](#); Model PTC.
5. [Recold](#); Model MT.
6. [Thermal Care, Inc](#); Models FC and FT.
7. **<Insert manufacturer's name; product name or designation>**.
8. or approved equal.

B. Fabricate cooling tower mounting base with reinforcement strong enough to resist cooling tower movement during a seismic event when cooling tower is anchored to field support structure.

C. Cooling tower designed to resist wind load of **[30 lbf/sq. ft. (1.44 kPa)] <Insert value>**.

- D. Casing and Frame:
1. Casing[and Frame] Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Stainless steel]**.
 2. Frame Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Stainless steel]**.
 3. Fasteners: **[Galvanized] [Stainless]** steel.
 4. Joints and Seams: Sealed watertight.
 5. Welded Connections: Continuous and watertight.
- E. Collection Basin: Configure tower for installation with a field-constructed collection basin.
- F. Collection Basin:
1. Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G210 (Z600) coating] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel]**.
 2. Strainer: Removable **[stainless-steel]** strainer with openings smaller than nozzle orifices.
 3. Overflow and drain connections.
 4. Makeup water connection.
 5. Outlet Connection: ASME B16.5, Class 150 flange.
 6. Removable equalization flume plate between adjacent cells of multiple-cell towers.
 7. Equalizer connection for field-installed equalizer piping.
 8. Basin Sweeper Distribution Piping and Nozzles:
 - a. Pipe Material: **[PVC] <Insert material>**.
 - b. Nozzle Material: **[Plastic] <Insert material>**.
 - c. Configure piping and nozzles to minimize sediment from collecting in the collection basin.
- G. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.
- H. Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, **[Type 4] [Type 4X] <Insert type>**.
 2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to provide **[control of water makeup valve] [control of water makeup valve and low-level alarm] [control of water makeup valve and low- and high-level alarms] [control of water makeup valve, low- and high-level alarms, and output for shutoff of pump on low level]**.
 3. Electrode Probes: Stainless steel.
 4. Water Stilling Chamber: **[Corrosion-resistant material] [FRP] [Galvanized steel] [PVC pipe] [Stainless steel]**.

5. Solenoid Valve: Slow closing[**with stainless-steel body**]; controlled and powered through level controller in response to water-level set point.
 6. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- I. Ultrasonic Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, [**Type 4**] [**Type 4X**] <Insert type>.
 2. Controller: Ultrasonic level sensor/transmitter and relays factory wired to a terminal strip to control water makeup valve and signal a level alarm. Controller shall provide continuous level indication through a 4- to 20-mA signal[**for connection to BMS**].
 3. Water Stilling Chamber: [**Corrosion-resistant material**] [**FRP**] [**Galvanized steel**] [**PVC pipe**] [**Stainless steel**].
 4. Solenoid Valve: Slow closing[**with stainless-steel body**]; controlled and powered through level controller in response to water-level set point.
 5. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- J. Electric Basin Heater:
1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
 2. Heater Control Panel: Mounted on the side of each cooling tower cell.
 3. Enclosure: NEMA 250, [**Type 3R**] [**Type 4**] [**Type 4X**].
 4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
 5. Control-circuit transformer with primary and secondary side fuses.
 6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 7. Single-point, field-power connection to a [**fused disconnect switch**] [**nonfused disconnect switch**] [**circuit breaker**] and heater branch circuiting complying with NFPA 70.
 8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.
- K. Hot-Water-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- L. Steam-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- M. Steam-Injector Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- N. Pressurized Water Distribution Piping: Main header and lateral branch piping designed for even distribution over heat-exchanger coil or fill throughout the flow range without the need for balancing valves and for connecting individual, removable, nonclogging spray nozzles.

1. Pipe Material: [**Fiberglass**] [**PVC**] [**Galvanized steel**] <Insert material>.
 2. Spray Nozzle Material: [**Plastic**] [**Polypropylene**] [**PVC**] <Insert material>.
 3. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.
- O. Fill:
1. Materials: [**CPVC**] [**PVC**] <Insert material>, resistant to rot, decay, and biological attack; with maximum flame-spread index of [**5**] [**25**] <Insert value> according to ASTM E 84.
 2. Minimum Thickness: [**15 mils (0.4 mm)**] [**20 mils (0.5 mm)**] <Insert value> before forming.
 3. Fabrication: Fill-type sheets, fabricated, formed, and bonded together after forming into removable assemblies that are factory installed by manufacturer.
 4. Fill Material Operating Temperature: Suitable for entering-water temperatures up through [**120 deg F (49 deg C)**] <Insert temperature>.
- P. [**Removable**] Drift Eliminator:
1. Material: [**FRP**] [**PVC**] [**FRP or PVC**] <Insert material>; resistant to rot, decay, and biological attack; with maximum flame-spread index of [**5**] [**25**] <Insert value> according to ASTM E 84.
 2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
 3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.
- Q. Air-Intake Louvers:
1. Material: [**FRP**] [**PVC**] [**Matching casing**].
 2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
 3. Louver Blades: Arranged to uniformly direct air into cooling tower, to minimize air resistance, and to prevent water from splashing out of tower during all modes of operation including operation with fans off.
- R. [**Removable**] Air-Intake Screens: [**Galvanized**] [**Polymer-coated, galvanized**] [**Stainless**]-steel wire mesh.
- S. Axial Fan: Balanced at the factory after assembly.
1. Blade Material: [**Aluminum**] [**FRP**] [**Galvanized steel**].
 2. Hub Material: [**Aluminum**] [**FRP**] [**Galvanized steel**].
 3. Blade Pitch: Field adjustable.
 4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens, complying with OSHA regulations.
 5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of [**40,000**] [**50,000**] <Insert value> hours.
 6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.

T. Belt Drive:

1. Service Factor: **[1.5] <Insert value>** based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
 - a. Belt: Multiple V-belt design with a matched set of **[cogged]** belts.
 - b. Belt: One-piece, multigrooved, solid-back belt.
 - c. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
 - d. Belt-Drive Guard: Comply with OSHA regulations.

U. Direct Drive: Fan hub directly connected, and properly secured, to motor shaft.

V. Gear Drive: Right angle, reduced speed, and designed for cooling tower applications according to CTI STD 111. Motor and gear drive shall be aligned before shipment.

1. Gear Drive and Coupling Service Factor: **[2.0] <Insert value>** based on motor nameplate horsepower.
2. Housing: Cast iron, with epoxy or polyurethane finish, beveled high-strength steel gears continuously bathed in oil, and with lubrication to other internal parts at all operating speeds.
3. Mounting: Directly mounted to fan hub and connected to motor so motor shaft is in horizontal position.
4. Operation: Able to operate both forward and in reverse.
5. Drive-to-Motor Connection: **[Close coupled to motor using a flexible coupling] [Connected to motor located outside of cooling tower casing by a full-floating drive shaft].**
6. Drive Shaft Material: **[Corrosion resistant] [Stainless steel]**, and fitted with flexible couplings on both ends. Provide exposed shaft and couplings with guards according to OSHA regulations.
7. Extend oil fill, drain, and vent to outside of cooling tower casing using galvanized-steel piping. Provide installation with oil-level sight glass.

W. Fan Motor:

1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
2. Motor Enclosure: **[Totally enclosed] [Totally enclosed air over (TEAO)] [Totally enclosed fan cooled (TEFC)] [with epoxy or polyurethane finish].**
3. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1] [NEMA Premium Efficient].**
4. Service Factor: **[1.15] <Insert value>**.
5. Insulation: **[Class F] [Class H] <Insert class>**.
6. Variable-Speed Motors: Inverter-duty rated per NEMA MG-1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
7. Motor Location: Mounted outside of cooling tower casing and cooling tower discharge airstream.

8. Severe-duty rating with the following features:
 - a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
 - b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C.)
 - c. Internal heater automatically energized when motor is de-energized.
9. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
- X. Fan Discharge Stack: Material shall match casing, [**manufacturer's standard**] [**velocity recovery**] design.
 1. Stack Extension: Fabricated to extend above fan deck **<Insert distance>** unless otherwise indicated.
 2. Stack Termination: Wire-mesh, galvanized-steel screens; complying with OSHA regulations.
- Y. Vibration Switch: For each fan drive.
 1. Enclosure: NEMA 250, [**Type 4**] [**Type 4X**] **<Insert type>**.
 2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
 3. Provide switch[**with manual-reset button**] for [**field connection to a BMS and**]hardwired connection to fan motor electrical circuit.
 4. Switch shall, on sensing excessive vibration,[**signal an alarm through the BMS and**] shut down the fan.
- Z. Gear-Drive, Oil-Level Switch: Low-oil-level warning switch[**for connection to a BMS**].
 1. Switch shall, on reaching a low-oil-level set point recommended by cooling tower manufacturer, signal an alarm[**through the BMS**].
- AA. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
- BB. Control Package: Factory installed and wired, and functionally tested at factory before shipment.
 1. NEMA 250, [**Type 3R**] [**Type 4**] [**Type 4X**] enclosure with removable internally mount backplate.
 2. Control-circuit transformer with primary and secondary side fuses.
 3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
 4. Microprocessor-based controller for automatic control of fan based on cooling tower leaving-water temperature with control features to improve operating efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.

5. Fan motor sequencer for multiple-cell and two-speed applications with automatic lead stage rotation.
6. Collection basin level controller complying with requirements in **["Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve"] ["Ultrasonic Collection Basin Water-Level Controller with Solenoid Valve"]** Paragraph.
7. Electric basin heaters with temperature control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph.
8. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph.
9. Oil-level switch for each fan with a gear drive, complying with requirement in "Gear-Drive, Oil-Level Switch" Paragraph.
10. Single-point, field-power connection to a **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker] [for each cooling tower cell]**.
 - a. Branch power circuit to each motor and electric basin heater and to controls **[with a disconnect switch or circuit breaker]**.
 - b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller with manual bypass and line reactors for each variable-speed motor indicated.
11. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquidtight conduit.
12. Visual indication of status and alarm **[with momentary test push button]** for each motor.
13. Audible alarm and silence switch.
14. Visual indication of elapsed run time, graduated in hours for each motor.
15. Cooling tower shall have hardware to enable BMS to remotely monitor and display the following:
 - a. Operational status of each motor.
 - b. Position of dampers.
 - c. Cooling tower leaving-fluid temperature.
 - d. Fan vibration alarm.
 - e. Oil-level alarm.
 - f. Collection basin **[high] [low] [high- and low]-water-level** alarms.
 - g. **<Insert conditions to be monitored>**.

CC. Personnel Access Components:

1. Doors: Large enough for personnel to access cooling tower internal components from both cooling tower end walls. Doors shall be operable from both sides of the door.
2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless-steel, fixed ladders with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.
3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at cooling tower access doors when cooling towers are elevated and not accessible from grade.

4. Handrail: Aluminum, galvanized steel, or stainless steel complete with kneerail and toeboard, around top of cooling tower. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.
 - a. Spanning the collection basin from one end of cooling tower to the other and positioned to form a path between the access doors. Platform shall be elevated so that all parts are above the high water level of the collection basin.
 - b. Elevated internal platforms with handrails accessible from fixed vertical ladders to access the fan drive assembly when out of reach from collection basin platform.

DD. Capacities and Characteristics:

1. Number of Cells: **<Insert quantity>**.
2. Air-Inlet Arrangement: All sides.
3. Maximum Drift Loss: **[0.005] <Insert number>** percent of design water flow.
4. Water Flow/Cell: **<Insert gpm (L/s)>**.
5. Minimum Water Flow/Cell: **<Insert gpm (L/s)>**.
6. Water Pressure Drop: **<Insert psig (kPa)>**.
7. Entering-Water Temperature: **<Insert deg F (deg C)>**.
8. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
9. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
10. Economizer Mode:
 - a. Water Flow/Cell: **<Insert gpm (L/s)>**.
 - b. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 - c. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
 - d. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
11. Fan Drive: Belt, direct, or gear.
12. Fan Motor:
 - a. Type: **[Single speed] [Two speed, single winding] [Two speed, two winding] [Variable speed]**.
 - b. Horsepower/Cell: **<Insert horsepower>**.
 - c. Full-Load Ampacity: **<Insert value>**.
 - d. Minimum Circuit Ampacity: **<Insert value>**.
 - e. Maximum Overcurrent Protection Device: **<Insert amperage>**.
 - f. Electrical Characteristics: **[208] [240] [480] <Insert value>**-V ac, 3 phase, 60 Hz.
13. Sound Pressure Level: **<Insert dBA>** at **<Insert distance in feet (m)>** **[when measured according to CTI ATC 128]**.
14. Basin Heater:
 - a. Basin Water Temperature: **[40 deg F (5 deg C)] <Insert deg F (deg C)>**.
 - b. Outdoor Ambient Temperature: **[0 deg F (minus 18 deg C)] [Minus 20 deg F (Minus 29 deg C)] <Insert deg F (deg C)>**.
 - c. Capacity/Cell: **<Insert kilowatts>**.

- d. Full-Load Ampacity: **<Insert value>**.
- e. Minimum Circuit Ampacity: **<Insert value>**.
- f. Maximum Overcurrent Protection Device: **<Insert amperage>**.
- g. Electrical Characteristics: **[208] [240] [480] <Insert value>**-V ac, 3 phase, 60 Hz.
- h. Capacity/Cell: **<Insert MBtu/h (kW)>**.
- i. Entering-Fluid Temperature: **<Insert deg F (deg C)>**.
- j. Fluid Flow Rate: **<Insert gpm (L/s)>**.
- k. Fluid Pressure Drop: **<Insert psig (kPa)>**.
- l. Capacity/Cell: **<Insert MBtu/h (kW)>**.
- m. Steam Flow: **<Insert lb/h (L/s)>**.
- n. Steam Pressure: **<Insert psig (kPa)>**.

2.6 OPEN-CIRCUIT, INDUCED-DRAFT, CROSSFLOW COOLING TOWERS

A. Products: Subject to compliance with requirements, provide one of the following:

1. [Amcot Cooling Tower Corp](#); Models LRC-H, LRC-LNS Series.
2. [Baltimore Aircoil Company](#); Series 1500 and 3000.
3. [Marley Cooling Technologies](#); Models Aquatower, AV series, NC Class, Primus.
4. **<Insert manufacturer's name; product name or designation>**.
5. or approved equal.

B. Fabricate cooling tower mounting base with reinforcement strong enough to resist cooling tower movement during a seismic event when cooling tower is anchored to field support structure.

C. Cooling tower designed to resist wind load of **[30 lbf/sq. ft. (1.44 kPa)] <Insert value>**.

D. Casing and Frame:

1. Casing[and Frame] Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel]**.
2. Frame Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel]**.
3. Fasteners: **[Galvanized] [Stainless] steel**.
4. Joints and Seams: Sealed watertight.
5. Welded Connections: Continuous and watertight.

E. Collection Basin: Configure tower for installation with a field-constructed collection basin.

F. Collection Basin:

1. Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel]**.
2. Removable[**stainless-steel**] strainer with openings smaller than nozzle orifices.

3. Overflow and drain connections.
 4. Makeup water connection.
 5. Outlet Connection: ASME B16.5, Class 150 flange.
 6. Removable equalization flume plate between adjacent cells of multiple-cell towers.
 7. Equalizer connection for field-installed equalizer piping.
 8. Basin Sweeper Distribution Piping and Nozzles:
 - a. Pipe Material: **[PVC] <Insert material>**.
 - b. Nozzle Material: **[Plastic] <Insert material>**.
 - c. Configure piping and nozzles to minimize sediment from collecting in the collection basin.
- G. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.
- H. Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosures: NEMA 250, **[Type 4] [Type 4X] <Insert type>**.
 2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to provide **[control of water makeup valve] [control of water makeup valve and low-level alarm] [control of water makeup valve and low- and high-level alarms] [control of water makeup valve, low- and high-level alarms, and output for shutoff of pump on low level]**.
 3. Electrode Probes: Stainless steel.
 4. Water Stilling Chamber: **[Corrosion-resistant material] [FRP] [Galvanized steel] [PVC pipe] [Stainless steel]**.
 5. Solenoid Valve: Slow closing[**with stainless-steel body**], controlled and powered through level controller in response to water-level set point.
 6. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- I. Ultrasonic Collection Basin Water-Level Controller with Solenoid Valve:
1. Enclosure: NEMA 250, **[Type 4] [Type 4X] <Insert type>**.
 2. Controller: Ultrasonic level sensor/transmitter and relays factory wired to a terminal strip to control water makeup valve and signal a level alarm. Controller shall provide continuous level indication through a 4- to 20-mA signal[**for connection to BMS**].
 3. Water Stilling Chamber: **[Corrosion-resistant material] [FRP] [Galvanized steel] [PVC pipe] [Stainless steel]**.
 4. Solenoid Valve: Slow closing[**with stainless-steel body**]; controlled and powered through level controller in response to water-level set point.
 5. Electrical Connection Requirements: 120 V, single phase, 60 Hz.
- J. Electric Basin Heater:
1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
 2. Heater Control Panel: Mounted on the side of each cooling tower cell.
 3. Enclosure: NEMA 250, **[Type 3R] [Type 4] [Type 4X]**.

4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
 5. Control-circuit transformer with primary and secondary side fuses.
 6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
 7. Single-point, field-power connection to a **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker]** and heater branch circuiting complying with NFPA 70.
 8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.
- K. Hot-Water-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- L. Steam-Coil Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- M. Steam-Injector Basin Heater: Manufacturer's standard offering to provide capacity indicated.
- N. Gravity Water Distribution Basin: Nonpressurized design with head of water level in basin adequate to overcome spray nozzle losses and designed to evenly distribute water over fill throughout the flow range indicated.
1. Material: **[FRP with UV inhibitors] [Galvanized steel, ASTM A 653/A 653M, G235 (Z700) coating] [Polymer-coated galvanized steel] [Stainless steel]**.
 2. Location: Over each bank of fill with easily replaceable **[plastic] <Insert material>** spray nozzles mounted in bottom of basin.
 3. Inlet Connection: ASME B16.5, Class 150 flange.
 4. Joints and Seams: Sealed watertight.
 5. Partitioning Dams: Same material as basin to distribute water over the fill to minimize icing while operating throughout the flow range indicated.
 6. Removable Panels: Same material as basin to completely cover top of basin. Secure panels to basin with removable **[corrosion-resistant] [stainless-steel]** hardware.
 7. Valves: Manufacturer's standard valve installed at each inlet connection and arranged to balance or shut off flow to each gravity distribution basin.
 8. Single-Inlet, Field Pipe Connection: **[Galvanized-steel] [PVC]** pipe arranged to provide balancing of flow within cooling tower cell without the need for additional balancing valves. Pipe each cooling tower cell internally to a single, field connection suitable for mating to ASME B16.5, Class 150 flange and located on the **[bottom] [side]** unless otherwise indicated.
- O. Fill:
1. Materials: PVC, with maximum flame-spread index of **[5] [25] <Insert value>** according to ASTM E 84.

2. Minimum Thickness: [15 mils (0.4 mm)] [20 mils (0.5 mm)] <Insert value>, before forming.
 3. Fabrication: Fill-type sheets, fabricated, formed, and bonded together after forming into removable assemblies that are factory installed by manufacturer.
 4. Fill Material Operating Temperature: Suitable for entering-water temperatures up through [120 deg F (49 deg C)] <Insert temperature>.
- P. Drift Eliminator:
1. Material: [FRP] [PVC] [FRP or PVC] <Insert material>; with maximum flame-spread index of [5] [25] <Insert value> according to ASTM E 84.
 2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
 3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.
 4. Location: [Integral to] [Separate and removable from] fill.
- Q. Air-Intake Louvers:
1. Material: [FRP] [PVC] [Matching casing].
 2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
 3. Louver Blades: Arranged to uniformly direct air into cooling tower, to minimize air resistance, and to prevent water from splashing out of tower during all modes of operation including operation with fans off.
 4. Location: [Integral to] [Separate from] fill.
- R. [Removable] Air-Intake Screens: [Galvanized] [Polymer-coated, galvanized] [Stainless]-steel wire mesh.
- S. Axial Fan: Balanced at the factory after assembly.
1. Blade Material: [Aluminum] [FRP] [Galvanized steel].
 2. Hub Material: [Aluminum] [FRP] [Galvanized steel].
 3. Blade Pitch: Field adjustable.
 4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.
 5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of [40,000] [50,000] <Insert value> hours.
 6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.
- T. Belt Drive:
1. Service Factor: [1.5] <Insert value> based on motor nameplate horsepower.
 2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
 3. Belt: Multiple V-belt design with a matched set of [cogged] belts.
 4. Belt: One-piece, multigrooved, solid-back belt.

5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
 6. Belt-Drive Guard: Comply with OSHA regulations.
 7. Two-Motor, Single-Fan Drive:
 - a. Two single-speed motors per fan, one sized for full speed and load and the other sized for **[67]** **<Insert value>** percent of full-load speed.
 - b. Each motor with belt drive and configured for operation when other motor fails.
 - c. Controls and wiring same as two-speed, two-winding motor.
- U. Gear Drive: Right angle, reduced speed, and designed for cooling tower applications according to CTI STD 111. Motor and gear drive shall be aligned before shipment.
1. Gear Drive and Coupling Service Factor: **[2.0]** **<Insert value>** based on motor nameplate horsepower.
 2. Housing: Cast iron, with epoxy or polyurethane finish, beveled high-strength steel gears continuously bathed in oil, and with lubrication to other internal parts at all operating speeds.
 3. Mounting: Directly mounted to fan hub and connected to motor so motor shaft is in horizontal position.
 4. Operation: Able to operate both forward and in reverse.
 5. Drive-to-Motor Connection: **[Close coupled to motor using a flexible coupling]** **[Connected to motor located outside of cooling tower casing by a full-floating drive shaft]**.
 6. Drive Shaft Material: **[Corrosion resistant]** **[Stainless steel]**, and fitted with flexible couplings on both ends. Provide exposed shaft and couplings with guards according to OSHA regulations.
 7. Extend oil fill, drain, and vent to outside of cooling tower casing using galvanized-steel piping. Provide installation with oil-level sight glass.
- V. Fan Motor:
1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
 2. Motor Enclosure: **[Totally enclosed]** **[Totally enclosed air over (TEAO)]** **[Totally enclosed fan cooled (TEFC)]** **[with epoxy or polyurethane finish]**.
 3. Energy Efficiency: **[Comply with ASHRAE/IESNA 90.1]** **[NEMA Premium Efficient]**.
 4. Service Factor: **[1.15]** **<Insert value>**.
 5. Insulation: **[Class F]** **[Class H]** **<Insert class>**.
 6. Variable-Speed Motors: Inverter-duty rated per NEMA MG-1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
 7. Motor Location: Mounted outside of cooling tower casing and cooling tower discharge airstream.
 8. Severe-duty rating with the following features:
 - a. Rotor and stator protected with corrosion-inhibiting epoxy resin.

- b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between **minus 20 and plus 300 deg F** (minus 29 and plus 149 deg C.)
 - c. Internal heater automatically energized when motor is de-energized.
 9. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
- W. Fan Discharge Stack: Material shall match casing, [**manufacturer's standard**] [**velocity recovery**] design.
 1. Stack Extension: Fabricated to extend above fan deck **<Insert distance>** unless otherwise indicated.
 2. Stack Termination: Wire-mesh, galvanized-steel screens; complying with OSHA regulations.
- X. Vibration Switch: For each fan drive.
 1. Enclosure: NEMA 250, [**Type 4**] [**Type 4X**] **<Insert type>**.
 2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
 3. Provide switch[**with manual-reset button**] for [**field connection to a BMS and**]hardwired connection to fan motor electrical circuit.
 4. Switch shall, on sensing excessive vibration,[**signal an alarm through the BMS and**] shut down the fan.
- Y. Gear-Drive, Oil-Level Switch: Low-oil-level warning switch[**for connection to a BMS**].
 1. Switch shall, on reaching a low-oil-level set point recommended by cooling tower manufacturer, signal an alarm[**through the BMS**].
- Z. Capacity-Control Dampers: [**Galvanized-steel**] [**Stainless-steel**] **<Insert material>** dampers, with linkages, electric operator, controller, limit switches, transformer, and weatherproof enclosure.
- AA. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
- BB. Control Package: Factory installed and wired, and functionally tested at factory before shipment.
 1. NEMA 250, [**Type 3R**] [**Type 4**] [**Type 4X**] enclosure with removable internally mount backplate.
 2. Control-circuit transformer with primary and secondary side fuses.
 3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
 4. Microprocessor-based controller for automatic control of fan based on cooling tower leaving-water temperature with control features to improve operating

- efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.
5. Fan motor sequencer for multiple-cell and two-speed applications with automatic lead stage rotation.
 6. Collection basin level controller complying with requirements in ["**Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve**"] ["**Ultrasonic Collection Basin Water-Level Controller with Solenoid Valve**"] Paragraph.
 7. Electric basin heaters with temperature control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph.
 8. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph.
 9. Oil-level switch for each fan with a gear drive, complying with requirement in "Gear-Drive, Oil-Level Switch" Paragraph.
 10. Single-point, field-power connection to a [**fused disconnect switch**] [**nonfused disconnect switch**] [**circuit breaker**] [**for each cooling tower cell**].
 - a. Branch power circuit to each motor and electric basin heater and to controls[**with a disconnect switch or circuit breaker**].
 - b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable frequency controller with manual bypass and line reactors for each variable-speed motor indicated.
 11. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquidtight conduit.
 12. Visual indication of status and alarm[**with momentary test push button**] for each motor.
 13. Audible alarm and silence switch.
 14. Visual indication of elapsed run time, graduated in hours for each motor.
 15. Cooling tower shall have hardware to enable BMS to remotely monitor and display the following:
 - a. Operational status of each motor.
 - b. Position of dampers.
 - c. Cooling tower leaving-fluid temperature.
 - d. Fan vibration alarm.
 - e. Oil-level alarm.
 - f. Collection basin [**high**] [**low**] [**high- and low**]-water-level alarms.
 - g. **<Insert conditions to be monitored>**.

CC. Personnel Access Components:

1. Doors: Large enough for personnel to access cooling tower internal components from both cooling tower end walls. Doors shall be operable from both sides of the door.
2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless-steel, fixed ladders with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.

3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at cooling tower access doors when cooling towers are elevated and not accessible from grade.
4. Handrail: Aluminum, galvanized steel, or stainless steel complete with kneerail and toeboard, around top of cooling tower. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.
 - a. Spanning the collection basin from one end of cooling tower to the other and positioned to form a path between the access doors. Platform shall be elevated so that all parts are above the high water level of the collection basin.
 - b. Elevated internal platforms with handrails accessible from fixed vertical ladders to access the fan drive assembly when out of reach from collection basin platform.

DD. Capacities and Characteristics:

1. Number of Cells: <Insert quantity>.
2. Air-Inlet Arrangement: [**Single side**] [**Two sides**].
3. Maximum Drift Loss: [**0.005**] <Insert number> percent of design water flow.
4. Water Flow/Cell: <Insert gpm (L/s)>.
5. Minimum Water Flow/Cell: <Insert gpm (L/s)>.
6. Water Pressure Drop: <Insert psig (kPa)>.
7. Entering-Water Temperature: <Insert deg F (deg C)>.
8. Leaving-Water Temperature: <Insert deg F (deg C)>.
9. Entering-Air Wet-Bulb Temperature: <Insert deg F (deg C)>.
10. Economizer Mode:
 - a. Water Flow/Cell: <Insert gpm (L/s)>.
 - b. Entering-Water Temperature: <Insert deg F (deg C)>.
 - c. Leaving-Water Temperature: <Insert deg F (deg C)>.
 - d. Entering-Air Wet-Bulb Temperature: <Insert deg F (deg C)>.
11. Fan Drive: Belt or gear.
12. Fan Motor:
 - a. Type: [**Single speed**] [**Two speed, single winding**] [**Two speed, two winding**] [**Variable speed**].
 - b. Horsepower/Cell: <Insert horsepower>.
 - c. Full-Load Ampacity: <Insert value>.
 - d. Minimum Circuit Ampacity: <Insert value>.
 - e. Maximum Overcurrent Protection Device: <Insert amperage>.
 - f. Electrical Characteristics: [**208**] [**240**] [**480**] <Insert value>-V ac, 3 phase, 60 Hz.
13. Sound Pressure Level: <Insert dBA> at <Insert distance in feet (m)> [**when measured according to CTI ATC 128**].
14. Basin Heater:
 - a. Basin Water Temperature: [**40 deg F (5 deg C)**] <Insert deg F (deg C)>.

- b. Outdoor Ambient Temperature: [0 deg F (minus 18 deg C)] [Minus 20 deg F (Minus 29 deg C)] <Insert deg F (deg C)>.
- c. Capacity/Cell: <Insert kilowatts> .
- d. Full-Load Ampacity: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection Device: <Insert amperage>.
- g. Electrical Characteristics: [208] [240] [480] <Insert value>-V ac, 3 phase, 60 Hz.
- h. Capacity/Cell: <Insert MBtu/h (kW)>.
- i. Entering-Fluid Temperature: <Insert deg F (deg C)>.
- j. Fluid Flow Rate: <Insert gpm (L/s)>.
- k. Fluid Pressure Drop: <Insert psig (kPa)>.
- l. Capacity/Cell: <Insert MBtu/h (kW)>.
- m. Steam Flow: <Insert lb/h (L/s)>.
- n. Steam Pressure: <Insert psig (kPa)>.

2.7 SOURCE QUALITY CONTROL

- A. Verification of Performance: Test and certify cooling tower performance according to CTI STD 201, "Certification Standard for Commercial Water-Cooling Towers Thermal Performance."
- B. Factory pressure test heat exchangers after fabrication and prove to be free of leaks.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before cooling tower installation, examine roughing-in for tower support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting tower performance, maintenance, and operation.
 - 1. Cooling tower locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install cooling towers on support structure indicated.
- C. Equipment Mounting:
 - 1. Install cooling towers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [Section 033000

"Cast-in-Place Concrete." [Section 033053 "Miscellaneous Cast-in-Place Concrete."]

2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Install anchor bolts to elevations required for proper attachment to supported equipment.
- E. Maintain manufacturer's recommended clearances for service and maintenance.
- F. Loose Components: Install electrical components, devices, and accessories that are not factory mounted.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to cooling towers to allow service and maintenance.
- C. Install flexible pipe connectors at pipe connections of cooling towers mounted on vibration isolators.
- D. Provide drain piping with valve at cooling tower drain connections and at low points in piping.
- E. Connect cooling tower overflows and drains, and piping drains to sanitary sewage system.
- F. Domestic Water Piping: Comply with applicable requirements in Section 221116 "Domestic Water Piping." Connect to water-level control with shutoff valve and union, flange, or mechanical coupling at each connection.
- G. Supply and Return Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Connect to entering cooling tower connections with shutoff valve, balancing valve, thermometer, plugged tee with pressure gage, [**flow meter,**] and drain connection with valve. Connect to leaving cooling tower connection with shutoff valve. Make connections to cooling tower with a [**union**] [**flange**] [**mechanical coupling**] [**union, flange, or mechanical coupling**].
- H. Equalizer Piping: Piping requirements to match supply and return piping. Connect an equalizer pipe, full size of cooling tower connection, between tower cells. Connect to cooling tower with shutoff valve.
- I. Hot-Water Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Connect to supply and return basin heater with shutoff valve, strainer, control valve, and union or flange on

supply connection and union or flange and balancing valve on return connection.
Provide supply and return piping with pressure gage and thermometer.

- J. Steam and Condensate Piping: Comply with applicable requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties." Connect steam supply to basin heater with shutoff valve, strainer, control valve, and union or flange and condensate piping with union or flange, shutoff valve, strainer, and an appropriate steam trap.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to perform field tests and inspections.
- C. Perform tests and inspections.
1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections: Comply with [**ASME PTC 23, "ASME Performance Test Codes - Code on Atmospheric Water Cooling Equipment**] [**CTI ATC 105, "Acceptance Test Code for Water Cooling Towers**]."
- E. Cooling towers will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- C. Obtain performance data from manufacturer.
1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
- a. Clean entire unit including basins.
 - b. Verify that accessories are properly installed.
 - c. Verify clearances for airflow and for cooling tower servicing.
 - d. Check for vibration isolation and structural support.
 - e. Lubricate bearings.

- f. Verify fan rotation for correct direction and for vibration or binding and correct problems.
 - g. Adjust belts to proper alignment and tension.
 - h. Verify proper oil level in gear-drive housing. Fill with oil to proper level.
 - i. Operate variable-speed fans through entire operating range and check for harmonic vibration imbalance. Set motor controller to skip speeds resulting in abnormal vibration.
 - j. Check vibration switch setting. Verify operation.
 - k. Verify water level in tower basin. Fill to proper startup level. Check makeup water-level control and valve.
 - l. Verify operation of basin heater and control.
 - m. Verify that cooling tower air discharge is not recirculating air into tower or HVAC air intakes. Recommend corrective action.
 - n. Replace defective and malfunctioning units.
- D. Start cooling tower and associated water pumps. Follow manufacturer's written starting procedures.
- E. Prepare a written startup report that records the results of tests and inspections.

3.6 ADJUSTING

- A. Set and balance water flow to each tower inlet.
- B. Adjust water-level control for proper operating level.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain cooling towers.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work

described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236500

SECTION 236533.13 - LIQUID COOLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes packaged liquid coolers using evaporative cooling, and including a circulating pump, and accessories.
 - 1. Liquid cooler.
 - 2. Controls.
 - 3. Ladders and handrails.
 - 4. Inside Sump.
 - 5. Circulating pump.
 - 6. Sound attenuators.
 - 7. Discharge hood.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Provide rated capacities, dimensions, weights and point loadings, accessories, required clearances, electrical requirements and wiring diagrams, and location and size of field connections. Submit schematic indicating capacity controls.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings (required only for equipment other than the selections shown on drawing layouts and specified in detail by manufacturer/model number in equipment schedules):
 - 1. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - 2. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - 3. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

- C. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Certificates: Certify that liquid cooler performance [, **based on ASME PTC-23**] meet or exceed specified requirements and submit performance curve plotting leaving water temperature against wet bulb temperature.
- C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For liquid coolers to include in emergency, operation, and maintenance manuals.
 - 1. Include start-up instructions, maintenance data, parts lists, controls, and accessories. Include cleaning methods and cleaning materials recommended.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fan Belts: [**Two (2)**] <Insert number> sets of matched fan belts.
 - 2. Provide [**twelve (12)**] <Insert number> spray nozzles.
 - 3. Provide [**one (1)**] <Insert number> valve seat for each make-up valve, [**one (1)**] <Insert number> strainer screen, [**one (1)**] <Insert number> float.
 - 4. Provide [**one (1)**] <Insert number> pump seal, and [**one (1)**] <Insert number> set of pump gaskets.

1.7 QUALITY ASSURANCE

- A. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- B. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.8 DELIVERY, STORAGE, AND PROTECTION

- A. Comply with requirements of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Factory assemble entire unit. For shipping, disassemble into as large as practical sub-assemblies so that minimum amount of field work is required for re-assembly.
- C. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Minimum **[five (5)]** <Insert number> years from date of Substantial Completion.
 - 2. Warranty to include coverage for **[liquid cooler package] [fan drive] [motor] [pan, casing and cooler coil] [labor only] [materials only] [labor and materials]**.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. Baltimore Aircoil Co.
 - 2. Evapco, Inc.
 - 3. Bohn Heat Transfer, Inc.
 - 4. Recold.
 - 5. **<Insert manufacturer's name>**.
 - 6. or approved equal.

2.2 MANUFACTURED UNITS

- A. Provide **[outdoor] [indoor]** units, factory assembled, sectional, counterflow, vertical discharge, **[forced draft] [induced draft]** design, with fan assemblies built into pan

and casing.

2.3 COMPONENTS

- A. Pan and Casing: Galvanized steel, **[12 gage]** **[14 gage]** for casing and 8 gage for reinforcing angles and channels.
1. Access doors at both ends of cooler to air plenum.
 2. Lift out steel strainer.
 3. Bleed line (from pump discharge) with valve.
 4. Inlet and outlet silencers.
 5. Discharge hood with access doors.
 6. Duct flanges on inlet and outlet.
- B. Cooler Coil: Steel tubing, air tested under water to 350 psig, sloped to ensure drainage, encased in steel framework. **[Provide cleanable [header] [tube]** unit with removable cover plates on header to access tubular coil].
- C. Fans: **[Multi blade, cast aluminum, axial type]** **[Forward curve centrifugal type mounted on steel shaft]**, with belt drive, bearings with ABMA 9 or ABMA 11 L-10 life expectancy at 30,000 hours, with grease fittings extended to outside of casing.
- D. Fan Motors: **[Single]** **[Two]** speed **[(1800/900 rpm)]** mounted on adjustable steel base, **[totally enclosed air over (TEAO) type with special moisture protection.]** **[totally enclosed fan cooled (TEFC) type with special moisture protection and insulation for cooling tower duty.][Refer to Section 16486 - Electric Motors.]**
- E. Unit Wiring of Electrical Components and Accessories: All electrical equipment, accessories, control devices, and interconnecting wiring required for components forming parts of the equipment specified under this Section shall be either factory installed or field-installed as work of this Section, including required contactors, overcurrent protection, and disconnect switches; and including motor controllers where indicated as unit-installed (refer to Division 26 sections for requirements governing separately-installed controllers). The completed installation shall conform to all Division 26 requirements, and shall provide for single points of connection under other Sections for:
1. Power supply branch circuit serving motor(s), sump heaters, and any powered accessory items, as applicable.
 2. Vibration switch output terminals, where motor controllers are remotely installed.
- F. V-Belt Drive: Cast iron or steel sheaves, dynamically balanced, keyed. **[Fixed]** **[Variable and adjustable]** pitch sheave for motors 15 hp and under, selected so required rpm is obtained with sheaves set at mid-position. Fixed sheave for 20 hp and over, matched belts. Drive rated minimum 1.5 times nameplate rating of motor.
- G. Fan Guard: Removable, welded steel rod and wire guard.
- H. Distribution Section: **[Polyvinyl] chloride]** **[Galvanized steel]** piping header and

branches with **[ABS]** plastic spray nozzles.

- I. Drift Eliminators: Two or three pass formed galvanized steel, minimum 24 gage, to limit drift loss to **[0.7]** **[0.2]** percent of total water circulated.
- J. Float Valves: Brass or bronze **[balanced piston type]** make-up valve with plastic or copper float.
- K. Finish: Electrostatically sprayed thermosetting polymer.
- L. Hardware: **[Galvanized steel.]** **[Stainless steel.]** **[Phenolic epoxy coated, cadmium plated washer head fasteners.]**

2.4 INSIDE SUMP

- A. Pan and Casing: Galvanized steel, 12 gage for casing and 8 gage for reinforcing angles and channels with lift out steel strainer.
- B. Finish: Electrostatically sprayed thermosetting polymer.
- C. Float Valves: Brass or bronze **[balanced piston type]** make-up valve with plastic or copper float.
- D. Capacity: Minimum <Insert number> gallons, size **<Insert number>** x **<Insert number>** x **<Insert number>** inches deep.

2.5 CIRCULATING PUMP

- A. Pump: Close coupled, bronze fitted, centrifugal pump with mechanical seal, mounted on piping **[controlled by pan mounted immersion thermostat set at [140 degrees F] [180 degrees F]]**.
- B. Pump motor: **[Single]** **[Two] speed [(1800/900 rpm)]** open drip proof mounted on pump body.
- C. Pump: As shown on the drawings.

2.6 ACCESSORIES

- A. Electric Immersion Heaters: In pan suitable to maintain temperature of water in basin at 42 degrees F when outside temperature is 0 degrees F and wind velocity is 15 mph; immersion thermostat and float control to operate heaters on low temperature when pan is filled.
- B. Electric Temperature Controller: In leaving coil-water piping, set at 74 to 78 degrees F; with sensor to cycle fans and start and stop spray pump.
- C. Time Delay Relay: Limits fan motor starts to not more than six per hour.

- D. Capacity Control: Scroll damper and modulating electronic damper motor controlled by temperature controller.
- E. Vibration Switch: Provide factory installed vibration switch, for field wiring, to automatically shut off fan operation when excessive vibration occurs.

2.7 FACTORY FINISH

- A. Finish of steel components: ASTM A 90 G210 hot dipped galvanized steel with [**zinc chromated aluminum paint**] [**electrostatically sprayed thermosetting polymer**].

2.8 PERFORMANCE

- A. Capacity: As indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that openings are ready to receive work.
- B. Verify field measurements are as shown on Drawings.
- C. Verify that required utilities are available, in proper location, and ready to use.
- D. Beginning of installation means installer accepts existing conditions.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install cooler on structural steel beams as instructed by manufacturer.
- C. Install cooler on vibration isolators. Refer to Section 230548.13 "Vibration Controls for HVAC".
- D. Connect cooler water piping with flanged connections to cooler. Refer to Section 232113 "Hydronic Piping".
- E. Connect make-up water piping with flanged or union connections to cooler. Pitch to cooler. Pipe drain, overflow drain, and bleed lint to nearest floor drain.

3.3 ELECTRICAL WIRING AND CONNECTIONS

- A. Provide for any field-installed electrical accessories and wiring required to yield a

fully-wired assembly; refer to Part 2 above.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Prepare and start systems.
 - 2. Inspect cooler after installation and submit report prior to start-up, verifying installation is in accordance with specifications and manufacturer's recommendations.
 - 3. Supervise rigging, hoisting, and installation; include **<Insert number>** eight-hour days per cooler.
 - 4. Allow **<Insert number>** eight-hour days per cooler for start-up and instructions for DEN Project Managers operating personnel.
 - 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 6. Verify bearing lubrication.
 - 7. Verify proper motor rotation.
 - 8. Test Reports: Prepare a written report to record the following:
 - a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- C. Liquid coolers will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Adjust water level float valves and float controls for proper operating level.
- B. Adjust bleed valve for proportion of circulated water.
- C. Adjust temperature controls and verify operation.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain dry type liquid coolers.

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236533.13

SECTION 236533.16 - DRY TYPE LIQUID COOLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes dry coolers for closed systems, with horizontal cores and up-blast fans.
 - 1. Dry coolers.
 - 2. Controls.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Provide rated capacities, dimensions, weights and point loadings, accessories, required clearances, electrical requirements and wiring diagrams, and location and size of field connections. Submit schematic indicating capacity controls.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Shop Drawings (required only for equipment other than the selections shown on drawing layouts and specified in detail by manufacturer/model number in equipment schedules):
 - 1. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

- B. Certificates: Certify that liquid cooler performance [, **based on ASME PTC-23**] meet or exceed specified requirements and submit performance curve plotting leaving water temperature against dry bulb temperature.
- C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For dry type liquid coolers to include in emergency, operation, and maintenance manuals.
 - 1. Include start-up instructions, maintenance data, parts lists, controls, and accessories. Include cleaning methods and cleaning materials recommended.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fan Belts: [**Two (2)**] <Insert number> sets of matched fan belts.
 - 2. Provide [**twelve (12)**] <Insert number> spray nozzles.
 - 3. Provide [**one (1)**] <Insert number> valve seat for each make-up valve, [**one (1)**] <Insert number> strainer screen, [**one (1)**] <Insert number> float.
 - 4. Provide [**one (1)**] <Insert number> pump seal, and [**one (1)**] <Insert number> set of pump gaskets.

1.7 QUALITY ASSURANCE

- A. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- B. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.8 DELIVERY, STORAGE, AND PROTECTION

- A. Comply with requirements of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Factory assemble entire unit. For shipping, disassemble into as large as practical sub-assemblies so that minimum amount of field work is required for re-assembly.

- C. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Minimum **[five]** <Insert number> years from date of Substantial Completion.
 - 2. Warranty to include coverage for **[dry cooler package]** **[motor]** **[labor only]** **[materials only]** **[labor and materials]**.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. Leibert.
 - 2. Young.
 - 3. <Insert manufacturer's name>.
 - 4. or approved equal.

2.2 MANUFACTURED UNITS

- A. Direct Drive Propeller Fan Dry coolers: Furnish and install air-cooled dry coolers, arranged for vertical airflow. Dry coolers shall be draw-through design and shall perform in accordance the scheduled requirements.
- B. General: Each dry cooler shall consist of casing, dry cooler coil, and propeller fans direct driven by individual fan motors, fan guards, and mounting legs. Fan motors shall be furnished for operation on power supply indicated on the drawings.

2.3 COIL

- A. The dry cooler coil shall be constructed using copper tubes on a staggered tube pattern. Tubes shall be expanded into continuous, rippled aluminum fins. The fins shall

have full-depth fin collars completely covering the copper tube.

- B. Copper tubes shall be connected to heavy wall type L headers, inlet coil connector tubes shall pass through relieved holes in the tube sheet, for maximum resistance to piping strain and vibration. Coils shall be factory leak-tested at 300 PSIG (minimum); dehydrated, evacuated and sealed.
- C. Coils shall be designed to deliver required performance with cooled liquid consisting of 50% propylene glycol/water solution.

2.4 CASING

- A. The dry cooler casing shall be constructed of bright aluminum sheet. Casing shall be divided into individual fan sections by full width baffles.
- B. Structural support members, including coil support frame, motor and drive support shall be galvanized steel for strength and corrosion resistance. Aluminum legs with rigging holes shall be provided for hoisting the unit into position.
- C. FANS
- D. Fans shall have zinc-plated steel or aluminum blades. Fan shall be secured to fan shaft by means of heavy-duty dual set screws. Fan diameter shall be 30 inches or less. Fans shall be factory-balanced and run before shipment.
- E. Fan guards shall be heavy gauge, close-meshed, steel wire, with corrosion resistant finish.
- F. FAN MOTORS
- G. Fan motors shall be equipped with rain slingers and permanently sealed ball bearings. Motors shall include built-in overload protection. Motors shall be rigidly mounted on die-formed galvanized steel supports.
- H. Quiet-Line Motors: Fan motors shall be 12-pole, 570 RPM, equipped with rain shields and permanently sealed ball bearings. Motors shall include built-in overload protection. Motors shall be rigidly mounted on die-formed galvanized steel supports.

2.5 ELECTRICAL CONTROL

- A. All electrical connections (and electrical low ambient control options) shall be provided in a weatherproof enclosure, integral with the dry cooler. Controls shall include combination magnetic motor controller for each motor.
- B. Constant Operation: The unit (Liebert model DNL or equivalent) shall provide magnetic contactor and control voltage for remote starting of the dry cooler. The dry cooler shall be provided with disconnect switch mounted and wired.
- C. Fan cycling model (Liebert model DNT or equivalent) shall be equipped to control

leaving fluid temperature by cycling fans in one or two steps. The 24 volt control system as furnished to consists of control transformer and fan temperature control(s).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that openings are ready to receive work.
- B. Verify field measurements are as shown on Drawings.
- C. Verify that required utilities are available, in proper location, and ready to use.
- D. Beginning of installation means installer accepts existing conditions.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install cooler on structural steel beams as instructed by manufacturer.
- C. Install cooler on vibration isolators. Refer to Section 230548.13 "Vibration Controls for HVAC".
- D. Connect cooler water piping with flanged connections to cooler. Refer to Section 232113 "Hydronic Piping".
- E. Connect make-up water piping with flanged or union connections to cooler. Pitch to cooler. Pipe drain, overflow drain, and bleed lint to nearest floor drain.

3.3 ELECTRICAL WIRING AND CONNECTIONS

- A. Provide for any field-installed electrical accessories and wiring required to yield a fully-wired assembly; refer to Part 2 above.

3.4 FIELD QUALITY CONTROL

- A. **Manufacturer's Field Service:** Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Prepare and start systems.
 - 2. Inspect cooler after installation and submit report prior to start-up, verifying

- installation is in accordance with specifications and manufacturer's recommendations.
3. Supervise rigging, hoisting, and installation; include **<Insert number>** eight-hour days per cooler.
 4. Allow **<Insert number>** eight-hour days per cooler for start-up and instructions for DEN Project Managers operating personnel.
 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 6. Verify bearing lubrication.
 7. Verify proper motor rotation.
 8. Test Reports: Prepare a written report to record the following:
 - a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- C. Dry type liquid coolers will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Adjust temperature controls and verify operation.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain dry type liquid coolers.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236533.16

SECTION 236600 - PRECONDITIONED AIR HYDRONIC AIR HANDLING UNITS - AVIATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes hydronic units, supplied with chilled water from a chiller system.
- B. Related Sections:
 - 1. Section 236611 "Preconditioned Air DX Air Handling Units - Aviation" for DX air handling units.
 - 2. Section 236613 "Preconditioned Air Ductwork and Accessories - Aviation" for ductwork and accessories.
 - 3. Section 236616 "Preconditioned Air Electric Control Systems - Aviation" for electric control systems.
 - 4. Section 236619 "Preconditioned Air Sequence of Operation - Aviation" for sequence of operation.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of hydronic air handling unit.
 - 1. Product data for selected models, including specialties, accessories, and the following:
 - a. Fan performance curves with system operating conditions indicated.
 - b. Motor ratings and electrical characteristics plus motor and fan accessories.
 - c. Materials thicknesses and finishes.
 - d. Dampers, including housings, linkages, and operators.
 - e. Submit air filter manufacturer's technical product data including dimensions, weights, required clearances and access, flow capacity including initial and final pressure drop at rated air flow, efficiency and test method, fire classification, and installation instructions.
 - 2. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: Shop drawings from manufacturer detailing equipment assemblies and indicating dimensions, weights, required clearances, components, and location and size of field connections.
- C. Wiring diagrams that detail power, signal, and control wiring.
 - 1. Differentiate between manufacturer installed wiring and field installed wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Product certificates, signed by manufacturers of air handling units, certifying that their products comply with specified requirements.
- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For hydronic air handling units to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- B. ARI Compliance: Air filter equipment shall comply with ARI 850.
- C. NFPA Compliance: Comply with applicable portions of NFPA 70, for components and installation of air handling units.
- D. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.
- E. UL Compliance: Components shall be UL listed and labeled.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Lift and support units with the manufacturer's designated lifting or supporting points.
- B. Disassemble and reassemble units as required for movement into the final location

following manufacturer's written instructions.

- C. Deliver fan units as a factory assembled unit to the extent allowable by shipping limitations, with protective crating and covering.
- D. Store all equipment and material in suitable facilities until delivery and acceptance by the Owner.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace heat exchanger of hydronic air handling units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Minimum **[two (2)] [five (5)] <Insert number>** years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. Air Handling Units:
 - a. **Twist, Inc.**
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 - 2. Air Filters:
 - a. American Air Filter Company.
 - b. Farr Company.
 - c. Research Products Corp.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.

2.2 FANS

- A. General: Provide fans that are factory fabricated and assembled, factory tested, and factory finished, with required capacities and characteristics.
- B. Fans and Shafts: Statically and dynamically balanced and designed for continuous operation at the maximum rated fan speed and motor horsepower.
 - 1. Fan Shaft: Turned, ground, and polished steel designed to operated at no more than 70 percent of the first critical speed at the top of the speed range of the fan's class.
- C. Shaft Bearings: Provide bearings having a median life "Rating Life" (ABMA L50) of 200,000, calculated in accordance with ABMA 9 for ball bearings or ABMA 11 for roller bearings.
- D. Factory Finish:
 - 1. Sheet Metal Parts: Prime coating prior to final assembly.
 - 2. Exterior Surfaces: Manufacturer's standard finish is acceptable.

2.3 AIR FILTERS

- A. Provide [**reusable**] [**throw away**] type air filters in the PCA air handling units.
 - 1. Cleanable (Washable) Panel Filters: Provide factory fabricated, flat panel type cleanable air filters with holding frames, with 25 mm thick cleanable filtering media constructed of galvanized woven and crimped steel screening, with 0.91 mm galvanized steel frame. Provide cleanable filters with rated face velocity of 2.5 M/sec, initial resistance not greater than 24.9 Pa, and average arrestance of 75 percent.
 - 2. Throw Away Air Filters: Provide factory fabricated, dual filter system, consisting of a 25 mm fiberglass media prefilter, and a 100 mm 30/30 woven cotton fabric main filter. Provide filters with rated face velocity of 2.5 M/sec, initial resistance not greater than 24.9 Pa, and average arrestance of 75 percent.

2.4 AIR HANDLING UNIT AND SUPPLY AIR SYSTEM

- A. The system and all components shall be designed and constructed in accordance with all codes, standards, local laws and regulations applicable to the design and construction of this type of equipment.
- B. Units shall be factory fabricated and factory tested, and all components shall be UL listed.
- C. Provide compact, lightweight, and low noise insulated air handling units that can be mounted on the passenger loading bridge, such that bridge movement is unrestricted on apron drives. Air handling unit shall be mounted underneath bridge at rotunda or

the cab. Unit shall be free of vibration transmission and installed with vibration isolators when necessary. The air handling unit at each gate shall contain cooling coils, blower, inlet vane damper (or inlet butterfly damper), auxiliary electric strip heater (for use when central plant(s) are still in the dedicated cooling season, minimal heating, only), and controls to provide the required cool air, heated air, or ventilation to maintain the aircraft cabin temperature specified. Maximum air handler weight shall not exceed 1360 Kg, including accessories, mounted at the rotunda or on the bridge behind the lift column.

1. The air handling unit(s) to be provided at each gate shall be of the "Type" as scheduled on the drawings. Per schedule listed above, AHU's shall have the capacity to sufficiently cool the largest designated aircraft parked at each bridge (see note below) as indicated on plan drawings, considering quantity of air to be delivered and static pressures as scheduled in following paragraphs of this Article. Units serving wide body gates shall also operate properly when serving a narrow body aircraft at the same gate. Units serving B 747 / A340 gates shall also operate properly when serving a wide body or narrow body aircraft. Submittals shall indicate the actual M 3/hr at the minimum and maximum static pressure conditions and list the kW input at each condition. (Note: Two wide body AHU's may be used to serve one B 747, A340 or B 777. Refer to plans for bridge and aircraft locations. Some narrow-body gates may have wide body AHU's for that purpose.)
2. Airflow shall be controlled with an inlet vane damper (or inlet butterfly damper) on the blower interfaced with a thermostat. Variable frequency drive, as a method of airflow control, is also acceptable. The blower shall be centrifugal type and sized for the appropriate variable volume airflow requirements. The unit size shall be selected so that the fan brake horsepower does not exceed the maximum required over the design operating range of the unit at the total static pressure.
3. External static pressure shall be defined as the static pressure at the outlet of the air handling unit. The Contractor shall present the external static pressure of each type air handling unit on the appropriate equipment data sheet. An estimate of static pressure available at the aircraft connection, on a per gate basis, shall also be presented with the submittal.
4. Horsepower shall be selected based on the Contractor's choice of equipment that affects the external resistance of the system. However, the minimum nominal motor rating requirement for a narrow body air handling unit shall be 11.19 kW (15 hp); a wide body air handling unit shall be 18.65 kW (25 hp); and for a B 747 / A340 air handling unit 37.3 kW (50 hp). Contractor shall furnish the fan motor and unit size adequate for static pressure and maximum brake horsepower requirements.
5. The AHU shall be provided with motor starter equipment.
6. Return air to the unit shall not be utilized.
7. The Contractor shall submit correspondence with the bridge manufacturer indicating coordination efforts to maintain structural integrity of the bridge.
8. The construction of the unit shall be of a material sufficient to provide adequate structural rigidity of frame and enclosure; of a noncorrosive nature; and provided with thermal insulation for conditions encountered in normal usage. Equipment exterior shall be primed and painted to match bridge color. Equipment interior shall be painted per manufacturer's standard color.

9. Provide and install hooks on any service and cable boxes (both sides) as required to meet OSHA standards and Owner's safety system. Provide maintenance instruction on the correct method of servicing all bridge mounted equipment.
 10. If the air handling unit is to be mounted underneath a fixed bridge, a minimum of four guard posts shall be mounted on the apron around the unit for protection.
 11. The maximum sound level for the air handling unit(s) at maximum cooling shall not exceed 85 dBA at a distance of 5 M from the unit. Sound power level radiated by the unit outlet and at the unit inlet when the unit is operated at the designated capacity shall be furnished with the submittal.
 12. Coil(s) shall be copper finned copper tube. The number of tubes and fin spacing shall be submitted on coil selections made. Coils shall be constructed and certified in accordance with ASHRAE 15 and ARI 410. Furnish drainable coils. Galvanized casing shall be the manufacturer's standard. Design coils for a working pressure of 862 kPa. Hydrostatically test at 2758 kPa and air test at 1379 kPa under water.
 13. Capacity control and defrost control shall be identified and explained in submittal.
 14. Provide access doors of the hinged and insulated type. Locate as required for proper access to the following:
 - a. Dampers.
 - b. Filters.
 - c. Coils.
- D. A drain pan shall be provided for each AHU. A condensate Pump shall be required in each AHU where the gate configuration does not allow for gravity drain to a potable water ramp drain. The condensate pump shall be lightweight, self priming, and capable of running dry without damage. Minimum pump rating shall be 0.2 L/sec, 13 M head, with suitable horsepower rating.
1. Position the drain pan under the coil section. Drain pan shall be stainless steel. Condensate pump shall be provided with a summer/winter switch or internal float switch actuated assembly.
- E. Controls shall include, but are not limited to a remote "start/stop" push button station accessible from the ground level for each AHU.
1. **[ModBus] [Wireless]** connection to LonWorks compatible building automation system to monitor, view, and control all points. Wiring, Conduit and interface shall be included with PC Air unit and coordinated with other components.
- F. A narrow body air handling unit shall be capable of delivering a minimum of 68 Kg/min of 1.7 degrees C air at 2488 Pa total pressure at the end of the aircraft air hose nozzle through 18 M of air hose at sea level. Provide a 20 kW auxiliary electric strip heater. The air handling unit provided in this contract shall be designed appropriately to compensate for operating conditions at installation altitude. The supply air pressure shall not exceed the aircraft manufacturer's maximum inlet pressure.
- G. A wide body air handling unit shall be capable of delivering a minimum of 110 Kg/min

of 0 degrees C air at 5473 Pa total pressure at the end of the aircraft hose nozzle through 18 M of air hose at sea level. Provide a 40 kW auxiliary electric strip heater. The air handling unit provided in this contract shall be designed appropriately to compensate for operating conditions at the installation altitude.

- H. A B 747 / A340 air handling unit shall be a single 190 Kg/min unit capable of delivering a minimum of 85 Kg/min of 0 degrees C air at 4975 Pa total pressure at the end of each of two aircraft air hose nozzles through 18 M of air hose at sea level. Provide a 53 kW auxiliary electric strip heater. The air handling unit provided in this contract shall be designed appropriately to compensate for operating conditions at the installation altitude.

2.5 MOTORS

- A. Provide motors in accordance with Division 26 sections.
- B. Starters, Electrical Devices, and Wiring: Electrical devices and connections are specified in Division 26.

2.6 CONTROL SYSTEMS

- A. Refer to Section [236619 "Preconditioned Air Electric Control Systems"] [236621 "Preconditioned Air Sequence of Operation"] for controls requirements.

PART 3 - EXECUTION

- A. FACTORY TEST OF AIR HANDLING UNITS
- B. Factory test each air handling unit prior to shipment. Test each unit in accordance with the following procedure and submit a record of the results of each test identifying the unit number of each data set.
- C. Apparatus: Static pressure, either external or total, shall be measured with a U tube manometer. The manometer must have graduations no larger than 5.0 Pa from zero to 500 Pa, and graduations no larger than 50 Pa from 500 Pa up.
1. Volume flowrate shall be measured by static pressure drop across ASME long radius nozzles. The nozzles shall be housed in a multiple nozzle airflow chamber, which is built and operated in accordance with AMCA Standard 210 85, "Laboratory Methods of Testing Fans for Rating". The manometer used to measure the pressure drop must have a demonstrated accuracy of 2.5 Pa.
 2. Air density shall be determined with wet and dry bulb thermometers and a mercury barometer, or the equivalent. An ammeter, voltmeter, and tachometer shall be employed.
- D. Procedure: The central station air handler will be connected to the flow chamber and sealed well. The fan unit will be started and allowed to run for at least five minutes. A

static pressure load shall be exerted on the fan by dampering or blocking the inlet or outlet. In the case of specified total pressure, the static taps should be placed on either side of the fan wall. In the case of specified external pressure, the static taps should be placed on the inlet and outlet of the cabinet.

1. Static pressure and hence flowrate shall be measured at least at three points. One at a static load near design, one slightly above, and one slightly below. This will yield a short curve intersecting the system curve.
2. Motor amperage draw, line voltage, and fan RPM shall be measured for each performance point.
3. Using the measured density, results shall be corrected to standard conditions or to conditions at job site. Results shall be plotted for comparison to specifications. A central station air handler is considered acceptable when the volume flowrate is at between 97.5 percent and 102.5 percent of design, when evaluated along the specified system curve and the motor amperage draw does not exceed nameplate amperes. Owner's Representative shall be notified five (5) days prior to test.

3.2 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of air handling units.
- B. Do not proceed until unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. PCA air handling units shall be mounted underneath the bridge at the rotunda or the cab.
- B. Arrange installation of units to provide access space around air handling units for service and maintenance.
- C. Furnish all necessary supports, brackets, guard posts, safety hooks, etc., for properly installing all air handling units.
- D. All air handling units shall be properly aligned, adjusted and lubricated before final acceptance.
- E. Perform water and air system testing and balancing as specified in Section 230593 "Testing, adjusting, and Balancing for HVAC".

3.4 CONNECTIONS

- A. Duct installations and connections are specified in other Sections. Make final duct connections with flexible connections.

- B. Electrical Connections: The following requirements apply:
1. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
 2. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables" in compliance with the National Electrical Code.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Inspect the field assembly of components and installation of air handling units including ductwork and electrical connections.
 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 3. Test Reports: Prepare a written report to record the following:
 - a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- C. Hydronic air handling units will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain oil-fired unit heaters.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236600

SECTION 236611 - PRECONDITIONED AIR DX AIR HANDLING UNITS - AVIATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes the following types of direct expansion air handling units:
 - 1. Preconditioned air handling units for narrow-body aircraft; can be applied to wide-body aircraft under favorable conditions (45-60 tons).
- B. Related Requirements:
 - 1. Section 230548.13 "Vibration Controls for HVAC".
 - 2. Section 236600 "Preconditioned Air Hydronic Air Handling Units - Aviation" for hydronic air handling units.
 - 3. Section 236613 "Preconditioned Air Ductwork and Accessories - Aviation" for ductwork and accessories.
 - 4. Section 236616 "Preconditioned Air Electric Control Systems - Aviation" for electric control systems.
 - 5. Section 236619 "Preconditioned Air Sequence of Operation - Aviation" for sequence of operation.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- 1. Product Data: For each type of product. Submit manufacturer's technical product data, including rated capacities of selected model clearly indicated, dimensions, required clearances, weights, furnished specialties and accessories; and installation and start up instructions. Also include the following:
 - a. Fan performance curves with system operating conditions indicated.
 - b. Motor ratings and electrical characteristics plus motor and fan accessories.
 - c. Materials gauges and finishes.
 - d. Dampers, including housings, linkages, and operators.
 - e. Submit air filter manufacturer's technical product data including dimensions, weights, required clearances and access, flow capacity including initial and

- final pressure drop at rated air flow, efficiency and test method, fire classification, and installation instructions.
2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Shop drawings detailing fabrication and installation for metal supports and anchorage for air handling unit equipment.
1. Submit shop drawings detailing the manufacturer's electrical requirements for power supply wiring. Submit manufacturer's ladder type wiring diagrams for interlock and control wiring.
 - a. Clearly differentiate between portions of wiring that are factory installed and portions to be field installed.
- 1.4 INFORMATIONAL SUBMITTALS
- A. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the Quality Assurance Article.
 - B. Field quality-control reports.
- 1.5 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For preconditioned air DX air handling units to include in operation and maintenance manuals.
 1. Submit maintenance data and parts list for each air handling unit, including "troubleshooting" maintenance guide, servicing guide and preventative maintenance schedule and procedures. Include this data in the maintenance manual; in accordance with requirements of Section 230400 "Basic HVAC Requirements" and Division 1.
 - B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.6 MAINTENANCE SUBMITTALS
- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Filters: One (1) set of filters for each unit.

1.7 QUALITY ASSURANCE

- A. ARI Compliance: Coils shall comply with ARI 410; Air filter equipment shall comply with ARI 850.
- B. ASHRAE Compliance: Air filters shall comply with ASHRAE Standard 52 for method of testing, and for recording and calculating airflow rates; and Standard 15 Safety Code for Mechanical Refrigeration.
- C. NFPA Compliance: Comply with applicable portions of NFPA 70, for components and installation of air handling units.
- D. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.
- E. UL Compliance: Components shall be UL listed and labeled.
- F. Comply with the local building and fire codes as required by jurisdictional authorities.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Lift and support units with the manufacturer's designated lifting or supporting points.
- B. Disassemble and reassemble units as required for movement into the final location, following manufacturer's written instructions.
- C. Deliver fan units as factory assembled units to the extent allowable by shipping limitations, with protective crating and covering.
- D. Store all equipment and material in suitable facilities until delivery and acceptance by the DEN Project Manager.
- E. Each air handling unit shall be easily mounted and removed from the aircraft bridge without permanent damage to the bridge or its operation.

1.9 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements".

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Handling Units:
 - 1) Twist, Inc.
 - 2) **<Insert manufacturer's name>**.
 - 3) or approved equal.
 - b. Air Filters:
 - 1) American Air Filter Company.
 - 2) Farr Company.
 - 3) Research Products Corp.
 - 4) **<Insert manufacturer's name>**
 - 5) or approved equal.

2.2 GENERAL DESCRIPTION

- A. The pre-conditioned air unit shall be an all electric, self-contained, automatically controlled air conditioning unit that provides ventilation, cooling, dehumidifying, filtering, and heating of air supplied to parked aircraft. The unit shall use direct expansion, vapor cycle technology. The pre-conditioned air unit shall be designed to provide comfortable cabin temperatures for passengers and crew during pre-flight, turn-around, overnight parking and maintenance operations.
- B. Provide a compact, minimum weight, and low noise insulated DX air handling unit that can be mounted on equipment stands or passenger loading bridges, such that the operational characteristics of the bridge are unrestricted and the bridge's structural integrity is not compromised.
 1. 45-60 Ton Stand-Mounted: The DX units shall be stand mounted on the apron. All stands shall be designed and manufactured by the pre-conditioned air unit manufacturer. Any proposed apron-mounted air handling unit shall require a telescoping duct across the bridge. It is unacceptable to use flexible air duct (hose) from the rotunda out to the bogie. Location for mounting the air handling unit underneath the bridge shall be behind the bogie wheels and as indicated on the contract drawings.
 2. 45, 60, and 90 Tons Bridge-Mounted: The DX units shall be mounted to the underside of the passenger boarding bridges on the "C" Tunnel, as far back from drive column as possible. All support brackets and accessories shall be designed and provided and by the pre-conditioned air unit manufacturer.

- C. Unit shall be free of vibration transmission and installed with vibration isolators when necessary.
- D. The air handling unit at each gate shall contain evaporator coils, evaporator blower, compressors, condenser coils, condenser fan, refrigeration and temperature controls, smoke detector, electric resistance heaters, filters, complete motor starting equipment (including disconnect switch), condensate drain pan, and condensate discharge pump (where gravity drain to potable water drain cannot be accomplished) to provide the required cooled, ventilated or heated air to maintain the aircraft cabin temperature specified.
- E. The air handling unit(s) shall have the capacity required to sufficiently cool the largest designated aircraft parked at a gate, considering quantity of air to be delivered and static pressures.
 - 1. Units serving wide-body gates shall also operate properly when serving narrow-body aircraft at the same gate.
 - 2. Units service B-747 gates shall also operate properly when serving a wide-body or narrow-body aircraft at the same gate.
- F. The blower shall be sized for the appropriate variable volume airflow requirements. The unit size shall be selected so that the fan brake horsepower does not exceed the maximum required over the design operating range of the unit at the total static pressure.
- G. Unit external static pressure shall be defined as the gauge pressure measured at the outlet of the air handling unit.
 - 1. The Contractor shall submit data presenting the gauge pressure that the proposed air handling unit can produce at the outlet of the air handling unit and at the aircraft connection through 45 feet of hose and an aircraft adapter nozzle in the submittal.
- H. Horsepower shall be selected based on the Contractor's choice of equipment based on the external resistance of the system.
 - 1. Contractor shall furnish the fan motor and unit size adequate for final total static pressure and maximum brake horsepower requirements.
 - 2. Minimum horsepower requirement for narrow-body air handling units shall be 15; for wide-body air handling units, shall be 40; and for B-747/A340 air handling units shall be 50.
- I. Return air to the unit shall not be utilized.
- J. The Contractor shall submit evidence that coordination efforts have been made with the bridge manufacturer for bridge-mounted DX air handling units equipment weights, static and dynamic loading, location, and safety factors.
- K. The construction of the unit shall be as follows:

1. Of a material sufficient to provide adequate structural rigidity of frame and enclosure.
 2. Of a noncorrosive nature.
 3. Provided with thermal insulation for conditions encountered in normal usage.
- L. Where applicable, equipment exterior shall be primed and painted to match bridge color. Equipment interior shall be manufacturer's standard.
- M. The maximum sound level for the DX air handling units at maximum cooling shall not exceed 85 dBA at a distance of 15 feet from the unit. Sound power level radiated by the unit outlet and at the unit inlet when the unit is operated at the designated capacity shall be furnished with the submittal.
- N. No dirty filter indications will be required. However, Contractor shall include in the O&M manuals provisions for scheduled, routine filter cleaning or replacement.
- O. All apron mounted DX air handling units shall be installed with guard posts for protection from ramp activities.
1. Guard posts shall be 6 inches in diameter concrete filled steel pipes embedded 2' 0" minimum in an 18 inch square concrete foundation and projecting 3' 6" above grade.
 2. Guard posts shall be located at all corners of equipment and spaced no more than 4' 0" apart.
 3. All posts shall be painted to match existing posts.
 4. Post locations shall not inhibit access to PCA service areas.
- P. Capacity control and defrost control shall be identified and explained in submittal.
- Q. Provide access doors of the hinge type or removable panels. Locate as required for proper access to the following:
1. Compressors.
 2. Blower/damper.
 3. Filters.
 4. Coils.
- R. Controls panel shall include, but are not limited to:
1. A remote "start/stop" push button station shall be provided, accessible from the ground level for each AHU.
 2. "ON" light.
 3. "Ready" light (lighted pushbutton).
 4. Stop/Reset Pushbutton (red light for fault)
 5. WB/NB pushbutton or B 747/WB/NB pushbutton as applicable.
 6. Wireless connection to LonWorks compatible building automation system to monitor, view and control all points. Wiring, conduit and interface shall be included with PC Air unit and coordinated with other components.
- S. Internal ductwork of air handler shall be stainless steel or aluminum construction.

- T. The unit shall have a variable frequency drive (VFD) to modulate and provide a soft start for airflow. The VFD shall gradually ramp up when the unit is activated to minimize hose snap.

2.3 SCHEDULE 2 - 45, 60 AND 90 TON UNITS

- A. PRODUCT DATA SHEET 1 - The unit design shall consist of three refrigeration systems to provide multiple stages of control.

1. Refrigeration Circuit Configuration: The refrigeration circuit configuration will consist of a Pre-Cool System, a Primary System and a Secondary System.
- a. Refrigeration Circuit Configuration: The refrigeration circuit configuration will consist of a Primary System, a Middle System, and a Secondary System.

- 1) Primary System: The Primary System to be comprised of basic refrigeration circuits consisting of an evaporator coil, compressor, condenser coils, necessary piping, and a means of controlling the flow of refrigerant. The Primary System takes air from the outside, through the air filters, through the blower where it picks up the heat of compression from the blower, and cools the air. This stage takes a large amount of moisture out of the air. The air is then directed to the Middle System.
- 2) Middle System: The Middle System to be comprised of basic refrigeration circuits consisting of an evaporator coil, compressor, condenser coil, necessary piping, and a means of controlling the flow of refrigerant. The Middle System intakes air from the Primary System, where it was cooled, further cools it, and discharges it to the Secondary System.
- 3) Secondary System: The Secondary Systems to be comprised of basic refrigeration circuits consisting of an evaporator coil, compressor, condenser coil, necessary piping, and a means of controlling the flow of refrigerant. The Secondary System intakes air from the Middle System, where it was cooled, further cools it, and discharges it to the aircraft.
- 4) Control Stages from low ambient to high temperatures:

Stage:	System:	Mode of Operation:
1	Three (3) Stages of heat	Heat
2	Two (2) Stages of heat	Heat
3	One (1) Stage of heat	Heat.
4	Blowers only	Ventilate
5	Secondary System	Cool
6	Primary and Secondary Systems.	Cool
7	Pre-Cool, Primary, Secondary	Cool

- 5) The unit shall be designed to use one blower system. The airflow shall be reduced with the VFD for narrow-body mode and heating

modes.

- 6) The condensers shall use one or two condenser fans and motors.
- 7) The air shall be filtered with 2" thick aluminum washable type filters.

2. Air Conditioning Components:

- a. Refrigerant Compressor: The refrigerant compressors shall be hermetic scroll type, 2-pole motor, unidirectional compressor with a solidly mounted compressor base assembly and with oil Sight glass and oil charging valve.
- b. Condenser Coil: the condenser coil shall be copper-tube / aluminum fin heat exchanger. Copper tubes shall be rifled and aluminum fins raised lanced to intensify heat transfer.
- c. Filter-Drier: A replaceable sealed-type filter-drier, installed in the liquid line, to remove moisture and contamination from the refrigerant. The filter-drier shall contain a 100-mesh screen and a molded blend of desiccants for acid and water removal.
- d. Sight Glass: A combination moisture and liquid indicator shall be installed in the liquid line to monitor the flow and moisture content of the refrigerant. The sight glass color indicator is to be protected by a pad and screen and changes color on the basis of relative moisture in the refrigerant.
- e. Expansion Valve: A thermostatic expansion valve to automatically meter the refrigerant flow to the evaporator coil by sensing evaporating pressure and temperature of the vapor leaving the evaporator coil.
- f. Evaporator Coil: The evaporator coil shall be copper tube / aluminum fin heat exchanger with rifled copper tubing and raised lanced aluminum fins to intensify the heat transfer process.
- g. Electronic Discharge Bypass Valve: An electronic discharge bypass valve shall be installed in the Secondary System circuit to prevent the coil from dropping below freezing and to control the capacity of this coil.
- h. Pressure Transducers: Located as appropriate according to sound engineering practices, the transducers shall be fully encapsulated, non-adjustable, direct mount controls for use with non-corrosive refrigerants. These controls shall be fitted with a 1/4 inch SAE female flare fitting with an internal depressor for the Schrader valves located in the piping to prevent refrigerant loss during replacement.
- i. Access (Schrader) Valves: 1/4 inch SAE male valves designed for flare connection used as ports for pressure switch connections and access to the system.
- j. A 3/8 SAE flare charging valve shall be installed in the suction and discharge lines for evacuating and charging the system.

3. Air moving Components:

- a. Supply air blower:
 - 1) 2-pole motor, direct driver, radial wheel turbo pressure type blower with anti-spark and corrosion wheel.
 - 2) Blower motors shall be totally enclosed fan cooled, Direct-connected to blower impeller and of NEMA design B, Class F insulation, 1.15

service factor.

- b. Cooling Air Fan: Axial type, 4-pole or 6-pole motor driven fan with spark and corrosion proof fan blades. The motor is fan-cooled, totally enclosed of NEMA Design B, Class F insulation, 1.15 Service Factor.
 - c. Air Filter: Used to filter intake ambient air, the air filter shall be the cleanable, viscous impingement type
 - d. Control of the unit shall be by means of three or four push buttons. Two or three buttons for Start, one button for Stop/Reset of the unit. These modes, and all of the components shall be controlled by a solid state Direct Digital Controller (DDC) with communication capability. This capability can be linked to monitor the performance of the unit.
4. Safety Provisions and Components:
- a. Circuit Protection: The following systems and / or components will be protected against short-circuit currents or grounds by means of properly selected circuit breakers or fuses:
 - 1) Main Power.
 - 2) Blower motor.
 - 3) Fan motors.
 - 4) Compressor motors.
 - 5) Heater stages.
 - 6) Transformer primary winding (2-pole).
 - 7) Transformer secondary winding, 24 volt (1-pole).
 - b. Overload Protection: Each motor shall be protected from damaging overload currents as follows:
 - 1) Compressor motors: With solid-state built-in protection.
 - 2) Blower Motor: Overload protection provided by the VFD.
 - 3) Fan Motors: With relays of the manual reset type and adjustable setting range type.
 - c. Refrigerant Extreme Pressure Protection: High and low-pressure limit transducers shall protect each refrigeration system. High and low limit pressure transducers shall be used on all refrigeration systems.
 - d. Compressor Short Cycling Protection: Each refrigerant compressor motor shall be protected against short cycling (multiple starts and stops over a short period) by a run-limit timer. The timer shall be programmed in the controller; wired to the motor control circuit to provide a minimum 3-minute delay on re-energizing the compressor motors after each stop.
5. Performance and Capabilities: The following are the design criteria that have been established for the 45 Ton pre-conditioned air units (basic unit performance and configuration are shown in schedules on the drawings):
- a. Outdoor Design Temperatures:

- 1) Summer:
 - a) 92°F db/59°F wb
 - b) 95°F db/63°F wb – Air Cooled Condensing Temperature
 - 2) Winter:
 - a) -5°F db
 - b. Performance Outputs: When operating in the Cooling Mode at design ambient conditions and at the nominal airflow rates, the unit shall deliver 34°F (1°C) air at the unit. When operating in the Heating Mode the unit shall deliver air temperatures between 100°F (38°C) and 160°F (71°C) at the unit.
 - c. Nominal airflow has been shown in the drawing schedules; however, the unit shall be capable of operating at increased airflow rates with a coincident decrease in static pressure. The unit shall be capable of delivering up to 15 percent greater airflow with a concomitant increase in cooling-duty supply air temperature of approximately 5°F.
 - d. Blowers must be adjusted for site altitude of 5,400 ft.
6. Miscellaneous Equipment:
- a. Supply Air Duct: The length of duct going from the pre-conditioned air unit to the aircraft shall be 60 feet.
 - b. Mode Selector: The controls shall be three or four push buttons mounted on the passenger loading bridge.
 - c. Hose Trolley: steel construction with safety yellow finish, toe brakes, capacity of 80 feet of 14" PCA duct.
 - d. Supply Hose Reducer: The PC air unit shall be supplied with a fabric duct that attaches into the 14-inch duct and reduces it to 8-inch duct.
 - e. Provide 2" tall reflective black and yellow, angle-striped, reflective safety tape on the bottom edges of all loading bridge mounted units.

2.4 AIR HANDLING UNIT SUPPORT

- A. All air handling units shall be supported on a factory furnished stand. Stands shall be constructed of steel shapes complying with ASTM A 36, ASTM A 572 grade 50. Stands shall be coated with a baked enamel finish with the color matching the unit or safety yellow.
- B. Field Welding: Comply with AWS D1.1 Structural Welding Code - Steel, as referenced in Part 1.
- C. Supports for all loading bridge mounted units shall be provided by the air handling unit supplier.

2.5 CONTROL SYSTEMS

- A. Refer to Section [236619 "Preconditioned Air Electric Control Systems"] [236621 "Preconditioned Air Sequence of Operation"] for controls requirements.

2.6 EQUIPMENT SCHEDULES

45- TON PRECONDITIONED AIR UNITS:

Tons Nominal (Actual Compressor Tonnage)	45
Unit Weight (lbs)	4500
Refrigerant	R-410A
Power Voltage/Hertz/Phase	480-60-3
Rated Amps	150
Compressors, Scroll @ 60 Hz Rating	15, 15, 15 Ton
Blower H.P.	25
Design Airflow lb/min (kgs)	275 (2.08)
Static at Aircraft in. Wc (kPa)	25 (6.25)
Cooling Discharge Temperature degrees F/C	32 (0.6) - 36 (3.3)
Heating Discharge Temperature degrees F/C	100 (38) - 160 (71)

NOTE: Blowers shall be corrected for site altitude of 5,400 ft. above sea level.

60- TON PRECONDITIONED AIR UNITS:

Tons Nominal (Actual Compressor Tonnage)	60
Unit Weight (lbs)	4850
Refrigerant	R-410A
Power Voltage/Hertz/Phase	480-60-3
Rated Amps	200
Compressors, Scroll @ 60Hz Rating	20, 20, 20 Ton
Blower H.P.	40
Design Airflow lb/min (kgs)	325 (2.45)
Static at Aircraft in Wc (kPa)	30 (7.5)
Cooling Discharge Temperature degrees F/C	32 (0.6) - 38 (3.3)
Heating discharge Temperature degrees F/C	100 (38) - 160 (71)

NOTE: Blowers shall be corrected for site altitude of 5,400 ft. above sea level.

90- TON PRECONDITIONED AIR UNITS:

Tons Nominal (Actual Compressor Tonnage)	90
Unit Weight (lbs)	7950
Refrigerant	R-410A
Power Voltage/Hertz/Phase	480-60-3
Rated Amps	300
Compressors, Scroll @ 60Hz Rating	25, 25, (2)20 Ton
Blower H.P.	60
Design Airflow lb/min (kgs)	500 (3.78)

Cooling Discharge Temperature F/C	32 (0.6) - 38 (3.3)
Heating Discharge Temperature F/C	100 (38) - 160 (71)
Outlet Ducts	Two (2) 14-inch Diameter

NOTE: Blowers shall be corrected for site altitude of 5,400 ft. above sea level.

PART 1 - EXECUTION

2.7 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of air handling units.
- B. Do not proceed until unsatisfactory conditions have been corrected.

2.8 INSTALLATION, GENERAL

- A. PCA air handling units shall be mounted underneath and on the bridge. Units may be apron mounted due to weight considerations, with DEN Project Manager's approval.
- B. Arrange installation of units to provide access space around air handling units for service and maintenance.
- C. Furnish all necessary supports, brackets, guard posts, safety hooks, etc., for properly installing all air handling units.
- D. All air handling units shall be properly aligned, adjusted and lubricated before final acceptance.
- E. Perform system testing and balancing as specified in Section 230593 "Testing, Adjusting, and Balancing for HVAC".

2.9 CONNECTIONS

- A. Duct installations and connections are specified in other Division 23 Sections. Make final duct connections with flexible connections.
- B. Electrical Connections: The following requirements apply:
 - 1. Electrical power wiring is specified in Division 26.
 - 2. Temperature control wiring and interlock wiring as specified in Section 236619 "Preconditioned Air Electrical Control Systems".
 - 3. Grounding: Connect unit components to ground in accordance with the National Electrical Code.

2.10 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
 - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
 - 2. Inspect the field assembly of components and installation of DX air handling units including ductwork and electrical connections.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.

2.11 DEMONSTRATION

- A. Startup Services:
 - 1. Provide the services of a factory authorized service representative to start up PCA DX air handling units, in accordance with manufacturer's written start up instructions.
 - 2. Test controls and demonstrate compliance with requirements.
 - 3. Replace damaged or malfunctioning controls and equipment.
- B. Operating and maintenance training for Owner's Representative is described in Section 230593 "Testing, Adjusting and Balancing for HVAC".
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

2.12 ADJUSTING, CLEANING, AND PROTECTING

- A. Clean unit cabinet interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheel and cabinet.

PART 3 - MEASUREMENT

3.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 4 - PAYMENT

4.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236611

SECTION 236614 - PRECONDITIONED AIR DUCTWORK AND ACCESSORIES - AVIATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes telescoping ductwork, glycol over the bridge devices, aircraft adapter nozzles, baskets, flexible aircraft duct (hose), miscellaneous hard ductwork and fittings, and flexible connections.
- B. Related Sections:
 - 1. Section 236600 "Preconditioned Air Hydronic Air Handling Units - Aviation" for preconditioned air hydronic air handling units.
 - 2. Section 236611 "Preconditioned Air DX Air Handling Units - Aviation" for DX air handling units.
 - 3. Section 236616 "Preconditioned Air Electric Control Systems - Aviation" for electric control systems.
 - 4. Section 236619 "Preconditioned Air Sequence of Operation - Aviation" for sequence of operation.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Submit manufacturer's technical product data for each type of ductwork, glycol over the bridge device, fitting, flexible connection, aircraft adapter nozzle, and basket, including dimensions, capacities, and materials of construction; and installation instructions.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Submit manufacturer's assembly-type shop drawings for each type of product data required, showing interfacing requirements with equipment, method of fastening or support, and methods of assembly of components.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Submit manufacturer's maintenance data including parts list for each type of product data required. Include these data, product data, and shop drawings in maintenance manual in accordance with requirements of Division 1.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Firms regularly engaged in manufacture of ductwork and accessories, of types and sizes required, whose products have been in satisfactory use in similar service for not less than three (3) years.
- B. Codes and Standards:
 - 1. SMACNA Compliance: Comply with applicable portions of SMACNA HVAC Duct Construction Standards, 1985 edition.
 - 2. Industry Standards: Comply with ASHRAE recommendations pertaining to construction of ductwork accessories, except as otherwise required.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store flexible aircraft duct (hose), aircraft adapter nozzle, basket, glycol over the bridge device and telescoping duct to the jobsite in original unopened containers with labels indicating manufacturer, product name, and related data.
- B. Examine all items for concealed damage or flaws and report any damage.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. **Flexible Aircraft Duct (Hose):**

- a. Air-A-Plane Corporation.
 - b. AmCraft.
 - c. J&B Aviation.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Aircraft Adapter Nozzle:
- a. Air-A-Plane Corporation.
 - b. J&B Aviation.
 - c. Devtec Corporation.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
3. Basket:
- a. J&B Aviation.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
4. Hose Reels:
- a. Air-A-Plane Corporation.
 - b. J&B Aviation.
 - c. Reelcraft Industries, Inc.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
5. Telescoping Air Duct:
- a. Cavotec INET US Inc.
 - b. Twist Inc.
 - c. **<Insert manufacturer>**
 - d. or approved equal.
6. Hose Trolley:
- a. Metroplex Conveyor
 - b. **<Insert manufacturer>**
 - c. or approved equal.

2.2 SHEET METAL MATERIALS

- A. Sheet Metal, General: Provide sheet metal in thicknesses required, packaged, and marked as specified in ASTM A 700.
- B. Galvanized Sheet Steel: Lock-forming quality, ASTM A 527, Coating Designation G90. Provide mill phosphatized finish for exposed surfaces of ducts exposed to view.

2.3 SEALING MATERIALS

- A. The Contractor shall insure that ductwork (hard and flexible) on the bridge is free from excessive air leaks. Contractor shall use sealants as recommended by the manufacturer for the application of preconditioned air ductwork.

2.4 HANGERS AND SUPPORTS

- A. Hangers: Furnish hangers and supporting systems in accordance with Section II of SMACNA and suitable for outdoor installation.
- B. Where galvanized steel ducts are installed, provide hot-dipped galvanized steel shapes and plates.
- C. Straps and Rod Sizes: Conform with Table 5-1 in SMACNA HVAC Duct Construction Standards, 2005 edition, for sheet steel width and gauge, and rod diameters. All materials must be suitable for outdoor installation.
- D. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials, and suitable for outdoor installation.

2.5 ROUND DUCT FABRICATION

- A. Round Ducts: Fabricate round supply ducts with spiral lockseam construction. Comply with SMACNA HVAC Duct Construction Standards, Table 3-2 for galvanized steel gauges.

2.6 ROUND SUPPLY FITTINGS FABRICATION

- A. Ninety Degree Tees and Laterals and Conical Tees: Fabricate to conform to SMACNA HVAC Duct Construction Standards, 1985 edition, Figures 3-4 and 3-5, and with metal thicknesses specified for longitudinal and straight duct.
- B. Elbows: Fabricated in die-formed, gored, pleated, or mitered construction. Fabricate the bend radius of die-formed, gored, and pleated elbows 1.5 times the elbow diameter. Provide elbows meeting the following requirements:
 - 1. Mitered Elbows: Fabricate mitered elbows with welded construction in metal thicknesses specified below.
 - a. Mitered Elbows Radius and Number of Pieces: Construct elbow to comply with SMACNA HVAC Duct Construction Standards, Table 3-1.
 - 2. Round Elbows: Larger than 350 mm: Gored elbows, except where space restrictions require a mitered elbow.
- C. PVC-Coated Elbows and Fittings: Fabricate elbows and fittings as follows:

1. Round Elbows 225 to 650 mm: Standing seam construction.
2. Other Fittings: Riveted and bonded joints.
3. Couplings: Slip-joint construction with a minimum of a 50 mm insertion length.

2.7 SCHEDULE 2 - TELESCOPING AIR DUCTS

- A. PRODUCT DATA SHEET 1 - General: The telescoping air duct shall be a complete assembly of rigid insulated tubing sections, air seals or gaskets, guide bearings, brackets and other mounting and alignment devices. It shall be designed to extend and retract during the full range of motion of a telescoping passenger loading bridge to which it is attached.
- B. PRODUCT DATA SHEET 2 - Materials and Construction: Telescoping air duct shall be rigid cross-bridge, shall be foam core fiberglass with minimum 1/8" inner and outer fiberglass layer for rigid construction. Polyurethane insulation core shall be flame retardant, fireproof and smoke proof, as tested and demonstrated according to approved NFPA procedures. Telescoping section shall have Teflon bearings and foam seals to minimize air leaks. Seals shall be provided as necessary to limit air leakage during operation to less than 1% under the above rated air pressure conditions. Telescoping air duct to be designed to maximize airflow and minimize heat gains when utilizing subfreezing airflow. The number of telescoping sections shall match the number of tunnels of the passenger loading bridge at each gate. Provide no hindrance or resistance to bridge retraction or extension in excess of 110 lbs of force opposing the bridge motion.
- C. PRODUCT DATA SHEET 3 - Ratings: The TAD shall be rated to carry pressurized air at up to 40 inches water column at temperatures between -20°F and +130°F. In order to accommodate the required airflows within acceptable pressure drop limits, the inner diameter of the smallest section of duct shall be at least 14 inches.
- D. PRODUCT DATA SHEET 4 - Mounting: Furnish telescoping duct with all brackets and supports as recommended by the manufacturer's installation requirements.
- E. PRODUCT DATA SHEET 5 - Quality: The construction shall allow extension and retraction of the duct assembly while mounted on the bridge for a minimum of 50,000 full cycles or ten (10) years without requiring inspection or any scheduled maintenance. This shall be proven in practice by a minimum of 100 previously-installed units in continuous service on passenger boarding bridges. Minimum overlap between duct sections is 12" regardless of duct diameter.
- F. PRODUCT DATA SHEET 6 - Safety: Provide reflective 6" tall, black and yellow, angled-stripe, reflective safety tape on the bottom edges of ductwork.

2.8 SCHEDULE 3 - FLEXIBLE AIRCRAFT DUCT (HOSE)

- A. PRODUCT DATA SHEET 1 - Flat Duct Characteristics – Outer Surface:
 1. Orange colored outer cover shall be constructed of 1000 denier Nylon, tight

- weave construction, with polyurethane laminated backing. The finished material thread is nylon type thread 66. Vinyl outside surface is not acceptable.
2. The minimal grab tensile strength shall be:
 3. Warp 600 lbs.
 4. Fill 500 lbs.
 5. The minimal Torque tear strength shall be:
 6. Warp 50 lbs.
 7. Fill 50 lbs.
 8. Material shall have fire resistance of 3 seconds maximum for flame out, 5 seconds maximum for glow, and 5 inches maximum for char length.
 9. The abrasion resistance at the end of 1000 wear cycles the fabric coating shall not be worn to such an extent that the basic fabric is torn by the abraser wheel. (H-22 Abraser wheel under 1000).
 10. The material shall not exceed 10% thickness, 15% weight, and 20% volume increase if soaked for 48 hrs. in 91 octane gasoline, SAE No. 10 oil and water.
 11. No scorching or other harmful effects to be resulted following hot air flowing inside at 170 degrees F for two hrs. No harmful effects due to flexing and exposure to -65 degrees F for 24 hrs. Operating temperature range -46 degrees F to +200 degrees F intermittent to +170 degrees Fahrenheit.
 12. There shall be no visual evidence of deterioration or fungus growth per MIL-STD-810, Method 508.1, Procedure II.
 13. All stitching shall be nylon thread.
 14. 2-ply cuffs shall be at each end of each section of flat duct hose. Each section of hose shall have Velcro connections for means of attaching and securing additional sections.

B. PRODUCT DATA SHEET 2 - Flat Duct Characteristics - Inner Liner:

1. Inner liner shall be constructed of tear resistant woven nylon material. Vinyl inner liner is not acceptable.
2. The minimum grab tensile strength in lbs. shall be 600 lbs warp and 500 lbs fill.
3. The minimum Tongue Tear shall be 50 lbs warp and 50 lbs fill.
4. Material shall have fire resistance for 5 seconds maximum on flame out, 8 seconds maximum for glow, and 5 inches for char length.
5. The inner liner shall be moisture resistant and cold resistant to -65 degrees F.

C. PRODUCT DATA SHEET 3 - Flat Duct Characteristics - Insulation:

1. Insulation shall have the following characteristics:
2. Thickness: 0.05" nominal
3. Weight: 0.02 lbs/sq. ft.
4. Contact Temperature Range -60°F to 180°F
5. Flame spread: 25 in accordance with ASTM E 84
6. Smoke Development: 35
7. Linear shrinkage: none
8. Puncture Resistance: 47 lbs./psi
9. Fire rating NFPA Class A/UBC Class 1
10. Emittance 0.03-0.04
11. Reflectivity 0.96-0.97 in accordance with ASTM C 1371

12. Aluminum foil sheet, bonded to woven polyethylene film, fungi resistant.
13. Thermal Values, R-Value of 3.25 or greater.
14. Insulation (between the inner liner and the outside cover) shall not retain moisture nor create a wicking effect should the insulation come in contact with water or any fluids.

D. PRODUCT DATA SHEET 4 - Spiral-Reinforced Duct Characteristics - Outer Surface:

1. Yellow colored outer surface shall be comprised of 3-ply high strength PVC fabric and black wearstrip. Finished material thickness shall be 0.029 inches.
2. Spiral reinforcement shall be hard-drawn steel with 4" or 6" standard pitch.
3. Temperature Rating: -20 degrees F to 180 degrees F
4. 2-ply cuffs shall be at each end of each section of flat duct hose. Each section of hose shall have Velcro connections for means of attaching and securing additional sections.

E. PRODUCT DATA SHEET 5 - Spiral-Reinforced Duct Characteristics - Inner Liner:

1. 3-ply PVC fabric designed to eliminate delamination commonly found in inner liners
2. Finished material thickness shall be 0.017 inches.

F. PRODUCT DATA SHEET 6 - Spiral-Reinforced Duct Characteristics - Insulation:

1. Stitch-bonded polyester insulation similar to high performance material found in cold weather clothing and camping products.
2. Insulation shall not retain moisture nor create a wicking effect should the insulation come in contact with water or any fluids.

G. PRODUCT DATA SHEET 7 - Pantograph:

1. Contractor shall provide a pantograph for the cables over the bridge service. Pantograph shall be four-piece with 3 looped hinges and have two cable conduits. One (1) conduit shall remain as spare. Pantographs supports shall be by the manufacturer. Proposed device must have satisfactory service in other PCA systems for a minimum of two (2) years.

H. PRODUCT DATA SHEET 8 - Hose Trolley:

1. A three-wheel type metal hose trolley shall be provided to store the flexible supply ducts and aircraft adapter nozzles at each gate. The hose trolley shall be stainless steel and free of sharp edges. Trolleys connected to apron drive bridges shall be constructed such that the trolley can be readily removed and reconnected. All hinges shall be stainless steel. Wheels shall be composite urethane with stainless steel bearings and bushings. No plastic internals shall be used. Trolley design and location shall be approved by the DEN Project Manager.

2.9 FLEXIBLE CONNECTIONS

- A. General: Provide flexible duct connections wherever ductwork connects to vibration isolated equipment. Construct flexible connections of neoprene-coated flameproof fabric with dual clamps at the flexible duct connection to the AHU collar for ease of maintenance. Flexible connector shall be suitable for outdoor installation and pressure classification of supply air. Make airtight joint. Provide adequate joint flexibility to allow for thermal, axial, transverse, and torsional movement, and also capable of absorbing vibrations of connected air handling unit.

2.10 MISCELLANEOUS

- A. Provide one or two flat, insulated, flexible aircraft ducts per gate as required by PCA service for extension of the hard ductwork, from the loading bridge to the aircraft connection(s) at each gate. The flexible ducts shall be provided in segments with a connecting device to allow easy replacement in the field without special tools. The flexible ducts shall be a minimum of 18 M in length, but in no case requiring a "taut" over-extension to the connection point.
- B. Contractor shall supply two aircraft adapter nozzles for each gate.

2.11 SCHEDULE 4 - AIRCRAFT ADAPTER NOZZLE:

- A. PRODUCT DATA SHEET 1 - Properties and characteristics:
1. The adapter shall be manufactured using a Nylon material using Nylon 66 impact modified Super Tough Heat Stabilized and lubricated material known as Hylon Select N1000STHL. The connector is of injection molded construction.
 2. The connector shall be designed to withstand an IZOD tested impact of 16ft/lbs. The method used to conduct this test is ASTM D 256 for scored material.
 3. The connector assembly shall be capable of operating under the following conditions with no deleterious effect on the connector:
 4. High Temperature range 250 degrees F.
 5. Low Temperature range -40 degrees F.
 6. The connector shall have integral means to prevent the stainless hose clamps from sliding off.
 7. The connector flange to remain rigid under all operational conditions to provide positive seal to aircraft connection point to reduce risk of air loss. The gasket material for the flange shall be 1/2" thick and consist of foam neoprene, medium density. This gasket shall be glued to the flange.
 8. The inlet shall be beveled to prevent damage to flat duct hose.
 9. PRODUCT DATA SHEET 2 - Latching Mechanism
 10. Connector latching mechanism shall be 100 percent slot filled and provide positive connection to mating aircraft flange preventing unintentional disengagement.
 11. Latching hooks shall be retractable to minimize risk of damage to hose in storage condition.
 12. Latching mechanism shall be removable to allow for easy access should repairs

or adjustments become necessary.

B. PRODUCT DATA SHEET 3 - Operating Levers:

1. Each operating lever shall have dimensions of not less than 7 inches long and 1 inch wide.
2. Each operating lever shall serve as a handle for the purpose of installing adapter to the aircraft.
3. Handle shall be constructed of not less than 3/16", 303 stainless steel.
4. The operators grip area shall be covered with resilient material not less than 4 inches in length for cold weather operation.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine areas and conditions under which ductwork and accessories will be installed. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to installer.

3.2 DUCT INSTALLATION

- A. Duct System Pressure Class: Construct and install each duct system for the specific duct pressure classification required.
- B. Install ducts with the fewest possible joints.
- C. Use fabricated fittings for all changes in directions, changes in size and shape, and connections.
- D. Locate ducts, vertically and horizontally, parallel and perpendicular to passenger bridge lines; avoid diagonal runs. Install duct systems in shortest route that does not obstruct usable space or block access for servicing bridge and its equipment.
- E. Install ducts close to walls, overhead substrates, columns, and other structural and permanent enclosure elements of bridge.
- F. All rigid and flexible ductwork shall be insulated so as to maintain a 3 degree C maximum heat gain from leaving coil temperature to supply temperature at the aircraft.

3.3 INSTALLATION OF DUCTWORK ACCESSORIES

- A. Install ductwork accessories in accordance with manufacturer's installation instructions, with applicable portions of details of construction as shown in SMACNA standards, and in accordance with recognized industry practices to ensure that products serve intended function.

- B. Coordinate with other work, as necessary to interface installation of ductwork accessories properly with other work.

3.4 SEAM AND JOINT SEALING

- A. General: Seal duct seams and joints as follows:
 - 1. Pressure Classifications Greater than 750 Pa: All transverse joints and longitudinal seams.

3.5 HANGING AND SUPPORTING

- A. Install rigid round duct with support systems indicated in SMACNA HVAC Duct Construction Standards, Tables 4-1 through 4-3 and Figures 4-1 through 4-8.
- B. Support horizontal ducts within 600 mm of each elbow.
- C. Support vertical ducts at a maximum interval of 5 m.

3.6 CONNECTIONS

- A. Air Handling Unit Connection: Connect equipment with flexible connectors.
- B. Aircraft Connection: Aircraft connections shall be made with a mating nozzle; referred to in this document as an aircraft adapter nozzle.

3.7 FIELD QUALITY CONTROL

- A. Test for air leakage while system is operating. Remake leaking joints as necessary.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236614

SECTION 236616 - PRECONDITIONED AIR ELECTRIC CONTROL SYSTEMS - AVIATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Related Requirements:
 - 1. Section 230548.13 "Vibration Controls for HVAC".
 - 2. Section 236600 "Preconditioned Air Hydronic Air Handling Units - Aviation" for hydronic air handling units.
 - 3. Section 236611 "Preconditioned Air DX Air Handling Units - Aviation" for DX air handling units.
 - 4. Section 236613 "Preconditioned Air Ductwork and Accessories - Aviation" for ductwork and accessories.
 - 5. Section 236619 "Preconditioned Air Sequence of Operation - Aviation" for sequence of operation.
 - 6. Electrical work shall be as specified in Division 26.
 - 7. Control sequences are specified Section 236619 "Preconditioned Air Sequence of Operation - Aviation".
 - 8. Installation of instrument wells and valve bodies in mechanical systems: Other Division 23 Sections as applicable.
 - 9. For the following work: Division 26 Sections as applicable:
 - a. Power supply wiring for power source to power connection on controls and/or unit control panels. Include starters, disconnects, and required electrical devices, except where specified as furnished, or factory installed, by manufacturer.
 - b. Interlock wiring between electrically operated equipment units; and between equipment and field installed control devices. Interlock wiring specified as factory installed is work of this Section.
 - 10. Provide the following electrical work as work of this Section, complying with requirements of Division 26 Sections:
 - a. Control wiring between field installed controls, indicating devices, and unit control panels.

1.2 SUMMARY

- A. Section includes control panels and all related components, controls, and devices to complete the systems specified herein.

B. General:

1. Contractor shall furnish all design drawings and detailed submittal data corresponding to the complete control system included as part of the Preconditioned Air design. Drawings and specifications are to indicate general arrangement of the equipment, controls, and devices, types of control schemes, and the extent of remote controls as required to make the complete system meet the performance specifications.
2. Systems Included:
 - a. Preconditioned air central chiller plant(s) system.
 - b. Ramp air handling systems.
 - c. The direct digital control system.
3. Type of Control System: Electronic sensing electric or electronic positioning.

C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of preconditioned air electric control system.

1. Submit manufacturer's technical product data for each control device furnished, indicating dimensions, capacities, performance characteristics, electrical characteristics, finishes of materials, and including installation instructions and start up instructions.
 - a. Furnish description or specification sheets on all control components.
 - b. Submit samples of all control system graphic maps to be created or modified with all points to be used.
2. Include data substantiating that materials comply with requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For preconditioned air electric control systems to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Firms regularly engaged in manufacturer of electric control equipment, of types and sizes required, whose products have been in

satisfactory use in similar service for not less than five (5) **<Insert number>** years.

B. Codes and Standards:

1. Electrical Standards: Provide electrical products, which have been tested, listed and labeled by UL and comply with NEMA standards; except AHUs, which shall have, components listed and labeled by UL, or shall be Owner approved.
2. NEMA Compliance: Comply with NEMA standards pertaining to components and devices for electric control systems.
3. NFPA Compliance: Comply with NFPA 90A where applicable to controls and control sequences.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Provide factory shipping cartons for each piece of equipment, and control device. Maintain cartons through shipping, storage and handling as required to prevent equipment damage, and to eliminate dirt and moisture from equipment. Store equipment and materials inside and protected from weather.

1.7 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace preconditioned air electric control system that fails in materials or workmanship within specified warranty period.
1. Warranty Period: Minimum **[two (2)] [five (5)] <Insert number>** years from date of Substantial Completion.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Honeywell, Inc.
 2. Johnson Controls, Inc.
 3. Siemens Corp.
 4. **<Insert manufacturer's name>**.
 5. or approved equal.

2.2 MATERIALS AND EQUIPMENT

- A. General: Provide LonMark certified electric control products in sizes and capacities required, consisting of valves, dampers, thermostats, clocks, sensors, controllers, and other components as required for complete installation. Provide manufacturer's standard control system components as indicated by published product information, designed and constructed as recommended by manufacturer. Provide electric control systems with all specified functional and construction features. Devices shall communicate seamlessly with existing DEN LonWorks-based Honeywell Building Solutions Facility Management System (FMS).
- B. Control Valves: Provide factory fabricated electrical control valves of type, body material and pressure class as determined by manufacturer for installation requirements and pressure class, based on maximum pressure and temperature rating of piping system. Provide valves which mate and match material of connecting piping. Equip control valves with control valve motors, and with proper shutoff ratings for each individual application.
1. Water Service Valves: Equal percentage characteristics with rangeability of 50 to 1, and maximum full flow pressure drop of 35 kPa.
 2. Single Seated Valves: Cage type trim, providing seating and guiding surfaces for plug on "top and bottom" guided plugs.
 3. Double Seated Valves: Balanced plug type, with cage type trim providing seating and guiding surfaces for plugs on "top and bottom" guided plugs.
 4. Valve Trim and Stems: Polished stainless steel.
 5. Packing: Spring loaded Teflon, self adjusting.
 6. Air Handling Unit Control Valves: Provide control valves for control of air handling units that are of integral motor type. Provide 2 position or modulating type valves, electrically actuated by line voltage of 24 V.

2.3 SPACE TEMPERATURE CONTROL ASSEMBLY - BRIDGE SERVICE

- A. Furnish a temperature sensor (probe), which can be placed by gate agents in the aircraft interior. This probe shall sense the aircraft space temperature and control the aircraft space temperature automatically.

2.4 RELAYS

- A. Electrical relays shall be approved industrial type with NEMA 12 general purpose enclosures and multiple contacts as required.
- B. All relays shall be 220 volts or less.
- C. All relays shall have A600 contact rating.
- D. All relays shall have two spare contacts (1 N.O. and 1 N.C.)

2.5 ELECTRONIC - ELECTRIC PROPORTIONAL OPERATORS

- A. Operators shall have single phase 220 volt or 24 volt heavy duty motors and sealed oil immersed gear train.
- B. Operators shall modulate the controlled device without exceeding the torque rating of the motor.
- C. Furnish integral spring return to permit fail safe operation upon power interruption.
- D. Provide built in, adjustable, auxiliary switches where required.
- E. Furnish complete with mounting brackets, control arms, linkage, and cranks.

2.6 TEMPERATURE INDICATOR AND SELECTOR SWITCHES

- A. Control panel mounted electronic precision temperature indicators and selector switches may be used in lieu of control panel mounted dial temperature gauges.
- B. Sensing elements: Wire wound resistance temperature elements.
- C. Provide automatic compensation for ambient temperature variations.
- D. Minimum calibrated accuracy shall be 1 percent of full scale range.
- E. Minimum scale length shall be adequate to provide 1 degree division and a range of approximately -10 to 50 degrees C.
- F. Temperature indicator readings shall not be affected by a supply voltage variation of plus or minus 10 percent line voltage fluctuation.
- G. Maximum response time shall be 6 seconds for full scale deflection.
- H. Selector switches shall be panel mounted momentary contact push button type with approved type nameplates.

2.7 MOTORIZED VALVE ASSEMBLIES - INTERIOR EQUIPMENT AREAS

- A. Assemblies shall include the following:
 - 1. Electronic or electric operators as specified in this Section.
 - 2. Adjustable linkage.
 - 3. Position indicators.
- B. Valve bodies for up to 105 degrees C water service. Bodies shall be as follows:
 - 1. Have adequate flow coefficient Cv for the application and as indicated.
 - 2. Suitable for the temperatures and fluid handled.

3. Provide tight shutoff if single seated.
4. Bronze with screwed ends up to 65 mm.
5. 125 pound cast iron flanged in sizes over 65 mm, unless otherwise indicated due to higher pressures.

- C. Control valve operators shall be adequate to close valves completely against the maximum shutoff pressure of the system.

2.8 ELECTRICAL AND ELECTRONIC CONTROL DEVICES

- A. Switches, potentiometers, and other control components shall be rated at 220 volt service and have suitable dustproof enclosures equal to NEMA 12 general purpose. Provide indicating plates, and identifying nameplates unless otherwise specified.
- B. Transformers shall be furnished as required with enclosed terminals and adequate ratings for use with 220 volt ac primary supply voltage.
- C. Outdoor control devices shall have NEMA 4 weathertight enclosures. Electrical devices installed in hazardous AREAS shall have enclosures approved for the NEC classification.
- D. Water Flow Switches: Provide water flow switches of stainless steel or bronze paddle types. Where flow switches are used in chilled water applications, provide vapor proof type to prevent condensation of electrical switch. Provide pressure flow switches of bellows actuated mercury type or snap acting type, with appropriate scale range and differential adjustment for service indicated.
- E. Local Control Panels: Panels shall be manufacturer's standard, completely enclosed, wall mounted cubicle panels. Control arrangement shall be approved by the Construction Supervisor.
1. Fabricate panels of 1.9 mm furniture quality steel, or 6063 T5 extruded aluminum alloy, totally enclosed, with hinged doors and keyed lock, with manufacturer's standard shop painted finish and color. Provide UL listed cabinets for use with line voltage devices.
 2. Panel Mounted Equipment: Include temperature and humidity controllers, relays and automatic switches, except exclude low temperature protection thermostats, firestats, and other devices excluded in sequence of operation. Fasten devices with adjustments accessible through front of panels. Also include manual switches, including damper "minimum off" positioning switches, "summer-winter" switches, and "manual automatic" switches; and including dial thermometers.
 3. Nameplates: Furnish for all components located on the front of the panel. Nameplates shall be sizes, materials, and contain legends consistent with Contractor's standard practice.
 4. Terminal Block: Furnish for all electrical connections. Identify terminals.
 5. Control Panel Wiring: Wiring shall be as specified in Division 26. Control panels shall be prewired at the factory to terminal strips for field connections. Factory test all wiring. Wiring terminals shall be arranged for top rear control cable connections unless otherwise specified or required. Connect terminal blocks with

approved flexible panelboard wiring to electrical control switches and devices mounted on the hinged door. Wiring shall be neatly arranged and supported in plastic or plated steel brackets.

- F. Central (Master) Control Panels: Provide central control panels of fully enclosed steel cubicle type, with locking doors and/or locking removable backs. Match finish of panels and provide multi color graphic displays, schematically showing system being controlled.
- G. Central Plant Control System: Refer to Section [15495 Preconditioned Air Sequence of Operation for PCA System Computer Control] [15955 - Building Automation System (Honeywell EBI)].
- H. Provide battery backup for all memory devices.

2.9 UNITARY CONTROLLERS

- A. General: Unitary DDC controllers (UCs) shall be standalone, EEPROM-based, configured to perform the sequences specified, and I/O selected for the application. All unitary DDC controllers (UCs) shall be LonMark-approved products and shall support the LonMark Functional Profile for the given application. UC s shall be tested and listed under UL916 for computing devices. UC enclosures shall be flame retardant, compact plastic conforming to UL94-V5 for plenum mounting or plated steel. UCs shall be CE approved and meet FCC Part 15 class B requirements. UC s shall be configured for DIN rail mounting, using industry-standard clip-on adapters, or for direct panel mounting. Each ASC shall be capable of standalone operation and shall continue to provide control functions without being connected to the network. Each ASC will contain sufficient I/O capacity to control the target system.
- B. Communication: The unitary controller shall communicate with other devices on the internetwork using EIA standard 709.1, the LonTalk™ protocol, as the common communication protocol with a minimum transmission speed of 78Kbaud. A twisted-pair cable utilizing T-Taps, star, and mixed topologies on the same network shall support this network. The free topology transceiver (FTT) network shall not be polarity sensitive. Network media shall be Level IV, 22AWG, twisted-pair wire, and shall conform to UL Category 4 for high-speed networks. Cable shall be supplied in plenum and non-plenum-rated versions. Network length shall not exceed 1,640 ft without the addition of Echelon LonWorks repeater achieving an additional length of 3280 ft. For lengths in excess of 3,280 ft, a daisy chain wiring scheme can be employed; using a repeater, this length can be extended to 10,000 ft. Lengths in excess of 10,000 ft will not be allowed. Repeater bus topologies shall include bus segments of 60 nodes unless routers are utilized. Systems communicating at slower speeds shall not exceed 30 nodes per segment to ensure adequate global data and alarm response times.
 - 1. PRODUCT DATA SHEET 2 - Controller shall communicate to BAS remote server via wireless transceiver:
 - a. Lantronix Wireless Device Server.

b. Device Specifications:

- 1) 802.11b/g wireless interface.
- 2) Two DB9 DTE serial ports to support RS-232, RS-422 or RS-485 communication.
- 3) Wireless security with IEEE 802.11i-pSK, WPA-PSK, TKIP protection.
- 4) 256-bit AES, end-to-end encryption.
- 5) Complete with power supply.

C. Environment: The hardware shall be suitable for the anticipated ambient conditions.

1. Controllers used outdoors or in wet ambient conditions shall be mounted within waterproof enclosures and shall be rated for ambient temperature operation at -40 degrees C to +65 degrees C (-40 degrees F to +150 degrees F) and ambient humidity of 5 to 95 percent RH noncondensing.
2. Controllers used in conditioned space shall be mounted in dust-proof enclosures and shall be rated for ambient temperature operation at 0 degree C to +50 degrees C (32 degrees F to +122 degrees F) and humidity of 5 to 95 percent RH noncondensing.

D. Serviceability: Each UC shall be provided with face-mounted LED type annunciation to continually display its operational mode: power, normal, or in an alarm state. As an alternative to the face-mounted integral LED, the control contractor shall provide relay-driven pilot lights mounted at the UC location, which shall provide the specified annunciation. UCs shall be configured for DIN rail mounting, using industry-standard clip-on adapters, or for direct panel mounting. Each controller shall be designed with on-board jacks for quick commissioning and troubleshooting with a portable programming tool.

E. Immunity to power and noise: Controllers shall be able to operate at 90 percent to 110 percent of nominal voltage rating and shall perform an orderly shutdown below 80 percent. Operation shall be protected against electrical noise of 5-120 Hz and from keyed radios up to 5 W at 1 m (3 ft).

F. Transformer: Power supply for the ASC shall be rated at a minimum of 125 percent of ASC power consumption and shall be of the fused or current-limiting type.

G. Provide a standalone Single Zone DDC controller featuring preprogrammed heating and cooling and economizer control algorithms configurable for either standard single zone rooftop unit applications or heat pumps. Controller shall use Echelon LonWorks communication technology for field bus and shall utilize the LonMark Rooftop Unit (RTU) functional profile 8030 for interoperability with third-party LonMark devices in network applications. For rooftop applications, the controller shall have an extended operating temperature rating from -40 degrees F to +150 degrees F so the controller can be mounted directly in the wiring cabinet of AHU. If controller provided does not have a -40 degree F to 150 degree F temperature range, then the device shall be mounted in a separate enclosure with suitable heating and cooling to meet the controller operating temperature range. Controller application software shall include

PID control, set-point resets for energy demand limit control, and economizer minimum position for IAQ control. Separate unoccupied heating and cooling set-points shall be provided. Provide an adaptive algorithm that continuously adjusts the discharge air setpoint as needed. A standby feature shall be provided to reset the occupied temperature set point back to a user-definable limit based on status from an auxiliary device, such as an occupancy sensor or window contact. The controller shall include a temperature wall module connection that may be used in applications where the wall module shall sense temperature, control set point temperature, control occupied and unoccupied, or control fan speed. In addition to internal I/O selected for the application, the controller shall support distributed I/O from the network.

- H. Provide a standalone DDC Fan Coil controller for common two pipe or four pipe fan coil units featuring preprogrammed heating and cooling control algorithms for single or up to three fan speed applications. Controllers shall use Echelon LonWorks communication technology for field bus and shall utilize the LonMark Fan Coil Unit (FCU) functional profile 8020 for interoperability with third-party LonMark devices in network applications. Controllers shall have integral transformers and fan speed relays directly wired to line voltage power 115Vac and 230Vac. Controller application software shall include a set point reset for energy demand limit control. Separate unoccupied heating and cooling set points shall be provided. A standby feature shall be provided to reset the occupied temperature set point back to a user-definable limit based on status from an auxiliary device, such as an occupancy sensor or window contact. The controller shall include a temperature wall module connection that may be used in any applications where the wall module shall sense temperature, control set point temperature, control occupied and unoccupied, or control fan speed. In addition to internal I/O selected for the application, the controller shall support distributed I/O from the network. The control contractor shall furnish and ship damper actuators and Unitary DDC controllers to the zone equipment manufacturer for factory installation. See section <Insert section> and plans for coordination details.
- I. Provide a distributed input and output module that connects sensors and actuators onto the Echelon field bus network for use with a LonWorks general purpose controllers (GPCs) and unitary DDC controllers (UC). LonWorks controllers shall be configured to read and command these points as required or specified. These distributed I/O modules shall use a Neuron® chip and an FTT-10A free topology transceiver for communication on a LonWorks bus, and comply with LonMark Application Layer Guidelines V3.2. I/O. The device shall have extended operating temperature rating from -40 degrees F to +150 degrees F, so it can be mounted directly in a wiring cabinet of monitored appliances. The I/O device shall include a temperature wall module connection that may be used in applications where the wall module shall sense temperature, control set point temperature, control occupied and unoccupied, or control fan speed.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine areas and conditions under which electric control systems are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to Installer.

3.2 INSTALLATION (BRIDGE MOUNTED EQUIPMENT ONLY)

- A. General:

- 1. Field check for clearances and interferences before fabrication.
- 2. Furnish all labor, tools, rigging equipment, scaffolding, and all other materials necessary to make a complete installation of the material and equipment specified and indicated.
- 3. Prepare surfaces and spot apply primer and finishing paint on all equipment after installation where the shop paint has been damaged or flaked off.
- 4. Installation shall equal or exceed the minimum requirements of the applicable codes and these specifications; however, where local codes and ordinances are more stringent, they shall govern.
- 5. Include all material, labor, and changes occasioned by the Contractor's choice of equipment.
- 6. All equipment furnished shall be installed complete including necessary piping, electrical connections, wiring, mounting, etc.
- 7. Contractor shall coordinate his work and interface of his work with others as required, including coordination with the bridge manufacturer to prevent damage to the bridge due to installation of Contractor furnished equipment.

- B. Electrical Wiring and Installation:

- 1. Materials and equipment shall be in accordance with Division 26.
- 2. Install wiring in conduits and provide separate conduits for electronic control circuits. All control circuit wiring shall be 220 volts or less.

3.3 INSTALLATION OF ELECTRIC CONTROL SYSTEMS

- A. General: Install systems and materials in accordance with manufacturer's instructions. Install electrical components and use electrical products complying with requirements of applicable Division 26 Sections of these Specifications. Mount controllers at convenient locations and heights.
- B. Control Wiring: The term "control wiring" is defined to include providing of wire, conduit, and miscellaneous materials as required for mounting and connecting electric control devices.
- C. Wiring System: Install complete control wiring system for electric control systems.

Conceal wiring, except in mechanical rooms and AREAS where other conduit and piping are exposed. Provide multi conductor instrument harness (bundle) in place of single conductors where number of conductors can be run along common path. Fasten flexible conductors bridging cabinets and doors, neatly along hinge side, and protect against abrasion. Tie and support conductors neatly.

- D. Number code or color code conductors appropriately for future identification and servicing of control system. Coding shall match designations shown on the manufacturer's control diagrams.
- E. Unit Mounted Equipment: Where control devices are to be unit mounted, ship such devices to unit manufacturer for mounting and wiring at factory.
- F. Furnish all the necessary components so that the system performs as specified.
- G. Completely adjust and test the systems specified to ensure those control systems perform satisfactorily.
- H. Group control components together in a neat orderly fashion in control panels.
- I. Permanently identify all control components by adhesive embossed plastic label corresponding to the numbers shown on the control diagrams submitted for approval.
- J. Post control diagrams and operating sequences in a frame with glass or clear plastic lens adjacent to the main control station panel. The control diagrams and sequences in final form shall be submitted for approval.
- K. Electronic sensing systems may use local control panel mounted electronic precision temperature indicators and resistance temperature detectors with panel mounted separate pushbuttons for each point of temperature indication in lieu of panel mounted dial thermometers.

3.4 STARTUP

- A. Start up, test, and adjust electric control systems in presence of manufacturer's authorized representative. Demonstrate compliance with requirements. Replace damaged or malfunctioning controls and equipment.
- B. Prepare test and inspection reports.

3.5 ADJUSTING AND CLEANING

- A. Cleaning: Clean factory finished surfaces. Repair any marred or scratched surfaces with manufacturer's touch up paint.
- B. Final Adjustment: After completion of installation, adjust thermostats, control valves, motors and similar equipment provided as work of this Section.

1. Final adjustment shall be performed by specially trained personnel in direct employ of manufacturer of primacy temperature control system.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain systems.
 1. Provide services of manufacturer's technical representative for **[two (2)] <Insert number>** 8-hour days to instruct Owner's personnel in operation and maintenance of electrical control systems.
 2. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 236616

SECTION 236619 - PRECONDITIONED AIR SEQUENCE OF OPERATION - AVIATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes requirements for sequence of operation for preconditioned air. Sequence of operation is defined as the manner and method by which the control system (direct digital control) functions.
- B. Related Sections:
 - 1. Section 230548.13 "Vibration Controls for HVAC".
 - 2. Section 236600 "Preconditioned Air Hydronic Air Handling Units - Aviation" for hydronic air handling units.
 - 3. Section 236611 "Preconditioned Air DX Air Handling Units - Aviation" for DX air handling units.
 - 4. Section 236613 "Preconditioned Air Ductwork and Accessories" for ductwork and accessories.
 - 5. Section 236616 "Preconditioned Air Electric Control Systems" for electric control systems.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For preconditioned air sequence of operation.
 - 1. Submit sequence of operation description along with Piping and Instrumentation Diagram (P&ID) diagram indicating methods and equipment applied to achieve specified operation of PCA system.
 - 2. Include data substantiating that materials comply with requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation Data: For preconditioned air sequence of operation to include in emergency, operation, and maintenance manuals.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Applicable Standards:
 - 1. EIA 485: Standard for Electrical Characteristics of Generators and receivers for Use and Balanced Digital Multi Point Systems.
- B. Manufacturer's Qualifications: Firms regularly engaged in manufacturer of electric control equipment, of types and sizes required, whose products have been in satisfactory use in similar service for not less than five (5) years.

1.6 PRECONDITIONED AIR SYSTEM SEQUENCE OF OPERATION

- A. General: The preconditioned air system shall provide heated, cooled, or ventilated air to gates as indicated on the drawings. The control system shall be expandable to [50] <Insert number> gates per concourse for future build out.
- B. The PCA system shall be designed such that the aircraft parked at the gates shall maintain an interior space temperature of 75 degrees F in the cooling season and 70 degrees F in the heating season (tolerance of +/- 2 degrees F). A minimum ventilation rate of 10 cfm/seat for the cooling mode and 5 cfm/seat for the heating mode shall be required. Cooling shall be provided for outdoor air temperatures of 45 degrees F and above during the dedicated cooling season. The central plant shall heat aircraft at an outdoor air temperature of 40 degrees F and below during the dedicated heating season.
- C. The system shall be comprised of two (2) major components (on each concourse):
 - 1. The air handling units and associated equipment located on each passenger bridge.
 - 2. The direct digital control system.

1.7 SCHEDULE 2 - PRECONDITIONED AIR SYSTEM SEQUENCE OF OPERATION (DETAILED SEQUENCE)

- A. PRODUCT DATA SHEET 1 - Start / Stop Control:
 - 1. The system is started through a momentary "Start" push button. The system runs continuously unless stopped by the blower motor VFD, the smoke detector, the phase monitor, or pressing the "Stop" button.
 - 2. Upon depressing the "Start" push buttons, the appropriate control relay energizes. A normally open contact on the control relay closes and signals the PCA controller (PCAC) that the unit has been started. The PCAC then energizes

the VFD relay, which tells the VFD to start the blower motor. When the blower starts, the auxiliary contact on VFD opens and tells the PCAC that the blower is running. When the VFD relay is energized, the NO contact closes and power is provided to the rest of the control circuit. The PCAC will start the compressors or heaters as required.

3. On system start-up, the VFD slowly starts the blower motor. This prevents power surges and hose snap.

B. PRODUCT DATA SHEET 2 - Fault Shut-Down:

1. The unit will initiate a "FAULT" (the red light on the "Stop" button) and shut the unit down for the following "out of normal" conditions.
2. The power monitor has tripped due to a phase reversal, voltage unbalance, low voltage, or loss of a phase.
3. The blower motor VFD overload has tripped.
4. The smoke detector has tripped.
5. Pushing the "Stop" button will reset the fault. Other components can stop operating without stopping the unit. Reasons include:
6. The condenser fans will shut down and fail to restart when the condenser fan motor overload trips.
7. Any of the compressors will shut down and not restart when the compressor motor overload trips. The compressors will shut down and restart automatically when the low suction pressure sensor trips or the high discharge pressure sensor trips.
8. The high pressure switch is manual reset. Push the reset button on the pressure switch to reset.

C. PRODUCT DATA SHEET 3 - Control Software - Data Base

1. The PCA controller will automatically select the appropriate operational mode based on the ambient temperature.
2. The unit is controlled by the discharge temperature set point.
3. Several stages of cooling are provided. Modulation in cooling mode is obtained by cycling the compressors and controlled with hot gas by-pass.
4. If for any reason the discharge sensor becomes unreadable or unstable, the PCA controller will determine the sensor reading to be invalid and shutdown the unit. The unit will not restart until the sensor is repaired. The maintenance required light will turn on.
5. If the ambient sensor becomes unreadable or unstable, the PCA controller will determine the sensor reading to be invalid and it will default to 53 degrees F, (Vent mode) where the blower will run but no compressors or heaters will turn on.
6. If the aircraft cabin sensor becomes unreadable or unstable, the PCA controller will determine the sensor reading to be invalid and it will default to 90 degrees F in the cooling mode or 60 degrees F in the heating mode. The maintenance required light will turn on. This will allow the unit to operate normally but will be in the full cool or heat mode.

D. PRODUCT DATA SHEET 4 - Control Logic

1. The PCAC status changes to "On" when the start push button is energized. The program then provides a signal to the blower output point, the compressor output points, and the condenser fan output point.
2. There is a five-second delay between each component start-up to prevent high current in-rush.
3. The discharge air temperature sensor reduces the capacity when the discharge air temperature drops below 32 degrees F (0 degrees C).
4. The condenser fans runs whenever the unit is on. The second condenser fan will cycle on the high pressure. The fan will come on at 400 psig, and off at 300 psig.
5. The VFD starts the blower motor slowly to provide a soft start preventing hose snap and high power inrush.
6. The compressors have a three-minute off delay to prevent rapid cycling of the compressors.

1.8 SCHEDULE 3 - PRECONDITIONED AIR SYSTEM CONTROL

- A. PRODUCT DATA SHEET 1 - The PCA system shall be controlled by a LonMark Certified direct digital control system, which shall monitor and control the use of the PCA system and communicate directly with the BAS. Upon failure of the automatic control system described below, the PCA system shall be operable manually through a Manual/Automatic Switch and position switches located inside each gate control unit (defined below).
- B. PRODUCT DATA SHEET 2 - Provide a digital data acquisition network to interactively communicate with the gate PCA equipment, and a central DDC system. The Contractor shall be totally responsible for the detailed design, supply, delivery, installation, test, and training of personnel for the control system.
- C. PRODUCT DATA SHEET 3 - This network shall serve all aircraft gates at the concourse of installation and additionally serve the system as a whole. A concourse specific central control and display system shall be installed in each PCA concourse mechanical equipment room. The concourse specific central control and display system (computer) shall allow control for the respective concourse it serves only. A central monitoring and display system (computer) shall be located in the building/terminal central mechanical plant and shall have the capability to monitoring any of the individual concourse plants. Each concourse system shall be expandable up to 50 gates with no changes to the control system hardware.
- D. PRODUCT DATA SHEET 4 - The PCA control system shall consist of the following four major functional elements:
 1. A Gate Control Unit (GCU) installed at each passenger loading bridge. This unit shall provide all necessary interfaces between the ground handling personnel and the central control system. It shall also provide monitoring and selective control functions of gate ground support activity.
 2. A Data Acquisition System (DAS), which provides two way data/control transmission between all gate control units and the central control unit. It shall also provide one way data transmission (digital input) between the 400 Hz

- frequency converters, gate boxes, and the central control unit.
3. A Building Automation System (BAS), which receives all data from, and passes information/control to, the gates via the DAS. The BAS shall store all gate and other defined data. The BAS shall provide selected control or status signals to the gate control units as pre programmed or per manual input.
 4. Provide battery backup for all memory devices.
- E. PRODUCT DATA SHEET 5 - A GCU shall be installed at each gate. The GCU unit shall have as a minimum, the following functions and features:
1. Monitoring of Aircraft: Each GCU shall automatically sense parked aircraft status to its associated passenger loading bridge.
 2. Switch shall be located adjacent to AHU on/off control.
 3. The switch shall be interlocked with the bridge so that a status light in the console of the bridge indicates PCA use.
 4. Monitoring and stand-alone control of Preconditioned Air (PCA) System: Each GCU shall perform the automatic monitoring and control of the gate's PCA to the aircraft as described in the points lists at the end of this section. Refer to Section 15955 for additional unit controller requirements.
 5. The GCU shall contain a weatherproof control panel to be interfaced by the ground crew operator. The control panel shall have the following features and may be mounted on the AHU:
 6. Manual/Automatic switch (located inside GCU).
 7. Manual position switches for positioning of glycol valve and air damper (locate inside GCU).
 8. Lighted "PCA Disabled."
 9. Lighted "400 Hz Disabled."
 10. The GCU shall contain a wireless transceiver interface to the DAS and thus to the BAS to supply and receive data.
 11. The GCU shall contain in addition to the above defined interfaces and control panel, the required circuitry, power supplies, and other components necessary to perform the functional operation described below:
 12. The GCU shall continuously scan the status of the PCA status described above and light the summary fault light(s) on its control panel and pass the data on to the DAS. The GCU shall also scan the inputs from the DAS (originating in the BAS).
 13. The BAS shall accept data/control transmission from the DAS, associated with each 400 hertz frequency converter. Points are to be annunciated at the BAS screens.
- F. PRODUCT DATA SHEET 6 - The Data Acquisition System (DAS) shall provide two way data/control transmission between all GCU's and the BAS and shall accept digital inputs from the 400 hertz frequency converter's controls. Refer to other Division 23 Controls Sections for router requirements.
- G. PRODUCT DATA SHEET 7 - The major functional components of the Building Automation System (BAS) are defined in other Division 23 Controls Sections.

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace preconditioned air sequence of operation system that fails in materials or workmanship within specified warranty period.
1. Warranty Period: Minimum **[two (2)] [five (5)] <Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Honeywell, Inc.
 2. Johnson Controls, Inc.
 3. Siemens Corp.
 4. **<Insert manufacturer's name>**.

2.2 EQUIPMENT

- A. Provide a fully programmable LonMark Certified microprocessor control system (direct digital control) inclusive of sensing and measuring devices for each concourse.
- B. Software shall be user configurable with a complete library of energy management, measuring, control, reporting, alarming, and color graphic programs.
- C. Each concourse shall operate independently; however, all concourses shall communicate directly with the building BAS. Refer to Section **<Insert section number and name>**

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine areas and conditions under which electric control systems are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to Installer.

3.2 INSTALLATION GENERAL

- A. Field check for clearances and interferences before fabrication.
- B. Furnish all labor, tools, and all other materials necessary to make a complete installation of the material and equipment specified and indicated.
- C. Installation shall equal or exceed the minimum requirements of the applicable codes and these specifications; however, where local codes and ordinances are more stringent, they shall govern.
- D. Include all material, labor, and changes occasioned by the Contractor's choice of equipment.

3.3 INSTALLATION OF SYSTEMS

- A. General: Install systems and materials in accordance with manufacturer's instructions.
- B. Furnish all the necessary components so that the system performs as specified.
- C. Completely adjust and test the systems specified to ensure that they perform satisfactorily.

3.4 STARTUP AND DEMONSTRATION

- A. Start Up: Start up, test, and adjust systems in presence of Owner's Representative. Demonstrate compliance with requirements.
- B. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain systems.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **236619**

SECTION 237200 - AIR-TO-AIR ENERGY RECOVERY EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Heat wheels.
 - 2. Heat-pipe heat exchangers.
 - 3. Fixed-plate sensible heat exchangers.
 - 4. Fixed-plate total heat exchangers.
 - 5. Packaged energy recovery units.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design vibration isolation and seismic-restraint details, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Seismic Performance: Air-to-air energy recovery equipment shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified **and the unit will be fully operational after the seismic event**."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, furnished specialties, and accessories. Provide data with dimensions, locations, and size of tappings and performance data.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For air-to-air energy recovery equipment. Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
 3. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
 4. Test Reports: Indicate tube bundle pressure tests.
- D. Delegated-Design Submittal: For air-to-air energy recovery equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of air-to-air energy recovery equipment.
 2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
 3. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
1. Suspended ceiling components.
 2. Structural members to which equipment or suspension systems will be attached.
- B. Seismic Qualification Certificates: For air-to-air energy recovery equipment, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Certificates: Certify that **[Products]** <Insert item> meet or exceed **[specified requirements.]**

D. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air-to-air energy recovery equipment to include in maintenance manuals.

1. Include start up and shut down instructions, assembly drawings, and spare parts lists.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Filters: **[One (1)]** <Insert number> set(s) of each type of filter specified.
2. Fan Belts: **[One (1)]** <Insert number> set(s) of belts for each belt-driven fan in energy recovery units.
3. Wheel Belts: **[One (1)]** <Insert number> set(s) of belts for each heat wheel.

1.8 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ARI Compliance:

1. Capacity ratings for air-to-air energy recovery equipment shall comply with ARI 1060, "Performance Rating of Air-to-Air Heat Exchangers for Energy Recovery Ventilation Equipment."
2. Capacity ratings for air coils shall comply with ARI 410, "Forced-Circulation Air-Cooling and Air-Heating Coils."

C. ASHRAE Compliance:

1. Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
2. Capacity ratings for air-to-air energy recovery equipment shall comply with ASHRAE 84, "Method of Testing Air-to-Air Heat Exchangers."

- D. NRCA Compliance: Roof curbs for roof-mounted equipment shall be constructed according to recommendations of NRCA.
- E. UL Compliance:
 - 1. Packaged heat recovery ventilators shall comply with requirements in UL 1812, "Ducted Heat Recovery Ventilators"; or UL 1815, "Nonducted Heat Recovery Ventilators."
 - 2. Electric coils shall comply with requirements in UL 1995, "Heating and Cooling Equipment."

1.9 COORDINATION

- A. Coordinate layout and installation of air-to-air energy recovery equipment and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, handle and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1
- B. Protect internals from entry of foreign material by temporary caps on flanged openings.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of air-to-air energy recovery equipment that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Packaged Energy Recovery Units: Minimum [**two (2)**] **<Insert number>** years.
 - 2. Warranty Period for Fixed-Plate Total Heat Exchangers: Minimum [**ten (10)**] **<Insert number>** years.
 - 3. **<Insert components requiring extended warranty>**.
- B. CONSTRUCTION WASTE MANAGEMENT
- C. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 HEAT WHEELS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Advanced Thermal Technologies.](#)
 2. [Airxchange Inc.](#)
 3. [American Energy Exchange, Inc.](#)
 4. [Loren Cook Company.](#)
 5. [SEMCO Incorporated.](#)
 6. [Trane; American Standard Companies, Inc.](#)
 7. **<Insert manufacturer's name>.**
 8. or approved equal.
- B. Casing:
1. Steel with standard factory-painted finish.
 2. Integral purge section limiting carryover of exhaust air to between **[0.05 percent at 1.6-inch wg and 0.20 percent at 4-inch wg (0.05 percent at 400-Pa and 0.20 percent at 1000-Pa)] <Insert value>** differential pressure.
 3. Casing seals on periphery of rotor and on duct divider and purge section.
 4. Support vertical rotors on grease-lubricated ball bearings having extended grease fittings[**or permanently lubricated bearings**]. Support horizontal rotors on tapered roller bearing.
- C. Rotor: Aluminum segmented wheel strengthened with radial spokes[, **with nontoxic, noncorrosive, silica-gel desiccant coating**].
1. Maximum Solid Size for Media to Pass: **[500] [800] [1200]** micrometer.
- D. Rotor: **[Glass-fiber] [Polymer]** segmented wheel strengthened with radial spokes impregnated with nonmigrating, water-selective, molecular-sieve desiccant coating.
1. Maximum Solid Size for Media to Pass: **[800] [1200]** micrometer.
- E. Drive: Fractional horsepower motor and gear reducer[, **with speed changed by variable frequency controller**] and self-adjusting multilink belt around outside of rotor.
1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- F. Controls:

1. Starting relay, factory mounted and wired, and manual motor starter for field wiring.
2. Variable frequency controller, factory mounted and wired, permitting input of field connected 4-20 mA or 1-10-V control signal.
3. Variable frequency controller, factory mounted and wired, with exhaust-air sensor to vary rotor speed and maintain exhaust temperature above freezing.
4. Variable frequency controller, factory mounted and wired, with exhaust- and outdoor-air sensors, automatic changeover thermostat and set-point adjuster, to vary rotor speed and maintain[**exhaust temperature above freezing and**] air differential temperature above set point. Rotor speed shall increase to maximum when exhaust-air temperature is less than outdoor-air temperature.
5. Pilot-Light Indicator: Display rotor rotation and speed.
6. Speed Settings: Adjustable settings for maximum and minimum rotor speed limits.

G. Disposable Panel Filters:

1. Comply with NFPA 90A.
2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
3. Factory-fabricated, viscous-coated, flat-panel type.
4. Thickness: [1 inch (25 mm)] [2 inches (50 mm)].
5. Dust-Holding Capacity: <Insert lb (kg)>.
6. Initial Resistance: <Insert inches wg (Pa)>.
7. Recommended Final Resistance: <Insert inches wg (Pa)>.
8. Minimum Arrestance: [80] <Insert value>, according to ASHRAE 52.1.
9. MERV: [5] <Insert value>, according to ASHRAE 52.2.
10. Media: Interlaced glass fibers sprayed with nonflammable adhesive[**and antimicrobial agent**].
11. Frame: Galvanized steel with metal grid on outlet side, steel rod grid on inlet side, hinged, and with pull and retaining handles.

H. Extended-Surface, Disposable Panel Filters:

1. Comply with NFPA 90A.
2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
3. Factory-fabricated, dry, extended-surface type.
4. Thickness: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)].
5. Dust-Holding Capacity: <Insert lb (kg)>.
6. Initial Resistance: <Insert inches wg (Pa)>.
7. Recommended Final Resistance: <Insert inches wg (Pa)>.
8. Minimum Arrestance: [90] <Insert value>, according to ASHRAE 52.1.
9. MERV: [7] <Insert value>, according to ASHRAE 52.2.
10. Media: Fibrous material formed into deep-V-shaped pleats[**with antimicrobial agent**] and held by self-supporting wire grid.
11. Media-Grid Frame: [Nonflammable cardboard] [Galvanized steel] [Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets].

12. Mounting Frames: Welded, galvanized steel with gaskets and fasteners, suitable for bolting together into built-up filter banks.

I. Extended-Surface, Nonsupported-Media Filters:

1. Comply with NFPA 90A.
2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
3. Factory-fabricated, dry, extended-surface, self-supporting type.
4. Dust-Holding Capacity: <Insert lb (kg)>.
5. Initial Resistance: <Insert inches wg (Pa)>.
6. Recommended Final Resistance: <Insert inches wg (Pa)>.
7. Minimum Arrestance: **[95]** <Insert value>, according to ASHRAE 52.1.
8. MERV: **[13]** <Insert value>, according to ASHRAE 52.2.
9. Media: Fibrous material constructed so individual pleats are maintained in tapered form by flexible internal supports under rated-airflow conditions[**and antimicrobial agent**].
10. Filter-Media Frame: **[Galvanized steel]** **[Hard polyurethane foam]**.
11. Mounting Frames: Welded, galvanized steel with gaskets and fasteners, suitable for bolting together into built-up filter banks[**with space for prefilter**].

2.2 HEAT-PIPE HEAT EXCHANGERS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Applied Air; Mestek Technology, Inc.](#)
2. [Des Champs Technologies.](#)
3. [Engineered Air.](#)
4. [Gaylord Industries, Inc.](#)
5. [Heat Pipe Technology, Inc.](#)
6. <Insert manufacturer's name>.
7. or approved equal.

B. Casing: Galvanized-steel flanged casing, with airtight partition between airstreams.

C. Refrigerant: ASHRAE 15, Group 1. <Insert requirements>.

D. Tubes: **[5/8-inch- (16-mm-)]** **[1-inch- (25-mm-)]** diameter, **[aluminum]** **[copper]** <Insert material>.

E. Fins: **[Aluminum]** **[Integral aluminum]** **[Copper]**.

1. Fin Spacing: **[0.125 inch (3.18 mm)]** **[0.091 inch (2.31 mm)]** **[0.071 inch (1.80 mm)]** **[0.067 inch (1.70 mm)]** **[0.056 inch (1.42 mm)]** **[0.0075 inch (0.19 mm)]** <Insert fins per inch (mm)>.
2. Fin and Tube Joint: **[Mechanical bond]** **[Silver brazed]**.

- F. Coating: **[Thermoplastic vinyl] [Epoxy] [Synthetic resin] [Phenolic] [Polytetrafluoroethylene] [Vinyl ester] <Insert coating>**; apply to supply and exhaust.
- G. Control: Integral plenum containing heat-pipe coil and gasketed, face-and-bypass, opposed-blade dampers with rods extended outside casing for damper operator and linkage.
- H. Control: Pivot center of bottom of heat-pipe coil on shaft and bearings to tilt coil. Include tilt controls with electronic controller, electric actuator and linkage, thermostats, sensors, and polyester fabric with PVC-coated flexible connector for automatic supply temperature regulation, summer/winter changeover, and frost protection.

2.3 FIXED-PLATE SENSIBLE HEAT EXCHANGERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [American Energy Exchange, Inc.](#)
 - 2. [Des Champs Technologies.](#)
 - 3. [Eclipse Innovative Thermal Technologies.](#)
 - 4. [Nutech Brands Inc.](#)
 - 5. [RenewAire LLC.](#)
 - 6. [UAS, Inc.: a CLARCOR company.](#)
 - 7. **<Insert manufacturer's name>**.
 - 8. or approved equal.
- B. Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- C. Casing: **[Aluminum] [Galvanized steel] [Enameled steel, with galvanized-steel liner] [Enameled steel]** with duct collars.
- D. Casing Insulation: **[1/2-inch- (13-mm-) thick, foil-faced glass fiber] [1-inch- (25-mm-) thick, foil-faced glass fiber] [1 inch (25 mm) thick, ASTM C 1071 with coated surface] [1 inch (25 mm) thick, fiber free]**.
- E. Drain Pan: **[Same material as casing, with drain connections on exhaust and supply side] [Molded ABS covering bottom of case, with drain connections on exhaust and supply side]**.
 - 1. Comply with requirements in ASHRAE 62.1.
- F. Plates: Evenly spaced and sealed and arranged for counter airflow.
 - 1. Plate Material: **[Embossed aluminum] [Stainless steel] [Polypropylene copolymer (high-density plastic)]**.
 - 2. Plate Coating: **[Epoxy] [Air-dried phenolic]**.

- G. Bypass Plenum: Within casing, with gasketed face-and-bypass dampers having operating rods extended outside casing.
- H. Water Wash: Automatic system, with spray manifold to individual spray tubes or traversing type with stainless-steel-screw operating mechanism and electric motor drive; activated by time clock[, **with detergent injection**].
- I. Disposable Panel Filters:
1. Comply with NFPA 90A.
 2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
 3. Factory-fabricated, viscous-coated, flat-panel type.
 4. Thickness: [1 inch (25 mm)] [2 inches (50 mm)].
 5. Initial Resistance: <Insert inches wg (Pa)>.
 6. Recommended Final Resistance: <Insert inches wg (Pa)>.
 7. Minimum Arrestance: [80] <Insert value>, according to ASHRAE 52.1.
 8. MERV: [5] <Insert value>, according to ASHRAE 52.2.
 9. Media: Interlaced glass fibers sprayed with nonflammable adhesive[**and antimicrobial agent**].
 10. Frame: Galvanized steel with metal grid on outlet side, steel rod grid on inlet side, hinged, and with pull and retaining handles.
- J. Extended-Surface, Disposable Panel Filters:
1. Comply with NFPA 90A.
 2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
 3. Factory-fabricated, dry, extended-surface type.
 4. Thickness: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)].
 5. Initial Resistance: <Insert inches wg (Pa)>.
 6. Recommended Final Resistance: <Insert inches wg (Pa)>.
 7. Minimum Arrestance: [90] <Insert value>, according to ASHRAE 52.1.
 8. MERV: [7] <Insert value>, according to ASHRAE 52.2.
 9. Media: Fibrous material formed into deep-V-shaped pleats[**with antimicrobial agent**] and held by self-supporting wire grid.
 10. Media-Grid Frame: [Nonflammable cardboard] [Galvanized steel] [Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets].
 11. Mounting Frames: Welded, galvanized steel with gaskets and fasteners, suitable for bolting together into built-up filter banks.
- K. Extended-Surface, Nonsupported-Media Filters:
1. Comply with NFPA 90A.
 2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
 3. Factory-fabricated, dry, extended-surface, self-supporting type.

4. Initial Resistance: <Insert inches wg (Pa)>.
5. Recommended Final Resistance: <Insert inches wg (Pa)>.
6. Minimum Arrestance: [95] <Insert value>, according to ASHRAE 52.1.
7. MERV: [13] <Insert value>, according to ASHRAE 52.2.
8. Media: Fibrous material constructed so individual pleats are maintained in tapered form by flexible internal supports under rated-airflow conditions[**and antimicrobial agent**].
9. Filter-Media Frame: [Galvanized steel] [Hard polyurethane foam].
10. Mounting Frames: Welded, galvanized steel with gaskets and fasteners, suitable for bolting together into built-up filter banks[**with space for prefilter**].

2.4 FIXED-PLATE TOTAL HEAT EXCHANGERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Mitsubishi Electric Sales Canada Inc.](#)
 2. [RenewAire LLC.](#)
 3. <Insert manufacturer's name>.
 4. or approved equal.
- B. Casing: Galvanized steel.
- C. Plates: Evenly spaced and sealed and arranged for counter airflow.
1. Plate Material: Chemically treated paper with selective hydroscopicity and moisture permeability, and gas barrier properties.
- D. Bypass Plenum: Within casing, with gasketed face-and-bypass dampers having operating rods extended outside casing.
- E. Disposable Panel Filters:
1. Comply with NFPA 90A.
 2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
 3. Factory-fabricated, viscous-coated, flat-panel type.
 4. Thickness: [1 inch (25 mm)] [2 inches (50 mm)].
 5. Initial Resistance: <Insert inches wg (Pa)>.
 6. Recommended Final Resistance: <Insert inches wg (Pa)>.
 7. Minimum Arrestance: [80] <Insert value>, according to ASHRAE 52.1.
 8. MERV: [5] <Insert value>, according to ASHRAE 52.2.
 9. Media: Interlaced glass fibers sprayed with nonflammable adhesive[**and antimicrobial agent**].
 10. Frame: Galvanized steel with metal grid on outlet side, steel rod grid on inlet side, hinged, and with pull and retaining handles.
- F. Extended-Surface, Disposable Panel Filters:

1. Comply with NFPA 90A.
2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
3. Factory-fabricated, dry, extended-surface type.
4. Thickness: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)].
5. Initial Resistance: <Insert inches wg (Pa)>.
6. Recommended Final Resistance: <Insert inches wg (Pa)>.
7. Minimum Arrestance: [90] <Insert value>, according to ASHRAE 52.1.
8. MERV: [7] <Insert value>, according to ASHRAE 52.2.
9. Media: Fibrous material formed into deep-V-shaped pleats[**with antimicrobial agent**] and held by self-supporting wire grid.
10. Media-Grid Frame: [**Nonflammable cardboard**] [**Galvanized steel**] [**Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets**].
11. Mounting Frames: Welded, galvanized steel with gaskets and fasteners, suitable for bolting together into built-up filter banks.

2.5 PACKAGED ENERGY RECOVERY UNITS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Advanced Thermal Technologies.](#)
2. [American Energy Exchange, Inc.](#)
3. [Applied Air; Mestek Technology, Inc.](#)
4. [Carnes Company.](#)
5. [Des Champs Technologies.](#)
6. [Engineered Air.](#)
7. [Fairchild Industrial Products Company.](#)
8. [Gaylord Industries, Inc.](#)
9. [Greenheck Fan Corporation.](#)
10. [Loren Cook Company.](#)
11. [Mitsubishi Electric & Electronics USA, Inc.](#)
12. [Mitsubishi Electric Sales Canada Inc.](#)
13. [RenewAire LLC.](#)
14. [SEMCO Incorporated.](#)
15. [Trane; American Standard Companies, Inc.](#)
16. [Venmar CES Inc.](#)
17. [Wing, L. J.; Mestek Technology, Inc.](#)
18. <Insert manufacturer's name>.
19. or approved equal.

- B. Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

- C. Housing: Manufacturer's standard construction with corrosion-protection coating and exterior finish, [**gasketed and calked weathertight,**] [**hinged access doors**] [**removable panels**] with neoprene gaskets for inspection and access to internal parts, minimum [1-inch- (25-mm-)] [2-inch- (50-mm-)] <Insert thickness> thick thermal

insulation, knockouts for electrical and piping connections, exterior drain connection, and lifting lugs.

1. Inlet: Weatherproof **[hood]** **[louver]**, with damper for exhaust and supply.
 - a. Exhaust: **[Gravity backdraft damper]** **[Spring-return, two-position, motor-operated damper]**.
 - b. Supply: **[Gravity backdraft damper]** **[Spring-return, two-position, motor-operated damper]**.
 2. Roof Curb: Refer to Section 077200 "Roof Accessories" for roof curbs and equipment supports.
- D. Heat Recovery Device: **[Heat wheel]** **[Heat-pipe heat exchanger]** **[Fixed-plate heat exchanger]**.
- E. Supply and Exhaust Fans: **[Forward-curved, centrifugal]** **[Propeller]** **[Backward-inclined, SWSI centrifugal]** **[Backward-inclined, plenum centrifugal]** fan with **[spring isolators]** **[restrained, spring isolators]** **[spring hangers]** **[spring hangers with vertical-limit stops]** **[and]** **[insulated]** flexible duct connections.- 1. Motor and Drive: **[Direct driven]** **[Belt driven with adjustable sheaves, motor mounted on adjustable base]** **[Drive type indicated on Drawings]**.
- 2. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- 3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- 4. Spring isolators on each fan having **[1-inch (25-mm)]** **<Insert deflection>** static deflection.

F. Disposable Panel Filters:

 1. Comply with NFPA 90A.
 2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
 3. Factory-fabricated, viscous-coated, flat-panel type.
 4. Thickness: **[1 inch (25 mm)]** **[2 inches (50 mm)]**.
 5. Initial Resistance: **<Insert inches wg (Pa)>**.
 6. Recommended Final Resistance: **<Insert inches wg (Pa)>**.
 7. Minimum Arrestance: **[80]** **<Insert value>**, according to ASHRAE 52.1.
 8. MERV: **[5]** **<Insert value>**, according to ASHRAE 52.2.
 9. Media: Interlaced glass fibers sprayed with nonflammable adhesive **[and antimicrobial agent]**.
 10. Frame: Galvanized steel with metal grid on outlet side, steel rod grid on inlet side, hinged, and with pull and retaining handles.

G. Extended-Surface, Disposable Panel Filters:

1. Comply with NFPA 90A.
 2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
 3. Factory-fabricated, dry, extended-surface type.
 4. Thickness: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)].
 5. Initial Resistance: <Insert inches wg (Pa)>.
 6. Recommended Final Resistance: <Insert inches wg (Pa)>.
 7. Minimum Arrestance: [90] <Insert value>, according to ASHRAE 52.1.
 8. MERV: [7] <Insert value>, according to ASHRAE 52.2.
 9. Media: Fibrous material formed into deep-V-shaped pleats[with antimicrobial agent] and held by self-supporting wire grid.
 10. Media-Grid Frame: [Nonflammable cardboard] [Galvanized steel] [Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets].
 11. Mounting Frames: Welded, galvanized steel with gaskets and fasteners, suitable for bolting together into built-up filter banks.
- H. Extended-Surface, Nonsupported-Media Filters:
1. Comply with NFPA 90A.
 2. Filter Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lift out from access plenum.
 3. Factory-fabricated, dry, extended-surface, self-supporting type.
 4. Initial Resistance: <Insert inches wg (Pa)>.
 5. Recommended Final Resistance: <Insert inches wg (Pa)>.
 6. Minimum Arrestance: [95] <Insert value>, according to ASHRAE 52.1.
 7. MERV: [13] <Insert value>, according to ASHRAE 52.2.
 8. Media: Fibrous material constructed so individual pleats are maintained in tapered form by flexible internal supports under rated-airflow conditions[and antimicrobial agent].
 9. Filter-Media Frame: [Galvanized steel] [Hard polyurethane foam].
 10. Mounting Frames: Welded, galvanized steel with gaskets and fasteners, suitable for bolting together into built-up filter banks[with space for prefilter].
- I. Cooling Coils: Rated according to ARI 410 and ASHRAE 33[, and bearing the ARI label].
1. Access: Fabricate coil section to allow removal and replacement of coil and to allow in-place access for service and maintenance of coil(s).
 2. Casing: [Manufacturer's standard material] [Aluminum] [Galvanized steel] [Stainless steel] <Insert material>.
 3. Tubes: [Copper] <Insert material>.
 4. Tube Headers: [Manufacturer's standard material] [Copper] [Carbon steel] [Red brass] <Insert material>.
 5. Fins: [Aluminum] [Copper] <Insert material>.
 6. Fin and Tube Joint: Mechanical bond.
 7. Leak Test: Coils shall be leak tested with air under water.
 8. Refrigerant Coils:

- a. Capacity Reduction: Circuit coils for **[face] [row] [interleaved]** control.
 - b. Suction and Distributor: Seamless copper tube with brazed joints.
9. Coating: Phenolic epoxy corrosion-protection coating after assembly.
- J. Cooling-Coil Condensate Drain Pans:
1. Fabricated from **[galvanized] [stainless]**-steel sheet and sloped in multiple planes to collect and drain condensate from cooling coils, coil piping connections, coil headers, and return bends.
 2. Complying with requirements in ASHRAE 62.1.
 3. Drain Connections: At low point of pan with minimum **<Insert size>** threaded nipple.
 4. Units with stacked coils shall have an intermediate drain pan to collect and drain condensate from top coil.
- K. Hot-Water Coils: Rated according to ARI 410 and ASHRAE 33[, **and bearing the ARI label**].
1. Access: Fabricate coil section to allow removal and replacement of coil and to allow in-place access for service and maintenance of coil(s).
 2. Casing: **[Manufacturer's standard material] [Aluminum] [Galvanized steel] [Stainless steel] <Insert material>**.
 3. Tubes: **[Copper] <Insert material>**.
 4. Tube Headers: **[Manufacturer's standard material] [Copper] [Carbon steel] [Red brass] <Insert material>**.
 5. Fins: **[Aluminum] [Copper] <Insert material>**.
 6. Fin and Tube Joint: Mechanical bond.
 7. Leak Test: Coils shall be leak tested with air under water.
 8. Coating: Phenolic epoxy corrosion-protection coating after assembly.
- L. **[Nonfreeze Type]** Steam Coils: Rated according to ARI 410 and ASHRAE 33[, **and bearing the ARI label**].
1. Access: Fabricate coil section to allow removal and replacement of coil and to allow in-place access for service and maintenance of coil(s).
 2. Casing: **[Manufacturer's standard material] [Aluminum] [Galvanized steel] [Stainless steel] <Insert material>**.
 3. Tubes: **[Copper] <Insert material>**.
 4. Tube Headers: **[Manufacturer's standard material] [Copper] [Carbon steel] [Red brass] <Insert material>**.
 5. Fins: **[Aluminum] [Copper] <Insert material>**.
 6. Fin and Tube Joint: Mechanical bond.
 7. Leak Test: Coils shall be leak tested with air under water.
 8. Coating: Phenolic epoxy corrosion-protection coating after assembly.
- M. Electrical Coils, Controls, and Accessories: Comply with UL 1995.
1. Casing Assembly: **[Slip-in] [Flanged]** type with galvanized-steel frame.

2. Access: Fabricate coil section to allow removal and replacement of coil and to allow in-place access for service.
3. Sheathed Heating Elements: Coiled resistance wire of 80 percent nickel and 20 percent chromium surrounded by compacted magnesium-oxide powder in tubular-steel sheath; with spiral-wound, copper-plated, steel fins continuously brazed to sheath.
4. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
5. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout, safety device; serviceable through terminal box without removing heater from coil section.
6. Secondary Protection: Load-carrying, manually resetting or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
7. Control Panel: **[Unit]** **[Remote]** mounted with disconnecting means and overcurrent protection.
 - a. **[Magnetic]** **[Mercury]** contactor.
 - b. Solid-state, stepless pulse controller.
 - c. Toggle switches, one per step.
 - d. Step controller.
 - e. Time-delay relay.
 - f. Pilot lights, one per step.
 - g. Airflow proving switch.

N. Indirect-Fired Gas Furnaces:

1. Description: Factory assembled, piped, and wired; complying with NFPA 54, "National Fuel Gas Code," and ANSI Z21.47, "Gas-Fired Central Furnaces."
 - a. AGA Approval: Furnace shall bear label of AGA.
2. Burners: **[Aluminized steel with stainless-steel inserts]** **[Stainless steel]**.
 - a. Ignition: Electronically controlled electric spark with flame sensor.
 - b. High-Altitude **[Model]** **[Kit]**: For Project at elevations more than 2000 feet (610 m) above sea level.
3. Heat-Exchanger Drain Pan: Stainless steel.
4. Venting: Gravity vented.
5. Power Vent: Integral, motorized centrifugal fan interlocked with gas valve.
6. Gas Control Valve: **[Single stage]** **[Two stage]** **[Electronic modulating]**.
7. Gas Train: Single-body, regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff. Control devices and control sequence shall comply with requirements of **[FMG]** **[IRI]** **<Insert agency>**.
8. Access: Fabricate section to allow removal and replacement of furnace and to allow in-place access for service.

- O. Piping and Wiring: Fabricate units with space within housing for piping and electrical conduits. Wire motors and controls so only external connections are required during installation.
1. Indoor Enclosure: NEMA 250, Type 12 enclosure contains relays, starters, and terminal strip.
 2. Outdoor Enclosure: NEMA 250, Type 3R enclosure contains relays, starters, and terminal strip.
 3. Include **[fused]** **[nonfused]** disconnect switches.
 4. Variable-speed controller to vary fan capacity from 100 to approximately **[50]** **<Insert number>** percent.
- P. Accessories:
1. Roof Curb: **[Steel]** **[Galvanized steel]** **[Aluminum]** with gasketing, and factory-installed wood nailer; complying with NRCA standards; minimum height of **[14 inches (350 mm)]** **[24 inches (600 mm)]** **<Insert height>**.
 2. Intake weather hood with **2-inch-** (50-mm-) thick filters.
 3. Louvered intake weather hood with **2-inch-** (50-mm-) thick filters in V-bank configuration.
 4. Exhaust weather hood with birdscreen.
 5. Low-Leakage, Isolation Dampers: Double-skin, airfoil-blade, **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** dampers with compressible jamb seals and extruded-vinyl blade edge seals, in **[opposed]** **[parallel]**-blade arrangement with **[cadmium-plated]** steel operating rods rotating in **[stainless-steel sleeve]** **[sintered bronze or nylon]** bearings mounted in a single **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** frame, with operating rods connected with a common linkage, and electric damper operator factory wired. Leakage rate shall not exceed **5 cfm/sq. ft.** (0.22 L/s per sq. m) at **1-inch wg** (250 Pa) and **9 cfm/sq. ft.** (0.4 L/s per sq. m) at **4-inch wg** (1.0 MPa).
 6. Isolation Dampers: Opposed-blade, **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** dampers with **[cadmium-plated]** steel operating rods rotating in sintered bronze or nylon bearings mounted in a single **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** frame with operating rods connected with a common linkage, and electric damper operator factory wired. Blades shall have gaskets and edge seals, and shall be mechanically fastened to operating rod.
 7. Duct flanges.
 8. Rubber-in-shear isolators for ceiling-mounted units.
 9. Hinged access doors with quarter-turn latches.
 10. Drain pans for condensate removal **[complying with ASHRAE 62.1]**.
 11. Automatic, in-place, spray-wash system.
 12. Weatherproofing for tilt-control system.

2.6 CONTROLS

- A. Time Clock: Solid-state, programmable, microprocessor-based unit for **[wall mounting]** **[mounting in outdoor NEMA 250, Type 3R enclosure]** with up to eight

on/off cycles per day and battery backup protection of program settings against power failure to energize unit.

- B. Motion (Occupancy) Sensor: Passive infrared sensor for **[wall]** **[ceiling]** mounting with adjustable time-off delay of up to 30 minutes to energize unit.
- C. Carbon Monoxide Sensor: Adjustable control from 600 to 2000 ppm for **[wall]** **[duct]** mounting with digital display and computer/building management system interface to energize unit.
- D. Humidistat: Adjustable, wall-mounted instrument to energize unit when space relative humidity exceeds **[50 percent]** **<Insert relative humidity>**.
- E. Chilled-Water-Cooling-Coils Controls:
1. **[Factory-mounted sensor in unit discharge]** **[Remote-mounted sensor for field installation in supply-air duct]** with sensor adjustment located in control panel to modulate factory-**[mounted]** **[furnished]** coil-control valve to maintain temperature.
 2. Wall-mounted, space-temperature sensor with **[temperature adjustment]** **[unit-mounted temperature adjustment]** **[adjustment on remote-control panel]** to modulate factory-**[mounted]** **[furnished]** coil-control valve to maintain temperature.
- F. Refrigerant-Cooling-Coils Controls:
1. **[Factory-mounted sensor in unit discharge]** **[Remote-mounted sensor for field installation in supply-air duct]** with sensor adjustment located in control panel to control remote condensing unit to maintain temperature.
 2. Wall-mounted, space-temperature sensor with **[temperature adjustment]** **[unit-mounted temperature adjustment]** **[adjustment on remote-control panel]** controls remote condensing unit to maintain temperature.
 3. Cooling Capacity Control: **[On/off]** **[Multiple steps]** **<Insert type>**.
- G. **[Hot-Water-]** **[and]** **[Steam-]**Coils Controls:
1. **[Factory-mounted sensor in unit discharge]** **[Remote-mounted sensor for field installation in supply-air duct]** with sensor adjustment located in control panel to modulate factory-**[mounted]** **[furnished]** coil-control valve to maintain temperature.
 2. Wall-mounted, space-temperature sensor with **[temperature adjustment]** **[unit-mounted temperature adjustment]** **[adjustment on remote-control panel]** to modulate factory-**[mounted]** **[furnished]** coil-control valve to maintain temperature.
- H. Electric-Coils Controls:
1. **[Factory-mounted sensor in unit discharge]** **[Remote-mounted sensor for field installation in supply-air duct]** with sensor adjustment located in control panel to control electric coil to maintain temperature.

2. Wall-mounted, space-temperature sensor with **[temperature adjustment]** **[unit-mounted temperature adjustment]** **[adjustment on remote-control panel]** to control electric coil to maintain temperature.
3. Coil Controls: **[On/off]** **[Multiple steps]** **[Modulating SCR]** **<Insert type>**.

I. Indirect-Fired-Gas-Furnaces Controls:

1. **[Factory-mounted sensor in unit discharge]** **[Remote-mounted sensor for field installation in supply-air duct]** with sensor adjustment located in control panel to control gas furnace burner to maintain temperature.
2. Wall-mounted, space-temperature sensor with **[temperature adjustment]** **[unit-mounted temperature adjustment]** **[adjustment on remote-control panel]** to control gas furnace burner to maintain temperature.
3. Burner Controls: **[On/off]** **[Multiple steps]** **[Modulating]** **<Insert type>**.

2.7 CAPACITIES AND CHARACTERISTICS

A. Exhaust Air:

1. Airflow: **<Insert cfm (L/s)>**.
2. Face Velocity: **<Insert fpm (m/s)>**.
3. Summer:
 - a. Entering-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - b. Entering-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - c. Leaving-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - d. Leaving-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
4. Winter:
 - a. Entering-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - b. Entering-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - c. Leaving-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - d. Leaving-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
5. Air Pressure Drop: **<Insert inches wg (Pa)>**.
6. Fan Motor Size: **<Insert horsepower>**.
7. Fan Motor Electrical Characteristics:
 - a. Volts: **[120] [208] [230] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.

B. Supply Air:

1. Airflow: **<Insert cfm (L/s)>**.
2. Face Velocity: **<Insert fpm (m/s)>**.
3. Summer:
 - a. Entering-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.

- b. Entering-Air Temperature, Wet Bulb: <Insert deg F (deg C)>.
 - c. Leaving-Air Temperature, Dry Bulb: <Insert deg F (deg C)>.
 - d. Leaving-Air Temperature, Wet Bulb: <Insert deg F (deg C)>.
 4. Winter:
 - a. Entering-Air Temperature, Dry Bulb: <Insert deg F (deg C)>.
 - b. Entering-Air Temperature, Wet Bulb: <Insert deg F (deg C)>.
 - c. Leaving-Air Temperature, Dry Bulb: <Insert deg F (deg C)>.
 - d. Leaving-Air Temperature, Wet Bulb: <Insert deg F (deg C)>.
 5. Air Pressure Drop: <Insert inches wg (Pa)>.
 6. Fan Motor Size: <Insert horsepower>.
 7. Fan Motor Electrical Characteristics:
 - a. Volts: [120] [208] [230] <Insert value>.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.
- C. Wheel Drive:
 1. Motor Size: <Insert horsepower>.
 2. Motor Electrical Characteristics:
 - a. Volts: [120] [208] [230] <Insert value>.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.
- D. Effectiveness: <Insert percent>.
- E. Cooling Coil:
 1. Fluid: [Chilled water] [Refrigerant] <Insert fluid>.
 2. Sensible Heat-Transfer Rate: <Insert Btu/h (kW)>.
 3. Total Heat-Transfer Rate: <Insert Btu/h (kW)>.
 4. Entering-Air, Dry-Bulb Temperature: <Insert deg F (deg C)>.
 5. Entering-Air, Wet-Bulb Temperature: <Insert deg F (deg C)>.
 6. Leaving-Air, Dry-Bulb Temperature: <Insert deg F (deg C)>.
 7. Leaving-Air, Wet-Bulb Temperature: <Insert deg F (deg C)>.
 8. Face Area: <Insert sq. ft. (sq. m)>.
 9. Maximum Face Velocity: <Insert fpm (m/s)>.
 10. Maximum Air-Side, Static-Pressure Drop: <Insert inches wg (Pa)>.
 11. Coil Type: [Continuous circuit] [Self-draining] [Cleanable].
 12. Piping Connections: [Threaded] [Flanged], [same end] [opposite ends] of coil.
 13. Tube Thickness: <Insert inches (mm)>.
 14. Fin Spacing: <Insert fins per inch (cm)>.
 15. Fin Thickness: <Insert inches (mm)>.
 16. Number of Rows: <Insert number>.
 17. Coil Working-Pressure Ratings: [200 psig (1380 kPa), 325 deg F (163 deg C)] <Insert value>.

18. Fluid:

- a. Fluid Flow: <Insert gpm (L/s)>.
- b. Maximum Fluid Pressure Drop: <Insert feet of head (kPa)>.
- c. Entering-Fluid Temperature: <Insert deg F (deg C)>.
- d. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
- e. Tube velocity: <Insert fpm (L/s)>.

F. [Hot-Water] [Steam] Coils:

1. Heat-Transfer Rate: <Insert Btu/h (kW)>.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Leaving-Air Temperature: <Insert deg F (deg C)>.
4. Face Area: <Insert sq. ft. (sq. m)>.
5. Maximum Face Velocity: <Insert fpm (m/s)>.
6. Maximum Air-Side, Static-Pressure Drop: <Insert inches wg (Pa)>.
7. Coil Type: [Continuous circuit] [Self-draining] [Cleanable].
8. Piping Connections: [Threaded] [Flanged], [same end] [opposite ends] of coil.
9. Tube Thickness: <Insert inches (mm)>.
10. Fin Spacing: <Insert fins per inch (cm)>.
11. Fin Thickness: <Insert inches (mm)>.
12. Number of Rows: <Insert number>.
13. Coil Working-Pressure Ratings: [200 psig (1380 kPa), 325 deg F (163 deg C)] <Insert value>.
14. Fluid:
 - a. Fluid Flow: <Insert gpm (L/s)>.
 - b. Maximum Fluid Pressure Drop: <Insert feet of head (kPa)>.
 - c. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 - d. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
 - e. Tube velocity: <Insert fpm (L/s)>.

15. Steam Coils:

- a. Heat-Transfer Rate: <Insert Btu/h (kW)>.
- b. Steam Flow: <Insert lb/h (g/s)>.
- c. Inlet Steam Pressure: <Insert psig (kPa)>.
- d. Coil Working-Pressure Ratings: [200 psig (1380 kPa), 325 deg F (163 deg C)] <Insert value>.

G. Electric Heating Coils:

1. Heat-Transfer Rate: <Insert Btu/h (kW)>.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Leaving-Air Temperature: <Insert deg F (deg C)>.
4. Power Input: <Insert kilowatts>.
5. Volts: [208] [230] [480] <Insert value>.
6. Phase: [Single] [Three].
7. Hertz: 60.
8. Full-Load Amperes: <Insert value>.

9. Maximum Overcurrent Protection: **<Insert amperage>**.
10. Capacity Control Number of Steps: **<Insert number>**.

H. Indirect-Fired Gas Furnace:

1. Heat-Transfer Rate: **<Insert Btu/h (kW)>**.
2. Entering-Air Temperature: **<Insert deg F (deg C)>**.
3. Leaving-Air Temperature: **<Insert deg F (deg C)>**.
4. Efficiency: **[80] <Insert number>** percent.
5. Fuel: **[Natural] [Propane]** gas.
6. Gas Heating Value: **<Insert Btu/cu. ft. (kJ/L)>**.
7. Gas Input: **<Insert cfh (mL/s)>**.
8. Power Input: **<Insert kilowatts>**.
9. Volts: **[120] [208] [230] [480] <Insert value>**.
10. Phase: **[Single] [Three]**.
11. Hertz: 60.
12. Full-Load Amperes: **<Insert value>**.
13. Minimum Circuit Ampacity: **<Insert value>**.
14. Maximum Overcurrent Protection: **<Insert amperage>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine casing insulation materials and filter media before air-to-air energy recovery equipment installation. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for electrical services to verify actual locations of connections before installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install to permit removal of components with minimum disturbance to installed equipment and piping.
- C. Install heat wheels so supply and exhaust airstreams flow in opposite directions and rotation is away from exhaust side to purge section to supply side.
 1. Install access doors in both supply and exhaust ducts, both upstream and downstream, for access to wheel surfaces, drive motor, and seals.

2. Install removable panels or access doors between supply and exhaust ducts on building side for bypass during startup.
 3. Access doors and panels are specified in Section 233300 "Air Duct Accessories."
- D. Install heat-pipe heat exchangers so supply and exhaust airstreams flow in opposite directions. Install flexible connectors on ducts to enable tilt control; make connections airtight and with slack to compensate for full tilt.
1. Install heat exchanger with clearance space for heat-pipe coil removal.
 2. Install duct access doors in both supply and exhaust ducts, both upstream and downstream, for access to both sides of heat-pipe coil. Access doors and panels are specified in Section 233300 "Air Duct Accessories."
 3. Install tilt-control components, including electronic controller, electric actuator and linkage, thermostats, and sensors.
- E. Install fixed-plate heat exchangers so supply and exhaust airstreams flow in opposite directions.
1. Install duct access doors in both supply and exhaust ducts, both upstream and downstream, for access to heat exchanger. Access doors and panels are specified in Section 233300 "Air Duct Accessories."
- F. Install gas-fired furnaces according to NFPA 54, "National Fuel Gas Code."
- G. Install floor-mounted units on **4-inch- (100-mm-)** high concrete base[**designed to withstand, without damage to equipment, seismic force required by code**].
- H. Equipment Mounting:
1. Install air-to-air energy recovery equipment on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete.]"** **[Section 033053 "Miscellaneous Cast-in-Place Concrete."]**
- I. Roof Curb: Install on roof structure or concrete base, level and secure, according to **[The NRCA "Roofing and Waterproofing Manual - Volume 4: Construction Details - Low-Slope Roofing," Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts.]"** **[ARI Guideline B.]** Install air-to-air energy recovery equipment on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure air-to-air energy recovery equipment to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.
- J. Unit Support: Install unit level on structural **[curbs]** **[pilings]**. Coordinate wall penetrations and flashing with wall construction. Secure air-to-air energy recovery equipment to structural support with anchor bolts.
- K. Install wind and seismic restraints according to manufacturers' written instructions.**[Wind and seismically restrained vibration isolation roof-curb rails are specified in Section 230548 "Vibration and Seismic Controls for HVAC."]**

- L. Suspended Units: Suspend[**and brace**] units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- M. Install units with clearances for service and maintenance.
- N. Install new filters at completion of equipment installation and before testing, adjusting, and balancing.
- O. Pipe drains from drain pans to nearest floor drain; use [ASTM B 88, Type L](#) ([ASTM B 88M, Type B](#)), drawn-temper copper water tubing with soldered joints, same size as condensate drain connection.
- P. Pipe drains from drain pans to nearest floor drain; use ASTM D 1785, Schedule 40 PVC pipe and solvent-welded fittings, same size as condensate drain connection.
 - 1. Requirements for Low-Emitting Materials:
 - a. PVC solvent cement shall have a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Requirements for Low-Emitting Materials: Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

3.3 CONNECTIONS

- A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to unit to allow service and maintenance.
- C. Connect piping to units mounted on vibration isolators with flexible connectors.
- D. Connect cooling condensate drain pans with air seal trap at connection to drain pan and install cleanouts at changes in pipe direction.
- E. **[Chilled] [and] [Hot]** Water Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Install shutoff valve and union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.
- F. Steam and Condensate Piping: Comply with applicable requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and

Condensate Piping Specialties." Install shutoff valve at steam coil connections, float and thermostatic trap, and union or flange at each coil return connection.

- G. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping."
- H. Gas Piping: Comply with requirements in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**] Connect gas piping with shutoff valve and union and with sufficient clearance for burner removal and service. Make connection with AGA-approved flexible connectors.
- I. Comply with requirements for ductwork specified in Section 233113 "Metal Ducts."
- J. Indirect-Fired Furnace Vent Connections: Comply with Section 235123 "Gas Vents."
- K. Install electrical devices furnished with units but not factory mounted.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to and inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Adjust seals and purge.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 4. Set initial temperature and humidity set points.
 - 5. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- D. Air-to-air energy recovery equipment will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.5 CLEANING

- A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

3.6 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain air-to-air energy recovery units.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 237200

SECTION 237313 - MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Constant-air-volume, single-zone air-handling units.
 - 2. Constant-air-volume, multizone air-handling units.
 - 3. Constant-air-volume, dual-duct air-handling units.
 - 4. Variable-air-volume, single-zone air-handling units.
 - 5. Variable-air-volume, dual-duct air-handling units.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design vibration isolation and seismic-restraint details, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Casing panels shall be self-supporting and capable of withstanding 133 percent of internal static pressures indicated, without panel joints exceeding a deflection of [L/200] [L/100] <Insert value> where "L" is the unsupported span length within completed casings.
- C. Seismic Performance: Air-handling units shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.4 ACTION SUBMITTALS

- A. Product Data: For each air-handling unit indicated.

1. Unit dimensions and weight.
2. Cabinet material, metal thickness, finishes, insulation, and accessories.
3. Fans:
 - a. Certified fan-performance curves with system operating conditions indicated.
 - b. Certified fan-sound power ratings.
 - c. Fan construction and accessories.
 - d. Motor ratings, electrical characteristics, and motor accessories.
4. Certified coil-performance ratings with system operating conditions indicated.
5. Dampers, including housings, linkages, and operators.
6. Filters with performance characteristics.
7. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."

C. Delegated-Design Submittal: For vibration isolation[**and seismic restraints**] indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
2. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Mechanical-room layout and relationships between components and adjacent structural and mechanical elements.
2. Support location, type, and weight.
3. Field measurements.

B. Seismic Qualification Certificates: For air-handling units, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- C. Source quality-control reports.
- D. Field quality-control reports.
- E. Copy of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-handling units to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Filters: **[One (1)]** <Insert number> set(s) for each air-handling unit.
 - 2. Gaskets: **[One (1)]** <Insert number> set(s) for each access door.
 - 3. Fan Belts: **[One (1)]** <Insert number> set(s) for each air-handling unit fan.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
- C. ARI Certification: Air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.
- D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- E. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- F. Comply with NFPA 70.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of modular indoor central-station air-handling units that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including all major operational components.
 - b. Faulty operation of controls.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - 2. Warranty Periods: From date of Substantial Completion.
 - a. AHUs: Manufacturer's standard, but not less than **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.
 - b. Other Components: Minimum **[one (1)] <Insert number>** year(s).

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Air Enterprises, Inc.](#)
 - 2. [Airtherm; a Mestek company.](#)
 - 3. [Buffalo Air Handling.](#)
 - 4. [Carrier Corporation; a member of the United Technologies Corporation Family.](#)
 - 5. [Coil Company, LLC.](#)
 - 6. [Dunham-Bush, Inc.](#)
 - 7. [Engineered Air.](#)

8. [Mammoth Inc.](#)
9. [McQuay International](#)
10. [Scott Springfield Mfg. Inc.](#)
11. [Trane; American Standard Inc.](#)
12. [USA Coil & Air.](#)
13. [YORK International Corporation.](#)
14. <Insert manufacturer's name>.
15. or approved equal.

2.2 UNIT CASINGS

A. General Fabrication Requirements for Casings:

1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
2. Casing Joints: Sheet metal screws or pop rivets.
3. Sealing: Seal all joints with water-resistant sealant.
4. Factory Finish for [**Steel**] [**and**] [**Galvanized-Steel**] Casings: Apply manufacturer's standard primer immediately after cleaning and pretreating.
5. Factory Finish for [**Steel**] [**and**] [**Galvanized-Steel**] Casings: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on enamel finish, consisting of prime coat and thermosetting topcoat.
6. Casing Coating: [**Thermoplastic vinyl**] [**Epoxy**] [**Zinc**] [**Synthetic resin**] [**Phenolic**] [**Polytetrafluoroethylene**] [**Vinyl ester**] [**Hot-dip galvanized**] [**Powder-baked enamel**] <Insert special coating>.
7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Casing Insulation and Adhesive:

1. Materials: ASTM C 1071, [**Type I**] [**Type II**].
2. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the cooling-coil section.
 - a. Liner Adhesive: Comply with ASTM C 916, Type I.
 - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 - c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service-air velocity.
3. Location and Application: Encased between outside and inside casing.

C. Inspection and Access Panels and Access Doors:

1. Panel and Door Fabrication: Formed and reinforced, single- or double-wall and insulated panels of same materials and thicknesses as casing.

2. Inspection and Access Panels:
 - a. Fasteners: Two or more camlock type for panel lift-out operation. Arrangement shall allow panels to be opened against air-pressure differential.
 - b. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - c. Size: Large enough to allow inspection and maintenance of air-handling unit's internal components.
 3. Access Doors:
 - a. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever-type latches, operable from inside and outside. Arrange doors to be opened against air-pressure differential.
 - b. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - c. Fabricate windows in **[fan section]** doors of double-glazed, wire-reinforced safety glass with an air space between panes and sealed with interior and exterior rubber seals.
 - d. Size: At least **[18 inches (450 mm)] [24 inches (600 mm)] <Insert width>** wide by full height of unit casing up to a maximum height of **[60 inches (1500 mm)] [72 inches (1800 mm)] <Insert height>**.
 4. Locations and Applications:
 - a. Fan Section: **[Inspection and access panels] [Doors] [Doors and inspection and access panels]**.
 - b. Access Section: Doors.
 - c. Coil Section: Inspection and access panel.
 - d. Damper Section: **[Inspection and access panels] [Doors]**.
 - e. Filter Section: **[Inspection and access panels] [Doors]** large enough to allow periodic removal and installation of filters.
 - f. Mixing Section: Doors.
 - g. Humidifier Section: Doors.
 5. Service Light: 100-W vaporproof fixture with switched junction box located **[outside] [inside]** adjacent to door.
 - a. Locations: **[Each section accessed with door] [Fan section] <Insert location>**.
- D. Condensate Drain Pans:
1. Fabricated with **[one] [two]** percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and from humidifiers and to direct water toward drain connection.
 - a. Length: Extend drain pan downstream from leaving face **[to comply with ASHRAE 62.1] <Insert distance>**.
 - b. Depth: A minimum of **[2 inches (50 mm)] <Insert depth>** deep.

2. **[Formed sections] [Integral part of floor plating].**
 3. Single-wall, **[galvanized] [stainless]**-steel sheet.
 4. Double-wall, **[galvanized] [stainless]**-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
 5. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on **[one end] [both ends]** of pan.
 - a. Minimum Connection Size: **[NPS 1 (DN 25)] [NPS 2 (DN 50)] <Insert size>**.
 6. Pan-Top Surface Coating: Asphaltic waterproofing compound.
 7. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.
- E. Service Platform: **[Steel] [Galvanized steel] [Aluminum]**, **[42 inches (1070 mm)] <Insert width>** wide running entire length of unit and located on service access side, with angle side rails, **4-inch (100-mm)** kick plates, and expanded metal floor. Provide platform with a fixed ladder that extends from the top of the side rail to the floor.
- F. Air-Handling-Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.
1. Seismic Fabrication Requirements: Fabricate mounting base and attachment to air-handling unit sections, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when air-handling unit frame is anchored to building structure.

2.3 FAN, DRIVE, AND MOTOR SECTION

- A. Fan and Drive Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum-rated fan speed and motor horsepower.
1. Shafts: Designed for continuous operation at maximum-rated fan speed and motor horsepower, and with field-adjustable alignment.
 - a. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil.
 - b. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
- B. Centrifugal Fan Housings: Formed- and reinforced-steel panels to form curved scroll housings with shaped cutoff and spun-metal inlet bell.
1. Bracing: Steel angle or channel supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 2. Horizontal-Flanged, Split Housing: Bolted construction.
 3. Housing for Supply Fan: Attach housing to fan-section casing with metal-edged flexible duct connector.

4. Flexible Connector: Factory fabricated with a fabric strip [3-1/2 inches (89 mm)] [5-3/4 inches (146 mm)] wide attached to 2 strips of 2-3/4-inch- (70-mm-) wide, 0.028-inch- (0.7-mm-) thick, galvanized-steel sheet or 0.032-inch- (0.8-mm-) thick aluminum sheets; select metal compatible with casing.
 - a. Flexible Connector Fabric: Glass fabric, double coated with neoprene. Fabrics, coatings, and adhesives shall comply with UL 181, Class 1.
 - 1) Fabric Minimum Weight: 26 oz./sq. yd. (880 g/sq. m).
 - 2) Fabric Tensile Strength: 480 lbf/inch (84 N/mm) in the warp and 360 lbf/inch (63 N/mm) in the filling.
 - 3) Fabric Service Temperature: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).
- C. Plenum Fan Housings: Steel frame and panel; fabricated without fan scroll and volute housing.
- D. Backward-Inclined, Centrifugal Fan Wheels: Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange, backplate, backward-inclined blades welded or riveted to flange and backplate; cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.
- E. Forward-Curved, Centrifugal Fan Wheels: Inlet flange, backplate, and shallow blades with inlet and tip curved forward in direction of airflow and mechanically fastened to flange and backplate; cast-steel hub swaged to backplate and fastened to shaft with set screws.
- F. Airfoil, Centrifugal Fan Wheels: Smooth-curved inlet flange, backplate, and hollow die-formed airfoil-shaped blades continuously welded at tip flange and backplate; cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.
- G. Axial Fans: Fan wheel and housing, straightening-vane section, factory-mounted motor with belt drive or direct drive, an inlet cone section, and accessories.
 1. Variable-Pitch Fans: Internally mounted [pneumatic] [electric] [electronic] actuator, externally mounted positive positioner, and mechanical-blade-pitch indicator.
 2. Housings: [Steel] [Galvanized steel] [Aluminum].
 - a. Inlet and Outlet Connections: Flanges.
 - b. Guide Vane Section: Integral guide vanes downstream from fan wheel designed to straighten airflow.
- H. Fan Shaft Bearings:
 1. Prelubricated and Sealed, Ball Bearings: Self-aligning, pillow-block type with a rated life of [50,000] [120,000] <Insert number> hours according to ABMA 9.
 2. Grease-Lubricated, Tapered-Roller Bearings: Self-aligning, pillow-block type with double-locking collars and 2-piece, cast-iron housing [with grease lines]

- extended to outside unit]** and a rated life of **[50,000] [120,000] <Insert number>** hours according to ABMA 11.
3. Grease-Lubricated Bearings: Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing[**with grease lines extended to outside unit**].
- I. Belt Drives: Factory mounted, with adjustable alignment and belt tensioning, and with **[1.5] [1.4] [1.3] [1.2]** service factor based on fan motor.
 1. Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
 2. Motor Pulleys: Adjustable pitch for use with **[5] <Insert number>**-hp motors and smaller; fixed pitch for use with motors larger than **[5] <Insert number>** hp. Select pulley size so pitch adjustment is at the middle of adjustment range at fan design conditions.
 3. Belts: Oil resistant, nonsparking, and nonstatic; in matched sets for multiple-belt drives.
 4. Belt Guards: Comply with requirements specified by OSHA and fabricate according to SMACNA's "HVAC Duct Construction Standards"; **0.1046-inch (2.7-mm-)** thick, **3/4-inch (20-mm)** diamond-mesh wire screen, welded to steel angle frame; prime coated.
 - J. Variable-Inlet Vanes: Steel, with blades supported at both ends with permanently lubricated bearings. Variable mechanism terminating in single lever for connection to control actuator with connecting shaft for second set of variable inlet vanes on double-width fans.
 - K. Discharge Dampers: Heavy-duty steel assembly with channel frame and sealed ball bearings, and **[opposed] [parallel]** blades constructed of two plates formed around and welded to shaft, with blades linked out of air stream to single control lever.
 - L. Internal Vibration Isolation[**and Seismic Control**]: Fans shall be factory mounted with manufacturer's standard[**restrained**] vibration isolation mounting devices having a minimum static deflection of **[1 inch (25 mm)] [2 inches (50 mm)] <Insert value>**.
 1. Seismic Fabrication Requirements: Fabricate fan section, internal mounting frame and attachment to fans, fan housings, motors, casings, accessories, and other fan section components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when fan-mounting frame and air-handling-unit mounting frame are anchored to building structure.
 - M. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 1. Enclosure Type: Totally enclosed, fan cooled.
 2. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
 3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

4. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
5. Mount unit-mounted disconnect switches on **[exterior]** **[interior]** of unit.
6. **<Insert unique motor characteristics>**.

N. Variable Frequency Controllers:

1. Description: NEMA ICS 2, IGBT, PWM, VFC; listed and labeled as a complete unit and arranged to provide variable speed of an NEMA MG 1, Design B, 3-phase induction motor by adjusting output voltage and frequency.
2. Output Rating: 3-phase; 6 to **[60 Hz, with voltage proportional to frequency throughout voltage range]** **[66 Hz, with torque constant as speed changes]** **[120 Hz, with horsepower constant throughout speed range]**.
3. Unit Operating Requirements:
 - a. Input ac voltage tolerance of **[208 V, plus or minus 5]** **[380 to 500 V, plus or minus 10]** **[525 to 575 V, plus or minus 10]** percent.
 - b. Input frequency tolerance of 06/11 Hz, plus or minus 6 percent.
 - c. Minimum Efficiency: 96 percent at 60 Hz, full load.
 - d. Minimum Displacement Primary-Side Power Factor: 96 percent.
 - e. Overload Capability: 1.1 times the base load current for 60 seconds; 2.0 times the base load current for 3 seconds.
 - f. Starting Torque: 100 percent of rated torque or as indicated.
 - g. Speed Regulation: Plus or minus 1 percent.
4. Isolated control interface to allow controller to follow control signal over an 11:1 speed range.
5. Internal Adjustability Capabilities:
 - a. Minimum Speed: 5 to 25 percent of maximum rpm.
 - b. Maximum Speed: 80 to 100 percent of maximum rpm.
 - c. Acceleration: 2 to a minimum of 22 seconds.
 - d. Deceleration: 2 to a minimum of 22 seconds.
 - e. Current Limit: 50 to a minimum of 110 percent of maximum rating.
6. Self-Protection and Reliability Features:
 - a. Input transient protection by means of surge suppressors.
 - b. Undervoltage and overvoltage trips; inverter overtemperature, overload, and overcurrent trips.
 - c. Adjustable motor overload relays capable of NEMA ICS 2, **[Class 10]** **[Class 20]** **[Class 30]** performance.
 - d. Notch filter to prevent operation of the controller-motor-load combination at a natural frequency of the combination.
 - e. Instantaneous line-to-line and line-to-ground overcurrent trips.
 - f. Loss-of-phase protection.
 - g. Reverse-phase protection.
 - h. Short-circuit protection.
 - i. Motor overtemperature fault.

7. Automatic Reset/Restart: Attempts three restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction. Bidirectional autospeed search shall be capable of starting into rotating loads spinning in either direction and returning motor to set speed in proper direction, without damage to controller, motor, or load.
8. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped.
9. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.
10. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.
11. Door-mounted LED status lights shall indicate the following conditions:
 - a. Power on.
 - b. Run.
 - c. Overvoltage.
 - d. Line fault.
 - e. Overcurrent.
 - f. External fault.
12. Panel-Mounted Operator Station: Start-stop and auto-manual selector switches with manual-speed-control potentiometer and elapsed time meter.
13. Meters or digital readout devices and selector switch, mounted flush in controller door and connected to indicate the following controller parameters:
 - a. Output frequency (Hertz).
 - b. Motor speed (rpm).
 - c. Motor status (running, stop, fault).
 - d. Motor current (amperes).
 - e. Motor torque (percent).
 - f. Fault or alarming status (code).
 - g. Proportional-integral-derivative (PID) feedback signal (percent).
 - h. DC-link voltage (volts direct current).
 - i. Set-point frequency (Hertz).
 - j. Motor output voltage (volts).
14. Control Signal Interface:
 - a. Electric Input Signal Interface: A minimum of 2 analog inputs (0 to 10 V or 0/4-20 mA) and 6 programmable digital inputs.
 - b. Remote signal inputs capable of accepting any of the following speed-setting input signals from the control system:
 - 1) 0 to 10-V dc.
 - 2) 0-20 or 4-20 mA.
 - 3) Potentiometer using up/down digital inputs.
 - 4) Fixed frequencies using digital inputs.

- 5) RS485.
 - 6) Keypad display for local hand operation.
- c. Output signal interface with a minimum of 1 analog output signal (0/4-20 mA), which can be programmed to any of the following:
- 1) Output frequency (Hertz).
 - 2) Output current (load).
 - 3) DC-link voltage (volts direct current).
 - 4) Motor torque (percent).
 - 5) Motor speed (rpm).
 - 6) Set-point frequency (Hertz).
- d. Remote indication interface with a minimum of 2 dry circuit relay outputs (120-V ac, 1 A) for remote indication of the following:
- 1) Motor running.
 - 2) Set-point speed reached.
 - 3) Fault and warning indication (overtemperature or overcurrent).
 - 4) High- or low-speed limits reached.
15. Communications: RS485 interface allows VFC to be used with an external system within a multidrop LAN configuration. Interface shall allow all parameter settings of VFC to be programmed via BMS control. Provide capability for VFC to retain these settings within the nonvolatile memory.
16. Integral Disconnecting Means: **[NEMA AB 1, instantaneous-trip circuit breaker] [NEMA AB 1, molded-case switch] [NEMA KS 1, nonfusible switch] [NEMA KS 1, fusible switch]** with lockable handle.
17. Accessories:
- a. Devices shall be factory installed in controller enclosure unless otherwise indicated.
 - b. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.
 - c. Standard Displays:
 - 1) Output frequency (Hertz).
 - 2) Set-point frequency (Hertz).
 - 3) Motor current (amperes).
 - 4) DC-link voltage (volts direct current).
 - 5) Motor torque (percent).
 - 6) Motor speed (rpm).
 - 7) Motor output voltage (volts).

2.4 COIL SECTION

A. General Requirements for Coil Section:

1. Comply with ARI 410.

2. Fabricate coil section to allow removal and replacement of coil for maintenance and to allow in-place access for service and maintenance of coil(s).
3. For multizone units, provide air deflectors and air baffles to balance airflow across coils.
4. Coils shall not act as structural component of unit.
5. Seismic Fabrication Requirements: Fabricate coil section, internal mounting frame and attachment to coils, and other coil section components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when coil-mounting frame and air-handling-unit mounting frame are anchored to building structure.

B. Electrical Heating Coils, Controls, and Accessories: Comply with UL 1995.

1. Casing Assembly: **[Slip-in] [Flanged]** type with galvanized-steel frame.
2. Sheathed Heating Elements: Coiled resistance wire of 80 percent nickel and 20 percent chromium surrounded by compacted magnesium-oxide powder in tubular-steel sheath; with spiral-wound, copper-plated, steel fins continuously brazed to sheath.
3. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
4. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout, safety device; serviceable through terminal box without removing heater from coil section.
5. Secondary Protection: Load-carrying, manually resetting or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
6. Control Panel: **[Unit] [Remote]** mounted with disconnecting means and overcurrent protection.
 - a. **[Magnetic] [Mercury]** contactor.
 - b. Solid-state, stepless pulse controller.
 - c. Toggle switches, one per step.
 - d. Step controller.
 - e. Time-delay relay.
 - f. Pilot lights, one per step.
 - g. Airflow proving switch.

2.5 AIR FILTRATION SECTION

A. General Requirements for Air Filtration Section:

1. Comply with NFPA 90A.
2. Provide minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
3. Provide filter holding frames arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.

B. Disposable Panel Filters:

1. Factory-fabricated, viscous-coated, flat-panel type.
2. Thickness: [1 inch (25 mm)] [2 inches (50 mm)].
3. Dust-Holding Capacity: <Insert lb (kg)>.
4. Initial Resistance: <Insert inches wg (Pa)>.
5. Recommended Final Resistance: <Insert inches wg (Pa)>.
6. Arrestance (ASHRAE 52.1): [80] <Insert value>.
7. Merv (ASHRAE 52.2): [5] <Insert value>.
8. Media: Interlaced glass fibers sprayed with nonflammable adhesive[and antimicrobial agent].
9. Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, hinged, and with pull and retaining handles.

C. Extended-Surface, Disposable Panel Filters:

1. Factory-fabricated, dry, extended-surface type.
2. Thickness: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)].
3. Dust-Holding Capacity: <Insert lb (kg)>.
4. Initial Resistance: <Insert inches wg (Pa)>.
5. Recommended Final Resistance: <Insert inches wg (Pa)>.
6. Arrestance (ASHRAE 52.1): [90] <Insert value>.
7. Merv (ASHRAE 52.2): [7] <Insert value>.
8. Media: Fibrous material formed into deep-V-shaped pleats[with antimicrobial agent] and held by self-supporting wire grid.
9. Media-Grid Frame: [Nonflammable cardboard] [Galvanized steel] [Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets].
10. Mounting Frames: Welded, galvanized steel, with gaskets and fasteners, suitable for bolting together into built-up filter banks.

D. Extended-Surface, Nonsupported-Media Filters:

1. Factory-fabricated, dry, extended-surface, self-supporting type.
2. Dust-Holding Capacity: <Insert lb (kg)>.
3. Initial Resistance: <Insert inches wg (Pa)>.
4. Recommended Final Resistance: <Insert inches wg (Pa)>.
5. Arrestance (ASHRAE 52.1): [95] <Insert value>.
6. Merv (ASHRAE 52.2): [13] <Insert value>.
7. Media: Fibrous material [with antimicrobial agent] constructed so individual pleats are maintained in tapered form by flexible internal supports under rated-airflow conditions.
8. Filter-Media Frame: [Galvanized steel] [Hard polyurethane foam].
9. Mounting Frames: Welded, galvanized steel, with gaskets and fasteners, suitable for bolting together into built-up filter banks[with space for prefilter].

E. Automatic Roll Filters:

1. Factory-fabricated, automatic, motor-driven, roll type.
2. Arrangement: [Horizontal] [Vertical].

3. Dust-Holding Capacity: <Insert lb (kg)>.
4. Initial Resistance: <Insert inches wg (Pa)>.
5. Recommended Final Resistance: <Insert inches wg (Pa)>.
6. Arrestance (ASHRAE 52.1): [80] <Insert value>.
7. Merv (ASHRAE 52.2): [5] <Insert value>.
8. Media: Compressed and rolled, fibrous-glass material viscous coated[, and with antimicrobial agent].
9. Holding Frame: Galvanized steel, with enclosed, clean media roll arranged to allow upstream replacement of filter media.
10. Auxiliary Frame: Locate on downstream side of unit with [downstream] [side] access.
11. Final Filter: Extended-surface, [retained-media] [nonsupported-media] [HEPA] filters.
12. Control and Drive:
 - a. Mechanism: Electric, gear-reducer, motor-driven, feed control equipped with manual media advance and runout switches for stopping media movement of filter bank and operating remote warning signal lights.
 - b. Manual Control: Manual switch to advance media and wired to override automatic controls.
 - c. Automatic Control: Prewired control package to advance media [when filter resistance exceeds adjustable high limit] [after adjustable operating time].

F. Activated-Carbon Panel Filters:

1. Factory-fabricated unit with activated-carbon media.
2. Flat-Panel Media: Multilayer filter with inlet layer of polyester fibers, layer of activated-carbon granules bonded to fibers, layer of polyurethane foam, and housed in cardboard frame.
3. Pleated Media: Multilayer filter with inlet layer of cotton and synthetic fibers and layer of activated-carbon granules bonded to synthetic fibers, formed into deep-V-shaped pleats and held by self-wire grid, and housed in nonflammable cardboard frame.
4. Mounting Frames: Welded galvanized steel, with polyurethane gaskets and fasteners, capable of holding media and media frame in place and suitable for bolting together into built-up filter banks.

G. Activated-Carbon Filters:

1. Factory-fabricated unit in deep-V arrangement with disposable panel prefilter.
2. Media: Activated carbon mounted in removable carbon-cell trays of epoxy-coated steel.
3. Activated-Carbon Capacity: [12 lb (5.4 kg) of activated carbon per 500 cfm (236 L/s)] [8.8 lb (4.0 kg) of activated carbon per 2000 cfm (944 L/s)] of airflow.
4. Housing: 0.064-inch- (1.6-mm-) thick, galvanized steel, for side servicing through gasketed access doors on both sides. Equip housings with metal slide channel tracks to hold activated-carbon trays.

H. HEPA Filters:

1. Factory-fabricated unit.
2. Dust-Holding Capacity: <Insert lb (kg)>.
3. Initial Resistance: <Insert inches wg (Pa)>.
4. Recommended Final Resistance: <Insert inches wg (Pa)>.
5. Arrestance (ASHRAE 52.1): [95 percent on 0.3-micrometer D.O.P. particles] [99.97 percent on 0.3-micrometer D.O.P. particles] [99.9995 percent on 0.1- and 0.2-micrometer D.O.P. particles] [99.99995 percent on 0.1- and 0.2-micrometer D.O.P. particles] <Insert value>.
6. Media: UL 586, fibrous glass, constructed of continuous sheets with closely spaced pleats with [aluminum separators] [vinyl-coated aluminum separators] [separators of ribbons of filter media].
7. Frame Material: [3/4-inch- (19-mm-) thick, fire-retardant plywood] [3/4-inch- (19-mm-) thick, fire-retardant particleboard] [3/4-inch- (19-mm-) thick plywood] [3/4-inch- (19-mm-) thick particleboard] [Galvanized steel] [Aluminized steel] [Cadmium-plated steel] [Stainless steel] [Aluminum].
8. Media to Frame Side Bond: [Polyurethane foam] [Silicone] [Neoprene adhesive] [Fiberglass-mat packing] [Thermosetting sealant] [Knife edge in fluid-filled channel].
9. Face Gasket: [Neoprene expanded rubber] [Ceramic fiber] [Silicone].
10. Mounting Frames: Downstream corners of holding device shall have cushion pads to protect media. Bolted filter-sealing mechanism shall mount and continuously seal each individual filter.

I. Filter Gage:

1. [3-1/2-inch- (90-mm-)] [2-inch- (50-mm-)] diameter, diaphragm-actuated dial in metal case.
2. Vent valves.
3. Black figures on white background.
4. Front recalibration adjustment.
5. [2] [3] percent of full-scale accuracy.
6. Range: [0- to 0.5-inch wg (0 to 125 Pa)] [0- to 1.0-inch wg (0 to 250 Pa)] [0- to 2.0-inch wg (0 to 500 Pa)] [0- to 3.0-inch wg (0 to 750 Pa)] [0- to 4.0-inch wg (0 to 1000 Pa)].
7. Accessories: Static-pressure tips with integral compression fittings, 1/4-inch (6-mm) [aluminum] [plastic] tubing, and 2- or 3-way vent valves.

2.6 DAMPERS

- A. General Requirements for Dampers: Leakage rate, according to AMCA 500, "Laboratory Methods for Testing Dampers for Rating," shall not exceed [2] <Insert number> percent of air quantity at [2000-fpm (10-m/s)] <Insert value> face velocity through damper and [4-inch wg (1000-Pa)] <Insert value> pressure differential.
- B. Damper Operators: Comply with requirements in Section 230923.12 "Control Dampers."

C. Electronic Damper Operators:

1. Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.
2. Electronic damper position indicator shall have visual scale indicating percent of travel and 2- to 10-V dc, feedback signal.
3. Operator Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
 - c. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.
4. Nonspring-Return Motors for Dampers Larger Than **25 Sq. Ft. (2.3 sq. m)**: Size for running torque of **150 in. x lbf (16.9 N x m)** and breakaway torque of **300 in. x lbf (33.9 N x m)**.
5. Spring-Return Motors for Dampers Larger Than **25 Sq. Ft. (2.3 sq. m)**: Size for running and breakaway torque of **150 in. x lbf (16.9 N x m)**.
6. Size dampers for running torque calculated as follows:
 - a. Parallel-Blade Damper with Edge Seals: **7 inch-lb/sq. ft. (86.8 kg-cm/sq. m)** of damper.
 - b. Opposed-Blade Damper with Edge Seals: **5 inch-lb/sq. ft. (62 kg-cm/sq. m)** of damper.
 - c. Parallel-Blade Damper without Edge Seals: **4 inch-lb/sq. ft. (49.6 kg-cm/sq. m)** of damper.
 - d. Opposed-Blade Damper without Edge Seals: **3 inch-lb/sq. ft. (37.2 kg-cm/sq. m)** of damper.
 - e. Dampers with **2- to 3-Inch wg (500 to 750 Pa)** of Pressure Drop or Face Velocities of **1000 to 2500 fpm (5 to 13 m/s)**: Increase running torque by 1.5.
 - f. Dampers with **3- to 4-Inch wg (750 to 1000 Pa)** of Pressure Drop or Face Velocities of **2500 to 3000 fpm (13 to 15 m/s)**: Increase running torque by 2.0.
7. Coupling: V-bolt and V-shaped, toothed cradle.
8. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
9. Fail-Safe Operation: Mechanical, spring-return mechanism with external, manual gear release on nonspring-return actuators.
10. Power Requirements (Two-Position Spring Return): **[24] [120] [230]-V ac**.
11. Power Requirements (Modulating): Maximum 10 VA at 24-V ac or 8 W at 24-V dc.
12. Proportional Signal: 2- to 10-V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.

13. Temperature Rating: [Minus 22 to plus 122 deg F (Minus 30 to plus 50 deg C)] [40 to 104 deg F (5 to 40 deg C)].
14. Run Time: [12 seconds open, 5 seconds closed] [30 seconds] [60 seconds] [120 seconds].

D. Pneumatic Damper Operators:

1. Rolling-diaphragm piston type with adjustable stops and spring return, sized to operate with sufficient reserve power to provide smooth modulating action or two-position action. Where actuators operate in sequence, provide pilot positioners.
2. Pneumatic Damper Position Indicator: Potentiometer mounted in enclosure with adjustable crank-arm assembly connected to damper to transmit 0 to 100 percent valve/damper travel.
3. Pilot Positioners:
 - a. Start Point: Adjustable from 2 to 12 psig (14 to 83 kPa).
 - b. Operating Span: Adjustable from 5 to 13 psig (35 to 90 kPa).
 - c. Linearity: Plus or minus 10 percent of output signal span.
 - d. Hysteresis: 3 percent of span.
 - e. Response: 0.25-psig (1723-Pa) input change.
 - f. Maximum Pilot Signal Pressure: 20 psig (140 kPa).
 - g. Maximum Control Air-Supply Pressure: 60 psig (410 kPa).
4. Actuator Housing: Molded or die-cast zinc or aluminum. [Terminal unit actuators may be high-impact plastic with ambient temperature rating of 50 to 140 deg F (10 to 60 deg C) unless located in return-air plenums.]
5. Inlet-Vane Operators: High pressure, with pilot positioners.

E. Zone Dampers: Two single-blade, [galvanized-steel] [aluminum] [extruded-aluminum] dampers offset 90 degrees from each other on [cadmium-plated] steel operating rod rotating in sintered bronze or nylon bearings mounted in a single [galvanized-steel] [aluminum] [extruded-aluminum] frame. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod.

F. Face-and-Bypass Dampers: Opposed-blade, [galvanized-steel] [aluminum] [extruded-aluminum] dampers with [cadmium-plated] steel operating rods rotating in sintered bronze or nylon bearings mounted in a single [galvanized-steel] [aluminum] [extruded-aluminum] frame and with operating rods connected with a common linkage. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod.

G. Outdoor- and Return-Air Mixing Dampers: Parallel-blade, [galvanized-steel] [aluminum] [extruded-aluminum] dampers mechanically fastened to [cadmium-plated] steel operating rod in reinforced cabinet. Connect operating rods with common linkage and interconnect linkages so dampers operate simultaneously.

H. Outdoor- and Return-Air Dampers: Low-leakage, double-skin, airfoil-blade, [galvanized-steel] [aluminum] [extruded-aluminum] dampers with compressible

jamb seals and extruded-vinyl blade edge seals in **[opposed]** **[parallel]**-blade arrangement with **[cadmium-plated]** steel operating rods rotating in **[stainless-steel sleeve]** **[sintered bronze or nylon]** bearings mounted in a single **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** frame, and with operating rods connected with a common linkage. Leakage rate shall not exceed **5 cfm/sq. ft.** (0.22 L/s per sq. m) at **1-inch wg** (250 Pa) and **9 cfm/sq. ft.** (0.4 L/s per sq. m) at **4-inch wg** (1.0 MPa).

- I. Mixing Section: Multiple-blade, air-mixer assembly located immediately downstream of mixing section.
- J. Combination Filter and Mixing Section:
 - 1. Cabinet support members shall hold **2-inch-** (50-mm-) thick, pleated, flat, permanent or throwaway filters.
 - 2. Multiple-blade, air-mixer assembly shall mix air to prevent stratification, located immediately downstream of mixing box.

2.7 HUMIDIFIERS

A. Steam Grid Humidifier:

- 1. Manifold:
 - a. ASTM A 666, Type 304 stainless steel.
 - b. Steam jacketed.
 - c. Insulated with **1/2-inch** (13-mm) fiberglass and stainless-steel jacket.
 - d. Manifold shall extend the full width of unit with mounting brackets at ends.
- 2. Steam Separator: **[Cast iron,]** **[ASTM A 666, Type 304 stainless steel,]** with **[separate]** humidifier control valve.
- 3. Humidifier Control Valve: Actuator: **[Pneumatic]** **[Electric]** modulating with spring return.
- 4. Humidifier Control Valve: Actuator: As specified in Section 230923.11 "Control Valves."
- 5. Steam Trap: Inverted-bucket type, sized for a minimum of three times the maximum rated condensate flow of humidifier at **1/2-psig** (3.4-kPa) inlet pressure.
- 6. Aquastat: For separate mounting on steam condensate, return piping to prevent cold operation of humidifier.
- 7. Strainer: In-line type.
- 8. Airflow Switch: To prevent humidifier operation in the absence of airflow.

B. Wet Glass Cell Washer Section:

- 1. **3-inch-** (75-mm-) deep cells with random packed, glass-fiber media in **[galvanized]** **[stainless]-**steel frames.
- 2. Access Door: Watertight with brass fittings[, **wire glass window,**] and locking handles.
- 3. Spray Tree Assembly: **[Brass]** **[Stainless-steel]** nozzles and **[galvanized]** **[stainless]-**steel piping.

4. Eliminator: [**Galvanized**] [**Stainless**]-steel plates.
5. Tank:
 - a. Welded[**stainless**] steel[, **with interior and exterior surfaces blasted and painted with zinc-chromate paint**].
 - b. Copper suction screen.
 - c. Drain, overflow, and suction connections.
 - d. Makeup connection with [**brass**]float valve, and with quick-fill connection.
6. Insulate exterior with duct insulation and mount on 2-inch (-(50-mm-)) thick, rigid insulation board.

C. Evaporative Humidifier Section:

1. Access Door: Watertight [**cast iron**]with brass fittings, wire glass window, and locking handles.
2. Spray Tree Assembly: Brass nozzles and galvanized piping, [**galvanized eliminator plates with flooding nozzles and header, and galvanized antisplash baffles**] [**cross-fluted cellulose media**].
3. Tank:
 - a. Welded steel tank with interior and exterior surfaces blasted and painted with zinc-chromate paint.
 - b. Copper suction screen, drain, overflow, and suction connections.
 - c. Makeup connection with [**brass**]float valve, and with quick-fill connection.
4. Insulation: Insulate with duct insulation on exterior and mount on 2-inch (-(50-mm-)) thick, rigid insulation board.

2.8 AIR-TO-AIR ENERGY RECOVERY

A. Heat Wheels:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Airxchange](#).
 - b. [American Energy Exchange, Inc.](#)
 - c. [Loren Cook Company](#).
 - d. [SEMCO Incorporated](#).
 - e. [Trane; American Standard Inc.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Casing:
 - a. Steel, with manufacturer's standard paint coating.

- b. Integral purge section limiting carryover of exhaust air to between **0.05 percent at 1.6-inch wg and 0.20 percent at 4-inch wg** (0.05 percent at 400-Pa and 0.20 percent at 1000-Pa) differential pressure.
 - c. Casing seals on periphery of rotor, on duct divider, and on purge section.
 - d. Support rotor on grease-lubricated ball bearings with extended grease fittings. Mount horizontal wheels on tapered roller bearing.
 3. Rotor: Aluminum, segmented wheel, strengthened with radial spokes[, **with nontoxic, noncorrosive, silica-gel desiccant coating**]. Construct media for passing maximum [500] [800] [1200]-micrometer solids.
 4. Rotor: [**Glass-fiber**] [**Polymer**] segmented wheel, strengthened with radial spokes impregnated with nonmigrating, water-selective, molecular-sieve desiccant coating. Construct media for passing maximum [800] [1200]-micrometer solids.
 5. Drive: Fractional horsepower motor and gear reducer[, **with speed changed by variable frequency controller,**] and self-adjusting multilink belt around outside of rotor.
 6. Controls:
 - a. Starting relay, factory mounted and wired, and manual motor starter for field wiring.
 - b. Variable frequency controller, factory mounted and wired, permitting input of field connected 4-20 mA or 1-10-V control signal.
 - c. Variable frequency controller, factory mounted and wired, with exhaust-air sensor to vary rotor speed and maintain exhaust temperature above freezing.
 - d. Variable frequency controller, factory mounted and wired, with exhaust- and outdoor-air sensors, automatic changeover thermostat and set-point adjuster, to vary rotor speed and maintain [**exhaust temperature above freezing and**] air differential temperature above set point. Provide maximum rotor speed when exhaust-air temperature is less than outdoor-air temperature.
 - e. Pilot-Light Indicator: Display rotor rotation and speed.
 - f. Speed Settings: Adjustable settings for maximum and minimum rotor speed limits.
- B. Fixed-Plate Sensible Heat Exchangers:
1. **Manufacturers:** Subject to compliance with requirements, [provide products by one of the following:
 - a. [American Energy Exchange, Inc.](#)
 - b. [Des Champs Technologies.](#)
 - c. [Exothermics Inc.; a brand of Eclipse, Inc.](#)
 - d. [Nutech Brands Inc.](#)
 - e. [RenewAire LLC.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.

2. Casing: **[Aluminum] [Galvanized steel] [Enameled steel, with galvanized-steel liner] [Enameled steel]**.
3. Plates: Evenly spaced and sealed and arranged for counter airflow.
4. Plate Material: **[Embossed aluminum] [Stainless steel] [Polypropylene copolymer (high-density plastic)]**.
 - a. Plate Coating: **[Epoxy] [Air-dried phenolic]**.
5. Bypass: Plenum within casing, with gasketed face-and-bypass dampers that have operating rods extended outside casing.
6. Water Wash: Automatic system, with spray manifold to individual spray tubes or traversing type with stainless-steel-screw operating mechanism and electric motor drive; activated by time clock, **with detergent injection**.
7. Heat-Exchanger Prefilters: **[1 inch (25 mm) thick, disposable] [2 inches (50 mm) thick, disposable] [Medium efficiency] [Electrostatic]**.

2.9 CAPACITIES AND CHARACTERISTICS

A. Casing:

1. Outside Casing: Galvanized steel, minimum **[0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] [0.079 inch (2.0 mm)] <Insert value>** thick.
2. Outside Casing: Aluminum, minimum **[0.050 inch (1.3 mm)] [0.063 inch (1.6 mm)] [0.080 inch (2.0 mm)] <Insert value>** thick.
3. Outside Casing: Stainless steel, minimum **[0.050 inch (1.3 mm)] [0.0625 inch (1.6 mm)] [0.0781 inch (2.0 mm)] <Insert value>** thick.
4. Inside Casing: Galvanized steel, **[solid] [perforated]**, minimum **[0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] [0.079 inch (2.0 mm)] <Insert value>** thick.
5. Inside Casing: Aluminum, **[solid] [perforated]**, minimum **[0.050 inch (1.3 mm)] [0.063 inch (1.6 mm)] [0.080 inch (2.0 mm)] <Insert value>** thick.
6. Inside Casing: Stainless steel, **[solid] [perforated]**, minimum **[0.050 inch (1.3 mm)] [0.0625 inch (1.6 mm)] [0.0781 inch (2.0 mm)] <Insert value>** thick.
7. Floor Plate: Galvanized steel, minimum **[0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] [0.079 inch (2.0 mm)] <Insert value>** thick.
8. Floor Plate: Aluminum, minimum **[0.040 inch (1.0 mm)] [0.050 inch (1.3 mm)] [0.063 inch (1.6 mm)] [0.080 inch (2.0 mm)] <Insert value>** thick.
9. Floor Plate: Stainless steel, minimum **[0.050 inch (1.3 mm)] [0.0625 inch (1.6 mm)] [0.0781 inch (2.0 mm)] <Insert value>** thick.
10. Insulation Thickness: **[1 inch (25 mm)] [1-1/2 inches (40 mm)] [2 inches (50 mm)] <Insert value>**.
11. Static-Pressure Classifications for Unit Sections before Fans: **[2-inch wg (500 Pa)] [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] [6-inch wg (1500 Pa)] [8-inch wg (2000 Pa)] [9-inch wg (2250 Pa)] [10-inch wg (2500 Pa)] <Insert value>**.
12. Static-Pressure Classifications for Unit Sections after Fans: **[2-inch wg (500 Pa)] [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] [6-inch wg (1500 Pa)] [8-inch wg (2000 Pa)] [9-inch wg (2250 Pa)] [10-inch wg (2500 Pa)] <Insert value>**.

B. Supply Fan:

1. **[Class I] [Class II] [Class III]:** AMCA 99-2408.
2. Drive: **[V-belt] [Direct]**.
3. Type: **[Steel, backward-inclined centrifugal] [Aluminum, backward-inclined centrifugal] [Black-steel, forward-curved centrifugal] [Galvanized-steel, forward-curved centrifugal] [Steel, airfoil centrifugal] [Aluminum, airfoil centrifugal] [Cast-aluminum axial]**.
4. Number of Fan Wheels: **<Insert number>**.
5. Fan Diameter : **<Insert inches (mm)>**.
6. Fan Housing and Wheel Coating: **[Thermoplastic vinyl] [Epoxy] [Zinc] [Synthetic resin] [Phenolic] [Polytetrafluoroethylene] [Vinyl ester] [Hot-dip galvanized] [Powder-baked enamel]; <Insert manufacturer's name; trade name>**.
7. Airflow: **<Insert cfm (L/s)>**.
8. Total Static Pressure: **<Insert inches wg (kPa)>**.
9. External Static Pressure: **<Insert inches wg (kPa)>**.
10. Speed: **<Insert rpm>**.
11. Maximum Outlet Velocity: **<Insert fpm (m/s)>**.
12. Inlet vane controls.
13. Motor Size: **<Insert horsepower>**.
14. Motor Speed: **<Insert rpm>**.
15. Electrical Characteristics:
 - a. Volts: **[120] [208] [230] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
16. Fan Discharge Sound Power:
 - a. 1st Octave: **<Insert value>**.
 - b. 2nd Octave: **<Insert value>**.
 - c. 3rd Octave: **<Insert value>**.
 - d. 4th Octave: **<Insert value>**.
 - e. 5th Octave: **<Insert value>**.
 - f. 6th Octave: **<Insert value>**.
 - g. 7th Octave: **<Insert value>**.
 - h. 8th Octave: **<Insert value>**.

C. **[Exhaust] [Return] Fan:**

1. **[Class I] [Class II] [Class III]:** AMCA 99-2408.
2. Drive: **[V-belt] [Direct]**.
3. Type: **[Steel, backward-inclined centrifugal] [Aluminum, backward-inclined centrifugal] [Black-steel, forward-curved centrifugal] [Galvanized-steel, forward-curved centrifugal] [Steel, airfoil centrifugal] [Aluminum, airfoil centrifugal] [Cast-aluminum axial]**.
4. Number of Fan Wheels: **<Insert value>**.

5. Fan Diameter: <Insert inches (mm)>.
6. Fan Housing and Wheel Coating: [Thermoplastic vinyl] [Epoxy] [Zinc] [Synthetic resin] [Phenolic] [Polytetrafluoroethylene] [Vinyl ester] [Hot-dip galvanized] [Powder-baked enamel]; <Insert manufacturer's name; trade name>.
7. Airflow: <Insert cfm (L/s)>.
8. Total Static Pressure: <Insert inches wg (kPa)>.
9. External Static Pressure: <Insert inches wg (kPa)>.
10. Speed: <Insert rpm>.
11. Maximum Outlet Velocity : <Insert fpm (m/s)>.
12. Inlet vane controls.
13. Motor Size: <Insert horsepower>.
14. Motor Speed: <Insert rpm>.
15. Electrical Characteristics:
 - a. Volts: [120] [208] [230] <Insert value>.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

D. Preheat Coil:

1. Heat-Transfer Rate: <Insert Btu/h (kW)>.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Leaving-Air Temperature: <Insert deg F (deg C)>.
4. Face Area: <Insert sq. ft. (sq. m)>.
5. Maximum Face Velocity: <Insert fpm (m/s)>.
6. Maximum Air-Side, Static-Pressure Drop: <Insert inches wg (Pa)>.
7. Coil Type: [Continuous circuit] [Self-draining] [Cleanable].
8. Coil Type: [Steam distributed] [Single tube].
9. Piping Connections: [Threaded] [Flanged], [same end] [opposite ends] of coil.
10. Tube Material: [Copper] <Insert material>.
11. Tube Thickness: <Insert inches (mm)>.
12. Fin Type: [Plate] [Spiral].
13. Fin Material: [Aluminum] [Copper].
14. Fin Spacing: [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.80 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.42 mm)] [0.0075 inch (0.19 mm)] <Insert fins per inch (mm)>.
15. Fin Thickness: <Insert inches (mm)>.
16. Fin and Tube Joint: [Mechanical bond] [Silver brazed].
17. Headers:
 - a. Cast iron with[cleaning plugs and] drain and air vent tappings[extended to exterior of unit].
 - b. Seamless copper tube with brazed joints, prime coated.
 - c. Fabricated steel, with brazed joints, prime coated.
 - d. Provide insulated cover to conceal headers exposed outside casings.

18. Frames: Channel frame, [0.052-inch (- 1.3-mm-) **thick galvanized steel**] [0.064-inch- (1.6-mm-) **thick galvanized steel**] [0.079-inch (- 2.0-mm-) **thick galvanized steel**] [0.0625-inch (- 1.58-mm-) **thick galvanized steel**] [0.0625-inch (- 1.58-mm-) **thick stainless steel**].
19. Number of Rows: <Insert number>.
20. Coil Working-Pressure Ratings: [200 psig (1380 kPa), 325 deg F (163 deg C)] <Insert value>.
21. Water:
 - a. Water Flow: <Insert gpm (L/s)>.
 - b. Maximum Water Pressure Drop: <Insert feet of head (kPa)>.
 - c. Entering-Water Temperature: <Insert deg F (deg C)>.
 - d. Leaving-Water Temperature: <Insert deg F (deg C)>.
 - e. Tube Velocity: <Insert fpm (L/s)>.
22. Steam:
 - a. Steam Flow: <Insert lb/h (g/s)>.
 - b. Inlet Steam Pressure: <Insert psig (kPa)>.
 - c. Outer-Tube Diameter: <Insert inches (mm)>.
23. Coating: [Thermoplastic vinyl] [Epoxy] [Zinc] [Synthetic resin] [Phenolic] [Polytetrafluoroethylene] [Vinyl ester] [Hot-dip galvanized] [Powder-baked enamel]; <Insert manufacturer's name; trade name>.
24. Integral Face-and-Bypass Dampers: [Horizontal] [Vertical], opposed-blade, [galvanized-steel] [aluminum] [extruded-aluminum] dampers with [cadmium-plated] steel operating rods rotating in sintered bronze or nylon bearings mounted in a single [galvanized-steel] [aluminum] [extruded-aluminum] frame, with operating rods connected with a common linkage. Meeting edges of blades shall have gaskets and edge seals, and blades shall be mechanically fastened.

E. Heating Coil:

1. Heat-Transfer Rate: <Insert Btu/h (kW)>.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Leaving-Air Temperature: <Insert deg F (deg C)>.
4. Face Area: <Insert sq. ft. (sq. m)>.
5. Maximum Face Velocity: <Insert fpm (m/s)>.
6. Maximum Air-Side, Static-Pressure Drop: <Insert inches wg (Pa)>.
7. Coil Type: [Continuous circuit] [Self-draining] [Cleanable].
8. Coil Type: [Steam distributed] [Single tube].
9. Piping Connections: [Threaded] [Flanged], [same end] [opposite ends] of coil.
10. Tube Material: [Copper] <Insert material>.
11. Tube Thickness: <Insert inches (mm)>.
12. Fin Type: [Plate] [Spiral].
13. Fin Material: [Aluminum] [Copper].

14. Fin Spacing: [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.80 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.42 mm)] [0.0075 inch (0.19 mm)] <Insert fins per inch (mm)>.
 15. Fin Thickness: <Insert inches (mm)>.
 16. Fin and Tube Joint: [Mechanical bond] [Silver brazed].
 17. Headers:
 - a. Cast iron with [cleaning plugs and]drain and air vent tappings[extended to exterior of unit].
 - b. Seamless copper tube with brazed joints, prime coated.
 - c. Fabricated steel, with brazed joints, prime coated.
 - d. Provide insulated cover to conceal headers exposed outside casings.
 18. Frames: Channel frame, [0.052-inch (- 1.3-mm-) thick galvanized steel] [0.064-inch (- 1.6-mm-) thick galvanized steel] [0.079-inch (- 2.0-mm-) thick galvanized steel] [0.0625-inch (- 1.58-mm-) thick galvanized steel] [0.0625-inch (- 1.58-mm-) thick stainless steel].
 19. Number of Rows: <Insert number>.
 20. Coil Working-Pressure Ratings: [200 psig (1380 kPa), 325 deg F (163 deg C)] <Insert value>.
 21. Water:
 - a. Water Flow: <Insert gpm (L/s)>.
 - b. Maximum Water Pressure Drop: <Insert feet of head (kPa)>.
 - c. Entering-Water Temperature: <Insert deg F (deg C)>.
 - d. Leaving-Water Temperature: <Insert deg F (deg C)>.
 - e. Tube Velocity: <Insert fpm (L/s)>.
 22. Steam:
 - a. Steam Flow: <Insert lb/h (g/s)>.
 - b. Inlet Steam Pressure: <Insert psig (kPa)>.
 - c. Outer-Tube Diameter: <Insert inches (mm)>.
 23. Coating: [Thermoplastic vinyl] [Epoxy] [Zinc] [Synthetic resin] [Phenolic] [Polytetrafluoroethylene] [Vinyl ester] [Hot-dip galvanized] [Powder-baked enamel]; <Insert manufacturer's name; trade name>.
 24. Integral Face-and-Bypass Dampers: [Horizontal] [Vertical], opposed-blade, [galvanized-steel] [aluminum] [extruded-aluminum] dampers with [cadmium-plated]steel operating rods rotating in sintered bronze or nylon bearings mounted in a single [galvanized-steel] [aluminum] [extruded-aluminum] frame, with operating rods connected with a common linkage. Meeting edges of blades shall have gaskets and edge seals, and blades shall be mechanically fastened.
- F. Electric Heating Coil:
1. Heat-Transfer Rate: <Insert Btu/h (kW)>.
 2. Input: <Insert kilowatts>.

3. Volts: [120] [208] [230] <Insert value>.
4. Phase: [Single] [Three].
5. Full-Load Amperes: <Insert value>.
6. Number of Steps: <Insert number>.

G. Cooling Coil:

1. Sensible Heat-Transfer Rate: <Insert Btu/h (kW)>.
2. Total Heat-Transfer Rate: <Insert Btu/h (kW)>.
3. Entering-Air, Dry-Bulb Temperature: <Insert deg F (deg C)>.
4. Entering-Air, Wet-Bulb Temperature: <Insert deg F (deg C)>.
5. Leaving-Air, Dry-Bulb Temperature: <Insert deg F (deg C)>.
6. Leaving-Air, Wet-Bulb Temperature: <Insert deg F (deg C)>.
7. Face Area: <Insert sq. ft. (sq. m)>.
8. Maximum Face Velocity: <Insert fpm (m/s)>.
9. Maximum Air-Side, Static-Pressure Drop: <Insert inches wg (Pa)>.
10. Coil Type: [Continuous circuit] [Self-draining] [Cleanable].
11. Piping Connections: [Threaded] [Flanged], [same end] [opposite ends] of coil.
12. Tube Material: [Copper] <Insert material>.
13. Tube Thickness: <Insert inches (mm)>.
14. Fin Type: [Plate] [Spiral].
15. Fin Material: [Aluminum] [Copper].
16. Fin Spacing: [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.80 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.42 mm)] [0.0075 inch (0.19 mm)] <Insert fins per inch (mm)>.
17. Fin Thickness: <Insert inches (mm)>.
18. Fin and Tube Joint: [Mechanical bond] [Silver brazed].
19. Headers:
 - a. Cast iron with [cleaning plugs and] drain and air vent tappings [extended to exterior of unit].
 - b. Seamless copper tube with brazed joints, prime coated.
 - c. Fabricated steel, with brazed joints, prime coated.
 - d. Provide insulated cover to conceal headers exposed outside casings.
20. Frames: Channel frame, [0.052-inch (- 1.3-mm-) thick galvanized steel] [0.064-inch- (1.6-mm-) thick galvanized steel] [0.079-inch (- 2.0-mm-) thick galvanized steel] [0.0625-inch (- 1.58-mm-) thick galvanized steel] [0.0625-inch (- 1.58-mm-) thick stainless steel].

 - a. Water Flow: <Insert gpm (L/s)>.
 - b. Maximum Water Pressure Drop: <Insert feet of head (kPa)>.
 - c. Entering-Water Temperature: <Insert deg F (deg C)>.
 - d. Leaving-Water Temperature: <Insert deg F (deg C)>.
 - e. Tube Velocity: <Insert fpm (L/s)>.

24. Refrigerant Type: **<Insert type>**.
25. Coating: **[Thermoplastic vinyl] [Epoxy] [Zinc] [Synthetic resin] [Phenolic] [Polytetrafluoroethylene] [Vinyl ester] [Hot-dip galvanized] [Powder-baked enamel]; <Insert manufacturer's name; trade name>**.

H. Prefilters:

1. Type: **<Insert type>**.
2. Face Area: **<Insert sq. ft. (sq. m)>**.
3. Surface Area: **<Insert sq. ft. (sq. m)>**.
4. Thickness or Depth: **<Insert inches (mm)>**.
5. Number of Filters: **<Insert number>**.
6. Access Location: **[Front] [Back] [Side]**.
7. Maximum or Rated Face Velocity: **<Insert fpm (m/s)>**.

I. Filters:

1. Type: **<Insert type>**.
2. Face Area: **<Insert sq. ft. (sq. m)>**.
3. Surface Area: **<Insert sq. ft. (sq. m)>**.
4. Thickness or Depth: **<Insert inches (mm)>**.
5. Number of Filters: **<Insert number>**.
6. Access Location: **[Front] [Back] [Side]**.
7. Maximum or Rated Face Velocity: **<Insert fpm (m/s)>**.

J. Dampers: **[Zone] [Mixing dampers] [Face and bypass]**.

K. Steam Grid Humidifier:

1. Humidification Rate: **<Insert lb/h (g/s)>**.
2. Steam Supply Pressure: **<Insert psig (kPa)>**.
3. Dry-Bulb Air Temperature at Discharge: **<Insert deg F (deg C)>**.
4. Wet-Bulb Air Temperature at Discharge: **<Insert deg F (deg C)>**.
5. Maximum Absorption Distance: **<Insert inches (mm)>**.
6. Number of Manifolds: **<Insert number>**.

L. Wet Glass Cell Washer:

1. Rated Capacity: **<Insert lb/h (kg/h)>**.
2. Saturation Efficiency: **<Insert percent>**.

M. Evaporative Humidifier:

1. Rated Capacity: **<Insert lb/h (kg/h)>**.
2. Saturation Efficiency: **<Insert percent>**.

N. Air-to-Air Energy Recovery:

1. Exhaust Air:

- a. Airflow: **<Insert cfm (L/s)>**.
 - b. Face Velocity: **<Insert fpm (m/s)>**.
 - c. Summer:
 - 1) Entering-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - 2) Entering-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - 3) Leaving-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - 4) Leaving-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - d. Winter:
 - 1) Entering-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - 2) Entering-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - 3) Leaving-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - 4) Leaving-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - e. Air Pressure Drop: **<Insert inches wg (Pa)>**.
2. Supply Air:
- a. Airflow: **<Insert cfm (L/s)>**.
 - b. Face Velocity: **<Insert fpm (m/s)>**.
 - c. Summer:
 - 1) Entering-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - 2) Entering-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - 3) Leaving-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - 4) Leaving-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - d. Winter:
 - 1) Entering-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - 2) Entering-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - 3) Leaving-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - 4) Leaving-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - e. Air Pressure Drop: **<Insert inches wg (Pa)>**.
3. Wheel Drive:
- a. Motor Size: **<Insert horsepower>**.
 - b. Motor Electrical Characteristics:
 - 1) Volts: **[120] [208] [230] <Insert value>**.
 - 2) Phase: **[Single] [Three]**.
 - 3) Hertz: 60.
4. Effectiveness: **<Insert percent>**.

2.10 SOURCE QUALITY CONTROL

- A. Fan Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal.
- B. Fan Performance Rating: Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency. Rate performance according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating."
- C. Water Coils: Factory tested to **300 psig (2070 kPa)** according to ARI 410 and ASHRAE 33.
- D. Steam Coils: Factory tested to **300 psig (2070 kPa)** and to **200 psig (1380 kPa)** underwater according to ARI 410 and ASHRAE 33.
- E. Refrigerant Coils: Factory tested to **450 psig (3105 kPa)** according to ARI 410 and ASHRAE 33.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine casing insulation materials and filter media before air-handling unit installation. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for steam, hydronic, and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Equipment Mounting:
 - 1. Install air-handling units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

- B. Suspended Units: Suspend[**and brace**] units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in [**Section 230548 "Vibration and Seismic Controls for HVAC."**] [**Section 230548.13 "Vibration Controls for HVAC."**]
- C. Arrange installation of units to provide access space around air-handling units for service and maintenance.
- D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.
- E. Install filter-gage, static-pressure taps upstream and downstream of filters. Mount filter gages on outside of filter housing or filter plenum in accessible position. Provide filter gages on filter banks, installed with separate static-pressure taps upstream and downstream of filters.

3.3 CONNECTIONS

- A. Comply with requirements for piping specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to air-handling unit to allow service and maintenance.
- C. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.
- D. Connect condensate drain pans using [NPS 1-1/4 (DN 32)] **<Insert pipe size>**, ASTM B 88, Type M (ASTM B 88M, Type C) copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.
- E. Hot- and Chilled-Water Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Install shutoff valve and union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.
- F. Steam and Condensate Piping: Comply with applicable requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties." Install shutoff valve at steam supply connections, float and thermostatic trap, and union or flange at each coil return connection. Install gate valve and inlet strainer at supply connection of dry steam humidifiers, and inverted bucket steam trap to condensate return connection.
- G. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.

- H. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
 - 1. Leak Test: After installation, fill water and steam coils with water, and test coils and connections for leaks.
 - 2. Charge refrigerant coils with refrigerant and test for leaks.
 - 3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Automatic-Roll-Filter Operational Test: Operate filters to demonstrate compliance with requirements. Test for leakage of unfiltered air while system is operating.
 - 5. HEPA-Filter Operational Test: Pressurize housing to a minimum of 3-inch wg (750 Pa) or to designed operating pressure, whichever is higher; test housing joints, door seals, and sealing edges of filter with soapy water to check for air leaks.
 - 6. HEPA-Filter Operational Test: Pressurize housing to a minimum of 3-inch wg (750 Pa) or to designed operating pressure, whichever is higher; test housing joints, door seals, and sealing edges of filter for air leaks according to ASME N510, pressure-decay method.
 - 7. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Air-handling unit or components will be considered defective if unit or components do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Verify that shipping, blocking, and bracing are removed.

3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
6. Verify that zone dampers fully open and close for each zone.
7. Verify that face-and-bypass dampers provide full face flow.
8. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.
9. Comb coil fins for parallel orientation.
10. Verify that proper thermal-overload protection is installed for electric coils.
11. Install new, clean filters.
12. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.

B. Starting procedures for air-handling units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. [**Replace fan and motor pulleys as required to achieve design conditions.**]
2. Measure and record motor electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

3.6 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.7 CLEANING

- A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, coils, and filter housings, and install new, clean filters.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 237313

SECTION 237333.16 - INDOOR, INDIRECT, GAS-FIRED HEATING AND VENTILATING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes indirect, gas-fired heating and ventilating units.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. DDC: Direct digital control.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type and configuration of indoor, indirect, gas-fired heating and ventilating unit.
 - 1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For each type and configuration of indoor, indirect, gas-fired heating and ventilating unit.
 - 1. Signed, sealed, and prepared by or under the supervision of a qualified professional engineer.
 - 2. Include plans, elevations, sections, and [mounting] [attachment] details.

3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
4. Detail fabrication and assembly of gas-fired heating and ventilating units, as well as procedures and diagrams.
5. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.
6. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
7. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Startup service reports.
- B. Sample Warranty: For manufacturer's special warranty.
- C. Seismic Qualification Certificates: For indoor, indirect, gas-fired heating and ventilating units, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For indirect-fired heating and ventilating units to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Filters: [**One (1)**] <Insert number> set(s) for each unit.
 2. Fan Belts: [**One (1)**] <Insert number> set(s) for each unit.

1.8 QUALITY ASSURANCE

- A. Comply with NFPA 70.
- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of indirect, gas-fired heating and ventilating units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Heat Exchangers: Manufacturer's standard, but not less than **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [AbsolutAire, Inc.](#)
 - 2. [Applied Air.](#)
 - 3. [ARES.](#)
 - 4. [Banza; Div. of Roberts-Gordon LLC.](#)
 - 5. [BessamAire, Inc.](#)
 - 6. [Cambridge Engineering, Inc.](#)
 - 7. [CaptiveAire Systems.](#)
 - 8. [CES Group.](#)
 - 9. [Des Champs Technologies.](#)
 - 10. [Energy Jet U.S.](#)
 - 11. [Engineered Air.](#)
 - 12. [Greenheck Fan Corporation.](#)
 - 13. [Hastings HVAC; Division of Eric, Inc.](#)
 - 14. [I.C.E. Manufacturing Ltd.; Industrial Commercial Equipment - I.C.E. \(US\), Inc.](#)

15. [Jackson & Church.](#)
16. [LCSystems.](#)
17. [Modine Manufacturing Company.](#)
18. [Powrmatic, Inc.](#)
19. [Rapid Engineering, Inc.](#)
20. [Reznor/Thomas & Betts Corporation.](#)
21. [Sterling HVAC Products.](#)
22. [Temprite.](#)
23. [Titan Air Incorporated.](#)
24. [Trane.](#)
25. [Weather-Rite, Inc.](#)
26. **<Insert manufacturer's name>.**
27. or approved equal.

2.2 SYSTEM DESCRIPTION

- A. Factory-assembled, prewired, self-contained unit consisting of cabinet, supply fan, controls, **[filters]**, and indirect-fired gas burner to be installed inside the building.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 UNIT CASINGS

- A. General Fabrication Requirements for Casings:
 1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
 2. Casing Joints: Sheet metal screws or pop rivets, factory sealed with water-resistant sealant.
 3. Factory Finish for **[Steel] [and] [Galvanized-Steel]** Casings: Apply manufacturer's standard primer immediately after cleaning and pretreating.
 4. Factory Finish for **[Steel] [and] [Galvanized-Steel]** Casings: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on enamel finish, consisting of prime coat and thermosetting topcoat.
 5. Casing Coating: **[Thermoplastic vinyl] [Epoxy] [Zinc] [Synthetic resin] [Phenolic] [Polytetrafluoroethylene] [Vinyl ester] [Hot-dip galvanized] [Powder-baked enamel] <Insert special coating>.**
 6. Air-Handling-Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to air-handling-unit sections, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when air-handling-unit frame is anchored to building structure.

7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- B. Configuration: [**Horizontal**] [**Vertical**] unit with [**top**] [**horizontal**] [**bottom**] discharge for [**floor-mounted**] [**suspended**] installation.
- C. Cabinet: [**Galvanized-steel**] [**Aluminized- or galvanized-steel**] [**Aluminized-steel**] panels, formed to ensure rigidity and supported by galvanized-steel channels or structural channel supports with lifting lugs. Duct flanges at inlet and outlet.
- D. Outer Casing: [**0.0598-inch- (1.519-mm-)**] [**0.0478-inch- (1.214-mm-)**] [**0.0359-inch- (0.912-mm-)**] thick steel with [**heat-resistant, baked-enamel**] [**enamel-painted**] [**baked-on, polyester-powder**] finish over corrosion-resistant-treated surface in color to match fan section.
- E. Outer Casing: [**0.0598-inch- (1.519-mm-)**] [**0.0478-inch- (1.214-mm-)**] [**0.0359-inch- (0.912-mm-)**] thick steel with unpainted finish
- F. Inner Casing:
1. Burner Section Inner Casing: **0.0299-inch ((0.759-mm))** steel.
 2. Double-wall casing with inner wall of [**perforated**] [**solid**] steel, for the following sections:
 - a. Blower section.
 - b. Filter section.
 - c. Mixing box.
 - d. Inlet plenum.
 - e. Discharge plenum.
 - f. Access [**Doors**] [**Panels**]: [**Lift out**] [**Piano hinged with cam-lock fasteners**] [**Hinged with handles**] for burner and fan motor assemblies on both sides of unit.
 3. Internal Insulation: Fibrous-glass duct lining, neoprene coated, comply with ASTM C 1071, Type II, applied on [**complete unit**] [**burner and fan sections only**].
 - a. Thickness: [**1 inch (25 mm)**] [**2 inches (50 mm)**].
 - b. Insulation Adhesive: Comply with ASTM C 916, Type I.
 - c. Density: [**1.5 lb/cu. ft. ((24.0 kg/cu. m))**] [**2.0 lb/cu. ft. ((32.0 kg/cu. m))**] [**3.0 lb/cu. ft. ((48.0 kg/cu. m))**].
 - d. Mechanical Fasteners: Galvanized steel suitable for adhesive, mechanical, or welding attachment to casing without damaging liner when applied as recommended by manufacturer and without causing air leakage.
- G. Discharge Section: [**Galvanized**] [**Aluminized**]-steel assembly with [**gravity**] [**individually adjustable, vaned,**] [**two-position, motorized,**] parallel-blade dampers with nylon bushings.
1. Pattern: [**Single**] [**Double**] deflection.

2. Leakage: **[Standard]** **[Low]** leakage.
- H. Discharge Section: Trapezoidal cowls with horizontal louvers.
- I. Discharge Section: Plenum with **[two]** **[four]** sides louvered.
- J. Discharge Section: Down-discharge plenum insulated with **1 inch** (25 mm), **1.5 lb/cu. ft.** (24.0 kg/cu. m) fibrous glass.
- K. Casing Internal Insulation and Adhesive:
 1. Materials: ASTM C 1071, **[Type I]** **[Type II]**.
 2. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the heating-coil section.
 - a. Liner Adhesive: Comply with ASTM C 916, Type I.
 - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive, mechanical, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 - c. Liner materials applied in this location shall have airstream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric, depending on service-air velocity.
 3. Location and Application: Encased between outside and inside casing.
- L. Inspection and Access Panels and Access Doors:
 1. Panel and Door Fabrication: Formed and reinforced, single- or double-wall and insulated panels of same materials and thicknesses as casing.
 2. Inspection and Access Panels:
 - a. Fasteners: Two or more camlock type for panel lift-out operation. Arrangement shall allow panels to be opened against air-pressure differential.
 - b. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - c. Size: Large enough to allow inspection and maintenance of air-handling unit's internal components.
 3. Access Doors:
 - a. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever-type latches, operable from inside and outside. Arrange doors to be opened against air-pressure differential.
 - b. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - c. Fabricate windows in **[fan section]** doors of double-glazed, wire-reinforced safety glass with an air space between panes and sealed with interior and exterior rubber seals.

- d. Size: At least [18 inches (450 mm)] [24 inches (600 mm)] <Insert dimension> wide by full height of unit casing up to a maximum height of [60 inches (1500 mm)] [72 inches (1800 mm)] <Insert dimension>.
4. Locations and Applications:
 - a. Fan Section: [Inspection and access panels] [Doors] [Doors and inspection and access panels].
 - b. Access Section: Doors.
 - c. Coil Section: Inspection and access panels.
 - d. Damper Section: [Inspection and access panels] [Doors].
 - e. Filter Section: [Inspection and access panels] [Doors] large enough to allow periodic removal and installation of filters.
 - f. Mixing Section: Doors.
 - g. Humidifier Section: Doors.
 5. Service Light: 100-W vaporproof fixture with switched junction box located [outside] [inside] adjacent to door.
 - a. Locations: [Each section accessed with door] [Fan section] <Insert location>.
- M. Condensate Drain Pans:
1. Fabricated with [one] [two] percent slope in at least two planes to collect condensate from condensate-producing heat exchangers and from humidifiers and to direct water toward drain connection.
 - a. Length: Extend drain pan downstream from leaving face [to comply with ASHRAE 62.1] <Insert distance>.
 - b. Depth: A minimum of [2 inches (50 mm)] <Insert dimension> deep.
 2. [Formed sections] [Integral part of floor plating].
 3. Single-wall, [galvanized] [stainless]-steel sheet.
 4. Double-wall, [galvanized] [stainless]-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
 5. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on [one end] [both ends] of pan.
 - a. Minimum Connection Size: [NPS 1 (DN 25)] [NPS 2 (DN 50)] <Insert pipe size>.
 6. Pan-Top Surface Coating: Asphaltic waterproofing compound.
- ## 2.4 ACCESSORIES
- A. Service Platform: [Steel] [Galvanized steel] [Aluminum], [42 inches (1070 mm)] <Insert dimension> wide running entire length of unit and located on service access side, with angle side rails, 4-inch (100-mm) kick plates, and expanded metal floor.

Provide platform with a fixed ladder that extends from the top of the side rail to the floor.

2.5 SUPPLY-AIR FAN

- A. Fan Type: Centrifugal, rated according to AMCA 210; statically and dynamically balanced, galvanized steel; mounted on solid-steel shaft with heavy-duty[, **self-aligning, permanently lubricated ball bearings**][, **pillow-block bearings rated for L50 or 200,000 hours with external grease fittings**].
- B. Drive: V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly.
- C. Mounting: Fan wheel, motor, and drives shall be mounted in fan casing with [**restrained,**] [**elastomeric**] [**spring**] isolators.
- D. Fan-Shaft Lubrication Lines: Extended to a location outside the casing.

2.6 AIR FILTERS

- A. Comply with [**NFPA 90A**] [**NFPA 90B**].
- B. Cleanable Filters: Cleanable metal mesh.
 - 1. Thickness: [**1 inch (25 mm)**] [**2 inches (50 mm)**].
 - 2. Maximum Face Velocity: **<Insert fpm ((m/s))>**.
- C. Disposable Panel Filters: Factory-fabricated, flat-panel-type, disposable air filters with holding frames[, **with a MERV 6 according to ASHRAE 52.2**].
 - 1. Thickness: [**1 inch (25 mm)**] [**2 inches (50 mm)**].
 - 2. Media: Interlaced [**glass**] [**polyester**] fibers.
 - 3. Frame: Galvanized steel.
 - 4. Maximum Face Velocity: **<Insert fpm ((m/s))>**.

2.7 DAMPERS

- A. Outdoor-Air [**and Return-Air**] Damper: Galvanized-steel, opposed-blade dampers with vinyl blade seals and stainless-steel jamb seals, having a maximum leakage of **10 cfm/sq. ft. (51 L/s per sq. m)** of damper area, at a differential pressure of **2-inch wg (448 Pa)**.
- B. Damper Operator: Direct coupled, electronic with spring return or fully modulating as required by the control sequence.

2.8 INDIRECT-FIRED GAS BURNER

- A. Description: Factory assembled, piped, and wired; and complying with ANSI Z21.47, "Gas-Fired Central Furnaces," and with NFPA 54, "National Fuel Gas Code."
1. CSA Approval: Designed and certified by and bearing label of CSA.
 2. Burners: [**Aluminized steel with stainless-steel inserts**] [**Stainless steel**].
 - a. Gas Control Valve: [**Single stage**] [**Two stage**] [**Modulating**].
 - b. Fuel: [**Natural**] [**Propane**] gas.
 - c. Minimum Combustion Efficiency: [**80**] <Insert number> percent.
 - d. Ignition: Electronically controlled electric spark with flame sensor.
 - e. High-Altitude [**Model**] [**Kit**]: For Project elevation above sea level.
- B. Venting: Gravity vented.
- C. Venting: Power vented, with integral, motorized centrifugal fan interlocked with gas valve.
- D. Combustion-Air Intake: Separate combustion-air intake and vent terminal assembly.
- E. Heat Exchanger: [**Aluminized**] [**Stainless**] steel.
- F. Heat-Exchanger Drain Pan: Stainless steel.
- G. Safety Controls:
1. Vent Flow Verification: [**Differential pressure switch to verify open vent**] [**Flame rollout switch**].
 2. Control Transformer: 24-V ac.
 3. High Limit: Thermal switch or fuse to stop burner.
 4. Gas Train: Regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, [**hydraulic**] [**electronic**]-modulating temperature control valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
 5. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
 6. Gas Manifold: Safety switches and controls complying with ANSI standards [**and**] [**FM Global**] [**XL Insurance**].
 7. Airflow Proving Switch: Differential pressure switch senses correct airflow before energizing pilot.
 8. Automatic-Reset, High-Limit Control Device: Stops burner and closes main gas valve if high-limit temperature is exceeded.
 9. Safety Lockout Switch: Locks out ignition sequence if burner fails to light after three tries. Controls are reset manually by turning the unit off and on.

2.9 UNIT CONTROL PANEL

- A. Factory-wired, fuse-protected control transformer, connection for power supply and field-wired unit to remote control panel.

- B. Control Panel: **[Surface-mounted] [Recessed, with trim ring,]** remote panel, with engraved plastic cover, and the following lights and switches:
1. **[On-off] [On-off-auto]** fan switch.
 2. Heat-vent-off switch.
 3. Supply-fan operation indicating light.
 4. Heating operation indicating light.
 5. Thermostat.
 6. Damper position potentiometer.
 7. Dirty-filter indicating light operated by unit-mounted differential pressure switch.
 8. Safety-lockout indicating light.
 9. Enclosure: NEMA 250, **[Type 1] [Type 3R] [Type 4] [Explosion proof]**.

2.10 CONTROLS

- A. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC" for control equipment and sequence of operation.
- B. Control Devices:
1. Remote Thermostat: Adjustable room thermostat with temperature readout.
 2. Remote Setback Thermostat: Adjustable room thermostat without temperature readout.
 3. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
 4. Fire-Protection Thermostats: Fixed or adjustable settings to operate at not less than **75 deg F (24 deg C)** above normal maximum operating temperature.
 5. Timers: Seven-day, programming-switch timer with synchronous-timing motor and seven-day dial; continuously charged, nickel-cadmium-battery-driven, eight-hour, power-failure carryover; multiple-switch trippers; minimum of two and maximum of eight signals per day with two normally open and two normally closed output contacts.
 6. Timers: Solid-state, programmable time control with four separate programs; 24-hour battery carryover; individual on-off-auto switches for each program; 365-day calendar with 20 programmable holidays; choice of fail-safe operation for each program; and system fault alarm.
 7. Ionization-Type Smoke Detectors: 24-V dc, nominal; self-restoring; plug-in arrangement; integral visual-indicating light; sensitivity that can be tested and adjusted in place after installation; integral addressable module; remote controllability; responsive to both visible and invisible products of combustion; self-compensating for changes in environmental conditions.
 8. Smoke detectors, located in supply **[and return]** air, shall stop fans when the presence of smoke is detected.
- C. Fan Control: Interlock fan to start with exhaust fan(s) to which this heating and ventilating unit is associated for makeup air.

- D. Fan Control: Timer starts and stops indirect-fired heating and ventilating unit and exhaust fan(s).
1. Smoke detectors, located in supply[**and return**] air, shall stop fans when the presence of smoke is detected.
- E. Outdoor-Air Damper Control, 100 Percent Outdoor-Air Units: Outdoor-air damper shall open when supply fan starts, and close when fan stops.
- F. Mixed Outdoor- and Return-Air Damper Control: When fan is running, outdoor- and return-air dampers shall modulate to supply minimum outdoor air as follows:
1. Minimum **[30]** **<Insert number>** percent outdoor air.
 2. Outdoor-air quantity adjusted by potentiometer on control panel.
 3. Outdoor-air quantity to maintain minimum building static pressure.
- G. Temperature Control: Operates gas valve to maintain supply-air temperature.
1. Operates gas valve to maintain discharge-air temperature with factory-mounted sensor in blower outlet.
 2. Operates gas valve to maintain space temperature with wall-mounted, field-wired sensor[**with temperature adjustment,**] **[and unit-mounted control adjustment]** **[and adjustment on remote-control panel]**.
 3. Timer shall select remote setback thermostat to maintain space temperature at **[50 deg F (10 deg C)]** **<Insert temperature>**.
 4. Burner Control: Two or four steps of control using one or two burner sections in series.
 5. Burner Control: 20 to 100 percent modulation of the firing rate. 10 to 100 percent with dual burner units.
- H. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display status and alarms of heating and ventilating unit.
1. Hardwired Points:
 - a. Room temperature.
 - b. Discharge-air temperature.
 - c. Burner operating.
 2. **[ASHRAE 135.1 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol]** **<Insert type of interface>** communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the heating and ventilating unit from an operator workstation. Control features and monitoring points displayed locally at heating and ventilating unit control panel shall be available through the DDC system for HVAC.

2.11 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 2. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 3. Motor Bearings: <Insert requirements>.
 4. Unusual Service Conditions:
 - a. Ambient Temperature: <Insert deg C>.
 - b. Altitude: <Insert feet (m)> above sea level.
 - c. High humidity.
 - d. <Insert conditions>.
 5. Efficiency: [**Premium efficient**] [**EPAct compliant**].
 6. NEMA Design: <Insert designation>.
 7. Service Factor: <Insert value>.

2.12 CAPACITIES AND CHARACTERISTICS

- A. Fan:
1. Discharge Configuration: [**Horizontal**] [**Vertical**].
 2. Airflow: <Insert cfm (L/s)>.
 3. External Static Pressure: <Insert inches wg (kPa)>.
 4. Maximum RPM: <Insert number>.
 5. Minimum Size: <Insert inches (mm)>.
 6. Altitude: <Insert feet ((m))>.
- B. Fan Motor:
1. Horsepower: <Insert value>.
 2. RPM: <Insert value>.
 3. Service Factor: <Insert value>.
 4. Speed: [**Single**] [**Two**].
- C. Single-Point Electrical Connection:
1. Volts: [**120**] [**240**] [**277**] [**480**] <Insert voltage>.
 2. Phase: [**Single**] [**Three**].
 3. Hertz: 60.
 4. Full-Load Amperes: <Insert value>.
 5. Minimum Circuit Ampacity: <Insert value>.
 6. Maximum Overcurrent Protection: <Insert amperage>.

- D. Indirect-Fired Gas Burner:
1. Minimum Combustion Efficiency: <Insert number> percent.
 2. Entering-Air Temperature: <Insert deg F (deg C)>.
 3. Leaving-Air Temperature: <Insert deg F (deg C)>.
 4. Airflow: <Insert cfm (L/s)>.
 5. Gas Input: <Insert MBh (kW)>.
 6. Burner Output: <Insert MBh (kW)>.
 7. Number of Stages: <Insert value>.
 8. Minimum Inlet Pressure: <Insert inches wg ((Pa))>.
 9. Maximum Inlet Pressure: <Insert inches wg ((Pa))>.
 10. Gas Piping Connection Size: <Insert NPS ((DN))>.
 11. Vent Diameter: <Insert inches ((mm))>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of indirect-fired heating and ventilating units.
- B. Examine roughing-in for piping, ducts, and electrical systems to verify actual locations of connections before equipment installation.
- C. Verify cleanliness of airflow path to include inner-casing surfaces, filters, coils, turning vanes, fan wheels, and other components.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Equipment Mounting:
 1. Install heating and ventilating units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete. "] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]**
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- B. Unit Support: Install heating and ventilating unit level on structural **[curbs] [pilings]**. Coordinate wall penetrations and flashing with wall construction. **[Secure units to structural support with anchor bolts.]**

- C. Install gas-fired units according to NFPA 54, "National Fuel Gas Code."
- D. Install controls and equipment shipped by manufacturer for field installation with indirect-fired heating and ventilating units.

3.3 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
 - 1. Gas Piping: Comply with requirements in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**] Connect gas piping with shutoff valve and union and with sufficient clearance for burner removal and service. Make final connections of gas piping to unit with corrugated, stainless-steel tubing flexible connectors complying with ANSI LC 1/CSA 6.26 equipment connections.
- B. Drain: Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for traps and accessories on piping connections to condensate drain pans under condensing heat exchangers.
- C. Where installing piping adjacent to heating and ventilating units, allow space for service and maintenance.
- D. Duct Connections: Connect supply[**and return**] ducts to indirect-fired heating and ventilating units with flexible duct connectors. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.
- E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].
- C. Units will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 - a. Inspect for visible damage to burner combustion chamber.
 - b. Inspect casing insulation for integrity, moisture content, and adhesion.
 - c. Verify that clearances have been provided for servicing.
 - d. Verify that controls are connected and operable.
 - e. Verify that filters are installed.
 - f. Purge gas line.
 - g. Inspect and adjust vibration isolators[**and seismic restraints**].
 - h. Verify bearing lubrication.
 - i. Inspect fan-wheel rotation for movement in correct direction without vibration and binding.
 - j. Adjust fan belts to proper alignment and tension.
 - k. Start unit according to manufacturer's written instructions.
 2. Complete startup sheets and attach copy with Contractor's startup report.
 3. Inspect and record performance of interlocks and protective devices; verify sequences.
 4. Operate unit for run-in period recommended by manufacturer.
 5. Perform the following operations for both minimum and maximum firing and adjust burner for peak efficiency:
 - a. Measure gas pressure at manifold.
 - b. Measure combustion-air temperature at inlet to combustion chamber.
 - c. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.
 6. Calibrate thermostats.
 7. Adjust and inspect high-temperature limits.
 8. Inspect dampers, if any, for proper stroke and interlock with return-air dampers.
 9. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.
 10. Measure and record airflow. Plot fan volumes on fan curve.
 11. Verify operation of remote panel, including pilot-operation and failure modes. Inspect the following:
 - a. High-limit heat.
 - b. Alarms.
 12. After startup and performance testing, change filters, verify bearing lubrication, and adjust belt tension.
 13. Verify drain-pan performance.
 14. Verify outdoor-air damper operation.

3.6 ADJUSTING

- A. Adjust initial temperature set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Occupancy Adjustments: When requested within [12] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [two] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain heating and ventilating units.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 237333.16

SECTION 237339 - INDOOR, DIRECT-FIRED HEATING AND VENTILATING UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes indoor, direct-fired heating and ventilating units.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type and configuration of indoor, direct-fired heating and ventilating unit.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For each type and configuration of indoor, direct-fired heating and ventilating unit.
 - 1. Include plans, elevations, sections, and **[mounting] [attachment]** details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For manufacturer's special warranty.
- B. Seismic Qualification Certificates: For indoor, direct-fired heating and ventilating units, accessories, and components, from manufacturer.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Comply with NFPA 70.
- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of direct-fired heating and ventilating units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Heat Exchangers: Manufacturer's standard, but not less than **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [AbsolutAire, Inc.](#)
 - 2. [Applied Air.](#)
 - 3. [ARES.](#)
 - 4. [Banza; a division of Roberts-Gordon LLC.](#)
 - 5. [BessamAire, Inc.](#)
 - 6. [Cambridge Engineering, Inc.](#)
 - 7. [Captive-Air Systems, Inc.](#)
 - 8. [Energy Jet U.S.](#)
 - 9. [Engineered Air.](#)

10. [Greenheck Fan Corporation.](#)
11. [Hastings Industries.](#)
12. [I.C.E. Manufacturing Ltd.; Industrial Commercial Equipment - I.C.E. \(US\), Inc.](#)
13. [Jackson & Church.](#)
14. [LC Systems.](#)
15. [Modine Mfg. Co.](#)
16. [Powrmatic, Inc.](#)
17. [Rapid Engineering, Inc.](#)
18. [Reznor-Thomas & Betts Corporation.](#)
19. [Sterling HVAC Products; a Mestek company.](#)
20. [Temprite.](#)
21. [Titan Air Incorporated.](#)
22. [Trane Company \(The\).](#)
23. [Weather-Rite, Inc.](#)
24. **<Insert manufacturer's name>.**
25. or approved equal.

2.2 SYSTEM DESCRIPTION

- A. Factory-assembled, prewired, self-contained unit consisting of cabinet, supply fan, controls, [**filters**,]and direct-fired gas burner to be installed exterior to the building.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 UNIT CASINGS

- A. General Fabrication Requirements for Casings:
 1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
 2. Casing Joints: Sheet metal screws or pop rivets, factory sealed with water-resistant sealant.
 3. Factory Finish for [**Steel**] [**and**] [**Galvanized-Steel**] Casings: Apply manufacturer's standard primer immediately after cleaning and pretreating.
 4. Air-Handling-Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to air-handling-unit sections, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when air-handling-unit frame is anchored to building structure.
 5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

- B. Configuration: Horizontal unit with **[top]** **[horizontal]** **[bottom]** discharge for **[floor-mounting]** **[suspended]** installation.
- C. Cabinet: Galvanized-steel panels, formed to ensure rigidity and supported by galvanized-steel channels or structural channel supports with lifting lugs. Duct flanges at inlet and outlet.
- D. Outer Casing: **[0.0598-inch (1.519-mm)]** **[0.0478-inch ((1.214-mm))]** **[0.0359-inch ((0.912-mm))]** thick steel with **[heat-resistant, baked-enamel]** **[enamel-painted]** **[baked-on, polyester-powder]** **[unpainted]** over-corrosion-resistant-treated surface in color to match fan section.
- E. Outer Casing: **[0.0598-inch (1.519-mm)]** **[0.0478-inch ((1.214-mm))]** **[0.0359-inch ((0.912-mm))]** thick steel with unpainted finish.
- F. Outer Casing: **0.0359-inch ((0.912-mm))** thick steel with heat-resistant, baked-enamel over-corrosion-resistant-treated surface in color to match fan section.
- G. Inner Casing:
1. Burner Section Inner Casing: **0.0299-inch- (0.759-mm-)** thick steel.
 2. Double-wall casing with inner wall of **[perforated]** **[solid]** steel[.][, **for the following sections:**]
 - a. Blower section.
 - b. Filter section.
 - c. Mixing box.
 - d. Inlet plenum.
 - e. Discharge plenum.
 - f. Access **[Doors]** **[Panels]:** **[Lift out]** **[Piano hinged with cam-lock fasteners]** **[Hinged with handles]** for burner and fan motor assemblies on both sides of unit.
 3. Internal Insulation: Fibrous-glass duct lining, neoprene coated, comply with ASTM C 1071, Type II, applied on **[complete unit]** **[burner and fan sections only]**.
 - a. Thickness: **[1 inch (25 mm)]** **[2 inches (50 mm)]**.
 - b. Insulation Adhesive: Comply with ASTM C 916, Type I.
 - c. Density: **[1.5 lb/cu. ft. ((24.0 kg/cu. m))]** **[2.0 lb/cu. ft. ((32.0 kg/cu. m))]** **[3.0 lb/cu. ft. ((48.0 kg/cu. m))]**.
 - d. Mechanical Fasteners: Galvanized steel suitable for adhesive, mechanical, or welding attachment to casing without damaging liner when applied as recommended by manufacturer and without causing air leakage.
- H. Discharge Section: **[Galvanized]** **[Aluminized]**-steel assembly with **[gravity]** **[individually adjustable, vaned,]** **[two-position, motorized,]** parallel-blade dampers with nylon bushings.
1. Pattern: **[Single]** **[Double]** deflection.

2. Leakage: **[Standard]** **[Low]** leakage.

- I. Discharge Section: Trapezoidal cowls with horizontal louvers.
- J. Discharge Section: Plenum with **[two]** **[four]** sides louvered.
- K. Discharge Section: Down-discharge plenum insulated with **1-inch** (25-mm), **1.5-lb/cu. ft.** (24.0-kg/cu. m) fibrous glass.
- L. Casing Insulation and Adhesive:
 - 1. Materials: ASTM C 1071, **[Type I]** **[Type II]**.
 - 2. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the heating-coil section.
- M. Inspection and Access Panels and Access Doors: Formed and reinforced, single- or double-wall and insulated panels of same materials and thicknesses as casing and complying with ASHRAE 62.1.

2.4 ACCESSORIES

- A. Service Platform: **[Steel]** **[Galvanized steel]** **[Aluminum]**, **[42 inches** (1070 mm)**]** **<Insert dimension>** wide running entire length of unit and located on service access side, with angle side rails, **4-inch** (100-mm) kick plates, and expanded metal floor. Provide platform with a fixed ladder that extends from the top of the side rail to the floor.

2.5 SUPPLY-AIR FAN

- A. Fan Type: Centrifugal, rated according to AMCA 210; statically and dynamically balanced, galvanized steel; mounted on solid-steel shaft with heavy-duty[]], **self-aligning, permanently lubricated ball bearings]**, **pillow-block bearings]**. Bearing rating: **[L10 of 60,000 hours]** **[L10 of 120,000 hours]** **[L10 of 150,000 hours]** **<Insert value>**.
- B. Drive: V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly.
- C. Mounting: Fan wheel, motor, and drives shall be mounted in fan casing with **[restrained,]** **[elastomeric]** **[spring]** isolators.
- D. Fan-Shaft Lubrication Lines: Extended to a location outside the casing.

2.6 AIR FILTERS

- A. Comply with **[NFPA 90A]** **[NFPA 90B]**.

- B. Cleanable Filters: Cleanable metal mesh; [1 inch (25 mm)] [2 inches (50 mm)].
- C. Disposable Panel Filters: Factory-fabricated, flat-panel-type, disposable air filters; 1 inch (25 mm).

2.7 DAMPERS

- A. Outdoor-Air [**and Return-Air**] Damper: Galvanized-steel, opposed-blade dampers with vinyl blade seals and stainless-steel jamb seals, having a maximum leakage of 10 cfm/sq. ft. (51 L/s per sq. m) of damper area, at a differential pressure of 2-inch wg (448 Pa).
- B. Damper Operator: Direct coupled, electronic with spring return or fully modulating as required by the control sequence.

2.8 DIRECT-FIRED GAS BURNER

- A. Description: Factory assembled, piped, and wired; and complying with ANSI Z21.47, "Gas-Fired Central Furnaces," and with NFPA 54, "National Fuel Gas Code."
 - 1. CSA Approval: Designed and certified by and bearing label of CSA.
 - 2. Burners: [**Aluminized steel with stainless-steel inserts**] [**Stainless steel**].
 - a. Gas Control Valve: [**Single stage**] [**Two stage**] [**Modulating**].
 - b. Rated maximum turndown ratio of 30 to 1.
 - c. Fuel: [**Natural**] [**Propane**] gas.
 - d. Minimum Combustion Efficiency: [**95**] <Insert number> percent.
 - e. Ignition: Electronically controlled electric spark with flame sensor.
 - f. High-Altitude [**Model**] [**Kit**]: For Project elevation above sea level.
- B. Safety Controls:
 - 1. Vent Flow Verification: [**Differential pressure switch to verify open vent**] [**Flame rollout switch**].
 - 2. Control Transformer: 24-V ac.
 - 3. High Limit: Thermal switch or fuse to stop burner.
 - 4. Gas Train: Regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, [**hydraulic**] [**electronic**]-modulating temperature control valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
 - 5. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
 - 6. Gas Manifold: Safety switches and controls complying with ANSI standards [**and**] [**FM Global**] [**XL Insurance**].
 - 7. Airflow Proving Switch: Differential pressure switch senses correct airflow before energizing pilot.
 - 8. Automatic-Reset, High-Limit Control Device: Stops burner and closes main gas valve if high-limit temperature is exceeded.

9. Safety Lockout Switch: Locks out ignition sequence if burner fails to light after three tries. Controls are reset manually by turning the unit off and on.

2.9 UNIT CONTROL PANEL

- A. Factory-wired, fuse-protected control transformer, connection for power supply and field-wired unit to remote control panel.
- B. Control Panel: [**Surface-mounted**] [**Recessed, with trim ring,**] remote panel, with engraved plastic cover and the following lights and switches:
 1. [**On-off**] [**On-off-auto**] fan switch.
 2. Heat-vent-off switch.
 3. Supply-fan operation indicating light.
 4. Heating operation indicating light.
 5. Thermostat.
 6. Damper position potentiometer.
 7. Dirty-filter indicating light operated by unit-mounted differential pressure switch.
 8. Safety-lockout indicating light.
 9. Enclosure: NEMA 250, [**Type 1**] [**Type 3R**] [**Type 4**] [**Explosion proof**].

2.10 CONTROLS

- A. Control Devices:
 1. Remote Thermostat: Adjustable room thermostat with temperature readout.
 2. Remote Setback Thermostat: Adjustable room thermostat without temperature readout.
 3. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
 4. Fire-Protection Thermostats: Fixed or adjustable settings to operate at not less than **75 deg F (24 deg C)** above normal maximum operating temperature.
 5. Timers: Seven-day, programming-switch timer with synchronous-timing motor and seven-day dial; continuously charged, nickel-cadmium-battery-driven, eight-hour, power-failure carryover; multiple-switch trippers; minimum of two and maximum of eight signals per day with two normally open and two normally closed output contacts.
 6. Ionization-Type Smoke Detectors: 24-V dc, nominal; self-restoring; plug-in arrangement; integral visual-indicating light; sensitivity that can be tested and adjusted in place after installation; integral addressable module; remote controllability; responsive to both visible and invisible products of combustion; self-compensating for changes in environmental conditions.
- B. Fan Control: Interlock fan to start with exhaust fan(s) to which this heating and ventilating unit is associated for makeup air.
- C. Smoke detectors, located in supply[**and return**] air, shall stop fans when the presence of smoke is detected.

- D. Outdoor-Air Damper Control, 100 Percent Outdoor-Air Units: Outdoor-air damper shall open when supply fan starts, and close when fan stops.
- E. Mixed Outdoor- and Return-Air Damper Control: When fan is running, outdoor- and return-air dampers shall modulate to supply minimum outdoor air.
- F. Temperature Control: Operates gas valve to maintain supply-air temperature.
 - 1. Operates gas valve to maintain discharge-air temperature with factory-mounted sensor in blower outlet.
 - 2. Timer shall select remote setback thermostat to maintain space temperature at **[50 deg F (10 deg C)] <Insert temperature>**.
 - 3. Burner Control: Two or four steps of control using one or two burner sections in series.

2.11 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - 1. Enclosure: **[Open, dripproof] [Totally enclosed, fan cooled] [Totally enclosed, air over] [Open, externally ventilated] [Totally enclosed, nonventilated] [Severe duty] [Explosion proof] [Dust-ignition-proof machine]**.
 - 2. Enclosure Materials: **[Cast iron] [Cast aluminum] [Rolled steel]**.
 - 3. Motor Bearings: **<Insert requirements>**.
 - 4. Unusual Service Conditions:
 - a. Ambient Temperature: **<Insert deg C>**.
 - b. Altitude: **<Insert feet (m)>** above sea level.
 - c. High humidity.
 - d. **<Insert conditions>**.
 - 5. Efficiency: **[Premium efficient] [EPA compliant]**.
 - 6. NEMA Design: **<Insert designation>**.
 - 7. Service Factor: **<Insert value>**.

2.12 CAPACITIES AND CHARACTERISTICS

- A. Fan:
 - 1. Discharge Configuration: **[Horizontal] [Vertical]**.
 - 2. Airflow in CFM (L/s): **<Insert quantity>**.
 - 3. External Static Pressure: **<Insert inches wg (kPa)>**.
 - 4. Maximum RPM: **<Insert number>**.
 - 5. Minimum Size: **<Insert inches (mm)>**.
 - 6. Altitude: **<Insert feet ((m))>**.

B. Fan Motor:

1. Horsepower: <Insert value>.
2. RPM: <Insert value>.
3. Service Factor: <Insert value>.
4. Speed: [Single] [Two].

C. Single-Point Electrical Connection:

1. Volts: [120] [240] [277] [480] <Insert value>.
2. Phase: [Single] [Three].
3. Hertz: 60.
4. Full-Load Amperes: <Insert value>.
5. Minimum Circuit Ampacity: <Insert value>.
6. Maximum Overcurrent Protection: <Insert amperage>.

D. Direct-Fired Gas Burner:

1. Minimum Combustion Efficiency: <Insert number> percent.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Leaving-Air Temperature: <Insert deg F (deg C)>.
4. Airflow: <Insert cfm (L/s)>.
5. Gas Input: <Insert MBh (kW)>.
6. Burner Output: <Insert MBh (kW)>.
7. Number of Stages: <Insert value>.
8. Minimum Inlet Pressure: <Insert inches wg ((Pa))>.
9. Maximum Inlet Pressure: <Insert inches wg ((Pa))>.
10. Gas Piping Connection Size: <Insert NPS ((DN))>.
11. Vent Diameter: <Insert inches ((mm))>.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Mounting:

1. Install heating and ventilating units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Unit Support: Install heating and ventilating unit level on structural [curbs] [pilings]. Coordinate wall penetrations and flashing with wall construction.[Secure units to structural support with anchor bolts.]

- C. Install gas-fired units according to NFPA 54, "National Fuel Gas Code."
- D. Install controls and equipment shipped by manufacturer for field installation with direct-fired heating and ventilating units.
- E. Install seismic restraints according to manufacturer's written instructions.

3.2 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
 - 1. Gas Piping: Comply with requirements in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**] Connect gas piping with shutoff valve and union, and with sufficient clearance for burner removal and service. Make final connections of gas piping to unit with corrugated, stainless-steel tubing flexible connectors complying with ANSI LC 1/CSA 6.26 equipment connections.
- B. Duct Connections: Connect supply[**and return**] ducts to direct-fired heating and ventilating units with flexible duct connectors. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.
- C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].
- B. Units will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Adjust initial temperature set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain heating and ventilating units.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 237339

SECTION 237413 - PACKAGED, OUTDOOR, CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes packaged, outdoor, central-station air-handling units (rooftop units) with the following components and accessories:
 - 1. Direct-expansion cooling.
 - 2. Heat-pump refrigeration components.
 - 3. Hot-gas reheat.
 - 4. Electric-heating coils.
 - 5. Gas furnace.
 - 6. Economizer outdoor- and return-air damper section.
 - 7. Integral, space temperature controls.
 - 8. Roof curbs.
- B. Related Sections include the following:
 - 1. Section 237333.16 "Indoor, Indirect, Gas-Fired Heating and Ventilating Units" for outdoor units providing 100 percent tempered outdoor air with heat exchangers.
 - 2. Section 237339 "Indoor, Direct-Fired Heating and Ventilating Units" for outdoor units providing 100 percent tempered outdoor air without heat exchangers.
 - 3. Section 237433 "Dedicated Outdoor-Air Units" for outdoor equipment air conditioning 100 percent outdoor air to replace air exhausted from a building.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. DDC: Direct-digital controls.
- B. ECM: Electrically commutated motor.
- C. Outdoor-Air Refrigerant Coil: Refrigerant coil in the outdoor-air stream to reject heat during cooling operations and to absorb heat during heating operations. "Outdoor air"

is defined as the air outside the building or taken from outdoors and not previously circulated through the system.

- D. Outdoor-Air Refrigerant-Coil Fan: The outdoor-air refrigerant-coil fan in RTUs. "Outdoor air" is defined as the air outside the building or taken from outdoors and not previously circulated through the system.
- E. RTU: Rooftop unit. As used in this Section, this abbreviation means packaged, outdoor, central-station air-handling units. This abbreviation is used regardless of whether the unit is mounted on the roof or on a concrete base on ground.
- F. Supply-Air Fan: The fan providing supply air to conditioned space. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.
- G. Supply-Air Refrigerant Coil: Refrigerant coil in the supply-air stream to absorb heat (provide cooling) during cooling operations and to reject heat (provide heating) during heating operations. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.
- H. VVT: Variable-air volume and temperature.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design RTU supports to comply with **[wind] [and] [seismic]** performance requirements, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Wind-Restraint Performance:
 - 1. Basic Wind Speed: **<Insert value>**.
 - 2. Building Classification Category: **[I] [II] [III] [IV]**.
 - 3. Minimum **10 lb/sq. ft (48.8 kg/sq. m)** multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.
- C. Seismic Performance: RTUs shall withstand the effects of earthquake motions determined according to **[SEI/ASCE 7] <Insert requirement>**.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

1.5 ACTION SUBMITTALS

- A. Product Data: Include manufacturer's technical data for each RTU, including rated capacities, dimensions, required clearances, characteristics, weights, fan performance,

gages, and finishes of materials, electrical characteristics, connection requirements, furnished specialties, and accessories.

1. Provide data for filter media, filter performance data, filter assembly, and filter frames.
2. Provide fan curves with specified operating point clearly plotted.
3. Submit sound power level data for both fan outlet and casing radiation at rated capacity.
4. Submit electrical requirements for power supply wiring including wiring diagrams for interlock and control wiring, clearly indicating factory-installed and field-installed wiring.
5. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
2. Wiring Diagrams: Power, signal, and control wiring.

D. Delegated-Design Submittal: For RTU supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.
2. Detail mounting, securing, and flashing of roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
3. **[Wind-] [and] [Seismic-]**Restraint Details: Detail fabrication and attachment of wind and seismic restraints and snubbers. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Structural members to which RTUs will be attached.
 2. Roof openings
 3. Roof curbs and flashing.
- B. Manufacturer Wind Loading Qualification Certification: Submit certification that specified equipment shall withstand wind forces identified in "Performance Requirements" Article and in Section 230548 "Vibration and Seismic Controls for HVAC."
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculations.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of wind force and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Manufacturer Seismic Qualification Certification: Submit certification that RTUs, accessories, and components will withstand seismic forces defined in "Performance Requirements" Article and in Section 230548 "Vibration and Seismic Controls for HVAC."
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Field quality-control test reports.
- E. Warranty: Special warranty specified in this Section.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For RTUs to include in emergency, operation, and maintenance manuals.
1. Include instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Fan Belts: **[One (1) set]** [**<Insert number> sets**] for each belt-driven fan.
 2. Filters: **[One (1) set]** [**<Insert number> sets**] of filters for each unit.

1.9 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in manufacturing the Products specified in this Section with minimum three (3) years documented experience, who issues complete catalog data on total product.
- B. ARI Compliance:
1. Comply with ARI 203/110 and ARI 303/110 for testing and rating energy efficiencies for RTUs.
 2. Comply with ARI 270 for testing and rating sound performance for RTUs.
- C. ASHRAE Compliance:
1. Comply with ASHRAE 15 for refrigeration system safety.
 2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
 3. Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- D. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. NFPA Compliance: Comply with NFPA 90A and NFPA 90B.
- F. UL Compliance: Comply with UL 1995.
- G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.10 ENVIRONMENTAL REQUIREMENTS

- A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.
- B. Do not operate units for temporary heating or cooling prior to substantial completion without approval by DEN Project Manager.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, handle and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1
- B. Accept products on site in factory-fabricated protective containers, with factory-installed shipping skids and lifting lugs. Inspect for damage.
- C. Store in clean dry place and protect from weather and construction traffic. Handle carefully to avoid damage to components, enclosures, and finish.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace components of RTUs that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Compressors: Manufacturer's standard, but not less than **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.
 - 2. Warranty Period for Gas Furnace Heat Exchangers: Manufacturer's standard, but not less than **[five (5)] [ten (10)] [fifteen (15)] [twenty (20)] <Insert number>** years from date of Substantial Completion.
 - 3. Warranty Period for Solid-State Ignition Modules: Manufacturer's standard, but not less than **[three (3)] <Insert number>** years from date of Substantial Completion.
 - 4. Warranty Period for Control Boards: Manufacturer's standard, but not less than **[three (3)] <Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [AAON, Inc.](#)
 - 2. [Addison Products Company.](#)
 - 3. [Carrier Corporation.](#)
 - 4. [Engineered Air.](#)
 - 5. [Lennox Industries Inc.](#)

6. [McQuay International](#).
7. [Trane; American Standard Companies, Inc.](#)
8. [YORK International Corporation](#).
9. <Insert manufacturer's name>.
10. or approved equal.

2.2 CASING

- A. General Fabrication Requirements for Casings: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.
1. Fabricate on channel base, welded frame construction and drain pan of welded steel coated externally with manufacturers standard paint finish. Assemble sections with gaskets and bolts. Casing/frame assembly shall be capable of withstanding 30 lb. per square foot snow load and 100 MPH winds.
- B. Exterior Casing Material: G-90 galvanized steel, phosphatized, with factory-painted finish of **[baked enamel] [zinc chromate, iron oxide, phenolic resin paint] [asphalt base coating formulated to protect surfaces, seal seams and joints, and provide insulation and sound deadening] [three coat system of epoxy applied over shot blasted surface, to total thickness of 5-6 mils]** with pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.
1. Finish: Unit base, framework, and fan assembly shall be painted with 3 mil thick industrial primer with built in rust inhibitors and one coat of DTM enamel.
 2. Weatherproof Casing Finish: Seal fixed joints with flexible weather tight sealer. Seal removable joints with closed-cell foam gasket. Pitch roof panels for drainage. Reinforce roof for winter snow loading. Provide cap strips over roof flanges. Provide rain caps and gaskets on access doors.
 3. Exterior Casing Thickness: **[0.052 inch (1.3 mm)] [0.0626 inch (1.6 mm)] [0.079 inch (2.0 mm)] <Insert thickness>** thick.
- C. Inner Casing Fabrication Requirements:
1. Inside Casing: Galvanized steel, **[0.034 inch (0.86 mm)] [0.028 inch (0.7 mm)] <Insert thickness>** thick[, **perforated 40 percent free area**].
- D. Casing Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
1. Materials: ASTM C 1071, Type I.
 2. Thickness: **[2] <Insert number>** inch thick, 3 lbs per cu ft density, neoprene coated, glass fiber insulation, "K" value at 75 degrees F maximum 0.26 Btu/inch/sq ft/degrees F/hr, applied to internal surfaces with adhesive and secured with pins and washers. Coat exposed edges of insulation with adhesive.
 3. Liner materials shall have air-stream surface coated with an erosion- and temperature-resistant coating or faced with a plain or coated fibrous mat or fabric.
 4. Liner Adhesive: Comply with ASTM C 916, Type I.

- E. Walk-in Access Doors: **[18 x 40] [24 x 48] [24 x 60] [30 x 60] [30 x 72]** inch of galvanized steel insulated sandwich construction, for flush mounting, with hinges, gasket, latch, and handle assemblies [, **and 12 X 12 inch inspection window of 1/4 inch thick plexiglass**]. **[Provide welded channel frame to set door out from casing to permit external insulation.]**
- F. Inspection Doors: 10 x 10 inch, of galvanized steel for flush mounting, with gasket, latch, and handle assembly **[and 1/4 inch thick plexiglass inspection window]**. **[Provide welded channel frame to set door out from casing to permit external insulation.]**
- G. Inspection Doors: 18 x 22 inch of galvanized steel for flush mounting, with gasket, latch, and handle assemblies **[and 12 x 12 inch inspection window of 1/4 inch thick plexiglass]**. **[Provide welded channel frame to set door out from casing to permit external insulation.]**
- H. Louvers: **[Stationary] [Adjustable]**, of galvanized steel, **[4] [6]** inch deep with plenum, **[nylon bearings,]** 1/2 inch mesh, 0.04 inch galvanized wire bird screen in **[aluminum] [galvanized]** frame, and bearing AMCA Certified Ratings Seal in accordance with AMCA 500. **[Furnish adjustable louvers with hollow vinyl bulb edging on blades and foam side stops to limit leakage to maximum 2 percent at 4-inch wg differential pressure when sized for 2000 fpm face velocity.]**
- I. Condensate Drain Pans: Formed sections of **[single] [double]** thickness **[galvanized] [stainless]**-steel sheet, a minimum of **2 inches (50 mm)** deep[, **and complying with ASHRAE 62.1**], **[with insulation between layers]** with welded corners. Cross break and pitch to drain connection. Provide drain pans under **[fan section] [heating coil section] [cooling coil section] [mixing section] [humidifier section] [plenum sections] [with asphalt base coating]**. Provide drain pans under cooling coil section outside air section with asphalt base coating. Humidifier drain section shall be constructed of 304 stainless steel.
1. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
 2. Drain Connections: Threaded nipple[**both sides of drain pan**].
 3. Pan-Top Surface Coating: Corrosion-resistant compound.
 4. Provide vapor-sealed 1-inch thick insulation under drain pan, and 1-inch trapped drain discharging to roof surface.
- J. Supplemental Condensate Drain Pans:
1. Wherever units equipped for cooling service are installed above facilities such as electrical power equipment, computer equipment, data server or telecommunications equipment, or other electrical or electronic equipment susceptible to malfunction if exposed to water, Contractor shall provide a supplemental drain pan to serve as additional protection against leakage, overflow, or other failure of the primary drain pan normally comprising a part of the air-conditioning equipment.
 2. Supplemental drain pans to be constructed of 20 gauge (minimum) galvanized

- steel, minimum depth 2 inches, fabricated, braced, and supported to ensure stability.
3. Provide drain piping conforming to provisions 221116 "Domestic Water Piping" and other Division 22 Sections, as applicable, minimum size 3/4 inch, terminating as a visible sight drain discharging to a floor drain or service sink if feasible, or as may otherwise be directed or approved by the DEN Project Manager.
- K. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- L. Bottom Inlet/outlet Units: Provide steel or aluminum walking grate on structural supports.
- M. Strength: Provide structure to brace casings for suction pressure of 4-inch wg, with maximum deflection of 1 in 200.

2.3 FANS

- A. Direct-Driven Supply-Air Fans: Double width, **[forward curved]** **[backward inclined]**, centrifugal; with permanently lubricated, **[multispeed]** **[ECM]** motor resiliently mounted in the fan inlet. Aluminum or painted-steel wheels, and galvanized- or painted-steel fan scrolls.
- B. Belt-Driven Supply-Air Fans: Double width, forward curved, centrifugal; with permanently lubricated, single-speed motor installed on an adjustable fan base resiliently mounted in the casing. Aluminum or painted-steel wheels, and galvanized- or painted-steel fan scrolls.
- C. Condenser-Coil Fan: Propeller, mounted on shaft of permanently lubricated motor.
- D. Relief-Air Fan: **[Propeller]** **[Forward curved]** **[Backward inclined]**, shaft mounted on permanently lubricated motor.
- E. Seismic Fabrication Requirements: Fabricate fan section, internal mounting frame and attachment to fans, fan housings, motors, casings, accessories, and other fan section components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when fan-mounted frame and RTU-mounted frame are anchored to building structure.
- F. Fan Motor: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- G. Mounting: Locate fan and motor internally on welded steel base coated with corrosion resistant paint. Factory mount motor on slide rails. Provide access to motor, drive, and bearings through removable casing panels or hinged access doors. Mount base on vibration isolators. Refer to Section 230548.13 "Vibration Controls for HVAC".
- H. Flexible Connection: Separate fan, discharge, and coil sections. Refer to Section 233300 "Air Duct Accessories".

- I. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Discharge	64	57	51	47	42	39	38	37
Inlet	64	57	51	47	42	39	38	37

2.4 BEARINGS AND DRIVES

- A. Bearings: AFBMA 9, AFBMA 11, L-10 life at 120,000 hours pillow block type, self-aligning, grease-lubricated roller bearings.
- B. Shafts: Solid, hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil.
- C. V-Belt Drive: Cast iron or steel sheaves, dynamically balanced, bored to fit shafts and keyed. Variable and adjustable pitch sheaves for motors 15 hp and under selected so required rpm is obtained with sheaves set at mid-position; fixed sheave for 20 hp and over, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.
- D. Belt Guard: Fabricate to SMACNA Standard; 12 gage thick, 3/4 inch diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

2.5 COILS

- A. Casing: Provide access to both sides of coils. Enclose coils with headers and return bends fully contained within casing. Slide coils into casing through removable end panel with blank off sheets and sealing collars at connection penetrations.
- B. Eliminators: Three break of galvanized steel on coils, and Type 304 stainless steel on evaporative humidifier, mounted over drain pan.
- C. Supply-Air Refrigerant Coil:
1. **[Aluminum] [Copper]**-plate fin and seamless **[internally grooved]** copper tube in steel casing with equalizing-type vertical distributor.
 2. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.
 3. Coil Split: Interlaced.
 4. **[Baked phenolic] [Cathodic epoxy]** coating.
 5. Condensate Drain Pan: **[Galvanized steel with corrosion-resistant coating] [Stainless steel]** formed with pitch and drain connections **[complying with ASHRAE 62.1]**. 24 inch downstream of coil and down spouts for cooling coil banks more than one coil high.

D. Outdoor-Air Refrigerant Coil:

1. **[Aluminum] [Copper]**-plate fin and seamless **[internally grooved]** copper tube in steel casing with equalizing-type vertical distributor.
2. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.
3. **[Baked phenolic] [Cathodic epoxy]** coating.

E. Hot-Gas Reheat Refrigerant Coil:

1. **[Aluminum] [Copper]**-plate fin and seamless **[internally grooved]** copper tube in steel casing with equalizing-type vertical distributor.
2. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.
3. **[Baked phenolic] [Cathodic epoxy]** coating.

F. Electric-Resistance Heating:

1. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.
2. Overtemperature Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box.
3. Overcurrent Protection: Manual-reset thermal cutouts, factory wired in each heater stage.
4. Control Panel: Unit mounted with disconnecting means and overcurrent protection. Include the following controls:
 - a. **[Magnetic] [Mercury]** contactors.
 - b. Step Controller: Pilot lights and override toggle switch for each step.
 - c. SCR Controller: Pilot lights operate on load ratio, a minimum of five steps.
 - d. Time-delay relay.
 - e. Airflow proving switch.

2.6 REFRIGERANT CIRCUIT COMPONENTS

A. Number of Refrigerant Circuits: **[One (1)] [Two (2)] <Insert number>**.

B. Compressor: **[Hermetic, reciprocating] [Semihhermetic, reciprocating] [Hermetic, scroll]**, mounted on vibration isolators; with internal overcurrent and high-temperature protection, internal pressure relief, **and crankcase heater**].

C. Refrigeration Specialties:

1. Refrigerant: **[R-22] [R-407C] [R-410A] <Insert type>**.
2. Refrigerant: R-407C or R-410A.
3. Expansion valve with replaceable thermostatic element.

4. Refrigerant filter/dryer.
5. Manual-reset high-pressure safety switch.
6. Automatic-reset low-pressure safety switch.
7. Minimum off-time relay.
8. Automatic-reset compressor motor thermal overload.
9. Brass service valves installed in compressor suction and liquid lines.
10. Low-ambient kit high-pressure sensor.
11. Hot-gas reheat solenoid valve with a replaceable magnetic coil.
12. Hot-gas bypass solenoid valve with a replaceable magnetic coil.
13. Four-way reversing valve with a replaceable magnetic coil, thermostatic expansion valves with bypass check valves, and a suction line accumulator.

2.7 SPRAYED COIL DEHUMIDIFIER

- A. Units: Assembly with casing, tank, nozzles, spray headers, eliminators, water and drain connections [, **spray pump**,] and cooling coils. [**Refer to Section 238413 "Humidifiers".**]
- B. Insulation: Externally insulate casing. Mount on 2-inch thick rigid insulation board.
- C. Performance: Operate at [**3 inch wg negative**] [**3 inch wg positive**] [**6 inch wg positive**] operating static pressure.
- D. Coil: Refer to coil specification for size and cooling capacity.
- E. Casing: 14 gage galvanized steel reinforced and braced with galvanized angles.
- F. Drain Tank: [**10 gage**] [**3/16 inch**] welded black steel with coating of [**1/8 inch waterproof mastic**] [**3/32 inch minimum epoxy**].] [**glass fiber reinforced plastic.**] [**10 gage stainless steel.**] Provide with 2" drain, 1-1/2" water make-up connection, and 3" overflow connection.
- G. Coils: Copper, drainable.
- H. Spray Headers: Galvanized steel pipe.
- I. Spray Nozzles: Bronze, self-cleaning.
- J. Spray Pump: Vertical in-line operating at 1750 rev/min.
- K. Float Valve: Adjustable, with brass rod, brass float ball, and brass valve with replaceable neoprene seat.
- L. Low Water Cut-off: Float operated.

2.8 HUMIDIFIER

- A. Humidifiers: Certify capacities and selection in accordance with ARI 610.

- B. Steam Grid Humidifier: Stainless steel distribution tube with evenly spaced orifices extended full width of unit, factory mounted **[in plenum with drain pan for draw-thru units] [in diffuser section of blow-thru units]**. **[Refer to Section 238413 "Humidifiers".]**
- C. Evaporative Pan Humidifier: Factory mounted in plenum with drain pan, float box, copper pan, water immersion type sheathed heating element, and low water cut-off switch. **[Refer to Section 238413 "Humidifiers".]**
- D. Wet Glass Cell Washer: Section with 3-inch deep cells with random packed, glass fiber media in **[galvanized] [stainless]** steel frames, access door, spray tree assembly with **[brass] [stainless steel]** nozzles and **[galvanized] [stainless]** steel piping, and **[galvanized] [stainless]** steel eliminator plates. Assemble over welded **[stainless]** steel tank **[with interior and exterior surfaces blasted and painted with zinc chromate paint.]** Provide copper suction screen, drain, overflow, and suction connections in tank with make-up connection, **[brass]** float valve, and quick-fill connection. Insulate exterior with duct insulation. Mount tank on 2-inch thick rigid closed-cell insulation board.
- E. Evaporative Humidifier: Section with watertight **[cast iron]** door with brass fittings, wire glass window, and locking handles, **[spray tree assembly with brass nozzles and galvanized piping, galvanized eliminator plates with flooding nozzles and header, and galvanized anti-splash baffles] [water distribution assembly with brass nozzles and galvanized piping and cross fluted cellulose media]**. Assemble over welded steel tank with interior and exterior surfaces blasted and painted with zinc chromate paint. Provide copper suction screen, drain, overflow, and suction connections in tank with make-up connection, **[brass]** float valve, and quick-fill connection. Insulate exterior with duct insulation. Mount tank on 2-inch thick rigid closed-cell insulation board. **[Refer to Section 238413 "Humidifiers".]**

2.9 AIR BLENDERS

- A. For air handling units as indicated, provide casing section fitted with static air mixing devices. Each section shall be designed to accurately match flange geometry and bolting provisions of adjacent sections, and air mixing device assembly design shall be established by the air blender manufacturer to ensure specified mixing performance for the airflow rates and flow patterns produced by air handler configurations. Furnish blender section mixing box generally consisting of air blenders and mixing section fitted together in one rigid unit, as shown on drawings.
- B. Housing shall be constructed of 18-gage steel finished with corrosion resistant paint or zinc coating. Housing shall be manufactured and sized to fit up to air handler unit without any major field modification. Housing shall be internally insulated the same as specified for the air handler unit casings.
- C. The Blender of the blender section shall incorporate a minimum of 0.08 in thick, (0.125 in for blenders larger than 96 inches), all welded multiple static mixing devices which shall impart a patented counter rotational mixing of the air stream thereby producing a minimum standard deviation through a plane parallel with the blenders between

entering air stream. Simple mixing devices, which do not produce counter rotational mixed air streams as described above, will not be acceptable. The pressure drop through the blender section shall not exceed 0.1 inch WG at 400 ft/min plenum velocity, 0.15 inch WG at 500 ft/min plenum velocity, or 0.2 inches WG at 600 ft/min plenum velocity. The blender's performance range shall be from 600 through 2500 ft/min with no loss in mixing performance.

- D. The unit shall be capable of providing a minimum mixing effectiveness of 75% and +/- 6 degrees F standard deviation when mixing at 50% OA with 50% RA at 50 degrees F inlet temperature differential, and minimum mixing effectiveness of 80% and +/- 5 degrees F standard deviation when mixing 30% OA with 70% RA at 50 degrees F inlet temperature differential. The mixing section shall provide acceptable performance throughout the entire operating range of the air handler, including system turn down.
- E. The velocity profile at the blender section discharge shall provide uniform velocity across filters, coils and control thermostats to insure proper performance and accurate temperature sensing. The mixing section shall yield a minimum Velocity Variation Coefficient (Cv) of 0.3 based on the following expression:
1. $Cv = Vsd/Vave$. Where:
 - a. Vsd = Velocity Standard Deviation, and
 - b. Vave = Average Plenum Velocity.
- F. The unit shall have provisions for floor or ceiling mounting corresponding to mounting provisions forming a part of the air handling unit assembly in which the blended unit is installed. Each blender section shall be equipped with connection flanges, sized to match the inlet side of the Air Handling Unit and outlet of mixing box, with no additional or field transitions necessary.

2.10 AIR FILTRATION

- A. Filter Box: Section with filter guides, access doors from both sides, for face loading.
- B. Filter Media: UL 900 listed, Class I or Class II, approved by local authorities.
- C. Flat Panel Prefilter: Arrangement with 2 and 4-inch deep disposable, extended area panel filters.
- D. Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
1. Glass Fiber: Minimum [80] <Insert number> percent arrestance, and [MERV 5] <Insert value>.
 2. Pleated: Minimum [90] <Insert number> percent arrestance, and [MERV 7] <Insert value>.

2.11 GAS FURNACE

- A. Description: Factory assembled, piped, and wired; complying with ANSI Z21.47 and NFPA 54.
 - 1. CSA Approval: Designed and certified by and bearing label of CSA.
- B. Burners: Stainless steel.
 - 1. Fuel: **[Natural] [Propane]** gas.
 - 2. Ignition: Electronically controlled electric spark or hot-surface igniter with flame sensor.
 - 3. High-Altitude **[Model] [Kit]**: For Project elevations more than 2000 feet (610 m) above sea level.
- C. Heat Exchanger and Drain Pan: Stainless steel.
- D. Venting: Gravity vented[**with vertical extension**].
- E. Power Vent: Integral, motorized centrifugal fan interlocked with gas valve[**with vertical extension**].
- F. Safety Controls:
 - 1. Gas Control Valve: **[Single stage] [Two stage] [Modulating]**.
 - 2. Gas Train: Single-body, regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff.

2.12 DAMPERS

- A. Outdoor-Air Damper: Linked damper blades, for 0 to 25 percent outdoor air, with **[manual] [motorized]** damper filter.
- B. Outdoor- and Return-Air Mixing Dampers: Parallel- or opposed-blade galvanized-steel dampers mechanically fastened to cadmium plated for galvanized-steel operating rod in reinforced cabinet, and edge seals in galvanized frame, with galvanized steel axles in self-lubricating brass bearings, in opposed air foil blade arrangement with damper blades positioned across short air opening dimension. Provide removable, full width rack for supporting freeze protection thermostat, with removable end panel to permit rack removal. Connect operating rods with common linkage and interconnect linkages so dampers operate simultaneously.
 - 1. Damper Motor: Modulating with adjustable minimum position.
 - 2. Relief-Air Damper: Gravity actuated or motorized, as required by ASHRAE/IESNA 90.1, with bird screen and hood.
 - 3. Damper Leakage: Maximum 1 percent at 6 inch w.g. differential pressure when sized for 2000 fpm face velocity.

2.13 ELECTRICAL POWER CONNECTION, REQUIREMENTS AND CHARACTERISTICS

- A. Provide for single connection of power to unit with[**unit-mounted disconnect switch accessible from outside unit and**] control-circuit transformer with built-in overcurrent protection.
- B. Work of this section includes:
1. Factory or field installed motor controllers for all motors. Refer to Section 262913 "Enclosed Controllers", Section 262923 "Variable Frequency Motor Controllers" and Section 260583 "Electrical Connections".
 2. Furnishing and installation of a main disconnect switch, which will interrupt all power serving the packaged air handling assembly. This switch will comprise a single point of connection for the power supply feeder installed under Division 26.
 - a. For equipment designated by the manufacturer as requiring a maximum fuse size or circuit protection ampere rating, the main disconnect switch shall be a fusible switch or circuit breaker conforming to manufacturer's specified limitations. Where no limitations are imposed, main disconnect shall be an unfused switch or acceptable substitute.
 3. Disconnect shall be mounted on the AHU and be furnished with two normally open contacts.
 4. Furnishing and installation of all required wiring extending from the main disconnect to the components requiring power, in accordance with Division 26 specifications. Include all protective devices required for circuits developed for unit requirements.
- C. VFD controllers shall be remote mounted and not integral to the AHU.
- D. Motor: Open drip proof.
- E. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70.
- F. Factory wire motors, variable frequency drives, starters and disconnects for a single source of electrical connection. In addition, factory wire convenience outlets for an additional 115V single source of electrical connection.

2.14 CONTROLS

- A. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- B. Basic Unit Controls:
1. Control-voltage transformer.

2. Wall-mounted thermostat or sensor with the following features:
 - a. Heat-cool-off switch.
 - b. Fan on-auto switch.
 - c. Fan-speed switch.
 - d. **[Manual] [Automatic]** changeover.
 - e. Adjustable deadband.
 - f. **[Concealed] [Exposed]** set point.
 - g. **[Concealed] [Exposed]** indication.
 - h. **[Degree F] [Degree C]** indication.
 - i. Unoccupied-period-override push button.
 - j. Data entry and access port to input temperature[**and humidity**] set points, occupied and unoccupied periods, and output room temperature[**and humidity**], supply-air temperature, operating mode, and status.

3. Wall-mounted humidistat or sensor with the following features:
 - a. **[Concealed] [Exposed]** set point.
 - b. **[Concealed] [Exposed]** indication.

4. **[Remote Wall] [Unit]-Mounted Annunciator Panel for Each Unit:**
 - a. Lights to indicate power on, cooling, heating, fan running, filter dirty, and unit alarm or failure.
 - b. DDC controller or programmable timer and interface with HVAC instrumentation and control system.
 - c. Digital display of outdoor-air temperature, supply-air temperature, return-air temperature, economizer damper position, indoor-air quality, and control parameters.

- C. **[Electronic] [DDC] Controller:**
 1. Controller shall have volatile-memory backup.
 2. Safety Control Operation:
 - a. Smoke Detectors: Stop fan and close outdoor-air damper if smoke is detected. Provide additional contacts for alarm interface to fire alarm control panel.
 - b. Firestats: Stop fan and close outdoor-air damper if air greater than **[130 deg F (54 deg C)] <Insert temperature>** enters unit. Provide additional contacts for alarm interface to fire alarm control panel.
 - c. Fire Alarm Control Panel Interface: Provide control interface to coordinate with operating sequence described in Section 283111 "Digital, Addressable Fire-Alarm System" and Section 283112 "Zoned (DC Loop) Fire-Alarm System."
 - d. Low-Discharge Temperature: Stop fan and close outdoor-air damper if supply air temperature is less than **[40 deg F (4 deg C)] <Insert temperature>**.
 - e. Defrost Control for Condenser Coil: Pressure differential switch to initiate defrost sequence.

3. Scheduled Operation: Occupied and unoccupied periods on **[seven]** **[365]**-day clock with a minimum of **[two]** **[four]** programmable periods per day.
4. Unoccupied Period:
 - a. Heating Setback: **[10 deg F (5.6 deg C)]** **<Insert temperature>**.
 - b. Cooling Setback: System off.
 - c. Override Operation: **[Two]** **<Insert number>** hours.
5. Supply Fan Operation:
 - a. Occupied Periods: Run fan continuously.
 - b. Unoccupied Periods: Cycle fan to maintain setback temperature.
6. Refrigerant Circuit Operation:
 - a. Occupied Periods: Cycle or stage compressors[, **and operate hot-gas bypass**] to match compressor output to cooling load to maintain **[room]** **[discharge]** temperature[**and humidity**]. Cycle condenser fans to maintain maximum hot-gas pressure. Operate low-ambient control kit to maintain minimum hot-gas pressure.
 - b. Unoccupied Periods: **[Compressors off]** **[Cycle compressors and condenser fans for heating to maintain setback temperature]**.
 - c. Switch reversing valve for heating or cooling mode on air-to-air heat pump.
7. Hot-Gas Reheat-Coil Operation:
 - a. Occupied Periods: Humidistat opens hot-gas valve to provide hot-gas reheat, and cycles compressor.
 - b. Unoccupied Periods: Reheat not required.
8. Gas Furnace Operation:
 - a. Occupied Periods: **[Cycle]** **[Stage]** **[Modulate]** burner to maintain **[room]** **[discharge]** temperature.
 - b. Unoccupied Periods: Cycle burner to maintain setback temperature.
9. Electric-Heating-Coil Operation:
 - a. Occupied Periods: **[Cycle]** **[Stage]** **[Modulate]** coil to maintain **[room]** **[discharge]** temperature.
 - b. Unoccupied Periods: Energize coil to maintain setback temperature.
 - c. Operate supplemental electric heating coil with compressor for heating with outdoor temperature below **[25 deg F (minus 4 deg C)]** **<Insert temperature>**.
10. Fixed Minimum Outdoor-Air Damper Operation:
 - a. Occupied Periods: Open to **[25]** **<Insert percent>** percent.
 - b. Unoccupied Periods: Close the outdoor-air damper.

11. Economizer Outdoor-Air Damper Operation:

- a. Occupied Periods: Open to **[10] [25] <Insert percent>** percent fixed minimum intake, and maximum 100 percent of the fan capacity to comply with ASHRAE Cycle II. Controller shall permit airside economizer operation when outdoor air is less than **[60 deg F (15 deg C)] <Insert temperature>**. Use **[outdoor-air temperature] [mixed-air and outdoor-air temperature] [outdoor-air enthalpy] [mixed-air temperature and select between outdoor-air and return-air enthalpy]** to adjust mixing dampers. **[Start relief-air fan with end switch on outdoor-air damper.]** During economizer cycle operation, lock out cooling.
- b. Unoccupied Periods: Close outdoor-air damper and open return-air damper.
- c. Outdoor-Airflow Monitor: Accuracy maximum plus or minus 5 percent within 15 and 100 percent of total outdoor air. Monitor microprocessor shall adjust for temperature, and output shall range from **[2- to 10-V dc] [4 to 20 mA] <Insert value>**.

12. Carbon Dioxide Sensor Operation:

- a. Occupied Periods: Reset minimum outdoor-air ratio down to minimum **[10] <Insert percent>** percent to maintain maximum **[1000-ppm] <Insert concentration>** concentration.
- b. Unoccupied Periods: Close outdoor-air damper and open return-air damper.

13. VVT Relays:

- a. Provide heating- and cooling-mode changeover relays compatible with VVT terminal control system required in Section 233600 "Air Terminal Units" and Section 230923 "Direct Digital Control (DDC) System for HVAC."

D. Interface Requirements for HVAC Instrumentation and Control System:

1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at the central workstation and diagnostic code storage.
3. Provide **[BACnet] [or] [LonWorks]** compatible interface for central HVAC control workstation for the following:
 - a. Adjusting set points.
 - b. Monitoring supply fan start, stop, and operation.
 - c. Inquiring data to include **[outdoor-air damper position,]** supply- and room-air temperature **[and humidity]**.
 - d. Monitoring occupied and unoccupied operations.
 - e. Monitoring constant and variable motor loads.
 - f. Monitoring variable-frequency drive operation.
 - g. Monitoring cooling load.
 - h. Monitoring economizer cycles.
 - i. Monitoring air-distribution static pressure and ventilation air volume.

2.15 ACCESSORIES

- A. Electric heater with integral thermostat maintains minimum 50 deg F (10 deg C) temperature in gas burner compartment.
- B. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required. [**Outlet shall be energized even if the unit main disconnect is open.**]
 - 1. Provide in accessible sections suitable for damp locations a duplex outlet mounted on casing exterior.
- C. Lighting: Provide vapor-proof incandescent lights with guards in each accessible maintenance area. Include weatherproof switches with pilot lights on outside surface of casing for control of lighting.
- D. Low-ambient kit using [staged] [damper on] [variable-speed] condenser fans for operation down to [35 deg F (1.7 deg C)] <Insert temperature>.
- E. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.
- F. Coil guards of painted, galvanized-steel wire.
- G. Hail guards of galvanized steel, painted to match casing.
- H. Concentric diffuser with white louvers and polished aluminum return grilles, insulated diffuser box with mounting flanges, and interior transition.

2.16 ROOF CURBS

- A. Roof curbs with vibration isolators and wind or seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
 - 1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
 - a. Materials: ASTM C 1071, Type I or II.
 - b. Thickness: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert thickness>.
 - 2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
 - a. Liner Adhesive: Comply with ASTM C 916, Type I.
 - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging

- liner when applied as recommended by manufacturer and without causing leakage in cabinet.
- c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
 - d. Liner Adhesive: Comply with ASTM C 916, Type I.

C. Curb Height: [**14 inches (355 mm)**] [**24 inches (610 mm)**] [**36 inches (910 mm)**] <Insert height>.

D. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match RTU, used to anchor unit to the curb, and designed for loads at Project site. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for wind-load requirements.

2.17 CAPACITIES AND CHARACTERISTICS

A. Supply-Air Fan:

1. Airflow: <Insert cfm (L/s)>.
2. External Static Pressure: <Insert inches wg (kPa)>.
3. Fan Speed: <Insert rpm>.
4. Motor Horsepower: <Insert value>.
5. Motor Speed: <Insert rpm>.

B. Relief-Air Fan:

1. Airflow: <Insert cfm (L/s)>.
2. External Static Pressure: <Insert inches wg (kPa)>.
3. Fan Speed: <Insert rpm>.
4. Motor Horsepower: <Insert value>.
5. Motor Speed: <Insert rpm>.

C. Outdoor-Air-Intake Relief-Air Fan:

1. Airflow: <Insert cfm (L/s)>.
2. Static Pressure: <Insert inches wg (kPa)>.
3. Fan Speed: <Insert rpm>.
4. Motor Horsepower: <Insert value>.
5. Motor Speed: <Insert rpm>.

D. Supply-Air Refrigerant Coil:

1. Total Cooling Capacity: <Insert Btu/h (kW)>.
2. Sensible Cooling Capacity: <Insert Btu/h (kW)>.
3. Entering-Air Dry-Bulb Temperature: <Insert deg F (deg C)>.
4. Entering-Air Wet-Bulb Temperature: <Insert deg F (deg C)>.
5. Coating: [**Baked phenolic**] [**Cathodic epoxy**].

E. Outdoor-Air Refrigerant Coil:

1. Ambient-Air Temperature: <Insert deg F (deg C)>.
2. Coating: [**Baked phenolic**] [**Cathodic epoxy**].
3. Fan Motor: <Insert value>.
4. Number of Fans: <Insert number>.

F. Hot-Gas Reheat Coil:

1. Heating Capacity: <Insert Btu/h (kW)>.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Air-Temperature Rise: <Insert deg F (deg C)>.
4. Coating: [**Baked phenolic**] [**Cathodic epoxy**].

G. Electric-Resistance Heating Coil:

1. Capacity: <Insert kilowatts>.
2. Number of Steps: <Insert number>.

H. Compressors:

1. Suction Temperature: <Insert deg F (deg C)>.
2. Power Input: <Insert kilowatts>.
3. Energy-Efficiency Ratio (EER): <Insert value>.
4. Seasonal Energy-Efficiency Ratio (SEER): <Insert value>.
5. Coefficient of Performance (COP): <Insert value>.

I. Gas Furnace:

1. Airflow: <Insert cfm (L/s)>.
2. Minimum AFUE: <Insert number> percent.
3. Minimum Thermal Efficiency: <Insert number> percent.
4. Minimum Combustion Efficiency: <Insert number> percent.
5. Input: <Insert Btu/h (kW)>.
6. Output: <Insert Btu/h (kW)>.
7. Entering-Air Temperature: <Insert deg F (deg C)>.
8. Air-Temperature Rise: <Insert deg F (deg C)>.

J. Recirculating-Air Filters:

1. Minimum Face Area: <Insert sq. ft. (sq. m)>.
2. Thickness: [**1 inch (25 mm)**] [**2 inches (50 mm)**] <Insert thickness>.
3. Initial Resistance: <Insert inches wg (kPa)>.
4. Final Resistance: <Insert inches wg (kPa)>.

K. Outdoor-Air Filters:

1. Minimum Face Area: <Insert sq. ft. (sq. m)>.
2. Thickness: [**1 inch (25 mm)**] [**2 inches (50 mm)**] <Insert thickness>.
3. Initial Resistance: <Insert inches wg (kPa)>.

4. Final Resistance: <Insert inches wg (kPa)>.
- L. Electrical Characteristics for Single-Point Connection:
1. Voltage: <Insert value>.
 2. Phase: <Insert value>.
 3. Hertz: <Insert value>.
 4. Full-Load Amperes: <Insert value>.
 5. Minimum Circuit Ampacity: <Insert value>.
 6. Maximum Overcurrent Protection: <Insert amperage>.
- M. Sound Power: Radiated from condenser casing.
1. 1st Octave: <Insert value> dB.
 2. 2nd Octave: <Insert value> dB.
 3. 3rd Octave: <Insert value> dB.
 4. 4th Octave: <Insert value> dB.
 5. 5th Octave: <Insert value> dB.
 6. 6th Octave: <Insert value> dB.
 7. 7th Octave: <Insert value> dB.
 8. 8th Octave: <Insert value> dB.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of RTUs.
- B. Examine roughing-in for RTUs to verify actual locations of piping and duct connections before equipment installation.
- C. Examine roofs for suitable conditions where RTUs will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:
 1. Install units level and plumb.
 2. Anchor units to structure.
 3. Install seismic restraints.
 4. Install static-pressure probe.
 5. Install water-cooled units with thermometer and pressure gage at the water supply and return connection.

B. Equipment Mounting:

1. Install RTUs on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

C. Roof Curb: Install on roof structure or concrete base, level and secure, according to [**NRCA's "Low-Slope Membrane Roofing Construction Details Manual," Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts."**] [**ARI Guideline B.**] Install RTUs on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure RTUs to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.

D. Unit Support: Install unit level on structural [**curbs**] [**pilings**]. Coordinate wall penetrations and flashing with wall construction. Secure RTUs to structural support with anchor bolts.

3.3 CONNECTIONS

A. Install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.

B. Install piping adjacent to RTUs to allow service and maintenance.

1. Gas Piping: Comply with applicable requirements in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**] Connect gas piping to burner, full size of gas train inlet, and connect with union and shutoff valve with sufficient clearance for burner removal and service.

C. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Water Coil Connections: Comply with requirements in Section 232113 "Hydronic Piping". Connect to supply and return coil with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.
2. Remote Water-Cooled Condenser Connections: Comply with requirements in Section 232113 "Hydronic Piping". Connect to supply and return with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.

D. Refrigerant Piping: Connect to supply and return coil tappings with shutoff valve and

union or flange at each connection.

- E. Install piping adjacent to unit to allow service and maintenance.
- F. Duct installation requirements are specified in other HVAC Sections. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:
 - 1. Install ducts to termination at top of roof curb.
 - 2. Remove roof decking only as required for passage of ducts. Do not cut out decking under entire roof curb.
 - 3. Connect supply ducts to RTUs with flexible duct connectors specified in Section 233300 "Air Duct Accessories."
 - 4. Install return-air duct continuously through roof structure.
 - 5. Install normal-weight, **3000-psi (20.7-MPa)**, compressive strength (28-day) concrete mix inside roof curb, [**4 inches (100 mm)**] **<Insert thickness>** thick. Concrete, formwork, and reinforcement are specified with concrete.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Perform tests and inspections and prepare test reports.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing. Report results in writing.
- C. Tests and Inspections:
 - 1. After installing RTUs and after electrical circuitry has been energized, test units for compliance with requirements.
 - 2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
 - 3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Remove and replace malfunctioning units and retest as specified above.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.

- B. Complete installation and startup checks according to manufacturer's written instructions and do the following:
1. Inspect for visible damage to unit casing.
 2. Inspect for visible damage to furnace combustion chamber.
 3. Inspect for visible damage to compressor, coils, and fans.
 4. Inspect internal insulation.
 5. Verify that labels are clearly visible.
 6. Verify that clearances have been provided for servicing.
 7. Verify that controls are connected and operable.
 8. Verify that filters are installed.
 9. Clean condenser coil and inspect for construction debris.
 10. Clean furnace flue and inspect for construction debris.
 11. Connect and purge gas line.
 12. Remove packing from vibration isolators.
 13. Inspect operation of barometric relief dampers.
 14. Verify lubrication on fan and motor bearings.
 15. Inspect fan-wheel rotation for movement in correct direction without vibration and binding.
 16. Adjust fan belts to proper alignment and tension.
 17. Start unit according to manufacturer's written instructions.
 - a. Start refrigeration system.
 - b. Do not operate below recommended low-ambient temperature.
 - c. Complete startup sheets and attach copy with Contractor's startup report.
 18. Inspect and record performance of interlocks and protective devices; verify sequences.
 19. Operate unit for an initial period as recommended or required by manufacturer.
 20. Perform the following operations for both minimum and maximum firing. Adjust burner for peak efficiency.
 - a. Measure gas pressure on manifold.
 - b. Inspect operation of power vents.
 - c. Measure combustion-air temperature at inlet to combustion chamber.
 - d. Measure flue-gas temperature at furnace discharge.
 - e. Perform flue-gas analysis. Measure and record flue-gas carbon dioxide and oxygen concentration.
 - f. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.
 21. Calibrate thermostats.
 22. Adjust and inspect high-temperature limits.
 23. Inspect outdoor-air dampers for proper stroke and interlock with return-air dampers.
 24. Start refrigeration system and measure and record the following when ambient is a minimum of 15 deg F (8 deg C) above return-air temperature:
 - a. Coil leaving-air, dry- and wet-bulb temperatures.

- b. Coil entering-air, dry- and wet-bulb temperatures.
 - c. Outdoor-air, dry-bulb temperature.
 - d. Outdoor-air-coil, discharge-air, dry-bulb temperature.
25. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.
26. Measure and record the following minimum and maximum airflows. Plot fan volumes on fan curve.
- a. Supply-air volume.
 - b. Return-air volume.
 - c. Relief-air volume.
 - d. Outdoor-air intake volume.
27. Simulate maximum cooling demand and inspect the following:
- a. Compressor refrigerant suction and hot-gas pressures.
 - b. Short circuiting of air through condenser coil or from condenser fans to outdoor-air intake.
28. Verify operation of remote panel including pilot-light operation and failure modes. Inspect the following:
- a. High-temperature limit on gas-fired heat exchanger.
 - b. Low-temperature safety operation.
 - c. Filter high-pressure differential alarm.
 - d. Economizer to minimum outdoor-air changeover.
 - e. Relief-air fan operation.
 - f. Smoke and firestat alarms.
29. After startup and performance testing and prior to Substantial Completion, replace existing filters with new filters.

3.6 CLEANING AND ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two]** <Insert number> visits to site during other-than-normal occupancy hours for this purpose.
- B. After completing system installation and testing, adjusting, and balancing RTU and air-distribution systems, clean filter housings and install new filters.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain RTUs. Refer to Section 017900 "Demonstration and Training."

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 237413

SECTION 237423.13 - PACKAGED, DIRECT-FIRED, OUTDOOR, HEATING-ONLY MAKEUP-AIR UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes direct-fired heating and ventilating units.

1.3 DEFINITIONS

- A. DDC: Direct digital control.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type and configuration of outdoor, direct-fired heating and ventilating unit.
 - 1. Include rated capacities, operating characteristics, weights, fan performance, gages, and finishes of materials, electrical characteristics, connection requirements, and furnished specialties and accessories.
 - 2. Provide data for filter media, filter performance data, filter assembly, and filter frames.
 - 3. Provide fan curves with specified operating point clearly plotted.
 - 4. Submit sound power level data for both fan outlet and casing radiation at rated capacity.
 - 5. Submit electrical requirements for power supply wiring including wiring diagrams for interlock and control wiring, clearly indicating factory-installed and field-installed wiring.
 - 6. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For each type and configuration of outdoor, direct-fired heating and ventilating unit.

1. Signed, sealed, and prepared by or under the supervision of a qualified professional engineer.
2. Include plans, elevations, sections, and **[mounting] [attachment]** details.
3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
4. Detail fabrication and assembly of gas-fired heating and ventilating units, as well as procedures and diagrams.
5. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.
6. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
7. Include diagrams for power, signal, and control wiring.
8. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.5 INFORMATIONAL SUBMITTALS

- A. Startup service reports.
- B. Sample Warranty: For manufacturer's special warranty.
- C. Seismic Qualification Certificates: For outdoor, direct-fired heating and ventilating units, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For direct-fired heating and ventilating units to include in emergency, operation, and maintenance manuals.
 1. Include instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300

"Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Filters: **[One (1)]** <Insert number> set(s) for each unit.
 - 2. Fan Belts: **[One (1)]** <Insert number> set(s) for each unit.

1.8 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in manufacturing the Products specified in this Section with minimum three (3) years documented experience, who issues complete catalog data on total product.
- B. Comply with NFPA 70.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.9 ENVIRONMENTAL REQUIREMENTS

- A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.
- B. Do not operate units for temporary heating or cooling prior to substantial completion without approval by DEN Project Manager.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, handle and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1
- B. Accept products on site in factory-fabricated protective containers, with factory-installed shipping skids and lifting lugs. Inspect for damage.
- C. Store in clean dry place and protect from weather and construction traffic. Handle carefully to avoid damage to components, enclosures, and finish.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of direct-fired heating and ventilating units that fail in materials or workmanship within specified warranty period.
1. Warranty Period for Heat Exchangers: Manufacturer's standard, but not less than **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [AbsolutAire, Inc.](#)
 2. [Applied Air.](#)
 3. [ARES.](#)
 4. [Bananza; Div. of Roberts-Gordon LLC.](#)
 5. [BessamAire, Inc.](#)
 6. [Cambridge Engineering, Inc.](#)
 7. [CaptiveAire Systems.](#)
 8. [Energy Jet U.S.](#)
 9. [Engineered Air.](#)
 10. [Greenheck Fan Corporation.](#)
 11. [Hastings HVAC; Division of Eric, Inc.](#)
 12. [I.C.E. Manufacturing Ltd.; Industrial Commercial Equipment - I.C.E. \(US\), Inc.](#)
 13. [Jackson & Church.](#)
 14. [LCSystems.](#)
 15. [Modine Manufacturing Company.](#)
 16. [Powrmatic, Inc.](#)
 17. [Rapid Engineering, Inc.](#)
 18. [Reznor/Thomas & Betts Corporation.](#)
 19. [Sterling HVAC Products.](#)
 20. [Temprite.](#)
 21. [Titan Air Incorporated.](#)
 22. [Trane Inc.](#)
 23. [Weather-Rite, Inc.](#)
 24. **<Insert manufacturer's name>**.
 25. or approved equal.

2.2 SYSTEM DESCRIPTION

- A. Factory-assembled, prewired, self-contained unit consisting of cabinet, supply fan, controls, **[filters]**, and direct-fired gas burner to be installed exterior to the building.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 UNIT CASINGS

- A. General Fabrication Requirements for Casings:
 - 1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
 - 2. Casing Joints: Sheet metal screws or pop rivets, factory sealed with water-resistant sealant.
 - 3. Factory Finish for **[Steel]** **[and]** **[Galvanized-Steel]** Casings: Apply manufacturer's standard primer immediately after cleaning and pretreating.
 - 4. Factory Finish for **[Steel]** **[and]** **[Galvanized-Steel]** Casings: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on enamel finish, consisting of prime coat and thermosetting topcoat.
 - 5. Casing Coating: **[Thermoplastic vinyl]** **[Epoxy]** **[Zinc]** **[Synthetic resin]** **[Phenolic]** **[Polytetrafluoroethylene]** **[Vinyl ester]** **[Hot-dip galvanized]** **[Powder-baked enamel]** **<Insert special coating>**.
 - 6. Air-Handling-Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to air-handling-unit sections, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when air-handling-unit frame is anchored to building structure.
 - 7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- B. Configuration: Horizontal unit with **[top]** **[horizontal]** **[bottom]** discharge for **[roof-mounting]** **[concrete-base]** installation.
- C. Cabinet: **[Galvanized-steel]** **[Aluminized- or galvanized-steel]** **[Aluminized-steel]** panels, formed to ensure rigidity and supported by galvanized-steel channels or structural channel supports with lifting lugs. Duct flanges at inlet and outlet. Pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.
- D. Outer Casing: **[0.0598-inch- ((1.519-mm-))]** **[0.0478-inch- ((1.214-mm-))]** **[0.0359-inch- ((0.912-mm-))]** thick steel with **[heat-resistant, baked-enamel]** **[enamel-painted]**

[baked-on, polyester-powder] [unpainted] [over-corrosion-resistant-treated surface in color to match fan section] [finish].

E. Inner Casing:

1. Burner Section Inner Casing: 0.0299-inch- (0.759-mm-) thick steel.
2. Double-wall casing with inner wall of **[perforated] [solid]** steel[.],[, **for the following sections:**]
 - a. Blower section.
 - b. Filter section.
 - c. Mixing box.
 - d. Inlet plenum.
 - e. Discharge plenum.
 - f. Access **[Doors] [Panels]: [Lift out] [Piano hinged with cam-lock fasteners] [Hinged with handles]** for burner and fan motor assemblies on both sides of unit.
3. Internal Insulation: Fibrous-glass duct lining, neoprene coated, comply with ASTM C 1071, Type II, applied on **[complete unit] [burner and fan sections only]**.
 - a. Thickness: **[1 inch (25 mm)] [2 inches (50 mm)]**.
 - b. Insulation Adhesive: Comply with ASTM C 916, Type I.
 - c. Density: **[1.5 lb/cu. ft. ((24.0 kg/cu. m))] [2.0 lb/cu. ft. ((32.0 kg/cu. m))] [3.0 lb/cu. ft. ((48.0 kg/cu. m))]**.
 - d. Mechanical Fasteners: Galvanized steel suitable for adhesive, mechanical, or welding attachment to casing without damaging liner when applied as recommended by manufacturer and without causing air leakage.

F. Discharge Section:

1. **[Galvanized] [Aluminized]**-steel assembly with **[gravity] [individually adjustable, vaned,] [two-position, motorized,]** parallel-blade dampers with nylon bushings.
 - a. Pattern: **[Single] [Double]** deflection.
 - b. Leakage: **[Standard] [Low]** leakage.
2. Trapezoidal cowls with horizontal louvers.
3. Plenum with **[two] [four]** sides louvered.
4. Down-discharge plenum insulated with **1-inch (25-mm), 1.5-lb/cu. ft. (24.0-kg/cu. m)** fibrous glass.

G. Casing Insulation and Adhesive:

1. Materials: ASTM C 1071, **[Type I] [Type II]**.
2. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the heating-coil section.

- a. Liner Adhesive: Comply with ASTM C 916, Type I.
 - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive, mechanical, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 - c. Liner materials applied in this location shall have airstream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric, depending on service-air velocity.
3. Location and Application: Encased between outside and inside casing.
- H. Inspection and Access Panels and Access Doors:
1. Panel and Door Fabrication: Formed and reinforced, single- or double-wall and insulated panels of same materials and thicknesses as casing.
 2. Inspection and Access Panels:
 - a. Fasteners: Two or more camlock type for panel lift-out operation. Arrangement shall allow panels to be opened against air-pressure differential.
 - b. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - c. Size: Large enough to allow inspection and maintenance of air-handling unit's internal components.
 3. Access Doors:
 - a. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever-type latches, operable from inside and outside. Arrange doors to be opened against air-pressure differential.
 - b. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - c. Fabricate windows in **[fan section's]**doors of double-glazed, wire-reinforced safety glass with an air space between panes and sealed with interior and exterior rubber seals.
 - d. Size: At least **[18 inches (450 mm)] [24 inches (600 mm)] <Insert dimension>** wide by full height of unit casing up to a maximum height of **[60 inches (1500 mm)] [72 inches (1800 mm)] <Insert dimension>**.
 4. Locations and Applications:
 - a. Fan Section: **[Inspection and access panels] [Doors] [Doors and inspection and access panels]**.
 - b. Access Section: Doors.
 - c. Coil Section: Inspection and access panels.
 - d. Damper Section: **[Inspection and access panels] [Doors]**.
 - e. Filter Section: **[Inspection and access panels] [Doors]** large enough to allow periodic removal and installation of filters.
 - f. Mixing Section: Doors.
 5. Service Light: 100-W vaporproof fixture with switched junction box located **[outside] [inside]** adjacent to door.

- a. Locations: **[Each section accessed with door] [Fan section] <Insert location>**.

2.4 ACCESSORIES

- A. Service Platform: **[Steel] [Galvanized steel] [Aluminum]**, **[42 inches (1070 mm)] <Insert dimension>** wide running entire length of unit and located on service access side, with angle side rails, **4-inch (100-mm)** kick plates, and expanded metal floor. Provide platform with a fixed ladder that extends from the top of the side rail to the floor.
- B. Electric heater with integral thermostat maintains minimum **50 deg F (10 deg C)** temperature in gas burner compartment.
- C. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required. **[Outlet shall be energized even if the unit main disconnect is open.]**
- D. Lighting: Provide vapor-proof incandescent lights with guards in each accessible maintenance area. Include weatherproof switches with pilot lights on outside surface of casing for control of lighting.
- E. Low-ambient kit using **[staged] [damper on] [variable-speed]** condenser fans for operation down to **[35 deg F (1.7 deg C)] <Insert temperature>**.
- F. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.
- G. Coil guards of painted, galvanized-steel wire.
- H. Hail guards of galvanized steel, painted to match casing.

2.5 OUTDOOR-AIR INTAKE HOOD

- A. Type: Manufacturer's standard hood or louver.
- B. Materials: Match cabinet.
- C. Bird Screen: Comply with requirements in ASHRAE 62.1.
- D. Filter: Aluminum, **[1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>** cleanable.
- E. Configuration: Designed to inhibit wind-driven rain and snow from entering unit.

2.6 ROOF CURBS

- A. Roof curbs with vibration isolators and wind or seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
 - 1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
 - a. Materials: ASTM C 1071, Type I or Type II.
 - b. Thickness: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (50 mm)] **<Insert dimension>**.
 - 2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
 - a. Liner Adhesive: Comply with ASTM C 916, Type I.
 - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 - c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
 - d. Liner Adhesive: Comply with ASTM C 916, Type I.
- C. Curb Height: [14 inches (355 mm)] [24 inches (610 mm)] [36 inches (910 mm)] **<Insert dimension>**.
- D. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match unit, used to anchor unit to the curb, and designed for loads at Project site. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for wind-load requirements.

2.7 SUPPLY-AIR FAN

- A. Fan Type: Centrifugal, rated according to AMCA 210; statically and dynamically balanced, galvanized steel; mounted on solid-steel shaft with heavy-duty[, **self-aligning, permanently lubricated ball bearings**][, **pillow-block bearings**]. Bearing rating: [L10 of 60,000 hours] [L10 of 120,000 hours] [L10 of 150,000 hours] **<Insert value>**.
- B. Drive: V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly.
- C. Mounting: Fan wheel, motor, and drives shall be mounted in fan casing with **[restrained,] [elastomeric] [spring]** isolators.

- D. Fan-Shaft Lubrication Lines: Extended to a location outside the casing.
- E. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000Hz	2000Hz	4000 Hz	8000 Hz
Discharge	64	57	51	47	42	39	38	37
Inlet	64	57	51	47	42	39	38	37

2.8 BEARINGS AND DRIVES

- A. Bearings: AFBMA 9, AFBMA 11, L-10 life at 120,000 hours pillow block type, self-aligning, grease-lubricated roller bearings.
- B. Shafts: Solid, hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil.
- C. V-Belt Drive: Cast iron or steel sheaves, dynamically balanced, bored to fit shafts and keyed. Variable and adjustable pitch sheaves for motors 15 hp and under selected so required rpm is obtained with sheaves set at mid-position; fixed sheave for 20 hp and over, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.
- D. Belt Guard: Fabricate to SMACNA Standard; 12 gage thick, 3/4 inch diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

2.9 AIR FILTERS

- A. Filter Box: Section with filter guides, access doors from both sides, for face loading.
- B. Filter Media: UL 900 listed, Class I or Class II, approved by local authorities.
- C. Comply with **[NFPA 90A]** **[NFPA 90B]**.
- D. Cleanable Filters: Cleanable metal mesh.
 - 1. Thickness: **[1 inch (25 mm)] [2 inches (50 mm)]**.
 - 2. Maximum Face Velocity: **<Insert fpm ((m/s))>**.
- E. Disposable Panel Filters: Factory-fabricated, flat-panel-type, disposable air filters with holding frames, **with a MERV 6 according to ASHRAE 52.2**.
 - 1. Thickness: **[1 inch (25 mm)] [2 inches (50 mm)]**.
 - 2. Media: Interlaced **[glass]** **[polyester]** fibers.
 - 3. Frame: Galvanized steel.
 - 4. Maximum Face Velocity: **<Insert fpm ((m/s))>**.

2.10 DAMPERS

- A. Outdoor-Air [**and Return-Air**] Damper: Galvanized-steel, opposed-blade dampers with vinyl blade seals and stainless-steel jamb seals, having a maximum leakage of **10 cfm/sq. ft.** (51 L/s per sq. m) of damper area, at a differential pressure of **2-inch wg** (448 Pa).
- B. Damper Operator: Direct coupled, electronic with spring return or fully modulating as required by the control sequence.

2.11 DIRECT-FIRED GAS BURNER

- A. Description: Factory assembled, piped, and wired; and complying with ANSI Z21.47, "Gas-Fired Central Furnaces," and with NFPA 54, "National Fuel Gas Code."
 - 1. CSA Approval: Designed and certified by and bearing label of CSA.
 - 2. Burners: [**Aluminized steel with stainless-steel inserts**] [**Stainless steel**].
 - a. Gas Control Valve: [**Single stage**] [**Two stage**] [**Modulating**].
 - b. Fuel: [**Natural**] [**Propane**] gas.
 - c. Minimum Combustion Efficiency: [**95**] <Insert number> percent.
 - d. Ignition: Electronically controlled electric spark with flame sensor.
 - e. High-Altitude [**Model**] [**Kit**]: For Project elevation above sea level.
- B. Safety Controls:
 - 1. Vent Flow Verification: [**Differential pressure switch to verify open vent**] [**Flame rollout switch**].
 - 2. Control Transformer: 24-V ac.
 - 3. High Limit: Thermal switch or fuse to stop burner.
 - 4. Gas Train: Regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, [**hydraulic**] [**electronic**]-modulating temperature control valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
 - 5. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
 - 6. Gas Manifold: Safety switches and controls complying with ANSI standards [**and**] [**FM Global**] [**XL Insurance**].
 - 7. Airflow Proving Switch: Differential pressure switch senses correct airflow before energizing pilot.
 - 8. Automatic-Reset, High-Limit Control Device: Stops burner and closes main gas valve if high-limit temperature is exceeded.
 - 9. Safety Lockout Switch: Locks out ignition sequence if burner fails to light after three tries. Controls are reset manually by turning the unit off and on.

2.12 UNIT CONTROL PANEL

- A. Factory-wired, fuse-protected control transformer, connection for power supply and field-wired unit to remote control panel.

- B. Control Panel: **[Surface-mounted] [Recessed, with trim ring,]** remote panel, with engraved plastic cover and the following lights and switches:
1. **[On-off] [On-off-auto]** fan switch.
 2. Heat-vent-off switch.
 3. Supply-fan operation indicating light.
 4. Heating operation indicating light.
 5. Thermostat.
 6. Damper position potentiometer.
 7. Dirty-filter indicating light operated by unit-mounted differential pressure switch.
 8. Safety-lockout indicating light.
 9. Enclosure: NEMA 250, **[Type 1] [Type 3R] [Type 4] [Explosion proof]**.

2.13 CONTROLS

- A. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC" for control equipment and sequence of operation.
- B. Control Devices:
1. Remote Thermostat: Adjustable room thermostat with temperature readout.
 2. Remote Setback Thermostat: Adjustable room thermostat without temperature readout.
 3. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
 4. Fire-Protection Thermostats: Fixed or adjustable settings to operate at not less than **75 deg F (24 deg C)** above normal maximum operating temperature.
 5. Timers: Seven-day, programming-switch timer with synchronous-timing motor and seven-day dial; continuously charged, nickel-cadmium-battery-driven, eight-hour, power-failure carryover; multiple-switch trippers; minimum of two and maximum of eight signals per day with two normally open and two normally closed output contacts.
 6. Timers: Solid-state, programmable time control with four separate programs; 24-hour battery carryover; individual on-off-auto switches for each program; 365-day calendar with 20 programmable holidays; choice of fail-safe operation for each program; and system fault alarm.
 7. Ionization-Type Smoke Detectors: 24-V dc, nominal; self-restoring; plug-in arrangement; integral visual-indicating light; sensitivity that can be tested and adjusted in place after installation; integral addressable module; remote controllability; responsive to both visible and invisible products of combustion; self-compensating for changes in environmental conditions.
- C. Fan Control: Interlock fan to start with exhaust fan(s) to which this heating and ventilating unit is associated for makeup air.
- D. Fan Control: Timer starts and stops direct-fired heating and ventilating unit and exhaust fan(s).

1. Smoke detectors, located in supply[**and return**] air, shall stop fans when the presence of smoke is detected.
- E. Outdoor-Air Damper Control, 100 Percent Outdoor-Air Units: Outdoor-air damper shall open when supply fan starts, and close when fan stops.
- F. Mixed Outdoor- and Return-Air Damper Control: When fan is running, outdoor- and return-air dampers shall modulate to supply minimum outdoor air as follows:
 1. Minimum **[30]** **<Insert number>** percent outdoor air.
 2. Outdoor-air quantity adjusted by potentiometer on control panel.
 3. Outdoor-air quantity to maintain minimum building static pressure.
- G. Temperature Control: Operates gas valve to maintain supply-air temperature.
 1. Operates gas valve to maintain discharge-air temperature with factory-mounted sensor in blower outlet.
 2. Operates gas valve to maintain space temperature with wall-mounting, field-wired sensor[**with temperature adjustment,**] **[and unit-mounted control adjustment]** **[and adjustment on remote-control panel]**.
 3. Timer shall select remote setback thermostat to maintain space temperature at **[50 deg F (10 deg C)]** **<Insert temperature>**.
 4. Burner Control: Two or four steps of control using one or two burner sections in series.
 5. Burner Control: 20 to 100 percent modulation of the firing rate. 10 to 100 percent with dual burner units.
- H. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display status and alarms of heating and ventilating unit.
 1. Hardwired Points:
 - a. Room temperature.
 - b. Discharge-air temperature.
 - c. Burner operating.
 2. **[ASHRAE 135.1 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol]** **<Insert type of interface>** communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the heating and ventilating unit from an operator workstation. Control features and monitoring points displayed locally at heating and ventilating unit control panel shall be available through the DDC system for HVAC.

2.14 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 2. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 3. Motor Bearings: <Insert requirements>.
 4. Unusual Service Conditions:
 - a. Ambient Temperature: <Insert deg C>.
 - b. Altitude: <Insert feet (m)> above sea level.
 - c. High humidity.
 - d. <Insert conditions>.
 5. Efficiency: [**Premium efficient**] [**EPAct compliant**].
 6. NEMA Design: <Insert designation>.
 7. Service Factor: <Insert value>.

2.15 CAPACITIES AND CHARACTERISTICS

- A. Fan:
1. Discharge Configuration: [**Horizontal**] [**Vertical**].
 2. Airflow in CFM (L/s): <Insert quantity>.
 3. External Static Pressure: <Insert inches wg (kPa)>.
 4. Maximum RPM: <Insert number>.
 5. Minimum Size: <Insert inches (mm)>.
 6. Altitude: <Insert feet ((m))>.
- B. Fan Motor:
1. Horsepower: <Insert value>.
 2. RPM: <Insert value>.
 3. Service Factor: <Insert value>.
 4. Speed: [**Single**] [**Two**].
- C. Single-Point Electrical Connection:
1. Volts: [**120**] [**240**] [**277**] [**480**] <Insert value>.
 2. Phase: [**Single**] [**Three**].
 3. Hertz: 60.
 4. Full-Load Amperes: <Insert value>.
 5. Minimum Circuit Ampacity: <Insert value>.
 6. Maximum Overcurrent Protection: <Insert amperage>.

D. Direct-Fired Gas Burner:

1. Minimum Combustion Efficiency: <Insert number> percent.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Leaving-Air Temperature: <Insert deg F (deg C)>.
4. Airflow: <Insert cfm (L/s)>.
5. Gas Input: <Insert MBh (kW)>.
6. Burner Output: <Insert MBh (kW)>.
7. Number of Stages: <Insert value>.
8. Minimum Inlet Pressure: <Insert inches wg ((Pa))>.
9. Maximum Inlet Pressure: <Insert inches wg ((Pa))>.
10. Gas Piping Connection Size: <Insert NPS ((DN))>.
11. Vent Diameter: <Insert inches ((mm))>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping, ducts, and electrical systems to verify actual locations of piping and electrical connections before equipment installation.
- C. Verify cleanliness of airflow path to include inner-casing surfaces, filters, coils, turning vanes, fan wheels, and other components.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General:

1. Install units level and plumb.
2. Anchor units to structure.
3. Install seismic restraints.
4. Install static-pressure probe.

B. Equipment Mounting:

1. Install heating and ventilating unit on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete. "] [Section 033053 "Miscellaneous Cast-in-Place Concrete. "]**
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
 - C. Unit Support: Install heating and ventilating unit level on structural [**curbs**] [**pilings**]. Coordinate wall penetrations and flashing with wall construction. [**Secure units to structural support with anchor bolts.**]
 - D. Install gas-fired units according to NFPA 54, "National Fuel Gas Code."
 - E. Install controls and equipment shipped by manufacturer for field installation with direct-fired heating and ventilating units.
 - F. Roof Curb: Install on roof structure or concrete base, level and secure, according to [**NRCA's "Low-Slope Membrane Roofing Construction Details Manual," Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts."**] [**AHRI Guideline B.**] Install units on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure units to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.
 - G. Unit Support: Install unit level on structural [**curbs**] [**pilings**]. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.
- 3.3 CONNECTIONS
- A. Drawings indicate general arrangement of piping, fittings, and specialties.
 1. Gas Piping: Comply with requirements in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**] Connect gas piping with shutoff valve and union, and with sufficient clearance for burner removal and service. Make final connections of gas piping to unit with corrugated, stainless-steel tubing flexible connectors complying with ANSI LC 1/CSA 6.26 equipment connections.
 - B. Drain: Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for traps and accessories on piping connections to condensate drain pans under condensing heat exchangers. Where installing piping adjacent to heating and ventilating units, allow space for service and maintenance.
 - C. Duct Connections: Connect supply[**and return**] ducts to direct-fired heating and ventilating units with flexible duct connectors. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.
 - D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
 - E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].
- C. Units will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
- B. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 - 1. Inspect for visible damage to burner combustion chamber.
 - 2. Inspect casing insulation for integrity, moisture content, and adhesion.
 - 3. Verify that clearances have been provided for servicing.
 - 4. Verify that controls are connected and operable.
 - 5. Verify that filters are installed.
 - 6. Purge gas line.
 - 7. Inspect and adjust vibration isolators[**and seismic restraints**].
 - 8. Verify bearing lubrication.
 - 9. Inspect fan-wheel rotation for movement in correct direction without vibration and binding.
 - 10. Adjust fan belts to proper alignment and tension.
- C. Start unit according to manufacturer's written instructions.
 - 1. Complete startup sheets and attach copy with Contractor's startup report.
 - 2. Inspect and record performance of interlocks and protective devices; verify sequences.
 - 3. Operate unit for run-in period recommended by manufacturer.
 - 4. Perform the following operations for both minimum and maximum firing, and adjust burner for peak efficiency:
 - a. Measure gas pressure at manifold.
 - b. Measure combustion-air temperature at inlet to combustion chamber.
 - c. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.
 - 5. Calibrate thermostats.
 - 6. Adjust and inspect high-temperature limits.

7. Inspect dampers, if any, for proper stroke and interlock with return-air dampers.
8. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.
9. Measure and record airflow. Plot fan volumes on fan curve.
10. Verify operation of remote panel, including pilot-operation and failure modes.
Inspect the following:
 - a. High-limit heat.
 - b. Alarms.
11. After startup and performance testing, change filters, verify bearing lubrication, and adjust belt tension.
12. Verify drain-pan performance.
13. Verify outdoor-air damper operation.

3.6 ADJUSTING

- A. Adjust initial temperature set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Occupancy Adjustments: When requested within [**twelve (12)**] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain heating and ventilating units.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 237423.13

SECTION 237423.16 - PACKAGED, INDIRECT-FIRED, OUTDOOR, HEATING-ONLY MAKEUP-AIR UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes indirect-fired makeup-air units.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. DDC: Direct digital control.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type and configuration of outdoor, indirect-fired makeup-air unit.
 - 1. Include rated capacities, operating characteristics, weights, fan performance, gages, and finishes of materials, electrical characteristics, connection requirements, and furnished specialties and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For each type and configuration of outdoor, indirect-fired heating and ventilating unit.
 - 1. Signed, sealed, and prepared by or under the supervision of a qualified professional engineer.
 - 2. Include plans, elevations, sections, and **[mounting] [attachment]** details.

3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
4. Detail fabrication and assembly of gas-fired heating and ventilating units, as well as procedures and diagrams.
5. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.
6. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
7. Include diagrams for power, signal, and control wiring.
8. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.5 INFORMATIONAL SUBMITTALS

- A. Startup service reports.
- B. Sample Warranty: For manufacturer's special warranty.
- C. Seismic Qualification Certificates: For outdoor, indirect-fired makeup-air units, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For indirect-fired makeup-air units to include in emergency, operation, and maintenance manuals.
 1. Include instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Filters: **[One (1)] <Insert number>** set(s) for each unit.
 - 2. Fan Belts: **[One (1)] <Insert number>** set(s) for each unit.

1.8 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in manufacturing the Products specified in this Section with minimum three (3) years documented experience, who issues complete catalog data on total product.
- B. Comply with NFPA 70.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.9 ENVIRONMENTAL REQUIREMENTS

- A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.
- B. Do not operate units for temporary heating or cooling prior to substantial completion without approval by DEN Project Manager.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, handle and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1
- B. Accept products on site in factory-fabricated protective containers, with factory-installed shipping skids and lifting lugs. Inspect for damage.
- C. Store in clean dry place and protect from weather and construction traffic. Handle carefully to avoid damage to components, enclosures, and finish.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of indirect-fired heating and ventilating units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Heat Exchangers: Manufacturer's standard, but not less than **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [AbsolutAire, Inc.](#)
 2. [Applied Air.](#)
 3. [ARES.](#)
 4. [Banza; Div. of Roberts-Gordon LLC.](#)
 5. [BessamAire, Inc.](#)
 6. [Cambridge Engineering, Inc.](#)
 7. [CaptiveAire Systems.](#)
 8. [CES Group.](#)
 9. [Des Champs Technologies.](#)
 10. [Energy Jet U.S.](#)
 11. [Engineered Air.](#)
 12. [Greenheck Fan Corporation.](#)
 13. [Hastings HVAC; Division of Eric, Inc.](#)
 14. [I.C.E. Manufacturing Ltd.; Industrial Commercial Equipment - I.C.E. \(US\), Inc.](#)
 15. [Jackson & Church.](#)
 16. [LCSystems.](#)
 17. [Modine Manufacturing Company.](#)
 18. [Powrmatic, Inc.](#)
 19. [Rapid Engineering, Inc.](#)
 20. [Reznor/Thomas & Betts Corporation.](#)
 21. [Sterling HVAC Products.](#)
 22. [Temprite.](#)
 23. [Titan Air Incorporated.](#)
 24. [Trane Inc.](#)
 25. [Weather-Rite, Inc.](#)
 26. **<Insert manufacturer's name>**.
 27. or approved equal.

2.2 SYSTEM DESCRIPTION

- A. Factory-assembled, prewired, self-contained unit consisting of cabinet, supply fan, controls, **[filters]**, and indirect-fired gas burner to be installed exterior to the building.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 UNIT CASINGS

- A. General Fabrication Requirements for Casings:
 - 1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
 - 2. Casing Joints: Sheet metal screws or pop rivets, factory sealed with water-resistant sealant.
 - 3. Factory Finish for **[Steel]** **[and]** **[Galvanized-Steel]** Casings: Apply manufacturer's standard primer immediately after cleaning and pretreating.
 - 4. Factory Finish for **[Steel]** **[and]** **[Galvanized-Steel]** Casings: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on enamel finish, consisting of prime coat and thermosetting topcoat.
 - 5. Casing Coating: **[Thermoplastic vinyl]** **[Epoxy]** **[Zinc]** **[Synthetic resin]** **[Phenolic]** **[Polytetrafluoroethylene]** **[Vinyl ester]** **[Hot-dip galvanized]** **[Powder-baked enamel]** <Insert special coating>.
 - 6. Air-Handling-Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to air-handling-unit sections, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when air-handling-unit frame is anchored to building structure.
 - 7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- B. Configuration: Horizontal unit with **[top]** **[horizontal]** **[bottom]** discharge for **[roof-mounting]** **[concrete-base]** installation.
- C. Cabinet: **[Galvanized-steel]** **[Aluminized- or galvanized-steel]** **[Aluminized-steel]** panels, formed to ensure rigidity and supported by galvanized-steel channels or structural channel supports with lifting lugs. Duct flanges at inlet and outlet. Pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.
- D. Outer Casing: **[0.0598-inch- ((1.519-mm-))]** **[0.0478-inch- ((1.214-mm-))]** **[0.0359-inch- ((0.912-mm-))]** thick steel with **[heat-resistant, baked-enamel]** **[enamel-painted]**

[baked-on, polyester-powder] [unpainted] [over-corrosion-resistant-treated surface in color to match fan section] [finish].

E. Inner Casing:

1. Burner Section Inner Casing: 0.0299-inch- (0.759-mm-) thick steel.
2. Double-wall casing with inner wall of **[perforated] [solid]** steel[.], **for the following sections:**
 - a. Blower section.
 - b. Filter section.
 - c. Mixing box.
 - d. Inlet plenum.
 - e. Discharge plenum.
 - f. Access **[Doors] [Panels]: [Lift out] [Piano hinged with cam-lock fasteners] [Hinged with handles]** for burner and fan motor assemblies on both sides of unit.
3. Internal Insulation: Fibrous-glass duct lining, neoprene coated, comply with ASTM C 1071, Type II, applied on **[complete unit] [burner and fan sections only]**.
 - a. Thickness: **[1 inch (25 mm)] [2 inches (50 mm)]**.
 - b. Insulation Adhesive: Comply with ASTM C 916, Type I.
 - c. Density: **[1.5 lb/cu. ft. ((24.0 kg/cu. m))] [2.0 lb/cu. ft. ((32.0 kg/cu. m))] [3.0 lb/cu. ft. ((48.0 kg/cu. m))]**.
 - d. Mechanical Fasteners: Galvanized steel suitable for adhesive, mechanical, or welding attachment to casing without damaging liner when applied as recommended by manufacturer and without causing air leakage.

F. Discharge Section:

1. **[Galvanized] [Aluminized]**-steel assembly with **[gravity] [individually adjustable, vaned,] [two-position, motorized,]** parallel-blade dampers with nylon bushings.
 - a. Pattern: **[Single] [Double]** deflection.
 - b. Leakage: **[Standard] [Low]** leakage.
2. Trapezoidal cowls with horizontal louvers.
3. Plenum with **[two] [four]** sides louvered.
4. Down-discharge plenum insulated with **1-inch (25-mm), 1.5-lb/cu. ft. (24.0-kg/cu. m)** fibrous glass.

G. Casing Insulation and Adhesive:

1. Materials: ASTM C 1071, **[Type I] [Type II]**.
2. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the heating-coil section.

- a. Liner Adhesive: Comply with ASTM C 916, Type I.
 - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive, mechanical, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 - c. Liner materials applied in this location shall have airstream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric, depending on service-air velocity.
3. Location and Application: Encased between outside and inside casing.
- H. Inspection and Access Panels and Access Doors:
1. Panel and Door Fabrication: Formed and reinforced, single- or double-wall and insulated panels of same materials and thicknesses as casing.
 2. Inspection and Access Panels:
 - a. Fasteners: Two or more camlock type for panel lift-out operation. Arrangement shall allow panels to be opened against air-pressure differential.
 - b. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - c. Size: Large enough to allow inspection and maintenance of air-handling unit's internal components.
 3. Access Doors:
 - a. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever-type latches, operable from inside and outside. Arrange doors to be opened against air-pressure differential.
 - b. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - c. Fabricate windows in **[fan section's]**doors of double-glazed, wire-reinforced safety glass with an air space between panes and sealed with interior and exterior rubber seals.
 - d. Size: At least **[18 inches (450 mm)] [24 inches (600 mm)] <Insert dimension>** wide by full height of unit casing up to a maximum height of **[60 inches (1500 mm)] [72 inches (1800 mm)] <Insert dimension>**.
 4. Locations and Applications:
 - a. Fan Section: **[Inspection and access panels] [Doors] [Doors and inspection and access panels]**.
 - b. Access Section: Doors.
 - c. Coil Section: Inspection and access panels.
 - d. Damper Section: **[Inspection and access panels] [Doors]**.
 - e. Filter Section: **[Inspection and access panels] [Doors]** large enough to allow periodic removal and installation of filters.
 - f. Mixing Section: Doors.
 5. Service Light: 100-W vaporproof fixture with switched junction box located **[outside] [inside]** adjacent to door.

- a. Locations: **[Each section accessed with door] [Fan section] <Insert location>**.
- I. Condensate Drain Pans:
1. Fabricated with **[one] [two]** percent slope in at least two planes to collect condensate from condensate-producing heat exchangers and from humidifiers, and to direct water toward drain connection.
 - a. Length: Extend drain pan downstream from leaving face **[to comply with ASHRAE 62.1] <Insert distance>**.
 - b. Depth: A minimum of **[2 inches (50 mm)] <Insert dimension>** deep.
 2. **[Formed sections] [Integral part of floor plating]**.
 3. Single-wall, **[galvanized] [stainless]**-steel sheet.
 4. Double-wall, **[galvanized] [stainless]**-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
 5. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on **[one end] [both ends]** of pan.
 - a. Minimum Connection Size: **[NPS 1 (DN 25)] [NPS 2 (DN 50)] <Insert pipe size>**.
 6. Pan-Top Surface Coating: Asphaltic waterproofing compound.

2.4 ACCESSORIES

- A. Service Platform: **[Steel] [Galvanized steel] [Aluminum]**, **[42 inches (1070 mm)] <Insert dimension>** wide running entire length of unit and located on service access side, with angle side rails, **4-inch (100-mm)** kick plates, and expanded metal floor. Provide platform with a fixed ladder that extends from the top of the side rail to the floor.
- B. Electric heater with integral thermostat maintains minimum **50 deg F (10 deg C)** temperature in gas burner compartment.
- C. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required. **[Outlet shall be energized even if the unit main disconnect is open.]**
- D. Lighting: Provide vapor-proof incandescent lights with guards in each accessible maintenance area. Include weatherproof switches with pilot lights on outside surface of casing for control of lighting.
- E. Low-ambient kit using **[staged] [damper on] [variable-speed]** condenser fans for operation down to **[35 deg F (1.7 deg C)] <Insert temperature>**.
- F. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.

- G. Coil guards of painted, galvanized-steel wire.
- H. Hail guards of galvanized steel, painted to match casing.

2.5 OUTDOOR-AIR INTAKE HOOD

- A. Type: Manufacturer's standard hood or louver.
- B. Materials: Match cabinet.
- C. Bird Screen: Comply with requirements in ASHRAE 62.1.
- D. Filter: Aluminum, 1 inch (25 mm) cleanable.
- E. Configuration: Designed to inhibit wind-driven rain and snow from entering unit.

2.6 ROOF CURBS

- A. Roof curbs with vibration isolators and wind or seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
 - 1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
 - a. Materials: ASTM C 1071, Type I or Type II.
 - b. Thickness: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (50 mm)] **<Insert dimension>**.
 - 2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
 - a. Liner Adhesive: Comply with ASTM C 916, Type I.
 - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 - c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
 - d. Liner Adhesive: Comply with ASTM C 916, Type I.
- C. Curb Height: [14 inches (355 mm)] [24 inches (610 mm)] [36 inches (910 mm)] **<Insert dimension>**.
- D. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match unit, used to anchor unit to the curb, and designed for loads at

Project site. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for wind-load requirements.

2.7 SUPPLY-AIR FAN

- A. Fan Type: Centrifugal, rated according to AMCA 210; statically and dynamically balanced, galvanized steel; mounted on solid-steel shaft with heavy-duty[, **self-aligning, permanently lubricated ball bearings**][, **pillow-block bearings**]. Bearing rating: [**L10 of 60,000 hours**] [**L10 of 120,000 hours**] [**L10 of 150,000 hours**] **<Insert value>**.
- B. Drive: V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly.
- C. Mounting: Fan wheel, motor, and drives shall be mounted in fan casing with [**restrained,**] [**elastomeric**] [**spring**] isolators.
- D. Fan-Shaft Lubrication Lines: Extended to a location outside the casing.
- E. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000Hz	2000Hz	4000 Hz	8000 Hz
Discharge	64	57	51	47	42	39	38	37
Inlet	64	57	51	47	42	39	38	37

2.8 BEARINGS AND DRIVES

- A. Bearings: AFBMA 9, AFBMA 11, L-10 life at 120,000 hours pillow block type, self-aligning, grease-lubricated roller bearings.
- B. Shafts: Solid, hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil.
- C. V-Belt Drive: Cast iron or steel sheaves, dynamically balanced, bored to fit shafts and keyed. Variable and adjustable pitch sheaves for motors 15 hp and under selected so required rpm is obtained with sheaves set at mid-position; fixed sheave for 20 hp and over, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.
- D. Belt Guard: Fabricate to SMACNA Standard; 12 gage thick, 3/4 inch diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

2.9 AIR FILTERS

- A. Filter Box: Section with filter guides, access doors from both sides, for face loading.
- B. Filter Media: UL 900 listed, Class I or Class II, approved by local authorities.
- C. Comply with **[NFPA 90A]** **[NFPA 90B]**.
- D. Cleanable Filters: Cleanable metal mesh.
 - 1. Thickness: **[1 inch (25 mm)]** **[2 inches (50 mm)]**.
 - 2. Maximum Face Velocity: **<Insert fpm ((m/s))>**.
- E. Disposable Panel Filters: Factory-fabricated, flat-panel-type, disposable air filters with holding frames, **with a MERV 6 according to ASHRAE 52.2**.
 - 1. Thickness: **[1 inch (25 mm)]** **[2 inches (50 mm)]**.
 - 2. Media: Interlaced **[glass]** **[polyester]** fibers.
 - 3. Frame: Galvanized steel.
 - 4. Maximum Face Velocity: **<Insert fpm ((m/s))>**.

2.10 DAMPERS

- A. Outdoor-Air **[and Return-Air]**Damper: Galvanized-steel, opposed-blade dampers with vinyl blade seals and stainless-steel jamb seals, having a maximum leakage of **10 cfm/sq. ft. (51 L/s per sq. m)** of damper area, at a differential pressure of **2-inch wg (448 Pa)**.
- B. Damper Operator: Direct coupled, electronic with spring return or fully modulating as required by the control sequence.

2.11 INDIRECT-FIRED GAS BURNER

- A. Description: Factory assembled, piped, and wired; and complying with ANSI Z21.47, "Gas-Fired Central Furnaces," and with NFPA 54, "National Fuel Gas Code."
 - 1. CSA Approval: Designed and certified by and bearing label of CSA.
 - 2. Burners: **[Aluminized steel with stainless-steel inserts]** **[Stainless steel]**.
 - a. Gas Control Valve: **[Single stage]** **[Two stage]** **[Modulating]**.
 - b. Fuel: **[Natural]** **[Propane]** gas.
 - c. Minimum Combustion Efficiency: **[80]** **<Insert number>** percent.
 - d. Ignition: Electronically controlled electric spark with flame sensor.
 - e. High-Altitude **[Model]** **[Kit]**: For Project elevation above sea level.
- B. Venting: Gravity vented.

- C. Venting: Power vented, with integral, motorized centrifugal fan interlocked with gas valve.
- D. Combustion-Air Intake: Separate combustion-air intake and vent terminal assembly.
- E. Heat Exchanger: **[Aluminized]** **[Stainless]** steel.
- F. Heat-Exchanger Drain Pan: Stainless steel.
- G. Safety Controls:
 - 1. Vent Flow Verification: **[Differential pressure switch to verify open vent]** **[Flame rollout switch]**.
 - 2. Control Transformer: 24-V ac.
 - 3. High Limit: Thermal switch or fuse to stop burner.
 - 4. Gas Train: Regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, **[hydraulic]** **[electronic]**-modulating temperature control valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
 - 5. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
 - 6. Gas Manifold: Safety switches and controls complying with ANSI standards **[and]** **[FM Global]** **[XL Insurance]**.
 - 7. Airflow Proving Switch: Differential pressure switch senses correct airflow before energizing pilot.
 - 8. Automatic-Reset, High-Limit Control Device: Stops burner and closes main gas valve if high-limit temperature is exceeded.
 - 9. Safety Lockout Switch: Locks out ignition sequence if burner fails to light after three tries. Controls are reset manually by turning the unit off and on.

2.12 UNIT CONTROL PANEL

- A. Factory-wired, fuse-protected control transformer, connection for power supply and field-wired unit to remote control panel.
- B. Control Panel: **[Surface-mounted]** **[Recessed, with trim ring,]** remote panel, with engraved plastic cover and the following lights and switches:
 - 1. **[On-off]** **[On-off-auto]** fan switch.
 - 2. Heat-vent-off switch.
 - 3. Supply-fan operation indicating light.
 - 4. Heating operation indicating light.
 - 5. Thermostat.
 - 6. Damper position potentiometer.
 - 7. Dirty-filter indicating light operated by unit-mounted differential pressure switch.
 - 8. Safety-lockout indicating light.
 - 9. Enclosure: NEMA 250, **[Type 1]** **[Type 3R]** **[Type 4]** **[Explosion proof]**.

2.13 CONTROLS

- A. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC" for control equipment and sequence of operation.
- B. Control Devices:
1. Remote Thermostat: Adjustable room thermostat with temperature readout.
 2. Remote Setback Thermostat: Adjustable room thermostat without temperature readout.
 3. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
 4. Fire-Protection Thermostats: Fixed or adjustable settings to operate at not less than **75 deg F (24 deg C)** above normal maximum operating temperature.
 5. Timers: Seven-day, programming-switch timer with synchronous-timing motor and seven-day dial; continuously charged, nickel-cadmium-battery-driven, eight-hour, power-failure carryover; multiple-switch trippers; minimum of two and maximum of eight signals per day with two normally open and two normally closed output contacts.
 6. Timers: Solid-state, programmable time control with four separate programs; 24-hour battery carryover; individual on-off-auto switches for each program; 365-day calendar with 20 programmable holidays; choice of fail-safe operation for each program; and system fault alarm.
 7. Ionization-Type Smoke Detectors: 24-V dc, nominal; self-restoring; plug-in arrangement; integral visual-indicating light; sensitivity that can be tested and adjusted in place after installation; integral addressable module; remote controllability; responsive to both visible and invisible products of combustion; self-compensating for changes in environmental conditions.
- C. Fan Control: Interlock fan to start with exhaust fan(s) to which this heating and ventilating unit is associated for makeup air.
- D. Fan Control: Timer starts and stops indirect-fired heating and ventilating unit and exhaust fan(s).
1. Smoke detectors, located in supply[**and return**] air, shall stop fans when the presence of smoke is detected.
- E. Outdoor-Air Damper Control, 100 Percent Outdoor-Air Units: Outdoor-air damper shall open when supply fan starts, and close when fan stops.
- F. Mixed Outdoor- and Return-Air Damper Control: When fan is running, outdoor- and return-air dampers shall modulate to supply minimum outdoor air as follows:
1. Minimum [**30**] **<Insert number>** percent outdoor air.
 2. Outdoor-air quantity adjusted by potentiometer on control panel.
 3. Outdoor-air quantity to maintain minimum building static pressure.
- G. Temperature Control: Operates gas valve to maintain supply-air temperature.

1. Operates gas valve to maintain discharge-air temperature with factory-mounted sensor in blower outlet.
 2. Operates gas valve to maintain space temperature with wall-mounting, field-wired sensor[**with temperature adjustment,**] [**and unit-mounted control adjustment**] [**and adjustment on remote-control panel**].
 3. Timer shall select remote setback thermostat to maintain space temperature at **[50 deg F (10 deg C)]** **<Insert temperature>**.
 4. Burner Control: Two or four steps of control using one or two burner sections in series.
 5. Burner Control: 20 to 100 percent modulation of the firing rate. 10 to 100 percent with dual burner units.
- H. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display status and alarms of heating and ventilating unit.
1. Hardwired Points:
 - a. Room temperature.
 - b. Discharge-air temperature.
 - c. Burner operating.
 2. **[ASHRAE 135.1 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol]** **<Insert type of interface>** communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the heating and ventilating unit from an operator workstation. Control features and monitoring points displayed locally at heating and ventilating unit control panel shall be available through the DDC system for HVAC.

2.14 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Enclosure: **[Open, dripproof] [Totally enclosed, fan cooled] [Totally enclosed, air over] [Open, externally ventilated] [Totally enclosed, nonventilated] [Severe duty] [Explosion proof] [Dust-ignition-proof machine]**.
 2. Enclosure Materials: **[Cast iron] [Cast aluminum] [Rolled steel]**.
 3. Motor Bearings: **<Insert requirements>**.
 4. Unusual Service Conditions:
 - a. Ambient Temperature: **<Insert deg C>**.
 - b. Altitude: **<Insert feet (m)>** above sea level.
 - c. High humidity.
 - d. **<Insert conditions>**.

5. Efficiency: [**Premium efficient**] [**EPAct compliant**].
6. NEMA Design: <Insert designation>.
7. Service Factor: <Insert value>.

2.15 CAPACITIES AND CHARACTERISTICS

A. Fan:

1. Discharge Configuration: [**Horizontal**] [**Vertical**].
2. Airflow in CFM (L/s): <Insert quantity>.
3. External Static Pressure: <Insert inches wg (kPa)>.
4. Maximum RPM: <Insert number>.
5. Minimum Size: <Insert inches (mm)>.
6. Altitude: <Insert feet ((m))>.

B. Fan Motor:

1. Horsepower: <Insert value>.
2. RPM: <Insert value>.
3. Service Factor: <Insert value>.
4. Speed: [**Single**] [**Two**].

C. Single-Point Electrical Connection:

1. Volts: [**120**] [**240**] [**277**] [**480**] <Insert value>.
2. Phase: [**Single**] [**Three**].
3. Hertz: 60.
4. Full-Load Amperes: <Insert value>.
5. Minimum Circuit Ampacity: <Insert value>.
6. Maximum Overcurrent Protection: <Insert amperage>.

D. Indirect-Fired Gas Burner:

1. Minimum Combustion Efficiency: <Insert number> percent.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Leaving-Air Temperature: <Insert deg F (deg C)>.
4. Airflow: <Insert cfm (L/s)>.
5. Gas Input: <Insert MBh (kW)>.
6. Burner Output: <Insert MBh (kW)>.
7. Number of Stages: <Insert value>.
8. Minimum Inlet Pressure: <Insert inches wg ((Pa))>.
9. Maximum Inlet Pressure: <Insert inches wg ((Pa))>.
10. Gas Piping Connection Size: <Insert NPS ((DN))>.
11. Vent Diameter: <Insert inches ((mm))>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping, ducts, and electrical systems to verify actual locations of connections before equipment installation.
- C. Verify cleanliness of airflow path to include inner-casing surfaces, filters, coils, turning vanes, fan wheels, and other components.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:
 - 1. Install units level and plumb.
 - 2. Anchor units to structure.
 - 3. Install seismic restraints.
 - 4. Install static-pressure probe.
- B. Equipment Mounting:
 - 1. Install heating and ventilating units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete."]** **[Section 033053 "Miscellaneous Cast-in-Place Concrete."]**
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- C. Unit Support: Install heating and ventilating unit level on structural **[curbs] [pilings]**. Coordinate wall penetrations and flashing with wall construction. **[Secure units to structural support with anchor bolts.]**
- D. Install gas-fired units according to NFPA 54, "National Fuel Gas Code."
- E. Install controls and equipment shipped by manufacturer for field installation with indirect-fired heating and ventilating units.
- F. Roof Curb: Install on roof structure or concrete base, level and secure, according to **[NRCA's "Low-Slope Membrane Roofing Construction Details Manual," Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts."]** **[ARI Guideline B.]** Install units on curbs and coordinate roof penetrations and flashing with

roof construction specified in Section 077200 "Roof Accessories." Secure units to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.

- G. Unit Support: Install unit level on structural [**curbs**] [**pilings**]. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

3.3 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
 - 1. Gas Piping: Comply with requirements in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**] Connect gas piping with shutoff valve and union, and with sufficient clearance for burner removal and service. Make final connections of gas piping to unit with corrugated, stainless-steel tubing flexible connectors complying with ANSI LC 1/CSA 6.26 equipment connections.
- B. Drain: Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for traps and accessories on piping connections to condensate drain pans under condensing heat exchangers. Where installing piping adjacent to heating and ventilating units, allow space for service and maintenance.
- C. Duct Connections: Connect supply[**and return**] ducts to indirect-fired heating and ventilating units with flexible duct connectors. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.
- D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].
- C. Units will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
- B. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 - 1. Inspect for visible damage to burner combustion chamber.
 - 2. Inspect casing insulation for integrity, moisture content, and adhesion.
 - 3. Verify that clearances have been provided for servicing.
 - 4. Verify that controls are connected and operable.
 - 5. Verify that filters are installed.
 - 6. Purge gas line.
 - 7. Inspect and adjust vibration isolators[**and seismic restraints**].
 - 8. Verify bearing lubrication.
 - 9. Inspect fan-wheel rotation for movement in correct direction without vibration and binding.
 - 10. Adjust fan belts to proper alignment and tension.
- C. Start unit according to manufacturer's written instructions.
 - 1. Complete startup sheets and attach copy with Contractor's startup report.
 - 2. Inspect and record performance of interlocks and protective devices; verify sequences.
 - 3. Operate unit for run-in period recommended by manufacturer.
 - 4. Perform the following operations for both minimum and maximum firing, and adjust burner for peak efficiency:
 - a. Measure gas pressure at manifold.
 - b. Measure combustion-air temperature at inlet to combustion chamber.
 - c. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.
 - 5. Calibrate thermostats.
 - 6. Adjust and inspect high-temperature limits.
 - 7. Inspect dampers, if any, for proper stroke and interlock with return-air dampers.
 - 8. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.
 - 9. Measure and record airflow. Plot fan volumes on fan curve.
 - 10. Verify operation of remote panel, including pilot-operation and failure modes. Inspect the following:
 - a. High-limit heat.
 - b. Alarms.
 - 11. After startup and performance testing, change filters, verify bearing lubrication, and adjust belt tension.
 - 12. Verify drain-pan performance.
 - 13. Verify outdoor-air damper operation.

3.6 ADJUSTING

- A. Adjust initial temperature set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Occupancy Adjustments: When requested within [**twelve (12)**] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain heating and ventilating units.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 237423.16

SECTION 237433 - DEDICATED OUTDOOR-AIR UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes factory-packaged units capable of supplying up to 100 percent outdoor air and providing cooling **[only] [and heating]**.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rated capacities, operating characteristics, weights, fan performance, gages, and finishes of materials, electrical characteristics, connection requirements, and furnished specialties and accessories.
 - 1. Provide data for filter media, filter performance data, filter assembly, and filter frames.
 - 2. Provide fan curves with specified operating point clearly plotted.
 - 3. Submit sound power level data for both fan outlet and casing radiation at rated capacity.
 - 4. Submit electrical requirements for power supply wiring including wiring diagrams for interlock and control wiring, clearly indicating factory-installed and field-installed wiring.
 - 5. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with applicable requirements in ASHRAE/IESNA 90.1.
 - 2. Product Data for Prerequisite EA 3: Documentation indicating that refrigerants comply.
 - 3. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 - 4. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
 - 5. Product Data for Credit IEQ 1: Documentation indicating that units are equipped with a direct outdoor airflow-measuring device capable of measuring the

minimum outdoor airflow with accuracy within 15 percent of the design minimum airflow rate, as defined by ASHRAE 62.1.

6. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.
7. Laboratory Test Reports for Credit IEQ 4: For solvent cements and adhesive primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
8. Product Data for Credit IEQ 5: Documentation indicating that units include MERV 13 filters rated according to ASHRAE 52.2.

C. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Prepare the following by or under the supervision of a qualified professional engineer:
 - a. Mounting Details: For securing and flashing roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
 - b. Include diagrams for power, signal, and control wiring.
4. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

D. Delegated-Design Submittal: For design of **[vibration isolation]** **[seismic restraints]** **[and]** **[wind restraints]**, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Unit fabrication and assembly details.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
3. Design Calculations:
 - a. Calculate requirements for selecting vibration isolators **[and seismic restraints]** **[and wind restraints]** and for designing vibration isolation bases.
 - b. Indicate compliance with "Performance Requirements" article.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Roof-curb mounting details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Size and location of unit-mounted rails and anchor points and methods for anchoring units to roof curb.
 2. Required roof penetrations for ducts, pipes, and electrical raceways, including size and location of each penetration.
- B. Seismic Qualification Certificates: For dedicated outdoor-air units, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Startup service reports.
- D. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For units to include in emergency, operation, and maintenance manuals.
1. Include instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Fan Belts: **[One (1)]** <Insert number> set[s] for each belt-driven fan.
 2. Filters: **[One (1)]** <Insert number> set[s] for each unit.

1.7 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in manufacturing the Products specified in this

Section with minimum three (3) years documented experience, who issues complete catalog data on total product.

B. ARI Compliance:

1. Comply with ARI 203/110 and ARI 303/110 for testing and rating energy efficiencies for RTUs.
2. Comply with ARI 270 for testing and rating sound performance for RTUs.

C. ASHRAE Compliance:

1. Comply with ASHRAE 15 for refrigeration system safety.
2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
3. Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

D. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. NFPA Compliance: Comply with NFPA 90A and NFPA 90B.

F. UL Compliance: Comply with UL 1995.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.
- B. Do not operate units for temporary heating or cooling prior to substantial completion without approval by DEN Project Manager.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, handle and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1
- B. Accept products on site in factory-fabricated protective containers, with factory-installed shipping skids and lifting lugs. Inspect for damage.
- C. Store in clean dry place and protect from weather and construction traffic. Handle carefully to avoid damage to components, enclosures, and finish.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to replace components of units that fail in materials or workmanship within specified warranty period.
1. Warranty Period for Compressors: **[Five (5)] <Insert number>** years from date of Substantial Completion.
 2. Warranty Period for Heat Exchangers: **[Five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [AAON.](#)
 2. [Addison.](#)
 3. [Desert Aire.](#)
 4. [Engineered Air.](#)
 5. [LCSystems.](#)
 6. [Munters Corporation, Dehumidification Division; Des Champs Products.](#)
 7. [Thomas & Betts Corporation; Reznor HVAC Division.](#)
 8. **<Insert manufacturer's name>.**
 9. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. General Fabrication Requirements: Comply with requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment," and Section 7 - "Construction and System Start-up."
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design **[vibration isolation] [seismic restraints] [and] [wind restraints]**.
- C. Seismic Performance: Units shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
- D. Wind-Restraint Performance:
1. Basic Wind Speed: **<Insert value>**.
 2. Building Classification Category: [I] [II] [III] [IV].
 3. Minimum **10 lb/sq. ft** (48.8 kg/sq. m) multiplied by the maximum area of unit projected on a vertical plane that is normal to the wind direction and 45 degrees either side of normal.
- E. Cabinet Thermal Performance:
1. Maximum Overall U-Value: Comply with requirements in ASHRAE/IESNA 90.1.
 2. Maximum Overall U-Value: [0.10 Btu/h x sq. ft. x deg F (0.57 W/sq. m x deg K)] **<Insert value>**.
 3. Include effects of metal-to-metal contact and thermal bridges in the calculations.
- F. Cabinet Surface Condensation:
1. Cabinet shall have additional insulation and vapor seals if required to prevent condensation on the interior and exterior of the cabinet.
 2. Portions of cabinet located downstream from the cooling coil shall have a thermal break at each thermal bridge between the exterior and interior casing to prevent condensation from occurring on the interior and exterior surfaces. The thermal break shall not compromise the structural integrity of the cabinet.
- G. Maximum Cabinet Leakage: **[0.5] [1] [2] <Insert number>** percent of the total supply-air flow at a pressure rating equal to the fan shut-off pressure.
- H. Cabinet Deflection Performance:
1. Walls and roof deflection shall be within **[1/200] [1/240] <Insert value>** of the span at the design working pressure equal to the fan shut-off pressure. Deflection limits shall be measured at any point on the surface.
 2. Floor deflections shall be within **[1/240] [1/300] [1/360] <Insert value>** of the span considering the worst-case condition caused by the following:
 - a. Service personnel.
 - b. Internal components.
 - c. Design working pressure defined for the walls and roof.
- I. Electrical components, devices, and accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- J. Capacities and Characteristics:
1. Supply Airflow: **<Insert cfm (L/s)>**.
 2. External Static Pressure: **<Insert inches wg (Pa)>**.

3. Supply Fan:
 - a. Size: **<Insert wheel size>**.
 - b. Speed: **<Insert rpm>**.
 - c. Brake Horsepower: **<Insert value>**.

4. Supply Fan Motor:
 - a. Size: **<Insert horsepower>**.
 - b. Speed: **<Insert rpm>**.
 - c. Volts: **[120] [208] [230] [460] <Insert value>**.
 - d. Phase: **[Single] [Three]**.
 - e. Hertz: 60.

5. Refrigerant Cooling:
 - a. Capacity: **<Insert tons (kW)>**.
 - b. Full-Load Efficiency (EER or COP): **<Insert number>**.
 - c. Condenser Ambient-Air Temperature: **<Insert deg F (deg C)>**.
 - d. Evaporator Coil:
 - 1) Sensible Heat-Transfer Rate: **<Insert Btu/h (kW)>**.
 - 2) Total Heat-Transfer Rate: **<Insert Btu/h (kW)>**.
 - 3) Entering-Air, Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 - 4) Entering-Air, Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
 - 5) Leaving-Air, Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 - 6) Leaving-Air, Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
 - 7) Face Area: **<Insert sq. ft. (sq. m)>**.
 - 8) Maximum Face Velocity: **<Insert fpm (m/s)>**.
 - 9) Maximum Air-Side, Static-Pressure Drop: **<Insert inches wg (Pa)>**.
 - 10) Fin Spacing: **<Insert fins per inch (cm)>**.
 - 11) Fin Thickness: **<Insert inches (mm)>**.
 - 12) Number of Rows: **<Insert number>**.

6. Chilled-Water Cooling Coil:
 - a. Fluid: **[Chilled water] [Refrigerant] <Insert fluid>**.
 - b. Sensible Heat-Transfer Rate: **<Insert Btu/h (kW)>**.
 - c. Total Heat-Transfer Rate: **<Insert Btu/h (kW)>**.
 - d. Entering-Air, Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 - e. Entering-Air, Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
 - f. Leaving-Air, Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 - g. Leaving-Air, Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
 - h. Face Area: **<Insert sq. ft. (sq. m)>**.
 - i. Maximum Face Velocity: **<Insert fpm (m/s)>**.
 - j. Maximum Air-Side, Static-Pressure Drop: **<Insert inches wg (Pa)>**.
 - k. Coil Type: **[Continuous circuit] [Self-draining] [Cleanable]**.
 - l. Piping Connections: **[Threaded] [Flanged], [same end] [opposite ends]** of coil.
 - m. Tube Thickness: **<Insert inches (mm)>**.

- n. Fin Spacing: <Insert fins per inch (cm)>.
 - o. Fin Thickness: <Insert inches (mm)>.
 - p. Number of Rows: <Insert number>.
 - q. Coil Working-Pressure Ratings: [200 psig (1380 kPa), 325 deg F (163 deg C)] <Insert value>.
 - r. Fluid Flow: <Insert gpm (L/s)>.
 - s. Maximum Fluid-Pressure Drop: <Insert feet of head (kPa)>.
 - t. Entering-Fluid Temperature: <Insert deg F (deg C)>.
 - u. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
 - v. Fluid Velocity: <Insert fpm (L/s)>.
7. Electric-Resistance Heating Coils:
- a. Heat-Transfer Rate: <Insert Btu/h (kW)>.
 - b. Entering-Air Temperature: <Insert deg F (deg C)>.
 - c. Leaving-Air Temperature: <Insert deg F (deg C)>.
 - d. Power Input: <Insert kilowatts>.
 - e. Volts: [120] [208] [230] [480] <Insert value>.
 - f. Phase: [Single] [Three].
 - g. Hertz: 60.
 - h. Full-Load Amperes: <Insert value>.
 - i. Maximum Overcurrent Protection: <Insert amperage>.
 - j. Capacity Control Number of Steps: <Insert number>.
8. Gas-Fired Furnace Heating:
- a. Heat-Transfer Rate: <Insert Btu/h (kW)>.
 - b. Entering-Air Temperature: <Insert deg F (deg C)>.
 - c. Leaving-Air Temperature: <Insert deg F (deg C)>.
 - d. Efficiency: [80] <Insert number> percent.
 - e. Fuel: [Natural] [Propane] gas.
 - f. Gas Heating Value: <Insert Btu/cu. ft. (kJ/L)>.
 - g. Gas Input: <Insert cfh (mL/s)>.
 - h. Gas Burner Electrical Characteristics:
 - 1) Power Input: <Insert kilowatts>.
 - 2) Volts: [120] [208] [230] [460] <Insert value>.
 - 3) Phase: [Single] [Three].
 - 4) Hertz: 60.
 - 5) Full-Load Amperes: <Insert value>.
 - 6) Minimum Circuit Ampacity: <Insert value>.
 - 7) Maximum Overcurrent Protection: <Insert amperage>.
9. [Hot-Water] [Steam] Heating Coils:
- a. Heat-Transfer Rate: <Insert Btu/h (kW)>.
 - b. Entering-Air Temperature: <Insert deg F (deg C)>.
 - c. Leaving-Air Temperature: <Insert deg F (deg C)>.
 - d. Face Area: <Insert sq. ft. (sq. m)>.
 - e. Maximum Face Velocity: <Insert fpm (m/s)>.

- f. Maximum Air-Side, Static-Pressure Drop: <Insert inches wg (Pa)>.
- g. Coil Type: [**Continuous circuit**] [**Self-draining**] [**Cleanable**].
- h. Piping Connections: [**Threaded**] [**Flanged**]; [**same end**] [**opposite ends**] of coil.
- i. Tube Thickness: <Insert inches (mm)>.
- j. Fin Spacing: <Insert fins per inch (cm)>.
- k. Fin Thickness: <Insert inches (mm)>.
- l. Number of Rows: <Insert number>.
- m. Coil Working-Pressure Ratings: [200 psig (1380 kPa), 325 deg F (163 deg C)] <Insert value>.
- n. Fluid Flow: <Insert gpm (L/s)>.
- o. Maximum Fluid-Pressure Drop: <Insert feet of head (kPa)>.
- p. Entering-Fluid Temperature: <Insert deg F (deg C)>.
- q. Leaving-Fluid Temperature: <Insert deg F (deg C)>.
- r. Fluid Velocity: <Insert fpm (L/s)>.
- s. Steam Flow: <Insert lb/h (g/s)>.
- t. Inlet Steam Pressure: <Insert psig (kPa)>.

10. Overall Unit Electrical Characteristics:

- a. Volts: [120] [208] [230] [460] <Insert value>.
- b. Phase: [**Single**] [**Three**].
- c. Hertz: 60.
- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

2.3 CABINET

- A. General Fabrication Requirements for Casings: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.

- 1. Fabricate on channel base, welded frame construction and drain pan of welded steel coated externally with manufacturers standard paint finish. Assemble sections with gaskets and bolts. Casing/frame assembly shall be capable of withstanding 30 lb. per square foot snow load and 100 MPH winds.

- B. Exterior Casing Material: G-90 galvanized steel, phosphatized, with factory-painted finish of [**baked enamel**] [**zinc chromate, iron oxide, phenolic resin paint**] [**asphalt base coating formulated to protect surfaces, seal seams and joints, and provide insulation and sound deadening**] [**three coat system of epoxy applied over shot blasted surface, to total thickness of 5-6 mils**] with pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.

- 1. Finish: Unit base, framework and fan assembly shall be painted with 3 mil thick industrial primer with built in rust inhibitors and one coat of DTM enamel.
- 2. Weatherproof Casing Finish: Seal fixed joints with flexible weather tight sealer. Seal removable joints with closed-cell foam gasket. Pitch roof panels for

- drainage. Reinforce roof for winter snow loading. Provide cap strips over roof flanges. Provide rain caps and gaskets on access doors.
3. Exterior Casing Thickness: [0.052 inch (1.3 mm)] [0.0626 inch (1.6 mm)] [0.079 inch (2.0 mm)] **<Insert thickness>** thick.
 4. Interior Casing Material: Galvanized steel, [0.034 inch (0.86 mm)] [0.028 inch (0.7 mm)] **<Insert thickness>** thick[, **perforated 40 percent free area**].
- C. Casing Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
1. Materials: ASTM C 1071, Type I.
 2. Thickness: [2] **<Insert number>** inch thick, 3 lbs per cu ft density, neoprene coated, glass fiber insulation, "K" value at 75 degrees F maximum 0.26 Btu/inch/sq ft/degrees F/hr, applied to internal surfaces with adhesive and secured with pins and washers. Coat exposed edges of insulation with adhesive.
 3. Liner materials shall have air-stream surface coated with an erosion- and temperature-resistant coating or faced with a plain or coated fibrous mat or fabric.
 4. Liner Adhesive: Comply with ASTM C 916, Type I.
- D. Lifting and Handling Provisions: Factory-installed shipping skids and lifting lugs.
- E. Base Rails: [**Galvanized**] [**Stainless**]-steel rails for mounting on roof curb or pad as indicated.
- F. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.
- G. Service Doors: Hinged access doors with gaskets. Material and construction of doors shall match material and construction of cabinet in which doors are installed.
- H. Walk-in Access Doors: [**18 x 40**] [**24 x 48**] [**24 x 60**] [**30 x 60**] [**30 x 72**] inch of galvanized steel insulated sandwich construction, for flush mounting, with hinges, gasket, latch, and handle assemblies [, **and 12 X 12 inch inspection window of 1/4 inch thick plexiglass**]. [**Provide welded channel frame to set door out from casing to permit external insulation.**].
- I. Inspection Doors: 10 x 10 inch, of galvanized steel for flush mounting, with gasket, latch, and handle assembly [**and 1/4 inch thick plexiglass inspection window**]. [**Provide welded channel frame to set door out from casing to permit external insulation.**]
- J. Inspection Doors: 18 x 22 inch of galvanized steel for flush mounting, with gasket, latch, and handle assemblies [**and 12 x 12 inch inspection window of 1/4 inch thick plexiglass**]. [**Provide welded channel frame to set door out from casing to permit external insulation.**]
- K. Louvers: [**Stationary**] [**Adjustable**], of galvanized steel, [**4**] [**6**] inch deep with plenum, [**nylon bearings**,] 1/2 inch mesh, 0.04 inch galvanized wire bird screen in [**aluminum**] [**galvanized**] frame, and bearing AMCA Certified Ratings Seal in accordance with

AMCA 500. **[Furnish adjustable louvers with hollow vinyl bulb edging on blades and foam side stops to limit leakage to maximum 2 percent at 4 inch wg differential pressure when sized for 2000 fpm face velocity.]**

- L. Roof: Standing seam or membrane; sloped to drain water.
- M. Floor: Reinforced, metal surface; reinforced to limit deflection when walked on by service personnel. Insulation shall be below metal walking surface.
- N. Cabinet Insulation:
1. Type: **[Fibrous-glass duct lining complying with ASTM C 1071, Type II] [or] [flexible elastomeric insulation complying with ASTM C 534, Type II, sheet materials.]**
 2. Thickness: **[1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.**
 3. Insulation Adhesive: Comply with ASTM C 916, Type I.
 4. Mechanical Fasteners: Suitable for adhesive, mechanical, or welding attachment to casing without damaging liner and without causing air leakage when applied as recommended by manufacturer.
- O. Condensate Drain Pans:
1. Shape: Rectangular, with **[1] [2]** percent slope in at least two planes to direct water toward drain connection.
 2. Size: Large enough to collect condensate from cooling coils including coil piping connections, coil headers, and return bends.
 - a. Length: Extend drain pan downstream from leaving face **[to comply with ASHRAE 62.1] <Insert distance>.**
 - b. Depth: A minimum of **[2 inches (50 mm)] <Insert dimension>** deep.
 3. Configuration: Single wall.
 4. Configuration: Double wall, with space between walls filled with foam insulation and moisture-tight seal.
 5. Material: Galvanized-steel sheet with asphaltic waterproofing compound coating on pan top surface.
 6. Material: Stainless-steel sheet.
 7. Drain Connection:
 - a. Located on **[one end] [both ends]** of pan, at lowest point of pan.
 - b. Terminated with threaded nipple.
 - c. Minimum Connection Size: **[NPS 1 (DN 25)] [NPS 2 (DN 50)] <Insert size>.**
 8. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.
 9. Provide vapor-sealed 1-inch thick insulation under drain pan, and 1-inch trapped drain discharging to roof surface.
- P. Supplemental Condensate Drain Pans:

1. Wherever units equipped for cooling service are installed above facilities such as electrical power equipment, computer equipment, data server or telecommunications equipment, or other electrical or electronic equipment susceptible to malfunction if exposed to water, Contractor shall provide a supplemental drain pan to serve as additional protection against leakage, overflow, or other failure of the primary drain pan normally comprising a part of the air conditioning equipment.
2. Supplemental drain pans to be constructed of 20 gauge (minimum) galvanized steel, minimum depth 2 inches, fabricated, braced, and supported so as to ensure stability.
3. Provide drain piping conforming to provisions 221116 "Domestic Water Piping" and other Division 22 Sections, as applicable, minimum size 3/4 inch, terminating as a visible sight drain discharging to a floor drain or service sink if feasible, or as may otherwise be directed or approved by the DEN Project Manager.

Q. Surfaces in Contact with Airstream: Comply with requirements in ASHRAE 62.1 for resistance to mold and erosion.

R. Bottom Inlet/outlet Units: Provide steel or aluminum walking grate on structural supports.

S. Strength: Provide structure to brace casings for suction pressure of 4 inch wg, with maximum deflection of 1 in 200.

T. Roof Curb: Full-perimeter curb of sheet metal, minimum [8 inches (200 mm)] [12 inches (300 mm)] [16 inches (400 mm)] <Insert number> high, with wood nailer, neoprene sealing strip, and welded Z-bar flashing.

1. Comply with requirements in "The NRCA Roofing Manual."

2.4 SUPPLY FAN

A. Forward-Curved Fan Type: Centrifugal; statically and dynamically balanced.

1. Fan Wheel Material: **[Galvanized] [Painted] [Coated]** steel, mounted on solid-steel shaft.
2. Bearings: **[Self-aligning, permanently lubricated ball bearings] [Pillow-block bearings rated L₅₀ for 200,000 hours and having external grease fittings].**

B. Plenum Fan Type: Single width, non-overloading, with backward-inclined or airfoil blades.

1. Fan Wheel Material: Aluminum; attached directly to motor shaft.
2. Fan Wheel Drive and Arrangement: Direct drive, AMCA Arrangement 4.
3. Fan panel and frame Material: Powder-coated steel, stainless steel, or aluminum.
4. Fan Enclosure: Easily removable enclosure around rotating parts.
5. Fan Balance: Precision balance fan below 0.08 inch/s (2.0 mm/s) at design speed with filter in.

- C. Service Factor for Belt Drive Applications: **[Multiple]**V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly with minimum **[1.4] [1.5] [2.0]** **<Insert value>** service factor.
- D. Motors:
1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Enclosure: **[Open dripproof] [Totally enclosed]**.
 3. Enclosure Materials: **[Cast iron] [Cast aluminum] [Rolled steel]**.
 4. Motor Bearings: **<Insert requirements>**.
 5. Unusual Service Conditions:
 - a. Ambient Temperature: **<Insert deg C>**.
 - b. Altitude: **<Insert feet (m)>** above sea level.
 - c. High humidity.
 - d. **<Insert conditions>**.
 6. Efficiency: Premium efficient.
 7. NEMA Design: **<Insert designation>**.
 8. Service Factor: **[1.0] [1.15] <Insert value>**.
- E. Mounting: Fan wheel, motor, and drives shall be mounted to fan casing with [restrained] [elastomeric] [spring] isolators. Locate fan and motor internally on welded steel base coated with corrosion resistant paint. Factory mount motor on slide rails. Provide access to motor, drive, and bearings through removable casing panels or hinged access doors. Mount base on vibration isolators. Refer to Section 230548.13 "Vibration Controls for HVAC".
- F. Flexible Connection: Separate fan, discharge and coil sections. Refer to Section 233300 "Air Duct Accessories".
- G. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000Hz	2000Hz	4000 Hz	8000 Hz
Discharge	64	57	51	47	42	39	38	37
Inlet	64	57	51	47	42	39	38	37

2.5 BEARINGS AND DRIVES

- A. Bearings: AFBMA 9, AFBMA 11, L-10 life at 120,000 hours pillow block type, self-aligning, grease-lubricated roller bearings.
- B. Shafts: Solid, hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil.

- C. V-Belt Drive: Cast iron or steel sheaves, dynamically balanced, bored to fit shafts and keyed. Variable and adjustable pitch sheaves for motors 15 hp and under selected so required rpm is obtained with sheaves set at mid-position; fixed sheave for 20 hp and over, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.
- D. Belt Guard: Fabricate to SMACNA Standard; 12 gage thick, 3/4 inch diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

2.6 COOLING COILS

- A. Casing: Provide access to both sides of coils. Enclose coils with headers and return bends fully contained within casing. Slide coils into casing through removable end panel with blank off sheets and sealing collars at connection penetrations.
- B. Eliminators: Three break of galvanized steel on coils, and Type 304 stainless steel on evaporative humidifier, mounted over drain pan.
- C. Capacity Ratings: Comply with ASHRAE 33 and ARI 410 [**and coil bearing the ARI label**].
- D. Coil Casing Material: [**Manufacturer's standard material**] [**Aluminum**] [**Galvanized steel**] [**Stainless steel**] <Insert material>.
- E. Tube Material: [**Copper**] <Insert material>.
- F. Tube Header Material: [**Manufacturer's standard material**] [**Copper**] [**Carbon steel**] [**Red brass**] <Insert material>.
- G. Fin Material: [**Aluminum**] [**Copper**] <Insert material>.
- H. Fin and Tube Joints: Mechanical bond.
- I. Leak Test: Coils shall be leak tested with air underwater.
- J. Refrigerant Coil Capacity Reduction: Circuit coils for [**face**] [**row**] [**interleaved**] control.
- K. Refrigerant Coil Suction and Distributor Header Materials: Seamless copper tube with brazed joints.
- L. Coating: Phenolic epoxy corrosion-protection coating after assembly.

2.7 REFRIGERATION SYSTEM

- A. Comply with requirements in ASHRAE 15, "Safety Standard for Refrigeration Systems."

- B. Refrigerant Charge: Factory charged with refrigerant and filled with oil.
- C. Compressors: [**Scroll**] [**Reciprocating or scroll**] compressors with integral vibration isolators, internal overcurrent and overtemperature protection, internal pressure relief[, **and crankcase heater**].
- D. Refrigerant: [**R-22**] [**R-134a**] [**R-407C**] [**R-410A**] [**HFC refrigerant**] <Insert other available type>.
1. Classified as Safety Group A1 according to ASHRAE 34.
 2. Provide unit with operating charge of refrigerant.
- E. Refrigeration System Specialties:
1. Expansion valve with replaceable thermostatic element.
 2. Refrigerant dryer.
 3. High-pressure switch.
 4. Low-pressure switch.
 5. Thermostat for coil freeze-up protection during low ambient temperature operation or loss of air.
 6. Brass service valves installed in discharge and liquid lines.
- F. Capacity Control:
1. Hot-gas bypass refrigerant control for capacity control with continuous dehumidification on a single compressor.
 2. Patented, Rawal APR control with zero to 100 percent modulating capacity control using hot-gas bypass. Evaporator coil shall be continuously active for dehumidification.
 3. Single compressor with evaporator and condenser coil within the refrigerant section to provide initial pre-cooling and to reheat for humidity control.
 4. Heat-pipe heat exchanger wrapped around the evaporator coil to pre-cool the air entering the evaporator coil and reheat the air leaving the evaporator coil to control humidity.
- G. Refrigerant [**condenser**] [**and**] [**reheat condenser**] coils:
1. Capacity Ratings: Complying with ASHRAE 33 and ARI 410 [**and coil bearing the ARI label**].
 2. Tube Material: Copper.
 3. Fin Material: [**Aluminum**] [**Copper**].
 4. Fin and Tube Joint: Mechanical bond.
 5. Leak Test: Coils shall be leak tested with air underwater.
 6. Coating: Phenolic epoxy corrosion-protection coating after assembly.
- H. Condenser Fan Assembly:
1. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades.
 2. Fan Motors:

- a. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Motor Enclosure: Totally enclosed non-ventilating (TENV) or totally enclosed air over (TEAO) enclosure.
 - c. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 - d. Motor Bearings: [**Permanently lubricated bearings**] <Insert requirements>.
 - e. Unusual Service Conditions:
 - 1) Ambient Temperature: <Insert deg C>.
 - 2) Altitude: <Insert feet (m)> above sea level.
 - 3) High humidity.
 - 4) <Insert conditions>.
 - f. Built-in overcurrent and thermal-overload protection.
 - g. Efficiency: Premium efficient.
 - h. NEMA Design: <Insert designation>.
 - i. Service Factor: <Insert value>.
3. Fan Safety Guards: Steel with corrosion-resistant coating.
- I. Safety Controls:
1. Compressor motor and condenser coil fan motor low ambient lockout.
 2. Overcurrent protection for compressor motor.

2.8 ELECTRIC-RESISTANCE HEATING COIL

- A. UL Compliance: Comply with requirements in UL 1995, "Heating and Cooling Equipment."
- B. Electric-Resistance Heating Elements:
1. Coiled Resistance Wire: 80 percent nickel and 20 percent chromium.
 2. Tubular-Steel Sheath: Compacted magnesium oxide powder.
 3. Fins: Spiral-wound, copper-plated, steel fins continuously brazed to sheath.
 4. Heating Capacity: Low density **35 W per sq. in.** (54 kW per sq. m), factory wired for single-point wiring connection; with time delay for element staging and overcurrent- and overheat-protection devices.
 5. Safety Controls:
 - a. Blower-motor interlock, air-pressure switch.
 - b. Quiet mercury contactors.
 - c. Time delay between steps.
 - d. Integral, nonfused power disconnect switch.
- C. Electric-Resistance Heating Elements:
1. Open-Coil Resistance Wire: 80 percent nickel and 20 percent chromium.

2. Supports and Insulation: Floating ceramic bushings recessed into casing openings; fastened to supporting brackets and mounted in galvanized-steel frame.
3. Heating Capacity: Low density **35 W per sq. in.** (54 kW per sq. m), factory wired for single-point wiring connection; with time delay for element staging and overcurrent- and overheat-protection devices.
4. Safety Controls:
 - a. Blower-motor interlock, air-pressure switch.
 - b. Quiet mercury contactors.
 - c. Time delay between steps.
 - d. Integral, nonfused power disconnect switch.

2.9 DIRECT-FIRED GAS FURNACE HEATING

A. Furnace Assembly:

1. Factory assembled, piped, and wired.
2. Comply with requirements in NFPA 54, "National Fuel Gas Code"; ANSI Z83.4, "Non-Recirculating Direct Gas-Fired Industrial Air Heaters"; and ANSI Z83.18, "Recirculating Direct Gas-Fired Industrial Air Heaters."

B. Burners:

1. Cast-iron burner with stainless-steel mixing plates.
2. Rated for a maximum turndown ratio of 30:1.
3. Fuel: **[Natural] [Propane]** gas.

C. Safety Controls:

1. Gas manifold safety switches and controls shall comply with ANSI standards **[and FM Global] [and IRI]**.
2. Pilot: Intermittent spark igniter.
3. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
4. External gas-pressure regulator shall regulate pressure to not more than **0.5 psig** (3.4 kPa).
5. Airflow Proving Switch: Dual pressure switch senses correct airflow before energizing pilot and requires airflow to be maintained within minimum and maximum pressure settings across burner.
6. Manual-Reset, High-Limit Switch: Stops burner and closes main gas valve if high-limit temperature is exceeded.
7. Gas Train: Redundant main gas valves, electric pilot valve, main and pilot gas-pressure regulators, main and pilot manual shutoff valves[, **high-low gas-pressure switches**], and main and pilot pressure taps, **[to comply with FM Global requirements] [to comply with IRI requirements]**.

2.10 INDIRECT-FIRED GAS FURNACE HEATING

A. Furnace Assembly:

1. Factory assembled, piped, and wired.
2. Comply with requirements in NFPA 54, "National Fuel Gas Code," and ANSI Z21.47, "Gas-Fired Central Furnaces."
3. AGA Approval: Designed and certified by and bearing label of AGA.

B. Burners:

1. Heat-Exchanger Material: [**Aluminized steel with stainless-steel inserts**] [**Stainless steel**] with a minimum thermal efficiency of 80 percent.
2. Fuel: [**Natural**] [**Propane**] gas.
3. Ignition: Electronically controlled electric spark with flame sensor.
4. High-Altitude [**Model**] [**Kit**]: For Project elevations more than 2000 feet (610 m) above sea level.

C. Heat-Exchanger Drain Pan Material: Stainless steel.

D. Venting: Gravity vented.

E. Venting: Power vent with integral, motorized centrifugal fan interlocked with gas valve.

F. Safety Controls:

1. Gas Control Valve: [**Single stage**] [**Two stage**] [**Electronic modulating**].
2. Gas Train: Single-body, regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff.

2.11 HOT-WATER HEATING COIL

A. Capacity Ratings: Comply with ASHRAE 33 and ARI 410 [**and coil bearing the ARI label**].

B. Coil Casing Material: [**Manufacturer's standard material**] [**Aluminum**] [**Galvanized steel**] [**Stainless steel**] <Insert material>.

C. Tube Material: [**Copper**] <Insert material>.

D. Tube Header Material: [**Manufacturer's standard material**] [**Copper**] [**Carbon steel**] [**Red brass**] <Insert material>.

E. Fin Material: [**Aluminum**] [**Copper**] <Insert material>.

F. Fin and Tube Joints: Mechanical bond.

G. Leak Test: Coils shall be leak tested with air underwater.

- H. Coating: Phenolic epoxy corrosion-protection coating after assembly.

2.12 STEAM HEATING COIL

- A. Capacity Ratings: Comply with ASHRAE 33 and ARI 410 [**and coil bearing the ARI label**].
- B. Coil Type: Non-freeze, horizontal or vertical, tube arrangement.
- C. Casing Material: [**Manufacturer's standard material**] [**Aluminum**] [**Galvanized steel**] [**Stainless steel**] <Insert material>.
- D. Tube Material: [**Copper**] <Insert material>.
- E. Tube Header Material: [**Manufacturer's standard material**] [**Copper**] [**Carbon steel**] [**Red brass**] <Insert material>.
- F. Fin Material: [**Aluminum**] [**Copper**] <Insert material>.
- G. Fin and Tube Joints: Mechanical bond.
- H. Leak Test: Coils shall be leak tested with air underwater.
- I. Coating: Phenolic epoxy corrosion-protection coating after assembly.

2.13 SPRAYED COIL DEHUMIDIFIER

- A. Units: Assembly with casing, tank, nozzles, spray headers, eliminators, water and drain connections [, **spray pump**,] and cooling coils. [**Refer to Section 238413 "Humidifiers"**.]
- B. Insulation: Externally insulate casing. Mount on 2 inch thick rigid insulation board.
- C. Performance: Operate at [**3 inch wg negative**] [**3 inch wg positive**] [**6 inch wg positive**] operating static pressure.
- D. Coil: Refer to coil specification for size and cooling capacity.
- E. Casing: 14 gage galvanized steel reinforced and braced with galvanized angles.
- F. Drain Tank: [**10 gage**] [**3/16 inch**] welded black steel with coating of [**1/8 inch waterproof mastic**] [**3/32 inch minimum epoxy**].] [**glass fiber reinforced plastic.**] [**10 gage stainless steel.**] Provide with 2" drain, 1-1/2" water make-up connection, and 3" overflow connection.
- G. Coils: Copper, drainable.
- H. Spray Headers: Galvanized steel pipe.

- I. Spray Nozzles: Bronze, self-cleaning.
- J. Spray Pump: Vertical in-line operating at 1750 rev/min.
- K. Float Valve: Adjustable, with brass rod, brass float ball, and brass valve with replaceable neoprene seat.
- L. Low Water Cut-off: Float operated.

2.14 HUMIDIFIER

- A. Humidifiers: Certify capacities and selection in accordance with ARI 610.
- B. Steam Grid Humidifier: Stainless steel distribution tube with evenly spaced orifices extended full width of unit, factory mounted **[in plenum with drain pan for draw-thru units] [in diffuser section of blow-thru units]. [Refer to Section 238413 "Humidifiers".]**
- C. Evaporative Pan Humidifier: Factory mounted in plenum with drain pan, float box, copper pan, water immersion type sheathed heating element, and low water cut-off switch. **[Refer to Section 238413 "Humidifiers".]**
- D. Wet Glass Cell Washer: Section with 3 inch deep cells with random packed, glass fiber media in **[galvanized] [stainless]** steel frames, access door, spray tree assembly with **[brass] [stainless steel]** nozzles and **[galvanized] [stainless]** steel piping, and **[galvanized] [stainless]** steel eliminator plates. Assemble over welded **[stainless]** steel tank **[with interior and exterior surfaces blasted and painted with zinc chromate paint.]** Provide copper suction screen, drain, overflow, and suction connections in tank with make-up connection, **[brass]** float valve, and quick-fill connection. Insulate exterior with duct insulation. Mount tank on 2 inch thick rigid closed-cell insulation board.
- E. Evaporative Humidifier: Section with watertight **[cast iron]** door with brass fittings, wire glass window, and locking handles, **[spray tree assembly with brass nozzles and galvanized piping, galvanized eliminator plates with flooding nozzles and header, and galvanized anti-splash baffles] [water distribution assembly with brass nozzles and galvanized piping and cross fluted cellulose media]**. Assemble over welded steel tank with interior and exterior surfaces blasted and painted with zinc chromate paint. Provide copper suction screen, drain, overflow, and suction connections in tank with make-up connection, **[brass]** float valve, and quick-fill connection. Insulate exterior with duct insulation. Mount tank on 2 inch thick rigid closed-cell insulation board. **[Refer to Section 238413 "Humidifiers".]**

2.15 OUTDOOR-AIR INTAKE HOOD

- A. Type: Manufacturer's standard hood or louver.
- B. Materials: Match cabinet.

- C. Bird Screen: Comply with requirements in ASHRAE 62.1.
- D. Configuration: Designed to inhibit wind-driven rain and snow from entering unit.

2.16 FILTERS

- A. Filter Box: Section with filter guides, access doors from both sides, for face loading.
- B. Filter Media: UL 900 listed, Class I or Class II, approved by local authorities.
- C. Flat Panel Prefilter: Arrangement with 2 and 4 inch deep disposable, extended area panel filters.
- D. Cleanable Filters: **2-inch-** (50-mm-) thick, cleanable metal mesh.
- E. Disposable Panel Filters:
 - 1. Comply with NFPA 90A.
 - 2. Factory-fabricated, viscous-coated, flat-panel type.
 - 3. Thickness: [1 inch (25 mm)] [2 inches (50 mm)].
 - 4. Initial Resistance: <Insert inches wg (Pa)>.
 - 5. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - 6. Minimum Arrestance: [80] <Insert value>, according to ASHRAE 52.1.
 - 7. Minimum Merv: [6] <Insert value>, according to ASHRAE 52.2.
 - 8. Media: Interlaced glass fibers sprayed with nonflammable adhesive[**and antimicrobial agent**].
- F. Extended-Surface, Disposable Panel Filters:
 - 1. Comply with NFPA 90A.
 - 2. Factory-fabricated, dry, extended-surface type.
 - 3. Thickness: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)].
 - 4. Initial Resistance: <Insert inches wg (Pa)>.
 - 5. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - 6. Minimum Arrestance: [90] <Insert value>, according to ASHRAE 52.1.
 - 7. Minimum Merv: [7] <Insert value>, according to ASHRAE 52.2.
 - 8. Media: Fibrous material formed into deep-V-shaped pleats[**with antimicrobial agent**] and held by self-supporting wire grid.
- G. Extended-Surface, Nonsupported-Media Filters:
 - 1. Comply with NFPA 90A.
 - 2. Factory-fabricated, dry, extended-surface, self-supporting type.
 - 3. Initial Resistance: <Insert inches wg (Pa)>.
 - 4. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - 5. Minimum Arrestance: [95] <Insert value>, according to ASHRAE 52.1.
 - 6. Minimum Merv: [13] <Insert value>, according to ASHRAE 52.2.

7. Media: Fibrous material [**coated with an antimicrobial agent and**] constructed so individual pleats are maintained in tapered form by flexible internal supports under rated-airflow conditions.

H. Mounting Frames:

1. Panel filters arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or from access plenum.
2. Extended surface filters arranged for flat orientation, removable from access plenum.
3. Galvanized or stainless steel with gaskets and fasteners, suitable for bolting together into built-up filter banks[**with space for prefilter**].

2.17 ELECTRICAL POWER CONNECTIONS

- A. General Electrical Power Connection Requirements: Factory-installed and -wired switches, motor controllers, transformers, and other necessary electrical devices shall provide a [**single-point**] field power connection to unit.
- B. Enclosure: NEMA 250, [**Type 3R**] [**Type 4**] [**Type 4X**] <Insert type>, mounted in unit with hinged access door in unit cabinet having a lock and key or padlock and key,
- C. Wiring: Numbered and color-coded to match wiring diagram.
- D. Wiring Location: Install factory wiring outside an enclosure in a raceway.
- E. Power Interface: Field power interface shall be to [**wire lugs**] [**NEMA KS 1, heavy-duty, nonfused disconnect switch**].
- F. Factory Wiring: Branch power circuit to each motor and to controls with one of the following disconnecting means:
 1. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 2. NEMA KS 1, heavy-duty, nonfusible switch.
 3. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
- G. Factory-Mounted, Overcurrent-Protection Service: For each motor.
- H. Transformer: Factory mounted with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
- I. Controls: Factory wire unit-mounted controls where indicated.
- J. Lights: Factory wire unit-mounted lights.
- K. Receptacle: Factory wire unit-mounted, ground fault interrupt (GFI) duplex receptacle.

- L. Control Relays: Auxiliary and adjustable time-delay relays.

2.18 CONTROLS

- A. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- B. Control Valves: Comply with requirements in Section 230923.11 "Control Valves."
- C. Control Wiring: Factory wire connection for controls' power supply.
- D. Control Devices: Sensors, transmitters, relays, switches, detectors, operators, actuators, and valves shall be manufacturer's standard items to accomplish indicated control functions.
- E. **[Remote] [Unit]-Mounted Status Panel:**
1. Cooling/Off/Heating Controls: Control operational mode.
 2. Damper Position: Indicate position of outdoor-air dampers in terms of percentage of outdoor air.
 3. Status Lights:
 - a. Filter dirty.
 - b. Fan operating.
 - c. Cooling operating.
 - d. Heating operating.
 - e. Smoke alarm.
 - f. General alarm.
 - g. **<Insert points>**.
 4. Digital Numeric Display:
 - a. Outdoor airflow.
 - b. Supply airflow.
 - c. Outdoor dry-bulb temperature.
 - d. Outdoor dew point temperature.
 - e. Space temperature.
 - f. Supply temperature.
 - g. Space relative humidity.
 - h. Space carbon dioxide level.
 - i. **<Insert points>**.
- F. Control Dampers:
1. Damper Location: Factory installed inside unit for ease of blade axle and bushing service. Arrange dampers located in a mixing box to achieve convergent airflow to minimize stratification.
 2. Damper Leakage: Comply with requirements in AMCA 500-D. Leakage shall not exceed **6.5 cfm per sq. ft.** (33 L/s per sq. m) at a static-pressure differential of **4.0**

- inches water column (1000 Pa) when a torque of 5 inch pounds per sq. ft. (30.1 Newton meters per sq. m) is applied to the damper jackshaft.
3. Damper Rating: Rated for close-off pressure equal to the fan shutoff pressure.
 4. Damper Label: Bear the AMCA seal for both air leakage and performance.
 5. Blade Configuration: Unless otherwise indicated, use parallel blade configuration for two-position control and equipment isolation service and use modulating control when mixing two airstreams. For other applications, use an opposed-blade configuration.
 6. Damper Frame Material: **[Extruded aluminum] [galvanized steel] [or] [stainless steel]**.
 7. Blade Type: **[Single-thickness metal reinforced with multiple V-grooves] [or] [hollow-shaped airfoil]**.
 8. Blade Material: **[Extruded aluminum] [galvanized steel] [or] [stainless steel]**.
 9. Maximum Blade Width: 6 inches (150 mm).
 10. Maximum Blade Length: 48 inches (1200 mm).
 11. Blade Seals: Replaceable, continuous perimeter vinyl seals and jambs with stainless-steel compression-type seals.
 12. Bearings: Thrust bearings for vertical blade axles.
 13. Airflow Measurement:
 - a. Monitoring System: Complete and functioning system of airflow monitoring as an integral part of the damper assembly where indicated.
 - b. Remote Monitoring Signal: 0-10 volt or 4-20 mA scaled signal.
 - c. Accuracy of flow measurement: Within **[5] [10] <Insert value>** percent of the actual flow rate between the range of the scheduled minimum and maximum airflow. For units with a large range between minimum and maximum airflow, configure the damper sections and flow measurement assembly as necessary to comply with accuracy.
 - d. Straightening Device: Integral to the flow measurement assembly if required to achieve the specified accuracy as installed.
 - e. Flow measuring device: Suitable for operation in untreated and unfiltered outdoor air. If necessary, include temperature and altitude compensation and correction to maintain the accuracy.

G. Damper Operators:

1. Factory-installed electric operator for each damper assembly with one operator for each damper assembly mounted to the damper frame.
2. Operator capable of shutoff against fan pressure and able to operate the damper with sufficient reserve power to achieve smooth modulating action and proper speed of response at the velocity and pressure conditions to which the damper is subjected.
3. Maximum Operating Time: Open or close damper 90 degrees in **[60] [90] <Insert value>** seconds.
4. Adjustable Stops: For both maximum and minimum positions.
5. Position Indicator and Graduated Scale: Factory installed on each actuator with words "OPEN" and "CLOSED," or similar identification, at travel limits.
6. Spring-return operator to fail-safe; either closed or open as required by application.

7. Operator Type: Direct coupled, designed for minimum 60,000 full-stroke cycles at rated torque.
8. Position feedback Signal: For remote monitoring of damper position.
9. Coupling: V-bolt and V-shaped, toothed cradle.
10. Circuitry: Electronic overload or digital rotation-sensing circuitry.

H. Chilled-Water Coil Controls:

1. **[Factory-mounted sensor in unit discharge] [Remote-sensor for field installation in supply-air duct]** with sensor adjustment located in control panel to modulate factory-**[mounted] [furnished]** coil control valve to maintain temperature.
2. Space-temperature sensor with **[temperature adjustment] [unit-mounted temperature adjustment] [adjustment on remote-control panel]** to modulate factory-**[mounted] [furnished]** coil control valve to maintain temperature.

I. Refrigeration System Controls:

1. Unit-mounted enthalpy controller shall lock out refrigerant system when outdoor-air enthalpy is less than **[28 Btu/lb (65 kJ/kg)] <Insert value>** of dry air or outdoor-air temperature is less than **60 deg F (15 deg C) <Insert value>**.
2. Outdoor-air sensor de-energizes dehumidifier operation when outdoor-air temperature is less than **60 deg F (15 deg C) <Insert value>**.
3. Relative-humidity sensor energizes dehumidifier operation when relative humidity is more than **[50] <Insert value>** percent.

J. Furnace Controls:

1. **[Factory-mounted sensor in supply outlet] [Remote sensor for field installation in supply-air duct]** with sensor adjustment located in control panel to modulate gas furnace burner to maintain space temperature.
2. Wall-mounted, space-temperature sensor with **[temperature adjustment] [unit-mounted temperature adjustment] [adjustment on remote-control panel]** to modulate gas furnace burner to maintain space temperature.
3. Remote Setback: Adjustable room thermostat selected by timer, set at **[50 deg F (10 deg C)] <Insert temperature>**; cycles supply fan and gas furnace burner to maintain space temperature.
4. Staged Burner Control: **[Two] [Four]** steps of control.
5. Electromechanical or Electronic Burner Control: 20 to 100 percent modulation of the firing rate; 10 to 100 percent with dual-furnace units.

K. Electric-Resistance Heat Controls:

1. **[Factory-mounted sensor in unit discharge] [Remote sensor for field installation in supply-air duct]** with sensor adjustment located in control panel to control electric coil to maintain temperature.
2. Wall-mounted, space-temperature sensor with **[temperature adjustment] [unit-mounted temperature adjustment] [adjustment on remote-control panel]** to control electric coil to maintain temperature.
3. Capacity Controls: **[On/off] [Multiple steps] [Modulating SCR] <Insert type>**.

- L. **[Hot-Water] [and] [Steam]** Coil Controls: **[Factory-mounted sensor in unit discharge] [Remote sensor for field installation in supply-air duct]** with sensor adjustment located in control panel to modulate factory-**[mounted] [furnished]** coil control valve to maintain temperature.
- M. **[Hot-Water] [and] [Steam]** Coil Controls: Space-temperature sensor with **[temperature adjustment] [unit-mounted temperature adjustment] [adjustment on remote-control panel]** to modulate factory-**[mounted] [furnished]** coil control valve to maintain temperature.
- N. Damper Controls: Space pressure sensor modulates outdoor- and return-air dampers to maintain a positive pressure in space at a minimum of **[0.05 inch wg (12.4 Pa)]** **<Insert value>** with respect to outdoor reference.
- O. Integral Smoke Alarm: Smoke detector installed in **[supply] [and] [return]** air.
- P. DDC Temperature Control: Standalone control module for link between unit controls and DDC temperature-control system. Control module shall be compatible with control system specified in Section 230923 "Direct Digital Control (DDC) System for HVAC." Links shall include the following:
1. Start/stop interface relay, and relay to notify DDC temperature-control system alarm condition.
 2. Hardware interface or additional sensors for the following:
 - a. Room temperature.
 - b. Discharge-air temperature.
 - c. Refrigeration system operating.
 - d. Furnace operating.
 - e. Constant and variable motor loads.
 - f. Variable-frequency-controller operation.
 - g. Cooling load.
 - h. Economizer cycles.
 - i. Air-distribution static pressure and ventilation-air volumes.
- Q. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display unit status and alarms.
1. Hardwired Points:
 - a. Monitoring: On-off status, **[common trouble alarm] <Insert monitoring point>**.
 - b. Control: On-off operation, **[space temperature set-point adjustment] [supply temperature set-point adjustment] [space humidity set-point adjustment] [space pressure set-point adjustment] <Insert control point>**.
- 2.19 **[ASHRAE 135 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol]**

<Insert type of interface> communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the unit from an operator workstation. Control features and monitoring points displayed locally at unit control panel shall be available through the DDC system for HVAC.ACCESSORIES

- A. Service Lights and Switch: Factory installed in [fan section] [fan and coil sections] [each accessible section] <Insert locations> with weatherproof cover. Factory wire lights to a single-point field connection.
- B. Duplex Receptacle: Factory mounted in unit supply-fan section [and refrigeration section], with 20 amp 120 V GFI duplex receptacle and weatherproof cover.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping, ducts, and electrical systems to verify actual locations of connections before equipment installation.
- C. Examine roof curbs and equipment supports for suitable conditions where units will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:
 - 1. Install units level and plumb.
 - 2. Anchor units to structure.
 - 3. Install seismic restraints.
 - 4. Install static-pressure probe.
 - 5. Install water-cooled units with thermometer and pressure gage at the water supply and return connection.
- B. Comply with manufacturer's rigging and installation instructions for unloading units and moving to final locations.
- C. Curb Support: Install roof curb on roof structure according to "The NRCA Roofing Manual."
 - 1. Install and secure units on curbs and coordinate roof penetrations and flashing with roof construction.

2. Coordinate size, installation, and structural capacity of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077200 "Roof Accessories."
 3. Coordinate size, location, and installation of unit manufacturer's roof curbs and equipment supports with roof Installer.
- D. Restrained Curb Support: Install restrained vibration isolation roof-curb rails on roof structure according to "The NRCA Roofing Manual."
- E. Equipment Mounting:
1. Install air units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- F. Suspended Units: Suspend[**and brace**] units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in [**Section 230548 "Vibration and Seismic Controls for HVAC."**] [**Section 230548.13 "Vibration Controls for HVAC."**]
- G. Install wall- and duct-mounted sensors furnished by manufacturer for field installation. Install control wiring and make final connections to control devices and unit control panel.
- H. Install 3000-psi (20.7-MPa), compressive-strength (28-day) concrete base inside roof curb, [4 inches (100 mm)] <Insert dimension> thick. Concrete and reinforcement are specified with concrete.
- I. Comply with requirements for gas-fired furnace installation in NFPA 54, "National Fuel Gas Code."
- J. Install separate devices furnished by manufacturer and not factory installed.
- K. Install new filters at completion of equipment installation and before testing, adjusting, and balancing.
- L. Install drain pipes from unit drain pans to sanitary drain.
1. Drain Piping: Drawn-temper copper water tubing complying with [ASTM B 88, Type L](#) (ASTM B 88M, Type B), with soldered joints.
 2. Drain Piping: Schedule 40 PVC pipe complying with ASTM D 1785, with solvent-welded fittings.
 - a. PVC solvent cement shall have a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- b. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - c. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
3. Pipe Size: Same size as condensate drain pan connection.

3.3 CONNECTIONS

- A. Where installing piping adjacent to units, allow space for service and maintenance.
- B. Gas Piping Connections:
1. Comply with requirements in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**]
 2. Connect gas piping to furnace, full size of gas train inlet, and connect with union[, **pressure regulator,**] and shutoff valve with sufficient clearance for burner removal and service.
 3. Install AGA-approved flexible connectors.
- C. Hydronic Piping Connections:
1. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties."
 2. Install shutoff valve and union or flange on each supply connection and install balancing valve and union or flange on each return connection.
- D. Steam Piping Connections:
1. Comply with requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties."
 2. Install shutoff valve and union or flange on each supply connection.
 3. Install, starting from the coil connection, union or flange, strainer, union, float and thermostatic trap, union, and shutoff valve.
- E. Duct Connections:
1. Comply with requirements in Section 233113 "Metal Ducts."
 2. Drawings indicate the general arrangement of ducts.
 3. Connect ducts to units with flexible duct connectors. Comply with requirements for flexible duct connectors in Section 233300 "Air Duct Accessories."
- F. Electrical Connections: Comply with requirements for power wiring, switches, and motor controls in electrical Sections.
1. Install electrical devices furnished by unit manufacturer but not factory mounted.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Inspect units for visible damage to furnace combustion chamber.
 3. Perform the following operations for both minimum and maximum firing and adjust burner for peak efficiency:
 - a. Measure gas pressure at manifold.
 - b. Measure combustion-air temperature at inlet to combustion chamber.
 - c. Measure flue-gas temperature at furnace discharge.
 - d. Perform flue-gas analysis. Measure and record flue-gas carbon dioxide and oxygen concentration.
 - e. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.
 4. Verify operation of remote panel including pilot-light operation and failure modes. Inspect the following:
 - a. High-limit heat exchanger.
 - b. Alarms.
 5. Inspect units for visible damage to refrigerant compressor, condenser and evaporator coils, and fans.
 6. Start refrigeration system when outdoor-air temperature is within normal operating limits and measure and record the following:
 - a. Cooling coil leaving-air, dry- and wet-bulb temperatures.
 - b. Cooling coil entering-air, dry- and wet-bulb temperatures.
 - c. Condenser coil entering-air dry-bulb temperature.
 - d. Condenser coil leaving-air dry-bulb temperature.
 7. Simulate maximum cooling demand and inspect the following:
 - a. Compressor refrigerant suction and hot-gas pressures.
 - b. Short-circuiting of air through outside coil or from outside coil to outdoor-air intake.
 8. Inspect casing insulation for integrity, moisture content, and adhesion.
 9. Verify that clearances have been provided for servicing.
 10. Verify that controls are connected and operable.
 11. Verify that filters are installed.
 12. Clean coils and inspect for construction debris.
 13. Clean furnace flue and inspect for construction debris.
 14. Inspect operation of power vents.
 15. Purge gas line.
 16. Inspect and adjust vibration isolators and seismic restraints.

17. Verify bearing lubrication.
18. Clean fans and inspect fan-wheel rotation for movement in correct direction without vibration and binding.
19. Adjust fan belts to proper alignment and tension.
20. Start unit.
21. Inspect and record performance of interlocks and protective devices including response to smoke detectors by fan controls and fire alarm.
22. Operate unit for run-in period.
23. Calibrate controls.
24. Adjust and inspect high-temperature limits.
25. Inspect outdoor-air dampers for proper stroke[**and interlock with return-air dampers**].
26. Verify operational sequence of controls.
27. Measure and record the following airflows. Plot fan volumes on fan curve.
 - a. Supply-air volume.
 - b. Return-air flow.
 - c. Outdoor-air flow.

- B. After startup, change filters, verify bearing lubrication, and adjust belt tension.
- C. Remove and replace components that do not properly operate and repeat startup procedures as specified above.
- D. Prepare written report of the results of startup services.

3.5 ADJUSTING

- A. Adjust initial temperature and humidity set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Occupancy Adjustments: When requested within [**twelve (12)**] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain units.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 237433

SECTION 238113.11 - PACKAGED TERMINAL AIR-CONDITIONERS, THROUGH-WALL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes packaged, terminal, through-the-wall air conditioners.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 1. Provide manufacturer's drawings indicating dimensions, rough-in connections, and electrical characteristics and connection requirements.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 - 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For packaged, terminal air conditioners.
 - 1. Include plans, elevations, sections, details for wall penetrations, [**seismic bracing,**] and attachments to other work.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
 - 4. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:

- a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
- b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

D. Color Samples: For unit cabinet, discharge grille, and exterior louver, and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For packaged, terminal air conditioners, for tests performed by manufacturer and witnessed by a qualified testing agency.
- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For packaged, terminal air conditioners to include in emergency, operation, and maintenance manuals.
 - 1. Include manufacturer's descriptive literature, operating instructions, installation instructions, and maintenance and repair data.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MOCKUP

- A. Install one (1) unit that includes inside cabinet, wall sleeve, and wall louver.
- B. Locate where directed by DEN Project Manager.
- C. Mockup may **[not]** remain as part of the Work.

1.7 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver, store and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Protect finished cabinets from physical damage by leaving factory packing cases in place before installation and providing temporary covers after installation.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of packaged, terminal air conditioners that fail in materials or workmanship within specified warranty period.
1. Warranty Period for Sealed Refrigeration System: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion, including components and labor.
 2. Warranty Period for Nonsealed System Parts: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion, including only components and excluding labor.
 3. Warranty Period for Heat Exchangers: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Amana; a brand of Whirlpool Corporation.
 2. Carrier Corporation; a unit of United Technologies Corp.
 3. ClimateMaster, Inc.
 4. Comfort-Aire; a division of Heat Controller, Inc.
 5. Friedrich Air Conditioning Company.
 6. General Electric Company; GE Energy Management - Electrical Distribution.
 7. LG Appliances.
 8. McQuay International; Daikin Industries.
 9. Suburban Manufacturing Company; a division of AIRXCEL, Inc.
 10. Trane.
 11. York International.
 12. **<Insert manufacturer's name>**.
 13. or approved equal.

2.2 MANUFACTURED UNITS

- A. Description: Factory-assembled and -tested, self-contained, packaged, terminal **[air conditioning] [heat pump]** units with room cabinet, electric refrigeration system,

[electric] [hot water] [gas fired] [heating,] and [built-in] [remote] temperature controls; fully charged with refrigerant and filled with oil; with [cord-connected] [hardwired] chassis.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."
- D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.
- E. ASHRAE Thermal Comfort: Applicable requirements in ASHRAE 55.
- F. UL listed and ETL performance certified.

2.3 CHASSIS

- A. Cabinet: [0.052-inch- (1.3-mm-)] <Insert dimension> thick [galvanized] [powder-coated] [epoxy coated] [baked enamel] steel with removable front panel with concealed latches.
 - 1. Mounting: [Wall with wall sleeve] [Floor with subbase].
 - 2. Top: [Angled] [Flat].
 - 3. Discharge Grille: [Punched-louver discharge grille allowing four-way discharge-air pattern] [Extruded-aluminum discharge grille] [Reversible-polycarbonate discharge grille allowing upward and horizontal airflow], tamperproof, and carrying a flame test rating in accordance with UL standard 494.
 - 4. Louvers: [Extruded aluminum with enamel finish] [Stamped aluminum with clear-anodized finish] [Stamped steel with enamel finish]; [white] [bronze] [brown] [beige] <Insert color> color.
 - 5. Finish: [Epoxy coating] [Baked enamel].
 - 6. Access Door: Hinged door in top of cabinet for access to controls.
 - 7. Cabinet Extension: Matching cabinet in construction and finish, allowing diversion of airflow to adjoining room; with grille.
 - 8. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
 - 9. Electrical Subbase: Enameled steel with four adjustable leveling feet and adjustable end plates[, with factory-installed and -wired, fused disconnect switch and receptacle sized for unit].
 - 10. Hydronic Subbase: Enameled steel with six adjustable leveling feet and adjustable end plates with two-row NPS 5/8 (DN 18) copper tube, aluminum-plate finned coil for use with hot water or steam, [normally open] [normally closed] low-voltage electric valve for [hot water] [steam] and provision for mounting receptacle[, with factory-installed and -wired, fused disconnect switch and receptacle sized for unit].

11. Wall Sleeves: **[Galvanized steel with polyester finish] [Galvanized steel with powder-coated paint] [Molded polymer] [Molded fiberglass-reinforced polyester]**.
 - B. Refrigeration System: Direct-expansion indoor coil with capillary restrictor and hermetically sealed scroll compressor with vibration isolation and overload protection.
 1. Indoor and Outdoor Coils: Seamless copper tubes mechanically expanded into aluminum fins **[with capillary tube distributor on indoor coil]**.
 2. Accumulator.
 3. Constant-pressure expansion valve.
 4. Reversing valve.
 5. Charge: **[R-407C] [R-410A]**.
 - C. Indoor Fan: Forward curved, centrifugal; with **[single-] [two-]**speed motor and positive-pressure ventilation damper with **[concealed manual] [electric]** operator.
 - D. Filters: Washable polyurethane in molded plastic frame.
 - E. Condensate Drain: Drain pan **[to direct condensate to outdoor coil for re-evaporation] [and piping to direct condensate to building waste and vent piping]**.
 1. Comply with ASHRAE 62.1 for drain pan construction and connections.
 - F. Outdoor Fan: **[Forward curved, centrifugal] [Propeller] [Forward curved, centrifugal or propeller]** type **[with separate] [driven by indoor fan]** motor.
 1. Indoor and Outdoor Fan Motors: Two speed; comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Fan Motors: Permanently lubricated split capacitor.
 - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - c. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
- 2.4 HEATING
- A. Electric-Resistance Heating Coil: Nickel-chromium-wire, electric-resistance heating elements with contactor and high-temperature-limit switch.
 - B. Hot-Water Heating Coil: Seamless copper tubes mechanically expanded into aluminum fins with two-way modulating control valve and air vent
 - C. Gas Heat:

1. General Requirements for Gas-Fired, Noncondensing Furnaces: Factory assembled, piped, wired, and tested; complying with ANSI Z21.86/CSA 2.32, "Vented Gas-Fired Space Heating Appliances," and with NFPA 54.
2. Type of Gas: **[Natural]** **[Propane]**.
3. Heat Exchanger: **[Aluminized]** **[Stainless]** steel.
4. Burner:
 - a. Gas Valve: 100 percent safety, single-stage main gas valve; main shutoff valve; pressure regulator; safety pilot with electronic flame sensor; limit control, transformer; and combination ignition/fan timer control board.
 - b. Ignition: Electric pilot ignition with hot-surface igniter or electric spark ignition.
5. Gas-Burner Safety Controls:
 - a. Electronic Flame Sensor: Prevents gas valve from opening until pilot flame is proven; stops gas flow on ignition failure.
 - b. Flame Rollout Switch: Installed on burner box; prevents burner operation.
 - c. Limit Control: Fixed stop at maximum permissible setting; de-energizes burner on excessive bonnet temperature; automatic reset.
6. Combustion-Air Inducer: Centrifugal fan prepurges heat exchanger and vents combustion products; thermally protected motor includes sleeve bearings; pressure switch prevents operation if combustion-air inlet or flue outlet is blocked.
7. Furnace Controls: Solid-state board for integrating ignition, heat, cooling, and fan speeds; adjustable fan-on and fan-off timing; and terminals for connection to accessories.

2.5 CONTROLS

- A. Control Module: Unit-mounted digital panel with touchpad temperature control and with touchpad for heating, cooling, and fan operation. Include the following features:
 1. Low-Ambient Lockout Control: Prevents cooling-cycle operation below **40 deg F (5 deg C)** outdoor air temperature.
 2. Heat-Pump Ambient Control: Field-adjustable switch changes to heat-pump heating operation above **40 deg F (5 deg C)** and to supplemental heating below **plus 25 deg F (minus 4 deg C)**.
 3. Temperature-Limit Control: Prevents occupant from exceeding preset **[setback or]** setup temperature.
 4. Building Automation System Interface: Allows remote on-off control with setback temperature control.
 5. Reverse-Cycle Defrost: Solid-state sensor monitors frost buildup on **[indoor]** **[outdoor]** coil and reverses unit to melt frost.
- B. Remote Control: Standard unit-mounted controls with remote-mounted, low-voltage, adjustable thermostat with heat anticipator; **[heat-off-cool-auto]** **[heat-off-cool]** switch; and **[on-auto]** fan switch.

- C. Outdoor Air: Motorized intake damper. Open intake when unit indoor-air fan runs.
- D. Outdoor Air: Manual intake damper.

2.6 CAPACITIES AND CHARACTERISTICS

- A. Airflow: <Insert cfm (L/s)>.
- B. Outdoor-Air Intake Rate: <Insert cfm (L/s)>.
- C. Cooling Capacity:
 - 1. Total: <Insert Btu/h (kW)>.
 - 2. Sensible: <Insert Btu/h (kW)>.
 - 3. Energy-Efficiency Ratio: <Insert number>.
 - 4. Indoor Coil Entering-Air Dry Bulb Temperature: <Insert deg F (deg C)>.
 - 5. Indoor Coil Entering-Air Wet Bulb Temperature: <Insert deg F (deg C)>.
 - 6. Indoor Coil Leaving-Air Dry Bulb Temperature: <Insert deg F (deg C)>.
 - 7. Indoor Coil Leaving-Air Wet Bulb Temperature: <Insert deg F (deg C)>.
 - 8. Outdoor Coil Entering-Air Temperature: <Insert deg F (deg C)>.
- D. Heat-Pump Capacity:
 - 1. Total: <Insert Btu/h (kW)>.
 - 2. Outdoor Temperature: <Insert deg F (deg C)>.
- E. Electric Heat Capacity: <Insert Btu/h (kW)>.
- F. Hydronic Heat Capacity:
 - 1. Total: <Insert Btu/h (kW)>.
 - 2. Entering-Air Temperature: <Insert deg F (deg C)>.
 - 3. Leaving-Air Temperature: <Insert deg F (deg C)>.
 - 4. Water Flow: <Insert gpm (L/s)>.
 - 5. Entering-Water Temperature: <Insert deg F (deg C)>.
 - 6. Leaving-Water Temperature: <Insert deg F (deg C)>.
- G. Gas Heat Capacity:
 - 1. Input: <Insert Btu/h (kW)>.
 - 2. Output: <Insert Btu/h (kW)>.
 - 3. AFUE: [80] <Insert number> percent.
- H. Sound:
 - 1. Indoor: <Insert bels>.
 - 2. Outdoor: <Insert bels>.
- I. Electrical Characteristics:

1. Volts: <Insert value>.
2. Phase: [**Single**] [**Three**].
3. Hertz: 60.
4. Full-Load Amperes: <Insert value>.
5. Minimum Circuit Ampacity: <Insert value>.
6. Maximum Overcurrent Protection: <Insert amperage>.

2.7 SOURCE QUALITY CONTROL

- A. Sound-Power Level Ratings: Factory test to comply with AHRI 300, "Sound Rating and Sound Transmission Loss of Packaged Terminal Equipment."
- B. Unit Performance Ratings: Factory test to comply with AHRI 310/380/CSA C744, "Packaged Terminal Air-Conditioners and Heat Pumps."

2.8 SUPPLEMENTAL CONDENSATE DRAIN PANS

- A. Wherever units equipped for cooling service are installed above facilities such as electrical power equipment, computer equipment, data server or telecommunications equipment, or other electrical or electronic equipment susceptible to malfunction if exposed to water, Contractor shall provide a supplemental drain pan to serve as additional protection against leakage, overflow, or other failure of the primary drain pan normally comprising a part of the air conditioning equipment.
- B. Supplemental drain pans to be constructed of 20 gauge (minimum) galvanized steel, minimum depth 2 inches, fabricated, braced, and supported so as to ensure stability.
- C. Provide drain piping conforming to provisions Division 22 Sections, as applicable, minimum size 3/4 inch, terminating as a visible sight drain discharging to a floor drain or service sink if feasible, or as may otherwise be directed or approved by the DEN Project Manager.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate installation of units with architectural, [**mechanical,**] and electrical work.
- C. Install units level and plumb, maintaining manufacturer's recommended clearances and tolerances.
- D. Install wall sleeves in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."

- E. Install and anchor wall sleeves to withstand, without damage to equipment and structure, seismic forces required by building code.
- F. On water coils, provide shut-off valve on supply line and [**balancing valve**] [**flow control and shut-off valve**] on return line. Provide [**manual**] [**float operated automatic**] air vents at high points complete with stop valve.

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements for piping specified in Section 231123 "Facility Natural-Gas Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to machine to allow service and maintenance.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
 - 2. After installing packaged, terminal air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
 - 3. Unit is level on base and is flashed in exterior wall.
 - 4. Unit casing has no visible damage.
 - 5. Compressor, air-cooled condenser coil, and fans have no visible damage.
 - 6. Labels are clearly visible.
 - 7. Controls are connected and operable.
 - 8. Shipping bolts, blocks, and tie-down straps are removed.
 - 9. Filters are installed and clean.
 - 10. Drain pan and drain line are installed correctly.
 - 11. Electrical wiring installation complies with manufacturer's submittal and installation requirements in electrical Sections.
 - 12. Installation: Perform startup checks according to manufacturer's written instructions, including the following:
 - a. Lubricate bearings on fan.
 - b. Check fan-wheel rotation for correct direction without vibration and binding.

13. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
14. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- D. After operational test, change filters.
- E. Packaged, terminal air conditioners will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Adjust initial temperature set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain packaged, terminal air conditioners.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238113.11

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238113.12 - PACKAGED TERMINAL AIR-CONDITIONERS, FREESTANDING UNITS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify with manufacturers that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system design alternatives that do not include packaged, terminal air conditioners may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes packaged, terminal, freestanding air conditioners.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
1. Provide manufacturer's drawings indicating dimensions, rough-in connections, and electrical characteristics and connection requirements.
 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

See "Sustainable Design Considerations" Article in the Evaluations for discussion on LEED prerequisites and credits.

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For packaged, terminal air conditioners.
1. Include plans, elevations, sections, details for wall penetrations, [**seismic bracing,**] and attachments to other work.
 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.
 4. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
- D. Color Samples: For unit cabinet, discharge grille, and exterior louver, and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For packaged, terminal air conditioners, for tests performed by manufacturer and witnessed by a qualified testing agency.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For packaged, terminal air conditioners to include in emergency, operation, and maintenance manuals.
 - 1. Include manufacturer's descriptive literature, operating instructions, installation instructions, and maintenance and repair data.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Delete paragraph (and subparagraphs below) if mockups not required. If retaining, indicate location, size, and other details of mockups on drawings or with inserts.

Verify mockup requirements with DEN Project Manager.

1.6 MOCKUP

Use this article for assessing full sized erected assemblies required for review of construction coordination of work of several sections, testing, or observation of operation.

- A. Install one (1) unit that includes inside cabinet, wall sleeve, and wall louver.
- B. Locate where directed by DEN Project Manager.

Review requirement below with DEN Project Manager.

- C. Mockup may **[not]** remain as part of the Work.

1.7 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver, store and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Protect finished cabinets from physical damage by leaving factory packing cases in place before installation and providing temporary covers after installation.

1.8 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer agrees to repair or replace components of packaged, terminal air conditioners that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for units and components.

1. Warranty Period for Sealed Refrigeration System: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion, including components and labor.
2. Warranty Period for Nonsealed System Parts: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion, including only components and excluding labor.
3. Warranty Period for Heat Exchangers: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion.]

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

Manufacturers and products listed in SpecAgent and Masterworks Paragraph Builder are neither recommended nor endorsed by the AIA or ARCOM. Before inserting names, verify that manufacturers and products listed there comply with requirements retained or revised in descriptions and are both available and suitable for the intended applications. For definitions of terms and requirements for Contractor's product selection, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Carrier Corporation; a unit of United Technologies Corp.
 2. ClimateMaster, Inc.

3. [Friedrich Air Conditioning Company.](#)
4. [General Electric Company; GE Energy Management - Electrical Distribution.](#)
5. [McQuay International; Daikin Industries.](#)
6. [Suburban Manufacturing Company; a division of AIRXCEL, Inc.](#)
7. **<Insert manufacturer's name>.**
8. or approved equal.

2.2 MANUFACTURED UNITS

Retain first option in "Description" Paragraph below for heating and cooling units and for heat pumps with supplemental heat.

- A. Description: Factory-assembled and -tested, self-contained, packaged, [air conditioning] [**heat pump**] with room cabinet, electric refrigeration system, [**electric**] [**hot water**] [**gas fired**] [**heating,**] and [**built-in**] [**remote**] temperature controls; fully charged with refrigerant and filled with oil; with [**cord-connected**] [**hardwired**] chassis.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1. In addition to establishing minimum ventilation rates, ASHRAE 62.1 includes requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain pan construction and connection, finned-tube coil selection and cleaning, and equipment access. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

- D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.
- E. ASHRAE Thermal Comfort: Applicable requirements in ASHRAE 55.
- F. UL listed and ETL performance certified.

2.3 CHASSIS

- A. Cabinet: [0.052-inch- (1.32-mm-)] **<Insert dimension>** thick [**galvanized**] [**powder-coated**] [**epoxy coated**] [**baked enamel**] steel with removable front panel with concealed latches.

Retain "Mounting," "Top," and "Discharge Grille" subparagraphs below if units are not scheduled on Drawings.

1. Mounting: **[Floor with subbase] [Horizontal] [Vertical]**.
2. Top: **[Angled] [Flat]**.
3. Discharge Grille: **[Punched-louver discharge grille allowing four-way discharge-air pattern] [Extruded-aluminum discharge grille] [Reversible-polycarbonate discharge grille allowing upward and horizontal airflow]**, tamperproof, and carrying a flame test rating in accordance with UL standard 494.
4. Louvers: **[Extruded aluminum with enamel finish] [Stamped aluminum with clear-anodized finish] [Stamped steel with enamel finish]; [white] [bronze] [brown] [beige] <Insert color> color**.
5. Finish: **[Epoxy coating] [Baked enamel]**.
6. Access Door: Hinged door in top of cabinet for access to controls.
7. Cabinet Extension: Matching cabinet in construction and finish, allowing diversion of airflow to adjoining room; with grille.

Retain "Finish of Interior Surfaces" Subparagraph below to comply with LEED Prerequisite IEQ 1 or if required by Project requirements or authorities having jurisdiction. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

8. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

Retain "Electrical Subbase" Subparagraph below for floor-mounted units.

9. Electrical Subbase: Enameled steel with four adjustable leveling feet and adjustable end plates[, **with factory-installed and -wired, fused disconnect switch and receptacle sized for unit**].
10. Hydronic Subbase: Enameled steel with six adjustable leveling feet and adjustable end plates with two-row **NPS 5/8 (DN 18)** copper tube, aluminum-plate finned coil for use with hot water or steam, **[normally open] [normally closed]** low-voltage electric valve for **[hot water] [steam]** and provision for mounting receptacle[, **with factory-installed and -wired, fused disconnect switch and receptacle sized for unit**].
11. Wall Sleeves: **[Galvanized steel with polyester finish] [Galvanized steel with powder coated paint] [Molded polymer] [Molded fiberglass-reinforced polyester]**.

B. Refrigeration System: Direct-expansion indoor coil with capillary restrictor and hermetically sealed scroll compressor with vibration isolation and overload protection.

1. Indoor and Outdoor Coils: Seamless copper tubes mechanically expanded into aluminum fins[**with capillary tube distributor on indoor coil**].

Retain first three subparagraphs below for heat-pump units.

2. Accumulator.
3. Constant-pressure expansion valve.
4. Reversing valve.
5. Charge: **[R-407C] [R-410A]**.

- C. Indoor Fan: Forward curved, centrifugal; with **[single-] [two-]**speed motor and positive-pressure ventilation damper with **[concealed manual] [electric]** operator.

Filters in "Filters" Paragraph below are optional feature. Washable filters may not comply with requirements in ASHRAE 62.1 for a minimum MERV 6, which would not fulfill LEED Prerequisite IEQ 1. Verify filter efficiency with manufacturers.

- D. Filters: Washable polyurethane in molded plastic frame.
- E. Condensate Drain: Drain pan **[to direct condensate to outdoor coil for re-evaporation] [and piping to direct condensate to building waste and vent piping]**.

In subparagraph below, verify drain pan construction and connection requirements with manufacturers if applying for LEED credits or if required by Project requirements or authorities having jurisdiction. ASHRAE 62.1 has specific requirements for drain pan construction and connections.

1. Comply with ASHRAE 62.1 for drain pan construction and connections.

- F. Outdoor Fan: **[Forward curved, centrifugal] [Propeller] [Forward curved, centrifugal or propeller]** type **[with separate] [driven by indoor fan]** motor.

Default motor characteristics are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Indoor and Outdoor Fan Motors: Two speed; comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Fan Motors: Permanently lubricated split capacitor.
 - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - c. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

2.4 HEATING

Retain "Electric-Resistance Heating Coil," "Hot-Water Heating Coil," or "Gas Heat" Paragraph below for heating and cooling units or for heat pumps with supplemental heat.

- A. Electric-Resistance Heating Coil: Nickel-chromium-wire, electric-resistance heating elements with contactor and high-temperature-limit switch.
- B. Hot-Water Heating Coil: Seamless copper tubes mechanically expanded into aluminum fins with two-way modulating control valve and air vent

Gas heat is only provided by Suburban Manufacturing Company.

C. Gas Heat:

1. General Requirements for Gas-Fired, Noncondensing Furnaces: Factory assembled, piped, wired, and tested; complying with ANSI Z21.86/CSA 2.32, "Vented Gas-Fired Space Heating Appliances," and with NFPA 54.
2. Type of Gas: **[Natural]** **[Propane]**.
3. Heat Exchanger: **[Aluminized]** **[Stainless]** steel.
4. Burner:

In "Gas Valve" Subparagraph below, two-stage and modulating gas valves are optional features.

- a. Gas Valve: 100 percent safety, **[two-stage]** **[modulating]** main gas valve; main shutoff valve; pressure regulator; safety pilot with electronic flame sensor; limit control; transformer; and combination ignition/fan timer control board.
 - b. Ignition: Electric pilot ignition with hot-surface igniter or electric spark ignition.
5. Gas-Burner Safety Controls:
- a. Electronic Flame Sensor: Prevents gas valve from opening until pilot flame is proven; stops gas flow on ignition failure.
 - b. Flame Rollout Switch: Installed on burner box; prevents burner operation.
 - c. Limit Control: Fixed stop at maximum permissible setting; de-energizes burner on excessive bonnet temperature; automatic reset.
6. Combustion-Air Inducer: Centrifugal fan prepurges heat exchanger and vents combustion products; thermally protected motor includes sleeve bearings; pressure switch prevents operation if combustion-air inlet or flue outlet is blocked.
7. Furnace Controls: Solid-state board for integrating ignition, heat, cooling, and fan speeds; adjustable fan-on and fan-off timing; and terminals for connection to accessories.

2.5 CONTROLS

LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, Section 5 - "Systems and Equipment," for ventilation system controls. If applying for LEED credits or if required by Project requirements or authorities having jurisdiction, verify that manufacturers can provide units with controls that comply with requirements. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

Select applicable control options.

When packaged equipment needs to be connected to the BAS for monitoring or remote setpoint override, it is the responsibility of the engineer to verify that the packaged controls are fully compatible\controllable with the BAS. Any change orders for controls modifications to make new equipment work will be burdened by the engineer.

- A. Control Module: Unit-mounted digital panel with touchpad temperature control and with touchpad for heating, cooling, and fan operation. Include the following features:
1. Low-Ambient Lockout Control: Prevents cooling-cycle operation below 40 deg F (5 deg C) outdoor air temperature.

Retain "Heat-Pump Ambient Control" Subparagraph below for heat-pump units.

2. Heat-Pump Ambient Control: Field-adjustable switch changes to heat-pump heating operation above 40 deg F (5 deg C) and to supplemental heating below plus 25 deg F (minus 4 deg C).

Retain option "Temperature-Limit Control" Subparagraph below for heating and cooling units and for heat pumps.

3. Temperature-Limit Control: Prevents occupant from exceeding preset[**setback or**] setup temperature.
 4. Building Automation System Interface: Allows remote on-off control with setback temperature control.
 5. Reverse-Cycle Defrost: Solid-state sensor monitors frost buildup on [**indoor**] [**outdoor**] coil and reverses unit to melt frost.
- B. Remote Control: Standard unit-mounted controls with remote-mounted, low-voltage, adjustable thermostat with heat anticipator; [**heat-off-cool-auto**] [**heat-off-cool**] switch; and[**on-auto**] fan switch.

Retain one of two "Outdoor Air" paragraphs below. Retain first paragraph to comply with LEED Prerequisite IEQ 1, which requires compliance with ASHRAE 62.1, or if required by Project requirements or authorities having jurisdiction. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

- C. Outdoor Air: Motorized intake damper. Open intake when unit indoor-air fan runs.
- D. Outdoor Air: Manual intake damper.

2.6 CAPACITIES AND CHARACTERISTICS

If Project has more than one type or configuration of packaged, terminal air conditioners, delete this article and schedule packaged, terminal air conditioners on Drawings.

- A. Airflow: <Insert cfm (L/s)>.

LEED Prerequisite IEQ 1 requires minimum ventilation rates according to ASHRAE 62.1. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

- B. Outdoor-Air Intake Rate: <Insert cfm (L/s)>.
- C. Cooling Capacity:
1. Total: <Insert Btu/h (kW)>.
 2. Sensible: <Insert Btu/h (kW)>.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

3. Energy-Efficiency Ratio: <Insert number>.
4. Indoor Coil Entering-Air Dry Bulb Temperature: <Insert deg F (deg C)>.
5. Indoor Coil Entering-Air Wet Bulb Temperature: <Insert deg F (deg C)>.
6. Indoor Coil Leaving-Air Dry Bulb Temperature: <Insert deg F (deg C)>.
7. Indoor Coil Leaving-Air Wet Bulb Temperature: <Insert deg F (deg C)>.
8. Outdoor Coil Entering-Air Temperature: <Insert deg F (deg C)>.

D. Heat-Pump Capacity:

1. Total: <Insert Btu/h (kW)>.
2. Outdoor Temperature: <Insert deg F (deg C)>.

E. Electric Heat Capacity: <Insert Btu/h (kW)>.

F. Hydronic Heat Capacity:

1. Total: <Insert Btu/h (kW)>.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Leaving-Air Temperature: <Insert deg F (deg C)>.
4. Water Flow: <Insert gpm (L/s)>.
5. Entering-Water Temperature: <Insert deg F (deg C)>.
6. Leaving-Water Temperature: <Insert deg F (deg C)>.

G. Gas Heat Capacity:

1. Input: <Insert Btu/h (kW)>.
2. Output: <Insert Btu/h (kW)>.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

3. AFUE: [80] <Insert number> percent.

H. Sound:

1. Indoor: <Insert bels>.
2. Outdoor: <Insert bels>.

I. Electrical Characteristics:

1. Volts: <Insert value>.
2. Phase: [Single] [Three].
3. Hertz: 60.
4. Full-Load Amperes: <Insert value>.
5. Minimum Circuit Ampacity: <Insert value>.
6. Maximum Overcurrent Protection: <Insert amperage>.

2.7 SOURCE QUALITY CONTROL

- A. Sound-Power Level Ratings: Factory test to comply with AHRI 300, "Sound Rating and Sound Transmission Loss of Packaged Terminal Equipment."
- B. Unit Performance Ratings: Factory test to comply with AHRI 310/380/CSA C744, "Packaged Terminal Air-Conditioners and Heat Pumps."

2.8 SUPPLEMENTAL CONDENSATE DRAIN PANS

- A. Wherever units equipped for cooling service are installed above facilities such as electrical power equipment, computer equipment, data server or telecommunications equipment, or other electrical or electronic equipment susceptible to malfunction if exposed to water, Contractor shall provide a supplemental drain pan to serve as additional protection against leakage, overflow, or other failure of the primary drain pan normally comprising a part of the air conditioning equipment.
- B. Supplemental drain pans to be constructed of 20 gauge (minimum) galvanized steel, minimum depth 2 inches, fabricated, braced, and supported so as to ensure stability.
- C. Provide drain piping conforming to provisions Division 22 Sections, as applicable, minimum size 3/4 inch, terminating as a visible sight drain discharging to a floor drain or service sink if feasible, or as may otherwise be directed or approved by the DEN Project Manager.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate installation of units with architectural, [**mechanical,**] and electrical work.
- C. Install units level and plumb, maintaining manufacturer's recommended clearances and tolerances.
- D. Install exterior louver in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."

Retain paragraph below in seismic areas. Equipment protection may be required for some types of buildings. Verify requirements with model building codes and ASCE/SEI 7.

- E. Install and anchor exterior louver to withstand, without damage to equipment and structure, seismic forces required by building code.

Edit paragraph below.

- F. On water coils, provide shut-off valve on supply line and **[balancing valve] [flow control and shut-off valve]** on return line. Provide **[manual] [float operated automatic]** air vents at high points complete with stop valve.

3.2 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

Retain first paragraph below for units with hot-water supplemental heating.

- A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

Retain first paragraph below for units with gas-fired supplemental heating.

- B. Comply with requirements for piping specified in Section 231123 "Facility Natural-Gas Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to machine to allow service and maintenance.

3.3 FIELD QUALITY CONTROL

Retain "Testing Agency," "Manufacturer's Field Service," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph or if retaining "Manufacturer's Field Service" or "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- C. Perform the following tests and inspections **[with the assistance of a factory-authorized service representative]**:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing packaged, terminal air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Unit is level on base and is flashed in exterior wall.
4. Unit casing has no visible damage.
5. Compressor, air-cooled condenser coil, and fans have no visible damage.
6. Labels are clearly visible.
7. Controls are connected and operable.
8. Shipping bolts, blocks, and tie-down straps are removed.
9. Filters are installed and clean.
10. Drain pan and drain line are installed correctly.
11. Electrical wiring installation complies with manufacturer's submittal and installation requirements in electrical Sections.
12. Installation: Perform startup checks according to manufacturer's written instructions, including the following:
 - a. Lubricate bearings on fan.
 - b. Check fan-wheel rotation for correct direction without vibration and binding.
13. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
14. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. After performance test, change filters.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

E. Packaged, terminal air conditioners will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust initial temperature set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain packaged, terminal air conditioners.

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238113.12

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238113.13 - PACKAGED TERMINAL AIR-CONDITIONERS, OUTDOOR, WALL-MOUNTED UNITS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify with manufacturers that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system design alternatives that do not include packaged, terminal air conditioners may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes packaged, terminal, outdoor, wall-mounted air conditioners.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
1. Provide manufacturer's drawings indicating dimensions, rough-in connections, and electrical characteristics and connection requirements.
 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

See "Sustainable Design Considerations" Article in the Evaluations for discussion on LEED prerequisites and credits.

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For packaged, terminal air conditioners.
1. Include plans, elevations, sections, details for wall penetrations, [**seismic bracing,**] and attachments to other work.
 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.
 4. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
- D. Color Samples: For unit cabinet, discharge grille, and exterior louver, and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For packaged, terminal air conditioners, for tests performed by manufacturer and witnessed by a qualified testing agency.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For packaged, terminal air conditioners to include in emergency, operation, and maintenance manuals.
 - 1. Include manufacturer's descriptive literature, operating instructions, installation instructions, and maintenance and repair data.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Delete paragraph (and subparagraphs below) if mockups not required. If retaining, indicate location, size, and other details of mockups on drawings or with inserts.

Verify mockup requirements with DEN Project Manager.

1.6 MOCKUP

Use this article for assessing full sized erected assemblies required for review of construction, coordination of work of several sections, testing, or observation of operation.

- A. Install one (1) unit that includes inside cabinet, wall sleeve, and wall louver.
- B. Locate where directed by DEN Project Manager.

Review requirement below with DEN Project Manager.

- C. Mockup may **[not]** remain as part of the Work.

1.7 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver, store and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Protect finished cabinets from physical damage by leaving factory packing cases in place before installation and providing temporary covers after installation.
- C. WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- D. Special Warranty: Manufacturer agrees to repair or replace components of packaged, terminal air conditioners that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for units and components.

1. Warranty Period for Sealed Refrigeration System: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion, including components and labor.
2. Warranty Period for Nonsealed System Parts: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion, including only components and excluding labor.
3. Warranty Period for Heat Exchangers: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion.
4. Warranty Period for Energy Recovery Ventilator: : Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

Manufacturers and products listed in SpecAgent and Masterworks Paragraph Builder are neither recommended nor endorsed by the AIA or ARCOM. Before inserting names, verify that manufacturers and products listed there comply with requirements retained or revised in descriptions and are both available and suitable for the intended applications. For definitions of terms and requirements for Contractor's product selection, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bard Manufacturing Company.

2. [Compu-Aire, Inc.](#)
3. [Liebert Corporation.](#)
4. [Marvair.](#)
5. <Insert manufacturer's name>.
6. or approved equal.

2.2 MANUFACTURED UNITS

Retain first option in "Description" Paragraph below for heating and cooling units and for heat pumps with supplemental heat.

- A. Description: Factory-assembled and -tested, self-contained, packaged, terminal [air conditioning] [heat pump] with room cabinet, electric refrigeration system, [**electric**] [**hot water**] [**gas fired**] [**heating**,] and [**built-in**] [**remote**] temperature controls; fully charged with refrigerant and filled with oil; with hardwired chassis and circuit breaker.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1. In addition to establishing minimum ventilation rates, ASHRAE 62.1 includes requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain pan construction and connection, finned-tube coil selection and cleaning, and equipment access. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

- D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.
- E. ASHRAE Thermal Comfort: Applicable requirements in ASHRAE 55.
- F. ASHRAE ERV Testing: Applicable requirements in ASHRAE 84.
- G. AHRI Rating: Applicable requirements in AHRI 1060.
- H. UL listed and ETL performance certified.

2.3 CHASSIS

- A. Cabinet: Sloped top, [0.052-inch- (1.32-mm-)] **<Insert dimension>** thick [**galvanized**] [**powder-coated**] [**epoxy coated**] [**baked enamel**] [**steel**] [**aluminum**] with removable front panel with concealed latches.

Retain "Mounting," "Discharge Grille," and "Return Grille" subparagraphs below if units are not scheduled on Drawings.

1. Mounting: On exterior wall.
2. Discharge Grille: [**Extruded-aluminum discharge grille**] [**Supply-air acoustical plenum**].
3. Return Grille: [**Extruded-aluminum grille**] [**Return-air acoustical plenum**].
4. Louvers: [**Extruded aluminum with enamel finish**] [**Stamped aluminum with clear-anodized finish**]; [**medium bronze**] [**dark bronze**] color.
5. Finish: [**Epoxy coating**] [**Baked enamel**].
6. Access Door: Hinged door in top of cabinet for access to controls.
7. Cabinet Extension: Matching cabinet in construction and finish, allowing diversion of airflow to adjoining room; with grille.
8. Insulation: Cooling and heating sections fully insulated with **1-inch (25-mm)**-thick fiberglass insulation.

Retain "Finish of Interior Surfaces" Subparagraph below to comply with LEED Prerequisite IEQ 1 or if required by Project requirements or authorities having jurisdiction. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

9. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

Retain "Wall Sleeves" Subparagraph below for floor-mounted units.

10. Wall Sleeves: [**Galvanized steel with polyester finish**] [**Molded polymer**] [**Molded fiberglass-reinforced polyester**].
- B. Refrigeration System: Direct-expansion indoor coil with capillary restrictor and hermetically sealed[, **soft-start**] scroll compressor with [**crankcase heater**,] liquid line filter dryer, externally equalized expansion valve, high-pressure switch, [**low-pressure switch**,] [**low-pressure bypass timer**,] [**fan cycle, control, common alarm**,] [**fan cycle, variable speed control, common alarm**,] [**fan cycle, control, lockout relay, common alarm**,] [**fan cycle, variable speed control, lockout relay, common alarm**,] vibration isolation, and overload protection.
1. Indoor and Outdoor Coils: Seamless copper tubes mechanically expanded into aluminum fins[**with capillary tube distributor on indoor coil**].

Retain first three subparagraphs below for heat-pump units.

2. Accumulator.
3. Constant-pressure expansion valve.
4. Reversing valve.
5. Charge: [**R-407C**] [**R-410A**].

- C. Indoor Fan: Forward curved, centrifugal; with **[single] [twin] [constant-] [variable-]speed motor(s)** and positive-pressure ventilation damper with **[concealed manual] [electric]** operator.

Filters in "Filters" Paragraph below are optional feature. Washable filters may not comply with requirements in ASHRAE 62.1 for a minimum MERV 6, which would not fulfill LEED Prerequisite IEQ 1. Verify filter efficiency with manufacturers.

- D. Filters: **[Washable polyurethane in molded plastic frame] [2-inch (25-mm), pleated, disposable MERV 6]**, serviceable from front of the unit.
- E. Condensate Drain: Coated galvanized-steel drain pan **[to direct condensate to outdoor coil for re-evaporation] [and piping to direct condensate to building waste and vent piping]**.

In subparagraph below, verify drain pan construction and connection requirements with manufacturers if applying for LEED credits or if required by Project requirements or authorities having jurisdiction. ASHRAE 62.1 has specific requirements for drain pan construction and connections.

1. Comply with ASHRAE 62.1 for drain pan construction and connections.

- F. Outdoor Fan: **[High-ambient] [Forward curved, centrifugal] [Propeller] [Forward curved, centrifugal, or propeller]** type **[with separate] [driven by indoor fan]** motor.

Default motor characteristics are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Indoor and Outdoor Fan Motors: Two speed; comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Fan Motors: Permanently lubricated split capacitor.
 - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - c. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

- G. Energy Recovery Wheel:

1. Casing: Steel with standard factory-painted finish.
2. Casing seals on periphery of rotor and on duct divider.
3. Support vertical rotors on grease-lubricated ball bearings having extended grease fittings **[or permanently lubricated bearings]**. Support horizontal rotors on tapered roller bearing.
4. Rotor: Polymer segmented wheel strengthened with radial spokes impregnated with nonmigrating, water-selective, molecular-sieve desiccant coating.
5. Drive: Fractional horsepower motor, gear reducer, and self-adjusting multilink belt around outside of rotor.

Default motor characteristics are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

- a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
6. Controls: Starting relay, factory mounted and wired, and manual motor starter for field wiring.

2.4 HEATING

Retain "Electric-Resistance Heating Coil" or "Gas Heat" Paragraph below for heating and cooling units or for heat pumps with supplemental heat.

- A. Electric-Resistance Heating Coil: Nickel-chromium-wire, electric-resistance heating elements with contactor and high-temperature-limit switch.
- B. Gas Heat:
1. General Requirements for Gas-Fired, Noncondensing Furnaces: Factory assembled, piped, wired, and tested; complying with ANSI Z21.86/CSA 2.32, "Vented Gas-Fired Space Heating Appliances," and with NFPA 54.
 2. Type of Gas: **[Natural]** **[Propane]**.
 3. Heat Exchanger: **[Stainless]** steel.
 4. Burner:

In first subparagraph below, two-stage and modulating gas valves are optional features.

- a. Gas Valve: 100 percent safety, **[two-stage]** **[modulating]** main gas valve; main shutoff valve; pressure regulator; safety pilot with electronic flame sensor; limit control; transformer; and combination ignition/fan timer control board.
 - b. Ignition: Electric pilot ignition with hot-surface igniter or electric spark ignition.
 - c. Field conversion kit for high altitude.
5. Gas-Burner Safety Controls:
- a. Electronic Flame Sensor: Prevents gas valve from opening until pilot flame is proven; stops gas flow on ignition failure.
 - b. Flame Rollout Switch: Installed on burner box; prevents burner operation.
 - c. Limit Control: Fixed stop at maximum permissible setting; de-energizes burner on excessive bonnet temperature; automatic reset.

6. Combustion-Air Inducer: Centrifugal fan prepurges heat exchanger and vents combustion products; thermally protected motor includes sleeve bearings; pressure switch prevents operation if combustion-air inlet or flue outlet is blocked.
7. Furnace Controls: Solid-state board for integrating ignition, heat, cooling, and fan speeds; adjustable fan-on and fan-off timing; and terminals for connection to accessories.

2.5 CONTROLS

LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, Section 5 - "Systems and Equipment," for ventilation system controls. If applying for LEED credits or if required by Project requirements or authorities having jurisdiction, verify that manufacturers can provide units with controls that comply with requirements. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

Select applicable control options.

When packaged equipment needs to be connected to the BAS for monitoring or remote setpoint override, it is the responsibility of the engineer to verify that the packaged controls are fully compatible\controllable with the BAS. any change orders for controls modifications to make new equipment work will be burdened by the engineer.

- A. Control Module: Unit-mounted digital panel with touchpad temperature control and with touchpad for heating, cooling, and fan operation. Include the following features:
 1. Low-Ambient Lockout Control: Prevents cooling-cycle operation below 40 deg F (5 deg C) outdoor air temperature.

Retain "Heat-Pump Ambient Control" Subparagraph below for heat-pump units.

2. Heat-Pump Ambient Control: Field-adjustable switch changes to heat-pump heating operation above 40 deg F (5 deg C) and to supplemental heating below plus 25 deg F (minus 4 deg C).

Retain option in "Temperature-Limit Control" Subparagraph below for heating and cooling units and for heat pumps.

3. Temperature-Limit Control: Prevents occupant from exceeding preset[**setback or**] setup temperature.
4. Building Automation System Interface: Allows remote on-off control with setback temperature control.
5. Reverse-Cycle Defrost: Solid-state sensor monitors frost buildup on [**indoor**] [**outdoor**] coil and reverses unit to melt frost.

- B. Remote Control: Standard unit-mounted controls with remote-mounted, low-voltage, adjustable thermostat with heat anticipator; [**heat-off-cool-auto**] [**heat-off-cool**] switch; and[**on-auto**] fan switch.

Retain one of two "Outdoor Air" paragraphs below. Retain first paragraph to comply with LEED Prerequisite IEQ 1, which requires compliance with ASHRAE 62.1, or if required by Project requirements

or authorities having jurisdiction. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

- C. Outdoor Air: Motorized intake damper. Open intake when unit indoor-air fan runs.
- D. Outdoor Air: Manual intake damper.
- E. Economizer Operation: Motorized intake-air damper controlled by an enthalpy sensor and a mixed-air sensor to provide natural cooling when the outdoor air temperature is favorable.
- F. Dual Unit Control (DUC): Hinged cover with two-stage heat/cool thermostat with individual heat/cool setpoints, adjustable interstage differentials and bimetallic elements. The control shall feature a solid-state timer with 1-2-4-8 day sequence, unit lead selector, Unit 1 and 2 power-on LEDs, Unit 1 or 2 lead unit LEDs, 48-hour program save on loss of power, industry standard connections, and 24-volt power from each unit. The DUC shall provide auto sequencing and displays on status and operating status parameters.
- G. Three-Phase Power Rotation Monitor: Three-phase monitoring to protect compressor from reverse rotation and to protect the unit from phase failure. Monitor manually reset.
- H. Ventilation:
 - 1. Extra Ventilation: Section internally mounted, allowing up to 50% outside air and exhaust air through the action of adjustable dampers.
 - 2. Energy Recovery Ventilator: **[One]** **[Two]** rotary washable desiccant wheel(s), insulated cassette frame with seals, three-speed drive motor and belt, and intake and exhaust blowers.
- I. Dehumidification Circuit: Supply-air stream, independent heat exchanger using a separate humidistat, hot gas three-way valve, separate desuperheating condenser circuit, and back drain orifice inserted between the reheat coil and suction line.

2.6 CAPACITIES AND CHARACTERISTICS

If Project has more than one type or configuration of packaged, terminal air conditioners, delete this article and schedule packaged, terminal air conditioners on Drawings.

- A. Airflow: **<Insert cfm (L/s)>**.

LEED Prerequisite IEQ 1 requires minimum ventilation rates according to ASHRAE 62.1. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

- B. Outdoor-Air Intake Rate: **<Insert cfm (L/s)>**.
- C. Cooling Capacity:
 - 1. Total: **<Insert Btu/h (kW)>**.

2. Sensible: <Insert Btu/h (kW)>.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

3. Energy-Efficiency Ratio: <Insert number>.
4. Indoor Coil Entering-Air Dry Bulb Temperature: <Insert deg F (deg C)>.
5. Indoor Coil Entering-Air Wet Bulb Temperature: <Insert deg F (deg C)>.
6. Indoor Coil Leaving-Air Dry Bulb Temperature: <Insert deg F (deg C)>.
7. Indoor Coil Leaving-Air Wet Bulb Temperature: <Insert deg F (deg C)>.
8. Outdoor Coil Entering-Air Temperature: <Insert deg F (deg C)>.

D. Heat-Pump Capacity:

1. Total: <Insert Btu/h (kW)>.
2. Outdoor Temperature: <Insert deg F (deg C)>.

E. Electric Heat Capacity: <Insert Btu/h (kW)>.

F. Hydronic Heat Capacity:

1. Total: <Insert Btu/h (kW)>.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Leaving-Air Temperature: <Insert deg F (deg C)>.
4. Water Flow: <Insert gpm (L/s)>.
5. Entering-Water Temperature: <Insert deg F (deg C)>.
6. Leaving-Water Temperature: <Insert deg F (deg C)>.

G. Gas Heat Capacity:

1. Input: <Insert Btu/h (kW)>.
2. Output: <Insert Btu/h (kW)>.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1. See "Sustainable Design Considerations" Article in the Evaluations for discussion on this prerequisite.

3. AFUE: [80] <Insert number> percent.

H. Exhaust Air:

1. Airflow: <Insert cfm (L/s)>.
2. Face Velocity: <Insert fpm (m/s)>.
3. Summer:
 - a. Entering-Air Temperature, Dry Bulb: <Insert deg F (deg C)>.
 - b. Entering-Air Temperature, Wet Bulb: <Insert deg F (deg C)>.
 - c. Leaving-Air Temperature, Dry Bulb: <Insert deg F (deg C)>.
 - d. Leaving-Air Temperature, Wet Bulb: <Insert deg F (deg C)>.
4. Winter:
 - a. Entering-Air Temperature, Dry Bulb: <Insert deg F (deg C)>.

- b. Entering-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - c. Leaving-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - d. Leaving-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 5. Air-Pressure Drop: **<Insert inches wg (Pa)>**.
- I. Supply Air:
 1. Airflow: **<Insert cfm (L/s)>**.
 2. Face Velocity: **<Insert fpm (m/s)>**.
 3. Summer:
 - a. Entering-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - b. Entering-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - c. Leaving-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - d. Leaving-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 4. Winter:
 - a. Entering-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - b. Entering-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 - c. Leaving-Air Temperature, Dry Bulb: **<Insert deg F (deg C)>**.
 - d. Leaving-Air Temperature, Wet Bulb: **<Insert deg F (deg C)>**.
 5. Air-Pressure Drop: **<Insert inches wg (Pa)>**.
- J. Wheel Drive:
 1. Motor Size: **<Insert horsepower>**.
 2. Motor Electrical Characteristics:
 - a. Volts: **[120] [208] [230] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.
- K. Effectiveness: **<Insert percent>**.
- L. Sound:
 1. Indoor: **<Insert bels>**.
 2. Outdoor: **<Insert bels>**.
- M. Electrical Characteristics:
 1. Volts: **<Insert value>**.
 2. Phase: **[Single] [Three]**.
 3. Hertz: 60.
 4. Full-Load Amperes: **<Insert value>**.
 5. Minimum Circuit Ampacity: **<Insert value>**.
 6. Maximum Overcurrent Protection: **<Insert amperage>**.

2.7 SOURCE QUALITY CONTROL

- A. Sound-Power Level Ratings: Factory test to comply with AHRI 300, "Sound Rating and Sound Transmission Loss of Packaged Terminal Equipment."
- B. Unit Performance Ratings: Factory test to comply with AHRI 310/380/CSA C744, "Packaged Terminal Air-Conditioners and Heat Pumps."

2.8 SUPPLEMENTAL CONDENSATE DRAIN PANS

- A. Wherever units equipped for cooling service are installed above facilities such as electrical power equipment, computer equipment, data server or telecommunications equipment, or other electrical or electronic equipment susceptible to malfunction if exposed to water, Contractor shall provide a supplemental drain pan to serve as additional protection against leakage, overflow, or other failure of the primary drain pan normally comprising a part of the air conditioning equipment.
- B. Supplemental drain pans to be constructed of 20 gauge (minimum) galvanized steel, minimum depth 2 inches, fabricated, braced, and supported so as to ensure stability.
- C. Provide drain piping conforming to provisions Division 22 Sections, as applicable, minimum size 3/4 inch, terminating as a visible sight drain discharging to a floor drain or service sink if feasible, or as may otherwise be directed or approved by the DEN Project Manager.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate installation of units with architectural, [**mechanical,**] and electrical work.
- C. Install units level and plumb, maintaining manufacturer's recommended clearances and tolerances.
- D. Install wall sleeves in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."

Retain paragraph below in seismic areas. Equipment protection may be required for some types of buildings. Verify requirements with model building codes and ASCE/SEI 7.

- E. Install and anchor wall sleeves to withstand, without damage to equipment and structure, seismic forces required by building code.

Edit paragraph below.

- F. On water coils, provide shut-off valve on supply line and **[balancing valve] [flow control and shut-off valve]** on return line. Provide **[manual] [float operated automatic]** air vents at high points complete with stop valve.

3.2 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

Retain first paragraph below for units with hot-water supplemental heating.

- A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

Retain first paragraph below for units with gas-fired supplemental heating.

- B. Comply with requirements for piping specified in Section 231123 "Facility Natural-Gas Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to machine to allow service and maintenance.

3.3 FIELD QUALITY CONTROL

Retain "Testing Agency," "Manufacturer's Field Service," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph or if retaining "Manufacturer's Field Service" or "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- C. Perform the following tests and inspections **[with the assistance of a factory-authorized service representative]**:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing packaged, terminal air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Unit is level on base and is flashed in exterior wall.
4. Unit casing has no visible damage.
5. Compressor, air-cooled condenser coil, and fans have no visible damage.
6. Labels are clearly visible.
7. Controls are connected and operable.
8. Shipping bolts, blocks, and tie-down straps are removed.
9. Filters are installed and clean.
10. Drain pan and drain line are installed correctly.
11. Electrical wiring installation complies with manufacturer's submittal and installation requirements in electrical Sections.
12. Installation: Perform startup checks according to manufacturer's written instructions, including the following:
 - a. Lubricate bearings on fan.
 - b. Check fan-wheel rotation for correct direction without vibration and binding.
13. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
14. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. After performance test, change filters.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

E. Packaged, terminal air conditioners will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust initial temperature set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain packaged, terminal air conditioners.

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238113.13

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238119 - SELF-CONTAINED AIR-CONDITIONERS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify, with manufacturers, that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system design alternatives that do not include self-contained air conditioners may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes packaged, [air] [water]-cooled air-conditioning units with refrigerant compressors and controls intended for indoor installations.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in

this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories.

1. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.
3. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

D. Samples for Initial Selection: For units with factory-applied color finishes.

1.4 INFORMATIONAL SUBMITTALS

A. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For self-contained air conditioners to include in emergency, operation, and maintenance manuals.

1. Include manufacturer's descriptive literature, operating instructions, installation

instructions, maintenance and repair data, and parts listing.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Filters: [One (1)] <Insert number> set(s) of filters for each unit.
 - 2. Fan Belts: [One (1)] <Insert number> set(s) of belts for each unit.
 - 3. Gaskets: [One (1)] <Insert number> set(s) for each access door.
 - 4. Fuses: [One (1)] <Insert number> set(s) for each air-handling unit.

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ARI Compliance:

Retain one or more of three subparagraphs below depending on types of units in Project. Retain first subparagraph for units with cooling capacity less than 65,000 Btu/h (19 kW); retain second subparagraph for units with cooling capacity from 65,000 to 250,000 Btu/h (19 to 73 kW); retain third subparagraph for vertical configuration in a commercial or industrial application.

- 1. Applicable requirements in ARI 210/240.
- 2. Applicable requirements in ARI 340/360.
- 3. Applicable requirements in ARI 390.

- C. ASHRAE Compliance:

- 1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."

"ASHRAE Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1. In addition to establishing minimum ventilation rates, ASHRAE 62.1 includes requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain pan construction and connection, finned-tube coil selection and cleaning, and equipment access. See "LEED Rating System" Article in the Evaluations for discussion on this

prerequisite. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

"ASHRAE/IESNA" Compliance Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1. See "LEED Rating System" Article in the Evaluations for discussion on this prerequisite.

- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

1.8 COORDINATION

Retain this article for larger units to be installed on a base.

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."

1.9 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws. Coordinate with Section 016000 "Product Requirements."

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of self-contained air conditioners that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for units and components with manufacturers listed.

1. Warranty Period:

Retain the applicable level of warranty in three subparagraphs below. Flexibility exists in the level of warranty that can be purchased; not all manufacturers' standard warranty is the same and differences add/subtract base unit cost. Extended warranties will affect construction costs.

- a. For Compressor: Minimum **[One (1)] [Five (5)] <Insert number>** year(s) from date of Substantial Completion.
- b. For Parts: Minimum **[One (1)] [Five (5)] <Insert number>** year(s) from date of Substantial Completion.
- c. For Labor: Minimum **[One (1)] [Five (5)] <Insert number>** year(s) from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain the paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bard Manufacturing Company.
 2. Carrier Corporation; Home Comfort and HVAC Building & Industrial Systems.
 3. Engineered Air.
 4. Marshall Engineered Products Co. (MEPCO).
 5. McQuay International.
 6. Trane Inc.
 7. USA Coil & Air.
 8. Whalen Company (The).
 9. **<Insert manufacturer's name>.**
 10. or approved equal.

2.2 PACKAGED UNITS

- A. Description: Factory assembled, wired, and tested; and fully charged with refrigerant and oil.

Retain one of three "Configuration" paragraphs below.

- B. Configuration: Horizontal, ceiling[-**plenum**] mounted.
- C. Configuration: Vertical, floor mounted; [**vertical**] [**and**] [**horizontal**] discharge.
- D. Configuration: Horizontal, ceiling mounted and vertical, floor mounted; [**vertical**] [**and**] [**horizontal**] discharge.
- E. Disconnect Switch: Factory mounted [**in control panel**] [**on cabinet**].

2.3 Cabinet

- A. Frame and Panels: Structural-steel frame with galvanized-steel panels and access doors or panels.

Retain first subparagraph below if units are exposed in finished spaces.

1. Exterior-Surface Finish: Factory painted in color selected by DEN Project Manager.

ASHRAE compliance in "Interior-Surface Finish" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1. See "LEED Rating System" Article in the Evaluations for discussion on this prerequisite.

2. Interior-Surface Finish: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
 - B. Insulation: **1-inch-** (25-mm-) thick, glass-fiber duct liner complying with ASTM C 1091 and having a microbial coating on cabinet interior and control panel. **1/2-inch-** (13-mm-) thick liner is acceptable for units smaller than **15 tons** (50 kW).
 - C. Return-Air Opening: Rear, **[open] [flange for duct connection]**.
 - D. Corrosion-Resistant Treatment: Phenolic coating on unit interior and exterior.
- 2.4 Supply-air Fan
- A. Fan Material: Galvanized steel.

For units 15 tons (50 kW) and smaller, "forward-curved" option in first paragraph below may be the only fan choice.

- B. Configuration: Double-width, double-inlet, **[forward-curved] [airfoil]** centrifugal fan; statically and dynamically balanced. **[Vertical] [Horizontal]** discharge with flexible discharge collar.

Retain one of two drive types in first paragraph below. For units larger than 15 tons (50 kW), first option may be the only choice.

- C. Drive: **[Belt, with fan mounted on permanently lubricated bearings] [Direct, with fan and motor resiliently mounted]**.

Retain first three paragraphs below for belt-driven units.

- D. Fan Sheaves: Variable pitch, dynamically balanced, bored to fit shafts, and keyed for initial startup.
- E. Motor Sheave: Variable and adjustable pitch, dynamically balanced, and selected to achieve specified rpm when set at midposition.
- F. Belt Rating: As recommended by manufacturer or a minimum of one and one-half times nameplate rating of motor.

Retain "Bearings" and "Variable Air Volume" paragraphs below for units larger than 15 tons (50 kW).

- G. Bearings: Grease lubricated with grease lines extended to exterior of unit[**with L-50 life at 200,000 hours**].
- H. Variable Air Volume: Variable-frequency motor controller[**with bypass**].

Default motor characteristics are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

- I. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - 1. Special Motor Features: Premium efficiency, as defined in Section 230513 "Common Motor Requirements for HVAC Equipment."

If unique characteristics are required for motors in this Section, insert in subparagraph below.

- 2. **<Insert unique motor characteristics>**.

Retain first paragraph below for units larger than 15 tons (50 kW).

- J. Isolation: Mount fan and motor on common subbase and mount assembly on spring isolators with minimum static deflection of [**1 inch (25 mm)**] **<Insert dimension>**.
- K. Outdoor-Air-Intake Accessories:
 - 1. Barometric Outdoor-Air Damper: Adjustable-blade damper allowing induction of up to 25 percent outdoor air when evaporator fan is running.
 - 2. Motorized Outdoor-Air Damper: Motorized, two-position blade damper allowing induction of up to 25 percent outdoor air; with spring-return, low-voltage damper motor.
 - 3. Energy-Recovery Ventilator: Assembly of desiccant-coated, heat-recovery wheels and centrifugal exhaust fans to transfer approximately 67 percent of the difference between the sensible and latent heat of outdoor and exhaust air.
 - 4. Air-Side Economizer: Damper assembly allowing induction of up to 100 percent outdoor air to maintain a selected mixed-air temperature; and exhaust damper and spring-return, low-voltage, modulating damper motor with minimum position adjustment.

2.5 REFRIGERATION SYSTEM

- A. Compressor: Scroll type, hermetically sealed, 3600 rpm maximum, and resiliently mounted with positive lubrication and internal motor protection.
- B. Refrigerant Coils (Indoor and Outdoor for Air-Cooled Units): Seamless copper tubes expanded into aluminum fins.

Corrosion-resistant treatment in first subparagraph below is an optional feature.

- 1. Corrosion-Resistant Treatment: Phenolic coating applied with multiple dips and baked.

Retain options in first subparagraph below for units larger than 15 tons (50 kW).

2. Refrigerant Circuits: A separate circuit for each compressor, with externally equalized thermal-expansion valve[**with adjustable superheat**], filter dryer,[**sight glass, high-pressure relief valve,**] and charging valves.

ASHRAE compliance option in first subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain first option in first subparagraph to comply with LEED Prerequisite IEQ 1. See "LEED Rating System" Article in the Evaluations for discussion on this prerequisite.

3. Mount coil assembly over stainless-steel drain pan[**complying with ASHRAE 62.1**] [and] [having a condensate pump unit with integral float switch, pump-motor assembly, and condensate reservoir].

Retain option in first subparagraph below if any refrigerant type is acceptable. Delete to comply with LEED-NC, LEED-CS, and LEED for Schools Credit EA 4.

4. Refrigerant: [R-22,]R-407C or R-410A.

First subparagraph below is required for heat-pump units only. Retain other appropriate components to suit Project.

5. Expansion valve with replaceable thermostatic element.
6. Refrigerant dryer.
7. High-pressure switch.
8. Low-pressure switch.
9. Thermostat for coil freeze-up protection during low ambient temperature operation or loss of air.
10. Low ambient temperature switch.
11. Brass service valves installed in discharge and liquid lines.

C. Water-Cooled Condenser:

1. Description: Factory assembled and tested; tube in tube coaxial type with water-regulating valve.
2. Tubing: [Nonferrous] [Copper] [Cupro-nickel] inner tube; [steel with corrosion-resistant coating;]refrigerant and water-side leak tested to 400 psig (2760 kPa) underwater.

Retain "Water-Side Economizer Section" Paragraph below for water-cooled units only.

D. Water-Side Economizer Section:

1. Description: Factory assembled and tested; consisting of water coil, modulating valves, controls, piping with cleanouts, and access panels.
2. Water Coil: [Two] [Four] rows, copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), and [copper] [cast-iron] headers; leak tested to 300 psig (2070 kPa) underwater; and having a two-position control valve.

2.6 Heating Coil

Retain one of two paragraphs below if unit includes heating.

- A. Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch** (2.5 mm); leak tested to **300 psig** (2070 kPa) underwater; and having a two-position control valve.
- B. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements with refractory ceramic support bushings; automatic-reset thermal cutout; built-in magnetic contactors; manual-reset thermal cutout; airflow-proving device; and one-time fuses in terminal box for overcurrent protection.

2.7 CONTROLS

- A. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- B. Control Package: Factory wired, including contactor, high- and low-pressure cutouts, internal-winding thermostat for compressor, control-circuit transformer, and noncycling reset relay.
- C. Time-Delay Relay: Five-minute delay to prevent compressor cycling.

Revise first paragraph below to suit unit configuration.

- D. Adjustable Thermostat: [**Unit mounted**] [**Remote**] to control the following:
 - 1. Supply fan.
 - 2. Compressor.
 - 3. Condenser.
 - 4. Hot-water coil valve.
 - 5. Electric heater.
- E. System Selector Switch: [**Heat-off-cool**] [**Off-heat-auto-cool**].
- F. Fan Control Switch: Auto-on.

Time clock in first paragraph below is an optional accessory for units larger than 15 tons (50 kW).

- G. Time Clock: Cycle unit on and off.
- H. Microprocessor Control Panel: Controls unit functions as standalone or network operation, including refrigeration and safety controls, with unit-mounted display, and the following:

Revise subparagraphs below to suit unit configuration.

- 1. Supply fan.
- 2. Supply-fan motor speed.
- 3. Compressors.
- 4. Air-cooled condenser.
- 5. Cooling tower pump.

6. Modulating, hot-water coil valve.
7. Multistep, electric heater.
8. Time-of-day control to cycle unit on and off.
9. Night-heat, morning warm-up cycle.
10. Economizer control.
11. Panel-mounted control switch to operate unit in remote or local control mode or to stop or reset.
12. Panel-mounted indication of the following:
 - a. Operating status.
 - b. System diagnostics and safety alarms.
 - c. Supply-air temperature set point.
 - d. Zone heating-temperature set point.
 - e. Supply-air pressure set point.
 - f. Economizer minimum position set point.
 - g. Supply-air-pressure, high-limit set point.

LEED-NC and LEED for Schools Credit EA 5, LEED-CI Credit EA 3, and LEED-CS Credit EA 5.1 require continuous metering equipment for monitoring building's energy consumption performance over time. Retain five subparagraphs below if required to comply with the requirements for this credit. Verify availability of control features with unit manufacturers.

- h. Monitor constant and variable motor loads.
- i. Monitor variable-frequency drive operation.
- j. Monitor economizer cycle.
- k. Monitor cooling load.
- l. Monitor air distribution static pressure and ventilation air volumes.

If Project has more than one type or configuration of self-contained air conditioner, delete article below and schedule self-contained air conditioners on Drawings.

2.8 CAPACITIES AND CHARACTERISTICS

A. Cooling Capacity:

1. Total: <Insert Btu/h (kW)>.
2. Sensible: <Insert Btu/h (kW)>.

Retain first subparagraph below for units with cooling capacity of 5 tons (17 kW) or less.

3. Seasonal Energy Efficiency Ratio: [10.0] [12.0] [13.0] [14.0] [16.0] <Insert ratio>.

Retain first subparagraph below for units with cooling capacity of more than 5 tons (17 kW).

4. Energy Efficiency Ratio: [10.0] [12.0] [13.0] [14.0] [16.0] <Insert ratio>.
5. Moisture Removal Rate: <Insert pints/h (L/h)>.
6. Entering-Air Temperature:
 - a. Dry Bulb: <Insert deg F (deg C)>.
 - b. Wet Bulb: <Insert deg F (deg C)>.
7. Leaving-Air Temperature:

- a. Dry Bulb: <Insert deg F (deg C)>.
- b. Wet Bulb: <Insert deg F (deg C)>.

B. Heating Capacity:

1. Total: <Insert Btu/h (kW)>.
2. Air-Temperature Rise: <Insert deg F (deg C)>.
3. Heat Pump:
 - a. Coefficient of Performance: <Insert value>.
 - b. Heating Season Performance Factor: [7.7] [8.0] <Insert value>.
4. Hot Water:
 - a. Entering-Water Temperature: <Insert deg F (deg C)>.
 - b. Leaving-Water Temperature: <Insert deg F (deg C)>.
 - c. Water Flow: <Insert gpm (L/s)>.
 - d. Water Pressure Drop: <Insert feet of head (kPa)>.
5. Electric Heat:
 - a. Total Capacity: <Insert Btu/h (kW)>.
 - b. Air-Temperature Rise: <Insert deg F (deg C)>.
 - c. Control Steps: [One] [Two] [Three] <Insert number>.

Auxiliary heat may be required for heat-pump units.

C. Auxiliary Electric Heat:

1. Total Capacity: <Insert Btu/h (kW)>.
2. Air-Temperature Rise: <Insert deg F (deg C)>.
3. Control Steps: [One] [Two] [Three] <Insert number>.

D. Supply-Air Fan:

1. Fan motor.
2. Size: <Insert value> hp.
3. [Multispeed, PSC] [Open-dripproof] [Totally enclosed fan-cooled] type.
4. Total Airflow:

Retain first two subparagraphs below for variable-speed fans.

- a. High: <Insert cfm (L/s)>.
- b. Low: <Insert cfm (L/s)>.

5. Outdoor Airflow: <Insert cfm (L/s)>.

E. Air-Cooled Condenser:

1. Fan Quantity: [Two] [Four] <Insert number>.
2. Motor Speed: <Insert value> rpm.

3. Motor Horsepower: <Insert value>.

F. Water-Cooled Condenser:

1. Entering-Water Temperature: <Insert deg F (deg C)>.
2. Leaving-Water Temperature: <Insert deg F (deg C)>.
3. Water Flow: <Insert gpm (L/s)>.
4. Water Pressure Drop: <Insert feet of head (kPa)>.

G. Filters:

1. Prefilters:

- a. Type: [Flat] [Pleated] disposable panel.
- b. MERV: <Insert number>.
- c. Face Area: <Insert sq. ft. (sq. m)>.
- d. Surface Area: <Insert sq. ft. (sq. m)>.
- e. Thickness or Depth: [2 inches (50 mm)] [4 inches (100 mm)].
- f. Number of Filters: <Insert number>.
- g. Maximum or Rated Face Velocity: <Insert fpm (m/s)>.
- h. Initial Resistance: <Insert inches wg (Pa)>.
- i. Recommended Final Resistance: <Insert inches wg (Pa)>.
- j. Access Location: [Front] [Back] [Side].

2. Final Filter:

- a. Type: [Flat] [Pleated] disposable panel.

LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher. See "LEED Rating System" Article in the Evaluations for discussion on this prerequisite.

- b. MERV: <Insert number>.
- c. Face Area: <Insert sq. ft. (sq. m)>.
- d. Surface Area: <Insert sq. ft. (sq. m)>.
- e. Thickness or Depth: [2 inches (50 mm)] [4 inches (100 mm)].
- f. Number of Filters: <Insert number>.
- g. Maximum or Rated Face Velocity: <Insert fpm (m/s)>.
- h. Initial Resistance: <Insert inches wg (Pa)>.
- i. Recommended Final Resistance: <Insert inches wg (Pa)>.
- j. Access Location: [Front] [Back] [Side].

H. Accessories:

1. Manual outdoor-air damper.
2. Motorized outdoor-air damper.
3. Air-side economizer.
4. Water-side economizer.
5. Hot-gas bypass.

Retain subparagraph below for units larger than 15 tons (50 kW).

6. Air Pressure Switch: Indicates when differential pressure exceeds set point representing dirty filters.

- I. Single-Point Electrical Characteristics:
 - 1. Volts: [**120**] [**208**] [**230**] [**460**] <Insert value>.
 - 2. Phase: [**Single**] [**Three**].
 - 3. Hertz: 60.
 - 4. Full-Load Amperes: <Insert value>.
 - 5. Minimum Circuit Ampacity: <Insert value>.
 - 6. Maximum Overcurrent Protection: <Insert amperage>.

- J. Radiated Noise Requirements:
 - 1. Radiated noise shall not exceed the following values:
 - a. NC 35 – In Office.
 - b. NC 40 – Terminal/Concourse.
 - c. NC 45 – Maintenance Facilities.

2.9 SUPPLEMENTAL CONDENSATE DRAIN PANS

- A. Wherever units equipped for cooling service are installed above facilities such as electrical power equipment, computer equipment, data server or telecommunications equipment, or other electrical or electronic equipment susceptible to malfunction if exposed to water, Contractor shall provide a supplemental drain pan to serve as additional protection against leakage, overflow, or other failure of the primary drain pan normally comprising a part of the air conditioning equipment.

Edit paragraph below.

- 1. Supplemental drain pans to be constructed [**as detailed on the drawings**] [**of 20 gauge (minimum) galvanized steel, minimum depth 2 inches, fabricated, braced, and supported so as to ensure stability.**]
- 2. Provide drain piping conforming to provisions Division 22 sections, as applicable, minimum size 3/4 inch, terminating as a visible sight drain discharging to a floor drain or service sink if feasible, or as may otherwise be directed or approved by the DEN Project Manager.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install units level and plumb.
- B. Install evaporator-fan components using manufacturer's standard mounting devices, and securely anchor units to structure.

Retain paragraph below if seismic design is required.

- C. Install seismic restraints.

Select one of two paragraphs below. First is minimum required.

- D. Install compressor-condenser components on restrained, spring isolators with a minimum static deflection of [**1 inch (25 mm)**] <Insert number>.
- E. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.
- F. Install ground-mounting, compressor-condenser components on 4-inch- (100-mm-) thick, reinforced concrete base; 4 inches (100 mm) larger on each side than unit. Concrete, reinforcement, and formwork are specified in Division 3. Coordinate anchor installation with concrete base.

Retain paragraph above or first paragraph below.

- G. Install ground-mounting, compressor-condenser components on polyethylene mounting base.

3.2 CONNECTIONS

Retain first two paragraphs below if unit has water piping connections. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

Retain first subparagraph below for units with hot-water coils.

1. Water Coil Connections: Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Connect to supply and return coil with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.

Retain subparagraph below for units with water-cooled condenser.

2. Water-Cooled Condenser Connections: Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Connect to supply and return with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.
 - C. Provide shut-off valves in condenser water inlet and outlet piping.

Select one option in paragraph below.

- D. Pipe drain pan condensate to [**nearest floor drain.**] [**condensate drainage system.**]

Retain paragraph below for units connected to ducts. Coordinate duct installation requirements with schematics on Drawings and with requirements specified for duct systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- E. Duct Connections: Duct installation requirements are specified in Section 233113 "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply[**and return**] ducts to self-contained air conditioners with flexible duct connectors. Flexible duct connectors are specified in Section 233300 "Air Duct Accessories."
- F. Ground equipment according to Division 26.
- G. Electrical Connections: Comply with requirements in Division 26 for power wiring, switches, and motor controls.

3.3 FIELD QUALITY CONTROL

Retain first paragraph below to require a factory-authorized service representative to perform inspections, tests, and adjustments.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

- C. Tests and Inspections:
 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation, and inspect for refrigerant leaks.
 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- D. Units will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. **<Insert startup steps if any.>**

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain units.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238119

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238123 - COMPUTER-ROOM AIR-CONDITIONERS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify with manufacturers that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system design alternatives that do not include computer-room air conditioners may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Floor-mounted computer-room air conditioners, 6 tons (21 kW) and larger.
 - 2. Floor-mounted computer-room air conditioners, 5 tons (18 kW) and smaller.
 - 3. Ceiling-mounted computer-room air conditioners.
 - 4. Console computer-room air conditioners.
- B. Related Sections:

Retain Sections in subparagraph below that contain requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 230900 "Instrumentation and Control for HVAC" for installation and wiring of thermostats and control components.
2. Section 260583 "Electrical Connections for Equipment" for installation and wiring of thermostats and control components.

C. Scope:

1. These specifications describe requirements for a precision environmental control system. The system shall be designed to maintain temperature and humidity conditions in the rooms containing electronic equipment.
2. The manufacturer shall design and furnish all equipment to be fully compatible with heat dissipation requirements of the room.

D. Design Requirements and Ratings: As indicated on the drawings.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- E. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITION

Retain definition remaining after this Section has been edited.

- A. DDC: Direct digital control.

1.4 PERFORMANCE REQUIREMENTS

Retain this article with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction.

- A. Seismic Performance: Computer-room air conditioners shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

- 1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 - 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For computer-room air conditioners. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Wiring Diagrams: For power, signal, and control wiring.

Coordinate sample requirements with DEN Project Manager.

- D. Color Samples: For unit cabinet, discharge grille, and exterior louver and for each color and texture specified.

1.6 INFORMATIONAL SUBMITTALS

Retain first paragraph below if Drawings do not include detailed plans or if Project involves unusual coordination requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, using input from Installers of the items involved.

Retain first paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC." See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: For computer-room air conditioners, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- C. Field quality-control reports.
- D. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For computer-room air conditioners to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fan Belts: **[One (1)] <Insert number>** set(s) for each belt-driven fan.
 - 2. Filters: **[One (1)] <Insert number>** set(s) of filters for each unit.

1.9 MAINTENANCE SERVICE

Select one below. First number is minimum required.

- A. Furnish service and maintenance of computer room air conditioning unit system for **[one (1) year] [Insert number]** from Date of Substantial Completion.

1.10 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE Compliance:
 - 1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."

"ASHRAE Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1. In addition to establishing minimum ventilation rates, ASHRAE 62.1 includes

requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain pan construction and connection, finned-tube coil selection and cleaning, and equipment access. See "LEED Rating System" Article in the Evaluations for discussion on this prerequisite. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

"ASHRAE/IESNA Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1. See "LEED Rating System" Article in the Evaluations for discussion on this prerequisite.

- C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
- D. ASME Compliance: Fabricate and label water-cooled condenser shell to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

1.11 COORDINATION

Revise first paragraph below to delete or insert types of construction that penetrate, or are supported by, ceilings.

- A. Coordinate layout and installation of computer-room air conditioners and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.
- B. Coordinate installation of computer-room air conditioners with computer-room access flooring Installer.

Retain first paragraph below for units mounted on concrete bases.

- C. Coordinate sizes and locations of concrete bases with actual equipment provided.

Retain paragraph below for remote air-cooled refrigerant condensers and remote, air-cooled, glycol-solution coolers.

- D. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.12 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to

repair or replace components of computer-room air conditioners that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for units and components with manufacturers listed in Part 2 articles.

1. Warranty Period for Compressors: Manufacturer's standard, but not less than **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.
2. Warranty Period for Humidifiers: Manufacturer's standard, but not less than **[three (3)] <Insert number>** years from date of Substantial Completion.
3. Warranty Period for Control Boards: Manufacturer's standard, but not less than **[three (3)] <Insert number>** years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Radiated noise shall not exceed:
 1. NC 35 - In Office.
 2. NC 40 - Terminal/Concourse.
 3. NC 45 - Maintenance Facilities.

2.2 FLOOR-MOUNTED UNITS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Liebert
 2. Data Aire, Inc.
 3. **<Insert manufacturer>**
 4. or approved equal.
- B. Cabinet and Frame Construction:
 1. The frame shall be constructed of welded tubular steel and shall be painted

using the autophoretic coating process for maximum corrosion protection. The exterior panels shall be insulated with a minimum 1 in of 1.5 lbs. density coated acoustic liner. Doors shall be not less than 18 gage steel, hinged and equipped with polyurethane gaskets and concealed fasteners. The main front panel shall have captive 1/4 turn fasteners. The main unit color shall be as selected by the DEN Project Manager. Panels and filter chambers shall be as follows:

Select from following options; edit as needed.

2. Heavy gauge panels (on upflow units): The exterior panels shall be 16 gauge steel for operation with high external static pressures.
3. Filter Chamber (Downflow units): The filter chamber shall be an integral part of the system, located within the cabinet serviceable from the end of the unit or the top of the unit (if there is no plenum). The filters shall be of 4-inch thickness and shall be rated not less than 85 % efficiency based on ASHRAE 52.1.
4. Filter chamber (upflow units w/front and bottom return): The filter chamber shall be an integral part of the system, located within the cabinet, serviceable from the end of the unit. The filters shall be of 4-inch thickness and shall be rated not less than 85 % efficiency based on ASHRAE 52.1.
5. Filter chamber (upflow units w/rear return): The filter units chamber shall be located on the back of the cabinet, serviceable from the end of the unit. The filters shall be of 4-inch thickness and shall be rated not less than 85 % efficiency based on ASHRAE 52.1.

C. Fan Section:

1. The fan section shall be designed for the specified CFM at an external static pressure of as indicated. The fans shall be centrifugal type, double width double inlet, and shall be statically and dynamically balanced as a completed assembly to a maximum vibration level of two mils in any plane. The shaft shall be heavy duty steel with self-aligning ball bearings with a minimum life span of 100,000 hours. The fan motor shall be mounted on an adjustable slide base. The drive package shall be multi-belt, variable speed, sized for 200% of the fan motor horsepower. The fans shall be located to draw air over the A-Frame coil to ensure even air distribution and maximum coil performance.

Sound testing and sound performance shall not be waived. review the table below for compliance with NC-40 criteria.

2. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Discharge	64	57	51	47	42	39	38	37
Inlet	64	57	51	47	42	39	38	37

D. Humidifier:

Select type and edit as required for Project.

1. Infrared humidifier: The humidifier shall be of the infrared type consisting of high intensity quartz lamps mounted above and out of the water supply. The

evaporator pan shall be stainless steel and arranged to be serviceable without disconnecting high voltage electrical connections. The complete humidifier section shall be pre-piped ready for final connection. The infrared humidification system shall use bypass air to prevent over-humidification of the computer room. The humidifier shall have a capacity as indicated on the drawings and shall be equipped with an automatic water supply system. The system shall have an adjustable water-overfeed to prevent mineral precipitation.

2. Steam generating humidifier: The environmental control system shall be equipped with a steam generating humidifier that is controlled by the microprocessor control system. It shall be complete with disposable canister, all supply and drain valves, steam distributor, and electronic controls. The need to change canister shall be annunciated on the microprocessor control panel. The humidifier shall be designed to operate with water conductivity from 200-500 micromhos.

E. Reheat Provisions:

Select from following options; edit as needed for Project.

1. Electric reheat: The electric reheat coils shall be low watt density, 304/304 stainless steel fin tubular construction, protected by thermal safety switches, shall be rated as shown on the drawings and controlled in three stages.
2. Hot water reheat: The hot water reheat coil shall have copper tubes and aluminum fins with a capacity as shown on the drawings when supplied with entering water temperature indicated. The control system shall be factory pre-piped with a 2-way modulating control valve and cleanable Y-strainer.

F. Control processor:

Select this "Standard" system of the "Advanced" type system described in the following Article; edit as needed for Project.

1. Standard control processor: The control system shall be microprocessor based. The system shall be provided with two 0.43 inch high, seven-segment LED numerical displays to allow observation of room temperature and humidity and each settable function. Normal Operating Modes (Heating, Cooling, Humidification, Dehumidification) shall be indicated by colored LEDs on the unit-mounted display panel.
 - a. Control: The control system shall allow programming of the following room conditions:
 - 1) Temperature Setpoint: 65-85 degrees F.
 - 2) Temperature Sensitivity: 1 to 5 degrees F.
 - 3) Humidity Setpoint: 40-60% R.H.
 - 4) Humidity Sensitivity: 1% to 10% R.H.
 - 5) Humidifier Flush Rate.
 - b. Compressor Short-Cycle Control: The control system shall prevent compressor short-cycling by a 3-minute timer from compressor stop to the next start.

- c. Alarms: The control system shall monitor unit operation and activate an audible and visual alarm in the event of the following factory preset alarm conditions:

- 1) High Temperature.
- 2) Low Temperature.
- 3) High Humidity.
- 4) Low Humidity.
- 5) Restricted Air Filters.
- 6) Loss of Air.
- 7) High Head Pressure.
- 8) Local Alarm.

G. Advanced Microprocessor Control w/Graphics

1. The advanced control processor shall be microprocessor based with a front monitor dot matrix display panel and control keys for user inputs. The controls shall be menu driven with on-screen prompts for easy user operation. The system shall allow user review and programming of temperature and humidity setpoints, alarm parameters, and setup selections including choice of control type. A password shall be required to make system changes. For all user selections, the range of acceptable input (temperature, humidity, or time delay) shall be displayed on the monitor screen. The system shall provide monitoring of room conditions, operational status in percentage of each function, component run times, date and time, and four analog inputs from sensors provided by others.
 - a. Control: The control system shall allow programming of the following room conditions:
 - 1) Temperature Setpoint 65-85 degrees F.
 - 2) Temperature Sensitivity +/-1 to +/- 9.9 degrees F in 0.1 degree F increments.
 - 3) Humidity Setpoint 20-80% R.H.
 - 4) Humidity Sensitivity +/-1% to +/-30% R.H.
 - b. All setpoints shall be adjustable from the individual unit front monitor panel. Temperature and humidity sensors shall be capable of being calibrated using the front monitor panel controls to coordinate with other temperature and humidity sensors in the room.
 - c. Predictive humidity control: The microprocessor shall calculate the moisture content in the room and prevent unnecessary humidification and dehumidification cycles by responding to changes in dewpoint temperature. In addition, the system shall provide the following internal controls:
 - d. Compressor Short-Cycle Control: The control system shall prevent compressor short-cycling by a 3-minute timer from compressor stop to the next start.
 - e. Automatic compressor sequencing: The microprocessor shall automatically change the lead/lag sequence of the compressors after each start to lengthen compressor-on cycles and even compressor wear.

- f. System auto-restart: For start-up after power failure, the system shall provide automatic restart with a programmable (up to 9.9 minutes in 6-second increments) time delay. Programming can be performed either at the unit or from the central site monitoring system.
 - g. Sequential load activation: During start-up, or after power failure, the microprocessor shall sequence operational load activation to minimize inrush current. Systems allowing multiple loads to start simultaneously are unacceptable.
 - h. Hot water/econ-o-coil flush cycles: Hot water coils and Econ-o-coils shall be automatically flushed to prevent the buildup of contaminants. Systems without this feature shall include the necessary devices to bypass fluid into the coil on a programmed basis.
2. Front monitor display panel: The microprocessor shall provide a front monitor 240 x 128 dot matrix graphics display panel with backlighting. This display (along with five front mounted control keys) shall be the only operator interface required to obtain all available system information such as room conditions, operational status, graphical data, alarms, control and alarm set-points, and all user selections including alarm delays, sensor calibration, DIP switch selections, and diagnostics. All indicators shall be in language form. No symbols or codes shall be acceptable.
 3. Alarms: The microprocessor shall activate an audible and visual alarm in event of any of the following conditions:

Select from following options based on applicability; edit as needed.

- a. High Temperature.
 - b. Low Temperature.
 - c. High Humidity.
 - d. Low Humidity.
 - e. Short Cycle.
 - f. Compressor: Overload #1 and #2.
 - g. Main Fan Overload.
 - h. Humidifier Problem.
 - i. High Head Pressure (#1 and #2),
 - j. Change Filters.
 - k. Loss of Air Flow.
 - l. Low Suction Pressure.
 - m. Loss of Power.
 - n. Custom Alarm (#1 to #4)
4. Custom alarms are four customer accessible alarm inputs to be indicated on the front panel. Custom alarms can be identified with prepared (programmed) labels for the following frequently used inputs:
 - a. Water Under Floor.
 - b. Smoke Detected.
 - c. Standby GC Pump On.
 - d. Loss of Water Flow.
 - e. Standby Unit On.

5. User customized text can be entered for all four custom alarms. Each alarm (unit and custom) can be separately enabled or disabled, selected to activate the common alarm, and programmed for a time delay of 0 to 255 seconds.
 - a. Audible Alarm: The audible alarm shall annunciate any alarm that is enabled by the operator.
 - b. Common Alarm: A programmable common alarm shall be provided to interface user selected alarms with a remote alarm device.
 - c. Remote Monitoring: All alarms shall be communicated to the Liebert site monitoring system with the following information:
 - 1) Date and time of occurrence, unit number, and present temperature and humidity.
6. Control type: The user shall be able to select the type of control the advanced microprocessor will use. Selections available shall be intelligent, proportional, and tunable PID (proportional, integral, and derivative gains). The intelligent control shall incorporate control logic that uses artificial intelligence techniques including "fuzzy logic" and "expert systems" methods to maintain precise, stable control. If tunable PID is selected, the user shall be able to program each of the three gains.
7. Analog Inputs: The system shall include four customer accessible analog inputs for sensors provided by others. The analog inputs shall accept a 4 to 20 mA or 0 to 10 vdc signal. The user shall be able to change the input to 0 to 5 vdc if desired. The gains for each analog input shall be programmable from the front panel. The analog inputs shall be able to be monitored from the front panel.
8. Diagnostics: The control system and electronic circuitry shall be provided with self-diagnostics to aid in troubleshooting. The microcontroller board shall be diagnosed and reported as pass/not pass. Control inputs shall be indicated as on or off at the front monitor panel. Control outputs shall be able to be turned on or off from the front monitor panel without using jumpers or a service terminal.
9. Data collection: The control system shall maintain accumulative operating hours of compressors, reheats, humidifier, fan motor, Econ-o-coil, and heat rejection. The sixty most recent alarms shall also be retained.
10. Graphing: The control shall display the following graphical data:
 - a. Temperature, humidity, analog inputs.
 - b. Component operating status by hour.
 - c. Leak detection floor plan.
 - d. Operating status.
11. Communications: The microprocessor shall be compatible with all Liebert remote monitoring and control devices.

H. Compressorized Systems

1. Dual refrigeration systems: Each refrigeration circuit shall include hot gas mufflers, liquid line filter dryers, refrigerant sight glass with moisture indicator adjustable, externally equalized expansion valves, and liquid line solenoid valves.

2. Semi-hermetic compressors: The compressors shall be located in a separate compartment so they may be serviced during operation of the equipment. The compressor shall be semi-hermetic with a suction gas cooled motor, vibration isolators, thermal overloads, oil sight glass, manual reset high pressure switch, pump down low pressure switch, suction line strainer, reversible oil pumps for forced feed lubrication, and a maximum operating speed of 1750 RPM.
3. Four-step refrigeration system: The environmental control system shall include cylinder unloaders on the semi-hermetic compressors. The unloaders shall be activated by solenoid valves, which are controlled from the microprocessor control. In response to the return air temperature, the microprocessor control shall activate the unloader solenoids and the liquid line solenoids such that four stages of refrigeration cooling are obtained. The stages shall be as follows:
 - a. One compressor, partially loaded,
 - b. Two compressors partially loaded,
 - c. One compressor partially loaded, one compressor fully loaded,
 - d. Two compressors fully loaded.

Select this optional four step system if warranted; edit as needed.

- 1) On a call for dehumidification, the microprocessor control shall insure that at least one compressor is on full for proper humidity control.
4. A-Frame DX coil: The evaporator coil shall be an A-Frame design and shall be constructed of copper tubes and aluminum fins. Refrigerant of each system shall be distributed throughout the entire coil face area. A stainless steel condensate drain pan shall be provided.
5. Air cooled systems: The Liebert manufactured air cooled condenser shall be the low profile, show speed, multiple direct drive, propeller fan type. The condenser shall balance the heat rejection of the compressor at applicable ambient temperature. The condenser shall be constructed of aluminum and contain a copper tube, aluminum fin coil arranged for (horizontal) (vertical) air discharge. Provide hail protection on condensing units exposed to outdoors.
 - a. Fan speed control condenser: The winter control system for the air cooled condenser shall be Liebert Fan Speed Control. The variable speed motor shall operate from 0 to 230 volts single phase, 10 to 1050 RPM. It shall be designed with ball bearings, permanent lubrication, internal overload protection, 40 degrees Celsius rise at full speed, 65 degrees Celsius rise at 10 RPM. The control system shall be complete with transducers, thermostats and electrical control circuit, factory pre-packaged in the integral condenser control box. The transducer shall automatically sense the highest head pressure of either operating compressor and control the variable speed fan on the air cooled condenser to properly maintain the head pressure. The fan speed control system shall provide positive start-up and operation in ambient temperature as low as -20 degrees F.
 - b. Lee-temp winter control system: The winter control system for the air cooled condenser shall be Lee-Temp. The Lee-Temp system shall allow start-up and positive head pressure control with ambient temperatures as

- low as -30 degrees F. The Lee-Temp package shall include the following components for each refrigeration circuit: insulated receiver, pressure relief valve, head pressure three-way control valve, and rotoloc valve for isolating the refrigerant charge. The Lee-Temp receiver shall be factory insulated and mounted ready for the field connection to the air cooled condenser. The Lee-Temp heater shall require a separate power supply.
- c. Quiet-line condenser: Fan motors shall be 12-pole, 570 RPM, equipped with rain shields and permanently sealed ball bearings. Motors shall include built-in overload protection. Motors shall be rigidly mounted on die-formed galvanized steel supports. Disconnect switch shall be a standard feature.
 - d. Air cooled condenser: Provide a disconnect switch factory mounted and wired to the condenser control panel, accessible from the exterior.

6. Water Cooled Systems:

- a. Condenser: The water cooled condensers for each circuit shall be clean-able, shell-and-tube, counter flow with removable heads. Condensers shall be A.S.M.E. stamped for a maximum refrigerant pressure of 400 PSI at 200 degrees F.

Select from options following this subparagraph; edit as needed.

- b. Water regulating valve: The condenser shall be pre-piped with a 2-way regulating valve which is head pressure actuated.

Select one below.

- c. Regulating valves: The water regulating valve shall be pre-piped with head pressure actuated **[3 way] [2 way with bypass]** regulating valve.

Select one below.

- d. Pressure rating: The condenser water circuit shall be designed for a pressure of **[150] [300]**PSI.
- e. Hot gas reheat: The complete hot gas reheat system shall include a copper tube, aluminum fin coil, three-way solenoid valve, refrigeration check valve, and one stage of electric reheat.

7. Glycol cooled:

- a. Condenser: The glycol cooled condenser for each circuit shall be counterflow, shell-and-tube. It shall be cleanable, with removable heads. The condensers shall be A.S.M.E. stamped for a maximum refrigerant pressure of 400 PSI at 200 degrees F.

Select from options following this subparagraph; edit as needed.

- b. Glycol regulating valve: Each condenser shall be pre-piped with head pressure activated regulating valve and parallel bypass valve.
- c. Three-way glycol- regulating valve: Each condenser shall be pre-piped with a head pressure activated three-way regulating valve.

Select one below.

- d. Pressure rating: The condenser glycol circuit shall be designed for a

- pressure of [150] [300] PSI.
- e. Dry cooler: The dry cooler shall be the low profile, slow speed, multiple direct drive, propeller fan type. The dry cooler shall be constructed of aluminum and contain a copper tube aluminum fin coil with an integral electric control panel and disconnect switch.
 - f. Glycol pump package: This system shall be provided with a centrifugal pump mounted in a weatherproof and vented enclosure. The pump shall be rated as shown on the drawings.
 - g. Dual pump package: The dual pump package shall include pumps, enclosure, field mounted flow switch, and a separate factory wired control box (including a lead/lag switch for the pumps). The standby pump shall automatically start upon failure of the lead pump.
 - h. Hot gas reheat: The complete hot gas reheat system shall include a copper tube, aluminum fin coil, three-way solenoid valve, and refrigerant check valve.

8. Glycool:

"Glycool" may be selected as condensing system to provide economy cooling in cold weather. Select from options described in subparagraphs 4 through 8; edit as needed.

- a. Condenser: The glycol cooled condenser for each circuit shall be counterflow, shell-and-tube. It shall be cleanable, with removable heads. The condensers shall be A.S.M.E. stamped for a maximum refrigerant pressure of 400 PSI at 200 degrees F.
 - b. Glycol regulating valve: Each condenser shall be pre-piped with a head pressure activated three-way regulating valve.
 - c. Dry cooler: The dry cooler shall be the low profile, slow speed, multiple direct drive, propeller fan type. The dry cooler shall be constructed of aluminum and contain a copper tube aluminum fin coil with an integral electric control panel and disconnect switch.
 - d. Glycol pump package: This system shall be provided with a centrifugal pump mounted in a weatherproof and vented enclosure.
 - e. Dual pump package: The dual pump package shall include pumps, enclosure, field mounted flow switch, and a separate factory wired control box (including a lead/lag switch for the pumps). The standby pump shall automatically start upon failure of the lead pump.
 - f. Glycool three-way control valve: The glycool coil shall be equipped with a fully proportional 3-way control valve. This motorized control valve shall control the amount of flow to the glycool cooling coil and maintain constant temperature and relative humidity.
 - g. Glycool coil: Free cooling Glycool coil shall be copper tube, aluminum fin coil located in the return air before the A-Frame evaporator coil.
 - h. Pressure rating: The condenser/GLYCOOL coil circuit shall be designed for a pressure of [150] [300] PSI.
9. Dual Cooling Source Systems: The dual cooling source system shall consist of an air or water cooled compressorized system with the addition of a chilled water coil, a modulating control valve, and a comparative temperature sensor. The system shall be able to function either as a modulating chilled water system or

as a compressorized system, or a combination of both. The primary mode of cooling shall be chilled water. Switchover between the two cooling modes shall be performed automatically by the microprocessor control.

- a. Dual cooling source three-way control valve: The water circuit shall include a 3-way modulating valve. The microprocessor positions the valve in response to room conditions. Cooling capacity will be controlled by bypassing chilled water around the coil. The modulating valve travel for dehumidification shall be proportional.
- b. Dual cooling source coil: The dual-cooling source coil shall be constructed with copper tubes and aluminum fins. It shall be located in the return air, before the A-Frame evaporator coil.

I. Equipment Components:

Select from following options; edit as needed.

1. Disconnect switch:
 - a. Disconnect switch (non-locking type): The manual disconnect switch shall be mounted in the high voltage section of the electrical panel. The switch shall be accessible with the door closed.
 - b. Disconnect switch (locking type): The manual disconnect switch shall be mounted in the high voltage section of the electrical panel. The switch shall be accessible from the outside of the unit with the door closed, and prevent access to the high voltage electrical components until switched to the "OFF" position.
2. Firestat: The firestat shall immediately shut down the environmental control system when activated. The firestat shall be mounted in the electrical panel with the sensing element in the return air.
3. Condensate pump: The condensate pump shall have a minimum capacity of 100 GPH at 20 ft head. It shall be complete with integral float switch, pump and motor assembly, and reservoir.
4. LiquiTect sensors (max. of two per unit): Provide <Insert quantity> solid state water sensors under the raised floor.
5. Floor stand: The floor stand shall be constructed of a heliarc welded tubular steel frame. The floor stand shall have adjustable legs with vibration isolation pads. The floor stand shall be of height matching raised floor system.
6. Floor stand turning vane: A factory supplied, field mounted turning vane shall be provided.
7. Temperature and humidity recorder: Provide a 7-day/24 hour temperature and humidity recorder of the full scope, two pen, surface mounted type with 100 recording charts, one red and one blue bottle of recording ink.
8. Smoke detector: The smoke detector shall immediately shut down the environmental control system and activate the alarm system when activated. The smoke detector shall be mounted in the electrical panel with the sensing element in the return air compartment.
9. SiteScan site monitoring system: Provide a SiteScan monitor system with the Deluxe System/3. The SiteScan shall have the capability to monitor and change

(at the user direction) the temperature and humidity setpoints and sensitivities of each unit. The printer shall provide the user with chronological alarm information. It shall also be capable of being programmed to print out environmental conditions or operating modes at each unit.

Hail guards are required on all condensing units that are located outdoors or in areas where apron workers have access to them.

10. Air cooled DX-condensing coils shall be provided with steel hail guard. Hail guard shall be constructed to prevent the passage of one-half inch diameter hail.

2.3 CEILING-MOUNTED UNITS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Liebert
 2. Mitsubishi
 3. Daikin
 4. York International.
 5. <Insert manufacturer>
 6. or approved equal.
- B. Standard Features:
 1. Cabinet construction for ceiling mounted units: The cabinet and chassis shall be constructed of heavy gauge galvanized steel. Mounting brackets shall be factory attached to the cabinet.
 - a. For units of 1-1/2 ton capacity or less, service access is from front and bottom of unit only (water cooled units require right end access).
 - b. For units of 2-ton and larger capacity, evaporator cabinet service shall require access from one side only.
 2. Air distribution:
 - a. Systems larger than 1-1/2 ton capacity: The air distribution system shall be constructed with a quiet, direct-drive fan assembly equipped with double-inlet blower, self-aligning ball bearings, and lifetime lubrication. Fan motor shall be permanent-split capacitor, high efficiency type, equipped with two speeds for air flow modulation. Dehumidification shall utilize the lower fan speed. For systems 5 tons and larger, drive package shall be equipped with an adjustable motor sheave and fan/motor assembly shall be mounted on vibration isolators. Refer to drawings for ratings.
 - b. Systems 1-1/2 ton and smaller: The air distribution system shall be constructed with a quiet, direct-drive fan assembly equipped with double-inlet blower, self-aligning ball bearings, and lifetime lubrication. Fan motor shall be permanent-split capacitor, high efficiency type, equipped

with two speeds for air flow modulation. Dehumidification shall utilize the lower fan speed. System shall be suitable for plenum or ducted air distribution. Refer to drawings for ratings.

3. Microprocessor control: The control system shall be microprocessor based. The wall-mounted control enclosure shall include a 2-line by 16 character LCD display providing continuous display of operating status and alarm condition. An 8-key membrane keypad for setpoint/program control, unit on/off, and fan speed shall be located below the display. Temperature and humidity sensors shall be located in the wall box which shall be capable of being located up to 300 ft. from the evaporator/air handling unit, via field supplied and wired thermostat-type wire.
 - a. For 8-ton capacity systems, the microprocessor shall provide 3 stages of cooling by cycling the 3-ton compressor, 5-ton compressor and then both compressors. The microprocessor shall determine the optimal stage to run based on historical run data.

Delete this paragraph if not applicable.

4. Monitoring: The LCD display shall provide an on/off indication, fan speed indication, operating mode indication (cooling, heating, humidifying, dehumidifying) and current day, time, temperature and humidity (if applicable) indication. The monitoring system shall be capable of relaying unit operating parameters and alarms to the Liebert SiteScan, or approved substitute, monitoring system.
5. Control setpoint parameters:
 - a. Temp. setpoint: 65-85 degrees F.
 - b. Temp. sensitivity: 1 to 5 degrees F (1 to 9.9 degrees F for units larger than 3-ton capacity).
 - c. Humidity setpoint: 20-80% RH.
 - d. Humidity sensitivity: 1 to 10% RH (1 to 30% RH for units larger than 3-ton capacity).
 - e. Unit controls:
 - 1) Compressor short-cycle control: The control system shall prevent compressor short-cycling by a 3 minute timer from compressor stop to the next start.
 - 2) Common alarm and remote on/off: A common alarm relay shall provide a contact closure to a remote alarm device. Two (2) terminals shall also be provided for remote on/off control. Individual alarms shall be "enabled" or "disabled" from reporting to the common alarm.
 - 3) Temperature calibration: The control shall include the capabilities to calibrate the temperature and humidity sensors and adjust the sensor response delay time from 1 to 90 seconds. The control shall be capable of displaying temperature values in degrees F.
 - 4) System auto restart: For start-up after power failure, the system shall provide automatic restart with a programmable (up to 9.9 minutes in 6-second increments) time delay. Programming can be performed either at the unit or from the central site monitoring system.

f. Alarms:

1) Unit alarm: The control system shall monitor unit operation and activate an audible and visual alarm in the event of the following factory preset alarm conditions:

- a) High Temperature.
- b) Low Temperature.
- c) High Humidity.
- d) Low Humidity.
- e) High Water Alarm - Lockout Unit Operation.
- f) High Head Pressure.
- g) Loss of Power.
- h) Compressor Short Cycle.

2) Custom alarms (2x): (User customized text can be entered for the two (2) custom alarms):

- a) Humidifier Problem.
- b) Filter Clog.
- c) Water Detected.
- d) Smoke Detected.

- 6. Alarm controls: Each alarm (unit and custom) shall be separately enabled or disabled, selected to activate the common alarm (except for high head pressure).
- 7. Audible alarm: The audible alarm shall annunciate any alarm that is enabled by the operator.
- 8. Common alarm: A programmable common alarm shall be provided to interface user selected alarms with a remote alarm device.
- 9. Remote monitoring: All alarms shall be communicated to the site monitoring system with the following information: date and time of occurrence, unit number, and preset temperature and humidity.
- 10. Radiated noise shall not exceed:
 - a. NC 35 - In Office.
 - b. NC 40 - Terminal/Concourse.
 - c. NC 45 - Maintenance Facilities.

C. Direct expansion system evaporator components:

- 1. Direct expansion coil: The evaporator section shall include evaporator coil, thermostatic expansion valve, and filter drier.
- 2. The evaporator coil shall be constructed of copper tubes and aluminum fins. The coil shall be provided with a stainless steel drain pan. Refrigerant flow shall be controlled by an externally equalized thermostatic expansion valve.
- 3. Refrigeration system (DX systems 1-1/2 Ton Capacity or Smaller): The refrigeration system shall consist of a scroll or rotary compressor with vibration isolating grommets, high pressure safety switch, filter drier, and externally equalized expansion valve.

D. Chilled Water System Components:

1. Chilled water control valve: The control solenoid valve shall be motorized slow-acting type to reduce water hammer. Design pressure shall be 300 psig static pressure, with a maximum close-off pressure of 30 psi.
2. Chilled water coil: The cooling coil shall be constructed of copper tubes and aluminum fins and have a maximum face velocity of 500 ft. per minute at rated CFM. The coil shall be supplied with 45 degree F entering water temperature. The coil assembly shall be mounted in a stainless steel condensate drain pan.

E. Air-cooled centrifugal fan condensing unit (systems 2 tons or larger):

Select the desired type of condensing systems from this Article 2.4 or following Articles 2.5 through 2.7.

1. The condenser coil shall be constructed of copper tubes and aluminum fins. The condensing unit shall be factory charged with refrigerant, sealed, and shall be capable of being connected to the evaporator section directly. The condensing unit can be mounted directly to the evaporator or can be mounted remote to the evaporator; refer to drawings for arrangement.
 - a. The condensing unit shall be designed for 95 degrees F ambient and be capable of operation to -20 degrees F ambient. The fan and motor assembly shall be direct drive for systems of 3 tons capacity or less; and belt driven for larger systems.
 - b. A hot gas bypass circuit shall be provided to ensure operation under low load conditions.
 - c. Provide hail protection on condensing units exposed to outdoors.

Sound testing and sound performance shall not be waived. Review the table below for compliance with NC-40 criteria.

2. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Discharge	64	57	51	47	42	39	38	37
Inlet	64	57	51	47	42	39	38	37

F. Self-Contained Systems (1-1/2 ton or smaller):

1. Air-cooled self-contained systems: The condenser section shall contain a factory mounted and piped condenser coil constructed of copper tubes and aluminum fins. No piping, brazing, dehydration or charging shall be required. The condenser coil shall be factory mounted within the evaporator cabinet. A factory supplied condenser fan shall be field mounted to the end of the evaporator cabinet.
 - a. Condenser electrical connection to the cooling chassis shall be by a factory provided harness. Fan shall be sized to provide full rated cooling capacity at 95 degrees F entering air from plenum space. The system shall be

provided with a fan speed control system to permit operation at -20 degrees F ambient temperature.

2. Water or glycol cooled self-contained systems: The water/glycol system shall be equipped with a coaxial condenser having ratings as indicated on the drawings. The condenser circuit shall be pre-piped with a **[2-way] [3-way]** regulating valve which is head-pressure actuated. The condenser water/glycol circuit shall be designed for a pressure of 150 PSI.

G. Air-Cooled Propeller Fan Condensing Unit:

1. The condenser coil shall be constructed of copper tubes and aluminum fins with a direct-drive propeller-type fan, and shall include a scroll compressor, high pressure switch, and Lee-temp receiver. All components shall be factory assembled, charged with refrigerant, sealed, and be capable of being connected to the evaporator section using pre-charged refrigerant line sets. No internal piping, brazing, dehydration, or charging shall be required. Condensing unit shall be designed for 95 degrees F ambient and be capable of operation to -30 degrees F.
 - a. The condensing unit shall be designed to operate at a sound level less than 58 dba.
 - b. A hot gas bypass circuit shall be provided to ensure operation under low load conditions.
 - c. The outdoor condensing unit shall be designed for design ambient operation of 105 degrees F.

Sound testing and sound performance shall not be waived. review the table below for compliance with NC-40 criteria.

2. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Discharge	64	57	51	47	42	39	38	37
Inlet	64	57	51	47	42	39	38	37

H. Water/Glycol Cooled Condensing Unit:

1. The water/glycol condensing unit shall be equipped with a coaxial condenser, scroll compressor, and high-pressure switch. The condensing unit shall be factory charged with R-22 refrigerant. The condenser circuit shall be pre-piped with a **[2-way] [3-way]** regulating valve which is head-pressure actuated. The condenser water/glycol circuit shall be designed for a static operating pressure of 150 PSI.
 - a. A hot gas bypass circuit shall be provided to reduce compressor cycling and improve operation under low load conditions.

I. Factory-Installed Accessories:

Select desired accessories from the following.

1. Steam Generating Humidifier: The environmental control system shall be equipped with a steam generating humidifier that is controlled by the microprocessor control system. It shall be complete with disposable canister, all supply and drain valves, steam distributor, and electronic controls. The need to change canister shall be annunciated on the microprocessor wallbox control panel. The humidifier shall have a capacity as indicated on the drawings. An LED light on the humidifier assembly shall indicate cylinder full, over-current detection, fill system fault, and end of cylinder life conditions.
2. Electric Reheat: The electric reheat shall be low-watt density, 304/304 stainless steel, finned-tubular. The reheat section shall include an NRTL approved safety switch to protect the system from overheating. The capacity of the reheat coils shall be as shown on the drawings, controlled in one stage.
3. Hot Water Reheat: The hot water reheat coil shall have copper tubes and aluminum fins with a capacity as shown on the drawings. The control system shall be factory prepiped with a 2-way solenoid valve and cleanable Y-strainer.
 - a. SCR Electric Reheat: The electric reheat shall be low-watt density, 304/304 stainless steel, finned-tubular and shall be capable of maintaining room dry bulb conditions when the system is calling for dehumidification. The reheat section shall include an NRTL approved safety switch to protect the system from overheating.
4. The SCR (Silicon Controlled Rectifier) controller shall proportionally control the reheat elements to maintain the selected room temperature. The unit microprocessor control shall operate the SCR controller, while cooling is locked on. The capacity of the reheat coils shall be as shown on the drawings.
5. Disconnect switch, Non-Locking: The non-automatic, non-locking, molded case circuit breaker shall be factory mounted in the high voltage section of the electrical panel. The switch shall be accessible from the front of the unit.
6. Firestat: The firestat shall immediately shut down the system when high temperatures are detected. The firestat shall be mounted with the sensing element in the return air.
7. Smoke detector: The smoke detector shall immediately shut down the environmental control system and activate the alarm system when activated. The sensing element shall be located in the return air compartment.
8. Free-cooling/dual cooling source: A free-cooling coil shall be integral to the evaporator cabinet, and shall be constructed of copper tubes and aluminum fins. The coil shall be rated as shown on the drawings. Free-cooling shall be activated by a temperature stat, and shall include factory piped three-way valve and separate supply and return piping.

J. Field Installed Accessories:

Select desired field-installed accessories from the following.

1. Remote sensors: The unit shall be supplied with remote temperature and humidity sensors. The sensors shall be connected to the unit by a shielded cable.
2. Accessories for 1-ton and 1-1/2-ton Systems:

- a. Supply and return grill: A factory supplied supply and return grill kit, with 20% ASHRAE 52-76 filter, shall be provided for supply and return air delivery through a 2' x 4' ceiling grid.
 - b. Filter box and duct kit: A return air filter box shall be provided with hinged filter access, and 1" duct flange. A 1" duct flange shall also be provided for air discharge. Filters shall be 35% efficiency based on ASHRAE 52-76.
 - c. Duct collar kit: A 1" Duct Flange shall be provided for the discharge and return air openings. Filters to be field supplied.
3. Air distribution plenum (2-ton through 8-ton systems): The evaporator section shall be supplied with an air distribution plenum with integral filter. The plenum shall provide 4-way air distribution, for installation into a standard 29 x 49 ceiling grid. Filter size shall be 4" deep pleated type with minimum efficiency of 20%, based on ASHRAE 52-76.
 4. High static blower assembly (2-ton through 8-ton systems): A blower box shall be field attached to the evaporator to provide up to 2.00 of external static pressure on the discharge side of the evaporator. The blower box shall contain a centrifugal type, double inlet blower, with belt drive and single speed motor, mounted to an adjustable motor base.
 5. Air filter box (2-ton through 8-ton systems): The evaporator section shall be supplied with an air filter box for use with ducted installations. The filter shall be 4" deep, pleated type, with a minimum efficiency of 20%, based on ASHRAE 52-76.
 6. Condensate pump: The condensate pump shall have the minimum capacity of 30 GPH at 20 ft. head, and shall be complete with integral float switch, pump, motor assembly, and reservoir.
 7. Refrigerant line sets: Pre-charged refrigerant line sets shall be provided in proper lengths for application. Line set lengths shall be as shown on the drawings.
 8. Refrigerant line sweat adapter Kit: Provide a sweat adapter kit to permit field brazing of refrigerant line connections.
 9. Single point power kit: A single point power kit shall be provided for a close-coupled system to allow a single electrical feed to supply power to both the evaporator and condensing unit.
 10. Liebert SiteScan Site Monitoring System: A Liebert SiteScan Site Monitoring System shall be provided for remote monitoring of the Mini-Mate2 unit and monitoring of other Liebert support equipment. The SiteScan shall have the capability to monitor and change (at the user direction) the temperature and humidity setpoints and sensitivities of each unit. The printer shall provide the user with chronological alarm information. It shall also be capable of being programmed to print out environmental conditions or operating modes at each unit.
 11. Dry cooler: The dry cooler shall be the low-profile, slow speed, multiple direct drive propeller fan type. The dry cooler shall be constructed of aluminum and contain a copper type, aluminum fin coil with an integral electric control panel. The dry cooler shall be designed for 105 degrees ambient.
 12. Glycol pump package: The system shall include a centrifugal pump mounted in a weatherproof and vented enclosure. The pump shall be rated as shown on the drawings.

K. Electrical Characteristics and Components:

1. Electrical characteristics: As indicated on the Drawings.

Select one below.

2. Disconnect Switch: Factory mount disconnect switch [in control panel.] [on equipment under provisions of Division 26 Sections.]

L. Supplemental Condensate Drain Pans:

1. Wherever units equipped for cooling service are installed above facilities such as electrical power equipment, computer equipment, data server or telecommunications equipment, or other electrical or electronic equipment susceptible to malfunction if exposed to water, Contractor shall provide a supplemental drain pan to serve as additional protection against leakage, overflow, or other failure of the primary drain pan normally comprising a part of the air conditioning equipment.
 - a. Supplemental drain pans to be constructed of 20 gauge (minimum) galvanized steel, minimum depth 2 inches, fabricated, braced, and supported so as to ensure stability.
 - b. Provide drain piping conforming to provisions 15410 or 15510, as applicable, minimum size 3/4 inch, terminating as a visible sight drain discharging to a floor drain or service sink if feasible, or as may otherwise be directed or approved by the DEN Project Manager.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for hydronic piping systems to verify actual locations of piping connections before equipment installation.
- C. Examine walls, floors, and roofs for suitable conditions where computer-room air conditioners will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install computer-room air conditioners level and plumb, maintaining manufacturer's recommended clearances. [**Install according to ARI Guideline B.**]

Retain one or more of five paragraphs below. Coordinate with Drawings and Sections specifying vibration and seismic controls. Retain or insert amount of required deflection.

- B. Computer-Room Air-Conditioner Mounting: Install using [elastomeric pads] [elastomeric mounts] [restrained spring isolators] <Insert device>. Comply with requirements for vibration isolation devices specified in [Section 230548 "Vibration and Seismic Controls for HVAC."] [Section 230548.13 "Vibration Controls for HVAC."]
1. Minimum Deflection: [1/4 inch (6 mm)] [1 inch (25 mm)] <Insert dimension>.
- C. Suspended Computer-Room Air Conditioners: Install using continuous-thread hanger rods and [elastomeric hangers] [spring hangers] [spring hangers with vertical-limit stop] of size required to support weight of computer-room air conditioner.
1. Comply with requirements for vibration isolation devices specified in [Section 230548 "Vibration and Seismic Controls for HVAC."] [Section 230548.13 "Vibration Controls for HVAC."] Fabricate brackets or supports as required.
 2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- D. Air-Cooled Refrigerant Condenser Mounting: Install using [elastomeric pads] [elastomeric mounts] [restrained spring isolators] <Insert device>. Comply with requirements for vibration isolation devices specified in [Section 230548 "Vibration and Seismic Controls for HVAC."] [Section 230548.13 "Vibration Controls for HVAC."]
1. Minimum Deflection: [1/4 inch (6 mm)] [1 inch (25 mm)] <Insert dimension>.
- E. Remote, Air-Cooled, Glycol-Solution Cooler Mounting: Install using [elastomeric pads] [elastomeric mounts] [restrained spring isolators] <Insert device>. Comply with requirements for vibration isolation devices specified in [Section 230548 "Vibration and Seismic Controls for HVAC."] [Section 230548.13 "Vibration Controls for HVAC."]
1. Minimum Deflection: [1/4 inch (6 mm)] [1 inch (25 mm)] <Insert dimension>.
- F. Glycol-Solution Pump Package Mounting: Install using [elastomeric pads] [elastomeric mounts] <Insert device>. Comply with requirements for vibration isolation devices specified in [Section 230548 "Vibration and Seismic Controls for HVAC."] [Section 230548.13 "Vibration Controls for HVAC."]

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in other heating, ventilating, and air-conditioning Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

- B. Install piping adjacent to machine to allow service and maintenance.
- C. Water and Drainage Connections: Comply with applicable requirements in Section 221116 "Domestic Water Piping." Provide adequate connections for water-cooled units, condensate drain, and humidifier flushing system.

Retain first paragraph below for units with hot-water coils.

- D. Hot-Water Heating Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Provide shutoff valves in inlet and outlet piping to heating coils.

Retain first paragraph below for units with steam coils.

- E. Steam and Condensate Piping: Comply with applicable requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties." Provide shutoff valves in steam inlet and steam trap in condensate outlet piping to heating coils.
- F. Condenser-Water Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Provide shutoff valves in water inlet and outlet piping on water-cooled units.
- G. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Provide shutoff valves and piping.
- H. Electrical System Connections: Comply with applicable requirements in Division 26 for power wiring, switches, and motor controls.
- I. Ground equipment according to Division 26.
- J. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

Retain first paragraph below to require a factory-authorized service representative to perform inspections, tests, and adjustments.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

C. Tests and Inspections:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing computer-room air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- D. Computer-room air conditioners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
- B. Verify that computer-room air-conditioning units are installed and connected according to manufacturer's written instructions and the Contract Documents.
- C. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements in Division 26.
- D. Complete installation and startup checks according to manufacturer's written instructions.
- E. After startup service and performance test, change filters and flush humidifier.

3.6 ADJUSTING

- A. Adjust initial temperature[**and humidity**] set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Occupancy Adjustments: When requested within [**twelve (12)**] <Insert number>

months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain computer-room air conditioners.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238123

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238126 - SPLIT-SYSTEM AIR-CONDITIONERS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify with manufacturers that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system design alternatives that do not include split-system air conditioners may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes split-system air-conditioning and heat-pump units consisting of separate evaporator-fan and compressor-condenser components.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT

PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.

- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

Retain subparagraph below if equipment includes wiring.

2. Wiring Diagrams: For power, signal, and control wiring.

Coordinate sample requirements with DEN Project Manager.

- D. Samples for Initial Selection: For units with factory-applied color finishes.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
B. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Filters: **[One (1)] <Insert number>** set(s) for each air-handling unit.
 - 2. Gaskets: **[One (1)] <Insert number>** set(s) for each access door.
 - 3. Fan Belts: **[One (1)] <Insert number>** set(s) for each air-handling unit fan.

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE Compliance:
 - 1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."

"ASHRAE Compliance" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1. In addition to establishing minimum ventilation rates, ASHRAE 62.1 includes requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain-pan construction and connection, finned-tube coil selection and cleaning, and equipment access. See "LEED Rating System" Article in the Evaluations for discussion on this prerequisite. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- 2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Procedures," and Section 7 - "Construction and System Start-up."

"ASHRAE/IESNA" Compliance Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1. See "LEED Rating System" Article in the Evaluations for discussion on this prerequisite.

- C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

1.8 COORDINATION

Retain first paragraph below if remote condensing units are located on grade; retain second paragraph if they are located on roof.

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."
- B. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.9 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws. Coordinate with Section 016000 "Product Requirements."

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for units and components with manufacturers listed in Part 2.

1. Warranty Period:

- a. For Compressor: Minimum **[one (1)] [five (5)] <Insert number>** year(s) from date of Substantial Completion.
- b. For Parts: Minimum **[one (1)] [five (5)] <Insert number>** year(s) from date of Substantial Completion.
- c. For Labor: Minimum **[one (1)] [five (5)] <Insert number>** year(s) from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- B. Factory-packaged and -tested units rated according to AHRI 440, ASHRAE 33, and UL 1995.
- C. Radiated noise shall not exceed:
 - 1. NC 35 – In Office.
 - 2. NC 40 – Terminal/Concourse.
 - 3. NC 45 – Maintenance Facilities.

2.2 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain one paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

Verify that manufacturers retained in the list below make combination of unit components retained.

- 1. Carrier Corporation; Home Comfort and HVAC Building & Industrial Systems.
- 2. Coleman Company Inc. (The).
- 3. First Operations LP.
- 4. Friedrich Air Conditioning Company.
- 5. Koldwave, Inc.; a Mestek company.
- 6. Lennox International Inc.
- 7. Mitsubishi Electric & Electronics USA, Inc.; HVAC Advanced Products Division.
- 8. Mitsubishi Electric Sales Canada Inc.
- 9. Mitsubishi Heavy Industries America, Inc.
- 10. SANYO North America Corporation; SANYO Fisher Company.
- 11. Trane; a business of American Standard companies.
- 12. YORK; a Johnson Controls company.
- 13. **<Insert manufacturer's name>.**
- 14. or approved equal.

2.3 INDOOR UNITS (5 TONS (18 kW) OR LESS)

- A. Concealed Evaporator-Fan Components:
 - 1. Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel.
 - 2. Insulation: Faced, glass-fiber duct liner.
 - 3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.

Retain one of first two subparagraphs below if heating coil is required.

- 4. Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch (2.5 mm)**; leak tested to **300 psig (2070 kPa)** underwater; with a two-position control valve.

5. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
6. Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.
7. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
 - c. Wiring Terminations: Connect motor to chassis wiring with plug connection.

ASHRAE compliance in "Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain first subparagraph below to comply with LEED Prerequisite IEQ 1.

8. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
9. Filters: Permanent, cleanable.
10. Condensate Drain Pans:

First option in first subparagraph below is minimum slope in ASHRAE 62.1.

- a. Fabricated with **[one]** **[two]** percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.

ASHRAE compliance option in "Length" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain option in first subparagraph to comply with LEED Prerequisite IEQ 1; otherwise, insert distance.

- 1) Length: Extend drain pan downstream from leaving face **[to comply with ASHRAE 62.1]** **<Insert distance>**.
- 2) Depth: A minimum of **[2 inches (50 mm)]** **<Insert depth>** deep.

Retain one of first two subparagraphs below. Retain second subparagraph if drain-pan temperature is expected to fall below surrounding dew point temperature.

- b. Single-wall, **[galvanized]** **[stainless]**-steel sheet.
- c. Double-wall, **[galvanized]** **[stainless]**-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
- d. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on **[one end]** **[both ends]** of pan.
 - 1) Minimum Connection Size: **[NPS 1 (DN 25)]** **[NPS 2 (DN 50)]** **<Insert size>**.

Retain first subparagraph below for galvanized-steel drain pans; delete for stainless-steel drain pans.

- e. Pan-Top Surface Coating: Asphaltic waterproofing compound.
- f. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

B. Floor-Mounted, Evaporator-Fan Components:

- 1. Cabinet: Enameled steel with removable panels on front and ends in color selected by DEN Project Manager.
 - a. Discharge Grille: **[Steel with surface-mounted frame] [Welded steel bars forming a linear grille and welded into supporting panel].**
 - b. Insulation: Faced, glass-fiber duct liner.
 - c. Drain Pans: Galvanized steel, with connection for drain; insulated.
- 2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.

Retain one of first two subparagraphs below if heating coil is required.

- 3. Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch (2.5 mm)**; leak tested to **300 psig (2070 kPa)** underwater; with a two-position control valve.
- 4. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
- 5. Fan: Direct drive, centrifugal, **with power-induced outside air**].
- 6. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
- 7. Air Filtration Section:

See Evaluations for discussion on filter characteristics and applications. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

- a. General Requirements for Air Filtration Section:
 - 1) Comply with NFPA 90A.
 - 2) Minimum Arrestance: According to ASHRAE 52.1 and MERV according to ASHRAE 52.2.
 - 3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
- b. Disposable Panel Filters:

Retain one or more of first seven subparagraphs below, as applicable. If Project has more than one filter type, indicate filter type for each unit on Drawings.

- 1) Factory-fabricated, viscous-coated, flat-panel type.
- 2) Thickness: [1 inch (25 mm)] [2 inches (50 mm)].
- 3) Dust-Holding Capacity: <Insert lb (kg)>.
- 4) Initial Resistance: <Insert inches wg (Pa)>.
- 5) Recommended Final Resistance: <Insert inches wg (Pa)>.
- 6) Arrestance according to ASHRAE 52.1: [80] <Insert value>.
- 7) Merv according to ASHRAE 52.2: [5] <Insert value>.
- 8) Media: Interlaced glass fibers sprayed with nonflammable adhesive[**and antimicrobial agent**].
- 9) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.

c. Extended-Surface, Disposable Panel Filters:

- 1) Factory-fabricated, dry, extended-surface type.
- 2) Thickness: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)].
- 3) Dust-Holding Capacity: <Insert lb (kg)>.
- 4) Initial Resistance: <Insert inches wg (Pa)>.
- 5) Recommended Final Resistance: <Insert inches wg (Pa)>.
- 6) Arrestance according to ASHRAE 52.1: [90] <Insert value>.
- 7) Merv according to ASHRAE 52.2: [7] <Insert value>.
- 8) Media: Fibrous material formed into deep-V-shaped pleats[**with antimicrobial agent**] and held by self-supporting wire grid.
- 9) Media-Grid Frame: [**Nonflammable cardboard**] [**Galvanized steel**] [**Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets**].
- 10) Mounting Frames: Welded, galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

C. Wall-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by DEN Project Manager, and discharge drain pans with drain connection.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.

Retain "Electric Coil" Subparagraph below for heat-pump units and supplemental electric heat.

3. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
4. Fan: Direct drive, centrifugal.
5. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

- b. Multitapped, multispeed with internal thermal protection and permanent lubrication.

Retain first subparagraph below if enclosure is not open-dripproof type. Retain second subparagraph for premium efficiency.

- c. Enclosure Type: Totally enclosed, fan cooled.
- d. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
- e. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

Retain first subparagraph below to require that disconnect switches be supplied with unit.

- f. Mount unit-mounted disconnect switches on **[exterior]** **[interior]** of unit.

If unique characteristics are required for motors in this Section, insert subparagraphs below.

- g. **<Insert unique motor characteristics>**.

ASHRAE compliance in "Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain first subparagraph to comply with LEED Prerequisite IEQ 1.

- 6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- 7. Condensate Drain Pans:

First option in first subparagraph below is minimum slope in ASHRAE 62.1.

- a. Fabricated with **[one]** **[two]** percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.

ASHRAE compliance option in "Length" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain option in first subparagraph to comply with LEED Prerequisite IEQ 1; otherwise, insert distance.

- 1) Length: Extend drain pan downstream from leaving face **[to comply with ASHRAE 62.1]** **<Insert distance>**.
- 2) Depth: A minimum of **[1 inch (25 mm)]** **<Insert depth>** deep.

Retain one of first two subparagraphs below.

- b. Single-wall, **[galvanized]** **[stainless]**-steel sheet.
- c. Double-wall, **[galvanized]** **[stainless]**-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
- d. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on **[one end]** **[both ends]** of pan.
 - 1) Minimum Connection Size: **[NPS 1 (DN 25)]** **[NPS 2 (DN 50)]** **<Insert size>**.

Retain first subparagraph below for galvanized-steel drain pans; delete for stainless-steel drain pans.

e. Pan-Top Surface Coating: Asphaltic waterproofing compound.

8. Air Filtration Section:

See Evaluations for discussion on filter characteristics and applications. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

a. General Requirements for Air Filtration Section:

- 1) Comply with NFPA 90A.
- 2) Minimum Arrestance: According to ASHRAE 52.1 and MERV according to ASHRAE 52.2.
- 3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.

b. Disposable Panel Filters:

Retain one or more of first seven subparagraphs below, as applicable. If Project has more than one filter type, indicate filter type for each unit on Drawings.

- 1) Factory-fabricated, viscous-coated, flat-panel type.
- 2) Thickness: [1 inch (25 mm)] [2 inches (50 mm)].
- 3) Dust-Holding Capacity: <Insert lb (kg)>.
- 4) Initial Resistance: <Insert inches wg (Pa)>.
- 5) Recommended Final Resistance: <Insert inches wg (Pa)>.
- 6) Arrestance according to ASHRAE 52.1: [80] <Insert value>.
- 7) Merv according to ASHRAE 52.2: [5] <Insert value>.
- 8) Media: Interlaced glass fibers sprayed with nonflammable adhesive[**and antimicrobial agent**].
- 9) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.

c. Extended-Surface, Disposable Panel Filters:

- 1) Factory-fabricated, dry, extended-surface type.
- 2) Thickness: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)].
- 3) Dust-Holding Capacity: <Insert lb (kg)>.
- 4) Initial Resistance: <Insert inches wg (Pa)>.
- 5) Recommended Final Resistance: <Insert inches wg (Pa)>.
- 6) Arrestance according to ASHRAE 52.1: [90] <Insert value>.
- 7) Merv according to ASHRAE 52.2: [7] <Insert value>.
- 8) Media: Fibrous material formed into deep-V-shaped pleats[**with antimicrobial agent**] and held by self-supporting wire grid.
- 9) Media-Grid Frame: [Nonflammable cardboard] [Galvanized steel] [Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets].
- 10) Mounting Frames: Welded, galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

2.4 INDOOR UNITS (6 TONS (21 kW) OR MORE)

A. Concealed Evaporator-Fan Components:

1. Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel.
2. Insulation: Faced, glass-fiber duct liner.
3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.

Retain one of first two subparagraphs below if heating coil is required.

4. Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm); leak tested to 300 psig (2070 kPa) underwater; with a two-position control valve.
5. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
6. Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.
7. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
 - c. Three-phase, permanently lubricated, ball-bearing motors with built-in thermal-overload protection.
 - d. Wiring Terminations: Connect motor to chassis wiring with plug connection.

ASHRAE compliance in "Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain first subparagraph to comply with LEED Prerequisite IEQ 1.

8. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

The smaller casings of these units do not typically permit extensive filtration choices.

9. Filters: [1 inch (25 mm) thick, in fiberboard frames] [Permanent, cleanable].
10. Condensate Drain Pans:

First option in first subparagraph below is minimum slope in ASHRAE 62.1.

- a. Fabricated with [one] [two] percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.

ASHRAE compliance option in "Length" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain option in first subparagraph to comply with LEED Prerequisite IEQ 1; otherwise, insert distance.

- 1) Length: Extend drain pan downstream from leaving face [**to comply with ASHRAE 62.1**] <Insert distance>.
- 2) Depth: A minimum of [2 inches (50 mm)] <Insert depth> deep.

Retain one of first two subparagraphs below. Retain second subparagraph if drain-pan temperature is expected to fall below surrounding dew point temperature.

- b. Single-wall, [**galvanized**] [**stainless**]-steel sheet.
- c. Double-wall, [**galvanized**] [**stainless**]-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
- d. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on [**one end**] [**both ends**] of pan.
 - 1) Minimum Connection Size: [NPS 1 (DN 25)] [NPS 2 (DN 50)] <Insert size>.

Retain first subparagraph below for galvanized-steel drain pans; delete for stainless-steel drain pans.

- e. Pan-Top Surface Coating: Asphaltic waterproofing compound.
- f. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

B. Floor-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by DEN Project Manager.
 - a. Discharge Grille: [**Steel with surface-mounted frame**] [**Welded steel bars forming a linear grille and welded into supporting panel**].
 - b. Insulation: Faced, glass-fiber duct liner.
2. Condensate Drain Pans:

First option in first subparagraph below is minimum slope in ASHRAE 62.1.

- a. Fabricated with [**one**] [**two**] percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.

ASHRAE compliance option in "Length" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain option in first subparagraph to comply with LEED Prerequisite IEQ 1; otherwise, insert distance.

- 1) Length: Extend drain pan downstream from leaving face [**to comply with ASHRAE 62.1**] <Insert distance>.
- 2) Depth: A minimum of [2 inches (50 mm)] <Insert depth> deep.

Retain one of first two subparagraphs below. Retain second subparagraph if drain-pan temperature is expected to fall below surrounding dew point temperature.

- b. Single-wall, **[galvanized]** **[stainless]**-steel sheet.
- c. Double-wall, **[galvanized]** **[stainless]**-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
- d. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on **[one end]** **[both ends]** of pan.
 - 1) Minimum Connection Size: **[NPS 1 (DN 25)]** **[NPS 2 (DN 50)]** **<Insert size>**.

Retain first subparagraph below for galvanized-steel drain pans; delete for stainless-steel drain pans.

- e. Pan-Top Surface Coating: Asphaltic waterproofing compound.
 - f. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.
3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.

Retain one of first two subparagraphs below if heating coil is required.

- 4. Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch (2.5 mm)**; leak tested to **300 psig (2070 kPa)** underwater; with a two-position control valve.
- 5. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
- 6. Fan: Direct drive, centrifugal, **with power-induced outside air**].
- 7. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.

Retain first subparagraph below if enclosure is not open-dripproof type. Retain second subparagraph for premium efficiency.

- c. Enclosure Type: Totally enclosed, fan cooled.
- d. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
- e. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

Retain first subparagraph below to require that disconnect switches be supplied with unit.

- f. Mount unit-mounted disconnect switches on **[exterior]** **[interior]** of unit.

If unique characteristics are required for motors in this Section, insert subparagraphs below.

- g. **<Insert unique motor characteristics>**.

8. Air Filtration Section:

See Evaluations for discussion on filter characteristics and applications. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

a. General Requirements for Air Filtration Section:

- 1) Comply with NFPA 90A.
- 2) Minimum Arrestance: According to ASHRAE 52.1 and a MERV according to ASHRAE 52.2.
- 3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.

b. Disposable Panel Filters:

Retain one or more of first seven subparagraphs below, as applicable. If Project has more than one filter type, indicate filter type for each unit on Drawings.

- 1) Factory-fabricated, viscous-coated, flat-panel type.
- 2) Thickness: [1 inch (25 mm)] [2 inches (50 mm)].
- 3) Dust-Holding Capacity: <Insert lb (kg)>.
- 4) Initial Resistance: <Insert inches wg (Pa)>.
- 5) Recommended Final Resistance: <Insert inches wg (Pa)>.
- 6) Arrestance according to ASHRAE 52.1: [80] <Insert value>.
- 7) Merv according to ASHRAE 52.2: [5] <Insert value>.
- 8) Media: Interlaced glass fibers sprayed with nonflammable adhesive[**and antimicrobial agent**].
- 9) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.

c. Extended-Surface, Disposable Panel Filters:

- 1) Factory-fabricated, dry, extended-surface type.
- 2) Thickness: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)].
- 3) Dust-Holding Capacity: <Insert lb (kg)>.
- 4) Initial Resistance: <Insert inches wg (Pa)>.
- 5) Recommended Final Resistance: <Insert inches wg (Pa)>.
- 6) Arrestance according to ASHRAE 52.1: [90] <Insert value>.
- 7) Merv according to ASHRAE 52.2: [7] <Insert value>.
- 8) Media: Fibrous material formed into deep-V-shaped pleats[**with antimicrobial agent**] and held by self-supporting wire grid.
- 9) Media-Grid Frame: [Nonflammable cardboard] [Galvanized steel] [Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets].
- 10) Mounting Frames: Welded, galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

Paragraph below is an example of variable-frequency controllers. Retain features and attributes to suit Project, and verify their availability with listed manufacturers.

C. Variable-Frequency Controllers:

1. Description: NEMA ICS 2, IGBT, PWM, VFC; listed and labeled as a complete unit and arranged to provide variable speed of an NEMA MG 1, Design B, three-phase induction motor by adjusting output voltage and frequency.
2. Output Rating: Three-phase; 6 to **[60 Hz, with voltage proportional to frequency throughout voltage range] [66 Hz, with torque constant as speed changes] [120 Hz, with horsepower constant throughout speed range]**.
3. Unit Operating Requirements:
 - a. Input ac voltage tolerance of **[208 V, plus or minus 5] [380 to 500 V, plus or minus 10] [525 to 575 V, plus or minus 10]** percent.
 - b. Input-frequency tolerance of 06/11 Hz, plus or minus 6 percent.
 - c. Minimum Efficiency: 96 percent at 60 Hz, full load.
 - d. Minimum Displacement Primary-Side Power Factor: 96 percent.
 - e. Overload Capability: 1.1 times the base load current for 60 seconds; 2.0 times the base load current for 3 seconds.
 - f. Starting Torque: 100 percent of rated torque or as indicated.
 - g. Speed Regulation: Plus or minus 1 percent.
4. Isolated control interface to allow controller to follow control signal over an 11:1 speed range.
5. Internal Adjustability Capabilities:
 - a. Minimum Speed: 5 to 25 percent of maximum rpm.
 - b. Maximum Speed: 80 to 100 percent of maximum rpm.
 - c. Acceleration: 2 seconds to a minimum of 22 seconds.
 - d. Deceleration: 2 seconds to a minimum of 22 seconds.
 - e. Current Limit: 50 percent to a minimum of 110 percent of maximum rating.
6. Self-Protection and Reliability Features:

Retain one or more of first nine subparagraphs below.

- a. Input transient protection by means of surge suppressors.
- b. Undervoltage and overvoltage trips; inverter overtemperature, overload, and overcurrent trips.
- c. Adjustable motor overload relays capable of NEMA ICS 2, **[Class 10] [Class 20] [Class 30]** performance.
- d. Notch filter to prevent operation of the controller-motor-load combination at a natural frequency of the combination.
- e. Instantaneous line-to-line and line-to-ground overcurrent trips.
- f. Loss-of-phase protection.
- g. Reverse-phase protection.
- h. Short-circuit protection.
- i. Motor overtemperature fault.

Revise first four subparagraphs below to suit Project; delete if not applicable.

7. Automatic Reset/Restart: Attempts three restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction. Bidirectional autospeed search shall be capable of starting into

- rotating loads, spinning in either direction and returning motor to set speed in proper direction, without damage to controller, motor, or load.
8. Power-Interruption Protection: Prevents motor from re-energizing after a power interruption until motor has stopped.
 9. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.
 10. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back, based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.
 11. Door-mounted, digital status lights shall indicate the following conditions:
 - a. Power on.
 - b. Run.
 - c. Overvoltage.
 - d. Line fault.
 - e. Overcurrent.
 - f. External fault.
 12. Panel-Mounted Operator Station: Start-stop and auto-manual selector switches with manual-speed-control potentiometer and elapsed-time meter.
 13. Meters or digital readout devices and selector switch, mounted flush in controller door and connected, to indicate the following controller parameters:
 - a. Output frequency (Hertz).
 - b. Motor speed (rpm).
 - c. Motor status (running, stop, fault).
 - d. Motor current (amperes).
 - e. Motor torque (percent).
 - f. Fault or alarming status (code).
 - g. Proportional-integral-derivative feedback signal (percent).
 - h. DC-link voltage (volts dc).
 - i. Set-point frequency (Hertz).
 - j. Motor output voltage (volts).
 14. Control Signal Interface:
 - a. Electric Input Signal Interface: A minimum of two analog inputs (0 to 10 V or 0/4-20 mA) and six programmable digital inputs.
 - b. Remote signal inputs capable of accepting any of the following speed-setting input signals from the control system:
 - 1) 0 to 10-V dc.
 - 2) 0-20 or 4-20 mA.
 - 3) Potentiometer using up/down digital inputs.
 - 4) Fixed frequencies using digital inputs.
 - 5) RS485.
 - 6) Keypad display for local hand operation.

- c. Output signal interface with a minimum of one analog output signal (0/4-20 mA), which can be programmed to any of the following:
 - 1) Output frequency (Hertz).
 - 2) Output current (load).
 - 3) DC-link voltage (volts dc).
 - 4) Motor torque (percent).
 - 5) Motor speed (rpm).
 - 6) Set-point frequency (Hertz).
- d. Remote indication interface with a minimum of two dry circuit relay outputs (120-V ac, 1 A) for remote indication of the following:
 - 1) Motor running.
 - 2) Set-point speed reached.
 - 3) Fault and warning indication (overtemperature or overcurrent).
 - 4) High- or low-speed limits reached.
15. Communications: RS485 interface allows VFC to be used with an external system within a multidrop LAN configuration. Interface shall allow all parameter settings of VFC to be programmed via BMS control. Provide capability for VFC to retain these settings within the nonvolatile memory.

Coordinate both subparagraphs below with manufacturers; not all manufacturers offer all optional features below.

16. Integral Disconnecting Means: [**NEMA AB 1, instantaneous-trip circuit breaker**] [**NEMA AB 1, molded-case switch**] [**NEMA KS 1, nonfusible switch**] [**NEMA KS 1, fusible switch**] with lockable handle.
17. Accessories:
 - a. Devices shall be factory installed in controller enclosure unless otherwise indicated.
 - b. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.
 - c. Standard Displays:
 - 1) Output frequency (Hertz).
 - 2) Set-point frequency (Hertz).
 - 3) Motor current (amperes).
 - 4) DC-link voltage (volts dc).
 - 5) Motor torque (percent).
 - 6) Motor speed (rpm).
 - 7) Motor output voltage (volts).

2.5 OUTDOOR UNITS (5 TONS (18 kW) OR LESS)

A. Air-Cooled, Compressor-Condenser Components:

1. Casing: Steel, finished with baked enamel in color selected by DEN Project Manager, with removable panels for access to controls, weep holes for water

- drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - a. Compressor Type: Scroll.

Feature in first subparagraph below is not available from all manufacturers.

- b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.

LEED Credit EA 4 awards a single point if all HVAC&R equipment has HCFC-free refrigerants. R-407C and R-410A are HCFC-free refrigerants.

- c. Refrigerant Charge: [R-22] [R-407C] [R-410A] <Insert type>.
 - d. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 206/110.

Retain first subparagraph below for heat-pump units.

3. Heat-Pump Components: Reversing valve and low-temperature-air cutoff thermostat.
4. Fan: Aluminum-propeller type, directly connected to motor.
5. Motor: Permanently lubricated, with integral thermal-overload protection.
6. Low Ambient Kit: Permits operation down to 45 deg F (7 deg C).
7. Mounting Base: Polyethylene.

2.6 OUTDOOR UNITS (6 TONS (21 kW) OR MORE)

A. Air-Cooled, Compressor-Condenser Components:

1. Casing: Steel, finished with baked enamel in color selected by DEN Project Manager, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - a. Compressor Type: Scroll.

Feature in first subparagraph below is not available from all manufacturers.

- b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.

LEED Credit EA 4 awards a single point if all HVAC&R equipment has HCFC-free refrigerants. R-407C and R-410A are HCFC-free refrigerants.

- c. Refrigerant Charge: [R-22] [R-407C] [R-410A] <Insert type>.
 - d. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 206/110.

Retain first subparagraph below for heat-pump units.

3. Heat-Pump Components: Reversing valve and low-temperature-air cutoff thermostat.
4. Fan: Aluminum-propeller type, directly connected to motor.
5. Motor: Permanently lubricated, with integral thermal-overload protection.
6. Low Ambient Kit: Permits operation down to 45 deg F (7 deg C).
7. Mounting Base: Polyethylene.

B. Water-Cooled, Compressor-Condenser Components:

1. Casing: Steel, finished with baked enamel in color selected by DEN Project Manager, with removable panels for access to controls and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - a. Compressor Type: Scroll.

Feature in first subparagraph below is not available from all manufacturers.

- b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.

LEED Credit EA 4 awards a single point if all HVAC&R equipment has HCFC-free refrigerants. R-407C and R-410A are HCFC-free refrigerants.

- c. Refrigerant Charge: [R-22] [R-407C] [R-410A] <Insert type>.

Retain first subparagraph below for heat-pump units.

3. Heat-Pump Components: Reversing valve.
4. Heat Exchanger: Copper tubes in copper tube or in steel shell, with water-temperature-actuated, water-regulating valve.

2.7 ACCESSORIES

Retain one of first three paragraphs below. Retain first paragraph if controls are part of overall temperature control system.

- A. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- B. Thermostat: Low voltage with subbase to control compressor and evaporator fan.
- C. Thermostat: Wireless infrared functioning to remotely control compressor and evaporator fan, with the following features:
 1. Compressor time delay.
 2. 24-hour time control of system stop and start.

3. Liquid-crystal display indicating temperature, set-point temperature, time setting, operating mode, and fan speed.
 4. Fan-speed selection including auto setting.
- D. Automatic-reset timer to prevent rapid cycling of compressor.
- E. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.
- F. Drain Hose: For condensate.

LEED-NC and LEED for Schools Credit EA 5, LEED-CI Credit EA 3, and LEED-CS Credit EA 5.1 require continuous metering equipment for monitoring building energy consumption performance over time. Retain paragraph below if required to comply with requirements for this credit. Verify availability of control features with unit manufacturers or if required by Project requirements or authorities having jurisdiction.

- G. Additional Monitoring:
1. Monitor constant and variable motor loads.
 2. Monitor variable-frequency-drive operation.
 3. Monitor economizer cycle.
 4. Monitor cooling load.
 5. Monitor air distribution static pressure and ventilation air volumes.

2.8 CAPACITIES AND CHARACTERISTICS

A. Cooling Capacity:

1. Total: <Insert value> Btu/h (kW).
2. Sensible: <Insert value> Btu/h (kW).

Retain "SEER" Subparagraph below for units with capacities 5 tons (18 kW) and less.

3. SEER: [10.0] [12.0] [13.0] [14.0] [16.0] <Insert ratio>.

Retain "EER" Subparagraph below for units with capacities 6 tons (21 kW) or more.

4. EER: [10.0] [12.0] [13.0] [14.0] [16.0] <Insert ratio>.
5. Moisture Removal: <Insert pints/h (L/h)>.
6. Entering-Air Temperature:

- a. Dry Bulb: <Insert deg F (deg C)>.
- b. Wet Bulb: <Insert deg F (deg C)>.

7. Leaving-Air Temperature:

- a. Dry Bulb: <Insert deg F (deg C)>.
- b. Wet Bulb: <Insert deg F (deg C)>.

B. Heating Capacity:

1. Type: **[Electric]** **[Natural gas]**.
2. Total Capacity: **<Insert value>** Btu/h (kW).
3. Air-Temperature Rise: **<Insert deg F (deg C)>**.

Retain one or both of first two subparagraphs below for heat pumps.

4. Coefficient of Performance: **<Insert value>**.
5. Heating Season Performance Factor: **[7.7] [8.0] <Insert value>**.

Retain first subparagraph below for hydronic heating coil.

6. Hot Water:
 - a. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 - b. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
 - c. Water Flow: **<Insert gpm (L/s)>**.
 - d. Water Pressure Drop: **<Insert feet of head (kPa)>**.

Retain first subparagraph below for electric heating coil.

7. Electric Heating Coil:
 - a. Total Capacity: **<Insert value>** kW.
 - b. Volts: **[120] [208] [230] [460] <Insert value>**.
 - c. Phase: **[Single] [Poly]**.
 - d. Hertz: 60.
 - e. Steps: **[One] [Two] [Three] <Insert number>**.

Retain subparagraph below for natural or propane gas heat.

8. Gas Heating Section:
 - a. Input: **<Insert cfh (mL/s)>**.
 - b. Output: **<Insert cfh (mL/s)>**.

C. Auxiliary Heating Capacity:

Retain first six subparagraphs below for heat pumps with auxiliary electric heat.

1. Type: **[Electric]** **[Natural gas]** **[Propane]**.
2. Total Capacity: **<Insert value>** Btu/h (kW).
3. Volts: **[120] [208] [230] [460] <Insert value>**.
4. Phase: **[Single] [Poly]**.
5. Hertz: 60.
6. Steps: **[One] [Two] [Three] <Insert number>**.

Retain two subparagraphs below for auxiliary gas heat.

7. Input: **<Insert cfh (mL/s)>**.
8. Output: **<Insert cfh (mL/s)>**.

D. Indoor Unit:

1. Fan Motor Electrical Characteristics:

- a. Volts: [120] [208] [230] [460] <Insert value>.
 - b. Phase: [Single] [Poly].
 - c. Hertz: 60.
2. Airflow: <Insert value> cfm (L/s).
- E. Outdoor Unit:
1. Type: [Air cooled] [Water cooled].
 2. Electrical Characteristics:
 - a. Volts: [120] [208] [230] [460] <Insert value>.
 - b. Phase: [Single] [Poly].
 - c. Hertz: 60.
 - d. Minimum Circuit Ampacity: <Insert value>.
 - e. Maximum Overcurrent Protection: <Insert amperage>.
 - f. Fan Motor Full-Load Amperes: <Insert value>.
 - g. Compressor Full-Load Amperes: <Insert value>.
 - h. Compressor Locked-Rotor Amperes: <Insert value>.
 3. Sound-Pressure Level: <Insert value> dBa.
- Retain subparagraph below for water-cooled outdoor units.
4. Water:
 - a. Entering-Water Temperature: <Insert deg F (deg C)>.
 - b. Water Flow: <Insert gpm (L/s)>.
 - c. Water Pressure Drop: <Insert feet of head (kPa)>.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate to assure correct recess size for recessed units.
- C. Install units level and plumb.
- D. Install equipment exposed to finished areas after walls and ceiling are finished and painted. Avoid damage to other materials.
- E. Protection: Provide finished cabinet units with protective covers during balance of construction.
- F. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.

- G. Install roof-mounted, compressor-condenser components on equipment supports specified in Section 077200 "Roof Accessories." Anchor units to supports with removable, cadmium-plated fasteners.
- H. Equipment Mounting:

Retain first subparagraph below to require ground-mounted units to be installed on cast-in-place concrete equipment bases.

1. Install ground-mounted, compressor-condenser components on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]
2. Install ground-mounted, compressor-condenser components on polyethylene mounting base.

Retain one of two subparagraphs below. Retain first for projects in seismic areas; retain second for projects not in seismic areas. Indicate vibration isolation and seismic-control device type and minimum deflection in supported equipment schedule on Drawings.

3. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 4. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- I. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.2 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

Retain first subparagraph below for units with hot-water coils.

1. Water Coil Connections: Comply with requirements specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Connect hydronic piping to supply and return coil connections with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.

Retain subparagraph below for units with remote water-cooled condenser.

2. Remote, Water-Cooled Condenser Connections: Comply with requirements specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Connect hydronic piping to supply and return connections with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.

- B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.

Retain paragraph below for units connected to ducts. Coordinate duct installation requirements with schematics on Drawings and with requirements specified for duct systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- C. Duct Connections: Duct installation requirements are specified in Section 233113 "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply[**and return**] ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Section 233300 "Air Duct Accessories."
- D. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

Retain first paragraph below to require a factory-authorized service representative to perform inspections, tests, and adjustments.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

- C. Tests and Inspections:
 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Remove and replace malfunctioning units and retest as specified above.

- E. Prepare test and inspection reports.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. **<Insert startup steps if any>**.

3.5 CLEANING

- A. After construction is completed, including painting, clean exposed surfaces of units. Vacuum clean coils and inside of cabinets.
- B. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.
- C. Install new filters.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist contractor and train owner's maintenance personnel to adjust, operate, and maintain units.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238126

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238146 - WATER-SOURCE UNITARY HEAT PUMPS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes unitary heat pumps with refrigerant-to-water heat exchangers, refrigeration circuits, and refrigerant compressor(s).

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each water-source unitary heat pump.
2. Include rated capacities, operating characteristics, furnished specialties, and accessories.
3. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit EA 2: Documentation indicating that equipment complies with minimum efficiency.

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

2. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.

C. Shop Drawings:

1. Include plans, elevations, sections, and mounting and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC." See ASCE/SEI 7 for certification requirements for equipment and components.

A. Seismic Qualification Certificates: For water-source unitary heat pumps, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Retain "Product Certificates" Paragraph below to require submittal of product certificates from manufacturers.

B. Product Certificates: For each type of water-source unitary heat pump, signed by product manufacturer.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

C. Field quality-control reports.

Coordinate sample requirements with DEN Project Manager.

- D. Sample Warranty: For manufacturer's warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For water-source unitary heat pumps to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

Extra materials may not be allowed for publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Revise subparagraph below to suit Project.

1. **[One (1)] <Insert number>** spare heat-pump unit(s) of each size and model furnished.

1.7 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer agrees to repair or replace components of water-source unitary heat pumps that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, refrigeration components.

Verify available warranties and warranty periods for refrigerant components.

2. Warranty Period: Minimum **[four (4)] <Insert number>** years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 PERFORMANCE REQUIREMENTS

"ASHRAE Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- A. ASHRAE Compliance:
1. ASHRAE 15.
- B. Comply with NFPA 70.
- C. Comply with safety requirements in UL 484 for assembly of free-delivery, water-source heat pumps.

2.2 WATER-SOURCE UNITARY HEAT PUMPS, 6 TONS (21 kW) AND SMALLER

Many optional features are available for this product, and some optional features are mutually exclusive from each other. Specify all those required for Project.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Carrier Corporation; a unit of United Technologies Corp.
 2. ClimateMaster, Inc.
 3. FHP Manufacturing Inc.
 4. Hydro-Temp Corporation, Inc.
 5. Mammoth Inc.
 6. McQuay International; Daikin Industries.
 7. Trane Inc.
 8. Water Furnace International, Inc.
 9. **<Insert manufacturer's name>.**
 10. or approved equal.

- B. Description: Packaged water-source unitary heat pump with temperature controls; factory assembled, piped, wired, tested, and rated according to ASHRAE/ARI/ISO-13256-1.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Cabinet and Chassis: Galvanized-steel casing with the following features:
1. Access panel for access and maintenance of internal components.
 2. Knockouts for electrical and piping connections.
 3. Cabinet Insulation: Glass-fiber liner, minimum [1/2 inch (13 mm)], [3/4 inch (19 mm)] thick, complying with UL 181, ASTM C 1071, and ASTM G 21.
- D. Water Circuits:
1. Refrigerant-to-Water Heat Exchangers:

Retain one of first two subparagraphs below.

- a. Source-side coaxial heat exchangers with **[copper] [cupronickel] [internal vented double wall]** water tube, with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to **450 psig** (3102 kPa) on refrigerant side and **400 psig** (2758 kPa) on water side.
- b. Load-side coaxial heat exchangers with **[copper] [cupronickel]** water tube, with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to **450 psig** (3102 kPa) on refrigerant side and **400 psig** (2758 kPa) on water side.
- c. Stainless-steel, brazed-plate heat exchanger is leak tested to **450 psig** (3102 kPa) on refrigerant side and **400 psig** (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.
- d. Hot-water generator, **[copper water tube] [vented double wall copper tube]** with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to **450 psig** (3102 kPa) on refrigerant side and **400 psig** (2758 kPa) on water side, pump, circuit breaker, high water temperature and low water refrigerant cutoffs, and tank connection.

Verify availability of water-regulating valves and motorized water valves.

- E. Refrigerant Circuit Components:
1. Sealed Refrigerant Circuit: Charge with R-410A refrigerant.

Filter-dryers are unavailable from some manufacturers.

2. Filter-Dryer: Factory installed to clean and dehydrate the refrigerant circuit.
3. Charging Connections: Service fittings on suction and liquid for charging and testing on each circuit.
4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.

Options in "Compressor" Subparagraph below depend on unit size. Verify with manufacturers. Delete if these features are not specific selection criteria.

5. Compressor:
 - a. ~~[Scroll]~~ **[Reciprocating]**.
 - b. **[Single stage]** ~~[Two stage]~~ **[Variable speed]**.
 - c. Installed on vibration isolators and mounted on a structural steel base plate and full-length channel stiffeners.
 - d. Exterior of compressor shall be wrapped with a high-density sound-attenuating blanket and housed in an acoustically treated enclosure.
 - e. Factory-Installed Safeties:
 - 1) Antirecycle timer.
 - 2) High-pressure cutout.
 - 3) Low-pressure cutout or loss of charge switch.
 - 4) Internal thermal-overload protection.

Retain first two subparagraphs below for compressor safety switches.

- 5) Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below **[35 deg F (2 deg C)]** **<Insert temperature>**.
 - 6) Water-coil, low-temperature switch.
6. Refrigerant Piping Materials: ASTM B 743 copper tube with wrought-copper fittings and brazed joints.
7. Pipe Insulation: Refrigerant minimum **3/8-inch- (10-mm-)** thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes according to ASTM E 84.

Retain one of two "Refrigerant Metering Device" subparagraphs below.

8. Refrigerant Metering Device: Thermal-expansion valve.
9. Refrigerant Metering Device: Dual-port, thermal-expansion valve to allow specified operation with entering-water temperatures from **[25 to 125 deg F (minus 4 to plus 52 deg C)]** **<Insert temperature range>**.

Retain one of the two "Controls" paragraphs below. Retain first paragraph if controls are part of a DDC temperature-control system.

- F. Controls: Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- G. Controls:
 1. Basic Unit Control Modes and Devices:
 - a. Unit shutdown on high or low refrigerant pressures.
 - b. Unit shutdown on low water temperature.
 - c. Low- and high-voltage protection.
 - d. Overcurrent protection for compressor.
 - e. Random time delay, three to 10 seconds, start on power-up.

- f. Time delay override for servicing.
 - g. Control voltage transformer.
 - h. Water-coil freeze protection (selectable for water or antifreeze).
 - i. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
 - j. Ability to defeat time delays for servicing.
 - k. Digital display to indicate high pressure, low pressure, low voltage, and high voltage.
 - l. The low-pressure switch shall not be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
 - m. Remote fault-type indication at thermostat.
 - n. Selectable 24-V dc or pilot duty dry contact alarm output.
 - o. 24-V dc output to cycle a motorized water valve with compressor contactor.
 - p. Service test mode for troubleshooting and service.
 - q. Unit-performance sentinel warns when heat pump is running inefficiently.
 - r. Compressor soft start.
2. Thermostat:
- a. Wall-Mounted Thermostat:
 - 1) Heat-cool-off switch.
 - 2) **[Five day] [Seven day]**, programmable.
 - 3) **[Manual] [Automatic]** changeover.
 - 4) **[Concealed] [Exposed]** temperature set point.
 - 5) **[Concealed] [Exposed]** temperature indication.
 - 6) Deg **[F] [C]** indication.
 - b. Wall-mounted temperature sensor.
 - c. Duct-mounted temperature sensor
 - d. Unoccupied period override push button.
 - e. Digital display to indicate fault condition at heat pump.
 - f. Data entry and access port.
 - 1) Input data include room temperature and humidity set points for occupied and unoccupied periods.
 - 2) Output data include room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.
3. Terminal Controller:
- a. Scheduled operation for occupied and unoccupied periods on **[seven] [365]**-day clock with minimum of four programmable periods per day.
 - b. **[Two] <Insert number>**-hour unoccupied override period.
 - c. Remote-control panel to contain programmable timer and digital display for fault condition.
 - d. Compressor-disable relay to stop compressor operation for demand limiting or switch to unoccupied operation.

- e. Automatic restart after five minutes if fault clears. Lockout after three attempts to restart following fault. Indicate fault for service technician.
 - f. Backup for volatile memory.
4. DDC interface requirements as further described in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- a. Interface relay for scheduled operation.
 - b. Interface relay to provide indication of fault at central workstation.
 - c. Provide [**BAC-net**] [**or**] [**Lonworks**] interface for central DDC workstation for the following functions:
 - 1) Set-point adjustment.
 - 2) Start/stop and operating status of heat-pump unit.
 - 3) Data inquiry to include supply-air and room-air temperature and humidity, and entering-water temperature.
 - 4) Occupied and unoccupied schedules.

H. Electrical Connection: Single electrical connection [**with fused disconnect**].

If Project has more than one of this type of heat pump, delete "Capacities and Characteristics" Paragraph below and schedule heat pumps on Drawings.

I. Capacities and Characteristics:

1. Source-Side Water Supply:

- a. Water Flow: <Insert gpm (L/s)>.
- b. Pressure Loss: <Insert feet wg (kPa)>.
- c. Entering-Water Temperature (Cooling): <Insert deg F (deg C)>.
- d. Entering-Water Temperature (Heating): <Insert deg F (deg C)>.
- e. Antifreeze Protection Chemical: <Insert chemical name>.
- f. Antifreeze Concentration: <Insert percentage>.

2. Load-Side Water Supply:

- a. Water Flow: <Insert gpm (L/s)>.
- b. Pressure Loss: <Insert feet wg (kPa)>.
- c. Entering-Water Temperature (Cooling): <Insert deg F (deg C)>.
- d. Entering-Water Temperature (Heating): <Insert deg F (deg C)>.
- e. Antifreeze Protection Chemical: <Insert chemical name>.
- f. Antifreeze Concentration: <Insert percentage>.

3. Cooling:

- a. Total Capacity: <Insert Btu/h (kW)>.
- b. Sensible Capacity: <Insert Btu/h (kW)>.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- c. Minimum Energy-Efficiency Ratio (EER): **<Insert value>**.
4. Heating:
 - a. Capacity: **<Insert Btu/h (kW)>**.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- b. Minimum Coefficient of Performance (COP): **<Insert value>**.
5. Electrical Characteristics for Single Connection:
 - a. Volts: **[120] [208] [230] <Insert number> V.**
 - b. Phase: **[Single] [Three].**
 - c. Hertz: 60.
 - d. Full-Load Amperes (FLA): **<Insert number> A.**
 - e. Maximum Circuit Amperage (MCA): **<Insert number> A.**
 - f. Maximum Overcurrent Protection (MOCP): **<Insert number> A.**

2.3 WATER-SOURCE UNITARY HEAT PUMPS LARGER THAN 6 TONS (21 kW)

Many optional features are available for this product, and some are mutually exclusive. Specify all those required for Project.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Carrier Corporation; a unit of United Technologies Corp.
 2. ClimateMaster, Inc.
 3. FHP Manufacturing Inc.
 4. Hydro-Temp Corporation, Inc.
 5. Mammoth Inc.
 6. McQuay International; Daikin Industries.
 7. Trane Inc.
 8. Water Furnace International, Inc.
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Description: Packaged water-source unitary heat pump with temperature controls; factory assembled, piped, wired, tested, and rated according to ASHRAE/ARI/ISO-13256-1.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency and marked for intended location and application.
- C. Cabinet and Chassis: Galvanized-steel casing with the following features:
1. Access panel for access and maintenance of internal components.
 2. Knockouts for electrical and piping connections.
 3. Cabinet Insulation: Glass-fiber liner, minimum [1/2 inch (13 mm)], [3/4 inch (19 mm)] thick, complying with UL 181, ASTM C 1071, and ASTM G 21.
- D. Water Circuits:
1. Refrigerant-to-Water Heat Exchangers:

Retain one of first two subparagraphs below.

- a. Source-side coaxial heat exchangers with [**copper**] [**cupronickel**] [**internal vented double wall**] water tube, with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side.
- b. Load-side coaxial heat exchangers with [**copper**] [**cupronickel**] water tube, with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side.
- c. Stainless-steel, brazed-plate heat exchanger is leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.
- d. Hot-water generator, [**copper water tube**] [**vented double wall copper tube**] with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side, pump, circuit breaker, high water temperature and low water refrigerant cutoffs, and tank connection.

Verify availability of water-regulating valves and motorized water valves.

- E. Refrigerant Circuit Components:
1. Sealed Refrigerant Circuit: Charge with R-410A refrigerant.

Filter-dryers are unavailable from some manufacturers.

2. Filter-Dryer: Factory installed to clean and dehydrate the refrigerant circuit.
3. Charging Connections: Service fittings on suction and liquid for charging and testing on each circuit.
4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.

Options in "Compressor" Subparagraph below depend on unit size. Verify with manufacturers. Delete if these features are not specific selection criteria.

5. Compressor:

- a. **[Scroll] [Reciprocating].**
- b. **[Single stage] [Two stage] [Variable speed].**
- c. Installed on vibration isolators and mounted on a structural steel base plate and full-length channel stiffeners.
- d. Exterior of compressor shall be wrapped with a high-density sound-attenuating blanket and housed in an acoustically treated enclosure.
- e. Factory-Installed Safeties:
 - 1) Antirecycle timer.
 - 2) High-pressure cutout.
 - 3) Low-pressure cutout or loss of charge switch.
 - 4) Internal thermal-overload protection.

Retain first two subparagraphs below for compressor safety switches.

- 5) Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below [35 deg F (2 deg C)] **<Insert temperature>**.
 - 6) Water-coil, low-temperature switch.
6. Refrigerant Piping Materials: ASTM B 743 copper tube with wrought-copper fittings and brazed joints.
 7. Pipe Insulation: Refrigerant minimum **3/8-inch- (10-mm-)** thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes according to ASTM E 84.

Retain one of two "Refrigerant Metering Device" subparagraphs below.

8. Refrigerant Metering Device: Thermal-expansion valve.
9. Refrigerant Metering Device: Dual-port, thermal-expansion valve to allow specified operation with entering-water temperatures from [25 to 125 deg F (minus 4 to plus 52 deg C)] **<Insert temperature range>**.

Retain first "Controls" Paragraph below if controls are part of a DDC temperature-control system.

- F. Controls: Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

Retain "Controls" Paragraph below if controls are not part of a DDC temperature-control system.

- G. Controls:

1. Basic Unit Control Modes and Devices:
 - a. Unit shutdown on high or low refrigerant pressures.
 - b. Unit shutdown on low water temperature.
 - c. Low- and high-voltage protection.
 - d. Overcurrent protection for compressor.
 - e. Random time delay, three to 10 seconds, start on power-up.
 - f. Time delay override for servicing.
 - g. Control voltage transformer.
 - h. Water-coil freeze protection (selectable for water or antifreeze).

- i. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
 - j. Ability to defeat time delays for servicing.
 - k. Digital display to indicate high pressure, low pressure, low voltage, and high voltage.
 - l. The low-pressure switch shall not be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
 - m. Remote fault-type indication at thermostat.
 - n. Selectable 24-V dc or pilot duty dry contact alarm output.
 - o. 24-V dc output to cycle a motorized water valve with compressor contactor.
 - p. Service test mode for troubleshooting and service.
 - q. Unit-performance sentinel warns when heat pump is running inefficiently.
 - r. Compressor soft start.
2. Thermostat:
- a. Wall-Mounted Thermostat:
 - 1) Heat-cool-off switch.
 - 2) **[Five day] [Seven day]**, programmable
 - 3) **[Manual] [Automatic]** changeover.
 - 4) **[Concealed] [Exposed]** temperature set point.
 - 5) **[Concealed] [Exposed]** temperature indication.
 - 6) Deg **[F] [C]** indication.
 - b. Wall-mounted temperature sensor.
 - c. Duct-mounted temperature sensor
 - d. Unoccupied period override push button.
 - e. Digital display to indicate fault condition at heat pump.
 - f. Data entry and access port.
 - 1) Input data include room temperature and humidity set points for occupied and unoccupied periods.
 - 2) Output data include room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.
3. Terminal Controller:
- a. Scheduled operation for occupied and unoccupied periods on **[seven] [365]**-day clock with minimum of four programmable periods per day.
 - b. **[Two] <Insert number>**-hour unoccupied override period.
 - c. Remote-control panel to contain programmable timer and digital display for fault condition.
 - d. Compressor-disable relay to stop compressor operation for demand limiting or switch to unoccupied operation.
 - e. Automatic restart after five minutes if fault clears. Lockout after three attempts to restart following fault. Indicate fault for service technician.
 - f. Backup for volatile memory.

4. DDC interface requirements as further described in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
 - a. Interface relay for scheduled operation.
 - b. Interface relay to provide indication of fault at central workstation.
 - c. Provide [**BAC-net**] [**or**] [**Lonworks**] interface for central DDC workstation for the following functions:
 - 1) Set-point adjustment
 - 2) Start/stop and operating status of heat-pump unit.
 - 3) Data inquiry to include supply-air and room-air temperature and humidity, and entering-water temperature.
 - 4) Occupied and unoccupied schedules.

H. Electrical Connection: Single electrical connection[**with fused disconnect**].

If Project has more than one of this type of heat pump, delete "Capacities and Characteristics" Paragraph below and schedule heat pumps on Drawings.

I. Capacities and Characteristics:

1. Source-Side Water Supply:

- a. Water Flow: <Insert gpm (L/s)>.
- b. Pressure Loss: <Insert feet wg (kPa)>.
- c. Entering-Water Temperature (Cooling): <Insert deg F (deg C)>.
- d. Entering-Water Temperature (Heating): <Insert deg F (deg C)>.
- e. Antifreeze Protection Chemical: <Insert chemical name>.
- f. Antifreeze Concentration: <Insert percentage>.

2. Load-Side Water Supply:

- a. Water Flow: <Insert gpm (L/s)>.
- b. Pressure Loss: <Insert feet wg (kPa)>.
- c. Entering-Water Temperature (Cooling): <Insert deg F (deg C)>.
- d. Entering-Water Temperature (Heating): <Insert deg F (deg C)>.
- e. Antifreeze Protection Chemical: <Insert chemical name>.
- f. Antifreeze Concentration: <Insert percentage>.

3. Cooling:

- a. Total Capacity: <Insert Btu/h (kW)>.
- b. Sensible Capacity: <Insert Btu/h (kW)>.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- c. Minimum Energy-Efficiency Ratio (EER): <Insert value>.

4. Heating:

- a. Capacity: <Insert Btu/h (kW)>.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- b. Minimum Coefficient of Performance (COP): <Insert value>.

5. Electrical Characteristics for Single Connection:

- a. Volts: [120] [208] [230] <Insert number> V.
- b. Phase: [Single] [Three].
- c. Hertz: 60.
- d. Full-Load Amperes (FLA): <Insert number> A.
- e. Maximum Circuit Amperage (MCA): <Insert number> A.
- f. Maximum Overcurrent Protection (MOCP): <Insert number> A.

2.4 ACCESSORIES

Retain either "Hose Kits" Paragraph or "Hose Kit Assemblies" Paragraph below. Retain "Hose Kits" Paragraph below if hose kits are furnished with the water-source unitary heat pumps.

A. Hose Kits: Tag hose kits to equipment designations.

1. Minimum Working Pressure: 400 psig (2758 kPa).
2. Operating Temperatures: From 33 to 211 deg F (1 to 100 deg C).
3. Hose Length: [24 inches (600 mm)] [36 inches (900 mm)] <Insert dimension>.
4. Minimum Hose Diameter: Equal to water-source unitary heat-pump piping connection.
5. Hose Material: Braided stainless steel with adapters for pipe connections.
6. Isolation Valves: Two-piece, bronze-body ball valves with stainless-steel ball and stem, standard-port threaded connections, and galvanized-steel lever handle. Valves shall be factory installed on supply and return connections of both load-side and source-side heat exchangers. If balancing valve is combination shutoff type with memory stop, the isolation valve may be omitted on the return.
7. Strainer: Y-pattern with blowdown valve in supply connections of both load and source side of heat exchangers.
8. Balancing Valves: Mount in return connection. Include meter ports to allow flow measurement with differential pressure gage.

Retain one of first three subparagraphs below.

- a. Automatic balancing valve, factory set to operate within 10 percent of design flow rate over a pressure range of 2 to 80 psig (13.8 to 552 kPa).
 - b. Manual, calibrated-orifice balancing valve with memory stop.
 - c. Manual, venturi-type balancing valve with memory stop.
9. Water-Regulating Valve Assemblies: A direct acting valve regulates discharge pressure during the cooling cycle, and a reverse acting valve regulates the suction pressure during the heating cycle. Valves shall close when heat-pump compressor is not running.

10. Motorized Water Valve: Stop water flow through the unit when compressor is off. Slow-acting, 24-V dc valve with threaded connections is installed between isolation valves and heat exchanger.

Retain "Hose Kit Assemblies" Paragraph if hoses kits are not furnished separately from the water-source unitary heat pumps.

B. Hose Kit Assemblies:

1. Minimum Working Pressure: 400-psig (2758-kPa).
2. Operating Temperatures: From 33 to 211 deg F (1 to 100 deg C).
3. Hose Length: [24 inches (600 mm)] [36 inches (900 mm)] <Insert dimension>.
4. Minimum Hose Diameter: Equal to water-source unitary heat-pump piping connection.
5. Hose Material: Braided stainless steel with adapters for pipe connections.

Retain one or more of four subparagraphs below.

6. Supply and return hoses having ball valve with pressure-temperature port.
7. Supply hose having ball valve with pressure-temperature port; return hose having automatic flow regulator valve with pressure-temperature ports and ball valve.
8. Supply hose having Y-pattern strainer with blowdown valve and ball valve with pressure-temperature port; return hose having automatic flow regulator with pressure-temperature ports and ball valve.
9. Supply hose having Y-pattern strainer with blowdown valve and ball valve with pressure-temperature port; return hose having ball valve with pressure-temperature port.

C. Loop Controller: Six stages; two stages for heating and four stages for cooling.

Retain "Pump Module" Paragraph below for individual heat pumps that either stand alone or are secondary to a central circulating water loop.

D. Pump Module:

Values in first subparagraph below are examples only; verify actual values with manufacturer.

1. Minimum [1/6-hp] <Insert motor size>, [230-V] [120-V], single-phase pump, rated for at least [16 gpm (1 L/s)] <Insert value> at [20 feet of head (59 kPa)] <Insert value>.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project.

2. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
3. Include pump module hose kit with thread to barb fittings, hose, and hose clamps.
4. Three-way brass shut-off/flushing/purging valve.
5. Include controls to operate pump as required to maintain room temperature and ventilation set points.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping and electric installations for water-source unitary heat pumps to verify actual locations of piping connections and electrical conduits before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.

Retain "Equipment Mounting" Paragraph below if units are floor mounted.

- B. Equipment Mounting:

Retain first subparagraph below to require equipment to be installed on cast-in-place concrete equipment bases.

- 1. Install water-source, unitary heat pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

Retain one of two subparagraphs below. Retain first for projects in seismic areas; retain second for projects not in seismic areas. Indicate vibration-isolation and seismic-restraint device type and minimum deflection in supported equipment schedule on Drawings.

- 2. Comply with requirements for vibration-isolation and seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- 3. Comply with requirements for vibration-isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

Retain first paragraph below if units are suspended from structure.

- C. Suspend water-source, unitary heat pumps from structure with all-thread hanger rods and [**elastomeric hangers**] [**spring hangers**] [**spring hangers with vertical-limit stop**]. Hanger rods and attachments to structure are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in [**Section 230548 "Vibration and Seismic Controls for HVAC."**] [**Section 230548.13 "Vibration Controls for HVAC."**]
- D. Install wall-mounting thermostats and switch controls in electrical outlet boxes at heights to match lighting controls or as required in Section 230923 "Direct Digital Control (DDC) System for HVAC."

3.3 CONNECTIONS

Coordinate requirements for piping installation and specialty arrangements with Drawings and with requirements specified in hydronic piping and steam and condensate piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:
 - 1. Connect supply and return hydronic piping to heat pump with **[unions and shutoff valves] [hose kits]**.

Coordinate duct installation requirements with Drawings and with requirements specified for duct systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- B. Install electrical devices furnished by manufacturer but not specified to be factory mounted.
- C. Install piping adjacent to machine to allow space for service and maintenance.

3.4 FIELD QUALITY CONTROL

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform the following field tests and inspections:
 - 1. After installing water to water heat pumps and after electrical circuitry has been energized, test units for compliance with requirements.
 - 2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- C. Heat pumps will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 STARTUP SERVICE

Delete paragraph below if factory-authorized service representative is not required.

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Inspect for visible damage to unit casing.
 - 3. Inspect for visible damage to compressor and coils.
 - 4. Inspect internal insulation.
 - 5. Verify that labels are clearly visible.
 - 6. Verify that clearances have been provided for servicing.
 - 7. Verify that controls are connected and operable.
 - 8. Adjust vibration isolators.
 - 9. Start unit according to manufacturer's written instructions.
 - 10. Complete startup sheets and attach copy with Contractor's startup report.
 - 11. Inspect and record performance of interlocks and protective devices; verify sequences.
 - 12. Operate unit for an initial period as recommended or required by manufacturer.
 - 13. Verify thermostat calibration.
 - 14. Inspect controls for correct sequencing of heating, refrigeration, and normal and emergency shutdown.

3.6 ADJUSTING

- A. Adjust initial temperature set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two]** <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain water-source unitary heat pumps.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 238146.13 - WATER-TO-AIR HEAT PUMPS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify, with manufacturers, that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system design alternatives that do not include water-source unitary heat pumps may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Concealed horizontal or vertical units, **6 tons (21 kW)** and smaller.
 - 2. Concealed horizontal or vertical units larger than **6 tons (21 kW)**.
 - 3. Vertical-stack units.
 - 4. Exposed, floor-mounted console units.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include rated capacities, furnished specialties, and accessories for each model.
 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Include diagrams for power, signal, and control wiring.

Retain "Samples" Paragraph below for single-stage Samples, with a subordinate list if applicable. Retain "Samples for Initial Selection" and "Samples for Verification" paragraphs for two-stage Samples.

Coordinate sample requirements with DEN Project Manager.

- D. Samples: For each exposed product and for each color and texture specified.
- E. Samples for Initial Selection: For units with factory-applied color finishes.
- F. Samples for Verification: For each type of unit indicated.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

Revise subparagraphs below to suit Project.

1. Suspended ceiling components.
2. Structural members to which heat pumps are attached.
3. Method of attaching hangers to building structure.
4. Size and location of initial access modules for acoustical tile.
5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. <Insert item>.

Retain "Product Certificates" Paragraph below to require submittal of product certificates from manufacturers.

- B. Product Certificates: For each type of water-source unitary heat pump, signed by product manufacturer.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC." See ASCE/SEI 7 for certification requirements for equipment and components.

- C. Seismic Qualification Certificates: Submit certification that water-source heat pumps, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain one of first two subparagraphs below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Second definition is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified, and the unit will be fully operational after the seismic event."
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity, and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Field quality-control reports.

E. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For water-to-air heat pumps to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

Extra materials may not be allowed for publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Revise subparagraphs below to suit Project.

1. **[One (1)]** <Insert number>set(s) of matched fan belts for each belt-driven fan.
2. **[One (1)]** <Insert number>set(s) of filters for each unit.
3. **[One (1)]** <Insert number> spare heat-pump unit(s) of each size and model furnished.

1.7 QUALITY ASSURANCE

"ASHRAE Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain pan construction and connection, finned-tube coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

A. ASHRAE Compliance:

1. ASHRAE 15.
2. Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

"ASHRAE/IESNA Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1.

- B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- C. Comply with NFPA 70.
- D. Comply with safety requirements in UL 484 for assembly of free-delivery, water-source heat pumps.
- E. Comply with safety requirements in UL 1995 for duct-system connections.

1.8 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer agrees to repair or replace components of water-source heat pumps that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, refrigeration components.

Verify available warranties and warranty periods for refrigerant components.

- 2. Warranty Period: Minimum [four (4)] <Insert number> years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 CONCEALED WATER-SOURCE HEAT PUMPS, 6 TONS (21 kW) AND SMALLER

Concealed water-source heat pumps, 6 tons (21 kW) and smaller, are characterized by direct-drive fan and absence of mixing box including outdoor-air dampers.

Many optional features are available for this product, and some are mutually exclusive. Specify all those required for Project. Identify optional features for specific units in the schedule or on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Carrier Corporation](#).
 2. [ClimateMaster, Inc.](#)
 3. [FHP Manufacturing Inc.](#)
 4. [Hydro-Temp Corporation, Inc.](#)
 5. [Mammoth Inc.](#)
 6. [McQuay International.](#)
 7. [Trane Inc.](#)
 8. [WaterFurnace International, Inc.](#)
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Description: Packaged water-source heat pump with temperature controls; factory assembled, tested, and rated according to ASHRAE/ARI/ISO-13256-1.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
- C. Cabinet and Chassis: Galvanized-steel casing with the following features:
1. Access panel for access and maintenance of internal components.
 2. Knockouts for electrical and piping connections.
 3. Flanged duct connections.
 4. Cabinet Insulation: Glass-fiber liner, minimum **1/2 inch (13 mm)** thick, complying with UL 181, ASTM C 1071, and ASTM G 21.
 5. Units field convertible for various discharge configurations.

ASHRAE compliance option in "Condensate Drainage" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain option in subparagraph to comply with LEED Prerequisite IEQ 1.

6. Condensate Drainage: High-density polyethylene plastic or stainless-steel drain pan with condensate drain piping projecting through unit cabinet[**and complying with ASHRAE 62.1**].
 - a. Condensate Overflow Protection Switch: Solid state electronic; mechanical float switch not permitted.

ASHRAE compliance in "Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

Retain "Sound Attenuation Package" Subparagraph below for sound attenuation package. Verify, with manufacturer, availability of method selected.

8. Sound Attenuation Package: Provide one or more of the following:
 - a. Minimum **0.598-inch-** (1.5-mm-) thick compressor enclosure and front panel. Minimum **0.0937-inch-** (2.38-mm-) thick foam gasket around the compressor and perimeter of end panel.
 - b. Sound attenuating blanket over compressor.
 - c. Hot-gas muffler.
 - d. **<Insert method>**.

- D. Fan: Direct driven, centrifugal, with multispeed motor resiliently mounted in fan inlet and with inlet rings to allow wheel removal from one side without removing housing.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project.

1. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Motor: Multispeed, permanently lubricated, [**permanent split capacitor**] [**ECM**] motor.

- E. Water Circuit:

1. Refrigerant-to-Water Heat Exchangers:

Retain one of first two subparagraphs below.

- a. Coaxial heat exchangers with [**copper**] [**cupronickel**] water tube with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to **450 psig** (3102 kPa) on refrigerant side and **400 psig** (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.
- b. Stainless-steel, brazed-plate heat exchanger is leak tested to **450 psig** (3102 kPa) on refrigerant side and **400 psig** (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.

Verify availability of water-regulating valves and motorized water valves.

2. Water-Regulating Valves: Limit water flow through refrigerant-to-water heat exchanger, and control head pressure on compressor during cooling and heating. Valves shall close when heat-pump compressor is not running.
3. Motorized Water Valve: Stop water flow through the unit when compressor is off.

"Refrigerant-to-Air Coils" Paragraph below describes both heating/cooling and reheat coils.

- F. Refrigerant-to-Air Coils: Copper tubes with aluminum fins, leak tested to 450 psig (3102 kPa).
- G. Refrigerant Circuit Components:
 - 1. Sealed Refrigerant Circuit: Charge with R-410A refrigerant.

Filter-dryer is unavailable from some manufacturers.

- 2. Filter-Dryer: Factory installed to clean and dehydrate the refrigerant circuit.
- 3. Charging Connections: Service fittings on suction and liquid for charging and testing on each circuit.
- 4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.

Options in "Compressor" Subparagraph below depend on unit size. Verify with manufacturers. Delete if these features are not specific selection criteria.

- 5. Compressor: Hermetic [rotary] [reciprocating] [scroll], [single-stage] [two-stage] compressor installed on vibration isolators and housed in an acoustically treated enclosure with factory-installed safeties as follows:
 - a. Antirecycle timer.
 - b. High-pressure cutout.
 - c. Low-pressure cutout or loss of charge switch.
 - d. Internal thermal-overload protection.

Retain first two subparagraphs below for compressor safety switches.

- e. Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below [35 deg F (2 deg C)] <Insert temperature>.
 - f. Condensate overflow switch to stop compressor with high condensate level in condensate drain pan.
 - g. Water-coil, low-temperature switch.
 - h. Air-coil, low-temperature switch.
- 6. Refrigerant Piping Materials: ASTM B 743 copper tube with wrought-copper fittings and brazed joints.
 - 7. Pipe Insulation: Refrigerant minimum 3/8-inch- (10-mm-) thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes according to ASTM E 84.

Retain one of two "Refrigerant Metering Device" subparagraphs below.

- 8. Refrigerant Metering Device: Thermal-expansion valve.
- 9. Refrigerant Metering Device: Dual-port, thermal-expansion valve to allow specified operation with entering-water temperatures from [25 to 125 deg F (minus 4 to plus 52 deg C)] <Insert temperature range>.

Retain "Hot-Gas Reheat Valve" Subparagraph below for hot-gas reheat.

- 10. Hot-Gas Reheat Valve: Pilot-operated, sliding-type valve with replaceable magnetic coil.

Electric heating coil is an optional feature for "boilerless" system. Some features are mutually exclusive. Verify availability with manufacturer. Temperature set point is adjustable and varies with system type.

- H. Electric Heating Coil: Helix-wound, nickel-chromium, wire-heating elements in ceramic insulators mounted on steel supports. Energize on call for heating when entering-water-loop temperature is less than [25 deg F (minus 4 deg C)] [40 deg F (5 deg C)] [60 deg F (15 deg C)] <Insert temperature>.

Retain "Hot-Gas Reheat" Paragraph below for hot-gas reheat for humidity control; water-regulating valves may be required.

- I. Hot-Gas Reheat: Reheat valve diverts refrigerant hot gas to reheat coil when remote humidistat calls for dehumidification.

Retain one of five "Filters" paragraphs below. Verify availability of filter options in first paragraph with manufacturers. Retain second, fourth, or fifth paragraph if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

- J. Filters: Disposable, glass-fiber, flat type, [1 inch (25 mm)] <Insert dimension> thick, treated with adhesive, and having a minimum efficiency reporting value of 5 according to ASHRAE 52.2.
- K. Filters: Disposable, pleated type, [1 inch (25 mm)] <Insert dimension> thick and with a minimum efficiency reporting value of 7 according to ASHRAE 52.2.
- L. Filters: Electronic air cleaner type; 1 inch (25 mm); cleanable.
- M. Filters: Disposable, pleated type, [4 inches (100 mm)] <Insert dimension> thick and with a minimum efficiency reporting value of 13 according to ASHRAE 52.2.
- N. Filters: Disposable, pleated type, [2 inches (50 mm)] <Insert dimension> thick and with a minimum efficiency reporting value of 11 according to ASHRAE 52.2.
- O. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

Retain last paragraph above and delete "Controls" Paragraph below if controls are part of overall temperature-control system.

- P. Controls:
 - 1. Basic Unit Control Modes and Devices:
 - a. Dehumidification mode.
 - b. Unit shutdown on high or low refrigerant pressures.
 - c. Unit shutdown on low water temperature.
 - d. Low- and high-voltage protection.
 - e. Overcurrent protection for compressor and fan motor.
 - f. Random time delay, three to ten seconds, start on power-up.
 - g. Time delay override for servicing.

- h. Control voltage transformer.
- i. Water-coil freeze protection (selectable for water or antifreeze).
- j. Air-coil freeze protection (check filter switch).
- k. Condensate overflow shutdown switch.
- l. Option to reset unit at thermostat or disconnect.
- m. Fault type shall be retained in memory if reset at thermostat.
- n. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
- o. Ability to defeat time delays for servicing.
- p. Light-emitting diodes (LED) to indicate high pressure, low pressure, low voltage, and high voltage.
- q. The low-pressure switch SHALL NOT be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
- r. Remote fault-type indication at thermostat.
- s. Selectable 24-V dc or pilot duty dry contact alarm output.
- t. 24-V dc output to cycle a motorized water valve with compressor contactor.
- u. Electric heat output to control two stages of electric heat (emergency heat).
- v. Service test mode for troubleshooting and service.
- w. Unit-performance sentinel warns when the heat pump is running inefficiently.

2. Thermostat:

a. Wall-Mounted Thermostat:

- 1) Heat-cool-off switch.
- 2) Fan on-auto switch.
- 3) **[Manual]** **[Automatic]** changeover.
- 4) **[Concealed]** **[Exposed]** temperature set point.
- 5) **[Concealed]** **[Exposed]** temperature indication.
- 6) Deg **[F]** **[C]** indication.

b. Wall-Mounted Humidistat: **[Concealed]** **[Exposed]**.

- 1) Temperature set point.
- 2) Temperature indication.

c. Wall-mounted temperature sensor.

- d. Unoccupied period override push button.
- e. LED to indicate fault condition at heat pump.
- f. Data entry and access port.

- 1) Input data include room temperature and humidity set points for occupied and unoccupied periods.
- 2) Output data include room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

3. Terminal Controller:

- a. Scheduled operation for occupied and unoccupied periods on **[seven]** **[365]**-day clock with minimum of four programmable periods per day.
 - b. **[Two]** **<Insert number>**-hour unoccupied override period.
 - c. Remote-control panel to contain programmable timer and LED for fault condition.
 - d. Compressor disable relay to stop compressor operation for demand limiting or switch to unoccupied operation.
 - e. Automatic restart after five minutes if fault clears. Lockout after three attempts to restart following fault. Indicate fault for service technician.
 - f. Return-air temperature high-limit (firestat). Stop unit on high temperature.
 - g. Backup for volatile memory.
 - h. Differential pressure switch to indicate fan status. Fan failure alarm.
 - i. Differential pressure switch to indicate filter status. Dirty filter alarm.
4. Interface with DDC system for HVAC requirements as further described in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- a. Interface relay for scheduled operation.
 - b. Interface relay to provide indication of fault at central workstation.
 - c. Provide **[BAC-net]** **[or]** **[Lonworks]** interface for central DDC system for HVAC workstation for the following functions:
 - 1) Set-point adjustment for set points identified in this Section.
 - 2) Start/stop and operating status of heat-pump unit.
 - 3) Data inquiry to include supply air, room air temperature and humidity, and entering-water temperature.
 - 4) Occupied and unoccupied schedules.

Q. Electrical Connection: Single electrical connection[**with fused disconnect**].

If Project has more than one of this type of heat pump, delete "Capacities and Characteristics" Paragraph below and schedule heat pumps on Drawings.

R. Capacities and Characteristics:

1. Fan:
 - a. Airflow: **<Insert cfm (L/s)>**.
 - b. External Static Pressure: **<Insert inches wg (kPa)>**.
 - c. Fan Speed: **<Insert rpm>**.
 - d. Motor Speed: **<Insert rpm>**.
 - e. Motor Horsepower: **<Insert value>**.
2. Water Supply:
 - a. Water Flow: **<Insert gpm (L/s)>**.
 - b. Pressure Loss: **<Insert feet wg (kPa)>**.
 - c. Entering-Water Temperature (Cooling): **<Insert deg F (deg C)>**.
 - d. Entering-Water Temperature (Heating): **<Insert deg F (deg C)>**.
 - e. Antifreeze Protection Chemical: **<Insert chemical name>**.

- f. Antifreeze Concentration: **<Insert percentage>**.
3. Cooling:
- a. Total Capacity: **<Insert Btu/h (kW)>**.
 - b. Sensible Capacity: **<Insert Btu/h (kW)>**.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- c. Minimum Energy-Efficiency Ratio (EER): **<Insert value>**.
 - d. Entering-Air Temperature Dry Bulb: **<Insert deg F (deg C)>**.
 - e. Entering-Air Temperature Wet Bulb: **<Insert deg F (deg C)>**.
4. Heating:
- a. Capacity: **<Insert Btu/h (kW)>**.
 - b. Entering-Air Temperature: **<Insert deg F (deg C)>**.
 - c. Air Temperature Rise: **<Insert deg F (deg C)>**.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- d. Minimum Coefficient of Performance (COP): **<Insert value>**.
5. Electric Heating Coil (Optional Feature):
- a. Capacity: **<Insert Btu/h (kW)>**.
 - b. Number of Steps: **<Insert number>**.

6. Filters:
- a. Face Area: **<Insert sq. ft. (sq. m)>**.
 - b. Maximum Face Velocity: **<Insert fpm (m/s)>**.

7. Electrical Characteristics for Single Connection:
- a. Volts: **[120] [208] [230] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.
 - d. Full-Load Amperes (F.L.A.): **<Insert value>**.
 - e. Maximum Circuit Amperage (MCA): **<Insert value>**.
 - f. Maximum Overcurrent Protection (MOCP): **<Insert amperes>**.

2.2 CONCEALED WATER-SOURCE HEAT PUMPS LARGER THAN 6 TONS (21 kW)

Concealed water-source heat pumps larger than 6 tons (21 kW) are characterized by belt-drive fan and absence of mixing box including outdoor-air dampers.

Many optional features are available for this product, and some are mutually exclusive. Specify all those required for Project. Identify optional features for specific units in the schedule or on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Carrier Corporation](#).
 2. [ClimateMaster, Inc.](#)
 3. [FHP Manufacturing Inc.](#)
 4. [Hydro-Temp Corporation, Inc.](#)
 5. [Mammoth Inc.](#)
 6. [McQuay International](#).
 7. [Trane Inc.](#)
 8. [WaterFurnace International, Inc.](#)
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Description: Packaged water-source heat pump with temperature controls; factory assembled, tested, and rated according to ASHRAE/ARI/ISO-13256-1.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
- C. Cabinet and Chassis: Galvanized-steel casing with the following features:
1. Access panel for access and maintenance of internal components.
 2. Knockouts for electrical and piping connections.
 3. Flanged duct connections.
 4. Cabinet Insulation: Glass-fiber liner, minimum **1/2 inch (13 mm)** thick, complying with UL 181, ASTM C 1071, and ASTM G 21.
 5. Units field convertible for various discharge configurations.

Retain option in "Condensate Drainage" Subparagraph below to comply with LEED Prerequisite IEQ 1.

6. Condensate Drainage: High-density polyethylene plastic or stainless-steel drain pan with condensate drain piping projecting through unit cabinet[**and complying with ASHRAE 62.1**].
 - a. Condensate Overflow Protection Switch: Solid state electronic; mechanical float switch not permitted.

ASHRAE compliance in "Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

7. Airstream Surfaces: Surfaces lined with one-half-thick, foil-backed fiber insulation in contact with the airstream shall comply with requirements in ASHRAE 62.1.

Retain "Sound Attenuation Package" Subparagraph below for sound attenuation package. Verify, with manufacturer, availability of method selected.

8. Sound Attenuation Package: Provide one or more of the following:

- a. Minimum **0.598-inch**- (1.5-mm-) thick compressor enclosure and front panel. Minimum **0.0937-inch**- (2.38-mm-) thick foam gasket around the compressor and perimeter of end panel.
 - b. Sound attenuating blanket over compressor.
 - c. Hot-gas muffler.
 - d. **<Insert method>**.
- D. Fan: Belt driven, centrifugal, with motor installed on an adjustable fan base resiliently mounted in chassis and with inlet rings to allow wheel removal from one side without removing housing.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project. Permanently lubricated ball bearings are available for motors up to and including 5 hp. Larger motors have grease-lubricated ball bearings.

1. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Motor: Single-speed, permanently lubricated, ECM motor.
- E. Water Circuit:
1. Refrigerant-to-Water Heat Exchanger:

Retain one or both of first two subparagraphs below.

- a. **[Coaxial] [Coil-in-shell] [Shell-and-tube]** heat exchanger with **[copper] [cupronickel]** water tube with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to **450 psig** (3102 kPa) on refrigerant side and **400 psig** (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.
- b. Stainless-steel, brazed-plate heat exchanger is leak tested to **450 psig** (3102 kPa) on refrigerant side and **400 psig** (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.

Verify availability of water-regulating valves and motorized water valves.

2. Water-Regulating Valves: Limit water flow through refrigerant-to-water heat exchanger, and control head pressure on compressor during cooling and heating. Valves shall close when heat-pump compressor is not running.
3. Motorized Water Valve: Stop water flow through the unit when compressor is off.

"Refrigerant-to-Air Coils" Paragraph below describes both heating/cooling and reheat coils.

- F. Refrigerant-to-Air Coils: Copper tubes with aluminum fins, leak tested to **450 psig** (3102 kPa).
- G. Refrigerant Circuit Components:

1. Sealed Refrigerant Circuit: Minimum of two circuits required for units [10 tons (35 kW)] <Insert value> and larger. Intertwine circuits in refrigerant to air coil.
 - a. Charge with R-410A refrigerant.

Filter-dryer is unavailable from some manufacturers.

2. Filter-Dryer: Factory installed to clean and dehydrate each refrigerant circuit.
3. Charging Connections: Service fittings on suction and liquid for charging and testing on each circuit.
4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.

Options in "Compressor" Subparagraph below depend on unit size. Verify with manufacturers. Delete if these features are not specific selection criteria.

5. Compressor: [Hermetic reciprocating] [Scroll] [Single-stage] [Two-stage] compressor installed on vibration isolators housed in an acoustically treated enclosure with factory-installed safeties as follows:
 - a. Antirecycle timer.
 - b. High-pressure cutout.
 - c. Low-pressure cutout or loss of charge switch.
 - d. Internal thermal-overload protection.

Retain first subparagraph below for compressor safety switches.

- e. Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below [35 deg F (2 deg C)] <Insert temperature>.
 - f. Condensate overflow switch to stop compressor with high condensate level in condensate drain pan.
 - g. Water-coil, low-temperature switch.
 - h. Air-coil, low-temperature switch.
6. Refrigerant Piping Materials: ASTM B 743 copper tube with wrought-copper fittings and brazed joints.
7. Pipe Insulation: Refrigerant minimum 3/8-inch- (10-mm-) thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes per ASTM E 84.
8. Refrigerant Metering Device: Dual-port, thermal-expansion valve to allow specified operation with entering-water temperatures from 25 to 125 deg F (minus 4 to plus 52 deg C).

Retain "Hot-Gas Reheat Valve" Subparagraph below for hot-gas reheat.

9. Hot-Gas Reheat Valve: Pilot-operated, sliding-type valve with replaceable magnetic coil.

Electric heating coil is an optional feature for "boilerless" system. Some features are mutually exclusive. Verify availability with manufacturer. Temperature set point is adjustable and varies with system type.

- H. Electric Heating Coil: Helix-wound, nickel-chromium, wire-heating elements in ceramic insulators mounted on steel supports. Energize on call for heating when

entering-water-loop temperature is less than [25 deg F (minus 4 deg C)] [40 deg F (5 deg C)] [60 deg F (15 deg C)] <Insert temperature>.

Retain "Hot-Gas Reheat" Paragraph below for hot-gas reheat for humidity control; water-regulating valves may be required.

- I. Hot-Gas Reheat: Reheat valve diverts refrigerant hot gas to reheat coil when remote humidistat calls for dehumidification.

Retain "Hot-Gas Bypass" Paragraph below for hot-gas bypass for capacity control; water-regulating valves may be required.

- J. Hot-Gas Bypass: Include constant pressure expansion valve, solenoid valve, and controls to maintain continuous refrigeration system operation at 10 percent of full load on lead compressor.

Retain one of four "Filters" paragraphs below. Verify availability of filter options in first paragraph with manufacturers. Retain second, third, or fourth paragraph if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

- K. Filters: Disposable, glass-fiber, flat type, [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)] <Insert dimension> thick, treated with adhesive, and having a minimum efficiency reporting value of 5 according to ASHRAE 52.2.
- L. Filters: Disposable, pleated type, [1 inch (25 mm)] <Insert dimension> thick and with a minimum efficiency reporting value of 7 according to ASHRAE 52.2.
- M. Filters: Disposable, pleated type, [2 inches (50 mm)] <Insert dimension> thick and with a minimum efficiency reporting value of 11 according to ASHRAE 52.2.
- N. Filters: Disposable, pleated type, [4 inches (100 mm)] <Insert dimension> thick and with a minimum efficiency reporting value of 13 according to ASHRAE 52.2.
- O. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

Retain last paragraph above and delete "Controls" Paragraph below if controls are part of overall temperature-control system.

- P. Controls:
 1. Basic Unit Control Modes and Devices:
 - a. Dehumidification mode.
 - b. Unit shutdown on high or low refrigerant pressures.
 - c. Unit shutdown on low water temperature.
 - d. Low- and high-voltage protection.
 - e. Overcurrent protection for compressor and fan motor.
 - f. Random time delay, three to ten seconds, start on power-up.
 - g. Time delay override for servicing.

- h. Control voltage transformer.
- i. Water-coil freeze protection (selectable for water or antifreeze).
- j. Air-coil freeze protection (check filter switch).
- k. Condensate overflow shutdown switch.
- l. Option to reset unit at thermostat or disconnect.
- m. Fault type shall be retained in memory if reset at thermostat.
- n. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
- o. Ability to defeat time delays for servicing.
- p. Light-emitting diodes (LED) to indicate high pressure, low pressure, low voltage, and high voltage.
- q. The low-pressure switch SHALL NOT be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
- r. Remote fault-type indication at thermostat.
- s. Selectable 24-V dc or pilot duty dry contact alarm output.
- t. 24V dc output to cycle a motorized water valve with compressor contactor.
- u. Electric heat output to control two stages of electric heat (emergency heat).
- v. Service test mode for troubleshooting and service.
- w. Unit-performance sentinel warns when the heat pump is running inefficiently.

2. Thermostat:

- a. Wall-Mounted Thermostat:
 - 1) Heat-cool-off switch.
 - 2) Fan on-auto switch.
 - 3) **[Manual]** **[Automatic]** changeover.
 - 4) **[Concealed]** **[Exposed]** temperature set point.
 - 5) **[Concealed]** **[Exposed]** temperature indication.
 - 6) Deg **[F]** **[C]** indication.
 - 7) **[One]** **[Two]**-stage heating.
 - 8) **[One]** **[Two]**-stage cooling.
- b. Wall-Mounted Humidistat: **[Concealed]** **[Exposed]**.
 - 1) Temperature set point.
 - 2) Temperature indication.
- c. Wall-mounted temperature sensor.
- d. Unoccupied period override push button.
- e. LED to indicate fault condition at heat pump.
- f. Data entry and access port.
 - 1) Input data include room temperature and humidity set points for occupied and unoccupied periods.
 - 2) Output data include room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

3. Terminal Controller:
 - a. Scheduled operation for occupied and unoccupied periods on **[seven]** **[365]**-day clock with minimum of four programmable periods per day.
 - b. **[Two]** **<Insert number>**-hour unoccupied override period.
 - c. Remote-control panel to contain programmable timer and LED for fault condition.
 - d. Compressor disable relay to stop compressor operation for demand limiting or switch to unoccupied operation.
 - e. Automatic restart after five minutes if fault clears. Lockout after three attempts to restart following fault. Indicate fault for service technician.
 - f. Return-air temperature high-limit (firestat). Stop unit on high temperature.
 - g. Smoke alarm with smoke detector installed in **[supply]** **[return]** **[supply and return]** air. Stop unit on smoke detection.
 - h. Backup for volatile memory.
 - i. Differential pressure switch to indicate fan status. Fan failure alarm.
 - j. Differential pressure switch to indicate filter status. Dirty filter alarm.

4. Interface with DDC system for HVAC requirements as further described in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
 - a. Interface relay for scheduled operation.
 - b. Interface relay to provide indication of fault at central workstation.
 - c. Provide **[BAC-net]** **[or]** **[Lonworks]** interface for central DDC system for HVAC workstation for the following functions:
 - 1) Set-point adjustment for set points identified in this Section.
 - 2) Start/stop and operating status of heat-pump unit.
 - 3) Data inquiry to include supply air, room air temperature and humidity, and entering-water temperature.
 - 4) Occupied and unoccupied schedules.

- Q. Electrical Connection: Single electrical connection **[with fused disconnect]**.

- R. Capacities and Characteristics:
 1. Fan:
 - a. Airflow: **<Insert cfm (L/s)>**.
 - b. External Static Pressure: **<Insert inches wg (kPa)>**.
 - c. Fan Speed: **<Insert rpm>**.
 - d. Motor Speed: **<Insert rpm>**.
 - e. Motor Horsepower: **<Insert value>**.

 2. Water Supply:
 - a. Water Flow: **<Insert gpm (L/s)>**.
 - b. Pressure Loss: **<Insert feet wg (kPa)>**.
 - c. Entering-Water Temperature (Cooling): **<Insert deg F (deg C)>**.

- d. Entering-Water Temperature (Heating): **<Insert deg F (deg C)>**.
- e. Antifreeze Protection Chemical: **<Insert chemical name>**.
- f. Antifreeze Concentration: **<Insert percentage>**.

3. Cooling:

- a. Total Capacity: **<Insert Btu/h (kW)>**.
- b. Sensible Capacity: **<Insert Btu/h (kW)>**.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- c. Minimum Energy-Efficiency Ratio (EER): **<Insert value>**.
- d. Entering-Air Temperature Dry Bulb: **<Insert deg F (deg C)>**.
- e. Entering-Air Temperature Wet Bulb: **<Insert deg F (deg C)>**.

4. Heating:

- a. Capacity: **<Insert Btu/h (kW)>**.
- b. Entering-Air Temperature: **<Insert deg F (deg C)>**.
- c. Air Temperature Rise: **<Insert deg F (deg C)>**.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- d. Minimum Coefficient of Performance (COP): **<Insert value>**.

5. Electric Heating Coil (Optional Feature):

- a. Capacity: **<Insert Btu/h (kW)>**.
- b. Number of Steps: **<Insert number>**.

6. Filters:

- a. Face Area: **<Insert sq. ft. (sq. m)>**.
- b. Maximum Face Velocity: **<Insert fpm (m/s)>**.

7. Electrical Characteristics for Single Connection:

- a. Volts: **[120] [208] [230] <Insert value>**.
- b. Phase: **[Single] [Three]**.
- c. Hertz: 60.
- d. Full-Load Amperes (F.L.A.): **<Insert value>**.
- e. Maximum Circuit Amperage (MCA): **<Insert value>**.
- f. Maximum Overcurrent Protection (MOCP): **<Insert amperes>**.

2.3 VERTICAL-STACK, WATER-SOURCE HEAT PUMPS

Vertical-stack, water-source heat pumps are distinguished from other types by their approximate cooling capacity of from 1/2 to 3 tons (1.7 to 10.5 kW), direct-drive fans, unfinished cabinet concealed in the occupied space, and absence of outdoor-air dampers.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [ClimateMaster, Inc.](#)
 2. [McQuay International.](#)
 3. [Trane Inc.](#)
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. Description: Packaged water-source heat pump with temperature controls; factory assembled, tested, and rated according to ASHRAE/ARI/ISO-13256-1.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
- C. Cabinet and Chassis: Manufacturer's standard galvanized-steel casing with the following features:
1. Return-air opening with access panel for access to internal components.
 2. Knockouts for electrical and piping connections.
 3. Cabinet Insulation: Glass-fiber liner, minimum **1/2 inch (13 mm)** thick, complying with UL 181, ASTM C 1071, and ASTM G 21.

Retain "Sound Attenuation Package" Subparagraph below for sound attenuation package. Verify, with manufacturer, availability of method selected.

4. Sound Attenuation Package: Provide one or more of the following.
 - a. Minimum **0.598-inch- (1.5-mm-)** thick compressor enclosure and front panel. Minimum **0.0937-inch (2.38-mm)** thick foam gasket around the compressor and perimeter of end panel.
 - b. **<Insert method>**.

ASHRAE compliance option in "Condensate Drainage" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain option to comply with LEED Prerequisite IEQ 1.

5. Condensate Drainage: High-density polyethylene plastic or stainless-steel drain pan with condensate drain piping projecting to unit exterior[**and complying with ASHRAE 62.1**].

- a. Condensate Overflow Protection: Solid state electronic; mechanical float switch not permitted.
6. Discharge Grille: Double deflection grille for adjustable discharge air pattern.
7. Discharge and Return Grille Color: Selected by DEN Project Manager from manufacturer's **[standard]** **[custom]** color selection.

Retain "Airstream Surfaces" Subparagraph below to comply with LEED Prerequisite IEQ 1.

8. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
9. Fan: Direct driven, centrifugal, with multispeed motor mounted on a removable fan-motor board and with inlet rings to allow wheel removal from one side without removing housing.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project.

10. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
11. Motor: Multispeed, permanently lubricated, **[permanent split capacitor]** **[ECM]**.

D. Water Circuit:

1. Refrigerant-to-Water Heat Exchanger: **[Coaxial]** **[Coil-in-shell]** heat exchanger with **[copper]** **[cupronickel]** water tube with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.
2. Risers: **[ASTM B 88, Type L (ASTM B 88M, Type B)]** **[ASTM B 88, Type M (ASTM B 88M Type C)]** copper pipe with hose and ball valve for system flushing.

E. Refrigerant-to-Air Coil: Copper tubes with aluminum fins, leak tested to 450 psig (3102 kPa).

F. Refrigerant Circuit Components:

1. Sealed Refrigerant Circuit: Charge with R-410A refrigerant.

Filter-dryer is unavailable from some manufacturers.

2. Filter-Dryer: Factory installed to clean and dehydrate the refrigerant circuit.
3. Charging Connections: Service fittings on suction and liquid for charging and testing.
4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.

Options in "Compressor" Subparagraph below depend on unit size. Verify with manufacturers. Delete if these features are not specific selection criteria.

5. Compressor: Hermetic **[rotary]** **[scroll]** compressor installed on vibration isolators housed in an acoustically treated enclosure with factory-installed safeties as follows:

- a. Antirecycle timer.
 - b. High-pressure cutout.
 - c. Low-pressure cutout or loss of charge switch.
 - d. Internal thermal-overload protection.
 - e. Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below [35 deg F (2 deg C)] <Insert temperature>.
 - f. Condensate overflow switch to stop compressor with high condensate level in condensate drain pan.
 - g. Water-coil, low-temperature switch.
 - h. Air-coil, low-temperature switch.
6. Refrigerant Piping Materials: ASTM B 743 copper tube with wrought-copper fittings and brazed joints.
 7. Pipe Insulation: Refrigerant minimum 3/8-inch- (10-mm-) thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes according to ASTM E 84.
 8. Refrigerant Metering Device: Thermal-expansion valve to allow specified operation with entering-water temperatures from [65 to 100 deg F (minus 18 to plus 38 deg C)] <Insert temperature range>.

Retain one of two "Filters" paragraphs below. Verify availability of filter options in first paragraph with manufacturers. Retain second paragraph if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

- G. Filters: Disposable, glass-fiber, flat type, [1 inch (25 mm)] <Insert dimension> thick, treated with adhesive, and having a minimum efficiency reporting value of 5 according to ASHRAE 52.2.
- H. Filters: Disposable, pleated type, [1 inch (25 mm)] <Insert dimension> thick and with a minimum efficiency reporting value of 7 according to ASHRAE 52.2.
- I. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

Retain last paragraph above and delete "Controls" Paragraph below if controls are part of overall temperature-control system.

- J. Controls:
 1. Basic Unit Control Modes and Devices:
 - a. Dehumidification mode.
 - b. Unit shutdown on high or low refrigerant pressures.
 - c. Unit shutdown on low water temperature.
 - d. Low- and high-voltage protection.
 - e. Overcurrent protection for compressor and fan motor.
 - f. Random time delay, three to ten seconds, start on power-up.
 - g. Time delay override for servicing.
 - h. Control voltage transformer.

- i. Water-coil freeze protection (selectable for water or antifreeze).
 - j. Air-coil freeze protection (check filter switch).
 - k. Condensate overflow shutdown switch.
 - l. Option to reset unit at thermostat or disconnect.
 - m. Fault type shall be retained in memory if reset at thermostat.
 - n. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
 - o. Ability to defeat time delays for servicing.
 - p. Light-emitting diodes (LED) to indicate high pressure, low pressure, low voltage, and high voltage.
 - q. The low-pressure switch SHALL NOT be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
 - r. Remote fault-type indication at thermostat.
 - s. Selectable 24-V dc or pilot duty dry contact alarm output.
 - t. 24-V dc output to cycle a motorized water valve with compressor contactor.
 - u. Electric heat output to control two stages of electric heat (emergency heat).
 - v. Service test mode for troubleshooting and service.
 - w. Unit-performance sentinel warns when the heat pump is running inefficiently.
2. Thermostat:
- a. Wall-Mounted Thermostat:
 - 1) Heat-cool-off switch.
 - 2) Fan on-auto switch.
 - 3) **[Manual]** **[Automatic]** changeover.
 - 4) **[Concealed]** **[Exposed]** temperature set point.
 - 5) **[Concealed]** **[Exposed]** temperature indication.
 - 6) Deg **[F]** **[C]** indication.
3. Terminal Controller:
- a. Scheduled operation for occupied and unoccupied periods on seven-day clock with minimum four periods per day.
 - b. **[Two]** **<Insert number>**-hour unoccupied override period.
 - c. Backup for volatile memory.

K. Electrical Connection: Single electrical connection[**with fused disconnect**].

If Project has more than one of this heat-pump type, delete "Capacities and Characteristics" Paragraph below and schedule heat pumps on Drawings.

L. Capacities and Characteristics:

1. Fan:
 - a. Airflow: **<Insert cfm (L/s)>**.
 - b. External Static Pressure: **<Insert inches wg (kPa)>**.
 - c. Fan Speed: **<Insert rpm>**.

- d. Motor Speed: **<Insert rpm>**.
 - e. Motor Horsepower: **<Insert value>**.
2. Water Supply:
- a. Water Flow: **<Insert gpm (L/s)>**.
 - b. Pressure Loss: **<Insert feet wg (kPa)>**.
 - c. Entering-Water Temperature (Cooling): **<Insert deg F (deg C)>**.
 - d. Entering-Water Temperature (Heating): **<Insert deg F (deg C)>**.
 - e. Antifreeze Protection Chemical: **<Insert chemical name>**.
 - f. Antifreeze Concentration: **<Insert percentage>**.
3. Cooling:
- a. Total Capacity: **<Insert Btu/h (kW)>**.
 - b. Sensible Capacity: **<Insert Btu/h (kW)>**.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- c. Minimum Energy-Efficiency Ratio (EER): **<Insert value>**.
 - d. Entering-Air Temperature Dry Bulb: **<Insert deg F (deg C)>**.
 - e. Entering-Air Temperature Wet Bulb: **<Insert deg F (deg C)>**.
4. Heating:
- a. Capacity: **<Insert Btu/h (kW)>**.
 - b. Entering-Air Temperature: **<Insert deg F (deg C)>**.
 - c. Air Temperature Rise: **<Insert deg F (deg C)>**.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- d. Minimum Coefficient of Performance (COP): **<Insert value>**.
5. Filters:
- a. Face Area: **<Insert sq. ft. (sq. m)>**.
 - b. Maximum Face Velocity: **<Insert fpm (m/s)>**.
6. Electrical Characteristics for Single Connection:
- a. Volts: **[120] [208] [230] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.
 - d. Full-Load Amperes (F.L.A.): **<Insert value>**.
 - e. Maximum Circuit Amperage (MCA): **<Insert value>**.
 - f. Maximum Overcurrent Protection (MOCP): **<Insert amperes>**.

2.4 EXPOSED, CONSOLE WATER-SOURCE HEAT PUMPS

Exposed, console water-source heat pumps are distinguished from other types by their approximate cooling capacity of from 1/2 to 2 tons (1.7 to 7 kW), finished cabinet exposed in the occupied space, hot-gas bypass for capacity control, optional motorized outdoor-air damper, and direct-drive fans.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Carrier Corporation](#).
 2. [ClimateMaster, Inc.](#)
 3. [FHP Manufacturing Inc.](#)
 4. [Hydro-Temp Corporation, Inc.](#)
 5. [Mammoth Inc.](#)
 6. [McQuay International](#).
 7. [Trane Inc.](#)
 8. [WaterFurnace International, Inc.](#)
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Description: Packaged water-source heat pump with temperature controls; factory assembled, tested, and rated according to ASHRAE/ARI/ISO-13256-1.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
- C. Cabinet and Chassis: Manufacturer's **[standard]** **[low]** **[standard- and low]**-height, **[flat]** **[sloped]**-top, **[extended]** galvanized-steel casing with the following features:
1. Access panel for access and maintenance of internal components.
 2. Knockouts for electrical and piping connections.
 3. Cabinet Insulation: Glass-fiber liner, minimum **1/2 inch** (13 mm) thick, complying with UL 181, ASTM C 1071, and ASTM G 21.
 4. Cabinet Insulation: Glass-fiber liner, minimum **1/2 inch** (13 mm) thick, complying with ASTM C 1071 and NAIMA AH124, "Fibrous Glass Duct Liner Standard."

Retain "Sound Attenuation Package" Subparagraph below for sound attenuation package. Verify, with manufacturer, availability of method selected.

5. Sound Attenuation Package: Provide one or more of the following:
 - a. Minimum **0.598-inch**- ((1.5-mm-)) thick compressor enclosure and front panel. Minimum **0.0937-inch** ((2.38-mm)) thick foam gasket around the compressor and perimeter of end panel.
 - b. **<Insert method>**.

ASHRAE compliance option in "Condensate Drainage" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain option to comply with LEED Prerequisite IEQ 1.

6. Condensate Drainage: High-density polyethylene plastic or stainless-steel drain pan with condensate drain piping projecting to unit exterior[**and complying with ASHRAE 62.1**].
 - a. Condensate Overflow Protection: Solid state electronic; mechanical float switch not permitted.
7. Discharge Grille: Steel, aluminum, or plastic grille for adjustable discharge air pattern.
8. Color: Selected by DEN Project Manager from manufacturer's [**standard**] [**custom**] color selection.

ASHRAE compliance with "Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

9. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Fan: Direct driven, centrifugal, with multispeed motor mounted on a removable fan-motor board.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project.

1. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Motor: Multispeed, permanently lubricated, [**permanent split capacitor**] [**ECM**].

E. Water Circuit:

1. Refrigerant-to-Water Heat Exchanger: Coaxial heat exchanger with [**copper**] [**cupronickel**] water tube with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to **450 psig** (3102 kPa) for refrigerant side and **400 psig** (2758 kPa) for water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.

"Water-Regulating Valves" Subparagraph below is a feature with some manufacturers.

2. Water-Regulating Valves: Limit water flow through refrigerant-to-water heat exchanger and control head pressure on compressor during cooling and heating. Valves shall close when heat-pump compressor is not running.

"Refrigerant-to-Air Coils" Paragraph below describes both heating/cooling and hot-gas reheat coils.

- F. Refrigerant-to-Air Coils: Copper tubes with aluminum fins, leak tested to **450 psig** (3102 kPa).

G. Refrigerant Circuit Components:

1. Sealed Refrigerant Circuit: Charge with R-410A refrigerant.

Filter-dryer is unavailable from some manufacturers.

2. Filter-Dryer: Factory installed to clean and dehydrate the refrigerant circuit.
3. Charging Connections: Service fittings on suction and liquid for charging and testing.
4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.
5. Compressor: Hermetic rotary compressor installed on vibration isolators housed in an acoustically treated enclosure with factory-installed safeties as follows:
 - a. Antirecycle timer.
 - b. High-pressure cutout.
 - c. Low-pressure cutout or loss of charge switch.
 - d. Internal thermal-overload protection.

Retain first subparagraph below for compressor safety switches.

- e. Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below [35 deg F (2 deg C)] <Insert temperature>.
 - f. Condensate overflow switch to stop compressor with high condensate level in condensate drain pan.
 - g. Water-coil, low-temperature switch.
 - h. Air-coil, low-temperature switch.
6. Refrigerant Piping Materials: ASTM B 743 copper tube with wrought-copper fittings and brazed joints.
 7. Pipe Insulation: Refrigerant minimum 3/8-inch- (10-mm-) thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes per ASTM E 84.
 8. Refrigerant Metering Device: Dual-port, thermal-expansion valve to allow specified operation with entering-water temperatures from [25 to 125 deg F (minus 4 to 52 deg C)] <Insert temperature range>.

Retain "Hot-Gas Reheat Valve" Subparagraph below for hot-gas reheat.

9. Hot-Gas Reheat Valve: Pilot-operated, sliding-type valve with replaceable magnetic coil.

Electric heating coil is an optional feature for "boilerless" system. Some features are mutually exclusive. Verify availability with manufacturer. Temperature set point is adjustable and varies with system type.

- H. Electric Heating Coil: Energized on call for heating when entering-water-loop temperature is less than [60 deg F (15 deg C)] <Insert temperature>.

Retain "Hot-Gas Reheat" Paragraph below for hot-gas reheat for humidity control; water-regulating valves may be required.

- I. Hot-Gas Reheat: Reheat valve diverts refrigerant hot gas to reheat coil when [remote] [unit-mounted] humidistat calls for dehumidification.

Retain "Outdoor-Air Damper" Paragraph below for outdoor-air damper.

ASHRAE/IESNA 90.1 sets requirements for dampers. If applying for LEED certification, retain second option in "Outdoor-Air Damper" Paragraph below to comply with ASHRAE/IESNA 90.1.

- J. Outdoor-Air Damper: Two-position, [manual] [motorized] outdoor-air damper for fixed minimum intake up to 25 percent of fan capacity.

Retain one of two "Filters" paragraphs below. Verify availability of filter options in first paragraph with manufacturers. Retain second paragraph if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

- K. Filters: Disposable, glass-fiber, flat type, [1 inch (25 mm)] <Insert dimension> thick, treated with adhesive, and having a minimum efficiency reporting value of 5 according to ASHRAE 52.2.
- L. Filters: Disposable, pleated type, [1 inch (25 mm)] <Insert dimension> thick and with a minimum efficiency reporting value of 7 according to ASHRAE 52.2.
- M. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

Retain last paragraph above and delete "Controls" Paragraph below if controls are part of overall temperature-control system.

- N. Controls:
1. Basic Unit Control Modes and Devices:
 - a. Dehumidification mode.
 - b. Unit shutdown on high or low refrigerant pressures.
 - c. Unit shutdown on low water temperature.
 - d. Low- and high-voltage protection.
 - e. Overcurrent protection for compressor and fan motor.
 - f. Random time delay, three to ten seconds, start on power-up.
 - g. Time delay override for servicing.
 - h. Control voltage transformer.
 - i. Water-coil freeze protection (selectable for water or antifreeze).
 - j. Air-coil freeze protection (check filter switch).
 - k. Condensate overflow shutdown switch.
 - l. Option to reset unit at thermostat or disconnect.
 - m. Fault type shall be retained in memory if reset at thermostat.
 - n. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
 - o. Ability to defeat time delays for servicing.
 - p. Light-emitting diodes (LED) to indicate high pressure, low pressure, low voltage, and high voltage.
 - q. The low-pressure switch SHALL NOT be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
 - r. Remote fault-type indication at thermostat.
 - s. Selectable 24-V dc or pilot duty dry contact alarm output.

- t. 24V dc output to cycle a motorized water valve with compressor contactor.
- u. Electric heat output to control two stages of electric heat (emergency heat).
- v. Service test mode for troubleshooting and service.
- w. Unit-performance sentinel warns when the heat pump is running inefficiently.

Retain subparagraphs below to suit Project; delete those not required. Verify availability with manufacturers.

2. Thermostat:

a. **[Wall] [Unit]**-Mounted Thermostat:

- 1) Heat-cool-off switch.
- 2) Fan on-auto switch.
- 3) **[Manual] [Automatic]** changeover.
- 4) **[Concealed] [Exposed]** temperature set point.
- 5) **[Concealed] [Exposed]** temperature indication.
- 6) Deg **[F] [C]** indication.

b. **[Wall] [Unit]**-Mounted Humidistat: **[Concealed] [Exposed]**.

- 1) Temperature set point.
- 2) Temperature indication.

c. **[Wall] [Unit]**-mounted temperature sensor.

d. Unoccupied period override push button.

e. LED to indicate fault condition at heat pump.

f. Data entry and access port.

- 1) Input data include room temperature and humidity set points for occupied and unoccupied periods.
- 2) Output data include room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

3. Terminal Controller:

- a. Scheduled operation for occupied and unoccupied periods on **[seven] [365]**-day clock with minimum of four programmable periods per day.
- b. **[Two] <Insert number>**-hour unoccupied override period.
- c. Compressor disable relay to stop compressor operation for demand limiting or switch to unoccupied operation.
- d. Automatic restart after five minutes if fault clears. Lockout after three attempts to restart following fault. Indicate fault for service technician.
- e. Backup for volatile memory.

Differential pressure switches for statuses of fan and filter are unavailable from some manufacturers.

- f. Differential pressure switch to indicate fan status. Fan failure alarm.
- g. Differential pressure switch to indicate filter status. Dirty filter alarm.

4. Interface with DDC system for HVAC requirements as further described in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
 - a. Interface relay for scheduled operation.
 - b. Interface relay to provide indication of fault at central workstation.
 - c. Provide [**BAC-net**] [**or**] [**Lonworks**] interface for central DDC system for HVAC workstation for the following functions:
 - 1) Set-point adjustment for set points identified in this Section.
 - 2) Start/stop and operating status of heat-pump unit.
 - 3) Data inquiry to include supply air, room air temperature and humidity, and entering-water temperature.
 - 4) Occupied and unoccupied schedules.
- O. Electrical Connection: Single electrical connection[**with fused disconnect**].

If Project has more than one of this type of heat pump, delete "Capacities and Characteristics" Paragraph below and schedule heat pumps on Drawings.

P. Capacities and Characteristics:

1. Fan:
 - a. Airflow: <Insert cfm (L/s)>.
 - b. External Static Pressure: <Insert inches wg (kPa)>.
 - c. Fan Speed: <Insert rpm>.
 - d. Motor Speed: <Insert rpm>.
 - e. Motor Horsepower: <Insert value>.
2. Water Supply:
 - a. Water Flow: <Insert gpm (L/s)>.
 - b. Pressure Loss: <Insert feet wg (kPa)>.
 - c. Entering-Water Temperature (Cooling): <Insert deg F (deg C)>.
 - d. Entering-Water Temperature (Heating): <Insert deg F (deg C)>.
 - e. Antifreeze Protection Chemical: <Insert chemical name>.
 - f. Antifreeze Concentration: <Insert percentage>.
3. Cooling:
 - a. Total Capacity: <Insert Btu/h (kW)>.
 - b. Sensible Capacity: <Insert Btu/h (kW)>.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- c. Minimum Energy-Efficiency Ratio (EER): <Insert value>.
- d. Entering-Air Temperature Dry Bulb: <Insert deg F (deg C)>.
- e. Entering-Air Temperature Wet Bulb: <Insert deg F (deg C)>.

4. Heating:
 - a. Capacity: **<Insert Btu/h (kW)>**.
 - b. Entering-Air Temperature: **<Insert deg F (deg C)>**.
 - c. Air Temperature Rise: **<Insert deg F (deg C)>**.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1, Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements."

- d. Minimum Coefficient of Performance (COP): **<Insert value>**.
5. Electric Heating Coil (Optional Feature):
 - a. Capacity: **<Insert Btu/h (kW)>**.
 - b. Number of Steps: **<Insert number>**.
6. Filters:
 - a. Face Area: **<Insert sq. ft. (sq. m)>**.
 - b. Maximum Face Velocity: **<Insert fpm (m/s)>**.
7. Electrical Characteristics for Single Connection:
 - a. Volts/Phase/Hertz: **<Insert values>**.
 - b. Full-Load Amperes (F.L.A.): **<Insert value>**.
 - c. Maximum Circuit Amperage (MCA): **<Insert value>**.
 - d. Maximum Overcurrent Protection (MOCP): **<Insert amperes>**.

2.5 HOSE KITS

Retain this article for hose kits furnished with each water-source heat pump. Revise for size and components. Delete this article if retaining "Hose Kit Assemblies" Article.

- A. General: Hose kits shall be designed for minimum **400-psig (2758-kPa)** working pressure and operating temperatures from **33 to 211 deg F (0.5 to 99 deg C)**. Tag hose kits to equipment designations.
- B. Hose: Length [**24 inches (600 mm)**] [**36 inches (900 mm)**] braided stainless steel, complete with adapters, **<Insert dimension>**. Minimum diameter, equal to water-source, heat-pump connection size.
- C. Isolation Valves: Two-piece, bronze-body ball valves with stainless-steel, standard-port ball and stem with normal pipe thread (NPT) connections, and galvanized-steel lever handle. Provide valve for supply and return. If balancing device is combination shutoff type with memory stop, the isolation valve may be omitted on the return.
- D. Strainer: Y-type with blowdown valve in supply connection.
- E. Balancing Device: Mount in return connection. Include meter ports to allow flow measurement with differential pressure gage.

Retain one of three subparagraphs below. Retain more than one if using different balancing valves on different heat-pump types.

1. Automatic balancing valve, factory set to operate within 10 percent of design flow rate over a 40:1 differential pressure range of 2 to 80 psig (13.8 to 552 kPa).
2. Manual, calibrated-orifice balancing valve.
3. Manual, venturi-type balancing valve.

F. Motorized Water Valve: Slow-acting, 24-V dc, with NPT connections.

2.6 HOSE KIT ASSEMBLIES

The assemblies in this article ship with the valves already assembled to the hose described.

- A. Supply and return hoses having ball valve with pressure temperature port.
- B. Supply hose having ball valve with pressure temperature port; return hose having automatic flow regulator valve with pressure temperature ports, and ball valve.
- C. Supply hose having "Y" strainer with blowdown valve, and ball valve with pressure temperature port; return hose having automatic flow regulator with PT ports, and ball valve.
- D. Supply hose having "Y" strainer with blowdown valve, and ball valve with pressure temperature port.
- E. Return hose having ball valve with pressure temperature port.

2.7 PUMP MODULE

Retain this article for individual heat pumps that stand alone from a central circulating water loop. Values in first paragraph below are examples only; verify actual values with manufacturer.

- A. Minimum [1/6] <Insert value>-hp, 230-V, single-phase pump rated to move at least [16 gpm (1 L/s)] <Insert value> at [20-foot wg (59-kPa)] <Insert value> head pressure.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project.

1. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- B. Include pump module hose kit with thread to barb fittings, hose, and hose clamps.
- C. Three-way brass shut-off/flushing/purging valve.
- D. Include controls to operate pump as required to maintain room temperature and ventilation set points.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping and electric installations for water-source heat pumps to verify actual locations of piping connections and electrical conduits before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Equipment Mounting:

Retain first subparagraph below to require equipment to be installed on cast-in-place concrete equipment bases.

- 1. Install water-source heat pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete."]** **[Section 033053 "Miscellaneous Cast-in-Place Concrete."]**

Retain one of two subparagraphs below. Retain first for projects in seismic areas; retain second for projects not in seismic areas. Indicate vibration isolation and seismic-control device type and minimum deflection in supported equipment schedule on Drawings.

- 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- C. Install wall-mounting thermostats, humidistats, and switch controls in electrical outlet boxes at heights to match lighting controls or as required in Section 230923.27 "Temperature Instruments," Section 230923.19 "Moisture Instruments," and Section 230923 "Direct Digital Control (DDC) System for HVAC."

3.3 CONNECTIONS

Coordinate requirements for piping installation and specialty arrangements with Drawings and with requirements specified in hydronic piping and steam and condensate piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:

1. Connect supply and return hydronic piping to heat pump with [**unions and shutoff valves**] [**hose kits**].
2. Connect heat-pump condensate drain pan to indirect waste connection with condensate trap of adequate depth to seal against fan pressure. Install cleanouts in piping at changes of direction.
3. Unless otherwise indicated, install shutoff valve and union or flange at each connection.
4. Install piping adjacent to machine to allow service and maintenance.

Coordinate duct installation requirements with Drawings and with requirements specified for duct systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- B. Duct installation requirements are specified in other Sections. Drawings indicate general arrangement of ducts. Specific connection requirements are as follows:
1. Connect supply and return ducts to water-source heat pumps with flexible duct connectors specified in Section 233300 "Air Duct Accessories."
- C. Install electrical devices furnished by manufacturer but not specified to be factory mounted.
- D. Install piping adjacent to machine to allow service and maintenance.
- E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- G. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform the following field tests and inspections:

1. After installing water-source heat pumps and after electrical circuitry has been energized, test units for compliance with requirements.
2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- C. Heat pumps will be considered defective if they do not pass tests and inspections.
- D. Retest as specified above after repairs or replacements are made.
- E. Prepare test and inspection reports.

3.5 STARTUP SERVICE

Delete first paragraph below if factory-authorized service representative is not required.

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
- B. Complete installation and startup checks according to manufacturer's written instructions and do the following:
 1. Inspect for visible damage to unit casing.
 2. Inspect for visible damage to compressor, coils, and fans.
 3. Inspect internal insulation.
 4. Verify that labels are clearly visible.
 5. Verify that clearances have been provided for servicing.
 6. Verify that controls are connected and operable.
 7. Verify that filters are installed.
 8. Adjust vibration isolators.
 9. Inspect operation of barometric dampers.
 10. Verify bearing lubrication on fan.
 11. Inspect fan-wheel rotation for movement in correct direction without vibration and binding.
 12. Adjust fan belts to proper alignment and tension.
 13. Start unit according to manufacturer's written instructions.
 14. Complete startup sheets and attach copy with Contractor's startup report.
 15. Inspect and record performance of interlocks and protective devices; verify sequences.
 16. Operate unit for an initial period as recommended or required by manufacturer.
 17. Verify thermostat and humidistat calibration.
 18. Inspect outdoor-air dampers for proper stroke and interlock with return-air dampers.
 19. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.

Retain testing requirements if not using Section 230593 "Testing, Adjusting, and Balancing for HVAC."

20. Start refrigeration system, and measure and record the following:
 - a. Coil leaving-air, dry- and wet-bulb temperatures.
 - b. Coil entering-air, dry- and wet-bulb temperatures.
 - c. Outdoor-air, dry-bulb temperature.
 - d. Outdoor-air-coil, discharge-air, dry-bulb temperature.

21. Measure and record the following minimum and maximum airflows. Plot fan volumes on fan curve.
 - a. Supply-air volume.
 - b. Return-air volume.
 - c. Relief-air volume.
 - d. Outdoor-air intake volume.

3.6 ADJUSTING

- A. Adjust initial temperature and humidity set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two (2)] <Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.7 CLEANING

- A. Replace filters used during construction prior to air balance or Substantial Completion.
- B. After completing installation of exposed, factory-finished, water-source heat pumps, inspect exposed finishes and repair damaged finishes.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain water-source heat pumps.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238146.13

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238213 - VALANCE HEATING AND COOLING UNITS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Electric radiant heaters.
 - 2. Hydronic heating and cooling panels.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, specialties, and accessories for each product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, details, and attachments to other work. Detail equipment assemblies and suspension and attachment.
 - 2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

Retain subparagraph below if equipment includes wiring.

- 3. Include diagrams for power, signal, and control wiring.

Retain "Samples for Initial Selection" and "Samples for Verification" paragraphs below for two-stage Samples.

Coordinate sample requirements with DEN Project Manager.

- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
 - 1. Radiant Heater Finishes: [4 by 4 inches (100 by 100 mm)] <Insert size>.
 - 2. Radiant Panel Finishes: [12 by 12 inches (300 by 300 mm)] <Insert size>.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

- A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

Revise subparagraphs below to suit Project.

- 1. Suspended ceiling components.
- 2. Structural members to which heaters and suspension systems will be attached.
- 3. Size and location of initial access modules for acoustical tile.
- 4. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.

- c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. <Insert item>.
5. Perimeter moldings.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC." See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: Submit certification that suspended radiant heaters and panels, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
- 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain first subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electric radiant heaters to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 ELECTRIC RADIANT HEATERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Berko Electric Heating; a division of Marley Engineered Products.
 2. Chromalox Inc.; a division of Emerson Electric Company.
 3. Fostoria Industries, Inc.; a division of TPI Corporation.
 4. Markel Products; a division of TPI Corporation.
 5. Omega Engineering, Inc.
 6. QMark Electric Heating; a division of Marley Engineered Products.
 7. **<Insert manufacturer's name>.**
 8. or approved equal.

Retain "Quartz Lamp Heating Elements," "Quartz Tube Heating Elements," or "Metal-Sheathed Heating Elements" Paragraph below. If more than one type of heating element is required, indicate each type in a schedule on Drawings.

- B. Quartz Lamp Heating Elements: Coiled tungsten-wire heating element enclosed in clear quartz tube.
- C. Quartz Tube Heating Elements: Nickel-chromium-wire heating element enclosed in quartz tube.
- D. Metal-Sheathed Heating Elements: Nickel-chromium-wire heating element embedded in magnesium oxide powder enclosed in metal sheath. Comply with UL 1030.

In first paragraph below, retain UL 499 for supplemental heating applications requiring humidity control; retain UL 2021 for comfort heating applications. Retain all three options if both applications are required.

- E. Comply with **[UL 499]** **[and]** **[UL 2021]**.
- F. Enclosures: **[Aluminized]** **[Stainless]** **[Painted]**-steel housing with anodized-aluminum reflector.

Retain "Finish" Subparagraph below for painted enclosures.

1. Finish: Baked-enamel finish in manufacturer's **[standard]** **[custom]** paint color as selected by DEN Project Manager.
- G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Retain "Unit Controls" Paragraph below for integral control device if control devices are not specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

- H. Unit Controls:

Retain one or more of three subparagraphs below. If more than one type of control device is required, indicate each type in a schedule on Drawings.

1. Line-voltage thermostat.
2. Enclosed contactor for remote thermostat.
3. Snow and ice detector with moisture sensor and integral temperature sensor.

If Project has more than one type or size of electric radiant heater, delete "Capacities and Characteristics" Paragraph below and schedule heaters on Drawings.

I. Capacities and Characteristics:

1. Enclosure Length: <Insert inches (mm)>.
2. Mounting Height: <Insert feet (m)>.
3. Heating Capacity: <Insert kilowatts>.
4. Radiation Pattern: [30] [60] [90] <Insert number> [symmetric] [asymmetric]-degree-included angle.
5. Electrical Characteristics for Single-Point Connection:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

2.2 HYDRONIC HEATING[AND COOLING] PANELS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [AIRTEX Radiant Systems; a division of Engineered Air Ltd.](#)
2. [Rosemex Products.](#)
3. [Sun-EI Corporation.](#)
4. [Twa Panel Systems Inc.](#)
5. <Insert manufacturer's name>.
6. or approved equal.

B. Description: [Modular] [Linear] sheet-metal panel with serpentine water piping, suitable for [lay-in installation flush with T-bar ceiling grid] [surface mounting] [recessed mounting].

1. Panels: Minimum [0.0336-inch- (0.86-mm-) thick, galvanized-steel] [0.0396-inch- (1.0-mm-) thick, aluminum] sheet.
2. Backing Insulation: Minimum [1-inch- (25-mm-)] [2-inch- (50-mm-)] <Insert dimension> thick, mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB with factory-applied jacket.

Retain one of three "Exposed-Side Panel Finish" subparagraphs below. If more than one type of finish is required, indicate each type in a schedule on Drawings.

3. Exposed-Side Panel Finish: Apply silk-screened finish to match appearance of acoustical ceiling tiles selected by DEN Project Manager.
4. Exposed-Side Panel Finish: Factory prime coated, ready for field painting.
5. Exposed-Side Panel Finish: Baked-enamel finish in manufacturer's **[standard]** **[custom]** paint color as selected by DEN Project Manager.
6. Factory Piping: **[ASTM B 88, Type L (ASTM B 88M, Type B)]** **[ASTM B 88, Type M (ASTM B 88M, Type C)]** copper tube with ASME B16.22 wrought-copper fittings and brazed joints. Piping shall be mechanically bonded to panel.

Retain "Surface-Mounted Trim" Subparagraph below for surface-mounted panels.

7. Surface-Mounted Trim: Sheet metal with baked-enamel finish in manufacturer's **[standard]** **[custom]** paint color as selected by DEN Project Manager.

Retain "Accessories" Subparagraph below for linear panels only.

8. Accessories:
 - a. **[5-inch (127-mm)]** **[6-inch (152-mm)]** **[8-inch (203-mm)]** panel with drape track recess.
 - b. **5-inch (127-mm)** male bullnose panel.
 - c. **5-inch (127-mm)** female bullnose panel.
 - d. **4-inch (102-mm)** male corner panel.
 - e. **4-inch (102-mm)** female corner panel.
 - f. Inside corner panel.
 - g. **1/2-inch (13-mm)** filler panel.

If Project has more than one type or size of hydronic heating and cooling panel, delete "Capacities and Characteristics" Paragraph below and schedule panels on Drawings.

C. Capacities and Characteristics:

1. Nominal Panel Size: **[24 by 24 inches (600 by 600 mm)]** **[24 by 36 inches (600 by 900 mm)]** **[24 by 48 inches (600 by 1200 mm)]** **[24 by 60 inches (600 by 1500 mm)]** **<Insert dimensions>**.
2. Piping Inlet and Outlet: **[NPS 1/2 (DN 15)]** **<Insert pipe size>**.
3. Heating:
 - a. Capacity: **<Insert Btu/h (kW)>**.
 - b. Room Temperature: **<Insert deg F (deg C)>**.
 - c. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 - d. Average Water Temperature: **<Insert deg F (deg C)>**.
 - e. Water Flow: **<Insert gpm (L/s)>**.
 - f. Water-Side Pressure Loss: **<Insert psig (kPa)>**.
4. Cooling:
 - a. Sensible Capacity: **<Insert Btu/h (kW)>**.
 - b. Dry-Bulb Room Temperature: **<Insert deg F (deg C)>**.
 - c. Wet-Bulb Room Temperature: **<Insert deg F (deg C)>**.
 - d. Entering-Water Temperature: **<Insert deg F (deg C)>**.

- e. Average Water Temperature: <Insert deg F (deg C)>.
- f. Water Flow: <Insert gpm (L/s)>.
- g. Water-Side Pressure Loss: <Insert psig (kPa)>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive radiant heating and cooling units for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for [**hydraulic piping**] [**electrical**] connections to verify actual locations before radiant heating and cooling unit installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate to assure correct recess size for recessed units.
- C. Install radiant heating and cooling units level and plumb.
- D. Suspend radiant heaters from structure.
- E. Install equipment exposed to finished areas after walls and ceiling are finished and painted. Avoid damage to other materials.
- F. Protection: Provide finished units with protective covers during balance of construction.

Revise first paragraph below for other types of construction that penetrate or are supported by ceilings.

- G. Coordinate layout and installation of radiant heaters and suspension-system components with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, communications system, security system, and partition assemblies.
- H. Support for Radiant Heating and Cooling Panels in or on Grid-Type Suspended Ceilings: Use grid as a support element.
 - 1. Install a minimum of four ceiling support-system rods or wires for each panel. Locate not more than **6 inches (150 mm)** from panel corners.
 - 2. Support Clips: Fasten to panel and to ceiling grid members at or near each panel corner with clips designed for the application.

3. Panels of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans, or center in acoustical panel and support panels independently with at least two 3/4-inch (19-mm) metal channels spanning and secured to ceiling tees.
4. Unless otherwise indicated, install shutoff valve and union or flange at each connection.
5. Install piping adjacent to machine to allow service and maintenance.

Retain subparagraph below if Project is in a seismic area.

6. Install at least one independent support rod or wire from structure to a tab on panel. Wire or rod shall have breaking strength of the weight of panel at a safety factor of three.

To comply with requirements of the Americans with Disabilities Act, verify mounting height in paragraph below with authorities having jurisdiction. Verify locations of thermostats with Drawings and room details before installation.

- I. Install devices [48 inches (1220 mm)] [60 inches (1525 mm)] <Insert dimension> above finished floor.

3.3 CONNECTIONS

Retain first three paragraphs below for hydronic heating and cooling panels. Coordinate piping installations and specialty arrangements with Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Unless otherwise indicated, install shutoff valve and union or flange at each connection.
- C. Install piping adjacent to unit to allow service and maintenance.
- D. Ground electric units according to Section 260526 "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- F. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:

Retain first subparagraph below if units have electric heat.

1. Operate electric heating elements through each stage to verify proper operation and electrical connections.
 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and units.
- B. Remove and replace malfunctioning units and retest as specified above.
- C. After installing panels, inspect unit cabinet for damage to finish. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
- D. Retest as specified above after repairs or replacements are made.
- E. Prepare test and inspection reports.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain radiant heaters and panels. See Section 017900 "Demonstration and Training."
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238213

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238216 - AIR COILS

- 1.1 This Section has no Section Text as it has been replaced by the Sections listed below. If e-SPECS Bindings have been associated to this Section, they should be updated to refer to the replacement sections below.
- A. SECTION 238216.11 – HYDRONIC AIR COILS
 - B. SECTION 238216.12 – STEAM AIR COILS
 - C. SECTION 238216.13 – REFRIGERANT AIR COILS
 - D. SECTION 238216.14 – ELECTRIC RESISTANCE AIR COILS

PART 1 - GENERAL (Not Applicable)

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 238216

SECTION 238216.11 - HYDRONIC AIR COILS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes hydronic heating and cooling air coils.
- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1.
2. Section 238216.13 "Refrigerant Air Coils."
3. Section 238216.14 "Electric Resistance Air Coils."

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT

PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, coil and frame configurations, material descriptions, dimensions of individual components and profiles, and finishes for each air coil.
 2. Include rated capacities, operating characteristics, and pressure drops for each air coil.
 3. Include data substantiating that materials comply with requirements.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which coil location and ceiling-mounted access panels are shown and coordinated with each other.
- B. Certificates: Certify that [**coil capacities, pressure drops, and selection procedures**] meet or exceed specified requirements. [**coils are tested and rated in accordance with ARI 410.**]
- C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air coils to include in operation and maintenance manuals.
- B. Warranty: Submit manufacturer warranty and ensure forms have been completed in DEN Project Manager's name and registered with manufacturer.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in

NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

Verify availability of certification. Not all mfrs certify coils. This requirement should not be deleted.

- B. Comply with ARI 410 for components, construction, and rating.
 - 1. Certify coils to ARI 410.
- C. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc., or other testing agency acceptable to the authority having jurisdiction, as suitable for the purpose specified and indicated.

1.7 FIELD CONDITIONS

- A. Altitude above Mean Sea Level: 5,500 feet (1677 m).

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 DESCRIPTION

LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, humidification and dehumidification, drain-pan construction and connection, finned-tube coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- A. ASHRAE Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

2.2 COILS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aerofin.
 2. Armstrong-Hunt, Inc.
 3. Carrier Corporation: a UTC company.
 4. Coil Company, LLC.
 5. Colmac Coil Manufacturing, Inc.
 6. Dunham-Bush USA.
 7. Heatcraft Worldwide Refrigeration.
 8. Greenheck Fan Corporation.
 9. Super Radiator Coils.
 10. Technical Systems, Inc.
 11. Temptrol.
 12. Trane.
 13. USA Coil & Air.
 14. **<Insert manufacturer's name>.**
 15. or approved equal.
- B. Performance Ratings: Tested and rated according to AHRI 410 and ASHRAE 33.

Pressure/temperature ratings in "Minimum Working-Pressure/Temperature Ratings" Paragraph below are common. Some manufacturers may vary ratings.

- C. Minimum Working-Pressure/Temperature Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).
- D. Source Quality Control: Factory tested to 300 psig (2070 kPa).
- E. Tubes: ASTM B 743 copper, minimum [0.020 inch (0.508 mm)] [0.035 inch (0.889 mm)] [0.049 inch (1.245 mm)] **<Insert dimension>** thick.
- F. Fins: [Aluminum] [Copper], minimum [0.006 inch (0.152 mm)] [0.010 inch (0.254 mm)] **<Insert dimension>** thick.
- G. Headers: [**Cast iron with drain and air vent tappings**] [**Cast iron with cleaning plugs and drain and air vent tappings**] [**Seamless copper tube with brazed joints, prime coated**] [**Steel with brazed joints, prime coated**].

Retain one of two "Frames" paragraphs below.

- H. Frames: Galvanized-steel channel frame, minimum [0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] [0.079 inch (2.0 mm)] thick for [**slip-in**] [**flanged**] mounting.
- I. Frames: ASTM A 666, [**Type 304**] [**Type 316**] stainless steel, minimum 0.0625 inch (1.6 mm) thick for [**slip-in**] [**flanged**] mounting.

Retain "Hot-Water Coil, Face-and-Bypass Dampers" Paragraph below for face-and-bypass heating coils.

- J. Hot-Water Coil, Face-and-Bypass Dampers: Alternating arrangement of coil segments and dampers.

1. Coil Configuration: [**Horizontal**] [**Vertical**] tubes.
2. Dampers: [**Extruded-aluminum**] [**Galvanized-steel**] blades with edge and end seals; full-length drive rod and mount for actuator [**in**] [**outside**] the airstream.

If Project has more than one type or size of hot-water coil, delete "Hot-Water Coil Capacities and Characteristics" Paragraph below and schedule coils on Drawings.

K. Hot-Water Coil Capacities and Characteristics:

1. Coil Face Dimensions:
 - a. Finned Length: <Insert inches (mm)>.
 - b. Finned Width: <Insert inches (mm)>.
2. Minimum Fin Spacing: [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.81 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.41 mm)] [0.0075 inch (0.19 mm)] <Insert dimension>.
3. Tube Diameter: [0.375 inch (9.5 mm)] [0.50 inch (12.7 mm)] [0.625 inch (15.9 mm)] [0.75 inch (19.0 mm)] [1.0 inch (25.4 mm)] <Insert dimension>.
4. Number of Rows: <Insert number>.
5. Serpentine: [**Single**] [**Half**] [**Full**].
6. Mounting: [**Slip in**] [**Flanged**].
7. Coating: [**Baked phenolic**] [**Cathodic epoxy e-coat**].
8. Air Side:
 - a. Flow Rate: <Insert cfm (L/s)>.
 - b. Finned Area Face Velocity: <Insert fpm (m/s)>.
 - c. Static Pressure Drop: <Insert inches wg (Pa)>.
 - d. Total Capacity: <Insert Btu/h (kW)>.
 - e. Entering Temperature: <Insert deg F (deg C)>.
 - f. Leaving Temperature: <Insert deg F (deg C)>.
9. Water Side:
 - a. Flow Rate: <Insert gpm (L/s)>.
 - b. Tube Velocity: <Insert fpm (m/s)>.
 - c. Glycol Type: [**Ethylene**] [**Propylene**].
 - d. Aqueous Glycol Solution Concentration: <Insert percentage>.
 - e. Pressure Drop: <Insert feet (kPa)>.
 - f. Entering Temperature: <Insert deg F (deg C)>.
 - g. Leaving Temperature: <Insert deg F (deg C)>.

If Project has more than one type or size of chilled-water coil, delete "Chilled-Water Coil Capacities and Characteristics" Paragraph below and schedule coils on Drawings.

L. Chilled-Water Coil Capacities and Characteristics:

1. Coil Face Dimensions:
 - a. Finned Length: <Insert inches (mm)>.
 - b. Finned Width: <Insert inches (mm)>.

2. Minimum Fin Spacing: [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.81 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.41 mm)] [0.0075 inch (0.19 mm)] **<Insert dimension>**.
3. Tube Diameter: [0.375 inch (9.5 mm)] [0.50 inch (12.7 mm)] [0.625 inch (15.9 mm)] [0.75 inch (19.0 mm)] [1.0 inch (25.4 mm)] **<Insert dimension>**.
4. Number of Rows: **<Insert number>**.
5. Serpentine: [Half] [Single] [Double].
6. Mounting: [Slip in] [Flanged].
7. Coating: [Baked phenolic] [Cathodic epoxy e-coat].
8. Air Side:
 - a. Flow Rate: **<Insert cfm (L/s)>**.
 - b. Finned Area Face Velocity: **<Insert fpm (m/s)>**.
 - c. Static Pressure Drop: **<Insert inches wg (Pa)>**.
 - d. Total Capacity: **<Insert Btu/h (kW)>**.
 - e. Sensible Capacity: **<Insert Btu/h (kW)>**.
 - f. Entering Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 - g. Entering Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
 - h. Leaving Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 - i. Leaving Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
9. Water Side:
 - a. Flow Rate: **<Insert gpm (L/s)>**.
 - b. Tube Velocity: **<Insert fpm (m/s)>**.
 - c. Glycol Type: [Ethylene] [Propylene].
 - d. Aqueous Glycol Solution Concentration: **<Insert percentage>**.
 - e. Pressure Drop: **<Insert feet (Pa)>**.
 - f. Entering Temperature: **<Insert deg F (deg C)>**.
 - g. Leaving Temperature: **<Insert deg F (deg C)>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before coil installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturers written instructions.

- B. Install coils level and plumb.
- C. Make connections to coils with unions and flanges.
- D. Install coils level. [**Install cleanable tube coils with 1:50 pitch.**]
- E. Connect water supply to leaving air side of coil (counterflow arrangement).
- F. Provide shut-off valve on supply line and lockshield balancing valve [**with memory stop**] on return line.
- G. Locate water supply at bottom of supply header and return water connection at top.

Select one below.

- H. Provide [**manual**] [**float operated automatic**] air vents at high points complete with stop valve.
- I. Ensure water coils are drainable and provide drain connection at low points.
- J. Refer to Section 232116 "Hydronic Piping Specialties".
- K. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."
 - 1. Support coil sections independent of piping on steel channel or double angle frames and secure to casings.
 - 2. Provide frames for maximum three coil sections.
 - 3. Arrange supports to avoid piercing drain pans.
 - 4. Install coil to assure access for cleaning and maintenance.
 - 5. Provide airtight seal between coil and duct or casing.
- L. Install [**galvanized**] [**stainless**]-steel drain pan under each cooling coil.

Option in first subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain option to comply with LEED Prerequisite IEQ 1.

- 1. Construct drain pans with connection for drain; insulated[**and complying with ASHRAE 62.1**].
 - 2. Construct drain pans to extend beyond coil length and width and to connect to condensate trap and drainage.
 - 3. Extend drain pan upstream and downstream from coil face.
 - 4. Extend drain pan under coil headers and exposed supply piping.
- M. Install moisture eliminators for cooling coils. Extend drain pan under moisture eliminator.
- N. Provide protection for coils to prevent damage to fins and flanges. Comb out and straighten bent fins on air coils.

- O. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified for hydronic piping systems.

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to coils to allow service and maintenance.
- C. Connect water piping with unions and shutoff valves to allow coils to be disconnected without draining piping. Control valves are specified in Section 230923.11 "Control Valves," and other piping specialties are specified in Section 232116 "Hydronic Piping Specialties."
- D. Ground equipment.
 - 1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 ADJUSTING

- A. Adjust initial temperature and humidity set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Straighten bent fins on each air coil.

3.5 CLEANING

- A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.
- B. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238216.11

SECTION 238216.12 - STEAM AIR COILS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes steam heating air coils.
- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 238216.11 "Hydronic Air Coils."
- 2. Section 238216.13 "Refrigerant Air Coils."
- 3. Section 238216.14 "Electric Resistance Air Coils."

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each air coil.
 - 2. Include rated capacities, operating characteristics, and pressure drops for each air coil.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which coil location and ceiling-mounted access panels are shown and coordinated with each other.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air coils to include in operation and maintenance manuals.

1.6 FIELD CONDITIONS

- A. Altitude above Mean Sea Level: <Insert feet (m)>.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 DESCRIPTION

LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, humidification and dehumidification, drain-pan construction and connection, finned-tube coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- A. ASHRAE Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

2.2 COILS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

Retain "Basis-of-Design Product" Paragraph and list of manufacturers below to identify a specific product or a comparable product from manufacturers listed. Retain option and delete insert note if manufacturer's name and model number are indicated on Drawings.

B. Basis-of-Design Product: Subject to compliance with requirements, provide [product indicated on Drawings] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. Aerofin Corporation.
2. Carrier Corporation; a UTC company.
3. Coil Company, LLC.
4. Colmac Coil Manufacturing, Inc.
5. Dunham-Bush, Inc.
6. Greenheck Fan Corporation.
7. Heatcraft Refrigeration Products LLC.
8. Super Radiator Coils.
9. Trane.
10. USA Coil & Air.
11. **<Insert manufacturer's name>.**

C. Performance Ratings: Tested and rated according to AHRI 410 and ASHRAE 33.

Pressure/temperature ratings in "Minimum Working-Pressure/Temperature Ratings" Paragraph below are common. Some manufacturers may vary ratings.

- D. Minimum Working-Pressure/Temperature Ratings: 100 psig (690 kPa), 400 deg F (204 deg C).
- E. Source Quality Control: Factory tested to 300 psig (2070 kPa).
- F. Tubes: ASTM B 743 copper, minimum [0.025 inch (0.635 mm)] [0.035 inch (0.889 mm)] [0.049 inch (1.245 mm)] **<Insert dimension>** thick.
- G. Fins: [Aluminum] [Copper], minimum [0.006 inch (0.152 mm)] [0.010 inch (0.254 mm)] **<Insert dimension>** thick.
- H. Headers: [Cast iron with drain and air vent tappings] [Cast iron with cleaning plugs, and drain and air vent tappings] [Seamless copper tube with brazed joints, prime coated] [Steel with brazed joints, prime coated].

Indicate single- or distributing-tube type in "Capacities and Characteristics" Paragraph or in schedule on Drawings.

I. Tube Type: Single or distributing as indicated.

Retain one of two "Frames" paragraphs below.

J. Frames: Galvanized-steel channel frame, minimum [0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] [0.079 inch (2.0 mm)] thick for [slip-in] [flanged] mounting.

- K. Frames: ASTM A 666, [Type 304] [Type 316] stainless steel, minimum 0.0625 inch (1.6 mm) thick for [slip-in] [flanged] mounting.

Retain "Face-and-Bypass Dampers" Paragraph below for face-and-bypass coils.

- L. Face-and-Bypass Dampers: Alternating arrangement of coil segments and dampers.
1. Coil Configuration: [Horizontal] [Vertical] tubes.
 2. Dampers: [Extruded-aluminum] [Galvanized-steel] blades with edge and end seals; full-length drive rod and mount for actuator [in] [outside] the airstream.

If Project has more than one type or size of steam coil, delete "Capacities and Characteristics" Paragraph below and schedule coils on Drawings.

- M. Capacities and Characteristics:

1. Coil Face Dimensions:
 - a. Finned Length: <Insert inches (mm)>.
 - b. Finned Width: <Insert inches (mm)>.
2. Minimum Fin Spacing: [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.81 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.41 mm)] [0.0075 inch (0.19 mm)] <Insert dimension>.
3. Tube Diameter: [0.375 inch (9.5 mm)] [0.50 inch (12.7 mm)] [0.625 inch (15.9 mm)] [0.75 inch (19.0 mm)] [1.0 inch (25.4 mm)] <Insert dimension>.
4. Number of Rows: <Insert number>.
5. Mounting: [Slip in] [Flanged].
6. Air Side:
 - a. Flow Rate: <Insert cfm (L/s)>.
 - b. Finned Area Face Velocity: <Insert fpm (m/s)>.
 - c. Static Pressure Drop: <Insert inches wg (Pa)>.
 - d. Total Capacity: <Insert Btu/h (kW)>.
 - e. Entering Temperature: <Insert deg F (deg C)>.
 - f. Leaving Temperature: <Insert deg F (deg C)>.
7. Steam Side:
 - a. Inlet Pressure: <Insert psig (kPa)>.
 - b. Tube Type: [Single] [Distributing].
 - c. Condensing Capacity: <Insert lb/h (g/s)>.
 - d. Pressure Drop: <Insert psig (kPa)>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before coil installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install coils level and plumb.
- B. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."
- C. Straighten bent fins on air coils.
- D. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified for steam and condensate piping systems.

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to coils to allow service and maintenance.
- C. Connect steam piping with gate valve and union and steam condensate piping with union, strainer, trap, and gate valve to allow coils to be disconnected without draining piping. Control valves are specified in Section 230923.11 "Control Valves," and other piping specialties are specified in Section 232213 "Steam and Condensate Heating Piping."

SECTION 238216.13 - REFRIGERANT AND GLYCOL AIR COILS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes refrigerant air coils and glycol air coils.
- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 238216.11 "Hydronic Air Coils."
- 2.
3. Section 238216.14 "Electric Resistance Air Coils."

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, coil and frame configurations, material descriptions, dimensions of individual components and profiles, and finishes for each air coil.
 - 2. Include rated capacities, operating characteristics, and pressure drops for each air coil.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

- 1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which coil location and ceiling-mounted access panels are shown and coordinated with each other.
- B. Certificates: Certify that [**coil capacities, pressure drops, and selection procedures**] meet or exceed specified requirements. [**coils are tested and rated in accordance with ARI 410.**]
- C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air coils to include in operation and maintenance manuals.
- B. Warranty: Submit manufacturer warranty and ensure forms have been completed in DEN Project Manager's name and registered with manufacturer.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300

"Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

Verify availability of certification. Not all mfrs certify coils. This requirement should not be deleted.

- B. Comply with ARI 410 for components, construction, and rating.
 - 1. Certify coils to ARI 410.
- C. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc., or other testing agency acceptable to the authority having jurisdiction, as suitable for the purpose specified and indicated.

1.7 FIELD CONDITIONS

- A. Altitude above Mean Sea Level: 5,500 feet (1677 m).

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 DESCRIPTION

LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, humidification and dehumidification, drain-pan construction and connection, finned-tube coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- A. ASHRAE Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

2.2 REFRIGERANT AIR COILS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aerofin Corporation.
2. Armstrong-Hunt, Inc.
3. Carrier Corporation; a UTC company.
4. Coil Company, LLC.
5. Colmac Coil Manufacturing, Inc.
6. Dunham-Bush, Inc.
7. Greenheck Fan Corporation.
8. Heatcraft Refrigeration Products LLC.
9. Lennox Industries Inc.
10. Super Radiator Coils.
11. Technical Systems, Inc.
12. Temptrol.
13. Trane.
14. USA Coil & Air.
15. **<Insert manufacturer's name>.**
16. or approved equal.

B. Performance Ratings: Tested and rated according to AHRI 410 and ASHRAE 33.

Pressure rating in "Minimum Working-Pressure Rating" Paragraph below is common. Some manufacturers may vary rating.

C. Minimum Working-Pressure Rating: 300 psig (2070 kPa).

D. Source Quality Control: Factory tested to 450 psig (3105 kPa).

E. Tubes: ASTM B 743 copper, minimum [0.020 inch (0.508 mm)] [0.035 inch (0.889 mm)] [0.049 inch (1.245 mm)] **<Insert dimension>** thick.

F. Fins: [Aluminum] [Copper], minimum [0.006 inch (0.152 mm)] [0.010 inch (0.254 mm)] **<Insert dimension>** thick.

G. Suction and Distributor Piping: ASTM B 88, Type L (ASTM B 88M, Type B) copper tube with brazed joints.

Retain one of two "Frames" paragraphs below.

H. Frames: Galvanized-steel channel frame, minimum [0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] [0.079 inch (2.0 mm)] thick for [slip-in] [flanged] mounting.

I. Frames: ASTM A 666, [Type 304] [Type 316] stainless steel, minimum 0.0625 inch (1.6 mm) thick for [slip-in] [flanged] mounting.

If Project has more than one type or size of refrigerant coil, delete "Capacities and Characteristics" Paragraph below and schedule coils on Drawings.

J. Capacities and Characteristics:

1. Coil Face Dimensions:

- a. Finned Length: <Insert inches (mm)>.
- b. Finned Width: <Insert inches (mm)>.

2. Minimum Fin Spacing: [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.81 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.41 mm)] [0.0075 inch (0.19 mm)] <Insert dimension>.

3. Tube Diameter: [0.375 inch (9.5 mm)] [0.50 inch (12.7 mm)] [0.625 inch (15.9 mm)] [0.75 inch (19.0 mm)] [1.0 inch (25.4 mm)] <Insert dimension>.

4. Number of Rows: <Insert number>.

5. Coil Split: [Row] [Face] [Interlaced].

6. Mounting: [Slip in] [Flanged].

7. Coating: [Baked phenolic] [Cathodic epoxy e-coat].

8. Air Side:

- a. Flow Rate: <Insert cfm (L/s)>.
- b. Finned Area Face Velocity: <Insert fpm (m/s)>.
- c. Static Pressure Drop: <Insert inches wg (Pa)>.
- d. Total Capacity: <Insert Btu/h (kW)>.
- e. Sensible Capacity: <Insert Btu/h (kW)>.
- f. Entering Dry-Bulb Temperature: <Insert deg F (deg C)>.
- g. Entering Wet-Bulb Temperature: <Insert deg F (deg C)>.
- h. Leaving Dry-Bulb Temperature: <Insert deg F (deg C)>.
- i. Leaving Wet-Bulb Temperature: <Insert deg F (deg C)>.

9. Refrigerant Side:

Retain one of two "Refrigerant Type" subparagraphs below to require a specific refrigerant type; delete both if any refrigerant type is acceptable. LEED-NC, LEED-CS, and LEED for Schools Credit EA 4 awards a single point if all HVAC&R equipment meets requirements for enhanced refrigerant management.

- a. Refrigerant Type: [R-22] [R-407C] [R-410A] [HFC-134a] [HFC refrigerant] <Insert type>.
- b. Refrigerant Type: R-407C, R-410A, or HFC-134a.
- c. Saturated Suction Temperature: <Insert deg F (deg C)>.

2.3 GLYCOL AIR COILS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aerofin Corporation.
2. Armstrong-Hunt, Inc.
3. Carrier Corporation; a UTC company.
4. Coil Company, LLC.
5. Colmac Coil Manufacturing, Inc.
6. Dunham-Bush, Inc.
7. Greenheck Fan Corporation.
8. Heatcraft Refrigeration Products LLC.
9. Lennox Industries Inc.
10. Super Radiator Coils.
11. Technical Systems, Inc.
12. Temptrol.
13. Trane.
14. USA Coil & Air.
15. <Insert manufacturer's name>.
16. or approved equal.

- B. Tubes: 5/8 inch OD seamless copper [**or brass**] arranged in parallel or staggered pattern, expanded into fins, [**silver**] brazed joints.
- C. Fins: Aluminum [**or copper**] [**continuous plate type with full fin collars**] [**or individual helical finned tube type wound under tension**].

Select one or include all of the optional fins; some may only be manufacturer-dependent and not affect performance of the equipment.

Edit paragraph below.

- D. Casing: Die formed channel frame of [**16 gage**] [**14 gage**] [**18 gage**] galvanized steel with [**3/8 inch**] mounting holes on [**3 inch**] [**6 inch**] centers. Provide tube supports for coils longer than [**36 inches**] [**40 inches**] [**48 inches**].
- E. Headers: [**Cast iron with tubes expanded into header**] [**Seamless copper tube with silver brazed joints**] [**Prime coated steel pipe with brazed joints**].

Select one or include all of the optional header systems; some may only be manufacturer-dependent and not affect performance of the equipment.

Select one below.

- F. Testing: Air test under water to [**200 psig**] [**350 psig**] for working pressure of 200 psig and 220 degrees F. Design tested and rated according to ASHRAE 33 and ARI 410.
- G. Configuration: Drainable, with threaded plugs [**in headers**] for drain and vent; threaded plugs in return bends and in headers opposite each tube.

Select one below.

- H. Fin Spacing: [**8 fins per inch**] [**11 fins per inch**].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before coil installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturers written instructions.
- B. Install coils level and plumb.
- C. Make connections to coils with unions and flanges.
- D. Install coils level. [**Install cleanable tube coils with 1:50 pitch.**]
- E. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."
 - 1. Support coil sections independent of piping on steel channel or double angle frames and secure to casings.
 - 2. Provide frames for maximum three coil sections.
 - 3. Arrange supports to avoid piercing drain pans.
 - 4. Install coil to assure access for cleaning and maintenance.
 - 5. Provide airtight seal between coil and duct or casing.
- F. Install [**galvanized**] [**stainless**]-steel drain pan under each cooling coil.

Option in first subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain option to comply with LEED Prerequisite IEQ 1.

- 1. Construct drain pans with connection for drain; insulated[**and complying with ASHRAE 62.1**].
 - 2. Construct drain pans to extend beyond coil length and width and to connect to condensate trap and drainage.
 - 3. Extend drain pan upstream and downstream from coil face.
 - 4. Extend drain pan under coil headers and exposed supply piping.
- G. Install moisture eliminators for cooling coils. Extend drain pan under moisture eliminator.
 - H. Cooling Coils:

Generally, moisture eliminators should be installed on all duct refrigerant cooling coils.

Edit paragraphs 1 and 2 below.

1. Provide [**three break**] [**six break**] moisture eliminators of 24 gage galvanized steel, where air velocity exceeds [**500 ft/min**] [**550 ft/min**] [**<Insert number> ft/min**].
 2. Provide drain pan and drain connection; fabricate from 20 gage galvanized steel, extend 3 inches from face of entering air side, [**6 inches**] [**<Insert number inches**] from face of leaving air side [, and **4 inches from face of eliminators**]. Pipe drain pans individually to floor drain with water seal trap. Drain pan construction shall comply with ASHRAE 62.
- I. Refrigerant Coils: Provide sight glass in liquid line within 12 inches of coil. Refer to Section 232300 "Refrigerant Piping".
 - J. Insulate headers located outside airflow as specified for piping. Refer to Section 230719 "HVAC Piping Insulation" Piping Insulation.
 - K. Electric Duct Heating Coils: Wire in accordance with NFPA 70. Refer to Section 260583 "Electrical Connections for Equipment".
 - L. Straighten bent fins on air coils.
 - M. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified for refrigerant piping systems.

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to coils to allow service and maintenance.
- C. Connect refrigerant piping according to Section 232300 "Refrigerant Piping."
- D. Ground equipment.
 1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 ADJUSTING

- A. Adjust initial temperature and humidity set points.

- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Straighten bent fins on each air coil.

3.5 CLEANING

- A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.
- B. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238216.13

SECTION 238216.14 - ELECTRIC-RESISTANCE AIR COILS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes electric resistance air coils.
- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 238216.11 "Hydronic Air Coils."
2. Section 238216.13 "Refrigerant and Gycol Air Coils."

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, coil and frame configurations, material descriptions, dimensions of individual components and profiles, and finishes for each air coil.
 - 2. Include rated capacities, operating characteristics, and pressure drops for each air coil.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which coil location and ceiling-mounted access panels are shown and coordinated with each other.
- B. Certificates: Certify that coils meet or exceed specified requirements. **[coils are tested and rated in accordance with ARI 410.]**
- C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air coils to include in operation and maintenance manuals.
- B. Warranty: Submit manufacturer warranty and ensure forms have been completed in DEN Project Manager's name and registered with manufacturer.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

Verify availability of certification. Not all mfrs certify coils. This requirement should not be deleted.

- B. Comply with ARI 410 for components, construction, and rating.
 - 1. Certify coils to ARI 410.
- C. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc., or other testing agency acceptable to the authority having jurisdiction, as suitable for the purpose specified and indicated.

1.7 FIELD CONDITIONS

- A. Altitude above Mean Sea Level: 5,500 feet (1677 m).

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 DESCRIPTION

LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, humidification and dehumidification, drain-pan construction and connection, finned-tube coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- A. ASHRAE Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

2.2 COILS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Berko Electric Mfg. Div.
 2. Brasch Manufacturing Co., Inc.
 3. Chromalox.
 4. Dunham-Bush, Inc.
 5. Federal Pacific Electric Co.
 6. INDEECO.
 7. Trane.
 8. **<Insert manufacturer's name>.**
 9. or approved equal.
- B. Testing Agency Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Coil Assembly: Comply with UL 1995.

Retain one of two "Heating Elements" paragraphs below.

- D. Heating Elements: Coiled resistance wire of 80 percent nickel and 20 percent chromium; surrounded by compacted magnesium-oxide powder in tubular-steel sheath; with spiral-wound, copper-plated, steel fins continuously brazed to sheath.
- E. Heating Elements: **[Enclosed copper tube, aluminum finned element of coiled nickel-chrome resistance wire centered in tubes and embedded in refractory material][.] [or]** Open-coil resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, and fastened to supporting brackets.
- F. High-Temperature Coil Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box without removing heater from duct or casing.
1. Secondary Protection: Load-carrying, manually reset or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
- G. Frames: Galvanized-steel channel frame, minimum [0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] [0.079 inch (2.0 mm)] thick for **[slip-in] [flanged]** mounting. Provide tube supports for coils longer than **[36 inches] [40 inches] [48 inches]**.
- H. Control Panel: **[Unit] [Remote]** mounted with disconnecting means and overcurrent protection. Include the following controls:
1. Magnetic contactor.
 2. Mercury contactor.

3. Solid-state stepless pulse controller.
4. Toggle switches; one per step.
5. Step controller.
6. Time-delay relay.
7. Pilot lights; one per step.
8. Airflow proving switch.

Retain one of first two paragraphs below.

- I. See Section 230923.27 "Temperature Instruments" for thermostat.

If thermostats are used with step controllers, ensure their compatibility regarding number of steps.

- J. Thermostats: Duct-mounted modulating thermostats, with temperature range from 0 to 100 degrees F, and 2.5 degrees F throttling range; and with 1/2-by-4-1/2-inch sensing bulb and 60-inch capillary.

If Project has more than one type or size of electric coil, delete "Capacities and Characteristics" Paragraph below and schedule coils on Drawings.

- K. Capacities and Characteristics:

1. Coil Face Dimensions:

- a. Length: <Insert inches (mm)>.
- b. Height: <Insert inches (mm)>.

2. Mounting: **[Slip in] [Flanged]**.

3. Air Side:

- a. Flow Rate: <Insert cfm (L/s)>.
- b. Face Velocity: <Insert fpm (m/s)>.
- c. Static Pressure Drop: <Insert inches wg (Pa)>.
- d. Total Capacity: <Insert Btu/h (kW)>.
- e. Entering Temperature: <Insert deg F (deg C)>.
- f. Leaving Temperature: <Insert deg F (deg C)>.

4. Electrical Characteristics:

- a. Capacity: <Insert kilowatts>.
- b. Number of Steps: <Insert number>.
- c. Volts: <Insert value>.
- d. Phase: <Insert value>.
- e. Hertz: <Insert value>.
- f. Full-Load Amperes: <Insert value>.
- g. Minimum Circuit Ampacity: <Insert value>.
- h. Maximum Overcurrent Protection: <Insert amperage>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturers written instructions.
- B. Install coils level and plumb.
- C. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."
- D. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.3 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Ground equipment.
 - 1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 ADJUSTING

- A. Adjust initial temperature and set points.
- B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.5 CLEANING

- A. After completing system installation, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

- B. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

Delete below if no copper tube with resistance wire and aluminum finned elements.

- C. Straighten bent fins on each air coil.

3.6 FIELD QUALITY CONTROL

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 1. Operational Test: After electrical circuitry has been energized, operate electric coils to confirm proper unit operation.
 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 238219 - FAN COIL UNITS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify, with manufacturers, that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system design alternatives that do not include fan coil units may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Ductless fan coil units and accessories.
 - 2. Ducted fan coil units and accessories.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
 2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings:
1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Include diagrams for power, signal, and control wiring.

Retain "Samples for Initial Selection" and "Samples for Verification" paragraphs below for two-stage Samples.

Coordinate sample requirements with DEN Project Manager.

- D. Samples for Initial Selection: For units with factory-applied color finishes.
- E. Samples for Verification: For each type of fan coil unit indicated.
- F. Mock-up:

Use this paragraph for assessing full sized erected assemblies for review of construction, coordination of the Work of several sections, testing, or observation of operation.

Verify mockup requirements with DEN Project Manager.

1. Provide **<Insert number>** mockup, **<Insert number>** feet long by **<Insert number>** feet wide, of **<typical exterior wall module>** **<one typical bay, under window enclosure assembly complete with induction units>**.
2. Locate **<where directed by DEN Project Manager>** **<Insert location>**.
3. Mockup may **<not>** remain as part of the Work.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Suspended ceiling components.
 2. Structural members to which fan coil units will be attached.
 3. Method of attaching hangers to building structure.
 4. Size and location of initial access modules for acoustical tile.
 5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. <Insert item>.
 6. Perimeter moldings.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment." See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: For fan coil units, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.
- D. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fan coil units to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Maintenance schedules and repair part lists for motors, coils, integral controls, and filters.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fan Coil Unit Filters: Furnish <Insert number> spare filters for each filter installed.

Retain "Fan Belts" Subparagraph below only for fan coil units with belt-driven fans.

- 2. Fan Belts: Furnish <Insert number> spare fan belts for each unit installed.

1.7 QUALITY ASSURANCE

- A. Comply with NFPA 70. Listed and labeled by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

"ASHRAE Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain pan construction and connection, finned-tube coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

"ASHRAE/IES 90.1 Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1.

- C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.8 COORDINATION

Delete this article if fan coil units are wall or floor mounted.

Revise first paragraph below to delete or add types of construction that penetrate or are supported by ceilings.

- A. Coordinate layout and installation of fan coil units and suspension system components with other construction that penetrates or is supported by ceilings, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

Retain paragraph below for units with outdoor air.

- B. Coordinate size and location of wall sleeves for outdoor-air intake.

1.9 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws. Coordinate with Section 016000 "Product Requirements."

Warranties vary among manufacturers from covering the whole unit for up to four years, to only the compressor for five to 10 years, or only the condenser coil for five years. Extended special warranties are limited to units in the 1- to 5-ton (3.5- to 17.6-kW) range, and then are usually restricted to residential applications.

- A. Special Warranty: Manufacturer agrees to repair or replace components of condensing units that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Compressor failure.
 - b. Condenser coil leak.

Verify available warranties and warranty periods for units and components.

- 2. Warranty Period: Minimum **[four (4)] [five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.
- 3. Warranty Period (Compressor Only): Minimum **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Factory-packaged and -tested units rated according to AHRI 440, ASHRAE 33, and UL 1995.
- C. Radiated noise shall not exceed:
1. NC 35 – In Office.
 2. NC 40 – Terminal/Concourse.
 3. NC 45 – Maintenance Facilities.

2.2 DUCTLESS FAN COIL UNITS

Many additional features, which vary with each manufacturer, are available for this product. Include all features for fan coil units that are required for Project, and identify additional features for specific units in the Fan Coil Unit Schedule on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Airtherm; a Mestek Company.
 2. Carrier Corporation; a UTC company.
 3. DRS Marlo Coil; part of DRS Technologies, Inc.
 4. Dunham-Bush.
 5. Engineered Air.
 6. ENVIRO-TEC; by Johnson Controls, Inc.
 7. First Company Products.
 8. Greenheck Fan Corporation.
 9. IEC; a subsidiary of LSB Industries, Inc.

10. [McQuay International; a member of Daikin Group.](#)
11. [Nailor Industries Inc.](#)
12. [Rosemex.](#)
13. [Superior Rex.](#)
14. [Titus.](#)
15. [Trane Inc.](#)
16. [USA Coil & Air.](#)
17. [YORK; by Johnson Controls, Inc.](#)
18. **<Insert manufacturer's name>.**
19. or approved equal.

Fan coil units come with various coil configurations, the most typical being split coil systems with one heating and three cooling coils. The coils tend to be row split rather than face split, although both configurations are available. Units can also come with either a two-pipe or a four-pipe system, depending on Project design requirements.

B. Fan Coil Unit Configurations: [**Row**] [**Face**] split.

1. Number of Heating Coils: [**One**] **<Insert number>** with two-pipe system.
2. Number of Cooling Coils: [**One**] [**Three**] with [**two**][**four**]-pipe system.

Retain one of two "Coil Section Insulation" paragraphs below for coil section insulation.

Closed-cell insulation with foil or matt facing is provided by some manufacturers to reduce the possibility of fibers from glass-fiber insulation being introduced into the conditioned space.

C. Coil Section Insulation: [**1/2-inch- (13-mm-)**] [**1-inch- (25-mm-)**] **<Insert dimension>** thick, [**coated glass fiber**] [**foil-covered, closed-cell foam**] [**matte-finish, closed-cell foam**] complying with ASTM C 1071 and attached with adhesive complying with ASTM C 916.

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84 by a qualified testing agency.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

D. Coil Section Insulation: Insulate coil section according to Section 230616 "HVAC Equipment Insulation."

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84 by a qualified testing agency.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

Removable drain pans are an extra feature with some manufacturers.

"(Main and Auxiliary)Drain Pans" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1.

- E. **[Main and Auxiliary]Drain Pans: [Plastic] [Stainless steel] [Insulated galvanized steel with plastic liner].** Fabricate pans and drain connections to comply with ASHRAE 62.1. **[Drain pans shall be removable.]**
- F. Chassis: Galvanized steel where exposed to moisture, **with baked-enamel finish and removable access panel**], **with powder-coat finish and removable access panel**]. Floor-mounting units shall have leveling screws.

Coordinate custom-color requirements in "Cabinet" Paragraph below with sample submittal requirements. Coordinate field painting with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

- G. Cabinet: Steel with **[factory prime coating, ready for field painting] [baked-enamel finish in manufacturer's standard paint color as selected by DEN Project Manager] [baked-enamel finish in manufacturer's custom paint color as selected by DEN Project Manager]**.
 - 1. Vertical Unit Front Panels: Removable, steel, with **[integral stamped] [polyethylene] [steel]** discharge grille and channel-formed edges, cam fasteners, and insulation on back of panel.
 - 2. Horizontal Unit Bottom Panels: Fastened to unit with cam fasteners and hinge and attached with safety chain; with **[integral stamped] [cast-aluminum]** discharge grilles.

Retain "Stack Unit Discharge and Return Grille" Subparagraph below for stack-type fan coil unit.

- 3. Stack Unit Discharge and Return Grille: Aluminum double-deflection discharge grille, and louvered- or panel-type return grille; color as selected by DEN Project Manager from manufacturer's **[standard] [custom]** colors. Return grille shall provide maintenance access to fan coil unit.
- 4. Steel recessing flanges for recessing fan coil units into ceiling or wall.

Retain "Outdoor-Air Wall Box" Paragraph below for fan coil units with outdoor-air intake.

- H. Outdoor-Air Wall Box: Minimum **0.1265-inch- (3.2-mm-)** thick, aluminum, rain-resistant louver and box with integral eliminators and bird screen.
 - 1. Louver Configuration: **[Horizontal] [Vertical]**, rain-resistant louver.
 - 2. Louver Material: **[Aluminum] [Steel]**.
 - 3. Bird Screen: **1/2-inch (13-mm)** mesh screen on interior side of louver.
 - 4. Decorative Grille: On outside of intake.
 - 5. Finish: **[Anodized aluminum] [Baked enamel]**, color as selected by DEN Project Manager from manufacturer's **[standard] [custom]** colors.

Outdoor-air dampers are furnished for wall-mounting, vertical, exposed units only.

- I. Outdoor-Air Damper: Galvanized-steel blades with edge and end seals and nylon bearings; with **[electronic] [pneumatic], [two-position] [modulating]** actuators.

Verify available filter types with manufacturer. Indicate filter thickness in "Capacities and Characteristics" Paragraph or in the Fan Coil Unit Schedule on Drawings.

For further information on air filters and air filter ratings, see Section 234100 "Particulate Air Filtration."

- J. Filters: Easily removed, minimum arrestance and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2 and all addendums.

Retain "MERV Rating" Subparagraph below to require compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher. Also, retain subparagraph for LEED Prerequisite IEQ 1. LEED-NC, LEED-CI, and LEED for Schools Credit IEQ 3.1 and LEED-CS Credit IEQ 3 require that filters have a minimum MERV 13 rating for systems that deliver air to occupied spaces

1. MERV Rating: [6] [13] <Insert number> when tested according to ASHRAE 52.2.

Retain one or more of three subparagraphs below. Indicate filter type in the Fan Coil Unit Schedule on Drawings. 2-inch- (50-mm-) thick washable foam is unavailable. Retain third subparagraph if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

2. Washable Foam: 70 percent arrestance and MERV[3].
3. Glass Fiber Treated with Adhesive: 80 percent arrestance and MERV[5].
4. Pleated Cotton-Polyester Media: 90 percent arrestance and MERV[7].

- K. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), rated for a minimum working pressure of 200 psig (1378 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.

Retain "Indoor Refrigerant Coils" Paragraph below only when the fan coil unit includes refrigerant coils working in conjunction with a remote condenser unit. Remote condensing units are specified in Section 236200 "Packaged Compressor and Condenser Units."

- L. Indoor Refrigerant Coils: [Copper] [Stainless-steel] tube, with mechanically bonded [aluminum] [stainless-steel] fins spaced no closer than 0.1 inch (2.5 mm) and brazed joints at fittings. Comply with AHRI 210/240, and leak test to minimum 450 psig (3105 kPa) for a minimum 300-psig (2070-kPa) working pressure. Include thermal expansion valve.
- M. Steam Coils: Copper[distributing] tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), rated for a minimum working pressure of 75 psig (517 kPa).

Some manufacturers limit air-to-air heat pumps to electric supplemental heating coils.

- N. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with fuses in terminal box for overcurrent protection and limit controls for high-temperature protection. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.
- O. Fan and Motor Board: Removable.

1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project.

2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
3. Wiring Termination: Connect motor to chassis wiring with plug connection.

Retain "Factory, Hydronic Piping Package" Paragraph below to suit Project. Delete if factory piping package is not required.

- P. Factory, Hydronic Piping Package: [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 88, Type M (ASTM B 88M Type C)] copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.

Retain one or more of first four subparagraphs below.

1. [Two][Three]-way, [two-position] [modulating] control valve for dual-temperature coil.
2. [Two][Three]-way, [two-position] [modulating] control valve for chilled-water coil.
3. [Two][Three]-way, [two-position] [modulating] control valve for hot-water heating coil.
4. [Two][Three]-way [two-position] [modulating] control valve for hot-water reheat coil.
5. Hose Kits: Minimum 400-psig (2758-kPa) working pressure and operating temperatures from 33 to 211 deg F (0.5 to 99 deg C). Tag hose kits to equipment designations.
 - a. Length: [24 inches (600 mm)] [36 inches (900 mm)] <Insert dimension>.
 - b. Minimum Diameter: Equal to fan coil unit connection size.
6. Two-Piece Ball Valves: Bronze body with full-port, chrome-plated bronze ball; PTFE or TFE seats; and 600-psig (4140-kPa) minimum CWP rating and blowout-proof stem.
7. Calibrated-Orifice Balancing Valves: Bronze body, ball type; 125-psig (860-kPa) working pressure, 250 deg F (121 deg C) maximum operating temperature; with calibrated orifice or venturi, connections for portable differential pressure meter with integral seals, threaded ends, and a memory stop to retain set position.
8. Automatic Flow-Control Valve: Brass or ferrous-metal body; 300-psig (2070-kPa) working pressure at 250 deg F (121 deg C); with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow with plus or minus 10 percent over differential pressure range of 2 to 80 psig (13.8 to 552 kPa).
9. Y-Pattern Hydronic Strainers: Cast-iron body (ASTM A 126, Class B); 125-psig (860-kPa) working pressure; with threaded connections, bolted cover, perforated

- stainless-steel basket, and bottom drain connection. Include minimum NPS 1/2 (DN 15) hose-end, full-port, ball-type blowdown valve in drain connection.
10. Wrought-Copper Unions: ASME B16.22.

Retain "Risers" Subparagraph below for stack-type units with hydronic coils.

11. Risers: [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 88, Type M (ASTM B 88M Type C)] copper pipe with hose and ball valve for system flushing.

- Q. Control devices and operational sequences are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

Retain last paragraph above and delete "Basic Unit Controls" Paragraph below if controls are part of overall temperature-control system.

- R. Basic Unit Controls:

1. Control voltage transformer.

Verify control features with manufacturer.

2. [Wall-mounting] [Unit-mounted] thermostat with the following features:
 - a. Heat-cool-off switch.
 - b. Fan on-auto switch.

Retain first subparagraph below if multispeed motors are specified.

- c. Fan-speed switch.
 - d. [Manual] [Automatic] changeover.
 - e. Adjustable deadband.
 - f. [Concealed] [Exposed] set point.
 - g. [Concealed] [Exposed] indication.
 - h. [Degree F] [Degree C] indication.
3. [Wall-mounting] [Unit-mounted] humidistat.
 - a. [Concealed] [Exposed] set point.
 - b. [Concealed] [Exposed] indication.
 4. [Wall-mounting] [Unit-mounted] temperature sensor.
 5. Unoccupied-period-override push button.
 6. Data entry and access port.
 - a. Input data includes room temperature, and humidity set points and occupied and unoccupied periods.
 - b. Output data includes room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

Retain "(DDC)Terminal Controller" Paragraph below and coordinate with "Basic Unit Controls" Paragraph above or with control devices specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

S. **[DDC]** Terminal Controller:

1. Scheduled Operation: Occupied and unoccupied periods on seven-day clock with a minimum of four programmable periods per day.
2. Unoccupied-Period-Override Operation: **[Two]** <Insert number> hours.
3. Unit Supply-Air Fan Operation:
 - a. Occupied Periods: Fan runs continuously.
 - b. Unoccupied Periods: Fan cycles to maintain room setback temperature.
4. Hydronic-Cooling-Coil Operation:
 - a. Occupied Periods: **[Open]** **[Modulate]** control valve to maintain room temperature.
 - b. Unoccupied Periods: Close control valve.

Retain "Refrigerant-Coil Operation" Subparagraph below only when the fan coil unit includes refrigerant coils working in conjunction with a remote condenser unit. Remote condensing units are specified in Section 236200 "Packaged Compressor and Condenser Units."

5. Refrigerant-Coil Operation:
 - a. Occupied Periods: Start compressor to maintain room temperature or humidistat set point.
 - b. Unoccupied Periods: Stop compressor cooling and cycle compressor for heating to maintain setback temperature.
6. **[Supplemental]** Heating-Coil Operation:
 - a. Occupied Periods: **[Open control valve]** **[Modulate control valve]** **[Energize electric-resistance coil]** to provide heating if room temperature falls below thermostat set point.
 - b. Unoccupied Periods: Start fan and **[open control valve]** **[modulate control valve]** **[energize electric-resistance coil]** if room temperature falls below setback temperature.

Retain first subparagraph below only when the fan coil unit includes refrigerant coils working in conjunction with a remote condenser unit. Remote condensing units are specified in Section 236200 "Packaged Compressor and Condenser Units."

- c. Switch refrigerant-reversing valve to operate supplemental coil for heating when outdoor temperature is below **[25 deg F (4 deg C)]** <Insert temperature>.
7. Dual-Temperature Hydronic-Coil Operation:
 - a. Occupied Periods: When chilled water is available, **[open]** **[modulate]** control valve if room temperature exceeds thermostat set point. When hot water is available, open control valve if temperature falls below thermostat set point.

- b. Unoccupied Periods: When chilled water is available, close control valve. When hot water is available, **[open] [modulate]** control valve if room temperature falls below thermostat setback temperature.

8. Reheat-Coil Operation:

Retain "Humidity Control for Occupied Periods" and "Humidity Control for Unoccupied Periods" subparagraphs below if reheat coil provides reheating only.

- a. Humidity Control for Occupied Periods:
 - 1) Humidistat **[opens control valve] [modulates control valve] [energizes electric-resistance coil]** to provide heating. As space temperature rises above set point, cooling-coil valve **[opens] [modulates]** to maintain room temperature.
- b. Humidity Control for Unoccupied Periods: **[Close control valve] [De-energize]**.

Retain "Occupied Periods" and "Unoccupied Periods" subparagraphs below if reheat coil provides heating and reheating.

- c. Occupied Periods:
 - 1) Heating Operations: **[Open control valve] [Modulate control valve] [Energize electric-resistance coil]** to provide heating if room temperature falls below thermostat set point.
 - 2) Humidity-Control Operations: Humidistat **[opens control valve] [modulates control valve] [energizes electric-resistance coil]** to provide heating. As space temperature rises above set point, cooling-coil valve **[opens] [modulates]** to maintain room temperature.
- d. Unoccupied Periods: Start fan and **[open control valve] [modulate control valve] [energize electric-resistance coil]** if room temperature falls below setback temperature. Humidity control is not available.

Retain first "Outdoor-Air Damper Operation" Subparagraph below for fixed, minimum outdoor-air intake.

9. Outdoor-Air Damper Operation:

- a. Occupied Periods: Open damper to fixed position for **[25] <Insert number>** percent outdoor air.
- b. Unoccupied periods: Close damper.

Retain "Outdoor-Air Damper Operation" Subparagraph below for outdoor-air economizer cycle.

10. Outdoor-Air Damper Operation:

- a. Occupied Periods:

- 1) Outdoor-Air Temperature below Room Temperature: If room temperature is above thermostat set point, modulate outdoor-air damper to maintain room temperature (outdoor-air economizer). If room temperature is below thermostat set point, position damper to fixed minimum position.
 - 2) Outdoor-Air Temperature above Room Temperature: Position damper to fixed minimum position for [25] <Insert number> percent outdoor air.
- b. Unoccupied Periods: Close damper.

Retain "Outdoor-Air Damper Operation (Enthalpy Based)" Subparagraph below for outdoor-air economizer cycle based on enthalpy.

11. Outdoor-Air Damper Operation (Enthalpy Based):

- a. Occupied Periods:
- 1) Outdoor-Air Enthalpy below Room Enthalpy: If room temperature is above room-temperature set point, modulate outdoor-air damper to maintain room temperature (outdoor-air economizer). If room temperature is below set point, position damper to fixed minimum position for [25] <Insert number> percent outdoor air.
 - 2) Outdoor-Air Enthalpy above Room Enthalpy: Position damper to fixed minimum position for [25] <Insert number> percent outdoor air.
- b. Unoccupied Periods: Close outdoor-air damper and open return-air damper.

12. Controller shall have volatile-memory backup.

T. Interface with DDC System for HVAC Requirements:

1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at the central workstation.
3. Provide [BACnet] [or] [LonWorks] interface for central DDC system for HVAC workstation for the following functions:
 - a. Adjust set points.
 - b. Fan coil unit start, stop, and operating status.
 - c. Data inquiry, including [outdoor-air damper position,]supply- and room-air temperature[and humidity].
 - d. Occupied and unoccupied schedules.

U. Electrical Connection: Factory wire motors and controls for a single electrical connection.

If Project has more than one type or configuration of fan coil unit, delete "Capacities and Characteristics" Paragraph below and schedule fan coil units on Drawings.

V. Capacities and Characteristics:

1. Fan:
 - a. Airflow: <Insert cfm (L/s)>.
 - b. External Static Pressure: <Insert inches wg (kPa)>.
 - c. Fan Speed: <Insert rpm>.
 - d. Motor Speed: <Insert rpm>.
 - e. Motor Horsepower: <Insert horsepower>.
 - f. Drive: [Direct] [Belt].

2. Cooling Capacity:
 - a. Total: <Insert Btu/h (kW)>.
 - b. Sensible: <Insert Btu/h (kW)>.
 - c. Entering-Air Dry-Bulb Temperature: <Insert deg F (deg C)>.
 - d. Entering-Air Wet-Bulb Temperature: <Insert deg F (deg C)>.

3. Chilled-Water Coil:
 - a. Water Flow: <Insert gpm (L/s)>.
 - b. Water-Side Pressure Loss: <Insert feet wg (kPa)>.
 - c. Entering-Water Temperature: <Insert deg F (deg C)>.
 - d. Air-Side Pressure Drop: <Insert inches wg (kPa)>.

Retain "Refrigerant Coil" Subparagraph below only when the fan coil unit includes refrigerant coils working in conjunction with a remote condenser unit. Remote condensing units are specified in Section 236200 "Packaged Compressor and Condenser Units."

4. Refrigerant Coil:
 - a. Air-Side Pressure Loss: <Insert inches wg (kPa)>.
 - b. Suction Temperature: <Insert deg F (deg C)>.

5. Heating Capacity:
 - a. Output: <Insert Btu/h (kW)>.
 - b. Entering-Air Temperature: <Insert deg F (deg C)>.
 - c. Air-Temperature Rise: <Insert deg F (deg C)>.

6. Hot-Water Heating Coil:
 - a. Water Flow: <Insert gpm (L/s)>.
 - b. Water-Side Pressure Loss: <Insert feet wg (kPa)>.
 - c. Air-Side Pressure Drop: <Insert inches wg (kPa)>.
 - d. Entering-Water Temperature: <Insert deg F (deg C)>.

7. Steam Heating Coil:
 - a. Inlet Steam Pressure: <Insert psig (kPa)>.
 - b. Condensing Capacity: <Insert lb/h (g/s)>.
 - c. Air-Side Pressure Drop: <Insert inches wg (kPa)>.

8. Electric-Resistance Heating Coil:
 - a. Capacity: **<Insert kilowatts>**.
 - b. Number of Steps: **<Indicate number>**.
 - c. Air-Side Pressure Drop: **<Insert inches wg (kPa)>**.
9. Reheat Capacity:
 - a. Output: **<Insert Btu/h (kW)>**.
 - b. Entering-Air Temperature: **<Insert deg F (deg C)>**.
 - c. Air-Temperature Rise: **<Insert deg F (deg C)>**.
10. Filters:
 - a. Face Area: **<Insert sq. ft. (sq. m)>**.
 - b. Thickness: **[1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>**.
11. Electrical Characteristics for Single-Point Connection:
 - a. Voltage/Phase/Hertz: **<Insert values>**.
 - b. Full-Load Amperes: **<Insert value>**.
 - c. Maximum Circuit Amperes: **<Insert value>**.
 - d. Maximum Overcurrent Protection: **<Insert amperage>**.

2.3 DUCTED FAN COIL UNITS

Many additional features, which vary with each manufacturer, are available for this product. Include all features for fan coil units that are required for Project, and identify additional features for specific units in the Fan Coil Unit Schedule on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Carrier Corporation; a UTC company.
 2. DRS Marlo Coil; part of DRS Technologies, Inc.
 3. Dunham-Bush.
 4. Engineered Air.
 5. ENVIRO-TEC; by Johnson Controls, Inc.
 6. First Company Products.
 7. Greenheck Fan Corporation.
 8. IEC; a subsidiary of LSB Industries, Inc.
 9. McQuay International; a member of Daikin Group.
 10. Nailor Industries Inc.
 11. Rosemex.
 12. Superior Rex.
 13. Titus.
 14. Trane Inc.

15. [USA Coil & Air.](#)
16. [Williams Comfort Products.](#)
17. [YORK; by Johnson Controls, Inc.](#)
18. **<Insert manufacturer's name>.**
19. or approved equal.

Fan coil units come with various coil configurations, the most typical being split coil systems with one heating and three cooling coils. The coils tend to be row split rather than face split, although both configurations are available. Units can also come with either a two-pipe or a four-pipe system, depending on Project design requirement.

B. Fan Coil Unit Configurations: [**Row**] [**Face**] split.

1. Number of Heating Coils: [**One**] with two-pipe system.
2. Number of Cooling Coils: [**One**] [**Three**] with [**two**][**four**]-pipe system.

Closed-cell insulation with foil or matt facing is provided by some manufacturers to reduce the possibility of fibers from glass-fiber insulation being introduced into the conditioned space. If fan coil unit cabinet is constructed from double-wall insulated panels, then coil unit may not be insulated separately. Retain one of two "Coil Section Insulation" paragraphs below for coil section insulation.

C. Coil Section Insulation: [**1/2-inch- (13-mm-)**] [**1-inch- (25-mm-)**] **<Insert dimension>** thick, [**coated**] [**foil-faced**] glass fiber complying with ASTM C 1071 and attached with adhesive complying with ASTM C 916.

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84 by a qualified testing agency.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

D. Coil Section Insulation: Insulate coil section according to Section 230616 "HVAC Equipment Insulation."

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84 by a qualified testing agency.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

Removable drain pans are an extra feature with some manufacturers.

"(Main and Auxiliary)Drain Pans" Removable drain pans are an extra feature with some manufacturers. Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1.

- E. **[Main and Auxiliary]**Drain Pans: **[Plastic] [Stainless steel] [Insulated galvanized steel with plastic liner]**. Fabricate pans and drain connections to comply with ASHRAE 62.1.
- F. Chassis: Galvanized steel where exposed to moisture[, **with baked-enamel finish and removable access panel**][, **with powder-coat finish and removable access panel**]. Floor-mounting units shall have leveling screws.
- G. Cabinets: Steel with baked-enamel finish in manufacturer's standard paint color.
1. Supply-Air Plenum: Sheet metal plenum finished and insulated to match the chassis[**with mill-finish, aluminum, double-deflection grille**].

Retain "Return-Air Plenum" or "Mixing Plenum" Subparagraph below.

2. Return-Air Plenum: Sheet metal plenum finished to match the chassis.
3. Mixing Plenum: Sheet metal plenum finished and insulated to match the chassis with outdoor- and return-air, formed-steel dampers.
4. Dampers: Galvanized steel with extruded-vinyl blade seals, flexible-metal jamb seals, and interlocking linkage.

Verify available filters with fan coil unit manufacturer. Indicate filter thickness in "Capacities and Characteristics" Paragraph or in the Fan Coil Unit Schedule on Drawings.

For further information on air filters and air filter ratings, see Section 234100 "Particulate Air Filtration."

- H. Filters: Minimum arrestance and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2 and all addendums.

Retain "MERV Rating" Paragraph below to require compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher. Also, retain paragraph for LEED Prerequisite IEQ 1. LEED-NC, LEED-CI, and LEED for Schools Credit IEQ 3.1 and LEED-CS Credit IEQ 3 require that filters have a minimum MERV 13 rating for systems that deliver air to occupied spaces.

- I. MERV Rating: **[6] [13] <Insert number>** when tested according to ASHRAE 52.2.

Retain one or more of three subparagraphs below. Indicate filter type in the Fan Coil Unit Schedule on Drawings. 2-inch- (50-mm-) thick washable foam is unavailable. Retain third subparagraph if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

1. Washable Foam: 70 percent arrestance and MERV[**3**].
 2. Glass Fiber Treated with Adhesive: 80 percent arrestance and MERV[**5**].
 3. Pleated Cotton-Polyester Media: 90 percent arrestance and MERV[**7**].
- J. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch (2.5 mm)**, rated for a minimum working pressure of **200 psig (1378 kPa)** and a maximum entering-water temperature of **220 deg F (104 deg C)**. Include manual air vent and drain.

Retain "Indoor Refrigerant Coils" Paragraph below only when the fan coil unit includes refrigerant coils working in conjunction with a remote condenser unit. Remote condensing units are specified in Section 236200 "Packaged Compressor and Condenser Units."

- K. Indoor Refrigerant Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch (2.5 mm)** and brazed joints at fittings. Comply with AHRI 210/240, and leak test to minimum **450 psig (3105 kPa)** for a minimum **300-psig (2070-kPa)** working pressure. Include thermal expansion valve.
- L. Steam Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch (2.5 mm)**, rated for a minimum working pressure of **75 psig (517 kPa)**.
- M. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with fuses in terminal box for overcurrent protection and limit controls for high-temperature protection of heaters. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.

Retain "Direct-Driven Fans" or "Belt-Driven Fans" Paragraph below. Retain both if multiple-type units are required. If retaining both, indicate fan type in the Fan Coil Unit Schedule on Drawings.

- N. Direct-Driven Fans: Double width, forward curved, centrifugal; with permanently lubricated, multispeed motor resiliently mounted in the fan inlet. Aluminum or painted-steel wheels, and painted-steel or galvanized-steel fan scrolls.
- O. Belt-Driven Fans: Double width, forward curved, centrifugal; with permanently lubricated, single-speed motor installed on an adjustable fan base resiliently mounted in the cabinet. Aluminum or painted-steel wheels, and painted-steel or galvanized-steel fan scrolls.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project. Permanently lubricated ball bearings are available for motors up through 5 hp. Larger motors have grease-lubricated ball bearings.

Retain "Motors" Subparagraph below with "Direct-Driven Fans" or "Belt-Driven Fans" Paragraph above.

1. Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

Retain "Factory, Hydronic Piping Package" Paragraph below to suit Project. Delete if factory piping package is not required.

- P. Factory, Hydronic Piping Package: **[ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 88, Type M (ASTM B 88M Type C)]** copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.

Retain one or more of first four subparagraphs below.

1. **[Two][Three]-way, [two-position] [modulating]** control valve for chilled-water coil.
2. **[Two][Three]-way, [two-position] [modulating]** control valve for heating coil.
3. **[Two][Three]-way, [two-position] [modulating]** control valve for dual-temperature coil.

4. **[Two][Three]**-way, **[two-position] [modulating]** control valve for reheat coil.
 5. Hose Kits: Minimum **400-psig (2758-kPa)** working pressure and operating temperatures from **33 to 211 deg F (0.5 to 99 deg C)**. Tag hose kits to equipment designations.
 - a. Length: **[24 inches (600 mm)] [36 inches (900 mm)] <Insert dimension>**.
 - b. Minimum Diameter: Equal to fan coil unit connection size.
 6. Two-Piece Ball Valves: Bronze body with full-port, chrome-plated bronze ball; PTFE or TFE seats; and **600-psig (4140-kPa)** minimum CWP rating and blowout-proof stem.
 7. Calibrated-Orifice Balancing Valves: Bronze body, ball type; **125-psig (860-kPa)** working pressure, **250 deg F (121 deg C)** maximum operating temperature; with calibrated orifice or venturi, connections for portable differential pressure meter with integral seals, threaded ends, and a memory stop to retain set position.
 8. Automatic Flow-Control Valve: Brass or ferrous-metal body; **300-psig (2070-kPa)** working pressure at **250 deg F (121 deg C)**; with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow with plus or minus 10 percent over differential pressure range of **2 to 80 psig (13.8 to 552 kPa)**.
 9. Y-Pattern Hydronic Strainers: Cast-iron body (ASTM A 126, Class B); **125-psig (860-kPa)** working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum **NPS 1/2 (DN 15)** hose-end, full-port, ball-type blowdown valve in drain connection.
 10. Wrought-Copper Unions: ASME B16.22.
- Q. Remote condensing units are specified in Section 236200 "Packaged Compressor and Condenser Units."
- R. Control devices and operational sequence are specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

Retain last paragraph above and delete "Basic Unit Controls" Paragraph below if controls are part of overall temperature-control system.

S. Basic Unit Controls:

1. Control voltage transformer.

Verify control features with manufacturer.

2. **[Wall-mounting] [Unit-mounted]** thermostat with the following features.
 - a. Heat-cool-off switch.
 - b. Fan on-auto switch.

Retain first subparagraph below if multispeed motors are specified.

- c. Fan-speed switch.
- d. **[Manual] [Automatic]** changeover.
- e. Adjustable deadband.
- f. **[Concealed] [Exposed]** set point.
- g. **[Concealed] [Exposed]** indication.

- h. **[Degree F] [Degree C]** indication.
- 3. **[Wall-mounting] [Unit-mounted]** humidistat.
 - a. **[Concealed] [Exposed]** set point.
 - b. **[Concealed] [Exposed]** indication.
- 4. **[Wall-mounting] [Unit-mounted]** temperature sensor.
- 5. Unoccupied-period-override push button.
- 6. Data entry and access port.
 - a. Input data includes room temperature, and humidity set points and occupied and unoccupied periods.
 - b. Output data includes room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

Retain "(DDC)Terminal Controller" Paragraph below and coordinate with "Basic Unit Controls" Paragraph above or with control devices specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

T. **[DDC]**Terminal Controller:

- 1. Scheduled Operation: Occupied and unoccupied periods on seven-day clock with a minimum of four programmable periods per day.
- 2. Unoccupied-Period-Override Operation: **[Two] <Insert number>** hours.
- 3. Unit Supply-Air Fan Operation:
 - a. Occupied Periods: Fan runs continuously.
 - b. Unoccupied Periods: Fan cycles to maintain room setback temperature.
- 4. Hydronic-Cooling-Coil Operation:
 - a. Occupied Periods: **[Open] [Modulate]** control valve to maintain room temperature.
 - b. Unoccupied Periods: Close control valve.

Retain "Refrigerant-Coil Operation" Subparagraph below only when the fan coil unit includes refrigerant coils working in conjunction with a remote condenser unit. Remote condensing units are specified in Section 236200 "Packaged Compressor and Condenser Units."

- 5. Refrigerant-Coil Operation:
 - a. Occupied Periods: Start compressor to maintain room temperature or humidistat set point.
 - b. Unoccupied Periods: Stop compressor cooling and cycle compressor for heating to maintain setback temperature.
- 6. **[Supplemental]**Heating-Coil Operation:

- a. Occupied Periods: **[Open control valve] [Modulate control valve] [Energize electric-resistance coil]** to provide heating if room temperature falls below thermostat set point.
- b. Unoccupied Periods: Start fan and **[open control valve] [modulate control valve] [energize electric-resistance coil]** if room temperature falls below setback temperature.

Retain first subparagraph below only when the fan coil unit includes refrigerant coils working in conjunction with a remote condenser unit. Remote condensing units are specified in Section 236200 "Packaged Compressor and Condenser Units."

- c. Switch refrigerant-reversing valve to operate supplemental coil for heating when outdoor temperature is below **[25 deg F (4 deg C)] <Insert temperature>**.

7. Dual-Temperature Hydronic-Coil Operation:

- a. Occupied Periods: When chilled water is available, **[open] [modulate]** control valve if room temperature exceeds thermostat set point. When hot water is available, **[open] [modulate]** control valve if temperature falls below thermostat set point.
- b. Unoccupied Periods: When chilled water is available, close valve. When hot water is available, **[open] [modulate]** control valve if room temperature falls below thermostat setback temperature.

8. Reheat-Coil Operation:

Retain "Humidity Control for Occupied Periods" and "Humidity Control for Unoccupied Periods" subparagraphs below if reheat coil provides reheating only.

- a. Humidity Control for Occupied Periods:
 - 1) Humidistat **[opens control valve] [modulates control valve] [energizes electric-resistance coil]** to provide heating. As room temperature rises above set point, cooling-coil valve **[opens] [modulates]** to maintain room temperature.
- b. Humidity Control for Unoccupied Periods: **[Close control valve] [De-energize]**.

Retain "Occupied Periods" and "Unoccupied Periods" subparagraphs below if reheat coil provides heating and reheating.

- c. Occupied Periods:
 - 1) Heating Operations: **[Open control valve] [Modulate control valve] [Energize electric-resistance coil]** to provide heating if room temperature falls below thermostat set point.
 - 2) Humidity-Control Operations: Humidistat **[opens control valve] [modulates control valve] [energizes electric-resistance coil]** to provide heating. As room temperature rises above set point, cooling-coil valve **[opens] [modulates]** to maintain room temperature.

- d. Unoccupied Periods: Start fan and **[open control valve] [modulate control valve] [energize electric-resistance coil]** if room temperature falls below setback temperature. Humidity control is not available.

Retain first "Outdoor-Air Damper Operation" Subparagraph below for fixed, minimum outdoor-air intake.

9. Outdoor-Air Damper Operation:
 - a. Occupied Periods: Open damper to fixed position for **[25] <Insert number>** percent outdoor air.
 - b. Unoccupied Periods: Close damper.

Retain "Outdoor-Air Damper Operation" Subparagraph below for outdoor-air economizer cycle based on temperature.

10. Outdoor-Air Damper Operation:
 - a. Occupied Periods:
 - 1) Outdoor-Air Temperature below Room Temperature: If room temperature is above room-temperature set point, modulate outdoor- and return-air dampers to maintain room temperature set point (outdoor-air economizer). If room temperature is below set point, position damper to fixed minimum setting.
 - 2) Outdoor-Air Temperature above Room Temperature: Position damper to fixed minimum position for **[25] <Insert number>** percent outdoor air.
 - b. Unoccupied Periods: Close outdoor-air damper and open return-air damper.

Retain "Outdoor-Air Damper Operation (Enthalpy Based)" Subparagraph below for outdoor-air economizer cycle based on enthalpy.

11. Outdoor-Air Damper Operation (Enthalpy Based):
 - a. Occupied Periods:
 - 1) Outdoor-Air Enthalpy below Room Enthalpy: If room temperature is above room-temperature set point, modulate outdoor-air damper to maintain room temperature (outdoor-air economizer). If room temperature is below set point, position damper to fixed minimum position for **[25] <Insert number>** percent outdoor air.
 - 2) Outdoor-Air Enthalpy above Room Enthalpy: Position damper to fixed minimum position for **[25] <Insert number>** percent outdoor air.
 - b. Unoccupied Periods: Close outdoor-air damper and open return-air damper.

12. Controller shall have volatile-memory backup.

- U. Interface with DDC System for HVAC Requirements:
1. Interface relay for scheduled operation.
 2. Interface relay to provide indication of fault at the central workstation.
 3. Provide **[BACnet]** [or] **[LonWorks]** interface for central DDC system for HVAC workstation for the following functions:
 - a. Adjust set points.
 - b. Fan coil unit start, stop, and operating status.
 - c. Data inquiry, including **[outdoor-air damper position,]**supply- and room-air temperature[**and humidity**].
 - d. Occupied and unoccupied schedules.
- V. Electrical Connection: Factory wire motors and controls for a single electrical connection.

If Project has more than one type or configuration of fan coil unit, delete "Capacities and Characteristics" Paragraph below and schedule fan coil units on Drawings.

- W. Capacities and Characteristics:
1. Fan:
 - a. Airflow: **<Insert cfm (L/s)>**.
 - b. Static Pressure: **<Insert inches wg (kPa)>**.
 - c. Fan Speed: **<Insert rpm>**.
 - d. Motor Speed: **<Insert rpm>**.
 - e. Motor Horsepower: **<Insert horsepower>**.
 - f. Drive: **[Direct] [Belt]**.
 2. Cooling Capacity:
 - a. Total: **<Insert Btu/h (kW)>**.
 - b. Sensible: **<Insert Btu/h (kW)>**.
 - c. Entering-Air Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 - d. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
 3. Chilled-Water Coil:
 - a. Water Flow: **<Insert gpm (L/s)>**.
 - b. Water-Side Pressure Loss: **<Insert feet wg (kPa)>**.
 - c. Air-Side Pressure Drop: **<Insert inches wg (kPa)>**.
 - d. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 4. Refrigerant Coil:
 - a. Air-Side Pressure Loss: **<Insert inches wg (kPa)>**.

Retain "Refrigerant Coil" Subparagraph below only when the fan coil unit includes refrigerant coils working in conjunction with a remote condenser unit. Remote condensing units are specified in Section 236200 "Packaged Compressor and Condenser Units."

- b. Suction Temperature: <Insert deg F (deg C)>.
5. Heating Capacity:
 - a. Output: <Insert Btu/h (kW)>.
 - b. Entering-Air Temperature: <Insert deg F (deg C)>.
 - c. Air-Temperature Rise: <Insert deg F (deg C)>.
6. Hot-Water Heating Coil:
 - a. Water Flow: <Insert gpm (L/s)>.
 - b. Water-Side Pressure Loss: <Insert feet wg (kPa)>.
 - c. Air-Side Pressure Drop: <Insert inches wg (kPa)>.
 - d. Entering-Water Temperature: <Insert deg F (deg C)>.
7. Steam Heating Coil:
 - a. Inlet Steam Pressure: <Insert psig (kPa)>.
 - b. Condensing Capacity: <Insert lb/h (g/s)>.
 - c. Air-Side Pressure Drop: <Insert inches wg (kPa)>.
8. Electric-Resistance Heating Coil:
 - a. Capacity: <Insert kilowatts>.
 - b. Number of Steps: <Insert number>.
 - c. Air-Side Pressure Drop: <Insert inches wg (kPa)>.
9. Reheat Capacity:
 - a. Output: <Insert Btu/h (kW)>.
 - b. Entering-Air Temperature: <Insert deg F (deg C)>.
 - c. Air-Temperature Rise: <Insert deg F (deg C)>.
10. Filters:
 - a. Face Area: <Insert sq. ft. (sq. m)>.
 - b. Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.
11. Electrical Characteristics for Single-Point Connection:
 - a. Voltage/Phase/Hertz: <Insert values>.
 - b. Full-Load Amperes: <Insert values>.
 - c. Maximum Circuit Amperes: <Insert values>.
 - d. Maximum Overcurrent Protection: <Insert amperage>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, to receive fan coil units for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping and electrical connections to verify actual locations before fan coil unit installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate to assure correct recess size for recessed units.
- C. Install fan coil units level and plumb.
- D. Install fan coil units to comply with NFPA 90A.
- E. Install equipment exposed to finished areas after walls and ceiling are finished and painted. Avoid damage to other materials.
- F. Protection: Provide finished cabinet units with protective covers during balance of construction.

Retain first paragraph below for horizontal, suspended units.

- G. Suspend fan coil units from structure with elastomeric hangers. Vibration isolators are specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

Verify mounting height in first paragraph below with authorities having jurisdiction to comply with requirements of the Americans with Disabilities Act.

- H. Verify locations of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. Install devices [48 inches (1220 mm)] [60 inches (1525 mm)] <Insert dimension> above finished floor.
- I. Install new filters in each fan coil unit within two weeks after Substantial Completion.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:
1. Install piping adjacent to machine to allow service and maintenance.
 2. Connect piping to fan coil unit factory hydronic piping package. Install piping package if shipped loose.
 3. Connect condensate drain to indirect waste.
 4. Unless otherwise indicated, install shutoff valve and union or flange at each connection.
 5. Install piping adjacent to machine to allow service and maintenance.

Retain subparagraph below for concealed and ducted fan coil units.

- a. Install condensate trap of adequate depth to seal against fan pressure. Install cleanouts in piping at changes of direction.

Retain first paragraph below for ducted fan coil units. Coordinate duct installation requirements with Drawings and with requirements specified in Section 233113 "Metal Ducts," Section 233116 "Nonmetal Ducts," and Section 233300 "Air Duct Accessories."

- B. Connect supply-air and return-air ducts to fan coil units with flexible duct connectors specified in Section 233300 "Air Duct Accessories." Comply with safety requirements in UL 1995 for duct connections.
- C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- E. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

Retain "Testing Agency," "Manufacturer's Field Service," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph or if retaining "Manufacturer's Field Service" or "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

Retain first subparagraph below if units have electric heat.

2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Retest as specified above after repairs or replacements are made.
- F. Prepare test and inspection reports.

3.5 ADJUSTING

Retain this article if control devices are specified in this Section; delete if they are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

- A. Adjust initial temperature and humidity set points.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two (2)] <Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.6 CLEANING

- A. After construction is completed, including painting, clean exposed surfaces of units. Vacuum clean coils and inside of cabinets.

- B. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.
- C. Install new filters.

3.7 DEMONSTRATION

Delete this article if factory-authorized service representative is not required.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain fan coil units.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238219

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238223 - UNIT VENTILATORS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify, with manufacturers, that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system design alternatives that do not include unit ventilators may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes unit ventilators and accessories with the following heating and cooling features:

Some manufacturers can provide both heating and reheat coils in same unit; however, for most applications, retain heating or reheat coil.

1. [Hydronic] [Steam] [Electric] heating coil.
2. [Hydronic] [Steam] [Electric] reheat coil.

3. **[Hydronic] [Direct-expansion refrigerant]** cooling coil.

B. Related Requirements:

Retain subparagraph below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 238146.13 "Water-to-Air Heat Pumps" for ground-loop, water-source heat-pump-type unit ventilators.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product

1. Include rated capacities, operating characteristics, and furnished specialties and accessories for each unit type and configuration.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."

C. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Detail anchorages and attachments to structure and to supported equipment.
4. Include diagrams for power, signal, and control wiring.

Retain "Samples for Initial Selection" and "Samples for Verification" paragraphs below for two-stage Samples.

Coordinate sample requirements with DEN Project Manager.

- D. Samples for Initial Selection: For units with factory-applied color finishes.

- E. Samples for Verification: For each type of unit ventilator[**and auxiliary shelves**] and cabinets indicated.

Delete paragraph (and subparagraphs below) if mockups not required. If retaining, indicate location, size, and other details of mockups on drawings or with inserts.

Verify mockup requirements with DEN Project Manager.

- F. Mock-up:

Use this paragraph for assessing full sized erected assemblies for review of construction, coordination of the Work of several sections, testing, or observation of operation.

Verify mockup requirements with DEN Project Manager.

1. Provide **<Insert number>** mockup, **<Insert number>** feet long by **<Insert number>** feet wide, of **<typical exterior wall module> <one typical bay, under window enclosure assembly complete with induction units>**.
2. Locate **<where directed by DEN Project Manager> <Insert location>**.
3. Mockup may **<not>** remain as part of the Work.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

Revise subparagraphs below for ceiling-mounted unit ventilators.

1. Suspended ceiling components.
2. Structural members to which equipment will be attached.
3. Method of attaching hangers to building structure.
4. Size and location of initial access modules for acoustical tile.
5. Size and location of access panels in hard ceilings to provide access to concealed units.
6. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. **<Insert item>**.

7. Perimeter moldings.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment." See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: For unit ventilators, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.
- D. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For unit ventilators to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Maintenance schedules and repair part lists for motors, coils, integral controls, and filters.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Unit Ventilator Filters: Furnish <Insert number> spare filter(s) for each filter installed.

Retain "Spare Cooling Chassis" Subparagraph below only for integral cooling chassis unit ventilators.

2. Spare Cooling Chassis: Furnish <Insert number> spare integral cooling chassis for each size unit installed.

1.7 QUALITY ASSURANCE

- A. Comply with NFPA 70. Listed and labeled by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

"ASHRAE Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain pan construction and connection, finned-tube coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

"ASHRAE/IES 90.1 Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1.

- C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.8 COORDINATION

Delete this article if unit ventilators are wall or floor mounted.

Revise first paragraph below to delete or add types of construction that penetrate or are supported by ceilings.

- A. Coordinate layout and installation of unit ventilators and suspension system components with other construction that penetrates or is supported by ceilings, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

Retain paragraph below for units with outdoor air.

- B. Coordinate size and location of wall sleeves for outdoor-air intake.

1.9 WARRANTY

Delete this article if remote or integral condensing unit is not required.

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws. Coordinate with Section 016000 "Product Requirements."

Warranties vary among manufacturers from covering the whole unit for up to four years, to only the compressor for five to 10 years, or only the condenser coil for five years. Extended special warranties are limited to units in the 1- to 5-ton (3.5- to 17.6-kW) range, and then are usually restricted to residential applications.

- A. Special Warranty: Manufacturer agrees to repair or replace components of condensing units that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Compressor failure.
 - b. Condenser coil leak.

Verify available warranties and warranty periods for units and components.

- 2. Warranty Period: Minimum **[four (4)] [five (5)] [10 (10)] <Insert number>** years from date of Substantial Completion.
- 3. Warranty Period (Compressor Only): Minimum **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.
- 4. Warranty Period (Condenser Coil Only): Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Factory-packaged and -tested units rated according to AHRI 840, ASHRAE 33, and UL 1995.

- C. Radiated noise shall not exceed:
1. NC 35 – In Office.
 2. NC 40 – Terminal/Concourse.
 3. NC 45 – Maintenance Facilities.

2.2 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Carrier Corporation.
 2. Engineered Air Ltd.
 3. McQuay International.
 4. Nesbitt Aire, Inc.
 5. Trane.
 6. Venmar CES Inc.
 7. **<Insert manufacturer's name>.**
 8. or approved equal.

Many additional features are available for this product. Some are mutually exclusive. Include all features for unit ventilators that are required for Project, and identify additional features for specific units in a Unit Ventilator Schedule on Drawings.

2.3 MANUFACTURED UNITS

- A. Description: Unit ventilators consisting of finished cabinet, filter, cooling coil, drain pan, supply-air fan and motor in [**blow-**] [**or**] [**draw-**]through configuration, and hydronic cooling coil.
1. Unit Ventilator Coil Configurations: [**Row**] [**Face**] split.
 - a. Number of Heating Coils: [**One**] with two-pipe system.
 - b. Number of Cooling Coils: [**One**] [**Three**] with [**two**][**four**]-pipe system.

2.4 CABINETS

Closed-cell insulation with foil or matt facing is provided by some manufacturers to reduce the possibility of fibers from glass-fiber insulation being introduced into the conditioned space. Retain "Insulation" or "Coil Section Insulation" Paragraph below for coil section insulation.

- A. Insulation: Minimum [**1/2-inch-** (13-mm-)] [**1-inch-** (25-mm-)] **<Insert dimension>** thick, [**coated glass fiber**] [**foil-covered, closed-cell foam**] [**matte-finish, closed-cell foam**] complying with ASTM C 1071 and attached with adhesive complying with ASTM C 916.

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84 by a qualified testing agency.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

- B. Coil Section Insulation: Insulate coil section according to Section 230616 "HVAC Equipment Insulation."

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84 by a qualified testing agency.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

"Main and Auxiliary Drain Pans" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1. Removable drain pans in paragraph are an extra feature with some manufacturers.

- C. Main and Auxiliary Drain Pans: [**Plastic**] [**Insulated galvanized steel with plastic liner**], formed as required by ASHRAE 62.1. [**Drain pans shall be removable.**]

- D. Cabinet Frame and Access Panels: Welded-steel frame with removable panels fastened with hex-head tamperproof fasteners[**and key-operated control and valve access doors**].

1. Steel components exposed to moisture shall be [**hot-dip galvanized after fabrication**] [**baked-enamel finished**] [**powder-coat finished**].

Retain one of two "Cabinet Finish" paragraphs below to suit Project. Coordinate custom-color requirements with sample submittal requirements. Coordinate field painting with painting Sections.

- E. Cabinet Finish: Baked-on primer ready for field painting.
- F. Cabinet Finish: [**Baked enamel**] [**Powder coat**], in manufacturer's [**standard**] [**custom**] color as selected by Architect.
- G. Indoor-Supply-Air Grille: [**Steel**] [**Aluminum**], [**double deflection, adjustable**] [**adjustable linear bar**].

Note limitations of configurations when retaining an option in "Return-Air Inlet" Paragraph below.

- H. Return-Air Inlet: [**Front toe space**] [**Back inlet with top inlet grille**].

Retain "End Panels" Paragraph below if unit ventilators are freestanding.

- I. End Panels: Matching material and finish of unit ventilator.
- J. Outdoor-Air Wall Box: Minimum **0.1265-inch** (3.2-mm-) thick, aluminum, rain-resistant louver and box with integral eliminators and bird screen.
 - 1. Louver Configuration: [**Horizontal**] [**Vertical**], rain-resistant louver.
 - 2. Louver Material: [**Aluminum**] [**Steel**].
 - 3. Bird Screen: **1/2-inch** (13-mm) mesh screen on interior side of louver.
 - 4. Decorative Grille: On outside of intake.
 - 5. Finish: [**Anodized aluminum**] [**Baked enamel**], color as selected by Architect from manufacturer's [**standard**] [**custom**] colors.

2.5 COILS

- A. Test and rate unit ventilator coils according to ASHRAE 33.
- B. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch** (2.5 mm), rated for a minimum working pressure of **200 psig** (1378 kPa) and a maximum entering-water temperature of **220 deg F** (104 deg C). Include manual air vent and drain valve.
- C. Steam Coils: Copper[**distributing**] tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch** (2.5 mm), rated for a minimum working pressure of **75 psig** (517 kPa).

Some manufacturers limit air-to-air heat pumps to electric supplemental heating coils.

- D. Electric-Resistance Heating Coils: Nickel-chromium heating wire or tubular elements in coil fins, free of expansion noise and hum, with fuses in terminal box for overcurrent protection and continuous limit controls for high-temperature protection. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.

Retain "Indoor Refrigerant Coils" Paragraph below for integral or remote condensing units.

- E. Indoor Refrigerant Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch** (2.5 mm), and brazed joints at fittings. Comply with AHRI 210/240, and leak test to minimum **450 psig** (3105 kPa) for a minimum **300-psig** (2070-kPa) working pressure. Include thermal expansion valve.

2.6 INDOOR FAN

- A. Fan and Motor Board: Removable.
 - 1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.
 - 2. Fan Shaft and Bearings: Hollow-steel shaft with permanently lubricated, resiliently mounted bearings.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project. Permanently lubricated ball bearings are available for motors up through 5 hp.

3. Motor: Permanently lubricated, multispeed, resiliently mounted on motor board. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
4. Wiring Termination: Connect motor to chassis wiring with plug connection.

2.7 DAMPERS

- A. Mixing Dampers: Galvanized-steel blades with edge and end seals and nylon bearings; with **[electric]** **[pneumatic]** actuator.
- B. Outdoor-Air Dampers: Galvanized-steel blades with edge and end seals and nylon bearings; with **[electric]** **[pneumatic]** actuator.

Face and bypass dampers in "Face and Bypass Dampers" Paragraph below are optional.

- C. Face and Bypass Dampers: Galvanized-steel damper blades with edge and end seals and nylon bearings; with factory-mounted **[electric]** **[pneumatic]** actuator.

Retain paragraph below to comply with LEED Prerequisite EA 2.

- D. Comply with ASHRAE/IES 90.1.

2.8 ACCESSORIES

Verify availability of additional features for unit ventilators specified.

- A. Exhaust Shutter: **[Barometric]** **[Motorized, modulating]** type designed to limit room pressure to maximum **0.10-inch wg** (25 kPa) with **[steel]** **[aluminum]** **[fabric]** damper blades, including edge and end seals, in galvanized-steel frame with **[outdoor]** **[and]** **[interior]** wall grille.
- B. Subbase: Sheet metal floor-mounting base with leveling screws and black enamel finish.
- C. Insulated false back with gasket seals on wall and outdoor-air plenum.
 1. Insulation: Minimum **[1/2-inch- (13-mm-)]** **[1-inch- (25-mm-)]** **<Insert dimension>** thick, **[coated glass fiber]** **[foil-covered, closed-cell foam]** **[matte-finish, closed-cell foam]** complying with ASTM C 1071 and attached with adhesive complying with ASTM C 916.
 - a. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84 by a qualified testing agency.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

- b. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

- D. Return-air plenum, 6 inches (150 mm) thick, designed to take return air from top inlet grilles in cabinets on both sides of unit ventilator with gasket seals on wall and outdoor-air plenum extension.

Retain first paragraph below for concealed unit ventilators.

- E. Duct flanges for supply-, return-, and outdoor-air connections.
- F. Radiation Grille: [Steel] [Aluminum], [linear-bar] [stamped] grille with finish to match discharge-air grille.

Verify available filters with unit ventilator manufacturer.

For further information on air filters and air filter ratings, see Section 234100 "Particulate Air Filtration."

- G. Filters: Minimum arrestance and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2 and all addendums.

Retain "MERV Rating" Subparagraph below to require compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher. Also, retain subparagraph for LEED Prerequisite IEQ 1. LEED-NC, LEED-CI, and LEED for Schools Credit IEQ 3.1 and LEED-CS Credit IEQ 3 require that filters have a minimum MERV 13 rating for systems that deliver air to occupied spaces.

1. MERV Rating: [6] [13] <Insert number> when tested according to ASHRAE 52.2.

Retain one of three subparagraphs below. Retain third subparagraph if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

2. Washable Foam: 70 percent arrestance and MERV[3].
3. Glass Fiber Treated with Adhesive: 80 percent arrestance and MERV[5].
4. Pleated Cotton-Polyester Media: 90 percent arrestance and MERV[7].

- H. Energy Recovery Wheel:

1. Casing: Steel with manufacturer's standard paint coating and with the following:
 - a. Integral purge section.
 - b. Casing seals on periphery of rotor, on duct divider, and on purge section.
 - c. Support rotor on grease-lubricated ball bearings with extended grease fittings. Mount horizontal wheels on tapered roller bearing.
2. Rotor: Corrugated-aluminum, segmented wheel strengthened with radial spokes, and having nontoxic, noncorrosive silica-gel desiccant coating. Construct media for passing maximum 800-micrometer solids and maximum 0.04 percent cross contamination by volume of exhaust air. Drive rotor with belt around outside of rotor.

3. Defrost Coils: Electric defrost coil in the exhaust airstream.
4. Drive: Fractional horsepower motor and gear reducer, with speed changed by adjustable variable frequency controller.
5. Inlet and Discharge Fans: Forward curved, centrifugal; resiliently mounted with flexible duct connections.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project.

- a. Motor and Drive: Permanently lubricated, direct driven. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
6. Filters: 1-inch- (25-mm-) thick, disposable type, mounted in galvanized-steel frame upstream of energy recovery wheel in both supply and exhaust airstreams.
7. Electrical: Single electrical connection from attached unit ventilator.

2.9 FACTORY HYDRONIC PIPING PACKAGE

- A. Piping: [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 88, Type M (ASTM B 88M Type C)] copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet. Crossover piping, [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)] <Insert pipe size> with shutoff valves.
- B. Control Valves: [Electric] [Pneumatic] actuators compatible with terminal controller and building controls.

Retain one or more of four subparagraphs below.

1. [Two][Three]-way, [two-position] [modulating] control valve for dual-temperature-water coil.
 2. [Two][Three]-way, [two-position] [modulating] control valve for chilled-water coil.
 3. [Two][Three]-way, [two-position] [modulating] control valve for hot-water heating coil.
 4. [Two][Three]-way, [two-position] [modulating] control valve for hot-water reheat coil.
- C. Hose Kits: Minimum 400-psig (2758-kPa) working pressure and operating temperatures from 33 to 211 deg F (0.5 to 99 deg C). Tag hose kits to equipment designations.
 1. Length: [24 inches (600 mm)] [36 inches (900 mm)] <Insert dimension>.
 2. Minimum Diameter: Equal to unit ventilator connection size.
 - D. Isolation Valves, Strainers, Unions, and Balance Valves:
 1. Two-Piece Ball Valves: Bronze body with stainless-steel ball and stem and galvanized-steel lever handle for each supply and return connection. If balancing

- device is combination shutoff type with memory stop, isolation valve may be omitted on the return.
2. Calibrated-Orifice Balancing Valves: Bronze body, ball type; **125-psig** (860-kPa) working pressure, **250 deg F** (121 deg C) maximum operating temperature; with calibrated orifice or venturi, connections for portable differential pressure meter with integral seals, threaded ends, and a memory stop to retain set position.
 3. Automatic Flow-Control Valve: Brass or ferrous-metal body; **300-psig** (2070-kPa) working pressure at **250 deg F** (121 deg C); with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow with plus or minus 10 percent over differential pressure range of **2 to 80 psig** (13.8 to 552 kPa).
 4. Y-Pattern Hydronic Strainers: Cast-iron body (ASTM A 126, Class B); **125-psig** (860-kPa) working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum **NPS 1/2** (DN 15) hose-end, full-port, ball-type blowdown valve in drain connection.
 5. Wrought-Copper Unions: ASME B16.22.

2.10 INTEGRAL COOLING CHASSIS

- A. Description: Assembly mounted within unit ventilator, factory assembled and tested; consisting of compressors, condenser coils, fans, motors, and refrigerant receivers; removable for maintenance, with plug and receptacle connections for control and power wiring. Construct, test, and rate condensing units according to AHRI 210/240 and ASHRAE 15.
- B. Casing: Galvanized steel with removable panels for access to controls and refrigerant piping.
- C. Exterior Louver: Extruded aluminum.
- D. Compressor: Hermetic, [**scroll**] [**reciprocating**] type; internally isolated for vibration with factory-installed safety devices as follows:
 1. Antirecycle timer.
 2. High-pressure cutout.
 3. Low-pressure cutout or loss-of-charge switch.
 4. Internal thermal-overload protection.
 5. Current- and voltage-sensitive safety devices.

Retain "Energy Efficiency" Paragraph below if applying for LEED certification or if required by Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1.

- E. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IES 90.1, "Energy Standard for Buildings except Low-Rise Residential Buildings."
- F. Refrigerant Piping Materials:
 1. Drawn-Temper Copper Tube: [**ASTM B 88, Type L** (ASTM B 88M, Type B)].

2. Annealed-Temper Copper Tube: [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 88, Type K (ASTM B 88M, Type A)].
3. Wrought-Copper Fittings: ASME B16.22.

Retain one of two "Refrigerant" paragraphs below to require a specific refrigerant type; delete both if any refrigerant type is acceptable. LEED-NC, LEED-CS, and LEED for Schools Credit EA 4 award a single point if all HVAC&R equipment complies with requirements for enhanced refrigerant management. Retain second or third option in first paragraph or retain second paragraph to comply with Credit EA 4.

- G. Refrigerant: [R-22] [R-407C] [R-410A].
- H. Refrigerant: R-407C or R-410A.
- I. Low ambient controls to permit operation down to 45 deg F (7 deg C).
- J. Crankcase heater.
- K. Charging and service fittings.
- L. Filter dryer.
- M. Air-to-Air Heat Pump: Pilot-operated, sliding-type reversing valve with replaceable magnetic coil, and controls for air-to-air heat pump operation with supplemental heat.
- N. HGBP, constant-pressure expansion valve and controls to maintain continuous refrigeration system operation at 10 percent of full load.
- O. Condenser: Copper-tube, aluminum-fin coil, with liquid subcooler.
- P. Direct-Driven Condenser Fan: Forward curved, double width, centrifugal; thermoplastic or painted-steel wheels and galvanized-steel fan scrolls.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, add subparagraphs below to suit Project.

1. Motor: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.11 BASIC UNIT CONTROLS

Retain first paragraph below and delete "Basic Unit Controls" Paragraph below if controls are part of overall temperature-control system.

- A. Control devices and operational sequences are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- B. Basic Unit Controls:
 1. Control voltage transformer.

Verify control features with manufacturer.

2. **[Wall-mounting] [Unit-mounted]** thermostat with the following features.
 - a. Heat-cool-off switch.
 - b. Fan on-auto switch.

Retain first subparagraph below if multispeed motors are specified.

- c. Fan-speed switch.
 - d. **[Manual] [Automatic]** changeover.
 - e. Adjustable deadband.
 - f. **[Concealed] [Exposed]** set point.
 - g. **[Concealed] [Exposed]** indication.
 - h. **[Degree F] [Degree C]** indication.
3. **[Wall-mounting] [Unit-mounted]** humidistat.
 - a. **[Concealed] [Exposed]** set point.
 - b. **[Concealed] [Exposed]** indication.
4. **[Wall-mounting] [Unit-mounted]** temperature sensor.
5. Unoccupied-period-override push button.
6. Data entry and access port.
 - a. Input data includes room temperature, and humidity set points and occupied and unoccupied periods.
 - b. Output data includes room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

Retain "(DDC)Terminal Controller" Paragraph below and coordinate with "Basic Unit Controls" Paragraph above or with control devices specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

C. **[DDC]** Terminal Controller:

1. Safety Controls Operation: Freezestat shall stop fan and close outdoor-air damper if air less than **38 deg F (3 deg C)** enters coils.
2. Scheduled Operation: Occupied and unoccupied periods on seven-day clock with a minimum of four programmable periods per day.
3. Unoccupied-Period-Override Operation: **[Two] <Insert number>** hours.
4. Dual-Temperature Coil Operation:
 - a. Occupied Periods: When chilled water is available, **[open] [modulate]** control valve if room temperature exceeds thermostat set point. When hot water is available, **[open] [modulate]** control valve if room temperature falls below thermostat set point.
 - b. Unoccupied Periods: When chilled water is available, close control valve. When hot water is available, **[open] [modulate]** control valve if room temperature falls below thermostat setback temperature.
5. Hydronic Cooling-Coil Operation:

- a. Occupied Periods: **[Open] [Modulate]** control valve to provide cooling if room temperature exceeds thermostat set point.
- b. Unoccupied Periods: Close control valve.

Refrigerant coil may be cooling or heating with air-to-air heat pump.

6. Refrigerant-Coil Operation:

- a. Occupied Periods: Start compressor to maintain room temperature.
- b. Unoccupied Periods: **[Stop compressor cooling] [Cycle compressor for heating to maintain setback temperature].**

7. **[Supplemental]**Heating-Coil Operation:

- a. Occupied Periods: **[Open control valve] [Modulate control valve] [Energize electric-resistance coil]** to provide heating if room temperature falls below thermostat set point.
- b. Unoccupied Periods: Start fan and **[open control valve] [modulate control valve] [energize electric-resistance coil]** if room temperature falls below setback temperature.
- c. Switch refrigerant-reversing valve to operate supplemental coil for heating when outdoor temperature is below **[25 deg F (4 deg C)] <Insert temperature>**.

8. Reheat-Coil Operation:

Retain "Humidity Control for Occupied Periods" and "Humidity Control for Unoccupied Periods" subparagraphs below if reheat coil provides reheating only.

- a. Humidity Control for Occupied Periods: Humidistat **[opens control valve] [modulates control valve] [energizes electric-resistance coil]** to provide heating. As room temperature rises above set point, cooling-coil valve **[opens] [modulates]** to maintain room temperature.
- b. Humidity Control for Unoccupied Periods: **[Close control valve] [De-energize].**

Retain first "Outdoor-Air Damper Operation" Subparagraph below for fixed outdoor-air intake; retain second subparagraph for economizer cycle. Energy recovery wheel is provided with fixed outdoor-air damper described in first subparagraph.

9. Outdoor-Air Damper Operation: Open to **[25] <Insert number>** percent fixed minimum intake during occupied periods, and close during unoccupied periods.
10. Outdoor-Air Damper Operation: Open to **[25] <Insert number>** percent fixed minimum intake, and maximum 100 percent of the fan capacity to comply with ASHRAE Cycle II during occupied periods, and close during unoccupied periods. Microprocessor controller shall permit air-side economizer operation when outdoor air is less than **[60 deg F (15 deg C)] <Insert temperature>**.
11. Carbon Dioxide Sensor Operation: During occupied periods, reset minimum outdoor-air ratio down to minimum **[10] <Insert number>** percent to maintain maximum **[800-ppm] <Insert value>** concentration.

12. Face-and-Bypass Damper Operation: Position damper to face of coils until room temperature equals thermostat set point; bypass after room-temperature set point is achieved.
13. Cooling Lockout: During economizer cycle operation, block out cooling.
14. HGBP: Open HGBP solenoid valve to maintain minimum suction pressure at compressor.
15. Energy Recovery Wheel Operation:
 - a. Factory-mounted and -wired, starting relay and manual motor starter for field wiring.
 - b. Occupied period is established by [**remote signal**] [**room occupancy sensor**].
 - c. Energy recovery wheel and inlet and discharge fans operate during occupied periods after room temperature set point has been achieved.
 - d. Energy recovery wheel operates during occupied periods, but stops when unit ventilator controls call for cooling, and outdoor-air temperatures permit free air cooling.
 - e. Energy recovery wheel and fans stop during unoccupied periods.
16. Controller shall have volatile-memory backup.

D. Building Automation System (BAS) Interface Requirements:

1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at the central workstation.
3. Provide [**BACnet**] [**or**] [**LonWorks**] interface for central BAS workstation for the following functions:
 - a. Adjust set points.
 - b. Unit ventilator start, stop, and operating status.
 - c. Data inquiry to include [**outdoor-air damper position**,]supply- and room-air temperature[**and humidity**].
 - d. Occupied and unoccupied schedules.

E. Electrical Connection: Factory wire motors and controls for a single electrical connection.

2.12 METAL SHELVES AND CABINETS

Retain features required for Project. Verify available features with manufacturer. Coordinate this article with Drawings.

- A. Include manufacturer's standard cabinets to match unit ventilators with required installation hardware as indicated:
 1. Open Shelving with Reinforced Shelves:
 - a. [**Return-air plenum**] [**Radiation enclosure**] and aluminum bar grille with finish to match unit ventilator grille.
 - b. Through-piping enclosure with solid top.

2. Closed Shelving with Reinforced Shelves:
 - a. **[Return-air plenum] [Radiation enclosure]** and aluminum bar grille with finish to match unit ventilator grille.
 - b. Through-piping enclosure with solid top.
 - c. Two sliding doors with key-operated locks.
 3. Utility compartment with access panel with key-operated lock.
 4. Wall and corner filler sections, and end panels finished to match shelving.
- B. Painted Finish: Manufacturer's **[standard] [custom]** baked enamel, in color selected by Architect, applied to shelving before shipping.
- C. Cabinet Top: Plastic-laminate top in color and pattern selected by Architect from manufacturer's **[standard] [custom]** colors.

2.13 CAPACITIES AND CHARACTERISTICS

If Project has more than one type or configuration of unit ventilator, delete this article and schedule unit ventilators on Drawings.

- A. Fan:
1. Airflow: **<Insert cfm (L/s)>**.
 2. External Static Pressure: **<Insert inches wg (kPa)>**.
 3. Fan Speed: **<Insert rpm>**.
 4. Motor Horsepower: **<Insert horsepower>**.
 5. Drive: **[Direct] [Belt]**.
- B. Cooling Capacity:
1. Total: **<Insert Btu/h (kW)>**.
 2. Sensible: **<Insert Btu/h (kW)>**.
 3. Entering-Air Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 4. Entering-Air Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
- C. Chilled-Water Coil:
1. Water Flow: **<Insert gpm (L/s)>**.
 2. Water-Side Pressure Loss: **<Insert feet wg (kPa)>**.
 3. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 4. Air-Side Pressure Drop: **<Insert inches wg (kPa)>**.
- D. Refrigerant Coil:
1. Suction Temperature: **<Insert deg F (deg C)>**.
 2. Air-Side Pressure Drop: **<Insert inches wg (kPa)>**.
- E. Condensing Unit:

1. Ambient Temperature: <Insert deg F (deg C)>.
2. Compressor Power Input: <Insert kilowatts>.

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1. If applying for LEED certification, efficiency must be equal to or greater than minimum efficiency required by ASHRAE/IES 90.1, Table 6.8.1A, "Air Conditioners and Condensing Units," for cooling-only equipment and Table 6.8.1B, "Electrically Operated Unitary and Applied Heat Pumps - Minimum Efficiency Requirements," for heat pump applications.

3. Cooling Energy Efficiency [(EER)] [(SEER)]: <Insert value>.

Retain "Heating Coefficient of Performance" Subparagraph below for heat pump applications.

4. Heating Coefficient of Performance: <Insert value>.
5. Voltage/Phase/Hertz: <Insert values>.
6. Full-Load Amperes: <Insert value>.
7. Maximum Circuit Amperes: <Insert value>.
8. Maximum Overcurrent Protection: <Insert amperage>.

F. Heating Capacity:

1. Output: <Insert Btu/h (kW)>.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Air-Temperature Rise: <Insert deg F (deg C)>.

G. Hot-Water Heating Coil:

1. Water Flow: <Insert gpm (L/s)>.
2. Water-Side Pressure Loss: <Insert feet wg (kPa)>.
3. Air-Side Pressure Drop: <Insert inches wg (kPa)>.
4. Entering-Water Temperature: <Insert deg F (deg C)>.

H. Steam Heating Coil:

1. Inlet Steam Pressure: <Insert psig (kPa)>.
2. Condensing Capacity: <Insert lb/h (g/s)>.
3. Air-Side Pressure Drop: <Insert inches wg (kPa)>.

I. Electric-Resistance Heating Coil:

1. Capacity: <Insert kilowatts>.
2. Number of Steps: <Insert number>.
3. Air-Side Pressure Drop: <Insert inches wg (kPa)>.

J. Reheat Capacity:

1. Output: <Insert Btu/h (kW)>.
2. Entering-Air Temperature: <Insert deg F (deg C)>.
3. Air-Temperature Rise: <Insert deg F (deg C)>.

K. Filters:

Retain third option in "Type" Subparagraph below if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

1. Type: [**Washable foam**] [**Coated glass fiber**] [**Pleated cotton-polyester media**].
2. Maximum Face Velocity: <Insert fpm (m/s)>.
3. Thickness: [**1 inch (25 mm)**] [**2 inches (50 mm)**] <Insert dimension>.

L. Energy Recovery Exhaust:

1. Airflow: <Insert cfm (L/s)>.
2. Entering-Air Dry-Bulb Temperature: <Insert deg F (deg C)>.
3. Entering-Air Wet-Bulb Temperature: <Insert deg F (deg C)>.
4. Leaving-Air Dry-Bulb Temperature: <Insert deg F (deg C)>.
5. Leaving-Air Wet-Bulb Temperature: <Insert deg F (deg C)>.
6. Air-Side Pressure Drop: <Insert inches wg (kPa)>.
7. Fan Motor Horsepower: <Insert horsepower>.

M. Energy Recovery Outdoor Air:

1. Airflow: <Insert cfm (L/s)>.
2. Entering-Air Dry-Bulb Temperature: <Insert deg F (deg C)>.
3. Entering-Air Wet-Bulb Temperature: <Insert deg F (deg C)>.
4. Leaving-Air Dry-Bulb Temperature: <Insert deg F (deg C)>.
5. Leaving-Air Wet-Bulb Temperature: <Insert deg F (deg C)>.
6. Air-Side Pressure Drop: <Insert inches wg (kPa)>.
7. Motor Horsepower: <Insert horsepower>.

N. Energy Recovery Wheel:

1. Heat-Transfer Efficiency: <Insert percent>.
2. Drive Motor Horsepower: <Insert horsepower>.

O. Electrical Characteristics for Single-Point Connection:

1. Voltage/Phase/Hertz: <Insert values>.
2. Full-Load Amperes: <Insert value>.
3. Maximum Circuit Amperes: <Insert value>.
4. Maximum Overcurrent Protection: <Insert amperage>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, to receive unit ventilators for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

- B. Examine roughing-in for piping and electrical connections to verify actual locations before unit ventilator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate to assure correct recess size for recessed units.
- C. Install unit ventilators to comply with NFPA 90A.
- D. Install equipment exposed to finished areas after walls and ceiling are finished and painted. Avoid damage to other materials.
- E. Protection: Provide finished cabinet units with protective covers during balance of construction.

Retain first paragraph below for horizontal, suspended units.

- F. Suspend horizontal unit ventilators from structure with threaded steel rods and minimum [0.25-inch (6.35-mm) **static-deflection, elastomeric vibration isolation hanger**] [1.0-inch (25-mm) **static-deflection spring hangers**]. Vibration isolators are specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

Verify mounting height in first paragraph below with authorities having jurisdiction to comply with requirements of the Americans with Disabilities Act.

- G. Verify location of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. Install devices [48 inches (1220 mm)] [60 inches (1525 mm)] <Insert dimension> above finished floor.

Retain paragraph below for condensing units not packaged with unit ventilators.

- H. Comply with requirements in Section 236200 "Packaged Compressor and Condenser Units" for condensing units matched to refrigerant cooling coil packaged in unit ventilators.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:

1. Install piping adjacent to machine to allow service and maintenance.
2. Connect piping to unit ventilator factory hydronic piping package. Install piping package if shipped loose.
3. Connect condensate drain to indirect waste.
4. Unless otherwise indicated, install shutoff valve and union or flange at each connection.
5. Install piping adjacent to machine to allow service and maintenance.

Retain first paragraph below for unit ventilators with remote condensing units.

- B. Install refrigerant piping as required by Section 232300 "Refrigerant Piping," and add refrigerant as required to compensate for length of piping.

Retain first paragraph below for ducted, unit ventilators. Coordinate duct installation requirements with Drawings and with requirements specified in Section 233113 "Metal Ducts," Section 233116 "Nonmetal Ducts," and Section 233300 "Air Duct Accessories."

- C. Connect supply-air and return-air ducts to unit ventilators with flexible duct connectors specified in Section 233300 "Air Duct Accessories." Comply with safety requirements in UL 1995 for duct connections.
- D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- F. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

Retain "Testing Agency," "Manufacturer's Field Service," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph or if retaining "Manufacturer's Field Service" or "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

Retain first subparagraph below if units have electric heat.

2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

Retain subparagraph below if energy recovery wheel is required.

4. Record temperatures entering and leaving energy recovery wheel when outdoor-air temperature is a minimum of **15 deg F (8.3 deg C)** higher, or **20 deg F (11 deg C)** lower, than room temperature.

- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.

3.5 ADJUSTING

Retain this article if control devices are specified in this Section; delete if they are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

- A. Adjust initial temperature and humidity set points.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two]** **<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.6 CLEANING

- A. After construction is completed, including painting, clean exposed surfaces of units. Vacuum clean coils and inside of cabinets.
- B. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.
- C. Install new filters.

3.7 DEMONSTRATION

Delete this article if factory-authorized service representative is not required.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain unit ventilators.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238223

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238229 - RADIATORS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes flat-pipe steel radiators.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
1. Include plans, elevations, sections, and details.
 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Indicate location and size of each field connection.

Retain first subparagraph below for hydronic radiators.

4. Indicate location and arrangement of piping valves and specialties.

Retain subparagraph below for radiators with integral controls; delete if control devices are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

5. Indicate location and arrangement of integral controls and other accessories.

Retain "Samples" Paragraph below for single-stage Samples, with a subordinate list if applicable. Retain "Color Samples for Initial Selection" and "Color Samples for Verification" paragraphs for two-stage Samples.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: For each exposed product and for each color and texture specified.
- D. Color Samples for Initial Selection: For radiators with factory-applied color finishes.
- E. Color Samples for Verification: For each type of exposed finish.
- F. Mock-up:

Use this paragraph for assessing full sized erected assemblies for review of construction, coordination of the Work of several sections, testing, or observation of operation.

Verify mockup requirements with DEN Project Manager.

1. Provide **<Insert number>** mockup, **<Insert number>** feet long by **<Insert number>** feet wide, of **<typical exterior wall module>** **<one typical bay, under window enclosure assembly complete with induction units>**.
2. Locate **<where directed by DEN Project Manager>** **<Insert location>**.
3. Mockup may **<not>** remain as part of the Work.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Structural members, including wall construction, to which radiators will be attached.
 - 2. Method of attaching radiators to building structure.
 - 3. Penetrations of fire-rated wall and floor assemblies.
- B. Field quality-control reports.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 FLAT-PIPE STEEL RADIATORS

Copy this article and re-edit for each style of flat-pipe steel radiator, or schedule on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Hydro-Air Components Inc.](#)
 - 2. [Quincy Hydronic Technology Inc.](#)
 - 3. [Runtal North America, Inc.](#)
 - 4. <Insert manufacturer's name>.

5. or approved equal.

B. Heating Elements: Steel, welded and formed into flat, square, steel header with minimum thickness of 0.109 inch (2.76 mm). Include threaded piping and air-vent connections.

Retain one of three "Working Pressure" subparagraphs below.

1. Working Pressure: 56 psig (386 kPa); 0.048 inch (1.22 mm).
2. Working Pressure: 85 psig (585 kPa); 0.058 inch (1.47 mm).
3. Working Pressure: 128 psig (881 kPa); 0.078 inch (1.98 mm).

If more than one configuration is required, delete subparagraphs below and schedule on Drawings.

4. Tube Height: <Insert inches (mm)>.
5. Tube Depth: <Insert inches (mm)>.
6. Tube Length: <Insert inches (mm)>.
7. Number of Tubes High: <Insert number>.
8. Number of Tubes Deep: <Insert number>.
9. Room Air Temperature: [65 deg F (18 deg C)] <Insert temperature>.
10. Heat Output: <Insert Btu/h (W)>.
11. Average Water Temperature: [180 deg F (82 deg C)] <Insert temperature>.
12. Temperature Drop: [10 deg F (5.56 deg C)] [20 deg F (11.1 deg C)] [30 deg F (16.6 deg C)] <Insert temperature>.
13. Pressure Loss: <Insert feet wg (kPa)>.

C. Mounting: [Wall brackets] [Floor pedestals] with maximum spacing of 36 inches (914 mm).

D. Finish: Baked-enamel finish in manufacturer's [standard] [custom] color as selected by DEN Project Manager.

E. Accessories:

1. Steel piping covers finished to match radiator finish.
2. Flexible Expansion Compensation Hoses: Minimum 400-psig (2758-kPa) working pressure, and operating temperatures from 33 to 211 deg F (0.5 to 99.5 deg C).
 - a. Length: [24 inches ((600 mm))] [36 inches (900 mm)] <Insert dimension>.
 - b. Minimum Diameter: Equal to connection size.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive radiators for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for hydronic-piping connections to verify actual locations before installation of radiators.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install units level and plumb.
- B. Install expansion compensation hoses.
- C. Install piping covers.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect radiators and components to piping according to Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
 - 1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.
- C. Install control valves as required by Section 230923.11 "Control Valves."
- D. Install piping adjacent to radiators to allow service and maintenance.

3.4 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform the following field tests and inspections:

Retain "Leak Test" Subparagraph below for hot-water radiators.

- 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- B. Units will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.5 CLEANING

- A. After construction is completed, including painting, clean exposed surfaces of units.
- B. Touch-up marred or scratched surfaces of factory-finished components, using finish materials furnished by manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238229

SECTION 238233 - CONVECTORS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes [**hydronic**] [**steam**] [**electric**] convectors.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
2. Include data substantiating that materials comply with requirements.

B. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include details and dimensions of custom-fabricated enclosures.
4. Indicate location and size of each field connection.

Retain first subparagraph below for hydronic and steam convectors.

5. Indicate location and arrangement of piping valves and specialties.

Retain first subparagraph below for convectors with integral controls; delete if control devices are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

6. Indicate location and arrangement of integral controls.
7. Include enclosure joints, corner pieces, access doors, and other accessories.

Retain subparagraph below for electric convectors.

8. Include diagrams for power, signal, and control wiring.

Retain "Samples" Paragraph below for single-stage Samples, with a subordinate list if applicable. Retain "Color Samples for Initial Selection" and "Color Samples for Verification" paragraphs for two-stage Samples.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: For each exposed product and for each color and texture specified.
- D. Color Samples for Initial Selection: For units with factory-applied color finishes.
- E. Color Samples for Verification: For each type of exposed finish.
- F. Mock-up:

Use this paragraph for assessing full sized erected assemblies for review of construction, coordination of the Work of several sections, testing, or observation of operation.

Verify mockup requirements with DEN Project Manager.

1. Provide **<Insert number>** mockup, **<Insert number>** feet long by **<Insert number>** feet wide, of **<typical exterior wall module>** **<one typical bay, under window enclosure assembly complete with induction units>**.
2. Locate **<where directed by DEN Project Manager>** **<Insert location>**.
3. Mockup may **<not>** remain as part of the Work.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Structural members, including wall construction, to which convectors will be attached.
 - 2. Method of attaching convectors to building structure.
 - 3. Penetrations of fire-rated wall and floor assemblies.
- B. Field quality-control reports.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 ELECTRIC CONVECTORS

Copy this article and re-edit for each style of convector, or schedule on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Berko; Marley Engineered Products.
 - 2. Chromalox.
 - 3. Indeeco.
 - 4. Markel Products Company; TPI Corporation.

5. [Marley Engineered Products.](#)
 6. [Ouellet Canada Inc.](#)
 7. [Qmark; Marley Engineered Products.](#)
 8. **<Insert manufacturer's name>.**
 9. or approved equal.
- B. Description: Factory-packaged units constructed according to UL 499, UL 1030, and UL 2021.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Heating Elements: Nickel-chromium-wire heating element enclosed in metallic sheath mechanically bonded to fins, with high-temperature cutout and sensor running the full length of element. Element supports shall eliminate thermal expansion noise.

If more than one configuration is required, delete subparagraphs below and schedule on Drawings.

1. Volts: **<Insert value>.**
 2. Phase: **<Insert value>.**
 3. Hertz: **<Insert value>.**
 4. Heat Output: **[300] [500] [750] [1000] [1250] [1500] [1750] [2000] [2250] [2500]**
<Insert number> W.
- D. Front and Top Panel: Minimum **[0.0528-inch- (1.35-mm-)] [0.0677-inch- (1.7-mm-)]** **<Insert dimension>** thick steel with exposed corners rounded; removable front panels with tamper-resistant fasteners braced and reinforced for stiffness.
- E. Wall-Mounted Back and End Panels: Minimum **0.0428-inch- (1.1-mm-)** thick steel.
- F. Floor-Mounted Pedestals: Conceal conduit for power and control wiring at maximum **36-inch (914-mm)** spacing. Pedestal-mounted back panel shall be solid panel matching front panel.
- G. Support Brackets: Locate at maximum **36-inch (914-mm)** spacing to support front panel and element.
- H. Insulation: **1/2-inch- (13-mm-)** thick, fibrous glass on inside of the back of the enclosure.
- I. Finish: Baked-enamel finish in manufacturer's **[standard] [custom]** color as selected by DEN Project Manager.
- J. Damper: Knob-operated internal damper.
- K. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size **6 by 7 inches (150 by 175 mm)**, integral with enclosure.
- L. Enclosure Style: **[Sloped] [Flat]** top.

Retain features required for Project in subparagraphs below.

1. Front Inlet Grille: Punched louver; painted to match enclosure.
2. Front Inlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.
 - b. Anodized finish, color as selected by DEN Project Manager from manufacturer's **[standard]** **[custom]** colors.
 - c. Painted to match enclosure.
3. **[Top]** **[Front]** Outlet Grille: Punched louver; painted to match enclosure.
4. **[Top]** **[Front]** Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.
 - b. Anodized finish, color as selected by DEN Project Manager from manufacturer's **[standard]** **[custom]** colors.
 - c. Painted to match enclosure.
5. Enclosure Height: **<Insert inches (mm)>**.
6. Enclosure Depth: **<Insert inches (mm)>**.
7. Enclosure Length: **<Insert inches (mm)>**.

Retain "Unit Controls" Paragraph below for integral control device; delete if control devices are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

- M. Unit Controls: Integral **[line-voltage thermostat with minimum range of 60 to 90 deg F (15 to 32 deg C)] [low-voltage relay and control transformer for remote thermostat]**.
- N. Accessories: Integral disconnect switch, recessing flanges finished to match enclosure or overlapping front cover for fully recessed units, and rubber gaskets to seal cabinet at wall.

2.2 **[HOT-WATER]** **[STEAM]** CONVECTORS

Copy this article and re-edit for each style of convector, or schedule on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Engineered Air.
 2. Rosemex.
 3. Slant/Fin Corporation.
 4. Sterling Hydronics; a Mestek company.
 5. Trane Inc.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.

- B. Heating Elements: Seamless copper tubing mechanically expanded into evenly spaced aluminum fins and rolled into cast-**[iron]** **[or]** **[brass]** headers with inlet/outlet and air vent; steel side plates and supports. Factory-pressure-test element at minimum **100 psig** (690 kPa).

If more than one configuration is required, delete subparagraphs below and schedule on Drawings.

1. Element Height: **<Insert inches (mm)>**.
2. Element Depth: **<Insert inches (mm)>**.
3. Element Length: **<Insert inches (mm)>**.
4. Entering-Air Temperature: **[65 deg F (18 deg C)] <Insert temperature>**.

Retain first four subparagraphs below for hot-water convector.

5. Heat Output: **<Insert Btu/h per ft. (W/m)>**.
6. Average Water Temperature: **[180 deg F (82 deg C)] <Insert temperature>**.
7. Temperature Drop: **[10 deg F (5.56 deg C)] [20 deg F (11.1 deg C)] [30 deg F (16.6 deg C)] <Insert temperature>**.
8. Pressure Loss: **<Insert feet wg (kPa)>**.

Retain two subparagraphs below for steam convector.

9. Heat Output: **<Insert sq. ft. EDR (W)>**.
10. Entering Steam Pressure: **[1 psig (6.9 kPa)] <Insert value>**.

- C. Front and Top Panel: Minimum **[0.0528-inch- (1.35-mm-)] [0.0677-inch- (1.7-mm-)] <Insert dimension>** thick steel with exposed corners rounded; removable front panels with tamper-resistant fasteners braced and reinforced for stiffness.
- D. Wall-Mounted Back and End Panels: Minimum **0.0428-inch- (1.1-mm-)** thick steel.
- E. Floor-Mounted Pedestals: Conceal conduit for power and control wiring at maximum **36-inch (914-mm)** spacing. Pedestal-mounted back panel shall be solid panel matching front panel.
- F. Support Brackets: Locate at maximum **36-inch (914-mm)** spacing to support front panel and element.
- G. Insulation: **1/2-inch- (13-mm-)** thick, fibrous glass on inside of the back of the enclosure.
- H. Finish: Baked-enamel finish in manufacturer's **[standard]** **[custom]** color as selected by DEN Project Manager.
- I. Damper: Knob-operated internal damper.

Units with operable front panels may not require access doors.

- J. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size **6 by 7 inches (150 by 175 mm)**, integral with enclosure.
- K. Enclosure Style: **[Sloped]** **[Flat]** top.

Retain features required for Project in subparagraphs below.

1. Front Inlet Grille: Punched louver; painted to match enclosure.
2. Front Inlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.
 - b. Anodized finish, color as selected by DEN Project Manager from manufacturer's **[standard]** **[custom]** colors.
 - c. Painted to match enclosure.
3. **[Top]** **[Front]** Outlet Grille: Punched louver; painted to match enclosure.
4. **[Top]** **[Front]** Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.
 - b. Anodized finish, color as selected by DEN Project Manager from manufacturer's **[standard]** **[custom]** colors.
 - c. Painted to match enclosure.

Enclosure dimensions in three subparagraphs below include end pockets for controls and piping.

5. Enclosure Height: <Insert inches (mm)>.
6. Enclosure Depth: <Insert inches (mm)>.
7. Enclosure Length: <Insert inches (mm)>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive convectors for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for **[hydronic-piping]** **[steam-piping]** **[electrical]** connections to verify actual locations before installation of convector.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate to assure correct recess size for recessed units.
- C. Install convectors level and plumb.
- D. Install equipment exposed to finished areas after walls and ceiling are finished and painted. Avoid damage to other materials.
- E. Protection: Provide finished cabinet units with protective covers during balance of construction.

Retain three paragraphs below for hot-water or steam convectors.

- F. Install valves within reach of access door provided in enclosure.
- G. Install air-seal gasket between wall and recessed flanges or front cover of fully recessed unit.
- H. Install piping within pedestals for freestanding units.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

Retain first five paragraphs below for hot-water or steam piping.

- A. Piping installation requirements are specified in [**Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties.**] [**Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties.**] Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect hot-water convectors and components to piping according to Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties."
 - 1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.
- C. Connect steam convectors and components to piping according to Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties."
 - 1. Install shutoff valve on inlet; install strainer, steam trap, and shutoff valve on outlet.
- D. Install control valves as required by Section 230923.11 "Control Valves."
- E. Install piping adjacent to convectors to allow service and maintenance.

Retain two paragraphs below for electric convectors.

- F. Ground electric convectors according to Section 260526 "Grounding and Bonding for Electrical Systems."
- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- H. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

A. Perform the following field tests and inspections:

Retain "Leak Test" Subparagraph below for hot-water or steam convectors.

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

Retain "Operational Test" Subparagraph below for electric convectors.

2. Operational Test: After electrical circuitry has been energized, start convectors to confirm proper operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

B. Convectors will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.5 CLEANING

A. After construction is completed, including painting, clean exposed surfaces of units. Vacuum clean coils and inside of cabinets.

B. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238233

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238236 - FINNED-TUBE RADIATION HEATERS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes [hydronic] [steam] [electric], [baseboard] [and] [finned-tube] radiation heaters.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
2. Include data substantiating that materials comply with requirements.

B. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include details and dimensions of custom-fabricated enclosures.
4. Indicate location and size of each field connection.

Retain first subparagraph below for hydronic and steam convection units.

5. Indicate location and arrangement of piping valves and specialties.

Retain first subparagraph below for finned-tube radiation heaters with integral controls; delete if control devices are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

6. Indicate location and arrangement of integral controls.
7. Include enclosure joints, corner pieces, access doors, and other accessories.

Retain subparagraph below for electric convection units.

8. Include diagrams for power, signal, and control wiring.

Retain "Samples" Paragraph below for single-stage Samples, with a subordinate list if applicable. Retain "Color Samples for Initial Selection" and "Color Samples for Verification" paragraphs for two-stage Samples.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: For each exposed product and for each color and texture specified.
- D. Color Samples for Initial Selection: For finned-tube radiation heaters with factory-applied color finishes.
- E. Color Samples for Verification: For each type of exposed finish.
- F. Mock-up:

Use this paragraph for assessing full sized erected assemblies for review of construction, coordination of the Work of several sections, testing, or observation of operation.

Verify mockup requirements with DEN Project Manager.

1. Provide **<Insert number>** mockup, **<Insert number>** feet long by **<Insert number>** feet wide, of **<typical exterior wall module>** **<one typical bay, under window enclosure assembly complete with induction units>**.
2. Locate **<where directed by DEN Project Manager>** **<Insert location>**.

3. Mockup may <not> remain as part of the Work.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 1. Structural members, including wall construction, to which finned-tube radiation heaters will be attached.
 2. Method of attaching finned-tube radiation heaters to building structure.
 3. Penetrations of fire-rated wall and floor assemblies.
- B. Field quality-control reports.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 ELECTRIC BASEBOARD RADIATION HEATERS

Copy this article and re-edit for each style of baseboard radiation heater, or schedule on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Berko; Marley Engineered Products.

2. [Chromalox](#).
3. [Indeeco](#).
4. [Markel Products Company; TPI Corporation](#).
5. [Marley Engineered Products](#).
6. [Ouellet Canada Inc.](#)
7. [Qmark; Marley Engineered Products](#).
8. **<Insert manufacturer's name>**.
9. or approved equal.

B. Description: Factory-packaged units constructed according to UL 499, UL 1030, and UL 2021.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Heating Elements: Nickel-chromium-wire heating element enclosed in metallic sheath mechanically bonded to fins, with high-temperature cutout and sensor running the full length of the element. Element supports shall eliminate thermal expansion noise.

Indicate length and total capacity on Drawings.

1. Volts: **<Insert value>**.
2. Phase: **<Insert value>**.
3. Hertz: **<Insert value>**.
4. Heat Output: **<Insert W/ft. (W/m)>**.

Retain "Enclosures" or "Rust-Resistant Enclosures" Paragraph below, or retain both and indicate location of each enclosure type on Drawings. Verify optional features with manufacturer.

D. Enclosures: Minimum [0.0329-inch- (0.85-mm-)] [0.0428-inch- (1.1-mm-)] **<Insert dimension>** thick steel, removable front cover.

1. Full-height back.
2. Full-length damper.
3. End panel.
4. **[Plastic end] [End]** caps.
5. Inside and outside corners.
6. Joiner pieces to snap together.
7. Enclosure Height: **<Insert inches (mm)>**.
8. Enclosure Depth: **<Insert inches (mm)>**.
9. Finish: Baked-enamel finish in manufacturer's **[standard] [custom]** color as selected by DEN Project Manager.
10. Element Brackets: Primed and painted steel to support front panel and element.

E. Rust-Resistant Enclosures: Minimum [0.040-inch- (1.0-mm-)] [0.052-inch- (1.3-mm-)] **<Insert dimension>** thick ASTM A 653/A 653M, **G60 (Z180)** galvanized-steel, removable front cover.

1. Full-height back.
2. Full-length damper.

3. End panel.
4. **[Plastic end] [End]** caps.
5. Inside and outside corners.
6. Joiner pieces to snap together.
7. Enclosure Height: **<Insert inches (mm)>**.
8. Enclosure Depth: **<Insert inches (mm)>**.
9. Finish: Baked-enamel finish in manufacturer's **[standard] [custom]** color as selected by DEN Project Manager.
10. Element Brackets: Primed and painted steel to support front panel and element.

Retain "Unit Controls" Paragraph below for integral control device; delete if control devices are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

- F. Unit Controls: **[Integral line-voltage thermostat] [Integral electronic thermostat] [Remote line-voltage thermostat]**.
- G. Accessories:
1. Filler sections without a heating element matching the adjacent enclosure.
 2. Straight-blade-type receptacles complying with DSCC W-C-596G/GEN, NEMA WD 1, NEMA WD 6, and UL 498; in color selected by DEN Project Manager.

2.2 **[HOT-WATER] [STEAM]** BASEBOARD RADIATION HEATERS

Copy this article and re-edit for each style of baseboard radiation heater, or schedule on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [A.I.M. Radiant Heating.](#)
 2. [Embassy Industries, Inc.](#)
 3. [Haydon Corporation, Inc.](#)
 4. [Hydro-Air Components Inc.](#)
 5. [Rosemex.](#)
 6. [Slant/Fin Corporation.](#)
 7. [Sterling Hydronics; a Mestek company.](#)
 8. **<Insert manufacturer's name>**.
 9. or approved equal.
- B. Performance Ratings: Rate baseboard radiation heaters according to Hydronics Institute's "I=B=R Testing and Rating Standard for Baseboard Radiation."

Retain one of two "Heating Elements" paragraphs below.

- C. Heating Elements: Copper tubing mechanically expanded into flanged collars of evenly spaced aluminum fins resting on polypropylene element glides. One end of tube shall be belled.

If more than one configuration is required, delete nine subparagraphs below and schedule on Drawings.

1. Tube Diameter: [NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)] [NPS 1 (DN 25)] [NPS 1-1/4 (DN 32)] <Insert pipe size>.
2. Fin Size: [2-1/2 by 2-1/2 inches (63 by 63 mm)] [3 by 3 inches (76 by 76 mm)] <Insert dimensions>.
3. Fin Spacing: [40 per foot (131 per m)] [50 per foot (164 per m)] [58 per foot (190 per m)] <Insert value>.
4. Number of Tiers: <Insert number>.
5. Heat Output: <Insert Btu/h per ft. (W/m)>.
6. Entering-Air Temperature: [65 deg F (18 deg C)] <Insert temperature>.

Retain first two subparagraphs below for hot-water radiation heaters.

7. Average Water Temperature: [180 deg F (82 deg C)] <Insert temperature>.
8. Minimum Water Velocity: [1/2 fps (0.15 m/s)] <Insert value>.

Retain "Entering Steam Pressure" Subparagraph below for steam radiation heaters.

9. Entering Steam Pressure: [1 psig (6.9 kPa)] <Insert value>.

- D. Heating Elements: Steel tubing mechanically expanded into flanged collars of evenly spaced steel fins resting on polypropylene element glides. Tube ends shall be threaded.

If more than one configuration is required, delete nine subparagraphs below and schedule on Drawings.

1. Tube Diameter: [NPS 1-1/4 (DN 32)] <Insert pipe size>.
2. Fin Size: [3 by 3 inches (76 by 76 mm)] <Insert dimensions>.
3. Fin Spacing: [52 per foot (171 per m)] <Insert value>.
4. Number of Tiers: <Insert number>.
5. Heat Output: <Insert Btu/h per ft. (W/m)>.
6. Entering-Air Temperature: [65 deg F (18 deg C)] <Insert temperature>.

Retain first two subparagraphs below for hot-water radiation heaters.

7. Average Water Temperature: [180 deg F (82 deg C)] <Insert temperature>.
8. Minimum Water Velocity: [1/2 fps (0.15 m/s)] <Insert value>.

Retain "Entering Steam Pressure" Subparagraph below for steam radiation heaters.

9. Entering Steam Pressure: [1 psig (6.9 kPa)] <Insert value>.

Retain "Enclosures" or "Rust-Resistant Enclosures" Paragraph below, or retain both and indicate location of each enclosure type on Drawings. Verify optional features with manufacturer.

- E. Enclosures: Minimum [0.0329-inch- (0.85-mm-)] [0.0428-inch- (1.1-mm-)] <Insert dimension> thick steel, removable front cover.

1. Full-height back.
2. Full-length damper.
3. End panel.
4. End caps.
5. Inside and outside corners.
6. Valve access door.

7. Joiner pieces to snap together.
 8. Enclosure Height: <Insert inches (mm)>.
 9. Enclosure Depth: <Insert inches (mm)>.
 10. Finish: Baked-enamel finish in manufacturer's [standard] [custom] color as selected by DEN Project Manager.
 11. Element Brackets: Primed and painted steel to support front panel and element.
- F. Rust-Resistant Enclosures: Minimum [0.040-inch- (1.0-mm-)] [0.052-inch- (1.3-mm-)] <Insert dimension> thick ASTM A 653/A 653M, G60 (Z180) galvanized-steel, removable front cover.
1. Full-height back.
 2. Full-length damper.
 3. End panel.
 4. End caps.
 5. Inside and outside corners.
 6. Valve access door.
 7. Joiner pieces to snap together.
 8. Enclosure Height: <Insert inches (mm)>.
 9. Enclosure Depth: <Insert inches (mm)>.
 10. Finish: Baked-enamel finish in manufacturer's [standard] [custom] color as selected by DEN Project Manager.
 11. Element Brackets: Primed and painted steel to support front panel and element.

2.3 ELECTRIC FINNED-TUBE RADIATION HEATERS

Copy this article and re-edit for each style of finned-tube radiation heater, or schedule on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Berko; Marley Engineered Products.](#)
 2. [Chromalox.](#)
 3. [Indeeco.](#)
 4. [Markel Products Company; TPI Corporation.](#)
 5. [Marley Engineered Products.](#)
 6. [Ouellet Canada Inc.](#)
 7. [Qmark; Marley Engineered Products.](#)
 8. [Trane Inc.](#)
 9. <Insert manufacturer's name>.
 10. or approved equal.
- B. Description: Factory-packaged units constructed according to UL 499, UL 1030, and UL 2021.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Heating Elements: Nickel-chromium-wire heating element enclosed in metallic sheath mechanically bonded to fins, with high-temperature cutout and sensor running the full length of the element. Element supports shall eliminate thermal expansion noise.

Indicate length and total capacity on Drawings.

1. Volts: <Insert value>.
2. Phase: <Insert value>.
3. Hertz: <Insert value>.
4. Heat Output: <Insert W/ft. (W/m)>.

Retain "Front Panel" or "Rust-Resistant Front Panel" Paragraph below, or retain both and indicate location of each panel type on Drawings.

- D. Front Panel: Minimum [0.0428-inch- (1.1-mm-)] [0.0528-inch- (1.35-mm-)] <Insert dimension> thick steel.
- E. Rust-Resistant Front Panel: Minimum [0.052-inch- (1.3-mm-)] [0.064-inch- (1.6-mm-)] <Insert dimension> thick, ASTM A 653/A 653M, G60 (Z180) galvanized steel.
- F. Wall-Mounted Back Panel: Minimum 0.0329-inch- (0.85-mm-) thick steel, full height, with full-length channel support for front panel without exposed fasteners.
- G. Floor-Mounted Pedestals: Conceal conduit for power and control wiring at maximum 36-inch (914-mm) spacing. Pedestal-mounted back panel shall be solid panel matching front panel.
- H. Support Brackets: Locate at maximum 36-inch (914-mm) spacing to support front panel and element.
- I. Finish: Baked[-enamel][-epoxy] finish in manufacturer's [standard] [custom] color as selected by DEN Project Manager.
- J. Damper: Knob-operated internal damper at enclosure outlet.
- K. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size 6 by 7 inches (150 by 175 mm), integral with enclosure.
- L. Enclosure Style: [Sloped] [Flat] top.

Retain features required for Project in subparagraphs below.

1. Front Inlet Grille: Punched louver; painted to match enclosure.
2. Front Inlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.

- b. Anodized finish, color as selected by DEN Project Manager from manufacturer's **[standard]** **[custom]** colors.
 - c. Painted to match enclosure.
3. **[Top]** **[Front]** Outlet Grille: Punched louver; painted to match enclosure.
 4. **[Top]** **[Front]** Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.
 - b. Anodized finish, color as selected by DEN Project Manager from manufacturer's **[standard]** **[custom]** colors.
 - c. Painted to match enclosure.
 5. Enclosure Height: **<Insert inches (mm)>**.
 6. Enclosure Depth: **<Insert inches (mm)>**.

Retain "Unit Controls" Paragraph below for integral control device; delete if control devices are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

- M. Unit Controls: Integral **[line-voltage thermostat with minimum range of 60 to 90 deg F (15 to 32 deg C)] [low-voltage relay and control transformer for remote thermostat]**.
- N. Accessories: Integral disconnect switch, filler sections, corners, relay sections, and splice plates all matching the enclosure and grille finishes.

2.4 **[HOT-WATER]** **[STEAM]** FINNED-TUBE RADIATION HEATERS

Copy this article and re-edit for each style of finned-tube radiation heater, or schedule on Drawings.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Embassy Industries, Inc.](#)
 2. [Engineered Air.](#)
 3. [Hydro-Air Components Inc.](#)
 4. [Quincy Hydronic Technology Inc.](#)
 5. [Rosemex.](#)
 6. [Slant/Fin Corporation.](#)
 7. [Sterling Hydronics; a Mestek company.](#)
 8. [Trane Inc.](#)
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Performance Ratings: Rate finned-tube radiation heaters according to Hydronics Institute's "I=B=R Testing and Rating Standard for Finned-Tube (Commercial) Radiation."

Retain one of two "Heating Elements" paragraphs below.

- C. Heating Elements: Copper tubing mechanically expanded into flanged collars of evenly spaced aluminum fins resting on element supports. One end of tube shall be belled.

If more than one configuration is required, delete nine subparagraphs below and schedule on Drawings.

1. Tube Diameter: [NPS 3/4 (DN 20)] [NPS 1 (DN 25)] [NPS 1-1/4 (DN 32)] <Insert pipe size>.
2. Fin Size: [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions>.
3. Fin Spacing: [40 per foot (131 per m)] [50 per foot (164 per m)] [58 per foot (190 per m)] <Insert value>.
4. Number of Tiers: <Insert number>.
5. Heat Output: <Insert Btu/h per ft. (W/m)>.
6. Entering-Air Temperature: [65 deg F (18 deg C)] <Insert temperature>.

Retain first two subparagraphs below for hot-water radiation heaters.

7. Average Water Temperature: [180 deg F (82 deg C)] <Insert temperature>.
8. Minimum Water Velocity: [1/2 fps (0.15 m/s)] <Insert value>.

Retain "Entering Steam Pressure" Subparagraph below for steam radiation heaters.

9. Entering Steam Pressure: [1 psig (6.9 kPa)] <Insert value>.

- D. Heating Elements: Steel tubing mechanically expanded into flanged collars of evenly spaced steel fins resting on element supports. Tube ends shall be threaded.

If more than one configuration is required, delete nine subparagraphs below and schedule on Drawings.

1. Tube Diameter: [NPS 1-1/4 (DN 32)] <Insert pipe size>.
2. Fin Size: [4 by 4 inches (102 by 102 mm)] <Insert dimensions>.
3. Fin Spacing: [52 per foot (171 per m)] <Insert value>.
4. Number of Tiers: <Insert number>.
5. Heat Output: <Insert Btu/h per ft. (W/m)>.
6. Entering-Air Temperature: [65 deg F (18 deg C)] <Insert temperature>.

Retain first two subparagraphs below for hot-water radiation heaters.

7. Average Water Temperature: [180 deg F (82 deg C)] <Insert temperature>.
8. Minimum Water Velocity: [1/2 fps (0.15 m/s)] <Insert value>.

Retain "Entering Steam Pressure" Subparagraph below for steam radiation heaters.

9. Entering Steam Pressure: [1 psig (6.9 kPa)] <Insert value>.

- E. Element Supports: Ball-bearing cradle type to permit longitudinal movement on enclosure brackets.

Retain "Front Panel" or "Rust-Resistant Front Panel" Paragraph below, or retain both and indicate location of each panel type on Drawings.

- F. Front Panel: Minimum [0.0428-inch- (1.1-mm-)] [0.0528-inch- (1.35-mm-)] <Insert thickness> thick steel.

- G. Rust-Resistant Front Panel: Minimum [0.052-inch- (1.3-mm-)] [0.064-inch- (1.6-mm-)] **<Insert thickness>** thick, ASTM A 653/A 653M, G60 (Z180) galvanized steel.
- H. Wall-Mounted Back Panel: Minimum 0.0329-inch- (0.85-mm-) thick steel, full height, with full-length channel support for front panel without exposed fasteners.
- I. Floor-Mounted Pedestals: Conceal insulated piping at maximum 36-inch (914-mm) spacing. Pedestal-mounted back panel shall be solid panel matching front panel. Provide stainless-steel escutcheon for floor openings at pedestals.
- J. Support Brackets: Locate at maximum 36-inch (914-mm) spacing to support front panel and element.
- K. Finish: Baked[-enamel][-epoxy] finish in manufacturer's [standard] [custom] color as selected by DEN Project Manager.
- L. Damper: Knob-operated internal damper at enclosure outlet.
- M. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size 6 by 7 inches (150 by 175 mm), integral with enclosure.
- N. Enclosure Style: [Sloped] [Flat] top.

Retain features required for Project in subparagraphs below.

- 1. Front Inlet Grille: Punched louver; painted to match enclosure.
 - 2. Front Inlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.
 - b. Anodized finish, color as selected by DEN Project Manager from manufacturer's [standard] [custom] colors.
 - c. Painted to match enclosure.
 - 3. [Top] [Front] Outlet Grille: Punched louver; painted to match enclosure.
 - 4. [Top] [Front] Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.
 - b. Anodized finish, color as selected by DEN Project Manager from manufacturer's [standard] [custom] colors.
 - c. Painted to match enclosure.
 - 5. Enclosure Height: <Insert inches (mm)>.
 - 6. Enclosure Depth: <Insert inches (mm)>.
- O. Accessories: Filler sections, corners, relay sections, and splice plates all matching the enclosure and grille finishes.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive finned-tube radiation heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for [**hydronic-piping**] [**steam-piping**] [**electrical**] connections to verify actual locations before installation of finned-tube radiation heaters.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BASEBOARD RADIATION HEATER INSTALLATION

- A. Install units level and plumb.
- B. Install enclosure continuously around corners, using outside and inside corner fittings.
- C. Join sections with splice plates and filler pieces to provide continuous enclosure.
- D. Install access doors for access to valves.
- E. Install enclosure continuously from wall to wall.
- F. Terminate enclosures with manufacturer's end caps except where enclosures are indicated to extend to adjoining walls.

Retain three paragraphs below for hot-water or steam units.

- G. Install valves within reach of access door provided in enclosure.
- H. Install air-seal gasket between wall and recessed flanges or front cover of fully recessed unit.
- I. Install piping within pedestals for freestanding units.

3.3 FINNED-TUBE RADIATION HEATER INSTALLATION

- A. Install units level and plumb.
- B. Install enclosure continuously around corners, using outside and inside corner fittings.
- C. Join sections with splice plates and filler pieces to provide continuous enclosure.
- D. Install access doors for access to valves.
- E. Install enclosure continuously from wall to wall.

- F. Terminate enclosures with manufacturer's end caps except where enclosures are indicated to extend to adjoining walls.

Retain three paragraphs below for hot-water or steam units.

- G. Install valves within reach of access door provided in enclosure.
- H. Install air-seal gasket between wall and recessed flanges or front cover of fully recessed unit.
- I. Install piping within pedestals for freestanding units.

3.4 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

Retain first five paragraphs below for hot-water or steam piping.

- A. Piping installation requirements are specified in [**Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties.**] [**Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties.**] Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect hot-water finned-tube radiation heaters and components to piping according to Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties."
 - 1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.
- C. Connect steam finned-tube radiation heaters and components to piping according to Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties."
 - 1. Install shutoff valve on inlet; install strainer, steam trap, and shutoff valve on outlet.
- D. Install control valves as required by Section 230923.11 "Control Valves."
- E. Install piping adjacent to finned-tube radiation heaters to allow service and maintenance.

Retain two paragraphs below for electric finned-tube radiation heaters.

- F. Ground electric finned-tube radiation heaters according to Section 260526 "Grounding and Bonding for Electrical Systems."
- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

A. Perform the following field tests and inspections:

Retain "Leak Test" Subparagraph below for hot-water or steam finned-tube radiation heaters.

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

Retain "Operational Test" Subparagraph below for electric finned-tube radiation heaters.

2. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.6 CLEANING

A. After construction is completed, including painting, clean exposed surfaces of units. Vacuum inside of cabinets.

B. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238236

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238239 - UNIT HEATERS

1.1 This Section has no Section Text as it has been replaced by the Sections listed below. If e-SPECS Bindings have been associated to this Section, they should be updated to refer to the replacement sections below.

- A. SECTION **238239.13** - CABINET **UNIT HEATERS**
- B. SECTION **238239.16** - PROPELLER **UNIT HEATERS**
- C. SECTION **238239.19** – WALL AND CEILING **UNIT HEATERS**

PART 1 - GENERAL (Not Applicable)

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 238239

SECTION 238239.13 - CABINET UNIT HEATERS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify, with manufacturers, that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system designs that do not include cabinet unit heaters may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes cabinet unit heaters with centrifugal fans and **[hot-water] [steam] [electric-resistance heating]** coils.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. CWP: Cold working pressure.
- B. DDC: Direct digital control.
- C. PTFE: Polytetrafluoroethylene plastic.
- D. TFE: Tetrafluoroethylene plastic.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include location and size of each field connection.
 - 4. Include details of anchorages and attachments to structure and to supported equipment.
 - 5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.

Retain first subparagraph below for hot-water and steam cabinet unit heaters.

- 6. Indicate location and arrangement of piping valves and specialties.

Retain first subparagraph below for cabinet unit heaters with integral controls; delete if control devices are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

- 7. Indicate location and arrangement of integral controls.
- 8. Wiring Diagrams: Power, signal, and control wiring.

Retain "Samples" Paragraph below for single-stage Samples, with a subordinate list if applicable. Retain "Samples for Initial Selection" and "Samples for Verification" paragraphs for two-stage Samples.

Coordinate sample requirements with DEN Project Manager.

- D. Samples: For each exposed product and for each color and texture specified.
- E. Samples for Initial Selection: Finish colors for units with factory-applied color finishes.
- F. Samples for Verification: Finish colors for each type of cabinet unit heater indicated with factory-applied color finishes.
- G. Mock-up:

Use this paragraph for assessing full sized erected assemblies for review of construction, coordination of the Work of several sections, testing, or observation of operation.

Verify mockup requirements with DEN Project Manager.

1. Provide **<Insert number>** mockup, **<Insert number>** feet long by **<Insert number>** feet wide, of **<typical exterior wall module> <one typical bay, under window enclosure assembly complete with induction units>**.
2. Locate **<where directed by DEN Project Manager> <Insert location>**.
3. Mockup may **<not>** remain as part of the Work.

1.5 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 1. Suspended ceiling components.
 2. Structural members to which cabinet unit heaters will be attached.
 3. Method of attaching hangers to building structure.
 4. Size and location of initial access modules for acoustical tile.
 5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. **<Insert item>**.
 6. Perimeter moldings for exposed or partially exposed cabinets.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC." See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: Submit certification that cabinet unit heaters, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Include detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For cabinet unit heaters to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

Retain this article for cabinet unit heaters with filters. Extra materials may not be allowed for publicly funded projects.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Cabinet Unit-Heater Filters: Furnish [**one (1)**] <Insert number> spare filter(s) for each filter installed.

1.8 QUALITY ASSURANCE

- A. Comply with NFPA 70. Listed and labeled by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

Edit or delete paragraphs below to suit Project and LEED requirements.

"ASHRAE Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain pan construction and connection, finned-tube coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

"ASHRAE/IES 90.1 Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IES 90.1.

- C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.9 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this Article are not less than remedies available to Owner under prevailing local laws. Coordinate with Section 016000 "Product Requirements".

- A. Special Warranty: Manufacturer agrees to repair or replace components of condensing units that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for units and components.

1. Warranty Period: Minimum [four (4)] [five (5)] [ten (10)] <Insert number> years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- B. Factory-packaged and -tested units rated according to AHRI 440, ASHRAE 33, and UL 1995.
- C. Radiated noise shall not exceed:
 - 1. NC 35 – In Office.
 - 2. NC 40 – Terminal/Concourse.
 - 3. NC 45 – Maintenance Facilities.

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.2 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Airtherm; a Mestek company.
 - 2. Berko; Marley Engineered Products.
 - 3. Carrier Corporation; a UTC company.
 - 4. Chromalox, Inc.
 - 5. Dunham-Bush, Inc.
 - 6. Engineered Air.
 - 7. Indeeco.
 - 8. International Environmental Corporation.
 - 9. Markel Products Company; TPI Corporation.
 - 10. Marley Engineered Products.
 - 11. McQuay International.
 - 12. Ouellet Canada Inc.
 - 13. QMark; Marley Engineered Products.
 - 14. Rosemex Products.
 - 15. Trane Inc.
 - 16. USA Coil & Air.
 - 17. **<Insert manufacturer's name>.**
 - 18. or approved equal.

2.3 DESCRIPTION

- A. Factory-assembled and -tested unit complying with AHRI 440.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Retain paragraph below for electric cabinet unit heaters.

- C. Comply with UL 2021.

2.4 PERFORMANCE REQUIREMENTS

"ASHRAE Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

"ASHRAE/IESNA 90.1 Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires compliance with requirements in ASHRAE/IESNA 90.1.

- B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

Retain "Seismic Performance" Paragraph below with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Delete paragraph if performance requirements are indicated on Drawings. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Coordinate requirements with structural engineer.

- C. Seismic Performance: Cabinet unit heaters shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

2.5 COIL SECTION INSULATION

Flexible elastomeric insulation and mineral-fiber insulation with a foil face are available from some manufacturers to reduce the number of glass or mineral fibers circulating through the air-conditioned space.

Retain first "Insulation Materials" Paragraph below for duct-liner-type, glass-fiber insulation.

- A. Insulation Materials: ASTM C 1071; surfaces exposed to airstream shall have [aluminum-foil facing] [erosion-resistant coating] to prevent erosion of glass fibers.
1. Thickness: [1/2 inch (13 mm)] [1 inch (25 mm)] [1-1/2 inches (38 mm)].
 2. Thermal Conductivity (k-Value): 0.26 Btu x in./h x sq. ft. at 75 deg F (0.037 W/m x K at 24 deg C) mean temperature.

3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
4. Adhesive: Comply with ASTM C 916 and with NFPA 90A or NFPA 90B.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

Retain "Insulation Materials" Paragraph below for flexible elastomeric insulation.

- B. Insulation Materials: Comply with NFPA 90A or NFPA 90B. Unicellular polyethylene thermal plastic, preformed sheet insulation complying with ASTM C 534, Type II, except for density.
1. Thickness: [3/8 inch (9 mm)] [1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)].
 2. Thermal Conductivity (k-Value): 0.24 Btu x in./h x sq. ft. at 75 deg F (0.034 W/m x K at 24 deg C) mean temperature.
 3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM C 411.
 4. Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph to comply with LEED Prerequisite IEQ 1.

5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

2.6 CABINETS

Retain "Material" Paragraph below for surface, semirecessed, and fully recessed units. Cabinet is not required for concealed units. Coordinate custom color requirements in paragraph below with Sample submittal requirements. Coordinate field painting with painting Sections.

- A. Material: Steel with [factory prime coating, ready for field painting] [baked-enamel finish with manufacturer's standard paint, in color selected by DEN Project Manager] [baked-enamel finish with manufacturer's custom paint, in color selected by DEN Project Manager].

First option in "Vertical Unit, Exposed Front Panels" and "Horizontal Unit, Exposed Bottom Panels" subparagraphs below is the equivalent of 16-gage steel; second option is the equivalent of 14-gage steel.

1. Vertical Unit, Exposed Front Panels: Minimum [0.0528-inch- (1.35-mm-)] [0.0677-inch- (1.7-mm-)] thick [galvanized] sheet steel, removable panels with channel-formed edges secured with tamperproof cam fasteners.
2. Horizontal Unit, Exposed Bottom Panels: Minimum [0.0528-inch- (1.35-mm-)] [0.0677-inch- (1.7-mm-)] thick [galvanized] sheet steel, removable panels secured with tamperproof cam fasteners and safety chain.

Retain "Recessed Flanges" Subparagraph below for units that are semirecessed or fully recessed in walls or ceilings.

3. Recessed Flanges: Steel, finished to match cabinet.
4. Control Access Door: Key operated.

Retain "Base" Subparagraph below for surface, vertical, wall-mounted units.

5. Base: Minimum 0.0528-inch- (1.35-mm-) thick steel, finished to match cabinet, [4 inches (100 mm)] [6 inches (150 mm)] <Insert dimension> high with leveling bolts.
6. Extended Piping Compartment: [8-inch- (200-mm-)] <Insert dimension> wide piping end pocket.

Accessories described in "False Back" and "Outdoor-Air Wall Box" subparagraphs below are furnished for vertical, wall-mounted units only.

7. False Back: Minimum 0.0428-inch- (1.1-mm-) thick steel, finished to match cabinet.
8. Outdoor-Air Wall Box: Minimum 0.1265-inch- (3.2-mm-) thick, aluminum, rain-resistant louver and box with integral eliminators and bird screen; aluminum louver with [anodized] [baked-enamel] finish in color selected by DEN Project Manager from manufacturer's [standard] [custom] colors.

Retain second or third option in "Outdoor-Air Damper" Subparagraph below if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, and Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1.

- a. Outdoor-Air Damper: Galvanized-steel blades with edge and end seals and nylon bearings; with [manual] [electronic] [pneumatic], two-position actuators.

2.7 FILTERS

Verify available filter types with manufacturer. Indicate filter thickness in "Capacities and Characteristics" Article or in the Cabinet Unit-Heater Schedule on Drawings.

- A. Minimum Arrestance: According to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.

Retain one or more of three subparagraphs below. If retaining more than one filter type, indicate type for each unit in the Cabinet Unit-Heater Schedule on Drawings.

1. Washable Foam: 70 percent arrestance and MERV 3.
2. Glass Fiber Treated with Adhesive: 80 percent arrestance and MERV 5.
3. Pleated: 90 percent arrestance and MERV 7.

2.8 COILS

Retain one of three coil paragraphs below.

- A. Hot-Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of 200 psig (1378 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain.

- B. Steam Coil: Copper[**distributing**] tube, with mechanically bonded aluminum fins spaced no closer than **0.1 inch** (2.5 mm) and rated for a minimum working pressure of **75 psig** (517 kPa).

Some manufacturers do not provide electric-resistance heating coils in downflow configuration.

- C. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and hum, mounted in ceramic inserts in galvanized-steel housing; with fuses in terminal box for overcurrent protection and limit controls for high-temperature protection. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.

2.9 CONTROLS

- A. Fan and Motor Board: Removable.

1. Fan: Forward curved, **high static**, double width, centrifugal, directly connected to motor; thermoplastic or painted-steel wheels and aluminum, painted-steel, or galvanized-steel fan scrolls.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, insert subparagraphs below to suit Project.

2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
3. Wiring Terminations: Connect motor to chassis wiring with plug connection.

Retain "Factory, Hot-Water Piping Package" Paragraph below to require factory-piping package.

- B. Factory, Hot-Water Piping Package: [**ASTM B 88, Type L** (ASTM B 88M, Type B)] [**ASTM B 88, Type M** (ASTM B 88M Type C)] copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.

Retain one or more of first four subparagraphs below.

1. [**Two**] [**Three**]-way, [**two-position**] [**modulating**] control valve. [**Three-way valve packages shall include bypass line with manually adjustable balance device.**]
2. Hose Kits: Minimum **400-psig** (2758-kPa) working pressure, and operating temperatures from **33 to 211 deg F** (0.5 to 99 deg C). Tag hose kits to equipment designations.
 - a. Length: [**24 inches** (600 mm)] [**36 inches** (900 mm)] **<Insert dimension>**.
 - b. Minimum Diameter: Equal to cabinet unit-heater connection size.
3. Two-Piece, Ball Valves: Bronze body with full-port, chrome-plated bronze ball; PTFE or TFE seats; and **600-psig** (4140-kPa) minimum CWP rating and blowout-proof stem.

4. Calibrated-Orifice Balancing Valves: Bronze body, ball type, **125-psig** (860-kPa) working pressure, **250 deg F** (121 deg C) maximum operating temperature; with calibrated orifice or venturi, connection for portable differential pressure meter with integral seals, threaded ends, and equipped with a memory stop to retain set position.
5. Automatic Flow-Control Valve: Brass or ferrous-metal body, **300-psig** (2068-kPa) working pressure at **250 deg F** (121 deg C), with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow within plus or minus 10 percent of differential pressure range of **2 to 80 psig** (13.8 to 552 kPa).
6. Y-Pattern, Hot-Water Strainers: Cast-iron body (ASTM A 126, Class B); **125-psig** (860-kPa) minimum working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum **NPS 1/2** (DN 15) threaded pipe and full-port ball valve in strainer drain connection.
7. Wrought-Copper Unions: ASME B16.22.

Retain first paragraph below and delete "Basic Unit Controls" Paragraph below if controls are part of overall temperature-control system.

- C. Control devices and operational sequences are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- D. Basic Unit Controls:
 1. Control voltage transformer.

Verify control features with manufacturer.

2. **[Wall]** **[Unit]**-mounted thermostat with the following features:
 - a. Heat-off switch.
 - b. Fan on-auto switch.

Retain first subparagraph below if multispeed motors are specified.

- c. Manual fan-speed switch.
- d. Adjustable deadband.
- e. **[Concealed]** **[Exposed]** set point.
- f. **[Concealed]** **[Exposed]** indication.
- g. **Deg F** (Deg C) indication.
3. **[Wall]** **[Unit]**-mounted temperature sensor.
4. Unoccupied period override push button.
5. Data entry and access port.
 - a. Input data includes room temperature and occupied and unoccupied periods.
 - b. Output data includes room temperature, supply-air temperature, entering-water temperature, operating mode, and status.

Retain "(DDC)Terminal Controller" Paragraph below and coordinate with "Basic Unit Controls" Paragraph above or with control devices specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

E. **[DDC]Terminal Controller:**

1. Scheduled Operation: Occupied and unoccupied periods on seven-day clock with a minimum of four programmable periods per day.
2. Unoccupied Period Override: **[Two]** <Insert number> hours.
3. Unit Supply-Air Fan Operations:
 - a. Occupied Periods: Fan runs continuously.
 - b. Unoccupied Periods: Fan cycles to maintain setback room temperature.
4. Heating-Coil Operations:
 - a. Occupied Periods: **[Open control valve] [Modulate control valve] [Energize electric-resistance coil]** to provide heating if room temperature falls below thermostat set point.
 - b. Unoccupied Periods: Start fan and **[open control valve] [modulate control valve] [energize electric-resistance coil]** if room temperature falls below setback temperature.

Retain "Outdoor-Air Damper Operation" Subparagraph below for automatic outdoor-air intake damper.

LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, and Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1.

5. Outdoor-Air Damper Operation:
 - a. Occupied Periods: Open dampers. Delay damper opening if room temperature is more than three degrees below set point.
 - b. Unoccupied Periods: Close damper.
6. Controller shall have volatile-memory backup.

F. Interface with DDC System for HVAC Requirements:

1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at central workstation.
3. Interface shall be **[BAC-net] [or] [LonWorks]** compatible for central DDC system for HVAC workstation and include the following functions:
 - a. Adjust set points.
 - b. Cabinet unit-heater start, stop, and operating status.
 - c. Data inquiry, including **[outdoor-air damper position and]**supply-air and room-air temperature.
 - d. Occupied and unoccupied schedules.

G. Electrical Connection: Factory-wired motors and controls for a single field connection.

2.10 CAPACITIES AND CHARACTERISTICS

If Project has more than one type or configuration of cabinet unit heater, delete this article and schedule cabinet unit heaters on Drawings.

A. Cabinet:

1. Vertical, Surface Mounted: Upflow.
 - a. Top: **[Flat] [Sloped] [Flat or sloped]**.
 - b. Air Inlet: **[Open bottom] [Front, punched louver] [Front, extruded-aluminum bar grille]**.
 - c. Air Outlet: **[Front] [Top] [Front or top], [quad louver] [punched louver] [extruded-aluminum bar grille]**.
2. Vertical, Surface Mounted: Downflow.
 - a. Top: **[Flat] [Sloped] [Flat or sloped]**.
 - b. Air Inlet: **[Front] [Top] [Front or top], [punched louver] [extruded-aluminum bar grille]**.
 - c. Air Outlet: **Front, [quad louver] [punched louver] [extruded-aluminum bar grille]**.
3. Vertical, Semirecessed: Upflow.
 - a. Air Inlet: **[Open bottom] [Front, punched louver] [Front, extruded-aluminum bar grille]**.
 - b. Air Outlet: **[Front] [Top] [Front or top], [quad louver] [punched louver] [extruded-aluminum bar grille]**.
4. Vertical, Semirecessed: Downflow.
 - a. Air Inlet: **[Front] [Top] [Front or top], [punched louver] [extruded-aluminum bar grille]**.
 - b. Air Outlet: **Front, [quad louver] [punched louver] [extruded-aluminum bar grille]**.
5. Vertical, Fully Recessed: **[Upflow] [Downflow]**.
 - a. Air Inlet: **[Front] [Duct connection], [punched louver] [extruded-aluminum bar grille]**.
 - b. Air Outlet: **[Front] [Duct connection], [quad louver] [punched louver] [extruded-aluminum bar grille]**.
6. Horizontal, Surface Mounted:
 - a. Air Inlet: **[Bottom] [Front] [Bottom or front], [punched louver] [extruded-aluminum bar grille]**.
 - b. Air Outlet: **[Front] [Top] [Front or top], [quad louver] [punched louver] [extruded-aluminum bar grille]**.

7. Horizontal, Semirecessed:
 - a. Air Inlet: **[Bottom] [Front] [Bottom or front], [punched louver] [extruded-aluminum bar grille].**
 - b. Air Outlet: **[Front] [Top] [Front or top], [quad louver] [punched louver] [extruded-aluminum bar grille].**
 8. Horizontal, Fully Recessed:
 - a. Air Inlet: **[Front] [Duct connection], [punched louver] [extruded-aluminum bar grille].**
 - b. Air Outlet: **[Front] [Duct connection], [quad louver] [punched louver] [extruded-aluminum bar grille].**
- B. Concealed Unit Heater:
1. Vertical: **[Upflow] [Downflow].**
 - a. Air Inlet: **[Open bottom] [Front, punched louver] [Front, extruded-aluminum bar grille].**
 - b. Air Outlet: **[Front] [Top] [Front or top], [quad louver] [punched louver] [extruded-aluminum bar grille].**
 2. Horizontal: Upflow.
 - a. Air Inlet: **[Open bottom] [Front, punched louver] [Front, extruded-aluminum bar grille].**
 - b. Air Outlet: **[Front] [Top] [Front or top], [quad louver] [punched louver] [extruded-aluminum bar grille].**
- C. Fan:
1. Airflow: **<Insert cfm (L/s)>.**
 2. External Static Pressure: **<Insert inches wg (Pa)>.**
 3. Fan Speed: **<Insert rpm>.**
 4. Motor Horsepower: **<Insert value>.**
- D. Heating Capacity:
1. Output: **<Insert Btu/h (kW)>.**
 2. Entering-Air Temperature: **<Insert deg F (deg C)>.**
 3. Air-Temperature Rise: **<Insert deg F (deg C)>.**
- E. Hot-Water Heating Coil:
1. Water Flow: **<Insert gpm (L/s)>.**
 2. Water-Side Pressure Loss: **<Insert feet wg (kPa)>.**
 3. Entering-Water Temperature: **<Insert deg F (deg C)>.**
- F. Steam Heating Coil:

1. Inlet Steam Pressure: <Insert psig (kPa)>.
 2. Condensing Capacity: <Insert lb/h (g/s)>.
- G. Electric-Resistance Heating Coil:
1. Capacity: <Insert kilowatts>.
 2. Number of Steps: <Insert number>.
- H. Filters:
1. Face Area: <Insert sq. ft. (sq. m)>.
 2. Thickness: [1/2 inch (13 mm)] [1 inch (25 mm)] <Insert dimension>.
- I. Electrical Characteristics for Single-Point Connection:
1. Volts: <Insert value>.
 2. Phase: <Insert value>.
 3. Hertz: <Insert value>.
 4. Full-Load Amperes: <Insert value>.
 5. Minimum Circuit Ampacity: <Insert value>.
 6. Maximum Overcurrent Protection: <Insert amperage>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive cabinet unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for [piping and]electrical connections to verify actual locations before unit-heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate to assure correct recess size for recessed units.

Retain first paragraph below for vertical, wall-mounted cabinet unit heaters with wall boxes and outdoor-air intake louvers.

- C. Install wall boxes in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."
- D. Install cabinet unit heaters to comply with NFPA 90A.

- E. Install equipment exposed to finished areas after walls and ceiling are finished and painted. Avoid damage to other materials.
- F. Protection: Provide finished cabinet units with protective covers during balance of construction.
- G. Suspend cabinet unit heaters from structure with elastomeric hangers[**and seismic restraints**]. Vibration isolators[**and seismic restraints**] are specified in [**Section 230548 "Vibration and Seismic Controls for HVAC."**] [**Section 230548.13 "Vibration Controls for HVAC."**]

Retain first paragraph below if controls are provided by unit-heater manufacturer. To comply with requirements of the Americans with Disabilities Act, verify mounting height with authorities having jurisdiction.

- H. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.
- I. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in Section 232113 "Hydronic Piping," Section 232116 Hydronic Piping Specialties," Section 232213 "Steam and Condensate Heating Piping," and Section 232216 Steam and Condensate Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to cabinet unit heater's factory, hot-water piping package. Install the piping package if shipped loose.

Retain first paragraph below for concealed cabinet unit heaters. Coordinate duct installation requirements with Drawings and with requirements specified in Section 233113 "Metal Ducts," Section 233116 "Nonmetal Ducts," and Section 233300 "Air Duct Accessories."

- D. Connect supply and return ducts to cabinet unit heaters with flexible duct connectors specified in Section 233300 "Air Duct Accessories."
- E. Unless otherwise indicated, install shutoff valve and union or flange at each connection.
- F. Install piping adjacent to machine to allow service and maintenance.

Retain first paragraph below for cabinet unit heaters with either hot-water or steam coils.

- G. Comply with safety requirements in UL 1995.

Retain first paragraph below for cabinet unit heaters if factory piping package is not required.

- H. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of cabinet unit heater. Hydronic specialties are specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties."

Retain first paragraph below for steam cabinet unit heaters.

- I. Unless otherwise indicated, install union and gate or ball valve on steam-supply connection and union, strainer, steam trap, and gate or ball valve on condensate-return connection of cabinet unit heater. Steam specialties are specified in Section 232216 Steam and Condensate Piping Specialties."
- J. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- K. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- L. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

Retain first subparagraph below for units that have electric-resistance heating coils.

2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- B. Units will be considered defective if they do not pass tests and inspections.
- C. Retest as specified above after repairs or replacements are made.
- D. Prepare test and inspection reports.

3.5 ADJUSTING

Retain this article if control devices are specified in this Section; delete if they are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

- A. Adjust initial temperature set points.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two]** <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.6 CLEANING

- A. After construction is completed, including painting, clean exposed surfaces of units. Vacuum clean coils and inside of cabinets.
- B. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.
- C. Install new filters.

3.7 DEMONSTRATION

Delete this article if factory-authorized service representative is not required.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain cabinet unit heaters.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238239.13
