

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain equipment.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 221429

SECTION 221513 - GENERAL-SERVICE COMPRESSED-AIR PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes piping and related specialties for general-service compressed-air systems operating at **200 psig** (1380 kPa) or less.
- B. Related Sections include the following:
 - 1. Section 221519 "General-Service Packaged Air Compressors and Receivers" for general-service air compressors and accessories.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. ABS: Acrylonitrile-butadiene-styrene plastic.
- B. CR: Chlorosulfonated polyethylene synthetic rubber.
- C. EPDM: Ethylene-propylene-diene terpolymer rubber.
- D. HDPE: High-density polyethylene plastic.
- E. NBR: Acrylonitrile-butadiene rubber.
- F. PE: Polyethylene plastic.
- G. PVC: Polyvinyl chloride plastic.
- H. High-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures between **150 and 200 psig** (1035 and 1380 kPa).
- I. Low-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures of **150 psig** (1035 kPa) or less.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Compressed-air piping and support and installation shall withstand effects of seismic events determined according to [**SEI/ASCE 7, "Minimum Design Loads for Buildings and Other Structures."**] <Insert applicable code requirement.>

1.5 ACTION SUBMITTALS

- A. Product Data: For the following:
1. Plastic pipes, fittings, and valves.
 2. Dielectric fittings.
 3. Flexible pipe connectors.
 4. Safety valves.
 5. Pressure regulators. Include rated capacities and operating characteristics.
 6. Automatic drain valves.
 7. Filters. Include rated capacities and operating characteristics.
 8. Lubricators. Include rated capacities and operating characteristics.
 9. Quick couplings.
 10. Hose assemblies.
 11. Include data substantiating that materials comply with requirements.
- B. Shop Drawings;
1. Indicate piping system schematic and connection requirements.
- C. Coordination Drawings:
1. Provide coordination drawings of piping and equipment, and coordinate locations of all piping and equipment with other trades and/or existing construction.

1.6 INFORMATIONAL SUBMITTALS

- A. [**Brazing**] [**Brazing and welding**] [**Welding**] certificates.
- B. Qualification Data: For Installers.
- C. Field quality-control test reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For general-service compressed-air piping specialties to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1. Record actual locations of pipe and connections to equipment and components. Modify shop drawings to indicate final locations.

1.8 QUALITY ASSURANCE

A. Installer Qualifications:

1. Extruded-Tee Outlet Procedure: Qualify operators according to training provided by T-DRILL Industries Inc., for making branch outlets.
2. Pressure-Seal Joining Procedure for Copper Tubing: Qualify operators according to training provided by Viega; Plumbing and Heating Systems.
3. Pressure-Seal Joining Procedure for Steel Piping. Qualify operators according to training provided by Victaulic Company.

B. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications," or to AWS B2.2, "Standard for Brazing Procedure and Performance Qualification."

C. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.

D. ASME Compliance:

1. Comply with ASME B31.1, "Power Piping," for high-pressure compressed-air piping.
2. Comply with ASME B31.9, "Building Services Piping," for low-pressure compressed-air piping.

1.9 PROJECT CONDITIONS

A. Interruption of Existing Compressed-Air Service: Do not interrupt compressed-air service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary compressed-air service according to requirements indicated:

1. Notify DEN Project Manager no fewer than **[seven (7)]** <Insert number> days in advance of proposed interruption of compressed-air service.
2. Do not proceed with interruption of compressed-air service without DEN Project Manager's written permission.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, protect and handle products under provisions of Section 220400 "Basic Plumbing Requirements" and Division 01

B. Protect piping and equipment from weather and construction traffic.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Schedule 40, Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade B, black or hot-dip zinc coated with ends threaded according to ASME B1.20.1.
1. Steel Nipples: ASTM A 733, made of ASTM A 53/A 53M or ASTM A 106, Schedule 40, galvanized seamless steel pipe. Include ends matching joining method.
 2. Malleable-Iron Fittings: ASME B16.3, Class 150 or 300, threaded.
 3. Malleable-Iron Unions: ASME B16.39, Class 150 or 300, threaded.
 4. Steel Flanges: ASME B16.5, Class 150 or 300, carbon steel, threaded.
 5. Wrought-Steel Butt-Welding Fittings: ASME B16.9, Schedule 40.
 6. Steel Flanges: ASME B16.5, Class 150 or 300, carbon steel.
 7. Grooved-End Fittings and Couplings:
 - a. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1) Anvil International, Inc.
 - 2) Star Pipe Products; Star Fittings Div.
 - 3) Victaulic Company.
 - 4) Ward Manufacturing, Inc.
 - 5) **<Insert manufacturer's name.>**
 - 6) or approved equal.
 - b. Grooved-End Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron casting; with grooves according to AWWA C606 and dimensions matching steel pipe.
 - c. Couplings: AWWA C606 or UL 213, for steel-pipe dimensions and rated for **300-psig (2070-kPa)** minimum working pressure. Include ferrous housing sections, gasket suitable for compressed air, and bolts and nuts. Provide EDPM gaskets for oil-free compressed air. Provide NBR gaskets if compressed air contains oil or oil vapor.
- B. Schedule 5, Steel Pipe: ASTM A 135, carbon steel with plain ends and zinc-plated finish.
1. Pressure-Seal Fittings: Listed and labeled by a qualified testing agency and FMG-approved, carbon-steel, pressure-seal housing with O-ring end seals suitable for compressed-air piping and rated for **300-psig (2070-kPa)** minimum

working pressure. Provide EDPM seals for oil-free compressed air. Provide NBR seals if compressed air contains oil or oil vapor.

a. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- 1) Victaulic Company.
- 2) **<Insert manufacturer's name.>**
- 3) or approved equal.

C. Copper Tube: [ASTM B 88, Type K or L (ASTM B 88M, Type A or B)] [and] [ASTM B 88, Type M (ASTM B 88M, Type C)] seamless, drawn-temper, water tube.

1. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, wrought copper with dimensions for brazed joints.

2. Cast-Copper-Alloy Flanges: ASME B16.24, Class 150 or 300.

3. Copper Unions: ASME B16.22 or MSS SP-123.

4. Press-Type Fittings, NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.

a. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- 1) Viega; Plumbing and Heating Systems.
- 2) **<Insert manufacturer's name.>**
- 3) or approved equal.

5. Press-Type Fittings, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.

a. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- 1) Viega; Plumbing and Heating Systems.
- 2) **<Insert manufacturer's name.>**
- 3) or approved equal.

6. Extruded-Tee Outlets: Procedure for making branch outlets in copper tube according to ASTM F 2014.

a. **Manufacturers: Subject to compliance with requirements, provide procedure according to one of the following:**

- 1) T-DRILL Industries Inc.
- 2) **<Insert manufacturer's name.>**
- 3) or approved equal.

7. Grooved-End Fittings and Couplings:

a. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- 1) Anvil International, Inc.
- 2) Victaulic Company.
- 3) **<Insert manufacturer's name.>**

- 4) or approved equal.
 - b. Grooved-End Fittings: **ASTM B 75** (ASTM B 75M), copper tube or ASTM B 584, bronze castings.
 - c. Couplings: Copper-tube dimensions and design similar to AWWA C606. Include ferrous housing sections, gasket suitable for compressed air, and bolts and nuts. Provide EDPM gasket for oil-free compressed air. Provide NBR gasket if compressed air contains oil or oil vapor.
- D. Transition Couplings for Metal Piping: Metal coupling or other manufactured fitting same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.
- E. PVC Pipe: ASTM D 1785, Schedule 40.
1. PVC Fittings: ASTM D 2466, Schedule 40, socket type.
- F. Blue ABS Piping System: Made of ASTM D 3965, ABS-resin modified to provide shatter-resistant pipe for compressed-air service. Pipe and fittings are light blue and sizes are in millimeters.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. IPEX Inc.
 - b. **<Insert manufacturer's name.>**
 - c. or approved equal.
 2. Transition Fittings, 20 to 63 mm: Composite union with ABS socket end, CR O-ring, and malleable-iron union nut and threaded end; with construction similar to MSS SP-107, transition union.
 3. Transition Fittings, 90 to 110 mm: Flange assembly with ABS flange, CR gasket, and metal flange of material matching piping to be connected.
 4. Valves, 20 to 63 mm: ABS union ball valve with socket ends.
 5. Valves, 90 to 110 mm: ABS butterfly valve with lever handle.
- G. Green ABS Piping System: Made of ASTM D 3965, ABS-resin modified to provide shatter-resistant pipe for compressed-air service. Pipe and fittings are dark green with SDR of 9.0 and same OD as ASTM A 53/A 53M, steel pipe.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. NIBCO INC.
 - b. **<Insert manufacturer's name.>**
 - c. or approved equal.
 2. Transition Fittings, **NPS 1/2 to NPS 2** (DN 15 to DN 50): Composite union with ABS socket end, CR O-ring, ABS union nut, and brass solder-joint end; with construction similar to MSS SP-107, transition union.
 3. Transition Fittings, **NPS 2-1/2 to NPS 4** (DN 65 to DN 100): ABS flange, CR gasket, and metal flange of material matching piping to be connected.

4. Valves, **NPS 1/2 to NPS 2 (DN 15 to DN 50)**: Union ball valve with socket ends.
 5. Valves, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: Union ball valve with flanged ends. Include safety exhaust feature in Part 3 "Valve Applications" Article if required.
- H. HDPE Piping System: Made of ASTM D 1248, HDPE resin to provide shatter-resistant pipe for compressed-air service. Pipe and fittings are dark blue with pipe dimensions about the same OD as ASTM D 3035, PE pipe.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Asahi/America.
 - b. **<Insert manufacturer's name.>**
 - c. or approved equal.
 2. Transition Fittings, **NPS 1/2 to NPS 2 (DN 15 to DN 50)**: HDPE adapter with one socket end and one end with threaded brass insert.
 3. Transition Fittings, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: HDPE flange, CR gasket, and metal flange of material matching piping to be connected.
 4. Valves, **NPS 1/2 to NPS 3 (DN 15 to DN 80)**: HDPE union ball valve with socket ends.

2.2 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for compressed-air piping system contents.
1. ASME B16.21, nonmetallic, flat, asbestos free, **1/8-inch (3.2-mm)** maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated.
- F. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- G. Solvent Cements for Joining Plastic Piping:
1. ABS Piping: ASTM D 2235.
 2. PVC Piping: ASTM D 2564. Include primer complying with ASTM F 656.

2.3 VALVES

- A. Metal Ball, Butterfly, Check, Gate, and Globe Valves: Comply with requirements in Section 220523 "General-Duty Valves for Plumbing Piping."
- B. General: Minimum rated pressure to be 200 PSI WOG at 200 degrees F.
- C. Gate Valves: Bronze body, bronze trim, **[non-rising]** **[rising]** stem, handwheel, inside screw, single wedge or disc, **[solder]** **[or]** **[threaded]** ends.
- D. Ball Valves: **[Bronze]** **[Stainless steel]** **[one]** **[two]** piece body, **[stainless]** **[chrome plated]** steel ball, teflon seats and stuffing box ring, lever handle **[solder]** **[or]** **[threaded]** ends **[with union.]**
- E. Swing Check Valves: Bronze swing disc, **[solder]** **[or]** **[screwed]** ends.
- F. Air Outlets: Quick Connector: **[3/8]** **[1/4]** inch brass, snap on connector with self closing valve.
- G. Pressure Reducing Valve:
 - 1. Pressure Reducing Station: Consisting of automatic reducing valve and bypass, and low pressure side relief valve and gage. Provide oil separator where indicated. Provide inlet and outlet shut-off valves, and globe or plug valve in bypass piping.
 - 2. Valve Capacity: Reduce pressure from 200 psi to 30 psi, adjustable upwards from reduced pressure.

2.4 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric fittings designed to effectively separate dissimilar metals exposed to water or other electrolytes, conforming to NSF and ASTM F492 standards for continuous use at temperatures up to 225 degrees F and pressures up to 300 psi. Fittings to have electro-zinc-plated steel casings providing for maintained exterior electrical continuity, threaded or flanged ends as applicable, and inert linings.
- C. Dielectric Unions:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Hart Industries International, Inc.
 - d. Jomar International Ltd.
 - e. Matco-Norca, Inc.

- f. McDonald, A. Y. Mfg. Co.
- g. Perfection Corporation.
- h. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- i. Wilkins; a Zurn company.
- j. **<Insert manufacturer's name>**.
- k. or approved equal.

2. Description:

- a. Standard: ASSE 1079.
- b. Pressure Rating: [125 psig (860 kPa) **minimum at 180 deg F (82 deg C)**] [150 psig (1035 kPa)] [250 psig (1725 kPa)].
- c. End Connections: Solder-joint copper alloy and threaded ferrous.

D. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Capitol Manufacturing Company.
- b. Central Plastics Company.
- c. Matco-Norca, Inc.
- d. Perfection Corporation.
- e. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- f. Wilkins; a Zurn company.
- g. **<Insert manufacturer's name>**.
- h. or approved equal.

2. Description:

- a. Standard: ASSE 1079.
- b. Factory-fabricated, bolted, companion-flange assembly.
- c. Pressure Rating: [125 psig (860 kPa) **minimum at 180 deg F (82 deg C)**] [150 psig (1035 kPa)] [175 psig (1200 kPa)] [300 psig (2070 kPa)].
- d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

E. Dielectric-Flange Insulating Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Advance Products & Systems, Inc.
- b. Calpico, Inc.
- c. Central Plastics Company.
- d. Perfection Corporation.
- e. Pipeline Seal and Insulator, Inc.
- f. **<Insert manufacturer's name>**.
- g. or approved equal.

2. Description:
 - a. Nonconducting materials for field assembly of companion flanges.
 - b. Pressure Rating: [150 psig (1035 kPa)] <Insert pressure>.
 - c. Gasket: Neoprene or phenolic.
 - d. Bolt Sleeves: Phenolic or polyethylene.
 - e. Washers: Phenolic with steel backing washers.

2.5 FLEXIBLE PIPE CONNECTORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Flex-Hose Co., Inc.
2. Flexicraft Industries.
3. Hyspan Precision Products, Inc.
4. Mercer Rubber Co.
5. Metraflex, Inc.
6. Proco Products, Inc.
7. Unaflex, Inc.
8. Universal Metal Hose; a Hyspan Company
9. <Insert manufacturer's name.>
10. or approved equal.

B. Bronze-Hose Flexible Pipe Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.

1. Working-Pressure Rating: [200 psig (1380 kPa)] [250 psig (1725 kPa)] minimum.
2. End Connections, NPS 2 (DN 50) and Smaller: Threaded copper pipe or plain-end copper tube.
3. End Connections, NPS 2-1/2 (DN 65) and Larger: Flanged copper alloy.

C. Stainless-Steel-Hose Flexible Pipe Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.

1. Working-Pressure Rating: [200 psig (1380 kPa)] [250 psig (1725 kPa)] minimum.
2. End Connections, NPS 2 (DN 50) and Smaller: Threaded steel pipe nipple.
3. End Connections, NPS 2-1/2 (DN 65) and Larger: Flanged steel nipple.

2.6 SPECIALTIES

A. Safety Valves: ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," construction; National Board certified, labeled, and factory sealed; constructed of bronze body with poppet-type safety valve for compressed-air service.

1. Pressure Settings: Higher than discharge pressure and same or lower than receiver pressure rating.

- B. Air-Main Pressure Regulators: Bronze body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for [250-psig (1725-kPa)] <Insert pressure> inlet pressure, unless otherwise indicated.
1. Type: Pilot operated.
- C. Air-Line Pressure Regulators: [Diaphragm] [Diaphragm or pilot] [Pilot] operated, bronze body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for [200-psig (1380-kPa)] <Insert pressure> minimum inlet pressure, unless otherwise indicated.
- D. Air-Line Pressure Regulators: Diaphragm operated, aluminum alloy or plastic body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for [200-psig (1380-kPa)] <Insert pressure> minimum inlet pressure, unless otherwise indicated.
- E. Automatic Drain Valves: Stainless-steel body and internal parts, rated for [200-psig (1380-kPa)] <Insert pressure> minimum working pressure, capable of automatic discharge of collected condensate. [**Include mounting bracket if wall mounting is indicated.**]
- F. Coalescing Filters: Coalescing type with activated carbon capable of removing water and oil aerosols; with color-change dye to indicate when carbon is saturated and warning light to indicate when selected maximum pressure drop has been exceeded. [**Include mounting bracket if wall mounting is indicated.**]
- G. Mechanical Filters: Two-stage, mechanical-separation-type, air-line filters. Equip with deflector plates, resin-impregnated-ribbon-type filters with edge filtration, and drain cock. [**Include mounting bracket if wall mounting is indicated.**]
- H. Air-Line Lubricators: With drip chamber and sight dome for observing oil drop entering air stream; with oil-feed adjustment screw and quick-release collar for easy bowl removal. [**Include mounting bracket if wall mounting is indicated.**]
1. Provide with automatic feed device for supplying oil to lubricator.

2.7 QUICK COUPLINGS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
1. Aeroquip Corporation; Eaton Corp.
 2. Bowes Manufacturing Inc.
 3. Foster Manufacturing, Inc.
 4. Milton Industries, Inc.
 5. Parker Hannifin Corp.; Fluid Connectors Group; Quick Coupling Div.
 6. Rectus Corp.
 7. Schrader-Bridgeport; Amflo Div. Schrader-Bridgeport/Standard Thomson.
 8. Snap-Tite, Inc.; Quick Disconnect & Valve Division.

9. TOMCO Products Inc.
 10. Tuthill Corporation; Hansen Coupling Div.
 11. **<Insert manufacturer's name.>**
 12. or approved equal.
- B. General Requirements for Quick Couplings: Assembly with locking-mechanism feature for quick connection and disconnection of compressed-air hose.
- C. Automatic-Shutoff Quick Couplings: Straight-through brass body with O-ring or gasket seal and stainless-steel or nickel-plated-steel operating parts.
1. Socket End: With one-way valve and threaded inlet for connection to piping or threaded hose fitting.
 2. Plug End: **[Flow-sensor-bleeder, check-valve] [Straight-through]** type with barbed outlet for attaching hose.
- D. Valveless Quick Couplings: Straight-through brass body with stainless-steel or nickel-plated-steel operating parts.
1. Socket End: With O-ring or gasket seal, without valve, and with barbed inlet for attaching hose.
 2. Plug End: With barbed outlet for attaching hose.

2.8 HOSE ASSEMBLIES

- A. Description: Compatible hose, clamps, couplings, and splicers suitable for compressed-air service, of nominal diameter indicated, and rated for **[300-psig (2070-kPa)]** **<Insert pressure>** minimum working pressure, unless otherwise indicated.
1. Hose: Reinforced **[single] [single- or double] [double]**-wire-braid, CR-covered hose for compressed-air service.
 2. Hose Clamps: Stainless-steel clamps or bands.
 3. Hose Couplings: Two-piece, straight-through, threaded brass or stainless-steel O-ring or gasket-seal swivel coupling with barbed ends for connecting two sections of hose.
 4. Hose Splicers: One-piece, straight-through brass or stainless-steel fitting with barbed ends for connecting two sections of hose.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Compressed-Air Piping between Air Compressors and Receivers: Use **[one of]** the following piping materials for each size range:
1. **[NPS 2 (DN 50)]** **<Insert pipe size>** and Smaller: Schedule 40, **[black] [galvanized]**-steel pipe; threaded, malleable-iron fittings; and threaded joints.

2. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Schedule 5, galvanized-steel pipe; pressure-seal fittings; and pressure-sealed joints.
 3. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.
 4. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed joints.
 5. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Schedule 40, [black] [galvanized]-steel pipe; threaded, malleable-iron fittings; and threaded joints.
 6. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Schedule 40, [black] [galvanized]-steel pipe; grooved-end fittings; couplings; and grooved joints.
 7. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.
 8. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed joints.
 9. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Type K or L (Type A or B), copper tube; grooved-end copper fittings; couplings; and grooved joints.
 10. [NPS 5 (DN 125)] <Insert pipe size> and Larger: Schedule 40, [black] [galvanized]-steel pipe; threaded, malleable-iron fittings; and threaded joints.
 11. [NPS 5 (DN 125)] <Insert pipe size> and Larger: Schedule 40, [black] [galvanized]-steel pipe; grooved-end fittings; couplings; and grooved joints.
 12. [NPS 5 (DN 125)] <Insert pipe size> and Larger: Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.
 13. [NPS 5 (DN 125)] <Insert pipe size> and Larger: Grooved-end, Type K or L (ASTM B 88M Type A or B), copper tube; grooved-end copper fittings; couplings; and grooved joints.
- B. Low-Pressure Compressed-Air Distribution Piping: Use [one of] the following piping materials for each size range:
1. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Schedule 40, [black] [galvanized]-steel pipe; threaded, malleable-iron fittings; and threaded joints.
 2. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Schedule 5, galvanized-steel pipe; pressure-seal fittings; and pressure-sealed joints.
 3. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed [or soldered] joints.
 4. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Type K or L (Type A or B), copper tube; press-type fittings; and pressure-sealed joints.
 5. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: 63-mm and smaller, blue ABS pipe and fittings; transition fittings; valves; and solvent-cemented joints.
 6. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Green ABS pipe and fittings, transition fittings, and valves; and solvent-cemented joints.
 7. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: HDPE pipe, fittings, and valves; and heat-fusion joints.
 8. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Schedule 40, [black] [galvanized]-steel pipe; threaded, malleable-iron fittings; and threaded joints.

9. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Schedule 40, **[black] [galvanized]**-steel pipe; grooved-end fittings; couplings; and grooved joints.
 10. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed[**or soldered**] joints.
 11. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Type K or L (Type A or B), copper tube; grooved-end copper fittings; couplings; and grooved joints.
 12. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Type K or L (Type A or B), copper tube; press-type fittings; and pressure-sealed joints.
 13. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: 90- and 110-mm, blue ABS pipe and fittings; transition fittings; and solvent-cemented joints. Include butterfly valves and flanged joints.
 14. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: NPS 3 and NPS 4 (DN 80 and DN 100), green ABS pipe and fittings; transition fittings; and solvent-cemented joints. Include ball valves and flanged joints.
 15. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: NPS 3 and NPS 4 (DN 80 and DN 100), HDPE pipe and fittings; valves; and heat-fusion joints.
 16. [NPS 5 and NPS 6 (DN 125 and DN 150)] <Insert pipe size range>: Schedule 40, **[black] [galvanized]**-steel pipe; threaded, malleable-iron fittings; and threaded joints.
 17. [NPS 5 (DN 125)] <Insert pipe size> and Larger: Schedule 40, **[black] [galvanized]**-steel pipe; grooved-end fittings; couplings; and grooved joints.
 18. [NPS 5 to NPS 8 (DN 125 to DN 200)] <Insert pipe size range>: Type K or L (Type A or B), copper tube; grooved-end copper fittings; couplings; and grooved joints.
- C. High-Pressure Compressed-Air Distribution Piping: Use[**one of**] the following piping materials for each size range:
1. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Schedule 40, **[black] [galvanized]**-steel pipe; threaded, malleable-iron fittings; and threaded joints.
 2. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Schedule 5, galvanized-steel pipe; pressure-seal fittings; and pressure-sealed joints.
 3. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.
 4. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed[**or soldered**] joints.
 5. [NPS 2-1/2 to NPS 6 (DN 65 to DN 150)] <Insert pipe size range>: Schedule 40, **[black] [galvanized]**-steel pipe; threaded, malleable-iron fittings; and threaded joints.
 6. [NPS 2-1/2 to NPS 6 (DN 65 to DN 150)] <Insert pipe size range>: Schedule 40, **[black] [galvanized]**-steel pipe; grooved-end fittings; couplings; and grooved joints.
 7. [NPS 2-1/2 to NPS 6 (DN 65 to DN 150)] <Insert pipe size range>: Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.
 8. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed[**or soldered**] joints.

9. [NPS 2-1/2 to NPS 6 (DN 65 to DN 150)] <Insert pipe size range>: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed joints.
10. [NPS 2-1/2 to NPS 6 (DN 65 to DN 150)] <Insert pipe size range>: Type K or L (Type A or B), copper tube; grooved-end copper fittings; couplings; and grooved joints.
11. [NPS 8 (DN 200)] <Insert pipe size> and Larger: Schedule 40, [black] [galvanized]-steel pipe; grooved-end fittings; couplings; and grooved joints.
12. [NPS 8 (DN 200)] <Insert pipe size> and Larger: Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.
13. [NPS 8 (DN 200)] <Insert pipe size>: Type K or L (Type A or B), copper tube; grooved-end copper fittings; couplings; and grooved joints.

D. Drain Piping: Use[**one of**] the following piping materials:

1. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Type M (Type C) copper tube; wrought-copper fittings; and brazed or soldered joints.
2. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: PVC pipe and fittings; and solvent-cemented joints.

3.2 VALVE APPLICATIONS

A. General-Duty Valves: Comply with requirements in Section 220523 "General-Duty Valves for Plumbing Piping" for metal general-duty valves. Use metal valves, unless otherwise indicated.

1. Metal General-Duty Valves: Use valve types specified in "Valve Applications" Article in Section 220523 "General-Duty Valves for Plumbing Piping" according to the following:
 - a. Low-Pressure Compressed Air: Valve types specified for low-pressure compressed air.
 - b. High-Pressure Compressed Air: Valve types specified for medium-pressure compressed air.
 - c. Equipment Isolation NPS 2 (DN 50) and Smaller: Safety-exhaust, copper-alloy ball valve with exhaust vent and pressure rating at least as great as piping system operating pressure.
 - d. Grooved-end valves may be used with grooved-end piping and grooved joints.
2. Plastic General-Duty Valves: Provide valves, made by piping manufacturer, that are compatible with piping. Do not use plastic valves between air compressors and receivers.
 - a. Blue ABS Piping System: Ball and butterfly valves.
 - b. Green ABS Piping System: Ball valves.
 - c. HDPE Piping System: Ball valves.

3.3 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping concealed from view and protected from physical contact by building occupants, unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited, unless otherwise indicated.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.
- E. Install piping adjacent to equipment and machines to allow service and maintenance.
- F. Install air and drain piping with 1 percent slope downward in direction of flow.
- G. Install nipples, flanges, unions, transition and special fittings, and valves with pressure ratings same as or higher than system pressure rating, unless otherwise indicated.
- H. Equipment and Specialty Flanged Connections:
 - 1. Use steel companion flange with gasket for connection to steel pipe.
 - 2. Use cast-copper-alloy companion flange with gasket and brazed[**or soldered**] joint for connection to copper tube. Do not use soldered joints for connection to air compressors or to equipment or machines producing shock or vibration.
- I. Flanged joints may be used instead of specified joint for any piping or tubing system.
- J. Extended-tee outlets with brazed branch connection may be used for copper tubing, within extruded-tee connection diameter to run tube diameter ratio for tube type, according to Extruded Tee Connections Sizes and Wall Thickness for Copper Tube (Inches) Table in ASTM F 2014.
- K. Install eccentric reducers where compressed-air piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.
- L. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.
- M. Install thermometer and pressure gage on discharge piping from each air compressor and on each receiver. Comply with requirements in Section 220519 "Meters and Gages for Plumbing Piping."
- N. Install piping to permit valve servicing.

- O. Install piping free of sags and bends.
- P. Install fittings for changes in direction and branch connections.
- Q. Install seismic restraints on piping. Seismic-restraint devices are specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- R. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- S. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- T. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."
- U. Make air cock and drain connection on horizontal casing.
- V. Connect condensate drains to nearest floor drain.
- W. Install valved bypass around air dryer. Factory insulate inlet and outlet connections.
- X. Install valved drip connections at low points of piping system.
- Y. Install take offs to outlets from top of main, with shut off valve after take off. Slope take off piping to outlets.
- Z. Install compressed air couplings, female quick connectors, and pressure gages where outlets are indicated.
- AA. Install tees instead of elbows at changes in direction of piping. Fit open end of each tee with plug.
- BB. Identify piping system and components. Refer to Section 220553 "Identification for Plumbing Piping and Equipment".

3.4 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints for Steel Piping: Join according to AWS D10.12/D10.12M.
- E. Brazed Joints for Copper Tubing: Join according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
- F. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Join according to ASTM B 828 or CDA's "Copper Tube Handbook."
- G. Extruded-Tee Outlets for Copper Tubing: Form branches according to ASTM F 2014, with tools recommended by procedure manufacturer, and using operators qualified according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Use asbestos-free, nonmetallic gasket suitable for compressed air. Join flanges with gasket and bolts according to ASME B31.9 for bolting procedure.
- I. Grooved Joints: Assemble couplings with housing, gasket, lubricant, and bolts. Join according to AWWA C606 for grooved joints. Do not apply lubricant to prelubricated gaskets.
- J. Heat-Fusion Joints for PE Piping: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657 for socket-fusion joints.
- K. Pressure-Sealed Joints: Join with tools recommended by fitting manufacturer, using operators qualified according to Part 1 "Quality Assurance" Article.
- L. Solvent-Cemented Joints for ABS Piping: Clean and dry joining surfaces. Join according to the following:
1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 2. Join according to ASME B31.9 for solvent-cemented joints and to ASTM D 2235 Appendix.
- M. Solvent-Cemented Joints for PVC Piping: Clean and dry joining surfaces. Join according to the following:
1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 2. Apply primer and join according to ASME B31.9 for solvent-cemented joints and to ASTM D 2672.
- N. Dissimilar Metal Piping Material Joints: Use dielectric fittings.

3.5 VALVE INSTALLATION

- A. General-Duty Valves: Comply with requirements in Section 220523 "General-Duty Valves for Plumbing Piping."
- B. Install shutoff valves and unions or flanged joints at compressed-air piping to air compressors.
- C. Install shutoff valve at inlet to each automatic drain valve, filter, lubricator, and pressure regulator.
- D. Install check valves to maintain correct direction of compressed-air flow to and from compressed-air piping specialties and equipment.
- E. Install line size gate valve and check valve on compressor discharge.

3.6 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Use dielectric unions.
- C. [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Use dielectric flanges.
- D. [NPS 5 (DN 125)] <Insert pipe size>and Larger: Use dielectric flange kits.

3.7 FLEXIBLE PIPE CONNECTOR INSTALLATION

- A. Install flexible pipe connectors in discharge piping[**and in inlet air piping from remote air-inlet filter**] of each air compressor.
- B. Install bronze-hose flexible pipe connectors in copper compressed-air tubing.
- C. Install stainless-steel-hose flexible pipe connectors in steel compressed-air piping.

3.8 SPECIALTY INSTALLATION

- A. Install safety valves on receivers in quantity and size to relieve at least the capacity of connected air compressors.
- B. Install air-main pressure regulators in compressed-air piping at or near air compressors.
- C. Install air-line pressure regulators in branch piping to equipment[**and tools**].
- D. Install automatic drain valves on aftercoolers, receivers, and dryers. Discharge condensate onto nearest floor drain.

- E. Install coalescing filters in compressed-air piping at or near air compressors and upstream from mechanical filters. [**Mount on wall at locations indicated.**]
- F. Install mechanical filters in compressed-air piping at or near air compressors and downstream from coalescing filters. [**Mount on wall at locations indicated.**]
- G. Install air-line lubricators in branch piping to machine tools. [**Mount on wall at locations indicated.**]
- H. Install quick couplings at piping terminals for hose connections.
- I. Install hose assemblies at hose connections.

3.9 CONNECTIONS

- A. Install unions, in piping **NPS 2 (DN 50)** and smaller, adjacent to each valve and at final connection to each piece of equipment and machine.
- B. Install flanges, in piping **NPS 2-1/2 (DN 65)** and larger, adjacent to flanged valves and at final connection to each piece of equipment and machine.

3.10 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment" for seismic-restraint devices.
- B. Comply with requirements in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support devices.
- C. Vertical Piping: MSS Type 8 or 42, clamps.
- D. Individual, Straight, Horizontal Piping Runs:
 - 1. **100 Feet (30 m)** or Less: MSS Type 1, adjustable, steel clevis hangers.
 - 2. Longer Than **100 Feet (30 m)**: MSS Type 43, adjustable roller hangers.
- E. Multiple, Straight, Horizontal Piping Runs **100 Feet (30 m)** or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
- F. Base of Vertical Piping: MSS Type 52, spring hangers.
- G. Support horizontal piping within [**12 inches (300 mm)**] **<Insert dimension>** of each fitting and coupling.
- H. Rod diameter may be reduced 1 size for double-rod hangers, with **3/8-inch (10-mm)** minimum rods.
- I. Install hangers for Schedule 40, steel piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1/4 to NPS 1/2 (DN 8 to DN 15): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 2. NPS 3/4 to NPS 1-1/4 (DN 20 to DN 32): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
 3. NPS 1-1/2 (DN 40): 12 feet (3.7 m) with 3/8-inch (10-mm) rod.
 4. NPS 2 (DN 50): 13 feet (4 m) with 3/8-inch (10-mm) rod.
 5. NPS 2-1/2 (DN 65): 14 feet (4.3 m) with 1/2-inch (13-mm) rod.
 6. NPS 3 (DN 80): 15 feet (4.6 m) with 1/2-inch (13-mm) rod.
 7. NPS 3-1/2 (DN 90): 16 feet (4.9 m) with 1/2-inch (13-mm) rod.
 8. NPS 4 (DN 100): 17 feet (5.2 m) with 5/8-inch (16-mm) rod.
 9. NPS 5 (DN 125): 19 feet (5.8 m) with 5/8-inch (16-mm) rod.
 10. NPS 6 (DN 150): 21 feet (6.4 m) with 3/4-inch (19-mm) rod.
 11. NPS 8 (DN 200): 24 feet (7.3 m) with 3/4-inch (19-mm) rod.
 12. NPS 10 (DN 250): 26 feet (7.9 m) with 7/8-inch (22-mm) rod.
 13. NPS 12 (DN 300): 30 feet (9.1 m) with 7/8-inch (22-mm) rod.
- J. Install supports for vertical, Schedule 40, steel piping every 15 feet (4.6 m).
- K. Install hangers for Schedule 5, steel piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1/2 (DN 15): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 2. NPS 3/4 (DN 20): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
 3. NPS 1 (DN 25): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 4. NPS 1-1/4 (DN 32): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
 5. NPS 1-1/2 (DN 40): 10 feet (3 m) with 3/8-inch (10-mm) rod.
 6. NPS 2 (DN 50): 11 feet (3.4 m) with 3/8-inch (10-mm) rod.
- L. Install supports for vertical, Schedule 5, steel piping every 10 feet (3 m).
- M. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1/4 (DN 8): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 2. NPS 3/8 and NPS 1/2 (DN 10 and DN 15): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 3. NPS 3/4 (DN 20): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
 4. NPS 1 (DN 25): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 5. NPS 1-1/4 (DN 32): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
 6. NPS 1-1/2 (DN 40): 10 feet (3 m) with 3/8-inch (10-mm) rod.
 7. NPS 2 (DN 50): 11 feet (3.4 m) with 3/8-inch (10-mm) rod.
 8. NPS 2-1/2 (DN 65): 13 feet (4 m) with 1/2-inch (13-mm) rod.
 9. NPS 3 (DN 80): 14 feet (4.3 m) with 1/2-inch (13-mm) rod.
 10. NPS 3-1/2 (DN 90): 15 feet (4.6 m) with 1/2-inch (13-mm) rod.
 11. NPS 4 (DN 100): 16 feet (4.9 m) with 1/2-inch (13-mm) rod.
 12. NPS 5 (DN 125): 18 feet (5.5 m) with 1/2-inch (13-mm) rod.
 13. NPS 6 (DN 150): 20 feet (6 m) with 5/8-inch (16-mm) rod.
 14. NPS 8 (DN 200): 23 feet (7 m) with 3/4-inch (19-mm) rod.
- N. Install supports for vertical copper tubing every 10 feet (3 m).

- O. Install vinyl-coated hangers for ABS piping with the following maximum horizontal spacing and minimum rod diameters:
1. All Sizes: Install continuous support for piping with compressed air at normal operating temperature above [100 deg F (38 deg C)] **<Insert temperature>**.
 2. NPS 3/8 and NPS 1/2 (DN 10 and DN 15): 30 inches (760 mm) with 3/8-inch (10-mm) rod.
 3. NPS 3/4 (DN 20): 38 inches (975 mm) with 3/8-inch (10-mm) rod.
 4. NPS 1 (DN 25): 40 inches (1015 mm) with 3/8-inch (10-mm) rod.
 5. NPS 1-1/4 (DN 32): 45 inches (1140 mm) with 3/8-inch (10-mm) rod.
 6. NPS 1-1/2 (DN 40): 52 inches (1330 mm) with 3/8-inch (10-mm) rod.
 7. NPS 2 (DN 50): 58 inches (1470 mm) with 3/8-inch (10-mm) rod.
 8. NPS 3 (DN 80): 68 inches (1730 mm) with 1/2-inch (13-mm) rod.
 9. NPS 4 (DN 100): 76 inches (1900 mm) with 1/2-inch (13-mm) rod.
- P. Install supports for vertical ABS piping every 48 inches (1220 mm).
- Q. Install vinyl-coated hangers for HDPE piping with the following maximum horizontal spacing and minimum rod diameters:
1. All Sizes: Install continuous support for piping with compressed air at normal operating temperature above [100 deg F (38 deg C)] **<Insert temperature>**.
 2. NPS 1/2 (DN 15): 30 inches (760 mm) with 3/8-inch (10-mm) rod.
 3. NPS 3/4 (DN 20): 35 inches (890 mm) with 3/8-inch (10-mm) rod.
 4. NPS 1 (DN 25): 40 inches (1015 mm) with 3/8-inch (10-mm) rod.
 5. NPS 1-1/4 (DN 32): 43 inches (1090 mm) with 3/8-inch (10-mm) rod.
 6. NPS 1-1/2 (DN 40): 49 inches (1245 mm) with 3/8-inch (10-mm) rod.
 7. NPS 2 (DN 50): 55 inches (1400 mm) with 3/8-inch (10-mm) rod.
 8. NPS 3 and NPS 4 (DN 80 and DN 100): 96 inches (2440 mm) with 1/2-inch (13-mm) rod.
- R. Install supports for vertical HDPE piping every 48 inches (1220 mm).

3.11 LABELING AND IDENTIFICATION

- A. Install identifying labels and devices for general-service compressed-air piping, valves, and specialties. Comply with requirements in Section 220553 "Identification for Plumbing Piping and Equipment."

3.12 FIELD QUALITY CONTROL

- A. Perform field tests and inspections.
- B. Tests and Inspections:
1. Piping Leak Tests for Metal Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen to pressure of 50 psig (345 kPa) above system

- operating pressure, but not less than [150 psig (1035 kPa)] **<Insert pressure>**. Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
2. Piping Leak Tests for ABS Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen, at temperature of 110 deg F (43 deg C) or less, to pressure of [40 psig (275 kPa)] **<Insert pressure>** above system operating pressure, but not less than [80 psig (550 kPa)] [100 psig (690 kPa)] **<Insert pressure>** or more than 120 psig (825 kPa). Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
 3. Piping Leak Tests for HDPE Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen, at temperature of 100 deg F (38 deg C) or less, to pressure of [40 psig (275 kPa)] **<Insert pressure>** above system operating pressure, but not less than [100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] **<Insert pressure>** or more than 180 psig (1240 kPa). Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
 4. Repair leaks and retest until no leaks exist.
 5. Inspect [filters] [lubricators] [and] [pressure regulators] for proper operation.
- C. Repair or replace compressed air piping as required to eliminate leaks, and retest to demonstrate compliance.
 - D. Cap (seal) ends of piping when not connected to mechanical equipment.
 - E. Prepare test reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 221513

SECTION 221519 - GENERAL-SERVICE PACKAGED AIR COMPRESSORS AND RECEIVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Lubricated, reciprocating air compressors.
 - 2. Oil-free, reciprocating air compressors.
 - 3. Oilless, reciprocating air compressors.
 - 4. Oil-free, rotary-screw air compressors.
 - 5. Oil-flooded, rotary-screw air compressors.
 - 6. Oil-free, rotary, sliding-vane air compressors.
 - 7. Oil-sealed, rotary, sliding-vane air compressors.
 - 8. Inlet-air filters.
 - 9. Air-cooled, compressed-air aftercoolers.
 - 10. Water-cooled, compressed-air aftercoolers.
 - 11. Refrigerant compressed-air dryers.
 - 12. Desiccant compressed-air dryers.
 - 13. Computer interface cabinet.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Actual Air: Air delivered from air compressors. Flow rate is delivered compressed air measured in **acfm** (actual L/s).
- B. Standard Air: Free air at **68 deg F** (20 deg C) and **1 atmosphere** (29.92 in. Hg) before compression or expansion and measured in **scfm** (standard L/s).

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Provide manufacturers catalog literature with capacity, weight, and connection requirements.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Include data substantiating that materials comply with requirements.

B. Shop Drawings:

1. Include diagrams for power, signal, and control wiring. Indicate electrical characteristics and connection requirements.

C. Delegated-Design Submittal: For compressed-air equipment mounting.

1. Detail fabrication and assembly of supports.
2. Include design calculations for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.5 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For compressed-air equipment, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Provide certificate of compliance from [**authority having jurisdiction**] <Insert **authority**> indicating approval of air receiver.
3. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
4. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For compressed-air equipment to include in emergency, operation, and maintenance manuals.

B. Test Reports: Submit inspector's certificate for air receiver for inclusion in Operating and Maintenance Manuals.

C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

D. Record actual locations of equipment and components. Modify shop drawings to indicate final locations.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Air-Compressor, Inlet-Air-Filter Elements: Equal to **<Insert number>** percent of amount installed, but no fewer than **<Insert number>** units.
 - 2. Belts: **[One] [Two] <Insert number>** for each belt-driven compressor.
 - 3. Provide **[two (2)] <Insert amount>** quart containers of compressor oil.

1.8 FIELD CONDITIONS

- A. Interruption of Existing Compressed-Air Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 - 1. Notify DEN Project Manager no fewer than **[seven (7)] <Insert number>** days in advance of proposed interruption of compressed-air service.
 - 2. Do not proceed with interruption of compressed-air service without DEN Project Manager's written permission.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect and handle products under provisions of Section 220400 "Basic Plumbing Requirements" and Division 01
- B. Accept air compressors, refrigerated air dryer on site in factory fabricated containers with shipping skids and plastic pipe end protectors in place. Inspect for damage.
- C. Protect piping and equipment from weather and construction traffic.

1.11 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 220400 "Basic Plumbing Requirements".
- B. Provide minimum five (5) year warranty for air compressors.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419

"Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label receivers to comply with ASME Boiler and Pressure Vessel Code.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design compressed-air equipment mounting.
- B. Seismic Performance: Compressed-air equipment shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified **[and the unit will be fully operational after the seismic event].**"

2.3 GENERAL REQUIREMENTS FOR PACKAGED AIR COMPRESSORS AND RECEIVERS

- A. General Description: Factory-assembled, -wired, -piped, and -tested; electric-motor-driven; air-cooled; continuous-duty air compressors and receivers that deliver air of quality equal to intake air.
- B. Control Panels: Automatic control station with load control and protection functions. Comply with NEMA ICS 2 and UL 508.
 - 1. Enclosure: NEMA ICS 6, Type 12 control panel unless otherwise indicated.
 - 2. Motor Controllers: Full-voltage, combination magnetic type with undervoltage release feature and motor-circuit-protector-type disconnecting means and short-circuit protective device.
 - 3. Control Voltage: 120-V ac or less, using integral control power transformer.
 - 4. Motor Overload Protection: Overload relay in each phase.
 - 5. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.
 - 6. Automatic control switches to **[alternate lead-lag compressors for duplex] [sequence lead-lag compressors for multiplex]** air compressors.

7. Instrumentation: Include discharge-air pressure gage, air-filter maintenance indicator, hour meter, compressor discharge-air and coolant temperature gages, and control transformer.
8. Alarm Signal Device: For connection to alarm system to indicate when backup air compressor is operating.

C. Receivers: Steel tank constructed according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

1. Pressure Rating: At least as high as highest discharge pressure of connected compressors, and bearing appropriate code symbols.
2. Interior Finish: Corrosion-resistant coating.
3. Accessories: Include safety valve, pressure gage, drain, and pressure-reducing valve.

D. Mounting Frame: Fabricate mounting and attachment to pressure vessel with reinforcement strong enough to resist packaged equipment movement during a seismic event when base is anchored to building structure.

2.4 LUBRICATED, RECIPROCATING AIR COMPRESSORS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Atlas Copco.](#)
2. [CompAir, Ltd.](#)
3. [Curtis-Toledo.](#)
4. [Gardner Denver, Inc.](#)
5. [General Air Products, Inc.](#)
6. [Ingersoll-Rand; Air Solutions Group.](#)
7. [Kaeser Compressors, Inc.](#)
8. [Powerex, Inc.](#)
9. [Quincy Compressor; an EnPro Industries company.](#)
10. [Saylor-Beall Manufacturing Company.](#)
11. **<Insert manufacturer's name>.**
12. or approved equal.

B. Compressor(s): Lubricated, reciprocating-piston type with lubricated compression chamber and crankcase.

1. Submerged gear-type oil pump.
2. Oil filter.
3. Combined high discharge-air temperature and low lubrication-oil pressure switch.
4. Belt guard totally enclosing pulleys and belts.

C. Capacities and Characteristics:

1. Air Compressor(s): **[One] [Two] [Three] <Insert number>; [single] [single or two] [two] stage.**

- a. Intercooler between stages of two-stage units.
2. Standard-Air Capacity of Each Air Compressor: **<Insert scfm (standard L/s)>** free air.
3. Actual-Air Capacity of Each Air Compressor: **<Insert acfm (actual L/s)>** delivered.
4. Discharge-Air Pressure: [100 psig (690 kPa)] [125 psig (860 kPa)] [175 psig (1200 kPa)] **<Insert value>**.
5. Intake-Air Temperature: **<Insert deg F (deg C)>**.
6. Discharge-Air Temperature: **<Insert deg F (deg C)>**.
7. Mounting: [Freestanding] [Tank mounted].
8. Motor (Each Air Compressor):
 - a. Horsepower: **<Insert value>**.
 - b. Speed: [1750] [3400] **<Insert value>** rpm.
9. Electrical Characteristics:
 - a. Volts: [120] [208] [240] **<Insert value>**.
 - b. Phase(s): [Single] [Three].
 - c. Hertz: [60] **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
10. Receiver: ASME construction steel tank.
 - a. Arrangement: [Horizontal] [Vertical].
 - b. Capacity: **<Insert gal. (L)>**.
 - c. Interior Finish: [Epoxy] [Epoxy or galvanized] [Galvanized] **<Insert coating>** coating.
 - d. Pressure Rating: [100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] [200 psig (1380 kPa)] [250 psig (1725 kPa)] **<Insert value>** minimum.
 - e. Pressure Regulator Setting: **<Insert psig (kPa)>**.
 - f. Pressure Relief Valve Setting: **<Insert psig (kPa)>**.
 - g. Drain: [Automatic] [Manual] valve.

2.5 OIL-FREE, RECIPROCATING AIR COMPRESSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Gast Manufacturing Inc.](#)
2. [Ingersoll-Rand.](#)
3. [Quincy Compressor.](#)
4. **<Insert manufacturer's name>**.
5. or approved equal.

- B. Compressor(s): Oil-free, reciprocating-piston type with nonlubricated compression chamber, lubricated crankcase, and of construction that prohibits oil from entering compression chamber.
1. Submerged gear-type oil pump.
 2. Oil filter.
 3. Combined high discharge-air temperature and low lubrication-oil pressure switch.
 4. Belt guard totally enclosing pulleys and belts.
- C. Capacities and Characteristics:
1. Air Compressor(s): **[One] [Two] [Three]** <Insert number>; single stage.
 2. Standard-Air Capacity of Each Air Compressor: <Insert scfm (standard L/s)> free air.
 3. Actual-Air Capacity of Each Air Compressor: <Insert acfm (actual L/s)> delivered.
 4. Discharge-Air Pressure: **[100 psig (690 kPa)] [125 psig (860 kPa)] [175 psig (1200 kPa)]** <Insert value>.
 5. Intake-Air Temperature: <Insert deg F (deg C)>.
 6. Discharge-Air Temperature: <Insert deg F (deg C)>.
 7. Mounting: **[Freestanding] [Tank mounted]**.
 8. Motor (Each Air Compressor):
 - a. Horsepower: <Insert value>.
 - b. Speed: **[1750] [3400]** <Insert value> rpm.
 9. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase(s): **[Single] [Three]**.
 - c. Hertz: **[60]** <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
 10. Receiver: ASME construction steel tank.
 - a. Arrangement: **[Horizontal] [Vertical]**.
 - b. Capacity: <Insert gal. (L)>.
 - c. Interior Finish: **[Epoxy] [Epoxy or galvanized] [Galvanized]** <Insert coating> coating.
 - d. Pressure Rating: **[100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] [200 psig (1380 kPa)] [250 psig (1725 kPa)]** <Insert value> minimum.
 - e. Pressure Regulator Setting: <Insert psig (kPa)>.
 - f. Pressure Relief Valve Setting: <Insert psig (kPa)>.
 - g. Drain: **[Automatic] [Manual]** valve.

2.6 OILLESS, RECIPROCATING AIR COMPRESSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [FS-Curtis Air Compressors.](#)
2. [Gast Manufacturing Inc.](#)
3. [General Air Products.](#)
4. [Ingersoll-Rand Company; Compressed Air Solutions.](#)
5. [JUN-AIR USA Inc.](#)
6. [Kaeser Compressors, Inc.](#)
7. [Ohio Medical Corporation; Squire-Cogswell brand.](#)
8. [Powerex, Inc.](#)
9. [Quincy Compressor.](#)
10. **<Insert manufacturer's name>.**
11. or approved equal.

B. Compressor(s): Oilless (nonlubricated), reciprocating-piston type, with sealed oil-free bearings, that deliver air of quality equal to intake air.

1. High discharge-air temperature switch.
2. Belt guard totally enclosing pulleys and belts.

C. Capacities and Characteristics:

1. Air Compressor(s): **[One] [Two] [Three] <Insert number>; [single] [single or two] [two] stage.**
 - a. Intercooler between stages of two-stage units.
2. Standard-Air Capacity of Each Air Compressor: **<Insert scfm (standard L/s)>** free air.
3. Actual-Air Capacity of Each Air Compressor: **<Insert acfm (actual L/s)>** delivered.
4. Discharge-Air Pressure: **[100 psig (690 kPa)] [125 psig (860 kPa)] [175 psig (1200 kPa)] <Insert value>.**
5. Intake-Air Temperature: **<Insert deg F (deg C)>.**
6. Discharge-Air Temperature: **<Insert deg F (deg C)>.**
7. Mounting: **[Freestanding] [Tank mounted].**
8. Motor (Each Air Compressor):
 - a. Horsepower: **<Insert value>.**
 - b. Speed: **[1750] [3400] <Insert value>** rpm.
9. Electrical Characteristics:
 - a. Volts: **<Insert value>.**
 - b. Phase(s): **[Single] [Three].**
 - c. Hertz: **[60] <Insert value>.**
 - d. Full-Load Amperes: **<Insert value>.**
 - e. Minimum Circuit Ampacity: **<Insert value>.**

- f. Maximum Overcurrent Protection: **<Insert amperage>**.
10. Receiver: ASME construction steel tank.
- a. Arrangement: **[Horizontal] [Vertical]**.
 - b. Capacity: **<Insert gal. (L)>**.
 - c. Interior Finish: **[Epoxy] [Epoxy or galvanized] [Galvanized] <Insert coating>** coating.
 - d. Pressure Rating: **[100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] [200 psig (1380 kPa)] [250 psig (1725 kPa)] <Insert value>** minimum.
 - e. Pressure Regulator Setting: **<Insert psig (kPa)>**.
 - f. Pressure Relief Valve Setting: **<Insert psig (kPa)>**.
 - g. Drain: **[Automatic] [Manual]** valve.

2.7 OIL-FREE, ROTARY-SCREW AIR COMPRESSORS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Atlas Copco](#).
2. [CompAir, Ltd.](#)
3. [Gardner Denver, Inc.](#)
4. [Ingersoll-Rand; Air Solutions Group](#).
5. **<Insert manufacturer's name>**.
6. or approved equal.

B. Compressor(s): Oil-free, rotary-screw type with nonlubricated helical screws and lubricated gear box, and of construction that prohibits oil from entering compression chamber.

1. Coupling: Nonlubricated, flexible type.
2. Cooling/Lubrication System: Unit-mounted, air-cooled exchanger package prepiped to unit; with air pressure circulation system with coolant stop valve, full-flow coolant filter, and thermal bypass valve.
3. Air Filter: Dry type, with maintenance indicator and cleanable, replaceable filter element.
4. Air/Coolant Receiver and Separation System: **150-psig- (1035-kPa-)** rated steel tank with ASME safety valve, coolant-level gage, multistage air-coolant separator element, minimum pressure valve, blowdown valve, discharge check valve, coolant stop valve, full-flow coolant filter, and thermal bypass valve.
5. Capacity Control: Capacity modulation between zero and 100 percent air delivery, with operating pressures between **50 and 100 psig (345 and 690 kPa)**. Include necessary control to hold constant pressure. When air demand is zero, unload compressor by using pressure switch and blowdown valve.

C. Capacities and Characteristics:

1. Air Compressor(s): **[One] [Two] <Insert number>**; single stage.

2. Standard-Air Capacity of Each Air Compressor: <Insert scfm (standard L/s)> free air.
3. Actual-Air Capacity of Each Air Compressor: <Insert acfm (actual L/s)> delivered.
4. Discharge-Air Pressure: [100 psig (690 kPa)] [125 psig (860 kPa)] [175 psig (1200 kPa)] <Insert value>.
5. Intake-Air Temperature: <Insert deg F (deg C)>.
6. Discharge-Air Temperature: <Insert deg F (deg C)>.
7. Motor (Each Air Compressor):
 - a. Horsepower: <Insert value>.
 - b. Speed: [1750] [3400] <Insert value> rpm.
8. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase(s): [Single] [Three].
 - c. Hertz: [60] <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
9. Receiver: ASME construction steel tank.
 - a. Arrangement: [Horizontal] [Vertical].
 - b. Capacity: <Insert gal. (L)>.
 - c. Interior Finish: [Epoxy] [Epoxy or galvanized] [Galvanized] <Insert coating> coating.
 - d. Pressure Rating: [100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] [200 psig (1380 kPa)] <Insert value> minimum.
 - e. Pressure Regulator Setting: <Insert psig (kPa)>.
 - f. Pressure Relief Valve Setting: <Insert psig (kPa)>.
 - g. Drain: [Automatic] [Manual] valve.
10. Enclosure: Steel with sound-attenuating material lining.

2.8 OIL-FLOODED, ROTARY-SCREW AIR COMPRESSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Atlas Copco.](#)
2. [CompAir, Ltd.](#)
3. [Gardner Denver, Inc.](#)
4. [Ingersoll-Rand; Air Solutions Group.](#)
5. [Kaeser Compressors, Inc.](#)
6. [Quincy Compressor; an EnPro Industries company.](#)
7. [Sullair Corporation.](#)
8. <Insert manufacturer's name>.
9. or approved equal.

- B. Compressor(s): Oil-flooded, rotary-screw type with lubricated helical screws and lubricated gear box.
1. Coupling: Nonlubricated, flexible type.
 2. Cooling/Lubrication System: Unit-mounted, air-cooled exchanger package prepiped to unit; with air pressure circulation system with coolant stop valve, full-flow coolant filter, and thermal bypass valve.
 3. Air Filter: Dry type, with maintenance indicator and cleanable, replaceable filter element.
 4. Air/Coolant Receiver and Separation System: **150-psig- (1035-kPa-)** rated steel tank with ASME safety valve, coolant-level gage, multistage air-coolant separator element, minimum pressure valve, blowdown valve, discharge check valve, coolant stop valve, full-flow coolant filter, and thermal bypass valve.
 5. Capacity Control: Capacity modulation between zero and 100 percent air delivery, with operating pressures between **50 and 100 psig (345 and 690 kPa)**. Include necessary control to hold constant pressure. When air demand is zero, unload compressor by using pressure switch and blowdown valve.
- C. Capacities and Characteristics:
1. Air Compressor(s): **[One] [Two] <Insert number>; [single] [single or two] [two]** stage.
 2. Standard-Air Capacity of Each Air Compressor: **<Insert scfm (standard L/s)>** free air.
 3. Actual-Air Capacity of Each Air Compressor: **<Insert acfm (actual L/s)>** delivered.
 4. Discharge-Air Pressure: **[100 psig (690 kPa)] [125 psig (860 kPa)] [175 psig (1200 kPa)] [200 psig (1380 kPa)] <Insert value>**.
 5. Intake-Air Temperature: **<Insert deg F (deg C)>**.
 6. Discharge-Air Temperature: **<Insert deg F (deg C)>**.
 7. Motor (Each Air Compressor):
 - a. Horsepower: **<Insert value>**.
 - b. Speed: **[1750] [3400] <Insert value>** rpm.
 8. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase(s): **[Single] [Three]**.
 - c. Hertz: **[60] <Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
 9. Receiver: ASME construction steel tank.
 - a. Arrangement: **[Horizontal] [Vertical]**.
 - b. Capacity: **<Insert gal. (L)>**.
 - c. Interior Finish: **[Epoxy] [Epoxy or galvanized] [Galvanized] <Insert coating>** coating.

- d. Pressure Rating: [100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] [200 psig (1380 kPa)] [250 psig (1725 kPa)] <Insert value> minimum.
 - e. Pressure Regulator Setting: <Insert psig (kPa)>.
 - f. Pressure Relief Valve Setting: <Insert psig (kPa)>.
 - g. Drain: [Automatic] [Manual] valve.
10. Enclosure: Steel with sound-attenuating material lining.

2.9 OIL-FREE, ROTARY, SLIDING-VANE AIR COMPRESSORS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Becker Pumps Corp.](#)
2. [Gast Manufacturing Inc.](#)
3. <Insert manufacturer's name>.
4. or approved equal.

B. Compressor(s): Oil-free, nonpulsating, rotary, sliding-vane type with nonlubricated sliding vanes.

1. Cleanable inlet screens.
2. Outlet silencers on discharge connections.

C. Capacities and Characteristics:

1. Air Compressor(s): [One] [Two] <Insert number>; single stage.
2. Standard-Air Capacity of Each Air Compressor: <Insert scfm (standard L/s)> free air.
3. Actual-Air Capacity of Each Air Compressor: <Insert acfm (actual L/s)> delivered.
4. Discharge-Air Pressure: [15 psig (103 kPa)] [20 psig (138 kPa)] [25 psig (173 kPa)] <Insert value>.
5. Intake-Air Temperature: <Insert deg F (deg C)>.
6. Discharge-Air Temperature: <Insert deg F (deg C)>.
7. Mounting: [Freestanding] [Tank mounted].
8. Motor (Each Air Compressor):
 - a. Horsepower: <Insert value>.
 - b. Speed: [1750] [3400] <Insert value> rpm.

9. Electrical Characteristics:

- a. Volts: <Insert value>.
- b. Phase(s): [Single] [Three].
- c. Hertz: [60] <Insert value>.
- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

10. Receiver: ASME construction steel tank.
 - a. Arrangement: **[Horizontal]** **[Vertical]**.
 - b. Capacity: **<Insert gal. (L)>**.
 - c. Interior Finish: **[Epoxy]** **[Epoxy or galvanized]** **[Galvanized]** **<Insert coating>** coating.
 - d. Pressure Rating: **[100 psig (690 kPa)]** **<Insert value>** minimum.
 - e. Pressure Regulator Setting: **<Insert psig (kPa)>**.
 - f. Pressure Relief Valve Setting: **<Insert psig (kPa)>**.
 - g. Drain: **[Automatic]** **[Manual]** valve.

2.10 OIL-SEALED, ROTARY, SLIDING-VANE AIR COMPRESSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Becker Pumps Corp.](#)
2. [Davey Compressor Company.](#)
3. [Gast Manufacturing Inc.](#)
4. [CompAir.](#)
5. **<Insert manufacturer's name>**.
6. or approved equal.

B. Compressor(s): Nonpulsating, rotary, sliding-vane type with oil-sealed sliding vanes.

1. Cleanable inlet screens.
2. Outlet silencers and oil-mist separators on discharge connections.

C. Capacities and Characteristics:

1. Air Compressor(s): **[One]** **[Two]** **<Insert number>**; single stage.
2. Standard-Air Capacity of Each Air Compressor: **<Insert scfm (standard L/s)>** free air.
3. Actual-Air Capacity of Each Air Compressor: **<Insert acfm (actual L/s)>** delivered.
4. Discharge-Air Pressure: **[20 psig (138 kPa)]** **[25 psig (173 kPa)]** **[30 psig (207 kPa)]** **[100 psig (690 kPa)]** **[125 psig (860 kPa)]** **<Insert value>**.
5. Intake-Air Temperature: **<Insert deg F (deg C)>**.
6. Discharge-Air Temperature: **<Insert deg F (deg C)>**.
7. Mounting: **[Freestanding]** **[Tank mounted]**.
8. Motor (Each Air Compressor):
 - a. Horsepower: **<Insert value>**.
 - b. Speed: **[1750]** **[3400]** **<Insert value>** rpm.
9. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase(s): **[Single]** **[Three]**.
 - c. Hertz: **[60]** **<Insert value>**.

- d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
10. Receiver: ASME construction steel tank.
- a. Arrangement: [Horizontal] [Vertical].
 - b. Capacity: <Insert gal. (L)>.
 - c. Interior Finish: [Epoxy] [Epoxy or galvanized] [Galvanized] <Insert coating> coating.
 - d. Pressure Rating: [100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] <Insert value> minimum.
 - e. Pressure Regulator Setting: <Insert psig (kPa)>.
 - f. Pressure Relief Valve Setting: <Insert psig (kPa)>.
 - g. Drain: [Automatic] [Manual] valve.

2.11 INLET-AIR FILTERS

- A. Description: Combination inlet-air filter-silencer, suitable for remote installation, for each air compressor.
1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
 2. Capacity: Match capacity of air compressor, with filter having collection efficiency of 99 percent retention of particles larger than 10 micrometers.
- B. Description: Combination inlet-air filter-silencer, suitable for remote installation, for multiple air compressors.
1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
 2. Capacity: Match total capacity of connected air compressors, with filter having collection efficiency of 99 percent retention of particles larger than 10 micrometers.

2.12 AIR-COOLED, COMPRESSED-AIR AFTERCOOLERS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
1. [Air/Tak, Inc.](#)
 2. [FS-Curtis Air Compressors.](#)
 3. [Gardner Denver, Inc.](#)
 4. [Ingersoll-Rand Company](#); Compressed Air Solutions.
 5. [McIntire Company](#); Arrow Dryers.
 6. [Pneumatech.](#)
 7. [Saylor-Beall Manufacturing Company.](#)
 8. [SPX Hankison.](#)

9. [Van Air Systems.](#)
10. [ZEKS Compressed Air Solutions.](#)
11. **<Insert manufacturer's name>.**
12. or approved equal.

B. Description: Electric-motor-driven, fan-operation, finned-tube unit; rated at [250 psig (1725 kPa)] **<Insert value>** and leak tested at 350-psig (2415-kPa) minimum air pressure; in capacities indicated. Size units to cool compressed air in compressor-rated capacities to [10 deg F (6 deg C)] **<Insert temperature>** above summertime maximum ambient temperature. Include moisture separator and automatic drain.

C. Capacities and Characteristics:

1. Standard-Air Capacity of Each Aftercooler: **<Insert scfm (standard L/s)>** free air.
2. Pressure: **<Insert psig (kPa)>**.
3. Entering, Compressed-Air Temperature: **<Insert deg F (deg C)>**.
4. Leaving, Compressed-Air Temperature: **<Insert deg F (deg C)>**.
5. Ambient-Air Temperature: **<Insert deg F (deg C)>**.
6. Maximum Compressed-Air-Pressure Drop: **<Insert psig (kPa)>**.
7. Motor Horsepower: **<Insert value>**.
8. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase(s): **[Single] [Three]**.
 - c. Hertz: **[60] <Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.13 Water-Cooled, Compressed-Air Aftercoolers

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Air/Tak, Inc.](#)
2. [FS-Curtis Air Compressors.](#)
3. [Gardner Denver, Inc.](#)
4. [Ingersoll-Rand Company; Compressed Air Solutions.](#)
5. [McIntire Company](#); Arrow Dryers.
6. [Pneumatech.](#)
7. [Saylor-Beall Manufacturing Company.](#)
8. [SPX Hankison.](#)
9. [Van Air Systems.](#)
10. [ZEKS Compressed Air Solutions.](#)
11. **<Insert manufacturer's name>**.
12. or approved equal.

- B. Description: Shell-and-tube unit, rated at [250 psig (1725 kPa)] <Insert value> and leak tested at 350-psig (2415-kPa) minimum air pressure, in capacities indicated. Include moisture separator and automatic drain.
- C. Capacities and Characteristics:
1. Standard-Air Capacity of Each Aftercooler: <Insert scfm (standard L/s)> free air.
 2. Pressure: <Insert psig (kPa)>.
 3. Entering-Water Temperature: <Insert deg F (deg C)>.
 4. Water Flow: <Insert gpm (L/s)>.
 5. Entering, Compressed-Air Temperature: <Insert deg F (deg C)>.
 6. Leaving, Compressed-Air Temperature: <Insert deg F (deg C)>.

2.14 REFRIGERANT COMPRESSED-AIR DRYERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Air/Tak, Inc.](#)
2. [Atlas Copco Compressors LLC.](#)
3. [Donaldson Company, Inc.](#); Compressed Air & Gas.
4. [FS-Curtis Air Compressors.](#)
5. [Ingersoll-Rand Company](#); Compressed Air Solutions.
6. [Kaeser Compressors, Inc.](#)
7. [McIntire Company](#); Arrow Dryers.
8. [Numatics, Incorporated.](#)
9. [Pioneer Air Systems, Inc.](#)
10. [Pneumatech Inc.](#)
11. [SPX Air Treatment.](#)
12. [Van Air Systems, Inc.](#)
13. [Wilkerson Operations; Pneumatic Division.](#)
14. [Zeks Compressed Air Solutions.](#)
15. <Insert manufacturer's name>.
16. or approved equal.

- B. Description: Noncycling, air-cooled, electric-motor-driven unit with steel enclosure and capability to deliver 35 deg F (2 deg C), 100-psig (690-kPa) air at dew point. Include automatic ejection of condensate from airstream, step-down transformers, disconnect switches, inlet and outlet pressure gages, thermometers, automatic controls, and filters.

- C. Capacities and Characteristics:

1. Standard-Air Capacity of Each Compressed-Air Dryer: <Insert scfm (standard L/s)> free air.
2. Pressure: <Insert psig (kPa)>.
3. Entering-Air Temperature: <Insert deg F (deg C)>.
4. Leaving-Air Temperature: <Insert deg F (deg C)>.
5. Leaving-Air Dew Point Temperature: <Insert deg F (deg C)>.

6. Ambient-Air Temperature: <Insert deg F (deg C)>.
7. Maximum Air-Pressure Drop: <Insert psig (kPa)>.
8. Inlet Filter: [5] <Insert number> micrometers.
9. Outlet Filter: [1] <Insert number> micrometer(s).
10. Motor Horsepower: <Insert value>.
11. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase(s): [Single] [Three].
 - c. Hertz: [60] <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

2.15 DESICCANT COMPRESSED-AIR DRYERS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Air/Tak, Inc.](#)
2. [Donaldson Company, Inc.; Compressed Air & Gas.](#)
3. [Ingersoll-Rand Company; Compressed Air Solutions.](#)
4. [Kaeser Compressors, Inc.](#)
5. [Numatics, Incorporated.](#)
6. [Pioneer Air Systems, Inc.](#)
7. [Pneumatech.](#)
8. [SPX Deltech.](#)
9. [SPX Hankison.](#)
10. [Van Air Systems.](#)
11. [Wilkerson Corp.](#)
12. [ZEKS Compressed Air Solutions.](#)
13. <Insert manufacturer's name>.
14. or approved equal.

B. **General:** Factory assembled dual chamber designs with each chamber filled with equal quantities of adsorbing desiccant. Regeneration flow shall be counter current to the direction of the inlet gas flow. Desiccant vessels shall be designed in accordance with the ASME pressure vessel code and shall be stamped as such. Provide package with blower purge heater.

C. **Assembly:** Each desiccant chamber shall be fitted with fill and drain ports equal to, or greater in diameter than the main flow pipe size, to facilitate filling and drawing of desiccant without the need to disassemble manifold piping. Each chamber shall be provided with a removable stainless steel perforated sheet inlet diffuser screen and desiccant bed support screen, and fitted with a relief valve. Chambers are not to be supported by interconnecting piping in any way. Install heater and blower in accordance with ASME, ASTM, and NEC Specifications.

D. **Controls:** Dryer shall be furnished with a repressurization circuit to allow the

regeneration chamber to reach line pressure prior to switch over. The controller shall be responsible for initiation and monitoring of the dryer operation. Standard instrumentation shall include a locally mounted purge flow indicator, chamber pressure gauges, visual type color change outlet moisture indicator, inlet and outlet pressure gauges, and discharge dewpoint indicating transmitter. Provide dryer with a NEMA 1 panel with motor starters, fusible disconnects, alternator, and transformer for a single point electrical connection.

- E. Description: Twin-tower unit with purge system, mufflers, and capability to deliver [plus 10 deg F (minus 12 deg C), 100-psig (690-kPa)] <Insert values> air at dew point. Include dew point controlled purge, step-down transformers, disconnect switches, inlet and outlet pressure gages, thermometers, automatic controls, and filters.

F. Capacities and Characteristics:

1. Standard-Air Capacity of Each Compressed-Air Dryer: <Insert scfm (standard L/s)> free air.
2. Pressure: <Insert psig (kPa)>.
3. Entering-Air Temperature: <Insert deg F (deg C)>.
4. Leaving-Air Temperature: <Insert deg F (deg C)>.
5. Leaving-Air Dew Point Temperature: <Insert deg F (deg C)>.
6. Ambient-Air Temperature: <Insert deg F (deg C)>.
7. Maximum Air-Pressure Drop: <Insert psig (kPa)>.
8. Inlet Filter: [5] <Insert number> micrometers.
9. Outlet Filter: [1] <Insert number> micrometer(s).
10. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase(s): [Single] [Three].
 - c. Hertz: [60] <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

2.16 COMPUTER INTERFACE CABINET

A. Description:

1. Wall mounting.
2. Welded steel with white enamel finish.
3. Gasketed door.
4. Grounding device.
5. Factory-installed, signal circuit boards.
6. Power transformer.
7. Circuit breaker.
8. Wiring terminal board.
9. Internal wiring capable of interfacing [20] <Insert number> alarm signals.

2.17 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 220513 "Common Motor Requirements for Plumbing Equipment."
1. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load does not require motor to operate in service factor range above 1.0.
- B. <Insert unique motor characteristics>.

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Equipment Mounting:
1. Install air compressors[**and aftercoolers**] [**and air dryers**] [, **aftercoolers, and air dryers**] on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 2. Install [**water-cooled, compressed-air aftercoolers**] [**and**] [**desiccant compressed-air dryers**] on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 3. Install compressor unit on vibration isolators. Level and bolt in place.
 4. Comply with requirements for vibration isolation and seismic control devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment"
 5. Comply with requirements for vibration isolation devices specified in Section 220548.13 "Vibration Controls for Plumbing Piping and Equipment."
- C. Install compressed-air equipment anchored to substrate.
- D. Arrange equipment so controls and devices are accessible for servicing.
- E. Maintain manufacturer's recommended clearances for service and maintenance.
- F. Install the following devices on compressed-air equipment:

1. Thermometer, Pressure Gage, and Safety Valve: Install on each compressed-air receiver.
 2. Pressure Regulators: Install downstream from air compressors[**and dryers**].
 3. Automatic Drain Valves: Install on aftercoolers, receivers, and dryers. Discharge condensate over nearest floor drain.
- G. Make air cock and drain connection on horizontal casing.
- H. Install line size gate valve and check valve on compressor discharge.
- I. Install replaceable cartridge type filter silencer of adequate capacity for each compressor.
- J. Place shut off valve on water inlet to aftercooler. Pipe drain to floor drain.
- K. Connect condensate drains to nearest floor drain.
- L. Piping: See Section 221513 "General-Service Compressed-Air Piping" for piping requirements.
1. Install valved bypass around air dryer. Factory insulate inlet and outlet connections.
 2. Install valved drip connections at low points of piping system.
 3. Install take offs to outlets from top of main, with shut off valve after take off. Slope take off piping to outlets.
 4. Install tees instead of elbows at changes in direction of piping. Fit open end of each tee with plug.
- M. Install compressed air couplings, female quick connectors, and pressure gages where outlets are indicated.
- N. Identify piping system and components. Refer to Section 220553 "Identification for Plumbing Piping and Equipment".

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Section 221513 "General-Service Compressed-Air Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to machine, allow space for service and maintenance.

3.3 IDENTIFICATION

- A. Identify general-service air compressors and components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.4 STARTUP SERVICE

- A. Field inspection and testing shall be performed under provisions of Division 01.
- B. Compressed Air Piping Leak Test: Prior to initial operation, clean and test compressed air piping in accordance with ANSI B31.1.
- C. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Check for lubricating oil in lubricated-type equipment.
 - 3. Check belt drives for proper tension.
 - 4. Verify that air-compressor inlet filters and piping are clear.
 - 5. Check for equipment vibration-control supports and flexible pipe connectors, and verify that equipment is properly attached to substrate.
 - 6. Check safety valves for correct settings. Ensure that settings are higher than air-compressor discharge pressure, but not higher than rating of system components.
 - 7. Check for proper seismic restraints.
 - 8. Drain receiver tanks.
 - 9. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 10. Test and adjust controls and safeties.
- D. Repair or replace compressed air piping as required to eliminate leaks, and retest to demonstrate compliance.
- E. Cap (seal) ends of piping when not connected to mechanical equipment.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain air compressors[**and aftercoolers**][**and air dryers**] [, **aftercoolers, and air dryers**].
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 221519

SECTION 223100 - DOMESTIC WATER SOFTENERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Commercial water softeners.
 - 2. Chemicals.
 - 3. Water-testing sets.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Water softeners shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for water softeners.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Wiring Diagrams: For power, signal, and control wiring.
 - 4. Include data substantiating that materials comply with requirements.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For water softeners, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Source quality-control reports.
- C. Field quality-control reports.
- D. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For water softeners to include in emergency, operation, and maintenance manuals.
 - 1. Include operation, maintenance, and inspection data, replacement part numbers and availability, and service depot location and telephone number.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Salt for Brine Tanks: Furnish in same form as and at least **[four]** **<Insert number>** times original load, but not less than **[200 lb (90.7 kg)] [1000 lb (453.6 kg)] <Insert weight>**. Deliver on pallets according to the following:
 - a. Food-Grade Pellet Salt: In **[40- or 50-lb (18.1- or 22.7-kg)] [80-lb (36.3-kg)] <Insert weight>** packages.
 - b. Plain Pellet Salt: In **[40- or 50-lb (18.1- or 22.7-kg)] [80-lb (36.3-kg)] <Insert weight>** packages.
 - c. Crystallized Solar Salt: In **[40- or 50-lb (18.1- or 22.7-kg)] [80-lb (36.3-kg)] <Insert weight>** packages.
 - d. Plain, Brine Block Salt: In **[50-lb (22.7-kg)] <Insert weight>** blocks.
 - 2. Store salt on raised platform where directed by Owner. Do not store in contact with concrete floor.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended application.
- B. ASME Compliance for Steel Tanks: Fabricate and label mineral tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, where indicated.
- C. ASME Compliance for FRP Tanks: Fabricate and label mineral tanks to comply with ASME Boiler and Pressure Vessel Code: Section X, where indicated.
- D. UL Compliance: Fabricate and label water softeners to comply with UL 979, "Water Treatment Appliances."

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect and handle products under provisions of Section 22400 "Basic Plumbing Requirements" and Division 01
- B. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of water softeners that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures of mineral and brine tanks.
 - b. Faulty operation of controls.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - d. Attrition loss of resin exceeding 3 percent per year.
 - e. Mineral washed out of system during service run or backwashing period.
 - f. Effluent turbidity greater and color darker than incoming water.
 - g. Fouling of underdrain system, gravel, and resin with turbidity or by dirt, rust, or scale from water softener or soft water, while operating according to manufacturer's written operating instructions.
 - 2. Residential Water Softeners, Warranty Period: From date of Substantial Completion.
 - a. Tanks: Minimum [**five (5)**] <Insert number> years.

- b. Control Valve: Minimum **[one (1)] <Insert number>** year(s).
- 3. Commercial Water Softeners, Warranty Period: From date of Substantial Completion.
 - a. Mineral Tanks: Minimum **[five (5)] [ten (10)] <Insert number>** years.
 - b. Brine Tanks: Minimum **[ten (10)] <Insert number>** years.
 - c. Control Valve: Minimum **[One (1)] <Insert number>** year(s).

1.12 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide **[three] [six] [nine] [12]** months' full maintenance by skilled employees of water softener Installer. Include **[monthly] [quarterly]** preventive maintenance, repair, or replacement of worn or defective components, cleaning, and adjusting as required for proper water softener operation at rated capacity. Provide parts and supplies the same as those used in the manufacture and installation of original equipment.
- B. Continuing Maintenance Proposal: From Installer to Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 COMMERCIAL WATER SOFTENERS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. [Aquion Water Treatment Products.](#)
 - 2. [Culligan International Company.](#)
 - 3. [CUNO Incorporated.](#)
 - 4. [Diamond Water Conditioning; a Griesbach company.](#)
 - 5. [Diamond Water Systems, Inc.](#)
 - 6. [Ecodyne Water Treatment, Inc.](#)
 - 7. [Hungerford & Terry, Inc.](#)
 - 8. [Integration Separation Solutions, LLC.](#)
 - 9. [Kinetico Incorporated.](#)
 - 10. [Marlo Incorporated.](#)
 - 11. [Parker Boiler.](#)

12. [Springsoft International, Inc.](#)
13. [Water King.](#)
14. [WaterSoft; a division of Amtrol, Inc.](#)
15. **<Insert manufacturer's name>.**
16. or approved equal.

B. Description: Factory-assembled, pressure-type water softener.

1. Standard: Comply with NSF 61, "Drinking Water System Components - Health Effects."
2. Configuration: **[Single unit with one mineral tank] [Twin unit with two mineral tanks] [Triple unit with three mineral tanks] <Insert configuration>** and one brine tank.
3. Mounting: On skids.
4. Wetted Components: Suitable for water temperatures from **[40 to at least 100 deg F (5 to at least 38 deg C)] [40 to at least 120 deg F (5 to at least 49 deg C)] [40 to at least 150 deg F (5 to at least 66 deg C)] <Insert temperature>.**
5. Mineral Tanks: FRP, pressure-vessel quality.
 - a. Construction: **[Non-ASME code.] [Fabricated and stamped to comply with ASME Boiler and Pressure Vessel Code: Section X, "Fiber-Reinforced Plastic Pressure Vessels."]**
 - b. Pressure Rating: **[100 psig (690 kPa)] [125 psig (860 kPa)] <Insert pressure>** minimum.
 - c. Freeboard: 50 percent minimum for backwash expansion above normal resin bed level.
 - d. Support Legs or Skirt: Constructed of structural steel, welded to tank **before testing and labeling**.
 - e. Upper Distribution System: Single, point type, fabricated from galvanized-steel pipe and fittings.
 - f. Lower Distribution System: Hub and radial-arm or header-lateral type; fabricated from nonmetallic pipe and fittings with individual, fine-slotted, nonclogging plastic strainers, and arranged for even flow distribution through resin bed.
 - g. Liner: PE, ABS, or other material suitable for potable water.
6. Mineral Tanks: **[Steel] [Stainless steel]**, electric welded; pressure-vessel quality.
 - a. Seismic Requirements: Fabricate supports and attachments to tank with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure.
 - b. Construction: **[Non-ASME code.] [Fabricated and stamped to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.]**
 - c. Pressure Rating: **[100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] <Insert pressure>** minimum.
 - d. Freeboard: 50 percent minimum for backwash expansion above normal resin bed level.

- e. Handholes: 4 inches (102 mm) round or 4 by 6 inches (102 by 152 mm) elliptical, in top head and lower sidewall of tanks [30 inches (762 mm)] <Insert tank size> and smaller in diameter.
 - f. Manhole: 11 by 15 inches (280 by 380 mm) in top head of tanks larger than [30 inches (762 mm)] <Insert tank size> in diameter.
 - g. Support Legs or Skirt: Constructed of structural steel, welded to tank[**before testing and labeling**].
 - h. Finish: Hot-dip galvanized on exterior and interior of tank after fabrication unless tank is stainless steel.
 - i. Finish: Exterior of tank spray-painted with rust-resistant prime coat, 2- to 3-mil (0.051- to 0.076-mm) dry film thickness. Interior sandblasted and lined with epoxy-polyamide coating, 8- to 10-mil (0.203- to 0.254-mm) dry film thickness.
 - j. Upper Distribution System: Single, point type, fabricated from galvanized-steel pipe and fittings.
 - k. Lower Distribution System: Hub and radial-arm or header-lateral type; fabricated from PVC pipe and fittings with individual, fine-slotted, nonclogging PE strainers, and arranged for even flow distribution through resin bed.
 - l. Liner: PE, ABS, or other material suitable for potable water.
7. Controls: Automatic; factory wired and factory mounted on unit.
- a. Adjustable duration of various regeneration steps.
 - b. Push-button start and complete manual operation.
 - c. Electric time clock and switch for automatic operation except for manual return to service.
 - d. Sequence of Operation: Multiport pilot-control valve automatically pressure-actuates main operating valve through steps of regeneration.
 - e. Pointer on pilot-control valve shall indicate cycle of operation.
 - f. Includes means of manual operation of pilot-control valve if power fails.
8. Controls: Fully automatic; factory wired and factory mounted on unit.
- a. Adjustable duration of various regeneration steps.
 - b. Push-button start and complete manual operation.
 - c. Electric time clock and switch for fully automatic operation, adjustable to initiate regeneration at any hour of day and any day of week or at fixed intervals.
 - d. Sequence of Operation: Multiport pilot-control valve automatically pressure-actuates main operating valve through steps of regeneration and return to service.
 - e. Pointer on pilot-control valve shall indicate cycle of operation.
 - f. Includes means of manual operation of pilot-control valve if power fails.
9. Main Operating Valves: Industrial, automatic, multiport, diaphragm type with the following features:
- a. Slow opening and closing, nonslam operation.
 - b. Diaphragm guiding on full perimeter from fully open to fully closed.

- c. Isolated, dissimilar metals within valve.
 - d. Self-adjusting, internal, automatic brine injector that draws brine and rinses at constant rate independent of pressure.
 - e. Valve for single mineral-tank unit with internal automatic bypass of raw water during regeneration.
 - f. Sampling cocks for soft water.
 - g. Special tools are not required for service.
10. Flow Control: Automatic, to control backwash and flush rates over wide variations in operating pressure; does not require field adjustments.
 - a. Meter Control: Each mineral tank is equipped with signal-register-head water meter that produces electrical signal indicating need for regeneration on reaching hand-set total in **gallons (liters)**. Signal will continue until reset.
 - b. Demand-Initiated Control: Single mineral tank is equipped with automatic-reset-head water meter that electrically activates cycle controller to initiate regeneration at preset total in **gallons (liters)**. Head automatically resets to preset total in **gallons (liters)** for next service run.
 - c. Demand-Initiated Control: Each mineral tank of twin mineral-tank unit is equipped with automatic-reset-head water meter that electrically activates cycle controllers to initiate regeneration at preset total in **gallons (liters)**. Head automatically resets to preset total in **gallons (liters)** for next service run. Electrical lockout prevents simultaneous regeneration of both tanks.
 - d. Demand-Initiated Control: Each twin mineral-tank unit is equipped with automatic-reset-head water meter, in common outlet header, that electrically activates cycle controller to automatically regenerate one mineral tank at preset total in **gallons (liters)** and divert flow to other tank. Automatically repeats with other tank. Electrical lockout prevents simultaneous regeneration of both tanks.
 - e. Demand-Initiated Control: Each mineral tank of multiple mineral-tank unit is equipped with automatic-reset-head water meter that electrically activates cycle controllers to automatically regenerate at preset total in **gallons (liters)**. Head automatically resets to preset total in **gallons (liters)** for next service run. Electrical lockout prevents simultaneous regeneration of more than one tank.
 - f. Demand-Initiated Control: Each multiple mineral-tank unit is equipped with automatic-reset-head water meter, in common outlet header, that electrically activates cycle controller to automatically regenerate one mineral tank at preset total in **gallons (liters)** and divert flow to other tanks. Automatically repeats with other tanks. Electrical lockout prevents simultaneous regeneration of more than one tank.
11. Brine Tank: Combination measuring and wet-salt storing system.
 - a. Tank and Cover Material: Fiberglass, **3/16 inch (4.8 mm)** thick; or molded PE, **3/8 inch (9.5 mm)** thick.
 - b. Brine Valve: Float operated and plastic fitted for automatic control of brine withdrawal and freshwater refill.
 - c. Size: Large enough for at least four regenerations at full salting.

12. Factory-Installed Accessories:

- a. Piping, valves, tubing, and drains.
- b. Sampling cocks.
- c. Main-operating-valve position indicators.
- d. Water meters.

C. Capacities and Characteristics:

1. Water Analysis:

- a. Hardness: <Insert grains/gal. or ppm (mg/L)>.
- b. Iron: <Insert ppm (mg/L)>.
- c. Dissolved Solids: <Insert ppm (mg/L)>.
- d. Concentration: <Insert pH>.
- e. Inlet Water Pressure: <Insert psig (kPa)>.
- f. Water Temperature: <Insert deg F (deg C)>.

2. Continuous Service Flow Rate: <Insert number> gpm at 15-psig (<Insert number> L/s at 104-kPa) pressure drop.
3. Peak Service Flow Rate: <Insert number> gpm at 25-psig (<Insert number> L/s at 173-kPa) pressure drop.
4. Water Meter Size: <Insert NPS (DN)>.
5. Manifold Pipe Size: <Insert NPS (DN)>.
6. Backwash-to-Drain Pipe Size: <Insert NPS (DN)>.
7. Water Consumption: <Insert gal./day (cu. m/day)>.
8. Water Demand: <Insert hours/day>.
9. Number of Mineral Tanks: [One] [Two] [Three] <Insert number>.
10. Mineral Quantity, Each Tank: <Insert cu. ft. (cu. m)>.
11. Mineral Exchange Capacity: <Insert grains/cu. ft. per lb (kg/cu. m per kg) of salt>.
12. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phases: <Insert value>.
 - c. Hertz: <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
13. Salt Capacity: <Insert lb (kg)>.
14. Minimum Number of Regenerations per Refill: <Insert number>.
15. Floor Area Required: <Insert sq. ft. (sq. m)>.
16. Height Required: <Insert inches (mm)>.

2.2 CHEMICALS

- A. Mineral: High-capacity, sulfonated-polystyrene, ion-exchange resin that is stable over entire pH range with good resistance to bead fracture from attrition or shock.

1. Exchange Capacity: [30,000 grains/cu. ft. (69 kg/cu. m)] <Insert capacity> of calcium carbonate of resin when regenerated with 15 lb (6.8 kg) of salt.
- B. Salt for Brine Tanks: High-purity sodium chloride, free of dirt and foreign material. Rock and granulated forms are unacceptable.
 1. Form: Processed, [food-grade salt pellets] [plain salt pellets] [crystallized solar salt collected from shallow ponds and milled into irregular particles] [plain, brine block salt].

2.3 WATER-TESTING SETS

- A. Description: Manufacturer's standard water-hardness testing apparatus and chemicals with testing procedure instructions. Include metal container suitable for wall mounting.

2.4 SOURCE QUALITY CONTROL

- A. Hydrostatically test mineral tanks before shipment to a minimum of one and one-half times the pressure rating.
- B. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 WATER SOFTENER INSTALLATION

- A. Equipment Mounting:
 1. Install **commercial** water softeners on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment"
 3. Comply with requirements for vibration isolation devices specified in Section 220548.13 "Vibration Controls for Plumbing Piping and Equipment."
- B. Install seismic restraints for tanks and floor-mounting accessories and anchor to building structure.
- C. Install brine lines and fittings furnished by equipment manufacturer but not specified to be factory installed.
- D. Prepare mineral-tank distribution system and underbed for minerals and place specified mineral into mineral tanks.

- E. Install water-testing sets mounted on wall, unless otherwise indicated, and near water softeners.

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where piping is installed adjacent to equipment, allow space for service and maintenance of equipment.
- C. Install shutoff valves on raw-water inlet and soft-water outlet piping of each mineral tank[, **and on inlet and outlet headers**].
 - 1. Metal general-duty valves are specified in Section 220523 "General-Duty Valves for Plumbing Piping."
 - 2. Plastic valves are specified in Section 221116 "Domestic Water Piping."
 - 3. Exception: Water softeners with factory-installed shutoff valves at locations indicated.
- D. Install pressure gages on raw-water inlet and soft-water outlet piping of each mineral tank. Pressure gages are specified in Section 220519 "Meters and Gages for Plumbing Piping."
 - 1. Exception: Water softeners with factory-installed pressure gages at locations indicated.
 - 2. Exception: Household water softeners.
 - 3. Exception: Water softeners in hot-water service.
- E. Install valved bypass in water piping around water softeners.
 - 1. Metal general-duty valves are specified in Section 220523 "General-Duty Valves for Plumbing Piping."
 - 2. Plastic valves are specified in Section 221116 "Domestic Water Piping."
 - 3. Water piping is specified in Section 221116 "Domestic Water Piping."
 - 4. Exception: Household water softeners.
 - 5. Exception: Water softeners in hot-water service.
- F. Install drains as indirect wastes to spill into open drains or over floor drains.

3.3 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Tests and Inspections:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Water softeners will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
- B. Add water to brine tanks and fill with the following form of salt:
1. Commercial Water Softeners: Processed, **[plain salt pellets] [crystallized solar salt collected from shallow ponds and milled into irregular particles] [plain, brine block salt] <Insert salt form>**.
- C. Sample water softener effluent after startup and at three consecutive seven-day intervals (total of four samples), and prepare certified test reports for required water performance characteristics. Comply with the following:
1. ASTM D 859, "Test Method for Silica in Water."
 2. ASTM D 1067, "Test Methods for Acidity or Alkalinity of Water."
 3. ASTM D 1068, "Test Methods for Iron in Water."
 4. ASTM D 1126, "Test Method for Hardness in Water."
 5. ASTM D 1129, "Terminology Relating to Water."
 6. ASTM D 3370, "Practices for Sampling Water from Closed Conduits."

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain services.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **223100**

SECTION 223200 - DOMESTIC WATER FILTRATION EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Bag-type filters.
2. Freestanding cartridge filters.
3. Off-floor cartridge filters.
4. Carbon filters.
5. Circulating sand filters.
6. Multimedia sand filters.
7. Greensand filters.
8. Separators.

- B. Related Sections:

1. Section 221119 "Domestic Water Piping Specialties" for plumbing piping strainers.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: **[Bag-type filters,] [freestanding cartridge filters,] [carbon filters,] [circulating sand filters,] [multimedia sand filters,] [greensand filters,] [and] [separators]** shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.

1. The term "withstand" means that "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified **and the unit will be fully operational after the seismic event**."

1.4 ACTION SUBMITTALS

- A. **Product Data:** For each type of product indicated. **[Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for filters and separators.] [Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.]**
1. Include data substantiating that materials comply with requirements.
- B. **Shop Drawings:** For water filtration equipment. Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. **Wiring Diagrams:** For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. **Seismic Qualification Certificates:** For **[bag-type filters,] [freestanding cartridge filters,] [carbon filters,] [circulating sand filters,] [multimedia sand filters,] [greensand filters,] [separators,]** accessories, and components, from manufacturer.
1. **Basis for Certification:** Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. **Dimensioned Outline Drawings of Equipment Unit:** Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. **Certificates of Shop Inspections and Data Reports:** For products required to have ASME label, signed by product manufacturer.
- C. Welding certificates.
- D. Source quality-control reports.
- E. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. **Operation and Maintenance Data:** For water filtration equipment to include in emergency, operation, and maintenance manuals.
1. Include operation, maintenance, and inspection data, replacement part numbers and availability, and service depot location and telephone number.
- B. **As-Built Plans:** Submit complete as-built plans of all Work, including interface with

other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MATERIALS MAINTENANCE SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Bag-Type Filter Bags: Bags for bag-type filters equal to [200] [400] <Insert number> percent of amount installed for each size and media indicated.
 2. Cartridge-Filter Elements: Elements for cartridge filters equal to [200] [400] <Insert number> percent of amount installed for each size and media indicated.

1.8 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of water filtration equipment through one source from a single manufacturer.
- B. Welding Qualifications: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NSF 61, "Drinking Water System Components - Health Effects," for all components that will be in contact with potable water.

1.9 PROJECT CONDITIONS

- A. Feedwater Analysis:
1. Alkalinity: <Insert ppm (mg/L)>.
 2. Arsenic: <Insert ppm (mg/L)>.
 3. Calcium: <Insert ppm (mg/L)>.
 4. Chlorine: <Insert ppm (mg/L)>.
 5. Color: <Insert nephelometric turbidity units>.
 6. Hydrogen-Ion Concentration: <Insert pH>.
 7. Hardness: <Insert ppm (mg/L)>.
 8. Hydrogen Sulfide: <Insert ppm (mg/L)>.
 9. Iron: <Insert ppm (mg/L)>.
 10. Lead: <Insert ppm (mg/L)>.
 11. Magnesium: <Insert ppm (mg/L)>.
 12. Manganese: <Insert ppm (mg/L)>.
 13. Potassium: <Insert ppm (mg/L)>.
 14. Sand: <Insert ppm (mg/L)>.
 15. Silt: <Insert ppm (mg/L)>.
 16. Sodium: <Insert ppm (mg/L)>.

17. Total Dissolved Solids: <Insert ppm (mg/L)>.
18. Turbidity: <Insert ppm (mg/L)>.
19. <Insert characteristic>: <Insert value>.

B. Feedwater Properties:

1. Inlet Water Pressure: <Insert psig (kPa)>.
2. Water Temperature: <Insert deg F (deg C)>.

1.10 COORDINATION

- A. Coordinate size and location of concrete bases with actual equipment provided.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect and handle products under provisions of Section 220400 "Basic Plumbing Requirements" and Division 01
- B. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

1.12 WARRANTY

- A. Provide minimum five (5) <Insert number> year warranty for domestic water filtration equipment.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 BAG-TYPE FILTERS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
1. Cycron Corporation.
 2. Eden Equipment Company.
 3. Filter Specialists, Inc.
 4. Filtration Systems; Mechanical Mfg. Corporation.
 5. Hayward Industrial Products, Inc.
 6. Krystal Klear Filtration.
 7. Parker Hannifin Corp.; Process Filtration Division.

8. PEP Filters, Inc.
 9. Rosedale Products, Inc.
 10. RPA Process Technologies.
 11. Shelco Filters.
 12. Siemens AG Water Technologies.
 13. **<Insert manufacturer's name>**.
 14. or approved equal.
- B. Description: Simplex, floor-mounted housing with [**single-bag filter**] [**multiple-bag filter**] for removing suspended particles from water.
1. Housing: Corrosion resistant; designed to separate feedwater from filtrate and to direct feedwater through bag-type water filter(s); with bag support and base, feet, or skirt.
 - a. Material: [**Carbon steel with NSF 61 lining material**] [**Plastic**] [**Stainless steel**].
 - b. Seals: [**NBR**] **<Insert material>**.
 - c. Bag Support: Top lock ring and perforated [**stainless-steel**] **<Insert material>** basket.
 - d. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - e. Steel Housing Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606. Provide stainless-steel flanges if housing is stainless steel.
 - f. Plastic Housing Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: **150-psig (1035-kPa)** plastic flanges.
 2. Bag: Replaceable; of shape to fit housing.
- C. Capacity and Characteristics:
1. Filtrate Design Concentrations:
 - a. Alkalinity: **<Insert ppm (mg/L)>**.
 - b. Chlorine: **<Insert ppm (mg/L)>**.
 - c. Color: **<Insert nephelometric turbidity units>**.
 - d. Hydrogen Sulfide: **<Insert ppm (mg/L)>**.
 - e. Iron: **<Insert ppm (mg/L)>**.
 - f. Manganese: **<Insert ppm (mg/L)>**.
 - g. Sand: **<Insert ppm (mg/L)>**.
 - h. Silt: **<Insert ppm (mg/L)>**.
 - i. Turbidity: **<Insert ppm (mg/L)>**.
 - j. **<Insert characteristic>**: **<Insert value>**.
 2. Filter Design:
 - a. Continuous Flow: **<Insert gpm (L/s)>**.
 - b. Peak Flow: **<Insert gpm (L/s)>**.

- c. Filtration Efficiency: **[98]** <Insert number> percent retention of suspended particles **[10]** **[20]** <Insert size> micrometers and larger from feedwater of listed filtrate design concentrations.
 - d. Pressure Drop: Not to exceed **[2 psig (14 kPa)]** <Insert value> at filter design flow rate when clean **[and <Insert value> when dirty]**.
3. Housing:
- a. Pressure Rating: <Insert psig (kPa)>.
 - b. Diameter: <Insert inches (mm)>.
 - c. Height or Length: <Insert inches (mm)>.
 - d. Inlet and Outlet Size: <Insert NPS (DN)>.
 - e. Drain Size: **[Not applicable]** <Insert NPS (DN)>.
4. Bag:
- a. Nominal Diameter: <Insert inches (mm)>.
 - b. Nominal Length: <Insert inches (mm)>.
 - c. Media: **[Cotton]** **[Polyester]** **[PP]** <Insert material>; **[felt, filament, or mesh]** **[felt]** **[filament]** **[mesh]** construction.

2.2 CARTRIDGE FILTERS

A. Freestanding Cartridge Filters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Campbell Manufacturing, Inc.
 - b. Cycron Corporation.
 - c. Diamond Water Conditioning; a Griesbach company.
 - d. Eden Equipment Company.
 - e. Filter Specialists, Inc.
 - f. Filterspun.
 - g. Filtrine Manufacturing Co.
 - h. General Electric Company; GE Water & Process Technologies.
 - i. Graver Technologies.
 - j. Harmsco, Inc.
 - k. Hydro Systems International.
 - l. ITT Water Equipment Technologies.
 - m. Keystone Filter Division; Met-Pro Corporation.
 - n. Krystal Klear Filtration.
 - o. Parker Hannifin Corp.; Process Filtration Division.
 - p. PEP Filters, Inc.
 - q. Rosedale Products, Inc.
 - r. Serfilco, Ltd.
 - s. Shelco Filters.
 - t. Siemens AG Water Technologies.
 - u. Watts Regulator Company; a division of Watts Water Technologies, Inc.

- v. **<Insert manufacturer's name>**.
 - w. or approved equal.
2. Description: Simplex, floor-mounted housing with replaceable element(s) for removing suspended particles from water.
- a. Housing: Corrosion resistant; designed to separate feedwater from filtrate and to direct feedwater through water filter element(s); with element support(s) and base, feet, or skirt.
 - 1) Fabricate supports and base, feet, or skirt and attachment to housing with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.
 - 2) Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - 3) Steel Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606. Provide stainless-steel flanges if housing is stainless steel.
 - 4) Plastic Housing Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: **150-psig (1035-kPa)** plastic flanges.
 - b. Element(s): Replaceable; of shape to fit housing.
3. Capacity and Characteristics:
- a. Filtrate Design Concentrations:
 - 1) Alkalinity: **<Insert ppm (mg/L)>**.
 - 2) Chlorine: **<Insert ppm (mg/L)>**.
 - 3) Color: **<Insert nephelometric turbidity units>**.
 - 4) Hydrogen Sulfide: **<Insert ppm (mg/L)>**.
 - 5) Iron: **<Insert ppm (mg/L)>**.
 - 6) Manganese: **<Insert ppm (mg/L)>**.
 - 7) Sand: **<Insert ppm (mg/L)>**.
 - 8) Silt: **<Insert ppm (mg/L)>**.
 - 9) Turbidity: **<Insert ppm (mg/L)>**.
 - 10) **<Insert characteristic>**: **<Insert value>**.
 - b. Filter Design:
 - 1) Continuous Flow: **<Insert gpm (L/s)>**.
 - 2) Peak Flow: **<Insert gpm (L/s)>**.
 - 3) Filtration Efficiency: **[98] <Insert number>** percent retention of suspended particles **[1] [10] [20] <Insert size>** micrometers and larger from feedwater of listed filtrate design concentrations.
 - 4) Pressure Drop: Not to exceed **[2 psig (14 kPa)] <Insert value>** at filter design flow rate when clean **[and <Insert value> when dirty]**.
 - c. Housing:

- 1) Material: [**Plastic**] [**Stainless steel**] <Insert material>.
- 2) Pressure Rating: <Insert psig (kPa)>.
- 3) Seals: [**NBR**] <Insert material>.
- 4) Diameter: <Insert inches (mm)>.
- 5) Height or Length: <Insert inches (mm)>.
- 6) Inlet and Outlet Size: <Insert NPS (DN)>.
- 7) Drain Size: [**Not applicable**] <Insert NPS (DN)>.

d. Elements:

- 1) Number Required: [**One**] [**Two**] <Insert number>.
- 2) Nominal Diameter: <Insert inches (mm)>.
- 3) Nominal Length: <Insert inches (mm)>.
- 4) Media: [**Activated charcoal**] [or] [**ground charcoal**].
- 5) Media: [**Pleated polyester**] [or] [**pleated PP**].
- 6) Media: [**Wound polyester**] [or] [**wound PP**].
- 7) Media: <Insert material>.

B. Off-Floor Cartridge Filters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. AMTROL, Inc.; WaterSoft Products.
- b. Campbell Manufacturing, Inc.
- c. Culligan International Company.
- d. Eagle Spring Filtration, Inc.
- e. Eden Equipment Company.
- f. Everpure, LLC.
- g. Fairey Industrial Ceramics.
- h. Filpro Corporation.
- i. Filterspun.
- j. Filtrine Manufacturing Co.
- k. Flint & Walling, Inc.
- l. General Electric Company; GE Water & Process Technologies.
- m. Graver Technologies.
- n. Harmsco, Inc.
- o. Hydro Systems International.
- p. Hydrotech, Inc.; a division of WaterGroup.
- q. ITT Water Equipment Technologies.
- r. Keystone Filter Division; Met-Pro Corporation.
- s. Matterhorn Filter Corp.
- t. Ompure Filter Company.
- u. Parker Hannifin Corp.; Process Filtration Division.
- v. Pentair Filtration, Inc.
- w. Shelco Filters.
- x. Siemens AG Water Technologies.
- y. Topway Global, Inc.
- z. Watts Premier Inc.
- aa. Watts Regulator Company; a division of Watts Water Technologies, Inc.

- bb. Watts Water Technologies, Inc.; Alamo Water.
 - cc. **<Insert manufacturer's name>**.
 - dd. or approved equal.
2. Description: Simplex, **[in-line]** **[wall-mounted]** housing with replaceable element for removing suspended particles from water.
- a. Housing: Corrosion resistant; designed to separate feedwater from filtrate and to direct feedwater through water filter element; with element support.
 - 1) Pipe Connections: Threaded according to ASME B1.20.1.
 - 2) Support: Wall bracket.
 - b. Element: Replaceable; of shape to fit housing.
3. Capacity and Characteristics:
- a. Filtrate Design Concentrations:
 - 1) Alkalinity: **<Insert ppm (mg/L)>**.
 - 2) Chlorine: **<Insert ppm (mg/L)>**.
 - 3) Color: **<Insert nephelometric turbidity units>**.
 - 4) Hydrogen Sulfide: **<Insert ppm (mg/L)>**.
 - 5) Iron: **<Insert ppm (mg/L)>**.
 - 6) Manganese: **<Insert ppm (mg/L)>**.
 - 7) Sand: **<Insert ppm (mg/L)>**.
 - 8) Silt: **<Insert ppm (mg/L)>**.
 - 9) Turbidity: **<Insert ppm (mg/L)>**.
 - 10) **<Insert characteristic>**: **<Insert value>**.
 - b. Filter Design:
 - 1) Continuous Flow: **<Insert gpm (L/s)>**.
 - 2) Peak Flow: **<Insert gpm (L/s)>**.
 - 3) Filtration Efficiency: **[98]** **<Insert number>** percent retention of suspended particles **[1]** **[10]** **[20]** **<Insert size>** micrometers and larger from feedwater of listed filtrate design concentrations.
 - 4) Pressure Drop: Not to exceed **[2 psig (14 kPa)]** **<Insert value>** at filter design flow rate when clean **[and <Insert value> when dirty]**.
 - c. Housing:
 - 1) Material: **[PE or PP]** **[Plastic]** **[Stainless steel]** **<Insert material>**.
 - 2) Pressure Rating: **<Insert psig (kPa)>**.
 - 3) Seals: **[NBR]** **<Insert material>**.
 - 4) Diameter: **<Insert inches (mm)>**.
 - 5) Height or Length: **<Insert inches (mm)>**.
 - 6) Inlet and Outlet Size: **<Insert NPS (DN)>**.
 - 7) Drain Size: **[Not applicable]** **<Insert NPS (DN)>**.

d. Element:

- 1) Nominal Diameter: <Insert inches (mm)>.
- 2) Nominal Length: <Insert inches (mm)>.
- 3) Media: [Activated charcoal] [or] [ground charcoal].
- 4) Media: [Pleated polyester] [or] [pleated PP].
- 5) Media: [Wound polyester] [or] [wound PP].
- 6) Media: <Insert material>.

2.3 CARBON FILTERS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. AMTROL, Inc.; WaterSoft Products.
2. Aquion Water Treatment Products; RainSoft Division.
3. CSI Controls.
4. Culligan International Company.
5. CUNO Incorporated.
6. Diamond Water Conditioning; a Griesbach company.
7. EcoWater Systems LLC.
8. Integrated Separation Solutions, LLC.
9. Marlo Incorporated.
10. PEP Filters, Inc.
11. Separmatic Fluid Systems.
12. Siemens AG Water Technologies.
13. Springsoft Intl, Inc.
14. Water & Power Technologies Incorporated; a Tyco International Ltd. company.
15. Water-Right, Inc.
16. Watts Water Technologies, Inc.; Alamo Water.
17. <Insert manufacturer's name>.
18. or approved equal.

B. **Description: Simplex carbon filter, with media tank, media, and automatic backwash for [removing chlorine from] [and] [improving color, odor, and taste of] <Insert application> water.**

1. Media Tank: Corrosion resistant with distribution system and media.
 - a. Construction:
 - 1) Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.
 - 2) Fabricate and label FRP filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section X, if indicated.
 - 3) Fabricate supports and base and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.

- 4) Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - 5) Steel Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606. Provide stainless-steel flanges if tank is stainless steel.
 - 6) FRP Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Type A, integral; [**Designation E, 125-psig (0.862-MPa)**] [**or**] [**Designation F, 150-psig (1.034-MPa)**] pressure category flanges of grade same as tank material according to ASTM D 5421.
 - 7) Support: Base, feet, or skirt.
2. Controls: Automatic for control of backwash; factory wired for single, external electrical connection.
 - a. Panel: NEMA 250, Type [4] **<Insert type>** enclosure.
 - b. Backwash Initiation Device: [**Differential pressure gages**] [**Electric time clock**] [**Water meter**].
- C. Capacity and Characteristics:
1. Filtrate Design Concentrations:
 - a. Alkalinity: **<Insert ppm (mg/L)>**.
 - b. Chlorine: **<Insert ppm (mg/L)>**.
 - c. Color: **<Insert nephelometric turbidity units>**.
 - d. Hydrogen-Ion Concentration: **<Insert pH>**.
 - e. Hydrogen Sulfide: **<Insert ppm (mg/L)>**.
 - f. Iron: **<Insert ppm (mg/L)>**.
 - g. Manganese: **<Insert ppm (mg/L)>**.
 - h. Total Dissolved Solids: **<Insert ppm (mg/L)>**.
 - i. Turbidity: **<Insert ppm (mg/L)>**.
 - j. **<Insert characteristic>**: **<Insert value>**.
 2. Filter Design:
 - a. Continuous Flow: **<Insert gpm (L/s)>**.
 - b. Flow Rate: **<Insert gpm/sq. ft. (L/s per sq. m)>** of media cross-sectional area.
 - c. Peak Flow: **<Insert gpm (L/s)>**.
 - d. Filtration Efficiency: [98] **<Insert number>** percent retention of suspended particles [20] [40] **<Insert size>** micrometers and larger from feedwater of listed filtrate design concentrations.
 - e. Pressure Drop: Not to exceed [2 psig (14 kPa)] **<Insert value>** at filter design flow rate when clean[**and <Insert value> when dirty**].
 - f. Backwash Flow: **<Insert gpm (L/s)>**.
 3. Filter Backwash Interval: **<Insert psig (kPa)>** pressure drop measured by differential pressure gages.
 4. Filter Backwash Interval: **<Insert number>** days measured by time clock.

5. Filter Backwash Interval: **<Insert gal. (cu. m)>** measured by water meter.
6. Media Tank:
 - a. Material: **[Carbon steel with NSF 61 lining material] [FRP] [Stainless steel]**.
 - b. Pressure Rating: **<Insert psig (kPa)>**.
 - c. Media: **[Activated charcoal] [Ground charcoal] <Insert material>**.
 - d. Media Quantity: **<Insert cu. ft. (cu. m)>**.
 - e. Diameter: **<Insert inches (mm)>**.
 - f. Height: **<Insert inches (mm)>**.
 - g. Inlet and Outlet Size: **<Insert NPS (DN)>**.
7. Unit Electrical Characteristics:
 - a. Volts: **[120] [240] [277] [480] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: **[60] <Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.4 SAND FILTERS

A. Circulating Sand Filters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Diamond Water Systems, Inc.
 - b. Everfilt.
 - c. Griswold Controls.
 - d. LAKOS; Claude Laval Corporation.
 - e. Miami Filter, Inc.
 - f. PEP Filters, Inc.
 - g. Puroflux Corporation.
 - h. United Industries, Inc.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Description: Factory-fabricated and -tested, simplex, sand-filter system of filter tank, media, strainer, circulating pump, piping, and controls for removing sediment particles from water.
 - a. Filter Tank: Corrosion resistant with distribution system and media.
 - 1) Construction:
 - a) Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.

- b) Fabricate and label FRP filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section X, if indicated.
 - c) Fabricate supports and base and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.
- 2) Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - 3) Steel Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
 - 4) FRP Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Type A, integral; Designation [**E, 125-psig (0.862-MPa)**] [**or**] [**F, 150-psig (1.034-MPa)**] pressure category flanges of grade same as tank material according to ASTM D 5421.
- b. Strainer: Basket type.
- 1) Pipe Connections:
 - a) Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - b) Connections **NPS 2-1/2 (DN 65)** and Larger: Cast-iron, Class 125 flanges according to ASME B16.1.
- c. Piping: [**Galvanized steel pipe, galvanized cast-iron fittings**] [**Stainless-steel pipe, stainless-steel fittings**], and flanged, grooved, or threaded joints.
- d. Piping: **ASTM B 88, Type L (ASTM B 88M, Type B)** copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
- e. Safety Valves: Automatic and manual pressure relief.
- f. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.
- 1) Pump Construction: Bronze fitted.
 - a) Casing: Radially split, cast iron.
 - b) Pressure Rating: [**125 psig (860 kPa)**] [**150 psig (1035 kPa)**] minimum.
 - c) Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
 - d) Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
 - e) Seal: Mechanical.
 - 2) Motor: General requirements for motors are specified in Section 220513 "Common Motor Requirements for Plumbing Equipment."
- g. Controls: Automatic for control of circulating pump and tank backwash; factory wired for single, external electrical connection.

- 1) Panel: NEMA 250, Type [4] <Insert type> enclosure with time clock and pressure gages.
 - 2) Pump: Automatic and manual.
 - 3) Backwash: Automatic; with [time-clock] [differential-pressure-switch] initiation device.
 - 4) Backwash Valve: Tank mounted.
- h. Support: Skid mounting.
3. Capacity and Characteristics:
- a. Filtrate Design Concentrations:
 - 1) Sand: <Insert ppm (mg/L)>.
 - 2) Silt: <Insert ppm (mg/L)>.
 - 3) <Insert characteristic>: <Insert value>.
 - b. Filter Design:
 - 1) Continuous Flow: <Insert gpm (L/s)> at [5-psig (34.5-kPa)] <Insert value> pressure drop.
 - 2) Flow Rate: <Insert gpm/sq. ft. (L/s per sq. m)> of media cross-sectional area.
 - 3) Peak Flow: <Insert gpm (L/s)>.
 - 4) Filtration Efficiency: [98] <Insert number> percent removal of [1.8] <Insert number> minimum specific-gravity suspended particles [5] [10] [20] [45] <Insert size> micrometers and larger from feedwater of listed filtrate design concentrations.
 - c. Filter Tank: With internal distribution piping.
 - 1) Material: [Carbon steel with NSF 61 lining material] [FRP] <Insert material>.
 - 2) Pressure Rating: <Insert psig (kPa)>.
 - 3) Diameter: <Insert inches (mm)>.
 - 4) Height: <Insert inches (mm)>.
 - 5) Inlet and Outlet Size: <Insert NPS (DN)>.
 - 6) Purge Size: <Insert NPS (DN)>.
 - d. Filter Media: [Graded silica sand] <Insert media>.
 - e. Filter Backwash Interval: <Insert psig (kPa)> pressure drop measured by differential pressure gages.
 - f. Filter Backwash Interval: <Insert number> days measured by time clock.
 - g. Circulating Pump:
 - 1) Capacity: <Insert gpm (L/s)>.
 - 2) Total Dynamic Head: <Insert feet (kPa)>.
 - 3) Speed: <Insert rpm>.
 - 4) Inlet Size: <Insert NPS (DN)>.
 - 5) Outlet Size: <Insert NPS (DN)>.

- h. Pump Motor Size and Electrical Characteristics:
 - 1) Horsepower: **<Insert value>**.
 - 2) Volts: **[120] [208] [240] [277] [480] <Insert value>**.
 - 3) Phase: **[Single] [Three]**.
 - 4) Hertz: **[60] <Insert value>**.
- i. Unit Electrical Characteristics:
 - 1) Full-Load Amperes: **<Insert value>**.
 - 2) Minimum Circuit Ampacity: **<Insert value>**.
 - 3) Maximum Overcurrent Protection: **<Insert amperage>**.

B. Multimedia Sand Filters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. AMTROL, Inc.; WaterSoft Products.
- b. Aquion Water Treatment Products; RainSoft Division.
- c. Aries; a division of ResinTech, Inc.
- d. Columbia Water; a division of R & M Manufacturing, Inc.
- e. CSI Controls.
- f. Culligan International Company.
- g. CUNO Incorporated.
- h. Diamond Water Conditioning; a Griesbach company.
- i. Diamond Water Systems, Inc.
- j. Everfilt.
- k. Filtronics, Inc.
- l. Hungerford & Terry, Inc.
- m. Industrial Filter & Pump Mfg. Co.
- n. Integrated Separation Solutions, LLC.
- o. LAKOS; Claude Laval Corporation.
- p. Marlo Incorporated.
- q. Mer-Made Filter, Inc.
- r. Miami Filter, Inc.
- s. PEP Filters, Inc.
- t. Puroflux Corporation.
- u. Separmatic Fluid Systems.
- v. Smith & Loveless.
- w. Springsoft Intl, Inc.
- x. Water & Power Technologies Incorporated.; a Tyco International Ltd. company.
- y. Water King.
- z. Watts Water Technologies, Inc.; Alamo Water.
- aa. **<Insert manufacturer's name>**.
- bb. or approved equal.

2. Description: Factory-fabricated and -tested, [**simplex**] [**duplex**] [**triplex**], multimedia, sand-filter system of filter tank(s), media, piping, and controls for removing sediment particles from water.
 - a. Tank Construction:
 - 1) Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.
 - 2) Fabricate and label FRP filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section X, if indicated.
 - 3) Fabricate supports and base and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.
 - b. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - c. Steel Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
 - d. FRP Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Type A, integral; Designation [**E, 125-psig (0.862-MPa)**] [**or**] [**F, 150-psig (1.034-MPa)**] pressure category flanges of grade same as tank material according to ASTM D 5421.
 - e. Service Valve(s): Diaphragm type [**hydraulically**] [**pneumatically**] operated.
 - f. Piping: [**Galvanized steel pipe, galvanized cast-iron fittings**] [**Stainless-steel pipe, stainless-steel fittings**], and flanged, grooved, or threaded joints.
 - g. Piping: **ASTM B 88, Type L (ASTM B 88M, Type B)** copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
 - h. Piping: Schedule 80 ABS or PVC pipe and fittings with solvent-cemented joints.
 - i. Safety Valves: Automatic air vent.
 - j. Controls for Simplex Tank System: Automatic, electric time clock for control of filter system flow and backwash cycles; factory-wired for single, external electrical connection.
 - k. Controls for [**Duplex**] [**Triplex**] Tank System: Automatic, electric time clock for control of filter system flow and backwash cycles; factory-wired for single, external electrical connection. System operation shall be continuous with bypass piping and not more than one tank in backwash cycle at same time.
 - l. Support: Skid mounting.
3. Capacity and Characteristics:
 - a. Filtrate Design Concentrations:
 - 1) Chlorine: <Insert ppm (mg/L)>.
 - 2) Color: <Insert nephelometric turbidity units>.
 - 3) Iron: <Insert ppm (mg/L)>.

- 4) Manganese: <Insert ppm (mg/L)>.
- 5) Total Dissolved Solids: <Insert ppm (mg/L)>.
- 6) Turbidity: <Insert ppm (mg/L)>.
- 7) <Insert characteristic>: <Insert value>.

b. Filter Design:

- 1) Continuous Flow: <Insert gpm (L/s)> at <Insert psig (kPa)> pressure drop.
- 2) Peak Flow: <Insert gpm (L/s)> at <Insert psig (kPa)> pressure drop.
- 3) Filtration Efficiency: [98] <Insert number> percent removal of suspended particles [10] [20] [40] <Insert size> micrometers and larger from feedwater of listed filtrate design concentrations.
- 4) Backwash Flow: <Insert gpm (L/s)> at <Insert psig (kPa)> pressure drop.

c. Media Tank: Single with controls.

d. Media Tanks: [Two] [Three] with manifolded inlet, outlet, and drain piping and controls.

e. Each Media Tank:

- 1) Material: [Carbon steel with NSF 61 lining material] [FRP] <Insert material>.
- 2) Pressure Rating: <Insert psig (kPa)> minimum.
- 3) Distribution System: Factory-installed plastic.
- 4) Temperature Rating: <Insert deg F (deg C)> minimum.
- 5) Diameter: <Insert inches (mm)>.
- 6) Height: <Insert inches (mm)>.
- 7) Service Valve Size: <Insert NPS (DN)>.
- 8) Inlet and Outlet Size: <Insert NPS (DN)>.
- 9) Drain Size: <Insert NPS (DN)>.

f. Filter Media: [Graded silica sand] <Insert media>.

C. Greensand Filters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. AMTROL, Inc.; WaterSoft Products.
- b. Aquion Water Treatment Products; RainSoft Division.
- c. Aries; a division of ResinTech, Inc.
- d. CSI Controls.
- e. Culligan International Company.
- f. CUNO Incorporated.
- g. Diamond Water Conditioning; a Griesbach company.
- h. Filtronics, Inc.
- i. Hungerford & Terry, Inc.
- j. Integrated Separation Solutions, LLC.
- k. Marlo Incorporated.

- I. PEP Filters, Inc.
 - m. Separmatic Fluid Systems.
 - n. Watts Water Technologies, Inc.; Alamo Water.
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.
2. Description: Greensand-filter system of piping, and controls for removing [iron] [iron and manganese] [manganese] from water.
 - a. Tank Construction:
 - 1) Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.
 - 2) Fabricate and label FRP filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section X, if indicated.
 - 3) Fabricate supports and base and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.
 - b. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - c. Steel Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
 - d. FRP Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Type A, integral; Designation [**E, 125-psig (0.862-MPa)**] [**or**] [**F, 150-psig (1.034-MPa)**] pressure category flanges of grade same as tank material according to ASTM D 5421.
 - e. Service Valve(s): Diaphragm type [**hydraulically**] [**pneumatically**] operated.
 - f. Piping: [**Galvanized steel pipe, galvanized cast-iron fittings**] [**Stainless-steel pipe, stainless-steel fittings**], and flanged, grooved, or threaded joints.
 - g. Piping: **ASTM B 88, Type L (ASTM B 88M, Type B)** copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
 - h. Piping: Schedule 80 ABS or PVC pipe and fittings with solvent-cemented joints.
 - i. Safety Valves: Automatic air vent.
 - j. Controls for Simplex Tank System: Automatic, electric time clock for control of filter system flow and backwash cycles; factory wired for single, external electrical connection.
 - k. Controls for [**Duplex**] [**Triplex**] Tank System: Automatic, electric time clock for control of filter system flow and backwash cycles; factory wired for single, external electrical connection. System operation shall be continuous with bypass piping and not more than one tank in backwash cycle at same time.
 - l. Support: Skid mounting.
3. Capacity and Characteristics:

- a. Filtrate Design Concentrations:
 - 1) Iron: <Insert ppm (mg/L)>.
 - 2) Manganese: <Insert ppm (mg/L)>.
 - 3) <Insert characteristic>: <Insert value>.
- b. Filter Design:
 - 1) Continuous Flow: <Insert gpm (L/s)> at <Insert psig (kPa)> pressure drop.
 - 2) Peak Flow: <Insert gpm (L/s)> at <Insert psig (kPa)> pressure drop.
 - 3) Filtration Efficiency: [98] <Insert number> percent removal of suspended particles [10] [20] [40] <Insert size> micrometers and larger from feedwater of listed filtrate design concentrations.
 - 4) Backwash Flow: <Insert gpm (L/s)> at <Insert psig (kPa)> pressure drop.
- c. Media Tank: Single with controls.
- d. Media Tanks: [Two] [Three] with manifolded inlet, outlet, and drain piping and controls.
- e. Each Media Tank:
 - 1) Material: [Carbon steel with NSF 61 lining material] [FRP] <Insert material>.
 - 2) Pressure Rating: <Insert psig (kPa)> minimum.
 - 3) Distribution System: Factory-installed plastic.
 - 4) Temperature Rating: <Insert deg F (deg C)> minimum.
 - 5) Diameter: <Insert inches (mm)>.
 - 6) Height: <Insert inches (mm)>.
 - 7) Service Valve Size: <Insert NPS (DN)>.
 - 8) Inlet and Outlet Size: <Insert NPS (DN)>.
 - 9) Drain Size: <Insert NPS (DN)>.
- f. Filter Media: [Graded silica sand] <Insert media>.

2.5 SEPARATORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Culligan International Company.
2. Griswold Controls.
3. LAKOS; Claude Laval Corporation.
4. PEP Filters, Inc.
5. Puroflux Corporation.
6. Rosedale Products, Inc.
7. Watts Water Technologies, Inc.; Alamo Water.
8. <Insert manufacturer's name>.
9. or approved equal.

- B. Description: Simplex separator housing with baffles and chambers for removing sediment particles from water by centrifugal action and gravity.
- C. Description: Factory-fabricated and -tested, simplex separator system of housing with baffles and chambers, strainer, circulating pump, piping, and controls for removing sediment particles from water by centrifugal action and gravity.
- D. Housing: With manufacturer's proprietary system of baffles and chambers.
1. Construction:
 - a. Fabricate and label steel separator housing to comply with ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.
 - b. Fabricate supports and base and attachment to separator housing with reinforcement strong enough to resist separator movement during a seismic event when separator base is anchored to building structure.
 2. Inlet: Designed with tangential entry to produce centrifugal flow of feedwater.
 3. Vortex Chamber: Designed for downward vortex flow and gravity separation of particles.
 4. Collection Chamber: Designed to hold separated particles.
 5. Outlet: Near top of unit.
 6. Purge: At bottom of collection chamber.
 7. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 8. Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: ASME B16.1; steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606. Provide stainless-steel flanges if tank is stainless steel.
- E. Strainer: Basket type.
1. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 2. Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Cast-iron, Class 125 flanges according to ASME B16.1.
- F. Piping: [**Galvanized steel pipe, galvanized cast-iron fittings**] [**Stainless-steel pipe, stainless-steel fittings**], and flanged, grooved, or threaded joints.
- G. Piping: **ASTM B 88, Type L (ASTM B 88M, Type B)** copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
- H. Safety Valves: Automatic and manual pressure relief.
- I. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.
1. Pump Construction: Bronze fitted.
 - a. Casing: Radially split, cast iron.
 - b. Pressure Rating: [**125 psig (860 kPa)**] [**150 psig (1035 kPa)**] minimum.

- c. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
 - d. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
 - e. Seal: Mechanical.
2. Motor: General requirements for motors are specified in Section 220513 "Common Motor Requirements for Plumbing Equipment."
- J. Controls: Automatic for control of circulating pump and separator purge; factory wired for single, external electrical connection.
 1. Panel: NEMA 250, Type [4] <Insert type> enclosure.
 2. Pump: Automatic and manual.
 3. Separator Purge: Automatic and manual.
- K. Support: Skid mounting.
- L. Capacity and Characteristics:
 1. Filtrate Design Concentrations:
 - a. Sand: <Insert ppm (mg/L)>.
 - b. Silt: <Insert ppm (mg/L)>.
 - c. <Insert characteristic>: <Insert value>.
 2. Separator Design:
 - a. Continuous Flow: <Insert gpm (L/s)> at [5-psig (34.5-kPa)] <Insert value> pressure drop.
 - b. Peak Flow: <Insert gpm (L/s)>.
 - c. Separator Efficiency: [98] <Insert number> percent removal of listed [1.8] <Insert number> minimum specific-gravity suspended particles [5] [10] [20] [45] <Insert size> micrometers and larger from feedwater of listed filtrate design concentrations.
 3. Housing:
 - a. Material: [Carbon] [Stainless] steel.
 - b. Pressure Rating: <Insert psig (kPa)>.
 - c. Diameter: <Insert inches (mm)>.
 - d. Height: <Insert inches (mm)>.
 - e. Inlet and Outlet Size: <Insert NPS (DN)>.
 - f. Purge Size: <Insert NPS (DN)>.
 4. Circulating Pump:
 - a. Capacity: <Insert gpm (L/s)>.
 - b. Total Dynamic Head: <Insert feet (kPa)>.
 - c. Speed: <Insert rpm>.
 - d. Inlet Size: <Insert NPS (DN)>.

- e. Outlet Size: <Insert NPS (DN)>.
5. Pump Motor Size and Electrical Characteristics:
- a. Horsepower: <Insert value>.
 - b. Volts: [120] [208] [240] [277] [480] <Insert value>.
 - c. Phase: [Single] [Three].
 - d. Hertz: [60] <Insert value>.
6. Unit Electrical Characteristics:
- a. Full-Load Amperes: <Insert value>.
 - b. Minimum Circuit Ampacity: <Insert value>.
 - c. Maximum Overcurrent Protection: <Insert amperage>.
- 2.6 SOURCE QUALITY CONTROL
- A. Before shipping, hydrostatically test [carbon filters,] [circulating sand filters,] [multimedia sand filters,] [greensand filters,] [and] [separators] to minimum of one and one-half times pressure rating.
 - B. Prepare test reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of [filters] [and] [separators].
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before equipment installation.
- C. Examine walls and floors for suitable conditions where [filters] [and] [separators] will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EQUIPMENT MOUNTING

- A. Equipment Mounting: Install [filters, except wall-mounted cartridge filters,] [and] [separators] on concrete bases. Comply with requirements for concrete bases specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of concrete base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.

3.3 BAG-TYPE FILTER INSTALLATION

- A. Equipment Mounting: Install filters on concrete base. Comply with requirements for concrete base specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
- B. Install bag-type filters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
- C. Install filter media bags.
- D. Install seismic restraints for bag-type filter housings and anchor to building structure.

3.4 CARTRIDGE-FILTER INSTALLATION

- A. Install cartridge filters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
- B. Equipment Mounting: Install freestanding cartridge filters on concrete base. Comply with requirements for concrete base specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 1. Exception: Omit concrete bases if installation directly on floor is indicated.
- C. Attach wall brackets for off-floor, wall-mounted, cartridge filter to vertical surface. Attach housing(s), and base if any, to wall bracket.
- D. Install housings for off-floor, in-line, cartridge filters in piping.
- E. Install filter elements in cartridges.
- F. Install seismic restraints for freestanding cartridge-filter housings and anchor to building structure.

3.5 CARBON-FILTER INSTALLATION

- A. Install carbon filters on concrete base. Comply with requirements for concrete base specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
- B. Prepare carbon-filter tank distribution system and underbed, if any, for filter media and place specified media into tanks.
- C. Install seismic restraints for carbon-filter housings and anchor to building structure.

3.6 SAND-FILTER INSTALLATION

- A. Install sand-filter tanks on concrete base. Comply with requirements for concrete base specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
- B. Prepare sand-filter tank distribution system and underbed for filter media and place specified sand and other media into tanks.
- C. Install seismic restraints for sand-filter tanks and accessories and anchor to building structure.

3.7 SEPARATOR INSTALLATION

- A. Install separators on concrete base. Comply with requirements for concrete base specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
- B. Install seismic restraints for separators and accessories and anchor to building structure.

3.8 CONNECTIONS

- A. Comply with requirements for piping specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Make piping connections between water filtration equipment and dissimilar-metal water piping with dielectric fittings. Comply with requirements for dielectric fittings specified in Section 221116 "Domestic Water Piping."
- D. Install shutoff valves on feedwater-inlet and filtrate-outlet piping of each water filtration equipment [**filter**] [**and**] [**separator**] [**and on inlet and outlet headers**].
 - 1. Comply with requirements for metal general-duty valves specified in Section 220523 "General-Duty Valves for Plumbing Piping."

2. Comply with requirements for plastic valves specified in Section 221116 "Domestic Water Piping."
 3. Exception: Water filtration equipment with factory-installed shutoff valves at locations indicated.
- E. Install pressure gages on feedwater-inlet and filtrate-outlet piping of each water filtration equipment **[filter]** **[and]** **[separator]**. Comply with requirements for pressure gages specified in Section 220519 "Meters and Gages for Plumbing Piping."
1. Exception: Water filtration equipment with factory-installed pressure gages at locations indicated.
 2. Exception: Cartridge water filters.
- F. Install valved bypass water piping around each water filtration equipment **[filter]** **[and]** **[separator]**.
1. Comply with requirements for metal general-duty valves specified in Section 220523 "General-Duty Valves for Plumbing Piping."
 2. Comply with requirements for plastic valves specified in Section 221116 "Domestic Water Piping."
 3. Comply with requirements for water piping specified in Section 221116 "Domestic Water Piping."
 4. Exception: Bag-type water filtration equipment.
 5. Exception: Cartridge water filtration equipment.
- G. Install drains as indirect wastes to spill into open drains or over floor drains.

3.9 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.10 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Domestic water filtration equipment will be considered defective if it does not pass tests and inspections.

- D. Prepare test and inspection reports.

3.11 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service for **[circulating sand filters,] [multimedia sand filters,] [greensand filters,] [and] [separators]**.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. **<Insert startup steps if any>**.

- B. Sample **[filter] [and] [separator]** filtrate after startup and at three consecutive seven-day intervals (total of four samples), and prepare certified test reports for required water performance characteristics.

3.12 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain **[circulating sand filters,] [multimedia sand filters,] [greensand filters,] [and] [separators]**.

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 223200

SECTION 223300 - ELECTRIC, DOMESTIC-WATER HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
1. Commercial, electric, domestic-water booster heaters.
 2. Commercial, electric, storage, domestic-water heaters.
 3. Commercial, light-duty, storage, electric, domestic-water heaters.
 4. Flow-control, electric, tankless, domestic-water heaters.
 5. Thermostat-control, electric, tankless, domestic-water heaters.
 6. Domestic-water heater accessories.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Commercial domestic-water heaters shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type and size of domestic-water heater indicated.[**Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.**]
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with applicable requirements in ASHRAE/IESNA 90.1, Section 7, "Service Water Heating."

C. Shop Drawings:

1. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For commercial domestic-water heaters, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Product Certificates: For each type of **[commercial]** **[residential]** **[and]** **[tankless]**, electric, domestic-water heater, from manufacturer.

C. Domestic-Water Heater Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.

D. Source quality-control reports.

E. Field quality-control reports.

F. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For electric, domestic-water heaters to include in emergency, operation, and maintenance manuals.

1. Include operation, maintenance, and inspection data, replacement part numbers and availability, and service depot location and telephone number.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
- C. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61, "Drinking Water System Components - Health Effects."

1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect and handle products under provisions of Section 220400 "Basic Plumbing Requirements" and Division 01
- B. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of electric, domestic-water heaters that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Structural failures including storage tank and supports.
- b. Faulty operation of controls.
- c. Deterioration of metals, metal finishes, and other materials beyond normal use.

2. Warranty Periods: From date of Substantial Completion.

- a. Commercial, Electric, Domestic-Water Booster Heaters:
 - 1) Controls and Other Components: Minimum **[three (3)] [five (5)]** **<Insert number>** years.
- b. Commercial, Electric, Storage, Domestic-Water Heaters:

- 1) Storage Tank: Minimum[**three (3)**] [**five (5)**] <Insert number> years.
- 2) Controls and Other Components: Minimum[**three (3)**] [**five (5)**] <Insert number> years.

c. Commercial, Light-Duty, Storage, Electric, Domestic-Water Heaters:

- 1) Storage Tank: [**Three**] [**Five**] <Insert number> years.
- 2) Controls and Other Components: [**Two**] [**Three**] <Insert number> years.

d. Electric, Tankless, Domestic-Water Heaters: Minimum[**one (1)**] [**two (2)**] [**five (5)**] <Insert number> year(s).

e. Compression Tanks: Minimum[**five (5)**] <Insert number> years.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 COMMERCIAL, ELECTRIC, DOMESTIC-WATER HEATERS

A. Commercial, Electric, Domestic-Water Booster Heaters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Bradford White Corporation.
- b. Coates Heater Company, Inc.
- c. Electric Heater Company (The).
- d. Hatco Corporation.
- e. HESco Industries, Inc.
- f. Lochinvar Corporation.
- g. Rheem Manufacturing Company.
- h. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
- i. <Insert manufacturer's name>.
- j. or approved equal.

2. Standard: UL 1453.

3. Tank Construction: [**Corrosion-resistant metal**] [**or**] [**steel**].

- a. Tappings: ASME B1.20.1 pipe thread.
- b. Pressure Rating: **150 psig** (1035 kPa).
- c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.

4. Factory-Installed Tank Appurtenances:

- a. Anode Rod: Replaceable magnesium.
- b. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
- c. Insulation: Comply with ASHRAE/IESNA 90.1.
- d. Jacket: Rectangular shaped, with stainless-steel front panel, unless otherwise indicated.
- e. Heating Elements: Electric, screw-in or bolt-on immersion type arranged in multiples of three.
 - 1) Option: Booster heaters with total of 9 kW or less may have two or three elements.
- f. Temperature Control: Adjustable thermostat, to setting of at least 180 deg F (82 deg C).
- g. Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
- h. Relief Valve: ASME rated and stamped for combination temperature-and-pressure relief valve. Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.
- i. Gages: Combination temperature-and-pressure type or separate thermometer and pressure gage.

5. Special Requirements: NSF 5 construction with **[brackets for undercounter]** **[legs for floor]** installation.

B. Commercial, Electric, Storage, Domestic-Water Heaters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. American Water Heaters.
- b. Bradford White Corporation.
- c. Cemline Corporation.
- d. Electric Heater Company (The).
- e. GSW Water Heating.
- f. HESco Industries, Inc.
- g. Lochinvar Corporation.
- h. Precision Boilers, Inc.
- i. PVI Industries, LLC.
- j. RECO USA.
- k. Rheem Manufacturing Company.
- l. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
- m. State Industries.
- n. Vaughn Manufacturing Corporation.
- o. **<Insert manufacturer's name>**.
- p. or approved equal.

2. Standard: UL 1453.
 3. Storage-Tank Construction: **[Non-]ASME-code**, steel **[horizontal] [vertical]** arrangement.
 - a. Tappings: Factory fabricated of materials compatible with tank and piping connections. Attach tappings to tank before testing.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
 - b. Pressure Rating: **[150 psig (1035 kPa)] <Insert value>**.
 - c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
 4. Factory-Installed Storage-Tank Appurtenances:
 - a. Anode Rod: Replaceable magnesium.
 - b. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
 - c. Insulation: Comply with ASHRAE/IESNA 90.1.
 - d. Jacket: Steel with enameled finish.
 - e. Heating Elements: Electric, screw-in or bolt-on immersion type arranged in multiples of three.
 - f. Temperature Control: Adjustable thermostat.
 - g. Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
 - h. Relief Valves: ASME rated and stamped for combination temperature-and-pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
 5. Special Requirements: NSF 5 construction.
- C. Commercial, Light-Duty, Storage, Electric, Domestic-Water Heaters:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Water Heaters.
 - b. Bradford White Corporation.
 - c. Electric Heater Company (The).
 - d. GSW Water Heating.
 - e. Heat Transfer Products, Inc.
 - f. Lochinvar Corporation.
 - g. Rheem Manufacturing Company.
 - h. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 - i. State Industries.

- j. **<Insert manufacturer's name>**.
 - k. or approved equal.
 2. Standard: UL 174.
 3. Storage-Tank Construction: Steel, vertical arrangement.
 - a. Tappings: ASME B1.20.1 pipe thread.
 - b. Pressure Rating: **150 psig** (1035 kPa).
 - c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
 4. Factory-Installed Storage-Tank Appurtenances:
 - a. Anode Rod: Replaceable magnesium.
 - b. Dip Tube: Required unless cold-water inlet is near bottom of tank.
 - c. Drain Valve: ASSE 1005.
 - d. Insulation: Comply with ASHRAE/IESNA 90.1[**or ASHRAE 90.2**].
 - e. Jacket: Steel with enameled finish.
 - f. Heat-Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
 - g. Heating Elements: Two; electric, screw-in immersion type; wired for simultaneous operation unless otherwise indicated. Limited to 12 kW total.
 - h. Temperature Control: Adjustable thermostat.
 - i. Safety Control: High-temperature-limit cutoff device or system.
 - j. Relief Valve: ASME rated and stamped for combination temperature-and-pressure relief valves. Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.
 5. Special Requirements: NSF 5 construction with legs for off-floor installation.
- D. Capacity and Characteristics:
 1. Capacity: **<Insert gal. (L)>**.
 2. Recovery: **<Insert gph (L/s)>** at [40 deg F (22 deg C)] [50 deg F (28 deg C)] [100 deg F (56 deg C)] **<Insert temperature>** temperature rise.
 3. Temperature Setting: [125 deg F (52 deg C)] [140 deg F (60 deg C)] [180 deg F (82 deg C)] **<Insert temperature>**.
 4. Power Demand: **<Insert kilowatts>**.
 5. Heating Elements:
 - a. Number of Elements: [Two] [Three] [Six] [Nine] **<Insert number>**.
 - b. Kilowatts Each Element: **<Insert kilowatts>**.
 - c. Number of Stages: [One] [Two] [Three] [Four] **<Insert number>**.
 6. Electrical Characteristics:
 - a. Volts: [120] [240] [277] [480] **<Insert value>**.
 - b. Phases: [Single] [Three].

- c. Hertz: 60.
- d. Full-Load Amperes: **<Insert value>**.
- e. Minimum Circuit Ampacity: **<Insert value>**.
- f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.2 ELECTRIC, TANKLESS, DOMESTIC-WATER HEATERS

A. Flow-Control, Electric, Tankless, Domestic-Water Heaters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Bosch Water Heating.
- b. Chronomite Laboratories, Inc.
- c. Eemax, Inc.
- d. Stiebel Eltron, Inc.
- e. **<Insert manufacturer's name>**.
- f. or approved equal.

2. Standard: UL 499 for electric, tankless, (domestic-water heater) heating appliance.

3. Construction: Copper piping or tubing complying with NSF 61 barrier materials for potable water, without storage capacity.

- a. Connections: ASME B1.20.1 pipe thread.
- b. Pressure Rating: [150 psig (1035 kPa)] **<Insert value>**.
- c. Heating Element: Resistance heating system.
- d. Temperature Control: Flow-control fitting.
- e. Safety Control: High-temperature-limit cutoff device or system.
- f. Jacket: Aluminum or steel with enameled finish or plastic.

4. Support: Bracket for wall mounting.

5. Capacity and Characteristics:

- a. Flow Rate: **<Insert gpm (L/s)>**.
- b. Maximum Temperature Setting: **<Insert temperature>**.
- c. Power Demand: **<Insert kilowatts>**.
- d. Electrical Characteristics:
 - 1) Volts: [120] [240] [277] [480] **<Insert value>**.
 - 2) Phases: [Single] [Three].
 - 3) Hertz: 60.
 - 4) Full-Load Amperes: **<Insert value>**.
 - 5) Minimum Circuit Ampacity: **<Insert value>**.
 - 6) Maximum Overcurrent Protection: **<Insert amperage>**.

B. Thermostat-Control, Electric, Tankless, Domestic-Water Heaters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Bosch Water Heating.
 - b. Chronomite Laboratories, Inc.
 - c. E-Tankless Water Heaters Corp.
 - d. Keltech, Inc.
 - e. Niagara Industries, Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Standard: UL 499 for electric, tankless, (domestic-water heater) heating appliance.
3. Construction: Copper piping or tubing complying with NSF 61 barrier materials for potable water, without storage capacity.
 - a. Connections: ASME B1.20.1 pipe thread.
 - b. Pressure Rating: [150 psig (1035 kPa)] **<Insert value>**.
 - c. Heating Element: Resistance heating system.
 - d. Temperature Control: Thermostat.
 - e. Safety Control: High-temperature-limit cutoff device or system.
 - f. Jacket: Aluminum or steel with enameled finish or plastic.
4. Support: Bracket for wall mounting.
5. Capacity and Characteristics:
 - a. Flow Rate: **<Insert gpm (L/s)>** at [100 deg F (56 deg C)] **<Insert temperature>** temperature rise.
 - b. Temperature Setting: [125 deg F (52 deg C)] [140 deg F (60 deg C)] **<Insert temperature>**.
 - c. Power Demand: **<Insert kilowatts>**.
 - d. Electrical Characteristics:
 - 1) Volts: [120] [240] [277] [480] **<Insert value>**.
 - 2) Phases: [Single] [Three].
 - 3) Hertz: 60.
 - 4) Full-Load Amperes: **<Insert value>**.
 - 5) Minimum Circuit Ampacity: **<Insert value>**.
 - 6) Maximum Overcurrent Protection: **<Insert amperage>**.

2.3 DOMESTIC-WATER HEATER ACCESSORIES

A. Domestic-Water Compression Tanks:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. AMTROL Inc.
 - b. Flexcon Industries.

- c. Honeywell International Inc.
 - d. Pentair Pump Group (The); Myers.
 - e. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 - f. State Industries.
 - g. Taco, Inc.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Description: Steel pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
 3. Construction:
 - a. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
 - b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Air-Charging Valve: Factory installed.
 4. Capacity and Characteristics:
 - a. Working-Pressure Rating: [100 psig (690 kPa)] [150 psig (1035 kPa)] **<Insert value>**.
 - b. Capacity Acceptable: [2 gal. (7.6 L)] [4 gal. (15.1 L)] [7 gal. (26.5 L)] [10 gal. (37.9 L)] **<Insert value>** minimum.
 - c. Air Precharge Pressure: **<Insert system pressure>**.
- B. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of domestic-water heater, and include drain outlet not less than **NPS 3/4 (DN 20)** with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.
- C. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1[**or ASHRAE 90.2**].
- D. Heat-Trap Fittings: ASHRAE 90.2.
- E. Manifold Kits: Domestic-water heater manufacturer's factory-fabricated inlet and outlet piping for field installation, for multiple domestic-water heater installation. Include ball-, butterfly-, or gate-type shutoff valves to isolate each domestic-water heater and **[calibrated] [memory-stop]** balancing valves to provide balanced flow through each domestic-water heater.
1. Comply with requirements for ball-, butterfly-, or gate-type shutoff valves specified in Section 220523 "General-Duty Valves for Plumbing Piping."
 2. Comply with requirements for balancing valves specified in Section 221119 "Domestic Water Piping Specialties."
- F. Pressure-Reducing Valves: ASSE 1003 for water. Set at **25-psig- (172.5-kPa-)** maximum outlet pressure unless otherwise indicated.

- G. Combination Temperature-and-Pressure Relief Valves: ASME rated and stamped. Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.
- H. Pressure Relief Valves: ASME rated and stamped. Include pressure setting less than domestic-water heater working-pressure rating.
- I. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4.
- J. Shock Absorbers: ASSE 1010 or PDI-WH 201, Size A water hammer arrester.
- K. Domestic-Water Heater Stands: Manufacturer's factory-fabricated steel stand for floor mounting, capable of supporting domestic-water heater and water. Include dimension that will support bottom of domestic-water heater a minimum of **18 inches** (457 mm) above the floor.
- L. Domestic-Water Heater Mounting Brackets: Manufacturer's factory-fabricated steel bracket for wall mounting, capable of supporting domestic-water heater and water.

2.4 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect domestic-water heaters specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test[**commercial**] domestic-water heaters to minimum of one and one-half times pressure rating before shipment.
- C. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 DOMESTIC-WATER HEATER INSTALLATION

- A. Coordinate with plumbing piping and related electrical work to achieve operating system.
- B. Commercial, Electric, Domestic-Water Heater Mounting: Install commercial, electric, domestic-water heaters on concrete base. Comply with requirements for concrete bases specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

1. Exception: Omit concrete bases for commercial, electric, domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
 2. Maintain manufacturer's recommended clearances.
 3. Arrange units so controls and devices that require servicing are accessible.
 4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch (450-mm)** centers around the full perimeter of concrete base.
 5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 6. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 7. Install anchor bolts to elevations required for proper attachment to supported equipment.
 8. Anchor domestic-water heaters to substrate.
- C. Electric, Tankless, Domestic-Water Heater Mounting: Install electric, tankless, domestic-water heaters[**at least 18 inches (457 mm) above floor**] on wall bracket.
1. Maintain manufacturer's recommended clearances.
 2. Arrange units so controls and devices that require servicing are accessible.
 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
 5. Anchor domestic-water heaters to substrate.
- D. Install electric, domestic-water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Section 220523 "General-Duty Valves for Plumbing Piping."
- E. Install commercial, electric, domestic-water heaters with seismic-restraint devices. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- F. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- G. Install [**combination temperature-and-**]pressure relief valves in water piping for electric, domestic-water heaters without storage. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

- H. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for electric, domestic-water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Section 221119 "Domestic Water Piping Specialties."
- I. Install thermometers on outlet piping of electric, domestic-water heaters. Comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."
- J. Install thermometers on inlet and outlet piping of residential, solar, electric, domestic-water heaters. Comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."
- K. Assemble and install inlet and outlet piping manifold kits for multiple electric, domestic-water heaters. Fabricate, modify, or arrange manifolds for balanced water flow through each electric, domestic-water heater. Include shutoff valve and thermometer in each domestic-water heater inlet and outlet, and throttling valve in each electric, domestic-water heater outlet. Comply with requirements for valves specified in Section 220523 "General-Duty Valves for Plumbing Piping," and comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."
- L. Install pressure-reducing valve with integral bypass relief valve in electric, domestic-water booster-heater inlet piping and water hammer arrester in booster-heater outlet piping. Set pressure-reducing valve for outlet pressure of [25 psig (172 kPa)] <Insert value>. Comply with requirements for pressure-reducing valves and water hammer arresters specified in Section 221119 "Domestic Water Piping Specialties."
- M. Install piping-type heat traps on inlet and outlet piping of electric, domestic-water heater storage tanks without integral or fitting-type heat traps.
- N. Fill electric, domestic-water heaters with water.
- O. Charge domestic-water compression tanks with air.

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to electric, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.3 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- C. Prepare test and inspection reports.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain **[commercial]** **[and]** **[tankless]**, electric, domestic-water heaters.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 223300

SECTION 223400 - FUEL-FIRED, DOMESTIC-WATER HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Commercial, atmospheric, gas-fired, storage, domestic-water heaters.
 - 2. Commercial, power-burner, gas-fired, storage, domestic-water heaters.
 - 3. Commercial, power-vent, gas-fired, storage, domestic-water heaters.
 - 4. Commercial, gas-fired, high-efficiency, storage, domestic-water heaters.
 - 5. Commercial, coil-type, finned-tube, gas-fired, domestic-water heaters.
 - 6. Commercial, grid-type, finned-tube, gas-fired, domestic-water heaters.
 - 7. Gas-fired, tankless, domestic-water heaters.
 - 8. Domestic-water heater accessories.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Commercial domestic-water heaters shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified **and the unit will be fully operational after the seismic event**]."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type and size of domestic-water heater indicated. **[Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.]**
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with applicable requirements in ASHRAE/IESNA 90.1, Section 7, "Service Water Heating."

C. Shop Drawings:

1. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For fuel-fired, domestic-water heaters, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Product Certificates: For each type of [**commercial, gas-fired,**] [**gas-fired, tankless,**] [**residential, gas-fired,**] [**commercial, oil-fired,**] [**residential, oil-fired,**] [**and**] [**commercial, gas- and oil-fired,**] domestic-water heater, from manufacturer.

C. Domestic-Water Heater Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.

D. Source quality-control reports.

E. Field quality-control reports.

F. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fuel-fired, domestic-water heaters to include in emergency, operation, and maintenance manuals.

1. Include operation, maintenance, and inspection data, replacement part numbers and availability, and service depot location and telephone number.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE/IESNA Compliance: Fabricate and label fuel-fired, domestic-water heaters to comply with ASHRAE/IESNA 90.1.
- C. ASME Compliance:
 - 1. Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - 2. Where ASME-code construction is indicated, fabricate and label commercial, finned-tube, domestic-water heaters to comply with ASME Boiler and Pressure Vessel Code: Section IV.
- D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61, "Drinking Water System Components - Health Effects."

1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect and handle products under provisions of Section 220400 "Basic Plumbing Requirements" and Division 01
- B. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fuel-fired, domestic-water heaters that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including storage tank and supports.
 - b. Faulty operation of controls.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - 2. Warranty Periods: From date of Substantial Completion.

- a. Commercial, Gas-Fired, Storage, Domestic-Water Heaters:
 - 1) Storage Tank: Minimum[**three (3)**] [**five (5)**] <Insert number> years.
 - 2) Controls and Other Components: Minimum[**one (1)**] [**two (2)**] <Insert number> year(s).

- b. Commercial, Finned-Tube, Gas-Fired, Domestic-Water Heaters:
 - 1) Heat Exchanger: Minimum[**three (3)**] [**five (5)**] <Insert number> years.
 - 2) Controls and Other Components: Minimum[**one (1)**] [**two (2)**] <Insert number> year(s).
 - 3) Separate Hot-Water Storage Tanks: Minimum[**three (3)**] [**five (5)**] <Insert number> years.

- c. Gas-Fired, Tankless, Domestic-Water Heaters:
 - 1) Heat Exchanger: Minimum[**five (5)**] <Insert number> years.
 - 2) Controls and Other Components: Minimum[**three (3)**] <Insert number> years.

- d. Compression Tanks: Minimum[**five (5)**] <Insert number> years.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 COMMERCIAL, GAS-FIRED, STORAGE, DOMESTIC-WATER HEATERS

- A. Commercial, Atmospheric, Gas-Fired, Storage, Domestic-Water Heaters:
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Water Heaters.
 - b. Bock Water Heaters, Inc.
 - c. Bradford White Corporation.
 - d. GSW Water Heating.
 - e. HESco Industries, Inc.
 - f. Lochinvar Corporation.
 - g. PVI Industries, LLC.
 - h. RECO USA.
 - i. Rheem Manufacturing Company.
 - j. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.

- k. State Industries.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
2. Standard: ANSI Z21.10.3/CSA 4.3.
3. Storage-Tank Construction: **[Non-]**ASME-code steel with **[150-psig (1035-kPa)]** **<Insert value>** working-pressure rating.
- a. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
 - b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Lining: **[Cement] [Glass] [Nickel plate] [Phenolic coating] [Sheet copper]** **<Insert material>** complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.
4. Factory-Installed Storage-Tank Appurtenances:
- a. Anode Rod: Replaceable magnesium.
 - b. Dip Tube: Required unless cold-water inlet is near bottom of tank.
 - c. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
 - d. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
 - e. Jacket: Steel with enameled finish.
 - f. Burner: For use with atmospheric, gas-fired, domestic-water heaters and **[natural-gas] [LP-gas] <Insert fuel gas>** fuel.
 - g. Automatic Ignition: ANSI Z21.20/CSA C22.2 No. 199, electric, automatic, gas-ignition system.
 - h. Controls: Automatic water thermostat with temperature range adjustable from 120 to 180 degrees F, gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, flue baffle and draft hood.
 - i. Controls: Automatic direct immersion thermostat with temperature range adjustable minimum 175 degrees F differential, automatic reset high temperature limiting thermostat, factory set at 205 degrees F, gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, **[intermittent electronic ignition monitoring pilot and main flame, trial for re-ignition for momentary loss of flame, shut down of pilot and main burner in 2-4 seconds after loss of flame,] [and automatic flue damper] [and power venter]**.
 - j. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.

- k. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
 5. Special Requirements: NSF 5 construction.
 6. Draft Hood: Draft diverter, complying with ANSI Z21.12.
 7. Automatic Damper: ANSI Z21.66/CSA 6.14-M, **[electrically operated]** **[mechanically activated]** **[thermally activated]**, automatic-vent-damper device with size matching draft hood.
- B. Commercial, Power-Burner, Gas-Fired, Storage, Domestic-Water Heaters:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Aldrich Company, Inc. (The).
 - b. Bock Water Heaters, Inc.
 - c. HESco Industries, Inc.
 - d. Precision Boilers.
 - e. PVI Industries, LLC.
 - f. RECO USA.
 - g. Sellers Engineering Co.
 - h. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 - i. State Industries.
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.
 2. Standard: ANSI Z21.10.3/CSA 4.3.
 3. Storage-Tank Construction: **[Non-]ASME**-code steel with **[150-psig (1035-kPa)]** **<Insert value>** working-pressure rating.
 - a. Multiple flu passages, 4 inch diameter inspection port.
 - b. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - d. Lining: **[Glass]** **<Insert material>** complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.
 4. Factory-Installed Storage-Tank Appurtenances:

- a. Anode Rod: Replaceable magnesium.
 - b. Dip Tube: Required unless cold-water inlet is near bottom of tank.
 - c. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
 - d. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls. Minimum 2 inches glass fiber.
 - e. Jacket: Steel with enameled finish.
 - f. Burner: UL 795 for power-burner, gas-fired, domestic-water heaters and **[natural-gas]** fuel.
 - g. Automatic Ignition: ANSI Z21.20/CSA C22.2 No. 199, electric, automatic, gas-ignition system.
 - h. Controls: Automatic water thermostat with temperature range adjustable from 120 to 180 degrees F, gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, flue baffle and draft hood.
 - i. Controls: Automatic direct immersion thermostat with temperature range adjustable minimum 175 degrees F differential, automatic reset high temperature limiting thermostat, factory set at 205 degrees F, gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, **[intermittent electronic ignition monitoring pilot and main flame, trial for re-ignition for momentary loss of flame, shut down of pilot and main burner in 2-4 seconds after loss of flame,] [and automatic flue damper] [and power venter]**.
 - j. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.
 - k. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
5. Special Requirements: NSF 5 construction.
6. Draft Hood: **[Draft diverter, complying with ANSI Z21.12] <Insert different hood or other arrangement>**.
- C. Commercial, Power-Vent, Gas-Fired, Storage, Domestic-Water Heaters:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Water Heaters.
 - b. Bradford White Corporation.
 - c. Lochinvar Corporation.
 - d. Rheem Manufacturing Company.
 - e. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 - f. State Industries.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Standard: ANSI Z21.10.3/CSA 4.3.

3. Storage-Tank Construction: **[Non-]**ASME-code steel with **[150-psig (1035-kPa)]** **<Insert value>** working-pressure rating.
 - a. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Lining: **[Glass]** **<Insert material>** complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.
4. Factory-Installed Storage-Tank Appurtenances:
 - a. Anode Rod: Replaceable magnesium.
 - b. Dip Tube: Required unless cold-water inlet is near bottom of tank.
 - c. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
 - d. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
 - e. Jacket: Steel with enameled finish.
 - f. Burner: For use with power-vent, gas-fired, domestic-water heaters and **[natural-gas] [LP-gas]** **<Insert fuel gas>** fuel.
 - g. Automatic Ignition: ANSI Z21.20/CSA C22.2 No. 199, electric, automatic, gas-ignition system.
 - h. Controls: Automatic water thermostat with temperature range adjustable from 120 to 180 degrees F, gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, flue baffle and draft hood.
 - i. Controls: Automatic direct immersion thermostat with temperature range adjustable minimum 175 degrees F differential, automatic reset high temperature limiting thermostat, factory set at 205 degrees F, gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, **[intermittent electronic ignition monitoring pilot and main flame, trial for re-ignition for momentary loss of flame, shut down of pilot and main burner in 2-4 seconds after loss of flame,]** **[and automatic flue damper]** **[and power venter]**.
 - j. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.
 - k. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

5. Special Requirements: NSF 5 construction.
6. Power-Vent System: Exhaust fan, interlocked with burner.

D. Commercial, Gas-Fired, High-Efficiency, Storage, Domestic-Water Heaters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. AERCO International, Inc.
- b. Ajax Boiler Inc.
- c. American Water Heaters.
- d. Bradford White Corporation.
- e. Heat Transfer Products, Inc.
- f. Lochinvar Corporation.
- g. PVI Industries, LLC.
- h. RBI Water Heaters; a Mestek company.
- i. Rheem Manufacturing Company.
- j. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
- k. State Industries.
- l. Weben-Jarco, Inc.
- m. **<Insert manufacturer's name>**.
- n. or approved equal.

2. Standard: ANSI Z21.10.3/CSA 4.3.

3. Description: Manufacturer's proprietary design to provide at least **[84] [85] [88] [95] <Insert number>** percent combustion efficiency at optimum operating conditions.

4. Storage-Tank Construction: ASME-code steel with **[150-psig (1035-kPa)] <Insert value>** minimum working-pressure rating.

a. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.

- 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
- 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.

c. Lining: **[Glass] <Insert material>** complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.

5. Factory-Installed Storage-Tank Appurtenances:

- a. Anode Rod: Replaceable magnesium.
- b. Dip Tube: Required unless cold-water inlet is near bottom of tank.
- c. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.

- d. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
 - e. Jacket: Steel with enameled finish.
 - f. Burner or Heat Exchanger: Comply with UL 795 or approved testing agency requirements for gas-fired, high-efficiency, domestic-water heaters and **[natural-gas] [LP-gas] <Insert fuel gas>** fuel.
 - g. Controls: Automatic water thermostat with temperature range adjustable from 120 to 180 degrees F, gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, flue baffle and draft hood.
 - h. Controls: Automatic direct immersion thermostat with temperature range adjustable minimum 175 degrees F differential, automatic reset high temperature limiting thermostat, factory set at 205 degrees F, gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, **[intermittent electronic ignition monitoring pilot and main flame, trial for re-ignition for momentary loss of flame, shut down of pilot and main burner in 2-4 seconds after loss of flame,] [and automatic flue damper] [and power venter]**.
 - i. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.
 - j. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
6. Draft Hood: **[Draft diverter, complying with ANSI Z21.12] <Insert different hood or other arrangement>**.
- E. Capacity and Characteristics:
1. Capacity: **<Insert gal. (L)>**.
 2. Recovery: **<Insert gph (L/s)>** at **[100 deg F (56 deg C)] <Insert temperature>** temperature rise.
 3. Temperature Setting: **[125 deg F (52 deg C)] [140 deg F (60 deg C)] <Insert temperature>**.
 4. Fuel Gas Demand: **<Insert cfh (L/s)>**.
 5. Fuel Gas Input: **<Insert Btu/h (W)>**.
 6. Gas Pressure Regulator:
 - a. Capacity: **<Insert cfh (L/s)>**.
 - b. Inlet Pressure: **<Insert psig (kPa) or inches (mm)>** water column.
 - c. Gas Pressure Required at Burner: **<Insert psig (kPa) or inches (mm)>** water column.
7. Electrical Characteristics:
- a. Volts: **[120] [240] [277] [480] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.

- d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
8. Minimum Vent Diameter: **<Insert inches (mm)>**.

2.2 COMMERCIAL, FINNED-TUBE, GAS-FIRED, DOMESTIC-WATER HEATERS

A. Commercial, Coil-Type, Finned-Tube, Gas-Fired, Domestic-Water Heaters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Ajax Boiler Inc.
 - b. CAMUS Hydronics Ltd.
 - c. Laars Heating Systems Company; a subsidiary of Bradford White Corporation.
 - d. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 - e. Weben-Jarco, Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Standard: ANSI Z21.13/CSA 4.9 for hot-water-supply boilers.
3. Description: Packaged unit with boiler, separate hot-water storage tank, pump, piping, and controls.
4. Boiler Construction: ASME code with [160-psig (1100-kPa)] **<Insert value>** working-pressure rating for hot-water-supply boiler, domestic-water heater.
- a. Heat Exchanger: Helix or spiral, finned-copper-tube coils with bronze headers.
 - b. Connections: Factory fabricated of materials compatible with boiler. Attach to boiler before testing.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
5. Boiler Appurtenances:
- a. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire boiler except connections and controls.
 - b. Jacket: Steel with enameled finish.
 - c. Burner: For use with coil-type, finned-tube, gas-fired, domestic-water heaters and **[natural-gas]** fuel.
 - d. Automatic Ignition: ANSI Z21.20/CSA C22.2 No. 199, intermittent electronic-ignition system.

- e. Temperature Control: Adjustable, storage-tank temperature-control fitting and flow switch, interlocked with circulator and burner.
 - f. Safety Control: Automatic, high-temperature-limit cutoff device or system.
6. Support: Steel base or skids.
7. Draft Hood: **[Draft diverter, complying with ANSI Z21.12] <Insert different hood or other arrangement>**.
8. Automatic Damper: ANSI Z21.66/CSA 6.14-M, **[electrically operated] [mechanically activated] [thermally activated]**, automatic-vent-damper device with size matching draft hood.
9. Hot-Water Storage Tank: Connected with piping to circulating pump and domestic-water heater.
- a. Construction: According to ASME Boiler and Pressure Vessel Code: Section VIII, steel with **[150-psig (1035-kPa)] [125-psig (860-kPa)] <Insert value>** working-pressure rating.
 - b. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
10. Factory-Installed Storage-Tank Appurtenances:
- a. Anode Rods: Factory installed, magnesium.
 - b. Drain Valve: Corrosion-resistant metal complying with ASSE 1005, factory installed.
 - c. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
 - d. Jacket: Steel with enameled finish.
 - e. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
11. Circulating Pump: UL 778, all-bronze, centrifugal, overhung-impeller, separately coupled in-line pump as defined in HI 1.1-1.2 and HI 1.3. Include mechanical seals, **[125-psig (860-kPa)] <Insert value>** minimum working-pressure rating, and **225 deg F (107 deg C)** continuous-water-temperature rating.
12. Piping: Copper tubing; copper, solder-joint fittings; and brazed or flanged joints.
13. Mounting: Domestic-water heater, tank, and accessories factory mounted on skids.

B. Commercial, Grid-Type, Finned-Tube, Gas-Fired, Domestic-Water Heaters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Bradford White Corporation.
 - b. CAMUS Hydronics Ltd.
 - c. HESco Industries, Inc.
 - d. Laars Heating Systems Company; a subsidiary of Bradford White Corporation.
 - e. Lochinvar Corporation.
 - f. Raypak; a Rheem company.
 - g. RBI Water Heaters; a Mestek company.
 - h. RECO USA.
 - i. Rheem Manufacturing Company.
 - j. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
2. Standard: ANSI Z21.13/CSA 4.9 for hot-water-supply boilers.
3. Description: Packaged unit with boiler, storage tank, pump, piping, and controls.
4. Boiler Construction: ASME code with [160-psig (1100-kPa)] **<Insert value>** working-pressure rating for hot-water-boiler-type, domestic-water heater.
 - a. Heat Exchanger: Horizontal, straight, finned-copper tubes with bronze headers.
 - b. Connections: Factory fabricated of materials compatible with boiler. Attach to boiler before testing.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
5. Boiler Appurtenances:
 - a. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire boiler except connections and controls.
 - b. Jacket: Steel with enameled finish.
 - c. Burner: For use with grid-type, finned-tube, gas-fired, domestic-water heaters and [**natural-gas**] [**LP-gas**] **<Insert fuel gas>** fuel.
 - d. Automatic Ignition: ANSI Z21.20/CSA C22.2 No. 199, intermittent electronic-ignition system.
 - e. Temperature Control: Adjustable, storage-tank temperature-control fitting and flow switch, interlocked with circulator and burner.
 - f. Safety Control: Automatic, high-temperature-limit cutoff device or system.
6. Support: Steel base or skids.

7. Draft Hood: **[Draft diverter, complying with ANSI Z21.12] <Insert different hood or other arrangement>**.
 8. Automatic Damper: ANSI Z21.66/CSA 6.14-M, **[electrically operated] [mechanically activated] [thermally activated]**, automatic-vent-damper device with size matching draft hood.
 9. Hot-Water Storage Tank: Connected with piping to circulating pump and domestic-water heater.
 - a. Construction: According to ASME Boiler and Pressure Vessel Code: Section VIII, steel with **[150-psig (1035-kPa)] [125-psig (860-kPa)] <Insert value>** working-pressure rating.
 - b. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 10. Factory-Installed Storage-Tank Appurtenances:
 - a. Anode Rods: Factory installed, magnesium.
 - b. Drain Valve: Corrosion-resistant metal complying with ASSE 1005, factory installed.
 - c. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
 - d. Jacket: Steel with enameled finish.
 - e. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
 11. Circulating Pump: UL 778, all-bronze, centrifugal, overhung-impeller, separately coupled in-line pump as defined in HI 1.1-1.2 and HI 1.3. Include mechanical seals, **[125-psig (860-kPa)] <Insert value>** minimum working-pressure rating, and **225 deg F (107 deg C)** continuous-water-temperature rating.
 12. Piping: Copper tubing; copper, solder-joint fittings; and brazed or flanged joints.
 13. Mounting: Domestic-water heater, tank, and accessories factory mounted on skids.
- C. Capacity and Characteristics:
1. Hot-Water Storage-Tank Capacity: **<Insert gal. (L)>**.
 2. Recovery: **<Insert gph (L/s)>** at **[100 deg F (56 deg C)] <Insert temperature>** temperature rise.

3. Temperature Setting: [125 deg F (52 deg C)] [140 deg F (60 deg C)] **<Insert temperature>**.
4. Fuel Gas Demand: **<Insert cfh (L/s)>**.
5. Fuel Gas Input: **<Insert Btu/h (W)>**.
6. Gas Pressure Regulator:
 - a. Capacity: **<Insert cfh (L/s)>**.
 - b. Inlet Pressure: **<Insert psig (kPa) or inches (mm)>** water column.
 - c. Gas Pressure Required at Burner: **<Insert psig (kPa) or inches (mm)>** water column.
7. Electrical Characteristics:
 - a. Volts: [120] [240] [277] [480] **<Insert value>**.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
8. Minimum Vent Diameter: **<Insert inches (mm)>**.

2.3 GAS-FIRED, TANKLESS, DOMESTIC-WATER HEATERS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 1. Baxi.
 2. Bosch Water Heating.
 3. Bradford White Corporation.
 4. NORITZ America Corp.
 5. Paloma Industries, Inc.
 6. Rheem Manufacturing Company; Rheem Water Heating.
 7. Rinnai Corporation.
 8. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 9. State Industries.
 10. Takagi.
 11. WaiWela.
 12. **<Insert manufacturer's name>**.
 13. or approved equal.
- B. Standard: ANSI Z21.10.3/CSA 4.3 for gas-fired, instantaneous, domestic-water heaters for indoor application.
- C. Construction: Copper piping or tubing complying with NSF 61 barrier materials for potable water, without storage capacity.
 1. Tappings: ASME B1.20.1 pipe thread.
 2. Pressure Rating: 150 psig (1035 kPa).

3. Heat Exchanger: Copper tubing.
4. Insulation: Comply with ASHRAE/IESNA 90.1[or **ASHRAE 90.2**].
5. Jacket: Metal, with enameled finish, or plastic.
6. Burner: For use with tankless, domestic-water heaters and [**natural-gas**] [**LP-gas**] <Insert fuel gas> fuel.
7. Automatic Ignition: Manufacturer's proprietary system for automatic, gas ignition.
8. Temperature Control: Adjustable thermostat.

D. Support: Bracket for wall mounting.

E. Capacity and Characteristics:

1. Flow Rate: <Insert gpm (L/s)> at [100 deg F (56 deg C)] <Insert temperature> temperature rise.
2. Temperature Setting: [125 deg F (52 deg C)] [140 deg F (60 deg C)] <Insert temperature>.
3. Fuel Gas Demand: <Insert cfh (L/s)>.
4. Fuel Gas Input: <Insert Btu/h (W)>.
5. Gas Pressure Regulator:
 - a. Capacity: <Insert cfh (L/s)>.
 - b. Inlet Pressure: <Insert psig (kPa) or inches (mm)> water column.
 - c. Gas Pressure Required at Burner: <Insert psig (kPa) or inches (mm)> water column.
6. Electrical Characteristics:
 - a. Volts: [120] <Insert value>.
 - b. Phase: Single.
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
7. Minimum Vent Diameter: <Insert inches (mm)>.

2.4 DOMESTIC-WATER HEATER ACCESSORIES

A. Domestic-Water Compression Tanks:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. AMTROL Inc.
 - b. Flexcon Industries.
 - c. Honeywell International Inc.
 - d. Pentair Pump Group (The); Myers.
 - e. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 - f. State Industries.

- H. Automatic Gas Valves: ANSI Z21.21/CSA 6.5, appliance, electrically operated, on-off automatic valve.
- I. Combination Temperature-and-Pressure Relief Valves: Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.
 - 1. Gas-Fired, Domestic-Water Heaters: ANSI Z21.22/CSA 4.4-M.
 - 2. Oil-Fired, Domestic-Water Heaters: ASME rated and stamped.
- J. Pressure Relief Valves: Include pressure setting less than domestic-water heater working-pressure rating.
 - 1. Gas-Fired, Domestic-Water Heaters: ANSI Z21.22/CSA 4.4-M.
 - 2. Oil-Fired, Domestic-Water Heaters: ASME rated and stamped.
- K. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4-M.
- L. Domestic-Water Heater Stands: Manufacturer's factory-fabricated steel stand for floor mounting, capable of supporting domestic-water heater and water. Provide dimension that will support bottom of domestic-water heater a minimum of **18 inches** (457 mm) above the floor.
- M. Domestic-Water Heater Mounting Brackets: Manufacturer's factory-fabricated steel bracket for wall mounting, capable of supporting domestic-water heater and water.

2.5 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect assembled domestic-water heaters[**and storage tanks**] specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test[**commercial**] domestic-water heaters[**and storage tanks**] to minimum of one and one-half times pressure rating before shipment.
- C. Domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 DOMESTIC-WATER HEATER INSTALLATION

- A. Coordinate with plumbing piping and related electrical work to achieve operating

system.

- B. Commercial, Domestic-Water Heater Mounting: Install commercial domestic-water heaters on concrete base. Comply with requirements for concrete base specified in **[Section 033000 "Cast-in-Place Concrete."]** **[Section 033053 "Miscellaneous Cast-in-Place Concrete."]**
1. Exception: Omit concrete bases for commercial domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
 2. Maintain manufacturer's recommended clearances.
 3. Arrange units so controls and devices that require servicing are accessible.
 4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch (450-mm)** centers around the full perimeter of concrete base.
 5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 6. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 7. Install anchor bolts to elevations required for proper attachment to supported equipment.
 8. Anchor domestic-water heaters to substrate.
- C. Tankless, Domestic-Water Heater Mounting: Install tankless, domestic-water heaters **[at least 18 inches (457 mm) above floor]** on wall bracket.
1. Maintain manufacturer's recommended clearances.
 2. Arrange units so controls and devices that require servicing are accessible.
 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
 5. Anchor domestic-water heaters to substrate.
- D. Install domestic-water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Section 220523 "General-Duty Valves for Plumbing Piping."
- E. Install gas-fired, domestic-water heaters according to NFPA 54.
1. Install gas shutoff valves on gas supply piping to gas-fired, domestic-water heaters without shutoff valves.
 2. Install gas pressure regulators on gas supplies to gas-fired, domestic-water heaters without gas pressure regulators if gas pressure regulators are required to reduce gas pressure at burner.

3. Install automatic gas valves on gas supplies to gas-fired, domestic-water heaters if required for operation of safety control.
 4. Comply with requirements for gas shutoff valves, gas pressure regulators, and automatic gas valves specified in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**]
- F. Install commercial domestic-water heaters with seismic-restraint devices. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- G. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- H. Install [**combination temperature-and-**]pressure relief valves in water piping for domestic-water heaters without storage. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- I. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for domestic-water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Section 221119 "Domestic Water Piping Specialties."
- J. Install thermometer on outlet piping of domestic-water heaters. Comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."
- K. Assemble and install inlet and outlet piping manifold kits for multiple domestic-water heaters. Fabricate, modify, or arrange manifolds for balanced water flow through each domestic-water heater. Include shutoff valve and thermometer in each domestic-water heater inlet and outlet, and throttling valve in each domestic-water heater outlet. Comply with requirements for valves specified in Section 220523 "General-Duty Valves for Plumbing Piping," and comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."
- L. Install piping-type heat traps on inlet and outlet piping of domestic-water heater storage tanks without integral or fitting-type heat traps.
- M. Fill domestic-water heaters with water.
- N. Charge domestic-water compression tanks with air.

3.2 CONNECTIONS

- A. Comply with requirements for domestic-water piping specified in Section 221116 "Domestic Water Piping."
- B. Comply with requirements for fuel-oil piping specified in Section 231113 "Facility Fuel-Oil Piping."
- C. Comply with requirements for gas piping specified in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**]
- D. Drawings indicate general arrangement of piping, fittings, and specialties.
- E. Where installing piping adjacent to fuel-fired, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.3 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- C. Prepare test and inspection reports.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain [**commercial,**

**gas-fired, storage,] [gas-fired, tankless] [commercial, oil-fired,] [commercial, gas-
and oil-fired,] domestic-water heaters.**

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 223400

SECTION 223500 - DOMESTIC-WATER HEAT EXCHANGERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
1. Shell-and-tube, heating-fluid-in-coil, domestic-water heat exchangers.
 2. Shell-and-tube, domestic-water-in-coil, domestic-water heat exchangers.
 3. Shell-and-tube, heating-fluid-in-U-tube-coil, domestic-water heat exchangers.
 4. Circulating, compact, domestic-water heat exchangers.
 5. Circulating, storage, domestic-water heat exchangers.
 6. Noncirculating, compact, domestic-water heat exchangers.
 7. Noncirculating, storage, domestic-water heat exchangers.
 8. Brazed-plate, domestic-water heat exchangers.
 9. Frame-and-plate, domestic-water heat exchangers.
 10. Domestic-water, heat reclaimers.
 11. Domestic-water, heat-exchanger accessories.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Domestic-water heat exchangers shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type and size of domestic-water heat exchanger indicated.[**Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.**]
1. Include data substantiating that materials comply with requirements.

- B. Shop Drawings:
 - 1. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For domestic-water heat exchangers, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Product Certificates: For each type of **[shell-and-tube] [circulating] [noncirculating] [and] [plate]**, domestic-water heat exchanger, from manufacturer.
- C. Domestic-Water, Heat-Exchanger Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.
- D. Source quality-control reports.
- E. Field quality-control reports.
- F. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For domestic-water heat exchangers to include in emergency, operation, and maintenance manuals.
 - 1. Include operation, maintenance, and inspection data, replacement part numbers and availability, and service depot location and telephone number.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

- C. ASME Compliance: Where ASME-code construction is indicated, fabricate and label heat-exchanger storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61, "Drinking Water System Components - Health Effects."

1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect, and handle products under provisions of Section 220400 "Basic Plumbing Requirements" and Division 01.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of domestic-water heat exchangers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Structural failures including heat exchanger, storage tank, and supports.
- b. Faulty operation of controls.
- c. Deterioration of metals, metal finishes, and other materials beyond normal use.

2. Warranty Periods: From date of Substantial Completion.

a. Shell-and-Tube, Domestic-Water Heat Exchangers:

- 1) Tube Coil: Minimum[**one (1)**] <Insert number> year(s).
- 2) Controls and Other Components: Minimum[**one (1)**] <Insert number> year(s).

b. Circulating, Storage, Domestic-Water Heat Exchangers:

- 1) Storage Tank: Minimum[**five (5)**] <Insert number> years.
- 2) Tube Coil: Minimum[**five (5)**] <Insert number> years.
- 3) Controls and Other Components: Minimum[**three (3)**] <Insert number> years.

c. Noncirculating, Storage, Domestic-Water Heat Exchangers:

- 1) Storage Tank: Minimum[**five (5)**] <Insert number> years.

- 2) Tube Coil: Minimum[**five (5)**] <Insert number> years.
 - 3) Controls and Other Components: Minimum[**three (3)**] <Insert number> years.
- d. Plate, Domestic-Water Heat Exchangers:
- 1) Brazed-Plate Type: Minimum[**one (1)**] <Insert number> year(s).
 - 2) Plate-and-Frame Type: Minimum[**one (1)**] <Insert number> year(s).
- e. Domestic-Water, Heat Reclaimers: Minimum[**one (1)**] <Insert number> year(s).
- f. Compression Tanks: Minimum[**one (1)**] <Insert number> year(s).

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SHELL-AND-TUBE, DOMESTIC-WATER HEAT EXCHANGERS

- A. Shell-and-Tube, Heating-Fluid-in-Coil, Domestic-Water Heat Exchangers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AERCO International, Inc.](#)
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
 2. Description: Packaged assembly of tank, heat-exchanger coils, controls, and specialties for heating domestic water with [**heating hot water**] [**steam**] in coils.
 3. Construction: ASME-code, negligible-capacity, copper-lined, carbon-steel shell with [**150-psig (1035-kPa)**] <Insert value> minimum working-pressure rating.
 - a. Tappings: Factory fabricated of materials compatible with heat-exchanger shell. Attach tappings to shell before testing and labeling.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

- b. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire shell and nozzle except connections and controls.
 4. Heat-Exchanger Coils: **[Copper] [Copper nickel] [Stainless-steel]**, helix-wound coils for heating fluid. Include pressure rating equal to or greater than heating-fluid supply pressure.
 5. Temperature Control: Adjustable thermostat that operates control valve and is capable of maintaining outlet-water temperature within **4 deg F (2 deg C)** of setting.
 6. Safety Control: Automatic, high-temperature-limit cutoff device or system.
 7. Relief Valves: ASME rated and stamped for combination temperature-and-pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than working-pressure rating of heat exchanger. Select one relief valve with sensing element that extends into storage tank.
 8. Miscellaneous Components for Heating Hot-Water Unit: Control valve, valves, and piping. **[Include components fitted for pneumatic control.]**
 9. Miscellaneous Components for Steam Unit: Strainers, steam-control valve, steam trap, valves, pressure gage, thermometer, and piping. **[Include components fitted for pneumatic control.]**
 - a. Exception: Steam trap is not required if manufacturer's written instructions direct that it not be used.
 10. Stand: Factory fabricated for floor mounting.
- B. Shell-and-Tube, Domestic-Water-in-Coil, Domestic-Water Heat Exchangers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Electric Heater Company \(The\)](#).
 - b. [Graham Corporation](#).
 - c. [Leslie Controls, Inc.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Description: Tankless, packaged assembly of heat-exchanger coils, controls, and specialties for heating domestic water in coils with steam in shell.
 3. Construction: ASME code, with **[cast-iron] [or] [steel]** shell for steam.
 - a. Cast-Iron Shell Pressure Rating: **[50 psig (345 kPa)] [75 psig (517 kPa)]**.
 - b. Steel Shell Pressure Rating: **150 psig (1035 kPa)**.
 - c. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire shell and nozzle except connections and controls.
 4. Heat-Exchanger Coils: Spiral-wound, **[copper or copper-alloy] [stainless-steel]** coils for domestic water.

5. Temperature Control: Adjustable thermostat that operates steam-control valve and is capable of maintaining outlet-water temperature within **3 deg F (2 deg C)** of setting.
 6. Safety Control: Automatic, high-temperature-limit cutoff device or system.
 7. Miscellaneous Components: Strainers, steam-control valve, steam trap, valves, and piping.
 8. Stand: Factory fabricated for floor mounting.
- C. Shell-and-Tube, Heating-Fluid-in-U-Tube-Coil, Domestic-Water Heat Exchangers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Adamson Global Technology Corporation.](#)
 - b. [Ajax Boiler Inc.](#)
 - c. [Armstrong International, Inc.](#)
 - d. [Cemline Corporation.](#)
 - e. [HESco Industries, Inc.](#)
 - f. [Leslie Controls, Inc.](#)
 - g. [Patterson-Kelley; a division of Harsco Corporation.](#)
 - h. [Precision Boilers, Inc.](#)
 - i. [PVI Industries, LLC.](#)
 - j. [RECO USA.](#)
 - k. [Sellers Engineering Co.](#)
 - l. **<Insert manufacturer's name>.**
 - m. or approved equal.
 2. Description: Tankless, packaged assembly of heat-exchanger coil, controls, and specialties for heating domestic water in shell with **[heating hot water] [steam]** in coil.
 3. Construction: ASME-code, negligible-capacity, copper-lined, carbon-steel or copper-alloy shell with **[150-psig (1035-kPa)] <Insert value>** minimum working-pressure rating.
 - a. Configuration: **[Horizontal] [Vertical]**.
 - b. Shell Tappings: Factory fabricated of materials compatible with domestic-water, heat-exchanger shell. Attach tappings to shell before testing and labeling.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - c. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire shell and nozzle except connections and controls.

4. Heat-Exchanger Coil: Copper, **[double]** **[single]**-wall U tubes for heating fluid. Include tube pressure rating equal to or greater than heating-fluid supply pressure.
5. Temperature Control: Adjustable thermostat that operates steam-control valve and is capable of maintaining outlet-water temperature within **5 deg F (3 deg C)** of setting.
6. Safety Control: Automatic, high-temperature-limit cutoff device or system.
7. Relief Valves: ASME rated and stamped for combination temperature-and-pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than working-pressure rating of heat exchanger. Select one relief valve with sensing element that extends into shell.
8. Miscellaneous Components for Heating Hot-Water Unit: Control valve, valves, and piping. **[Include components fitted for pneumatic control.]**
9. Miscellaneous Components for Steam Unit: Strainers, steam-control valve, steam trap, valves, pressure gage, thermometer, and piping. **[Include components fitted for pneumatic control.]**
10. Stand: Factory fabricated for floor mounting.

D. Capacity and Characteristics:

1. Flow Rate: **<Insert gpm (L/s)>** at **[100 deg F (56 deg C)] <Insert temperature>** temperature rise.
2. Hot-Water Temperature Setting: **<Insert deg F (deg C)>**.
3. Domestic-Water Pipe Size: **<Insert NPS (DN)>**.
4. Heating Hot-Water Supply:
 - a. Inlet Temperature: **<Insert deg F (deg C)>**.
 - b. Outlet Temperature: **<Insert deg F (deg C)>**.
 - c. Pipe Size: **<Insert NPS (DN)>**.
5. Steam Supply:
 - a. Inlet Pressure: **<Insert psig (kPa)>**.
 - b. Demand Rate: **<Insert lb/h (kg/s)>**.
 - c. Input Rating: **<Insert Btu/h (kW)>**.
 - d. Steam Pipe Size: **<Insert NPS (DN)>**.
6. Condensate Pipe Size: **<Insert NPS (DN)>**.
7. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phases: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.2 CIRCULATING, DOMESTIC-WATER HEAT EXCHANGERS

A. Circulating, Compact, Domestic-Water Heat Exchangers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Adamson Global Technology Corporation.](#)
 - b. [Ajax Boiler Inc.](#)
 - c. [Cemline Corporation.](#)
 - d. [Patterson-Kelley; a division of Harsco Corporation.](#)
 - e. [PVI Industries, LLC.](#)
 - f. [RECO USA.](#)
 - g. **<Insert manufacturer's name>.**
 - h. or approved equal.
2. Description: Packaged, small-capacity, hot-water storage tank with heat-exchanger coil; circulator; controls; and specialties for heating domestic water with **[heating hot water] [steam]** in coil.
3. Flow Pattern: Standard-flow arrangement, with water from bottom of storage tank circulated across heat-exchanger coil and returned to tank. Include hot-water outlet located at top of tank and temperature sensor in tank.
4. Storage-Tank Construction: ASME-code, copper-silicon or corrosion-resistant metal with **150-psig (1035-kPa)** working-pressure rating. Include nozzle and head for heat-exchanger tube coil.
 - a. Configuration: Vertical.
 - b. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing and labeling.
 - 1) **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - c. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire storage tank and nozzle except connections and controls.
5. Heat-Exchanger Coil: **[NPS 3/4 (DN 20)] [NPS 1-1/4 (DN 32)] <Insert pipe size>** diameter, **[vented, double-wall,]**copper or copper-alloy U tubes with tube sheet and supporting baffles. Include heat-exchanger pressure rating equal to or greater than heating-fluid supply pressure.
6. Temperature Control: Adjustable thermostat.
7. Safety Control: Automatic, high-temperature-limit cutoff device or system. Include automatic low-water cutoff device or system.
8. Relief Valves: ASME rated and stamped for combination temperature-and-pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure

- setting less than working-pressure rating of heat exchanger. Select one relief valve with sensing element that extends into storage tank.
9. Gages: Factory-mounted thermometer and pressure gage.
 10. Circulating Pump: UL 778, all-bronze, centrifugal, overhung-impeller, separately coupled in-line pump as defined in HI 1.1-1.2 and HI 1.3. Include mechanical seals, [125-psig (860-kPa)] <Insert value> minimum working-pressure rating, and 225 deg F (107 deg C) continuous-water-temperature rating.
 - a. Pump Control: Sensor for operating pump and control valve.
 11. Miscellaneous Components for Heating Hot-Water Units: Control valve, valves, and piping.
 12. Miscellaneous Components for Steam Units: Strainers, steam-control valve, steam trap, valves, and piping.
 13. Support: Factory mounted on skids.
 14. Energy Management System Interface: Normally closed dry contacts for enabling and disabling heat exchanger.
- B. Circulating, Storage, Domestic-Water Heat Exchangers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Adamson Global Technology Corporation.](#)
 - b. [Ajax Boiler Inc.](#)
 - c. [Cemline Corporation.](#)
 - d. [Electric Heater Company \(The\).](#)
 - e. [Patterson-Kelley; a division of Harsco Corporation.](#)
 - f. [PVI Industries, LLC.](#)
 - g. [RECO USA.](#)
 - h. [Sellers Engineering Co.](#)
 - i. [Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.](#)
 - j. <Insert manufacturer's name>.
 - k. or approved equal.
 2. Description: Packaged, large-capacity, hot-water storage tank with heat-exchanger coil; circulator; controls; and specialties for heating domestic water with [heating hot water] [steam] in coil.
 3. Flow Pattern: Standard-flow arrangement, with water from bottom of storage tank circulated across heat-exchanger coil and returned to tank. Include hot-water outlet located at top of tank and temperature sensor in tank.
 4. Flow Pattern: Reverse-flow arrangement, with water from storage tank drawn across heat-exchanger coil and returned to bottom of tank. Include hot-water outlet and temperature sensor located in or at coil shell.
 5. Storage-Tank Construction: ASME-code [steel] <Insert material> with [125-psig (860-kPa)] [150-psig (1035-kPa)] <Insert value> working-pressure rating. Include nozzle and head for heat-exchanger tube coil.
 - a. Configuration: [Horizontal] [Vertical].

- b. Manhole: **11 by 15 inches** (280 by 380 mm) in **[end head of horizontal]** **[sidewall of vertical]** storage-tank shell.
 - c. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing and labeling.
 - 1) **NPS 2** (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) **NPS 2-1/2** (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - d. Lining: **[Cement]** **[Glass]** **[Nickel plate]** **[Phenolic coating]** **[Sheet copper]** **<Insert material>** complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.
 - e. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire storage tank and nozzle except connections and controls.
 - f. Anode Rods: Factory installed, magnesium.
6. Heat-Exchanger Coil: **[NPS 3/4** (DN 20)] **[NPS 1-1/4** (DN 32)] **<Insert pipe size>** diameter, **[vented, double-wall,**]copper or copper-alloy U tubes with tube sheet and supporting baffles. Include heat-exchanger pressure rating equal to or greater than heating-fluid supply pressure.
7. Temperature Control: Adjustable temperature aquastat, mounted in storage-tank shell head unless otherwise indicated.
8. Safety Control: Automatic, high-temperature-limit cutoff device or system. Include automatic low-water cutoff device or system.
9. Relief Valves: ASME rated and stamped for combination temperature-and-pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than working-pressure rating of heat exchanger. Select one relief valve with sensing element that extends into storage tank.
10. Gages: Factory-mounted thermometer and pressure gage.
11. Circulating Pump: UL 778, all-bronze, centrifugal, overhung-impeller, separately coupled in-line pump as defined in HI 1.1-1.2 and HI 1.3. Include mechanical seals, **[125-psig** (860-kPa)] **<Insert value>** minimum working-pressure rating, and **225 deg F** (107 deg C) continuous-water-temperature rating.
 - a. Pump Control: Sensor for operating pump and control valve.
12. Support: Factory mounted on skids.
13. Energy Management System Interface: Normally closed dry contacts for enabling and disabling heat exchanger.
- C. Capacity and Characteristics:
- 1. Capacity: **<Insert gal. (L)>**.
 - 2. Recovery: **<Insert gph (L/s)>** at **[100 deg F** (56 deg C)] **<Insert temperature>** temperature rise.

3. Domestic-Water Pipe Size: <Insert NPS (DN)>.
4. Hot-Water Temperature Setting: <Insert deg F (deg C)>.
5. Heating Hot-Water Supply:
 - a. Inlet Temperature: <Insert deg F (deg C)>.
 - b. Outlet Temperature: <Insert deg F (deg C)>.
 - c. Pipe Size: <Insert NPS (DN)>.
6. Steam Supply:
 - a. Inlet Pressure: <Insert psig (kPa)>.
 - b. Demand Rate: <Insert lb/h (kg/s)>.
 - c. Input Rating: <Insert Btu/h (kW)>.
 - d. Steam Pipe Size: <Insert NPS (DN)>.
7. Condensate Pipe Size: <Insert NPS (DN)>.
8. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phases: <Insert value>.
 - c. Hertz: <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

2.3 NONCIRCULATING, DOMESTIC-WATER HEAT EXCHANGERS

A. Noncirculating, Compact, Domestic-Water Heat Exchangers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AMTROL Inc.](#)
 - b. [Bradford White Corporation.](#)
 - c. [Burnham Hydronics.](#)
 - d. [Crown Boiler Co.](#)
 - e. [ECR International.](#)
 - f. [Electric Heater Company \(The\).](#)
 - g. [Group Thermo Inc.](#)
 - h. [GSW Water Heating.](#)
 - i. [Heat Transfer Products, Inc.](#)
 - j. [Therma-Flow/Everhot.](#)
 - k. [Vaughn Manufacturing Corporation.](#)
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
2. Description: Hot-water storage tank with integral heat-exchanger coil, controls, and specialties for heating domestic water with [heating hot water] [steam] in coil.

3. Storage-Tank Shell Construction: Steel or stainless steel with 150-psig (1035-kPa) working-pressure rating.
 - a. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
 - b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Insulation: Complying with ASHRAE/IESNA 90.1 or ASHRAE 90.2, and suitable for operating temperature. Surround entire storage tank except connections and controls.
 - d. Jacket: Steel with enameled finish unless otherwise indicated.
 - e. Anode Rods: Factory installed, magnesium.
4. Heat-Exchanger Coil: Copper or stainless-steel coil assembly, permanently installed inside storage tank, for heating fluid. Include working-pressure rating equal to or greater than heating-fluid supply pressure.
5. Temperature Control: Adjustable thermostat.
6. Relief Valve: ASME rated and stamped for combination temperature-and-pressure relief valves. Include relief valve with relieving capacity at least as great as heat input, and include pressure setting less than working-pressure rating of heat exchanger. Select relief valve with sensing element that extends into storage tank.

B. Noncirculating, Storage, Domestic-Water Heat Exchangers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Adamson Global Technology Corporation.](#)
 - b. [Ajax Boiler Inc.](#)
 - c. [Cemline Corporation.](#)
 - d. [Electric Heater Company \(The\).](#)
 - e. [HESco Industries, Inc.](#)
 - f. [Leslie Controls, Inc.](#)
 - g. [Lochinvar Corporation.](#)
 - h. [Patterson-Kelley; a division of Harsco Corporation.](#)
 - i. [Precision Boilers, Inc.](#)
 - j. [PVI Industries, LLC.](#)
 - k. [RECO USA.](#)
 - l. [Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.](#)
 - m. [Weben-Jarco, Inc.](#)
 - n. [Wendland Manufacturing Corporation.](#)
 - o. **<Insert manufacturer's name>.**
 - p. or approved equal.
2. Description: Assembly of hot-water storage tanks with separate heat-exchanger coils, controls, and specialties for heating domestic water with **[heating hot water] [steam]** in coil.

3. Storage-Tank Construction: ASME-code [**steel**] <Insert material> with [125-psig (860-kPa)] [150-psig (1035-kPa)] <Insert value> working-pressure rating. Include nozzle and head for heat-exchanger tube coil.
 - a. Configuration: [**Horizontal**] [**Vertical**].
 - b. Manhole: 11 by 15 inches (280 by 380 mm) in [**end head of horizontal**] [**sidewall of vertical**] storage-tank shell.
 - c. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing and labeling.
 - 1) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - d. Lining: [**Cement**] [**Glass**] [**Nickel plate**] [**Phenolic coating**] [**Sheet copper**] <Insert material> complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.
 - e. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire storage tank and nozzle except connections and controls.
 - f. Anode Rods: Factory installed, magnesium.
4. Heat-Exchanger Coil: [NPS 3/4 (DN 20)] [NPS 1-1/4 (DN 32)] <Insert pipe size> diameter, [**vented, double-wall,**] copper or copper-alloy U tubes with tube sheet and supporting baffles. Include heat-exchanger pressure rating equal to or greater than heating-fluid supply pressure.
5. Temperature Control: Adjustable temperature aquastat, mounted in storage-tank shell head, unless otherwise indicated.
6. Relief Valves: ASME rated and stamped for combination temperature-and-pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than working-pressure rating of heat exchanger. Select one relief valve with sensing element that extends into storage tank.
7. Support: Factory mounted on skids.

C. Capacity and Characteristics:

1. Capacity: <Insert gal. (L)>.
2. Recovery: <Insert gph (L/s)> at [100 deg F (56 deg C)] <Insert temperature> temperature rise.
3. Domestic-Water Pipe Size: <Insert NPS (DN)>.
4. Heating Hot-Water Supply:
 - a. Inlet Temperature: <Insert deg F (deg C)>.
 - b. Outlet Temperature: <Insert deg F (deg C)>.
 - c. Pipe Size: <Insert NPS (DN)>.

5. Steam Supply:
 - a. Inlet Pressure: **<Insert psig (kPa)>**.
 - b. Demand Rate: **<Insert lb/h (kg/s)>**.
 - c. Input Rating: **<Insert Btu/h (kW)>**.
 - d. Steam Inlet Pipe Size: **<Insert NPS (DN)>**.
6. Condensate Outlet Pipe Size: **<Insert NPS (DN)>**.
7. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phases: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.4 PLATE, DOMESTIC-WATER HEAT EXCHANGERS

A. Brazed-Plate, Domestic-Water Heat Exchangers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Alfa Laval, Inc.](#)
 - b. [API Heat Transfer Inc.](#)
 - c. [Armstrong Pumps, Inc.](#)
 - d. [Bell & Gossett; ITT Industries.](#)
 - e. [Crown Boiler Co.](#)
 - f. [Doucette Industries, Inc.](#)
 - g. [GEA PHE Systems North America, Inc.](#)
 - h. [Mueller, Paul Company.](#)
 - i. [Polaris Plate Heat Exchangers.](#)
 - j. [Tranter PHE, Inc.](#)
 - k. [Triangle Tube.](#)
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
2. Description: Assembly of heat-exchanger plates, permanently brazed together, for using **[heating hot water] [steam]** to heat domestic water.
3. Working-Pressure Rating: **[150 psig (1035 kPa)] [200 psig (1380 kPa)] <Insert value>** minimum.
4. Plate Construction: **[Single] [Vented, double]** wall.
5. Plate Material: Stainless steel.
6. Plate Thickness: Not less than **[0.0197 inch (0.5 mm)] [0.024 inch (0.6 mm)]**.
7. Connections: Stainless steel, threaded.
8. Brazing Filler Metal: **[Copper] [or] [nickel]**.

B. Frame-and-Plate, Domestic-Water Heat Exchangers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Alfa Laval, Inc.](#)
 - b. [API Heat Transfer Inc.](#)
 - c. [APV Heat Transfer.](#)
 - d. [Armstrong Pumps, Inc.](#)
 - e. [Bell & Gossett; ITT Industries.](#)
 - f. [GEA PHE Systems North America, Inc.](#)
 - g. [Graham Corporation.](#)
 - h. [Mueller, Paul Company.](#)
 - i. [Polaris Plate Heat Exchangers.](#)
 - j. [Tranter PHE, Inc.](#)
 - k. [Triangle Tube.](#)
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
 2. Description: Assembly of nonfixed-position, heat-exchanger plates, with frame, for using [**heating hot water**] [**steam**] to heat domestic water.
 3. Working-Pressure Rating: [**150 psig (1035 kPa)**] [**200 psig (1380 kPa)**] [**250 psig (1725 kPa)**] [**400 psig (2760 kPa)**] **<Insert value>** minimum.
 4. Frame:
 - a. Carrying and Guide Bars: [**Carbon steel**] [**Stainless steel**] **<Insert material>**.
 - b. Fixed, Frame Plate; Pressure Plate; Support Column; and Nuts and Bolts: Carbon steel.
 5. Channel Plates:
 - a. Type: [**Single**] [**Vented, double**] wall.
 - b. Material: Stainless steel.
 - c. Plate Thickness: Not less than [**0.0197 inch (0.5 mm)**] [**0.024 inch (0.6 mm)**] [**0.031 inch (0.8 mm)**].
 - d. Gasket Material: Butyl or acrylonitrile-butadiene rubber, suitable for potable water.
 6. Connections: [**Stainless steel**] **<Insert material>** suitable for potable water.
 - a. **NPS 2 (DN 50)** and Smaller: Threaded.
 - b. **NPS 2-1/2 (DN 65)** and Larger: Flanged.
 7. Protective Shroud: Steel, covering channel plates.
 8. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire heat exchanger except connections.
- C. Capacity and Characteristics:
1. Heat-Exchanger Surface Area: **<Insert sq. ft. (sq. m)>**.

2. Number of Plates: **<Insert number>**.
3. Recovery: **<Insert gph (L/s)>** at [100 deg F (56 deg C)] **<Insert temperature>** temperature rise.
4. Domestic-Water Pipe Size: **<Insert NPS (DN)>**.
5. Domestic-Water Temperature Setting: **<Insert deg F (deg C)>**.
6. Heating Hot-Water Supply:
 - a. Inlet Temperature: **<Insert deg F (deg C)>**.
 - b. Outlet Temperature: **<Insert deg F (deg C)>**.
 - c. Pipe Size: **<Insert NPS (DN)>**.
7. Steam Supply:
 - a. Inlet Pressure: **<Insert psig (kPa)>**.
 - b. Demand Rate: **<Insert lb/h (kg/s)>**.
 - c. Input Rating: **<Insert Btu/h (kW)>**.
 - d. Steam Inlet Pipe Size: **<Insert NPS (DN)>**.
8. Condensate Outlet Pipe Size: **<Insert NPS (DN)>**.

2.5 DOMESTIC-WATER, HEAT RECLAIMERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Doucette Industries, Inc.](#)
 2. **<Insert manufacturer's name>**.
 3. or approved equal.
- B. Description: Waste-heat recovery device complying with and listed according to UL 207 for heat reclaimers. Device includes vertical drainage tube with helical, domestic-water preheat coil around drainage tube.
 1. Drainage Tube: ASTM B 306, Type DWV, center, copper drainage tube of size indicated.
 2. Water Preheat Coil: **ASTM B 88, Type L (ASTM B 88M, Type B)**, copper water tube of size indicated attached to drainage tube.
 3. Working-Pressure Rating: **150 psig (1035 kPa)** on potable-water supply tubing.
- C. Capacity and Characteristics:
 1. **NPS 2 (DN 50) Drainage Tube:**
 - a. Unit Height: [20 inches (508 mm)] [24 inches (610 mm)] [30 inches (762 mm)].
 - b. Domestic-Water Preheat Coil: **NPS 3/8 (DN 10)**.
 2. **NPS 3 (DN 80) Drainage Tube:**
 - a. Unit Height: [30 inches (762 mm)] [40 inches (1016 mm)] [60 inches (1524 mm)].

- b. Domestic-Water Preheat Coil: [NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)].
- 3. NPS 4 (DN 100) Drainage Tube:
 - a. Unit Height: [30 inches (762 mm)] [40 inches (1016 mm)] [60 inches (1524 mm)].
 - b. Domestic-Water Preheat Coil: [NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)].

2.6 DOMESTIC-WATER, HEAT-EXCHANGER ACCESSORIES

A. Domestic-Water Compression Tanks:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AMTROL Inc.](#)
 - b. [Flexcon Industries.](#)
 - c. [Honeywell International Inc.](#)
 - d. [Pentair Pump Group \(The\); Myers.](#)
 - e. [Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.](#)
 - f. [State Industries.](#)
 - g. [Taco, Inc.](#)
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
 - 2. Description: Steel pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
 - 3. Construction:
 - a. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
 - b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Air-Charging Valve: Factory installed.
 - 4. Capacity and Characteristics:
 - a. Working-Pressure Rating: [100 psig (690 kPa)] [150 psig (1035 kPa)] <Insert value>.
 - b. Capacity Acceptable: [2 gal. (7.6 L)] [4 gal. (15.1 L)] [7 gal. (26.5 L)] [10 gal. (37.9 L)] <Insert value> minimum.
 - c. Air Precharge Pressure: <Insert system pressure>.
- B. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1[or ASHRAE 90.2].
- C. Heat-Trap Fittings: ASHRAE 90.2.

- D. Combination Temperature-and-Pressure Relief Valves: ASME rated and stamped. Include relieving capacity at least as great as heat input, and include pressure setting less than heat-exchanger working-pressure rating. Select relief valves with sensing element that extends into storage tank.
- E. Pressure Relief Valves: ASME rated and stamped. Include pressure setting less than heat-exchanger working-pressure rating.
- F. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4-M.

2.7 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect domestic-water heat exchangers specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test domestic-water heat exchangers to minimum of one and one-half times pressure rating before shipment.
- C. Domestic-water heat exchangers will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 DOMESTIC-WATER, HEAT-EXCHANGER INSTALLATION

- A. Domestic-Water, Heat-Exchanger Mounting: Install domestic-water heat exchangers on concrete base. Comply with requirements for concrete bases specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 5. Anchor heat exchangers to substrate.
- B. Install domestic-water heat exchangers level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.

1. Install shutoff valves on domestic-water-supply piping to heat exchangers and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Section 220523 "General-Duty Valves for Plumbing Piping."
 2. Install shutoff valves on heating hot-water piping to heat exchangers. Comply with requirements for shutoff valves specified in Section 230523 "General-Duty Valves for HVAC Piping."
 3. Install shutoff valves on steam and condensate piping to heat exchangers. Comply with requirements for shutoff valves specified in Section 230523 "General-Duty Valves for HVAC Piping."
- C. Install domestic-water heat exchangers with seismic-restraint devices. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- D. Install temperature and pressure relief valves in top portion of storage-tank shells of domestic-water heat exchangers with domestic-water storage. Use relief valves with sensing elements that extend into shells. Extend relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- E. Install [**combination temperature-and-**]pressure relief valves in water piping for domestic-water heat exchangers without storage. Extend relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- F. Install heat-exchanger drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for domestic-water heat exchangers that do not have tank drains. Comply with requirements for hose-end drain valves specified in Section 221119 "Domestic Water Piping Specialties."
- G. Install thermometer on each domestic-water, heat-exchanger, [**inlet and**] outlet piping, and install thermometer on each domestic-water, heat-exchanger, heating-fluid [**inlet and**] outlet piping. Comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."
- H. Install pressure gages on domestic-water, heat-exchanger, heating-fluid piping. Comply with requirements for pressure gages specified in Section 220519 "Meters and Gages for Plumbing Piping."
- I. Fill domestic-water heat exchangers with water.
- J. Charge domestic-water compression tanks with air.
- 3.2 CONNECTIONS
- A. Comply with requirements for piping specified in Section 221116 "Domestic Water Piping."

- B. Comply with requirements for heating hot-water piping specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties."
- C. Comply with requirements for steam and condensate piping specified in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties."
- D. Drawings indicate general arrangement of piping, fittings, and specialties.
- E. Where installing piping adjacent to domestic-water heat exchangers, allow space for service and maintenance of heat exchangers. Arrange piping for easy removal of domestic-water heat exchangers.

3.3 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Domestic-water heat exchangers will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- C. Prepare test and inspection reports.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain [**shell-and-tube**] [**circulating**] [**and**] <Insert types> domestic-water heat exchangers.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **223500**

SECTION 224213.13 - COMMERCIAL WATER CLOSETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Water closets.
 - 2. Flushometer valves.
 - 3. Toilet seats.
- B. Related Requirements:
 - 1. Section 224500 "Emergency Plumbing Fixtures".
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for water closets.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite WE 1[**and Credit WE 3**] [, **Credit WE 2, and Credit WE 3**]: Documentation indicating flow and water consumption requirements.
 - 2. Product Data for Prerequisite WE 1: Documentation indicating flow and water consumption requirements.
 - 3. Product Data for Prerequisite WE 1[**and Credit WE 2**]: Documentation indicating flow and water consumption requirements.
- C. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For flushometer valves[**and electronic sensors**] to include in operation and maintenance manuals.
 - 1. Include fixture trim exploded view and replacement parts lists.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Flushometer-Valve Repair Kits: Equal to [10] <Insert number> percent of amount of each type installed, but no fewer than [one] [six] <Insert number> of each type.

1.6 QUALITY ASSURANCE

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 WALL-MOUNTED WATER CLOSETS

- A. Water Closets <Insert drawing designation>: Wall mounted, top spud[, **accessible**].
 - 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Briggs Plumbing Products, Inc.
 - c. Capizzi.
 - d. Crane Plumbing, L.L.C.
 - e. Ferguson Enterprises, Inc.; ProFlo Brand.
 - f. Gerber Plumbing Fixtures LLC.

- g. Kohler Co.
 - h. Mansfield Plumbing Products LLC.
 - i. Peerless Pottery Sales, Inc.
 - j. TOTO USA, INC.
 - k. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - l. **<Insert manufacturer's name>**.
 2. Bowl:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Siphon jet.
 - d. Style: Flushometer valve.
 - e. Height: Standard.
 - f. Rim Contour: Elongated.
 - g. Water Consumption: [1.28 gal. (4.8 L)] [1.6 gal. (6 L)] per flush.
 - h. Spud Size and Location: NPS 1-1/2 (DN 40); top.
 3. Flushometer Valve: **<Insert flushometer-valve designation>**.
 4. Toilet Seat: **<Insert toilet-seat designation>**.
 5. Support:
 - a. Standard: ASME A112.6.1M.
 - b. Description: Waste-fitting assembly as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture. [**Include additional extension coupling, faceplate, and feet for installation in wide pipe space.**]
 - c. Water-Closet Mounting Height: [Standard] [Child] [Handicapped/elderly according to ICC/ANSI A117.1].
- B. Water Closets **<Insert drawing designation>**: Wall mounted, back spud[, **accessible**].
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Crane Plumbing, L.L.C.
 - c. Ferguson Enterprises, Inc.; ProFlo Brand.
 - d. Gerber Plumbing Fixtures LLC.
 - e. Kohler Co.
 - f. TOTO USA, INC.
 - g. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
 2. Bowl:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.

- c. Type: Siphon jet.
 - d. Style: Flushometer valve.
 - e. Height: Standard.
 - f. Rim Contour: Elongated.
 - g. Water Consumption: [1.28 gal. (4.8 L)] [1.6 gal. (6 L)] per flush.
 - h. Spud Size and Location: NPS 1-1/2 (DN 40); back.
 3. Flushometer Valve: <Insert flushometer-valve designation>.
 4. Toilet Seat: <Insert toilet-seat designation>.
 5. Support:
 - a. Standard: ASME A112.6.1M.
 - b. Description: Waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture. [**Include additional extension coupling, faceplate, and feet for installation in wide pipe space.**]
 - c. Water-Closet Mounting Height: [Standard] [Child] [handicapped/elderly height according to ICC/ANSI A117.1].
- C. Water Closets <Insert drawing designation>: Wall mounted, blowout, top spud[, accessible].
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Crane Plumbing, L.L.C.
 - c. Kohler Co.
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
 2. Bowl:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5:
 - b. Material: Vitreous china.
 - c. Type: Blowout.
 - d. Style: Flushometer valve.
 - e. Height: Standard.
 - f. Rim Contour: Elongated.
 - g. Water Consumption: 3.5 gal. (13.2 L) per flush.
 - h. Spud Size and Location: NPS 1-1/2 (DN 40); top.
 - i. Color: [White] <Insert color>.
 3. Flushometer Valve: <Insert flushometer-valve designation>.
 4. Toilet Seat: <Insert toilet-seat designation>.
 5. Support:
 - a. Standard: ASME A112.6.1M.
 - b. Description: Waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet;

- bolts and hardware matching fixture. [**Include additional extension coupling, faceplate, and feet for installation in wide pipe space.**]
- c. Water-Closet Mounting Height: [**Standard**] [**handicapped/elderly height according to ICC/ANSI A117.1**].

D. Water Closets < **Insert drawing designation** >: Wall mounted, blowout, back spud[, **accessible**].

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. American Standard America.
b. Crane Plumbing, L.L.C.
c. Kohler Co.
d. < **Insert manufacturer's name** >.
e. or approved equal.

2. Bowl:

- a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
b. Material: Vitreous china.
c. Type: Blowout.
d. Style: Flushometer valve.
e. Height: Standard.
f. Rim Contour: Elongated.
g. Water Consumption: **3.5 gal. (13.2 L)** per flush.
h. Spud Size and Location: **NPS 1-1/2 (DN 40)**; back.
i. Color: [**White**] < **Insert color** >.

3. Flushometer Valve: < **Insert flushometer-valve designation** >.

4. Toilet Seat: < **Insert toilet-seat designation** >.

5. Support:

- a. Standard: ASME A112.6.1M.
b. Description: Waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture. [**Include additional extension coupling, faceplate, and feet for installation in wide pipe space.**]
c. Water-Closet Mounting Height: [**Standard height**] [**handicapped/elderly height according to ICC/ANSI A117.1**].

2.2 FLUSHOMETER VALVES

A. Lever-Handle, Diaphragm Flushometer Valves < **Insert designation** >:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Coyne & Delany Co.

- b. Gerber Plumbing Fixtures LLC.
 - c. Sloan Valve Company.
 - d. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Standard: ASSE 1037.
 3. Minimum Pressure Rating: **125 psig** (860 kPa).
 4. Features: Include integral check stop and backflow-prevention device.
 5. Material: Brass body with corrosion-resistant components.
 6. Exposed Flushometer-Valve Finish: Chrome plated.
 7. Panel Finish: Chrome plated or stainless steel.
 8. Style: **[Exposed] [Concealed]**.
 9. Consumption: **[1.28 gal. (4.8 L)] [1.6 gal. (6 L)] [3.5 gal. (13.2 L)] <Insert value>** per flush.
 10. Minimum Inlet: **NPS 1** (DN 25).
 11. Minimum Outlet: **NPS 1-1/4** (DN 32).
- B. Solenoid-Actuator, Diaphragm Flushometer Valves **<Insert designation>**:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Coyne & Delany Co.
 - b. Gerber Plumbing Fixtures LLC.
 - c. Sloan Valve Company.
 - d. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Standard: ASSE 1037.
 3. Minimum Pressure Rating: **125 psig** (860 kPa).
 4. Features: Include integral check stop and backflow-prevention device.
 5. Material: Brass body with corrosion-resistant components.
 6. Exposed Flushometer-Valve Finish: Chrome plated.
 7. Panel Finish: Chrome plated or stainless steel.
 8. Style: **[Exposed] [Concealed]**.
 9. Actuator: Solenoid complying with UL 1951, and listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 10. Trip Mechanism: **[Battery-powered] [Hard-wired]** electronic sensor complying with UL 1951, and listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 11. Consumption: **[1.28 gal. (4.8 L)] [1.6 gal. (6 L)] [3.5 gal. (13.2 L)] <Insert value>** per flush.
 12. Minimum Inlet: **NPS 1** (DN 25).
 13. Minimum Outlet: **NPS 1-1/4** (DN 32).
- C. Lever-Handle, Piston Flushometer Valves **<Insert designation>**:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Coyne & Delany Co.
 - b. Sloan Valve Company.
 - c. TOTO USA, INC.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: ASSE 1037.
3. Minimum Pressure Rating: **125 psig** (860 kPa).
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Panel Finish: Chrome plated or stainless steel.
8. Style: **[Exposed] [Concealed]**.
9. Consumption: **[1.28 gal. (4.8 L)] [1.6 gal. (6 L)] [3.5 gal. (13.2 L)] <Insert value>** per flush.
10. Minimum Inlet: **NPS 1** (DN 25).
11. Minimum Outlet: **NPS 1-1/4** (DN 32).

D. Hard-Wired, Solenoid-Actuator, Piston Flushometer Valves **<Insert designation>**:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Gerber Plumbing Fixtures LLC.
 - b. Moen Incorporated.
 - c. Sloan Valve Company.
 - d. TOTO USA, INC.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Standard: ASSE 1037.
3. Minimum Pressure Rating: **125 psig** (860 kPa).
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Panel Finish: Chrome plated or stainless steel.
8. Style: **[Exposed] [Concealed]**.
9. Actuator: Solenoid complying with UL 1951, and listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
10. Trip Mechanism: Hard-wired electronic sensor complying with UL 1951, and listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
11. Consumption: **[1.28 gal. (4.8 L)] [1.6 gal. (6 L)] [3.5 gal. (13.2 L)] <Insert value>** per flush.
12. Minimum Inlet: **NPS 1** (DN 25).
13. Minimum Outlet: **NPS 1-1/4** (DN 32).

2.3 TOILET SEATS

A. Toilet Seats <Insert drawing designation>:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Bemis Manufacturing Company.
 - c. Centoco Manufacturing Corporation.
 - d. Church Seats.
 - e. Jones Stephens Corp.; Comfort Seat Brand.
 - f. Kohler Co.
 - g. Olsonite Seat Co.
 - h. Sanderson Plumbing Products, Inc.
 - i. Sperzel of Lexington.
 - j. TOTO USA, INC.
 - k. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
2. Standard: IAPMO/ANSI Z124.5.
3. Material: Plastic.
4. Type: [**Commercial (Standard)**] [**Commercial (Heavy duty)**].
5. Shape: [**Elongated rim, open front**] <Insert shape>.
6. Hinge: [**Check**] [**Self-sustaining**] [**Self-sustaining, check**] [**Self-raising**].
7. Hinge Material: Noncorroding metal.
8. Seat Cover: [**Required**] [**Not required**].
9. Color: [**White**] <Insert color>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before water-closet installation.
- B. Examine walls and floors for suitable conditions where water closets will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Water-Closet Installation:
 1. Install level and plumb according to roughing-in drawings.
 2. Install floor-mounted water closets on bowl-to-drain connecting fitting attachments to piping or building substrate.

3. Install accessible, wall-mounted water closets at mounting height for handicapped/elderly, according to ICC/ANSI A117.1.

B. Support Installation:

1. Install supports, affixed to building substrate, for floor-mounted, back-outlet water closets.
2. Use carrier supports with waste-fitting assembly and seal.
3. Install floor-mounted, back-outlet water closets attached to building floor substrate, onto waste-fitting seals; and attach to support.
4. Install wall-mounted, back-outlet water-closet supports with waste-fitting assembly and waste-fitting seals; and affix to building substrate.

C. Flushometer-Valve Installation:

1. Install flushometer-valve, water-supply fitting on each supply to each water closet.
2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
3. Install lever-handle flushometer valves for accessible water closets with handle mounted on open side of water closet.
4. Install actuators in locations that are easy for people with disabilities to reach.
5. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

D. Install toilet seats on water closets.

E. Wall Flange and Escutcheon Installation:

1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork.
2. Install deep-pattern escutcheons if required to conceal protruding fittings.
3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

F. Joint Sealing:

1. Seal joints between water closets and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
2. Match sealant color to water-closet color.
3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.3 CONNECTIONS

- A. Connect water closets with water supplies and soil, waste, and vent piping. Use size fittings required to match water closets.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

- D. Where installing piping adjacent to water closets, allow space for service and maintenance.

3.4 ADJUSTING

- A. Operate and adjust water closets and controls. Replace damaged and malfunctioning water closets, fittings, and controls.
- B. Adjust water pressure at flushometer valves to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.5 CLEANING AND PROTECTION

- A. Clean water closets and fittings with manufacturers' recommended cleaning methods and materials.
- B. Install protective covering for installed water closets and fittings.
- C. Do not allow use of water closets for temporary facilities unless approved in writing by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 224213.13

SECTION 224213.16 - COMMERCIAL URINALS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Urinals.
 - 2. Flushometer valves.
- B. Related Requirements:
 - 1. **<Insert related requirements>**
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for urinals.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite WE 1[**and Credit WE 3**] [, **Credit WE 2, and Credit WE 3**]: Documentation indicating flow and water consumption requirements.
 - 2. Product Data for Prerequisite WE 1: Documentation indicating flow and water consumption requirements.
 - 3. Product Data for Prerequisite WE 1[**and Credit WE 2**]: Documentation indicating flow and water consumption requirements.
- C. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For flushometer valves[**and electronic sensors**] to include in operation and maintenance manuals.
 - 1. Include fixture trim exploded view and replacement parts lists.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Flushometer-Valve Repair Kits: Equal to [10] <Insert number> percent of amount of each type installed, but no fewer than [one] [six] <Insert number> of each type.
 - 2. Waterless Urinal Trap-Seal Cartridges: Equal to [200] <Insert number> percent of amount of each type installed, but no fewer than [12] <Insert number> of each type.
 - 3. Waterless Urinal Trap-Seal Liquid: Equal to [1 gal. (3.8 L)] <Insert volume> for each urinal installed.

1.6 QUALITY ASSURANCE

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 STALL URINALS

- A. Urinals <Insert drawing designation>: Stall, washout type.
 - 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.

- b. Kohler Co.
 - c. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Fixture:
- a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: [**Straight or sloped**] **<Insert type>** front.
 - d. Seam Covers: For [**21-inch (535-mm)**] [**24-inch (610-mm)**] urinal centers.
 - e. Strainer: Separate; removable.
 - f. Water Consumption: Water saving.
 - g. Spud Size and Location: **NPS 3/4 (DN 20)**; top.
 - h. Outlet Size and Location: **NPS 2 (DN 50)**; bottom for separate trap.
 - i. Color: [**White**] **<Insert color>**.
3. Flushometer Valve: **<Insert urinal flushometer-valve designation from "Urinal Flushometer Valves" Article>**.

2.2 WALL-HUNG URINALS

- A. Urinals **<Insert drawing designation>**: Wall hung, back outlet, blowout.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Capizzi.
 - c. Kohler Co.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Fixture:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Strainer or Trapway: [**Manufacturer's standard strainer**] [**Open trapway**] with integral trap.
 - d. Water Consumption: Water saving.
 - e. Spud Size and Location: **NPS 1-1/4 (DN 32)**; [**back**] [**top**].
 - f. Outlet Size and Location: **NPS 2 (DN 50)**; back.
 - g. Color: [**White**] **<Insert color>**.
 3. Flushometer Valve: **<Insert urinal-flushometer-valve designation from "Urinal Flushometer Valves" Article>**.
 4. Waste Fitting:
 - a. Standard: ASME A112.18.2/CSA B125.2 for coupling.

- b. Size: **NPS 2** (DN 50).
 5. Support: ASME A112.6.1M, Type I, urinal carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture. [**Include rectangular, steel uprights.**]
- B. Urinals <Insert drawing designation>: Wall hung, back outlet, siphon jet[, **accessible**].
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Briggs Plumbing Products, Inc.
 - c. Ferguson Enterprises, Inc.; ProFlo Brand.
 - d. Gerber Plumbing Fixtures LLC.
 - e. Kohler Co.
 - f. Mansfield Plumbing Products LLC.
 - g. Peerless Pottery Sales, Inc.
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
 2. Fixture:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Siphon jet[**with extended shields**].
 - d. Strainer or Trapway: [**Manufacturer's standard strainer**] <Insert **strainer**> with integral trap.
 - e. Water Consumption: [**Water saving**] [**Low**].
 - f. Spud Size and Location: **NPS 3/4** (DN 20); [**back**] [**top**].
 - g. Outlet Size and Location: **NPS 2** (DN 50); back.
 - h. Color: [**White**] <Insert color>.
 3. Flushometer Valve: <Insert urinal flushometer-valve designation from "**Urinal Flushometer Valves**" Article>.
 4. Waste Fitting:
 - a. Standard: ASME A112.18.2/CSA B125.2 for coupling.
 - b. Size: **NPS 2** (DN 50).
 5. Support: ASME A112.6.1M, Type I, urinal carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture. [**Include rectangular, steel uprights.**]
- C. Urinals <Insert drawing designation>: Wall hung, back outlet, washout[, **accessible**].
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. American Standard America.
 - b. Briggs Plumbing Products, Inc.
 - c. Capizzi.
 - d. Crane Plumbing, L.L.C.
 - e. Duravit USA, Inc.
 - f. Ferguson Enterprises, Inc.; ProFlo Brand.
 - g. Gerber Plumbing Fixtures LLC.
 - h. Kohler Co.
 - i. Mansfield Plumbing Products LLC.
 - j. Peerless Pottery Sales, Inc.
 - k. TOTO USA, INC.
 - l. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
2. Fixture:
- a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Washout with extended shields.
 - d. Strainer or Trapway: **[Manufacturer's standard strainer] <Insert strainer>** with integral trap.
 - e. Water Consumption: **[Water saving] [Low]**.
 - f. Spud Size and Location: **NPS 3/4 (DN 20), [back] [top]**.
 - g. Outlet Size and Location: **NPS 2 (DN 50), back**.
 - h. Color: **[White] <Insert color>**.
3. Flushometer Valve: **<Insert urinal flushometer-valve designation from "Urinal Flushometer Valves" Article>**.
4. Waste Fitting:
- a. Standard: ASME A112.18.2/CSA B125.2 for coupling.
 - b. Size: **NPS 2 (DN 50)**.
5. Support: ASME A112.6.1M, Type I, urinal carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture. **[Include rectangular, steel uprights.]**
- D. Urinals **<Insert drawing designation>**: Wall hung, bottom outlet, washout.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Briggs Plumbing Products, Inc.
 - c. Ferguson Enterprises, Inc.; ProFlo Brand.
 - d. Kohler Co.
 - e. Mansfield Plumbing Products LLC.
 - f. Peerless Pottery Sales, Inc.
 - g. **<Insert manufacturer's name>**.

- b. Material: Enameled cast iron.
 - c. Style: Wash sink with back and without pedestal modified for use as urinal.
 - d. Size: [36 inches (915 mm)] [48 inches (1219 mm)] [60 inches (1525 mm)] [72 inches (1830 mm)].
 - e. Drain: Separate removable chrome-plated dome strainer with chrome-plated, NPS 1-1/2 (DN 40) tailpiece.
 - f. Water Consumption: Not applicable.
 - g. Flushing Device: Manufacturer's standard self-closing valve with washdown pipe of length matching fixture.
 - h. Outlet Size and Location: NPS 1-1/2 (DN 40); bottom.
 - i. Color: [White] <Insert color>.
3. Flushometer Valve:
- a. Standard: ASME A112.18.1/CSA B125.1.
 - b. Flushing Device: Manufacturer's standard for NPS 1/2 (DN 15) supply; self-closing valve; and wash-down pipe of length matching fixture.
4. Waste Fitting:
- a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap:
 - 1) Size: NPS 1-1/2 (DN 50).
 - 2) Material: Chrome-plated, [two-piece, cast-brass trap and swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall] [two-piece, cast-brass trap and ground-joint swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall] [one-piece, cast-brass trap with swivel 0.029-inch- (73-mm-) thick tubular brass wall bend] <Insert trap type>; and chrome-plated brass or steel wall flange.
 - 3) Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch- (0.30-mm-) thick stainless-steel tube to wall; and stainless-steel wall flange.
5. Support: ASME A112.6.1M, Type II, sink carrier.

2.3 WATERLESS URINALS

- A. Urinals <Insert drawing designation>: Wall hung, back outlet, waterless, vitreous china, designed for liquid-trap-seal operation.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
- a. Duravit USA, Inc.
 - b. Falcon Waterfree Technologies.
 - c. Kohler Co.
 - d. Sloan Valve Company.

- e. Waterless Co.
 - f. Zero Flush.
 - g. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
 2. Fixture:
 - a. Standard: ASME A112.19.2/CSA B45.1, except without water supply.
 - b. Trap-Seal Method: Proprietary cartridge with liquid seal.
 - c. Outlet Size and Location: [NPS 2 (DN 50)] **<Insert size>** flange; back.
 - d. Trap-Sealing Liquid: Proprietary.
 - e. Color: [White] **<Insert color>**.
 3. Waste Fitting:
 - a. Standard: ASME A112.18.2/CSA B125.2 for transition coupling, trap, and waste pipe.
 - b. Size: [NPS 2 (DN 50)] **<Insert size>**.
 4. Support: ASME A112.6.1M, Type I, urinal carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture. [**Include rectangular, steel uprights.**]
- B. Urinals **<Insert drawing designation>**: Wall hung, back outlet, waterless, plastic, designed for liquid-trap-seal operation.
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Waterless Co.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 2. Fixture:
 - a. Standard: ANSI Z124.9, except without water supply.
 - b. Material: [FRP] **<Insert material>**.
 - c. Trap-Seal Method: Proprietary cartridge or trap system.
 - d. Outlet Size and Location: NPS 2 (DN 50); back. Include transition coupling.
 - e. Trap-Sealing Liquid: Proprietary.
 - f. Color: [White] **<Insert color>**.
 3. Waste Fitting:
 - a. Standard: ASME A112.18.2/CSA B125.2 for transition coupling, trap, and waste pipe.
 - b. Size: [NPS 2 (DN 50)] **<Insert size>**.
 4. Support: [Metal plate in wall] [Wood blocking in wall] [ASME A112.6.1M, Type I, urinal carrier with fixture support plates and coupling with seal and

fixture bolts and hardware matching fixture].[Include rectangular, steel uprights.]

2.4 URINAL FLUSHOMETER VALVES

A. Lever-Handle, Diaphragm Flushometer Valves <Insert designation>:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Coyne & Delany Co.
 - b. Gerber Plumbing Fixtures LLC.
 - c. Sloan Valve Company.
 - d. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - e. **<Insert manufacturer's name>**.
2. Standard: ASSE 1037.
3. Minimum Pressure Rating: **125 psig** (860 kPa).
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Panel Finish: Chrome plated or stainless steel.
8. Style: **[Exposed] [Concealed]**.
9. Consumption: **[0.5 gal. (1.9 L)] [1.0 gal. (3.8 L)] <Insert value>** per flush.
10. Minimum Inlet: **[NPS 3/4 (DN 20)] [NPS 1 (DN 25)]**.
11. Minimum Outlet: **[NPS 3/4 (DN 20)] [NPS 1-1/4 (DN 32)]**.

B. Solenoid-Actuator, Diaphragm Flushometer Valves <Insert designation>:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Coyne & Delany Co.
 - b. Gerber Plumbing Fixtures LLC.
 - c. Sloan Valve Company.
 - d. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Standard: ASSE 1037.
3. Minimum Pressure Rating: **125 psig** (860 kPa).
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Panel Finish: Chrome plated or stainless steel.
8. Style: **[Exposed] [Concealed]**.
9. Actuator: Solenoid complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.

10. Trip Mechanism: **[Battery-powered]** **[Hard-wired]** electronic sensor complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.
11. Consumption: **[0.5 gal. (1.9 L)]** **[1.0 gal. (3.8 L)]** **<Insert value>** per flush.
12. Minimum Inlet: **[NPS 3/4 (DN 20)]** **[NPS 1 (DN 25)]**.
13. Minimum Outlet: **[NPS 3/4 (DN 20)]** **[NPS 1-1/4 (DN 32)]**.

C. Lever-Handle, Piston Flushometer Valves **<Insert designation>**:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Coyne & Delany Co.
 - b. Sloan Valve Company.
 - c. TOTO USA, INC.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: ASSE 1037.
3. Minimum Pressure Rating: **125 psig** (860 kPa).
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Panel Finish: Chrome plated or stainless steel.
8. Style: **[Exposed]** **[Concealed]**.
9. Consumption: **[0.5 gal. (1.9 L)]** **[1.0 gal. (3.8 L)]** **<Insert value>** per flush.
10. Minimum Inlet: **[NPS 3/4 (DN 20)]** **[NPS 1 (DN 25)]**.
11. Minimum Outlet: **[NPS 3/4 (DN 20)]** **[NPS 1-1/4 (DN 32)]**.

D. Hard-Wired, Solenoid-Actuator, Piston Flushometer Valves **<Insert designation>**:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Gerber Plumbing Fixtures LLC.
 - b. Moen Incorporated.
 - c. Sloan Valve Company.
 - d. TOTO USA, INC.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Standard: ASSE 1037.
3. Minimum Pressure Rating: **125 psig** (860 kPa).
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Panel Finish: Chrome plated or stainless steel.
8. Style: **[Exposed]** **[Concealed]**.

9. Actuator: Solenoid complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.
10. Trip Mechanism: Hard-wired electronic sensor complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.
11. Consumption: [0.5 gal. (1.9 L)] [1.0 gal. (3.8 L)] <Insert value> per flush.
12. Minimum Inlet: [NPS 3/4 (DN 20)] [NPS 1 (DN 25)].
13. Minimum Outlet: [NPS 3/4 (DN 20)] [NPS 1-1/4 (DN 32)].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before urinal installation.
- B. Examine walls and floors for suitable conditions where urinals will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Urinal Installation:

1. Install urinals level and plumb according to roughing-in drawings.
2. Install wall-hung, back-outlet urinals onto waste fitting seals and attached to supports.
3. Install wall-hung, bottom-outlet urinals with tubular waste piping attached to supports.
4. Install accessible, wall-mounted urinals at mounting height for the handicapped/elderly, according to ICC/ANSI A117.1.
5. Install trap-seal liquid in waterless urinals.

B. Support Installation:

1. Install supports, affixed to building substrate, for wall-hung urinals.
2. Use off-floor carriers with waste fitting and seal for back-outlet urinals.
3. Use carriers without waste fitting for urinals with tubular waste piping.
4. Use chair-type carrier supports with rectangular steel uprights for accessible urinals.

C. Flushometer-Valve Installation:

1. Install flushometer-valve water-supply fitting on each supply to each urinal.
2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
3. Install lever-handle flushometer valves for accessible urinals with handle mounted on open side of compartment.

4. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

D. Wall Flange and Escutcheon Installation:

1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations.
2. Install deep-pattern escutcheons if required to conceal protruding fittings.
3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

E. Joint Sealing:

1. Seal joints between urinals and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
2. Match sealant color to urinal color.
3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.3 CONNECTIONS

- A. Connect urinals with water supplies and soil, waste, and vent piping. Use size fittings required to match urinals.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."
- D. Where installing piping adjacent to urinals, allow space for service and maintenance.

3.4 ADJUSTING

- A. Operate and adjust urinals and controls. Replace damaged and malfunctioning urinals, fittings, and controls.
- B. Adjust water pressure at flushometer valves to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.5 CLEANING AND PROTECTION

- A. Clean urinals and fittings with manufacturers' recommended cleaning methods and materials.
- B. Install protective covering for installed urinals and fittings.
- C. Do not allow use of urinals for temporary facilities unless approved in writing by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 224213.16

SECTION 224216.13 - COMMERCIAL LAVATORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Lavatories.
 - 2. Faucets.
- B. Related Requirements:
 - 1. Section 224500 "Emergency Plumbing Fixtures" for security lavatories.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for lavatories.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite WE 1[**and Credit WE 3**] [**Credit WE 2, and Credit WE 3**]: Documentation indicating flow and water consumption requirements.
 - 2. Product Data for Prerequisite WE 1: Documentation indicating flow and water consumption requirements.
 - 3. Product Data for Prerequisite WE 1[**and Credit WE 2**]: Documentation indicating flow and water consumption requirements.
- C. Shop Drawings: Include diagrams for power, signal, and control wiring of automatic faucets.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lavatories and faucets to include in operation and maintenance manuals.

1. Include fixture trim exploded view and replacement parts lists.
2. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Servicing and adjustments of automatic faucets.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Faucet Washers and O-Rings: Equal to [10] <Insert number> percent of amount of each type and size installed.
2. Faucet Cartridges and O-Rings: Equal to [5] <Insert number> percent of amount of each type and size installed.

1.7 QUALITY ASSURANCE

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 VITREOUS-CHINA, COUNTER-MOUNTED LAVATORIES

- A. Lavatory **<Insert drawing designation>**: Rectangular, self-rimming, vitreous china, counter mounted.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Crane Plumbing, L.L.C.
 - c. Kohler Co.
 - d. TOTO USA, INC.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Fixture:
 - a. Standard: ASME A112.19.2/CSA B45.1.
 - b. Type: Self-rimming for above-counter mounting.
 - c. Nominal Size: Rectangular, **[21 by 19 inches (533 by 483 mm)] [24 by 20 inches (610 by 508 mm)] <Insert dimensions>**.
 - d. Faucet-Hole Punching: **[One hole] [Three holes, 2-inch (51-mm) centers] [Three holes, 4-inch (102-mm) centers]**.
 - e. Faucet-Hole Location: Top.
 - f. Color: **[White] <Insert color>**.
 - g. Mounting Material: Sealant.
 3. Faucet: **<Insert lavatory faucet designation from "Solid-Brass, Manually Operated Faucets" or "Solid-Brass, Automatically Operated Lavatory Faucets" Article>**.
- B. Lavatory **<Insert drawing designation>**: **[Oval] [Round]**, self-rimming, vitreous china, counter mounted.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Briggs Plumbing Products, Inc.
 - c. Capizzi.
 - d. Crane Plumbing, L.L.C.
 - e. Ferguson Enterprises, Inc.; ProFlo Brand.
 - f. Gerber Plumbing Fixtures LLC.
 - g. Kohler Co.
 - h. Mansfield Plumbing Products LLC.
 - i. Peerless Pottery Sales, Inc.
 - j. TOTO USA, INC.

- k. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
2. Fixture:
- a. Standard: ASME A112.19.2/CSA B45.1.
 - b. Type: Self-rimming for above-counter mounting.
 - c. Nominal Size: Oval, [19 by 17 inches (483 by 432 mm)] [20 by 17 inches (508 by 432 mm)] **<Insert dimensions>**.
 - d. Nominal Size: Round, [19 inches (483 mm)] **<Insert dimension>**.
 - e. Faucet-Hole Punching: [One hole] [Three holes, 2-inch (51-mm) centers] [Three holes, 4-inch (102-mm) centers].
 - f. Faucet-Hole Location: Top.
 - g. Color: [White] **<Insert color>**.
 - h. Mounting Material: Sealant.
3. Faucet: **<Insert lavatory faucet designation from "Solid-Brass, Manually Operated Faucets" or "Solid-Brass, Automatically Operated Lavatory Faucets" Article>**.
- C. Lavatory **<Insert drawing designation>**: Oval, vitreous china, undercounter mounted.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Capizzi.
 - c. Crane Plumbing, L.L.C.
 - d. Ferguson Enterprises, Inc.; ProFlo Brand.
 - e. Gerber Plumbing Fixtures LLC.
 - f. Kohler Co.
 - g. Mansfield Plumbing Products LLC.
 - h. Peerless Pottery Sales, Inc.
 - i. TOTO USA, INC.
 - j. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 2. Fixture:
 - a. Standard: ASME A112.19.2/CSA B45.1.
 - b. Type: For undercounter mounting.
 - c. Nominal Size: Oval, [19 by 16 inches (483 by 406 mm)] [22 by 14 inches (559 by 356 mm)] [23 by 15 inches (584 by 381 mm)] **<Insert dimensions>**.
 - d. Faucet-Hole Punching: No holes.
 - e. Faucet-Hole Location: On countertop.
 - f. Color: [White] **<Insert color>**.
 - g. Mounting Material: Sealant and undercounter mounting kit.

3. Faucet: **<Insert lavatory faucet designation from "Solid-Brass, Manually Operated Faucets" or "Solid-Brass, Automatically Operated Lavatory Faucets" Article>**.

2.2 VITREOUS-CHINA, WALL-MOUNTED LAVATORIES

- A. Lavatory **<Insert drawing designation>**: Vitreous china, wall mounted, with back.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. American Standard America.
- b. Briggs Plumbing Products, Inc.
- c. Crane Plumbing, L.L.C.
- d. Ferguson Enterprises, Inc.; ProFlo Brand.
- e. Gerber Plumbing Fixtures LLC.
- f. Kohler Co.
- g. Mansfield Plumbing Products LLC.
- h. Peerless Pottery Sales, Inc.
- i. Zurn Industries, LLC; Commercial Brass and Fixtures.
- j. **<Insert manufacturer's name>**.
- k. or approved equal.

2. Fixture:

- a. Standard: ASME A112.19.2/CSA B45.1.
- b. Type: For wall hanging.
- c. Nominal Size: Oval, [19 by 16 inches (483 by 406 mm)] [22 by 14 inches (559 by 356 mm)] [23 by 15 inches (584 by 381 mm)] **<Insert dimensions>**.
- d. Faucet-Hole Punching: [One hole] [Three holes, 2-inch (51-mm) centers] [Three holes, 4-inch (102-mm) centers].
- e. Faucet-Hole Location: Top.
- f. Color: [White] **<Insert color>**.
- g. Mounting Material: Chair carrier.

3. Faucet: **<Insert lavatory faucet designation from "Solid-Brass, Manually Operated Faucets" or "Solid-Brass, Automatically Operated Lavatory Faucets" Article>**.
4. Support: ASME A112.6.1M, [Type I, exposed-arm lavatory carrier] [Type II, concealed-arm lavatory carrier] [Type II, concealed-arm lavatory carrier with escutcheons]. [Include rectangular, steel uprights.]

- B. Lavatory **<Insert drawing designation>**: Ledge back, vitreous china, wall mounted.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. American Standard America.
- b. Briggs Plumbing Products, Inc.

- c. Crane Plumbing, L.L.C.
 - d. Ferguson Enterprises, Inc.; ProFlo Brand.
 - e. Gerber Plumbing Fixtures LLC.
 - f. Kohler Co.
 - g. Mansfield Plumbing Products LLC.
 - h. Peerless Pottery Sales, Inc.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Fixture:
- a. Standard: ASME A112.19.2/CSA B45.1.
 - b. Type: For wall hanging.
 - c. Nominal Size: Oval, [19 by 16 inches (483 by 406 mm)] [22 by 14 inches (559 by 356 mm)] [23 by 15 inches (584 by 381 mm)] **<Insert dimensions>**.
 - d. Faucet-Hole Punching: [One hole] [Three holes, 2-inch (51-mm) centers] [Three holes, 4-inch (102-mm) centers].
 - e. Faucet-Hole Location: Top.
 - f. Color: [White] **<Insert color>**.
 - g. Mounting Material: Chair carrier.
3. Faucet: **<Insert lavatory faucet designation from "Solid-Brass, Manually Operated Faucets" or "Solid-Brass, Automatically Operated Lavatory Faucets" Article>**.
4. Support: ASME A112.6.1M, [Type I, exposed-arm lavatory carrier] [Type II, concealed-arm lavatory carrier] [Type II, concealed-arm lavatory carrier with escutcheons].[Include rectangular, steel uprights.]
- C. Lavatory **<Insert drawing designation>**: Slab type, vitreous china, wall mounted.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Standard America.
 - b. Kohler Co.
 - c. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Fixture:
 - a. Standard: ASME A112.19.2/CSA B45.1.
 - b. Type: For wall hanging.
 - c. Nominal Size: Oval, [19 by 16 inches (483 by 406 mm)] [22 by 14 inches (559 by 356 mm)] [23 by 15 inches (584 by 381 mm)] **<Insert dimensions>**.
 - d. Faucet-Hole Punching: [One hole] [Three holes, 2-inch (51-mm) centers] [Three holes, 4-inch (102-mm) centers].
 - e. Faucet-Hole Location: Top.
 - f. Color: [White] **<Insert color>**.
 - g. Mounting Material: Chair carrier.

3. Faucet: **<Insert lavatory faucet designation from "Solid-Brass, Manually Operated Faucets" or "Solid-Brass, Automatically Operated Lavatory Faucets" Article>**.
4. Support: ASME A112.6.1M, **[Type I, exposed-arm lavatory carrier] [Type II, concealed-arm lavatory carrier] [Type II, concealed-arm lavatory carrier with escutcheons]. [Include rectangular, steel uprights.]**

D. Lavatory **<Insert drawing designation>**: Wheelchair, vitreous china, wall mounted.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. American Standard America.
- b. Crane Plumbing, L.L.C.
- c. Ferguson Enterprises, Inc.; ProFlo Brand.
- d. Gerber Plumbing Fixtures LLC.
- e. Kohler Co.
- f. Mansfield Plumbing Products LLC.
- g. Peerless Pottery Sales, Inc.
- h. **<Insert manufacturer's name>**.
- i. or approved equal.

2. Fixture:

- a. Standard: ASME A112.19.2/CSA B45.1.
- b. Type: Slab or wheelchair.
- c. Nominal Size: Rectangular, **27 by 20 inches** (686 by 508 mm).
- d. Faucet-Hole Punching: Three holes, **[2-inch (51-mm)] <Insert dimension>** centers.
- e. Faucet-Hole Location: Top.
- f. Color: **[White] <Insert color>**.
- g. Mounting: For concealed-arm carrier.

3. Faucet: **<Insert lavatory faucet designation from "Solid-Brass, Manually Operated Faucets" or "Solid-Brass, Automatically Operated Lavatory Faucets" Article>**.

4. Support: ASME A112.6.1M, Type II, concealed-arm lavatory carrier with rectangular, steel uprights.

2.3 SOLID-BRASS, AUTOMATICALLY OPERATED LAVATORY FAUCETS

A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for faucet materials that will be in contact with potable water.

B. Lavatory Faucets **<Insert designation>**: Automatic-type, **[hard-wired,] electronic-sensor-operated, [mixing] [nonmixing]**, solid-brass valve.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. American Standard America.
 - b. Bradley Corporation.
 - c. Chicago Faucets.
 - d. Gerber Plumbing Fixtures LLC.
 - e. Grohe America, Inc.
 - f. Hydrotek International, Inc.
 - g. Kohler Co.
 - h. Moen Incorporated.
 - i. Sloan Valve Company.
 - j. Speakman Company.
 - k. T & S Brass and Bronze Works, Inc.
 - l. TOTO USA, INC.
 - m. Zurn Industries, LLC; Commercial Brass and Fixtures.
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.
2. Standards: ASME A112.18.1/CSA B125.1 and UL 1951.
 3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 4. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.
 5. Body Type: **[Single hole] <Insert type>**.
 6. Body Material: **[Commercial] [General-duty]**, solid brass.
 7. Finish: **[Polished chrome plate] <Insert finish>**.
 8. Maximum Flow Rate: **[0.5 gpm (1.5 L/min.)] <Insert value>**.
 9. Mounting Type: **[Deck, concealed] [Back/wall, concealed] <Insert type>**.
 10. Spout: **[Rigid] [Swing] [Rigid, gooseneck] [Swivel, gooseneck]** type.
 11. Spout Outlet: **[Aerator] [Laminar flow] [Spray] <Insert type>**.
 12. Drain: **[Not part of faucet] <Insert type>**.

2.4 SUPPLY FITTINGS

- A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.
- C. Supply Piping: Chrome-plated-brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated-brass or stainless-steel wall flange.
- D. Supply Stops: Chrome-plated-brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping.
- E. Operation: **[Loose key] [Wheel handle] <Insert type>**.
- F. Risers:

1. [NPS 3/8 (DN 10)] [NPS 1/2 (DN 15)].
2. **[Chrome-plated, rigid-copper-pipe and brass straight or offset tailpieces]** **[Chrome-plated, soft-copper flexible tube]** **[ASME A112.18.6, braided- or corrugated-stainless-steel, flexible hose]** riser.

2.5 WASTE FITTINGS

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. Drain: Grid type with NPS 1-1/4 (DN 32) offset and straight tailpiece.
- C. Trap:
 1. Size: [NPS 1-1/2 by NPS 1-1/4 (DN 40 by DN 32)] [NPS 1-1/4 (DN 32)].
 2. Material: Chrome-plated, **[two-piece, cast-brass trap and swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall]** **[two-piece, cast-brass trap and ground-joint swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall]** **[one-piece, cast-brass trap with swivel 0.029-inch- (73-mm-) thick tubular brass wall bend]** <Insert trap type>; and chrome-plated, brass or steel wall flange.
 3. Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch- (0.30-mm-) thick stainless-steel tube to wall; and stainless-steel wall flange.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before lavatory installation.
- B. Examine counters and walls for suitable conditions where lavatories will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install lavatories level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-mounted lavatories.
- C. Install accessible wall-mounted lavatories at handicapped/elderly mounting height for people with disabilities or the elderly, according to ICC/ANSI A117.1.
- D. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

- E. Seal joints between lavatories, counters, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."
- F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories. Comply with requirements in Section 220719 "Plumbing Piping Insulation."

3.3 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

- A. Operate and adjust lavatories and controls. Replace damaged and malfunctioning lavatories, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.5 CLEANING AND PROTECTION

- A. After completing installation of lavatories, inspect and repair damaged finishes.
- B. Clean lavatories, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed lavatories and fittings.
- D. Do not allow use of lavatories for temporary facilities unless approved in writing by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 224216.13

SECTION 224216.16 - COMMERCIAL SINKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Service basins.
2. Service sinks.
3. Utility sinks.
4. Handwash sinks.
5. Sink faucets.
6. Supply fittings.
7. Waste fittings.

- B. Related Requirements:

1. Section 224100 "Residential Plumbing Fixtures" for residential sinks.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for sinks.
2. Include rated capacities, operating characteristics[, **electrical characteristics,**] and furnished specialties and accessories.
3. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Prerequisite WE 1[**and Credit WE 3**] [, **Credit WE 2, and Credit WE 3**]: Documentation indicating flow and water consumption requirements.
2. Product Data for Prerequisite WE 1: Documentation indicating flow and water consumption requirements.

3. Product Data for Prerequisite WE 1[**and Credit WE 2**]: Documentation indicating flow and water consumption requirements.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sinks to include in maintenance manuals.
 1. Include fixture trim exploded view and replacement parts lists.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Faucet Washers and O-Rings: Equal to [10] <Insert number> percent of amount of each type and size installed.
 2. Faucet Cartridges and O-Rings: Equal to [5] <Insert number> percent of amount of each type and size installed.

1.7 QUALITY ASSURANCE

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SERVICE BASINS

- A. Service Basins <Insert drawing designation>: Terrazzo, floor mounted.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Engineering Company.](#)
 - b. [Crane Plumbing, L.L.C.](#)
 - c. [Florestone Products Co., Inc.](#)
 - d. [Stern-Williams Co., Inc.](#)
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.

 2. Fixture:
 - a. Standard: IAPMO PS 99.
 - b. Shape: **[Square] [Rectangular] [Five sided] [Radial front] <Insert shape>.**
 - c. Nominal Size: **[24 by 24 inches (610 by 610 mm)] [30 by 30 inches (762 by 762 mm)] [24 by 36 inches (610 by 915 mm)] [32 by 32 inches (815 by 815 mm)] [36 by 36 inches (915 by 915 mm)] <Insert dimensions>.**
 - d. Height: **[6 inches (150 mm)] [10 inches (255 mm)] [12 inches (305 mm)] [12 inches (305 mm) with dropped front] <Insert dimensions>.**
 - e. Tiling Flange: **[Not required] [On one side] [On two sides] [On three sides].**
 - f. Rim Guard: On **[front] [all]** top surfaces.
 - g. Color: **[Not applicable] <Insert color>.**
 - h. Drain: Grid with **[NPS 2 (DN 50)] [NPS 3 (DN 80)]** outlet.

 3. Mounting: On floor and flush to wall.
 4. Faucet: **<Insert sink-faucet designation from "Sink Faucets" Article>.**
- B. Service Basins **<Insert drawing designation>**: Plastic, floor mounted.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Crane Plumbing, L.L.C.](#)
 - b. [Ferguson Enterprises, Inc.: ProFlo Brand.](#)
 - c. [Florestone Products Co., Inc.](#)
 - d. [Mustee, E. L., & Sons, Inc.](#)
 - e. [Swan Corporation \(The\).](#)
 - f. [Zurn Industries, LLC; Light Commercial Specialty Plumbing Products.](#)
 - g. **<Insert manufacturer's name>.**
 - h. or approved equal.

 2. Fixture:
 - a. Standard: IAPMO/ANSI Z124.6.
 - b. Material: **[Cast polymer] <Insert material>.**
 - c. Nominal Size: **[24 by 36 by 10 inches (610 by 915 mm by 255 mm)] [36 by 36 by 10 inches (915 by 915 by 255 mm)] <Insert dimensions>.**

- d. Tiling Flange: **[Not required]** **[On one side]** **[On two sides]** **[On three sides]**.
 - e. Rim Guard: On **[front]** **[all]** top surfaces.
 - f. Color: **[Not applicable]** **<Insert color>**.
 - g. Drain: Grid with **[NPS 2 (DN 50)]** **[NPS 3 (DN 80)]** outlet.
3. Mounting: On floor and flush to wall.
 4. Faucet: **<Insert sink-faucet designation from "Sink Faucets" Article>**.

2.2 SERVICE SINKS

A. Service Sinks **<Insert drawing designation>**: Vitreous china, trap standard mounted.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Crane Plumbing, L.L.C.](#)
 - b. [Kohler Co.](#)
 - c. [Zurn Industries, LLC; Commercial Brass and Fixtures.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Fixture:
 - a. Standard: ASME A112.19.2/CSA B45.1.
 - b. Type: Service sink with back.
 - c. Back: **[Two faucet holes]** **[Plain]**.
 - d. Nominal Size: **[22 by 20 inches (560 by 508 mm)]** **<Insert dimensions>**.
 - e. Color: White.
 - f. Mounting: **[NPS 2 (DN 50)]** **[NPS 3 (DN 80)]** P-trap standard with grid strainer inlet, cleanout, and floor flange.
 - g. Rim Guard: On front and sides.
3. Faucet: **<Insert sink-faucet designation from "Sink Faucets" Article>**.
4. Support: ASME A112.6.1M, Type II, sink carrier.

2.3 UTILITY SINKS

A. Utility Sinks **<Insert drawing designation>**: Stainless steel, counter mounted.

1. Manufacturers: Subject to compliance with requirements, **provide products by one of the following**:
 - a. [Advance Tabco.](#)
 - b. [Eagle Group; Foodservice Equipment Division.](#)
 - c. [Elkay Manufacturing Co.](#)
 - d. [Griffin Products, Inc.](#)
 - e. [Just Manufacturing.](#)
 - f. **<Insert manufacturer's name>**.

- g. or approved equal.
2. Fixture:
- a. Standard: ASME A112.19.3/CSA B45.4.
 - b. Type: Ledge back.
 - c. Number of Compartments: **[One] [Two] [Three]**.
 - d. Overall Dimensions: **<Insert dimensions>**.
 - e. Metal Thickness: **[0.050 inch (1.3 mm)] <Insert dimension>**.
 - f. Compartment:
 - 1) Dimensions: **<Insert dimensions>**.
 - 2) Drain: **[Grid with NPS 1-1/2 (DN 40) tailpiece and twist drain] [Grid with NPS 2 (DN 50) tailpiece and twist drain] [NPS 1-1/2 (DN 40) tailpiece with stopper] <Insert drain>**.
 - 3) Drain Location: **[Centered in compartment] [Near back of compartment] [Near left side of compartment] [Near right side of compartment] <Insert location>**.
 - g. Each Compartment:
 - 1) Dimensions: **<Insert dimensions>**.
 - 2) Drains: **[Grid with NPS 1-1/2 (DN 40) tailpiece and twist drain] [Grid with NPS 2 (DN 50) tailpiece and twist drain] [NPS 1-1/2 (DN 40) tailpiece with stopper] <Insert drain>**.
 - 3) Drain Location: **[Centered in compartment] [Near back of compartment] <Insert location>**.
3. Faucet(s): **<Insert sink-faucet designation from "Sink Faucets" Article>**.
- a. Number Required: **[One] [Two]**.
 - b. Mounting: On ledge.
4. Supply Fittings:
- a. Standard: ASME A112.18.1/CSA B125.1.
 - b. Supplies: Chrome-plated brass compression stop with inlet connection matching water-supply piping type and size.
 - 1) Operation: **[Loose key] [Wheel handle] <Insert type>**.
 - 2) Risers: **NPS 1/2 (DN 15), [chrome-plated, rigid-copper pipe] [chrome-plated, soft-copper flexible tube] [ASME A112.18.6, braided or corrugated stainless-steel flexible hose]**.
5. Waste Fittings:
- a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap(s):
 - 1) Size: **[NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)]**.

- 2) Material: Chrome-plated, **[two-piece, cast-brass trap and swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall] [two-piece, cast-brass trap and ground-joint swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall]** <Insert trap type>; and chrome-plated brass or steel wall flange.
 - 3) Material: Stainless-steel, two-piece trap and swivel elbow with **0.012-inch- (0.30-mm-) thick stainless-steel tube to wall;** and stainless-steel wall flange.
 - c. Continuous Waste:
 - 1) Size: **[NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)].**
 - 2) Material: Chrome-plated, **0.032-inch- (0.83-mm-) thick brass tube.**
 6. Mounting: On counter with sealant.
- B. Utility Sinks <Insert drawing designation>: Stainless steel, freestanding.
1. Manufacturers: Subject to compliance with requirements, **provide products by one of the following:**
 - a. [Advance Tabco.](#)
 - b. [AERO Manufacturing Company.](#)
 - c. [Amtekco Industries, Inc.](#)
 - d. [Eagle Group; Foodservice Equipment Division.](#)
 - e. [Elkay Manufacturing Co.](#)
 - f. [Griffin Products, Inc.](#)
 - g. [Just Manufacturing.](#)
 - h. **<Insert manufacturer's name>.**
 - i. or approved equal.
 2. Fixture:
 - a. Standard: ASME A112.19.3/CSA B45.4.
 - b. Type: With backsplash.
 - c. Number of Compartments: **[One] [Two] [Three].**
 - d. Overall Dimensions: **<Insert dimensions>.**
 - e. Metal Thickness: **[0.050 inch (1.3 mm)] [0.063 inch (1.6 mm)] <Insert dimension>.**
 - f. Compartment:
 - 1) Dimensions: **<Insert dimensions>.**
 - 2) Drain: **[Grid with NPS 1-1/2 (DN 40) tailpiece and twist drain] [Grid with NPS 2 (DN 50) tailpiece and twist drain] [NPS 1-1/2 (DN 40) tailpiece with stopper]** <Insert drain>.
 - 3) Drain Location: **[Centered in compartment] [Near back of compartment] [Near left side of compartment] [Near right side of compartment]** <Insert location>.
 - g. Each Compartment:

- 1) Dimensions: **<Insert dimensions>**.
 - 2) Drains: **[Grid with NPS 1-1/2 (DN 40) tailpiece and twist drain]**
[Grid with NPS 2 (DN 50) tailpiece and twist drain] **[NPS 1-1/2 (DN 40) tailpiece with stopper]** **<Insert drain>**.
 - 3) Drain Location: **[Centered in compartment]** **[Near back of compartment]** **<Insert location>**.
- h. Drainboard(s): **[Not required]** **[Both]** **[Left]** **[Right]** side(s).
- 1) Dimensions Each: **[Not applicable]** **<Insert dimensions>**.
3. Supports: Adjustable-length steel legs.
4. Faucet(s): **<Insert sink-faucet designation from "Sink Faucets" Article>**.
- a. Number Required: **[One]** **[Two]**.
 - b. Mounting: On backsplash.
5. Supply Fittings:
- a. Standard: ASME A112.18.1/CSA B125.1.
 - b. Supplies: Chrome-plated brass compression stop with inlet connection matching water-supply piping type and size.
 - 1) Operation: **[Loose key]** **[Wheel handle]** **<Insert type>**.
 - 2) Risers: **NPS 1/2 (DN 15)**, **[chrome-plated, rigid-copper pipe]**
[chrome-plated, soft-copper flexible tube] **[ASME A112.18.6, braided or corrugated stainless-steel flexible hose]**.
6. Waste Fittings:
- a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap(s):
 - 1) Size: **[NPS 1-1/2 (DN 40)]** **[NPS 2 (DN 50)]**.
 - 2) Material: Chrome-plated, **[two-piece, cast-brass trap and swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall]**
[two-piece, cast-brass trap and ground-joint swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall] **<Insert trap type>**;
and chrome-plated brass or steel wall flange.
 - 3) Material: Stainless-steel, two-piece trap and swivel elbow with **0.012-inch- (0.30-mm-) thick stainless-steel tube to wall;** and stainless-steel wall flange.
 - c. Continuous Waste:
 - 1) Size: **[NPS 1-1/2 (DN 40)]** **[NPS 2 (DN 50)]**.
 - 2) Material: Chrome-plated, **0.032-inch- (0.83-mm-) thick brass tube.**

2.4 HANDWASH SINKS

- A. Handwash Sinks **<Insert drawing designation>**: Stainless steel, wall mounted.
1. Manufacturers: Subject to compliance with requirements, **provide products by one of the following**:
 - a. [Advance Tabco.](#)
 - b. [AERO Manufacturing Company.](#)
 - c. [Amtekco Industries, Inc.](#)
 - d. [Eagle Group; Foodservice Equipment Division.](#)
 - e. [Elkay Manufacturing Co.](#)
 - f. [Griffin Products, Inc.](#)
 - g. [Just Manufacturing.](#)
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
 2. Fixture:
 - a. Standards: ASME A112.19.3/CSA B45.4 and NSF/ANSI 2.
 - b. Type: Basin with radius corners, back for faucet, and support brackets.
 - c. Nominal Size: **17 by 16 by 5 inches** (432 by 406 by 127 mm).
 3. Faucet: **<Insert sink-faucet designation from "Sink Faucets" Article>**.
 4. Supply Fittings: Comply with requirements in "Supply Fittings" Article.
 5. Waste Fittings: Comply with requirements in "Waste Fittings" Article.
 6. Support: ASME A112.6.1M, Type II, sink carrier.

2.5 SINK FAUCETS

- A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for faucet-spout materials that will be in contact with potable water.
- B. Sink Faucets **<Insert drawing designation>**: Manual type, **[single-control]** **[two-lever-handle]** **<Insert type>** mixing valve.
1. Commercial, Solid-Brass Faucets.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) [American Standard America.](#)
 - 2) [Bradley Corporation.](#)
 - 3) [Chicago Faucets.](#)
 - 4) [Delta Faucet Company.](#)
 - 5) [Elkay Manufacturing Co.](#)
 - 6) [GROHE America, Inc.](#)
 - 7) [Just Manufacturing.](#)
 - 8) [Kohler Co.](#)
 - 9) [Moen Incorporated.](#)

- 10) [Speakman Company.](#)
- 11) [T & S Brass and Bronze Works, Inc.](#)
- 12) [Zurn Plumbing Products Group.](#)
- 13) **<Insert manufacturer's name>.**
- 14) or approved equal.

2. General-Duty, Solid-Brass Faucets.

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) [American Standard America.](#)
- 2) [Bradley Corporation.](#)
- 3) [BrassTech Inc.](#)
- 4) [Central Brass Company.](#)
- 5) [Chicago Faucets.](#)
- 6) [Danze, Inc.](#)
- 7) [Delta Faucet Company.](#)
- 8) [Eljer, Inc.](#)
- 9) [Elkay Manufacturing Co.](#)
- 10) [Franke Consumer Products, Inc.](#)
- 11) [Gerber Plumbing Fixtures LLC.](#)
- 12) [Griffin Products, Inc.](#)
- 13) [GROHE America, Inc.](#)
- 14) [Hansgrohe USA.](#)
- 15) [Hydrotek International, Inc.](#)
- 16) [Intersan Manufacturing Company.](#)
- 17) [Just Manufacturing.](#)
- 18) [Kohler Co.](#)
- 19) [Matco-Norca.](#)
- 20) [Moen Incorporated.](#)
- 21) [Price Pfister, Inc.](#)
- 22) [Speakman Company.](#)
- 23) [T & S Brass and Bronze Works, Inc.](#)
- 24) [WhiteRock Corp.](#)
- 25) [Wolverine Brass, Inc.](#)
- 26) [Zurn Plumbing Products Group.](#)
- 27) **<Insert manufacturer's name>.**
- 28) or approved equal.

3. Copper- or Brass-Underbody Faucets.

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) [American Standard America.](#)
- 2) [Briggs Plumbing Products, Inc.](#)
- 3) [Danze, Inc.](#)
- 4) [Delta Faucet Company.](#)
- 5) [Eljer, Inc.](#)

- 6) [Ferguson Enterprises, Inc.](#)
- 7) [Gerber Plumbing Fixtures LLC.](#)
- 8) [Matco-Norca.](#)
- 9) [Moen Incorporated.](#)
- 10) [Sterling.](#)
- 11) [WhiteRock Corp.](#)
- 12) [Wolverine Brass, Inc.](#)
- 13) **<Insert manufacturer's name>.**
- 14) or approved equal.

4. Standard: ASME A112.18.1/CSA B125.1.
5. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and sink receptor.
6. Body Type: **[Centerset] [Widespread] [Single hole] <Insert type>.**
7. Body Material: **[Commercial, solid brass] [General-duty, solid brass] [Copper or brass underbody].**
8. Finish: **[Chrome plated] [Polished chrome plate] <Insert finish>.**
9. Maximum Flow Rate: **[2.2 gpm (8.3 L/min.)] [4.0 gpm (15 L/min.)] <Insert value>.**
10. Handle(s): **[Lever] [Cross, four arm] [Wrist blade, 4 inches (102 mm)] [Elbow, 6 inches (152 mm)] [Not applicable] <Insert handles>.**
11. Mounting Type: **[Deck, concealed] [Deck, exposed] [Back/wall, exposed].**
12. Spout Type: **[Rigid, solid brass] [Rigid, solid brass with wall brace] [Swing, round tubular] [Swing, shaped tube] [Swing, solid brass] [Rigid gooseneck] [Swivel gooseneck] <Insert type>.**
13. Vacuum Breaker: **[Required] [Not required] for hose outlet.**
14. Spout Outlet: **[Aerator] [Laminar flow] [Hose thread according to ASME B1.20.7] [Plain end] [Spray] <Insert type>.**

2.6 SUPPLY FITTINGS

- A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.
- C. Supply Piping: Chrome-plated brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated brass or stainless-steel wall flange.
- D. Supply Stops: Chrome-plated brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping.
- E. Operation: **[Loose key] [Wheel handle] <Insert type>.**
- F. Risers:
 1. **[NPS 3/8 (DN 10)] [NPS 1/2 (DN 15)]**
 2. **[Chrome-plated, rigid-copper pipe] [Chrome-plated, soft-copper flexible tube] [ASME A112.18.6, braided or corrugated stainless-steel flexible hose].**

2.7 WASTE FITTINGS

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. Drain: Grid type with NPS 1-1/2 (DN 40) offset and straight tailpiece.
- C. Trap:
 - 1. Size: NPS 1-1/2 (DN 40).
 - 2. Material: Chrome-plated, **[two-piece, cast-brass trap and swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall] [two-piece, cast-brass trap and ground-joint swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall] [one-piece, cast-brass trap with swivel 0.029-inch- (73-mm-) thick tubular brass wall bend] <Insert trap type>**; and chrome-plated brass or steel wall flange.
 - 3. Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch- (0.30-mm-) thick stainless-steel tube to wall; and stainless-steel wall flange.

2.8 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before sink installation.
- B. Examine walls, floors, and counters for suitable conditions where sinks will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install sinks level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-hung sinks.

- C. Install accessible wall-mounted sinks at handicapped/elderly mounting height according to ICC/ANSI A117.1.
- D. Set floor-mounted sinks in leveling bed of cement grout.
- E. Install water-supply piping with stop on each supply to each sink faucet.
 - 1. Exception: Use ball, gate, or globe valves if supply stops are not specified with sink. Comply with valve requirements specified in Section 220523 "General-Duty Valves for Plumbing Piping."
 - 2. Install stops in locations where they can be easily reached for operation.
- F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- G. Seal joints between sinks and counters, floors, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."
- H. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 220719 "Plumbing Piping Insulation."

3.3 CONNECTIONS

- A. Connect sinks with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

- A. Operate and adjust sinks and controls. Replace damaged and malfunctioning sinks, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.

3.5 CLEANING AND PROTECTION

- A. After completing installation of sinks, inspect and repair damaged finishes.

- B. Clean sinks, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed sinks and fittings.
- D. Do not allow use of sinks for temporary facilities unless approved in writing by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **224216.16**

SECTION 224223 - COMMERCIAL SHOWERS, RECEPTORS, AND BASINS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Individual shower receptors.
2. Shower faucets.
3. Shower basins.
4. Group showers.
5. Grout.

- B. Related Requirements:

1. Section 224500 "Emergency Plumbing Fixtures" for emergency showers.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for showers[**and basins**].
2. Include rated capacities, operating characteristics, and furnished specialties and accessories.
3. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Prerequisite WE 1[**and Credit WE 3**] [, **Credit WE 2, and Credit WE 3**]: Documentation indicating flow and water consumption requirements.
2. Product Data for Prerequisite WE 1: Documentation indicating flow and water consumption requirements.
3. Product Data for Prerequisite WE 1[**and Credit WE 2**]: Documentation indicating flow and water consumption requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For shower faucets to include in maintenance manuals.
 - 1. Include fixture trim exploded view and replacement parts lists.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Faucet Washers and O-Rings: Equal to [10] <Insert number> percent of amount of each type and size installed.
 - 2. Faucet Cartridges and O-Rings: Equal to [5] <Insert number> percent of amount of each type and size installed.

1.6 QUALITY ASSURANCE

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 INDIVIDUAL SHOWERS

- A. Individual FRP Showers <Insert drawing designation>:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Aqua Glass Corporation.](#)
 - b. [Clarion Bathware.](#)
 - c. [Florestone Products Co., Inc.](#)
 - d. [LASCO Bathware.](#)
 - e. [MAAX.](#)
 - f. [MAAX; Aker Division.](#)

- g. [Praxis Industries, LLC.; Aquarius Bathware.](#)
 - h. [Sterling; a Kohler company.](#)
 - i. [Swan Corporation \(The\).](#)
 - j. **<Insert manufacturer's name>.**
 - k. or approved equal.
2. General: FRP[, **accessible,**] shower enclosure with faucet and receptor[**and appurtenances**].
 3. Standard: ANSI Z124.1.2.
 4. Type: [**One-piece unit with top**] [**One-piece unit without top**] [**Sectional unit with top**] [**Sectional unit without top**].
 5. Style: [**Standard residential**] [**Handicapped/wheelchair**].
 6. Faucet: **<Insert faucet designation from "Shower Faucets" Article>.**
 7. Nominal Size and Shape: [**30 by 30 inches (762 by 762 mm) square**] [**32 by 32 inches (813 by 813 mm) square**] [**34 by 34 inches (864 by 864 mm) square**] [**36 by 36 inches (915 by 915 mm) square**] [**48 by 34 to 36 inches (1219 by 864 to 915 mm) rectangular**] [**60 by 34 to 36 inches (1524 by 864 to 915 mm) rectangular**] [**36 inches (915 mm) neo-corner (two walls)**] [**36 inches (915 mm) neo-corner (four walls)**] [**38 inches (965 mm) neo-corner (two walls)**] [**38 inches (965 mm) neo-corner (four walls)**] [**42 inches (1067 mm) neo-corner (two walls)**] [**42 inches (1067 mm) neo-corner (four walls)**] **<Insert dimensions>.**
 8. Color: [**White**] **<Insert color>.**
 9. Bathing Surface: Slip resistant according to ASTM F 462.
 10. Outlet: Drain with [**NPS 2 (DN 50)**] **<Insert size>** outlet.
 11. Shower Rod and Curtain: [**Not required**] [**Required**].
 12. Grab Bar: [**ASTM F 446, mounted on support area back wall**] [**Not required**].

B. Individual PMMA Showers **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acryline USA, Inc.](#)
 - b. [Aqua Bath Company, Inc.](#)
 - c. [Aqua Glass Corporation.](#)
 - d. [Aquatic Industries, Inc.](#)
 - e. [Clarion Bathware.](#)
 - f. [Crane Plumbing, L.L.C.](#)
 - g. [Jacuzzi Inc.](#)
 - h. [Kohler Co.](#)
 - i. [LASCO Bathware.](#)
 - j. [MAAX.](#)
 - k. [Praxis Industries, LLC.; Aquarius Bathware.](#)
 - l. **<Insert manufacturer's name>.**
 - m. or approved equal.
2. General: PMMA shower enclosure with faucet and receptor[**and appurtenances**].
3. Standard: ANSI Z124.1.2.

4. Type: [**One-piece unit with top**] [**One-piece unit without top**] [**Sectional unit with top**] [**Sectional unit without top**].
5. Style: [**Standard residential**] [**Handicapped/wheelchair**].
6. Faucet: <Insert faucet designation from "Shower Faucets" Article>.
7. Nominal Size and Shape: [**30 by 30 inches (762 by 762 mm) square**] [**32 by 32 inches (813 by 813 mm) square**] [**34 by 34 inches (864 by 864 mm) square**] [**36 by 36 inches (915 by 915 mm) square**] [**48 by 34 to 36 inches (1219 by 864 to 915 mm) rectangular**] [**60 by 34 to 36 inches (1524 by 864 to 915 mm) rectangular**] [**36 inches (915 mm) neo-corner (two walls)**] [**36 inches (915 mm) neo-corner (four walls)**] [**38 inches (965 mm) neo-corner (two walls)**] [**38 inches (965 mm) neo-corner (four walls)**] [**42 inches (1067 mm) neo-corner (two walls)**] [**42 inches (1067 mm) neo-corner (four walls)**] <Insert dimensions>.
8. Color: [**White**] <Insert color>.
9. Bathing Surface: Slip resistant according to ASTM F 462.
10. Outlet: Drain with [**NPS 2 (DN 50)**] <Insert size> outlet.
11. Shower Rod and Curtain: [**Not required**] [**Required**].
12. Grab Bar: [**ASTM F 446, mounted on support area back wall**] [**Not required**].

C. Individual Cabinet Showers <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bradley Corporation](#).
 - b. [Crane Plumbing, L.L.C.](#)
 - c. [Mustee, E. L. & Sons, Inc.](#)
 - d. [Stern-Williams Co., Inc.](#)
 - e. [Swan Corporation \(The\)](#).
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
2. General: Factory-fabricated[, **accessible**] cabinet shower, with faucet and receptor.
3. Nominal Size: [**30 by 30 inches (762 by 762 mm)**] [**32 by 32 inches (813 by 813 mm)**] [**36 by 36 inches (915 by 915 mm)**] [**36 by 39 inches (915 by 990 mm)**] [**45 by 39 inches (1145 by 990 mm)**] <Insert dimensions>.
4. Material: [**Steel**] [**Stainless steel**] [**Composite**] [**Plastic**], [**front**] [**corner**] [**front and rear**] access.
5. Color: [**Not applicable**] <Insert color>.
6. Accessibility Options: Grab bar and bench.
7. Faucet: [**Manufacturer's standard fitting assembly**] <Insert faucet designation from "Shower Faucets" Article>.
8. Supplies: **NPS 1/2 (DN 15) copper tubing** [**with ball, gate, or globe valves**].
9. Drain: Grid, **NPS 2 (DN 50)**.

2.2 SHOWER FAUCETS

- A. NSF Standard: Comply with NSF 61, "Drinking Water System Components - Health Effects," for shower materials that will be in contact with potable water.

B. Shower Faucets <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [American Standard America.](#)
 - b. [Chicago Faucets.](#)
 - c. [Ferguson Enterprises, Inc.; ProFlo Brand.](#)
 - d. [Kohler Co.](#)
 - e. [Lawler Manufacturing Co., Inc.](#)
 - f. [Leonard Valve Company.](#)
 - g. [Matco-Norca.](#)
 - h. [Moen Incorporated.](#)
 - i. [Powers; a division of Watts Water Technologies, Inc.](#)
 - j. [Speakman Company.](#)
 - k. [Zurn Industries, LLC; AquaSpec Commercial Faucet Products.](#)
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
2. Description: Single-handle, pressure-balance mixing valve with hot- and cold-water indicators; check stops; and shower head.
3. Faucet:
 - a. Standards: ASME A112.18.1/CSA B125.1 and ASSE 1016.
 - b. Body Material: Solid brass.
 - c. Finish: Polished chrome plate.
 - d. Maximum Flow Rate: [2.5 gpm (9.5 L/min.)] <Insert value> unless otherwise indicated.
 - e. Mounting: [**Concealed**] [**Exposed**].
 - f. Operation: Single-handle, [**push-pull**] [**or**] [**twist or rotate**] control.
 - g. Antiscald Device: [**Integral with mixing valve**] [**Separate unit**] [**Not required**].
 - h. Check Stops: Check-valve type, integral with or attached to body; on hot- and cold-water supply connections.
4. Supply Connections: **NPS 1/2 (DN 15)**.
5. Shower Head:
 - a. Standard: ASME A112.18.1/CSA B125.1.
 - b. Type: [**Ball joint with arm and flange**] [**Without ball joint, but with arm and flange**] [**Ball joint and head integral with mounting flange**] [**Integral with mounting flange**] <Insert type>.
 - c. Shower Head Material: Metallic with chrome-plated finish.
 - d. Spray Pattern: [**Adjustable**] [**Fixed**].
 - e. Integral Volume Control: [**Not required**] [**Required**].
 - f. Shower-Arm, Flow-Control Fitting: [**Not required**] [**1.5 gpm (5.7 L/min.)**] [**2.0 gpm (7.6 L/min.)**].
 - g. Temperature Indicator: [**Integral with faucet**] [**Not required**].

C. Shower Faucets <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Chicago Faucets](#).
 - b. [Lawler Manufacturing Co., Inc.](#)
 - c. [Leonard Valve Company](#).
 - d. [Powers; a division of Watts Water Technologies, Inc.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Description: Single-handle, thermostatic mixing valve with hot- and cold-water indicators; check stops; and shower head.
3. Faucet:
 - a. Standards: ASME A112.18.1/CSA B125.1 and ASSE 1016.
 - b. Body Material: Solid brass.
 - c. Finish: Polished chrome plate.
 - d. Maximum Flow Rate: [2.5 gpm (9.5 L/min.)] **<Insert value>** unless otherwise indicated.
 - e. Mounting: [**Concealed**] [**Exposed**].
 - f. Operation: Single-handle, [**push-pull**] [**or**] [**twist or rotate**] control.
 - g. Antiscald Device: [**Integral with mixing valve**] [**Separate unit**] [**Not required**].
 - h. Check Stops: Check-valve type, integral with or attached to body; on hot- and cold-water supply connections.
4. Supply Connections: **NPS 1/2 (DN 15)**.
5. Shower Head:
 - a. Standard: ASME A112.18.1/CSA B125.1.
 - b. Type: [**Ball joint with arm and flange**] [**Without ball joint, but with arm and flange**] [**Ball joint and head integral with mounting flange**] [**Integral with mounting flange**] **<Insert type>**.
 - c. Shower Head Material: Metallic with chrome-plated finish.
 - d. Spray Pattern: [**Adjustable**] [**Fixed**].
 - e. Integral Volume Control: [**Not required**] [**Required**].
 - f. Shower-Arm, Flow-Control Fitting: [**Not required**] [**1.5 gpm (5.7 L/min.)**] [**2.0 gpm (7.6 L/min.)**].
 - g. Temperature Indicator: [**Integral with faucet**] [**Not required**].

2.3 SHOWER BASINS

- A. Shower Basins **<Insert drawing designation>**: [**Cast-polymer**] [**FRP**] [**PMMA**] [**Precast-terrazzo**] [**Solid-surface**] shower basin.

1. Cast-Polymer Shower Basins:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) [Crane Plumbing, L.L.C.](#)
 - 2) [Florestone Products Co., Inc.](#)
 - 3) **<Insert manufacturer's name>**.
 - 4) or approved equal.
2. FRP Shower Basins:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) [Crane Plumbing, L.L.C.](#)
 - 2) [Florestone Products Co., Inc.](#)
 - 3) [LASCO Bathware.](#)
 - 4) [MAAX.](#)
 - 5) [Mustee, E. L. & Sons, Inc.](#)
 - 6) [Sterling.](#)
 - 7) [Swan Corporation \(The\).](#)
 - 8) **<Insert manufacturer's name>**.
 - 9) or approved equal.
3. PMMA (Acrylic) Shower Basins:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) [American Standard America.](#)
 - 2) [Crane Plumbing, L.L.C.](#)
 - 3) [Florestone Products Co., Inc.](#)
 - 4) [Jason International, Inc.](#)
 - 5) [Kohler Co.](#)
 - 6) [LASCO Bathware.](#)
 - 7) [MAAX.](#)
 - 8) [Royal Baths Manufacturing Co.](#)
 - 9) **<Insert manufacturer's name>**.
 - 10) or approved equal.
4. Precast-Terrazzo Shower Basins:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) [Acorn Engineering Company.](#)
 - 2) [Crane Plumbing, L.L.C.](#)
 - 3) [Florestone Products Co., Inc.](#)
 - 4) [Stern-Williams Co., Inc.](#)
 - 5) **<Insert manufacturer's name>**.
 - 6) or approved equal.
5. Solid-Surface Shower Basins:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) [Swan Corporation \(The\)](#).
 - 2) [Tower Industries](#).
 - 3) **<Insert manufacturer's name>**.
 - 4) or approved equal.
6. General: [**Cast-polymer**] [**FRP**] [**PMMA**] [**Precast-terrazzo**] [**Solid-surface**] base for built-up-type shower fixture.
7. Standard: ANSI Z124.1.3 for [**cast-polymer**] [**FRP**] [**PMMA**] bases.
8. Standard: IAPMO PS 99 for precast-terrazzo material.
9. Standard: ANSI/ICPA SS-1 for solid-surface material.
10. Type: [**Standard residential**] [**Handicapped/wheelchair**].
11. Nominal Size and Shape: [**30 by 30 inches** (762 by 762 mm) **square**] [**32 by 32 inches** (813 by 813 mm) **square**] [**36 by 36 inches** (915 by 915 mm) **square**] [**42 by 34 to 36 inches** (1067 by 864 to 915 mm) **rectangular**] [**48 by 34 to 36 inches** (1219 by 864 to 915 mm) **rectangular**] [**36 inches** (915 mm) **neo-corner**] [**42 inches** (1067 mm) **neo-corner**] **<Insert dimensions>**.
12. Color: [**White**] **<Insert color>**.
13. Outlet: Drain with [**NPS 2** (DN 50)] **<Insert size>** outlet.
14. Bathing Surface: Slip resistant according to ASTM F 462.

2.4 GROUP SHOWERS

A. Group Column Showers **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Engineering Company](#).
 - b. [Bradley Corporation](#).
 - c. [Willoughby Industries, Inc.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Description: Stainless-steel, column shower fixture with individual nozzles.
3. Standards: ASME A112.18.1/CSA B125.1 and ASSE 1016.
4. Metal Nominal Thickness: [**0.050 inch** (1.3 mm) **minimum**] [**0.063 inch** (1.6 mm)].
5. Number of Shower Nozzles: [**Two**] [**Three**] [**Four**] [**Five**] [**Six**].
6. Height to Nozzles: [**66 inches** (1675 mm)] [**72 inches** (1830 mm)] **<Insert dimension>**.
7. Control: [**Thermostatic**] [**Pressure-balance**] mixing valve with hot- and cold-water operation.
8. Control: Thermostatic mixing valve with individual, tempered-water supply and push-button operation.
9. Flow Control: [**2 gpm** (7.6 L/min.)] [**2.5 gpm** (9.5 L/min.)] for each shower head.
10. Liquid Soap Dispenser: [**Not required**] [**Required**] for each shower head.
11. Soap Dish: [**Not required**] [**Required**] for each shower head.

12. Mounting: Floor flange.
13. Supplies: [NPS 3/4 (DN 20)] [NPS 1 (DN 25)] copper tubing with shutoff valve from [bottom] [top].
14. Shroud: [Not required] [Stainless steel of size to cover supplies and vent piping].
15. Drain Fitting: [NPS 3 (DN 80)] [NPS 4 (DN 100)] outlet with NPS 2 (DN 50) vent, integral with base of column.

B. Group Wall-Mounted Showers <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Engineering Company](#).
 - b. [Bradley Corporation](#).
 - c. [Willoughby Industries, Inc.](#)
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
2. Description: Stainless-steel, wall-mounted, surface-enclosure shower fixture with individual nozzles.
3. Standards: ASME A112.18.1/CSA B125.1 and ASSE 1016.
4. Metal Nominal Thickness: [0.050 inch (1.3 mm) minimum] [0.063 inch (1.6 mm)].
5. Number of Shower Nozzles: [Two] [Three].
6. Height to Nozzles: [66 inches (1675 mm)] [72 inches (1830 mm)] <Insert dimension>.
7. Control: [Thermostatic] [Pressure-balance] valve with individual hot- and cold-water mixing-valve operation.
8. Control: Thermostatic valve with individual, tempered-water supply and push-button operation.
9. Flow Control: [2 gpm (7.6 L/min.)] [2.5 gpm (9.5 L/min.)] for each shower head.
10. Liquid Soap Dispenser: [Not required] [Required] for each shower head.
11. Soap Dish: [Not required] [Required] for each shower head.
12. Mounting: Wall bracket.
13. Supplies: NPS 3/4 (DN 20) copper tubing with valves.

2.5 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before shower installation.
- B. Examine walls and floors for suitable conditions where showers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Assemble shower components according to manufacturers' written instructions.
- B. Install showers level and plumb according to roughing-in drawings.
- C. Install water-supply piping with stop on each supply to each shower faucet.
 - 1. Exception: Use ball, gate, or globe valves if supply stops are not specified with shower. Comply with valve requirements specified in Section 220523 "General-Duty Valves for Plumbing Piping."
 - 2. Install stops in locations where they can be easily reached for operation.
- D. Install shower flow-control fittings with specified maximum flow rates in shower arms.
- E. Set [**shower receptors**] [**and**] [**shower basins**] in leveling bed of cement grout.
- F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheons requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- G. Seal joints between showers and floors and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.3 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with traps and soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

- A. Operate and adjust showers and controls. Replace damaged and malfunctioning showers, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.

3.5 CLEANING AND PROTECTION

- A. After completing installation of showers[**and basins**], inspect and repair damaged finishes.
- B. Clean showers[**and basins**], faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed fixtures and fittings.
- D. Do not allow use of showers[**and basins**] for temporary facilities unless approved in writing by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **224223**

SECTION 224233 - WASH FOUNTAINS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Circular wash fountains.
 - 2. Semicircular wash fountains.
 - 3. Corner wash fountains.
 - 4. Linear wash fountains.
- B. Related Requirements:
 - 1. Section 224216.13 "Commercial Lavatories."
 - 2. Section 224216.16 "Commercial Sinks."
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for wash fountains.
 - 2. Include rated capacities, operating characteristics, [**electrical characteristics,**] and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite WE 1 [**and Credit WE 3**] [, **Credit WE 2, and Credit WE 3**]: Documentation indicating flow and water consumption requirements.
 - 2. Product Data for Prerequisite WE 1 [**and Credit WE 1**]: Documentation indicating flow and water consumption requirements.
 - 3. Product Data for Prerequisite WE 1 [**and Credit WE 2**]: Documentation indicating flow and water consumption requirements.

- C. Shop Drawings: For each type of wash fountain.
1. Include plans, elevations, sections, and **[mounting] [attachment]** details.
 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For wash fountains and components to include in operation and maintenance manuals.
1. Include fixture trim exploded view and replacement parts lists.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".\

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Faucet Washers and O-Rings: Equal to **[10] <Insert number>** percent of quantity of each type and size installed.
 2. Faucet Cartridges and O-Rings: Equal to **[5] <Insert number>** percent of quantity of each type and size installed.
 3. Retain article below if required for Project. Coordinate requirements with DIA Project Manager.

1.6 QUALITY ASSURANCE

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PRECAST-TERRAZZO, CIRCULAR WASH FOUNTAINS

A. Wash Fountains <Insert drawing designation>: Precast-terrazzo, circular receptor.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Bradley Corporation.
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
2. Standard: IAPMO IGC 156.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. Receptor:
 - a. Standard: IAPMO PS 99 for precast-terrazzo receptor.
 - b. Nominal Diameter: [36 to 39 inches (914 to 990 mm)] [39 inches (990 mm)] [42 inches (1067 mm)] [54 inches (1372 mm)].
 - c. Height to Rim: 29 inches (737 mm) above floor.
 - d. Color or Finish: [Not applicable] <Insert if required>.
 - e. Drain: Grid with [NPS 2 (DN 50)] <Insert size> tailpiece.
5. Spray Head:
 - a. Material: Stainless steel.
 - b. Number of User Stations: [Five] [Six] [Eight].
 - c. Spray Nozzles: Chrome-plated brass or stainless steel complying with NSF 61 and ASME A112.18.1/CSA B125.1.
 - d. Control: [Collective, foot-rail] [Individual foot-pedal] [Individual push-button] [Individual, hardwired sensor] [Individual, battery-powered sensor] actuation with [pressure-balancing] [thermostatic] mixing valve complying with ASSE 1016 and having check stops; comply with NSF 61.
 - e. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
6. Liquid-Soap Dispensers: [Manual] [Hardwired, sensor actuated] [Battery powered, sensor actuated] [Not required], for each user station.
 - a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
7. Pedestal: [Manufacturer's standard] [Painted or coated steel] [Stainless steel] with access panel.
8. Supply Fittings:
 - a. Piping: [NPS 3/4 (DN 20)] [NPS 1 (DN 25)] copper tubing.
 - b. Valves: Shutoff valve on each supply.

- c. Supply Piping: From **[bottom]** **[top]**.
- 9. Waste Fittings:
 - a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap and Drain Piping: **[NPS 2 (DN 50)]**.
 - c. Vent Piping: **[Not required]** **[NPS 1-1/2 (DN 40) to ceiling]**.
- 10. Shroud: **[Not required]** **[Stainless steel of size to cover supply and vent piping]**.
- 11. Mounting: Floor bracket.

2.2 SOLID-SURFACE, CIRCULAR WASH FOUNTAINS

A. Wash Fountains **<Insert drawing designation>**: Solid-surface, circular receptor.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Bradley Corporation.
 - b. Intersan Manufacturing Company.
 - c. Willoughby Industries.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: IAPMO IGC 156.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. Receptor:
 - a. Standard: ICPA SS-1 for solid-surface receptor.
 - b. Nominal Diameter: **[36 to 39 inches (914 to 990 mm)]** **[39 inches (990 mm)]** **[42 inches (1067 mm)]** **[54 inches (1370 mm)]**.
 - c. Height to Rim: **34 inches (864 mm)** above floor.
 - d. Color or Finish: **[Not applicable]** **<Insert if required>**.
 - e. Drain: Grid with **[NPS 2 (DN 50)]** **<Insert size>** tailpiece.
5. Spray Head:
 - a. Material: Stainless steel.
 - b. Number of User Stations: **[Five]** **[Six]** **[Eight]**.
 - c. Spray Nozzles: Chrome-plated brass or stainless steel complying with NSF 61 and ASME A112.18.1/CSA B125.1.
 - d. Control: **[Collective, foot-rail]** **[Individual foot-pedal]** **[Individual push-button]** **[Individual, hardwired sensor]** **[Individual, battery-powered sensor]** actuation with **[pressure-balancing]** **[thermostatic]** mixing valve complying with ASSE 1016 and having check stops; comply with NSF 61.

- e. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
- 6. Liquid-Soap Dispensers: **[Manual] [Hardwired, sensor actuated] [Battery powered, sensor actuated] [Not required]**, for each user station.
 - a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
- 7. Pedestal: **[Manufacturer's standard] [Painted or coated steel] [Stainless steel]** with access panel.
- 8. Supply Fittings:
 - a. Piping: **[NPS 3/4 (DN 20)] [NPS 1 (DN 25)]** copper tubing.
 - b. Valves: Shutoff valve on each supply.
 - c. Supply Piping: From **[bottom] [top]**.
- 9. Waste Fittings:
 - a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap and Drain Piping: **[NPS 2 (DN 50)]**.
 - c. Vent Piping: **[Not required] [NPS 1-1/2 (DN 40) to ceiling]**.
- 10. Shroud: **[Not required] [Stainless steel of size to cover supply and vent piping]**.
- 11. Mounting: Floor bracket.

2.3 STAINLESS-STEEL, CIRCULAR WASH FOUNTAINS

A. Wash Fountains **<Insert drawing designation>**: Stainless-steel, circular receptor.

- 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Acorn Engineering Company.
 - b. Bradley Corporation.
 - c. Intersan Manufacturing Company.
 - d. Willoughby Industries.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
- 2. Standard: IAPMO IGC 156.
- 3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 4. Receptor:
 - a. Standard: IAPMO IGC 156 for stainless-steel receptor.
 - b. Nominal Diameter: **[36 to 39 inches (914 to 990 mm)] [39 inches (990 mm)] [42 inches (1067 mm)] [54 inches (1372 mm)]**.
 - c. Height to Rim: **34 inches (864 mm)** above floor.
 - d. Color or Finish: **[Not applicable] <Insert if required>**.

- e. Drain: Grid with [NPS 2 (DN 50)] <Insert size> tailpiece.
 - 5. Spray Head:
 - a. Material: Stainless steel.
 - b. Number of User Stations: [Five] [Six] [Eight].
 - c. Spray Nozzles: Chrome-plated brass or stainless steel complying with NSF 61 and ASME A112.18.1/CSA B125.1.
 - d. Control: [Collective, foot-rail] [Individual foot-pedal] [Individual push-button] [Individual, hardwired sensor] [Individual, battery-powered sensor] actuation with [pressure-balancing] [thermostatic] mixing valve complying with ASSE 1016 and having check stops; comply with NSF 61.
 - e. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
 - 6. Liquid-Soap Dispensers: [Manual] [Hardwired, sensor actuated] [Battery powered, sensor actuated] [Not required], for each user station.
 - a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
 - 7. Pedestal: Stainless steel with access panel.
 - 8. Supply Fittings:
 - a. Piping: [NPS 3/4 (DN 20)] [NPS 1 (DN 25)] copper tubing.
 - b. Valves: Shutoff valve on each supply.
 - c. Supply Piping: From [bottom] [top].
 - 9. Waste Fittings:
 - a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap and Drain Piping: [NPS 2 (DN 50)].
 - c. Vent Piping: [Not required] [NPS 1-1/2 (DN 40) to ceiling].
 - 10. Shroud: [Not required] [Stainless steel of size to cover supply and vent piping].
 - 11. Mounting: Floor bracket.
- 2.4 PRECAST-TERRAZZO, SEMICIRCULAR WASH FOUNTAINS
- A. Wash Fountains <Insert drawing designation>: [Off] [On]-floor, precast-terrazzo, semicircular receptor.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bradley Corporation.
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
 - 2. Standard: IAPMO IGC 156.

3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. Receptor:
 - a. Standard: IAPMO PS 99 for precast-terrazzo receptor.
 - b. Nominal Diameter: [36 to 39 inches (914 to 990 mm)] [39 inches (990 mm)] [42 inches (1067 mm)] [54 inches (1372 mm)].
 - c. Height to Rim: 29 inches (737 mm) above floor.
 - d. Color or Finish: [Not applicable] <Insert if required>.
 - e. Drain: Grid with [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)] tailpiece.
5. Spray Head:
 - a. Material: Stainless steel or integral part of receptor back.
 - b. Number of User Stations: [Two] [Three] [Four].
 - c. Spray Nozzles: Chrome-plated brass or stainless steel complying with NSF 61 and ASME A112.18.1/CSA B125.1.
 - d. Control: [Collective, foot-rail] [Individual foot-pedal] [Individual push-button] [Individual, hardwired sensor] [Individual, battery-powered sensor] actuation with [pressure-balancing] [thermostatic] mixing valve complying with ASSE 1016 and having check stops; comply with NSF 61.
 - e. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
6. Liquid-Soap Dispensers: [Manual] [Hardwired, sensor actuated] [Battery powered, sensor actuated] [Not required], for each user station.
 - a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
7. Supply Fittings:
 - a. Piping: [NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)] copper tubing.
 - b. Valves: Shutoff valve on each supply.
 - c. Supply Piping: From [bottom] [top] [wall].
8. Waste Fittings:
 - a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap and Drain Piping: [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)].
 - c. Vent Piping: [Not required] [NPS 1-1/2 (DN 40) to ceiling].
9. Shroud: [Not required] [Stainless steel of size to cover supply and vent piping].
10. Off-Floor Mounting: Wall bracket and ASME A112.6.1M, Type II urinal carrier.
11. On-Floor Mounting: Floor bracket and wall bracket attached to [reinforcement in wall] [concrete or block wall].
 - a. Supplies: [NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)] copper tubing with ball, gate, or globe valves.

- b. Drain: Grid with [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)] tailpiece.
- c. Drain Piping: [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)] P-trap, waste to wall, and wall flange.

2.5 SOLID-SURFACE, SEMICIRCULAR WASH FOUNTAINS

- A. Wash Fountains <Insert drawing designation>: [Off] [On]-floor, solid-surface, semicircular receptor.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Acorn Engineering Company.
- b. Bradley Corporation.
- c. Intersan Manufacturing Company.
- d. Willoughby Industries.
- e. <Insert manufacturer's name>.
- f. or approved equal.

2. Standard: IAPMO IGC 156.

3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

4. Receptor:

- a. Standard: ICPA SS-1 for solid-surface receptor.
- b. Nominal Diameter: [36 to 39 inches (914 to 990 mm)] [39 inches (990 mm)] [42 inches (1067 mm)] [54 inches (1372 mm)].
- c. Height to Rim: 34 inches (864 mm) above floor.
- d. Color or Finish: [Not applicable] <Insert if required>.
- e. Drain: Grid with [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)] tailpiece.

5. Spray Head:

- a. Material: Stainless steel or integral part of receptor back.
- b. Number of User Stations: [Two] [Three] [Four].
- c. Spray Nozzles: Chrome-plated brass or stainless steel complying with NSF 61 and ASME A112.18.1/CSA B125.1.
- d. Control: [Collective, foot-rail] [Individual foot-pedal] [Individual push-button] [Individual, hardwired sensor] [Individual, battery-powered sensor] actuation with [pressure-balancing] [thermostatic] mixing valve complying with ASSE 1016 and having check stops; comply with NSF 61.
- e. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.

6. Liquid-Soap Dispensers: [Manual] [Hardwired, sensor actuated] [Battery powered, sensor actuated] [Not required], for each user station.

- a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.

7. Supply Fittings:
 - a. Piping: [NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)] copper tubing.
 - b. Valves: Shutoff valve on each supply.
 - c. Supply Piping: From [bottom] [top] [wall].
8. Waste Fittings:
 - a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap and Drain Piping: [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)].
 - c. Vent Piping: [Not required] [NPS 1-1/2 (DN 40) to ceiling].
9. Shroud: [Not required] [Stainless steel of size to cover supply and vent piping].
10. Off-Floor Mounting: Wall bracket and ASME A112.6.1M, Type II urinal carrier.
11. On-Floor Mounting: Floor bracket and wall bracket attached to [reinforcement in wall] [concrete or block wall].
 - a. Supplies: [NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)] copper tubing with ball, gate, or globe valves.
 - b. Drain: Grid with [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)] tailpiece.
 - c. Drain Piping: [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)] P-trap, waste to wall, and wall flange.

2.6 STAINLESS-STEEL, SEMICIRCULAR WASH FOUNTAINS

- A. Wash Fountains <Insert drawing designation>: [Off] [On]-floor, stainless-steel, semicircular receptor.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acorn Engineering Company.
 - b. Bradley Corporation.
 - c. Intersan Manufacturing Company.
 - d. Willoughby Industries.
 - e. <Insert manufacturer's name>.
 - f. or approved equal.
 2. Standard: IAPMO IGC 156.
 3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 4. Receptor:
 - a. Standard: ASME A112.19.3/CSA B45.4 for stainless-steel receptor.
 - b. Nominal Diameter: [36 to 39 inches (914 to 990 mm)] [39 inches (990 mm)] [42 inches (1067 mm)] [54 inches (1372 mm)].
 - c. Height to Rim: [34 inches (864 mm)] <Insert dimension> above floor.

- d. Color or Finish: [**Not applicable**] <Insert if required>.
 - e. Drain: Grid with [**NPS 1-1/2 (DN 40)**] [**NPS 2 (DN 50)**] tailpiece.
5. Spray Head:
- a. Material: Stainless steel or integral part of receptor back.
 - b. Number of User Stations: [**Two**] [**Three**] [**Four**].
 - c. Spray Nozzles: Chrome-plated brass or stainless steel complying with NSF 61 and ASME A112.18.1/CSA B125.1.
 - d. Control: [**Collective, foot-rail**] [**Individual foot-pedal**] [**Individual push-button**] [**Individual, hardwired sensor**] [**Individual, battery-powered sensor**] actuation with [**pressure-balancing**] [**thermostatic**] mixing valve complying with ASSE 1016 and having check stops; comply with NSF 61.
 - e. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
6. Liquid-Soap Dispensers: [**Manual**] [**Hardwired, sensor actuated**] [**Battery powered, sensor actuated**] [**Not required**], for each user station.
- a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
7. Supply Fittings:
- a. Piping: [**NPS 1/2 (DN 15)**] [**NPS 3/4 (DN 20)**] copper tubing.
 - b. Valves: Shutoff valve on each supply.
 - c. Supply Piping: From [**bottom**] [**top**] [**wall**].
8. Waste Fittings:
- a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap and Drain Piping: [**NPS 1-1/2 (DN 40)**] [**NPS 2 (DN 50)**].
 - c. Vent Piping: [**Not required**] [**NPS 1-1/2 (DN 40) to ceiling**].
9. Shroud: [**Not required**] [**Stainless steel of size to cover supply and vent piping**].
10. Off-Floor Mounting: Wall bracket and ASME A112.6.1M, Type II urinal carrier.
11. On-Floor Mounting: Floor bracket and wall bracket attached to [**reinforcement in wall**] [**concrete or block wall**].
- a. Supplies: [**NPS 1/2 (DN 15)**] [**NPS 3/4 (DN 20)**] copper tubing with ball, gate, or globe valves.
 - b. Drain: Grid with [**NPS 1-1/2 (DN 40)**] [**NPS 2 (DN 50)**] tailpiece.
 - c. Drain Piping: [**NPS 1-1/2 (DN 40)**] [**NPS 2 (DN 50)**] P-trap, waste to wall, and wall flange.

2.7 PRECAST-TERRAZZO, CORNER WASH FOUNTAINS

- A. Wash Fountains <Insert drawing designation>: Precast-terrazzo, corner receptor.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Acorn Engineering Company.
 - b. Bradley Corporation.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Standard: IAPMO IGC 156.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. Receptor:
 - a. Standard: IAPMO PS 99 for precast-terrazzo receptor.
 - b. Nominal Side Width: **[27 inches (686 mm)] [37 inches (940 mm)]**.
 - c. Height to Rim: **[34 inches (864 mm)] <Insert dimension>** above floor.
 - d. Color or Finish: **[Not applicable] <Insert if required>**.
 - e. Drain: Grid with **NPS 1-1/2 (DN 40)** tailpiece.
5. Spray Head:
 - a. Material: Stainless steel or integral part of receptor back.
 - b. Number of User Stations: **[Two] [Three]**.
 - c. Spray Nozzles: Chrome-plated brass or stainless steel complying with NSF 61 and ASME A112.18.1/CSA B125.1.
 - d. Control: **[Individual push-button] [Individual, hardwired sensor] [Individual, battery-powered sensor]** actuation with **[pressure-balancing] [thermostatic]** mixing valve complying with ASSE 1016 and having check stops; comply with NSF 61.
 - e. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
6. Liquid-Soap Dispensers: **[Manual] [Hardwired, sensor actuated] [Battery powered, sensor actuated] [Not required]**, for each user station.
 - a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
7. Supply Fittings:
 - a. Piping: **[NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)]** copper tubing.
 - b. Valves: Shutoff valve on each supply.
 - c. Supply Piping: From wall.
8. Waste Fittings:
 - a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap and Drain Piping: **NPS 1-1/2 (DN 40)**.
9. Off-Floor Mounting: Wall bracket and ASME A112.6.1M, Type II urinal carrier.

2.8 SOLID-SURFACE, CORNER WASH FOUNTAINS

A. Wash Fountains <Insert drawing designation>: Solid-surface, corner receptor.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Acorn Engineering Company.
- b. Bradley Corporation.
- c. Willoughby Industries.
- d. <Insert manufacturer's name>.
- e. or approved equal.

2. Standard: IAPMO IGC 156.

3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

4. Receptor:

- a. Standard: ICPA SS-1 for solid-surface receptor.
- b. Nominal Side Width: [27 inches (686 mm)] [37 inches (940 mm)].
- c. Height to Rim: [34 inches (864 mm)] <Insert dimension> above floor.
- d. Color or Finish: [Not applicable] <Insert if required>.
- e. Drain: Grid with NPS 1-1/2 (DN 40) tailpiece.

5. Spray Head:

- a. Material: Stainless steel or integral part of receptor back.
- b. Number of User Stations: [Two] [Three].
- c. Spray Nozzles: Chrome-plated brass or stainless steel complying with NSF 61 and ASME A112.18.1/CSA B125.1.
- d. Control: [Individual push-button] [Individual, hardwired sensor] [Individual, battery-powered sensor] actuation with [pressure-balancing] [thermostatic] mixing valve complying with ASSE 1016 and having check stops; comply with NSF 61.
- e. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.

6. Liquid-Soap Dispensers: [Manual] [Hardwired, sensor actuated] [Battery powered, sensor actuated] [Not required], for each user station.

- a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.

7. Supply Fittings:

- a. Piping: [NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)] copper tubing.
- b. Valves: Shutoff valve on each supply.
- c. Supply Piping: From wall.

8. Waste Fittings:

- a. Standard: ASME A112.18.2/CSA B125.2.

- b. Trap and Drain Piping: **NPS 1-1/2 (DN 40)**.
- 9. Off-Floor Mounting: Wall bracket and ASME A112.6.1M, Type II urinal carrier.

2.9 STAINLESS-STEEL, CORNER WASH FOUNTAINS

A. Wash Fountains <Insert drawing designation>: Stainless-steel, corner receptor.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Acorn Engineering Company.
 - b. Bradley Corporation.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Standard: IAPMO IGC 156.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. Receptor:
 - a. Standard: ASME A112.19.3/CSA B45.4 for stainless-steel receptor.
 - b. Nominal Side Width: [**27 inches (686 mm)**] [**37 inches (940 mm)**].
 - c. Height to Rim: [**34 inches (864 mm)**] **<Insert dimension>** above floor.
 - d. Color or Finish: [**Not applicable**] **<Insert if required>**.
 - e. Drain: Grid with **NPS 1-1/2 (DN 40)** tailpiece.
5. Spray Head:
 - a. Material: Stainless steel or integral part of receptor back.
 - b. Number of User Stations: [**Two**] [**Three**].
 - c. Spray Nozzles: Chrome-plated brass or stainless steel complying with NSF 61 and ASME A112.18.1/CSA B125.1.
 - d. Control: [**Individual push-button**] [**Individual, hardwired sensor**] [**Individual, battery-powered sensor**] actuation with [**pressure-balancing**] [**thermostatic**] mixing valve complying with ASSE 1016 and having check stops; comply with NSF 61.
 - e. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
6. Liquid-Soap Dispensers: [**Manual**] [**Hardwired, sensor actuated**] [**Battery powered, sensor actuated**] [**Not required**], for each user station.
 - a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
7. Supply Fittings:
 - a. Piping: [**NPS 1/2 (DN 15)**] [**NPS 3/4 (DN 20)**] copper tubing.
 - b. Valves: Shutoff valve on each supply.
 - c. Supply Piping: From wall.

8. Waste Fittings:
 - a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap and Drain Piping: **NPS 1-1/2 (DN 40)**.
9. Off-Floor Mounting: Wall bracket and ASME A112.6.1M, Type II urinal carrier.

2.10 SOLID-SURFACE, LINEAR WASH FOUNTAINS

- A. Wash Fountains **<Insert drawing designation>**: Solid-surface, linear (side-by-side) receptor.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Acorn Engineering Company.
 - b. Intersan Manufacturing Company.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Standard: IAPMO IGC 156.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. Bowl(s) and Counter:
 - a. Standard: ICPA SS-1 for solid-surface bowls.
 - b. Height to Rim: [**34 inches (864 mm)**] **<Insert dimension>** above floor.
 - c. Color or Finish: [**Not applicable**] **<Insert if required>**.
 - d. Number of Bowls: [**One**] [**Two**] [**Three**] [**Four**].
 - e. Drain: Grid with **NPS 1-1/2 (DN 40)** tailpiece, each bowl.
5. Pedestal: [**Not required**] [**Required, with access panel**].
6. Faucets:
 - a. Standards: ASME A112.18.1/CSA B125.1 and NSF 61.
 - b. Type: Manufacturer's standard, chrome-plated solid brass, each bowl.
 - c. Control: [**Manual, push-button**] [**Hardwired, sensor-actuated**] [**Battery-powered, sensor-actuated**], [**pressure-balancing**] mixing valve with check stops for each user station.
 - d. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
7. Liquid-Soap Dispensers: [**Manual**] [**Hardwired, sensor actuated**] [**Battery powered, sensor actuated**] [**Not required**], for each user station.
 - a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.
8. Mounting: Off floor on wall brackets and ASME A112.6.1M, Type II urinal carriers[, **each bowl**].
9. Supply Fittings:

- a. Piping: **NPS 1/2 (DN 15)** copper tubing, each bowl.
- b. Valves: Shutoff valve on each supply.
- c. Supply Piping: From wall.

10. Waste Fittings:

- a. Standard: ASME A112.18.2/CSA B125.2.
- b. Trap and Drain Piping: **NPS 1-1/2 (DN 40)**, each bowl.

2.11 STAINLESS-STEEL, LINEAR WASH FOUNTAINS

A. Wash Fountains **<Insert drawing designation>**: Stainless-steel, linear (side-by-side) receptor.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Acorn Engineering Company.
- b. **<Insert manufacturer's name>**.
- c. or approved equal.

2. Standard: IAPMO IGC 156.

3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

4. Bowl(s) and Counter:

- a. Standard: ASME A112.19.3/CSA B45.4 for stainless-steel bowls.
- b. Height to Rim: [**34 inches (864 mm)**] **<Insert dimension>** above floor.
- c. Color or Finish: [**Not applicable**] **<Insert if required>**.
- d. Number of Bowls: [**One**] [**Two**] [**Three**] [**Four**].
- e. Drain: Grid with **NPS 1-1/2 (DN 40)** tailpiece, each bowl.

5. Pedestal: [**Not required**] [**Required, with access panel**].

6. Faucets:

- a. Standards: ASME A112.18.1/CSA B125.1 and NSF 61.
- b. Type: Manufacturer's standard, chrome-plated solid brass, each bowl.
- c. Control: [**Manual, push-button**] [**Hardwired, sensor-actuated**] [**Battery-powered, sensor-actuated**], [**pressure-balancing**] mixing valve with check stops for each user station.
- d. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.

7. Liquid-Soap Dispensers: [**Manual**] [**Hardwired, sensor actuated**] [**Battery powered, sensor actuated**] [**Not required**], for each user station.

- a. Sensor: ASME A112.18.1/CSA B125.1 and UL 1951.

8. Mounting: Off floor on wall brackets and ASME A112.6.1M, Type II urinal carriers[, **each bowl**].

9. Supply Fittings:
 - a. Piping: NPS 1/2 (DN 15) copper tubing, each bowl.
 - b. Valves: Shutoff valve on each supply.
 - c. Supply Piping: From wall.

10. Waste Fittings:
 - a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap and Drain Piping: NPS 1-1/2 (DN 40), each bowl.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water-supply, sanitary drainage, and vent piping systems to verify actual locations of piping connections before wash-fountain installation.
- B. Examine walls and floors for suitable conditions where wash fountains will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install wash fountains level and plumb according to roughing-in drawings.
- B. Set freestanding wash fountains on floor.
- C. Install off-floor carrier supports, affixed to building substrate, for wall-mounted wash fountains.
- D. Install accessible, wall-mounted wash fountains at mounting height for handicapped/elderly according to ICC A117.1.
- E. Install water-supply piping with shutoff valve on each supply to each wash fountain to be connected to domestic-water distribution piping. Use ball, gate, or globe valve. Install valves in locations where they can be easily reached for operation. Valves are specified in Section 220523 "General-Duty Valves for Plumbing Piping."
- F. Install trap and waste piping on each drain outlet of each wash fountain to be connected to sanitary drainage system.
- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

- H. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.3 CONNECTIONS

- A. Connect wash fountains with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with requirements for water piping specified in Section 221116 "Domestic Water Piping."
- C. Comply with requirements for soil and waste drainage piping[**and vent piping**] specified in Section 221316 "Sanitary Waste and Vent Piping."
- D. Install protective-shielding pipe covers and enclosures on exposed supplies and waste piping of accessible wash fountains. Comply with requirements in Section 220719 "Plumbing Piping Insulation."

3.4 ADJUSTING

- A. Operate and adjust wash fountains and controls. Replace damaged and malfunctioning wash fountains, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.5 CLEANING AND PROTECTION

- A. After installing wash fountains, inspect and repair damaged finishes.
- B. Clean wash fountains, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed wash fountains and fittings.
- D. Do not allow use of wash fountains for temporary facilities unless approved in writing by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 224233

SECTION 224500 - EMERGENCY PLUMBING FIXTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Emergency showers.
 - 2. Eyewash equipment.
 - 3. Eye/face wash equipment.
 - 4. Combination units.
 - 5. Supplemental equipment.
 - 6. Water-tempering equipment.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Accessible Fixture: Emergency plumbing fixture that can be approached, entered, and used by people with disabilities.
- B. Plumbed Emergency Plumbing Fixture: Fixture with fixed, potable-water supply.
- C. Self-Contained Emergency Plumbing Fixture: Fixture with flushing-fluid-solution supply.
- D. Tepid: Moderately warm.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include flow rates and capacities, furnished specialties, and accessories.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Diagram power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Product Certificates: Submit certificates of performance testing specified in "Source Quality Control" Article.
- B. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For emergency plumbing fixtures to include in operation and maintenance manuals.
 - 1. Include fixture trim exploded view and replacement parts lists.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Flushing-Fluid Solution: Separate lot and equal to at least **[200] <Insert number>** percent of amount of solution installed for each self-contained unit.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ANSI Standard: Comply with ANSI Z358.1, "Emergency Eyewash and Shower Equipment."
- C. NSF Standard: Comply with NSF 61, "Drinking Water System Components - Health Effects," for fixture materials that will be in contact with potable water.
- D. Regulatory Requirements: Comply with requirements in ICC/ANSI A117.1, "Accessible and Usable Buildings and Facilities"[; **Public Law 90-480, "Architectural Barriers Act"; and Public Law 101-336, "Americans with Disabilities Act";**] for plumbing fixtures for people with disabilities.
- E. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 EMERGENCY SHOWERS

- A. Freestanding, Plumbed Emergency Showers, <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Acorn Safety; a division of Acorn Engineering Company.](#)
- b. [Bradley Corporation.](#)
- c. [Encon Safety Products.](#)
- d. [Guardian Equipment Co.](#)
- e. [Haws Corporation.](#)
- f. [Sellstrom Manufacturing Company.](#)
- g. [Speakman Company.](#)
- h. [WaterSaver Faucet Co.](#)
- i. <Insert manufacturer's name>.
- j. or approved equal.

2. Capacity: Not less than 20 gpm (76 L/min.) for at least 15 minutes.
3. Supply Piping: [NPS 1 (DN 25)] [NPS 1-1/4 (DN 32)] [galvanized steel] [chrome-plated brass or stainless steel] [PVC] with flow regulator and stay-open control valve.
4. Control-Valve Actuator: [Pull rod] [Foot treadle] <Insert actuator>.
5. Shower Head: 8-inch- (200-mm-) minimum diameter, [chrome-plated brass, stainless steel, or plastic] <Insert material>.
6. Mounting: Pedestal.

- B. Off-Floor, Plumbed Emergency Showers, <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Acorn Safety; a division of Acorn Engineering Company.](#)
- b. [Bradley Corporation.](#)
- c. [Chicago Faucet Company.](#)
- d. [Encon Safety Products.](#)
- e. [Guardian Equipment Co.](#)
- f. [Haws Corporation.](#)
- g. [Sellstrom Manufacturing Company.](#)
- h. [Speakman Company.](#)

- i. [WaterSaver Faucet Co.](#)
 - j. <Insert manufacturer's name>.
 - k. or approved equal.
2. Capacity: Not less than **20 gpm** (76 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1 (DN 25)** [**galvanized steel**] [**chrome-plated brass or stainless steel**] [**PVC**] with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: Pull rod.
 5. Shower Head: **8-inch-** (200-mm-) minimum diameter, [**chrome-plated brass, stainless steel, or plastic**] <Insert material>.
 6. Mounting: [**Horizontal from wall**] [**Vertical from ceiling**] and supported from piping.
- C. Freeze-Protected, Plumbed Emergency Showers, <Insert drawing designation>:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [B-L-S Industries, Inc.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Speakman Company.](#)
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
 2. Capacity: Not less than **20 gpm** (76 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1-1/4 (DN 32)** galvanized steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: Pull rod.
 5. Shower Head: **8-inch-** (200-mm-) minimum diameter, [**chrome-plated brass, stainless steel, or plastic**] <Insert material>.
 6. Heating System: [**120**] [**240**]-V ac electric, and insulation with protective jacket.
 7. Mounting: Pedestal.

2.2 EYEWASH EQUIPMENT

- A. Standard, Freestanding, Plumbed Eyewash Units, <Insert drawing designation>:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)

- g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. **<Insert manufacturer's name>.**
 - j. or approved equal.
 2. Capacity: Not less than **0.4 gpm (1.5 L/min.)** for at least 15 minutes.
 3. Supply Piping: **NPS 1/2 (DN 15)** chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: [**Paddle**] [**Treadle**] **<Insert actuator>.**
 5. Spray-Head Assembly: Two receptor-mounted spray heads.
 6. Receptor: [**Chrome-plated brass or stainless-steel**] [**Plastic**] bowl.
 7. Drain Piping: [**NPS 1-1/4 (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2/CSA B125.2**] [**Include galvanized-steel indirect connection to drainage system**].
 8. Mounting: Pedestal.
- B. Accessible, Freestanding, Plumbed Eyewash Units, **<Insert drawing designation>:**
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [WaterSaver Faucet Co.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
 2. Capacity: Not less than **0.4 gpm (1.5 L/min.)** for at least 15 minutes.
 3. Supply Piping: **NPS 1/2 (DN 15)** chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: [**Paddle**] **<Insert actuator>.**
 5. Spray-Head Assembly: Two receptor-mounted spray heads.
 6. Receptor: [**Chrome-plated brass or stainless-steel**] [**Plastic**] bowl.
 7. Drain Piping: [**NPS 1-1/4 (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2/CSA B125.2**] [**Include galvanized-steel indirect connection to drainage system**].
 8. Mounting: Offset pedestal.
 9. Special Construction: Comply with ICC/ANSI A117.1.
- C. Standard, Wall-Mounted, Plumbed Eyewash Units, **<Insert drawing designation>:**
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)

- c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)
 - g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. **<Insert manufacturer's name>.**
 - j. or approved equal.
2. Capacity: Not less than **0.4 gpm** (1.5 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1/2** (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: [**Paddle**] **<Insert actuator>.**
 5. Spray-Head Assembly: Two receptor-mounted spray heads.
 6. Receptor: [**Chrome-plated brass or stainless-steel**] **<Insert material>** bowl.
 7. Drain Piping: **NPS 1-1/4** (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2/CSA B125.2.
 8. Mounting: Wall bracket.
- D. Accessible, Wall-Mounted, Plumbed Eyewash Units, **<Insert drawing designation>:**
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Speakman Company.](#)
 - g. **<Insert manufacturer's name>.**
 - h. or approved equal.
 2. Capacity: Not less than **0.4 gpm** (1.5 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1/2** (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: [**Paddle**] **<Insert actuator>.**
 5. Spray-Head Assembly: Two receptor-mounted spray heads.
 6. Receptor: [**Chrome-plated brass or stainless-steel**] **<Insert material>** bowl.
 7. Drain Piping: **NPS 1-1/4** (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2/CSA B125.2.
 8. Mounting: Wall bracket.
 9. Special Construction: Comply with ICC/ANSI A117.1.
- E. Sink, Fixed-Position, Plumbed Eyewash Unit, **<Insert drawing designation>:**
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)
 - g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. **<Insert manufacturer's name>.**
 - j. or approved equal.
2. Capacity: Not less than **0.4 gpm** (1.5 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1/2 (DN 15)** chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: Paddle.
 5. Spray-Head Assembly: Two spray heads positioned over sink.
 6. Mounting: Attached to sink receptor.
- F. Sink, Swivel-Type, Plumbed Eyewash Unit, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)
 - g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. **<Insert manufacturer's name>.**
 - j. or approved equal.
 2. Capacity: Not less than **0.4 gpm** (1.5 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1/2 (DN 15)** chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: Movement of spray-head assembly to position over sink.
 5. Spray-Head Assembly: Two spray heads with offset piping.
 6. Mounting: Deck next to sink.
- G. Portable, Self-Contained Eyewash Units, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bradley Corporation.](#)
 - b. [Encon Safety Products.](#)
 - c. [Guardian Equipment Co.](#)
 - d. [Haws Corporation.](#)

- e. [Sellstrom Manufacturing Company](#).
 - f. [WaterSaver Faucet Co](#).
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Capacity: Not less than **0.4 gpm** (1.5 L/min.) for at least 15 minutes.
 3. Pressure Tank: [**10 gal.** (38 L)] **<Insert value>**, stainless steel, cylindrical, with pressure gage, and suitable for on-floor installation.
 4. Flushing Fluid: Medically acceptable solution manufactured and labeled according to applicable regulations.
 5. Spray-Head Assembly: Chrome-plated copper alloy or stainless-steel piping with flow regulator; paddle-actuated, stay-open control valve; and two spray heads mounted on tank.
 6. Drench Hose: Hand-held spray head with squeeze-handle actuation and hose attached to tank.
- H. Standard, Self-Contained Eyewash Units, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bradley Corporation](#).
 - b. [Encon Safety Products](#).
 - c. [Fend-all](#).
 - d. [Guardian Equipment Co](#).
 - e. [Haws Corporation](#).
 - f. [Sellstrom Manufacturing Company](#).
 - g. [Speakman Company](#).
 - h. [WaterSaver Faucet Co](#).
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Capacity: Not less than **0.4 gpm** (1.5 L/min.) for at least 15 minutes.
 3. Gravity Tank: [**14 gal.** (53 L) **minimum**] **<Insert value>**, plastic, and suitable for shelf mounting.
 4. Flushing Fluid: Medically acceptable solution manufactured and labeled according to applicable regulations.
 5. Actuator: Pull-down front panel.
 6. Spray Heads: Protected, two mounted on tank.
- I. Freeze-Protected, Self-Contained Eyewash Units, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bradley Corporation](#).
 - b. [Encon Safety Products](#).
 - c. [Fend-all](#).
 - d. [Guardian Equipment Co](#).
 - e. [Haws Corporation](#).

- f. [Speakman Company](#).
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Capacity: Not less than **0.4 gpm** (1.5 L/min.) for at least 15 minutes.
 3. Gravity Tank: [**14 gal. (53 L) minimum**] [**20 gal. (76 L) minimum**] **<Insert value>**, plastic, and suitable for shelf mounting.
 4. Flushing Fluid: Medically acceptable solution manufactured and labeled according to applicable regulations.
 5. Actuator: Pull-down front panel.
 6. Spray Heads: Protected, two mounted on tank.
 7. Heating System: Electric, 120-V ac; and insulation with protective jacket.

2.3 EYE/FACE WASH EQUIPMENT

A. Standard, Freestanding, Plumbed, Eye/Face Wash Units, **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company](#).
 - b. [Bradley Corporation](#).
 - c. [Encon Safety Products](#).
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation](#).
 - f. [Sellstrom Manufacturing Company](#).
 - g. [Speakman Company](#).
 - h. [WaterSaver Faucet Co.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Capacity: Not less than **3.0 gpm** (11.4 L/min.) for at least 15 minutes.
3. Supply Piping: **NPS 1/2 (DN 15)** chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
4. Control-Valve Actuator: [**Paddle**] [**Treadle**] **<Insert actuator>**.
5. Spray-Head Assembly: Two or four receptor-mounted spray heads.
6. Receptor: [**Chrome-plated brass or stainless-steel**] [**Plastic**] bowl.
7. Drain Piping: [**NPS 1-1/4 (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2/CSA B125.2**] [**Include galvanized-steel indirect connection to drainage system**].
8. Mounting: Pedestal.

B. Accessible, Freestanding, Plumbed, Eye/Face Wash Units, **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [WaterSaver Faucet Co.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
2. Capacity: Not less than **3 gpm** (11.4 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1/2 (DN 15)** chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: [**Paddle**] **<Insert actuator>.**
 5. Spray-Head Assembly: Two or four receptor-mounted spray heads.
 6. Receptor: [**Chrome-plated brass or stainless-steel**] [**Plastic**] bowl.
 7. Drain Piping: [**NPS 1-1/4 (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2/CSA B125.2**] [**Include galvanized-steel indirect connection to drainage system**].
 8. Mounting: Offset pedestal.
 9. Special Construction: Comply with ICC/ANSI A117.1.
- C. Standard, Wall-Mounted, Plumbed, Eye/Face Wash Units, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)
 - g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. **<Insert manufacturer's name>.**
 - j. or approved equal.
 2. Capacity: Not less than **3.0 gpm** (11.4 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1/2 (DN 15)** chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: [**Paddle**] **<Insert actuator>.**
 5. Spray-Head Assembly: Two or four receptor-mounted spray heads.
 6. Receptor: [**Chrome-plated brass or stainless-steel**] **<Insert material>** bowl.
 7. Drain Piping: **NPS 1-1/4 (DN 32)** minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2/CSA B125.2.
 8. Mounting: Wall bracket.

- D. Accessible, Wall-Mounted, Plumbed, Eye/Face Wash Units, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bradley Corporation](#).
 - b. [Encon Safety Products](#).
 - c. [Guardian Equipment Co.](#)
 - d. [Haws Corporation](#).
 - e. [WaterSaver Faucet Co.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Capacity: Not less than **3.0 gpm** (11.4 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1/2 (DN 15)** chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: [**Paddle**] **<Insert actuator>**.
 5. Spray-Head Assembly: Two or four receptor-mounted spray heads.
 6. Receptor: [**Chrome-plated brass or stainless-steel**] **<Insert material>** bowl.
 7. Mounting: Wall bracket.
 8. Special Construction: Comply with ICC/ANSI A117.1.
- E. Sink, Fixed-Position, Plumbed, Eye/Face Wash Unit, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company](#).
 - b. [Bradley Corporation](#).
 - c. [Encon Safety Products](#).
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation](#).
 - f. [Sellstrom Manufacturing Company](#).
 - g. [WaterSaver Faucet Co.](#)
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
 2. Capacity: Not less than **3 gpm** (11.4 L/min.) for at least 15 minutes.
 3. Supply Piping: **NPS 1/2 (DN 15)** chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 4. Control-Valve Actuator: Paddle.
 5. Spray-Head Assembly: Two or four spray heads positioned over sink.
 6. Receptor: [**Chrome-plated brass or stainless-steel**] **<Insert material>** bowl.
 7. Mounting: Attached to sink receptor.

2.4 COMBINATION UNITS

A. Standard, Plumbed Emergency Shower with Eyewash Combination Units, **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)
 - g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Piping:
 - a. Material: **[Galvanized steel] [Chrome-plated brass or stainless steel] [PVC]**.
 - b. Unit Supply: **[NPS 1-1/4 (DN 32) minimum] [NPS 1-1/2 (DN 40)]**.
 - c. Unit Drain: Outlet at back or side near bottom.
3. Shower:
 - a. Capacity: Not less than **20 gpm (76 L/min.)** for at least 15 minutes.
 - b. Supply Piping: **NPS 1 (DN 25)** with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: **[Pull rod] [Treadle] <Insert actuator>**.
 - d. Shower Head: **8-inch- (200-mm-)** minimum diameter, **[chrome-plated brass or stainless steel] [plastic]**.
 - e. Mounting: Pedestal.
4. Eyewash Unit:
 - a. Capacity: Not less than **0.4 gpm (1.5 L/min.)** for at least 15 minutes.
 - b. Supply Piping: **NPS 1/2 (DN 15)** with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.
 - d. Spray-Head Assembly: Two receptor-mounted spray heads.
 - e. Receptor: **[Chrome-plated brass or stainless-steel] [Plastic]** bowl.
 - f. Mounting: Attached shower pedestal.
 - g. Drench-Hose Option: May be provided instead of eyewash unit.
 - 1) Capacity: Not less than **0.4 gpm (1.5 L/min.)** for at least 15 minutes.
 - 2) Drench Hose: Hand-held spray head with squeeze-handle actuator and hose.

3) Mounting: Bracket on shower pedestal.

B. Accessible, Plumbed Emergency Shower with Eyewash Combination Units, <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)
 - g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. <Insert manufacturer's name>.
 - j. or approved equal.
2. Piping:
 - a. Material: **[Galvanized steel] [Chrome-plated brass or stainless steel] [PVC]**.
 - b. Unit Supply: **[NPS 1-1/4 (DN 32) minimum] [NPS 1-1/2 (DN 40)]**.
 - c. Unit Drain: Outlet at back or side near bottom.
3. Shower:
 - a. Capacity: Not less than **20 gpm (76 L/min.)** for at least 15 minutes.
 - b. Supply Piping: **NPS 1 (DN 25)** with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: **[Pull rod] <Insert actuator>**.
 - d. Shower Head: **8-inch- (200-mm-)** minimum diameter, **[chrome-plated brass or stainless steel] [plastic]**.
 - e. Mounting: Pedestal.
4. Eyewash Unit:
 - a. Capacity: Not less than **0.4 gpm (1.5 L/min.)** for at least 15 minutes.
 - b. Supply Piping: **NPS 1/2 (DN 15)** with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.
 - d. Spray-Head Assembly: Two receptor-mounted spray heads.
 - e. Receptor: **[Chrome-plated brass or stainless-steel] [Plastic]** bowl.
 - f. Mounting: Attached shower pedestal.
 - g. Drench-Hose Option: May be provided instead of eyewash unit.
 - 1) Capacity: Not less than **0.4 gpm (1.5 L/min.)** for at least 15 minutes.
 - 2) Drench Hose: Hand-held spray head with squeeze-handle actuator and hose.

3) Mounting: Bracket on shower pedestal.

C. Standard, Plumbed Emergency Shower with Eye/Face Wash Combination Units,
<Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)
 - g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. <Insert manufacturer's name>.
 - j. or approved equal.
2. Piping:
 - a. Material: **[Galvanized steel] [Chrome-plated brass or stainless steel] [PVC]**.
 - b. Unit Supply: **[NPS 1-1/4 (DN 32) minimum] [NPS 1-1/2 (DN 40)]**.
 - c. Unit Drain: Outlet at back or side near bottom.
3. Shower:
 - a. Capacity: Not less than **20 gpm** (76 L/min.) for at least 15 minutes.
 - b. Supply Piping: **NPS 1 (DN 25)** with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: **[Pull rod] [Treadle] <Insert actuator>**.
 - d. Shower Head: **8-inch-** (200-mm-) minimum diameter, **[chrome-plated brass or stainless steel] [plastic]**.
 - e. Mounting: Pedestal.
4. Eye/Face Wash Unit:
 - a. Capacity: Not less than **3 gpm** (11.4 L/min.) for at least 15 minutes.
 - b. Supply Piping: **NPS 1/2 (DN 15)** with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.
 - d. Spray-Head Assembly: Two or four receptor-mounted spray heads.
 - e. Receptor: **[Chrome-plated brass or stainless-steel] [Plastic]** bowl.
 - f. Mounting: Attached shower pedestal.
 - g. Drench-Hose Option: May be provided instead of eye/face wash unit.
 - 1) Capacity: Not less than **3 gpm** (11.4 L/min.) for at least 15 minutes.
 - 2) Drench Hose: Hand-held spray head with squeeze-handle actuator and hose.

3) Mounting: Bracket on shower pedestal.

D. Accessible, Plumbed Emergency Shower with Eye/Face Wash Combination Units,
<Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)
 - g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. <Insert manufacturer's name>.
 - j. or approved equal.
2. Piping:
 - a. Material: **[Galvanized steel] [Chrome-plated brass or stainless steel] [PVC]**.
 - b. Unit Supply: **[NPS 1-1/4 (DN 32) minimum] [NPS 1-1/2 (DN 40)]**.
 - c. Unit Drain: Outlet at back or side near bottom.
3. Shower:
 - a. Capacity: Not less than **20 gpm** (76 L/min.) for at least 15 minutes.
 - b. Supply Piping: **NPS 1 (DN 25)** with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: **[Pull rod] <Insert actuator>**.
 - d. Shower Head: **8-inch-** (200-mm-) minimum diameter, **[chrome-plated brass or stainless steel] [plastic]**.
 - e. Mounting: Pedestal.
4. Eye/Face Wash Unit:
 - a. Capacity: Not less than **3 gpm** (11.4 L/min.) for at least 15 minutes.
 - b. Supply Piping: **NPS 1/2 (DN 15)** with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.
 - d. Spray-Head Assembly: Two or four receptor-mounted spray heads.
 - e. Receptor: **[Chrome-plated brass or stainless-steel] [Plastic]** bowl.
 - f. Mounting: Attached to shower pedestal.
 - g. Drench-Hose Option: May be provided instead of eye/face wash unit.
 - 1) Capacity: Not less than **3 gpm** (11.4 L/min.) for at least 15 minutes.
 - 2) Drench Hose: Hand-held spray head with squeeze-handle actuator and hose.

3) Mounting: Bracket on shower pedestal.

- E. Freeze-Protected, Plumbed Emergency Shower with Eyewash Combination Units, <Insert drawing designation>:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [B-L-S Industries, Inc.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Speakman Company.](#)
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
 2. Piping: Galvanized steel.
 - a. Unit Supply: [NPS 1-1/4 (DN 32) minimum] [NPS 1-1/2 (DN 40)] from bottom.
 3. Heating System: Electric, [120] [240]-V ac; and insulation with protective jacket and thermometer.
 - a. Heating Capacity: [10 deg F (6 deg C)] <Insert temperature> minimum above ambient temperature.
 - b. Design Ambient Temperature: <Insert temperature>.
 4. Shower:
 - a. Shower Capacity: Not less than 20 gpm (76 L/min.) for at least 15 minutes.
 - b. Supply Piping: NPS 1 (DN 25) with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: [Pull rod] <Insert actuator>.
 - d. Shower Head: 8-inch- (200-mm-) minimum diameter, [chrome-plated brass or stainless steel] [plastic].
 - e. Mounting: Pedestal.
 5. Eyewash Unit:
 - a. Capacity: Not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
 - b. Supply Piping: NPS 1/2 (DN 15) with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: [Paddle] <Insert actuator>.
 6. Eye/Face Wash Unit:
 - a. Capacity: Not less than 3 gpm (11.4 L/min.) for at least 15 minutes.
 - b. Control-Valve Actuator: [Paddle] <Insert actuator>.

7. Appurtenances:
 - a. **<Insert appurtenances>**.

2.5 SUPPLEMENTAL EQUIPMENT

A. Self-Contained, Personal Eyewash Units, **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bradley Corporation](#).
 - b. [Encon Safety Products](#).
 - c. [Guardian Equipment Co.](#)
 - d. [Haws Corporation](#).
 - e. [Sellstrom Manufacturing Company](#).
 - f. [Speakman Company](#).
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Capacity: Not less than **0.4 gpm** (1.5 L/min.).
3. Pressure Tank: [**5 gal.** (19 L)] **<Insert value>**, stainless steel, cylindrical, with pressure gage and base suitable for on-floor installation.
4. Flushing Fluid: Medically acceptable solution manufactured and labeled according to applicable regulations.
5. Spray-Head Assembly: Chrome-plated copper alloy or stainless-steel piping with flow regulator; paddle-actuated, stay-open control valve; and two spray heads mounted on tank.

B. Deck-Mounted, Plumbed Drench Hoses, **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company](#).
 - b. [Bradley Corporation](#).
 - c. [Encon Safety Products](#).
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation](#).
 - f. [Speakman Company](#).
 - g. [WaterSaver Faucet Co.](#)
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Capacity: Not less than **0.4 gpm** (1.5 L/min).
3. Supply Fitting: **NPS 1/2** (DN 15) brass with flow regulator.
4. Drench Hose: Hand-held spray head with squeeze-handle actuation and hose.
5. Mounting: In hole in deck.

- C. Wall-Mounted, Plumbed Drench Hoses, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Bradley Corporation.](#)
 - c. [Encon Safety Products.](#)
 - d. [Guardian Equipment Co.](#)
 - e. [Haws Corporation.](#)
 - f. [Sellstrom Manufacturing Company.](#)
 - g. [Speakman Company.](#)
 - h. [WaterSaver Faucet Co.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Capacity: Not less than **3.0 gpm** (11.4 L/min.) for at least 15 minutes.
 3. Supply Fitting: **NPS 1/2 (DN 15)** brass with flow regulator.
 4. Drench Hose: Hand-held spray head with squeeze-handle actuation and hose.
 5. Mounting: Wall bracket.

2.6 WATER-TEMPERING EQUIPMENT

- A. Hot- and Cold-Water, Water-Tempering Equipment, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Acorn Safety; a division of Acorn Engineering Company.](#)
 - b. [Armstrong International, Inc.](#)
 - c. [Bradley Corporation.](#)
 - d. [Encon Safety Products.](#)
 - e. [Guardian Equipment Co.](#)
 - f. [Haws Corporation.](#)
 - g. [Lawler Manufacturing Co., Inc.](#)
 - h. [Leonard Valve Company.](#)
 - i. [Powers; a division of Watts Water Technologies, Inc.](#)
 - j. [Speakman Company.](#)
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 2. Description: Factory-fabricated equipment with thermostatic mixing valve.
 - a. Thermostatic Mixing Valve: Designed to provide [**85 deg F (29 deg C)**] **<Insert temperature>** tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus [**5 deg F (3 deg C)**] **<Insert temperature>** throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, controls, metal piping, and corrosion-resistant enclosure.

- b. Supply Connections: For hot and cold water.
- B. Steam and Cold-Water, Water-Tempering Equipment, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Encon Safety Products](#).
 - b. [Therm-Omega-Tech, Inc.](#)
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Description: Factory-fabricated equipment with thermostatic mixing valve.
 - a. Thermostatic Mixing Valve: Designed to provide [85 deg F (29 deg C)] **<Insert temperature>** tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus [5 deg F (3 deg C)] **<Insert temperature>** throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, steam controls, heat exchanger, high-temperature-limit and freeze-protection devices, metal piping, and corrosion-resistant enclosure.
 - b. Supply Connections: For steam and cold water.
- C. Electric Water-Tempering Equipment, **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Chronomite Laboratories, Inc.; a division of Acorn Engineering Company](#).
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 2. Description: Factory-fabricated equipment with electric heating.
 - a. Heating System: Electric, designed to provide [85 deg F (29 deg C)] **<Insert temperature>** tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus [5 deg F (3 deg C)] **<Insert temperature>** throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, controls, heating coils, high-temperature-limit device, metal piping, and corrosion-resistant enclosure.
 - 1) Electrical Characteristics: **[208-V ac, 38] [220-V ac, 40] [277-V ac, 32]** A, single phase, 60 Hz.

2.7 SOURCE QUALITY CONTROL

- A. Certify performance of emergency plumbing fixtures by independent testing organization acceptable to authorities having jurisdiction.

1. Exception: <Insert manufacturer's name>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for water[**and waste**] piping systems to verify actual locations of piping connections before plumbed emergency plumbing fixture installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EMERGENCY PLUMBING FIXTURE INSTALLATION

- A. Assemble emergency plumbing fixture piping, fittings, control valves, and other components.
- B. Install fixtures level and plumb.
- C. Fasten fixtures to substrate.
- D. Install shutoff valves in water-supply piping to fixtures. Use ball, gate, or globe valve if specific type valve is not indicated. Install valves chained or locked in open position if permitted. Install valves in locations where they can easily be reached for operation. Comply with requirements for valves specified in Section 220523 "General-Duty Valves for Plumbing Piping."
 1. Exception: Omit shutoff valve on supply to group of plumbing fixtures that includes emergency equipment.
 2. Exception: Omit shutoff valve on supply to emergency equipment if prohibited by authorities having jurisdiction.
- E. Install shutoff valve and strainer in steam piping and shutoff valve in condensate return piping. Comply with requirements for steam and condensate piping specified in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 "Steam and Condensate Piping Specialties."
- F. Install dielectric fitting in supply piping to emergency equipment if piping and equipment connections are made of different metals. Comply with requirements for dielectric fittings specified in Section 221116 "Domestic Water Piping."
- G. Install thermometers in supply and outlet piping connections to water-tempering equipment. Comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."
- H. Install trap and waste piping on drain outlet of emergency equipment receptors that are indicated to be directly connected to drainage system. Comply with requirements for waste piping specified in Section 221316 "Sanitary Waste and Vent Piping."

- I. Install indirect waste piping on drain outlet of emergency equipment receptors that are indicated to be indirectly connected to drainage system. Comply with requirements for waste piping specified in Section 221316 "Sanitary Waste and Vent Piping."
- J. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."
- K. Fill self-contained fixtures with flushing fluid.

3.3 CONNECTIONS

- A. Connect cold-water-supply piping to plumbed emergency plumbing fixtures not having water-tempering equipment. Comply with requirements for cold-water piping specified in Section 221116 "Domestic Water Piping."
- B. Connect hot- and cold-water-supply piping to hot- and cold-water, water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures. Comply with requirements for hot- and cold-water piping specified in Section 221116 "Domestic Water Piping."
- C. Connect steam and cold-water-supply and condensate return piping to steam and cold water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures. Comply with requirements for cold-water piping specified in Section 221116 "Domestic Water Piping" and comply with requirements for steam and condensate piping specified in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 "Steam and Condensate Piping Specialties."
- D. Connect cold water and electrical power to electric heating water-tempering equipment. Comply with requirements for cold-water piping specified in Section 221116 "Domestic Water Piping."
- E. Directly connect emergency plumbing fixture receptors with trapped drain outlet to sanitary waste and vent piping. Comply with requirements for waste piping specified in Section 221316 "Sanitary Waste and Vent Piping."
- F. Indirectly connect emergency plumbing fixture receptors without trapped drain outlet to sanitary waste or storm drainage piping.
- G. Where installing piping adjacent to emergency plumbing fixtures, allow space for service and maintenance of fixtures.

3.4 IDENTIFICATION

- A. Install equipment nameplates or equipment markers on emergency plumbing fixtures and equipment and equipment signs on water-tempering equipment. Comply with requirements for identification materials specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.5 FIELD QUALITY CONTROL

- A. Mechanical-Component Testing: After plumbing connections have been made, test for compliance with requirements. Verify ability to achieve indicated capacities.
- B. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Emergency plumbing fixtures[**and water-tempering equipment**] will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Adjust or replace fixture flow regulators for proper flow.
- B. Adjust equipment temperature settings.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **224500**

SECTION 224713 - DRINKING FOUNTAINS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes drinking fountains and related components.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of drinking fountain.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Include operating characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite WE 1[**and Credit WE 3**] [, **Credit WE 2, and Credit WE 3**]: Documentation indicating flow and water consumption requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For drinking fountains to include in maintenance manuals.
 - 1. Include fixture trim exploded view and replacement parts lists.

1.5 QUALITY ASSURANCE

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with

other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

PART 2 - PRODUCTS

2.1 DRINKING FOUNTAINS

A. Drinking Fountains <Insert drawing designation>: **[Stainless steel]**, wall mounted.

1. Stainless-Steel Drinking Fountains:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) [Elkay Manufacturing Co.](#)
- 2) [Filtrine Manufacturing Company.](#)
- 3) [Halsey Taylor.](#)
- 4) [Haws Corporation.](#)
- 5) [Murdock-Super Secur; a division of Acorn Engineering Company.](#)
- 6) [Stern-Williams Co., Inc.](#)
- 7) [Tri Palm International, LLC.](#)
- 8) <Insert manufacturer's name>.
- 9) or approved equal.

2. Standards:

- a. Comply with **[ASME A112.19.3/CSA B45.4]** **[ASME A112.19.2/CSA B45.1]**.
- b. Comply with NSF 61.

3. Type Receptor: **[Slab]** **[With back]** **[On horizontal support]**.

4. Receptor Shape: **[Rectangular]** **[Round]** <Insert shape>.

5. Back Panel: **[Stainless-steel]** <Insert material> wall plate behind drinking fountain.

6. Bubblers: **[One]** **[Two]** **[Three]**, with adjustable stream regulator, located on deck.

7. Control: **[Push button]** **[Push bar]** <Insert control>.

8. Drain: Grid type with **NPS 1-1/4 (DN 32)** tailpiece.

9. Supply: **NPS 3/8 (DN 10)** with shutoff valve.

10. Waste Fitting: ASME A112.18.2/CSA B125.2, **NPS 1-1/4 (DN 32)** chrome-plated brass P-trap and waste.

11. Support: ASME A112.6.1M, Type III lavatory carrier.

B. Drinking Fountains <Insert drawing designation>: **[Stainless steel]** **[Vitreous china]**, wall mounted, semirecessed.

1. Stainless-Steel Drinking Fountains:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) [Elkay Manufacturing Co.](#)
 - 2) [Filtrine Manufacturing Company.](#)
 - 3) [Halsey Taylor.](#)
 - 4) [Haws Corporation.](#)
 - 5) [Tri Palm International, LLC.](#)
 - 6) **<Insert manufacturer's name>.**
2. Standards: Comply with [ASME A112.19.3/CSA B45.4] [ASME A112.19.2/CSA B45.1].
 3. Standards: Comply with NSF 61.
 4. Receptor Shape: Concave with projecting bowl.
 5. Bubbler: One, with adjustable stream regulator, located on deck.
 6. Control: **[Push button] [Push bar] <Insert control>.**
 7. Drain: Grid type with NPS 1-1/4 (DN 32) tailpiece.
 8. Supply: NPS 3/8 (DN 10) with shutoff valve.
 9. Waste Fitting: ASME A112.18.2/CSA B125.2, NPS 1-1/4 (DN 32) brass P-trap.
 10. Support: Mounting frame or brackets for attaching to wood blocking or substrate.
- C. Drinking Fountains **<Insert drawing designation>**: Stainless steel, recessed.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Elkay Manufacturing Co.](#)
 - b. [Filtrine Manufacturing Company.](#)
 - c. [Halsey Taylor.](#)
 - d. [Haws Corporation.](#)
 - e. [Tri Palm International, LLC; Oasis Brand.](#)
 - f. [Tri Palm International, LLC; Sunroc Brand.](#)
 - g. **<Insert manufacturer's name>.**
 - h. or approved equal.
 2. Standard: Comply with NSF 61.
 3. Receptor Shape: Concave with flush wall flange.
 4. Bubbler: One, with adjustable stream regulator, located on deck.
 5. Control: **[Push button] [Push bar] <Insert control>.**
 6. Drain: Grid with NPS 1-1/4 (DN 32) minimum horizontal waste and trap, complying with ASME A112.18.2/CSA B125.2.
 7. Supply: NPS 3/8 (DN 10) with shutoff valve.
 8. Support: Mounting frame or brackets for attaching to substrate.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.

- B. Examine walls and floors for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.
- B. Set pedestal drinking fountains on floor.
- C. Install recessed drinking fountains secured to wood blocking in wall construction.
- D. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.
- E. Install water-supply piping with shutoff valve on supply to each fixture to be connected to domestic-water distribution piping. Use ball, gate, or globe valve. Install valves in locations where they can be easily reached for operation. Valves are specified in Section 220523 "General-Duty Valves for Plumbing Piping."
- F. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.
- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- H. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.3 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Install ball, gate, or globe shutoff valve on water supply to each fixture. Comply with valve requirements specified in Section 220523 "General-Duty Valves for Plumbing Piping."
- D. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

- A. Adjust fixture flow regulators for proper flow and stream height.

3.5 CLEANING

- A. After installing fixtures, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
- B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.
- C. Provide protective covering for installed fixtures.
- D. Do not allow use of fixtures for temporary facilities unless approved in writing by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **224713**

SECTION 224716 - PRESSURE WATER COOLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes pressure water coolers and related components.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of pressure water cooler.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite WE 1[**and Credit WE 3**] [, **Credit WE 2, and Credit WE 3**]: Documentation indicating flow and water consumption requirements.
- C. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For pressure water coolers to include in maintenance manuals.
 - 1. Include fixture trim exploded view and replacement parts lists.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Filter Cartridges: Equal to **<Insert number>** percent of quantity installed for each type and size indicated, but no fewer than **<Insert number>** of each.

1.6 QUALITY ASSURANCE

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PRESSURE WATER COOLERS

- A. Pressure Water Coolers **<Insert drawing designation>**: **[Freestanding] [Flush to wall]**.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Elkay Manufacturing Co.
- b. Halsey Taylor.
- c. Haws Corporation.
- d. Larco Inc.
- e. Tri Palm International, LLC; Oasis Brand.
- f. Tri Palm International, LLC; Sunroc Brand.
- g. **<Insert manufacturer's name>**.
- h. or approved equal.

2. Standards:

- a. Comply with NSF 61.
- b. Comply with ASHRAE 34, "Designation and Safety Classification of Refrigerants," for water coolers. Provide HFC 134a (tetrafluoroethane) refrigerant unless otherwise indicated.

3. Cabinet: **[All stainless steel] [Steel with powder-coat finish] [Vinyl-covered steel with stainless-steel top] <Insert material>**.

4. Bubbler: One, with adjustable stream regulator, located on deck.
 5. Control: **[Push button] [Foot pedal] <Insert control>**.
 6. Drain: Grid with **NPS 1-1/4 (DN 32)** tailpiece.
 7. Supply: **NPS 3/8 (DN 10)** with shutoff valve.
 8. Waste Fitting: ASME A112.18.2/CSA B125.2, **NPS 1-1/4 (DN 32)** brass P-trap.
 9. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards, with capacity sized for unit peak flow rate.
 10. Cooling System: Electric, with **[precooler,]** hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and adjustable thermostat.
 - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 11. Capacities and Characteristics:
 - a. Cooled Water: **[5 gph (0.0053 L/s)] [8 gph (0.0084 L/s)] [10 gph (0.0105 L/s)] [14 gph (0.0147 L/s)] <Insert value>**.
 - b. Ambient-Air Temperature: **90 deg F (32 deg C)**.
 - c. Inlet-Water Temperature: **80 deg F (27 deg C)**.
 - d. Cooled-Water Temperature: **50 deg F (10 deg C)**.
 - e. Cooled-Water Storage: **<Insert gal. (L)>**.
 - f. Electrical Characteristics:
 - 1) Motor Horsepower: **[1/6] [1/5] [1/4] <Insert value>**.
 - 2) Volts: 120-V ac.
 - 3) Phase: Single.
 - 4) Hertz: 60.
 - 5) Full-Load Amperes: **<Insert value>**.
 - 6) Minimum Circuit Ampacity: **<Insert value>**.
 - 7) Maximum Overcurrent Protection: **<Insert amperage>**.
- B. Pressure Water Coolers **<Insert drawing designation>**: Wall mounted[, **standard**] [, **wheelchair accessible**].
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Elkay Manufacturing Co.
 - b. Halsey Taylor.
 - c. Haws Corporation.
 - d. Larco Inc.
 - e. Tri Palm International, LLC; Oasis Brand.
 - f. Tri Palm International, LLC; Sunroc Brand.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.

2. Cabinet: **[Single] [Bi-level with two attached cabinets] [Bi-level with two attached cabinets and with a bi-level skirt kit], [all stainless steel] [vinyl-covered steel with stainless-steel top] <Insert material>**.
 3. Bubbler: One, with adjustable stream regulator, located on each cabinet deck.
 4. Control: **[Push button] [Push bar] <Insert control>**.
 5. Drain: Grid with **NPS 1-1/4 (DN 32)** tailpiece.
 6. Supply: **NPS 3/8 (DN 10)** with shutoff valve.
 7. Waste Fitting: ASME A112.18.2/CSA B125.2, **NPS 1-1/4 (DN 32)** brass P-trap.
 8. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards; with capacity sized for unit peak flow rate.
 9. Cooling System: Electric, with hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and adjustable thermostat.
 - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 10. Capacities and Characteristics:
 - a. Cooled Water: **[5 gph (0.0053 L/s)] [8 gph (0.0084 L/s)] <Insert value>**.
 - b. Ambient-Air Temperature: **90 deg F (32 deg C)**.
 - c. Inlet-Water Temperature: **80 deg F (27 deg C)**.
 - d. Cooled-Water Temperature: **50 deg F (10 deg C)**.
 - e. Cooled-Water Storage: **<Insert value>**.
 - f. Electrical Characteristics:
 - 1) Motor Horsepower: **[1/6] [1/5] [1/4] [1/3] <Insert value>**.
 - 2) Volts: 120-V ac.
 - 3) Phase: Single.
 - 4) Hertz: 60.
 - 5) Full-Load Amperes: **<Insert value>**.
 - 6) Minimum Circuit Ampacity: **<Insert value>**.
 - 7) Maximum Overcurrent Protection: **<Insert amperage>**.
 11. Support: ASME A112.6.1M, Type I water-cooler carrier.
- C. Pressure Water Coolers **<Insert drawing designation>**: Semirecessed[, **standard**] [, **wheelchair accessible**].
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Elkay Manufacturing Co.
 - b. Halsey Taylor.
 - c. Haws Corporation.
 - d. Tri Palm International, LLC; Oasis Brand.
 - e. Tri Palm International, LLC; Sunroc Brand.
 - f. **<Insert manufacturer's name>**.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Elkay Manufacturing Co.
 - b. Halsey Taylor.
 - c. Haws Corporation.
 - d. Tri Palm International, LLC; Oasis Brand.
 - e. Tri Palm International, LLC; Sunroc Brand.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.

2. **Standards:**
 - a. Comply with NSF 61.
 - b. Comply with ASHRAE 34, "Designation and Safety Classification of Refrigerants," for water coolers. Provide HFC 134a (tetrafluoroethane) refrigerant unless otherwise indicated.

3. Cabinet: All stainless steel.
4. Bubbler: One, with adjustable stream regulator, located on deck.
5. Control: **[Push button] [Push bar] <Insert control>**.
6. Drain: Grid with **NPS 1-1/4 (DN 32)** tailpiece.
7. Supply: **NPS 3/8 (DN 10)** with shutoff valve.
8. Waste Fitting: ASME A112.18.2/CSA B125.2, **NPS 1-1/4 (DN 32)** brass P-trap.
9. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards; with capacity sized for unit peak flow rate.
10. Cooling System: Electric, with **[precooler,]**hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and adjustable thermostat.
 - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

11. **Capacities and Characteristics:**
 - a. Cooled Water: **[8 gph (0.0084 L/s)] [12 gph (0.0126 L/s)] <Insert value>**.
 - b. Ambient-Air Temperature: **90 deg F (32 deg C)**.
 - c. Inlet-Water Temperature: **80 deg F (27 deg C)**.
 - d. Cooled-Water Temperature: **50 deg F (10 deg C)**.
 - e. Cooled-Water Storage: **<Insert value>**.
 - f. Electrical Characteristics:
 - 1) Motor Horsepower: **[1/6] [1/5] <Insert value>**.
 - 2) Volts: 120-V ac.
 - 3) Phase: Single.
 - 4) Hertz: 60.
 - 5) Full-Load Amperes: **<Insert value>**.
 - 6) Minimum Circuit Ampacity: **<Insert value>**.

7) Maximum Overcurrent Protection: <Insert amperage>.

12. Ventilation Grille: Stainless steel, located [**above**] [**below**] water cooler.
13. Support: Mounting frame for attaching to substrate.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls and floors for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.
- B. Set freestanding pressure water coolers on floor.
- C. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.
- D. Install mounting frames, affixed to building construction, and attach recessed, pressure water coolers to mounting frames.
- E. Install water-supply piping with shutoff valve on supply to each fixture to be connected to domestic-water distribution piping. Use ball, gate, or globe valve. Install valves in locations where they can be easily reached for operation. Valves are specified in Section 220523 "General-Duty Valves for Plumbing Piping."
- F. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.
- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- H. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.3 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Install ball, gate, or globe shutoff valve on water supply to each fixture. [**Install valve upstream from filter for water cooler.**] Comply with valve requirements specified in Section 220523 "General-Duty Valves for Plumbing Piping."
- D. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

- A. Adjust fixture flow regulators for proper flow and stream height.
- B. Adjust pressure water-cooler temperature settings.

3.5 CLEANING

- A. After installing fixture, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
- B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.
- C. Provide protective covering for installed fixtures.
- D. Do not allow use of fixtures for temporary facilities unless approved in writing by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 224716

SECTION 224723 - REMOTE WATER COOLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes remote water coolers and related components.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of remote water coolers.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite WE 1[**and Credit WE 3**] [, **Credit WE 2, and Credit WE 3**]: Documentation indicating flow and water consumption requirements.
- C. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For remote water coolers to include in maintenance manuals.
 - 1. Include fixture trim exploded view and replacement parts lists.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Filter Cartridges: Equal to **<Insert number>** percent of quantity installed for each type and size indicated, but no fewer than **<Insert number>** of each.

1.6 QUALITY ASSURANCE

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings or instructed by the manufacturer.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 REMOTE WATER COOLERS

- A. Remote Water Coolers **<Insert drawing designation>**: Remote chiller equipment.
 - 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Elkay Manufacturing Co.
 - b. Filtrine Manufacturing Company.
 - c. Halsey Taylor.
 - d. Haws Corporation.
 - e. Tri Palm International, LLC; Oasis Brand.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 - 2. Standards:
 - a. Comply with NSF 61.
 - b. Comply with UL 1951.
 - c. Comply with ASHRAE 34, "Designation and Safety Classification of Refrigerants," for water coolers. Provide HFC 134a (tetrafluoroethane) refrigerant unless otherwise indicated.
 - 3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

4. Chassis: Galvanized or corrosion-resistant-coated steel.
5. Chiller: Hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, and refrigerant.
6. Storage Tank: [0.5 gal. (1.9 L)] [4 gal. (15.1 L)] <Insert value>, stainless steel.
7. Controls: Adjustable thermostat.
8. Capacities and Characteristics:
 - a. Cooled Water: [5 gph (0.0053 L/s)] [8 gph (0.0084 L/s)] [14 gph (0.0147 L/s)] <Insert value>.
 - b. Ambient-Air Temperature: 90 deg F (32 deg C).
 - c. Inlet-Water Temperature: 80 deg F (27 deg C).
 - d. Cooled-Water Temperature: 50 deg F (10 deg C).
 - e. Cooled-Water Storage: <Insert gal. (L)>.
 - f. Electrical Characteristics:
 - 1) Motor Horsepower: [1/5] [1/4] [1/3] <Insert value>.
 - 2) Volts: 120-V ac.
 - 3) Phase: Single.
 - 4) Hertz: 60.
 - 5) Full-Load Amperes: <Insert value>.
 - 6) Minimum Circuit Ampacity: <Insert value>.
 - 7) Maximum Overcurrent Protection: <Insert amperage>.
9. Ventilation Grille: Stainless steel, <Insert size>.
10. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards; with capacity sized for unit peak flow rate.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for water-supply and sanitary drainage piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls and floors for suitable conditions where remote water coolers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install remote water coolers level and plumb according to roughing-in drawings.
- B. Install water-supply piping with shutoff valve on supply to each remote water cooler to be connected to domestic-water distribution piping. Use ball, gate, or globe valve. Install valves in locations where they can be easily reached for operation. Valves are specified in Section 220523 "General-Duty Valves for Plumbing Piping."

- C. Set remote water coolers on floor unless otherwise indicated.
- D. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

3.3 CONNECTIONS

- A. Connect fixtures with water supplies. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Install ball, gate, or globe shutoff valve on water supply to each fixture. [**Install valve upstream from filter for water cooler.**] Comply with valve requirements specified in Section 220523 "General-Duty Valves for Plumbing Piping."
- D. Install ball, gate, or globe isolation valves with valved bypass on water connections to [**remote water coolers**] [**and**] [**water filters**]. Comply with valve requirements specified in Section 220523 "General-Duty Valves for Plumbing Piping."

3.4 ADJUSTING

- A. Adjust water-cooler temperature settings.

3.5 CLEANING

- A. After installing remote water cooler, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 224723

SECTION 230130.51 - HVAC AIR-DISTRIBUTION SYSTEM CLEANING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes cleaning HVAC air-distribution equipment, ducts, plenums, and system components.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. ASCS: Air systems cleaning specialist.
- B. NADCA: National Air Duct Cleaners Association.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For an ASCS.
- B. Strategies and procedures plan.
- C. Cleanliness verification report.

1.5 QUALITY ASSURANCE

- A. ASCS Qualifications: **[A certified member of NADCA] <Insert objective qualifications>**.
 - 1. Certification: Employ **[an ASCS certified by NADCA on a full-time basis] <Insert objective qualifications>**.
 - 2. Supervisor Qualifications: Certified **[as an ASCS by NADCA] <Insert objective qualifications>**.
- B. UL Compliance: Comply with UL 181 and UL 181A for fibrous-glass ducts.

- C. Cleaning Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 - 1. Review methods and procedures related to HVAC air-distribution system cleaning including, but not limited to, review of the cleaning strategies, procedures plan, and possible interruption of Owner's activities.

1.6 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine HVAC air-distribution equipment, ducts, plenums, and system components to determine appropriate methods, tools, and equipment required for performance of the Work.
- B. Perform "Project Evaluation and Recommendation" according to NADCA ACR 2006.
- C. Prepare written report listing conditions detrimental to performance of the Work.
- D. Proceed with work only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare a written plan that includes strategies and step-by-step procedures. At a minimum, include the following:
 - 1. Supervisor contact information.
 - 2. Work schedule including location, times, and impact on occupied areas.
 - 3. Methods and materials planned for each HVAC component type.
 - 4. Required support from other trades.
 - 5. Equipment and material storage requirements.
 - 6. Exhaust equipment setup locations.
- B. Use the existing service openings, as required for proper cleaning, at various points of the HVAC system for physical and mechanical entry and for inspection.
- C. Comply with NADCA ACR 2006, "Guidelines for Constructing Service Openings in HVAC Systems" Section.

3.3 CLEANING

- A. Comply with NADCA ACR 2006.
- B. Remove visible surface contaminants and deposits from within the HVAC system.
- C. Systems and Components to Be Cleaned:
 - 1. Air devices for supply and return air.
 - 2. Air-terminal units.
 - 3. Ductwork:
 - a. Supply-air ducts, including turning vanes[**and reheat coils**], to the air-handling unit.
 - b. Return-air ducts to the air-handling unit.
 - c. Exhaust-air ducts.
 - 4. Air-Handling Units:
 - a. Interior surfaces of the unit casing.
 - b. Coil surfaces compartment.
 - c. Condensate drain pans.
 - d. Fans, fan blades, and fan housings.
 - 5. Filters and filter housings.
- D. Collect debris removed during cleaning. Ensure that debris is not dispersed outside the HVAC system during the cleaning process.
- E. Particulate Collection:
 - 1. For particulate collection equipment, include adequate filtration to contain debris removed. Locate equipment downwind and away from all air intakes and other points of entry into the building.
 - 2. HEPA filtration with 99.97 percent collection efficiency for particles sized 0.3 micrometer or larger shall be used where the particulate collection equipment is exhausting inside the building,
- F. Control odors and mist vapors during the cleaning and restoration process.
- G. Mark the position of manual volume dampers and air-directional mechanical devices inside the system prior to cleaning. Restore them to their marked position on completion of cleaning.
- H. System components shall be cleaned so that all HVAC system components are visibly clean. On completion, all components must be returned to those settings recorded just prior to cleaning operations.
- I. Clean all air-distribution devices, registers, grilles, and diffusers.

- J. Clean visible surface contamination deposits according to NADCA ACR 2006 and the following:
1. Clean air-handling units, airstream surfaces, components, condensate collectors, and drains.
 2. Ensure that a suitable operative drainage system is in place prior to beginning wash-down procedures.
 3. Clean evaporator coils, reheat coils, and other airstream components.
- K. Duct Systems:
1. Create service openings in the HVAC system as necessary to accommodate cleaning.
 2. Mechanically clean duct systems specified to remove all visible contaminants so that the systems are capable of passing the HVAC System Cleanliness Tests (see NADCA ACR 2006).
- L. Debris removed from the HVAC system shall be disposed of according to applicable Federal, state, and local requirements.
- M. Mechanical Cleaning Methodology:
1. Source-Removal Cleaning Methods: The HVAC system shall be cleaned using source-removal mechanical cleaning methods designed to extract contaminants from within the HVAC system and to safely remove these contaminants from the facility. No cleaning method, or combination of methods, shall be used that could potentially damage components of the HVAC system or negatively alter the integrity of the system.
 - a. Use continuously operating vacuum-collection devices to keep each section being cleaned under negative pressure.
 - b. Cleaning methods that require mechanical agitation devices to dislodge debris that is adhered to interior surfaces of HVAC system components shall be equipped to safely remove these devices. Cleaning methods shall not damage the integrity of HVAC system components or damage porous surface materials such as duct and plenum liners.
 2. Cleaning Mineral-Fiber Insulation Components:
 - a. Fibrous-glass thermal or acoustical insulation elements present in equipment or ductwork shall be thoroughly cleaned with HEPA vacuuming equipment while the HVAC system is under constant negative pressure and shall not be permitted to get wet according to NADCA ACR 2006.
 - b. Cleaning methods used shall not cause damage to fibrous-glass components and will render the system capable of passing the HVAC System Cleanliness Tests (see NADCA ACR 2006).
 - c. Fibrous materials that become wet shall be discarded and replaced.
- N. Coil Cleaning:

1. Measure static-pressure differential across each coil.
2. See NADCA ACR 2006, "Coil Surface Cleaning" Section. Type 1, or Type 1 and Type 2, cleaning methods shall be used to render the coil visibly clean and capable of passing Coil Cleaning Verification (see applicable NADCA ACR 2006).
3. Coil drain pans shall be subject to NADCA ACR 2006, "Non-Porous Surfaces Cleaning Verification." Ensure that condensate drain pans are operational.
4. Electric-resistance coils shall be de-energized, locked out, and tagged before cleaning.
5. Cleaning methods shall not cause any appreciable damage to, cause displacement of, inhibit heat transfer, or cause erosion of the coil surface or fins, and shall comply with coil manufacturer's written recommendations when available.
6. Rinse thoroughly with clean water to remove any latent residues.

O. Antimicrobial Agents and Coatings:

1. Apply antimicrobial agents and coatings if active fungal growth is reasonably suspected or where unacceptable levels of fungal contamination have been verified. Apply antimicrobial agents and coatings according to manufacturer's written recommendations and EPA registration listing after the removal of surface deposits and debris.
2. When used, antimicrobial treatments and coatings shall be applied after the system is rendered clean.
3. Apply antimicrobial agents and coatings directly onto surfaces of interior ductwork.
4. Sanitizing agent products shall be registered by the EPA as specifically intended for use in HVAC systems and ductwork.

3.4 CLEANLINESS VERIFICATION

- A. Verify cleanliness according to NADCA ACR 2006, "Verification of HVAC System Cleanliness" Section.
- B. Verify HVAC system cleanliness after mechanical cleaning and before applying any treatment or introducing any treatment-related substance to the HVAC system, including biocidal agents and coatings.
- C. Perform visual inspection for cleanliness. If no contaminants are evident through visual inspection, the HVAC system shall be considered clean. If visible contaminants are evident through visual inspection, those portions of the system where contaminants are visible shall be re-cleaned and subjected to re-inspection for cleanliness.
- D. Additional Verification:
 1. Perform surface comparison testing or NADCA vacuum test.
 2. Conduct NADCA vacuum gravimetric test analysis for nonporous surfaces.
- E. Verification of Coil Cleaning:

1. Measure static-pressure differential across each coil.
 2. Coil will be considered clean if cleaning restored the coil static-pressure differential within 10 percent of <Insert inches wg (Pa)>, the differential measured when the coil was first installed.
 3. Coil will be considered clean if the coil is free of foreign matter and chemical residue, based on a thorough visual inspection.
- F. Prepare a written cleanliness verification report. At a minimum, include the following:
1. Written documentation of the success of the cleaning.
 2. Site inspection reports, initialed by supervisor, including notation on areas of inspection, as verified through visual inspection.
 3. Surface comparison test results if required.
 4. Gravimetric analysis (nonporous surfaces only).
 5. System areas found to be damaged.
- G. Photographic Documentation: Comply with requirements in Section 013233 "Photographic Documentation."

3.5 RESTORATION

- A. Restore and repair HVAC air-distribution equipment, ducts, plenums, and components according to NADCA ACR 2006, "Restoration and Repair of Mechanical Systems" Section.
- B. Restore service openings capable of future reopening. Comply with requirements in Section 233113 "Metal Ducts." Include location of service openings in Project closeout report.
- C. Replace fibrous-glass materials that cannot be restored by cleaning or resurfacing. Comply with requirements in Section 233113 "Metal Ducts" and Section 233116 "Nonmetal Ducts."
- D. Replace damaged insulation according to Section 230713 "Duct Insulation."
- E. Ensure that closures do not hinder or alter airflow.
- F. New closure materials, including insulation, shall match opened materials and shall have removable closure panels fitted with gaskets and fasteners.
- G. Reseal fibrous-glass ducts. Comply with requirements in Section 233116 "Nonmetal Ducts."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230130.51

SECTION 230400 - BASIC HVAC REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Basic requirements common to the work in general of Division 23 and other Divisions and Sections of the Specification where referenced.
- B. Provide, unless specified otherwise, all labor, materials, and equipment necessary for completely finished and operational HVAC systems described and specified under other Sections of this Division 23.
- C. Provide all minor incidental items such as offsets, fittings, and accessories required as part of the work even though not specified or indicated.
- D. Inspection: Inspect work preceding or interfacing with work of Division 23 and report any known or observed defects that affect the Work to the General Contractor. Do not proceed with the work until defects are corrected.
- E. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCES

- A. General:
 - 1. For products or workmanship specified by association, trade, or Federal Standards comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable Codes.
 - 2. The date of the standard is that in effect as the date of the Contract Documents, except when a specific date is specified.
 - 3. When required by individual Specifications Section by means of reference for cleaning or installation requirements, etc., obtain a copy of the standard. Maintain the copy at job site during work until substantial completion. Copy may be in electronic format.
 - 4. Schedule of Referenced Organizations: Reference Section 014200 "References" for a list of the acronyms of organizations referenced in these Specifications.

1.4 DEFINITIONS

- A. Conform to Division 01: These Specifications are of abbreviated, simplified, or streamlined type and include incomplete sentences. Singular words will be interpreted as plural and plural words will be interpreted as singular where applicable and where full context of the Contract Documents so indicates.
- B. The following words are re-defined and/or elaborated on for the context of Division 23 work:
1. Furnish: Except as otherwise defined in greater detail, term "furnish" is used to mean supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, etc., as applicable in each instance.
 2. Install: Except as otherwise defined in greater detail, term "install" is used to describe operations at Project site including unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning and similar operations, as applicable in each instance.
 3. Provide: Except as otherwise defined in greater detail, term "provide" means furnish and install, complete and ready for intended use, as applicable in each instance.
 4. General Contractor: The term "General Contractor" used in Division 23 and elsewhere in the Contract Documents means the party with whom the Owner has executed the Owner-Contractor Agreement.

1.5 QUALITY CONTROL

- A. Conform to Division 01. Materials and apparatus required for the work to be new and of first-class quality; to be furnished, delivered, erected, connected and finished in every detail; and to be so selected and arranged so as to fit properly into the building spaces. Where no specific kind or quality of material is given, a first-class standard article shall be furnished.
- B. Unless otherwise specifically indicated, equipment and materials to be installed in accordance with the recommendations of the Manufacturer. This includes the performance of tests as recommended by the Manufacturer.

1.6 REGULATORY REQUIREMENTS

- A. Comply with latest editions of all applicable Codes, Standards, Ordinances and Regulations in effect as of the date of the Contract Documents adopted by CCD, BD, and FD, including but not necessarily limited to the following:
1. National Electrical Code NFPA-70.
 2. NFPA.
 3. ASHRAE.
 4. SMACNA.
 5. Underwriters Laboratories.

- B. If discrepancies occur between the Contract Documents and any applicable Codes, Guidelines, Ordinances, Acts, or Standards, the most stringent requirements shall apply.
- C. Where hourly fire ratings are indicated or required, provide components and assemblies meeting requirements of the American Insurance Association, Factory Mutual Insurance Association and listed by Underwriters Laboratories, Inc.

1.7 PRODUCT OPTIONS AND SUBSTITUTIONS

- A. Substitutions: Refer to Division 01, General Requirements.
- B. Some materials and equipment are specified by Manufacturer and catalog numbers. The Manufacturer and catalog numbers are used to establish a degree of quality and style for such equipment and material.
- C. When alternate or substitute materials and equipment are used, Contractor shall be responsible for space requirements, configurations, performance, changes in bases, supports, structural members and openings in structure, electrical changes and other apparatus and trades that may be affected by their use.
- D. When providing a product and/or service under the qualification of "acceptable equal," Contractor shall be entirely responsible for additional costs incurred due to modifications to the civil, architectural, structural, mechanical, and electrical design that may be required to accommodate the "acceptable equal."
- E. Substitute materials and equipment are only allowed to be provided from the Manufacturers listed as approved.

1.8 SHOP DRAWINGS, PRODUCT DATA, AND AS-BUILT DRAWINGS

- A. General: Comply with the General Conditions of the Contract and with Division 01 - General Requirements.
 - 1. All documents shall be submitted in electronic format.
 - 2. All submittals to be provided in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 CONTRACT RECORD DOCUMENTS

- A. General: Comply with the General Conditions of the Contract and with Division 01 - General Requirements,
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.10 OPERATING AND MAINTENANCE DATA

- A. HVAC Contractor shall submit electronic copy containing a single PDF file of the entire maintenance manual to the DEN Project Manager, General Contractor for their approval.
- B. All submittals to be provided in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- C. The manual shall have:
1. Alphabetical list of all system components including the name, address, and 24-hour phone number of the company responsible for servicing each item during the first year's operation.
 2. Operating instructions for complete system, including emergency procedures for fire or failure of major equipment and procedures for normal starting/operating/shutdown and long-term shutdown.
 3. Maintenance instructions, including valves, valve tag and other identified equipment lists, proper lubricants and lubricating instructions for each piece of equipment and necessary cleaning/replacing/adjusting schedules.
 4. Manufacturer's data on each piece of equipment, including:
 - a. Installation instructions.
 - b. Drawings and specifications (approved shop drawings).
 - c. Parts lists.
 - d. Complete wiring and temperature control diagrams (approved shop drawings).
 5. Each piece identified on any schedule shall be bookmarked in the electronic file by its scheduled tag ID (IE: AHU-1)
- D. In addition to the maintenance manual, and keyed to it, the equipment shall be identified and tagged as specified elsewhere. Insert a copy.
1. Identify all starters, disconnect switches, and manually operated controls, except integral equipment switches with permanently applied, legible markers corresponding to operating instructions in the "Maintenance Manual".
 2. Tag all manual operating valves with 1-1/2" diameter brass tags attached with chains. Tags are to be sequence numbered with legible metal stamps.
 3. Provide a typed tag list or schedule mounted under glass in the room designated by DEN Project Manager stating number, location, and function of each tagged item. Insert a copy of tag list in each "Maintenance Manual".
- E. Division 23 Contractor shall be responsible for scheduling instructional meetings for maintenance personnel on the proper operation and maintenance of all mechanical systems, using the maintenance manual as a guide. These meetings must be scheduled through the DEN Project Manager, and General Contractor far enough in advance so that all personnel can be notified.
- F. Division 23 Contractor shall provide proof of performance certification of all Mechanical

Equipment and Systems to demonstrate that all Mechanical Equipment and Systems are operating to the intent of the design.

1.11 FINAL OBSERVATION

A. Comply with the requirements of Division 01 and the following:

1. Prior to the request for final observation, all Work under the contract shall be completed; all systems shall be in proper working order and placed in operation (System Startup of 48 hours).
2. All HVAC systems shall be properly balanced with quantities shown on the Drawings, and all water circuits shall be adjusted to provide the proper flows.
3. All equipment shall be cleaned, including but not limited to, plumbing fixtures. All debris and construction materials shall be removed from the DEN property to a DEN approved landfill off-airport.
4. The temperature control system shall be complete and in proper working order. All instruments shall be properly and accurately field calibrated.
5. At the request of the DEN Project Manager, a representative of the Contractor who is thoroughly familiar with the Project and operation of the various systems shall be present during the final observation to demonstrate proper operation of the equipment and controls. If requested by the DEN Project Manager, the Contractor shall have representatives from his subcontractors present to assist during final observation.

1.12 PROJECT CONDITIONS

A. Accessibility.

1. Division 23 Contractor shall be responsible for the sufficiency of the size of shafts and chases and the adequate clearance in double partitions and hung ceilings for proper installation of his work. He shall cooperate with Contractors of other Divisions of the Work whose work is in the same space and shall advise the General Contractor of his requirements. Such spaces and clearances shall, however, be kept to the minimum size required.
2. Division 23 Contractor shall locate all equipment, which must be serviced, operated, or maintained in fully accessible positions. Such equipment shall include (but not be limited to) valves, shock absorbers, traps, cleanouts, motors, controllers, switchgear, and drain points. If required for better accessibility, furnish access doors for this purpose. Minor deviations from Drawings may be allowed to provide for better accessibility. Any changes shall be approved by the DEN Project Manager prior to making the change.
3. Division 23 Contractor shall provide the General Contractor with the exact locations of access doors for each concealed valve, shock absorber control, damper, or other device requiring service. Locations of these doors shall be submitted in sufficient time to be installed in the normal course of work.
4. Provide carpentry, masonry, concrete and metal work required for work of this Division where not specifically called for under other Sections.

B. Fabrication.

1. Before any ductwork is fabricated and before running and/or fabricating any lines of piping or ductwork, the Contractor shall assure himself that they can be run as contemplated in cooperation with Contractors of other Divisions of the Work and the physical constraints of existing conditions and new Structural and Architectural Work.

C. Freeze Protection.

1. Do not run lines in outside walls, or locations where freezing may occur. Piping next to outside walls shall be in furred spaces with insulation between the piping and the outside wall. Insulation of piping shall not be considered freeze protection.

D. Scaffolding, Rigging and Hoisting.

1. Provide all scaffolding, rigging, hoisting and services necessary for erection and delivery into the premises of any equipment and apparatus furnished; remove same from premises when no longer required. Conform to OSHA requirements and standards.

1.13 COORDINATION

- A. General: Coordinate and order the progress of mechanical work to conform to the progress of the work of the other trades. Complete the entire installation as soon as the condition of the building will permit.
- B. Coordination with Division 21 Fire Suppression, Division 22 Plumbing, Division 26 Electrical, and Division 33 Utilities and other Divisions as required to perform the Work..
- C. Existing System Interruptions: Comply with Division 01.
- D. Cutting and Patching: Section 024119 "Selective Demolition".
- E. Drawings and Specifications: The Mechanical Drawings indicate the general design and arrangement of lines, equipment, systems, etc. Information shown is diagrammatic in character and does not necessarily indicate every required offset, fitting, etc. Do not scale the Drawings for dimensions. Take dimensions, measurements, locations, levels, etc., from the Architectural and Engineering Drawings and equipment to be furnished.
- F. Discrepancies: Examine Drawings and Specifications for other parts of the work, and if any discrepancies occur between the plans for the work of this Division and the plans for the work of others, report such discrepancies to the DEN Project Manager and obtain written instructions for any changes necessary.
- G. Order of Precedence: The precedence of construction documents are as Specified in the General Conditions.

1.14 START-UP PROCEDURES

- A. Before start-up, each piece of equipment comprising a part of the system shall be checked for proper lubrication, drive rotation, belt tension, proper control sequence, and any other condition, which may cause damage to equipment or endanger personnel.
- B. Ensure that all control systems are fully operational in automatic mode.
- C. If systems are not to continue in use following the start-up procedures, steps should be taken to ensure against accidental operation or operation by unauthorized personnel.
- D. Factory personnel shall be notified as appropriate to start systems requiring their services.
- E. Notify the DEN Project Manager in writing a minimum of 48 hours prior to start-up of all major mechanical equipment and systems.
- F. Should there be any equipment found which had not been properly started up, it will be the responsibility of this Contractor to arrange for the appropriate personnel to start up the equipment at his expense and at a time as scheduled by the DEN Project Manager.

1.15 SCHEDULE OF TESTING

- A. Provide testing in accordance with the General Conditions of the Contract.
- B. A schedule of testing shall be drawn up by the Division 23 Contractor in such a manner that it will show areas tested, test pressure, length of test, date, time and signature of testing personnel.
- C. Notify the DEN Project Manager, DEN Mechanical Inspector, and DEN Mechanical Engineer in writing a minimum of 72 hours prior to testing of any mechanical equipment and systems.
- D. All testing must be performed in the presence DEN Project Manager and or his designated representative; his signature for verification of the test must appear on the schedule.
- E. All testing must be performed in accord with the procedures set forth in Division 23 and other Sections of the Specifications where referenced. At completion of testing, the schedule shall then be submitted in triplicate to the DEN Project Manager.
- F. Make all specified tests on piping, ductwork, and related systems as necessary.
- G. Make sure operational and performance tests are made on seasonal equipment.
- H. Complete all tests required by Code Authorities, such as health codes, building codes, and safety codes.

- I. After test runs have been completed and systems have been demonstrated to be satisfactory and ready for permanent operation, all permanent pipeline strainers and filters shall be cleaned, air filters cleaned or replaced, valve and pump packing properly adjusted, belt tensions adjusted, drive guards secured in place, lubrication checked and replenished if required.

1.16 CLEANING AND FINISHING

- A. Provide cleaning in accordance with the General Requirements of the Contract.
- B. Cleaning shall include but not be limited to removing grease, dirt, dust, stains, labels, fingerprints, and other foreign materials from sight-exposed piping, ductwork, equipment, fixtures and other such items installed under Division 23 of the work. If finishes have been damaged, refinish to original condition and leave everything in proper working order and of intended appearance.
- C. Clean HVAC Systems in accordance with applicable Division 23 Sections.

1.17 WARRANTIES

- A. Conform to Division 1: Provide a written warranty covering the entire mechanical work to be free from defective materials, equipment, and workmanship for a period of two (2) years after date of acceptance. During this period, provide labor and materials as required to repair or provide labor and materials required to repair or replace defects.
- B. Provide special warranties for such items of equipment that have been or are specified to have warranties in excess of two (2) years.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work

described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230400

SECTION 230500 - COMMON WORK RESULTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following basic mechanical materials and methods to complement other Division 23 Sections.
 - 1. Piping materials and installation instructions common to most piping systems.
 - 2. Dielectric fittings.
 - 3. Mechanical sleeve seals.
 - 4. Sleeves.
 - 5. Escutcheons.
 - 6. Nonshrink grout for equipment installations.
 - 7. Flowable backfill for underground piping.
 - 8. Field-fabricated metal equipment supports.
 - 9. Concrete bases
 - 10. Installation requirements common to equipment specification Sections.
 - 11. Mechanical demolition.
 - 12. Cutting and patching.
 - 13. Touch up painting and finishing.
 - 14. Pipe and pipe fitting materials are specified in piping system Sections.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 RELATED SECTIONS

- A. Drawings and general provisions of Contract, including General and the Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 230400 "Basic Mechanical Requirements".
- C. Division 31 Earthwork Sections.
- D. Section 059990 "Welding".
- E. Section 230553 "Identification for HVAC Piping and Equipment" for labeling and

identifying mechanical systems and equipment.

1.4 DEFINITIONS

- A. Pipe, pipe fittings, and piping include tube, tube fittings, and tubing.
- B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below the roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.
- C. Exposed Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- D. Exposed Exterior Installations: Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- E. Concealed Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.
- F. Concealed Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.5 SUBMITTALS

- A. General: Submit the following according to the Conditions of the Contract and Division 01 Specification Sections:
 - 1. Shop drawings detailing fabrication and installation for metal and wood supports and anchorage for mechanical materials and equipment.
 - 2. Prepare coordination drawings according to Division 01 Section 013300 "Submittals" to a 1/4 inch equals 1 foot scale or larger. Detail major elements, components, and systems of mechanical equipment and materials in relationship with other systems, installations, and building components. Show space requirements for installation and access. Show where sequence and coordination of installations are important to the efficient flow of the Work. Include the following:
 - a. Clearances for servicing and maintaining equipment, including space for equipment disassembly required for periodic maintenance.
 - b. Pump metal support details.
 - 3. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the Quality Assurance Article.
 - 4. Floor x-rays and/or ground penetrating radar reports.
 - 5. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures" .
 - 6. Contractor shall submit fully dimensioned spool drawings for all welded piping

work. Drawings shall indicate all weld types, sizes, and materials to be used. The spool drawing size shall match the full size contract documents of either 24" x 36" or 34" x 44". Spool drawings shall be submitted in accordance with requirements as specified in Section 013300 "Submittal Procedures". . Adobe Acrobat files shall not contain security. Other file formats will not be accepted.

7. Field Test Reports: Written reports of each pressure tests specified in Division 23 Sections. Include the following:
 - a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Failed test results and corrective action taken to achieve requirements.

1.6 QUALITY CONTROL

- A. Equipment Selection: Equipment of greater or larger power, dimensions, capacities, and ratings may be furnished provided such proposed equipment is approved in writing by the DEN Project Manager and connecting mechanical and electrical services, circuit breakers, conduit, motors, bases, and equipment spaces are increased. No additional costs will be approved for these increases, if larger equipment is approved. If minimum energy ratings or efficiencies of the equipment are specified, the equipment must meet the design requirements and commissioning requirements.
- B. Electronic Equipment Compliance:
 1. Contractor warrants that all equipment, devices, items, systems, software, hardware, or firmware provided shall properly, appropriately, and consistently function and accurately process date and time data (including without limitation: calculating, comparing, and sequencing). This warranty supersedes anything in the Specifications or other Contract Documents that might be construed inconsistently. This warranty is applicable whether the equipment, device, item, system, software, hardware, or firmware is specified with or without reference to a manufacturer's name, make, or model number.
- C. Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver pipes and tubes with factory-applied end-caps. Maintain end-caps through shipping, storage, and handling to prevent pipe-end damage and prevent entrance of dirt, debris, and moisture.
- B. Protect stored ductwork, pipes, and tubes from moisture and dirt. Elevate above grade. When stored inside, do not exceed structural capacity of the floor.
- C. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

- D. Protect flanges, fittings, and piping specialties from moisture and dirt.
- E. Deliver ductwork and fittings with plastic sheeting to protect it from elements. Inspect duct liner for exposure to dirt and tears.

1.8 SEQUENCING AND SCHEDULING

- A. Coordinate mechanical equipment installation with other building components.
- B. Coordinate the installation of required supporting devices.
- C. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work.
- D. Coordinate connection of electrical services.
- E. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces.

PART 2 - PRODUCTS

2.1 PIPE AND PIPE FITTINGS

- A. Refer to individual piping system specification Sections for pipe and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

- A. Refer to individual piping system specification Sections in Division 23 for special joining materials not listed below.
- B. Grooved Mechanical Couplings: Acceptable only for fire protection piping; not acceptable for any other applications.
- C. Pipe Flange Gasket Materials: Suitable for the chemical and thermal conditions of the piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness, except where thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125 cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250 cast-iron and steel flanges.
- D. Solder Filler Metal: ASTM B 32.

1. Alloy Sn95 or Alloy Sn94: Tin (approximately 95 percent) and silver (approximately 5 percent) – Not industry standard, usually 5% antimony.

E. Brazing Filler Metals: AWS A5.8.

1. BCuP Series: Copper-phosphorus alloys.
2. BAg1: Silver alloy.

F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded. All welding rod is to be kept in a operable rod oven at all times.

2.3 PIPING SPECIALTIES

A. Dielectric Fittings: Assembly or fitting having insulating material isolating joined dissimilar metals to prevent galvanic action and stop corrosion.

1. Description: Combination of copper alloy and ferrous; threaded, solder, plain, and weld neck end types and matching piping system materials.
2. Insulating Material: Suitable for system fluid, pressure, and temperature.
3. Dielectric Waterway Fittings: Dielectric fittings designed to effectively separate dissimilar metals exposed to water or other electrolytes, conforming to NSF and ASTM F492 standards for continuous use at temperatures up to 225 degrees F and pressures up to 300 psi. Fittings to have electro-zinc-plated steel casings providing for maintained exterior electrical continuity threaded or flanged ends as applicable, and inert linings.
4. Dielectric Flanges: Factory-fabricated, companion-flange assembly for 150- or 300-psig minimum pressure to suit system pressures.
5. Dielectric-Flange Insulation Kits: Field-assembled, companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
 - a. Provide separate companion flanges and steel bolts and nuts for 150- or 300-psig minimum working pressure to suit system pressures.

2.4 MECHANICAL SLEEVE SEALS

A. Reference Section 230517 "Sleeves and Sleeve Seals for HVAC Piping" for sleeve seals.

2.5 SLEEVES

A. Reference Section 230517 "Sleeves and Sleeve Seals for HVAC Piping" for sleeves.

2.6 ESCUTCHEONS

A. Reference Section 230518 "Escutcheons for HVAC Piping" for escutcheons.

2.7 GROUT

- A. Nonshrink, Nonmetallic Grout: ASTM C 1107, Grade B.
 - 1. Characteristics: Post-hardening, volume-adjusting, dry, hydraulic-cement grout, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.
 - 3. Packaging: Premixed and factory-packaged.

2.8 BACKFILL

- A. Flowable Backfill: Designed in accordance with ASTM C 94 and ASTM D 4832.
 - 1. Refer to Section 312323.33 "Flowable Backfill (Controlled Low-Strength Concrete)" for material and installation requirements.
 - 2. Minimum Requirements:
 - a. Compressive Strength: 50-100 psi
 - b. Slump: 6-8 inches.
 - 3. Required for all piping and ductwork installed below concrete slabs, apron paving and roadways.

PART 3 - EXECUTION

3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. General: Install piping as described below, except where system Sections specify otherwise. Individual piping system specification Sections in Division 23 specify piping installation requirements unique to the piping system.
- B. General Locations and Arrangements: Drawings indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated, except where deviations to layout are approved on coordination drawings.
- C. Install piping at indicated slope.
- D. Install piping free of sags and bends.
- E. Install piping plumb and at right angles and plumb or parallel to building walls. Diagonal runs are prohibited, except where indicated.
- F. Install piping tight to slabs, beams, joists, columns, walls, and other building elements.
- G. Install fittings for changes in direction and branch connections.

- H. Install couplings according to manufacturer's printed instructions.
- I. Piping Joint Construction: Join pipe and fittings as follows and as specifically required in individual piping system Sections.
1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
 2. Remove scale, slag, dirt, rust, and debris from inside and outside of pipe and fittings before assembly.
 3. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full inside diameter. Join pipe fittings and valves as follows:
 - a. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
 - b. Apply appropriate tape or thread compound to external pipe threads (except where dry seal threading is specified).
 - c. Align threads at point of assembly.
 - d. Tighten joint with wrench. Apply wrench to valve end into which pipe is being threaded.
 - e. Damaged Threads: Do not use pipe or pipe fittings having threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- J. Piping Connections: Except as otherwise indicated, make piping connections as specified below.
1. Install unions in piping 2 inches and smaller adjacent to each valve and at final connection to each piece of equipment having a 2-inch or smaller threaded pipe connection.
 2. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.
- K. Piping below apron, concrete slabs or paving shall be encased in flowable backfill. Refer to Section 312323.33 "Flowable Backfill (Controlled Low-Strength Concrete)" for material and installation requirements.

3.2 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to provide the maximum possible headroom where mounting heights are not indicated.
- B. Install equipment according to approved submittal data. Portions of the Work are shown only in diagrammatic form. Refer conflicts to the DEN Project Manager.
- C. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, except where otherwise indicated.

- D. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. Connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.
- E. Install equipment, giving right-of-way to piping systems installed at a required slope.

3.3 PAINTING AND FINISHING

- A. Refer to Division 09 Sections for Painting for field painting requirements. Paint color schedule shall conform to ASME A13.1-1996, "Scheme for the Identification of Piping Systems."
- B. Damage and Touch Up: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.
- C. All rooftop equipment exposed to public or aircraft view shall be painted flat white or grey in accordance with Division 09.

3.4 CONCRETE PENETRATIONS

- A. Reference Section 017329 "Cutting and Patching" for core drilling and saw cutting requirements.
- B. Reference Section 017329 "Selective Demolition" for demolition and removal of selected portions of a building or structure, and repair procedures for selective demolition operations.
- C. All penetrations required through completed concrete construction shall be core drilled or saw cut at minimum size required. All penetrations in concrete require an x-ray or ground penetrating radar to determine if the location is clear of reinforcing steel and embedded systems. Precautions shall be taken when drilling to prevent damage to structural concrete.
 - 1. The Contractor shall provide an interpretation of the x-rays or radar shot and obtain written acceptance from the DEN Project Manager before proceeding with drilling.

3.5 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to current seismic codes at Project location.
 - 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
 - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full

- perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 7. Use [**3000-psi**] <Insert other>, 28-day compressive-strength concrete and reinforcement as specified in Division 03.

3.6 WELDING

- A. Qualify welding processes and operators for structural steel according to AWS D1.1 Structural Welding Code - Steel. See Division 5 sections for additional requirements.
- B. All welding shall be inspected in process by a contractor provided, Certified, Independent Testing Agency by an AWS certified welding inspector.
- C. Qualify welding processes and operators for piping according to ASME Boiler and Pressure Vessel Code, Section IX, Welding and Brazing Qualifications.
 1. Comply with provisions of ASME B31 Series "Code for Pressure Piping."
 2. Certify that each welder has passed AWS qualification tests for the welding processes involved and that certification is current.

3.7 ERECTION OF METAL SUPPORTS AND ANCHORAGE

- A. Refer to Division 05 for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.
- C. Field Welding: Comply with AWS D1.1 Structural Welding Code - Steel, as referenced in Part 1.

3.8 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor mechanical materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.9 DEMOLITION

- A. Refer to Division 01 and Division 02 Sections for general demolition requirements and procedures.
- B. Where pipe, ductwork, insulation, or equipment to remain is damaged or disturbed, remove damaged portions and install new products of equal capacity and quality.
- C. Temporary Disconnection: Remove, store, clean, reinstall, reconnect, and make operational equipment indicated for relocation.
- D. Disconnect, demolish, and remove mechanical systems, equipment, and components indicated to be removed.
 - 1. Piping to Be Removed: Remove portion of piping and associated supports indicated to be removed, provide a shutoff valve with plug or cap in pressurized systems and cap or plug remaining piping with same or compatible piping material. No piping shall be abandoned in place. Repair insulation.
 - 2. Ducts to Be Removed: Remove portion of ducts and associated supports indicated to be removed and plug remaining ducts with same or compatible ductwork material. No ductwork shall be abandoned in place. Repair insulation.
 - 3. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
 - 4. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material.
 - 5. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - 6. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - 7. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
 - 8. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.
 - 9. Repair structure [**floor, ceilings, roof, slabs**] from removed supports in accordance with [**Division 03**], [**Division 05**], [**and Division 09**]

3.10 GROUTING

- A. Mix and install grout for mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.

- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the applicable unit price item, work order or lump sum bid item.

END OF SECTION 230500

SECTION 230513 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

1.4 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with NEMA MG 1 unless otherwise indicated.
- B. Comply with IEEE 841 for severe-duty motors.

2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: **[Class F]** <Insert class>.
- J. Code Letter Designation:
 - 1. Motors **[15]** <Insert number> HP and Larger: NEMA starting Code F or Code G.
 - 2. Motors Smaller than **[15]** <Insert number> HP: Manufacturer's standard starting characteristic.
- K. Enclosure Material: Cast iron for motor frame sizes **[324T]** <Insert number> and larger; rolled steel for motor frame sizes smaller than **[324T]** <Insert number>.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

- B. **Motors Used with Variable Frequency Controllers: [Ratings, characteristics, and features coordinated with and approved by controller manufacturer.]**
1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
 2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
 3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
 4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
- C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
1. Permanent-split capacitor.
 2. Split phase.
 3. Capacitor start, inductor run.
 4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230513

SECTION 230516 - EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Flexible, ball-joint packed expansion joints.
 - 2. Slip-joint, packed expansion joints.
 - 3. Metal, compensator packless expansion joints.
 - 4. Rubber union connector packless expansion joints.
 - 5. Flexible-hose packless expansion joints.
 - 6. Metal-bellows packless expansion joints.
 - 7. Externally pressurized metal-bellows packless expansion joints.
 - 8. Rubber packless expansion joints.
 - 9. Alignment guides and anchors.
 - 10. Pipe loops and swing connections.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. BR: Butyl rubber.
- B. Buna-N: Nitrile rubber.
- C. CR: Chlorosulfonated polyethylene synthetic rubber.
- D. CSM: Chlorosulfonyl-polyethylene rubber.
- E. EPDM: Ethylene-propylene-diene terpolymer rubber.
- F. NR: Natural rubber.
- G. PTFE: Polytetrafluoroethylene plastic.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
2. Expansion Joints: Indicate maximum temperature and pressure rating, and the estimated number of full flexures before joint failure. Provided multi-wall convoluted bellows where possible to reduce joint end force reactions on building structure.
3. Design Data: Indicate selection calculations.
4. For each type of pipe expansion joint and alignment guide indicated.
5. Product Certificates: For each type of pipe expansion joint, signed by product manufacturer.
6. Include data substantiating that materials comply with requirements.

B. Shop Drawings:

1. Expansion Joints: Submit for each assembly shop drawings, along with detailed calculations and procedures applied in making selections as appropriate to lifetime cycles ratings specified. Identify materials of construction and indicate maximum temperature and pressure ratings.

C. Shop Drawings by Delegated-Design Submittal: For each anchor and alignment guide, including analysis data, signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
3. Alignment Guide Details: Detail field assembly and attachment to building structure.
4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.
5. Design Data: Indicate selection calculations. Calculations shall be based on the following
 - a. Installation Temperature: 50 degrees F.
 - b. Hot Water Heating: 230 degrees F (0% glycol).
 - c. Domestic Hot Water: 140 degrees F.
 - d. PCA glycol: 20 degrees F (min) 230 degrees F(Max) (30 percent Glycol)
 - e. Safety Factor: 30 percent.

1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.6 CLOSEOUT SUBMITTALS

- A. Provide final inspection reports prepared by product manufacturers.
- B. Operation and Maintenance Data.
- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in manufacturing the products specified in this Section with minimum of three (3) years experience.
- B. Contractor shall design expansion compensating system under direct supervision of a Professional Engineer experienced in design of this Work and licensed in the State of Colorado.
- C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect, and handle products under provisions of Division 01.
- B. Accept expansion joints on site in factory packing with shipping bars and positioning devices intact. Inspect for damage.
- C. Protect equipment from exposure by leaving factory coverings, pipe end protection, and packaging in place until installation.

1.9 EXTRA MATERIALS

- A. Provide one (1) 12-ounce container of packing lubricant and cartridge style grease gun.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Expansion compensation for us with Steel Piping:
1. Inner Hose: Stainless Steel.
 2. Exterior Sleeve: Double braided stainless steel.
 3. Pressure Rating: 125 psig WSP and 450 degrees F, 200 psig WOG and 250 degrees F at 70 degrees F.
 4. Joint: As specified for pipe joints.
 5. Size: Use pipe sized units.
 6. Maximum offset: 3/4 inch on each side of installed centerline.
- B. Expansion compensation for us with Copper Piping:
1. Inner Hose: Bronze.
 2. Exterior Sleeve: Braided bronze.
 3. Pressure Rating: 125 psig WSP and 450 degrees F.
 4. Joint: As specified for pipe joints.
 5. Size: Use pipe sized units.
 6. Maximum offset: 3/4 inch on each side of installed centerline.

2.2 PERFORMANCE REQUIREMENTS

- A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.
- C. Provide structural work and equipment required to control expansion and contraction of piping. Verify that anchors, guides, and expansion joints provided, adequately protect system.

2.3 PACKED EXPANSION JOINTS

- A. Flexible, Ball-Joint Packed Expansion Joints **[FBJ-01] <Insert drawing designation>**:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Advanced Thermal Systems, Inc.](#)
 - b. [Hyspan Precision Products, Inc.](#)
 - c. [Mason Industries, Inc.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standards: ASME Boiler and Pressure Vessel Code: Section II, "Materials"; ASME B31.9, "Building Services Piping," for materials and design of pressure-containing parts and bolting.
 3. Material: Carbon-steel assembly with asbestos-free composition packing.
 4. Design: Provide 360-degree rotation and angular deflection.
 5. Minimum Pressure Rating: [250 psig at 400 deg F (1725 kPa at 204 deg C)] **<Insert value>**.
 6. Angular Deflection for NPS 6 (DN 150) and Smaller: 30 degree minimum.
 7. Angular Deflection for NPS 8 (DN 200) and Larger: 15 degree minimum.
 8. Seal Type: Two carbon steel and graphite seals suitable for continuous operation at temperature up to 650 deg F (343 deg C).
 9. Internal Ball: Plated with minimum 1-mil chrome cover.
 10. Ball Socket: One- or two-piece design with integral socket/retainer.
 - a. Stuffing Box: Incorporates containment seals and compression seals for containment of injectable packing.
 - b. Packing Cylinders: Provides packing under full line pressure with check valves to prevent blowback.
 11. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
 12. End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged.
- B. Slip-Joint Packed Expansion Joints [**SJ-01**] **<Insert drawing designation>**:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Adscos Manufacturing LLC.](#)
 - b. [Advanced Thermal Systems, Inc.](#)
 - c. [Hyspan Precision Products, Inc.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Standard: ASTM F 1007.
 3. Material: Carbon steel with asbestos-free PTFE packing.
 4. Design: With internal guide and injection ports for repacking under full system pressure. Housing shall be furnished with drain ports and lifting ring. Include drip connection if used for steam piping.
 5. Configuration: [**Single joint**] [**Single joint with base**] [**and**] [**double joint with base**] class(es), unless otherwise indicated.
 6. Slip Tube for sizes NPS 1-1/2 (DN 40) through NPS 16 (DN 400): Schedule 80.
 7. Slip Tube for sizes NPS 18 (DN 450) through NPS 24 (DN 600): Schedule 60.
 8. Sliding Surface: 2 mil thick chrome finish.
 9. End Connections: Flanged or welded ends to match piping system.

2.4 PACKLESS EXPANSION JOINTS

A. Metal, Compensator Packless Expansion Joints [MCEJ-01] <Insert drawing designation>:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Flexicraft Industries.](#)
 - b. [Flex-Weld, Inc.](#)
 - c. [Hyspan Precision Products, Inc.](#)
 - d. [Mason Industries, Inc.](#)
 - e. [Metraflex, Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
2. Minimum Pressure Rating: [150 psig (1035 kPa)] [175 psig (1200 kPa)] [200 psig (1380 kPa)] <Insert value>, unless otherwise indicated.
3. Description: Totally enclosed, externally pressurized, multi-ply bellows isolated from fluid flow by an internal pipe sleeve and external housing.
4. Joint Axial Movement: 2 inches (50 mm) of compression and 1/2 inch (12 mm) of extension.
5. Configuration for Copper Tubing: Multi-ply, phosphor-bronze bellows with copper pipe ends.
 - a. End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: [**Solder joint**] [**or**] [**threaded**].
 - b. End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Threaded.
6. Configuration for Steel Piping: Multi-ply, stainless-steel bellows; steel-pipe end connections; and carbon-steel shroud.
 - a. End Connections for Steel Pipe NPS 2 (DN 50) and Smaller: Threaded.
 - b. End Connections for Steel Pipe NPS 2-1/2 to NPS 4 (DN 65 to DN 100): [**Flanged**] [**Threaded**] [**Welded**].

B. Rubber Union Connector Expansion Joints [RUEJ-01] <Insert drawing designation>. To be used only on chilled water systems:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Amber/Booth Company, Inc.; a VMC Group Company.](#)
 - b. [Flex-Hose Co., Inc.](#)
 - c. [Flexicraft Industries.](#)
 - d. [General Rubber Corporation.](#)
 - e. [Mason Industries, Inc.](#)
 - f. [Proco Products, Inc.](#)
 - g. [Unaflex.](#)

- h. [Unisource Manufacturing, Inc.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Material: Twin reinforced-rubber spheres[**with external restraining cables**].
 3. Minimum Pressure Rating: [150 psig at 170 deg F (1035 kPa at 77 deg C)] **<Insert value>**, unless otherwise indicated.
 4. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
- C. Flexible-Hose Packless Expansion Joints [**FHEJ-01**] **<Insert drawing designation>**:
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Flex-Hose Co., Inc.](#)
 - b. [Flexicraft Industries.](#)
 - c. [Metraflex, Inc.](#)
 - d. [Mason Industries, Inc.](#)
 - e. [Unisource Manufacturing, Inc.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.
 3. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.
 4. Expansion Joints for Copper Tubing NPS 2 (DN 50) and Smaller: Copper-alloy fittings with [**solder-joint**] **<Insert type>** end connections.
 - a. Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F (3100 kPa at 21 deg C) and 340 psig at 450 deg F (2340 kPa at 232 deg C) ratings.
 - b. Bronze hoses and double-braid bronze sheaths with 700 psig at 70 deg F (4830 kPa at 21 deg C) and 500 psig at 450 deg F (3450 kPa at 232 deg C) ratings.
 5. Expansion Joints for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Copper-alloy fittings with [**threaded**] **<Insert type>** end connections.
 - a. Stainless-steel hoses and single-braid, stainless-steel sheaths with 300 psig at 70 deg F (2070 kPa at 21 deg C) and 225 psig at 450 deg F (1550 kPa at 232 deg C) ratings.
 - b. Stainless-steel hoses and double-braid, stainless-steel sheaths with 420 psig at 70 deg F (2890 kPa at 21 deg C) and 315 psig at 450 deg F (2170 kPa at 232 deg C) ratings.
 6. Expansion Joints for Steel Piping NPS 2 (DN 50) and Smaller: Carbon-steel fittings with threaded end connections.

- a. Stainless-steel hoses and single-braid, stainless-steel sheaths with **450 psig at 70 deg F** (3100 kPa at 21 deg C) and **325 psig at 600 deg F** (2250 kPa at 315 deg C) ratings.
 - b. Stainless-steel hoses and double-braid, stainless-steel sheaths with **700 psig at 70 deg F** (4830 kPa at 21 deg C) and **515 psig at 600 deg F** (3550 kPa at 315 deg C) ratings.
7. Expansion Joints for Steel Piping **NPS 2-1/2 to NPS 6** (DN 65 to DN 150): Carbon-steel fittings with **[flanged] [welded]** end connections.
- a. Stainless-steel hoses and single-braid, stainless-steel sheaths with **200 psig at 70 deg F** (1380 kPa at 21 deg C) and **145 psig at 600 deg F** (1000 kPa at 315 deg C) ratings.
 - b. Stainless-steel hoses and double-braid, stainless-steel sheaths with **275 psig at 70 deg F** (1900 kPa at 21 deg C) and **200 psig at 600 deg F** (1380 kPa at 315 deg C) ratings.
8. Expansion Joints for Steel Piping **NPS 8 to NPS 12** (DN 200 to DN 300): Carbon-steel fittings with **[flanged] [welded]** end connections.
- a. Stainless-steel hoses and single-braid, stainless-steel sheaths with **125 psig at 70 deg F** (860 kPa at 21 deg C) and **90 psig at 600 deg F** (625 kPa at 315 deg C) ratings.
 - b. Stainless-steel hoses and double-braid, stainless-steel sheaths with **165 psig at 70 deg F** (1130 kPa at 21 deg C) and **120 psig at 600 deg F** (830 kPa at 315 deg C) ratings.
9. Expansion Joints for Steel Piping **NPS 14** (DN 350) and Larger: Carbon-steel fittings with **[flanged] [welded]** end connections.
- a. Stainless-steel hoses and double-braid, stainless-steel sheaths with **165 psig at 70 deg F** (1130 kPa at 21 deg C) and **120 psig at 600 deg F** (830 kPa at 315 deg C) ratings.
- D. Metal-Bellows Packless Expansion Joints **[MBEJ-01] <Insert drawing designation>**:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Adesco Manufacturing LLC.](#)
 - b. [American BOA, Inc.](#)
 - c. [Badger Industries, Inc.](#)
 - d. [Expansion Joint Systems, Inc.](#)
 - e. [Flex-Hose Co., Inc.](#)
 - f. [Flexicraft Industries.](#)
 - g. [Flex-Weld, Inc.](#)
 - h. [Hyspan Precision Products, Inc.](#)
 - i. [Mason Industries, Inc.](#)
 - j. [Metraflex, Inc.](#)
 - k. [Tozen Corporation.](#)

- I. [Unaflex](#).
 - m. [Unisource Manufacturing, Inc.](#)
 - n. [Universal Metal Hose; a subsidiary of Hyspan Precision Products, Inc.](#)
 - o. [U.S. Bellows, Inc.](#)
 - p. [WahlcoMetroflex](#).
 - q. <Insert manufacturer's name>.
 - r. or approved equal.
 2. Standards: ASTM F 1120 and EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
 3. Type: Circular, corrugated bellows[**with external tie rods**].
 4. Minimum Pressure Rating: [150 psig (1035 kPa)] [175 psig (1200 kPa)] [200 psig (1379 kPa)] <Insert value>, unless otherwise indicated.
 5. Configuration: [Single joint] [Single joint with base] [and] [double joint with base] class(es), unless otherwise indicated.
 6. Expansion Joints for Copper Tubing: [Single-] [or] [multi-] ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.
 - a. End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: [**Solder joint**] [or] [**threaded**].
 - b. End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): [**Solder joint**] [or] [**threaded**].
 - c. End Connections for Copper Tubing NPS 5 (DN 125) and Larger: Flanged.
 7. Expansion Joints for Steel Piping: [Single-] [or] [multi-] ply stainless-steel bellows, steel pipe ends, and carbon-steel shroud.
 - a. End Connections for Steel Pipe NPS 2 (DN 50) and Smaller: Threaded.
 - b. End Connections for Steel Pipe NPS 2-1/2 (DN 65) and Larger: [**Flanged**] [**Welded**].
- E. Externally Pressurized Metal-Bellows Packless Expansion Joints [**EPEJ-01**] <Insert drawing designation>:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Adesco Manufacturing LLC](#).
 - b. [Hyspan Precision Products, Inc.](#)
 - c. [Mason Industries, Inc.](#)
 - d. [Metraflex, Inc.](#)
 - e. [U.S. Bellows, Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 2. Minimum Pressure Rating: [150 psig (1035 kPa)] [200 psig (1379 kPa)] [300 psig (2068 kPa)] <Insert value>, unless otherwise indicated.
 3. Description:

- a. Totally enclosed, externally pressurized, multi-ply, stainless-steel bellows isolated from fluid flow by an internal pipe sleeve.
 - b. Carbon-steel housing.
 - c. Drain plugs and lifting lug for the **NPS 3 (DN 80)** and larger.
 - d. Bellows shall have operating clearance between the internal pipe sleeves and the external shrouds.
 - e. Joints shall be supplied with a built-in scale to confirm the starting position and operating movement.
 - f. Joint Axial Movement: [4 inches (100 mm)] [6 inches (150 mm)] [8 inches (200 mm)] **<Insert compression limit>** of compression and [0.75 inch (19 mm)] [1 inch (25 mm)] [2 inches (50 mm)] **<Insert extension limit>** of extension.
4. Permanent Locking Bolts: Set locking bolts to maintain joint lengths during installation. Temporary welding tabs that are removed after installation in lieu of locking bolts are not acceptable.
 5. End Connection Configuration: Flanged; one raised, fixed and one floating flange.
- F. Rubber Packless Expansion Joints [**REJ-01**] **<Insert drawing designation>**:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Amber/Booth Company, Inc.: a VMC Group Company.](#)
 - b. [Flex-Hose Co., Inc.](#)
 - c. [Flexicraft Industries.](#)
 - d. [Flex-Weld, Inc.](#)
 - e. [Garlock Sealing Technologies.](#)
 - f. [General Rubber Corporation.](#)
 - g. [Mason Industries, Inc.](#)
 - h. [Metraflex, Inc.](#)
 - i. [Proco Products, Inc.](#)
 - j. [Red Valve Company, Inc.](#)
 - k. [Tozen Corporation.](#)
 - l. [Unaflex.](#)
 - m. [Unisource Manufacturing, Inc.](#)
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.
 2. Standards: ASTM F 1123 and FSA's "Technical Handbook: Non-Metallic Expansion Joints and Flexible Pipe Connectors."
 3. Material: Fabric-reinforced rubber complying with FSA-PSJ-703.
 4. Arch Type: [**Single**] [**or**] [**multiple**] arches[**with external control rods**].
 5. Spherical Type: [**Single**] [**or**] [**multiple**] spheres[**with external control rods**].
 6. Minimum Pressure Rating for **NPS 1-1/2 to NPS 4 (DN 40 to DN 100)**: [150 psig (1035 kPa) **at 220 deg F (104 deg C)**] **<Insert value>**.
 7. Minimum Pressure Rating for **NPS 5 and NPS 6 (DN 125 and DN 150)**: [140 psig (966 kPa) **at 200 deg F (93 deg C)**] **<Insert value>**.

8. Minimum Pressure Rating for **NPS 8 to NPS 12** (DN 200 to DN 300): [140 psig (966 kPa) at 180 deg F (82 deg C)] <Insert value>.
9. Material for Fluids Containing Acids, Alkalis, or Chemicals: [Butyl rubber] [Chlorosulfonyl-polyethylene rubber] [Ethylene-propylene-diene terpolymer rubber] <Insert material>.
10. Material for Fluids Containing Gas, Hydrocarbons, or Oil: [Buna-N] [Chlorosulfonated polyethylene synthetic rubber] <Insert material>.
11. Material for Water: [Butyl rubber] [Buna-N] [Chlorosulfonated polyethylene synthetic rubber] [Chlorosulfonyl-polyethylene rubber] [Ethylene-propylene-diene terpolymer rubber] [Natural rubber].
12. End Connections: Full-faced, integral steel flanges with steel retaining rings.

2.5 ALIGNMENT GUIDES AND ANCHORS

A. Alignment Guides [AG-01] <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Adscos Manufacturing LLC.](#)
 - b. [Advanced Thermal Systems, Inc.](#)
 - c. [Flex-Hose Co., Inc.](#)
 - d. [Flexicraft Industries.](#)
 - e. [Flex-Weld, Inc.](#)
 - f. [Hyspan Precision Products, Inc.](#)
 - g. [Mason Industries, Inc.](#)
 - h. [Metraflex, Inc.](#)
 - i. [Senior Flexonics Pathway.](#)
 - j. [Unisource Manufacturing, Inc.](#)
 - k. [U.S. Bellows, Inc.](#)
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding slider for bolting to pipe.

B. Anchor Materials:

1. Steel Shapes and Plates: ASTM A 36/A 36M.
2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
3. Washers: ASTM F 844, steel, plain, flat washers.
4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Stud: Threaded, zinc-coated carbon steel.
 - b. Expansion Plug: Zinc-coated steel.
 - c. Washer and Nut: Zinc-coated steel.

5. Chemical Fasteners: Insert-type stud, bonding-system anchor for use with hardened Portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
 - b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud, unless otherwise indicated.
 - c. Washer and Nut: Zinc-coated steel.
6. Concrete: Portland cement mix, **[3000 psi]** minimum. Refer to Division 3 for formwork, reinforcement, and concrete.
7. Grout: ASTM C1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink, nonmetallic grout; suitable for interior and exterior applications.
 - a. Properties: Nonstaining, noncorrosive, and nongaseous.
 - b. Design Mix: **[5000-psi]**, 28-day compressive strength.
8. Swivel Joints: **[Fabricated steel] [Bronze] [Ductile Iron] [Cast steel] [Insert type]** body, double ball bearing race, field lubricated, with **[rubber (Buna-N)] [Insert type]** o-ring seals.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine piping layout and notify DEN Project Manager of additional anchors or expansion joints required to adequately protect system.
- B. Provide inspection services by flexible pipe manufacturer's representative for final installing and certify installation is in accordance with manufacturer's recommendations and connectors are performing satisfactorily.

3.2 INSTALLATION - GENERAL

- A. Install flexible pipe connectors on pipes connected to equipment supported by vibration isolation. Axial and lateral offsets shall not exceed manufacturers' recommendations.
- B. Accomplish structural work and provide equipment required to control expansion and contraction of piping, loops, pipe offsets, and swing joints, and provide corrugated bellows type expansion joints where required.
- C. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end.

- D. Rigidly anchor pipe to building structure where necessary. Provide pipe guides so movement is directed along axis of pipe only. Erect piping such that strain and weight is not on cast connections or apparatus.
- E. Provide support and equipment required to control expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where **[required]** **[indicated]**.
- F. Provide expansion loops as indicated on drawings.

3.3 EXPANSION JOINT INSTALLATION

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.
- B. Install packed-type expansion joints with packing suitable for fluid service.
- C. Install metal-bellows expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
- D. Install rubber packless expansion joints according to FSA-PSJ-703.
- E. Install alignment guides to allow expansion and to avoid end-loading and torsional stress.

3.4 PIPE LOOP AND SWING CONNECTION INSTALLATION

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least **[five (5)] <Insert number>** pipe fittings, including tee in main.
- C. Connect risers and branch connections to terminal units with at least **[four (4)] <Insert number>** pipe fittings, including tee in riser.
- D. Connect mains and branch connections to terminal units with at least **[four (4)] <Insert number>** pipe fittings, including tee in main.
- E. Attach pipe bends and loops to anchors.
 - 1. Steel Anchors: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 2. Concrete Anchors: Attach by fasteners. Follow fastener manufacturer's written instructions.

3.5 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install [**one (1)**] [**two (2)**] guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than [**four (4)**] **<Insert number>** pipe diameters from expansion joint.
- C. Attach guides to pipe, and secure guides to building structure.
- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
 - 1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24; U bolts bolted to anchor.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
 - 1. Anchor Attachment to Steel Structural Members: Attach by welding.
 - 2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
- G. Construct concrete anchors of poured-in-place concrete of dimensions indicated and include embedded fasteners.
- H. Install pipe anchors according to expansion-joint manufacturer's written instructions if expansion joints or compensators are indicated.
- I. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

3.6 MANUFACTURER'S FIELD SERVICES

- A. Provide services under provisions of Division 01 requirements.
- B. Provide inspection services by flexible pipe manufacturer's representative to assist Contractor for final installing and certify installation is in accordance with manufacturer's recommendations and connectors are performing satisfactorily.
 - 1. Provide inspection report to DEN Project Manager.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230516

SECTION 230517 - SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Sleeves.
 - 2. Stack-sleeve fittings.
 - 3. Sleeve-seal systems.
 - 4. Sleeve-seal fittings.
 - 5. Grout.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.

1.4 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
- E. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- F. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
- G. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.

2.2 STACK-SLEEVE FITTINGS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. Smith, Jay R. Mfg. Co.
 - 2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
 - 3. **<Insert manufacturer's name>**.
 - 4. or approved equal.
- B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with setscrews.

2.3 SLEEVE-SEAL SYSTEMS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. Advance Products & Systems, Inc.
 - 2. CALPICO, Inc.
 - 3. Metraflex Company (The).
 - 4. Pipeline Seal and Insulator, Inc.
 - 5. Proco Products, Inc.
 - 6. **<Insert manufacturer's name>**.
 - 7. or approved equal.
- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
 - 1. Sealing Elements: **[EPDM-rubber] [NBR]** interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.

2. Pressure Plates: **[Carbon steel] [Plastic] [Stainless steel]**.
3. Connecting Bolts and Nuts: **[Carbon steel, with corrosion-resistant coating,] [Stainless steel]** of length required to secure pressure plates to sealing elements.

2.4 SLEEVE-SEAL FITTINGS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. Presealed Systems.
2. **<Insert manufacturer's name>**.
3. or approved equal.

B. Description: Manufactured plastic, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber waterstop collar with center opening to match piping OD.

2.5 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: **5000-psi (34.5-MPa)**, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide **[1-inch (25-mm)] <Insert dimension>** annular clear space between piping and concrete slabs and walls.
 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.

2. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas [2 inches (50 mm)] <Insert dimension> above finished floor level.
 3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
1. Cut sleeves to length for mounting flush with both surfaces.
 2. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Section 079200 "Joint Sealants."
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 078413 "Penetration Firestopping."

3.2 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
1. Install fittings that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
 2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section 076200 "Sheet Metal Flashing and Trim."
 3. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level.
 4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
 5. Using grout, seal the space around outside of stack-sleeve fittings.
- B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 078413 "Penetration Firestopping."

3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space

between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.4 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

3.5 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
 - 1. Exterior Concrete Walls above Grade:
 - a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Cast-iron wall sleeves] [Galvanized-steel wall sleeves] [Galvanized-steel-pipe sleeves] [Sleeve-seal fittings] <Insert material>.
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: [Cast-iron wall sleeves] [Galvanized-steel wall sleeves] [Galvanized-steel-pipe sleeves] <Insert material>.
 - 2. Exterior Concrete Walls below Grade:
 - a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Sleeve-seal fittings] <Insert material>.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] <Insert material>.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - 3. Concrete Slabs-on-Grade:
 - a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with

sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Sleeve-seal fittings] <Insert material>.

- 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: **[Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves] <Insert material>.**
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
4. Concrete Slabs above Grade:
- a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: **[Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] [Stack-sleeve fittings] [Sleeve-seal fittings] [Molded-PE or -PP sleeves] [Molded-PVC sleeves] <Insert material>.**
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: **[Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] [Stack-sleeve fittings] <Insert material>.**
5. Interior Partitions:
- a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: **[Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] <Insert material>.**
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: **[Galvanized-steel-sheet sleeves] <Insert material>.**

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230517

SECTION 230518 - ESCUTCHEONS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.
 - 2. Floor plates.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.

1.4 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

- A. One-Piece, Cast-Brass Type: With **[polished, chrome-plated]** **[and]** **[rough-brass]** finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.

- D. Split-Casting Brass Type: With **[polished, chrome-plated]** **[and]** **[rough-brass]** finish and with concealed hinge and setscrew.
- E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, **[concealed]** **[and]** **[exposed-rivet]** hinge, and spring-clip fasteners.

2.2 FLOOR PLATES

- A. One-Piece Floor Plates: Cast-iron flange[**with holes for fasteners**].
- B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Chrome-Plated Piping: One-piece, cast-brass[**or split-casting brass**] type with polished, chrome-plated finish.
 - c. Insulated Piping: One-piece, stamped-steel type[**or split-plate, stamped-steel type with concealed hinge**] [**or split-plate, stamped-steel type with exposed-rivet hinge**].
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass[**or split-casting brass**] type with polished, chrome-plated finish.
 - e. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type[**or split-plate, stamped-steel type with concealed hinge**] [**or split-plate, stamped-steel type with exposed-rivet hinge**].
 - f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass[**or split-casting brass**] type with polished, chrome-plated finish.
 - g. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type[**or split-plate, stamped-steel type with concealed hinge**] [**or split-plate, stamped-steel type with exposed-rivet hinge**].
 - h. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass[**or split-casting brass**] type with **[polished, chrome-plated]** **[rough-brass]** finish.
 - i. Bare Piping in Unfinished Service Spaces: One-piece, stamped-steel type[**or split-plate, stamped-steel type with concealed hinge**] [**or split-plate, stamped-steel type with exposed-rivet hinge**].

- j. Bare Piping in Equipment Rooms: One-piece, cast-brass[**or split-casting brass**] type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - k. Bare Piping in Equipment Rooms: One-piece, stamped-steel type[**or split-plate, stamped-steel type with concealed hinge**] [**or split-plate, stamped-steel type with exposed-rivet hinge**].
2. Escutcheons for Existing Piping:
- a. Chrome-Plated Piping: Split-casting brass type with polished, chrome-plated finish.
 - b. Insulated Piping: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
 - c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-casting brass type with polished, chrome-plated finish.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
 - e. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-casting brass type with polished, chrome-plated finish.
 - f. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
 - g. Bare Piping in Unfinished Service Spaces: Split-casting brass type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - h. Bare Piping in Unfinished Service Spaces: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
 - i. Bare Piping in Equipment Rooms: Split-casting brass type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - j. Bare Piping in Equipment Rooms: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
- 1. New Piping: One-piece, floor-plate type.
 - 2. Existing Piping: Split-casting, floor-plate type.

3.2 FIELD QUALITY CONTROL

- A. Replace broken and damaged escutcheons and floor plates using new materials.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230518

SECTION 230519 - METERS AND GAUGES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Bimetallic-actuated thermometers.
2. Filled-system thermometers.
3. Liquid-in-glass thermometers.
4. Light-activated thermometers.
5. Thermowells.
6. Dial-type pressure gauges.
7. Gauge attachments.
8. Test plugs.
9. Test-plug kits.
10. Sight flow indicators.
11. Orifice flowmeters.
12. Pitot-tube flowmeters.
13. Turbine flowmeters.
14. Venturi flowmeters.
15. Vortex-shedding flowmeters.
16. Impeller-turbine, thermal-energy meters.
17. Ultrasonic, thermal-energy meters.

- B. Related Sections:

1. Section 231123 "Facility Natural-Gas Piping" for gas meters.
2. Section 232216 "Steam and Condensate Piping Specialties" for steam and condensate meters.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1. Provide list, which indicates use, operating range, total range, and location for

- manufactured components.
 - 2. Include data substantiating that materials comply with requirements.
 - B. Wiring Diagrams: For power, signal, and control wiring.
- 1.4 INFORMATIONAL SUBMITTALS
- A. Product Certificates: For each type of meter and gauge, from manufacturer.
- 1.5 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For meters and gauges to include in operation and maintenance manuals.
 - B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of components and instrumentation.
- 1.6 ENVIRONMENTAL REQUIREMENTS
- A. Do not install instrumentation when areas are under construction, except for required rough-in, taps, supports and test plugs.
- 1.7 EXTRA MATERIALS
- A. Provide [**two (2)**] <Insert number> bottles of red gauge oil for static pressure gauges.
 - B. Provide [**two (2)**] <Insert number> [**pressure gauges with pulsation damper**] [**dial thermometers**].
- 1.8 CONSTRUCTION WASTE MANAGEMENT
- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 BIMETALLIC-ACTUATED THERMOMETERS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Ashcroft Inc.](#)
 2. [Ernst Flow Industries.](#)
 3. [Marsh Bellofram.](#)
 4. [Miljoco Corporation.](#)
 5. [Nanmac Corporation.](#)
 6. [Noshok.](#)
 7. [Palmer Wahl Instrumentation Group.](#)
 8. [REOTEMP Instrument Corporation.](#)
 9. [Tel-Tru Manufacturing Company.](#)
 10. [Trerice, H. O. Co.](#)
 11. [Watts Regulator Co.: a div. of Watts Water Technologies, Inc.](#)
 12. [Weiss Instruments, Inc.](#)
 13. [WIKA Instrument Corporation - USA.](#)
 14. [Winters Instruments - U.S.](#)
 15. <Insert manufacturer's name>.
 16. or approved equal.
- B. Standard: ASME B40.200.
- C. Case: Liquid-filled type(s); stainless steel with [3-inch (76-mm)] [5-inch (127-mm)] <Insert dimension> nominal diameter.
- D. Dial: [**Nonreflective aluminum**] <Insert material> with permanently etched scale markings and scales in [deg F (deg C)] [**deg F and deg C**].
- E. Connector Type(s): Union joint, [**adjustable angle**] [**rigid, back**] [**and**] [**rigid, bottom**] <Insert type>, with unified-inch screw threads.
- F. Connector Size: [1/2 inch (13 mm)] <Insert dimension>, with ASME B1.1 screw threads.
- G. Stem: 0.25 or 0.375 inch (6.4 or 9.4 mm) in diameter; stainless steel.
- H. Window: Plain glass <Insert material>.
- I. Ring: Stainless steel.
- J. Element: Bimetal coil.
- K. Pointer: Dark-colored metal.
- L. Accuracy: Plus or minus [1] [1.5] <Insert number> percent of scale range.
- 2.2 FILLED-SYSTEM THERMOMETERS
- A. Direct-Mounted, Metal-Case, Vapor-Actuated Thermometers:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Ashcroft Inc.](#)
 - b. [Marsh Bellofram.](#)
 - c. [Miljoco Corporation.](#)
 - d. [Palmer Wahl Instrumentation Group.](#)
 - e. [REOTEMP Instrument Corporation.](#)
 - f. [Trerice, H. O. Co.](#)
 - g. [Weiss Instruments, Inc.](#)
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Standard: ASME B40.200.
 3. Case: Sealed type, **[cast aluminum or drawn steel]** **<Insert material>**;
[4-1/2-inch (114-mm)] [5-inch (127-mm)] [6-inch (152-mm)] <Insert dimension>
nominal diameter.
 4. Element: Bourdon tube or other type of pressure element.
 5. Movement: Mechanical, **[dampening type,]** with link to pressure element and
connection to pointer.
 6. Dial: Nonreflective aluminum with permanently etched scale markings graduated
in **[deg F (deg C)] [deg F and deg C]**.
 7. Pointer: Dark-colored metal.
 8. Window: **[Glass] [or] [plastic]** **<Insert material>**.
 9. Ring: **[Metal] [Stainless steel]** **<Insert material>**.
 10. Connector Type(s): Union joint, **[adjustable, 180 degrees in vertical plane, 360
degrees in horizontal plane, with locking device] [rigid, back] [and] [rigid,
bottom]**; with ASME B1.1 screw threads.
 11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass
stem and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.
 12. Accuracy: Plus or minus **[1]** **<Insert number>** percent of scale range.
- B. Direct-Mounted, Plastic-Case, Vapor-Actuated Thermometers:
1. **Manufacturers: Subject to compliance with requirements, provide products by
one of the following:**
 - a. [Ashcroft Inc.](#)
 - b. [Miljoco Corporation.](#)
 - c. [REOTEMP Instrument Corporation.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Standard: ASME B40.200.
 3. Case: Sealed type, **[plastic]** **<Insert material>**; **[4-1/2-inch (114-mm)] [5-inch
(127-mm)] [6-inch (152-mm)] <Insert dimension>** nominal diameter.
 4. Element: Bourdon tube or other type of pressure element.
 5. Movement: Mechanical, with link to pressure element and connection to pointer.
 6. Dial: Nonreflective aluminum with permanently etched scale markings graduated

- in [deg F (deg C)] [deg F and deg C].
7. Pointer: Dark-colored metal.
 8. Window: [Glass] [or] [plastic] <Insert material>.
 9. Ring: [Metal] [or] [plastic] <Insert material>.
 10. Connector Type(s): Union joint, [adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device] [rigid, back] [and] [rigid, bottom]; with ASME B1.1 screw threads.
 11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.
 12. Accuracy: Plus or minus [1] <Insert number> percent of scale range.
- C. Remote-Mounted, Metal-Case, Vapor-Actuated Thermometers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AMETEK, Inc.; U.S. Gauge.](#)
 - b. [Ashcroft Inc.](#)
 - c. [Marsh Bellofram.](#)
 - d. [Miljoco Corporation.](#)
 - e. [Palmer Wahl Instrumentation Group.](#)
 - f. [REOTEMP Instrument Corporation.](#)
 - g. [Trerice, H. O. Co.](#)
 - h. [Weiss Instruments, Inc.](#)
 - i. [WIKA Instrument Corporation - USA.](#)
 - j. <Insert manufacturer's name>.
 - k. or approved equal.
 2. Standard: ASME B40.200.
 3. Case: Sealed type, [cast aluminum or drawn steel] <Insert material>; [4-1/2-inch (114-mm)] [6-inch (152-mm)] <Insert dimension> nominal diameter with [back] [front] flange and holes for panel mounting.
 4. Element: Bourdon tube or other type of pressure element.
 5. Movement: Mechanical, with link to pressure element and connection to pointer.
 6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [deg F (deg C)] [deg F and deg C].
 7. Pointer: Dark-colored metal.
 8. Window: [Glass] [or] [plastic] <Insert material>.
 9. Ring: [Metal] [Stainless steel] <Insert material>.
 10. Connector Type(s): Union joint, [back] [bottom]; with ASME B1.1 screw threads.
 11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.

12. Accuracy: Plus or minus [1] <Insert number> percent of scale range.

D. Remote-Mounted, Plastic-Case, Vapor-Actuated Thermometers:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [AMETEK, Inc.; U.S. Gauge.](#)
- b. [Ashcroft Inc.](#)
- c. [Miljoco Corporation.](#)
- d. [REOTEMP Instrument Corporation.](#)
- e. [Trerice, H. O. Co.](#)
- f. <Insert manufacturer's name>.
- g. or approved equal.

2. Standard: ASME B40.200.

3. Case: Sealed type, [plastic] <Insert material>; [4-1/2-inch (114-mm)] [6-inch (152-mm)] <Insert dimension> nominal diameter with [back] [front] flange and holes for panel mounting.

4. Element: Bourdon tube or other type of pressure element.

5. Movement: Mechanical, with link to pressure element and connection to pointer.

6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [deg F (deg C)] [deg F and deg C].

7. Pointer: Dark-colored metal.

8. Window: [Glass] [or] [plastic] <Insert material>.

9. Ring: [Metal] [or] [plastic] <Insert material>.

10. Connector Type(s): Union joint, threaded, [back] [bottom]; with ASME B1.1 screw threads.

11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.

- a. Design for Air-Duct Installation: With ventilated shroud.
- b. Design for Thermowell Installation: Bare stem.

12. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.3 LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Compact-Style, Liquid-in-Glass Thermometers:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Trerice, H. O. Co.](#)
- b. <Insert manufacturer's name>.
- c. or approved equal.

2. Standard: ASME B40.200.

3. Case: [**Cast aluminum**] <Insert material>; 6-inch (152-mm) nominal size.
4. Case Form: [**Back angle**] [**Straight**] unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue[**or red**] organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in [deg F (deg C)] [**deg F and deg C**].
7. Window: Glass or plastic.
8. Stem: Aluminum or brass and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.
9. Connector: 3/4 inch (19 mm), with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

B. Plastic-Case, Compact-Style, Liquid-in-Glass Thermometers:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Flo Fab Inc.](#)
 - b. [Miljoco Corporation.](#)
 - c. [Tel-Tru Manufacturing Company.](#)
 - d. [Watts Regulator Co.; a div. of Watts Water Technologies, Inc.](#)
 - e. [Weiss Instruments, Inc.](#)
 - f. [WIKA Instrument Corporation - USA.](#)
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
2. Standard: ASME B40.200.
3. Case: [**Plastic**] <Insert material>; 6-inch (152-mm) nominal size.
4. Case Form: [**Back angle**] [**Straight**] unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue[**or red**] organic liquid.
6. Tube Background: Nonreflective with permanently etched scale markings graduated in [deg F (deg C)] [**deg F and deg C**].
7. Window: Glass or plastic.
8. Stem: Aluminum or brass and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.
9. Connector: 3/4 inch (19 mm), with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

C. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Flo Fab Inc.](#)
 - b. [Miljoco Corporation.](#)
 - c. [Palmer Wahl Instrumentation Group.](#)
 - d. [Tel-Tru Manufacturing Company.](#)
 - e. [Trerice, H. O. Co.](#)
 - f. [Weiss Instruments, Inc.](#)
 - g. [Winters Instruments - U.S.](#)
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Standard: ASME B40.200.
 3. Case: [**Cast aluminum**] **<Insert material>**; [7-inch (178-mm)] [9-inch (229-mm)] nominal size unless otherwise indicated.
 4. Case Form: [**Adjustable angle**] [**Back angle**] [**Straight**] **<Insert form>** unless otherwise indicated.
 5. Tube: Glass with magnifying lens and blue[**or red**] organic liquid.
 6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in [deg F (deg C)] [**deg F and deg C**].
 7. Window: [**Glass**] [**or**] [**plastic**] **<Insert material>**.
 8. Stem: [**Aluminum**] **<Insert material>** and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.
 9. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.
 10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.4 LIGHT-ACTIVATED THERMOMETERS

A. Direct-Mounted, Light-Activated Thermometers:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Flo Fab Inc.](#)
 - b. [REOTEMP Instrument Corporation.](#)
 - c. [Trerice, H. O. Co.](#)
 - d. [Weiss Instruments, Inc.](#)
 - e. [WIKA Instrument Corporation - USA.](#)
 - f. [Winters Instruments - U.S.](#)
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Case: [**Plastic**] [**Metal**] **<Insert material>**; [7-inch (178-mm)] [9-inch (229-mm)] nominal size unless otherwise indicated.
3. Scale(s): [Deg F (Deg C)] [**Deg F and deg C**].
4. Case Form: [**Adjustable angle**] **<Insert form>**.
5. Connector: [1-1/4 inches (32 mm)] **<Insert dimension>**, with ASME B1.1 screw

- threads.
6. Stem: [**Aluminum**] <Insert material> and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.
 7. Display: Digital.
 8. Accuracy: Plus or minus 2 deg F (1 deg C).

B. Remote-Mounted, Light-Activated Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Miljoco Corporation](#).
 - b. [Weiss Instruments, Inc.](#)
 - c. [Winters Instruments - U.S.](#)
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
2. Case: Plastic, for wall mounting.
3. Scale(s): [Deg F (Deg C)] [**Deg F and deg C**].
4. Sensor: Bulb and thermister wire.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.
5. Display: Digital.
6. Accuracy: Plus or minus 2 deg F (1 deg C).

2.5 DUCT-THERMOMETER MOUNTING BRACKETS

- A. Socket: Brass separable sockets for thermometer stems with extensions where necessary to clear insulation, and with cap and chain.
- B. Description: Flanged bracket with screw holes, for attachment to air duct and made to hold thermometer stem.
 1. Flange: 3-inch outside diameter reversible flange, designed to fasten to sheet metal air ducts, with brass perforated stem.

2.6 THERMOWELLS

- A. Thermowells:
 1. Standard: ASME B40.200.
 2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
 3. Material for Use with Copper Tubing: [**CNR**] [or] [**CUNI**] <Insert material>.

4. Material for Use with Steel Piping: **[CRES] [CSA] <Insert material>**.
5. Type: Stepped shank unless straight or tapered shank is indicated.
6. External Threads: **NPS 1/2, NPS 3/4, or NPS 1**, (DN 15, DN 20, or NPS 25,) ASME B1.20.1 pipe threads.
7. Internal Threads: **1/2, 3/4, and 1 inch** (13, 19, and 25 mm), with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required to match thermometer bulb or stem.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: **[Mixture of graphite and glycerin] <Insert material>**.

2.7 PRESSURE GAUGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gauges:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [AMETEK, Inc.; U.S. Gauge.](#)
 - b. [Ashcroft Inc.](#)
 - c. [Ernst Flow Industries.](#)
 - d. [Flo Fab Inc.](#)
 - e. [Marsh Bellofram.](#)
 - f. [Miljoco Corporation.](#)
 - g. [Noshok.](#)
 - h. [Palmer Wahl Instrumentation Group.](#)
 - i. [REOTEMP Instrument Corporation.](#)
 - j. [Tel-Tru Manufacturing Company.](#)
 - k. [Trerice, H. O. Co.](#)
 - l. [Watts Regulator Co.; a div. of Watts Water Technologies, Inc.](#)
 - m. [Weiss Instruments, Inc.](#)
 - n. [WIKA Instrument Corporation - USA.](#)
 - o. [Winters Instruments - U.S.](#)
 - p. **<Insert manufacturer's name>**.
 - q. or approved equal.
2. Standard: ASME B40.100.
3. Case: **[Liquid-filled] [Open-front, pressure relief] [Solid-front, pressure relief] <Insert type>** type(s); **[cast aluminum or drawn steel] <Insert material>**; **[4-1/2-inch (114-mm)] [6-inch (152-mm)] <Insert dimension>** nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with **[NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)]**, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated

- in [psi (kPa)] [psi and kPa].
8. Pointer: Dark-colored metal.
 9. Window: [Glass] <Insert material>.
 10. Ring: [Metal] [Brass] [Stainless steel].
 11. Accuracy: [Grade A, plus or minus 1 percent of middle half of] scale range.

B. Remote-Mounted, Metal-Case, Dial-Type Pressure Gauges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AMETEK, Inc.: U.S. Gauge.](#)
 - b. [Ashcroft Inc.](#)
 - c. [Ernst Flow Industries.](#)
 - d. [Flo Fab Inc.](#)
 - e. [Marsh Bellofram.](#)
 - f. [Miljoco Corporation.](#)
 - g. [Noshok.](#)
 - h. [Palmer Wahl Instrumentation Group.](#)
 - i. [REOTEMP Instrument Corporation.](#)
 - j. [Tel-Tru Manufacturing Company.](#)
 - k. [Trerice, H. O. Co.](#)
 - l. [Watts Regulator Co.: a div. of Watts Water Technologies, Inc.](#)
 - m. [Weiss Instruments, Inc.](#)
 - n. [WIKA Instrument Corporation - USA.](#)
 - o. [Winters Instruments - U.S.](#)
 - p. <Insert manufacturer's name>.
 - q. or approved equal.
2. Standard: ASME B40.100.
3. Case: [Liquid-filled] <Insert type> type; [cast aluminum or drawn steel] [metal] <Insert material>; [4-1/2-inch (114-mm)] [6-inch (152-mm)] <Insert dimension> nominal diameter with [back] [front] flange and holes for panel mounting.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with [NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)], ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [psi (kPa)] [psi and kPa].
8. Pointer: Dark-colored metal.
9. Window: [Glass] <Insert material>.
10. Ring: [Metal] [Stainless steel] <Insert material>.
11. Accuracy: [Grade A, plus or minus 1 percent of middle half of] [Grade B, plus or minus 2 percent of middle half of] [Grade C, plus or minus 3 percent of middle half of] [Grade D, plus or minus 5 percent of whole] scale range.

2.8 GAUGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with [NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)], ASME B1.20.1 pipe threads and [piston] [porous-metal]-type surge-dampening device. Include extension for use on insulated piping.
- B. Siphons: Loop-shaped section of [brass] [stainless-steel] [steel] pipe with [NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)] pipe threads.
- C. Valves: Stainless-steel needle, with [NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)], ASME B1.20.1 pipe threads.

2.9 TEST PLUGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Flow Design, Inc.](#)
 - 2. [Miljoco Corporation.](#)
 - 3. [National Meter, Inc.](#)
 - 4. [Peterson Equipment Co., Inc.](#)
 - 5. [Sisco Manufacturing Company, Inc.](#)
 - 6. [Trerice, H. O. Co.](#)
 - 7. [Watts Regulator Co.; a div. of Watts Water Technologies, Inc.](#)
 - 8. [Weiss Instruments, Inc.](#)
 - 9. <Insert manufacturer's name>.
 - 10. or approved equal.
- B. Description: Test-station fitting made for insertion into piping tee fitting.
- C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
- D. Thread Size: [NPS 1/4 (DN 8)] [or] [NPS 1/2 (DN 15)], ASME B1.20.1 pipe thread.
- E. Minimum Pressure and Temperature Rating: [500 psig at 200 deg F (3450 kPa at 93 deg C)] <Insert ratings>.
- F. Core Inserts: [Chlorosulfonated polyethylene synthetic] [and] [EPDM] self-sealing rubber.

2.10 TEST-PLUG KITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Flow Design, Inc.](#)
 - 2. [Miljoco Corporation.](#)

3. [National Meter, Inc.](#)
 4. [Peterson Equipment Co., Inc.](#)
 5. [Sisco Manufacturing Company, Inc.](#)
 6. [Trerice, H. O. Co.](#)
 7. [Watts Regulator Co.; a div. of Watts Water Technologies, Inc.](#)
 8. [Weiss Instruments, Inc.](#)
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Furnish **[one]** **<Insert number>** test-plug kit(s) containing **[one]** **[two]** thermometer(s), one pressure gauge and adapter, and carrying case. Thermometer sensing elements, pressure gauge, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.
- C. Low-Range Thermometer: Small, bimetallic insertion type with **[1- to 2-inch- (25- to 51-mm-)]** **<Insert dimension>** diameter dial and tapered-end sensing element. Dial range shall be at least **[25 to 125 deg F (minus 4 to plus 52 deg C)]** **<Insert temperature range>**.
- D. High-Range Thermometer: Small, bimetallic insertion type with **[1- to 2-inch- (25- to 51-mm-)]** **<Insert dimension>** diameter dial and tapered-end sensing element. Dial range shall be at least **[0 to 300 deg F (minus 18 to plus 149 deg C)]** **<Insert temperature range>**.
- E. Pressure Gauge: Small, Bourdon-tube insertion type with **[2- to 3-inch- (51- to 76-mm-)]** **<Insert dimension>** diameter dial and probe. Dial range shall be at least **[0 to 200 psig (0 to 1380 kPa)]** **<Insert range>**.
- F. Carrying Case: Metal or plastic, with formed instrument padding.

2.11 SIGHT FLOW INDICATORS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
1. [Archon Industries, Inc.](#)
 2. [Dwyer Instruments, Inc.](#)
 3. [Emerson Process Management; Brooks Instrument.](#)
 4. [Ernst Co., John C., Inc.](#)
 5. [Ernst Flow Industries.](#)
 6. [KOBOLD Instruments, Inc. - USA; KOBOLD Messring GmbH.](#)
 7. [OPW Engineered Systems; a Dover company.](#)
 8. [Penberthy; A Brand of Tyco Valves & Controls - Prophetstown.](#)
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Description: Piping inline-installation device for visual verification of flow.
- C. Construction: Bronze or stainless-steel body, with sight glass and **[ball, flapper, or**

paddle wheel] <Insert device> indicator, and threaded or flanged ends.

- D. Minimum Pressure Rating: [125 psig (860 kPa)] [150 psig (1034 kPa)] <Insert value>.
- E. Minimum Temperature Rating: [200 deg F (93 deg C)] <Insert temperature>.
- F. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
- G. End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged.

2.12 FLOWMETERS

A. Turbine Flowmeters:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [ABB; Instrumentation and Analytical.](#)
 - b. [Data Industrial Corp.](#)
 - c. [EMCO Flow Systems; a division of Spirax Sarco, Inc.](#)
 - d. [ERDCO Engineering Corp.](#)
 - e. [Hoffer Flow Controls, Inc.](#)
 - f. [Liquid Controls; a unit of IDEX Corporation.](#)
 - g. [McCrometer, Inc.](#)
 - h. [Midwest Instruments & Controls Corp.](#)
 - i. [ONICON Incorporated.](#)
 - j. [SeaMetrics, Inc.](#)
 - k. [Sponsler, Inc.; a unit of IDEX Corporation.](#)
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
2. Description: Flowmeter with sensor and indicator.
3. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.
4. Sensor: Impeller turbine; for inserting into pipefitting or for installing in piping and measuring flow directly in **gallons per minute** (liters per second).
 - a. Design: Device or pipe fitting with inline turbine and integral direct-reading scale for **[gas] [oil] [steam] [water]** <Insert fluid>.
 - b. Construction: Bronze or stainless-steel body, with plastic turbine or impeller.
 - c. Minimum Pressure Rating: [150 psig (1035 kPa)] <Insert value>.
 - d. Minimum Temperature Rating: [180 deg F (82 deg C)] <Insert temperature>.
5. Indicator: Hand-held meter; either an integral part of sensor or a separate meter.
6. Accuracy: Plus or minus [1-1/2] <Insert number> percent.
7. Display: Shows rate of flow[, **with register to indicate total volume in gallons** (liters)].

8. Operating Instructions: Include complete instructions with each flowmeter.

2.13 THERMAL-ENERGY METERS

A. Impeller-Turbine, Thermal-Energy Meters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Data Industrial Corp.](#)
- b. [Hoffer Flow Controls, Inc.](#)
- c. [ISTEC Corporation.](#)
- d. [ONICON Incorporated.](#)
- e. **<Insert manufacturer's name>.**
- f. or approved equal.

2. Description: System with[**strainer**,] flow sensor, temperature sensors, transmitter, indicator, and connecting wiring.
3. Flow Sensor: Impeller turbine with corrosion-resistant-metal body and transmitter; for installing in piping.
 - a. Design: Total thermal-energy measurement.
 - b. Minimum Pressure Rating: [150 psig (1035 kPa)] **<Insert value>.**
 - c. Minimum Temperature Range: [40 to 250 deg F (5 to 121 deg C)] **<Insert temperature range>.**
4. Temperature Sensors: Insertion-type transducer.
5. Indicator: Solid-state, integrating-type meter[**with integral battery pack**]; for wall mounting.
 - a. Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or **British thermal units** (joules).
 - b. Battery Pack: Five-year lithium battery.
6. Accuracy: Plus or minus [1] **<Insert number>** percent.
7. Display: Visually indicates total fluid volume in **gallons** (liters) and thermal-energy flow in kilowatts per hour or **British thermal units** (joules).
8. Strainer: Full size of main line piping.
9. Operating Instructions: Include complete instructions with each thermal-energy meter system.

B. Ultrasonic, Thermal-Energy Meters:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [EMCO Flow Systems; a division of Spirax Sarco, Inc.](#)
- b. [Siemens Energy & Automation, Inc.](#)
- c. **<Insert manufacturer's name>.**
- d. or approved equal.

2. Description: Meter with flow sensor, temperature sensors, transmitter, indicator, and connecting wiring.
3. Flow Sensor: Transit-time ultrasonic type with transmitter.
4. Temperature Sensors: Insertion-type or strap-on transducer.
5. Indicator: Solid-state, integrating-type meter[**with integral battery pack**].
 - a. Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or **British thermal units (joules)**.
 - b. Battery Pack: Five-year lithium battery.
6. Accuracy: Plus or minus [1] **<Insert number>** percent.
7. Display: Visually indicates total fluid volume in **gallons (liters)** and thermal-energy flow in kilowatts per hour or **British thermal units (joules)**.
8. Operating Instructions: Include complete instructions with each thermal-energy meter system.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install positive displacement meters with isolating valves on inlet and outlet. Provide full line size valved bypass with globe valve for liquid service meters.
- C. Provide one pressure gauge per pump. Install taps before strainers and on suction and discharge of pumps and manifold to a single pressure gauge with an isolation valve for each leg of the manifold.
- D. Install pressure gauges with pulsation dampers. Provide needle valve to isolate each gauge. Extend nipples to allow clearance from insulation.
- E. Install thermometers in piping systems in sockets in short couplings. Enlarge pipes smaller than 2-1/2 inch for installation of thermometer sockets. Ensure sockets allow clearance from insulation.
- F. Install thermometer sockets adjacent to controls systems thermostat, transmitter, or sensor sockets. Where thermometers are provided on local panels, duct or pipe mounted thermometers are not required.
- G. Locate duct mounted thermometers minimum 10 feet downstream of mixing dampers, coils, or other devices causing air turbulence.
- H. Coil and conceal excess capillary on remote element instruments.
- I. Provide instruments with scale ranges selected according to service with largest appropriate scale.
- J. Install gauges, thermometers and test plug in locations where there is an unobstructed

field of view from a normal operating level. All portions of gauges and thermometers shall be easily read from a normal operating level. Locations of test plugs shall be treated as a gauges or thermometers for installation and field of view verification.

- K. Install thermowells with socket extending [**a minimum of 2 inches (51 mm) into fluid**] [**one-third of pipe diameter**] [**to center of pipe**] and in vertical position in piping tees.
- L. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- M. Install thermowells with extension on insulated piping.
- N. Fill thermowells with heat-transfer medium.
- O. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- P. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
- Q. Install direct-mounted pressure gauges in piping tees with pressure gauge located on pipe in vertical to 45 degrees off vertical at the most readable position.
- R. Install remote-mounted pressure gauges on panel.
- S. Install valve and snubber in piping for each pressure gauge for fluids (except steam).
- T. Install valve and syphon fitting in piping for each pressure gauge for steam.
- U. Install test plugs in piping tees.
- V. Locate test plugs [adjacent to thermometers and thermometer sockets] [**adjacent to pressure gauges and pressure gauge taps**] [**adjacent to pressure gauges and pressure gauge taps**] [**adjacent to control device sockets**] [**where indicated**].
- W. Install flow indicators in piping systems in accessible positions for easy viewing.
- X. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer's written instructions.
- Y. Install flowmeter elements in accessible positions in piping systems.
- Z. Install differential-pressure-type flowmeter elements, with at least minimum straight lengths of pipe, upstream and downstream from element according to manufacturer's written instructions.
- AA. Install permanent indicators on walls or brackets in accessible and readable positions.
- BB. Install connection fittings in accessible locations for attachment to portable indicators.

CC. Mount thermal-energy meters on wall if accessible; if not, provide brackets to support meters.

DD. Install thermometers in the following locations:

1. Inlet and outlet of each hydronic zone.
2. Inlet and outlet of each hydronic boiler.
3. Two inlets and two outlets of each chiller.
4. Inlet and outlet of each hydronic coil in air-handling units.
5. Two inlets and two outlets of each hydronic heat exchanger.
6. Inlet and outlet of each thermal-storage tank.
7. **<Insert location>**.

EE. Install pressure gauges in the following locations:

1. Inlet and outlet of each pressure-reducing valve.
2. Inlet and outlet of each chiller, cooling tower, boiler, and heat exchanger downstream of any balancing valve.
3. Suction and discharge of each pump.
4. Inlet and outlet of any strainer or filter.
5. Inlet of expansion tanks.
6. **<Insert location>**.

FF. Pressure and Temperature plugs:

1. Inlet and outlet of all coils.
2. **<Insert location>**

3.2 CONNECTIONS

- A. Install meters and gauges adjacent to machines and equipment to allow service and maintenance of meters, gauges, machines, and equipment.
- B. Connect flowmeter-system elements to meters.
- C. Connect flowmeter transmitters to meters.
- D. Connect thermal-energy meter transmitters to meters.

3.3 ADJUSTING

- A. After installation, calibrate meters according to manufacturer's written instructions.
- B. Adjust faces of meters and gauges to proper angle for best visibility, clean windows and lenses, and calibrate to zero.

3.4 THERMOMETER SCHEDULE

- A. Thermometers at inlet and outlet of each hydronic zone shall be[**one of**] the following:
1. Liquid-filled, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, metal-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- B. Thermometers at inlet and outlet of each hydronic boiler shall be[**one of**] the following:
1. Liquid-filled bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, metal-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- C. Thermometers at inlets and outlets of each chiller shall be[**one of**] the following:
1. Liquid-filled, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, metal-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- D. Thermometers at inlet and outlet of each hydronic coil in air-handling units and built-up central systems shall be[**one of**] the following:
1. Liquid-filled, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, metal-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- E. Thermometers at inlets and outlets of each hydronic heat exchanger shall be[**one of**] the following:
1. Liquid-filled, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, metal-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.

- F. Thermometers at inlet and outlet of each hydronic heat-recovery unit shall be **[one of]** the following:
1. Liquid-filled, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, metal-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- G. Thermometers at inlet and outlet of each thermal-storage tank shall be **[one of]** the following:
1. Liquid-filled, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, metal-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.

3.5 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: **[0 to 100 deg F (Minus 20 to plus 50 deg C)] [0 to 100 deg F and minus 20 to plus 50 deg C]**.
- B. Scale Range for Condenser-Water Piping: **[0 to 150 deg F (Minus 20 to plus 70 deg C)] [0 to 150 deg F and minus 20 to plus 70 deg C]**.
- C. Scale Range for Heating, Hot-Water Piping: **[50 to 400 deg F (0 to 200 deg C)] [50 to 400 deg F and 0 to 200 deg C]**.

3.6 PRESSURE-GAUGE SCHEDULE

- A. Pressure gauges at discharge of each pressure-reducing valve shall be **[one of]** the following:
1. **[Liquid-filled] [Open-front, pressure-relief] [Solid-front, pressure-relief] <Insert type>**, **[direct] [remote]**-mounted, metal case.
 2. **[Sealed] <Insert type>**, **[direct] [remote]**-mounted, plastic case.
 3. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- B. Pressure gauges at inlet and outlet of each chiller chilled-water and condenser-water connection shall be **[one of]** the following:
1. **[Liquid-filled] [Open-front, pressure-relief] [Solid-front, pressure-relief] <Insert type>**, **[direct] [remote]**-mounted, metal case.
 2. **[Sealed] <Insert type>**, **[direct] [remote]**-mounted, plastic case.
 3. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing

rubber inserts.

- C. Pressure gauges at suction and discharge of each pump shall be **[one of]** the following:
1. **[Liquid-filled] [Open-front, pressure-relief] [Solid-front, pressure-relief] <Insert type>**, **[direct] [remote]**-mounted, metal case.
 2. **[Sealed] <Insert type>**, **[direct] [remote]**-mounted, plastic case.
 3. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.

3.7 PRESSURE-GAUGE SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: **[0 to 160 psi (0 to 1100 kPa)] [0 to 160 psi and 0 to 1100 kPa]**.
- B. Scale Range for Condenser-Water Piping: **[0 to 160 psi (0 to 1100 kPa)] [0 to 160 psi and 0 to 1100 kPa]**.
- C. Scale Range for Heating, Hot-Water Piping: **[0 to 160 psi (0 to 1100 kPa)] [0 to 160 psi and 0 to 1100 kPa]**.

3.8 FLOWMETER SCHEDULE

- A. Flowmeters for Chilled-Water Piping: Turbine type.
- B. Flowmeters for Condenser-Water Piping: Turbine type.
- C. Flowmeters for Heating, Hot-Water Piping: Turbine type.
- D. Flowmeters for Steam and Steam-Condensate Piping: Turbine type.

3.9 THERMAL-ENERGY METER SCHEDULE

- A. Thermal-Energy Meters for Chilled-Water Piping: Impeller-turbine type.
- B. Thermal-Energy Meters for Condenser-Water Piping: Impeller-turbine type.
- C. Thermal-Energy Meters for Heating, Hot-Water Piping: Impeller-turbine type.
- D. Thermal-Energy Meters for Steam and Steam-Condensate Piping: Impeller-turbine type.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230519

SECTION 230523.11 - GLOBE VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Bronze angle valves.
 - 2. Bronze globe valves.
 - 3. Iron globe valves.
 - 4. Chainwheels.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of valve and accessory. Provide manufacturers catalog information. Indicate valve data and ratings.
 - 1. Include data substantiating that materials comply with requirements.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of valves.

C. EXTRA MATERIALS

1. Provide two (2) repacking kits for each type and size valve.

1.6 QUALITY ASSURANCE

- A. Valves: Manufacturer's name and pressure rating marked on valve body.
- B. Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 1. Protect internal parts against rust and corrosion.
 2. Protect threads, flange faces, grooves, and weld ends.
 3. Set angle and globe valves closed to prevent rattling.
- B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
- C. Use the following precautions during storage:
 1. Maintain valve end protection.
 2. Store valves indoors and maintain at higher-than-ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
 3. Provide temporary protective coating on cast iron and steel valves.
 4. Provide temporary end caps and closures on fittings. Maintain in place until installation.
 5. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.
- D. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
 - 1. ASME B1.20.1 for threads for threaded-end valves.
 - 2. ASME B16.1 for flanges on iron valves.
 - 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 4. ASME B16.18 for solder joint.
 - 5. ASME B31.1 for power piping valves.
 - 6. ASME B31.9 for building services piping valves.
- C. Refer to HVAC valve schedule articles for applications of valves.
- D. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream piping unless otherwise indicated.
- F. Valves in Insulated Piping: With **2-inch (50-mm)** stem extensions.

2.2 BRONZE ANGLE VALVES

- A. Class 125 Bronze Angle Valves:
 - 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [American Valve, Inc.](#)
 - b. [Hammond Valve.](#)
 - c. [Milwaukee Valve Company.](#)
 - d. [NIBCO INC.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 - 2. Description:
 - a. Standard: MSS SP-80, Type 1.
 - b. CWP Rating: **200 psig (1380 kPa)**.
 - c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
 - d. Ends: Threaded.
 - e. Stem and Disc: **[Bronze] [PTFE]**.
 - f. Packing: Asbestos free.
 - g. Handwheel: Malleable iron[, **bronze, or aluminum**].

B. Class 150 Bronze Angle Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Crane Co.; Crane Valve Group; Stockham Division.](#)
 - b. [Kitz Corporation.](#)
 - c. **<Insert manufacturer's name>.**
 - d. or approved equal.
2. Description:
 - a. Standard: MSS SP-80, Type 1.
 - b. CWP Rating: **300 psig** (2070 kPa).
 - c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.
 - d. Ends: Threaded.
 - e. Stem and Disc: [**Bronze**] [**PTFE**].
 - f. Packing: Asbestos free.
 - g. Handwheel: Malleable iron[, **bronze, or aluminum**].

2.3 BRONZE GLOBE VALVES

A. Class 125 Bronze Globe Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
 - b. [Crane Co.; Crane Valve Group; Stockham Division.](#)
 - c. [Hammond Valve.](#)
 - d. [Kitz Corporation.](#)
 - e. [Milwaukee Valve Company.](#)
 - f. [NIBCO INC.](#)
 - g. [Powell Valves.](#)
 - h. [Red-White Valve Corporation.](#)
 - i. [Valve Solutions.](#)
 - j. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
 - k. **<Insert manufacturer's name>.**
 - l. or approved equal.
2. Description:
 - a. Standard: MSS SP-80, Type 1.
 - b. CWP Rating: **200 psig** (1380 kPa).
 - c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
 - d. Ends: Threaded[**or solder joint**].
 - e. Stem and Disc: [**Bronze**] [**PTFE**].
 - f. Packing: Asbestos free.
 - g. Handwheel: Malleable iron[, **bronze, or aluminum**].

B. Class 150 Bronze Globe Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Hammond Valve.](#)
- c. [Kitz Corporation.](#)
- d. [Milwaukee Valve Company.](#)
- e. [NIBCO INC.](#)
- f. [Powell Valves.](#)
- g. [Red-White Valve Corporation.](#)
- h. [Valve Solutions.](#)
- i. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- j. **<Insert manufacturer's name>.**
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 2.
- b. CWP Rating: **300 psig** (2070 kPa).
- c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.
- d. Ends: Threaded.
- e. Stem: Bronze.
- f. Disc: **[Bronze] [PTFE]**.
- g. Packing: Asbestos free.
- h. Handwheel: Malleable iron[, **bronze, or aluminum**].

2.4 IRON GLOBE VALVES

A. Class 125 Iron Globe Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- c. [Crane Co.; Crane Valve Group; Stockham Division.](#)
- d. [Hammond Valve.](#)
- e. [Kitz Corporation.](#)
- f. [Milwaukee Valve Company.](#)
- g. [NIBCO INC.](#)
- h. [Powell Valves.](#)
- i. [Red-White Valve Corporation.](#)
- j. [Valve Solutions.](#)
- k. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- l. **<Insert manufacturer's name>.**
- m. or approved equal.

2. Description:

- a. Standard: MSS SP-85, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM A 126, gray iron with bolted bonnet.
- d. Ends: Flanged.
- e. Trim: Bronze.
- f. Packing and Gasket: Asbestos free.
- g. Operator: Handwheel or chainwheel.

B. Class 250 Iron Globe Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- c. [Crane Co.; Crane Valve Group; Stockham Division.](#)
- d. [Hammond Valve.](#)
- e. [Milwaukee Valve Company.](#)
- f. [NIBCO INC.](#)
- g. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- h. **<Insert manufacturer's name>**.
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-85, Type I.
- b. CWP Rating: 500 psig (3450 kPa).
- c. Body Material: ASTM A 126, gray iron with bolted bonnet.
- d. Ends: Flanged.
- e. Trim: Bronze.
- f. Packing and Gasket: Asbestos free.
- g. Operator: Handwheel or chainwheel.

2.5 CHAINWHEELS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Babbitt Steam Specialty Co.](#)
2. [Roto Hammer Industries.](#)
3. [Trumbull Industries.](#)
4. **<Insert manufacturer's name>**.
5. or approved equal.

B. Description: Valve actuation assembly with sprocket rim, chain guides, chain[, and attachment brackets for mounting chainwheels directly to handwheels].

1. Sprocket Rim with Chain Guides: [**Ductile iron**] [**Ductile or cast iron**] [**Cast iron**] [**Aluminum**] [**Bronze**], of type and size required for valve.[**Include zinc or epoxy coating.**]
2. Chain: [**Hot-dip-galvanized steel**] [**Brass**] [**Stainless steel**], of size required to fit sprocket rim.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves.

3.2 PREPARATION

- A. Ream pipe and tube ends. Remove burrs.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

3.3 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Provide dielectric fittings wherever jointing dissimilar metals.
- C. Locate valves for easy access and provide separate support where necessary.
- D. Provide clearance for installation of insulation and access to valves and fittings.
- E. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Division 08 installer.

- F. Install valves with stems upright or horizontal, not inverted.
- G. Lever Handle Valves: Install valve handle so that the handle opens in the direction of fluid flow.
- H. Install valves in horizontal piping with stem at or above center of pipe.
- I. Install valves in position to allow full stem movement.
- J. Install chainwheels on operators for globe valves [NPS 4 (DN 100)] <Insert pipe size> and larger and more than [96 inches (2400 mm)] <Insert dimension> above floor. Extend chains to [60 inches (1520 mm)] <Insert dimension> above finished floor.
- K. Install valve tags. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Throttling Service except Steam: [Globe] [Globe or angle] valves.
 - 2. Throttling Service, Steam: [Globe] [Globe or angle] valves.
- B. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
- C. Select valves with the following end connections:
 - 1. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 3. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 (DN 50) and Smaller: Threaded ends.
 - 5. For Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 6. For Steel Piping, NPS 5 (DN 125) and Larger: Flanged ends.
- D. Provide and install brass male adapters each side of valves in copper piped system. Sweat solder adapters to pipe.

3.6 CHILLED-WATER VALVE SCHEDULE

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze angle or globe valves, [**Class 125**] [**Class 150**], [**bronze**] [**nonmetallic**] disc, with [**soldered**] [**threaded**] ends.
- B. Pipe **NPS 2-1/2** (DN 65) and Larger: Iron globe valves, [**Class 125**] [**Class 250**] with flanged ends.

3.7 CONDENSER-WATER VALVE SCHEDULE

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze angle or globe valves, [**Class 125**] [**Class 150**], [**bronze**] [**nonmetallic**] disc, with [**soldered**] [**threaded**] ends.
- B. Pipe **NPS 2-1/2** (DN 65) and Larger: Iron globe valves, [**Class 125**] [**Class 250**] with flanged ends.

3.8 HEATING-WATER VALVE SCHEDULE

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze angle or globe valves, [**Class 125**] [**Class 150**], [**bronze**] [**nonmetallic**] disc, with [**soldered**] [**threaded**] ends.
- B. Pipe **NPS 2-1/2** (DN 65) and Larger: Iron globe valves, [**Class 125**] [**Class 250**] with flanged ends.

3.9 LOW-PRESSURE STEAM VALVE SCHEDULE (**15 PSIG** ([104 kPa]) OR LESS)

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze angle or globe valves, [**Class 125**] [**Class 150**], [**bronze**] [**nonmetallic**] disc, with [**soldered**] [**threaded**] ends.
- B. Pipe **NPS 2-1/2** (DN 65) and Larger: Iron globe valves, [**Class 125**] [**Class 250**] with flanged ends.

3.10 HIGH-PRESSURE STEAM VALVE SCHEDULE (MORE THAN **15 PSIG** ([104 kPa]))

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze angle or globe valves, [**Class 125**] [**Class 150**], [**bronze**] [**nonmetallic**] disc, with [**soldered**] [**threaded**] ends.
- B. Pipe Sizes **NPS 2-1/2** (DN 65) and Larger: Iron globe valves, [**Class 125**] [**Class 250**].

3.11 STEAM-CONDENSATE VALVE SCHEDULE

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze angle or globe valves, [**Class 125**] [**Class 150**], [**bronze**] [**nonmetallic**] disc, with [**soldered**] [**threaded**] ends.
- B. Pipe **NPS 2-1/2** (DN 65) and Larger: Iron globe valves, [**Class 125**] [**Class 250**].

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230523.11

SECTION 230523.12 - BALL VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Brass ball valves.
 - 2. Bronze ball valves.
 - 3. Steel ball valves.
 - 4. Iron ball valves.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. SWP: Steam working pressure.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of valve and accessory. Provide manufacturers catalog information. Indicate valve data and ratings.
 - 1. Include data substantiating that materials comply with requirements.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1. Record actual locations of valves.

C. EXTRA MATERIALS

1. Provide two (2) repacking kits for each type and size valve.

1.6 QUALITY ASSURANCE

- A. Valves: Manufacturer's name and pressure rating marked on valve body.
- B. Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 1. Protect internal parts against rust and corrosion.
 2. Protect threads, flange faces, and weld ends.
 3. Set ball valves open to minimize exposure of functional surfaces.
- B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
- C. Use the following precautions during storage:
 1. Maintain valve end protection.
 2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
 3. Provide temporary protective coating on cast iron and steel valves.
 4. Provide temporary end caps and closures on fittings. Maintain in place until installation.
 5. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.
- D. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use operating handles or stems as lifting or rigging points.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
 - 1. ASME B1.20.1 for threads for threaded-end valves.
 - 2. ASME B16.1 for flanges on iron valves.
 - 3. ASME B16.5 for flanges on steel valves.
 - 4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 5. ASME B16.18 for solder-joint connections.
 - 6. ASME B31.1 for power piping valves.
 - 7. ASME B31.9 for building services piping valves.
- C. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- D. Refer to HVAC valve schedule articles for applications of valves.
- E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- F. Valve Sizes: Same as upstream piping unless otherwise indicated.
- G. Valve Actuator Types:
 - 1. Gear Actuator: For quarter-turn valves [NPS 4 (DN 100)] <Insert size> and larger.
 - 2. Handlever: For quarter-turn valves smaller than [NPS 4 (DN 100)] <Insert size>.
- H. Valves in Insulated Piping:
 - 1. Include 2-inch (50-mm) stem extensions.
 - 2. Extended operating handle of nonthermal-conductive material, and protective sleeves that allow operation of valves without breaking the vapor seals or disturbing insulation.
 - 3. Memory stops that are fully adjustable after insulation is applied.
- I. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRASS BALL VALVES

- A. One-Piece Brass Ball Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Kitz Corporation](#).
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.

2. Description:
 - a. Standard: MSS SP-110.
 - b. CWP Rating: **400 psig** (2760 kPa).
 - c. Body Design: One piece.
 - d. Body Material: Forged brass.
 - e. Ends: Threaded.
 - f. Seats: PTFE.
 - g. Stem: Brass.
 - h. Ball: Chrome-plated brass.
 - i. Port: Reduced.

B. Two-Piece Brass Ball Valves with Full Port and Brass Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [American Valve, Inc.](#)
 - b. [Conbraco Industries, Inc.; Apollo Valves](#).
 - c. [Crane Co.; Crane Valve Group; Crane Valves](#).
 - d. [Crane Co.; Crane Valve Group; Stockham Valves](#).
 - e. [DynaQuip Controls](#).
 - f. [Hammond Valve](#).
 - g. [Jomar International, LTD.](#)
 - h. [Kitz Corporation](#).
 - i. [Legend Valve](#).
 - j. [Marwin Valve; a division of Richards Industries](#).
 - k. [Milwaukee Valve Company](#).
 - l. [NIBCO INC.](#)
 - m. [Red-White Valve Corporation](#).
 - n. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.

2. Description:
 - a. Standard: MSS SP-110.
 - b. SWP Rating: **150 psig** (1035 kPa).
 - c. CWP Rating: **600 psig** (4140 kPa).
 - d. Body Design: Two piece.
 - e. Body Material: Forged brass.
 - f. Ends: Threaded.
 - g. Seats: PTFE.

- h. Stem: Brass.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

C. Two-Piece Brass Ball Valves with Full Port and Stainless-Steel Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- c. [Flow-Tek, Inc.; a subsidiary of Bray International, Inc.](#)
- d. [Hammond Valve.](#)
- e. [Jamesbury; a subsidiary of Metso Automation.](#)
- f. [Kitz Corporation.](#)
- g. [Marwin Valve; a division of Richards Industries.](#)
- h. [Milwaukee Valve Company.](#)
- i. [RuB Inc.](#)
- j. **<Insert manufacturer's name>.**
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Forged brass.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Full.

D. Two-Piece Brass Ball Valves with Regular Port and Brass Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Hammond Valve.](#)
- b. [Jamesbury; a subsidiary of Metso Automation.](#)
- c. [Legend Valve.](#)
- d. [Marwin Valve; a division of Richards Industries.](#)
- e. [Milwaukee Valve Company.](#)
- f. [NIBCO INC.](#)
- g. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- h. **<Insert manufacturer's name>.**
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Forged brass.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Brass.
- i. Ball: Chrome-plated brass.
- j. Port: Regular.

E. Two-Piece Brass Ball Valves with Regular Port and Stainless-Steel Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Jamesbury; a subsidiary of Metso Automation.
- b. Marwin Valve; a division of Richards Industries.
- c. **<Insert manufacturer's name>.**
- d. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Brass or bronze.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Regular.

F. Three-Piece Brass Ball Valves with Full Port and Brass Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Jomar International, LTD.
- b. Kitz Corporation.
- c. Red-White Valve Corporation.
- d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- e. **<Insert manufacturer's name>.**
- f. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).

- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Forged brass.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Brass.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

G. Three-Piece Brass Ball Valves with Full Port and Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Jomar International, LTD.
- b. Kitz Corporation.
- c. Marwin Valve; a division of Richards Industries.
- d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- e. **<Insert manufacturer's name>**.
- f. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Forged brass.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Full.

2.3 BRONZE BALL VALVES

A. One-Piece Bronze Ball Valves with Bronze Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Conbraco Industries, Inc.; Apollo Valves.
- b. NIBCO INC.
- c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- d. **<Insert manufacturer's name>**.
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. CWP Rating: 400 psig (2760 kPa).
- c. Body Design: One piece.
- d. Body Material: Bronze.
- e. Ends: Threaded.
- f. Seats: PTFE.
- g. Stem: Bronze.
- h. Ball: Chrome-plated brass.
- i. Port: Reduced.

B. One-Piece Bronze Ball Valves with Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Conbraco Industries, Inc.; Apollo Valves.
- b. NIBCO INC.
- c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- d. **<Insert manufacturer's name>.**
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. CWP Rating: 600 psig (4140 kPa).
- c. Body Design: One piece.
- d. Body Material: Bronze.
- e. Ends: Threaded.
- f. Seats: PTFE.
- g. Stem: Stainless steel.
- h. Ball: Stainless steel, vented.
- i. Port: Reduced.

C. Two-Piece Bronze Ball Valves with Full Port and Bronze or Brass Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Conbraco Industries, Inc.; Apollo Valves.
- c. Crane Co.; Crane Valve Group; Crane Valves.
- d. Hammond Valve.
- e. Lance Valves; a division of Advanced Thermal Systems, Inc.
- f. Legend Valve.
- g. Milwaukee Valve Company.
- h. NIBCO INC.
- i. Red-White Valve Corporation.
- j. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- k. **<Insert manufacturer's name>.**
- l. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Bronze.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

D. Two-Piece Bronze Ball Valves with Full Port and Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Conbraco Industries, Inc.; Apollo Valves.
- b. Crane Co.; Crane Valve Group; Crane Valves.
- c. Hammond Valve.
- d. Lance Valves; a division of Advanced Thermal Systems, Inc.
- e. Milwaukee Valve Company.
- f. NIBCO INC.
- g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- h. **<Insert manufacturer's name>.**
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Full.

E. Two-Piece Bronze Ball Valves with Regular Port and Bronze or Brass Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Conbraco Industries; Apollo Valves.
- c. Crane Co.; Crane Valves Group; Jenkins Valves.
- d. Crane Co.; Crane Valves Group; Stockham Valves.

- e. [DynaQuip Controls](#).
- f. [Hammond Valve](#).
- g. [Lance Valves; a division of Advanced Thermal Systems, Inc.](#)
- h. [Milwaukee Valve Company](#).
- i. [NIBCO INC.](#)
- j. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- k. **<Insert manufacturer's name>**.
- l. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: **150 psig** (1035 kPa).
- c. CWP Rating: **600 psig** (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Bronze.
- i. Ball: Chrome-plated brass.
- j. Port: Regular.

F. Two-Piece Bronze Ball Valves with Regular Port and Stainless-Steel Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Conbraco Industries; Apollo Valves](#).
- b. [Crane Co.; Crane Valves Group; Jenkins Valves](#).
- c. [Hammond Valve](#).
- d. [Milwaukee Valve Company](#).
- e. [NIBCO INC.](#)
- f. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- g. **<Insert manufacturer's name>**.
- h. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: **150 psig** (1035 kPa).
- c. CWP Rating: **600 psig** (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Regular.

G. Three-Piece Bronze Ball Valves with Full Port and Bronze or Brass Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Conbraco Industries, Inc.; Apollo Valves.](#)
- b. [DynaQuip Controls.](#)
- c. [Hammond Valve.](#)
- d. [Milwaukee Valve Company.](#)
- e. [NIBCO INC.](#)
- f. [Red-White Valve Corporation.](#)
- g. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- h. **<Insert manufacturer's name>.**
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Bronze.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

H. Three-Piece Bronze Ball Valves with Full Port Stainless-Steel Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Conbraco Industries, Inc.; Apollo Valves.](#)
- b. [Hammond Valve.](#)
- c. [Milwaukee Valve Company.](#)
- d. [NIBCO INC.](#)
- e. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- f. **<Insert manufacturer's name>.**
- g. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.

j. Port: Full.

I. Three-Piece Bronze Ball Valves with Regular Port, and Stainless-Steel Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Conbraco Industries, Inc.; Apollo Valves.](#)
- b. [Jamesbury; a subsidiary of Metso Automation.](#)
- c. [NIBCO INC.](#)
- d. **<Insert manufacturer's name>.**
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Bronze.
- f. Ends: Threaded and solder.
- g. Seats: PTFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Regular.

2.4 STEEL BALL VALVES

A. Class 150 Steel Ball Valves with Full Port and Stainless-Steel Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Conbraco Industries, Inc.; Apollo Valves.](#)
- b. [Jamesbury; a subsidiary of Metso Automation.](#)
- c. [NIBCO INC.](#)
- d. **<Insert manufacturer's name>.**
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-72.
- b. CWP Rating: 285 psig (1964 kPa).
- c. Body Design: Split body.
- d. Body Material: Carbon steel, ASTM A 216, Type WCB.
- e. Ends: Flanged.
- f. Seats: PTFE.
- g. Stem: Stainless steel.
- h. Ball: Stainless steel, vented.

i. Port: Full.

B. Class 300 Steel Ball Valves with Full Port and Stainless-Steel Trim:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Conbraco Industries, Inc.; Apollo Valves.](#)
- b. [Jamesbury; a subsidiary of Metso Automation.](#)
- c. [NIBCO INC.](#)
- d. **<Insert manufacturer's name>.**
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-72.
- b. CWP Rating: **720 psig** (4960 kPa).
- c. Body Design: Split body.
- d. Body Material: Carbon steel, ASTM A 216, Type WCB.
- e. Ends: Flanged.
- f. Seats: PTFE.
- g. Stem: Stainless steel.
- h. Ball: Stainless steel, vented.
- i. Port: Full.

2.5 IRON BALL VALVES

A. Class 125 Iron Ball Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [American Valve, Inc.](#)
- b. [Conbraco Industries; Apollo Valves.](#)
- c. [Kitz Corporation.](#)
- d. [Sure Flow Equipment Inc.](#)
- e. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- f. **<Insert manufacturer's name>.**
- g. or approved equal.

2. Description:

- a. Standard: MSS SP-72.
- b. CWP Rating: **200 psig** (1380 kPa).
- c. Body Design: Split body.
- d. Body Material: ASTM A 126, gray iron.
- e. Ends: Flanged.
- f. Seats: PTFE.
- g. Stem: Stainless steel.

- h. Ball: Stainless steel.
- i. Port: Full.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves.

3.2 PREPARATION

- A. Ream pipe and tube ends. Remove burrs.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

3.3 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Provide dielectric fittings wherever jointing dissimilar metals.
- C. Locate valves for easy access and provide separate support where necessary.
- D. Provide clearance for installation of insulation and access to valves and fittings.
- E. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Division 08 installer.
- F. Install valves with stems upright or horizontal, not inverted.

- G. Lever Handle Valves: Install valve handle so that the handle opens in the direction of fluid flow.
- H. Install valves in horizontal piping with stem at or above center of pipe.
- I. Install valves in position to allow full stem movement.
- J. Install valve tags. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valves with specified SWP classes or CWP ratings are unavailable, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- B. Select valves with the following end connections:
 - 1. For Copper Tubing, **NPS 2 (DN 50)** and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
 - 2. For Copper Tubing, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
 - 3. For Copper Tubing, **NPS 5 (DN 125)** and Larger: Flanged ends.
 - 4. For Steel Piping, **NPS 2 (DN 50)** and Smaller: Threaded ends.
 - 5. For Steel Piping, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
 - 6. For Steel Piping, **NPS 5 (DN 125)** and Larger: Flanged ends.

3.5 CHILLED-WATER VALVE SCHEDULE

- A. Pipe **NPS 2 (DN 50)** and Smaller: **[One] [Two] [Three]** piece, **[full] [regular] [reduced]** port, **[brass] [or] [bronze]** with **[brass] [bronze] [stainless-steel]** trim.
 - 1. Valves may be provided with solder-joint ends instead of threaded ends.
- B. Pipe **NPS 2-1/2 (DN 65)** and Larger: Iron ball valves.
 - 1. Iron Valves, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: May be provided with threaded ends instead of flanged ends.
 - 2. Steel Ball Valves: Class 150.
- C. Pipe **NPS 2-1/2 (DN 65)** and Larger:
 - 1. Iron ball valves.
 - a. Iron Valves, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: May be provided with threaded ends instead of flanged ends.
 - 2. Class 150 steel ball valves.

3.6 CONDENSER-WATER VALVE SCHEDULE

A. Pipe **NPS 2 (DN 50)** and Smaller: **[One] [Two] [Three]** piece, **[full] [regular] [reduced]** port, **[brass] [or] [bronze]** with **[brass] [bronze] [stainless-steel]** trim.

1. Valves may be provided with solder-joint ends instead of threaded ends.

B. Pipe **NPS 2-1/2 (DN 65)** and Larger:

1. Iron ball valves.

a. Iron Valves, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: May be provided with threaded ends instead of flanged ends.

2. Class 150 steel ball valves.

3.7 HEATING-WATER VALVE SCHEDULE

A. Pipe **NPS 2 (DN 50)** and Smaller: **[One] [Two] [Three]** piece, **[full] [regular] [reduced]** port, **[brass] [or] [bronze]** with **[brass] [bronze] [stainless-steel]** trim.

1. Valves may be provided with solder-joint ends instead of threaded ends.

B. Pipe **NPS 2-1/2 (DN 65)** and Larger:

1. Iron ball valves.

a. Iron Valves, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: May be provided with threaded ends instead of flanged ends.

2. Class 150 steel ball valves.

3.8 LOW-PRESSURE STEAM VALVE SCHEDULE (**15 PSIG ([104 kPa])** OR LESS)

A. Pipe **NPS 2 (DN 50)** and Smaller: **[One] [Two] [Three]** piece, **[full] [regular] [reduced]** port, **[brass] [or] [bronze]** with **[brass] [bronze] [stainless-steel]** trim.

B. Pipe **NPS 2-1/2 (DN 65)** and Larger:

1. Iron ball valves.

a. Iron Valves, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: May be provided with threaded ends instead of flanged ends.

2. Class 150 steel ball valves.

- 3.9 HIGH-PRESSURE STEAM VALVE SCHEDULE (MORE THAN 15 PSIG ([104 kPa]))
- A. Pipe NPS 2 (DN 50) and Smaller: [One] [Two] [Three] piece, [full] [regular] [reduced] port, [brass] [or] [bronze] with [brass] [bronze] [stainless-steel] trim.
 - B. Pipe NPS 2-1/2 (DN 65) and Larger:
 - 1. Iron ball valves.
 - a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
 - 2. Class 300 steel ball valves.
- 3.10 STEAM-CONDENSATE VALVE SCHEDULE
- A. Pipe NPS 2 (DN 50) and Smaller: [One] [Two] [Three] piece, [full] [regular] [reduced] port, [brass] [or] [bronze] with [brass] [bronze] [stainless-steel] trim.
 - B. Pipe NPS 2-1/2 (DN 65) and Larger:
 - 1. Iron ball valves.
 - a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
 - 2. Class 300 steel ball valves.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230523.12

SECTION 230523.13 - BUTTERFLY VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Iron, single-flange butterfly valves.
 - 2. Iron, grooved-end butterfly valves.
 - 3. High-performance butterfly valves.
 - 4. Chainwheels.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene propylene copolymer rubber.
- C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
- D. SWP: Steam working pressure.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of valve and accessory. Provide manufacturers catalog information. Indicate valve data and ratings.
 - 1. Include data substantiating that materials comply with requirements.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1. Record actual locations of valves.

B. EXTRA MATERIALS

1. Provide two (2) repacking kits for each type and size valve.

1.6 QUALITY ASSURANCE

- A. Valves: Manufacturer's name and pressure rating marked on valve body.
- B. Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 1. Protect internal parts against rust and corrosion.
 2. Protect threads, flange faces, grooves, and weld ends.
 3. Set butterfly valves closed or slightly open.
- B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
- C. Use the following precautions during storage:
 1. Maintain valve end protection.
 2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- D. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

- B. ASME Compliance:
1. ASME B16.1 for flanges on iron valves.
 2. ASME B16.5 for pipe flanges and flanged fittings, NPS 1/2 through NPS 24.
 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 4. ASME B31.1 for power piping valves.
 5. ASME B31.9 for building services piping valves.
- C. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
- D. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream piping unless otherwise indicated.
- F. Valve Actuator Types:
1. Gear Actuator: For valves **NPS 8 (DN 200)** and larger.
 2. Handlever: For valves **NPS 6 (DN 150)** and smaller.
 3. Chainwheel: Device for attachment to gear, stem, or other actuator of size and with chain for mounting height, according to "Valve Installation" Article.
- G. Valves in Insulated Piping: With **2-inch (50-mm)** stem extensions with extended necks.

2.2 IRON, SINGLE-FLANGE BUTTERFLY VALVES

- A. Iron, Single-Flange Butterfly Valves with Aluminum-Bronze Disc:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.
 - b. Bray Controls; a division of Bray International.
 - c. Cooper Cameron Valves; a division of Cooper Cameron Corporation.
 - d. Conbraco Industries, Inc.; Apollo Valves.
 - e. Crane Co.; Crane Valve Group; Jenkins Valves.
 - f. Crane Co.; Crane Valve group; Stockham Valves.
 - g. DeZurik Water Controls.
 - h. Hammond Valve.
 - i. Kitz Corporation.
 - j. Milwaukee Valve Company.
 - k. NIBCO INC.
 - l. Norriseal; a Dover Corporation company.
 - m. Red-White Valve Corporation.
 - n. Spence Engineering Company; a division of CICOR International, Inc.
 - o. Tyco Valves & Controls; a unit of Tyco Flow Control.
 - p. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - q. **<Insert manufacturer's name>.**

r. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: [150 psig (1035 kPa)] [200 psig (1380 kPa)].
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: [EPDM] [NBR].
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Aluminum bronze.

B. Iron, Single-Flange Butterfly Valves with Ductile-Iron Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.](#)
- b. [Bray Controls; a division of Bray International.](#)
- c. [Cooper Cameron Valves; a division of Cooper Cameron Corporation.](#)
- d. [Conbraco Industries, Inc.; Apollo Valves.](#)
- e. [Crane Co.; Crane Valve Group; Center Line Valves.](#)
- f. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- g. [DeZurik Water Controls.](#)
- h. [Hammond Valve.](#)
- i. [Kitz Corporation.](#)
- j. [Milwaukee Valve Company.](#)
- k. [Mueller Steam Specialty; a division of SPX Corporation.](#)
- l. [NIBCO INC.](#)
- m. [Norriseal; a Dover company.](#)
- n. [Spence Engineering Company; a division of CICOR International, Inc.](#)
- o. [Sure Flow Equipment Inc.](#)
- p. [Tyco Valves & Controls; a unit of Tyco Flow Control.](#)
- q. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- r. <Insert manufacturer's name>.
- s. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: [150 psig (1035 kPa)] [200 psig (1380 kPa)].
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: [EPDM] [NBR].
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Nickel-plated[or -coated] ductile iron.

C. Iron, Single-Flange Butterfly Valves with Stainless-Steel Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.](#)
- b. [Bray Controls; a division of Bray International.](#)
- c. [Cooper Cameron Valves; a division of Cooper Cameron Corporation.](#)
- d. [Conbraco Industries, Inc.; Apollo Valves.](#)
- e. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- f. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- g. [DeZurik Water Controls.](#)
- h. [Hammond Valve.](#)
- i. [Kitz Corporation.](#)
- j. [Milwaukee Valve Company.](#)
- k. [Mueller Steam Specialty; a division of SPX Corporation.](#)
- l. [NIBCO INC.](#)
- m. [Norriseal; a Dover company.](#)
- n. [Red-White Valve Corporation.](#)
- o. [Spence Engineering Company; a division of CICOR International, Inc.](#)
- p. [Sure Flow Equipment Inc.](#)
- q. [Tyco Valves & Controls; a unit of Tyco Flow Control.](#)
- r. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- s. **<Insert manufacturer's name>.**
- t. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: [150 psig (1035 kPa)] [200 psig (1380 kPa)].
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: [EPDM] [NBR].
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Stainless steel.

2.3 DUCTILE-IRON, GROOVED-END BUTTERFLY VALVES

A. 175 CWP, Iron, Grooved-End Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Kennedy Valve; a division of McWane, Inc.](#)
- b. [Shurjoint Piping Products.](#)
- c. [Tyco Fire Products LP; Grinnell Mechanical Products.](#)
- d. [Victaulic Company.](#)
- e. **<Insert manufacturer's name>.**
- f. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 175 psig (1200 kPa).
- c. Body Material: Coated, ductile iron.
- d. Stem: Two-piece stainless steel.
- e. Disc: Coated, ductile iron.
- f. Seal: EPDM.

B. 300 CWP, Iron, Grooved-End Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Anvil International, Inc.](#)
- b. [Kennedy Valve Company; a division of McWane, Inc.](#)
- c. [Mueller Steam Specialty; a division of SPX Corporation.](#)
- d. [NIBCO INC.](#)
- e. [Shurjoint Piping Products.](#)
- f. [Tyco Fire Products LP; Grinnell Mechanical Products.](#)
- g. [Victaulic Company.](#)
- h. **<Insert manufacturer's name>**.
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. NPS 8 (DN 50) and Smaller CWP Rating: 300 psig (2070 kPa).
- c. NPS 10 (DN 250) and Larger CWP Rating: 200 psig (1380 kPa).
- d. Body Material: Coated, ductile iron.
- e. Stem: Two-piece stainless steel.
- f. Disc: Coated, ductile iron.
- g. Seal: EPDM.

2.4 HIGH-PERFORMANCE BUTTERFLY VALVES

A. Class 150, Single-Flange, High-Performance Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.](#)
- b. [Bray Controls; a division of Bray International.](#)
- c. [Cooper Cameron Valves; a division of Cooper Cameron Corporation.](#)
- d. [Crane Co.; Crane Valve Group; Flowseal Brand.](#)
- e. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- f. [DeZurik Water Controls.](#)
- g. [Hammond Valve.](#)
- h. [Jamesbury; a subsidiary of Metso Automation.](#)

- i. [Milwaukee Valve Company.](#)
- j. [NIBCO INC.](#)
- k. [Process Development & Control, Inc.](#)
- l. [Tyco Valves & Controls; a unit of Tyco Flow Control.](#)
- m. [Xomox; a brand of Crane Co.](#)
- n. **<Insert manufacturer's name>.**
- o. or approved equal.

2. Description:

- a. Standard: MSS SP-68.
- b. CWP Rating: **285 psig** (1965 kPa) at **100 deg F** (38 deg C).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: Carbon steel, cast iron, ductile iron, or stainless steel.
- e. Seat: Reinforced PTFE or metal.
- f. Stem: Stainless steel; offset from seat plane.
- g. Disc: Carbon steel.
- h. Service: Bidirectional.

B. Class 300, Single-Flange, High-Performance Butterfly Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.](#)
- b. [Bray Controls; a division of Bray International.](#)
- c. [Cooper Cameron Valves; a division of Cooper Cameron Corporation.](#)
- d. [Crane Co.; Crane Valve Group; Flowseal Valves.](#)
- e. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- f. [DeZurik Water Controls.](#)
- g. [Hammond Valve.](#)
- h. [Jamesbury; a subsidiary of Metso Automation.](#)
- i. [Milwaukee Valve Company.](#)
- j. [NIBCO INC.](#)
- k. [Process Development & Control, Inc.](#)
- l. [Tyco Valves & Controls; a unit of Tyco Flow Control.](#)
- m. [Xomox; a brand of Crane Co.](#)
- n. **<Insert manufacturer's name>.**

2. Description:

- a. Standard: MSS SP-68.
- b. CWP Rating: **720 psig** (4965 kPa) at **100 deg F** (38 deg C).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: Carbon steel, cast iron, or ductile iron.
- e. Seat: Reinforced PTFE or metal.
- f. Stem: Stainless steel; offset from seat plane.
- g. Disc: Carbon steel.

h. Service: Bidirectional.

2.5 CHAINWHEELS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Babbitt Steam Specialty Co.](#)
2. [Roto Hammer Industries.](#)
3. [Trumbull Industries.](#)
4. **<Insert manufacturer's name>.**
5. or approved equal.

B. **Description: Valve actuation assembly with sprocket rim, chain guides, chain[, and attachment brackets for mounting chainwheels directly to hand wheels].**

1. Sprocket Rim with Chain Guides: [**Ductile iron**] [**Ductile or cast iron**] [**Cast iron**] [**Aluminum**] [**Bronze**], of type and size required for valve. [**Include zinc or epoxy coating.**]
2. Chain: [**Hot-dip, galvanized steel**] [**Brass**] [**Stainless steel**], of size required to fit sprocket rim.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine mating flange faces for damage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- D. Do not attempt to repair defective valves; replace with new valves.

3.2 PREPARATION

- A. Ream pipe and tube ends. Remove burrs.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

3.3 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Provide dielectric fittings wherever jointing dissimilar metals.
- C. Locate valves for easy access and provide separate support where necessary.
- D. Provide clearance for installation of insulation and access to valves and fittings.
- E. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Division 08 installer.
- F. Install valves with stems upright or horizontal, not inverted.
- G. Lever Handle Valves: Install valve handle so that the handle opens in the direction of fluid flow.
- H. Install valves in horizontal piping with stem at or above center of pipe.
- I. Install valves in position to allow full stem movement.
- J. Install chainwheels on operators for butterfly valves [NPS 4 (DN 100)] <Insert size> and larger and more than [96 inches (2400 mm)] <Insert dimension> above floor. Extend chains to [60 inches (1520 mm)] <Insert dimension> above finished floor.
- K. Install valve tags. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.5 CHILLED-WATER VALVE SCHEDULE

- A. Pipe NPS 2-1/2 (DN 65) and Larger:
 - 1. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 200 CWP, [EPDM] [NBR] seat, [aluminum-bronze] [ductile-iron] [stainless-steel] disc.
 - 2. Iron, Single-Flange Butterfly Valves, NPS 14 to NPS 24 (DN 350 to DN 600): 150 CWP, [EPDM] [NBR] seat, [aluminum-bronze] [ductile-iron] [stainless-steel] disc.
 - 3. Iron, Grooved-End Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): [175] [300] CWP.
 - 4. High-Performance Butterfly Valves: [Class 150] [Class 300], single flange.

3.6 CONDENSER-WATER VALVE SCHEDULE

A. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 200 CWP, [EPDM] [NBR] seat, [aluminum-bronze] [ductile-iron] [stainless-steel] disc.
2. Iron, Single-Flange Butterfly Valves, NPS 14 to NPS 24 (DN 350 to DN 600): 150 CWP, [EPDM] [NBR] seat, [aluminum-bronze] [ductile-iron] [stainless-steel] disc.
3. Iron, Grooved-End Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): [175] [300] CWP.
4. High-Performance Butterfly Valves: [Class 150] [Class 300], single flange.

3.7 HEATING-WATER VALVE SCHEDULE

A. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 200 CWP, [EPDM] [NBR] seat, [aluminum-bronze] [ductile-iron] [stainless-steel] disc.
2. Iron, Single-Flange Butterfly Valves, NPS 14 to NPS 24 (DN 350 to DN 600): 150 CWP, [EPDM] [NBR] seat, [aluminum-bronze] [ductile-iron] [stainless-steel] disc.
3. Iron, Grooved-End Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): [175] [300] CWP.
4. High-Performance Butterfly Valves: [Class 150] [Class 300], single flange.

3.8 LOW-PRESSURE STEAM VALVE SCHEDULE (15 PSIG ([104 kPa]) OR LESS)

- #### A. Pipe NPS 2-1/2 (DN 65) and Larger: [Class 150] [Class 300], high-performance butterfly valves, single flange.

3.9 HIGH-PRESSURE STEAM VALVE SCHEDULE (MORE THAN 15 PSIG ([104 kPa]))

- #### A. Pipe NPS 2-1/2 (DN 65) and Larger: [Class 150] [Class 300], high-performance butterfly valves, single flange.

3.10 STEAM-CONDENSATE VALVE SCHEDULE

- #### A. Pipe NPS 2-1/2 (DN 65) and Larger: [Class 150] [Class 300], high-performance butterfly valves, single flange.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230523.13

SECTION 230523.14 - CHECK VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Bronze lift check valves.
 - 2. Bronze swing check valves.
 - 3. Iron swing check valves.
 - 4. Iron swing check valves with closure control.
 - 5. Iron, grooved-end swing check valves.
 - 6. Iron, center-guided check valves.
 - 7. Iron, plate-type check valves.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene propylene copolymer rubber.
- C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
- D. SWP: Steam working pressure.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of valve and accessory. Provide manufacturers catalog information. Indicate valve data and ratings.
 - 1. Include data substantiating that materials comply with requirements.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures"
 - 1. Record actual locations of valves.

C. EXTRA MATERIALS

- 1. Provide two (2) repacking kits for each type and size valve.

1.6 QUALITY ASSURANCE

- A. Valves: Manufacturer's name and pressure rating marked on valve body.
- B. Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooves, and weld ends.
 - 3. Block check valves in either closed or open position.
- B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
- C. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
 - 3. Provide temporary protective coating on cast iron and steel valves.
 - 4. Provide temporary end caps and closures on fittings. Maintain in place until installation.
 - 5. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.
- D. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
1. ASME B1.20.1 for threads for threaded-end valves.
 2. ASME B16.1 for flanges on iron valves.
 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 4. ASME B16.18 for solder joint.
 5. ASME B31.1 for power piping valves.
 6. ASME B31.9 for building services piping valves.
- C. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
- D. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- F. Valve Sizes: Same as upstream piping unless otherwise indicated.
- G. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE LIFT CHECK VALVES

- A. Class 125 Lift Check Valves with Bronze Disc:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Crane Co.; Crane Valve Group; Jenkins Valves.
 - c. Crane Co.; Crane Valve Group; Stockham Division.
 - d. **<Insert manufacturer's name>.**
 - e. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 1.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Vertical flow.
- d. Body Material: ASTM B 61 or ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: Bronze.

B. Class 125 Lift Check Valves with Nonmetallic Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Flo Fab Inc.](#)
- b. [Hammond Valve.](#)
- c. [Kitz Corporation.](#)
- d. [Milwaukee Valve Company.](#)
- e. [Mueller Steam Specialty; a division of SPX Corporation.](#)
- f. [NIBCO INC.](#)
- g. [Red-White Valve Corporation.](#)
- h. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- i. **<Insert manufacturer's name>**.
- j. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 2.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Vertical flow.
- d. Body Material: ASTM B 61 or ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: NBR or PTFE.

2.3 BRONZE SWING CHECK VALVES

A. Class 125, Bronze Swing Check Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [American Valve, Inc.](#)
- b. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- c. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- d. [Crane Co.; Crane Valve Group; Stockham Division.](#)
- e. [Hammond Valve.](#)
- f. [Kitz Corporation.](#)
- g. [Macomb Groups \(The\).](#)
- h. [Milwaukee Valve Company.](#)

- i. [NIBCO INC.](#)
- j. [Powell Valves.](#)
- k. [Red-White Valve Corporation.](#)
- l. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- m. **<Insert manufacturer's name>.**
- n. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 3.
- b. CWP Rating: **200 psig** (1380 kPa).
- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: Bronze.

B. Class 125, Bronze Swing Check Valves with Nonmetallic Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- c. [Crane Co.; Crane Valve Group; Stockham Division.](#)
- d. [Hammond Valve.](#)
- e. [Kitz Corporation.](#)
- f. [Milwaukee Valve Company.](#)
- g. [NIBCO INC.](#)
- h. [Red-White Valve Corporation.](#)
- i. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- j. **<Insert manufacturer's name>.**
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 4.
- b. CWP Rating: **200 psig** (1380 kPa).
- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: PTFE.

C. Class 150, Bronze Swing Check Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [American Valve, Inc.](#)
- b. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- c. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)

- d. [Crane Co.; Crane Valve Group; Stockham Division.](#)
- e. [Kitz Corporation.](#)
- f. [Macomb Groups \(The\).](#)
- g. [Milwaukee Valve Company.](#)
- h. [NIBCO INC.](#)
- i. [Red-White Valve Corporation.](#)
- j. **<Insert manufacturer's name>.**
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 3.
- b. CWP Rating: 300 psig (2070 kPa).
- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: Bronze.

D. Class 150, Bronze Swing Check Valves with Nonmetallic Disc:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- c. [Hammond Valve.](#)
- d. [Milwaukee Valve Company.](#)
- e. [NIBCO INC.](#)
- f. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- g. **<Insert manufacturer's name>.**
- h. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 4.
- b. CWP Rating: 300 psig (2070 kPa).
- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: PTFE.

2.4 IRON SWING CHECK VALVES

A. Class 125, Iron Swing Check Valves with Metal Seats:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)

- b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- c. [Crane Co.; Crane Valve Group; Stockham Division.](#)
- d. [Hammond Valve.](#)
- e. [Kitz Corporation.](#)
- f. [Legend Valve.](#)
- g. [Macomb Groups \(The\).](#)
- h. [Milwaukee Valve Company.](#)
- i. [NIBCO INC.](#)
- j. [Powell Valves.](#)
- k. [Red-White Valve Corporation.](#)
- l. [Sure Flow Equipment Inc.](#)
- m. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- n. **<Insert manufacturer's name>.**
- o. or approved equal.

2. Description:

- a. Standard: MSS SP-71, Type I.
- b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).**
- c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).**
- d. Body Design: Clear or full waterway.
- e. Body Material: ASTM A 126, gray iron with bolted bonnet.
- f. Ends: Flanged.
- g. Trim: Bronze.
- h. Gasket: Asbestos free.

B. Class 125, Iron Swing Check Valves with Nonmetallic-to-Metal Seats:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Stockham Division.](#)
- c. **<Insert manufacturer's name>.**
- d. or approved equal.

2. Description:

- a. Standard: MSS SP-71, Type I.
- b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).**
- c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).**
- d. Body Design: Clear or full waterway.
- e. Body Material: ASTM A 126, gray iron with bolted bonnet.
- f. Ends: Flanged.
- g. Trim: Composition.
- h. Seat Ring: Bronze.
- i. Disc Holder: Bronze.
- j. Disc: PTFE.
- k. Gasket: Asbestos free.

C. Class 250, Iron Swing Check Valves with Metal Seats:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- c. [Crane Co.; Crane Valve Group; Stockham Division.](#)
- d. [Hammond Valve.](#)
- e. [Milwaukee Valve Company.](#)
- f. [NIBCO INC.](#)
- g. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- h. **<Insert manufacturer's name>.**
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-71, Type I.
- b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).**
- c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).**
- d. Body Design: Clear or full waterway.
- e. Body Material: ASTM A 126, gray iron with bolted bonnet.
- f. Ends: Flanged.
- g. Trim: Bronze.
- h. Gasket: Asbestos free.

2.5 IRON SWING CHECK VALVES WITH CLOSURE CONTROL

A. Class 125, Iron Swing Check Valves with Lever- and Spring-Closure Control:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [NIBCO INC.](#)
- b. **<Insert manufacturer's name>.**
- c. or approved equal.

2. Description:

- a. Standard: MSS SP-71, Type I.
- b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).**
- c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).**
- d. Body Design: Clear or full waterway.
- e. Body Material: ASTM A 126, gray iron with bolted bonnet.
- f. Ends: Flanged.
- g. Trim: Bronze.
- h. Gasket: Asbestos free.
- i. Closure Control: Factory-installed, exterior lever and spring.

- B. Class 125, Iron Swing Check Valves with Lever and Weight-Closure Control:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
 - b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
 - c. [Crane Co.; Crane Valve Group; Stockham Division.](#)
 - d. [Hammond Valve.](#)
 - e. [Milwaukee Valve Company.](#)
 - f. [NIBCO INC.](#)
 - g. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
 - h. **<Insert manufacturer's name>.**
 - i. or approved equal.
 2. Description:
 - a. Standard: MSS SP-71, Type I.
 - b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).**
 - c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).**
 - d. Body Design: Clear or full waterway.
 - e. Body Material: ASTM A 126, gray iron with bolted bonnet.
 - f. Ends: Flanged.
 - g. Trim: Bronze.
 - h. Gasket: Asbestos free.
 - i. Closure Control: Factory-installed, exterior lever and weight.

2.6 IRON, GROOVED-END SWING CHECK VALVES

- A. 300 CWP, Iron, Grooved-End Swing Check Valves:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Anvil International, Inc.](#)
 - b. [Shurjoint Piping Products.](#)
 - c. [Tyco Valves & Controls; a unit of Tyco Flow Control.](#)
 - d. [Victaulic Company.](#)
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.
 2. Description:
 - a. CWP Rating: **300 psig (2070 kPa).**
 - b. Body Material: ASTM A 536, ductile iron.
 - c. Seal: EPDM.
 - d. Disc: Spring operated, ductile iron or stainless steel.

2.7 IRON, CENTER-GUIDED CHECK VALVES

A. Class 125, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Anvil International, Inc.](#)
- b. [APCO Willamette Valve and Primer Corporation.](#)
- c. [Crispin Valve.](#)
- d. [DFT Inc.](#)
- e. [Flo Fab Inc.](#)
- f. [GA Industries, Inc.](#)
- g. [Hammond Valve.](#)
- h. [Metraflex, Inc.](#)
- i. [Milwaukee Valve Company.](#)
- j. [Mueller Steam Specialty; a division of SPX Corporation.](#)
- k. [NIBCO INC.](#)
- l. [Spence Engineering Company, Inc.; a division of CIRCOR International, Inc.](#)
- m. [Sure Flow Equipment Inc.](#)
- n. [Val-Matic Valve & Manufacturing Corp.](#)
- o. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- p. **<Insert manufacturer's name>.**
- q. or approved equal.

2. **Description:**

- a. Standard: MSS SP-125.
- b. [NPS 2-1/2 to NPS 12 \(DN 65 to DN 300\), CWP Rating: 200 psig \(1380 kPa\).](#)
- c. [NPS 14 to NPS 24 \(DN 350 to DN 600\), CWP Rating: 150 psig \(1035 kPa\).](#)
- d. Body Material: ASTM A 126, gray iron.
- e. Style: Compact wafer.
- f. Seat: Bronze.

B. Class 125, Iron, Globe, Center-Guided Check Valves with Metal Seat:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crispin Valve.](#)
- c. [DFT Inc.](#)
- d. [Flomatic Corporation.](#)
- e. [Hammond Valve.](#)
- f. [Metraflex, Inc.](#)
- g. [Milwaukee Valve Company.](#)
- h. [Mueller Steam Specialty; a division of SPX Corporation.](#)
- i. [NIBCO INC.](#)
- j. [Spence Engineering Company, Inc.; a division of CIRCOR International.](#)

- a. Standard: MSS SP-125.
- b. NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 300 psig (2070 kPa).
- c. NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 250 psig (1725 kPa).
- d. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- e. Style: Globe, spring loaded.
- f. Ends: Flanged.
- g. Seat: Bronze.

E. Class 250, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. APCO Willamette Valve and Primer Corporation.
- b. Crispin Valve.
- c. DFT Inc.
- d. Flo Fab Inc.
- e. Hammond Valve.
- f. Metraflex, Inc.
- g. Milwaukee Valve Company.
- h. NIBCO INC.
- i. Sure Flow Equipment Inc.
- j. Val-Matic Valve & Manufacturing Corp.
- k. **<Insert manufacturer's name>.**
- l. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
- c. NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
- d. Body Material: ASTM A 126, gray iron.
- e. Style: Compact wafer, spring loaded.
- f. Seat: Bronze.

F. Class 250, Iron, Globe, Center-Guided Check Valves with Metal Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. APCO Willamette Valve and Primer Corporation.
- b. Crispin Valve.
- c. DFT Inc.
- d. Flomatic Corporation.
- e. Hammond Valve.
- f. Metraflex, Inc.
- g. Milwaukee Valve Company.
- h. Mueller Steam Specialty; a division of SPX Corporation.
- i. NIBCO INC.
- j. Val-Matic Valve & Manufacturing Corp.

- k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 2. Description:
 - a. Standard: MSS SP-125.
 - b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).**
 - c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).**
 - d. Body Material: ASTM A 126, gray iron.
 - e. Style: Globe, spring loaded.
 - f. Ends: Flanged.
 - g. Seat: Bronze.
- G. Class 300, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [APCO Willamette Valve and Primer Corporation.](#)
 - b. [Crispin Valve.](#)
 - c. [Val-Matic Valve & Manufacturing Corp.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Description:
 - a. Standard: MSS SP-125.
 - b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).**
 - c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 400 psig (2760 kPa).**
 - d. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
 - e. Style: Compact wafer, spring loaded.
 - f. Seat: Bronze.
- H. Class 300, Iron, Globe, Center-Guided Check Valves with Metal Seat:
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [APCO Willamette Valve and Primer Corporation.](#)
 - b. [Crispin Valve.](#)
 - c. [Val-Matic Valve & Manufacturing Corp.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Description:
 - a. Standard: MSS SP-125.
 - b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).**
 - c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 400 psig (2760 kPa).**
 - d. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.

- e. Style: Globe, spring loaded.
- f. Ends: Flanged.
- g. Seat: Bronze.

I. Class 125, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crispin Valve.](#)
- c. [DFT Inc.](#)
- d. [Flo Fab Inc.](#)
- e. [Hammond Valve.](#)
- f. [Milwaukee Valve Company.](#)
- g. [NIBCO INC.](#)
- h. [Spence Engineering Company, Inc.; a division of CIRCOR International, Inc.](#)
- i. [Sure Flow Equipment Inc.](#)
- j. [Val-Matic Valve & Manufacturing Corp.](#)
- k. **<Insert manufacturer's name>.**
- l. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).**
- c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).**
- d. Body Material: ASTM A 126, gray iron.
- e. Style: Compact wafer.
- f. Seat: **[EPDM] [or] [NBR] <Insert material>.**

J. Class 125, Iron, Globe, Center-Guided Check Valves with Resilient Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Anvil International, Inc.](#)
- b. [APCO Willamette Valve and Primer Corporation.](#)
- c. [Crispin Valve.](#)
- d. [DFT Inc.](#)
- e. [GA Industries, Inc.](#)
- f. [Hammond Valve.](#)
- g. [Milwaukee Valve Company.](#)
- h. [NIBCO INC.](#)
- i. [Sure Flow Equipment Inc.](#)
- j. [Val-Matic Valve & Manufacturing Corp.](#)
- k. **<Insert manufacturer's name>.**
- l. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **200 psig** (1380 kPa).
- c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **150 psig** (1035 kPa).
- d. Body Material: ASTM A 126, gray iron.
- e. Style: Globe, spring loaded.
- f. Ends: Flanged.
- g. Seat: **[EPDM] [or] [NBR] <Insert material>**.

K. Class 150, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crispin Valve.](#)
- c. [Val-Matic Valve & Manufacturing Corp.](#)
- d. **<Insert manufacturer's name>**.
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **300 psig** (2070 kPa).
- c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **250 psig** (1725 kPa).
- d. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- e. Style: Compact wafer.
- f. Seat: **[EPDM] [or] [NBR] <Insert material>**.

L. Class 150, Iron, Globe, Center-Guided Check Valves with Resilient Seat:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crispin Valve.](#)
- c. [DFT Inc.](#)
- d. [Val-Matic Valve & Manufacturing Corp.](#)
- e. **<Insert manufacturer's name>**.
- f. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **300 psig** (2070 kPa).
- c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **250 psig** (1725 kPa).
- d. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- e. Style: Globe, spring loaded.
- f. Ends: Flanged.

g. Seat: **[EPDM] [or] [NBR] <Insert material>**.

M. Class 250, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crispin Valve.](#)
- c. [DFT Inc.](#)
- d. [Flo Fab Inc.](#)
- e. [Hammond Valve.](#)
- f. [Milwaukee Valve Company.](#)
- g. [NIBCO INC.](#)
- h. [Sure Flow Equipment Inc.](#)
- i. [Val-Matic Valve & Manufacturing Corp.](#)
- j. **<Insert manufacturer's name>**.
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).**
- c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).**
- d. Body Material: ASTM A 126, gray iron.
- e. Style: Compact wafer, spring loaded.
- f. Seat: **[EPDM] [or] [NBR] <Insert material>**.

N. Class 250, Iron, Globe, Center-Guided Check Valves with Resilient Seat:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crispin Valve.](#)
- c. [DFT Inc.](#)
- d. [Hammond Valve.](#)
- e. [Milwaukee Valve Company.](#)
- f. [NIBCO INC.](#)
- g. [Val-Matic Valve & Manufacturing Corp.](#)
- h. **<Insert manufacturer's name>**.
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).**
- c. **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).**
- d. Body Material: ASTM A 126, gray iron.
- e. Style: Globe, spring loaded.

- f. Ends: Flanged.
- g. Seat: [EPDM] [or] [NBR] <Insert material>.

O. Class 300, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crispin Valve.](#)
- c. [Val-Matic Valve & Manufacturing Corp.](#)
- d. <Insert manufacturer's name>.
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
- c. NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 400 psig (2760 kPa).
- d. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- e. Style: Compact wafer, spring loaded.
- f. Seat: [EPDM] [or] [NBR] <Insert material>.

P. Class 300, Iron, Globe, Center-Guided Check Valves with Resilient Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crispin Valve.](#)
- c. [Val-Matic Valve & Manufacturing Corp.](#)
- d. <Insert manufacturer's name>.
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
- c. NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 400 psig (2760 kPa).
- d. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- e. Style: Globe, spring loaded.
- f. Ends: Flanged.
- g. Seat: [EPDM] [or] [NBR] <Insert material>.

2.8 IRON, PLATE-TYPE CHECK VALVES

A. Class 125, Iron, Dual-Plate Check Valves with Metal Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

2. **Basis-of-Design Product:** Subject to compliance with requirements, provide [product indicated on Drawings] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. APCO Willamette Valve and Primer Corporation.
 - b. Crane Co.; Crane Valve Group; Crane Valves.
 - c. Flomatic Corporation.
 - d. Mueller Steam Specialty; a division of SPX Corporation.
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.

3. Description:

- a. Standard: API 594.
- b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **200 psig** (1380 kPa).
- c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **150 psig** (1035 kPa).
- d. Body Design: Wafer, spring-loaded plates.
- e. Body Material: ASTM A 126, gray iron.
- f. Seat: Bronze.

B. Class 150, Iron, Dual-Plate Check Valves with Metal Seat:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. APCO Willamette Valve and Primer Corporation.
 - b. Crane Co.; Crane Valve Group; Crane Valves.
 - c. Mueller Steam Specialty; a division of SPX Corporation.
 - d. Val-Matic Valve & Manufacturing Corp.
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.

2. Description:

- a. Standard: API 594.
- b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **300 psig** (2070 kPa).
- c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **250 psig** (1725 kPa).
- d. Body Design: Wafer, spring-loaded plates.
- e. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- f. Seat: Bronze.

C. Class 250, Iron, Dual-Plate Check Valves with Metal Seat:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. APCO Willamette Valve and Primer Corporation.
 - b. Crane Co.; Crane Valve Group; Crane Valves.
 - c. **<Insert manufacturer's name>.**
 - d. or approved equal.

2. Description:

- a. Standard: API 594.
- b. NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
- c. NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
- d. Body Design: Wafer, spring-loaded plates.
- e. Body Material: ASTM A 126, gray iron.
- f. Seat: Bronze.

D. Class 300, Iron, Dual-Plate Check Valves with Metal Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- c. [Mueller Steam Specialty; a division of SPX Corporation.](#)
- d. [Val-Matic Valve & Manufacturing Corp.](#)
- e. <Insert manufacturer's name>.
- f. or approved equal.

2. Description:

- a. Standard: API 594.
- b. NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
- c. NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 400 psig (2760 kPa).
- d. Body Design: Wafer, spring-loaded plates.
- e. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- f. Seat: Bronze.

E. Class 125, Iron, Single-Plate Check Valves with Resilient Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Flo Fab Inc.](#)
- b. [Sure Flow Equipment Inc.](#)
- c. <Insert manufacturer's name>.
- d. or approved equal.

2. Description:

- a. Standard: API 594.
- b. NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
- c. NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
- d. Body Design: Wafer, spring-loaded plate.
- e. Body Material: ASTM A 126, gray iron.
- f. Seat: [EPDM] [or] [NBR] <Insert material>.

F. Class 125, Iron, Dual-Plate Check Valves with Resilient Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Cameron; Valves & Measurement Group.](#)
- c. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- d. [Crane Co.; Crane Valve Group; Stockham Division.](#)
- e. [NIBCO INC.](#)
- f. [Spence Engineering Company, Inc.; a division of CIRCOR International, Inc.](#)
- g. [Sure Flow Equipment Inc.](#)
- h. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- i. **<Insert manufacturer's name>.**
- j. or approved equal.

2. Description:

- a. Standard: API 594.
- b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **200 psig** (1380 kPa).
- c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **150 psig** (1035 kPa).
- d. Body Design: Wafer, spring-loaded plates.
- e. Body Material: ASTM A 126, gray iron.
- f. Seat: **[EPDM] [or] [NBR] <Insert material>.**

G. Class 150, Iron, Dual-Plate Check Valves with Resilient Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [APCO Willamette Valve and Primer Corporation.](#)
- b. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- c. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- d. [Val-Matic Valve & Manufacturing Corp.](#)
- e. **<Insert manufacturer's name>.**
- f. or approved equal.

2. Description:

- a. Standard: API 594.
- b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **300 psig** (2070 kPa).
- c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **250 psig** (1725 kPa).
- d. Body Design: Wafer, spring-loaded plates.
- e. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- f. Seat: **[EPDM] [or] [NBR] <Insert material>.**

H. Class 250, Iron, Wafer, Single-Plate Check Valves with Resilient Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Sure Flow Equipment Inc.](#)
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
2. Description:
- a. Standard: API 594.
 - b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **400 psig** (2760 kPa).
 - c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **300 psig** (2070 kPa).
 - d. Body Design: Wafer, spring-loaded plate.
 - e. Body Material: ASTM A 126, gray iron.
 - f. Seat: **[EPDM] [or] [NBR] <Insert material>**.
- I. Class 250, Iron, Dual-Plate Check Valves with Resilient Seat:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [APCO Willamette Valve and Primer Corporation.](#)
 - b. [Crane Co.; Crane Valve Group; Crane Valves.](#)
 - c. [Sure Flow Equipment Inc.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Description:
 - a. Standard: API 594.
 - b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **400 psig** (2760 kPa).
 - c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **300 psig** (2070 kPa).
 - d. Body Design: Wafer, spring-loaded plates.
 - e. Body Material: ASTM A 126, gray iron.
 - f. Seat: **[EPDM] [or] [NBR] <Insert material>**.
- J. Class 300, Iron, Dual-Plate Check Valves with Resilient Seat:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [APCO Willamette Valve and Primer Corporation.](#)
 - b. [Val-Matic Valve & Manufacturing Corp.](#)
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Description:
 - a. Standard: API 594.
 - b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **500 psig** (3450 kPa).
 - c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **400 psig** (2760 kPa).
 - d. Body Design: Wafer, spring-loaded plates.
 - e. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.

- f. Seat: [EPDM] [or] [NBR] <Insert material>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves.

3.2 PREPARATION

- A. Ream pipe and tube ends. Remove burrs.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

3.3 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Provide dielectric fittings wherever jointing dissimilar metals.
- C. Locate valves for easy access and provide separate support where necessary.
- D. Provide clearance for installation of insulation and access to valves and fittings.
- E. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Division 08 installer.
- F. Install valves with stems upright or horizontal, not inverted.
- G. Lever Handle Valves: Install valve handle so that the handle opens in the direction of

fluid flow.

- H. Install valves in horizontal piping with stem at or above center of pipe.
- I. Install valves in position to allow full stem movement.
- J. Install check valves for proper direction of flow and as follows:
 - 1. Swing Check Valves: In horizontal position with hinge pin level.
 - 2. **[Center-Guided]** **[and]** **[Plate-Type]** Check Valves: In horizontal or vertical position, between flanges.
 - 3. Lift Check Valves: With stem upright and plumb.
- K. Install valve tags. Comply with requirements for valve tags and schedules in Section 230553 "Identification for HVAC Piping and Equipment."

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Pump-Discharge Check Valves:
 - a. **NPS 2 (DN 50)** and Smaller: Bronze swing check valves with **[bronze]** **[or]** **[nonmetallic]** disc.
 - b. **NPS 2-1/2 (DN 65)** and Larger: Iron swing check valves with lever and weight or with spring or iron, center-guided, **[metal]** **[or]** **[resilient]**-seat check valves.
- B. If valves with specified SWP classes or CWP ratings are unavailable, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- C. Select valves, except wafer types, with the following end connections:
 - 1. For Copper Tubing, **NPS 2 (DN 50)** and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules.
 - 2. For Copper Tubing, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 3. For Copper Tubing, **NPS 5 (DN 125)** and Larger: Flanged ends.
 - 4. For Steel Piping, **NPS 2 (DN 50)** and Smaller: Threaded ends.
 - 5. For Steel Piping, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 6. For Steel Piping, **NPS 5 (DN 125)** and Larger: Flanged ends.
 - 7. For Grooved-End **[Copper Tubing]** **[and]** **[Steel Piping]** except Steam and

Steam Condensate Piping: Valve ends may be grooved.

3.6 CHILLED-WATER VALVE SCHEDULE

A. Pipe NPS 2 (DN 50) and Smaller:

1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
2. Bronze Swing Check Valves: **[Class 125] [Class 150]**, **[bronze] [nonmetallic]** disc.

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Iron Valves, **NPS 2-1/2 to NPS 4** (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
2. Iron Swing Check Valves: **[Class 125] [Class 250]**, **[metal] [nonmetallic-to-metal]** seats.
3. Iron Swing Check Valves with Closure Control, **NPS 2-1/2 to NPS 12** (DN 65 to DN 300): **Class 125**, lever and **[spring] [weight]**.
4. Iron, Grooved-End Check Valves, **NPS 3 to NPS 12** (DN 80 to DN 300): 300 CWP.
5. Iron, Center-Guided Check Valves: **[Class 125] [Class 150] [Class 250] [Class 300]**, **[compact-wafer] [globe]**, **[metal] [resilient]** seat.
6. Iron, Plate-Type Check Valves: **[Class 125] [Class 250]** single plate; resilient seat.
7. Iron, Plate-Type Check Valves: **[Class 125] [Class 150] [Class 250] [Class 300]** dual plate; metal seat.
8. Iron, Plate-Type Check Valves: **[Class 125] [Class 150] [Class 250] [Class 300]** dual plate; resilient seat.

3.7 CONDENSER-WATER VALVE SCHEDULE

A. Pipe NPS 2 (DN 50) and Smaller:

1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
2. Bronze Swing Check Valves: **[Class 125] [Class 150]**, **[bronze] [nonmetallic]** disc.

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Iron Valves, **NPS 2-1/2 to NPS 4** (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
2. Iron Swing Check Valves: **[Class 125] [Class 250]**, **[metal] [nonmetallic-to-metal]** seats.
3. Iron Swing Check Valves with Closure Control, **NPS 2-1/2 to NPS 12** (DN 65 to DN 300): **Class 125**, lever and **[spring] [weight]**.
4. Iron, Grooved-End Check Valves, **NPS 3 to NPS 12** (DN 80 to DN 300): 300 CWP.
5. Iron, Center-Guided Check Valves, **NPS 2-1/2 to NPS 24** (DN 65 to DN 600): **[Class 125] [Class 150] [Class 250] [Class 300]**, **[metal] [resilient]** seat.
6. Iron, Plate-Type Check Valves: **[Class 125] [Class 250]** single plate; resilient

- seat.
- 7. Iron, Plate-Type Check Valves: **[Class 125] [Class 150] [Class 250] [Class 300]** dual plate; metal seat.
- 8. Iron, Plate-Type Check Valves: **[Class 125] [Class 150] [Class 250] [Class 300]** dual plate; resilient seat.

3.8 HEATING-WATER VALVE SCHEDULE

A. Pipe **NPS 2** (DN 50) and Smaller:

- 1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
- 2. Bronze Swing Check Valves: **[Class 125] [Class 150]**, **[bronze] [nonmetallic]** disc.

B. Pipe **NPS 2-1/2** (DN 65) and Larger:

- 1. Iron Valves, **NPS 2-1/2 to NPS 4** (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
- 2. Iron Swing Check Valves: **[Class 125] [Class 250]**, **[metal] [nonmetallic-to-metal]** seats.
- 3. Iron Swing Check Valves with Closure Control, **NPS 2-1/2 to NPS 12** (DN 65 to DN 300): Class 125, lever and **[spring] [weight]**.
- 4. Iron, Grooved-End Check Valves, **NPS 3 to NPS 12** (DN 80 to DN 300): 300 CWP.
- 5. Iron, Center-Guided Check Valves: **[Class 125] [Class 150] [Class 250] [Class 300]**, **[compact-wafer] [globe]**, **[metal] [resilient]** seat.
- 6. Iron, Plate-Type Check Valves: **[Class 125] [Class 250]** single plate; resilient seat.
- 7. Iron, Plate-Type Check Valves: **[Class 125] [Class 150] [Class 250] [Class 300]** dual plate; metal seat.
- 8. Iron, Plate-Type Check Valves: **[Class 125] [Class 150] [Class 250] [Class 300]** dual plate; resilient seat.

3.9 LOW-PRESSURE STEAM VALVE SCHEDULE (**15 PSIG** ([104 kPa]) OR LESS)

A. Pipe **NPS 2** (DN 50) and Smaller:

- 1. Bronze Swing Check Valves: **[Class 125] [Class 150]**, **[bronze] [nonmetallic]** disc.

B. Pipe **NPS 2-1/2** (DN 65) and Larger:

- 1. Iron Valves, **NPS 2-1/2 to NPS 4** (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
- 2. Iron Swing Check Valves: **[Class 125] [Class 250]**, **[metal] [nonmetallic-to-metal]** seats.
- 3. Iron Swing Check Valves with Closure Control, **NPS 2-1/2 to NPS 12** (DN 65 to DN 300): Class 125, lever and **[spring] [weight]**.

3.10 HIGH-PRESSURE STEAM VALVE SCHEDULE (MORE THAN 15 PSIG ([104 kPa]))

A. Pipe NPS 2 (DN 50) and Smaller:

1. Bronze Swing Check Valves: [Class 125] [Class 150], [bronze] [nonmetallic] disc.

B. Pipe Sizes NPS 2-1/2 (DN 65) and Larger:

1. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
2. Iron Swing Check Valves: [Class 125] [Class 250], [metal] [nonmetallic-to-metal] seats.
3. Iron Swing Check Valves with Closure Control, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125, lever and [spring] [weight].

3.11 STEAM-CONDENSATE VALVE SCHEDULE

A. Pipe NPS 2 (DN 50) and Smaller:

1. Bronze Swing Check Valves: [Class 125] [Class 150], [bronze] [nonmetallic] disc.

B. Pipe NPS 2-1/2 (DN 65) and Larger:

1. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
2. Iron Swing Check Valves: [Class 125] [Class 250], [metal] [nonmetallic-to-metal] seats.
3. Iron Swing Check Valves with Closure Control: Class 125, lever and [spring] [weight].

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230523.14

SECTION 230523.15 - GATE VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Bronze gate valves.
 - 2. Iron gate valves.
 - 3. Chainwheels.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. NRS: Nonrising stem.
- C. OS&Y: Outside screw and yoke.
- D. RS: Rising stem.
- E. SWP: Steam working pressure.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of valve and accessory. Provide manufacturers catalog information. Indicate valve data and ratings.
 - 1. Include data substantiating that materials comply with requirements.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1. Record actual locations of valves.

C. EXTRA MATERIALS

1. Provide two repacking kits for each type and size valve.

1.6 QUALITY ASSURANCE

A. Valves: Manufacturer's name and pressure rating marked on valve body.

B. Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set gate valves closed to prevent rattling.

B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

C. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
3. Provide temporary protective coating on cast iron and steel valves.
4. Provide temporary end caps and closures on fittings. Maintain in place until installation.
5. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

D. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

E. Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
1. ASME B1.20.1 for threads for threaded-end valves.
 2. ASME B16.1 for flanges on iron valves.
 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 4. ASME B16.18 for solder joint.
 5. ASME B31.1 for power piping valves.
 6. ASME B31.9 for building services piping valves.
- C. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
- D. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- F. Valve Sizes: Same as upstream piping unless otherwise indicated.
- G. RS Valves in Insulated Piping: With 2-inch (50-mm) stem extensions.
- H. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE GATE VALVES

- A. Class 125, NRS, Bronze Gate Valves:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. American Valve, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves.
 - c. Crane Co.; Crane Valve Group; Jenkins Valves.
 - d. Crane Co.; Crane Valve Group; Stockham Valves.

- e. [Hammond Valve.](#)
- f. [Kitz Corporation.](#)
- g. [The Macomb Groups.](#)
- h. [Milwaukee Valve Company.](#)
- i. [NIBCO INC.](#)
- j. [Powell Valves.](#)
- k. [Red-White Valve Corporation.](#)
- l. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- m. **<Insert manufacturer's name>.**
- n. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 1.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
- d. Ends: Threaded[**or solder joint**].
- e. Stem: Bronze.
- f. Disc: Solid wedge; bronze.
- g. Packing: Asbestos free.
- h. Handwheel: Malleable iron[, **bronze, or aluminum**].

B. Class 125, RS, Bronze Gate Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [American Valve, Inc.](#)
- b. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- c. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- d. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- e. [Hammond Valve.](#)
- f. [Kitz Corporation.](#)
- g. [The Macomb Groups.](#)
- h. [Milwaukee Valve Company.](#)
- i. [NIBCO INC.](#)
- j. [Powell Valves.](#)
- k. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- l. **<Insert manufacturer's name>.**
- m. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 2.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
- d. Ends: Threaded[**or solder joint**].
- e. Stem: Bronze.
- f. Disc: Solid wedge; bronze.
- g. Packing: Asbestos free.

h. Handwheel: Malleable iron, bronze, or aluminum.

C. Class 150, NRS, Bronze Gate Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Hammond Valve.](#)
- b. [Kitz Corporation.](#)
- c. [Milwaukee Valve Company.](#)
- d. [NIBCO INC.](#)
- e. [Powell Valves.](#)
- f. [Red-White Valve Corporation.](#)
- g. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- h. **<Insert manufacturer's name>.**
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 1.
- b. CWP Rating: **300 psig** (2070 kPa).
- c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.
- d. Ends: Threaded.
- e. Stem: Bronze.
- f. Disc: Solid wedge; bronze.
- g. Packing: Asbestos free.
- h. Handwheel: Malleable iron, bronze, or aluminum.

D. Class 150, RS, Bronze Gate Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- c. [Hammond Valve.](#)
- d. [Kitz Corporation.](#)
- e. [The Macomb Groups.](#)
- f. [Milwaukee Valve Company.](#)
- g. [NIBCO INC.](#)
- h. [Powell Valves.](#)
- i. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- j. **<Insert manufacturer's name>.**
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 2.
- b. CWP Rating: **300 psig** (2070 kPa).
- c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.

- d. Ends: Threaded.
- e. Stem: Bronze.
- f. Disc: Solid wedge; bronze.
- g. Packing: Asbestos free.
- h. Handwheel: Malleable iron[, **bronze, or aluminum**].

2.3 IRON GATE VALVES

A. Class 125, NRS, Iron Gate Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- c. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- d. [Flo Fab Inc.](#)
- e. [Hammond Valve.](#)
- f. [Kitz Corporation.](#)
- g. [Legend Valve.](#)
- h. [The Macomb Groups.](#)
- i. [Milwaukee Valve Company.](#)
- j. [NIBCO INC.](#)
- k. [Powell Valves.](#)
- l. [Red-White Valve Corporation.](#)
- m. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- n. **<Insert manufacturer's name>.**
- o. or approved equal.

2. Description:

- a. Standard: MSS SP-70, Type I.
- b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **200 psig** (1380 kPa).
- c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **150 psig** (1035 kPa).
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Disc: Solid wedge.
- h. Packing and Gasket: Asbestos free.

B. Class 125, OS&Y, Iron Gate Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Jenkins Valves.](#)
- c. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- d. [Flo Fab Inc.](#)

- e. [Hammond Valve.](#)
- f. [Kitz Corporation.](#)
- g. [Legend Valve.](#)
- h. [The Macomb Groups.](#)
- i. [Milwaukee Valve Company.](#)
- j. [NIBCO INC.](#)
- k. [Powell Valves.](#)
- l. [Red-White Valve Corporation.](#)
- m. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- n. **<Insert manufacturer's name>.**
- o. or approved equal.

2. Description:

- a. Standard: MSS SP-70, Type I.
- b. [NPS 2-1/2 to NPS 12 \(DN 65 to DN 300\)](#), CWP Rating: [200 psig \(1380 kPa\)](#).
- c. [NPS 14 to NPS 24 \(DN 350 to DN 600\)](#), CWP Rating: [150 psig \(1035 kPa\)](#).
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Disc: Solid wedge.
- h. Packing and Gasket: Asbestos free.

C. Class 250, NRS, Iron Gate Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- c. [NIBCO INC.](#)
- d. **<Insert manufacturer's name>.**
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-70, Type I.
- b. [NPS 2-1/2 to NPS 12 \(DN 65 to DN 300\)](#), CWP Rating: [500 psig \(3450 kPa\)](#).
- c. [NPS 14 to NPS 24 \(DN 350 to DN 600\)](#), CWP Rating: [300 psig \(2070 kPa\)](#).
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Disc: Solid wedge.
- h. Packing and Gasket: Asbestos free.

D. Class 250, OS&Y, Iron Gate Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Crane Co.; Crane Valve Group; Crane Valves.](#)
- b. [Crane Co.; Crane Valve Group; Stockham Valves.](#)
- c. [Hammond Valve.](#)
- d. [Milwaukee Valve Company.](#)
- e. [NIBCO INC.](#)
- f. [Powell Valves.](#)
- g. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- h. **<Insert manufacturer's name>.**
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-70, Type I.
- b. [NPS 2-1/2 to NPS 12 \(DN 65 to DN 300\)](#), CWP Rating: [500 psig \(3450 kPa\)](#).
- c. [NPS 14 to NPS 24 \(DN 350 to DN 600\)](#), CWP Rating: [300 psig \(2070 kPa\)](#).
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Disc: Solid wedge.
- h. Packing and Gasket: Asbestos free.

2.4 CHAINWHEELS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Babbitt Steam Specialty Co.](#)
2. [Roto Hammer Industries.](#)
3. [Trumbull Industries.](#)
4. **<Insert manufacturer's name>.**
5. or approved equal.

B. Description: Valve actuation assembly with sprocket rim, chain guides, chain[, and **attachment brackets for mounting chainwheels directly to hand wheels**].

1. Sprocket Rim with Chain Guides: [**Ductile iron**] [**Ductile or cast iron**] [**Cast iron**] [**Aluminum**] [**Bronze**], of type and size required for valve.[**Include zinc or epoxy coating.**]
2. Chain: [**Hot-dip-galvanized steel**] [**Brass**] [**Stainless steel**], of size required to fit sprocket rim.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves.

3.2 PREPARATION

- A. Ream pipe and tube ends. Remove burrs.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

3.3 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Provide dielectric fittings wherever jointing dissimilar metals.
- C. Locate valves for easy access and provide separate support where necessary.
- D. Provide clearance for installation of insulation and access to valves and fittings.
- E. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Division 08 installer.
- F. Install valves with stems upright or horizontal, not inverted.
- G. Lever Handle Valves: Install valve handle so that the handle opens in the direction of fluid flow.
- H. Install valves in horizontal piping with stem at or above center of pipe.
- I. Install valves in position to allow full stem movement.
- J. Install chainwheels on operators for gate valves [NPS 4 (DN 100)] <Insert size> and larger and more than [96 inches (2400 mm)] <Insert dimension> above floor. Extend chains to [60 inches (1520 mm)] <Insert dimension> above finished floor.
- K. Install valve tags. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Shutoff Service: Gate valves.
- B. If valves with specified SWP classes or CWP ratings are unavailable, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- C. Select valves, except wafer types, with the following end connections:
 - 1. For Copper Tubing, **NPS 2 (DN 50)** and Smaller: Threaded ends, except where solder-joint valve-end option is indicated in valve schedules below.
 - 2. For Copper Tubing, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: Flanged ends, except where threaded valve-end option is indicated in valve schedules below.
 - 3. For Copper Tubing, **NPS 5 (DN 125)** and Larger: Flanged ends.
 - 4. For Steel Piping, **NPS 2 (DN 50)** and Smaller: Threaded ends.
 - 5. For Steel Piping, **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**: Flanged ends, except where threaded valve-end option is indicated in valve schedules below.
 - 6. For Steel Piping, **NPS 5 (DN 125)** and Larger: Flanged ends.
 - 7. For Grooved-End [**Copper Tubing**] [**and**] [**Steel Piping**], except for Steam and Steam Condensate Piping: Valve ends may be grooved.

3.6 CHILLED-WATER VALVE SCHEDULE

- A. Pipe **NPS 2 (DN 50)** and Smaller: Bronze Valves, [**Class 125**] [**Class 150**], [**NRS**] [**RS**] with [**soldered**] [**threaded**] ends.
- B. Pipe **NPS 2-1/2 (DN 65)** and Larger: Iron Gate Valves, [**Class 125**] [**Class 250**], [**NRS**] [**OS&Y**].

3.7 CONDENSER-WATER VALVE SCHEDULE

- A. Pipe **NPS 2 (DN 50)** and Smaller: Bronze Valves, [**Class 125**] [**Class 150**], [**NRS**] [**RS**] with [**soldered**] [**threaded**] ends.
- B. Pipe **NPS 2-1/2 (DN 65)** and Larger: Iron Gate Valves, [**Class 125**] [**Class 250**], [**NRS**] [**OS&Y**].

3.8 HEATING-WATER VALVE SCHEDULE

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze Valves, [**Class 125**] [**Class 150**], [**NRS**] [**RS**] with [**soldered**] [**threaded**] ends.
- B. Pipe **NPS 2-1/2** (DN 65) and Larger: Iron Gate Valves, [**Class 125**] [**Class 250**], [**NRS**] [**OS&Y**].

3.9 LOW-PRESSURE STEAM VALVE SCHEDULE (**15 PSIG** ([104 kPa])) OR LESS)

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze Gate Valves, [**Class 125**] [**Class 150**], [**NRS**] [**RS**].
- B. Pipe **NPS 2-1/2** (DN 65) and Larger: Iron Gate Valves, [**Class 125**] [**Class 250**], [**NRS**] [**OS&Y**].

3.10 HIGH-PRESSURE STEAM VALVE SCHEDULE (MORE THAN **15 PSIG** ([104 kPa]))

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze Gate Valves, [**Class 125**] [**Class 150**], [**NRS**] [**RS**], bronze.
- B. Pipe **NPS 2-1/2** (DN 65) and Larger: Iron Gate Valves, [**Class 125**] [**Class 250**], [**NRS**] [**OS&Y**].

3.11 STEAM-CONDENSATE VALVE SCHEDULE

- A. Pipe **NPS 2** (DN 50) and Smaller: Bronze Gate Valves, [**Class 125**] [**Class 150**], [**NRS**] [**RS**].
- B. Pipe **NPS 2-1/2** (DN 65) and Larger: Iron Gate Valves, [**Class 125**] [**Class 250**], [**NRS**] [**OS&Y**].
- C. MEASUREMENT

PART 4 - METHOD OF MEASUREMENT

- 4.1 No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230523.15

SECTION 230523.16 - PLUG VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Lubricated plug valves.
 - 2. Eccentric plug valves.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of valve and accessory. Provide manufacturers catalog information. Indicate valve data and ratings.
 - 1. Include data substantiating that materials comply with requirements.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of valves.

C. EXTRA MATERIALS

1. Provide two (2) repacking kits for each type and size valve.

1.6 QUALITY ASSURANCE

- A. Valves: Manufacturer's name and pressure rating marked on valve body.
- B. Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 1. Protect internal parts against rust and corrosion.
 2. Protect threads, flange faces, grooves, and weld ends.
 3. Set plug valves open to minimize exposure of functional surfaces.
- B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
- C. Use the following precautions during storage:
 1. Maintain valve end protection.
 2. Store valves indoors and maintain at higher-than-ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
 3. Provide temporary protective coating on cast iron and steel valves.
 4. Provide temporary end caps and closures on fittings. Maintain in place until installation.
 5. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.
- D. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
 - 1. ASME B1.20.1 for threads for threaded-end valves.
 - 2. ASME B16.1 for flanges on iron valves.
 - 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 4. ASME B31.1 for power piping valves.
 - 5. ASME B31.9 for building services piping valves.
- C. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
- D. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream piping unless otherwise indicated.
- F. Valve Actuator Types: Wrench. Furnish Owner with one wrench for every **[five] [10]** **<Insert number>** plug valves, for each size square plug-valve head.

2.2 LUBRICATED PLUG VALVES

- A. Class 125, Lubricated Plug Valves with Threaded Ends:
 - 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Nordstrom Valves, Inc.](#)
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 - 2. Description:
 - a. Standard: MSS SP-78, Type I single gland.
 - b. **NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**, CWP Rating: **200 psig (1380 kPa)**.
 - c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
 - d. Pattern: **[Regular] [or] [short] [venturi]**.
 - e. Plug: Cast iron or bronze with sealant groove.
- B. Class 125, Lubricated Plug Valves with Flanged Ends:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Nordstrom Valves, Inc.](#)
 - b. **<Insert manufacturer's name>.**
 - c. or approved equal.
 2. Description:
 - a. Standard: MSS SP-78, **[Type I single gland] [or] [Type II regular gland]**.
 - b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **200 psig** (1380 kPa).
 - c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **150 psig** (1035 kPa).
 - d. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
 - e. Pattern: **[Regular] [or] [short] [venturi]**.
 - f. Plug: Cast iron or bronze with sealant groove.
- C. Class 125, Cylindrical, Lubricated Plug Valves with Threaded Ends:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [R & M Energy Systems; a unit of Robbins & Myers, Inc.](#)
 - b. **<Insert manufacturer's name>.**
 - c. or approved equal.
 2. Description:
 - a. Standard: MSS SP-78, Type IV.
 - b. **NPS 2-1/2 to NPS 4** (DN 65 to DN 100), CWP Rating: **200 psig** (1380 kPa).
 - c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
 - d. Pattern: **[Regular] [or] [short] [venturi]**.
 - e. Plug: Cast iron or bronze with sealant groove.
- D. Class 125, Cylindrical, Lubricated Plug Valves with Flanged Ends:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [R & M Energy Systems; a unit of Robbins & Myers, Inc.](#)
 - b. **<Insert manufacturer's name>.**
 - c. or approved equal.
 2. Description:
 - a. Standard: MSS SP-78, Type IV.
 - b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **200 psig** (1380 kPa).
 - c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
 - d. Pattern: **[Regular] [or] [short] [venturi]**.

e. Plug: Cast iron or bronze with sealant groove.

E. Class 250, Lubricated Plug Valves with Threaded Ends:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Nordstrom Valves, Inc.](#)
- b. **<Insert manufacturer's name>**.
- c. or approved equal.

2. Description:

- a. Standard: MSS SP-78, **[Type I single gland] [or] [Type II regular gland]**.
- b. **NPS 2-1/2 to NPS 4** (DN 65 to DN 100), CWP Rating: **400 psig** (2760 kPa).
- c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
- d. Pattern: **[Regular] [or] [short] [venturi]**.
- e. Plug: Cast iron or bronze with sealant groove.

F. Class 250, Lubricated Plug Valves with Flanged Ends:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Nordstrom Valves, Inc.](#)
- b. **<Insert manufacturer's name>**.
- c. or approved equal.

2. Description:

- a. Standard: MSS SP-78, **[Type I single gland] [or] [Type II regular gland]**.
- b. **NPS 2-1/2 to NPS 12** (DN 65 to DN 300), CWP Rating: **400 psig** (2760 kPa).
- c. **NPS 14 to NPS 24** (DN 350 to DN 600), CWP Rating: **300 psig** (2070 kPa).
- d. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
- e. Pattern: **[Regular] [or] [short] [venturi]**.
- f. Plug: Cast iron or bronze with sealant groove.

G. Class 250, Cylindrical, Lubricated Plug Valves with Threaded Ends:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [R & M Energy Systems; a unit of Robbins & Myers, Inc.](#)
- b. **<Insert manufacturer's name>**.
- c. or approved equal.

2. Description:

- a. Standard: MSS SP-78, Type IV.

- b. [NPS 2-1/2 to NPS 4 \(DN 65 to DN 100\)](#), CWP Rating: **400 psig** (2760 kPa).
- c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
- d. Pattern: [**Regular**] [**or**] [**short**] [**venturi**].
- e. Plug: Cast iron or bronze with sealant groove.

H. Class 250, Cylindrical, Lubricated Plug Valves with Flanged Ends:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [R & M Energy Systems; a unit of Robbins & Myers, Inc.](#)
- b. **<Insert manufacturer's name>**.
- c. or approved equal.

2. Description:

- a. Standard: MSS SP-78, Type IV.
- b. [NPS 2-1/2 to NPS 12 \(DN 65 to DN 300\)](#), CWP Rating: **400 psig** (2760 kPa).
- c. Body Material: ASTM A 48/A 48M or ASTM A 126, Grade 40 cast iron with lubrication-sealing system.
- d. Pattern: [**Regular**] [**or**] [**short**] [**venturi**].
- e. Plug: Cast iron or bronze with sealant groove.

2.3 ECCENTRIC PLUG VALVES

A. 175 CWP, Eccentric Plug Valves with Resilient Seating.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Clow Valve Co.; a division of McWane, Inc.](#)
- b. [DeZurik Water Controls.](#)
- c. [Henry Pratt Company.](#)
- d. [Homestead Valve; a division of Olson Technologies, Inc.](#)
- e. [M & H Valve Company; a division of McWane, Inc.](#)
- f. [Milliken Valve Company.](#)
- g. [Val-Matic Valve & Manufacturing Corp.](#)
- h. **<Insert manufacturer's name>**.
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-108.
- b. CWP Rating: **175 psig** (1200 kPa) minimum.
- c. Body and Plug: ASTM A 48/A 48M, gray iron; ASTM A 126, gray iron; or ASTM A 536, ductile iron.
- d. Bearings: Oil-impregnated bronze or stainless steel.
- e. Ends: Flanged.

- f. Stem-Seal Packing: Asbestos free.
- g. Plug, Resilient-Seating Material: Suitable for potable-water service unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves.

3.2 PREPARATION

- A. Ream pipe and tube ends. Remove burrs.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

3.3 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Provide dielectric fittings wherever jointing dissimilar metals.
- C. Locate valves for easy access and provide separate support where necessary.
- D. Provide clearance for installation of insulation and access to valves and fittings.
- E. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Division 08 installer.
- F. Install valves with stems upright or horizontal, not inverted.

- G. Lever Handle Valves: Install valve handle so that the handle opens in the direction of fluid flow.
- H. Install valves in horizontal piping with stem at or above center of pipe.
- I. Install valves in position to allow full stem movement.
- J. Install chainwheels on operators for plug valves [NPS 4 (DN 100)] <Insert pipe size> and larger and more than [96 inches (2400 mm)] <Insert dimension> above floor. Extend chains to [60 inches (1520 mm)] <Insert dimension> above finished floor.
- K. Install valve tags. Comply with requirements for valve tags and schedules in Section 230553 "Identification for HVAC Piping and Equipment."

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Shutoff Service: Plug valves.
- B. If valves with CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
- C. Select valves with the following end connections:
 - 1. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded ends.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 3. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 (DN 50) and Smaller: Threaded ends.
 - 5. For Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 6. For Steel Piping, NPS 5 (DN 125) and Larger: Flanged ends.
 - 7. For Grooved-End [Copper Tubing] [and] [Steel Piping] except Steam and Steam Condensate Piping: Valve ends may be grooved.

3.6 HOT-WATER AND CHILLED-WATER VALVE SCHEDULE

- A. Pipe NPS 2-1/2 (DN 65) and Larger:
 - 1. Lubricated Plug Valves: [Class 125] [Class 250], [regular gland] [cylindrical], [threaded] [flanged].

2. Eccentric Plug Valves: 175 CWP, resilient seating.

3.7 CONDENSER-WATER VALVE SCHEDULE

- A. Pipe **NPS 2-1/2 (DN 65)** and Larger: Lubricated plug valves, **[Class 125] [Class 250]**, **[regular gland] [cylindrical], [threaded] [flanged]**.

3.8 STEAM-CONDENSATE VALVE SCHEDULE

- A. Pipe **NPS 2-1/2 (DN 65)** and Larger: Lubricated plug valves, **[Class 125] [Class 250]**, **[regular gland] [cylindrical], [threaded] [flanged]**.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230523.16

SECTION 230529 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Fiberglass pipe hangers.
4. Metal framing systems.
5. Fiberglass strut systems.
6. Thermal-hanger shield inserts.
7. Fastener systems.
8. Pipe stands.
9. Equipment supports.

B. Related Sections:

1. Section 055000 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
2. Section 230516 "Expansion Fittings and Loops for HVAC Piping" for pipe guides and anchors.
3. **[Section 230548 "Vibration and Seismic Controls for HVAC"] [Section 230548.13 "Vibration Controls for HVAC"]** for vibration isolation devices.
4. **[Section 233113 "Metal Ducts"] [and] [Section 233116 "Nonmetal Ducts"]** for duct hangers and supports.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to [ASCE/SEI 7] <Insert requirement>.
 - 1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
 - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
 - 3. Design seismic-restraint hangers and supports for piping and equipment[**and obtain approval from authorities having jurisdiction**].

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated, including the following:
 - 1. Steel pipe hangers and supports.
 - 2. Thermal-hanger shield inserts.
 - 3. Powder-actuated fastener systems.
 - 4. Pipe positioning systems.
 - 5. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:[**Signed and sealed by a qualified professional engineer.**] Show fabrication and installation details and include calculations for the following; include Product Data for components:
 - 1. Trapeze pipe hangers.
 - 2. Metal framing systems.
 - 3. Pipe stands.
 - 4. Equipment supports.
- C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Detail fabrication and assembly of trapeze hangers.
 - 2. Design Calculations: Calculate requirements for designing trapeze hangers.

1.6 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
 - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 - 2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
 - 3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
 - 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 - 5. Hanger Rods: Continuous-thread rod, nuts, and washer made of [**carbon steel**] [**stainless steel**] <Insert material>.
- B. Stainless-Steel Pipe Hangers and Supports:
 - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 - 2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 - 3. Hanger Rods: Continuous-thread rod, nuts, and washer made of [**stainless steel**] <Insert material>.

2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

- A. MFMA Manufacturer Metal Framing Systems:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Allied Tube & Conduit.](#)
 - b. [Cooper B-Line, Inc.](#)
 - c. [Flex-Strut Inc.](#)
 - d. [GS Metals Corp.](#)
 - e. [Thomas & Betts Corporation.](#)
 - f. [Unistrut Corporation](#); Tyco International, Ltd.
 - g. [Wesanco, Inc.](#)
 - h. **<Insert manufacturer's name>.**
 - i. or approved equal.
2. Description: Shop- or field-fabricated pipe-support assembly for supporting multiple parallel pipes.
3. Standard: MFMA-4.
4. Channels: Continuous slotted steel channel with inturned lips.
5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
6. Hanger Rods: Continuous-thread rod, nuts, and washer made of [**carbon steel**] [**stainless steel**] **<Insert material>.**
7. Metallic Coating: [**Electroplated zinc**] [**Hot-dipped galvanized**] [**Mill galvanized**] [**In-line, hot galvanized**] [**Mechanically-deposited zinc**].
8. Paint Coating: [**Vinyl**] [**Vinyl alkyd**] [**Epoxy**] [**Polyester**] [**Acrylic**] [**Amine**] [**Alkyd**] **<Insert paint type>.**
9. Plastic Coating: [**PVC**] [**Polyurethane**] [**Epoxy**] [**Polyester**] **<Insert plastic type>.**
10. Combination Coating: **<Insert coating materials in order of application>.**

2.4 THERMAL-HANGER SHIELD INSERTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Carpenter & Paterson, Inc.](#)
2. [Clement Support Services.](#)
3. [ERICO International Corporation.](#)
4. [National Pipe Hanger Corporation.](#)

5. [PHS Industries, Inc.](#)
6. [Pipe Shields, Inc.](#); a subsidiary of Piping Technology & Products, Inc.
7. [Piping Technology & Products, Inc.](#)
8. [Rilco Manufacturing Co., Inc.](#)
9. [Value Engineered Products, Inc.](#)
10. <Insert manufacturer's name>.

- B. Insulation-Insert Material for Cold Piping: [**ASTM C 552, Type II cellular glass with 100-psig (688-kPa)**] [**or**] [**ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig (862-kPa)**] minimum compressive strength and vapor barrier.
- C. Insulation-Insert Material for Hot Piping: [**Water-repellent treated, ASTM C 533, Type I calcium silicate with 100-psig (688-kPa)**] [**ASTM C 552, Type II cellular glass with 100-psig (688-kPa)**] [**or**] [**ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig (862-kPa)**] minimum compressive strength.
- D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- F. Insert Length: Extend **2 inches (50 mm)** beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hilti, Inc.
 - b. ITW Ramset/Red Head.
 - c. or approved equal.
- B. Mechanical-Expansion Anchors: Insert-wedge-type, [**zinc-coated**] [**stainless-**] steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. B-Line Systems, Inc.; a division of Cooper Industries.
 - b. Hilti, Inc.
 - c. ITW Ramset/Red Head.

2.6 PIPE STANDS

- A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. Compact Pipe Stand: One-piece plastic unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
- C. Low-Type, Single-Pipe Stand: One-piece **[plastic] [stainless-steel]** base unit with plastic roller, for roof installation without membrane penetration.
- D. High-Type, Single-Pipe Stand:
1. Description: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
 2. Base: **[Plastic] [Stainless steel]**.
 3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
 4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.
 5. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ERICO/Michigan Hanger Co.
 - b. MIRO Industries.
 - c. Portable Pipe Hangers.
- E. High-Type, Multiple-Pipe Stand:
1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
 2. Bases: One or more; plastic.
 3. Vertical Members: Two or more protective-coated-steel channels.
 4. Horizontal Member: Protective-coated-steel channel.
 5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.
 6. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Portable Pipe Hangers.
 - b. or approved equal.
- F. Curb-Mounted-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

2.7 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.8 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
 - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
 - 2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.
- D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- E. Fastener System Installation:
 - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
 - 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- F. Pipe Stand Installation:

1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
 2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 077200 "Roof Accessories" for curbs.
- G. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- H. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- J. Install lateral bracing with pipe hangers and supports to prevent swaying.
- K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, [NPS 2-1/2 (DN 65)] <Insert size> and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- L. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- N. Insulated Piping:
1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
 3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.

- a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe **NPS 4 (DN 100)** and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
 - a. **NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.**
 - b. **NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.**
 - c. **NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.**
 - d. **NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.**
 - e. **NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches (610 mm) long and 0.105 inch (2.67 mm) thick.**
5. Pipes **NPS 8 (DN 200)** and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.3 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for **[trapeze pipe hangers] [and] [equipment supports]**.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.

4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.4 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to [1-1/2 inches (40 mm)] <Insert dimension>.

3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils (0.05 mm).
- B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in [**Section 099113 "Exterior Painting"**] [**Section 099123 "Interior Painting"**] [**and**] [**Section 099600 "High Performance Coatings."**]
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.6 HANGER AND SUPPORT APPLICATIONS AND SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel [**pipe hangers and supports**] [**metal trapeze pipe hangers**] [**and**] [**metal framing systems**] and attachments for general service applications.

- F. Use **[stainless-steel pipe hangers] fiberglass strut systems** and **[stainless-steel] [or] [corrosion-resistant]** attachments for hostile environment applications.
- G. Use padded hangers for piping that is subject to scratching.
- H. Use thermal-hanger shield inserts for insulated piping and tubing.
- I. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes **NPS 1/2 to NPS 30** (DN 15 to DN 750).
 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to **1050 deg F** (566 deg C), pipes **NPS 4 to NPS 24** (DN 100 to DN 600), requiring up to **4 inches** (100 mm) of insulation.
 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes **NPS 3/4 to NPS 36** (DN 20 to DN 900), requiring clamp flexibility and up to **4 inches** (100 mm) of insulation.
 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes **NPS 1/2 to NPS 24** (DN 15 to DN 600) if little or no insulation is required.
 5. Pipe Hangers (MSS Type 5): For suspension of pipes **NPS 1/2 to NPS 4** (DN 15 to DN 100), to allow off-center closure for hanger installation before pipe erection.
 6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes **NPS 3/4 to NPS 8** (DN 20 to DN 200).
 7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes **NPS 1/2 to NPS 8** (DN 15 to DN 200).
 8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes **NPS 1/2 to NPS 8** (DN 15 to DN 200).
 9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes **NPS 1/2 to NPS 8** (DN 15 to DN 200).
 10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes **NPS 3/8 to NPS 8** (DN 10 to DN 200).
 11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes **NPS 3/8 to NPS 3** (DN 10 to DN 80).
 12. U-Bolts (MSS Type 24): For support of heavy pipes **NPS 1/2 to NPS 30** (DN 15 to DN 750).
 13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
 14. Pipe Saddle Supports (MSS Type 36): For support of pipes **NPS 4 to NPS 36** (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
 15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes **NPS 4 to NPS 36** (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
 16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes **NPS 2-1/2 to NPS 36** (DN 65 to DN 900) if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.

17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes **NPS 1 to NPS 30** (DN 25 to DN 750), from two rods if longitudinal movement caused by expansion and contraction might occur.
 18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes **NPS 2-1/2 to NPS 24** (DN 65 to DN 600), from single rod if horizontal movement caused by expansion and contraction might occur.
 19. Complete Pipe Rolls (MSS Type 44): For support of pipes **NPS 2 to NPS 42** (DN 50 to DN 1050) if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
 20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes **NPS 2 to NPS 24** (DN 50 to DN 600) if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
 21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes **NPS 2 to NPS 30** (DN 50 to DN 750) if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.
- J. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers **NPS 3/4 to NPS 24** (DN 24 to DN 600).
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers **NPS 3/4 to NPS 24** (DN 20 to DN 600) if longer ends are required for riser clamps.
- K. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to **6 inches** (150 mm) for heavy loads.
 2. Steel Clevises (MSS Type 14): For **120 to 450 deg F** (49 to 232 deg C) piping installations.
 3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
 4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
 5. Steel Weldless Eye Nuts (MSS Type 17): For **120 to 450 deg F** (49 to 232 deg C) piping installations.
- L. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction, to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.

5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
 8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
 9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
 10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
 11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
 12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb (340 kg).
 - b. Medium (MSS Type 32): 1500 lb (680 kg).
 - c. Heavy (MSS Type 33): 3000 lb (1360 kg).
 13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
 15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- M. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- N. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
 2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches (32 mm).
 3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
 4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
 5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.

6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
 7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
 8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
 - a. Horizontal (MSS Type 54): Mounted horizontally.
 - b. Vertical (MSS Type 55): Mounted vertically.
 - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- O. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- P. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
- Q. Use [**powder-actuated fasteners**] [or] [**mechanical-expansion anchors**] instead of building attachments where required in concrete construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230529

SECTION 230533 - HEAT TRACING FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes heat tracing for HVAC piping with the following electric heating cables:
 - 1. Plastic insulated, series resistance.
 - 2. Self-regulating, parallel resistance.
- B. Related Requirements:
 - 1. Section 210533 "Heat Tracing for Fire-Suppression Piping."
 - 2. Section 220533 "Heat Tracing for Plumbing Piping."
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 - 2. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For electric heating cable.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

- B. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within specified warranty period.
1. Warranty Period: Minimum [**Three (3)**] [**Five (5)**] <Insert number> years from date of Substantial Completion.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PLASTIC-INSULATED, SERIES-RESISTANCE HEATING CABLES

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
1. Delta-Therm Corporation.
 2. Easy Heat; a division of EGS Electrical Group LLC.
 3. Orbit Manufacturing.
 4. Pyrotenax; a brand of Tyco Thermal Controls LLC.
 5. Raychem; a brand of Tyco Thermal Controls LLC.
 6. Watts Radiant, Inc.; a subsidiary of Watts Water Technologies, Inc.
 7. <Insert manufacturer's name>.
 8. or approved equal.
- B. Comply with IEEE 515.1.
- C. Heating Element: Single- or dual-stranded resistor wire. Terminate with waterproof, factory-assembled, nonheating leads with connectors at both ends.

- D. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone, Tefzel, or polyolefin.
- E. Cable Cover: Aluminum braid[**and silicone or Hylar outer jacket**].
- F. Maximum Operating Temperature (Power On): [150 deg F (65 deg C)] **<Insert temperature>**.
- G. Maximum Exposure Temperature (Power Off): [185 deg F (85 deg C)] **<Insert temperature>**.
- H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- I. Capacities and Characteristics:
 - 1. Maximum Heat Output: [6 W/ft. (19.7 W/m)] [7.5 W/ft. (24.6 W/m)] maximum **<Insert value>**.
 - 2. Piping Diameter: **<Insert NPS (DN)>**.
 - 3. Number of Parallel Cables: **<Insert number>**.
 - 4. Spiral Wrap Pitch: **<Insert inches (mm)>**.
 - 5. Electrical Characteristics for Single-Circuit Connection:
 - a. Volts: [120] [208] [240] [277] [480] **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.2 SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. BriskHeat.
 - 2. Chromalox.
 - 3. Delta-Therm Corporation.
 - 4. Easy Heat; a division of EGS Electrical Group LLC.
 - 5. Pyrotenax; a brand of Tyco Thermal Controls LLC.
 - 6. Raychem; a brand of Tyco Thermal Controls LLC.
 - 7. Thermon Americas Inc.
 - 8. Trasor Corp.
 - 9. **<Insert manufacturer's name>**.
 - 10. or approved equal.
- B. Comply with IEEE 515.1.

- C. Heating Element: Pair of parallel **[No. 16] [No. 18]** AWG, **[tinned] [nickel-coated]**, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled, nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
- D. Electrical Insulating Jacket: Flame-retardant polyolefin.
- E. Cable Cover: **[Tinned-copper] [Stainless-steel]** braid **[and polyolefin outer jacket with ultraviolet inhibitor]**.
- F. Maximum Operating Temperature (Power On): **[150 deg F (65 deg C)] <Insert temperature>**.
- G. Maximum Exposure Temperature (Power Off): **[185 deg F (85 deg C)] <Insert temperature>**.
- H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- I. Capacities and Characteristics:
 - 1. Maximum Heat Output: **[3 W/ft. (9.8 W/m)] [5 W/ft. (16.4 W/m)] [8 W/ft. (26 W/m)] [10 W/ft. (32.8 W/m)] [12 W/ft. (39.4 W/m)] <Insert value>**.
 - 2. Piping Diameter: **<Insert NPS (DN)>**.
 - 3. Number of Parallel Cables: **<Insert number>**.
 - 4. Spiral Wrap Pitch: **<Insert inches (mm)>**.
 - 5. Electrical Characteristics for Single-Circuit Connection:
 - a. Volts: **[120] [208] [240] [277] [480] <Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.3 CONTROLS

- A. Remote bulb unit with adjustable temperature range from **[30 to 50 deg F (minus 1 to plus 10 deg C)] <Insert temperature range>**.
- B. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
- C. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
- D. Corrosion-resistant, waterproof control enclosure.

2.4 ACCESSORIES

- A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
- B. Warning Labels: Refer to Section 230553 "Identification for HVAC Piping and Equipment."
- C. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils (0.08 mm) thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
 - 1. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches (150 mm): 3/4 inch (19 mm) minimum.
 - 2. Width for Markers on Pipes with OD, Including Insulation, 6 Inches (150 mm) or Larger: 1-1/2 inches (38 mm) minimum.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and substrates to receive electric heating cables for compliance with requirements for installation tolerances and other conditions affecting performance.
 - 1. Ensure surfaces and pipes in contact with electric heating cables are free of burrs and sharp protrusions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install electric heating cable across expansion joints according to manufacturer's written instructions; use slack cable to allow movement without damage to cable.
- B. Install electric heating cables after piping has been tested and before insulation is installed.
- C. Install electric heating cables according to IEEE 515.1.
- D. Install insulation over piping with electric cables according to Section 230719 "HVAC Piping Insulation."
- E. Install warning tape on piping insulation where piping is equipped with electric heating cables.
- F. Set field-adjustable switches and circuit-breaker trip ranges.

3.3 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
 - 2. Test cables for electrical continuity and insulation integrity before energizing.
 - 3. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
- D. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounted cables.
- E. Cables will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.5 PROTECTION

- A. Protect installed heating cables, including nonheating leads, from damage during construction.
- B. Remove and replace damaged heat-tracing cables.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230533

SECTION 230548.13 - VIBRATION CONTROLS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Elastomeric isolation pads.
2. Elastomeric isolation mounts.
3. Restrained elastomeric isolation mounts.
4. Open-spring isolators.
5. Housed-spring isolators.
6. Restrained-spring isolators.
7. Housed-restrained-spring isolators.
8. Pipe-riser resilient supports.
9. Resilient pipe guides.
10. Air-spring isolators.
11. Restrained-air-spring isolators.
12. Elastomeric hangers.
13. Spring hangers.
14. Vibration isolation equipment bases.
15. Restrained isolation roof-curb rails.

- B. Related Requirements:

1. Section 210548.13 "Vibration Controls for Fire Suppression" for devices for fire-suppression equipment and systems.
2. Section 220548.13 "Vibration Controls for Plumbing" for devices for plumbing equipment and systems.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.

2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of vibration isolation device type required.
3. Include data substantiating that materials comply with requirements.

B. Shop Drawings:

1. Detail fabrication and assembly of equipment bases. Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
3. Include static and dynamic loads on each component on drawings.

C. Delegated-Design Submittal: For each vibration isolation device.

1. Include design calculations for selecting vibration isolators and for designing vibration isolation bases.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Show coordination of vibration isolation device installation for HVAC piping and equipment with other systems and equipment in the vicinity, including other supports and restraints, if any.
- B. Qualification Data: For testing agency.
- C. Welding certificates.
- D. Air-Mounting System Performance Certification: Include natural frequency, load, and damping test data[**performed by an independent agency**].

1.5 CLOSEOUT SUBMITTALS

- A. Manufacturer's Certificate: Certify that isolators are properly installed and adjusted to meet or exceed specified requirements.
- B. Operation and Maintenance Data: For [**air-spring mounts**] [**and**] [**restrained-air-spring mounts**] to include in operation and maintenance manuals.
- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 1. Record actual locations of hangers including attachment points.

1.6 QUALITY ASSURANCE

- A. Maintain ASHRAE criteria for average noise criteria curves for all equipment at full load condition.
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ELASTOMERIC ISOLATION PADS

- A. Elastomeric Isolation Pads: **<Insert drawing designation>**.
 - 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Ace Mountings Co., Inc.
 - b. California Dynamics Corporation.
 - c. Isolation Technology, Inc.
 - d. Kinetics Noise Control, Inc.
 - e. Mason Industries, Inc.
 - f. Vibration Eliminator Co., Inc.
 - g. Vibration Isolation.
 - h. Vibration Mountings & Controls, Inc.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 - 2. Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area.
 - 3. Size: Factory or field cut to match requirements of supported equipment.
 - 4. Pad Material: Oil and water resistant with elastomeric properties.
 - 5. Surface Pattern: **[Smooth] [Ribbed] [Waffle]** pattern.
 - 6. Infused nonwoven cotton or synthetic fibers.
 - 7. Load-bearing metal plates adhered to pads.
 - 8. Sandwich-Core Material: **[Resilient] [and] [elastomeric] <Insert compound>**.
 - a. Surface Pattern: **[Smooth] [Ribbed] [Waffle]** pattern.
 - b. Infused nonwoven cotton or synthetic fibers.

2.2 ELASTOMERIC ISOLATION MOUNTS

A. Double-Deflection, Elastomeric Isolation Mounts: <Insert drawing designation>.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Ace Mountings Co., Inc.
- b. California Dynamics Corporation.
- c. Isolation Technology, Inc.
- d. Kinetics Noise Control, Inc.
- e. Mason Industries, Inc.
- f. Vibration Eliminator Co., Inc.
- g. Vibration Isolation.
- h. Vibration Mountings & Controls, Inc.
- i. <Insert manufacturer's name>.
- j. or approved equal.

2. Mounting Plates:

- a. Top Plate: Encapsulated steel load transfer top plates, factory drilled and threaded[**with threaded studs or bolts**].
- b. Baseplate: Encapsulated steel bottom plates with holes provided for anchoring to support structure.

3. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.

2.3 RESTRAINED ELASTOMERIC ISOLATION MOUNTS

A. Restrained Elastomeric Isolation Mounts: <Insert drawing designation>.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Ace Mountings Co., Inc.
- b. California Dynamics Corporation.
- c. Isolation Technology, Inc.
- d. Kinetics Noise Control, Inc.
- e. Mason Industries, Inc.
- f. Vibration Eliminator Co., Inc.
- g. Vibration Isolation.
- h. Vibration Mountings & Controls, Inc.
- i. <Insert manufacturer's name>.
- j. or approved equal.

2. Description: All-directional isolator with restraints containing two separate and opposing elastomeric elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.

- a. Housing: Cast-ductile iron or welded steel.
- b. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.

2.4 OPEN-SPRING ISOLATORS

A. Freestanding, Laterally Stable, Open-Spring Isolators: <Insert drawing designation>.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Ace Mountings Co., Inc.
- b. California Dynamics Corporation.
- c. Isolation Technology, Inc.
- d. Kinetics Noise Control, Inc.
- e. Mason Industries, Inc.
- f. Vibration Eliminator Co., Inc.
- g. Vibration Isolation.
- h. Vibration Mountings & Controls, Inc.
- i. <Insert manufacturer's name>.
- j. or approved equal.

2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Baseplates: Factory-drilled steel plate for bolting to structure with an elastomeric isolator pad attached to the underside. Baseplates shall limit floor load to 500 psig (3447 kPa).
7. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

2.5 HOUSED-SPRING ISOLATORS

A. Freestanding, Laterally Stable, Open-Spring Isolators in Two-Part Telescoping Housing: <Insert drawing designation>.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Ace Mountings Co., Inc.
- b. California Dynamics Corporation.
- c. Isolation Technology, Inc.
- d. Kinetics Noise Control, Inc.
- e. Mason Industries, Inc.
- f. Vibration Eliminator Co., Inc.

- g. Vibration Isolation.
 - h. Vibration Mountings & Controls, Inc.
 - i. <Insert manufacturer's name>.
 - j. or approved equal.
- 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
- 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
- 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
- 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
- 6. Two-Part Telescoping Housing: A steel top and bottom frame separated by an elastomeric material and enclosing the spring isolators.
 - a. Drilled base housing for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psig (3447 kPa).
 - b. Top housing with [attachment and leveling bolt] [threaded mounting holes and internal leveling device] [elastomeric pad].

2.6 RESTRAINED-SPRING ISOLATORS

- A. Freestanding, Laterally Stable, Open-Spring Isolators with Vertical-Limit Stop Restraint: <Insert drawing designation>.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. California Dynamics Corporation.
 - c. Isolation Technology, Inc.
 - d. Kinetics Noise Control, Inc.
 - e. Mason Industries, Inc.
 - f. Vibration Eliminator Co., Inc.
 - g. Vibration Isolation.
 - h. Vibration Mountings & Controls, Inc.
 - i. <Insert manufacturer's name>.
 - j. or approved equal.
 - 2. Housing: Steel housing with vertical-limit stops to prevent spring extension due to weight being removed.
 - a. Base with holes for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psig (3447 kPa).
 - b. Top plate with [threaded mounting holes] [elastomeric pad].
 - c. Internal leveling bolt that acts as blocking during installation.
 - 3. Restraint: Limit stop as required for equipment and authorities having jurisdiction.

4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
5. Minimum Additional Travel: 50 percent of the required deflection at rated load.
6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.7 HOUSED-RESTRAINED-SPRING ISOLATORS

- A. Freestanding, Steel, Open-Spring Isolators with Vertical-Limit Stop Restraint in Two-Part Telescoping Housing: **<Insert drawing designation>**.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Ace Mountings Co., Inc.](#)
 - b. [California Dynamics Corporation.](#)
 - c. [Isolation Technology, Inc.](#)
 - d. [Kinetics Noise Control, Inc.](#)
 - e. [Mason Industries, Inc.](#)
 - f. [Vibration Eliminator Co., Inc.](#)
 - g. [Vibration Isolation.](#)
 - h. [Vibration Mountings & Controls, Inc.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Two-Part Telescoping Housing: A steel top and bottom frame separated by an elastomeric material and enclosing the spring isolators. Housings are equipped with **[adjustable]** **[non-adjustable]** snubbers to limit vertical movement.
 - a. Drilled base housing for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psig (3447 kPa).
 - b. Threaded top housing with adjustment bolt and cap screw to fasten and level equipment.
 3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.8 PIPE-RISER RESILIENT SUPPORT

- A. Description: All-directional, acoustical pipe anchor consisting of two steel tubes separated by a minimum **1/2-inch-** (13-mm-) thick neoprene **<Insert drawing designation>**.

1. Vertical-Limit Stops: Steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions.
2. Maximum Load Per Support: **500 psig** (3.45 MPa) on isolation material providing equal isolation in all directions.

2.9 RESILIENT PIPE GUIDES

- A. Description: Telescopic arrangement of two steel tubes or post and sleeve arrangement separated by a minimum **1/2-inch-** (13-mm-) thick neoprene **<Insert drawing designation>**.
1. Factory-Set Height Guide with Shear Pin: Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

2.10 AIR-SPRING ISOLATORS

- A. Freestanding, Single or Multiple, Compressed-Air Bellows: **<Insert drawing designation>**.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. **Firestone Industrial Products Company.**
 - b. **Mason Industries, Inc.**
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Bellows Assembly: Upper and lower powder-coated steel sections connected by a replaceable, flexible, nylon-reinforced neoprene bellows or similar elastomeric material.
 3. Maximum Natural Frequency: 3 Hz.
 4. Operating Pressure Range: **25 to 100 psig** (172 to 690 kPa).
 5. Burst Pressure: At least three times manufacturer's published maximum operating pressure.
 6. Tank valves.

2.11 RESTRAINED-AIR-SPRING ISOLATORS

- A. Freestanding, Single or Multiple, Compressed-Air Bellows with Vertical-Limit Stop Restraint: **<Insert drawing designation>**.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. **Firestone Industrial Products Company.**
 - b. **Mason Industries, Inc.**
 - c. **<Insert manufacturer's name>**.

- d. or approved equal.
2. Housing: Steel housing with vertical-limit stops to prevent spring extension due to weight being removed.
 - a. Base with holes for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to **500 psig** (3447 kPa).
 - b. Top plate with **[threaded mounting holes] [elastomeric pad]**.
 - c. Internal leveling bolt that acts as blocking during installation.
3. Restraint: Limit stop as required for equipment and authorities having jurisdiction.
4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
5. Minimum Additional Travel: 50 percent of the required deflection at rated load.
6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
8. Bellows Assembly: Upper and lower powder-coated steel sections connected by a replaceable, flexible, nylon-reinforced neoprene bellows or similar elastomeric material.
9. Maximum Natural Frequency: 3 Hz.
10. Operating Pressure Range: **25 to 100 psig** (172 to 690 kPa).
11. Burst Pressure: At least three times manufacturer's published maximum operating pressure.
12. Tank valves.

2.12 ELASTOMERIC HANGERS

A. Elastomeric Mount in a Steel Frame with Upper and Lower Steel Hanger Rods: **<Insert drawing designation>**.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. **Ace Mountings Co., Inc.**
 - b. **California Dynamics Corporation.**
 - c. **Isolation Technology, Inc.**
 - d. **Kinetics Noise Control, Inc.**
 - e. **Mason Industries, Inc.**
 - f. **Vibration Eliminator Co., Inc.**
 - g. **Vibration Mountings & Controls, Inc.**
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Frame: Steel, fabricated with a connection for an upper threaded hanger rod and an opening on the underside to allow for a maximum of 30 degrees of angular lower hanger-rod misalignment without binding or reducing isolation efficiency.
3. Dampening Element: Molded, oil-resistant rubber, neoprene, or other elastomeric material with a projecting bushing for the underside opening preventing

steel-to-steel contact.

2.13 SPRING HANGERS

A. Combination Coil-Spring and Elastomeric-Insert Hanger with Spring and Insert in Compression: **<Insert drawing designation>**.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. California Dynamics Corporation.
 - c. Kinetics Noise Control, Inc.
 - d. Mason Industries, Inc.
 - e. Vibration Eliminator Co., Inc.
 - f. Vibration Isolation.
 - g. Vibration Mountings & Controls, Inc.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
7. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
8. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.
9. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

2.14 VIBRATION ISOLATION EQUIPMENT BASES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. California Dynamics Corporation.
2. Kinetics Noise Control.
3. Mason Industries, Inc.
4. Vibration Eliminator Co., Inc.
5. Vibration Isolation.
6. Vibration Mountings & Controls, Inc.
7. **<Insert manufacturer's name>**.

8. or approved equal.

B. Steel Rails: Factory-fabricated, welded, structural-steel rails.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor. Include equipment anchor bolts and auxiliary motor slide rails.

a. Include supports for suction and discharge elbows for pumps.

2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Rails shall have shape to accommodate supported equipment.

3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.

C. Steel Bases: Factory-fabricated, welded, structural-steel bases and rails.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.

a. Include supports for suction and discharge elbows for pumps.

2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.

3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.

D. Concrete Inertia Base: **[Factory-fabricated]** [or] **[field-fabricated]**, welded, structural-steel bases and rails ready for placement of cast-in-place concrete.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.

a. Include supports for suction and discharge elbows for pumps.

2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.

3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.

4. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

2.15 RESTRAINED ISOLATION ROOF-CURB RAILS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ace Mountings Co., Inc.
 2. California Dynamics Corporation.
 3. Kinetics Noise Control.
 4. Mason Industries, Inc.
 5. Thybar Corporation.
 6. <Insert manufacturer's name>.
 7. or approved equal.
- B. Description: Factory-assembled, fully enclosed, insulated, air- and watertight curb rail designed to resiliently support equipment.
- C. Upper Frame: Upper frame shall provide continuous and captive support for equipment.
- D. Lower Support Assembly: The lower support assembly shall be formed sheet metal section containing adjustable and removable steel springs that support upper frame. The lower support assembly shall have a means for attaching to building structure and a wood nailer for attaching roof materials and shall be insulated with a minimum of 2 inches (50 mm) of rigid glass-fiber insulation on inside of assembly. Adjustable, restrained-spring isolators shall be mounted on elastomeric vibration isolation pads and shall have access ports, for level adjustment, with removable waterproof covers at all isolator locations. Isolators shall be located so they are accessible for adjustment at any time during the life of the installation without interfering with the integrity of the roof.
- E. Snubber Bushings: All-directional, elastomeric snubber bushings at least 1/4 inch (6 mm) thick.
- F. Water Seal: Galvanized sheet metal with EPDM seals at corners, attached to upper support frame, extending down past wood nailer of lower support assembly, and counterflashed over roof materials.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 VIBRATION CONTROL DEVICE INSTALLATION

- A. Coordinate the location of embedded connection hardware with supported equipment

attachment and mounting points and with requirements for concrete reinforcement and formwork specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

- B. Installation of vibration isolators must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.

3.3 AIR-SPRING ISOLATORS INSTALLATION

- A. Independent Isolator Installation:

- 1. Install tank valve into each air isolator.
- 2. Inflate each isolator to [**height**] [**and**] [**pressure**] specified on Drawings.

- B. Pressure-Regulated Isolator Installation:

- 1. Coordinate the constant pressure-regulated air supply to air springs with the requirements for piping and connections specified in Section 221513 "General-Service Compressed-Air Piping."
- 2. Connect all pressure regulators to a single dry, filtered [**facility**] [**constant**] air supply.
- 3. Inflate isolators to [**height**] [**and**] [**or**] [**pressure**] specified on Drawings.

3.4 VIBRATION ISOLATION EQUIPMENT BASES INSTALLATION

- A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

3.5 MANUFACTURER'S FIELD SERVICES

- A. Inspect isolated equipment after installation and submit report. Include static deflections.

3.6 PIPE ISOLATION SCHEDULE

Pipe Size (in)	Isolated Distance from Equipment (Pipe Diameters)
1	120
2	90
3	80
4	75
6	60
8	60

10	54

3.7 EQUIPMENT ISOLATION SCHEDULE

Isolated Equipment	Base	Type	Static Deflection
Roof Mounted AHUs	Roof Curb	E	2"
Roof Mounted AHU, MAU Fans	Steel Frame	B	2"
Roof Mounted Fans, MAU's	Roof Curb	D	0.1"
Chillers	Concrete Pad	D	0.2" (provide 3/4" thick pads)
Cooling Towers	Roof Curb	D	0.1"
Piping	NA	C	0.5"

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230548.13

SECTION 230553 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Pipe labels.
 - 4. Duct labels.
 - 5. Stencils.
 - 6. Valve tags.
 - 7. Warning tags.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCES

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references as applicable. Refer to Section 014225 "Reference Standards" for listing of issuing organizations or agencies.
- B. Applicable Standards:
 - 1. American Society of Mechanical Engineers (ASME).
 - 2. ASME A13.1 - Scheme for the Identification of Piping Systems.
 - 3. International Building Code (IBC) with the Denver Amendments.
 - 4. International Fire Code (IFC) with the Denver Amendments.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Provide manufacturers catalog literature for each type of product.
 - 1. Include data substantiating that materials comply with requirements.

- B. Samples: For color coding, wording, letter style and size, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
 - 1. Submit list of wording, symbols, letter size, and color coding for mechanical identification.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.
 - 1. Include valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of tagged valves.

1.6 COORDINATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Brady Corporation.](#)
 - b. [Brimar Industries, Inc.](#)
 - c. [Carlton Industries, LP.](#)
 - d. [Champion America.](#)
 - e. [Craftmark Identification Systems.](#)
 - f. [emedco.](#)
 - g. [Kolbi Pipe Marker Co.](#)
 - h. [LEM Products Inc.](#)
 - i. [Marking Services Inc.](#)
 - j. [Seton Identification Products.](#)
 - k. **<Insert manufacturer's name>.**
 - l. or approved equal.
2. Material and Thickness: **[Brass, 0.032-inch (0.8-mm)] [stainless steel, 0.025-inch (0.64-mm)] [aluminum, 0.032-inch (0.8-mm)] [or] [anodized aluminum, 0.032-inch (0.8-mm)]** minimum thickness, and having predrilled or stamped holes for attachment hardware.
3. Letter Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>.**
4. Background Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>.**
5. Minimum Label Size: Length and width vary for required label content, but not less than **2-1/2 by 3/4 inch** (64 by 19 mm).
6. Minimum Letter Size: **1/4 inch** (6.4 mm) for name of units if viewing distance is less than **24 inches** (600 mm), **1/2 inch** (13 mm) for viewing distances up to **72 inches** (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
7. Fasteners: Stainless-steel **[rivets] [or] [self-tapping screws]**.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Plastic Labels for Equipment:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Brady Corporation.](#)
 - b. [Brimar Industries, Inc.](#)
 - c. [Carlton Industries, LP.](#)
 - d. [Champion America.](#)
 - e. [Craftmark Identification Systems.](#)
 - f. [emedco.](#)
 - g. [Kolbi Pipe Marker Co.](#)
 - h. [LEM Products Inc.](#)
 - i. [Marking Services Inc.](#)
 - j. [Seton Identification Products.](#)
 - k. **<Insert manufacturer's name>.**
 - l. or approved equal.

2. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, [1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] <Insert dimension> thick, and having predrilled holes for attachment hardware.
 3. Letter Color: [Black] [Blue] [Red] [White] [Yellow] <Insert color>.
 4. Background Color: [Black] [Blue] [Red] [White] [Yellow] <Insert color>.
 5. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
 6. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
 7. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
 8. Fasteners: Stainless-steel [rivets] [or] [self-tapping screws].
 9. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number, and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Brady Corporation](#).
 2. [Brimar Industries, Inc.](#)
 3. [Carlton Industries, LP](#).
 4. [Champion America](#).
 5. [Craftmark Identification Systems](#).
 6. [emedco](#).
 7. [LEM Products Inc.](#)
 8. [Marking Services Inc.](#)
 9. [NMC](#).
 10. [Seton Identification Products](#).
 11. [Stranco, Inc.](#)
 12. <Insert manufacturer's name>.
 13. or approved equal.

- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, [1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] <Insert dimension> thick, and having predrilled holes for attachment hardware.
- C. Letter Color: [Black] [Blue] [Red] [White] [Yellow] <Insert color>.
- D. Background Color: [Black] [Blue] [Red] [White] [Yellow] <Insert color>.
- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
- G. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
- H. Fasteners: Stainless-steel [rivets] [or] [self-tapping screws].
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- J. Label Content: Include caution and warning information plus emergency notification instructions.

2.3 PIPE LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Actioncraft Products, Inc.](#)
 - 2. [Brady Corporation.](#)
 - 3. [Brimar Industries, Inc.](#)
 - 4. [Carlton Industries, LP.](#)
 - 5. [Champion America.](#)
 - 6. [Craftmark Identification Systems.](#)
 - 7. [emedco.](#)
 - 8. [Kolbi Pipe Marker Co.](#)
 - 9. [LEM Products Inc.](#)
 - 10. [Marking Services Inc.](#)
 - 11. [Seton Identification Products.](#)
 - 12. <Insert manufacturer's name>.
 - 13. or approved equal.
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction according to ASME A13.1.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to [partially cover] [cover full] circumference of pipe and to attach to pipe without fasteners or adhesive.

- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; also include pipe size and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: **[Size letters according to ASME A13.1 for piping] [At least 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm) and proportionately larger lettering for greater viewing distances].**

2.4 DUCT LABELS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. [Brady Corporation.](#)
 - 2. [Brimar Industries, Inc.](#)
 - 3. [Carlton Industries, LP.](#)
 - 4. [Champion America.](#)
 - 5. [Craftmark Identification Systems.](#)
 - 6. [emedco.](#)
 - 7. [Kolbi Pipe Marker Co.](#)
 - 8. [LEM Products Inc.](#)
 - 9. [Marking Services Inc.](#)
 - 10. [Seton Identification Products.](#)
 - 11. **<Insert manufacturer's name>.**
 - 12. or approved equal.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, [1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] **<Insert dimension>** thick, and having predrilled holes for attachment hardware.
- C. Letter Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>.**
- D. Background Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>.**
- E. Maximum Temperature: Able to withstand temperatures up to **160 deg F (71 deg C).**
- F. Minimum Label Size: Length and width vary for required label content, but not less than **2-1/2 by 3/4 inch (64 by 19 mm).**
- G. Minimum Letter Size: **1/4 inch (6.4 mm)** for name of units if viewing distance is less than **24 inches (600 mm)**, **1/2 inch (13 mm)** for viewing distances up to **72 inches (1830 mm)**, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.

- H. Fasteners: Stainless-steel [rivets] [or] [self-tapping screws].
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- J. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings; also include duct size and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions or as separate unit on each duct label to indicate flow direction.

2.5 STENCILS

A. Stencils for Piping:

- 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Brimar Industries, Inc.](#)
 - b. [Carlton Industries, LP.](#)
 - c. [Champion America.](#)
 - d. [Craftmark Identification Systems.](#)
 - e. [Kolbi Pipe Marker Co.](#)
 - f. [Marking Services Inc.](#)
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
- 2. **Lettering Size: [Size letters according to ASME A13.1 for piping] [At least 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm) and proportionately larger lettering for greater viewing distances].**
- 3. **Stencil Material: [Aluminum] [Brass] [Fiberboard] [Fiberboard or metal] <Insert material>.**
- 4. **Stencil Paint: Exterior, gloss, [alkyd enamel] [acrylic enamel] <Insert paint type> in colors complying with recommendations in ASME A13.1 unless otherwise indicated. Paint may be in pressurized spray-can form.**
- 5. **Identification Paint: Exterior, [alkyd enamel] [acrylic enamel] <Insert paint type> in colors according to ASME A13.1 unless otherwise indicated. Paint may be in pressurized spray-can form.**

B. Stencils for Ducts:

- 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Brimar Industries, Inc.](#)
 - b. [Carlton Industries, LP.](#)
 - c. [Champion America.](#)
 - d. [Craftmark Identification Systems.](#)

- e. [Kolbi Pipe Marker Co.](#)
 - f. [Marking Services Inc.](#)
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Lettering Size: Minimum letter height of **1-1/4 inches** (32 mm) for viewing distances up to **15 feet** (4-1/2 m) and proportionately larger lettering for greater viewing distances.
 3. Stencil Material: [**Aluminum**] [**Brass**] [**Fiberboard**] [**Fiberboard or metal**] **<Insert material>**.
 4. Stencil Paint: Exterior, gloss, [**alkyd enamel**] [**acrylic enamel**] **<Insert paint type>**. Paint may be in pressurized spray-can form.
 5. Identification Paint: Exterior, [**alkyd enamel**] [**acrylic enamel**] **<Insert paint type>**. Paint may be in pressurized spray-can form.
- C. Stencils for Access Panels and Door Labels, Equipment Labels, and Similar Operational Instructions:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Brimar Industries, Inc.](#)
 - b. [Carlton Industries, LP.](#)
 - c. [Champion America.](#)
 - d. [Craftmark Identification Systems.](#)
 - e. [Kolbi Pipe Marker Co.](#)
 - f. [Marking Services Inc.](#)
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Lettering Size: Minimum letter height of **1/2 inch** (13 mm) for viewing distances up to **72 inches** (1830 mm) and proportionately larger lettering for greater viewing distances.
 3. Stencil Material: [**Aluminum**] [**Brass**] [**Fiberboard**] [**Fiberboard or metal**] **<Insert material>**.
 4. Stencil Paint: Exterior, gloss, [**alkyd enamel**] [**acrylic enamel**] **<Insert paint type>**. Paint may be in pressurized spray-can form.
 5. Identification Paint: Exterior, [**alkyd enamel**] [**acrylic enamel**] **<Insert paint type>**. Paint may be in pressurized spray-can form.

2.6 VALVE TAGS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
1. [Actioncraft Products, Inc.](#)
 2. [Brady Corporation.](#)
 3. [Brimar Industries, Inc.](#)
 4. [Carlton Industries, LP.](#)

5. [Champion America.](#)
6. [Craftmark Identification Systems.](#)
7. [emedco.](#)
8. [Kolbi Pipe Marker Co.](#)
9. [LEM Products Inc.](#)
10. [Marking Services Inc.](#)
11. [Seton Identification Products.](#)
12. **<Insert manufacturer's name>.**
13. or approved equal.

B. Description: Stamped or engraved with **1/4-inch (6.4-mm)** letters for piping system abbreviation and **1/2-inch (13-mm)** numbers.

1. Tag Material: [**Brass, 0.032-inch (0.8-mm)**] [**stainless steel, 0.025-inch (0.64-mm)**] [**aluminum, 0.032-inch (0.8-mm)**] [**or**] [**anodized aluminum, 0.032-inch (0.8-mm)**] minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Fasteners: Brass [**wire-link chain**] [**or**] [**beaded chain**] [**or**] [**S-hook**].

C. Valve Schedules: For each piping system, on **8-1/2-by-11-inch (A4)** bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.

2.7 WARNING TAGS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Brady Corporation.](#)
2. [Brimar Industries, Inc.](#)
3. [Carlton Industries, LP.](#)
4. [Champion America.](#)
5. [Craftmark Identification Systems.](#)
6. [emedco.](#)
7. [Kolbi Pipe Marker Co.](#)
8. [LEM Products Inc.](#)
9. [Marking Services Inc.](#)
10. [Seton Identification Products.](#)
11. **<Insert manufacturer's name>.**
12. or approved equal.

B. Description: Preprinted or partially preprinted accident-prevention tags of plasticized card stock with matte finish suitable for writing.

1. Size: [3 by 5-1/4 inches (75 by 133 mm) **minimum**] [Approximately 4 by 7 inches (100 by 178 mm)] <Insert size>.
2. Fasteners: [Brass grommet and wire] [Reinforced grommet and wire or string].
3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
4. Color: Safety-yellow background with black lettering.

2.8 CEILING TACKS

- A. Description: Steel with 3/4 inch diameter color coded head.
- B. Color code ceiling tacks as follows:
 1. Yellow: HVAC equipment.
 2. Red: Fire dampers/smoke dampers.
 3. Green: Plumbing valves.
 4. Blue: Heating/cooling valves.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.
- B. Prepare surfaces in accordance with Division 09 for stencil painting.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.
- D. Equipment: Identify air handling units, pumps, heat transfer equipment, tanks, and water treatment devices with plastic nameplates or stencil painting. Small devices, such as in-line pumps, may be identified with metal tags. At a minimum, the nameplate shall contain the following information:
 1. Equipment Tag.
 2. Equipment location.
 3. Service Area.

4. Flowrate (cfm/gpm).
 5. Capacity (btuh/kw).
 6. **<Equipment owner>**
- E. Equipment and terminal devices above ceiling: provide adhesive backed plastic nameplate on ceiling grid support directly below equipment identifying unit tag and temperature control node number.
1. Example:
 - a. VAV-01 NODE 067.
- F. Controls: Identify control panels and major control components outside panels with plastic nameplates. Key to control schematics.

3.3 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.4 PIPE LABEL INSTALLATION

- A. Identify piping, concealed or exposed, with plastic pipe markers. Tags may be used on ½" or smaller diameter non-insulated piping. Identify service, flow direction, and pressure. Install in clear view and align with axis of piping. Locate identification not to exceed 20 feet on straight runs including risers and drops, adjacent to each valve and "T", at each side of penetration of structure or enclosure, and at each obstruction.
- B. Piping Color Coding: Painting of piping is specified in [**Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**]
- C. Stenciled Pipe Label Option: Stenciled labels may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels, complying with ASME A13.1, [**with painted, color-coded bands or rectangles**] on each piping system.
 1. Identification Paint: Use for contrasting background.
 2. Stencil Paint: Use for pipe marking.
- D. Pipe Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 1. Near each valve and control device.
 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 3. Near penetrations and on both sides of through walls, floors, ceilings, and inaccessible enclosures.

4. At access doors, manholes, and similar access points that permit view of concealed piping.
 5. Near major equipment items and other points of origination and termination.
 6. Spaced at maximum intervals of [50 feet (15 m)] <Insert dimension> along each run. Reduce intervals to [25 feet (7.6 m)] <Insert dimension> in areas of congested piping and equipment.
 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- E. Directional Flow Arrows: Arrows shall be used to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.
- F. Pipe Label Color Schedule:
1. Chilled-Water Piping: [White letters on a safety-green background] [Black letters on a safety-orange background] <Insert colors>.
 2. Condenser-Water Piping: [White letters on a safety-green background] [Black letters on a safety-orange background] <Insert colors>.
 3. Heating Water Piping: [White letters on a safety-green background] [Black letters on a safety-orange background] <Insert colors>.
 4. Refrigerant Piping: [Black letters on a safety-orange background] [White letters on a safety-purple background] [Black letters on a safety-white background] [White letters on a safety-gray background] [White letters on a safety-black background] <Insert colors>.
 5. Low-Pressure Steam Piping: [White letters on a safety-purple background] [Black letters on a safety-white background] [White letters on a safety-gray background] [White letters on a safety-black background] <Insert colors>.
 6. High-Pressure Steam Piping: [White letters on a safety-purple background] [Black letters on a safety-white background] [White letters on a safety-gray background] [White letters on a safety-black background] <Insert colors>.
 7. Steam Condensate Piping: [White letters on a safety-purple background] [Black letters on a safety-white background] [White letters on a safety-gray background] [White letters on a safety-black background] <Insert colors>.

3.5 DUCT LABEL INSTALLATION

- A. Install [plastic-laminated] duct labels with permanent adhesive or stenciled painting on air ducts in the following color codes:
1. Green: For cold-air of general supply ducts.
 2. Yellow: For hot-air supply ducts.
 3. Blue: For exhaust-, outside-, relief-, return-, and mixed-air ducts.
 4. ASME A13.1 Colors and Designs: For hazardous material exhaust.
 5. Letter Size: Minimum 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- B. Stenciled Duct Label Option: Stenciled labels showing service and flow direction may

be provided instead of plastic-laminated duct labels, at Installer's option, if lettering larger than 1 inch (25 mm) high is needed for proper identification because of distance from normal location of required identification.

- C. Locate labels near points where ducts enter into and exit from concealed spaces and at maximum intervals of [50 feet (15 m)] **<Insert dimension>** in each space where ducts are exposed or concealed by removable ceiling system and/or each side of a penetration of structure or enclosure and at each obstruction and at air-handling equipment.

3.6 VALVE-TAG INSTALLATION

- A. Identify all valves, including fire protection valves, in main and branch piping located inside the building. Use tags secured with brass 'S' hooks or brass chains.
- B. Stamp tags with a unique prefix to identify system to which applied, followed by a number (Example: CW-1, CW-2, etc.). In general, prefix shall match system abbreviations used on drawings where applicable.
- C. Provide a typewritten listing of valves including: valve identification number, location, function, normal position, service, and area served. Mount list as specified and directed. Include additional copy in operation and maintenance manuals.
- D. Show valve tag designations on the project record document drawings, including schematic flow diagrams where included with construction documents.
- E. Contractor shall prepare and install where directed, in aluminum frames with clear plastic protective cover, a valve location diagram in the form of a series of flow diagrams with each automatic or manually actuated control or shut-off valve clearly identified in sequence with its individual valve tag number. Automatic control valves shall be tagged to match designations shown on the temperature control drawings, and the specified valve charts shall be installed adjacent to valve location diagrams.
- F. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:

1. Valve-Tag Size and Shape:

- a. Chilled Water: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] **<Insert shape>**.
- b. Condenser Water: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] **<Insert shape>**.
- c. Refrigerant: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] **<Insert shape>**.
- d. Hot Water: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] **<Insert shape>**.
- e. Gas: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] **<Insert shape>**.
- f. Low-Pressure Steam: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round]

- g. [square] <Insert shape>. High-Pressure Steam: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] <Insert shape>.
- h. Steam Condensate: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] <Insert shape>.

2. Valve-Tag Colors:

- a. Toxic and Corrosive Fluids: Black letters on a safety-orange background.
- b. Flammable Fluids: Black letters on a safety-yellow background.
- c. Combustible Fluids: White letters on a safety-brown background.
- d. Potable and Other Water: White letters on a safety-green background.
- e. Compressed Air: White letters on a safety-blue background.
- f. Defined by User: White letters on a safety-purple background, black letters on a safety-white background, white letters on a safety-gray background, and white letters on a safety-black background

3.7 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

3.8 VALVE CHART AND SCHEDULE

- A. Provide valve chart and schedule in aluminum frame with clear plastic shield. Install at location as directed by DEN Project Manager.

3.9 PIPING IDENTIFICATION SCHEDULE

- A. Pipe identification and color coding for general-use piping systems shall be in accordance with the following schedule. For plumbing piping identification schedule, reference Section 220553 "Identification for Plumbing Piping and Equipment":

Classification	Band Color	Stenciled Legend
Chilled Water Supply	Green	Ch. Water Supp.
Chilled Water Return	Green	Ch. Water Ret.
Condenser Water Supply	Green	Cond. Water Supp.
Condenser Water Return	Green	Cond. Water Ret.
Natural Gas*	Yellow	Nat. Gas
L.P. Gas*	Yellow	L.P. Gas
Gas Vent*	Yellow	Gas Vent
Hot Water Heating Supply	Yellow	H.W. Htg. Supp.
Hot Water Heating Return	Yellow	H.W. Htg. Ret.
Compressed Air	Blue	Comp. Air
Snow Melting Supply	Yellow	Snow Melt Supp.
Snow Melting Return	Yellow	Snow Melt Ret.
Blow Down	Yellow	Blow Dn.

Refrigerant Hot Gas	Green	Refr. Hot Gas
Refrigerant Liquid	Green	Refr. Liq.
Water Treatment	Green	Water Trtmt.
Humidifier	Green	Humidifier
Expansion Tank No.	Yellow	Exp. Tank. No.
Gasoline	Yellow	Gasoline
Gasoline Vent	Yellow	Gasoline Vent
Fuel Oil (heating)	Yellow	Fuel Oil Htg.
Fuel Oil (generator)	Yellow	Fuel Oil Gen.
Diesel Exhaust	Yellow	Engine Exh.
Refrigerant Relief	Yellow	Refr. Relief
Condensate Return	Yellow	Cond Ret.
Glycol Supply (PCA)	Green	Gly. Sup.
Glycol Return (PCA)	Green	Gly. Ret.

- B. Overflow condensate drain termination shall have a minimum 6"x6" placard that reads, "If water is observed from the pipe below, immediately contact Maintenance Control at (303) 342-2800".
1. Placard shall have red background with white lettering.
 2. Minimum lettering height shall be ½".
 3. Mount placard a minimum of 48" above finish floor.
- C. Paint exterior piping and duct systems to match wall colors.
- D. For fuel piping systems, piping identification shall conform to the following schedule:

Fuel Type	Band Colors	Stenciled Legend
Jet A	Black/Black Band	Jet A
Jet A-1	Black/2 Black Bands	Jet A-1
JP-4 (Jet B)	Black/3 Yellow Bands	JP-4
Avgas 115	Red/Purple Band	Avgas 115
Avgas 100	Red/Green Band	Avgas 100
Avgas 100LL	Red/Blue Band	Avgas 100LL
Avgas 80	Red/Red Band	Avgas 80

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230553

SECTION 230593 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This section of the Specifications covers testing and balancing of environmental systems, including, but not limited to distribution systems and the connected equipment and apparatus. The testing and balancing of all environmental systems shall be the responsibility of a single Testing, Adjusting, and Balancing (TAB) firm.
- B. Related Work Specified Elsewhere: General Requirements of Division 01 and Section 230400 "Basic Mechanical Requirements," pertain to and are hereby made part of the Work of this section of the Specifications.
- C. Section Includes:
 - 1. Balancing, Testing and Adjusting Air Systems:
 - a. Constant-volume air systems.
 - b. Dual-duct systems.
 - c. Variable-air-volume systems.
 - d. Multizone systems.
 - e. Induction-unit systems.
 - 2. Balancing, Testing and Adjusting Hydronic Piping Systems:
 - a. Constant-flow hydronic systems.
 - b. Variable-flow hydronic systems.
 - c. Primary-secondary hydronic systems.
 - 3. Balancing steam systems.
 - 4. Testing, Adjusting, and Balancing Equipment:
 - a. Heat exchangers.
 - b. Motors.
 - c. Chillers.
 - d. Cooling towers.
 - e. Condensing units.
 - f. Boilers.
 - g. Heat-transfer coils.

5. Testing, adjusting, and balancing existing systems and equipment.
6. Sound tests.
7. Vibration tests.
8. Duct leakage tests.
9. Space pressurization testing and adjusting.
10. Control system verification.

D. Related Sections:

1. Section 014510 "Contractor Quality Control".
2. Section 014520 "Contractor Quality Control for FAA Funded Projects".
3. Section 017515 "System Startup, Testing and Training".
4. Section 230400 "Basic Mechanical Requirements".

E. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ALLOWANCES

- A. Cash Allowance: Include under provisions of Division 01.
- B. Allowance includes testing, adjusting, and balancing of mechanical systems. Work is included in this section and is part of the Contract Sum/Price.

1.4 DEFINITIONS

- A. Adjust: To regulate fluid flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.
- B. AABC: Associated Air Balance Council.
- C. Balance: To proportion flows within the distribution system, including submains, branches, and terminals, according to indicated quantities.
- D. Barrier or Boundary: Construction, either vertical or horizontal, such as walls, floors, and ceilings that are designed and constructed to restrict the movement of airflow, smoke, odors, and other pollutants.
- E. BAS: Building automation systems.
- F. Draft: A current of air, when referring to localized effect caused by one or more factors of high air velocity, low ambient temperature, or direction of airflow, whereby more heat is withdrawn from a person's skin than is normally dissipated.
- G. NC: Noise criteria.
- H. NEBB: National Environmental Balancing Bureau.

- I. Procedure: An approach to and execution of a sequence of work operations to yield repeatable results.
 - J. RC: Room criteria.
 - K. Report Forms: Test data sheets for recording test data in logical order.
 - L. Smoke-Control System: An engineered system that uses fans to produce airflow and pressure differences across barriers to limit smoke movement.
 - M. Smoke-Control Zone: A space within a building that is enclosed by smoke barriers and is a part of a zoned smoke-control system.
 - N. Stair Pressurization System: A type of smoke-control system that is intended to positively pressurize stair towers with outdoor air by using fans to keep smoke from contaminating the stair towers during an alarm condition.
 - O. Static Head: The pressure due to the weight of the fluid above the point of measurement. In a closed system, static head is equal on both sides of the pump.
 - P. Suction Head: The height of fluid surface above the centerline of the pump on the suction side.
 - Q. System Effect: A phenomenon that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
 - R. System Effect Factors: Allowances used to calculate a reduction of the performance ratings of a fan when installed under conditions different from those presented when the fan was performance tested.
 - S. TAB: Testing, adjusting, and balancing.
 - T. TABB: Testing, Adjusting, and Balancing Bureau.
 - U. TAB Specialist: An independent entity meeting qualifications to perform TAB work.
 - V. TDH: Total dynamic head.
 - W. Terminal: A point where the controlled medium, such as fluid or energy, enters or leaves the distribution system.
 - X. Test: A procedure to determine quantitative performance of systems or equipment.
 - Y. Testing, Adjusting, and Balancing (TAB) Firm: The entity responsible for performing and reporting TAB procedures.
- 1.5 REFERENCES
- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references

as applicable. Refer to Section 014225 "Referenced Standards" for listing of issuing organizations or agencies.

B. Applicable Standards:

1. Associated Air Balance Council (AABC):
 - a. National Standards for Total System Balance.
2. Air Diffusion Council (ADC):
 - a. Test Code for Grilles, Registers, and Diffusers.
3. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE):
 - a. ASHRAE 111 - Practices for Measurement, Testing, Adjusting, and Balancing of Building Heating, Ventilation, Air-conditioning, and Refrigeration Systems.
4. International Building Code (IBC) with the Denver Amendments.
5. International Fire Code (IFC) with the Denver Amendments.
6. National Environmental Balancing Bureau (NEBB):
 - a. Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems.
7. Sheet Metal and Air Conditioning Contractor's National Association (SMACNA):
 - a. HVAC Systems Testing, Adjusting, and Balancing.

1.6 PREINSTALLATION MEETINGS

- A. TAB Conference: If requested by the Owner, conduct a TAB conference at **[Project site] [Location and time as determined by DEN Project Manager] <Insert location>** after approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Provide a minimum of **[14] <Insert number>** days' advance notice to DEN Project Manager of scheduled meeting time and location, with meeting to convene minimum **[one (1)] <Insert number>** week prior to commencing work of this Section.
- B. Attendance shall include representatives of all systems and equipment Installers having performed, or in the process of performing, project work subject to testing, balancing, and adjustment by the TAB firm.
- C. Conference agenda shall include review of status of installation and completion of each system requiring testing balancing and adjusting, for the purpose of confirming that the schedule of work to be performed will be planned so as to ensure readiness of systems.

1. Minimum Agenda Items:
 - a. The Contract Documents examination report.
 - b. The TAB plan.
 - c. Needs for coordination and cooperation of trades and subcontractors.
 - d. Proposed procedures for documentation and communication flow.

1.7 ACTION SUBMITTALS

- A. Submit name of adjusting and balancing agency for approval within **[30] <Insert number>** days after award of Contract to ensure that the TAB firm has met the requirements this section of the Specifications and is on the Project from the outset of construction.
- B. LEED Submittals:
 1. Air-Balance Report for Prerequisite IEQ 1: Documentation indicating that work complies with ASHRAE 62.1, Section 7.2.2 - "Air Balancing."
 2. TAB Report for Prerequisite EA 2: Documentation indicating that work complies with ASHRAE/IESNA 90.1, Section 6.7.2.3 - "System Balancing."
- C. All TAB submittals shall be electronically submitted in PDF format to the DEN Project Manager and directly to the DEN Mechanical Engineer [**Lee Walinchus: lee.walinchus@flydenver.com**].
- D. Field Reports: Indicate deficiencies in systems that would prevent proper testing, adjusting, and balancing of systems and equipment to achieve specified performance.
- E. Prior to commencing work, submit report forms or outlines indicating adjusting, balancing, and equipment data required.
- F. Submit draft copies of report for review prior to final acceptance of Project. Provide final copies for DEN Project Manager and for inclusion in operating and maintenance manuals.
- G. Include detailed procedures, agenda, sample report forms [**and copy of AABC National Project Performance Guaranty**] **<Insert requirement>** prior to commencing system balance.
- H. Test Reports: Indicate data on AABC National Standards for Total System Balance forms, or forms prepared following ASHRAE 111, NEBB or TABB forms. When necessary, supplement with forms containing information indicated in Schedules.
- I. Final Report: At least fifteen (15) days prior to Contractor's request for final inspection, submit in letter size, a single PDF file of the final test report on applicable reporting forms for review. Each individual final reporting form must bear the signature of the person who recorded data and that of the reporting organization. Identify instruments of all types that were used and last date of calibration of each. Report shall include all items listed in PART 3- Execution.

- J. A statement outlining all abnormal or notable conditions not covered in above data.
- K. Proposed resolutions to equipment that is performing outside of the specified performance ranges.

1.8 INFORMATIONAL SUBMITTALS

- A. Qualification Data: Within [30] [60] [90] <Insert number> days of Contractor's Notice to Proceed, submit documentation that the TAB specialist and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
- B. Contract Documents Examination Report: Within [30] [60] [90] <Insert number> days of Contractor's Notice to Proceed, submit the Contract Documents review report as specified in Part 3.
- C. Strategies and Procedures Plan: Within [30] [60] [90] <Insert number> days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.
- D. System Readiness Checklists: Within [30] [60] [90] <Insert number> days of Contractor's Notice to Proceed, submit system readiness checklists as specified in "Preparation" Article.
- E. Examination Report: Submit a summary report of the examination review required in "Examination" Article.
- F. Certified TAB reports.
- G. Sample report forms.
- H. Instrument calibration reports, to include the following:
 - 1. Instrument type and make.
 - 2. Serial number.
 - 3. Application.
 - 4. Dates of use.
 - 5. Dates of calibration.

1.9 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- B. Record actual locations of [flow measuring stations] [balancing valves and rough setting].

1.10 QUALITY ASSURANCE

- A. Sequence work to commence after completion of systems and schedule completion of work before Substantial Completion of Project.
- B. Schedule and provide assistance in final adjustment and test of **[life safety] [smoke evacuation] [smoke control]** system with Fire Authority.
- C. TAB Specialists Qualifications: Certified by **[AABC] [NEBB] [or] [TABB]**.
 - 1. TAB Field Supervisor: Employee of the TAB specialist and certified by **[AABC] [NEBB] [or] [TABB]**.
 - 2. TAB Technician: Employee of the TAB specialist and certified by **[AABC] [NEBB] [or] [TABB]** as a TAB technician.
- D. Instrumentation Type, Quantity, Accuracy, and Calibration: Comply with requirements in ASHRAE 111, Section 4, "Instrumentation."
- E. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 7.2.2 - "Air Balancing."
- F. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.7.2.3 - "System Balancing."

1.11 COORDINATION

- A. Coordinate the efforts of factory-authorized service representatives for systems and equipment, HVAC controls installers, and other mechanics to operate HVAC systems and equipment to support and assist TAB activities.
- B. Notice: Notify the DEN Project Manager, DEN Mechanical Inspector and DEN Mechanical Engineer in writing a minimum of 72 hours prior to testing of any equipment and/or systems. Include scheduled test dates and times.
- C. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

1.12 FIELD CONDITIONS

- A. Full Owner Occupancy: Owner will occupy the site and existing building during entire TAB period. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.
- B. Partial Owner Occupancy: Owner may occupy completed areas of building before Substantial Completion. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

1.13 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 017835 "Warranties and Bonds" and Section 230400 "Basic HVAC Requirements".
- B. National Project Performance Guarantee: Provide a guarantee on AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems" forms stating that AABC will assist in completing requirements of the Contract Documents if TAB firm fails to comply with the Contract Documents. Duration of Guarantee shall be [60] [90] [120] [365] days. Guarantee includes the following provisions:
 - 1. The certified TAB firm has tested and balanced systems according to the Contract Documents.
 - 2. Systems are balanced to optimum performance capabilities within design and installation limits.
- C. Special Guarantee: Provide a guarantee on NEBB forms stating that NEBB will assist in completing requirements of the Contract Documents if TAB firm fails to comply with the Contract Documents. Duration of Guarantee shall be [60] [90] [120] [365] days. Guarantee shall include the following provisions:
 - 1. The certified TAB firm has tested and balanced systems according to the Contract Documents.
 - 2. Systems are balanced to optimum performance capabilities within design and installation limits.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 TAB SPECIALISTS

- A. Subject to compliance with requirements, engage one of the following :
 - 1. Able Balance Corp.
 - 2. Griffith Engineering Service.
 - 3. Jedi Balancing, Inc.
 - 4. JPG Engineering, Inc.
 - 5. TAB Services, Inc.
 - 6. <Insert TAB specialist's name>.
 - 7. or approved equal.

3.2 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems designs that may preclude proper TAB of systems and equipment.
- B. Examine installed systems for balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual

- volume dampers. Verify that locations of these balancing devices are applicable for intended purpose and are accessible.
- C. Examine the approved submittals for HVAC systems and equipment.
 - D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems output, and statements of philosophies and assumptions about HVAC system and equipment controls.
 - E. Examine ceiling plenums and underfloor air plenums used for supply, return, or relief air to verify that they are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.
 - F. Examine equipment performance data including fan and pump curves.
 - 1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
 - 2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.
 - G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
 - H. Examine test reports specified in individual system and equipment Sections.
 - I. Examine HVAC equipment and verify that bearings are greased, belts are aligned and tight, filters are clean, and equipment with functioning controls is ready for operation.
 - J. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.
 - K. Examine strainers. Verify that startup screens have been replaced by permanent screens with indicated perforations.
 - L. Examine control valves for proper installation for their intended function of throttling, diverting, or mixing fluid flows.
 - M. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
 - N. Examine system pumps to ensure absence of entrained air in the suction piping.
 - O. Examine operating safety interlocks and controls on HVAC equipment.
 - P. Ensure the Following Conditions:

1. Systems are started and operating in a safe and normal condition.
2. Temperature control systems are installed complete and operable.
3. Proper thermal overload protection is in place for electrical equipment.
4. Final filters are clean and in place. If required, install temporary media in addition to final filters.
5. Duct systems are clean of debris.
6. Fans are rotating correctly.
7. Fire, smoke, and volume dampers are in place and open.
8. Air coil fins are cleaned and combed.
9. Access doors are closed and duct end caps are in place.
10. Air outlets are installed and connected.
11. Duct system leakage is minimized.
12. Return air paths are not obstructed (i.e. walls to structure).
13. Hydronic systems are flushed, filled, and vented.
14. Pumps are rotating correctly.
15. Proper strainer baskets are clean and in place.
16. Service and balance valves are open.

- Q. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.3 PREPARATION

- A. Provide instruments required for testing, adjusting, and balancing operations. Make instruments available to DEN Project Manager to facilitate spot checks during testing.
- B. Provide additional balancing devices as required.
- C. Prepare a TAB plan that includes the following:
1. Equipment and systems to be tested.
 2. Strategies and step-by-step procedures for balancing the systems.
 3. Instrumentation to be used.
 4. Sample forms with specific identification for all equipment.
- D. Perform system-readiness checks of HVAC systems and equipment to verify system readiness for TAB work. Include, at a minimum, the following:
1. Airside:
 - a. Verify that leakage and pressure tests on air distribution systems have been satisfactorily completed.
 - b. Duct systems are complete with terminals installed.
 - c. Volume, smoke, and fire dampers are open and functional.
 - d. Clean filters are installed.
 - e. Fans are operating, free of vibration, and rotating in correct direction.
 - f. Variable-frequency controllers' startup is complete and safeties are verified.
 - g. Automatic temperature-control systems are operational.

- h. Ceilings are installed.
- i. Windows and doors are installed.
- j. Suitable access to balancing devices and equipment is provided.

2. Hydronics:

- a. Verify leakage and pressure tests on water distribution systems have been satisfactorily completed.
- b. Piping is complete with terminals installed.
- c. Water treatment is complete.
- d. Systems are flushed, filled, and air purged.
- e. Strainers are pulled and cleaned.
- f. Control valves are functioning per the sequence of operation.
- g. Shutoff and balance valves have been verified to be 100 percent open.
- h. Pumps are started and proper rotation is verified.
- i. Pump gage connections are installed directly at pump inlet and outlet flanges or in discharge and suction pipe prior to valves or strainers.
- j. Variable-frequency controllers' startup is complete and safeties are verified.
- k. Suitable access to balancing devices and equipment is provided.

3.4 TEMPERATURE CONTROLS

- A. Verify that controllers are calibrated and commissioned.
- B. Check transmitter and controller locations and note conditions that would adversely affect control functions.
- C. Record controller settings and note variances between set points and actual measurements.
- D. Check the operation of limiting controllers (i.e., high-temperature and low-temperature controllers).
- E. Check free travel and proper operation of control devices such as damper and valve operators.
- F. Check the sequence of operation of control devices. Note air pressures and device positions and correlate with airflow and water flow measurements. Note the speed of response to input changes.
- G. Check the interaction of electrically operated switch transducers.
- H. Check the interaction of interlock and lockout systems.
- I. Check main control supply-air pressure and observe compressor and dryer operations.
- J. Record voltages of power supply and controller output. Determine whether the system operates on a grounded or nongrounded power supply.
- K. Note operation of electric actuators using spring return for proper fail-safe operations.

- L. VAV Boxes (Fan Powered and Shut off): Verify the following and report any discrepancies to the responsible installer:
- M. Velocity pressure sensor is receiving the proper signal and is then sending that signal to the regulator.
- N. Primary air damper will allow design flows without going to end point settings.
- O. Thermostats are calibrated.
- P. Control pressure is compatible with the primary damper motor range, dead band range and heating electric P.E. or valve motor range.
- Q. Direct acting or reverse acting controls are properly installed.
- R. Primary fan static pressure controls are receiving the proper signal in their installed location and transmitting this signal to the fan controller.
- S. Include a written certificate (include in balance report) that the above items are functioning properly.

3.5 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in [**AABC's "National Standards for Total System Balance"**] [**ASHRAE 111**] [**NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems"**] [**SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing"**] and in this Section.
- B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
 - 1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts. Restore vapor barrier and finish according to insulation Specifications for this Project.
 - 2. After testing and balancing, install test ports and duct access doors that comply with requirements in Section 233300 "Air Duct Accessories."
 - 3. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Section 230713 "Duct Insulation," Section 230716 "HVAC Equipment Insulation," and Section 230719 "HVAC Piping Insulation."
- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in [**inch-pound (IP)**] units.

3.6 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. For variable-air-volume systems, develop a plan to simulate diversity.
- D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.
- E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.
- F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- G. Verify that motor starters are equipped with properly sized thermal protection.
- H. Check dampers for proper position to achieve desired airflow path.
- I. Check for airflow blockages.
- J. Check condensate drains for proper connections and functioning.
- K. Check for proper sealing of air-handling-unit components.
- L. Verify that air duct system is sealed as specified in Section 233113 "Metal Ducts."

3.7 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

- A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
 - 1. Measure fan static pressures to determine actual static pressure as follows:
 - a. Measure outlet static pressure as far downstream from the fan as practicable and upstream from restrictions in ducts such as elbows and transitions.
 - b. Measure static pressure directly at the fan outlet or through the flexible connection.
 - c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from flexible connection, and downstream from duct restrictions.
 - d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.
 - 2. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and air-treating equipment.

- a. Simulate dirty filter operation and record the point at which maintenance personnel must change filters.
 3. Measure static pressures entering and leaving other devices such as sound traps, heat recovery equipment, and air washers, under final balanced conditions.
 4. Compare design data with installed conditions to determine variations in design static pressures versus actual static pressures. Compare actual system effect factors with calculated system effect factors to identify where variations occur. Recommend corrective action to align design and actual conditions.
 5. Obtain approval from DEN Project Manager for adjustment of fan speed higher or lower than indicated speed. Make required adjustments to pulley sizes, motor sizes, and electrical connections to accommodate fan-speed changes.
 6. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full cooling, full heating, economizer, and any other operating modes to determine the maximum required brake horsepower.
- B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.
1. Measure static pressure at a point downstream from the balancing damper and adjust volume dampers until the proper static pressure is achieved.
 - a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.
 2. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.
- C. Measure terminal outlets and inlets without making adjustments.
1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.
- D. Adjust terminal outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using volume dampers rather than extractors and the dampers at air terminals.
1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
 2. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.8 PROCEDURES FOR DUAL-DUCT SYSTEMS

A. Adjust the dual-duct systems as follows:

1. Verify that the system static pressure sensor is located two-thirds of the distance down the duct from the fan discharge. On systems with separate hot-deck and cold-deck fans, verify the location of the sensor on each deck.
2. Verify that the system is under static pressure control.
3. Select the terminal unit that is most critical to the supply-fan airflow. Measure inlet static pressure, and adjust system static pressure control set point so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
4. Calibrate and balance each terminal unit's hot deck and cold deck for maximum and minimum design airflow as follows:
 - a. Adjust controls so that terminal is calling for full cooling. Some controllers require starting with minimum set point. Verify calibration procedure for specific project.
 - b. Measure airflow and adjust calibration factors as required for design cold-deck maximum airflow and hot-deck minimum airflow. Record calibration factors.
 - c. When maximum airflow is correct, balance the air outlets downstream from terminal units.
 - d. Adjust controls so that terminal is calling for full heating.
 - e. Measure airflow and adjust calibration factors as required for design cold-deck minimum airflow and hot-deck maximum airflow. Record calibration factors. If no minimum calibration is available, note any deviation from design airflow.
5. After terminals have been calibrated and balanced, test and adjust system for total airflow. Adjust fans to deliver total design airflows within the maximum allowable fan speed listed by fan manufacturer.
 - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
 - b. Set terminals for maximum airflow. If system design includes diversity (cooling coil or fan), adjust terminals for maximum and minimum airflow so that connected total matches cooling coil or fan selection and simulates actual load in the building. In systems with separate hot-deck and cold-deck fans, diversity consideration applies to each individual fan.
 - c. Where duct conditions allow, measure airflow by Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses to obtain total airflow.
 - d. Where duct conditions are not suitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
 - e. If a reliable Pitot-tube traverse or coil traverse is not possible, measure airflow at terminals and calculate the total airflow.
6. Measure the fan(s) static pressures as follows:

- a. Measure static pressure directly at the fan outlet or through the flexible connection.
 - b. Measure static pressure directly at the fan inlet or through the flexible connection.
 - c. Measure static pressure across each component that makes up the air-handling system.
 - d. Report any artificial loading of filters at the time static pressures are measured.
7. Set final return and outside airflow to the fan(s) while operating at maximum return airflow and minimum outdoor airflow.
- a. Balance the return-air ducts and inlets the same as described for constant-volume air systems.
 - b. Verify that all terminal units are meeting design airflow under system maximum flow.
8. Re-measure the inlet static pressure at the most critical terminal unit and adjust the system static pressure set point to the most energy-efficient set point to maintain the optimum system static pressure. Record set point and give to controls contractor.
9. Verify final system conditions as follows:
- a. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
 - b. Re-measure and confirm that total airflow is within design.
 - c. Re-measure final fan operating data, rpms, volts, amps, and static profile.
 - d. Mark final settings.
 - e. Test system in economizer mode. Verify proper operation and adjust if necessary. Measure and record all operating data.
 - f. Verify tracking between supply and return fans.
10. Record final fan-performance data.

3.9 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

- A. **Compensating for Diversity:** When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a maximum set-point airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced airflow terminal units so they are distributed evenly among the branch ducts.
- B. **Pressure-Independent, Variable-Air-Volume Systems:** After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
 1. Set outside-air dampers at minimum and return- and exhaust-air dampers at a position that simulates full-cooling load.
 2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering

- static pressure for the critical terminal unit is not less than the sum of terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
3. Measure total system airflow. Adjust to within indicated airflow.
 4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use terminal-unit manufacturer's written instructions to make this adjustment. When total airflow is correct, balance the air outlets downstream from terminal units as described for constant-volume air systems.
 5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow as described for constant-volume air systems.
 - a. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow.
 6. Remeasure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets as described for constant-volume air systems.
 7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure that adequate static pressure is maintained at the most critical unit.
 8. Record the final fan performance data.
- C. Pressure-Dependent, Variable-Air-Volume Systems without Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
1. Balance systems similar to constant-volume air systems.
 2. Set terminal units and supply fan at full-airflow condition.
 3. Adjust inlet dampers of each terminal unit to indicated airflow and verify operation of the static-pressure controller. When total airflow is correct, balance the air outlets downstream from terminal units as described for constant-volume air systems.
 4. Readjust fan airflow for final maximum readings.
 5. Measure operating static pressure at the sensor that controls the supply fan, if one is installed, and verify operation of the static-pressure controller.
 6. Set supply fan at minimum airflow if minimum airflow is indicated. Measure static pressure to verify that it is being maintained by the controller.
 7. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow as described for constant-volume air systems.
 - a. If air outlets are out of balance at minimum airflow, report the condition but leave the outlets balanced for maximum airflow.
 8. Measure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets as described for constant-volume air systems.
- D. Pressure-Dependent, Variable-Air-Volume Systems with Diversity: After the fan

systems have been adjusted, adjust the variable-air-volume systems as follows:

1. Set system at maximum indicated airflow by setting the required number of terminal units at minimum airflow. Select the reduced airflow terminal units so they are distributed evenly among the branch ducts.
2. Adjust supply fan to maximum indicated airflow with the variable-airflow controller set at maximum airflow.
3. Set terminal units at full-airflow condition.
4. Adjust terminal units starting at the supply-fan end of the system and continuing progressively to the end of the system. Adjust inlet dampers of each terminal unit to indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units as described for constant-volume air systems.
5. Adjust terminal units for minimum airflow.
6. Measure static pressure at the sensor.
7. Measure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets as described for constant-volume air systems.

3.10 PROCEDURES FOR MULTIZONE SYSTEMS

- A. Position the unit's automatic zone dampers for maximum flow through the cooling coil.
- B. The procedures for multizone systems will utilize the zone balancing dampers to achieve the indicated airflow within the zone.
- C. After balancing, place the unit's automatic zone dampers for maximum heating flow. Retest zone airflows and record any variances.
- D. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
 1. Measure total airflow.
 - a. Set outside-air, return-air and relief-air dampers for proper position that simulates minimum outdoor air conditions.
 - b. Where duct conditions allow, measure airflow by Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses to obtain total airflow.
 - c. Where duct conditions are not suitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
 - d. If a reliable Pitot-tube traverse or coil traverse is not possible, measure airflow at terminals and calculate the total airflow.
 2. Measure fan static pressures as follows:
 - a. Measure static pressure directly at the fan outlet or through the flexible connection.
 - b. Measure static pressure directly at the fan inlet or through the flexible connection.

- c. Measure static pressure across each component that makes up the air-handling system.
 - d. Report artificial loading of filters at the time static pressures are measured.
 3. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
 4. Obtain approval from [Architect] [Owner] [Construction Manager] [commissioning authority] for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
 5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.
 - E. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows.
 1. Measure airflow of submain and branch ducts.
 2. Adjust submain and branch duct volume dampers for specified airflow.
 3. Re-measure each submain and branch duct after all have been adjusted.
 - F. Adjust air inlets and outlets for each space to indicated airflows.
 1. Set airflow patterns of adjustable outlets for proper distribution without drafts.
 2. Measure inlets and outlets airflow.
 3. Adjust each inlet and outlet for specified airflow.
 4. Re-measure each inlet and outlet after they have been adjusted.
 - G. Verify final system conditions.
 1. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
 2. Re-measure and confirm that total airflow is within design.
 3. Re-measure all final fan operating data, rpms, volts, amps, and static profile.
 4. Mark all final settings.
 5. Test system in economizer mode. Verify proper operation and adjust if necessary.
 6. Measure and record all operating data.
 7. Record final fan-performance data.
- 3.11 PROCEDURES FOR INDUCTION-UNIT SYSTEMS
- A. Balance primary-air risers by measuring static pressure at the nozzles of the top and bottom units of each riser to determine which risers must be throttled. Adjust risers to indicated airflow within specified tolerances.

- B. Adjust each induction unit.
- C. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
1. Measure total airflow.
 - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
 - b. Where duct conditions allow, measure airflow by Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses to obtain total airflow.
 - c. Where duct conditions are not suitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
 - d. If a reliable Pitot-tube traverse or coil traverse is not possible, measure airflow at terminals and calculate the total airflow.
 2. Measure fan static pressures as follows:
 - a. Measure static pressure directly at the fan outlet or through the flexible connection.
 - b. Measure static pressure directly at the fan inlet or through the flexible connection.
 - c. Measure static pressure across each component that makes up the air-handling system.
 - d. Report artificial loading of filters at the time static pressures are measured.
 3. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
 4. Obtain approval from [**Architect**] [**Owner**] [**Construction Manager**] [**commissioning authority**] for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
 5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.
- D. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows.
1. Measure airflow of submain and branch ducts.
 2. Adjust submain and branch duct volume dampers for specified airflow.
 3. Re-measure each submain and branch duct after all have been adjusted.
- E. Balance airflow to each induction unit by measuring the nozzle pressure and comparing it to the manufacturer's published data for nozzle pressure versus cfm. Adjust the unit's inlet damper to achieve the required nozzle pressure for design cfm.

- F. Verify final system conditions.
1. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
 2. Re-measure and confirm that total airflow is within design.
 3. Re-measure all final fan operating data, rpms, volts, amps, and static profile.
 4. Mark all final settings.
 5. Test system in economizer mode. Verify proper operation and adjust if necessary.
 6. Measure and record all operating data.
 7. Record final fan-performance data.

3.12 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

- A. Prepare test reports with pertinent design data and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against approved pump flow rate. Correct variations that exceed plus or minus 5%.
- B. Prepare schematic diagrams of systems' "as-constructed" piping layouts.
- C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:
1. Open all manual valves for maximum flow.
 2. Check expansion tank liquid level.
 3. Check makeup-water-station pressure gage for adequate pressure for highest vent.
 4. Check flow-control valves for specified sequence of operation and set at indicated flow.
 5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
 6. Set system controls so automatic valves are wide open to heat exchangers.
 7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
 8. Check air vents for a forceful liquid flow exiting from vents when manually operated.

3.13 PROCEDURES FOR HYDRONIC SYSTEMS

- A. Measure water flow at pumps. Use the following procedures, except for positive-displacement pumps:
1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
 2. Check system resistance. With all valves open, read pressure differential across

- the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
 3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
 4. Report flow rates that are not within plus or minus 5% of design.
 - B. Set calibrated balancing valves, if installed, at calculated presettings.
 - C. Measure flow at all stations and adjust, where necessary, to obtain first balance.
 1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.
 - D. Measure flow at main balancing station and set main balancing device to achieve flow that is 5% greater than indicated flow.
 - E. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:
 1. Determine the balancing station with the highest percentage over indicated flow.
 2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
 3. Record settings and mark balancing devices.
 - F. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.
 - G. Measure the differential-pressure control valve settings existing at the conclusions of balancing.
- 3.14 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS
- A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals and proceed as specified above for hydronic systems.
- 3.15 PROCEDURES FOR PRIMARY-SECONDARY-FLOW HYDRONIC SYSTEMS
- A. Balance the primary system crossover flow first, then balance the secondary system.
- 3.16 PROCEDURES FOR STEAM SYSTEMS
- A. Measure and record upstream and downstream pressure of each piece of equipment.

- B. Measure and record upstream and downstream steam pressure of pressure-reducing valves.
- C. Check settings and operation of automatic temperature-control valves, self-contained control valves, and pressure-reducing valves. Record final settings.
- D. Check settings and operation of each safety valve. Record settings.
- E. Verify the operation of each steam trap.

3.17 PROCEDURES FOR HEAT EXCHANGERS

- A. Measure water flow through all circuits.
- B. Adjust water flow to within specified tolerances.
- C. Measure inlet and outlet water temperatures.
- D. Measure inlet steam pressure.
- E. Check settings and operation of safety and relief valves. Record settings.

3.18 PROCEDURES FOR MOTORS

- A. Motors 1/2 HP and Larger: Test at final balanced conditions and record the following data:
 - 1. Manufacturer's name, model number, and serial number.
 - 2. Motor horsepower rating.
 - 3. Motor rpm.
 - 4. Efficiency rating.
 - 5. Phase and hertz.
 - 6. Nameplate and measured voltage, each phase.
 - 7. Nameplate and measured amperage, each phase.
 - 8. Starter size and thermal-protection-element rating.
 - 9. Service factor and frame size.
- B. Motors Driven by Variable-Frequency Controllers:
 - 1. Test for proper operation at speeds varying from minimum to maximum.
 - 2. Test manual bypass of controller to prove proper operation.
 - 3. Record observations, including controller manufacturer, model and serial numbers, and nameplate data.

3.19 PROCEDURES FOR CHILLERS

- A. Balance water flow through each evaporator and condenser to within specified tolerances of indicated flow with all pumps operating. With only one chiller operating in

a multiple chiller installation, do not exceed the flow for the maximum tube velocity recommended by the chiller manufacturer. Measure and record the following data with each chiller operating at design conditions:

1. Evaporator-water entering and leaving temperatures, pressure drop, and water flow.
2. For water-cooled chillers, condenser-water entering and leaving temperatures, pressure drop, and water flow.
3. Evaporator and condenser refrigerant temperatures and pressures, using instruments furnished by chiller manufacturer.
4. Power factor if factory-installed instrumentation is furnished for measuring kilowatts.
5. Kilowatt input if factory-installed instrumentation is furnished for measuring kilowatts.
6. Capacity: Calculate in tons of cooling.
7. For air-cooled chillers, verify condenser-fan rotation and record fan and motor data including number of fans and entering- and leaving-air temperatures.

3.20 PROCEDURES FOR COOLING TOWERS

- A. Tests in paragraph below do not comply with CTI STD-105, "Acceptance Test Code." Shut off makeup water for the duration of the test, and verify that makeup and blowdown systems are fully operational after tests and before leaving the equipment.
- B. Balance total condenser-water flows to towers. Measure and record the following data:
 1. Condenser-water flow to each cell of the cooling tower.
 2. Entering- and leaving-water temperatures.
 3. Wet- and dry-bulb temperatures of entering air.
 4. Wet- and dry-bulb temperatures of leaving air.
 5. Condenser-water flow rate recirculating through the cooling tower.
 6. Cooling-tower spray pump discharge pressure.
 7. Condenser-water flow through bypass.
 8. Fan and motor operating data.
 9. Adjust water level and feed rate of makeup-water system.

3.21 PROCEDURES FOR CONDENSING UNITS

- A. Verify proper rotation of fans.
- B. Measure entering- and leaving-air temperatures.
- C. Record fan and motor operating data.

3.22 PROCEDURES FOR BOILERS

- A. Hydronic Boilers:

1. Measure and record entering- and leaving-water temperatures.
2. Measure and record water flow.
3. Record relief valve pressure setting.

B. Steam Boilers:

1. Measure and record entering-water temperature.
2. Measure and record feed water flow.
3. Measure and record leaving-steam pressure and temperature.
4. Record relief valve pressure setting.

3.23 PROCEDURES FOR HEAT-TRANSFER COILS

A. Water Coils: Measure, adjust, and record the following data for each water coil:

1. Entering- and leaving-water temperature.
2. Water flow rate.
3. Water pressure drop for major (more than 20 gpm) equipment coils, excluding unitary equipment such as reheat coils, unit heaters, and fan-coil units.
4. Dry-bulb temperature of entering and leaving air.
5. Wet-bulb temperature of entering and leaving air for cooling coils.
6. Airflow.

B. Electric Coils: Measure, adjust, and record the following data for each electric heating coil:

1. Nameplate data.
2. Airflow.
3. Entering- and leaving-air temperature at full load.
4. Voltage and amperage input of each phase at full load.
5. Calculated kilowatt at full load.
6. Fuse or circuit-breaker rating for overload protection.

C. Steam Coils: Measure, adjust, and record the following data for each steam coil:

1. Dry-bulb temperature of entering and leaving air.
2. Airflow.
3. Inlet steam pressure.

D. Refrigerant Coils: Measure, adjust, and record the following data for each refrigerant coil:

1. Dry-bulb temperature of entering and leaving air.
2. Wet-bulb temperature of entering and leaving air.
3. Airflow.
4. Air pressure drop.
5. Refrigerant suction pressure and temperature.

3.24 PROCEDURES FOR COMMERCIAL KITCHEN HOODS

- A. Reference Section 233813 "Commercial Kitchen Hoods" for more information on kitchen hood equipment.
- B. Measure, adjust, and record the airflow of each kitchen hood. For kitchen hoods designed with integral makeup air, measure and adjust the exhaust and makeup airflow. Measure airflow by duct Pitot-tube traverse. If a duct Pitot-tube traverse is not possible, provide an explanation in the report of the reason(s) why and also the reason why the method used was chosen.
 - 1. Install welded test ports in the sides of the exhaust duct for the duct Pitot-tube traverse. Install each test port with a threaded cap that is liquid tight.
- C. After balancing is complete, do the following:
 - 1. Measure and record the static pressure at the hood exhaust-duct connection.
 - 2. Measure and record the hood face velocity. Make measurements at multiple points across the face of the hood. Perform measurements at a maximum of 12 inches between points and between any point and the perimeter. Calculate the average of the measurements recorded. Verify that the hood average face velocity complies with the Contract Documents and governing codes.
 - 3. Check the hood for capture and containment of smoke using a smoke emitting device. Observe the smoke pattern. Make adjustments to room airflow patterns to achieve optimum results.
- D. Visually inspect the hood exhaust duct throughout its entire length in compliance with authorities having jurisdiction. Begin at the hood connection and end at the point it discharges outdoors. Report findings.
 - 1. Check duct slopes as required.
 - 2. Verify that duct access is installed as required.
 - 3. Verify that point of termination is as required.
 - 4. Verify that duct air velocity is within the range required.
 - 5. Verify that duct is within a fire-rated enclosure.
- E. Report deficiencies.

3.25 PROCEDURES FOR SPACE PRESSURIZATION MEASUREMENTS AND ADJUSTMENTS

- A. Before testing for space pressurization, observe the space to verify the integrity of the space boundaries. Verify that windows and doors are closed and applicable safing, gaskets, and sealants are installed. Report deficiencies and postpone testing until after the reported deficiencies are corrected.
- B. Measure, adjust, and record the pressurization of each room, each zone, and each building by adjusting the supply, return, and exhaust airflows to achieve the indicated conditions.

- C. Measure space pressure differential where pressure is used as the design criteria and measure airflow differential where differential airflow is used as the design criteria for space pressurization.
 - 1. For pressure measurements, measure and record the pressure difference between the intended spaces at the door with all doors in the space closed. Record the high-pressure side, low-pressure side, and pressure difference between each adjacent space.
 - 2. For applications with cascading levels of space pressurization, begin in the most critical space and work to the least critical space.
 - 3. Test room pressurization first, then zones, and finish with building pressurization.
- D. To achieve indicated pressurization, set the supply airflow to the indicated conditions and adjust the exhaust and return airflow to achieve the indicated pressure or airflow difference.
- E. For spaces with pressurization being monitored and controlled automatically, observe and adjust the controls to achieve the desired set point.
 - 1. Compare the values of the measurements taken to the measured values of the control system instruments and report findings.
 - 2. Check the repeatability of the controls by successive tests designed to temporarily alter the ability to achieve space pressurization. Test overpressurization and underpressurization, and observe and report on the system's ability to revert to the set point.
 - 3. For spaces served by variable-air-volume supply and exhaust systems, measure space pressurization at indicated airflow and minimum airflow conditions.
- F. In spaces that employ multiple modes of operation, such as normal mode and emergency mode or occupied mode and unoccupied mode, measure, adjust, and record data for each operating mode.
- G. Record indicated conditions and corresponding initial and final measurements. Report deficiencies.

3.26 WATER SYSTEM PROCEDURE

- A. Adjust water systems to provide required or design quantities.
- B. Hydronic Systems with Meters: Use calibrated [**Venturi tubes, orifices, or other metered**] fittings and pressure gages to determine flow rates for system balance. On completion of the balance, the following information shall be recorded in the report: Flow meter or calibrated valve size and brand, required flow rate and pressure drop, valve settings on meters or valves with a readable scale, flow rate in both full coil flow and full bypass modes.
- C. Hydronic Systems Without Meters: Where flow metering devices are not installed, base flow balance on temperature difference across various heat transfer elements in the system. On completion of the balance the following information shall be recorded

in the report:

1. Design entering and leaving water temperature/pressure drop.
 2. Final balance entering and leaving water temperature/pressure drop.
- D. The hydronic system(s) shall be balanced being certain that the path to one terminal is fully open. Total system flow shall be adjusted at pump by restricting the discharge balance valve. Indicate final valve position on report.
- E. Adjust systems to provide specified pressure drops and flows through heat transfer elements prior to thermal testing. Perform balancing by measurement of temperature differential in conjunction with air balancing.
- F. Effect system balance with automatic control valves fully open to heat transfer elements. Control valve bypass loops shall be set with the balancing valve to provide equal flow in either mode. Confirm in writing.
- G. Effect adjustment of water distribution systems by means of balancing cocks, valves, and fittings. Do not use service or shut-off valves for balancing unless indexed for balance point.
- H. Where available pump capacity is less than total flow requirements or individual system parts, full flow in one part may be simulated by temporary restriction of flow to other parts.

3.27 SOUND TESTS

- A. Perform sound-pressure-level measurements with an octave-band analyzer complying with ANSI S1.4 for Type 1 sound-level meters and ANSI S1.11 for octave-band filters. Comply with requirements in ANSI S1.13, unless otherwise indicated.
- B. Calibrate sound meters before each day of testing. Use a calibrator provided with the sound meter complying with ANSI S1.40 and that has NIST certification.
- C. Use a microphone that is suitable for the type of sound levels measured. For areas where air velocities exceed 100 fpm, use a windscreen on the microphone.
- D. Perform sound-level testing after air and water balancing and equipment testing are complete.
- E. Close windows and doors to the space.
- F. Perform measurements when the space is not occupied and when the occupant noise level from other spaces in the building and outside are at a minimum.
- G. Clear the space of temporary sound sources so unrelated disturbances will not be measured. Position testing personnel during measurements to achieve a direct line-of-sight between the sound source and the sound-level meter.
- H. Take sound measurements at a height approximately 48 inches above the floor and at

least 36 inches from a wall, column, and other large surface capable of altering the measurements.

- I. Take sound measurements in dBA and in each of the 8 unweighted octave bands in the frequency range of 63 to 8000 Hz.
- J. Take sound measurements with the HVAC systems off to establish the background sound levels and take sound measurements with the HVAC systems operating.
 1. Calculate the difference between measurements. Apply a correction factor depending on the difference and adjust measurements.
- K. Perform sound testing at **<Insert number>** locations on Project for each of the following space types. For each space type tested, select a measurement location that has the greatest sound level. If testing multiple locations for each space type, select at least one location that is near and at least one location that is remote from the predominant sound source.
 1. Private office.
 2. Open office area.
 3. Conference room.
 4. Hold rooms
 5. Each space with an indicated noise criterion of NC 40 and lower that is adjacent to a mechanical equipment room or roof mounted equipment.
 6. Inside each mechanical equipment room.
 7. **<Insert other spaces.>**

3.28 VIBRATION TESTS

- A. After systems are balanced and construction is Substantially Complete, measure and record vibration levels on equipment having motor horsepower equal to or greater than **[10] [15] [25]<Insert number>**.
- B. Use a vibration meter meeting the following criteria:
 1. Solid-state circuitry with a piezoelectric accelerometer.
 2. Velocity range of 0.1 to 10 inches per second.
 3. Displacement range of 1 to 100 mils.
 4. Frequency range of at least 0 to 1000 Hz.
 5. Capable of filtering unwanted frequencies.
- C. Calibrate the vibration meter before each day of testing.
 1. Use a calibrator provided with the vibration meter.
 2. Follow vibration meter and calibrator manufacturer's calibration procedures.
- D. Perform vibration measurements when other building and outdoor vibration sources are at a minimum level and will not influence measurements of equipment being tested.

1. Turn off equipment in the building that might interfere with testing.
 2. Clear the space of people.
- E. Perform vibration measurements after air and water balancing and equipment testing is complete.
- F. Clean equipment surfaces in contact with the vibration transducer.
- G. Position the vibration transducer according to manufacturer's written instructions and to avoid interference with the operation of the equipment being tested.
- H. Measure and record vibration on rotating equipment over 3 hp.
- I. Measure and record equipment vibration, bearing vibration, equipment base vibration, and building structure vibration. Record velocity and displacement readings in the horizontal, vertical, and axial planes.
1. Pumps:
 - a. Pump Bearing: Drive end and opposite end.
 - b. Motor Bearing: Drive end and opposite end.
 - c. Pump Base: Top and side.
 - d. Building: Floor.
 - e. Piping: To and from the pump after flexible connections.
 2. Fans and HVAC Equipment with Fans:
 - a. Fan Bearing: Drive end and opposite end.
 - b. Motor Bearing: Drive end and opposite end.
 - c. Equipment Casing: Top and side.
 - d. Equipment Base: Top and side.
 - e. Building: Floor.
 - f. Ductwork: To and from equipment after flexible connections.
 - g. Piping: To and from equipment after flexible connections.
 3. Chillers and HVAC Equipment with Compressors:
 - a. Compressor Bearing: Drive end and opposite end.
 - b. Motor Bearing: Drive end and opposite end.
 - c. Equipment Casing: Top and side.
 - d. Equipment Base: Top and side.
 - e. Building: Floor.
 - f. Piping: To and from equipment after flexible connections.
- J. For equipment with vibration isolation, take floor measurements with the vibration isolation blocked solid to the floor and with the vibration isolation floating. Calculate and report the differences.
- K. Inspect, measure, and record vibration isolation.
1. Verify that vibration isolation is installed in the required locations.

2. Verify that installation is level and plumb.
3. Verify that isolators are properly anchored.
4. For spring isolators, measure the compressed spring height, the spring OD, and the travel-to-solid distance.
5. Measure the operating clearance between each inertia base and the floor or concrete base below. Verify that there is unobstructed clearance between the bottom of the inertia base and the floor.

L. Reporting:

1. Report shall record location and the system tested.
2. Include horizontal-vertical-axial measurements for tests.
3. Verify that vibration limits follow Specifications, or, if not specified, follow the General Machinery Vibration Severity Chart or Vibration Acceleration General Severity Chart from the AABC National Standards. Acceptable levels of vibration are normally "smooth" to "good."
4. Include in report General Machinery Vibration Severity Chart, with conditions plotted.

3.29 DUCT LEAKAGE TESTS

- A. Witness the duct pressure testing performed by Installer.
- B. Verify that proper test methods are used and that leakage rates are within specified tolerances.
- C. Report deficiencies observed.

3.30 CONTROLS VERIFICATION

- A. In conjunction with system balancing, perform the following:
 1. Verify temperature control system is operating within the design limitations.
 2. Confirm that the sequences of operation are in compliance with Contract Documents.
 3. Verify that controllers are calibrated and function as intended.
 4. Verify that controller set points are as indicated.
 5. Verify the operation of lockout or interlock systems.
 6. Verify the operation of valve and damper actuators.
 7. Verify that controlled devices are properly installed and connected to correct controller.
 8. Verify that controlled devices travel freely and are in position indicated by controller: open, closed, or modulating.
 9. Verify location and installation of sensors to ensure that they sense only intended temperature, humidity, or pressure.
- B. Reporting: Include a summary of verifications performed, remaining deficiencies, and variations from indicated conditions.

3.31 PROCEDURES FOR TESTING, ADJUSTING, AND BALANCING EXISTING SYSTEMS

- A. Before any demolition work or duct work alterations are made, measure airflow, temperature, static pressure and electrical measurements on main equipment serving the branch line. VAV systems shall be ramped to 100% before measurements are taken.
- B. Perform a preconstruction inspection of existing equipment that is to remain and be reused.
1. Measure and record the operating speed, airflow, and static pressure of each fan.
 2. Measure motor voltage and amperage. Compare the values to motor nameplate information.
 3. Check the refrigerant charge.
 4. Check the condition of filters.
 5. Check the condition of coils.
 6. Check the operation of the drain pan and condensate-drain trap.
 7. Check bearings and other lubricated parts for proper lubrication.
 8. Report on the operating condition of the equipment and the results of the measurements taken. Report deficiencies.
- C. Before performing testing and balancing of existing systems, inspect existing equipment that is to remain and be reused to verify that existing equipment has been cleaned and refurbished. Verify the following:
1. New filters are installed.
 2. Coils are clean and fins combed.
 3. Drain pans are clean.
 4. Fans are clean.
 5. Bearings and other parts are properly lubricated.
 6. Deficiencies noted in the preconstruction report are corrected.
- D. Perform testing and balancing of existing systems to the extent that existing systems are affected by the renovation work.
1. Compare the indicated airflow of the renovated work to the measured fan airflows, and determine the new fan speed and the face velocity of filters and coils.
 2. Verify that the indicated airflows of the renovated work result in filter and coil face velocities and fan speeds that are within the acceptable limits defined by equipment manufacturer.
 3. If calculations increase or decrease the airflow rates and water flow rates by more than 5 percent, make equipment adjustments to achieve the calculated rates. If increase or decrease is 5 percent or less, equipment adjustments are not required.
 4. Balance each air outlet.
- E. After all branch line ductwork modifications are complete and TAB services have been

performed, measure airflow, temperature, static pressure and electrical measurements on main equipment serving the branch line. VAV systems shall be ramped to 100% before measurements are taken.

3.32 TOLERANCES

- A. Set HVAC system's airflow rates and water flow rates within the following tolerances:
 - 1. Supply, Return, and Exhaust Fans and Equipment with Fans: Minus 5 to plus 10 percent] <Insert value>.
 - 2. Air Outlets and Inlets: [Zero to plus 10 percent] <Insert value>.
 - 3. Heating-Water Flow Rate: [Zero to plus 10 percent] <Insert value>.
 - 4. Cooling-Water Flow Rate: [Zero to plus 5 percent] <Insert value>.
- B. Maintaining pressure relationships as designed shall have priority over the tolerances specified above.
- C. Supply, return and exhaust airflow rate tolerances shall be identical for each system. (IE: If an AHU is balanced to 97% of design airflow rate, the corresponding exhaust fan should match this 97% tolerance.)

3.33 ADJUSTING

- A. Ensure recorded data represents actual measured or observed conditions.
- B. Permanently mark settings of valves, dampers, and other adjustment devices allowing settings to be restored. Set and lock memory stops.
- C. After adjustment, take measurements to verify balance has not been disrupted or that such disruption has been rectified.
- D. Leave systems in proper working order, replacing belt guards, closing access doors, closing doors to electrical switch boxes, and restoring thermostats to specified settings.
- E. At final inspection, recheck random selections of data recorded in report. Recheck points or areas as selected and witnessed by the DEN Project Manager.
- F. Check and adjust systems approximately six months after final acceptance and submit report.

3.34 PROGRESS REPORTING

- A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems balancing devices. Recommend changes and additions to systems balancing devices to facilitate proper performance measuring and balancing. Recommend

changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

- B. Status Reports: Prepare [**weekly**] [**biweekly**] [**monthly**] <Insert time interval> progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.35 SCHEDULES

- A. Equipment Requiring Testing, Adjusting, and Balancing:

1. Fire Pumps
2. Sprinkler Air Compressor
3. Electric Water Coolers
4. Plumbing Pumps
5. HVAC Pumps
6. Water Tube Boilers
7. Packaged Steel Water Tube Boilers
8. Packaged Steel Fire Tube Boilers
9. Forced Air Furnaces
10. Direct Fired Furnaces
11. Reciprocating Water Chillers
12. Air Cooled Water Chillers
13. Centrifugal Water Chillers
14. Absorption Water Chillers
15. Induced Draft Cooling Tower
16. Blow Through Cooling Tower
17. Air Cooled Refrigerant Condensers
18. Packaged Roof Top Heating/Cooling Units
19. Packaged Terminal Air Conditioning Units
20. Unit Air Conditioners
21. Computer Room Air Conditioning Units
22. Air Coils
23. Evaporative Humidifier
24. Sprayed Coil Dehumidifier
25. Terminal Heat Transfer Units
26. Induction Units
27. Air Handling Units
28. Fans
29. Air Filters
30. Air Terminal Units
31. Air Inlets and Outlets
32. Controls Compressor

3.36 ELECTRIC HEATERS

- A. Check staging of heating devices and reset if required for proper operation.

3.37 MOTOR STARTERS AND THERMAL HEATERS

- A. Coordinate the requirement for the exchange of thermal overloads as required for proper motor protection on magnetic and manual starters. Check for correct sizing and notify Installers responsible for supply of proper devices of corrections or replacements needed.

3.38 FINAL REPORT

- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.

1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
2. Include a list of instruments used for procedures, along with proof of calibration.
3. Certify validity and accuracy of field data.

- B. Final Report Contents: In addition to certified field-report data, include the following:

1. Pump curves.
2. Fan curves.
3. Manufacturers' test data.
4. Field test reports prepared by system and equipment installers.
5. Other information relative to equipment performance; do not include Shop Drawings and Product Data.

- C. General Report Data: In addition to form titles and entries, include the following data:

1. Title page.
2. Name and address of the TAB specialist.
3. Project name.
4. Project location.
5. Architect's name and address.
6. Engineer's name and address.
7. Contractor's name and address.
8. Report date.
9. Signature of TAB supervisor who certifies the report.
10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
11. Summary of contents including the following:
 - a. Indicated versus final performance.
 - b. Final performance percentage of design performance.
 - c. Equipment system or zone service.
 - d. Notable characteristics of systems.

- e. Description of system operation sequence if it varies from the Contract Documents.
12. Nomenclature sheets for each item of equipment.
 13. A set of contract document drawings indicating 'as-built' conditions shall be included in the report with all terminals (VAV boxes, outlets, inlets, coils, unit heaters, etc.) and thermostat locations clearly marked and all equipment designated. Locations of all tests shall be clearly indicated.
 14. Data for terminal units, including manufacturer's name, type, size, and fittings.
 15. Notes to explain why certain final data in the body of reports vary from indicated values and proposed resolutions for equipment measured outside of the acceptable specified ranges.
 16. Test conditions for fans and pump performance forms including the following:
 - a. Settings for outdoor-, return-, and exhaust-air dampers.
 - b. Conditions of filters.
 - c. Cooling coil, wet- and dry-bulb conditions.
 - d. Face and bypass damper settings at coils.
 - e. Fan drive settings including settings and percentage of maximum pitch diameter.
 - f. Inlet vane settings for variable-air-volume systems.
 - g. Settings for supply-air, static-pressure controller.
 - h. Other system operating conditions that affect performance.
- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outdoor, supply, return, and exhaust airflows.
 2. Water and steam flow rates.
 3. Duct, outlet, and inlet sizes.
 4. Pipe and valve sizes and locations.
 5. Terminal units.
 6. Balancing stations.
 7. Position of balancing devices.
- E. Equipment measurements shall include the following information.
1. Instrument list including instrument, manufacturer, model, serial number, range, calibration date.
 2. Data to be submitted for systems having electric motor drives, except as otherwise indicated, shall in all cases include the following to the extent applicable:
 - a. Electric Motor data including manufacturer, HP, Voltage, phase, amperage (name plate, actual (in all operating modes), no load), service factor, efficiency, power factor, starter size (brand, model, enclosure type, installed thermal heaters and the rating of the heaters, required thermal heaters and the rating of the heaters if different than installed).
 - b. For motors controlled by variable frequency controllers, test data shall include amperage at one-third, two-thirds, and full speed motor RPM.

- c. V-Belt Drive data including identification/location, required driven RPM; driven sheave (diameter and RPM), belt (size and quality), motor sheave (diameter and RPM), center-to-center distance (maximum, minimum and final).
3. Air Moving Equipment data including location, manufacturer, model, supply airflow (specified and actual), return airflow (specified and actual), outside airflow (specified and actual), total static pressure (specified and actual), inlet pressure, discharge pressure, fan RPM, motor and V-belt drive data. Include Manufacturer's fan curves.
4. Static pressure across each individual component of the system and the total system.
5. Exhaust Fan data including location, manufacturer, model, airflow (specified and actual), total static pressure (specified and actual), inlet pressure, discharge pressure (specified and actual), inlet pressure, discharge pressure, fan RPM, motor and V-belt drive data. Include Manufacturer's fan curves.
6. Outside/Return Air data including identification/ location, supply airflow (specified and actual), return airflow (specified and actual), outside airflow (specified and actual), return air temperature, outside air temperature, mixed air temperature (specified and actual).
7. Air Terminal Device data including air terminal number, room number/location, terminal type, terminal size, area factor, design velocity, design airflow, test (final) velocity, test (final) airflow, percent of design airflow.
8. Terminal Unit data including manufacturer, type (constant, variable, dual duct, reheat, fan powered parallel, fan powered-series), identification/number, location, model, size, minimum static pressure, minimum airflow (specified and actual), maximum airflow (specified and actual), inlet static pressure, fan air quantity (specified and actual) on fan powered terminal units. Include discharge air temperature for maximum cooling airflow and for maximum heating airflow for units equipped with heating coils.
9. Duct Traverse data including system zone/branch, duct size, area, design velocity, design airflow, test velocity, test airflow, duct static pressure, air temperature, and air correction factor.
10. Air Monitoring Station data including identification/ location, system, size, area, design velocity, design airflow, test (final) velocity, test (final) airflow.
11. Total CFM (required and final) for each fan system, including cabinet heaters, fan coils, etc.
12. Electric Duct Heater data including manufacturer, identification number, location, model, design KW, number of stages, phase, voltage, amperage, test voltage (each phase), test amperage (each phase), airflow (specified and actual), temperature rise (specified and actual).
13. Pump data including identification/number, manufacturer, size/model, impeller, service, flow rate (specified and actual), pressure drop (specified and actual), discharge pressure, suction pressure, total operating head pressure, shut-off (discharge and suction pressures), shut-off (total head pressure), and motor data. Include manufacturer's pump curves.
14. Chiller data including identification/number, manufacturer, capacity, model, evaporator leaving water temperature (specified and actual), evaporator pressure drop (specified and actual), evaporator water flow rate (specified and actual), condenser entering water temperature (specified and actual), condenser leaving

- water temperature (specified and actual), condenser pressure drop (specified and actual), condenser water flow rate (specified and actual), motor amperage.
15. Cooling Tower data including tower identification number, manufacturer, model, rated capacity, entering air WB temperature (specified and actual), leaving air WB temperature (specified and actual), ambient air DB temperature, condenser water entering temperature, condenser water leaving temperature, condenser water flow rate, fan RPM, motor data, wind velocity and direction.
 16. Air Cooled Condenser data including identification number, location, manufacturer, model, entering DB air temperature (specified and actual), leaving DB air temperature (specified and actual), number of compressors, and motor data.
 17. Heat Exchanger data including identification/number, location, service, manufacturer, model, primary water entering temperature (specified and actual), primary water leaving temperature (specified and actual), primary water flow (specified and actual), primary water pressure drop (specified and actual), secondary water entering temperature (specified and actual), secondary water flow (specified and actual), secondary water pressure drop (specified and actual).
 18. Boiler data including entering and leaving water temperature, gas flow rate, flue gas analysis (copy of manufacturer's analysis report), entering and leaving water pressures, and motor data (if applicable).
 19. Cooling Coil data including identification/number, location, service, manufacturer, airflow (specified and actual), entering air DB and WB temperatures (specified and actual), leaving air DB and WB temperatures (specified and actual), water flow (specified and actual), water pressure drop (specified and actual), entering water temperature (specified and actual), leaving water temperature (specified and actual), air pressure drop (specified and actual).
 20. Heating Coil data including identification/number, location, service, manufacturer, airflow (specified and actual), water flow (specified and actual), water pressure drop (specified and actual), entering and leaving water temperatures (specified and actual), entering and leaving air temperatures (specified and actual), air pressure drop (specified and actual).
 21. Heat Release Equipment (i.e. unit heaters, cabinet heaters, finned tube radiation, etc.) data including identification/number, location, manufacturer, inlet and outlet water temperatures (specified and actual), inlet and outlet water pressures (specified and actual), entering and leaving air temperatures (specified and actual - where applicable), and motor data (where applicable).
 22. Flow Measuring Station and Calibrated Balancing Valve data including identification, location, size, manufacturer, model, flow rate (specified and actual), pressure drop (specified and actual), station or valve calibrated setting.
 23. Gas flow and pressure to each piece of mechanical equipment and gas pressure at meter under full flow.
 24. Measurement of existing equipment data prior to new work start.
 - a. Date of test on original equipment
 - b. Equipment tag
 - c. Inlet static pressure (inches WC)
 - d. Outlet static pressure (inches WC)
 - e. Outlet airflow (CFM)
 - f. Coil entering air and water temperatures (F).
 - g. Coil leaving air and water temperatures (F).

- h. Motor electrical data, HP, voltage, and amperage at test time.
25. Measurement of existing equipment data upon completion of new work.
- a. Date of test on original equipment
 - b. Equipment tag
 - c. Inlet static pressure (inches WC)
 - d. Outlet static pressure (inches WC)
 - e. Outlet airflow (CFM)
 - f. Coil entering air and water temperatures (F).
 - g. Coil leaving air and water temperatures (F).
 - h. Motor electrical data, HP, voltage, and amperage at test time.
26. Sound Measurement: Record sound measurements on octave band and dBA test forms and on an NC or RC chart indicating the decibel level measured in each frequency band for both "background" and "HVAC system operating" readings. Record each tested location on a separate NC or RC chart. Record the following on the forms:
- a. Date and time of test. Record each tested location on its own NC curve.
 - b. Sound meter manufacturer, model number, and serial number.
 - c. Space location within the building including floor level and room number.
 - d. Diagram or color photograph of the space showing the measurement location.
 - e. Time weighting of measurements, either fast or slow.
 - f. Description of the measured sound: steady, transient, or tonal.
 - g. Description of predominant sound source.
 - h. Record measured octave bands with all area HVAC equipment off and all area HVAC equipment on.
 - i. Sound data curves for measured equipment and/or spaces with baseline [NC-35] [NC-40] [NC-45] curves for compliance.
27. Vibration Test: Where vibration limitations are specified or shown on the drawings, work shall include measurement and reporting of as-installed systems performance, including the following data:
- a. Location of points:
 - 1) Fan bearing, drive end.
 - 2) Fan bearing, opposite end.
 - 3) Motor bearing, center (if applicable).
 - 4) Motor bearing, drive end.
 - 5) Motor bearing, opposite end.
 - 6) Casing (bottom or top).
 - 7) Casing (side).
 - 8) Duct after flexible connection (discharge).
 - 9) Duct after flexible connection (suction).
 - b. Test readings:

- 1) Horizontal, velocity and displacement.
 - 2) Vertical, velocity and displacement.
 - 3) Axial, velocity and displacement.
 - c. Normally acceptable readings, velocity, and acceleration.
 - d. Unusual conditions at time of test.
 - e. Vibration source (if non-complying).
 28. Indoor-Air Quality Measurement Reports for Each HVAC System:
 - a. HVAC system designation.
 - b. Date and time of test.
 - c. Outdoor temperature, relative humidity, wind speed, and wind direction at start of test.
 - d. Room number or similar description for each location.
 - e. Measurements at each location.
 - f. Observed deficiencies.
 29. Instrument Calibration Reports:
 - a. Report Data:
 - 1) Instrument type and make.
 - 2) Serial number.
 - 3) Application.
 - 4) Dates of use.
 - 5) Dates of calibration.
 30. Measurements outside of tolerance: If the final measurements differ from the design measurements in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED." TAB firm shall provide recommendations and/or solutions for resolving all FAILED measurements.
- F. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:
1. Unit Data:
 - a. Unit identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and unit size.
 - e. Manufacturer's serial number.
 - f. Unit arrangement and class.
 - g. Discharge arrangement.
 - h. Sheave make, size in inches (mm), and bore.
 - i. Center-to-center dimensions of sheave and amount of adjustments in inches (mm).
 - j. Number, make, and size of belts.
 - k. Number, type, and size of filters.

2. Motor Data:

- a. Motor make, and frame type and size.
- b. Horsepower and rpm.
- c. Volts, phase, and hertz.
- d. Full-load amperage and service factor.
- e. Sheave make, size in inches (mm), and bore.
- f. Center-to-center dimensions of sheave and amount of adjustments in inches (mm).

3. Test Data (Indicated and Actual Values):

- a. Total airflow rate in cfm (L/s).
- b. Total system static pressure in inches wg (Pa).
- c. Fan rpm.
- d. Discharge static pressure in inches wg (Pa).
- e. Filter static-pressure differential in inches wg (Pa).
- f. Preheat-coil static-pressure differential in inches wg (Pa).
- g. Cooling-coil static-pressure differential in inches wg (Pa).
- h. Heating-coil static-pressure differential in inches wg (Pa).
- i. Outdoor airflow in cfm (L/s).
- j. Return airflow in cfm (L/s).
- k. Outdoor-air damper position.
- l. Return-air damper position.
- m. Vortex damper position.

G. Apparatus-Coil Test Reports:

1. Coil Data:

- a. System identification.
- b. Location.
- c. Coil type.
- d. Number of rows.
- e. Fin spacing in fins per inch (mm) o.c.
- f. Make and model number.
- g. Face area in sq. ft. (sq. m).
- h. Tube size in NPS (DN).
- i. Tube and fin materials.
- j. Circuiting arrangement.

2. Test Data (Indicated and Actual Values):

- a. Airflow rate in cfm (L/s).
- b. Average face velocity in fpm (m/s).
- c. Air pressure drop in inches wg (Pa).
- d. Outdoor-air, wet- and dry-bulb temperatures in deg F (deg C).
- e. Return-air, wet- and dry-bulb temperatures in deg F (deg C).
- f. Entering-air, wet- and dry-bulb temperatures in deg F (deg C).
- g. Leaving-air, wet- and dry-bulb temperatures in deg F (deg C).

- h. Water flow rate in **gpm** (L/s).
 - i. Water pressure differential in **feet of head or psig** (kPa).
 - j. Entering-water temperature in **deg F** (deg C).
 - k. Leaving-water temperature in **deg F** (deg C).
 - l. Refrigerant expansion valve and refrigerant types.
 - m. Refrigerant suction pressure in **psig** (kPa).
 - n. Refrigerant suction temperature in **deg F** (deg C).
 - o. Inlet steam pressure in **psig** (kPa).
- H. Gas- and Oil-Fired Heat Apparatus Test Reports: In addition to manufacturer's factory startup equipment reports, include the following:
- 1. Unit Data:
 - a. System identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and unit size.
 - e. Manufacturer's serial number.
 - f. Fuel type in input data.
 - g. Output capacity in **Btu/h** (kW).
 - h. Ignition type.
 - i. Burner-control types.
 - j. Motor horsepower and rpm.
 - k. Motor volts, phase, and hertz.
 - l. Motor full-load amperage and service factor.
 - m. Sheave make, size in **inches** (mm), and bore.
 - n. Center-to-center dimensions of sheave and amount of adjustments in **inches** (mm).
 - 2. Test Data (Indicated and Actual Values):
 - a. Total airflow rate in **cfm** (L/s).
 - b. Entering-air temperature in **deg F** (deg C).
 - c. Leaving-air temperature in **deg F** (deg C).
 - d. Air temperature differential in **deg F** (deg C).
 - e. Entering-air static pressure in **inches wg** (Pa).
 - f. Leaving-air static pressure in **inches wg** (Pa).
 - g. Air static-pressure differential in **inches wg** (Pa).
 - h. Low-fire fuel input in **Btu/h** (kW).
 - i. High-fire fuel input in **Btu/h** (kW).
 - j. Manifold pressure in **psig** (kPa).
 - k. High-temperature-limit setting in **deg F** (deg C).
 - l. Operating set point in **Btu/h** (kW).
 - m. Motor voltage at each connection.
 - n. Motor amperage for each phase.
 - o. Heating value of fuel in **Btu/h** (kW).
- I. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:

1. Unit Data:
 - a. System identification.
 - b. Location.
 - c. Coil identification.
 - d. Capacity in **Btu/h** (kW).
 - e. Number of stages.
 - f. Connected volts, phase, and hertz.
 - g. Rated amperage.
 - h. Airflow rate in **cfm** (L/s).
 - i. Face area in **sq. ft.** (sq. m).
 - j. Minimum face velocity in **fpm** (m/s).

2. Test Data (Indicated and Actual Values):
 - a. Heat output in **Btu/h** (kW).
 - b. Airflow rate in **cfm** (L/s).
 - c. Air velocity in **fpm** (m/s).
 - d. Entering-air temperature in **deg F** (deg C).
 - e. Leaving-air temperature in **deg F** (deg C).
 - f. Voltage at each connection.
 - g. Amperage for each phase.

J. Fan Test Reports: For supply, return, and exhaust fans, include the following:

1. Fan Data:
 - a. System identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and size.
 - e. Manufacturer's serial number.
 - f. Arrangement and class.
 - g. Sheave make, size in **inches** (mm), and bore.
 - h. Center-to-center dimensions of sheave and amount of adjustments in **inches** (mm).
2. Motor Data:
 - a. Motor make, and frame type and size.
 - b. Horsepower and rpm.
 - c. Volts, phase, and hertz.
 - d. Full-load amperage and service factor.
 - e. Sheave make, size in **inches** (mm), and bore.
 - f. Center-to-center dimensions of sheave, and amount of adjustments in **inches** (mm).
 - g. Number, make, and size of belts.
3. Test Data (Indicated and Actual Values):

- a. Total airflow rate in **cfm** (L/s).
 - b. Total system static pressure in **inches wg** (Pa).
 - c. Fan rpm.
 - d. Discharge static pressure in **inches wg** (Pa).
 - e. Suction static pressure in **inches wg** (Pa).
- K. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
1. Report Data:
 - a. System and air-handling-unit number.
 - b. Location and zone.
 - c. Traverse air temperature in **deg F** (deg C).
 - d. Duct static pressure in **inches wg** (Pa).
 - e. Duct size in **inches** (mm).
 - f. Duct area in **sq. ft.** (sq. m).
 - g. Indicated airflow rate in **cfm** (L/s).
 - h. Indicated velocity in **fpm** (m/s).
 - i. Actual airflow rate in **cfm** (L/s).
 - j. Actual average velocity in **fpm** (m/s).
 - k. Barometric pressure in **psig** (Pa).
- L. Air-Terminal-Device Reports:
1. Unit Data:
 - a. System and air-handling unit identification.
 - b. Location and zone.
 - c. Apparatus used for test.
 - d. Area served.
 - e. Make.
 - f. Number from system diagram.
 - g. Type and model number.
 - h. Size.
 - i. Effective area in **sq. ft.** (sq. m).
 2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in **cfm** (L/s).
 - b. Air velocity in **fpm** (m/s).
 - c. Preliminary airflow rate as needed in **cfm** (L/s).
 - d. Preliminary velocity as needed in **fpm** (m/s).
 - e. Final airflow rate in **cfm** (L/s).
 - f. Final velocity in **fpm** (m/s).
 - g. Space temperature in **deg F** (deg C).
- M. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:

1. Unit Data:
 - a. System and air-handling-unit identification.
 - b. Location and zone.
 - c. Room or riser served.
 - d. Coil make and size.
 - e. Flowmeter type.

 2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in **cfm** (L/s).
 - b. Entering-water temperature in **deg F** (deg C).
 - c. Leaving-water temperature in **deg F** (deg C).
 - d. Water pressure drop in **feet of head or psig** (kPa).
 - e. Entering-air temperature in **deg F** (deg C).
 - f. Leaving-air temperature in **deg F** (deg C).
- N. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:
1. Unit Data:
 - a. Unit identification.
 - b. Location.
 - c. Service.
 - d. Make and size.
 - e. Model number and serial number.
 - f. Water flow rate in **gpm** (L/s).
 - g. Water pressure differential in **feet of head or psig** (kPa).
 - h. Required net positive suction head in **feet of head or psig** (kPa).
 - i. Pump rpm.
 - j. Impeller diameter in **inches** (mm).
 - k. Motor make and frame size.
 - l. Motor horsepower and rpm.
 - m. Voltage at each connection.
 - n. Amperage for each phase.
 - o. Full-load amperage and service factor.
 - p. Seal type.

 2. Test Data (Indicated and Actual Values):
 - a. Static head in **feet of head or psig** (kPa).
 - b. Pump shutoff pressure in **feet of head or psig** (kPa).
 - c. Actual impeller size in **inches** (mm).
 - d. Full-open flow rate in **gpm** (L/s).
 - e. Full-open pressure in **feet of head or psig** (kPa).
 - f. Final discharge pressure in **feet of head or psig** (kPa).
 - g. Final suction pressure in **feet of head or psig** (kPa).
 - h. Final total pressure in **feet of head or psig** (kPa).
 - i. Final water flow rate in **gpm** (L/s).

- j. Voltage at each connection.
- k. Amperage for each phase.

O. Instrument Calibration Reports:

1. Report Data:

- a. Instrument type and make.
- b. Serial number.
- c. Application.
- d. Dates of use.
- e. Dates of calibration.

3.39 VERIFICATION OF TAB REPORT

- A. The TAB specialist's test and balance engineer shall conduct the inspection in the presence of [**Architect**] [**Owner**] [**Construction Manager**] [**commissioning authority**].
- B. [**Architect**] [**Owner**] [**Construction Manager**] [**Commissioning authority**] shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.
- C. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
- D. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
- E. If TAB work fails, proceed as follows:
 - 1. TAB specialists shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.
 - 2. If the second final inspection also fails, Owner may contract the services of another TAB specialist to complete TAB work according to the Contract Documents and deduct the cost of the services from the original TAB specialist's final payment.
 - 3. If the second verification also fails, [**Owner**] [**design professional**] [**Architect**] may contact AABC Headquarters regarding the AABC National Performance Guaranty.
- F. Prepare test and inspection reports.

3.40 INSPECTIONS

A. Initial Inspection:

1. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the Final Report.
2. Randomly check the following for each system:
 - a. Measure airflow of at least 10% of air outlets.
 - b. Measure water flow of at least 5% of terminals.
 - c. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
 - d. Measure sound levels at two locations.
 - e. Measure space pressure of at least 10% of locations.
 - f. Verify that balancing devices are marked with final balance position.
 - g. Note deviations to the Contract Documents in the Final Report.

B. Final Inspection:

1. After initial inspection is complete and evidence by random checks verifies that testing and balancing are complete and accurately documented in the final report, request that a final inspection be made by DEN Project Manager, DEN Mechanical Engineer or their designated representative(s).
2. TAB firm test and balance engineer shall conduct the inspection in the presence of DEN Project Manager, DEN Mechanical Engineer or their designated representative(s).
3. DEN Project Manager, DEN Mechanical Engineer or their designated representative(s) shall randomly select measurements documented in the final report to be rechecked. The rechecking shall be limited to either 10% of the total measurements recorded, or the extent of measurements that can be accomplished in a normal 8-hour business day.
4. If the rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
5. If the number of "FAILED" measurements is greater than 10% of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
6. TAB firm shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes and resubmit the final report.
7. Request a second final inspection. If the second final inspection also fails, Owner shall contract the services of another TAB firm to complete the testing and balancing in accordance with the Contract Documents and deduct the cost of the services from the final payment.

3.41 ADDITIONAL TESTS

- A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230593

SECTION 230596 - HVAC SMOKE CONTROL TESTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This section of the Specifications covers smoke testing as required by code. The smoke testing shall be the responsibility of a single Smoke Testing Agency (STA).
- B. Smoke testing shall be performed in compliance with the most current version of the Denver Amendments to the International Fire Code and Appendices.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. General: Submit the following according to the Conditions of the Contract and Division 01 Specification Sections.
- B. Submit draft copies of report for review prior to final acceptance of Project. Resubmit until accepted by DEN Project Manager and DEN Life Safety Team.
- C. Submit name of Smoke Testing Agency (STA) for approval within **[30]** thirty days after award of Contract to ensure that the STA firm has met the requirements this section of the Specifications and is on the project from the outset of construction.
- D. Within seven (7) days of completion and acceptance of testing of the smoke-control systems, architecture, and life safety activation systems, a copy of all operational and acceptance testing documentation shall be provided to the DEN Project Manager. This documentation shall be available for reference for periodic testing and maintenance. In addition, this information shall be submitted to the fire prevention bureau within 7 days of completion and acceptance testing.

1.4 CLOSEOUT SUBMITTALS

- A. Final Report: Submit one electronic copy containing a PDF version of the entire report, book-marked, indexed and without security. Reports shall include but not be limited to the following:

1. Title page including company name, address and telephone number; project name and location; PE number; Project Engineer; Project Contractor; project altitude.
2. An as-built set of contract drawings shall be included in the report to include floor plans, reflected ceiling plans, equipment schedules, sequence of operations and locations of all tests and measurements.
3. Provide a brief description of the smoke control systems installed in the building being tested, and state the year the building received its construction permit.
4. Describe in general terms the operating test procedures, if the tests were performed by someone other than the engineer submitting the report. Include a list of operating test and performance test deficiencies along with a schedule of the proposed corrective action.
- B. Describe detailed procedures followed during the operating tests, if operating tests were performed by the engineer submitting the report on the performance tests. Describe detailed procedures followed during the performance tests.
- C. List test equipment used and outside air temperature and wind conditions at the time the test were conducted.
- D. State sequences and timing of the system operations during all performance tests (e.g. smoke detector activation time, fan start times, dampers assume correct position time, etc.)
- E. List the location of the test measurements and the measured values for pressure differentials and door opening forces for each test.
- F. Record any operational defects and performance deficiencies with respect to the smoke-control Code and state recommendations and a schedule for corrective action. Retest and record the results.
- G. Include a statement that the smoke-control systems, as installed and tested, operated as required by the Code. If any part of the smoke-control system did not operate as required by the Code, state what action shall be taken to correct the deficiencies, and include documentation of the retest and certification that each deficiency has been cleared.
- H. The test report shall be either written by or written under the direct supervision of the engineer who supervised the testing. The test report shall bear the seal and signature of the engineer of record.
- I. Revised smoke control matrix in Microsoft Excel Format. Obtain the latest version of this file from the DEN Mechanical Engineer. Submit file directly to DEN Mechanical Engineer and DEN Project Manager.
- J. All pages shall be rotated to normal reading view.

1.5 QUALITY ASSURANCE

- A. Company specializing in the testing and balancing of systems specified in this Section with minimum of three years documented experience, and Licensed in the State of Colorado to Practice Mechanical Engineering.
- B. Acceptable Agencies: Subject to conformance with specified requirements, the following agencies are acceptable:
 - 1. Arappco Engineering Company.
 - 2. BradShaw Solutions.
 - 3. Impact Engineering.
 - 4. Rolf Jensen and Associates.
 - 5. Toombs and Associates.
 - 6. or approved equal.

1.6 PUBLICATIONS AND REFERENCE MATERIALS

- A. The most stringent interpretations of standards shall apply. All appendices and annex of standards shall apply.
- B. Materials, workmanship and testing procedures shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references as applicable:
 - 1. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. Publication, Design of Smoke Management Systems, 1992 Edition.
 - b. Guideline 5-1994 (RA 2001) - Commissioning Smoke Management Systems.
 - c. Standard 149-2000 - Laboratory Methods of Testing Fans Used to Exhaust Smoke in Smoke Management Systems (ANSI approved).
 - 2. International Building Code (IBC) with Denver Amendments.
 - 3. International Mechanical Code (IMC) with Denver Amendments.
 - 4. International Fire Code (IFC) with Denver Amendments.
 - 5. National Fire Protection Association (NFPA).
 - a. NFPA 70 - National Electrical Code.
 - b. NFPA 72 - National Fire Alarm Code.
 - c. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.
 - d. NFPA 92A - Recommended Practice for Smoke-Control Systems.
 - e. NFPA 92B - Standard for Smoke Management Systems in Malls, Atria, and Large Areas.
 - f. NFPA 101 - Life Safety Code.
 - 6. Underwriter Laboratories (UL):

- a. UL 555 - Standard for Safety Fire Dampers.
- b. UL 555S - Standard for Safety Leakage Rated Dampers for Use in Smoke Control Systems.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 OPERATIONAL TESTING

- A. General: The intent of operational testing is to establish that the installation complies with the specified design, is functioning properly, and is ready for acceptance testing. Testing shall be in compliance with the current Denver Amendments of the International Fire Code.
- B. Prior to testing the project manager and appropriate subcontractors shall verify completeness of building construction. Completeness of the following, but not limited to the following, architectural features shall be verified:
 1. Fire stopping.
 2. Doors/closers.
 3. Glazing.
 4. Smoke Partitions and Ceilings.
 5. Fire Alarm System.
 6. Sprinkler System.
 7. Lighting and emergency lighting.
 8. Exit Signage.
 9. Building Paging System.
 10. HVAC Systems.
- C. The following table shall be used for shaft pressure testing:

Shaft:	Operating Static Pressure (in w.g.):	Testing Static Pressure (in w.g.):
West Stairway	1.3	2.0
East Stairway	1.5	2.3
Main Elevator	1.7	2.5
Hoistway/Lobby		
Outside Air	2.9	3.5
General/Pressurization Shaft		
Relief/Life Safety Exhaust Shaft	-3.5	-5.3

1. NOTE: To minimize the effort of determining where the preceding shafts might lack integrity, pressure testing should take place for only two or three floors at a time.

- D. Operational testing of each individual mechanical life safety system and fire protection system shall be performed prior to interconnection to the overall smoke control system. Each test shall be individually documented, including such items as airflow rate, motor speed, voltage, and amperage. Submit operational test reports in accordance with Section 230400 "Basic HVAC Requirements".
- E. Testing shall include the following subsystems to the extent that they affect the operation of the smoke control systems and concurrent testing of other systems:
 - 1. Fire protective signaling system.
 - 2. Building Automation System (including DDC temperature controls system).
 - 3. HVAC equipment.
 - 4. Electrical equipment.
 - 5. Power sources.
 - 6. Emergency power systems.
 - 7. Automatic fire suppression systems.
 - 8. Automatic operating doors and closures.

3.2 OPERATING TESTS

- A. General: The following smoke-control system tests shall be conducted:
 - 1. Verify proper status indication of smoke-control dampers (i.e., "open/closed") and fans (i.e., "on/off") by visual observation at each damper and fan location, and at the Firefighter's Smoke Control Station (FSCS).
 - 2. Verify that all smoke-control dampers and fans assume the correct operating condition under both normal and fire modes, and when the manual override switches at the FSCS are placed in the "auto" position.
 - 3. Verify the manual override switches function properly for smoke-control dampers and fans.
 - 4. Items 1, 2, and 3 above shall be performed by a qualified service technician familiar with the proper operation of smoke-control systems. The STA engineer shall review the results of the tests and shall provide a summary with the documentation provided to the building department and fire prevention bureau.
 - 5. A copy of the test procedures and an accurate log of the tests shall be maintained in the Building Fire Command Center and at either the building management's office or the maintenance office. Any defects, system modifications, and repairs shall be recorded in the log.

3.3 ACCEPTANCE TESTING.

- A. Acceptance testing shall be performed in compliance with local Building Department and Fire Prevention Bureau requirements. The Acceptance testing shall be performed by a Colorado Licensed Mechanical Engineer having a minimum of five (5) years experience performing smoke testing in the Denver Region. The intent of acceptance testing is to demonstrate that the final integrated system installation complies with the specified design and is functioning properly.

- B. Prior to the official acceptance testing of the smoke-control systems, the construction manager, engineer of record and appropriate subcontractors shall confirm that all systems are installed, balanced and operating properly in accordance with the design documents and in accordance with the applicable codes. The construction manager shall then notify the building department and fire prevention bureau that the systems are ready for acceptance testing.
- C. All of the following should be present for the acceptance testing:
1. Fire Prevention Bureau.
 2. Building Department.
 3. Construction Manager.
 4. DEN Life Safety Group.
 5. Engineer of Record.
 6. Owner's Representative.
 7. DEN HVAC personnel
- D. Testing shall be performed during the evening and early morning hours, subject to approval from Federal Agencies operating facilities impacted by the testing. Additional fees payable by the Contractor to the Code Agencies for witnessing off-hour testing and or retesting shall be paid by the Contractor prior to testing.
- E. All documentation from the operational testing should be available for review prior to the acceptance test.
- F. A copy of this testing procedure shall be provided, in advance of the acceptance testing, to the Denver Fire Prevention Bureau, Engineer of Record, and the DEN Life Safety Team. This testing procedure shall include a list of testing equipment that will be used, any smoke generating devices to be used, and on which floors the demonstrations will be done. The procedure shall comply with the International Fire Code requirements.
- G. Smoke generating devices and types of smoke generated shall be approved by the code agencies prior to testing.
- H. The Contractor shall provide all equipment required for testing including ladders, radios, pressure gauges, etc. The smoke generating device(s) shall produce at least the volume of smoke required to fill the space being tested within 5 minutes or as required by the code agencies.

3.4 TEST EQUIPMENT

- A. The Contractor shall provide the following equipment:
1. Calibrated test instruments to read differential pressure with ranges from 0-0.25 in. w.g. and 0-0.50 in. w.g. with 50 feet of tubing.
 2. Spring scale with a range of 0-100 lbs.
 3. Anemometer.
 4. Flow-measuring hood (optional).

5. Door wedges.
6. Tissue paper (for indicating airflow direction).
7. Products that simulate smoke.
8. Materials for recording data.
9. Signs for indicating that a test of the smoke-control system is in progress and that doors must not be opened (or closed).
10. Several two-way radios to coordinate equipment operation and for data recording.

3.5 PROCEDURES FOR SMOKE-CONTROL SYSTEM TESTING

- A. The Contractor shall provide all personnel required to assure timely completion of the testing. The personnel shall include but not be limited to the following:
 1. Electrical Contractor Personnel.
 2. HVAC Contractor Personnel.
 3. Fire Protection Contractor Personnel.
 4. DEN approved security guards to secure doors.
 5. Fire Alarm programming personnel (MCS).
 6. Smoke Testing Agency.
- B. Testing Conference: The Contractor, in cooperation with the DEN Project Manager, shall arrange a conference with all interested parties with at least seven (7) days prior notice to the scheduled testing time to review all aspects of the testing.
- C. The Contractor shall stage equipment with the HVAC subcontractor to assure that vertical access equipment and optional supply and return grilles are available for relocation and replacement at the time of testing.
- D. Prior to beginning acceptance testing, all building equipment shall be placed in normal operation mode, including equipment that is not used to implement smoke control, such as toilet exhaust, HVAC systems, etc.
- E. These acceptance tests shall be performed in conjunction with the fire alarm and fire protection systems to demonstrate proper activation upon activation of any system device.
- F. Should the Fire Prevention Bureau or Fire Department personnel deem it appropriate, smoke or products that simulate smoke shall be used to activate the smoke control systems.
- G. Testing procedures shall comply with acceptable practices as approved by the Denver Fire Prevention Bureau. Procedures include but are not limited to the following:
 1. Measure and record wind speed and direction, outside-air temperature, and relative humidity on each test day.
 2. After air balancing is complete, perform the following pressurization testing for each smoke-control zone in the system:

- a. Verify the boundaries of each smoke-control zone.
 - b. With the HVAC systems in their normal mode of operation and smoke control not operating, measure and record the pressure difference across each smoke-control zone. Make measurements after closing doors that separate the zones. Make one measurement across each door. Clearly indicate the high and low pressure side of each door.
 - c. With the system operating in the smoke-control mode and with each zone in the smoke-control system activated, perform the following:
 - 1) Measure and record the pressure difference across each door that separates the smoke zone from adjacent zones. Make measurements with doors that separate the smoke zone from the other zones closed. Clearly indicate the high and low pressure side of the door. Doors that have a tendency to open slightly due to the pressure difference should have one pressure measurement made while held closed and another measurement made with the door open.
 - 2) Continue to activate each separate zoned smoke-control system and make pressure difference measurements.
 - 3) After testing a smoke zone's smoke-control system, deactivate the HVAC systems involved and return them to their normal operating mode before activating another zone's smoke-control system.
 - 4) Verify that controls necessary to prevent excessive pressure differences are functional.
3. Operational Tests:
- a. Check the proper activation of each zoned smoke-control system in response to all means of activation, both automatic and manual.
 - b. Check automatic activation in response to fire alarm signals received from the building's fire alarm and detection system. Initiate a separate alarm for each means of activation to ensure that the proper operation of the correct zoned smoke-control system occurs.
 - c. Check and record the proper operation of fans, dampers, and related equipment as outlined below for each separate zone of the smoke-control system.
 - 1) Fire zone in which a smoke-control system automatically activates.
 - 2) Type of signal that activates a smoke-control system, such as pull station, sprinkler water flow, or smoke detector.
 - 3) Smoke zone(s) where maximum mechanical exhaust to the outside is implemented and no supply air is provided.
 - 4) Positive pressure smoke-control zone(s) where maximum air supply is implemented and no exhaust to the outside is provided.
 - 5) Fan(s) "ON" as required to implement the smoke-control system. Multiple- or variable-speed fans should be further noted as "MAX. VOLUME" to verify that the intended control configuration is achieved.
 - 6) Fan(s) "OFF" as required to implement the smoke-control system.
 - 7) Damper(s) "OPEN" where maximum airflow must be achieved.

- 8) Damper(s) "CLOSED" where no airflow should take place.
- 9) Auxiliary functions to achieve the smoke-control system configuration such as changes or override of normal operating pressure and temperature-control set points.
- 10) If standby\emergency power is provided for the smoke-control system, test to verify that the system functions while operating under both normal and standby\emergency power.

- H. The acceptance test shall demonstrate that the correct outputs are produced for a given input for each sequence of operation specified. These sequences shall include:
1. Normal mode.
 2. Automatic smoke-control mode for each alarm (exhaust and pressurization).
 3. Manual overrides for each of the above modes.
 4. Return to normal operation.
- I. Conduct additional tests required by authorities having jurisdiction. Unless required by authorities having jurisdiction, perform testing without the use of smoke or products that simulate smoke.
- J. Prepare a complete report of observations, measurements, and deficiencies.

3.6 SHUT DOWN OF SYSTEMS NOT PART OF THE SMOKE-CONTROL SYSTEMS

- A. Verify the proper shutdown of all HVAC systems exceeding 2,000 cfm that are not part of the smoke-control systems, in response to all means of activation, both automatic and manual, as described in the Mechanical Life Safety Systems Sequences of Operation. For the automatic life safety activating systems each individual device shall be tested to demonstrate shut-down of the HVAC systems that are not part of the smoke-control systems.

3.7 OPERATION OF FIRE ALARM SYSTEM DURING TESTING

- A. The fire alarm system and sequencing shall be tested by the Contractor prior to smoke test. The DEN Life Safety Team and a representative from the Contractor's fire alarm contractor shall be present in the building fire command center during the entire time of each test. Operation of the fire alarm system shall be in the control of the DEN Life Safety Team.

3.8 STAIRWAY PRESSURIZATION SYSTEMS

- A. With all building HVAC systems in normal operation, measure and record the pressure difference across each stairway door while the door is closed. After recording the pressure difference, use the spring scale to measure and record the force necessary to open the stairway door. This recorded information will be the base data for the remaining test.
- B. Verify the proper activation of the stairway pressurization systems in response to all

means of activation, both automatic and manual, as described in the Mechanical Life Safety Systems Sequences of Operation. For the automatic activating systems each individual device shall be tested to demonstrate activation of the smoke-control systems.

- C. With the stairway pressurization systems activated, measure and record the pressure difference across each door with the door closed. Next measure and record the force required to open each door. With a door remaining open measure and record the differential pressure across the remaining closed doors.

3.9 ELEVATOR HOISTWAY, ELEVATOR LOBBY AND GENERAL OFFICE SPACE PRESSURIZATION

- A. With all building HVAC systems in normal operation, measure and record the pressure difference across each elevator lobby door while the door is closed. After recording the pressure difference, use the spring scale to measure and record the force necessary to open the stairway door. This recorded information will be the base data for the remaining test.
- B. Verify the proper activation of the stairway pressurization systems, elevator hoistway and lobby systems, and general office space pressurization systems in response to all means of activation, both automatic and manual, as described in the Mechanical Life Safety Systems Sequences of Operation. For the automatic activating systems, each individual device shall be tested to demonstrate activation of the smoke-control systems.
- C. With the stairway pressurization systems, elevator hoistway and lobby systems, and general office space pressurization systems activated, measure and record the pressure difference across each door with the door closed. Next measure and record the force required to open each door. With a door remaining open measure and record the differential pressure across the remaining closed doors.
- D. With all of the smoke-control systems remaining in operation, open six doors on various levels (for example two doors on level 5 and one each on levels 1, 3, 7 and 9). Measure and record the air velocity across the open doorways on each level. Repeat this test under three additional random scenarios. The required air velocity across the door opening is 200 feet per minute minimum. To allow for continuous flow there must be a path for the air to relieve from the building. For testing purposes, one window should be left out on each floor. A means for temporarily sealing this window opening should be available.
- E. The following paragraph is an example of specific testing requirements for specialized systems. The Engineer shall revise these sections as necessary to adequately describe testing procedures for this Project.

3.10 ELEVATOR RECALL

- A. During all smoke-control system tests confirm that the elevators return to the

designated return floor and perform as required by the Code.

3.11 SMOKE CONTROL MATRIX

- A. The Smoke Control Matrix attached is available from the DEN Mechanical Engineer. This matrix shall be updated by the Testing Agency to reflect all conditions at the time of testing. Update all addresses tested or added and resubmit this matrix in accordance with Part 1.
- B. The Engineer shall insert the Microsoft Excel Matrix into this document at this point. NO EXCEPTIONS.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230596

SECTION 230713 - DUCT INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes insulating the following duct services:
 - 1. Indoor, concealed supply and outdoor air.
 - 2. Indoor, exposed supply and outdoor air.
 - 3. Indoor, concealed return located in unconditioned space.
 - 4. Indoor, exposed return located in unconditioned space.
 - 5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.
 - 6. Indoor, exposed, Type I, commercial, kitchen hood exhaust.
 - 7. Indoor, concealed oven and warewash exhaust.
 - 8. Indoor, exposed oven and warewash exhaust.
 - 9. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
 - 10. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
 - 11. Outdoor, concealed supply and return.
 - 12. Outdoor, exposed supply and return.
- B. Related Sections:
 - 1. Section 230716 "HVAC Equipment Insulation."
 - 2. Section 230719 "HVAC Piping Insulation."
 - 3. Section 233113 "Metal Ducts" for duct liners.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Submit products description, list of materials and thickness for each service, and locations. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).
 - 1. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Detail insulation application at elbows, fittings, dampers, specialties and flanges for each type of insulation.
3. Detail application of field-applied jackets.
4. Detail application at linkages of control devices.

D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product, and intended use. Sample sizes are as follows:

1. Sheet Form Insulation Materials: 12 inches (300 mm) square.
2. Sheet Jacket Materials: 12 inches (300 mm) square.
3. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.
- C. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by DEN Project Manager. Use materials indicated for the completed Work.
1. Ductwork Mockups:
 - a. One 10-foot (3-m) section each of rectangular and round straight duct.
 - b. One each of a 90-degree mitered round and rectangular elbow, and one each of a 90-degree radius round and rectangular elbow.
 - c. One rectangular branch takeoff and one round branch takeoff from a rectangular duct. One round tee fitting.
 - d. One rectangular and round transition fitting.
 - e. Four support hangers for round and rectangular ductwork.
 - f. Each type of damper and specialty.
 2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
 3. Notify DEN Project Manager seven (7) days in advance of dates and times when mockups will be constructed.
 4. Obtain DEN Project Manager's approval of mockups before starting insulation application.
 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 7. Demolish and remove mockups when directed.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.
- B. Deliver, store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements" and Division 01.
- C. Deliver materials to site in original factory packaging, labeled with manufacturer's density, thickness, and "R" value.
- D. Store insulation in original wrapping and protect from weather and construction traffic.
- E. Protect insulation against dirt, water, chemical, and mechanical damage.

1.8 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.9 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type II for sheet materials.
1. **Products:** Subject to compliance with requirements, provide one of the following:
- a. [Aeroflex USA, Inc.; Aerocel.](#)
 - b. [Armacell LLC; AP Armaflex.](#)
 - c. [K-Flex USA; Insul-Sheet, K-Flex Gray Duct Liner, and K-FLEX LS.](#)
 - d. **<Insert manufacturer's name; product name or designation>.**
 - e. or approved equal.
- G. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, **[Type I] [Type II with factory-applied vinyl jacket] [Type III with factory-applied FSK jacket] [Type III with factory-applied FSP jacket]**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. **Products:** Subject to compliance with requirements, provide one of the following:
- a. [CertainTeed Corp.; SoftTouch Duct Wrap.](#)
 - b. [Johns Manville; Microlite.](#)
 - c. [Knauf Insulation; Friendly Feel Duct Wrap.](#)
 - d. [Manson Insulation Inc.; Alley Wrap.](#)
 - e. [Owens Corning; SOFTR All-Service Duct Wrap.](#)
 - f. **<Insert manufacturer's name; product name or designation>.**
 - g. or approved equal.
- H. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For duct and plenum applications, provide insulation **[without factory-applied jacket] [with**

factory-applied ASJ] [with factory-applied FSK jacket]. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. **Products:** Subject to compliance with requirements, provide one of the following:

- a. [CertainTeed Corp.: Commercial Board.](#)
- b. [Fibrex Insulations Inc.: FBX.](#)
- c. [Johns Manville: 800 Series Spin-Glas.](#)
- d. [Knauf Insulation: Insulation Board.](#)
- e. [Manson Insulation Inc.: AK Board.](#)
- f. [Owens Corning: Fiberglas 700 Series.](#)
- g. **<Insert manufacturer's name; product name or designation>.**
- h. or approved equal.

I. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied **[ASJ] [FSK jacket]** complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is **2.5 lb/cu. ft. (40 kg/cu. m)** or more. Thermal conductivity (k-value) at **100 deg F (55 deg C)** is **0.29 Btu x in./h x sq. ft. x deg F (0.042 W/m x K)** or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. **Products:** Subject to compliance with requirements, provide one of the following:

- a. [CertainTeed Corp.: CrimpWrap.](#)
- b. [Johns Manville: MicroFlex.](#)
- c. [Knauf Insulation: Pipe and Tank Insulation.](#)
- d. [Manson Insulation Inc.: AK Flex.](#)
- e. [Owens Corning: Fiberglas Pipe and Tank Insulation.](#)
- f. **<Insert manufacturer's name; product name or designation>.**
- g. or approved equal.

J. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.

1. **Products:** Subject to compliance with requirements, provide one of the following:

- a. [Armacell LLC: Tubolit.](#)
- b. [Nomaco Insulation: IMCOLOCK, IMCOSHEET, NOMALOCK, and NOMAPLY.](#)
- c. **<Insert manufacturer's name; product name or designation>.**
- d. or approved equal.

2.2 FIRE-RATED INSULATION SYSTEMS

A. Fire-Rated Board: Structural-grade, press-molded, xonolite calcium silicate, fireproofing board suitable for operating temperatures up to **1700 deg F (927 deg C).**

Comply with ASTM C 656, Type II, Grade 6. Tested and certified to provide a [1] [2]-hour fire rating by an NRTL acceptable to authorities having jurisdiction.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [Johns Manville; Super Firetemp M.](#)
 - b. **<Insert manufacturer's name; product name or designation>.**
 - c. or approved equal.

B. Fire-Rated Blanket: High-temperature, flexible, blanket insulation with FSK jacket that is tested and certified to provide a [1] [2]-hour fire rating by an NRTL acceptable to authorities having jurisdiction.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [CertainTeed Corp.; FlameChek.](#)
 - b. [Johns Manville; Firetemp Wrap.](#)
 - c. [Nelson Fire Stop Products; Nelson FSB Flameshield Blanket.](#)
 - d. [Thermal Ceramics; FireMaster Duct Wrap.](#)
 - e. [3M; Fire Barrier Wrap Products.](#)
 - f. [Unifrax Corporation; FyreWrap.](#)
 - g. **<Insert manufacturer's name; product name or designation>.**
 - h. or approved equal.

2.3 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [Aeroflex USA, Inc.; Aero seal.](#)
 - b. [Armacell LLC; Armaflex 520 Adhesive.](#)
 - c. [Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.](#)
 - d. [K-Flex USA; R-373 Contact Adhesive.](#)
 - e. **<Insert manufacturer's name; product name or designation>.**
 - f. or approved equal.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-03/11-70.
 - d. Mon-Eco Industries, Inc.; 22-25.
 - e. **<Insert manufacturer's name; product name or designation>.**
 - f. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. **Products:** Subject to compliance with requirements, **provide one of the following:**
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-50.
 - d. Mon-Eco Industries, Inc.; 22-25.
 - e. **<Insert manufacturer's name; product name or designation>.**
 - f. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. PVC Jacket Adhesive: Compatible with PVC jacket.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 739, Dow Silicone.
 - b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
 - c. P.I.C. Plastics, Inc.; Welding Adhesive.
 - d. Speedline Corporation; Polyco VP Adhesive.
 - e. **<Insert manufacturer's name; product name or designation>.**

- f. or approved equal.
2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.4 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.

1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below ambient services.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-03/11-90.
 - b. Vimasco Corporation; 749.
 - c. **<Insert manufacturer's name; product name or designation>.**
 - d. or approved equal.
2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, **0.013 perm** (0.009 metric perm) at **43-mil** (1.09-mm) dry film thickness.
3. Service Temperature Range: **Minus 20 to plus 180 deg F** (Minus 29 to plus 82 deg C).
4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
5. Color: White.

C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below ambient services.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-30.
 - b. Eagle Bridges - Marathon Industries; 501.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-35.
 - d. Mon-Eco Industries, Inc.; 55-10.
 - e. **<Insert manufacturer's name; product name or designation>.**
 - f. or approved equal.
2. Water-Vapor Permeance: ASTM F 1249, **0.05 perm** (0.03 metric perm) at **35-mil** (0.9-mm) dry film thickness.

3. Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.
 5. Color: White.
- D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below ambient services.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel.
 - b. Eagle Bridges - Marathon Industries; 570.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-03/11-96.
 - d. **<Insert manufacturer's name; product name or designation>.**
 - e. or approved equal.
 2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30-mil (0.8-mm) dry film thickness.
 3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
 4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
 5. Color: White.
- E. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-10.
 - b. Eagle Bridges - Marathon Industries; 550.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 46-50.
 - d. Mon-Eco Industries, Inc.; 55-50.
 - e. Vimasco Corporation; WC-1/WC-5.
 - f. **<Insert manufacturer's name; product name or designation>.**
 - g. or approved equal.
 2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms (1.2 metric perms) at 0.0625-inch (1.6-mm) dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Solids Content: 60 percent by volume and 66 percent by weight.
 5. Color: White.

2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
1. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36.
 - c. Vimasco Corporation; 713 and 714.
 - d. **<Insert manufacturer's name; product name or designation>.**
 - e. or approved equal.
 3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
 4. Service Temperature Range: **0 to plus 180 deg F** (Minus 18 to plus 82 deg C).
 5. Color: White.
 - a. SEALANTS
- B. FSK and Metal Jacket Flashing Sealants:
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. **<Insert manufacturer's name; product name or designation>.**
 - f. or approved equal.
 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: **Minus 40 to plus 250 deg F** (Minus 40 to plus 121 deg C).
 5. Color: Aluminum.
 6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. ASJ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. **<Insert manufacturer's name; product name or designation>.**
 - c. or approved equal.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: **Minus 40 to plus 250 deg F** (Minus 40 to plus 121 deg C).
5. Color: White.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.6 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
 1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
 4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
 5. Vinyl Jacket: White vinyl with a permeance of **1.3 perms** (0.86 metric perm) when tested according to ASTM E 96/E 96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.7 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Fabric: Approximately **6 oz./sq. yd.** (203 g/sq. m) with a thread count of **5 strands by 5 strands/sq. in.** (2 strands by 2 strands/sq. mm) for covering ducts.
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Chil-Glas No. 5.
 - b. **<Insert manufacturer's name; product name or designation>.**
 - c. or approved equal.

B. Woven Polyester Fabric: Approximately **1 oz./sq. yd.** (34 g/sq. m) with a thread count of **10 strands by 10 strands/sq. in.** (4 strands by 4 strands/sq. mm), in a Leno weave, for ducts.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Mast-A-Fab.
 - b. Vimasco Corporation; Elastafab 894.
 - c. **<Insert manufacturer's name; product name or designation>.**
 - d. or approved equal.

2.8 FIELD-APPLIED CLOTHS

A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of **8 oz./sq. yd.** (271 g/sq. m).

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84203/1185RW, Luben 59.
 - b. **<Insert manufacturer's name; product name or designation>.**
 - c. or approved equal.

2.9 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.

C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 - e. **<Insert manufacturer's name; product name or designation>.**
 - f. or approved equal.
2. Adhesive: As recommended by jacket material manufacturer.
3. Color: **[White] [Color-code jackets based on system. Color as selected by DEN Project Manager].**

D. Metal Jacket:

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Childers Brand, Specialty Construction Brands, Inc.**, a business of H. B. Fuller Company; Metal Jacketing Systems.
 - b. **ITW Insulation Systems**; Aluminum and Stainless Steel Jacketing.
 - c. **RPR Products, Inc.**; Insul-Mate.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.

2. Aluminum Jacket: Comply with **ASTM B 209** (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. **[Sheet and roll stock ready for shop or field sizing] [Factory cut and rolled to size]**.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: **[1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper] [3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.
 - d. Moisture Barrier for Outdoor Applications: **[3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.

3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.
 - a. **[Sheet and roll stock ready for shop or field sizing] [Factory cut and rolled to size]**.
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: **[1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper] [3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.
 - d. Moisture Barrier for Outdoor Applications: **[3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.

- E. Self-Adhesive Outdoor Jacket: **60-mil- (1.5-mm-) thick**, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a crosslaminated polyethylene film covered with **[white] [stucco-embossed]** aluminum-foil facing.
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Polyguard Products, Inc.**; Alumaguard 60.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.10 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
- Products:** Subject to compliance with requirements, provide one of the following:
 - [ABI, Ideal Tape Division](#); 428 AWF ASJ.
 - [Avery Dennison Corporation](#), Specialty Tapes Division; Fasson 0836.
 - [Compac Corporation](#); 104 and 105.
 - [Venture Tape](#); 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
 - <Insert manufacturer's name; product name or designation>**.
 - or approved equal.
 - Width: **3 inches** (75 mm).
 - Thickness: **11.5 mils** (0.29 mm).
 - Adhesion: **90 ounces force/inch** (1.0 N/mm) in width.
 - Elongation: 2 percent.
 - Tensile Strength: **40 lbf/inch** (7.2 N/mm) in width.
 - ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
- Products:** Subject to compliance with requirements, provide one of the following:
 - [ABI, Ideal Tape Division](#); 491 AWF FSK.
 - [Avery Dennison Corporation](#), Specialty Tapes Division; Fasson 0827.
 - [Compac Corporation](#); 110 and 111.
 - [Venture Tape](#); 1525 CW NT, 1528 CW, and 1528 CW/SQ.
 - <Insert manufacturer's name; product name or designation>**.
 - or approved equal.
 - Width: **3 inches** (75 mm).
 - Thickness: **6.5 mils** (0.16 mm).
 - Adhesion: **90 ounces force/inch** (1.0 N/mm) in width.
 - Elongation: 2 percent.
 - Tensile Strength: **40 lbf/inch** (7.2 N/mm) in width.
 - FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
- Products:** Subject to compliance with requirements, provide one of the following:
 - [ABI, Ideal Tape Division](#); 370 White PVC tape.
 - [Compac Corporation](#); 130.
 - [Venture Tape](#); 1506 CW NS.
 - <Insert manufacturer's name; product name or designation>**.
 - or approved equal.

2. Width: **2 inches** (50 mm).
3. Thickness: **6 mils** (0.15 mm).
4. Adhesion: **64 ounces force/inch** (0.7 N/mm) in width.
5. Elongation: 500 percent.
6. Tensile Strength: **18 lbf/inch** (3.3 N/mm) in width.

D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **ABI**, Ideal Tape Division; 488 AWF.
 - b. **Avery Dennison Corporation**, Specialty Tapes Division; Fasson 0800.
 - c. **Compac Corporation**; 120.
 - d. **Venture Tape**; 3520 CW.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. Width: **2 inches** (50 mm).
3. Thickness: **3.7 mils** (0.093 mm).
4. Adhesion: **100 ounces force/inch** (1.1 N/mm) in width.
5. Elongation: 5 percent.
6. Tensile Strength: **34 lbf/inch** (6.2 N/mm) in width.

2.11 SECUREMENTS

A. Bands:

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **ITW Insulation Systems**; Gerrard Strapping and Seals.
 - b. **RPR Products, Inc.**; Insul-Mate Strapping, Seals, and Springs.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, [**Type 304**] [**or**] [**Type 316**]; **0.015 inch** (0.38 mm) thick, [**1/2 inch** (13 mm)] [**3/4 inch** (19 mm)] wide with [**wing seal**] [**or**] [**closed seal**].
3. Aluminum: **ASTM B 209** (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, **0.020 inch** (0.51 mm) thick, [**1/2 inch** (13 mm)] [**3/4 inch** (19 mm)] wide with [**wing seal**] [**or**] [**closed seal**].
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, [**0.106-inch-** (2.6-mm-)] [**0.135-inch-** (3.5-mm-)] diameter shank, length to suit depth of insulation indicated.

- a. **Products:** Subject to compliance with requirements, provide one of the following:
 - 1) [AGM Industries, Inc.](#); CWP-1.
 - 2) [GEMCO; CD.](#)
 - 3) [Midwest Fasteners, Inc.](#); CD.
 - 4) [Nelson Stud Welding](#); TPA, TPC, and TPS.
 - 5) **<Insert manufacturer's name; product name or designation>.**
 - 6) or approved equal.

2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, [0.106-inch- (2.6-mm-)] [0.135-inch- (3.5-mm-)] diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38-mm) galvanized carbon-steel washer.
 - a. **Products:** Subject to compliance with requirements, provide one of the following:
 - 1) [AGM Industries, Inc.](#); CHP-1.
 - 2) [GEMCO](#); Cupped Head Weld Pin.
 - 3) [Midwest Fasteners, Inc.](#); Cupped Head.
 - 4) [Nelson Stud Welding](#); CHP.
 - 5) **<Insert manufacturer's name; product name or designation>.**
 - 6) or approved equal.

3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. **Products:** Subject to compliance with requirements, provide one of the following:
 - 1) [AGM Industries, Inc.](#); Tactoo Perforated Base Insul-Hangers.
 - 2) [GEMCO](#); Perforated Base.
 - 3) [Midwest Fasteners, Inc.](#); Spindle.
 - 4) **<Insert manufacturer's name; product name or designation>.**
 - 5) or approved equal.

 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: [**Copper- or zinc-coated, low-carbon steel**] [**Aluminum**] [**Stainless steel**], fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness

indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:

- a. **Products:** Subject to compliance with requirements, provide one of the following:
 - 1) **GEMCO**; Nylon Hangers.
 - 2) **Midwest Fasteners, Inc.**; Nylon Insulation Hangers.
 - 3) **<Insert manufacturer's name; product name or designation>**.
 - 4) or approved equal.
 - b. Baseplate: Perforated, nylon sheet, **0.030 inch** (0.76 mm) thick by **1-1/2 inches** (38 mm) in diameter.
 - c. Spindle: Nylon, **0.106-inch-** (2.6-mm-) diameter shank, length to suit depth of insulation indicated, up to **2-1/2 inches** (63 mm).
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
- a. **Products:** Subject to compliance with requirements, provide one of the following:
 - 1) **AGM Industries, Inc.**; Tactoo Self-Adhering Insul-Hangers.
 - 2) **GEMCO**; Peel & Press.
 - 3) **Midwest Fasteners, Inc.**; Self Stick.
 - 4) **<Insert manufacturer's name; product name or designation>**.
 - 5) or approved equal.
 - b. Baseplate: Galvanized carbon-steel sheet, **0.030 inch** (0.76 mm) thick by **2 inches** (50 mm) square.
 - c. Spindle: [**Copper- or zinc-coated, low-carbon steel**] [**Aluminum**] [**Stainless steel**], fully annealed, **0.106-inch-** (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive-backed base with a peel-off protective cover.
6. Insulation-Retaining Washers: Self-locking washers formed from **0.016-inch-** (0.41-mm-) thick, [**galvanized-steel**] [**aluminum**] [**stainless-steel**] sheet, with beveled edge sized as required to hold insulation securely in place but not less than **1-1/2 inches** (38 mm) in diameter.
- a. **Products:** Subject to compliance with requirements, provide one of the following:
 - 1) **AGM Industries, Inc.**; RC-150.
 - 2) **GEMCO**; R-150.

- 3) [Midwest Fasteners, Inc.](#); WA-150.
 - 4) [Nelson Stud Welding](#); Speed Clips.
 - 5) **<Insert manufacturer's name; product name or designation>**.
 - 6) or approved equal.
- b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from **0.016-inch** (0.41-mm-) thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than **1-1/2 inches** (38 mm) in diameter.
- a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1) [GEMCO](#).
 - 2) [Midwest Fasteners, Inc.](#)
 - 3) **<Insert manufacturer's name>**.
 - 4) or approved equal.
- C. Staples: Outward-clinching insulation staples, nominal **3/4-inch**- (19-mm-) wide, stainless steel or Monel.
- D. Wire: [**0.080-inch** (2.0-mm) **nickel-copper alloy**] [**0.062-inch** (1.6-mm) **soft-annealed, stainless steel**] [**0.062-inch** (1.6-mm) **soft-annealed, galvanized steel**].
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [C & F Wire](#).
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
- 2.12 CORNER ANGLES
- A. PVC Corner Angles: [**30 mils** (0.8 mm)] **<Insert dimension>** thick, minimum **1 by 1 inch** (25 by 25 mm), PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
 - B. Aluminum Corner Angles: [**0.040 inch** (1.0 mm)] **<Insert dimension>** thick, minimum **1 by 1 inch** (25 by 25 mm), aluminum according to **ASTM B 209** (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14.

PART 3 - Stainless-Steel Corner Angles: [0.024 inch (0.61 mm)] <Insert dimension> thick, minimum 1 by 1 inch (25 by 25 mm), stainless steel according to ASTM A 167 or ASTM A 240/A 240M, [Type 304] [or] [Type 316].EXECUTION

3.1 ENVIRONMENTAL REQUIREMENTS

- A. Maintain ambient temperatures and conditions required by manufacturers of adhesives, mastics, and insulation cements.
- B. Maintain temperature during and after installation for minimum period of 24 hours.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Install materials after ductwork has been tested and approved.
- B. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Install materials in accordance with manufacturer's instructions and N.I.C.A standards.
- B. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.
- C. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.
- D. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- E. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- F. Install multiple layers of insulation with longitudinal and end seams staggered.
- G. Keep insulation materials dry during application and finishing.

- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Provide insulation with vapor barrier when air conveyed may be below ambient temperature, and for all runs of heating duct which exceed 75 feet in maximum air-travel distance.
 - 2. Install insulation continuously through hangers and around anchor attachments.
 - 3. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 4. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth.
 - 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 - 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at [2 inches (50 mm)] [4 inches (100 mm)] o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 - 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 - 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

- P. High Temperature Insulation Application: Secure insulation with wires and treat joints as recommended by the manufacturer.
- Q. Walk-in Plenum Application: Adhere insulation on interior surface of plenum with adhesive for 100 percent coverage. Secure insulation with weld pins and split washers, 12" center to center. Seal and smooth joints. Do not use nail- type fasteners.

3.5 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside roof flashing at least **2 inches (50 mm)** below top of roof flashing.
 - 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least **2 inches (50 mm)**.
 - 4. Seal jacket to wall flashing with flashing sealant.
- C. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- D. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least **2 inches (50 mm)**.
 - 1. Comply with requirements in Section 078413 "Penetration Firestopping".
- E. Insulation Installation at Floor Penetrations:
 - 1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least **2 inches (50 mm)**.

2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

- F. Where staples are used to secure insulation covering requiring vapor barrier, the staples shall be sealed with a vapor barrier mastic.

3.6 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

- A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.7 INSTALLATION OF MINERAL-FIBER INSULATION

- A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for [100] [50] <Insert number> percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches (450 mm) and smaller, place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.
 - b. On duct sides with dimensions larger than 18 inches (450 mm), place pins 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Impale insulation over pins and attach speed washers.
 - f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch (13-mm) outward-clinching staples, 1 inch (25 mm) o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

- a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F (10 deg C) at 18-foot (5.5-m) intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches (75 mm).
5. Overlap unfaced blankets a minimum of 2 inches (50 mm) on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches (450 mm) o.c.
 6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
 7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- (150-mm-) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) o.c.
- B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for [100] [50] <Insert number> percent coverage of duct and plenum surfaces.
 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
 3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches (450 mm) and smaller, place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.
 - b. On duct sides with dimensions larger than 18 inches (450 mm), space pins 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation section with

1/2-inch (13-mm) outward-clinching staples, 1 inch (25 mm) o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

- a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F (10 deg C) at 18-foot (5.5-m) intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches (75 mm).
5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- (150-mm-) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) o.c.

3.8 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
1. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.
 2. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

- D. Where metal jackets are indicated, install with **2-inch (50-mm)** overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands **12 inches (300 mm)** o.c. and at end joints.

3.9 FIRE-RATED INSULATION SYSTEM INSTALLATION

- A. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.
- B. Insulate duct access panels and doors to achieve same fire rating as duct.
- C. Install firestopping at penetrations through fire-rated assemblies. Fire-stop systems are specified in Section 078413 "Penetration Firestopping."

3.10 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

1. Flat Acrylic Finish: [**Two**] <Insert number> finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

- a. Finish Coat Material: Interior, flat, latex-emulsion size.

- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by DEN Project Manager. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

3.11 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:

1. Inspect ductwork, randomly selected by DEN Project Manager, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to **[one]** <Insert number> location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.
- D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.12 DUCT INSULATION SCHEDULE, GENERAL

A. Plenums and Ducts Requiring Insulation:

1. Indoor, concealed supply and outdoor air.
2. Indoor, exposed supply and outdoor air.
3. Indoor, concealed return located in unconditioned space.
4. Indoor, exposed return located in unconditioned space.
5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.
6. Indoor, exposed, Type I, commercial, kitchen hood exhaust.
7. Indoor, concealed oven and warewash exhaust.
8. Indoor, exposed oven and warewash exhaust.
9. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
10. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
11. Outdoor, concealed supply and return.
12. Outdoor, exposed supply and return.

B. Items Not Insulated:

1. Fibrous-glass ducts.
2. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
3. Factory-insulated flexible ducts.
4. Factory-insulated plenums and casings.
5. Flexible connectors.
6. Vibration-control devices.
7. Factory-insulated access panels and doors.
8. Nameplates and data plates.
9. Access panels and doors in air-distribution systems.

3.13 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. Concealed, round and flat-oval, supply-air duct insulation shall be **[one of]** the following:
1. Flexible Elastomeric: **[1 inch (25 mm)]** <Insert dimension> thick.

2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- B. Concealed, round and flat-oval, return-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- C. Concealed, round and flat-oval, outdoor-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- D. Concealed, round and flat-oval, exhaust-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- E. Concealed, rectangular, supply-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.

3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- F. Concealed, rectangular, return-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- G. Concealed, rectangular, outdoor-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- H. Concealed, rectangular, exhaust-air duct insulation between isolation damper and penetration of building exterior shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- I. Concealed, Type I, Commercial, Kitchen Hood Exhaust Duct and Plenum Insulation: Fire-rated [blanket] [or] [board]; thickness as required to achieve 2-hour fire rating.
- J. Concealed, supply-air plenum insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.

3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- K. Concealed, return-air plenum insulation shall be [**one of**] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- L. Concealed, outdoor-air plenum insulation shall be [**one of**] the following:
1. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- M. Concealed, exhaust-air plenum insulation shall be [**one of**] the following:
1. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- N. Exposed, round and flat-oval, supply-air duct insulation shall be [**one of**] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 5. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- O. Exposed, round and flat-oval, return-air duct insulation shall be [**one of**] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.

2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 5. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- P. Exposed, round and flat-oval, outdoor-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 5. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- Q. Exposed, round and flat-oval, exhaust-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 5. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- R. Exposed, rectangular, supply-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96 kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- S. Exposed, rectangular, return-air duct insulation shall be [one of] the following:

1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- T. Exposed, rectangular, outdoor-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- U. Exposed, rectangular, exhaust-air duct insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- V. Exposed, Type I, Commercial, Kitchen Hood Exhaust Duct and Plenum Insulation: Fire-rated [blanket] [or] [board]; thickness as required to achieve 2-hour fire rating.
- W. Exposed, supply-air plenum insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- X. Exposed, return-air plenum insulation shall be [one of] the following:
1. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.

2. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
3. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
4. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.

Y. Exposed, outdoor-air plenum insulation shall be [**one of**] the following:

1. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
2. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.

Z. Exposed, exhaust-air plenum insulation shall be [**one of**] the following:

1. Mineral-Fiber Blanket: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
2. Mineral-Fiber Board: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.

3.14 ABOVEGROUND, OUTDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. Insulation materials and thicknesses are identified below. If more than one material is listed for a duct system, selection from materials listed is Contractor's option.

B. Concealed, round and flat-oval, supply-air duct insulation shall be [**one of**] the following:

1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.

C. Concealed, round and flat-oval, return-air duct insulation shall be [**one of**] the following:

1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.

2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- D. Concealed, round and flat-oval, outdoor-air duct insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- E. Concealed, rectangular, supply-air duct insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- F. Concealed, rectangular, return-air duct insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- G. Concealed, supply-air plenum insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- H. Concealed, return-air plenum insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.

- I. Exposed, round and flat-oval, supply-air duct insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 3. Mineral-Fiber Pipe and Tank: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
- J. Exposed, round and flat-oval, return-air duct insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- K. Exposed, rectangular, supply-air duct insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- L. Exposed, rectangular, return-air duct insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- M. Exposed, supply-air plenum insulation shall be[**one of**] the following:
1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
 2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- N. Exposed, return-air plenum insulation shall be[**one of**] the following:

1. Mineral-Fiber Blanket: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> and [0.75-lb/cu. ft. (12-kg/cu. m)] [1.5-lb/cu. ft. (24-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] nominal density.
2. Mineral-Fiber Board: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.

3.15 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Ducts and Plenums, Concealed:
 1. None.
 2. [PVC] [PVC, Color-Coded by System]: [20 mils (0.5 mm)] [30 mils (0.8 mm)] thick.
 3. Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
 4. Painted Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] thick.
 5. Stainless Steel, [Type 304] [or] [Type 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 6. <Insert jacket type>.
- D. Ducts and Plenums, Exposed:
 1. None.
 2. [PVC] [PVC, Color-Coded by System]: [20 mils (0.5 mm)] [30 mils (0.8 mm)] thick.
 3. Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
 4. Painted Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] thick.
 5. Stainless Steel, [Type 304] [or] [Type 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 6. <Insert jacket type>.

3.16 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Ducts and Plenums, Concealed:
1. None.
 2. **[PVC]** **[PVC, Color-Coded by System]**: **[20 mils (0.5 mm)]** **[30 mils (0.8 mm)]** thick.
 3. Aluminum, **[Smooth]** **[Corrugated]** **[Stucco Embossed]**: **[0.016 inch (0.41 mm)]** **[0.020 inch (0.51 mm)]** **[0.024 inch (0.61 mm)]** **[0.032 inch (0.81 mm)]** **[0.040 inch (1.0 mm)]** thick.
 4. Painted Aluminum, **[Smooth]** **[Corrugated]** **[Stucco Embossed]**: **[0.016 inch (0.41 mm)]** **[0.020 inch (0.51 mm)]** **[0.024 inch (0.61 mm)]** **[0.032 inch (0.81 mm)]** thick.
 5. Stainless Steel, **[Type 304]** **[or]** **[Type 316]**, **[Smooth 2B Finish]** **[Corrugated]** **[Stucco Embossed]**: **[0.010 inch (0.25 mm)]** **[0.016 inch (0.41 mm)]** **[0.020 inch (0.51 mm)]** **[0.024 inch (0.61 mm)]** thick.
 6. **<Insert jacket type>**.
- D. Ducts and Plenums, Exposed, up to **48 Inches (1200 mm)** in Diameter or with Flat Surfaces up to **72 Inches (1800 mm)**:
1. Aluminum, **[Smooth]** **[Corrugated]** **[Stucco Embossed]**: **[0.016 inch (0.41 mm)]** **[0.020 inch (0.51 mm)]** **[0.024 inch (0.61 mm)]** **[0.032 inch (0.81 mm)]** **[0.040 inch (1.0 mm)]** thick.
 2. Painted Aluminum, **[Smooth]** **[Corrugated]** **[Stucco Embossed]**: **[0.016 inch (0.41 mm)]** **[0.020 inch (0.51 mm)]** **[0.024 inch (0.61 mm)]** **[0.032 inch (0.81 mm)]** thick.
 3. Stainless Steel, **[Type 304]** **[or]** **[Type 316]**, **[Smooth 2B Finish]** **[Corrugated]** **[Stucco Embossed]**: **[0.010 inch (0.25 mm)]** **[0.016 inch (0.41 mm)]** **[0.020 inch (0.51 mm)]** **[0.024 inch (0.61 mm)]** thick.
 4. **<Insert jacket type>**.
- E. Ducts and Plenums, Exposed, Larger Than **48 Inches (1200 mm)** in Diameter or with Flat Surfaces Larger Than **72 Inches (1800 mm)**:
1. **[Painted]**Aluminum, **[Smooth]** **[Stucco Embossed]** with **[1-1/4-Inch- (32-mm-) Deep Corrugations]** **[2-1/2-Inch- (65-mm-) Deep Corrugations]** **[4-by-1-Inch (100-by-25-mm) Box Ribs]**: **[0.032 inch (0.81 mm)]** **[0.040 inch (1.0 mm)]** thick.
 2. Stainless Steel, **[Type 304]** **[or]** **[Type 316]**, **[Smooth]** **[Stucco Embossed]**, with **[1-1/4-Inch- (32-mm-) Deep Corrugations]** **[2-1/2-Inch- (65-mm-) Deep Corrugations]** **[4-by-1-Inch (100-by-25-mm) Box Ribs]**: **[0.020 inch (0.51 mm)]** **[0.024 inch (0.61 mm)]** thick.
 3. **<Insert jacket type>**.

3.17 R-VALUE SCHEDULE

Degree Days- Cool.		Degree Days- Heat.	
System Ducts:	R-Value:	System Ducts:	R-Value:
Below 500	3.3	Below 1500	3.3
500 to 1150	5.0	1500 to 4500	5.0
1151 to 2000	6.5	4501 to 7500	6.5
Above 2000	8.0	Above 7500	8.0

- A. The R-values shown in the following schedule and/or indicated on the drawings are "installed" values and, where materials performance can be affected by compression during installation, the Contractor shall make adjustments as required to achieve the R-values shown:

Ductwork Application:	Type:	Minimum R-Value:
*Ext. Cooling System Ducts	B**	8.0
*Ext. Heating System Ducts	B	6.5
Exhaust Ducts Within 10 ft of Exterior Openings	B	8.0
Plenums	A,B*	8.0
Ventilation Equip. Casings	A, B*	8.0
Supply and Return Ducts Inside Building Envelope or in Unconditioned Spaces with Temperature Differential > 15 Degrees F and < or = 40 Degrees F	A, B	3.3
Supply and Return Ducts Inside Building Envelope or in Unconditioned Spaces with Temperature Differential > 40 degrees F	A, B	5.0
Supply/Return Distribution Ducts in Conditioned Spaces	A, B*	2.0
Kitchen Grease Ducts	J	3"

1. *R-Values shown apply for both duct exterior and duct liner insulation applications.
2. **Or duct liner. Refer to Section 233113 "Metal Ducts" and Section 233116 "Non-Metal Ducts".

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230713

SECTION 230716 - HVAC EQUIPMENT INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes insulating the following HVAC equipment that is not factory insulated:

1. Chillers.
2. Heat exchangers.
3. Converters.
4. Chilled-water pumps.
5. Condenser-water pumps.
6. Dual-service heating and cooling pumps.
7. Heating, hot-water pumps.
8. Heat-recovery pumps.
9. Steam condensate pumps.
10. Expansion/compression tanks.
11. Air separators.
12. Thermal storage tanks.
13. Deaerators.
14. Steam condensate tanks.
15. Steam flash tanks, flash separators, moisture separators, and blow-off tanks.
16. Piping system filtration unit housings.
17. Outdoor, aboveground, heated, fuel-oil storage tanks.
18. High-temperature engine exhaust system insulation.

- B. Related Sections:

1. Section 230713 "Duct Insulation."
2. Section 230719 "HVAC Piping Insulation."

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Submit product description, list of materials and thickness for equipment scheduled. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).

1. Include data substantiating that materials comply with requirements.
- B. Manufacturer's Installation Instructions: Indicate procedures for each product type, which ensure acceptable workmanship and installation standards will be achieved.
- C. LEED Submittals:
 1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 2. Detail attachment and covering of heat tracing inside insulation.
 3. Detail removable insulation at equipment connections.
 4. Detail application of field-applied jackets.
 5. Detail application at linkages of control devices.
 6. Detail field application for each equipment type.
- E. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
 1. Preformed Pipe Insulation Materials: 12 inches (300 mm) long by NPS 2 (DN 50).
 2. Sheet Form Insulation Materials: 12 inches (300 mm) square.
 3. Sheet Jacket Materials: 12 inches (300 mm) square.
 4. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Certificates confirming that all insulation, jacket, adhesives, mastics, sealers, etc., utilized in the fabrication of these systems shall meet NFPA for fire resistant ratings of a maximum of 25 flame spread and 50 smoke developed ratings, or more stringent requirements as required, and shall be approved by the insulation manufacturer for guaranteed performances when incorporated into their insulation system, unless a specific product is specified for a specific application, and is stated as an exception to this requirement.
- C. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of

insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

- D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Insulation shall be applied by mechanics skilled in the work and regularly engaged in such occupation. All insulation shall be applied in strict accordance with manufacturer's recommendations and installation instructions as applicable. Unsightly or inadequate work will not be acceptable, and all such work shall be removed and replaced as necessary to achieve an acceptable installation.

- B. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

- C. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

- D. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by DEN Project Manager. Use materials indicated for the completed Work.

1. Equipment Mockups:
 - a. One chilled-water pump and one heating-hot-water pump.
 - b. One tank or vessel.
 - c. **<Add equipment>**.
2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
3. Notify DEN Project Manager [**seven**] **<Insert number>** days in advance of dates and times when mockups will be constructed.

4. Obtain DEN Project Manager's approval of mockups before starting insulation application.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
7. Demolish and remove mockups when directed.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.
- B. Deliver materials to site in original factory packaging, labeled with manufacturer's density and thickness.
- C. Store insulation in original wrapping and protect from weather and construction traffic.
- D. Protect insulation against dirt, water, chemical, and mechanical damage.

1.8 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with equipment Installer for equipment insulation application.
- C. Coordinate installation and testing of heat tracing.

1.9 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Breeching Insulation Schedule" and "Equipment Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate:
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Industrial Insulation Group (IIG); Thermo-12 Gold.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 - 2. Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
- G. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pittsburgh Corning Corporation; Foamglas.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 - 2. Block Insulation: ASTM C 552, Type I.
 - 3. Special-Shaped Insulation: ASTM C 552, Type III.
 - 4. Board Insulation: ASTM C 552, Type IV.
 - 5. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- H. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
 - 1. Products: Subject to compliance with requirements, provide one of the following:

- a. Aeroflex USA, Inc.; Aerocel.
 - b. Armacell LLC; AP Armaflex.
 - c. K-Flex USA; Insul-Sheet and K-FLEX LS.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- I. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, **[Type I] [Type II with factory-applied vinyl jacket] [Type III with factory-applied FSK jacket] [Type III with factory-applied FSP jacket]**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; SoftTouch Duct Wrap.
 - b. Johns Manville; Microlite.
 - c. Knauf Insulation; Friendly Feel Duct Wrap.
 - d. Manson Insulation Inc.; Alley Wrap.
 - e. Owens Corning; SOFTR All-Service Duct Wrap.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
- J. High-Temperature, Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type V, without factory-applied jacket.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Industrial Insulation Group (IIG); MinWool-1200 Flexible Batt.
 - b. Johns Manville; HTB 26 Spin-Glas.
 - c. Roxul Inc.; Roxul RW.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- K. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. Provide insulation **[without factory-applied jacket] [with factory-applied ASJ] [with factory-applied FSK jacket]**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; CertaPro Commercial Board.
 - b. Fibrex Insulations Inc.; FBX.
 - c. Johns Manville; 800 Series Spin-Glas.
 - d. Knauf Insulation; Insulation Board.
 - e. Manson Insulation Inc.; AK Board.
 - f. Owens Corning; Fiberglas 700 Series.
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. or approved equal.

- L. High-Temperature, Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type III, without factory-applied jacket.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fibrex Insulations Inc.; FBX.Industrial Insulation Group (IIG); MinWool-1200 Industrial Board.
 - b. Rock Wool; Delta Board.
 - c. Roxul Inc.; RHT and RockBoard.
 - d. Thermafiber, Inc.; Thermafiber Industrial Felt.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
- M. Mineral-Fiber, Preformed Pipe Insulation:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fibrex Insulations Inc.; Coreplus 1200.
 - b. Johns Manville; Micro-Lok.
 - c. Knauf Insulation; 1000-Degree Pipe Insulation.
 - d. Manson Insulation Inc.; Alley-K.
 - e. Owens Corning; Fiberglas Pipe Insulation.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. Type I, **850 Deg F** (454 Deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, **[without factory-applied jacket] [with factory-applied ASJ] [with factory-applied ASJ-SSL]**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 3. Type II, **1200 Deg F** (649 Deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type II, Grade A, **[without factory-applied jacket] [with factory-applied ASJ] [with factory-applied ASJ-SSL]**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- N. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied **[ASJ] [FSK jacket]** complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is **2.5 lb/cu. ft.** (40 kg/cu. m) or more. Thermal conductivity (k-value) at **100 deg F** (55 deg C) is **0.29 Btu x in./h x sq. ft. x deg F** (0.042 W/m x K) or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; CrimpWrap.
 - b. Johns Manville; MicroFlex.
 - c. Knauf Insulation; Pipe and Tank Insulation.

- d. Manson Insulation Inc.; AK Flex.
- e. Owens Corning; Fiberglas Pipe and Tank Insulation.
- f. **<Insert manufacturer's name; product name or designation>**.
- g. or approved equal.

O. Phenolic:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Kingspan Tarec Industrial Insulation NV; Koolphen K.
 - b. Resolco International BV; Insul-phen.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
2. Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.
3. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
4. Factory-Applied Jacket: **[None] [ASJ]**. Requirements are specified in "Factory-Applied Jackets" Article.

P. Polyisocyanurate: Unfaced, preformed, rigid cellular polyisocyanurate material intended for use as thermal insulation.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Trymer 2000 XP.
 - b. Duna USA Inc.; Corafoam.
 - c. Dyplast Products; ISO-25.
 - d. Elliott Company of Indianapolis; Elfoam.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. Comply with ASTM C 591, Type I or Type IV, except thermal conductivity (k-value) shall not exceed **0.19 Btu x in./h x sq. ft. x deg F** (0.027 W/m x K) at **75 deg F** (24 deg C) after 180 days of aging.
3. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less for thickness up to **1 inch** (25 mm) as tested by ASTM E 84.
4. Fabricate shapes according to ASTM C 450 and ASTM C 585.
5. Factory-Applied Jacket: Requirements are specified in "Factory-Applied Jackets" Article.

- a. Equipment Applications: **[None] [ASJ] [ASJ-SSL] [PVDC] [PVDC-SSL]**.

Q. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Armacell LLC; Tubolit.

- b. Nomaco Insulation; IMCOLOCK, IMCOSHEET, NOMALOCK, and NOMAPLY.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- R. Polystyrene: Rigid, extruded cellular polystyrene intended for use as thermal insulation. Comply with ASTM C 578, Type IV or Type XIII, except thermal conductivity (k-value) shall not exceed **0.26 Btu x in./h x sq. ft. x deg F** (0.038 W/m x K) after 180 days of aging. Fabricate shapes according to ASTM C 450 and ASTM C 585.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Styrofoam.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.2 HIGH-TEMPERATURE ENGINE EXHAUST SYSTEM INSULATION

A. Mineral Fiber Insulation (Type A):

- 1. High temperature piping and silencers; **600 degrees F** (316 degrees C) to **1200 degrees F** (649 degrees C):
- 2. Insulation for piping shall be premolded, mandrel wound, non-fabricated. Board insulation, when required for other than cylindrical surfaces, shall consist of the same materials as the pipe insulation described by this article.
- 3. Insulation thickness shall be 2", consisting of at least two layers or a factory ship lapped system.
 - a. Composition: Basalt wool and organic binder that is non-combustible and asbestos free.
 - b. Nominal Density: The nominal density to be between 6 and 10 pound per cubic foot.
 - c. Maximum Thermal Conductivity: The thermal conductivity shall not exceed the following:

BTU in./h Sq. Ft. degrees F (W/m K)	Mean Temperature
0.42 (0.062)	400 degrees F (204 degrees C)
0.50 (0.072)	500 degrees F (260 degrees C)
0.59 (0.086)	600 degrees F (316 degrees C)

- d. Maximum non-fibrous (shot) content: The percentage content of non-fibrous material (shot) shall not exceed 20% by weight.
- e. Linear shrinkage: The linear shrinkage, when tested at 1200 °F (649 degrees C), shall be less than 1%.
- f. Stress corrosion: The material must not promote or contribute to the corrosion of austenitic stainless steel.
- g. Surface burning characteristics shall not exceed:

- 1) Flame Spread: 5.
- 2) Smoke Developed: 0.
- h. Subject to compliance with requirements, provide one of the following:
 - 1) Owens Corning Insulation - High Temperature Pipe Insulation 1200.
 - 2) Advanced Thermal Products, Inc. - High Temperature Flexible Insulation, Type E.
 - 3) or approved equal.
4. Insulation Jacket:
 - a. Aluminum Jacket: ASTM B 209.
 - 1) Minimum thickness: 0.025-inch sheet.
 - 2) Finish: Embossed.
 - 3) Joining: Longitudinal slip joints and 2-inch laps.
 - 4) Fittings: 0.016-inch thick die shaped fitting covers with factory attached protective liner.
 - 5) Metal jacket bands: 3/8 inch wide; .015-inch thick aluminum.
- B. Pre-formed Calcium Silicate Pipe Insulation (Type B):
 1. Hydrous calcium silicate; ASTM C 533; rigid white; asbestos free, formed as V-groove or molded radius block for application to piping and fittings:
 - a. 'K' value: ASTM C 177 and C 518; 0.44 at 300 degrees F.
 - b. Maximum service temperature: 1500 degrees F.
 - c. Maximum thermal conductivity: The thermal conductivity shall not exceed the following:

BTU in./h Sq. Ft. degrees F	Mean Temperature:
(W/m degrees C):	
0.43 (0.062)	400 degrees F (204 degrees C)
0.46 (0.066)	500 degrees F (260 degrees C)
0.50 (0.072)	600 degrees F (316 degrees C)
 - d. Density: 13 lb/cu ft; compressive strength (block) 200 PSI with 5% compression at 1-1/2" thickness.
 - e. Insulation thickness shall be 2", consisting of two layers with staggered joints.
 - f. Tie with 16 gage stainless steel wire loops with twisted ends, spaced 12 inches on center.
 2. Subject to compliance with requirements, provide products by one of the following:
 - a. Calsite Group.
 - b. Pabco.
 - c. or approved equal.

C. High-Temperature Blanket Insulation System (Type C):

1. High temperature thermal insulation shall be installed on all flexible connectors (bellows) exhaust silencers, and all hot exhaust system piping. Surfaces shall be insulated so as to ensure that outside surface temperatures will not exceed 250 degrees F.
2. Thermal blanket insulation shall be comprised of factory-cut and finished blanket units fabricated as three-ply assemblies comprised of the following:
 - a. Type 304 stainless steel wire mesh.
 - b. 2-inch (two layer) thickness of type "E" fiberglass insulation conforming to MIL-L-16411 and having the following properties:

- 1) Maximum thermal conductivity: The thermal conductivity shall not exceed the following:

BTU in./h Sq. Ft. degrees F

(W/m degrees C):

0.27

0.41

0.52

Mean Temperature:

300 degrees F

500 degrees F

700 degrees F

- 2) Average fiber diameter: 0.00035 in.
- 3) Fusion Temperature: No fusion or melting at 1300 degrees F.

c. Cold Face Materials:

- 1) Cold face of outer layer of insulating mat shall be a flexible, silicone impregnated fiberglass cloth (not less than 34 ounces per square yard) which is water and oil resistant, capable of withstanding temperatures of up to 500 degrees F, and conforming to Mil Spec MIL-Y-1140-C and MIL-J-24244. Silicone coated cloth is unacceptable.
- 2) Cold face of inner layer of insulating mat shall be silica fabric coated with a special fire-retardant silicone rubber compound, Lewco Style 600 or equal, with properties as follows:
 - a) Weight: 18 oz/sq.yd. +/- 10%.
 - b) Thickness: 0.030" +/- 10%.
 - c) Breaking Strength FED STD 191/5102: Warp - 560 lbs. min. avg; Fill - 350 lbs. min. avg.
 - d) Temperature Resistance: 1800 degrees F., continuous use.
- d. All blanket edges shall be machine stitched with type 304 stainless steel thread. Permanently mounted type 304 stainless steel hooks and/or type 304 stainless steel capstans shall be used as fasteners. The blankets shall be laced together with type 304 stainless steel tie wire, 0.032" in diameter. "Hog rings" are unacceptable for binding edges or securing blankets.
- e. The high temperature thermal blanket system shall be flexible and designed to enable removal and re-installation.

- 1) Subject to compliance with requirements, provide one of the following:
 - a) Advanced Thermal Products, Inc., Santa Ana, California.
 - b) or approved equal.

D. Accessories (Type A and Type B insulation systems only):

1. Covering for Flexible Manifold Connectors: Inorganic High Temperature Insulating Blanket, temperature limit 1300 degrees F conforming to Mil 1-23128, Grade A, Class 1, 2 inches thick, 4 lb. density with expanded metal jacket wired in place. 'K' value 0.80 at 1000 degrees F.
2. Insulating Cement: ASTM C 195; hydraulic setting mineral wool, suitable for temperatures up to 1600 degrees F.
3. Finishing Cement: ASTM C 449.

2.3 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ramco Insulation, Inc.; Super-Stik.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ramco Insulation, Inc.; Thermokote V.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

C. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ramco Insulation, Inc.; Ramcote 1200 and Quik-Cote.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.4 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service

temperature range of 50 to 800 deg F (10 to 427 deg C).

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-97.
 - b. Eagle Bridges - Marathon Industries; 290.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-27.
 - d. Mon-Eco Industries, Inc.; 22-30.
 - e. Vimasco Corporation; 760.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F (minus 73 to plus 93 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-84.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Phenolic and Polyisocyanurate Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F (minus 59 to plus 149 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-96.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-33.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Aeroflex USA, Inc.; Aero seal.
 - b. Armacell LLC; Armaflex 520 Adhesive.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
 - d. K-Flex USA; R-373 Contact Adhesive.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70.
 - d. Mon-Eco Industries, Inc.; 22-25.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- G. Polystyrene Adhesive: Solvent- or water-based, synthetic resin adhesive with a service temperature range of minus 20 to plus 140 deg F (29 to plus 60 deg C).

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-96.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

- H. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-50.
 - d. Mon-Eco Industries, Inc.; 22-25.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- I. PVC Jacket Adhesive: Compatible with PVC jacket.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 739, Dow Silicone.
 - b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
 - c. P.I.C. Plastics, Inc.; Welding Adhesive.
 - d. Speedline Corporation; Polyco VP Adhesive.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.5 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
- For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
- Products: Subject to compliance with requirements, provide one of the following:
 - Foster Brand, Specialty Construction Brands, Inc., a business of H .B. Fuller Company; 30-80/30-90.
 - Vimasco Corporation; 749.
 - <Insert manufacturer's name; product name or designation>**.
 - or approved equal.
 - Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, **0.013 perm** (0.009 metric perm) at **43-mil** (1.09-mm) dry film thickness.
 - Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 - Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
 - Color: White.
- C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below ambient services.
- Products: Subject to compliance with requirements, provide one of the following:
 - Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-30.
 - Eagle Bridges - Marathon Industries; 501.
 - Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-35.
 - Mon-Eco Industries, Inc.; 55-10.
 - <Insert manufacturer's name; product name or designation>**.
 - or approved equal.
 - Water-Vapor Permeance: ASTM F 1249, **0.05 perm** (0.03 metric perm) at **35-mil** (0.9-mm) dry film thickness.
 - Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).
 - Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.
 - Color: White.
- D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below ambient services.
- Products: Subject to compliance with requirements, provide one of the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel.
 - b. Eagle Bridges - Marathon Industries; 570.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-95/60-96.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
2. Water-Vapor Permeance: ASTM F 1249, **0.05 perm** (0.033 metric perm) at **30-mil** (0.8-mm) dry film thickness.
 3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
 4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
 5. Color: White.
- E. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-10.
 - b. Eagle Bridges - Marathon Industries; 550.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 46-50.
 - d. Mon-Eco Industries, Inc.; 55-50.
 - e. Vimasco Corporation; WC-1/WC-5.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. Water-Vapor Permeance: ASTM F 1249, **1.8 perms** (1.2 metric perms) at **0.0625-inch** (1.6-mm) dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Solids Content: 60 percent by volume and 66 percent by weight.
 5. Color: White.

2.6 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
1. For indoor applications, use lagging adhesives that have a VOC content of **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2.

- b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36.
 - c. Vimasco Corporation; 713 and 714.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over equipment insulation.
 4. Service Temperature Range: 0 to plus 180 deg F (Minus 18 to plus 82 deg C).
 5. Color: White.

2.7 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass, Phenolic, and Polyisocyanurate Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Pittsburgh Corning Corporation; Pittseal 444.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
2. Joint Sealants for Polystyrene Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-70.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
3. Materials shall be compatible with insulation materials, jackets, and substrates.
4. Permanently flexible, elastomeric sealant.
5. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
6. Color: White or gray.
7. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
8. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile

Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: Aluminum.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: White.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.8 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
 4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
 5. PVDC Jacket for Indoor Applications: 4-mil- (0.10-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perm (0.013 metric perm) when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
 6. PVDC Jacket for Outdoor Applications: 6-mil- (0.15-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perm (0.007 metric perm) when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
 7. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.

8. Vinyl Jacket: White vinyl with a permeance of **1.3 perms** (0.86 metric perm) when tested according to ASTM E 96/E 96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.9 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Fabric: Approximately **6 oz./sq. yd.** (203 g/sq. m) with a thread count of **5 strands by 5 strands/sq. in.** (2 strands by 2 strands/sq. mm) for covering equipment.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Chil-Glas No. 5.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- B. Woven Polyester Fabric: Approximately **1 oz./sq. yd.** (34 g/sq. m) with a thread count of **10 strands by 10 strands/sq. in.** (4 strands by 4 strands/sq. mm), in a Leno weave, for equipment.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Mast-A-Fab.
 - b. Vimasco Corporation; Elastafab 894.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

2.10 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of **8 oz./sq. yd.** (271 g/sq. m).
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84217/9485RW, Luben 59.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.11 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.

- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: **[White] [Color-code jackets based on system. Color as selected by DEN Project Manager]**.
 4. Factory-fabricated tank heads and tank side panels.
- D. Metal Jacket:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.
 - b. ITW Insulation Systems; Aluminum and Stainless Steel Jacketing.
 - c. RPR Products, Inc.; Insul-Mate.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Aluminum Jacket: Comply with **ASTM B 209** (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. **[Sheet and roll stock ready for shop or field sizing] [Factory cut and rolled to size]**.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: **[1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper] [3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.
 - d. Moisture Barrier for Outdoor Applications: **[3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.

- 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
 3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.
 - a. **[Sheet and roll stock ready for shop or field sizing] [Factory cut and rolled to size].**
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: **[1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper] [3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn].**
 - d. Moisture Barrier for Outdoor Applications: **[3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn].**
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
- E. Self-Adhesive Outdoor Jacket: **60-mil- (1.5-mm-) thick**, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a crosslaminated polyethylene film covered with **[white] [stucco-embossed]** aluminum-foil facing.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Polyguard Products, Inc.; Alumaguard 60.
 - b. **<Insert manufacturer's name; product name or designation>.**
 - c. or approved equal.
- F. PVDC Jacket for Indoor Applications: **4-mil- (0.10-mm-) thick**, white PVDC biaxially oriented barrier film with a permeance at **0.02 perm (0.013 metric perm)** when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The), Saran 540 Vapor Retarder Film.

- b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

- G. PVDC Jacket for Outdoor Applications: **6-mil-** (0.15-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at **0.01 perm** (0.007 metric perm) when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The), Saran 560 Vapor Retarder Film.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

- H. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.12 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 428 AWF ASJ.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
 - c. Compac Corporation; 104 and 105.
 - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 - 2. Width: **3 inches** (75 mm).
 - 3. Thickness: **11.5 mils** (0.29 mm).
 - 4. Adhesion: **90 ounces force/inch** (1.0 N/mm) in width.
 - 5. Elongation: 2 percent.
 - 6. Tensile Strength: **40 lbf/inch** (7.2 N/mm) in width.
 - 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
 - 1. Products: Subject to compliance with requirements, provide one of the following:

- a. ABI, Ideal Tape Division; 491 AWF FSK.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
 - c. Compac Corporation; 110 and 111.
 - d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. Width: **3 inches** (75 mm).
 3. Thickness: **6.5 mils** (0.16 mm).
 4. Adhesion: **90 ounces force/inch** (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: **40 lbf/inch** (7.2 N/mm) in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 370 White PVC tape.
 - b. Compac Corporation; 130.
 - c. Venture Tape; 1506 CW NS.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Width: **2 inches** (50 mm).
 3. Thickness: **6 mils** (0.15 mm).
 4. Adhesion: **64 ounces force/inch** (0.7 N/mm) in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: **18 lbf/inch** (3.3 N/mm) in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 488 AWF.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
 - c. Compac Corporation; 120.
 - d. Venture Tape; 3520 CW.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. Width: **2 inches** (50 mm).
 3. Thickness: **3.7 mils** (0.093 mm).
 4. Adhesion: **100 ounces force/inch** (1.1 N/mm) in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: **34 lbf/inch** (6.2 N/mm) in width.
- E. PVDC Tape for Indoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Saran 540 Vapor Retarder Tape.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Width: **3 inches** (75 mm).
 3. Film Thickness: **4 mils** (0.10 mm).
 4. Adhesive Thickness: **1.5 mils** (0.04 mm).
 5. Elongation at Break: 145 percent.
 6. Tensile Strength: **55 lbf/inch** (10.1 N/mm) in width.
- F. PVDC Tape for Outdoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Saran 560 Vapor Retarder Tape.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Width: **3 inches** (75 mm).
 3. Film Thickness: **6 mils** (0.15 mm).
 4. Adhesive Thickness: **1.5 mils** (0.04 mm).
 5. Elongation at Break: 145 percent.
 6. Tensile Strength: **55 lbf/inch** (10.1 N/mm) in width.

2.13 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ITW Insulation Systems; Gerrard Strapping and Seals.
 - b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, [**Type 304**] [**or**] [**Type 316**]; **0.015 inch** (0.38 mm) thick, [**1/2 inch** (13 mm)] [**3/4 inch** (19 mm)] wide with [**wing seal**] [**or**] [**closed seal**].
3. Aluminum: **ASTM B 209** (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, **0.020 inch** (0.51 mm) thick, [**1/2 inch** (13 mm)] [**3/4 inch** (19 mm)] wide with [**wing seal**] [**or**] [**closed seal**].
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed

for capacitor-discharge welding, [0.106-inch- (2.6-mm-)] [0.135-inch- (3.5-mm-)] diameter shank, length to suit depth of insulation indicated.

- a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; CWP-1.
 - 2) GEMCO; CD.
 - 3) Midwest Fasteners, Inc.; CD.
 - 4) Nelson Stud Welding; TPA, TPC, and TPS.
 - 5) **<Insert manufacturer's name; product name or designation>**.
 - 6) or approved equal.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, [0.106-inch- (2.6-mm-)] [0.135-inch- (3.5-mm-)] diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38-mm) galvanized carbon-steel washer.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; CHP-1.
 - 2) GEMCO; Cupped Head Weld Pin.
 - 3) Midwest Fasteners, Inc.; Cupped Head.
 - 4) Nelson Stud Welding; CHP.
 - 5) **<Insert manufacturer's name; product name or designation>**.
 - 6) or approved equal.
 3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; Tactoo Perforated Base Insul-Hangers.
 - 2) GEMCO; Perforated Base.
 - 3) Midwest Fasteners, Inc.; Spindle.
 - 4) **<Insert manufacturer's name; product name or designation>**.
 - 5) or approved equal.
 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: [**Copper- or zinc-coated, low-carbon steel**] [**Aluminum**] [**Stainless steel**], fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) GEMCO; Nylon Hangers.
 - 2) Midwest Fasteners, Inc.; Nylon Insulation Hangers.
 - 3) **<Insert manufacturer's name; product name or designation>**.
 - 4) or approved equal.
 - b. Baseplate: Perforated, nylon sheet, **0.030 inch** (0.76 mm) thick by **1-1/2 inches** (38 mm) in diameter.
 - c. Spindle: Nylon, **0.106-inch-** (2.6-mm-) diameter shank, length to suit depth of insulation indicated, up to **2-1/2 inches** (63 mm).
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; Tactoo Self-Adhering Insul-Hangers, Series.
 - 2) GEMCO; Peel & Press.
 - 3) Midwest Fasteners, Inc.; Self Stick.
 - 4) **<Insert manufacturer's name; product name or designation>**.
 - 5) or approved equal.
 - b. Baseplate: Galvanized carbon-steel sheet, **0.030 inch** (0.76 mm) thick by **2 inches** (50 mm) square.
 - c. Spindle: [**Copper- or zinc-coated, low-carbon steel**] [**Aluminum**] [**Stainless steel**], fully annealed, **0.106-inch-** (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive-backed base with a peel-off protective cover.
6. Insulation-Retaining Washers: Self-locking washers formed from **0.016-inch-** (0.41-mm-) thick, [**galvanized-steel**] [**aluminum**] [**stainless-steel**] sheet, with beveled edge sized as required to hold insulation securely in place but not less than **1-1/2 inches** (38 mm) in diameter.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; RC-150.
 - 2) GEMCO; R-150.

- 3) Midwest Fasteners, Inc.; WA-150.
 - 4) Nelson Stud Welding; Speed Clips.
 - 5) **<Insert manufacturer's name; product name or designation>**.
 - 6) or approved equal.
- b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from **0.016-inch** (0.41-mm-) thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than **1-1/2 inches** (38 mm) in diameter.
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1) GEMCO.
 - 2) Midwest Fasteners, Inc.
 - 3) **<Insert manufacturer's name>**.
 - 4) or approved equal.
- C. Staples: Outward-clinching insulation staples, nominal **3/4-inch** (19-mm-) wide, stainless steel or Monel.
- D. Wire: [**0.080-inch** (2.0-mm) **nickel-copper alloy**] [**0.062-inch** (1.6-mm) **soft-annealed, stainless steel**] [**0.062-inch** (1.6-mm) **soft-annealed, galvanized steel**].
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. C & F Wire.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
- 2.14 CORNER ANGLES
- A. PVC Corner Angles: [**30 mils** (0.8 mm)] **<Insert dimension>** thick, minimum **1 by 1 inch** (25 by 25 mm), PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: [**0.040 inch** (1.0 mm)] **<Insert dimension>** thick, minimum **1 by 1 inch** (25 by 25 mm), aluminum according to **ASTM B 209** (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14.
- C. Stainless-Steel Corner Angles: [**0.024 inch** (0.61 mm)] **<Insert dimension>** thick, minimum **1 by 1 inch** (25 by 25 mm), stainless steel according to ASTM A 167 or ASTM A 240/A 240M, [**Type 304**] [**or**] [**Type 316**].

PART 3 - EXECUTION

3.1 ENVIRONMENTAL REQUIREMENTS

- A. Maintain ambient temperatures and conditions required by manufacturers of adhesive and insulation.
- B. Maintain temperature during and after installation for minimum period of 24 hours.

3.2 EXAMINATION

- A. Verify that equipment has been tested before applying insulation materials.
- B. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
 - 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer **5 mils** (0.127 mm) thick and an epoxy finish **5 mils** (0.127 mm) thick if operating in a temperature range between **140 and 300 deg F** (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 - 2. Carbon Steel: Coat carbon steel operating at a service temperature between **32 and 300 deg F** (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Install materials in accordance with manufacturer's instructions and N.I.C.A. standards.

- B. Do not insulate factory insulated equipment.
- C. On exposed equipment, locate insulation and cover seams in least visible locations.
- D. Apply insulation as close as possible to equipment by grooving, scoring, and beveling insulation. Secure insulation to equipment with studs, pins, clips, adhesive, wires, or bands.
- E. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment.
- F. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor barrier cement.
- G. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment as specified in insulation system schedules.
- H. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- I. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- J. Install multiple layers of insulation with longitudinal and end seams staggered.
- K. Keep insulation materials dry during application and finishing.
- L. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- M. Install insulation with least number of joints practical.
- N. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- O. Insulated dual temperature equipment or cold equipment containing fluids below ambient temperature:
 - 1. Provide vapor barrier jackets, factory applied or field applied.

2. Finish with glass cloth and vapor barrier adhesive.
 3. Insulate entire system.
 4. Where staples are used to secure insulation covering requiring vapor barrier, the staples shall be sealed with a vapor barrier mastic.
- P. For insulated equipment containing fluids above ambient temperature:
1. Provide standard jackets, with or without vapor barrier, factory applied or field applied.
 2. Finish with glass cloth and adhesive.
 3. For hot equipment containing fluids 140 degrees F or less, do not insulate flanges and unions, but bevel and seal ends of insulation.
 4. For hot equipment containing fluids over 140 degrees F, insulate flanges and unions with removable sections and jackets.
- Q. Inserts and Shields:
1. Application: Piping 1-1/2 inches diameter or larger.
 2. Shields: Galvanized steel between hangers and inserts.
 3. Insert location: Between support shield and equipment and under the finish jacket.
 4. Insert configuration: Minimum 6 inches long, of same thickness and contour as adjoining insulation; may be factory fabricated.
 5. Insert material: ASTM C640 cork, hydrous calcium silicate insulation, or other heavy density insulating material suitable for the planned temperature range.
- R. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- S. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at [2 inches (50 mm)] [4 inches (100 mm)] o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints.
- T. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- U. Finish installation with systems at operating conditions. Repair joint separations and

cracking due to thermal movement.

- V. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least **4 inches (100 mm)** beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- W. For above ambient services, do not install insulation to the following:
 - 1. Vibration-control devices.
 - 2. Testing agency labels and stamps.
 - 3. Nameplates and data plates.
 - 4. Manholes.
 - 5. Handholes.
 - 6. Cleanouts.
- X. Finish insulation at supports, protrusions, and interruptions.
- Y. For equipment in mechanical equipment rooms or in finished spaces, finish with PVC jacket and fitting covers.
- Z. For exterior applications, provide vapor barrier jacket or finish with glass mesh reinforced vapor barrier cement. Cover with aluminum jacket with seams located on bottom side of horizontal equipment.
- AA. Cover glass fiber, cellular glass, and cellular foam insulation with metal mesh and finish with heavy coat of insulating cement.
- BB. Install insulation for equipment requiring access for maintenance, repair, or cleaning, in such a manner that it can be easily removed and replaced without damage.
- CC. Do not insulate over nameplate or ASME stamps. Bevel and seal insulation around such.

3.5 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

- A. Mineral-Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.
 - 1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for **[100] [50] <Insert number>** percent coverage of tank and vessel surfaces.
 - 2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
 - 3. Protect exposed corners with secured corner angles.
 - 4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
 - a. Do not weld anchor pins to ASME-labeled pressure vessels.
 - b. Select insulation hangers and adhesive that are compatible with service

- temperature and with substrate.
- c. On tanks and vessels, maximum anchor-pin spacing is **3 inches (75 mm)** from insulation end joints, and **16 inches (400 mm)** o.c. in both directions.
 - d. Do not overcompress insulation during installation.
 - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
 - f. Impale insulation over anchor pins and attach speed washers.
 - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
 6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately **6 inches (150 mm)** from each end. Install wire or cable between two circumferential girdles **12 inches (300 mm)** o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of **48 inches (1200 mm)** o.c. Use this network for securing insulation with tie wire or bands.
 7. Stagger joints between insulation layers at least **3 inches (75 mm)**.
 8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
 9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
 10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
 2. Seal longitudinal seams and end joints.
- C. Insulation Installation on Pumps:
1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on **6-inch (150-mm)** centers, starting at corners. Install **3/8-inch- (10-mm-)** diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
 2. Fabricate boxes from [**galvanized steel**] [**aluminum**] [**stainless steel**], at least [**0.040 inch (1.0 mm)**] [**0.050 inch (1.3 mm)**] [**0.060 inch (1.6 mm)**] thick.
 3. For below ambient services, install a vapor barrier at seams, joints, and

penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.6 INSTALLATION OF CALCIUM SILICATE INSULATION

A. Insulation Installation on Boiler Breechings:

1. Secure single-layer insulation with stainless-steel bands at **12-inch** (300-mm) intervals and tighten bands without deforming insulation material.
2. Install two-layer insulation with joints tightly butted and staggered at least **3 inches** (75 mm). Secure inner layer with wire spaced at **12-inch** (300-mm) intervals. Secure outer layer with stainless-steel bands at **12-inch** (300-mm) intervals.
3. On exposed applications without metal jacket, finish insulation surface with a skim coat of mineral-fiber, hydraulic-setting cement. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth. Overlap edges at least **1 inch** (25 mm). Apply finish coat of lagging adhesive over glass cloth. Thin finish coat to achieve smooth, uniform finish.

3.7 INSTALLATION OF PHENOLIC INSULATION

- A. Secure single-layer insulation with stainless-steel bands at **12-inch** (300-mm) intervals and tighten bands without deforming insulation materials.
- B. Install two-layer insulation with joints tightly butted and staggered at least **3 inches** (75 mm). Secure inner layer with **0.062-inch** (1.6-mm) wire spaced at **12-inch** (300-mm) intervals. Secure outer layer with stainless-steel bands at **12-inch** (300-mm) intervals.

3.8 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
 1. Draw jacket smooth and tight to surface with **2-inch** (50-mm) overlap at seams and joints.
 2. Embed glass cloth between two **0.062-inch-** (1.6-mm-) thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
 1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with **1-1/2-inch** (38-mm) laps at longitudinal seams and **3-inch-** (75-mm-) wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

- C. Where PVC jackets are indicated, install with **1-inch (25-mm)** overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
 - 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with **2-inch (50-mm)** overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands **12 inches (300 mm)** o.c. and at end joints.
- E. Where PVDC jackets are indicated, install as follows:
 - 1. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of **33-1/2 inches (850 mm)** or less. **33-1/2-inch- (850-mm-)** circumference limit allows for **2-inch- (50-mm-)** overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.
 - 2. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

3.9 INSTALLATION OF HIGH-TEMPERATURE ENGINE EXHAUST INSULATION

- A. Recommended industry standards, similar to those listed in the MICA manual, are to be followed.
 - 1. National Commercial and Industrial Insulation Standards, produced by Midwest Insulation Contractors Association.
- B. All insulation, jacket, adhesives, mastics, sealers, etc., utilized in the fabrication of these systems shall meet NFPA for fire resistant ratings (maximum of 25 flame spread and 50 smoke developed ratings) and shall be approved by the insulation manufacturer for guaranteed performances when incorporated into their insulation system, unless a specific product is specified for a specific application, and is stated as an exception to this requirement. Certificates to this effect shall be submitted along with Contractor's submittal data for this section of the Specifications. No material may be used that, when tested by the ASTM E84-89 test method, is found to melt, drip or delaminate to such a degree that the continuity of the flame front is destroyed, thereby resulting in an artificially low flame spread rating.
- C. The handling and installation of all insulation materials shall be performed in strict accordance with the manufacturer's recommendations.
- D. All high temperature piping, silencers, and exhaust system accessories shall be insulated as indicated on the Drawings, as specified herein, and as required for a

complete system. In each case, the insulation shall be equal to that specified and materials applied and finished as described in these Specifications.

- E. Type A and B Insulation Systems: All surfaces to be insulated shall be clean and dry before applying the insulation. All sections of molded pipe covering shall be firmly butted together. Where an insulation covering is applied, it shall lap the adjoining section of insulation by at least three inches (3"). Where insulation terminates, it shall be neatly beveled and finished.
- F. Type A Insulation:
1. Provide an insert, not less than 6 inches long, of same thickness and contour as adjoining insulation, between support shield and piping, but under the finish jacket, on piping 2 inches diameter or larger, to prevent insulation from being crushed at support points. Inserts shall be calcium silicate or other heavy density insulating material suitable for the planned temperature range. Factory fabricated inserts may be used. Inserts shall also be provided (on both sides) where vertical piping supports are installed.
 2. Double-layer installation:
 - a. Piping runs: Insulation shall be installed in two layers, each in thickness of one-half of the total thickness specified. Outer layer shall be installed to provide staggered joints relative to longitudinal and transverse joints of inner layer.
 - b. Pipe fittings: For piping offsets and elbows, prepare two-layer installation of mitered sections of piping insulation, exercising care to ensure snug fit between miter-cut sections. As specified for piping runs, outer layer segments shall overlap joints of inner layer segments to provide staggered joints.
 - c. Apply insulation cement to joints in layers of insulation.
 3. Jacket: Cover completed insulation system with aluminum jacket with seams located on bottom side of horizontal piping. Insulate fittings and joints with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor barrier cement.
 4. Engine exhaust silencer:
 - a. Insulate cylindrical surfaces with pre-molded insulation, applied as described for piping.
 - b. For other surfaces, install high temperature board insulation on flat or curved surfaces by attaching with weld pins or studs, finishing with metal mesh and insulating cement, then one layer of glass cloth coated with mastic.
 - 1) Pins with speed washers or studs with nuts shall be installed on 16" (400mm) centers and not more than 4" (100mm) from the edge of the insulation.
 5. Flexible piping connectors: For flexible piping connectors, provide 2-inch high temperature blanket insulation as described in Part 2 of this Section. Provide

segments of enlarged Type A pipe insulation to fit over flanges of flexible connection, finished as specified for piping insulation.

G. Type B Insulation:

1. Insulate all interior sections of piping with rigid hydrous calcium silicate (thickness as indicated) molded sectional pipe insulation secured in place with stainless steel wire 12" on centers. Install piping insulation as a two-layer system.
 - a. Apply insulation cement to joints in layers of insulation.
2. Cover with 1" hexagonal mesh galvanized steel poultry netting secured in place, followed by application of two layers of insulating cement, finished smooth. Finish with one layer of glass cloth, coat with mastic.
3. Engine exhaust silencer:
 - a. Insulate cylindrical surfaces with 2" (50mm) thickness of pre-formed insulation, applied as described for piping.
 - b. Insulate other surfaces with 2" (50mm) thick rigid hydrous calcium silicate (Type HCS) molded block insulation, mitered, tightly butted with joints staggered, and filled with insulating cement. Tie with 16 gage stainless steel wire or 1/2" x 0.015" galvanized steel bands, 12" on centers. Cover with 1" hexagonal mesh galvanized steel poultry netting secured in place, followed by application of two layers of insulating cement, finished smooth. Finish with one layer of glass cloth, coat with mastic.
4. Flexible piping connectors: For flexible piping connectors, provide 2-inch high temperature blanket insulation as described in Part 2 of this section. Provide segments of enlarged Type B pipe insulation to fit over flanges of flexible connection, finished as specified for piping insulation.

H. Type C Insulation:

1. Dimensional data: Contractor shall provide insulation system manufacturer with detailed piping assembly drawings, showing dimensions, along with locations and dimensions of flanges, piping hangers, or supporting brackets and all accessory items as required to enable factory fabrication of blanket sections which will correctly fit assembled piping, silencers, and accessory components of exhaust systems. No field alterations to blanket assemblies will be allowed; for any changes necessitated by altered conditions or Contractor's failure to provide correct information to the manufacturer, modified blanket units must be prepared by the manufacturer for Contractor's installation.
2. Protection of insulation at piping supports:
 - a. At pipe supports, provide thermal wrapping of support surfaces, which will bear weight of piping, using same materials as applied blanket insulation. Obtain specific instructions from blanket insulation manufacturer for methods and procedures to be applied.
 - b. Notch blanket insulation as appropriate to accommodate area of insulation-wrapped piping support, and carefully position wrapped hanger

with notch to provide for a gap-free engagement of pipe support with insulated piping system.

3.10 FINISHES

- A. Equipment Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
 - 1. Flat Acrylic Finish: [**Two**] <Insert number> finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by DEN Project Manager. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

3.11 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections: Inspect field-insulated equipment, randomly selected by DEN Project Manager, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to [**one**] <Insert number> location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.
- D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.12 BREECHING INSULATION SCHEDULE

- A. Round, exposed breeching and connector insulation shall be [**one of**] the following:
 - 1. Calcium Silicate: **4 inches** (100 mm) thick.
 - 2. High-Temperature Mineral-Fiber Blanket: **3 inches** (75 mm) thick and **3-lb/cu. ft.** (48-kg/cu. m) nominal density.
 - 3. High-Temperature Mineral-Fiber Board: **3 inches** (75 mm) thick and [**3-lb/cu. ft.**

(48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.

- B. Round, concealed breeching and connector insulation shall be [**one of**] the following:
1. Calcium Silicate: 4 inches (100 mm) thick.
 2. High-Temperature Mineral-Fiber Blanket: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.
 3. High-Temperature Mineral-Fiber Board: 3 inches (75 mm) thick and [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- C. Rectangular, exposed breeching and connector insulation shall be [**one of**] the following:
1. Calcium Silicate: 4 inches (100 mm) thick.
 2. High-Temperature Mineral-Fiber Blanket: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.
 3. High-Temperature Mineral-Fiber Board: 3 inches (75 mm) thick and [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- D. Rectangular, concealed breeching and connector insulation shall be [**one of**] the following:
1. Calcium Silicate: 4 inches (100 mm) thick.
 2. High-Temperature Mineral-Fiber Blanket: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.
 3. High-Temperature Mineral-Fiber Board: 3 inches (75 mm) thick and [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.

3.13 EQUIPMENT INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.
- B. Insulate indoor and outdoor equipment that is not factory insulated.
- C. Chillers: Insulate cold surfaces on chillers, including, but not limited to, evaporator bundles, [condenser bundles,] [heat-recovery bundles,] suction piping, compressor inlets, tube sheets, water boxes, and nozzles with [**one of**] the following:
1. Cellular Glass: [2 inches (50 mm)] <insert dimension> thick.
 2. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 3. Mineral-Fiber Board: [1 inch (25 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1 inch (25 mm)] <Insert dimension> thick.
 5. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.
 6. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
 7. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.

- D. Heat-exchanger (water-to-water for cooling service) insulation shall be **[one of]** the following:
1. Cellular Glass: **[2 inches (50 mm)]** <Insert dimension> thick.
 2. Flexible Elastomeric: **[1 inch (25 mm)]** <Insert dimension> thick.
 3. Mineral-Fiber Board: **[1 inch (25 mm)]** <Insert dimension> thick and **[2-lb/cu. ft. (32-kg/cu. m)]** **[3-lb/cu. ft. (48-kg/cu. m)]** **[6-lb/cu. ft. (96-kg/cu. m)]** nominal density.
 4. Mineral-Fiber Pipe and Tank: **[1 inch (25 mm)]** <Insert dimension> thick.
 5. Phenolic: **[1 inch (25 mm)]** <Insert dimension> thick.
 6. Polyisocyanurate: **[1 inch (25 mm)]** <Insert dimension> thick.
 7. Polyolefin: **[1 inch (25 mm)]** <Insert dimension> thick.
- E. Heat-exchanger (water-to-water for heating service) insulation shall be **[one of]** the following:
1. Calcium Silicate: **[3 inches (75 mm)]** <Insert dimension> thick.
 2. Cellular Glass: **[3 inches (75 mm)]** <Insert dimension> thick.
 3. Mineral-Fiber Board: **[2 inches (50 mm)]** <Insert dimension> thick and **[2-lb/cu. ft. (32-kg/cu. m)]** **[3-lb/cu. ft. (48-kg/cu. m)]** **[6-lb/cu. ft. (96-kg/cu. m)]** nominal density.
 4. Mineral-Fiber Pipe and Tank: **[2 inches (50 mm)]** <Insert dimension> thick.
- F. Steam-to-hot-water converter insulation shall be **[one of]** the following:
1. Calcium Silicate: **[3 inches (75 mm)]** <Insert dimension> thick.
 2. Cellular Glass: **[3 inches (75 mm)]** <Insert dimension> thick.
 3. Mineral-Fiber Board: **[2 inches (50 mm)]** <Insert dimension> thick and **[2-lb/cu. ft. (32-kg/cu. m)]** **[3-lb/cu. ft. (48-kg/cu. m)]** **[6-lb/cu. ft. (96-kg/cu. m)]** nominal density.
 4. Mineral-Fiber Pipe and Tank: **[2 inches (50 mm)]** <Insert dimension> thick.
- G. Hot-water-to-steam converter insulation shall be **[one of]** the following:
1. Calcium Silicate: **[3 inches (75 mm)]** <Insert dimension> thick.
 2. Cellular Glass: **[3 inches (75 mm)]** <Insert dimension> thick.
 3. Mineral-Fiber Board: **[2 inches (50 mm)]** <Insert dimension> thick and **[2-lb/cu. ft. (32-kg/cu. m)]** **[3-lb/cu. ft. (48-kg/cu. m)]** **[6-lb/cu. ft. (96-kg/cu. m)]** nominal density.
 4. Mineral-Fiber Pipe and Tank: **[2 inches (50 mm)]** <Insert dimension> thick.
- H. Chilled-water pump insulation shall be **[one of]** the following:
1. Cellular Glass: **[3 inches (75 mm)]** <Insert dimension> thick.
 2. Mineral-Fiber Board: **[2 inches (50 mm)]** <Insert dimension> thick and **[2-lb/cu. ft. (32-kg/cu. m)]** **[3-lb/cu. ft. (48-kg/cu. m)]** **[6-lb/cu. ft. (96-kg/cu. m)]** nominal density.
 3. Phenolic: **[2 inches (50 mm)]** <Insert dimension> thick.
- I. Condenser-water pump insulation shall be **[one of]** the following:

1. Cellular Glass: [2 inches (50 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Board: [1 inch (25 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 3. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.
- J. Dual-service heating and cooling pump insulation shall be [one of] the following:
1. Cellular Glass: [3 inches (75 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Board: [2 inches (50 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 3. Phenolic: [2 inches (50 mm)] <Insert dimension> thick.
 4. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
- K. Heating-hot-water pump insulation shall be [one of] the following:
1. Calcium Silicate: [3 inches (75 mm)] <Insert dimension> thick.
 2. Cellular Glass: [3 inches (75 mm)] <Insert dimension> thick.
 3. Mineral-Fiber Board: [2 inches (50 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
- L. Heat-recovery pump insulation shall be [one of] the following:
1. Cellular Glass: [2 inches (50 mm)] <Insert dimension> thick.
 2. Mineral-Fiber Board: [2 inches (50 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 3. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.
- M. Steam condensate pump and boiler feedwater pump insulation shall be [one of] the following:
1. Calcium Silicate: [3 inches (75 mm)] <Insert dimension> thick.
 2. Cellular Glass: [3 inches (75 mm)] <Insert dimension> thick.
 3. Mineral-Fiber Board: [2 inches (50 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [2 inches (50 mm)] <Insert dimension> thick.
- N. Chilled-water expansion/compression tank insulation shall be [one of] the following:
1. Cellular Glass: [1-1/2 inches (38 mm)] <Insert dimension> thick.
 2. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 3. Mineral-Fiber Board: [1 inch (25 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1 inch (25 mm)] <Insert dimension> thick.
 5. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.

6. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
 7. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- O. Condenser-water expansion/compression tank insulation shall be [one of] the following:
1. Cellular Glass: [1-1/2 inches (38 mm)] <Insert dimension> thick.
 2. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 3. Mineral-Fiber Board: [1 inch (25 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1 inch (25 mm)] <Insert dimension> thick.
 5. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.
 6. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
 7. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- P. Dual-service heating and cooling expansion/compression tank insulation shall be [one of] the following:
1. Cellular Glass: [1-1/2 inches (38 mm)] <Insert dimension> thick.
 2. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 3. Mineral-Fiber Board: [1 inch (25 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1 inch (25 mm)] <Insert dimension> thick.
 5. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.
 6. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
 7. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.
- Q. Heating-hot-water expansion/compression tank insulation shall be [one of] the following:
1. Calcium Silicate: [2 inches (50 mm)] <Insert dimension> thick.
 2. Cellular Glass: [1-1/2 inches (38 mm)] <Insert dimension> thick.
 3. Mineral-Fiber Board: [1 inch (25 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1 inch (25 mm)] <Insert dimension> thick.
- R. Heat-recovery expansion/compression tank insulation shall be [one of] the following:
1. Cellular Glass: [1-1/2 inches (38 mm)] <Insert dimension> thick.
 2. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 3. Mineral-Fiber Board: [1 inch (25 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 4. Mineral-Fiber Pipe and Tank: [1 inch (25 mm)] <Insert dimension> thick.
 5. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.
 6. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
 7. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.

- S. Chilled-water air-separator insulation shall be **[one of]** the following:
1. Cellular Glass: **[2 inches (50 mm)]** <Insert dimension> thick.
 2. Flexible Elastomeric: **[1 inch (25 mm)]** <Insert dimension> thick.
 3. Mineral-Fiber Board: **[1 inch (25 mm)]** <Insert dimension> thick and **[2-lb/cu. ft. (32-kg/cu. m)]** **[3-lb/cu. ft. (48-kg/cu. m)]** **[6-lb/cu. ft. (96-kg/cu. m)]** nominal density.
 4. Mineral-Fiber Pipe and Tank: **[1 inch (25 mm)]** <Insert dimension> thick.
 5. Phenolic: **[1 inch (25 mm)]** <Insert dimension> thick.
 6. Polyisocyanurate: **[1 inch (25 mm)]** <Insert dimension> thick.
 7. Polyolefin: **[1 inch (25 mm)]** <Insert dimension> thick.
- T. Condenser-water air-separator insulation shall be **[one of]** the following:
1. Cellular Glass: **[2 inches (50 mm)]** <Insert dimension> thick.
 2. Flexible Elastomeric: **[1 inch (25 mm)]** <Insert dimension> thick.
 3. Mineral-Fiber Board: **[1 inch (25 mm)]** <Insert dimension> thick and **[2-lb/cu. ft. (32-kg/cu. m)]** **[3-lb/cu. ft. (48-kg/cu. m)]** **[6-lb/cu. ft. (96-kg/cu. m)]** nominal density.
 4. Mineral-Fiber Pipe and Tank: **[1 inch (25 mm)]** <Insert dimension> thick.
 5. Phenolic: **[1 inch (25 mm)]** <Insert dimension> thick.
 6. Polyisocyanurate: **[1 inch (25 mm)]** <Insert dimension> thick.
 7. Polyolefin: **[1 inch (25 mm)]** <Insert dimension> thick.
- U. Dual-service heating and cooling air-separator insulation shall be **[one of]** the following:
1. Cellular Glass: **[2 inches (50 mm)]** <Insert dimension> thick.
 2. Flexible Elastomeric: **[1 inch (25 mm)]** <Insert dimension> thick.
 3. Mineral-Fiber Board: **[1 inch (25 mm)]** <Insert dimension> thick and **[2-lb/cu. ft. (32-kg/cu. m)]** **[3-lb/cu. ft. (48-kg/cu. m)]** **[6-lb/cu. ft. (96-kg/cu. m)]** nominal density.
 4. Mineral-Fiber Pipe and Tank: **[1 inch (25 mm)]** <Insert dimension> thick.
 5. Phenolic: **[1 inch (25 mm)]** <Insert dimension> thick.
 6. Polyisocyanurate: **[1 inch (25 mm)]** <Insert dimension> thick.
 7. Polyolefin: **[1 inch (25 mm)]** <Insert dimension> thick.
- V. Heating-hot-water air-separator insulation shall be **[one of]** the following:
1. Calcium Silicate: **[3 inches (75 mm)]** <Insert dimension> thick.
 2. Cellular Glass: **[3 inches (75 mm)]** <Insert dimension> thick.
 3. Mineral-Fiber Board: **[2 inches (50 mm)]** <Insert dimension> thick and **[2-lb/cu. ft. (32-kg/cu. m)]** **[3-lb/cu. ft. (48-kg/cu. m)]** **[6-lb/cu. ft. (96-kg/cu. m)]** nominal density.
 4. Mineral-Fiber Pipe and Tank: **[2 inches (50 mm)]** <Insert dimension> thick.
- W. Heat-recovery air-separator insulation shall be **[one of]** the following:
1. Cellular Glass: **[2 inches (50 mm)]** <Insert dimension> thick.
 2. Flexible Elastomeric: **[1 inch (25 mm)]** <Insert dimension> thick.

3. Mineral-Fiber Board: [**1 inch (25 mm)**] <Insert dimension> thick and [**2-lb/cu. ft. (32-kg/cu. m)**] [**3-lb/cu. ft. (48-kg/cu. m)**] [**6-lb/cu. ft. (96-kg/cu. m)**] nominal density.
 4. Mineral-Fiber Pipe and Tank: [**1 inch (25 mm)**] <Insert dimension> thick.
 5. Phenolic: [**1 inch (25 mm)**] <Insert dimension> thick.
 6. Polyisocyanurate: [**1 inch (25 mm)**] <Insert dimension> thick.
 7. Polyolefin: [**1 inch (25 mm)**] <Insert dimension> thick.
- X. Thermal storage tank (brine, water, ice) insulation shall be[**one of**] the following:
1. Cellular Glass: [**4 inches (100 mm)**] <Insert dimension> thick.
 2. Mineral-Fiber Board: [**3 inches (75 mm)**] <Insert dimension> thick and [**2-lb/cu. ft. (32-kg/cu. m)**] [**3-lb/cu. ft. (48-kg/cu. m)**] [**6-lb/cu. ft. (96-kg/cu. m)**] nominal density.
 3. Mineral-Fiber Pipe and Tank: [**3 inches (75 mm)**] <Insert dimension> thick.
 4. Phenolic: [**3 inches (75 mm)**] <Insert dimension> thick.
 5. Polyisocyanurate (Outdoor Application Only): [**3 inches (75 mm)**] <Insert dimension> thick.
 6. Polystyrene (Outdoor Application Only): [**3 inches (75 mm)**] <Insert dimension> thick.
- Y. Deaerator insulation shall be[**one of**] the following:
1. Calcium Silicate: [**3 inches (75 mm)**] <Insert dimension> thick.
 2. Cellular Glass: [**3 inches (75 mm)**] <Insert dimension> thick.
 3. Mineral-Fiber Board: [**2 inches (50 mm)**] <Insert dimension> thick and [**2-lb/cu. ft. (32-kg/cu. m)**] [**3-lb/cu. ft. (48-kg/cu. m)**] [**6-lb/cu. ft. (96-kg/cu. m)**] nominal density.
 4. Mineral-Fiber Pipe and Tank: [**2 inches (50 mm)**] <Insert dimension> thick.
- Z. Steam condensate tank and receiver insulation shall be[**one of**] the following:
1. Calcium Silicate: [**3 inches (75 mm)**] <Insert dimension> thick.
 2. Cellular Glass: [**3 inches (75 mm)**] <Insert dimension> thick.
 3. Mineral-Fiber Board: [**2 inches (50 mm)**] <Insert dimension> thick and [**2-lb/cu. ft. (32-kg/cu. m)**] [**3-lb/cu. ft. (48-kg/cu. m)**] [**6-lb/cu. ft. (96-kg/cu. m)**] nominal density.
 4. Mineral-Fiber Pipe and Tank: [**2 inches (50 mm)**] <Insert dimension> thick.
- AA. Steam flash-tank, flash-separator, moisture-separator, and blow-off-tank insulation shall be[**one of**] the following:
1. Calcium Silicate: [**3 inches (75 mm)**] <Insert dimension> thick.
 2. Cellular Glass: [**3 inches (75 mm)**] <Insert dimension> thick.
 3. Mineral-Fiber Board: [**2 inches (50 mm)**] <Insert dimension> thick and [**2-lb/cu. ft. (32-kg/cu. m)**] [**3-lb/cu. ft. (48-kg/cu. m)**] [**6-lb/cu. ft. (96-kg/cu. m)**] nominal density.
 4. Mineral-Fiber Pipe and Tank: [**2 inches (50 mm)**] <Insert dimension> thick.
- BB. Piping system filter-housing insulation shall be[**one of**] the following:

1. Cellular Glass: [3 inches (75 mm)] <Insert dimension> thick.
2. Mineral-Fiber Board: [2 inches (50 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
3. Mineral-Fiber Pipe and Tank: [2 inches (50 mm)] <Insert dimension> thick.

CC. Outdoor, aboveground, heated, fuel-oil storage tank insulation shall be [one of] the following:

1. Cellular Glass: [3 inches (75 mm)] <Insert dimension> thick.
2. Mineral-Fiber Board: [2 inches (50 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
3. Mineral-Fiber Pipe and Tank: [2 inches (50 mm)] <Insert dimension> thick.
4. Polyisocyanurate: [1-1/2 inches (38 mm)] <Insert dimension> thick.

3.14 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.

C. Equipment, Concealed:

1. None.
2. [PVC] [PVC, Color-Coded by System]: [20 mils (0.5 mm)] [30 mils (0.8 mm)] thick.
3. Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
4. Painted Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] thick.
5. Stainless Steel, [Type 304] [or] [Type 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
6. <Insert jacket type>.

D. Equipment, Exposed, up to 48 Inches (1200 mm) in Diameter or with Flat Surfaces up to 72 Inches (1800 mm):

1. None.
2. [PVC] [PVC, Color-Coded by System]: [20 mils (0.5 mm)] [30 mils (0.8 mm)] thick.
3. Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
4. Painted Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch

- (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] thick.
5. Stainless Steel, [Type 304] [or] [Type 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 6. <Insert jacket type>.
- E. Equipment, Exposed, Larger Than 48 Inches (1200 mm) in Diameter or with Flat Surfaces Larger Than 72 Inches (1800 mm):
1. None.
 2. [Painted]Aluminum, [Smooth] [Stucco Embossed] with [1-1/4-Inch- (32-mm-) Deep Corrugations] [2-1/2-Inch- (65-mm-) Deep Corrugations] [4-by-1-Inch (100-by-25-mm) Box Ribs]: [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
 3. Stainless Steel, [Type 304] [or] [Type 316], [Smooth] [Stucco Embossed], with [1-1/4-Inch- (32-mm-) Deep Corrugations] [2-1/2-Inch- (65-mm-) Deep Corrugations] [4-by-1-Inch (100-by-25-mm) Box Ribs]: [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 4. <Insert jacket type>.
- 3.15 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE
- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Equipment, Concealed:
1. None.
 2. [PVC] [PVC, Color-Coded by System]: [20 mils (0.5 mm)] [30 mils (0.8 mm)] thick.
 3. Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
 4. Painted Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] thick.
 5. Stainless Steel, [Type 304] [or] [Type 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 6. <Insert jacket type>.
- D. Equipment, Exposed, up to 48 Inches (1200 mm) in Diameter or with Flat Surfaces up to 72 Inches (1800 mm):
1. [Painted]Aluminum, [Smooth] [Corrugated] [Stucco Embossed] [with Z-Shaped Locking Seam]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.

2. Stainless Steel, [Type 304] [or] [Type 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed] [with Z-Shaped Locking Seam]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 3. <Insert jacket type>.
- E. Equipment, Exposed, Larger Than 48 Inches (1200 mm) in Diameter or with Flat Surfaces Larger Than 72 Inches (1800 mm):
1. [Painted]Aluminum, [Smooth] [Stucco Embossed] with [1-1/4-Inch- (32-mm-) Deep Corrugations] [2-1/2-Inch- (65-mm-) Deep Corrugations] [4-by-1-Inch (100-by-25-mm) Box Ribs]: [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
 2. Stainless Steel, [Type 304] [or] [Type 316], [Smooth] [Stucco Embossed], with [1-1/4-Inch- (32-mm-) Deep Corrugations] [2-1/2-Inch- (65-mm-) Deep Corrugations] [4-by-1-Inch (100-by-25-mm) Box Ribs]: [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 3. <Insert jacket type>.
- F. High-Temperature Engine Exhaust System Insulation:
1. As specified in Part 2 of this Section.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230716

SECTION 230719 - HVAC PIPING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes insulating the following HVAC piping systems:
1. Condensate drain piping, **[indoors] [and] [outdoors]**.
 2. Chilled-water and brine piping, **[indoors] [and] [outdoors]**.
 3. Condenser-water piping, **[indoors when used for waterside economizer or for condensate control] [and] [outdoors]**.
 4. Heating hot-water piping, **[indoors] [and] [outdoors]**.
 5. Steam and steam condensate piping, **[indoors] [and] [outdoors]**.
 6. Refrigerant suction and hot-gas piping, **[indoors] [and] [outdoors]**.
 7. Dual-service heating and cooling piping, **[indoors] [and] [outdoors]**.
 8. Heat-recovery piping, **[indoors] [and] [outdoors]**.
 9. Heated fuel-oil piping, **[indoors] [and] [outdoors]**.
- B. Related Sections:
1. Section 230713 "Duct Insulation."
 2. Section 230716 "HVAC Equipment Insulation" for HVAC equipment insulation and high-temperature engine exhaust insulation.
 3. Section 232113.13 "Underground Hydronic Piping" for loose-fill pipe insulation in underground piping outside the building.
 4. Section 336313 "Underground Steam and Condensate Distribution Piping" for loose-fill pipe insulation in underground piping outside the building.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Submit product description, list of materials and thickness for each service, and locations. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied if any) for each type of product indicated.
1. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Detail attachment and covering of heat tracing inside insulation.
3. Detail insulation application at pipe expansion joints for each type of insulation.
4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
5. Detail removable insulation at piping specialties.
6. Detail application of field-applied jackets.
7. Detail application at linkages of control devices.

D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use.

1. Preformed Pipe Insulation Materials: 12 inches (300 mm) long by NPS 2 (DN 50).
2. Sheet Form Insulation Materials: 12 inches (300 mm) square.
3. Jacket Materials for Pipe: 12 inches (300 mm) long by NPS 2 (DN 50).
4. Sheet Jacket Materials: 12 inches (300 mm) square.
5. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Installer Certificates: Signed by the Contractor certifying that installers comply with requirements.
- D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.
- C. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by DEN Project Manager. Use materials indicated for the completed Work.
1. Piping Mockups:
 - a. One 10-foot (3-m) section of NPS 2 (DN 50) straight pipe.
 - b. One each of a 90-degree threaded, welded, and flanged elbow.
 - c. One each of a threaded, welded, and flanged tee fitting.
 - d. One NPS 2 (DN 50) or smaller valve, and one NPS 2-1/2 (DN 65) or larger valve.
 - e. Four support hangers including hanger shield and insert.
 - f. One threaded strainer and one flanged strainer with removable portion of insulation.
 - g. One threaded reducer and one welded reducer.
 - h. One pressure temperature tap.
 - i. One mechanical coupling.
 2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
 3. Notify DEN Project Manager seven (7) days in advance of dates and times when mockups will be constructed.
 4. Obtain DEN Project Manager's approval of mockups before starting insulation application.
 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.

6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
7. Demolish and remove mockups when directed.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.
- B. Deliver materials to site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.
- C. Store insulation in original wrapping and protect from weather and construction traffic.
- D. Protect insulation against dirt, water, chemical, and mechanical damage.

1.8 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.9 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Industrial Insulation Group (IIG); Thermo-12 Gold.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Preformed Pipe Sections: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
 3. Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
 4. Prefabricated Fitting Covers: Comply with ASTM C 450 and ASTM C 585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.
- G. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pittsburgh Corning Corporation; Foamglas.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Block Insulation: ASTM C 552, Type I.
 3. Special-Shaped Insulation: ASTM C 552, Type III.
 4. Board Insulation: ASTM C 552, Type IV.
 5. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.

6. Preformed Pipe Insulation with Factory-Applied **[ASJ]** **[ASJ-SSL]**: Comply with ASTM C 552, Type II, Class 2.
 7. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- H. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Aeroflex USA, Inc.; Aerocel.
 - b. Armacell LLC; AP Armaflex.
 - c. K-Flex USA; Insul-Lock, Insul-Tube, and K-FLEX LS.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- I. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type [I] **[II with factory-applied vinyl jacket]** **[III with factory-applied FSK jacket]** **[III with factory-applied FSP jacket]**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; SoftTouch Duct Wrap.
 - b. Johns Manville; Microlite.
 - c. Knauf Insulation; Friendly Feel Duct Wrap.
 - d. Manson Insulation Inc.; Alley Wrap.
 - e. Owens Corning; SOFTR All-Service Duct Wrap.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
- J. Mineral-Fiber, Preformed Pipe Insulation:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fibrex Insulations Inc.; Coreplus 1200.
 - b. Johns Manville; Micro-Lok.
 - c. Knauf Insulation; 1000-Degree Pipe Insulation.
 - d. Manson Insulation Inc.; Alley-K.
 - e. Owens Corning; Fiberglas Pipe Insulation.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. Type I, **850 deg F** (454 deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, **[without factory-applied jacket]** **[with factory-applied ASJ]** **[with factory-applied ASJ-SSL]**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 3. Type II, **1200 deg F** (649 deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type II, Grade A, **[without**

factory-applied jacket] [with factory-applied ASJ] [with factory-applied ASJ-SSL]. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

- K. Mineral-Fiber, Pipe Insulation Wicking System: Preformed pipe insulation complying with ASTM C 547, Type I, Grade A, with absorbent cloth factory-applied to the entire inside surface of preformed pipe insulation and extended through the longitudinal joint to outside surface of insulation under insulation jacket. Factory apply a white, polymer, vapor-retarder jacket with self-sealing adhesive tape seam and evaporation holes running continuously along the longitudinal seam, exposing the absorbent cloth.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Knauf Insulation; Permawick Pipe Insulation.
 - b. Owens Corning; VaporWick Pipe Insulation.
 - c. **<Insert manufacturer's name; product name or designation>.**
 - d. or approved equal.

- L. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied **[ASJ] [FSK jacket]** complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is **2.5 lb/cu. ft. (40 kg/cu. m)** or more. Thermal conductivity (k-value) at **100 deg F (55 deg C)** is **0.29 Btu x in./h x sq. ft. x deg F (0.042 W/m x K)** or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; CrimpWrap.
 - b. Johns Manville; MicroFlex.
 - c. Knauf Insulation; Pipe and Tank Insulation.
 - d. Manson Insulation Inc.; AK Flex.
 - e. Owens Corning; Fiberglas Pipe and Tank Insulation.
 - f. **<Insert manufacturer's name; product name or designation>.**
 - g. or approved equal.

- M. Phenolic:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Kingspan Tarec Industrial Insulation NV; Koolphen K.
 - b. Resolco International BV; Insul-phen.
 - c. **<Insert manufacturer's name; product name or designation>.**
 - d. or approved equal.
2. Preformed pipe insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type III, Grade 1.
3. Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.
4. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

5. Factory-Applied Jacket: Requirements are specified in "Factory-Applied Jackets" Article.
 - a. Preformed Pipe Insulation: **[None] [ASJ]**.

- N. Polyisocyanurate: Unfaced, preformed, rigid cellular polyisocyanurate material intended for use as thermal insulation.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Trymer 2000 XP.
 - b. Duna USA Inc.; Corafoam.
 - c. Dyplast Products; ISO-25.
 - d. Elliott Company of Indianapolis; Elfoam.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

 2. Comply with ASTM C 591, Type I or Type IV, except thermal conductivity (k-value) shall not exceed **0.19 Btu x in./h x sq. ft. x deg F** (0.027 W/m x K) at **75 deg F** (24 deg C) after 180 days of aging.
 3. Flame-spread index shall be 25 or less, and smoke-developed index shall be 50 or less for thickness up to **1 inch** (25 mm) as tested by ASTM E 84.
 4. Fabricate shapes according to ASTM C 450 and ASTM C 585.
 5. Factory-Applied Jacket: Requirements are specified in "Factory-Applied Jackets" Article.
 - a. Pipe Applications: **[None] [ASJ] [ASJ-SSL] [PVDC] [PVDC-SSL]**.

- O. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Armacell LLC; Tubolit.
 - b. Nomaco Insulation; IMCOLOCK, IMCOSHEET, NOMALOCK, and NOMAPLY.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

- P. Polystyrene: Rigid, extruded cellular polystyrene intended for use as thermal insulation. Comply with ASTM C 578, Type IV or Type XIII, except thermal conductivity (k-value) shall not exceed **0.26 Btu x in./h x sq. ft. x deg F** (0.038 W/m x K) after 180 days of aging. Fabricate shapes according to ASTM C 450 and ASTM C 585.
 1. Products: Subject to compliance with requirements, **provide one of the following**:
 - a. Dow Chemical Company (The); Styrofoam.
 - b. **<Insert manufacturer's name; product name or designation>**.

- c. or approved equal.

2.2 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ramco Insulation, Inc.; Super-Stik.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

1. Products: Subject to compliance with requirements, **provide one of the following:**
 - a. Ramco Insulation, Inc.; Thermokote V.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

C. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ramco Insulation, Inc.; Ramcote 1200 and Quik-Cote.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.3 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F (10 to 427 deg C).

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-97.
 - b. Eagle Bridges - Marathon Industries; 290.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-27.
 - d. Mon-Eco Industries, Inc.; 22-30.
 - e. Vimasco Corporation; 760.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.

2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F (minus 73 to plus 93 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-84.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Phenolic and Polyisocyanurate Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F (minus 59 to plus 149 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-96.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-33.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Aeroflex USA, Inc.; Aero seal.

- b. Armacell LLC; Armaflex 520 Adhesive.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
 - d. K-Flex USA; R-373 Contact Adhesive.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70.
 - d. Mon-Eco Industries, Inc.; 22-25.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- G. Polystyrene Adhesive: Solvent- or water-based, synthetic resin adhesive with a service temperature range of minus 20 to plus 140 deg F (29 to plus 60 deg C).
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-96.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- H. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
 1. Products: Subject to compliance with requirements, provide one of the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-50.
 - d. Mon-Eco Industries, Inc.; 22-25.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- I. PVC Jacket Adhesive: Compatible with PVC jacket.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 739, Dow Silicone.
 - b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
 - c. P.I.C. Plastics, Inc.; Welding Adhesive.
 - d. Speedline Corporation; Polyco VP Adhesive.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- 2.4 MASTICS
- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90.

- b. Vimasco Corporation; 749.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, **0.013 perm** (0.009 metric perm) at **43-mil** (1.09-mm) dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
 5. Color: White.
- C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below-ambient services.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-30.
 - b. Eagle Bridges - Marathon Industries; 501.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-35.
 - d. Mon-Eco Industries, Inc.; 55-10.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. Water-Vapor Permeance: ASTM F 1249, **0.05 perm** (0.03 metric perm) at **35-mil** (0.9-mm) dry film thickness.
 3. Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.
 5. Color: White.
- D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below-ambient services.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel.
 - b. Eagle Bridges - Marathon Industries; 570.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-95/60-96.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Water-Vapor Permeance: ASTM F 1249, **0.05 perm** (0.033 metric perm) at **30-mil** (0.8-mm) dry film thickness.
 3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
 4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
 5. Color: White.

- E. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-10.
 - b. Eagle Bridges - Marathon Industries; 550.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 46-50.
 - d. Mon-Eco Industries, Inc.; 55-50.
 - e. Vimasco Corporation; WC-1/WC-5.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. Water-Vapor Permeance: ASTM F 1249, **1.8 perms** (1.2 metric perms) at **0.0625-inch** (1.6-mm) dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Solids Content: 60 percent by volume and 66 percent by weight.
 5. Color: White.

2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
1. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36.
 - c. Vimasco Corporation; 713 and 714.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over pipe insulation.
 4. Service Temperature Range: 0 to plus 180 deg F (Minus 18 to plus 82 deg C).
 5. Color: White.

2.6 SEALANTS

- A. Joint Sealants:
1. Joint Sealants for Cellular-Glass, Phenolic, and Polyisocyanurate Products:

Subject to compliance with requirements, provide one of the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Pittsburgh Corning Corporation; Pittseal 444.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
2. Joint Sealants for Polystyrene Products: Subject to compliance with requirements, provide one of the following:
- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-70.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
3. Materials shall be compatible with insulation materials, jackets, and substrates.
4. Permanently flexible, elastomeric sealant.
5. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
6. Color: White or gray.
7. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
8. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. Materials shall be compatible with insulation materials, jackets, and substrates.

3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: Aluminum.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: White.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.7 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
5. PVDC Jacket for Indoor Applications: **4-mil- (0.10-mm-)** thick, white PVDC biaxially oriented barrier film with a permeance at **0.02 perm (0.013 metric perm)** when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.

- a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
6. PVDC Jacket for Outdoor Applications: **6-mil-** (0.15-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at **0.01 perm** (0.007 metric perm) when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
7. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
8. Vinyl Jacket: White vinyl with a permeance of **1.3 perms** (0.86 metric perms) when tested according to ASTM E 96/E 96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.8 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Fabric: Approximately **2 oz./sq. yd.** (68 g/sq. m) with a thread count of **10 strands by 10 strands/sq. in.** (4 strands by 4 strands/sq. mm) for covering pipe and pipe fittings.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Chil-Glas Number 10.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- B. Woven Polyester Fabric: Approximately **1 oz./sq. yd.** (34 g/sq. m) with a thread count of

10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm), in a Leno weave, for pipe.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Mast-A-Fab.
 - b. Vimasco Corporation; Elastafab 894.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

2.9 FIELD-APPLIED CLOTHS

A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd. (271 g/sq. m).

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84217/9485RW, Luben 59.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.10 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.

C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. Adhesive: As recommended by jacket material manufacturer.
3. Color: **[White] [Color-code jackets based on system. Color as selected by DEN Project Manager].**
4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.

- a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

D. Metal Jacket:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.
 - b. ITW Insulation Systems; Aluminum and Stainless Steel Jacketing.
 - c. RPR Products, Inc.; Insul-Mate.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
2. Aluminum Jacket: Comply with **ASTM B 209** (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. **[Sheet and roll stock ready for shop or field sizing] [Factory cut and rolled to size]**.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: **[1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper] [3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.
 - d. Moisture Barrier for Outdoor Applications: **[3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.
 - a. **[Sheet and roll stock ready for shop or field sizing] [Factory cut and rolled to size]**.
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: **[1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper] [3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick**

- polysurlyn].**
- d. Moisture Barrier for Outdoor Applications: **[3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn].**
- e. Factory-Fabricated Fitting Covers:
- 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
- E. Underground Direct-Buried Jacket: **125-mil- (3.2-mm-) thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.**
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pittsburgh Corning Corporation; Pittwrap.
 - b. Polyguard Products, Inc.; Insulrap No Torch 125.
 - c. **<Insert manufacturer's name; product name or designation>.**
 - d. or approved equal.
- F. Self-Adhesive Outdoor Jacket: **60-mil- (1.5-mm-) thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a crosslaminated polyethylene film covered with [white] [stucco-embossed] aluminum-foil facing.**
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Polyguard Products, Inc.; Alumaguard 60.
 - b. **<Insert manufacturer's name; product name or designation>.**
 - c. or approved equal.
- G. PVDC Jacket for Indoor Applications: **4-mil- (0.10-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perms (0.013 metric perms) when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.**
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Saran 540 Vapor Retarder Film.
 - b. **<Insert manufacturer's name; product name or designation>.**
 - c. or approved equal.

- H. PVDC Jacket for Outdoor Applications: 6-mil- (0.15-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perms (0.007 metric perms) when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Saran 560 Vapor Retarder Film.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- I. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.11 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 428 AWF ASJ.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
 - c. Compac Corporation; 104 and 105.
 - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. Width: 3 inches (75 mm).
 3. Thickness: 11.5 mils (0.29 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 491 AWF FSK.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
 - c. Compac Corporation; 110 and 111.

- d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. Width: **3 inches** (75 mm).
 3. Thickness: **6.5 mils** (0.16 mm).
 4. Adhesion: **90 ounces force/inch** (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: **40 lbf/inch** (7.2 N/mm) in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 370 White PVC tape.
 - b. Compac Corporation; 130.
 - c. Venture Tape; 1506 CW NS.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Width: **2 inches** (50 mm).
 3. Thickness: **6 mils** (0.15 mm).
 4. Adhesion: **64 ounces force/inch** (0.7 N/mm) in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: **18 lbf/inch** (3.3 N/mm) in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 488 AWF.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
 - c. Compac Corporation; 120.
 - d. Venture Tape; 3520 CW.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. Width: **2 inches** (50 mm).
 3. Thickness: **3.7 mils** (0.093 mm).
 4. Adhesion: **100 ounces force/inch** (1.1 N/mm) in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: **34 lbf/inch** (6.2 N/mm) in width.
- E. PVDC Tape for Indoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:

- a. Dow Chemical Company (The); Saran 540 Vapor Retarder Tape.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
2. Width: **3 inches** (75 mm).
 3. Film Thickness: **4 mils** (0.10 mm).
 4. Adhesive Thickness: **1.5 mils** (0.04 mm).
 5. Elongation at Break: 145 percent.
 6. Tensile Strength: **55 lbf/inch** (10.1 N/mm) in width.
- F. PVDC Tape for Outdoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Saran 560 Vapor Retarder Tape.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Width: **3 inches** (75 mm).
 3. Film Thickness: **6 mils** (0.15 mm).
 4. Adhesive Thickness: **1.5 mils** (0.04 mm).
 5. Elongation at Break: 145 percent.
 6. Tensile Strength: **55 lbf/inch** (10.1 N/mm) in width.

2.12 SECUREMENTS

- A. Bands:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ITW Insulation Systems; Gerrard Strapping and Seals.
 - b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, [**Type 304**] [**or**] [**Type 316**]; **0.015 inch** (0.38 mm) thick, [**1/2 inch** (13 mm)] [**3/4 inch** (19 mm)] wide with [**wing seal**] [**or**] [**closed seal**].
 3. Aluminum: **ASTM B 209** (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, **0.020 inch** (0.51 mm) thick, [**1/2 inch** (13 mm)] [**3/4 inch** (19 mm)] wide with [**wing seal**] [**or**] [**closed seal**].
 4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.
- B. Staples: Outward-clinching insulation staples, nominal **3/4-inch-** (19-mm-) wide, stainless steel or Monel.
- C. Wire: [**0.080-inch** (2.0-mm) **nickel-copper alloy**] [**0.062-inch** (1.6-mm) **soft-annealed**,

stainless steel] [0.062-inch (1.6-mm) soft-annealed, galvanized steel].

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. <Insert manufacturer's name>.
 - c. or approved equal.

PART 3 - EXECUTION

3.1 ENVIRONMENTAL REQUIREMENTS

- A. Maintain ambient temperatures and conditions required by manufacturers of adhesives, mastics, and insulation cements.
- B. Maintain temperature during and after installation for minimum period of 24 hours.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 1. Verify that systems to be insulated have been tested and are free of defects.
 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer **5 mils** (0.127 mm) thick and an epoxy finish **5 mils** (0.127 mm) thick if operating in a temperature range between **140 and 300 deg F** (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 2. Carbon Steel: Coat carbon steel operating at a service temperature between **32 and 300 deg F** (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the trade installing heat tracing. Comply with

requirements for heat tracing that apply to insulation.

- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Apply insulation materials, accessories, and finishes according to the manufacturer's written instructions; with smooth, straight, and even surfaces; free of voids throughout the length of piping, including fittings, valves, and specialties.
- B. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.
- C. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.
- D. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- E. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- F. Install multiple layers of insulation with longitudinal and end seams staggered.
- G. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- H. Seal joints and seams with vapor-retarder mastic on insulation indicated to receive a vapor retarder.
- I. Keep insulation materials dry during application and finishing.
- J. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- K. Install insulation with least number of joints practical.
- L. Apply insulation over fittings, valves, and specialties, with continuous thermal and vapor-retarder integrity, unless otherwise indicated. Refer to special instructions for applying insulation over fittings, valves, and specialties.
- M. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs at least **12 inches (300 mm)** from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to

- structure with vapor-barrier mastic.
3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- N. Insulation Terminations: For insulation application where vapor retarders are indicated, taper insulation ends. Seal tapered ends with a compound recommended by the insulation material manufacturer to maintain vapor retarder.
- O. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- P. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
 2. Circumferential joints: Cover circumferential joints with **3-inch- (75-mm-)** wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced **4 inches (100 mm)** o.c.
 3. Longitudinal seams: Overlap jacket longitudinal seams at least **1-1/2 inches (38 mm)**. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at [**2 inches (50 mm)**] [**4 inches (100 mm)**] o.c.
 - a. For below-ambient services, apply vapor-barrier mastic over staples.
 - b. Exception: Do not staple longitudinal laps on insulation having a vapor retarder.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- Q. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- R. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- S. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least **4 inches (100 mm)** beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- T. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.

3. Nameplates and data plates.
4. Manholes.
5. Handholes.
6. Cleanouts.

3.5 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least **2 inches** (50 mm) below top of roof flashing.
 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least **2 inches** (50 mm).
 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
1. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
1. Pipe: Install insulation continuously through floor penetrations.
 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.6 GENERAL PIPE INSULATION INSTALLATION

- A. Install materials in accordance with manufacturer's instructions and N.I.C.A. standards.
- B. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- C. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
 - 1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 - 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 - 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 - 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 - 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 - 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 - 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 - 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 - 9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.

- D. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- E. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical centerline of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least **2 inches (50 mm)** over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.7 INSTALLATION OF CALCIUM SILICATE INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure single-layer insulation with stainless-steel bands at **12-inch (300-mm)** intervals and tighten bands without deforming insulation materials.
2. Install two-layer insulation with joints tightly butted and staggered at least **3 inches (75 mm)**. Secure inner layer with wire spaced at **12-inch (300-mm)** intervals. Secure outer layer with stainless-steel bands at **12-inch (300-mm)** intervals.
3. Apply a skim coat of mineral-fiber, hydraulic-setting cement to insulation surface. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least **1 inch (25 mm)**. Apply finish coat of lagging adhesive over glass cloth or tape. Thin finish coat to achieve smooth, uniform finish.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus

- twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as pipe insulation.
 4. Finish flange insulation same as pipe insulation.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed insulation sections of insulation are not available, install mitered sections of calcium silicate insulation. Secure insulation materials with wire or bands.
3. Finish fittings insulation same as pipe insulation.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install mitered segments of calcium silicate insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
2. Install insulation to flanges as specified for flange insulation application.
3. Finish valve and specialty insulation same as pipe insulation.

3.8 INSTALLATION OF CELLULAR-GLASS INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward-clinched staples at **6 inches (150 mm)** o.c.
4. For insulation with factory-applied jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least **1 inch (25 mm)**, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.9 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of

air to surface being insulated.

3.10 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward-clinched staples at **6 inches (150 mm)** o.c.
4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least **1 inch (25 mm)**, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.11 INSTALLATION OF PHENOLIC INSULATION

A. General Installation Requirements:

1. Secure single-layer insulation with stainless-steel bands at **12-inch (300-mm)** intervals and tighten bands without deforming insulation materials.
2. Install 2-layer insulation with joints tightly butted and staggered at least **3 inches (75 mm)**. Secure inner layer with **0.062-inch (1.6-mm)** wire spaced at **12-inch (300-mm)** intervals. Secure outer layer with stainless-steel bands at **12-inch (300-mm)** intervals.

B. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward-clinched staples at **6 inches (150 mm)** o.c.
4. For insulation with factory-applied jackets with vapor retarders on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

C. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as pipe insulation.

D. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed insulation sections of same material as straight segments of pipe insulation. Secure according to manufacturer's written instructions.

E. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed insulation sections of same material as straight segments of pipe insulation. Secure according to manufacturer's written instructions.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.12 INSTALLATION OF POLYISOCYANURATE INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with tape or bands and tighten without deforming insulation materials. Orient longitudinal joints between half sections in 3- and 9-o'clock positions on the pipe.

2. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.
3. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, same thickness of adjacent pipe insulation, not to exceed **1-1/2-inch (38-mm)** thickness.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyisocyanurate block insulation of same thickness as pipe insulation.

C. Insulation Installation on Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation. Secure according to manufacturer's written instructions.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of polyisocyanurate insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.13 INSTALLATION OF POLYOLEFIN INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of polyolefin pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install cut sections of polyolefin pipe and sheet insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.14 INSTALLATION OF POLYSTYRENE INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation with tape or bands and tighten bands without deforming insulation materials. Orient longitudinal joints between half sections in 3- and 9-o'clock positions on the pipe.
2. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.
3. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, and make thickness same as adjacent pipe insulation, not to exceed 1-1/2-inch (38-mm).
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polystyrene block insulation of same thickness as pipe insulation.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed insulation sections of same material as straight segments of pipe insulation. Secure according to manufacturer's written instructions.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed section of polystyrene insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation

- without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.15 FIELD-APPLIED JACKET INSTALLATION

- A. Indoor, Concealed Applications: Insulated pipes conveying fluids above ambient temperature shall have standard jackets, with vapor barrier, factory-applied or field-applied. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass cloth and adhesive. PVC jackets may be used if in accordance with specified flame spread and smoke developed limitations.
- B. Indoor, Concealed Applications: Insulated dual-temperature pipes or pipes conveying fluids below ambient temperature shall have vapor barrier jackets, factory-applied or field-applied. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe, and finish with glass cloth and vapor barrier adhesive.
- C. Indoor, Exposed Applications: For pipe exposed in mechanical equipment rooms or in finished spaces, insulate as for concealed applications. Finish with reinforced white kraft and aluminum foil laminates. **[Do not use PVC jackets.]**
- D. Exterior Applications: Provide vapor barrier jackets. Cover with aluminum jacket with seams located on bottom side of horizontal piping. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor barrier cement.
- E. Buried Piping: Provide factory fabricated assembly with inner all-purpose service jacket with self-sealing lap, and asphalt impregnated open mesh glass fabric, with one mil thick aluminum foil sandwiched between three layers of bituminous compound; outer surface faced with a polyester film.
- F. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
 1. Draw jacket smooth and tight to surface with **2-inch (50-mm)** overlap at seams and joints.
 2. Embed glass cloth between two **0.062-inch- (1.6-mm-)** thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- G. Where FSK jackets are indicated, install as follows:
 1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with **1-1/2-inch (38-mm)** laps at longitudinal seams and **3-inch- (75-mm-)** wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

- H. Where PVC jackets are indicated, install with **1-inch (25-mm)** overlap at longitudinal seams and end joints; for horizontal applications. Seal with manufacturer's recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- I. Where metal jackets are indicated, install with **2-inch (50-mm)** overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands **12 inches (300 mm)** o.c. and at end joints.
- J. Where PVDC jackets are indicated, install as follows:
1. Apply three separate wraps of filament tape per insulation section to secure pipe insulation to pipe prior to installation of PVDC jacket.
 2. Wrap factory-presizes jackets around individual pipe insulation sections with one end overlapping the previously installed sheet. Install presized jacket with an approximate overlap at butt joint of **2 inches (50 mm)** over the previous section. Adhere lap seal using adhesive or SSL, and then apply 1-1/4 circumferences of appropriate PVDC tape around overlapped butt joint.
 3. Continuous jacket can be spiral-wrapped around a length of pipe insulation. Apply adhesive or PVDC tape at overlapped spiral edge. When electing to use adhesives, refer to manufacturer's written instructions for application of adhesives along this spiral edge to maintain a permanent bond.
 4. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of **33-1/2 inches (850 mm)** or less. The **33-1/2-inch- (850-mm-)** circumference limit allows for **2-inch- (50-mm-)** overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.
 5. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

3.16 FINISHES

- A. Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
1. Flat Acrylic Finish: [**Two**] **<Insert number>** finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

- C. Color: Final color as selected by DEN Project Manager. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

3.17 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
 - 1. Inspect pipe, fittings, strainers, and valves, randomly selected by DEN Project Manager, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to **[three] <Insert number>** locations of straight pipe, **[three] <Insert number>** locations of threaded fittings, **[three] <Insert number>** locations of welded fittings, **[two] <Insert number>** locations of threaded strainers, **[two] <Insert number>** locations of welded strainers, **[three] <Insert number>** locations of threaded valves, and **[three] <Insert number>** locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.18 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Drainage piping located in crawl spaces.
 - 2. Underground piping.
 - 3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.19 INDOOR PIPING INSULATION SCHEDULE

- A. Condensate and Equipment Drain Water below **60 Deg F (16 Deg C)**:
 - 1. All Pipe Sizes: Insulation shall be **[one of]** the following:
 - a. Cellular Glass: **[1-1/2 inches (38 mm)] <Insert dimension>** thick.
 - b. Flexible Elastomeric: **[3/4 inch (19 mm)] [1 inch (25 mm)] <Insert**

dimension> thick.

- c. Mineral-Fiber, Preformed Pipe Insulation, Type I: [**1/2 inch (13 mm)**] [**1 inch (25 mm)**] <Insert dimension> thick.
- d. Phenolic: [**1 inch (25 mm)**] <Insert dimension> thick.
- e. Polyisocyanurate: [**1 inch (25 mm)**] <Insert dimension> thick.
- f. Polyolefin: [**3/4 inch (19 mm)**] [**1 inch (25 mm)**] <Insert dimension> thick.

B. Chilled Water and Brine, 40 Deg F (5 Deg C) and below:

- 1. [**NPS 3 (DN 80)**] <Insert pipe size> and Smaller: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] <Insert dimension> thick.
 - b. Mineral-Fiber, [**Preformed Pipe, Type I**] [or] [**Pipe Insulation Wicking System**]: [**1 inch (25 mm)**] [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] <Insert dimension> thick.
 - c. Phenolic: [**1 inch (25 mm)**] [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] [**3 inches (75 mm)**] <Insert dimension> thick.
 - d. Polyisocyanurate: [**1 inch (25 mm)**] <Insert dimension> thick.
- 2. [**NPS 4 (DN 100) to NPS 12 (DN 300)**] <Insert pipe size range>: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] [**3 inches (75 mm)**] <Insert dimension> thick.
 - b. Mineral-Fiber, [**Preformed Pipe, Type I**] [or] [**Pipe Insulation Wicking System**]: [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] <Insert dimension> thick.
 - c. Phenolic: [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] [**3 inches (75 mm)**] <Insert dimension> thick.
 - d. Polyisocyanurate: [**1 inch (25 mm)**] <Insert dimension> thick.
- 3. [**NPS 14 (DN 350)**] <Insert pipe size> and Larger: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [**2 inches (50 mm)**] [**3 inches (75 mm)**] <Insert dimension> thick.
 - b. Mineral-Fiber, [**Preformed Pipe, Type I**,] [**Pipe and Tank Insulation**,] [or] [**Pipe Insulation Wicking System**]: [**2 inches (50 mm)**] [**3 inches (75 mm)**] <Insert dimension> thick.
 - c. Phenolic: [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] [**3 inches (75 mm)**] <Insert dimension> thick.

C. Chilled Water and Brine, above 40 Deg F (5 Deg C):

- 1. [**NPS 12 (DN 300)**] <Insert pipe size> and Smaller: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] <Insert

the following:

- a. Cellular Glass: [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension> thick.
 - b. Mineral-Fiber, Preformed Pipe, Type I: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension> thick.
 - c. Phenolic: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - d. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
2. [NPS 14 (DN 350)] <Insert pipe size> and Larger: Insulation shall be [one of] the following:
- a. Cellular Glass: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - b. Mineral-Fiber, [Preformed Pipe, Type I] [or] [Pipe and Tank Insulation]: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - c. Phenolic: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.

F. Heating-Hot-Water Supply and Return, above 200 Deg F (93 Deg C):

1. [NPS 3/4 (DN 20)] <Insert pipe size> and Smaller: Insulation shall be [one of] the following:
 - a. Calcium Silicate: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - b. Cellular Glass: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe, Type I or II: [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension> thick.
2. [NPS 1 (DN 25)] <Insert pipe size> and Larger: Insulation shall be [one of] the following:
 - a. Calcium Silicate: [3 inches (75 mm)] [4 inches (100 mm)] <Insert dimension> thick.
 - b. Cellular Glass: [3 inches (75 mm)] [4 inches (100 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe, Type I or II: [3 inches (75 mm)] [4 inches (100 mm)] <Insert dimension> thick.

G. Steam and Steam Condensate, 350 Deg F (177 Deg C) and Below:

1. [NPS 3/4 (DN 20)] <Insert pipe size> and Smaller: Insulation shall be [one of] the following:
 - a. Calcium Silicate: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.

- b. Cellular Glass: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe, Type I or II: [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension> thick.
 2. [NPS 1 (DN 25)] <Insert pipe size> and Larger: Insulation shall be [one of] the following:
 - a. Calcium Silicate: [3 inches (75 mm)] [4 inches (100 mm)] <Insert dimension> thick.
 - b. Cellular Glass: [3 inches (75 mm)] [4 inches (100 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, [Preformed Pipe, Type I or II] [or] [Pipe and Tank Insulation]: [3 inches (75 mm)] [4 inches (100 mm)] <Insert dimension> thick.
- H. Steam and Steam Condensate, above 350 Deg F (177 Deg C):
 1. [NPS 3/4 (DN 20)] <Insert pipe size> and Smaller: Insulation shall be [one of] the following:
 - a. Calcium Silicate: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - b. Cellular Glass: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe, Type I or II: [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension> thick.
 2. [NPS 1 (DN 25)] <Insert pipe size> and Larger: Insulation shall be [one of] the following:
 - a. Calcium Silicate: [3 inches (75 mm)] [4 inches (100 mm)] <Insert dimension> thick.
 - b. Cellular Glass: [3 inches (75 mm)] [4 inches (100 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, [Preformed Pipe, Type I or II] [or] [Pipe and Tank Insulation]: [3 inches (75 mm)] [4 inches (100 mm)] <Insert dimension> thick.
- I. Refrigerant Suction and Hot-Gas Piping:
 1. All Pipe Sizes: Insulation shall be [one of] the following:
 - a. Cellular Glass: [1-1/2 inches (38 mm)] <Insert dimension> thick.
 - b. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I: [1 inch (25 mm)] <Insert dimension> thick.
 - d. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.
 - e. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
 - f. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.

J. Refrigerant Suction and Hot-Gas Flexible Tubing:

1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 - b. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.

K. Dual-Service Heating and Cooling, 40 to 200 Deg F (5 to 93 Deg C):

1. [NPS 12 (DN 300)] <Insert pipe size> and Smaller: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension> thick.
 - b. Mineral-Fiber, Preformed Pipe, Type I: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension> thick.
 - c. Phenolic: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - d. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
2. [NPS 14 (DN 350)] <Insert pipe size> and Larger: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - b. Mineral-Fiber, [Preformed Pipe, Type I] [or] [Pipe and Tank Insulation]: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.
 - c. Phenolic: [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)] <Insert dimension> thick.

L. Heat-Recovery Piping:

1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [1-1/2 inches (38 mm)] <Insert dimension> thick.
 - b. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, [Preformed Pipe Insulation, Type I] [or] [Pipe and Tank Insulation]: [1 inch (25 mm)] <Insert dimension> thick.
 - d. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.
 - e. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
 - f. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.

3.20 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Chilled Water and Brine:

1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [3 inches (75 mm)] <Insert dimension> thick.

- b. Flexible Elastomeric: **[3 inches (75 mm)]** <Insert dimension> thick.
- c. Mineral-Fiber, Preformed Pipe Insulation, Type I: **[3 inches (75 mm)]** <Insert dimension> thick.
- d. Phenolic: **[2 inches (50 mm)]** <Insert dimension> thick.
- e. Polyisocyanurate: **[2 inches (50 mm)]** <Insert dimension> thick.
- f. Polyolefin: **[3 inches (75 mm)]** <Insert dimension> thick.
- g. Polystyrene: **[2 inches (50 mm)]** <Insert dimension> thick.

B. Condenser-Water Supply and Return:

- 1. All Pipe Sizes: Insulation shall be **[one of]** the following:
 - a. Cellular Glass: **[2 inches (50 mm)]** <Insert dimension> thick.
 - b. Flexible Elastomeric: **[2 inches (50 mm)]** <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I: **[2 inches (50 mm)]** <Insert dimension> thick.
 - d. Phenolic: **[2 inches (50 mm)]** <Insert dimension> thick.
 - e. Polyisocyanurate: **[2 inches (50 mm)]** <Insert dimension> thick.
 - f. Polyolefin: **[2 inches (50 mm)]** <Insert dimension> thick.
 - g. Polystyrene: **[2 inches (50 mm)]** <Insert dimension> thick.

C. Heating-Hot-Water Supply and Return, **200 Deg F (93 Deg C)** and Below:

- 1. All Pipe Sizes: Insulation shall be **[one of]** the following:
 - a. Cellular Glass: **[3 inches (75 mm)]** <Insert dimension> thick.
 - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: **[2 inches (50 mm)]** <Insert dimension> thick.
 - c. Phenolic: **[2 inches (50 mm)]** <Insert dimension> thick.
 - d. Polyisocyanurate: **[2 inches (50 mm)]** <Insert dimension> thick.

D. Heating-Hot-Water Supply and Return, above **200 Deg F (93 Deg C)**:

- 1. All Pipe Sizes: Insulation shall be **[one of]** the following:
 - a. Calcium Silicate: **[3 inches (75 mm)]** <Insert dimension> thick.
 - b. Cellular Glass: **[3 inches (75 mm)]** <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I or II: **[2 inches (50 mm)]** <Insert dimension> thick.

E. Steam and Steam Condensate, **350 Deg F (177 Deg C)** and Below:

- 1. All Pipe Sizes: Insulation shall be **[one of]** the following:
 - a. Calcium Silicate: **[4 inches (100 mm)]** <Insert dimension> thick.
 - b. Cellular Glass: **[4 inches (100 mm)]** <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I or II: **[3 inches (75 mm)]** <Insert dimension> thick.

F. Steam and Steam Condensate, above **350 Deg F (177 Deg C)**:

1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Calcium Silicate: [**5 inches (125 mm)**] <Insert dimension> thick.
 - b. Cellular Glass: [**5 inches (125 mm)**] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I or II: [**4 inches (100 mm)**] <Insert dimension> thick.

- G. Refrigerant Suction and Hot-Gas Piping:
 1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [**2 inches (50 mm)**] <Insert dimension> thick.
 - b. Flexible Elastomeric: [**2 inches (50 mm)**] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I: [**2 inches (50 mm)**] <Insert dimension> thick.
 - d. Phenolic: [**2 inches (50 mm)**] <Insert dimension> thick.
 - e. Polyisocyanurate: [**2 inches (50 mm)**] <Insert dimension> thick.
 - f. Polyolefin: [**2 inches (50 mm)**] <Insert dimension> thick.
 - g. Polystyrene: [**2 inches (50 mm)**] <Insert dimension> thick.

- H. Refrigerant Suction and Hot-Gas Flexible Tubing:
 1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Flexible Elastomeric: [**2 inches (50 mm)**] <Insert dimension> thick.
 - b. Polyolefin: [**2 inches (50 mm)**] <Insert dimension> thick.

- I. Heat-Recovery Piping:
 1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [**2 inches (50 mm)**] <Insert dimension> thick.
 - b. Flexible Elastomeric: [**2 inches (50 mm)**] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I: [**2 inches (50 mm)**] <Insert dimension> thick.
 - d. Phenolic: [**2 inches (50 mm)**] <Insert dimension> thick.
 - e. Polyisocyanurate: [**2 inches (50 mm)**] <Insert dimension> thick.
 - f. Polyolefin: [**2 inches (50 mm)**] <Insert dimension> thick.
 - g. Polystyrene: [**2 inches (50 mm)**] <Insert dimension> thick.

- J. Dual-Service Heating and Cooling:
 1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [**3 inches (75 mm)**] <Insert dimension> thick.
 - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: [**2 inches (50 mm)**] <Insert dimension> thick.
 - c. Phenolic: [**2 inches (50 mm)**] <Insert dimension> thick.
 - d. Polyisocyanurate: [**2 inches (50 mm)**] <Insert dimension> thick.

K. Fuel Oil Piping, Heated:

1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [**2 inches (50 mm)**] <Insert dimension> thick.
 - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: [**2 inches (50 mm)**] <Insert dimension> thick.

3.21 OUTDOOR, UNDERGROUND PIPING INSULATION SCHEDULE

- A. Loose-fill insulation, for belowground piping, is specified in Section 232113.13 "Underground Hydronic Piping" and Section 336313 "Underground Steam and Condensate Distribution Piping."
- B. Chilled Water, All Sizes: Cellular glass, [**2 inches (50 mm)**] <Insert dimension> thick.
- C. Condenser-Water Supply and Return, All Sizes: Cellular glass, [**2 inches (50 mm)**] <Insert dimension> thick.
- D. Heating-Hot-Water Supply and Return, All Sizes, **200 Deg F (93 Deg C)** and Below: Cellular glass, [**3 inches (75 mm)**] <Insert dimension> thick.
- E. Heating-Hot-Water Supply and Return, All Sizes, above **200 Deg F (93 Deg C)**:
 1. Calcium Silicate: [**3 inches (75 mm)**] <Insert dimension> thick.
 2. Cellular Glass: [**3 inches (75 mm)**] <Insert dimension> thick.
- F. Steam and Steam Condensate, All Sizes, **350 Deg F (177 Deg C)** and Below:
 1. Calcium Silicate: [**4 inches (100 mm)**] <Insert dimension> thick.
 2. Cellular Glass: [**4 inches (100 mm)**] <Insert dimension> thick.
- G. Steam and Steam Condensate, All Sizes, above **350 Deg F (177 Deg C)**:
 1. Calcium Silicate: [**5 inches (125 mm)**] <Insert dimension> thick.
 2. Cellular Glass: [**5 inches (125 mm)**] <Insert dimension> thick.
- H. Dual-Service Heating and Cooling, All Sizes, **40 to 200 Deg F (4 to 93 Deg C)**: Cellular glass, [**3 inches (75 mm)**] <Insert dimension> thick.
- I. Fuel Oil Piping, All Sizes, Heated: Cellular glass, [**2 inches (50 mm)**] <Insert dimension> thick.

3.22 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.

C. Piping, Concealed:

1. None.
2. **[PVC]** [**PVC, Color-Coded by System**]: [**20 mils (0.5 mm)**] [**30 mils (0.8 mm)**] thick.
3. Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [**0.016 inch (0.41 mm)**] [**0.020 inch (0.51 mm)**] [**0.024 inch (0.61 mm)**] [**0.032 inch (0.81 mm)**] [**0.040 inch (1.0 mm)**] thick.
4. Painted Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [**0.016 inch (0.41 mm)**] [**0.020 inch (0.51 mm)**] [**0.024 inch (0.61 mm)**] [**0.032 inch (0.81 mm)**] thick.
5. Stainless Steel, [**Type 304**] [or] [**Type 316**], [**Smooth 2B Finish**] [**Corrugated**] [**Stucco Embossed**]: [**0.010 inch (0.25 mm)**] [**0.016 inch (0.41 mm)**] [**0.020 inch (0.51 mm)**] [**0.024 inch (0.61 mm)**] thick.
6. <Insert jacket type>.

D. Piping, Exposed:

1. None.
2. **[PVC]** [**PVC, Color-Coded by System**]: [**20 mils (0.5 mm)**] [**30 mils (0.8 mm)**] thick.
3. Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [**0.016 inch (0.41 mm)**] [**0.020 inch (0.51 mm)**] [**0.024 inch (0.61 mm)**] [**0.032 inch (0.81 mm)**] [**0.040 inch (1.0 mm)**] thick.
4. Painted Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [**0.016 inch (0.41 mm)**] [**0.020 inch (0.51 mm)**] [**0.024 inch (0.61 mm)**] [**0.032 inch (0.81 mm)**] thick.
5. Stainless Steel, [**Type 304**] [or] [**Type 316**], [**Smooth 2B Finish**] [**Corrugated**] [**Stucco Embossed**]: [**0.010 inch (0.25 mm)**] [**0.016 inch (0.41 mm)**] [**0.020 inch (0.51 mm)**] [**0.024 inch (0.61 mm)**] thick.
6. <Insert jacket type>.

3.23 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:

1. None.
2. **[PVC]** [**PVC, Color-Coded by System**]: [**20 mils (0.5 mm)**] [**30 mils (0.8 mm)**] thick.
3. Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [**0.016 inch (0.41 mm)**] [**0.020 inch (0.51 mm)**] [**0.024 inch (0.61 mm)**] [**0.032 inch (0.81 mm)**] [**0.040 inch (1.0 mm)**] thick.
4. Painted Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [**0.016 inch (0.41 mm)**] [**0.020 inch (0.51 mm)**] [**0.024 inch (0.61 mm)**] [**0.032 inch (0.81 mm)**]

- thick.
5. Stainless Steel, Type [304] [316] [304 or 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 6. <Insert jacket type>.

D. Piping, Exposed:

1. PVC: [20 mils (0.5 mm)] [30 mils (0.8 mm)] [40 mils (1.0 mm)] thick.
2. [Painted]Aluminum, [Smooth] [Corrugated] [Stucco Embossed] [with Z-Shaped Locking Seam]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
3. Stainless Steel, Type [304] [316] [304 or 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed] [with Z-Shaped Locking Seam]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
4. <Insert jacket type>.

3.24 UNDERGROUND, FIELD-INSTALLED INSULATION JACKET

- A. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230719

SECTION 230800 - COMMISSIONING OF HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment.
- B. The purpose of this effort is to bring the project mechanical systems to a state of dynamic operation in accordance with the contract documents by verifying the operation of individual components, subsystems and systems.
- C. The Owner will retain the services of an independent commissioning agent (CA) separate from the work of this Contract. As herein specified the DEN Project Manager and CA shall develop detailed commissioning procedures, equipment checkout procedures and data forms for recording compliance with contract documents, performance and punch list deficiencies, and will assist in developing schedules for checkout and Owner acceptance, at a future date during the construction phase.
- D. The Division 23 Mechanical Contractor and the General Contractor shall include as part of the Work of this Contract, labor and material to provide manpower, equipment, tools, ladders, instruments, etc., necessary to accomplish the work and labor and material for execution, monitoring and printing data forms necessary to verify and record system observations.
- E. The Test and Balance Contractors shall include as part of the work of this contract, labor, and material to provide manpower, equipment, tools, ladders, instruments, etc. necessary to execute and accomplish the work.
- F. At the completion of the start-up, operations performance test and test and balance, the Contractor shall conduct a 72-hour dynamic mode demonstration of the systems in the presence of the DEN Project Manager and CA.
- G. Related Sections:
 - 1. Section 019113 "General Commissioning Requirements" for general commissioning process requirements.
- H. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

- I. Commissioned Equipment:
 - 1. Air Conditioning Units.
 - 2. Dry cooler Units, glycol pumps, and components.
 - 3. Packaged Rooftop Unit.
 - 4. Exhaust Fans (power Roof Ventilators).

- J. Commissioned Systems:
 - 1. Air Conditioning Units.
 - 2. Dry Cooler Units and glycol system.
 - 3. Packaged Roof Top Unit.
 - 4. Power Roof Ventilators (Exhaust Fans).

1.3 DEFINITIONS

- A. Commissioning Plan: A document that outlines the organization, schedule, allocation of resources, and documentation requirements of the commissioning process.
- B. CA: Commissioning Authority.
- C. HVAC&R: Heating, Ventilating, Air Conditioning, and Refrigeration.
- D. Systems, Subsystems, Equipment, and Components: Where these terms are used together or separately, they shall mean "as-built" systems, subsystems, equipment, and components.

1.4 INFORMATIONAL SUBMITTALS

- A. Certificates of readiness.
- B. Certificates of completion of installation, prestart, and startup activities.

1.5 ALLOWANCES

- A. Labor, instrumentation, tools, and equipment costs for technicians for the performance of commissioning testing are covered by the "Schedule of Allowances" Article in Section 012100 "Allowances."

1.6 UNIT PRICES

- A. Commissioning testing allowance may be adjusted up or down by the "List of Unit Prices" Article in Section 012200 "Unit Prices" when actual man-hours are computed at the end of commissioning testing.

1.7 CONTRACTOR'S RESPONSIBILITIES

- A. Perform commissioning tests at the direction of the CA.
- B. Attend construction phase controls coordination meeting.
- C. Attend testing, adjusting, and balancing review and coordination meeting.
- D. Participate in HVAC&R systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CA.
- E. Provide information requested by the CA for final commissioning documentation.
- F. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.

1.8 COMMISSIONING AGENT'S REQUIREMENTS AND RESPONSIBILITIES

- A. This Article covers the Scope of Work for the Commissioning Agent (CA) who will be hired by the Owner.
- B. Description of the Work:
 - 1. The Commissioning Agent shall oversee the commissioning of the HVAC systems as described in this Section. The CA shall prepare pre-commissioning and functional performance test checklists to be used by the Contractor. Prepare and publish a commissioning plan. Witness startup and operational tests of equipment and systems. Perform observations of the mechanical systems throughout construction and prepare the final commissioning document.
 - 2. The CA shall have authority to direct and schedule testing. The CA shall have no authority to direct changes to the systems.
- C. Commissioning Plan:
 - 1. The CA shall prepare a plan listing the parties involved with their responsibility, scope, definitions, safety concerns, design criteria, attendance schedules, commissioning schedules, and commissioning manual requirements.
- D. Commissioning Forms:
 - 1. Review 100% of CDs. Provide written summary of how each commissioned item of equipment should operate; include calculations verifying scheduled capacity.
 - 2. The CA shall develop forms similar to that in this Section for the Contractors use during the commissioning process. The forms shall become part of the final commissioning manual. Forms shall be provided for each piece of commissioned equipment and system. Any deviations from the design shall be noted and approved by the DEN Project Manager prior to acceptance. Each form shall be signed by the Contractor, CA, and DEN Project Manager prior to acceptance of a system or piece of equipment.

E. Commissioned Equipment:

1. All air-conditioning units as scheduled.
2. All split systems as scheduled.
3. All fans as scheduled.

F. Commissioned Systems:

1. All HVAC systems including the glycol system.

G. Project Observations:

1. The CA shall perform observations of construction progress for the equipment and systems to be commissioned twice a month at a minimum and more as required to keep pace with construction. The CA shall note progress and any deviations of the construction documents shall be brought to attention of the Contractor and DEN Project Manager for resolution. The CA will have no authority to direct changes or corrections to the system. Observation reports shall be published to the DEN Project Manager and Contractor and shall be part of the final commissioning manual.

H. Operational and Start-Up Tests:

1. The CA shall witness start-up tests and collect documentation of the tests. The CA shall notify the DEN Project Manager and Contractor of any deviations from the contract documents. Any deviations shall be corrected or accepted by the DEN Project Manager prior to acceptance.
2. After the Contractor has submitted in writing that the systems are completed, the CA shall schedule and direct operational tests of the systems. These tests shall be as described in this Section. The results shall be documented and made part of the commissioning manual. Any deviations from the design shall be brought to the attention of the DEN Project Manager and Contractor. Any deviations shall be corrected or accepted by the DEN Project Manager prior to acceptance.

I. Commissioning Manual:

1. The CA shall prepare the final commissioning manual. The manual shall provide a complete history of the commissioning process and shall include:
 - a. Design and Energy Codes.
 - b. Commissioning Plan.
 - c. Completed Commissioning Forms.
 - d. Completed Observation Reports.
 - e. Completed Start-up Reports.
 - f. System Operational Tests.
 - g. Final sequence of operation to be achieved.
 - h. Summary of building operation as commissioned, noting deviations from design.
 - i. Design Criteria (extended from Design Documents by CA).
 - j. Written summary of normal startup and operating procedures for each

- commissioned item of equipment.
- k. The manual shall be a three ring binder with tabs for each section. Provide five (5) copies.

1.9 COMMISSIONING DOCUMENTATION

- A. Provide the following information to the CA for inclusion in the commissioning plan:
1. Plan for delivery and review of submittals, systems manuals, and other documents and reports.
 2. Identification of installed systems, assemblies, equipment, and components including design changes that occurred during the construction phase.
 3. Process and schedule for completing construction checklists and manufacturer's prestart and startup checklists for HVAC&R systems, assemblies, equipment, and components to be verified and tested.
 4. Certificate of completion certifying that installation, prestart checks, and startup procedures have been completed.
 5. Certificate of readiness certifying that HVAC&R systems, subsystems, equipment, and associated controls are ready for testing.
 6. Test and inspection reports and certificates.
 7. Corrective action documents.
 8. Verification of testing, adjusting, and balancing reports.

PART 2 - PRODUCTS

2.1 MATERIALS, LABOR, INSTRUMENTS, TOOLS, LADDERS AND APPARATUS

- A. The Contractor shall provide all materials, labor, instruments, tools, ladders, and apparatus necessary to start-up, perform operating performance test and systems conditioning.
- B. The Contractor shall be responsible for maintaining the commissioning documentation until final acceptance of the Project. The checklists in appendix one are samples for bidding purposes. Final checklists will be produced by the CA and provided prior to beginning commissioning. The commissioning documentation shall be kept current by the Contractor and shall be available for inspection at all times. At the time of acceptance of the Project, the Contractor shall surrender three (3) completed copies of the commissioning documentation to the DEN Project Manager.

PART 3 - EXECUTION

3.1 TESTING PREPARATION

- A. Before request for contract compliance inspection and system commissioning all equipment, components, and systems shall be started-up, adjusted, calibrated; set, test and check all electric disconnect, fuses, circuit breakers, valves, dampers,

temperatures and pressures of all systems for proper operation and performance. After completion of the start-up and operating performance test, the Contractor will notify the Owner in writing that the system is ready for commissioning.

B. Information, date, etc. from start-up and operating performance test may be utilized, as appropriate, to execute preliminary commissioning documentation, however, certification of equipment and systems for the preliminary commissioning phase shall be completed in accordance with the following Article of this section of the specifications.

1. Start-up and operating performance test documentation shall include the following:

a. Rooftop Air Handling Unit Systems:

- 1) Coil entering and leaving air temperature.
- 2) Coil entering and leaving water temperature.
- 3) Space temperatures at thermostats or sensors.
- 4) Total fan air CFM.
- 5) Selected airflow readings at major branch ducts and grilles.
- 6) Fan speed.
- 7) Fan total static pressure.

b. Air Conditioning Unit Systems:

- 1) Coil entering and leaving air temperature.
- 2) Space temperatures at thermostats or sensors.
- 3) Total fan air CFM.
- 4) Selected airflow readings at major branch ducts and grilles.
- 5) Fan speed.
- 6) Fan total static pressure.

c. Exhaust Fans:

- 1) Total fan CFM.
- 2) Fan speed.
- 3) Fan total static pressure.

d. Electric Motors:

- 1) Full load amperes and voltage.
- 2) Starter heater size and rated amperage range for heater installed.
- 3) Measure running current, after adjustment of system to deliver rated performance.

e. Controls:

- 1) Operational setting of controllers and instruments.
- 2) Positioning and function of valves and dampers.
- 3) Interlock and operation of systems (HVAC and Fire).

f. Glycol System:

- 1) Compressor safety and operating controls.
- 2) Capacity reduction controls.
- 3) Low ambient controls.
- 4) Condenser fan operation.

- C. Certify that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- D. Certify that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- E. Certify that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- F. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- G. Inspect and verify the position of each device and interlock identified on checklists.
- H. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- I. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CA.

3.2 TESTING AND BALANCING VERIFICATION

- A. Prior to performance of testing and balancing Work, provide copies of reports, sample forms, checklists, and certificates to the CA.
- B. Notify the CA at least [10] <Insert number> days in advance of testing and balancing Work, and provide access for the CA to witness testing and balancing Work.
- C. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CA.
 1. The CA will notify testing and balancing [Contractor] [Subcontractor] [10] <Insert number> days in advance of the date of field verification. Notice will not include data points to be verified.
 2. The testing and balancing [Contractor] [Subcontractor] shall use the same instruments (by model and serial number) that were used when original data were collected.
 3. Failure of an item includes, other than sound, a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final testing, adjusting, and balancing report. For sound pressure readings, a

deviation of 3 dB shall result in rejection of final testing. Variations in background noise must be considered.

4. Remedy the deficiency and notify the CA so verification of failed portions can be performed.

3.3 SYSTEM COMMISSIONING

- A. All systems, components, equipment, etc., furnished as part of this Contract shall be subjected to system commissioning as hereinafter specified. All systems, components, equipment, etc., commissioned In this section of the Specifications shall be evaluated based on the sequences of control/operation, performance characteristics, and equipment schedules, etc., as specified in other sections of the Specifications and as shown on the Contract drawings. Systems, components, equipment, etc., that do not have specified operating sequence, etc., shall be operated and evaluated based on their use and function for this project.
- B. Commissioning Documentation: The Contractor shall maintain the commissioning documentation in 3-ring binders. The commissioning documentation shall be organized by system when practicable. All pages shall be numbered and a table of contents page shall be provided. The commissioning documentation shall include, but not be limited to, the following:
 1. Design Criteria provided by the A/E.
 2. Approved Test and Balance Report for the system or component being commissioned, provided by Test and Balance Contractor.
 3. Approved submittals for all equipment to be commissioned, provided by Mechanical Contractor.
 4. All approved shop drawings of equipment to be commissioned. Shop drawings shall be full size sheets folded as required to fit in binders. Provided by Mechanical Contractor.
 5. All pre-commissioning checklists initialized by indicated personnel organized by system and subsystem.
 6. All functional performance test checklist initialized by indicated personnel organized by systems and subsystems.
 7. Three copies of the Operation and Maintenance Manuals specified in other sections of these specifications shall be reviewed by the CA for completeness and for applicability. The manuals shall be incorporated in the Commissioning Documentation prior to the commencement of the training required in other sections of the specifications. Preparation of Operation and Maintenance Manuals shall be as specified in other sections of these specifications.
- C. Shop Drawings and As-Built Drawings and Specifications shall be assembled by the Contractor after completion of the pre-commissioning phase and turned over to the DEN Project Manager. Changes as a result of subsequent Commissioning procedures will be incorporated (as required) at the conclusion of final Commissioning.
- D. Commissioning Schedule:
 1. Phase 1 - Preliminary Commissioning: All shop drawings, including but not

- limited to, equipment, controls, test and balance reports, and operation and maintenance manuals, shall be submitted and approved by the CA. In addition, all pre-commissioning checklists shall be completed and initialed by all parties.
2. Phase 2 - Functional Performance Testing: Functional Performance Testing shall be performed as indicated on the Functional Performance Test Checklists. Functional Performance Testing shall not begin until Phase 1 of the commissioning process is complete. Owner's operation and maintenance personnel shall observe the function performance testing. The Contractor may perform initial system familiarization and training of Owner's operating and maintenance personnel required under other sections of the Specification during the functional performance testing.
 3. Functional Performance Test Notification: The Contractor shall notify the CA two (2) weeks before functional performance testing is to begin.
 4. Phase 3 - System training and operating instructions shall be conducted by the Contractor as indicated in the specifications of each item of equipment. The Contractor shall be responsible for specified training and operating instructions being observed by the CA

E. Pre-Commissioning Checklists:

1. Pre-Commissioning Checklists shall be developed by the CA and shall be executed and certified prior to the commencement of functional performance testing. The indicated initial is required in each location for all items, except where an "X" is shown indicating an initial is not required. See initials legend below for required initials. The pre-commissioning checklist will not be accepted as complete until all items have been initialed signifying this portion of the project is ready for Functional Performance Testing. The Contractor shall provide the CA with the completed Pre-Commissioning Checklists for his review and initials. The CA shall be the last person to initial each checklist item. The Contractor shall submit for approval a list of all contractor and subcontractor representatives responsible for the completion of the pre-commissioning checklist phase of the project. This list of representatives shall be submitted two (2) weeks prior to commencement of any pre-commissioning activities of any systems or equipment. Representatives may be replaced only after written approval from the CA.
2. Initials Legend:
 - a. Construction Manager.
 - b. Mechanical Contractor's representative.
 - c. Electrical Contractor' s representative.
 - d. Commissioning Agent.
 - e. Balancing Contractor's representative.
 - f. Controls Contractor's representative.
3. Blank Example Pre-Commissioning Checklists are in Appendix, located at the end of this Section of the specifications. A separate Pre-Commissioning checklist shall be provided for each system and piece of HVAC equipment to be Commissioned.

F. Functional Performance Test Checklist:

1. Functional performance testing shall be performed by the Contractor as directed by the CA and observed by a commissioning team consisting of the individuals indicated on the Functional Performance Test Checklists. The Contractor shall submit in writing a list of all contractor and subcontractor representatives responsible for the functional performance testing phase of the project. This list of representatives shall be submitted two (2) weeks prior to the commencement of functional performance testing of systems and equipment. All representatives shall remain on the commissioning team throughout functional performance testing. Substitutions will not be permitted. Functional performance test checklists shall be completed in the presence of all commissioning team personnel at the time of the functional performance test.
2. Upon failure of completion of a functional performance test checklist, the Contractor shall provide a written report to the CA listing the deficiencies causing the failure and remedies to correct all deficiencies. After the Contractor has corrected all deficiencies, the entire functional performance test checklist for the item of equipment shall be repeated. If possible, corrections can be accomplished during the functional performance testing of equipment in other non-related systems. In any case, no system will be accepted until all equipment items in the system have complete functional performance test checklists thereby demonstrating satisfactory performance.
3. Failure to complete 2 functional performance test checklists constitutes failure of Phase 2 of the HVAC Commissioning process. The Contractor shall provide a written report to the CA listing the deficiencies causing all failures and remedies to correct all deficiencies. After correction of all deficiencies, Phase 2 of the HVAC Commissioning process shall be repeated in its entirety. The Contractor shall give the CA two (2) weeks notice before repeat functional performance testing is scheduled. Should the first or one subsequent functional performance test fail, the Owner reserves the right to obtain compensation from the Contractor for fees and expenses incurred in conjunction with having to perform more than two (2) functional performance tests.
4. Blank examples functional performance test checklists are in the Appendix 2 located at the end of this section of the specifications. A separate Functional Performance Checklist shall be provided for each system and piece of equipment to be Commissioned.

3.4 DEMONSTRATION TEST

- A. After completion of system start-up, operating performance test and commissioning, but before Owner acceptance, the Contractor shall conduct a 72 hour dynamic mode demonstration of the systems provided under this Contract. The intent of the 72 hour dynamic test is to verify that the mechanical and electrical equipment will respond as designed to meet the changes that may occur under varying indoor/outdoor conditions including seasonal variations and occupancy loads.
- B. A detailed procedure and sequence of events shall be developed by the Contractor and submitted to the Owner and CA for review and approval. Procedures and sequence of events should contain as a minimum the following activities:
 1. Hours 1-4: Bring all systems on line for standard operations and parameters.

2. Hours 5-28: Operate all systems under normal parameters and verify proper operation.
 3. Hours 29-52: Validation of systems operation through indoor/outdoor changes to include heating, cooling, ventilation, humidity control, domestic and control systems.
 4. Hours 69-72: Return of systems to normal operation.
- C. Systems and their associated equipment which are to be included in the dynamic test are all systems and components furnished under this Contract and as a minimum will include, but are not limited to the following:
1. Pressurization Air Handling Systems.
 2. Air Handling Systems.
 3. Chilled Water Systems.
 4. Domestic Water Systems.
 5. Fan Coil Systems.
 6. Pumping Systems.
 7. Exhaust Systems.
 8. Air Filtration Systems.
 9. Building Management and Control Systems.
- D. Contractor shall notify the Owner and CA in writing that the Project is completed and ready for the demonstration test. Schedule for test will then be established and documented. Initiation of the 72 hours dynamic test will not occur until all systems are balanced, operational, and incorporated into the building management and control system. Should the demonstration test fail for any reason, the problems shall be corrected and another demonstration test conducted. Should the first or one subsequent demonstration test fail, the Owner reserves the right to obtain compensation from the Contractor for fees and expenses incurred in conjunction with having to witness more than two (2) 72 hour demonstration tests.
- E. The attendees of each 72 hour demonstration test shall include representative from the following organizations:
1. General Contractor.
 2. Mechanical Contractor.
 3. Electrical Contractor.
 4. Test and Balance Contractor.
 5. Building Management and Control System Contractor.
 6. DEN Project Manager of Record.
 7. Mechanical Engineer.
 8. Electrical Engineer.
 9. Commissioning Agent.
- F. Minor problems are anticipated and the necessary personnel required to correct problems and adjust systems need to be available to insure continuation of the dynamic testing process. If major problems are encountered, at the discretion of the Owner and CA, the testing will be terminated and rescheduled.
- G. The Contractor shall notify any external organizations, which would include but not be

limited to Fire Department which are not directly involved in the testing, but might be affected due to interface to insure that alarms do not occur.

- H. During the demonstration test, all systems shall operate in the "hands-off" automatic mode in accordance with the requirements of the Contract Documents. Changes in operating modes required to simulate load shifting, seasonal changeover, emergency modes, etc., will be accomplished by changing set points and equipment operating status at the BMS central control console as required to observe capacity control and monitoring. Provide a readout of space temperature at each thermostat building relative humidity, building pressurization, chilled water supply and return temperatures and chiller capacity.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 230800

SECTION 230900 - INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes control equipment for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-wired controls.
- B. Related Sections include the following:
 - 1. Section 230519 "Meters and Gages for HVAC Piping" for measuring equipment that relates to this Section.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to this Section.

1.3 DEFINITIONS

- A. DDC: Direct digital control.
- B. I/O: Input/output.
- C. LonWorks: A control network technology platform for designing and implementing interoperable control devices and networks.
- D. MS/TP: Master slave/token passing.
- E. PC: Personal computer.
- F. PID: Proportional plus integral plus derivative.
- G. RTD: Resistance temperature detector.

1.4 SYSTEM PERFORMANCE

- A. Comply with the following performance requirements:

1. Graphic Display: Display graphic with minimum 20 dynamic points with current data within 10 seconds.
2. Graphic Refresh: Update graphic with minimum 20 dynamic points with current data within 8 seconds.
3. Object Command: Reaction time of less than two seconds between operator command of a binary object and device reaction.
4. Object Scan: Transmit change of state and change of analog values to control units or workstation within six seconds.
5. Alarm Response Time: Annunciate alarm at workstation within 45 seconds. Multiple workstations must receive alarms within five seconds of each other.
6. Program Execution Frequency: Run capability of applications as often as five seconds, but selected consistent with mechanical process under control.
7. Performance: Programmable controllers shall execute DDC PID control loops, and scan and update process values and outputs at least once per second.
8. Reporting Accuracy and Stability of Control: Report values and maintain measured variables within tolerances as follows:
 - a. Water Temperature: Plus or minus 1 deg F (0.5 deg C).
 - b. Water Flow: Plus or minus 5 percent of full scale.
 - c. Water Pressure: Plus or minus 2 percent of full scale.
 - d. Space Temperature: Plus or minus 1 deg F (0.5 deg C).
 - e. Ducted Air Temperature: Plus or minus 1 deg F (0.5 deg C).
 - f. Outside Air Temperature: Plus or minus 2 deg F (1.0 deg C).
 - g. Dew Point Temperature: Plus or minus 3 deg F (1.5 deg C).
 - h. Temperature Differential: Plus or minus 0.25 deg F (0.15 deg C).
 - i. Relative Humidity: Plus or minus 5 percent.
 - j. Airflow (Pressurized Spaces): Plus or minus 3 percent of full scale.
 - k. Airflow (Measuring Stations): Plus or minus 5 percent of full scale.
 - l. Airflow (Terminal): Plus or minus 10 percent of full scale.
 - m. Air Pressure (Space): Plus or minus 0.01-inch wg (2.5 Pa).
 - n. Air Pressure (Ducts): Plus or minus 0.1-inch wg (25 Pa).
 - o. Carbon Monoxide: Plus or minus 5 percent of reading.
 - p. Carbon Dioxide: Plus or minus 50 ppm.
 - q. Electrical: Plus or minus 5 percent of reading.

1.5 SEQUENCE OF OPERATION

1.6 ACTION SUBMITTALS

- A. Product Data: Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.
 1. DDC System Hardware: Bill of materials of equipment indicating quantity, manufacturer, and model number. Include technical data for operator workstation equipment, interface equipment, control units, transducers/transmitters, sensors,

- actuators, valves, relays/switches, control panels, and operator interface equipment.
2. Control System Software: Include technical data for operating system software, operator interface, color graphics, and other third-party applications.
 3. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Bill of materials of equipment indicating quantity, manufacturer, and model number.
 2. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.
 3. Wiring Diagrams: Power, signal, and control wiring.
 4. Details of control panel faces, including controls, instruments, and labeling.
 5. Written description of sequence of operation.
 6. Schedule of dampers including size, leakage, and flow characteristics.
 7. Schedule of valves including flow characteristics.
 8. DDC System Hardware:
 - a. Wiring diagrams for control units with termination numbers.
 - b. Schematic diagrams and floor plans for field sensors and control hardware.
 - c. Schematic diagrams for control, communication, and power wiring, showing trunk data conductors and wiring between operator workstation and control unit locations.
 9. Control System Software: List of color graphics indicating monitored systems, data (connected and calculated) point addresses, output schedule, and operator notations.
 10. Controlled Systems:
 - a. Schematic diagrams of each controlled system with control points labeled and control elements graphically shown, with wiring.
 - b. Scaled drawings showing mounting, routing, and wiring of elements including bases and special construction.
 - c. Written description of sequence of operation including schematic diagram.
 - d. Points list.
- C. Samples for Initial Selection: For each color required, of each type of thermostat[**or sensor**] cover with factory-applied color finishes.
- D. Samples for Verification: For each color required, of each type of thermostat[**or sensor**] cover.

1.7 INFORMATIONAL SUBMITTALS

- A. Data Communications Protocol Certificates: Certify that each proposed DDC system component complies with ASHRAE 135.
- B. Data Communications Protocol Certificates: Certify that each proposed DDC system component complies with LonWorks.
- C. Qualification Data: For **[Installer]** **[and]** **[manufacturer]**.
- D. Software Upgrade Kit: For Owner to use in modifying software to suit future systems revisions or monitoring and control revisions.
- E. Field quality-control test reports.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For HVAC instrumentation and control system to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - 1. Maintenance instructions and lists of spare parts for each type of control device and compressed air station.
 - 2. Interconnection wiring diagrams with identified and numbered system components and devices.
 - 3. Keyboard illustrations and step-by-step procedures indexed for each operator function.
 - 4. Inspection period, cleaning methods, cleaning materials recommended, and calibration tolerances.
 - 5. Calibration records and list of set points.
- B. Software and Firmware Operational Documentation: Include the following:
 - 1. Software operating and upgrade manuals.
 - 2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
 - 3. Device address list.
 - 4. Printout of software application and graphic screens.
 - 5. Software license required by and installed for DDC workstations and control systems.

1.9 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Replacement Materials: One replacement diaphragm or relay mechanism for each unique [pneumatic damper motor] [valve motor] [controller] [thermostat] [positioning relay].
2. Maintenance Materials: [One] <Insert number required> thermostat adjusting key(s).
3. Maintenance Materials: One pneumatic thermostat test kit.

1.10 QUALITY ASSURANCE

- A. Installer Qualifications: Automatic control system manufacturer's authorized representative who is trained and approved for installation of system components required for this Project.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with ASHRAE 135 for DDC system components.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to equipment manufacturer.
- B. System Software: Update to latest version of software at Project completion.

1.12 COORDINATION

- A. Coordinate location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation.
- B. Coordinate equipment with Section 281600 "Intrusion Detection" to achieve compatibility with equipment that interfaces with that system and with building master clock.
- C. Coordinate equipment with Section 281300 "Access Control" to achieve compatibility with equipment that interfaces with that system.
- D. Coordinate equipment with Section 275313 "Clock Systems" to achieve compatibility with equipment that interfaces with that system.
- E. Coordinate equipment with Section 284619 "PLC Electronic Detention Monitoring and Control Systems" to achieve compatibility with equipment that interfaces with that system.

- F. Coordinate equipment with Section 260943.13 "Addressable-Fixture Lighting Controls" and Section 260943.23 "Relay-Based Lighting Controls" to achieve compatibility with equipment that interfaces with that system.
- G. Coordinate equipment with Section 283111 "Digital, Addressable Fire-Alarm System" and Section 283112 "Zoned (DC Loop) Fire-Alarm System" to achieve compatibility with equipment that interfaces with that system.
- H. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.
- I. Coordinate equipment with Section 260913 "Electrical Power Monitoring and Control" to achieve compatibility of communication interfaces.
- J. Coordinate equipment with Section 262416 "Panelboards" to achieve compatibility with starter coils and annunciation devices.
- K. Coordinate equipment with Section 262419 "Motor-Control Centers" to achieve compatibility with motor starters and annunciation devices.
- L. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-in-Place Concrete."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.
 - 2. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 CONTROL SYSTEM

- A. **[Available]**Manufacturers:
 - 1. [Alerton Inc.](#)
 - 2. [American Auto-Matrix.](#)
 - 3. [Andover Controls Corporation.](#)
 - 4. [Automated Logic Corporation.](#)
 - 5. [Carel.](#)
 - 6. [Delta Controls Inc.](#)
 - 7. [EDA Controls Corp.](#)

8. [Electronic Systems USA, Inc.](#)
 9. [Functional Devices Inc.](#)
 10. [Heat-Timer Corporation.](#)
 11. [Honeywell International Inc.: Home & Building Control.](#)
 12. [Impact Energy Controls Corp.](#)
 13. [Invensys Building Systems.](#)
 14. [Johnson Controls, Inc.: Controls Group.](#)
 15. [KMC Controls/Kreuter Manufacturing Company.](#)
 16. [Luwa USA, Inc.: Textile Air Engineering.](#)
 17. [MAMAC Systems, Inc.](#)
 18. [McQuay International.](#)
 19. [Pneuline Controls.](#)
 20. [Sauter Controls Corporation.](#)
 21. [Siemens Building Technologies, Inc.](#)
 22. [Solidyne Corp.](#)
 23. [Spence Engineering Company, Inc.](#)
 24. [Staefa Control System Inc.; Siemens Building Technologies, Inc.](#)
 25. [TAC Americas, INC.](#)
 26. [TCS/Basys Controls.](#)
 27. [tekmar Control Systems, Inc.](#)
 28. [Teletrol Systems Incorporated.](#)
 29. [Temco Controls Ltd. USA.](#)
 30. [Tour & Andersson Control, Inc.](#)
 31. [Trane; Worldwide Applied Systems Group](#)
 32. [Triangle MicroSystems, Inc.](#)
 33. [Voltec, Inc.](#)
 34. **<Insert manufacturer's name.>**
- B. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, and accessories to control mechanical systems.
- C. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, accessories, and software connected to distributed controllers operating in multiuser, multitasking environment on token-passing network and programmed to control mechanical systems. An operator workstation permits interface with the network via dynamic color graphics with each mechanical system, building floor plan, and control device depicted by point-and-click graphics.
- D. Control system shall include the following:
1. Building intrusion detection system specified in Section 281600 "Intrusion Detection."
 2. Building clock control system specified in Section 275313 "Clock Systems."
 3. Building lighting control system specified in Section 260943.13 "Addressable-Fixture Lighting Controls" and Section 260943.23 "Relay-Based Lighting Controls."
 4. Fire alarm system specified in Section 283111 "Digital, Addressable Fire-Alarm System" and Section 283112 "Zoned (DC Loop) Fire-Alarm System."

2.3 DDC EQUIPMENT

- A. Operator Workstation: **[One]** **[Two]** **<Insert number>** PC-based microcomputer(s) with minimum configuration as follows:
1. Motherboard: With 8 integrated USB 2.0 ports, integrated Intel Pro 10/100 (Ethernet), integrated audio, bios, and hardware monitoring.
 2. Processor: **[Intel Pentium 4]** **<Insert name>**, **<Insert clock speed>** MHz.
 3. Random-Access Memory: **[512]** **<Insert number>** MB.
 4. Graphics: Video adapter, minimum **[1280 x 1024]** **[1600 x 1200]** **<Insert value>** pixels, **[64]** **<Insert number>**-MB video memory, with TV out.
 5. Monitor: **[17 inches (430 mm)]** **[19 inches (480 mm)]** **<Insert size>**, LCD color.
 6. Keyboard: QWERTY, 105 keys in ergonomic shape.
 7. Floppy-Disk Drive: 1.44 MB.
 8. Hard-Disk Drive: **[80 GB]** **<Insert capacity>**.
 9. CD-ROM Read/Write Drive: **[48x24x48]** **<Insert value>**.
 10. Mouse: Three button, optical.
 11. Uninterruptible Power Supply: **[2]** **<Insert capacity>** kVa.
 12. Operating System: **[Microsoft Windows XP Professional]** **<Insert system name>** with high-speed Internet access.
 - a. ASHRAE 135 Compliance: Workstation shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.
 - b. LonWorks Compliance: Control units shall use LonTalk protocol and communicate using EIA/CEA 709.1 datalink/physical layer protocol.
 13. Printer: Black-and-white, laser-jet type as follows:
 - a. Print Head: **[1200 x 1200]** **<Insert value>** dpi resolution.
 - b. Paper Handling: Minimum of **[250]** **<Insert number>** sheet trays.
 - c. Print Speed: Minimum of **[120]** **<Insert number>** characters per second.
 14. Printer: Color, ink-jet type as follows:
 - a. Print Head: **[4800 x 1200]** **<Insert value>** dpi optimized color resolution.
 - b. Paper Handling: Minimum of **[100]** **<Insert number>** sheets.
 - c. Print Speed: Minimum of **[17]** **<Insert number>** ppm in black and **[12]** **<Insert number>** ppm in color.
 15. Application Software:
 - a. I/O capability from operator station.
 - b. System security for each operator via software password and access levels.
 - c. Automatic system diagnostics; monitor system and report failures.
 - d. Database creation and support.
 - e. Automatic and manual database save and restore.
 - f. Dynamic color graphic displays with up to **[10]** **<Insert number>** screen displays at once.

- g. Custom graphics generation and graphics library of HVAC equipment and symbols.
- h. Alarm processing, messages, and reactions.
- i. Trend logs retrievable in spreadsheets and database programs.
- j. Alarm and event processing.
- k. Object and property status and control.
- l. Automatic restart of field equipment on restoration of power.
- m. Data collection, reports, and logs. Include standard reports for the following:
 - 1) Current values of all objects.
 - 2) Current alarm summary.
 - 3) Disabled objects.
 - 4) Alarm lockout objects.
 - 5) Logs.
- n. Custom report development.
- o. Utility and weather reports.
- p. Workstation application editors for controllers and schedules.
- q. Maintenance management.

16. Custom Application Software:

- a. English language oriented.
- b. Full-screen character editor/programming environment.
- c. Allow development of independently executing program modules with debugging/simulation capability.
- d. Support conditional statements.
- e. Support floating-point arithmetic with mathematic functions.
- f. Contains predefined time variables.

B. Diagnostic Terminal Unit: Portable notebook-style, PC-based microcomputer terminal capable of accessing system data by connecting to system network with minimum configuration as follows:

1. System: With one integrated USB 2.0 port, integrated Intel Pro 10/100 (Ethernet), integrated audio, bios, and hardware monitoring.
2. Processor: [**Intel Pentium 4**] <Insert name>, <Insert clock speed> MHz.
3. Random-Access Memory: [**128**] <Insert number> MB.
4. Graphics: Video adapter, minimum [**800 x 600**] [**1024 x 768**] <Insert value> pixels, [**64**] <Insert number>-MB video memory.
5. Monitor: [**17 inches** (430 mm)] [**19 inches** (480 mm)] <Insert size>, LCD color.
6. Keyboard: QWERTY 105 keys in ergonomic shape.
7. Floppy-Disk Drive: 1.44 MB.
8. Hard-Disk Drive: [**800 MB**] <Insert capacity>.
9. CD-ROM Read/Write Drive: [**48x24x48**] <Insert value>.
10. Pointing Device: Touch pad or other internal device.

C. Control Units: Modular, comprising processor board with programmable, nonvolatile, random-access memory; local operator access and display panel; integral interface equipment; and backup power source.

1. Units monitor or control each I/O point; process information; execute commands from other control units, devices, and operator stations; and download from or upload to operator workstation or diagnostic terminal unit.
 2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
 - a. Global communications.
 - b. Discrete/digital, analog, and pulse I/O.
 - c. Monitoring, controlling, or addressing data points.
 - d. Software applications, scheduling, and alarm processing.
 - e. Testing and developing control algorithms without disrupting field hardware and controlled environment.
 3. Standard Application Programs:
 - a. Electric Control Programs: Demand limiting, duty cycling, automatic time scheduling, start/stop time optimization, night setback/setup, on-off control with differential sequencing, staggered start, antishort cycling, PID control, DDC with fine tuning, and trend logging.
 - b. HVAC Control Programs: Optimal run time, supply-air reset, and enthalpy switchover.
 - c. Chiller Control Programs: Control function of condenser-water reset, chilled-water reset, and equipment sequencing.
 - d. Programming Application Features: Include trend point; alarm processing and messaging; weekly, monthly, and annual scheduling; energy calculations; run-time totalization; and security access.
 - e. Remote communications.
 - f. Maintenance management.
 - g. Units of Measure: Inch-pound and SI (metric).
 4. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
 5. ASHRAE 135 Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.
 6. LonWorks Compliance: Control units shall use LonTalk protocol and communicate using EIA/CEA 709.1 datalink/physical layer protocol.
- D. Local Control Units: Modular, comprising processor board with electronically programmable, nonvolatile, read-only memory; and backup power source.
1. Units monitor or control each I/O point, process information, and download from or upload to operator workstation or diagnostic terminal unit.
 2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
 - a. Global communications.
 - b. Discrete/digital, analog, and pulse I/O.
 - c. Monitoring, controlling, or addressing data points.

3. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
 4. ASHRAE 135 Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.
 5. LonWorks Compliance: Control units shall use LonTalk protocol and communicate using EIA/CEA 709.1 datalink/physical layer protocol.
- E. I/O Interface: Hardwired inputs and outputs may tie into system through controllers. Protect points so that shorting will cause no damage to controllers.
1. Binary Inputs: Allow monitoring of on-off signals without external power.
 2. Pulse Accumulation Inputs: Accept up to 10 pulses per second.
 3. Analog Inputs: Allow monitoring of low-voltage (0- to 10-V dc), current (4 to 20 mA), or resistance signals.
 4. Binary Outputs: Provide on-off or pulsed low-voltage signal, selectable for normally open or normally closed operation[**with three-position (on-off-auto) override switches and status lights**].
 5. Analog Outputs: Provide modulating signal, either low voltage (0- to 10-V dc) or current (4 to 20 mA)[**with status lights, two-position (auto-manual) switch, and manually adjustable potentiometer**].
 6. Tri-State Outputs: Provide two coordinated binary outputs for control of three-point, floating-type electronic actuators.
 7. Universal I/Os: Provide software selectable binary or analog outputs.
- F. Power Supplies: Transformers with Class 2 current-limiting type or overcurrent protection; limit connected loads to 80 percent of rated capacity. DC power supply shall match output current and voltage requirements and be full-wave rectifier type with the following:
1. Output ripple of 5.0 mV maximum peak to peak.
 2. Combined 1 percent line and load regulation with 100-mic.sec. response time for 50 percent load changes.
 3. Built-in overvoltage and overcurrent protection and be able to withstand 150 percent overload for at least 3 seconds without failure.
- G. Power Line Filtering: Internal or external transient voltage and surge suppression for workstations or controllers with the following:
1. Minimum dielectric strength of 1000 V.
 2. Maximum response time of 10 nanoseconds.
 3. Minimum transverse-mode noise attenuation of 65 dB.
 4. Minimum common-mode noise attenuation of 150 dB at 40 to 100 Hz.

2.4 UNITARY CONTROLLERS

- A. Unitized, capable of stand-alone operation with sufficient memory to support its operating system, database, and programming requirements, and with sufficient I/O capacity for the application.

1. Configuration: Local keypad and display; diagnostic LEDs for power, communication, and processor; wiring termination to terminal strip or card connected with ribbon cable; memory with bios; and [72] <Insert number>-hour battery backup.
2. Operating System: Manage I/O communication to allow distributed controllers to share real and virtual object information and allow central monitoring and alarms. **[Perform scheduling with real-time clock.]** Perform automatic system diagnostics; monitor system and report failures.
3. ASHRAE 135 Compliance: Communicate using read (execute and initiate) and write (execute and initiate) property services defined in ASHRAE 135. Reside on network using MS/TP datalink/physical layer protocol and have service communication port for connection to diagnostic terminal unit.
4. LonWorks Compliance: Communicate using EIA/CEA 709.1 datalink/physical layer protocol using LonTalk protocol.
5. Enclosure: Dustproof rated for operation at 32 to 120 deg F (0 to 50 deg C).
6. Enclosure: Waterproof rated for operation at 40 to 150 deg F (5 to 65 deg C).

2.5 ALARM PANELS

- A. Unitized cabinet with suitable brackets for wall or floor mounting. Fabricate of 0.06-inch- (1.5-mm-) thick, furniture-quality steel or extruded-aluminum alloy, totally enclosed, with hinged doors and keyed lock and with manufacturer's standard shop-painted finish. **[Provide common keying for all panels.]**
- B. Indicating light for each alarm point, single horn, acknowledge switch, and test switch, mounted on hinged cover.
 1. Alarm Condition: Indicating light flashes and horn sounds.
 2. Acknowledge Switch: Horn is silent and indicating light is steady.
 3. Second Alarm: Horn sounds and indicating light is steady.
 4. Alarm Condition Cleared: System is reset and indicating light is extinguished.
 5. Contacts in alarm panel allow remote monitoring by independent alarm company.

2.6 ANALOG CONTROLLERS

- A. Step Controllers: 6- or 10-stage type, with heavy-duty switching rated to handle loads and operated by electric motor.
- B. Electric, Outdoor-Reset Controllers: Remote-bulb or bimetal rod-and-tube type, proportioning action with adjustable throttling range, adjustable set point, scale range minus 10 to plus 70 deg F (minus 23 to plus 21 deg C), and single- or double-pole contacts.
- C. Electronic Controllers: Wheatstone-bridge-amplifier type, in steel enclosure with provision for remote-resistance readjustment. Identify adjustments on controllers, including proportional band and authority.

1. Single controllers can be integral with control motor if provided with accessible control readjustment potentiometer.
- D. Fan-Speed Controllers: Solid-state model providing field-adjustable proportional control of motor speed from maximum to minimum of 55 percent and on-off action below minimum fan speed. Controller shall briefly apply full voltage, when motor is started, to rapidly bring motor up to minimum speed. Equip with filtered circuit to eliminate radio interference.
- E. Receiver Controllers: Single- or multiple-input models with control-point adjustment, direct or reverse acting with mechanical set-point adjustment with locking device, proportional band adjustment, authority adjustment, and proportional control mode.
 1. Remote-control-point adjustment shall be plus or minus 20 percent of sensor span, input signal of 3 to 13 psig (21 to 90 kPa).
 2. Proportional band shall extend from 2 to 20 percent for 5 psig (35 kPa).
 3. Authority shall be 20 to 200 percent.
 4. Air-supply pressure of 18 psig (124 kPa), input signal of 3 to 15 psig (21 to 103 kPa), and output signal of zero to supply pressure.
 5. Gages: [1-1/2 inches (38 mm)] [2-1/2 inches (64 mm)] [3-1/2 inches (89 mm)] in diameter, 2.5 percent wide-scale accuracy, and range to match transmitter input or output pressure.

2.7 TIME CLOCKS

- A. **[Available]Manufacturers:**
 1. [ATC-Diversified Electronics.](#)
 2. [Grasslin Controls Corporation.](#)
 3. [Paragon Electric Co., Inc.](#)
 4. [Precision Multiple Controls, Inc.](#)
 5. [SSAC Inc.; ABB USA.](#)
 6. [TCS/Basys Controls.](#)
 7. [Theben AG - Lumilite Control Technology, Inc.](#)
 8. [Time Mark Corporation.](#)
 9. **<Insert manufacturer's name.>**
- B. Seven-day, programming-switch timer with synchronous-timing motor and seven-day dial; continuously charged, nickel-cadmium-battery-driven, eight-hour, power-failure carryover; multiple-switch trippers; minimum of two and maximum of eight signals per day with two normally open and two normally closed output contacts.
- C. Solid-state, programmable time control with [4] [8] **<Insert number>** separate programs each with up to 100 on-off operations; 1-second resolution; lithium battery backup; keyboard interface and manual override; individual on-off-auto switches for each program; 365-day calendar with 20 programmable holidays; choice of fail-safe operation for each program; system fault alarm; and communications package allowing networking of time controls and programming from PC.

2.8 ELECTRONIC SENSORS

A. Description: Vibration and corrosion resistant; for wall, immersion, or duct mounting as required.

B. Thermistor Temperature Sensors and Transmitters:

1. **[Available]Manufacturers:**

- a. [BEC Controls Corporation.](#)
- b. [Ebtron, Inc.](#)
- c. [Heat-Timer Corporation.](#)
- d. [I.T.M. Instruments Inc.](#)
- e. [MAMAC Systems, Inc.](#)
- f. [RDF Corporation.](#)
- g. **<Insert manufacturer's name.>**

2. Accuracy: Plus or minus [0.5 deg F (0.3 deg C)] [0.36 deg F (0.2 deg C)] at calibration point.

3. Wire: Twisted, shielded-pair cable.

4. Insertion Elements in Ducts: Single point, [8 inches (200 mm)] [18 inches (460 mm)] long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft. (0.84 sq. m).

5. Averaging Elements in Ducts: [36 inches (915 mm) long, flexible] [72 inches (1830 mm) long, flexible] [18 inches (460 mm) long, rigid]; use where prone to temperature stratification or where ducts are larger than 10 sq. ft. (1 sq. m).

6. Insertion Elements for Liquids: Brass or stainless-steel socket with minimum insertion length of 2-1/2 inches (64 mm).

7. Room Sensor Cover Construction: Manufacturer's standard locking covers.

- a. Set-Point Adjustment: [Concealed] [Exposed].
- b. Set-Point Indication: [Concealed] [Keyed] [Exposed].
- c. Thermometer: [Concealed] [Exposed] [Red-reading glass] [Spiral bimetal].
- d. Color: **<Insert color from manufacturer's full range.>**
- e. Orientation: [Vertical] [Horizontal].

8. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.

9. Room Security Sensors: Stainless-steel cover plate with insulated back and security screws.

C. RTDs and Transmitters:

1. **[Available]Manufacturers:**

- a. [BEC Controls Corporation.](#)
- b. [MAMAC Systems, Inc.](#)
- c. [RDF Corporation.](#)
- d. **<Insert manufacturer's name.>**

2. Accuracy: Plus or minus 0.2 percent at calibration point.
 3. Wire: Twisted, shielded-pair cable.
 4. Insertion Elements in Ducts: Single point, [8 inches (200 mm)] [18 inches (460 mm)] long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft. (0.84 sq. m).
 5. Averaging Elements in Ducts: [18 inches (460 mm) long, rigid] [24 inches (610 mm) long, rigid] [48 inches (1200 mm) long, rigid] [24 feet (7.3 m) long, flexible]; use where prone to temperature stratification or where ducts are larger than 9 sq. ft. (0.84 sq. m); length as required.
 6. Insertion Elements for Liquids: Brass socket with minimum insertion length of 2-1/2 inches (64 mm).
 7. Room Sensor Cover Construction: Manufacturer's standard locking covers.
 - a. Set-Point Adjustment: [Concealed] [Exposed].
 - b. Set-Point Indication: [Concealed] [Keyed] [Exposed].
 - c. Thermometer: [Concealed] [Exposed] [Red-reading glass] [Spiral bimetal].
 - d. Color: <Insert color from manufacturer's full range.>
 - e. Orientation: [Vertical] [Horizontal].
 8. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.
 9. Room Security Sensors: Stainless-steel cover plate with insulated back and security screws.
- D. Humidity Sensors: Bulk polymer sensor element.
1. [Available]Manufacturers:
 - a. [BEC Controls Corporation.](#)
 - b. [General Eastern Instruments.](#)
 - c. [MAMAC Systems, Inc.](#)
 - d. [ROTRONIC Instrument Corp.](#)
 - e. [TCS/Basys Controls.](#)
 - f. [Vaisala.](#)
 - g. <Insert manufacturer's name.>
 2. Accuracy: [5] [2] percent full range with linear output.
 3. Room Sensor Range: 20 to 80 percent relative humidity.
 4. Room Sensor Cover Construction: Manufacturer's standard locking covers.
 - a. Set-Point Adjustment: [Concealed] [Exposed].
 - b. Set-Point Indication: [Concealed] [Keyed] [Exposed].
 - c. Thermometer: [Concealed] [Exposed] [Red-reading glass] [Spiral bimetal].
 - d. Color: <Insert color from manufacturer's full range.>
 - e. Orientation: [Vertical] [Horizontal].
 5. Duct Sensor: 20 to 80 percent relative humidity range with element guard and mounting plate.

6. Outside-Air Sensor: 20 to 80 percent relative humidity range with mounting enclosure, suitable for operation at outdoor temperatures of [32 to 120 deg F (0 to 50 deg C)] [minus 22 to plus 185 deg F (minus 30 to plus 85 deg C)] [minus 40 to plus 170 deg F (minus 40 to plus 76 deg C)].
 7. Duct and Sensors: With element guard and mounting plate, range of 0 to 100 percent relative humidity.
- E. Pressure Transmitters/Transducers:
1. **[Available]Manufacturers:**
 - a. [BEC Controls Corporation.](#)
 - b. [General Eastern Instruments.](#)
 - c. [MAMAC Systems, Inc.](#)
 - d. [ROTRONIC Instrument Corp.](#)
 - e. [TCS/Basys Controls.](#)
 - f. [Vaisala.](#)
 - g. <Insert manufacturer's name.>
 2. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
 - a. Accuracy: 2 percent of full scale with repeatability of 0.5 percent.
 - b. Output: 4 to 20 mA.
 - c. Building Static-Pressure Range: 0- to 0.25-inch wg (0 to 62 Pa).
 - d. Duct Static-Pressure Range: 0- to 5-inch wg (0 to 1240 Pa).
 3. Water Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig (1034-kPa) operating pressure; linear output 4 to 20 mA.
 4. Water Differential-Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig (1034-kPa) operating pressure and tested to 300-psig (2070-kPa); linear output 4 to 20 mA.
 5. Differential-Pressure Switch (Air or Water): Snap acting, with pilot-duty rating and with suitable scale range and differential.
 6. Pressure Transmitters: Direct acting for gas, liquid, or steam service; range suitable for system; linear output 4 to 20 mA.
- F. Room Sensor Cover Construction: Manufacturer's standard locking covers.
1. Set-Point Adjustment: **[Concealed] [Exposed]**.
 2. Set-Point Indication: **[Concealed] [Keyed] [Exposed]**.
 3. Thermometer: **[Concealed] [Exposed] [Red-reading glass] [Spiral bimetal]**.
 4. Color: <Insert color from manufacturer's full range.>
 5. Orientation: **[Vertical] [Horizontal]**.
- G. Room sensor accessories include the following:
1. Insulating Bases: For sensors located on exterior walls.

2. Guards: [**Locking; heavy-duty, transparent plastic; mounted on separate base**] [**Metal wire, tamperproof**] [**Locking, solid metal, ventilated**].
3. Adjusting Key: As required for calibration and cover screws.

2.9 PNEUMATIC SENSORS

A. Pneumatic Transmitters: Vibration and corrosion resistant.

1. Space-Temperature Sensors: Linear-output type, **50 to 100 deg F** (10 to 38 deg C) range, with blank locking covers matching room thermostats.
2. Room Return-Air Temperature Sensors: Linear-output type with bimetal sensing element and corrosion-proof construction, **50 to 100 deg F** (10 to 38 deg C) range, designed to be mounted in light troffers.
3. Duct-Mounted or Immersion-Type Temperature Sensors: Range as required for **3- to 15-psig** (21- to 103-kPa) output signal.
4. Temperature Transmitters: Rigid-stem type with bimetal sensing elements unless averaging is required, **3- to 15-psig** (21- to 103-kPa) output signal.
 - a. Averaging-Element Sensors: Single- or multiple-unit capillary elements.
 - b. Tamperproof Sensors: Corrosion-resistant construction, suitable for mounting on vibrating surface with exposed capillary protected with temperature-compensated armor or protective tubing.
 - c. Pipe-Mounted Temperature-Sensing Elements: Rod-and-tube type; with separable wells filled with heat-conductive compound.
 - d. Outdoors: Provide bulb shield with mounting bracket.
5. Space and Duct Humidity Transmitters: One pipe, directly proportional, with minimum sensing span of 20 to 80 percent relative humidity for **3- to 15-psig** (21- to 103-kPa) output signal, corrosion resistant and temperature compensated, and with factory-calibrated adjustment.
 - a. Space Mounting: With covers to match thermostats.
6. Differential-Pressure Transmitters: One pipe, direct acting for gas, liquid, or steam service; pressure sensor and transmitter of linear-output type; with range of **0 to 50 psig** (0 to 344 kPa), and **3- to 15-psig** (21- to 103-kPa) output signal.
7. Differential-Air-Pressure Transmitters: One pipe, direct acting, double bell; unidirectional with suitable range for expected input; and temperature compensated.
 - a. Accuracy: 5 percent of full range and 2 percent of full scale at midrange.
 - b. Output Signal: **3 to 15 psig** (21 to 103 kPa).

B. Digital-to-Pneumatic Transducers: Convert plus or minus 12-V dc pulse-width-modulation outputs, or continuous proportional current or voltage to **0 to 20 psig** (0 to 140 kPa).

1. [**Available**] [Manufacturers](#):

- a. [BEC Controls Corporation](#).
- b. [MAMAC Systems, Inc.](#)
- c. **<Insert manufacturer's name.>**

- C. Pneumatic Valve/Damper Position Indicator: Potentiometer mounted in enclosure with adjustable crank-arm assembly connected to damper to transmit 0 to 100 percent valve/damper travel.

2.10 STATUS SENSORS

- A. Status Inputs for Fans: Differential-pressure switch with pilot-duty rating and with adjustable range of 0- to 5-inch wg (0 to 1240 Pa).
- B. Status Inputs for Pumps: Differential-pressure switch with pilot-duty rating and with adjustable pressure-differential range of 8 to 60 psig (55 to 414 kPa), piped across pump.
- C. Status Inputs for Electric Motors: Comply with ISA 50.00.01, current-sensing fixed- or split-core transformers with self-powered transmitter, adjustable and suitable for 175 percent of rated motor current.
- D. Voltage Transmitter (100- to 600-V ac): Comply with ISA 50.00.01, single-loop, self-powered transmitter, adjustable, with suitable range and 1 percent full-scale accuracy.
- E. Power Monitor: 3-phase type with disconnect/shorting switch assembly, listed voltage and current transformers, with pulse kilowatt hour output and 4- to 20-mA kW output, with maximum 2 percent error at 1.0 power factor and 2.5 percent error at 0.5 power factor.
- F. Current Switches: Self-powered, solid-state with adjustable trip current, selected to match current and system output requirements.
- G. Electronic Valve/Damper Position Indicator: Visual scale indicating percent of travel and 2- to 10-V dc, feedback signal.
- H. Water-Flow Switches: Bellows-actuated mercury or snap-acting type with pilot-duty rating, stainless-steel or bronze paddle, with appropriate range and differential adjustment, in NEMA 250, Type 1 enclosure.

1. **[Available]Manufacturers:**
 - a. [BEC Controls Corporation](#).
 - b. [I.T.M. Instruments Inc.](#)
 - c. **<Insert manufacturer's name.>**

2.11 GAS DETECTION EQUIPMENT

- A. **[Available]Manufacturers:**

1. [B. W. Technologies.](#)
2. [CEA Instruments, Inc.](#)
3. [Ebtron, Inc.](#)
4. [Gems Sensors Inc.](#)
5. [Greystone Energy Systems Inc.](#)
6. [Honeywell International Inc.; Home & Building Control.](#)
7. [INTEC Controls, Inc.](#)
8. [I.T.M. Instruments Inc.](#)
9. [MSA Canada Inc.](#)
10. [QEL/Quatrosense Environmental Limited.](#)
11. [Sauter Controls Corporation.](#)
12. [Sensidyne, Inc.](#)
13. [TSI Incorporated.](#)
14. [Vaisala.](#)
15. [Vulcain Inc.](#)
16. **<Insert manufacturer's name.>**

- B. Carbon Monoxide Detectors: Single or multichannel, dual-level detectors using solid-state plug-in sensors with a 3-year minimum life; suitable over a temperature range of **32 to 104 deg F** (0 to 40 deg C); with 2 factory-calibrated alarm levels at **[50 and 100] [35 and 200]** ppm.
- C. Carbon Dioxide Sensor and Transmitter: Single detectors using solid-state infrared sensors; suitable over a temperature range of **23 to 130 deg F** (minus 5 to plus 55 deg C) and calibrated for 0 to 2 percent, with continuous or averaged reading, 4- to 20-mA output;, for wall mounting.
- D. Oxygen Sensor and Transmitter: Single detectors using solid-state zircon cell sensing; suitable over a temperature range of **minus 32 to plus 1100 deg F** (0 to 593 deg C) and calibrated for 0 to 5 percent, with continuous or averaged reading, 4- to 20-mA output; for wall mounting.
- E. Occupancy Sensor: Passive infrared, with time delay, daylight sensor lockout, sensitivity control, and 180-degree field of view with vertical sensing adjustment; for flush mounting.

2.12 FLOW MEASURING STATIONS

- A. Duct Airflow Station: Combination of air straightener and multiport, self-averaging pitot tube station.
1. **[Available]Manufacturers:**
 - a. [Air Monitor Corporation.](#)
 - b. [Wetmaster Co., Ltd.](#)
 - c. **<Insert manufacturer's name.>**
 2. Casing: Galvanized-steel frame.

3. Flow Straightener: Aluminum honeycomb, 3/4-inch (20-mm) parallel cell, 3 inches (75 mm) deep.
4. Sensing Manifold: Copper manifold with bullet-nosed static pressure sensors positioned on equal area basis.

2.13 THERMOSTATS

A. [Available]Manufacturers:

1. [Erie Controls.](#)
2. [Danfoss Inc.; Air-Conditioning and Refrigeration Div.](#)
3. [Heat-Timer Corporation.](#)
4. [Sauter Controls Corporation.](#)
5. [tekmar Control Systems, Inc.](#)
6. [Theben AG - Lumilite Control Technology, Inc.](#)
7. <Insert manufacturer's name.>

B. Combination Thermostat and Fan Switches: Line-voltage thermostat with push-button or lever-operated fan switch.

1. Label switches ["**FAN ON-OFF**"] ["**FAN HIGH-LOW-OFF**"] ["**FAN HIGH-MED-LOW-OFF**"].
2. Mount on single electric switch box.

C. Electric, solid-state, microcomputer-based room thermostat with remote sensor.

1. Automatic switching from heating to cooling.
2. Preferential rate control to minimize overshoot and deviation from set point.
3. Set up for four separate temperatures per day.
4. Instant override of set point for continuous or timed period from 1 hour to 31 days.
5. Short-cycle protection.
6. Programming based on [**weekday, Saturday, and Sunday**] [**every day of week**].
7. Selection features include degree F or degree C display, 12- or 24-hour clock, keyboard disable, remote sensor, and fan on-auto.
8. Battery replacement without program loss.
9. Thermostat display features include the following:
 - a. Time of day.
 - b. Actual room temperature.
 - c. Programmed temperature.
 - d. Programmed time.
 - e. Duration of timed override.
 - f. Day of week.
 - g. System mode indications include "heating," "off," "fan auto," and "fan on."

D. Low-Voltage, On-Off Thermostats: NEMA DC 3, 24-V, bimetal-operated, mercury-switch type, with adjustable or fixed anticipation heater, concealed set-point

adjustment, 55 to 85 deg F (13 to 30 deg C) set-point range, and 2 deg F (1 deg C) maximum differential.

- E. Line-Voltage, On-Off Thermostats: Bimetal-actuated, open contact or bellows-actuated, enclosed, snap-switch or equivalent solid-state type, with heat anticipator; listed for electrical rating; with concealed set-point adjustment, 55 to 85 deg F (13 to 30 deg C) set-point range, and 2 deg F (1 deg C) maximum differential.
1. Electric Heating Thermostats: Equip with off position on dial wired to break ungrounded conductors.
 2. Selector Switch: Integral, manual on-off-auto.
- F. Remote-Bulb Thermostats: On-off or modulating type, liquid filled to compensate for changes in ambient temperature; with copper capillary and bulb, unless otherwise indicated.
1. Bulbs in water lines with separate wells of same material as bulb.
 2. Bulbs in air ducts with flanges and shields.
 3. Averaging Elements: Copper tubing with either single- or multiple-unit elements, extended to cover full width of duct or unit; adequately supported.
 4. Scale settings and differential settings are clearly visible and adjustable from front of instrument.
 5. On-Off Thermostat: With precision snap switches and with electrical ratings required by application.
 6. Modulating Thermostats: Construct so complete potentiometer coil and wiper assembly is removable for inspection or replacement without disturbing calibration of instrument.
- G. Fire-Protection Thermostats: Listed and labeled by an NRTL acceptable to authorities having jurisdiction; with fixed or adjustable settings to operate at not less than 75 deg F (24 deg C) above normal maximum operating temperature, and the following:
1. Reset: Manual.
 2. Reset: Automatic, with control circuit arranged to require manual reset at central control panel; with pilot light and reset switch on panel labeled to indicate operation.
- H. Pneumatic Room Thermostats: **[One] [Two] [Three]** pipe(s), fully proportional with adjustable throttling range and tamperproof locking settings, direct or reverse acting as required. Factory calibrated at 2.5 psig/deg F (17.2 kPa/deg C).
1. Factory Calibration: 2.5 psig/deg F (17.2 kPa/deg C).
 2. Range: 45 to 85 deg F (7 to 30 deg C).
 3. Sensitivity Adjustment Range: 1 to 4 psig/deg F (7 to 27.6 kPa/deg C).
 4. Dual-Temperature Thermostats: Automatic changeover from normal setting to lower setting for unoccupied cycles, with manual-reset lever to permit return to normal temperatures during unoccupied cycles, with automatic reset to normal during next cycle of operation.
 5. Limits: Field adjustable, to limit setting cooling set point below 75 deg F (24 deg C), and heating set point above 75 deg F (24 deg C).

6. Room Thermostat Cover Construction: Manufacturer's standard locking covers.
 - a. Set-Point Adjustment: [**Concealed**] [**Exposed**].
 - b. Set-Point Indication: [**Concealed**] [**Keyed**] [**Exposed**].
 - c. Thermometer: [**Concealed**] [**Exposed**] [**Red-reading glass**] [**Spiral bimetal**].
 - d. Color: <Insert color from manufacturer's full range.>
 - e. Orientation: [**Vertical**] [**Horizontal**].
 7. Room thermostat accessories include the following:
 - a. Insulating Bases: For thermostats located on exterior walls.
 - b. Thermostat Guards: [**Locking; heavy-duty, transparent plastic; mounted on separate base**] [**Metal wire, tamperproof**] [**Locking, solid metal, ventilated**].
 - c. Adjusting Key: As required for calibration and cover screws.
 - d. Aspirating Boxes: For flush-mounted aspirating thermostats.
 - e. Set-Point Adjustment: 1/2-inch- (13-mm-) diameter, adjustment knob.
 - I. Immersion Thermostat: Remote-bulb or bimetal rod-and-tube type, proportioning action with adjustable throttling range and adjustable set point.
 - J. Airstream Thermostats: Two-pipe, fully proportional, single-temperature type; with adjustable set point in middle of range, adjustable throttling range, plug-in test fitting or permanent pressure gage, remote bulb, bimetal rod and tube, or averaging element.
 - K. Electric, Low-Limit Duct Thermostat: Snap-acting, single-pole, single-throw, manual- [**or automatic-**] reset switch that trips if temperature sensed across any 12 inches (300 mm) of bulb length is equal to or below set point.
 1. Bulb Length: Minimum 20 feet (6 m).
 2. Quantity: One thermostat for every 20 sq. ft. (2 sq. m) of coil surface.
 - L. Electric, High-Limit Duct Thermostat: Snap-acting, single-pole, single-throw, manual- [**or automatic-**] reset switch that trips if temperature sensed across any 12 inches (300 mm) of bulb length is equal to or above set point.
 1. Bulb Length: Minimum 20 feet (6 m).
 2. Quantity: One thermostat for every 20 sq. ft. (2 sq. m) of coil surface.
 - M. Heating/Cooling Valve-Top Thermostats: Proportional acting for proportional flow, with molded-rubber diaphragm, remote-bulb liquid-filled element, direct and reverse acting at minimum shutoff pressure of 25 psig (172 kPa), and cast housing with position indicator and adjusting knob.
- 2.14 HUMIDISTATS
- A. [**Available**] [Manufacturers](#):
 1. [MAMAC Systems, Inc.](#)

2. [ROTRONIC Instrument Corp.](#)
3. **<Insert manufacturer's name.>**

- B. Pneumatic Room Humidistats: Wall-mounting, proportioning type with adjustable throttling range, **[20 to 90] [55 to 95] [25 to 65]** percent operating range, and cover matching room thermostat cover.
- C. Duct-Mounting Humidistats: Electric insertion, 2-position type with adjustable, 2 percent throttling range, 20 to 80 percent operating range, and single- or double-pole contacts.
- D. Pneumatic Duct-Mounting Humidistats: Proportioning type with adjustable throttling range, **[20 to 90] [55 to 95] [25 to 65]** percent operating range, in galvanized-steel duct box.

2.15 ACTUATORS

- A. Electric Motors: Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
1. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.
 3. Nonspring-Return Motors for Valves Larger Than **NPS 2-1/2 (DN 65)**: Size for running torque of **150 in. x lbf (16.9 N x m)** and breakaway torque of **300 in. x lbf (33.9 N x m)**.
 4. Spring-Return Motors for Valves Larger Than **NPS 2-1/2 (DN 65)**: Size for running and breakaway torque of **150 in. x lbf (16.9 N x m)**.
 5. Nonspring-Return Motors for Dampers Larger Than **25 Sq. Ft. (2.3 sq. m)**: Size for running torque of **150 in. x lbf (16.9 N x m)** and breakaway torque of **300 in. x lbf (33.9 N x m)**.
 6. Spring-Return Motors for Dampers Larger Than **25 Sq. Ft. (2.3 sq. m)**: Size for running and breakaway torque of **150 in. x lbf (16.9 N x m)**.
- B. Electronic Actuators: Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.
1. **[Available]Manufacturers:**
 - a. [Belimo Aircontrols \(USA\), Inc.](#)
 - b. **<Insert manufacturer's name.>**
 2. Valves: Size for torque required for valve close off at maximum pump differential pressure.
 3. Dampers: Size for running torque calculated as follows:

- a. Parallel-Blade Damper with Edge Seals: **7 inch-lb/sq. ft.** (86.8 kg-cm/sq. m) of damper.
 - b. Opposed-Blade Damper with Edge Seals: **5 inch-lb/sq. ft.** (62 kg-cm/sq. m) of damper.
 - c. Parallel-Blade Damper without Edge Seals: **4 inch-lb/sq. ft.** (49.6 kg-cm/sq. m) of damper.
 - d. Opposed-Blade Damper without Edge Seals: **3 inch-lb/sq. ft.** (37.2 kg-cm/sq. m) of damper.
 - e. Dampers with **2- to 3-Inch wg** (500 to 750 Pa) of Pressure Drop or Face Velocities of **1000 to 2500 fpm** (5 to 13 m/s): Increase running torque by 1.5.
 - f. Dampers with **3- to 4-Inch wg** (750 to 1000 Pa) of Pressure Drop or Face Velocities of **2500 to 3000 fpm** (13 to 15 m/s): Increase running torque by 2.0.
4. Coupling: V-bolt and V-shaped, toothed cradle.
 5. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
 6. Fail-Safe Operation: Mechanical, spring-return mechanism. Provide external, manual gear release on nonspring-return actuators.
 7. Power Requirements (Two-Position Spring Return): **[24] [120] [230]-V ac.**
 8. Power Requirements (Modulating): Maximum 10 VA at 24-V ac or 8 W at 24-V dc.
 9. Proportional Signal: 2- to 10-V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.
 10. Temperature Rating: **[Minus 22 to plus 122 deg F (Minus 30 to plus 50 deg C)] [40 to 104 deg F (5 to 40 deg C)].**
 11. Temperature Rating (Smoke Dampers): **Minus 22 to plus 250 deg F (Minus 30 to plus 121 deg C).**
 12. Run Time: **[12 seconds open, 5 seconds closed] [30 seconds] [60 seconds] [120 seconds].**
- C. Pneumatic Valve Operators: Rolling-diaphragm, spring-loaded, piston type with spring range as required and start-point adjustment[**and positioning relay**]. Operator shall maintain full shutoff at maximum pump differential pressure.
- D. Pneumatic Damper Operators: Rolling-diaphragm, piston type with adjustable stops and spring return, sized to operate with sufficient reserve power to provide smooth modulating action or two-position action. Where actuators operate in sequence, provide pilot positioners.
1. Pilot Positioners: With the following characteristics:
 - a. Start Point: Adjustable from **2 to 12 psig** (14 to 83 kPa).
 - b. Operating Span: Adjustable from **5 to 13 psig** (35 to 90 kPa).
 - c. Linearity: Plus or minus 10 percent of output signal span.
 - d. Hysteresis: 3 percent of span.
 - e. Response: **0.25-psig** (1723-Pa) input change.
 - f. Maximum Pilot Signal Pressure: **20 psig** (140 kPa).
 - g. Maximum Control Air-Supply Pressure: **60 psig** (410 kPa).

2. Actuator Housing: Molded or die-cast zinc or aluminum. [**Terminal unit actuators may be high-impact plastic with ambient temperature rating of 50 to 140 deg F (10 to 60 deg C) unless located in return-air plenums.**]
3. Inlet-Vane Operators: High pressure, with pilot positioners.

2.16 CONTROL VALVES

A. [Available] Manufacturers:

1. Danfoss Inc.; Air Conditioning & Refrigeration Div.
2. Erie Controls.
3. Hayward Industrial Products, Inc.
4. Magnatrol Valve Corporation.
5. Neles-Jamesbury.
6. Parker Hannifin Corporation; Skinner Valve Division.
7. Pneuline Controls.
8. Sauter Controls Corporation.
9. **<Insert manufacturer's name.>**

B. Control Valves: Factory fabricated, of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.

C. Hydronic system globe valves shall have the following characteristics:

1. **NPS 2 (DN 50)** and Smaller: Class [125] [250] bronze body, bronze trim, rising stem, renewable composition disc, and screwed ends with backseating capacity repackable under pressure.
2. **NPS 2-1/2 (DN 65)** and Larger: Class 125 iron body, bronze trim, rising stem, plug-type disc, flanged ends, and renewable seat and disc.
3. Internal Construction: Replaceable plugs and stainless-steel or brass seats.
 - a. Single-Seated Valves: Cage trim provides seating and guiding surfaces for plug on top and bottom.
 - b. Double-Seated Valves: Balanced plug; cage trim provides seating and guiding surfaces for plugs on top and bottom.
4. Sizing: [3-psig (21-kPa)] [5-psig (35-kPa)] **<Insert value>** maximum pressure drop at design flow rate or the following:
 - a. Two Position: Line size.
 - b. Two-Way Modulating: Either the value specified above or twice the load pressure drop, whichever is more.
 - c. Three-Way Modulating: Twice the load pressure drop, but not more than value specified above.
5. Flow Characteristics: Two-way valves shall have equal percentage characteristics; three-way valves shall have linear characteristics.

6. Close-Off (Differential) Pressure Rating: Combination of actuator and trim shall provide minimum close-off pressure rating of 150 percent of total system (pump) head for two-way valves and 100 percent of pressure differential across valve or 100 percent of total system (pump) head.
- D. Steam system globe valves shall have the following characteristics:
1. **NPS 2 (DN 50)** and Smaller: Class 125 bronze body, bronze trim, rising stem, renewable composition disc, and screwed ends with backseating capacity repackable under pressure.
 2. **NPS 2-1/2 (DN 65)** and Larger: Class 125 iron body, bronze trim, rising stem, plug-type disc, flanged ends, and renewable seat and disc.
 3. Internal Construction: Replaceable plugs and stainless-steel seats.
 - a. Single-Seated Valves: Cage trim provides seating and guiding surfaces for plug on top and bottom of guided plugs.
 - b. Double-Seated Valves: Balanced plug; cage trim provides seating and guiding surfaces for plugs on top and bottom of guided plugs.
 4. Sizing: For pressure drop based on the following services:
 - a. Two Position: 20 percent of inlet pressure.
 - b. Modulating [**15-psig (103-kPa) Steam**]: 80 percent of inlet steam pressure.
 - c. Modulating [**16- to 50-psig (110- to 350-kPa) Steam**]: 50 percent of inlet steam pressure.
 - d. Modulating [**More Than 50-psig (350-kPa) Steam**]: As indicated.
 5. Flow Characteristics: Modified linear characteristics.
 6. Close-Off (Differential) Pressure Rating: Combination of actuator and trim shall provide minimum close-off pressure rating of 150 percent of operating (inlet) pressure.
- E. Butterfly Valves: **200-psig (1380-kPa)**, **150-psig (1034-kPa)** maximum pressure differential, ASTM A 126 cast-iron or ASTM A 536 ductile-iron body and bonnet, extended neck, stainless-steel stem, field-replaceable EPDM or Buna N sleeve and stem seals.
1. Body Style: [**Wafer**] [**Lug**] [**Grooved**].
 2. Disc Type: [**Nickel-plated ductile iron**] [**Aluminum bronze**] [**Elastomer-coated ductile iron**] [**Epoxy-coated ductile iron**].
 3. Sizing: **1-psig (7-kPa)** maximum pressure drop at design flow rate.
- F. Terminal Unit Control Valves: Bronze body, bronze trim, two or three ports as indicated, replaceable plugs and seats, and union and threaded ends.
1. Rating: Class 125 for service at **125 psig (860 kPa)** and **250 deg F (121 deg C)** operating conditions.
 2. Sizing: **3-psig (21-kPa)** maximum pressure drop at design flow rate, to close against pump shutoff head.

3. Flow Characteristics: Two-way valves shall have equal percentage characteristics; three-way valves shall have linear characteristics.
- G. Self-Contained Control Valves: Bronze body, bronze trim, two or three ports as indicated, replaceable plugs and seats, and union and threaded ends.
1. Rating: Class 125 for service at **125 psig** (860 kPa) and **250 deg F** (121 deg C) operating conditions.
 2. Thermostatic Operator: [**Wax**] [**Liquid**]-filled [**integral**] [**remote**] sensor with [**integral**] [**remote**] adjustable dial.

2.17 DAMPERS

A. [**Available**] Manufacturers:

1. [Air Balance Inc.](#)
2. [Don Park Inc.: Autodamp Div.](#)
3. [TAMCO \(T. A. Morrison & Co. Inc.\)](#).
4. [United Enertech Corp.](#)
5. [Vent Products Company, Inc.](#)
6. <Insert manufacturer's name.>

B. Dampers: AMCA-rated, [**parallel**] [**opposed**]-blade design; **0.108-inch-** (2.8-mm-) minimum thick, galvanized-steel or **0.125-inch-** (3.2-mm-) minimum thick, extruded-aluminum frames with holes for duct mounting; damper blades shall not be less than **0.064-inch-** (1.6-mm-) thick galvanized steel with maximum blade width of **8 inches** (200 mm) and length of **48 inches** (1220 mm).

1. Secure blades to **1/2-inch-** (13-mm-) diameter, zinc-plated axles using zinc-plated hardware, with [**oil-impregnated sintered bronze**] [**nylon**] blade bearings, blade-linkage hardware of zinc-plated steel and brass, ends sealed against spring-stainless-steel blade bearings, and thrust bearings at each end of every blade.
2. Operating Temperature Range: From **minus 40 to plus 200 deg F** (minus 40 to plus 93 deg C).
3. Edge Seals, Standard Pressure Applications: Closed-cell neoprene.
4. Edge Seals, Low-Leakage Applications: Use inflatable blade edging or replaceable rubber blade seals and spring-loaded stainless-steel side seals, rated for leakage at less than **10 cfm per sq. ft.** (50 L/s per sq. m) of damper area, at differential pressure of **4-inch wg** (1000 Pa) when damper is held by torque of **50 in. x lbf** (5.6 N x m); when tested according to AMCA 500D.

2.18 AIR SUPPLY

A. [**Available**] Manufacturers:

1. [Drainview Products](#).
2. [Pneuline Controls](#).

3. **<Insert manufacturer's name.>**
- B. Control and Instrumentation Tubing: Copper tubing complying with **ASTM B 88, Type K** (ASTM B 88M, Type A) or ASTM B 280 Type ACR.
1. Fittings: Cast-bronze solder fittings complying with ASME B16.18; or wrought-copper solder fittings complying with ASME B16.22, except forged-brass compression-type fittings at connections to equipment.
 2. Joining Method: Soldered or brazed.
- C. Control and Instrumentation Tubing: ASTM D 2737 Type FR plenum-rated polyethylene, flame-retardant, nonmetallic tubing rated for **30 psig** (207 kPa) and ambient temperature range of **10 to 150 deg F** (minus 13 to plus 65 deg C) with flame-retardant harness for multiple tubing.
1. Fittings: Compression or push-on polyethylene fittings.
- D. Tank: ASME storage tank with drain test cock, automatic moisture removal trap, tank relief valve, and rubber-cork vibration isolation mounting pads.
- E. Duplex Air Compressor: Capacity to supply compressed air to temperature-control system.
1. Pressure control with adjustable electric contacts, set to start and stop both compressors at different pressures.
 2. Electrical alternation set with motor starters and disconnect to operate compressors alternately or on time schedule.
- F. Simplex Air Compressor: Tank-mounting compressor with capacity to supply compressed air to temperature-control system, with starter and disconnect.
1. Pressure control with adjustable electric contacts, set to start and stop compressor.
- G. Compressor Type: **[Reciprocating] [Scroll]**.
- H. Size compressor and tank to operate compressor not more than **[20] [30]** minutes during a 60-minute period.
- I. Compressor Accessories: Low-resistance intake-air filter, and belt guards.
- J. System Accessories: Air filter rated for 97 percent efficiency at rated airflow, and combination filter/pressure-reducing station or separate filter and pressure-reducing station.
- K. Refrigerated Air Dryer: Self-contained, refrigerated air dryer complete with heat exchangers, moisture separator, internal wiring and piping, and with manual bypass valve.
1. Heat Exchangers: Air-to-refrigerant coils with centrifugal-type moisture separator and automatic trap assembly.

2. Refrigeration Unit: Hermetically sealed, operating to maintain dew point of 13 deg F (minus 11 deg C) at 20 psig (140 kPa), housed in steel cabinet with access door and panel.
 3. Accessories: Air-inlet temperature gage, air-inlet pressure gage, on-off switch, high-temperature light, power-on light, refrigerant gage on back, air-outlet temperature gage, air-outlet pressure gage, and with contacts for remote indication of power status and high-temperature alarm.
- L. Desiccant Dryer: Obtains dew point in pneumatic air piping between compressor and tank at least 15 deg F (minus 9 deg C) below inlet-air dew point at design conditions.
- M. Pressure Gages: Black letters on white background, 2-1/2 inches (64 mm) in diameter, flush or surface mounting, with front calibration screw to match sensor, and having a graduated scale in psig (kPa).
- N. Instrument Pressure Gages: Black letters on white background, 1-1/2 inches (38 mm) in diameter, stem mounted, with suitable dial range.
- O. Diaphragm Control and Instrument Valves: 1/4-inch (6-mm) forged-brass body with reinforced polytetrafluoroethylene diaphragm, stainless-steel spring, and color-coded phenolic handle.
- P. Gage Cocks: Tee or level handle, bronze, rated for 125 psig (860 kPa).
- Q. Relays: For summing, reversing, and amplifying highest or lowest pressure selection; with adjustable I/O ratio.
- R. Switches: With indicating plates and accessible adjustment; calibrated and marked.
- S. Pressure Regulators: Zinc or aluminum castings with elastomeric diaphragm, balanced construction to automatically prevent pressure buildup, and producing flat reduced-pressure curve.
- T. Particle Filters: Zinc or aluminum castings with 97 percent filtration efficiency at rated airflow, quick-disconnect service devices, and aluminum or plastic bowl with metal guard and manual drain cock.
- U. Combination Filter/Regulators: Zinc or aluminum castings with elastomeric diaphragm, balanced construction to automatically prevent pressure buildup, and producing flat reduced-pressure curve; with threaded pipe connections, quick-disconnect service devices, and aluminum or plastic bowl with metal guard and manual drain cock.
- V. Airborne Oil Filter: Filtration efficiency of 99.9 percent for airborne lubricating oil particles of 0.025 micron or larger.
- W. Pressure Relief Valves: ASME rated and labeled.
1. High Pressure: Size for installed capacity.
 2. Low Pressure: Size for installed capacity of pressure regulators and set at 20 percent above low pressure.

- X. Pressure-Reducing Stations: Two parallel pressure regulators.

2.19 CONTROL CABLE

- A. Electronic and fiber-optic cables for control wiring are specified in Section 271500 "Communications Horizontal Cabling."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that **[conditioned]** power supply is available to control units and operator workstation.
- B. Verify that pneumatic piping and duct-, pipe-, and equipment-mounted devices are installed before proceeding with installation.

3.2 INSTALLATION

- A. Install software in control units and operator workstation(s). Implement all features of programs to specified requirements and as appropriate to sequence of operation.
- B. Connect and configure equipment and software to achieve sequence of operation specified.
- C. Mount compressor and tank unit on **[elastomeric mounts]** **[spring isolators with 1-inch (25 mm) static deflection]** **[restrained spring isolators with 1-inch (25-mm) static deflection]**. Vibration isolators are specified in **[Section 230548 "Vibration and Seismic Controls for HVAC. "]** **[Section 230548.13 "Vibration Controls for HVAC. "]** Isolate air supply with wire-braid-reinforced rubber hose. Secure and anchor according to manufacturer's written instructions and seismic-control requirements.
 - 1. Pipe manual and automatic drains to nearest floor drain.
 - 2. Supply instrument air from compressor units through filter, pressure-reducing valve, and pressure relief valve, with pressure gages and shutoff and bypass valves.
- D. Verify location of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. Install devices **[48 inches (1220 mm)]** **[60 inches (1530 mm)]** **<Insert dimension>** above the floor.
 - 1. Install averaging elements in ducts and plenums in crossing or zigzag pattern.
- E. Install guards on thermostats in the following locations:
 - 1. Entrances.
 - 2. Public areas.

3. Where indicated.

- F. Install automatic dampers according to Section 233300 "Air Duct Accessories."
- G. Install damper motors on outside of duct in warm areas, not in locations exposed to outdoor temperatures.
- H. Install labels and nameplates to identify control components according to Section 230553 "Identification for HVAC Piping and Equipment."
- I. Install hydronic instrument wells, valves, and other accessories according to Section 232116 "Hydronic Piping Specialties."
- J. Install steam and condensate instrument wells, valves, and other accessories according to Section 232216 "Steam and Condensate Piping Specialties."
- K. Install refrigerant instrument wells, valves, and other accessories according to Section 232300 "Refrigerant Piping."
- L. Install duct volume-control dampers according to Section 233113 "Metal Ducts" and Section 233116 "Nonmetal Ducts."
- M. Install electronic and fiber-optic cables according to Section 271500 "Communications Horizontal Cabling."

3.3 PNEUMATIC PIPING INSTALLATION

- A. Install piping in mechanical equipment rooms inside mechanical equipment enclosures, in pipe chases, or suspended ceilings with easy access.
 - 1. Install copper tubing with maximum unsupported length of **36 inches** (915 mm), for tubing exposed to view.
 - 2. Install polyethylene tubing in metallic raceways or electrical metallic tubing. Electrical metallic tubing materials and installation requirements are specified in Section 260533 "Raceways and Boxes for Electrical Systems."
- B. Install terminal single-line connections, less than **18 inches** (460 mm) in length, with copper or polyethylene tubing run inside flexible steel protection.
- C. In concealed locations such as pipe chases and suspended ceilings with easy access, install **[copper] [polyethylene bundled and sheathed] [polyethylene tubing in electrical metallic]** tubing. Electrical metallic tubing materials and installation requirements are specified in Section 260533 "Raceways and Boxes for Electrical Systems."
- D. In concrete slabs, furred walls, or ceilings with no access, install copper or polyethylene tubing in electrical metallic tubing or vinyl-jacketed polyethylene tubing.

1. Protect embedded-copper and vinyl-jacketed polyethylene tubing with electrical metallic tubing extending **6 inches (150 mm)** above finished slab and **6 inches (150 mm)** into slab. Pressure test tubing before and after pour for leak and pinch.
 2. Install polyethylene tubing in electrical metallic tubing extending **6 inches (150 mm)** above floor line; pull tubing into electrical metallic tubing after pour.
- E. Install tubing with sufficient slack and flexible connections to allow for vibration of piping and equipment.
- F. Purge tubing with dry, oil-free compressed air before connecting control instruments.
1. Bridge cabinets and doors with flexible connections fastened along hinge side; protect against abrasion. Tie and support tubing.
- G. Number-code or color-code control air piping for future identification and service of control system, except local individual room control tubing.
- H. Pressure Gages or Test Plugs: Install on branch lines at each receiver controller and on signal lines at each transmitter, except individual room controllers.

3.4 ELECTRICAL WIRING AND CONNECTION INSTALLATION

- A. Install raceways, boxes, and cabinets according to Section 260533 "Raceways and Boxes for Electrical Systems."
- B. Install building wire and cable according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Install signal and communication cable according to Section 271500 "Communications Horizontal Cabling."
1. Conceal cable, except in mechanical rooms and areas where other conduit and piping are exposed.
 2. Install exposed cable in raceway.
 3. Install concealed cable in raceway.
 4. Bundle and harness multiconductor instrument cable in place of single cables where several cables follow a common path.
 5. Fasten flexible conductors, bridging cabinets and doors, along hinge side; protect against abrasion. Tie and support conductors.
 6. Number-code or color-code conductors for future identification and service of control system, except local individual room control cables.
 7. Install wire and cable with sufficient slack and flexible connections to allow for vibration of piping and equipment.
- D. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.
- E. Connect hand-off-auto selector switches to override automatic interlock controls when switch is in hand position.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect[, **test, and adjust**] field-assembled components and equipment installation, including connections[, **and to assist in field testing**]. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove and replace malfunctioning units and retest.
 2. Test and adjust controls and safeties.
 3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 4. Pressure test control air piping at **30 psig (207 kPa)** or 1.5 times the operating pressure for 24 hours, with maximum **5-psig (35-kPa)** loss.
 5. Pressure test high-pressure control air piping at **150 psig (1034 kPa)** and low-pressure control air piping at **30 psig (207 kPa)** for 2 hours, with maximum **1-psig (7-kPa)** loss.
 6. Test calibration of [**pneumatic**] [**electronic**] controllers by disconnecting input sensors and stimulating operation with compatible signal generator.
 7. Test each point through its full operating range to verify that safety and operating control set points are as required.
 8. Test each control loop to verify stable mode of operation and compliance with sequence of operation. Adjust PID actions.
 9. Test each system for compliance with sequence of operation.
 10. Test software and hardware interlocks.
- C. DDC Verification:
1. Verify that instruments are installed before calibration, testing, and loop or leak checks.
 2. Check instruments for proper location and accessibility.
 3. Check instrument installation for direction of flow, elevation, orientation, insertion depth, and other applicable considerations.
 4. Check instrument tubing for proper fittings, slope, material, and support.
 5. Check installation of air supply for each instrument.
 6. Check flow instruments. Inspect tag number and line and bore size, and verify that inlet side is identified and that meters are installed correctly.
 7. Check pressure instruments, piping slope, installation of valve manifold, and self-contained pressure regulators.
 8. Check temperature instruments and material and length of sensing elements.
 9. Check control valves. Verify that they are in correct direction.
 10. Check air-operated dampers. Verify that pressure gages are provided and that proper blade alignment, either parallel or opposed, has been provided.
 11. Check DDC system as follows:
 - a. Verify that DDC controller power supply is from emergency power supply, if applicable.

- b. Verify that wires at control panels are tagged with their service designation and approved tagging system.
 - c. Verify that spare I/O capacity has been provided.
 - d. Verify that DDC controllers are protected from power supply surges.
- D. Replace damaged or malfunctioning controls and equipment and repeat testing procedures.

3.6 ADJUSTING

A. Calibrating and Adjusting:

1. Calibrate instruments.
2. Make three-point calibration test for both linearity and accuracy for each analog instrument.
3. Calibrate equipment and procedures using manufacturer's written recommendations and instruction manuals. Use test equipment with accuracy at least double that of instrument being calibrated.
4. Control System Inputs and Outputs:
 - a. Check analog inputs at 0, 50, and 100 percent of span.
 - b. Check analog outputs using milliampere meter at 0, 50, and 100 percent output.
 - c. Check digital inputs using jumper wire.
 - d. Check digital outputs using ohmmeter to test for contact making or breaking.
 - e. Check resistance temperature inputs at 0, 50, and 100 percent of span using a precision-resistant source.
5. Flow:
 - a. Set differential pressure flow transmitters for 0 and 100 percent values with 3-point calibration accomplished at 50, 90, and 100 percent of span.
 - b. Manually operate flow switches to verify that they make or break contact.
6. Pressure:
 - a. Calibrate pressure transmitters at 0, 50, and 100 percent of span.
 - b. Calibrate pressure switches to make or break contacts, with adjustable differential set at minimum.
7. Temperature:
 - a. Calibrate resistance temperature transmitters at 0, 50, and 100 percent of span using a precision-resistance source.
 - b. Calibrate temperature switches to make or break contacts.
8. Stroke and adjust control valves and dampers without positioners, following the manufacturer's recommended procedure, so that valve or damper is 100 percent open and closed.

9. Stroke and adjust control valves and dampers with positioners, following manufacturer's recommended procedure, so that valve and damper is 0, 50, and 100 percent closed.
10. Provide diagnostic and test instruments for calibration and adjustment of system.
11. Provide written description of procedures and equipment for calibrating each type of instrument. Submit procedures review and approval before initiating startup procedures.

B. Adjust initial temperature and humidity set points.

C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[three]** <Insert number> visits to Project during other than normal occupancy hours for this purpose.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain HVAC instrumentation and controls. Refer to Section 017900 "Demonstration and Training."

END OF SECTION 230900

SECTION 230923 - DIRECT DIGITAL CONTROL (DDC) SYSTEM FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. DDC system for monitoring and controlling of HVAC systems.
2. Delivery of selected control devices to equipment and systems manufacturers for factory installation and to HVAC systems installers for field installation.

- B. Related Requirements:

1. Section **230923.13** "Energy Meters" for thermal and electric power energy meters that connect to DDC systems.
2. Section **230923.17** "Level Instruments" for liquid-level switches, sensors, and transmitters that connect to DDC systems.
3. Section **230923.22** "Position Instruments" for limit switches that connect to DDC systems.
4. Section **230923.33** "Vibration Instruments" for vibration instruments that connect to DDC systems.
5. Section **230923.43** "Weather Stations" for weather stations that connect to DDC systems.
6. Section 230993 "Sequence of Operations for HVAC Controls" for control sequences in DDC systems.

1.3 DEFINITIONS

- A. Algorithm: A logical procedure for solving a recurrent mathematical problem. A prescribed set of well-defined rules or processes for solving a problem in a finite number of steps.
- B. Analog: A continuously varying signal value, such as current, flow, pressure, or temperature.
- C. BACnet Specific Definitions:

1. BACnet: Building Automation Control Network Protocol, ASHRAE 135. A communications protocol allowing devices to communicate data over and services over a network.
 2. BACnet Interoperability Building Blocks (BIBBs): BIBB defines a small portion of BACnet functionality that is needed to perform a particular task. BIBBs are combined to build the BACnet functional requirements for a device.
 3. BACnet/IP: Defines and allows using a reserved UDP socket to transmit BACnet messages over IP networks. A BACnet/IP network is a collection of one or more IP subnetworks that share the same BACnet network number.
 4. BACnet Testing Laboratories (BTL): Organization responsible for testing products for compliance with ASHRAE 135, operated under direction of BACnet International.
 5. PICS (Protocol Implementation Conformance Statement): Written document that identifies the particular options specified by BACnet that are implemented in a device.
- D. Binary: Two-state signal where a high signal level represents "ON" or "OPEN" condition and a low signal level represents "OFF" or "CLOSED" condition. "Digital" is sometimes used interchangeably with "Binary" to indicate a two-state signal.
- E. Controller: Generic term for any standalone, microprocessor-based, digital controller residing on a network, used for local or global control. Three types of controllers are indicated: Network Controller, Programmable Application Controller, and Application-Specific Controller.
- F. Control System Integrator: An entity that assists in expansion of existing enterprise system and support of additional operator interfaces to I/O being added to existing enterprise system.
- G. COV: Changes of value.
- H. DDC System Provider: Authorized representative of, and trained by, DDC system manufacturer and responsible for execution of DDC system Work indicated.
- I. Distributed Control: Processing of system data is decentralized and control decisions are made at subsystem level. System operational programs and information are provided to remote subsystems and status is reported back. On loss of communication, subsystems shall be capable of operating in a standalone mode using the last best available data.
- J. DOCSIS: Data-OverCable Service Interface Specifications.
- K. E/P: Voltage to pneumatic.
- L. Gateway: Bidirectional protocol translator that connects control systems that use different communication protocols.
- M. HLC: Heavy load conditions.

- N. I/O: System through which information is received and transmitted. I/O refers to analog input (AI), binary input (BI), analog output (AO) and binary output (BO). Analog signals are continuous and represent control influences such as flow, level, moisture, pressure, and temperature. Binary signals convert electronic signals to digital pulses (values) and generally represent two-position operating and alarm status. "Digital," (DI and (DO), is sometimes used interchangeably with "Binary," (BI) and (BO), respectively.
- O. I/P: Current to pneumatic.
- P. LAN: Local area network.
- Q. LNS: LonWorks Network Services.
- R. LON Specific Definitions:
1. FTT-10: Echelon Transmitter-Free Topology Transceiver.
 2. LonMark: Association comprising suppliers and installers of LonTalk products. Association provides guidelines for implementing LonTalk protocol to ensure interoperability through a standard or consistent implementation.
 3. LonTalk: An open standard protocol developed by the Echelon Corporation that uses a "Neuron Chip" for communication. LonTalk is a register trademark of Echelon.
 4. LonWorks: Network technology developed by Echelon.
 5. Node: Device that communicates using CEA-709.1-C protocol and that is connected to a CEA-709.1-C network.
 6. Node Address: The logical address of a node on the network, consisting of a Domain number, Subnet number, and Node number. "Node number" portion of an address is a number assigned to device during installation, is unique within a subnet, and is not a factory-set unique Node ID.
 7. Node ID: A unique 48-bit identifier assigned at factory to each CEA-709.1-C device. Sometimes called a "Neuron ID."
 8. Program ID: An identifier (number) stored in a device (usually EEPROM) that identifies node manufacturer, functionality of device (application and sequence), transceiver used, and intended device usage.
 9. Standard Configuration Property Type (SCPT): Pronounced "skip-it." A standard format type maintained by LonMark International for configuration properties.
 10. Standard Network Variable Type (SNVT): Pronounced "snivet." A standard format type maintained by LonMark used to define data information transmitted and received by individual nodes. "SNVT" is used in two ways. It is an acronym for "Standard Network Variable Type" and is often used to indicate a network variable itself (i.e., it can mean "a network variable of a standard network variable type").
 11. Subnet: Consists of a logical grouping of up to 127 nodes, where logical grouping is defined by node addressing. Each subnet is assigned a number, which is unique within a Domain. See "Node Address."
 12. TP/FT-10: Free Topology Twisted Pair network defined by CEA-709.3 and is most common media type for a CEA-709.1-C control network.

13. TP/XF-1250: High-speed, 1.25-Mbps, twisted-pair, doubly terminated bus network defined by "LonMark Interoperability Guidelines" typically used only to connect multiple TP/FT-10 networks.
 14. User-Defined Configuration Property Type (UCPT): Pronounced "U-Keep-It." A Configuration Property format type that is defined by device manufacturer.
 15. User-Defined Network Variable Type (UNVT): Network variable format defined by device manufacturer. UNVTs create non-standard communications that other vendors' devices may not correctly interpret and may negatively impact system operation. UNVTs are not allowed.
- S. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- T. Modbus TCP/IP: An open protocol for exchange of process data.
- U. MS/TP: Master-slave/token-passing, IEE 8802-3. Datalink protocol LAN option that uses twisted-pair wire for low-speed communication.
- V. MTBF: Mean time between failures.
- W. Network Controller: Digital controller, which supports a family of programmable application controllers and application-specific controllers, that communicates on peer-to-peer network for transmission of global data.
- X. Network Repeater: Device that receives data packet from one network and rebroadcasts it to another network. No routing information is added to protocol.
- Y. PDA: Personal digital assistant.
- Z. Peer to Peer: Networking architecture that treats all network stations as equal partners.
- AA. POT: Portable operator's terminal.
- BB. PUE: Performance usage effectiveness.
- CC. RAM: Random access memory.
- DD. RF: Radio frequency.
- EE. Router: Device connecting two or more networks at network layer.
- FF. Server: Computer used to maintain system configuration, historical and programming database.
- GG. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.
- HH. UPS: Uninterruptible power supply.
- II. USB: Universal Serial Bus.

JJ. User Datagram Protocol (UDP): This protocol assumes that the IP is used as the underlying protocol.

KK. VAV: Variable air volume.

LL. WLED: White light emitting diode.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.5 ACTION SUBMITTALS

A. Multiple Submissions:

1. If multiple submissions are required to execute work within schedule, first submit a coordinated schedule clearly defining intent of multiple submissions. Include a proposed date of each submission with a detailed description of submittal content to be included in each submission.
2. Clearly identify each submittal requirement indicated and in which submission the information will be provided.
3. Include an updated schedule in each subsequent submission with changes highlighted to easily track the changes made to previous submitted schedule.

B. Product Data: For each type of product include the following:

1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Operating characteristics, electrical characteristics, and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
3. Product description with complete technical data, performance curves, and product specification sheets.
4. Installation, operation, and maintenance instructions including factors effecting performance.
5. Bill of materials of indicating quantity, manufacturer, and extended model number for each unique product.
 - a. Operator workstations.
 - b. Servers.
 - c. Printers.
 - d. Gateways.
 - e. Routers.
 - f. Protocol analyzers.
 - g. DDC controllers.
 - h. Enclosures.

- i. Electrical power devices.
 - j. UPS units.
 - k. Accessories.
 - l. Instruments.
 - m. Control dampers and actuators.
 - n. Control valves and actuators.
 - o. **<Insert product>**.
 6. When manufacturer's product datasheets apply to a product series rather than a specific product model, clearly indicate and highlight only applicable information.
 7. Each submitted piece of product literature shall clearly cross reference specification and drawings that submittal is to cover.
- C. Software Submittal:
 1. Cross-referenced listing of software to be loaded on each operator workstation, server, gateway, **<Insert product>** and DDC controller.
 2. Description and technical data of all software provided, and cross-referenced to products in which software will be installed.
 3. Operating system software, operator interface and programming software, color graphic software, DDC controller software, maintenance management software, and third-party software.
 4. Include a flow diagram and an outline of each subroutine that indicates each program variable name and units of measure.
 5. Listing and description of each engineering equation used with reference source.
 6. Listing and description of each constant used in engineering equations and a reference source to prove origin of each constant.
 7. Description of operator interface to alphanumeric and graphic programming.
 8. Description of each network communication protocol.
 9. Description of system database, including all data included in database, database capacity and limitations to expand database.
 10. Description of each application program and device drivers to be generated, including specific information on data acquisition and control strategies showing their relationship to system timing, speed, processing burden and system throughout.
 11. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.
- D. LEED Submittals:
 1. Include supporting data showing energy, flow, gas, moisture, motion, pressure, **<Insert other>** and temperature instruments, where and if used in Project; and associated application for monitoring and control to satisfy requirements of Project LEED credits.
 - a. Indicate applicable locations and area coverage, control set points, description of control operation and other required information to satisfy submission requirements for award of LEED credit.

2. Organize and identify standalone, supporting data for each LEED credit.
3. Project LEED credits include the following:

- a. **<Insert individual LEED credits applicable to Project>.**

E. Shop Drawings:

1. General Requirements:

- a. Include cover drawing with Project name, location, Owner, Architect, Contractor, and issue date with each Shop Drawings submission.
- b. Include a drawing index sheet listing each drawing number and title that matches information in each title block.
- c. Prepare Drawings using CAD.
- d. Drawings Size: **<Insert requirements>.**

2. Include plans, elevations, sections, and mounting details where applicable.
3. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
4. Detail means of vibration isolation and show attachments to rotating equipment.
5. Plan Drawings indicating the following:

- a. Screened backgrounds of walls, structural grid lines, HVAC equipment, ductwork, and piping.
- b. Room names and numbers with coordinated placement to avoid interference with control products indicated.
- c. Each desktop operator workstation, server, gateway, router, DDC controller, control panel instrument connecting to DDC controller, and damper and valve connecting to DDC controller, if included in Project.
- d. Exact placement of products in rooms, ducts, and piping to reflect proposed installed condition.
- e. Network communication cable and raceway routing.
- f. Information, drawn to scale, of **<Insert requirements>.**
- g. Proposed routing of wiring, cabling, conduit, and tubing, coordinated with building services for review before installation.

6. Schematic drawings for each controlled HVAC system indicating the following:

- a. I/O points labeled with point names shown. Indicate instrument range, normal operating set points, and alarm set points. Indicate fail position of each damper and valve, if included in Project.
- b. I/O listed in table format showing point name, type of device, manufacturer, model number, and cross-reference to product data sheet number.
- c. A graphic showing location of control I/O in proper relationship to HVAC system.
- d. Wiring diagram with each I/O point having a unique identification and indicating labels for all wiring terminals.
- e. Unique identification of each I/O that shall be consistently used between different drawings showing same point.

- f. Elementary wiring diagrams of controls for HVAC equipment motor circuits including interlocks, switches, relays and interface to DDC controllers.
 - g. Narrative sequence of operation.
 - h. Graphic sequence of operation, showing all inputs and output logical blocks.
7. Control panel drawings indicating the following:
 - a. Panel dimensions, materials, size, and location of field cable, raceways, and tubing connections.
 - b. Interior subpanel layout, drawn to scale and showing all internal components, cabling and wiring raceways, nameplates and allocated spare space.
 - c. Front, rear, and side elevations and nameplate legend.
 - d. Unique drawing for each panel.
8. DDC system network riser diagram indicating the following:
 - a. Each device connected to network with unique identification for each.
 - b. Interconnection of each different network in DDC system.
 - c. For each network, indicate communication protocol, speed, and physical means of interconnecting network devices, such as copper cable type, or fiber-optic cable type. Indicate raceway type and size for each.
 - d. Each network port for connection of an operator workstation or other type of operator interface with unique identification for each.
9. DDC system electrical power riser diagram indicating the following:
 - a. Each point of connection to field power with requirements (volts/phase//hertz/amperes/connection type) listed for each.
 - b. Each control power supply including, as applicable, transformers, power-line conditioners, transient voltage suppression and high filter noise units, DC power supplies, and UPS units with unique identification for each.
 - c. Each product requiring power with requirements (volts/phase//hertz/amperes/connection type) listed for each.
 - d. Power wiring type and size, race type, and size for each.
10. Monitoring and control signal diagrams indicating the following:
 - a. Control signal cable and wiring between controllers and I/O.
 - b. Point-to-point schematic wiring diagrams for each product.
 - c. Control signal tubing to sensors, switches, and transmitters.
 - d. Process signal tubing to sensors, switches, and transmitters.
 - e. Pneumatic main air and control signal tubing to pneumatic **[damper]** **[and]** **[valve]** actuators, pilot-positioners if applicable, and associated transducers.
11. Color graphics indicating the following:
 - a. Itemized list of color graphic displays to be provided.

- b. For each display screen to be provided, a true color copy showing layout of pictures, graphics and data displayed.
- c. Intended operator access between related hierarchical display screens.

F. System Description:

1. Full description of DDC system architecture, network configuration, operator interfaces and peripherals, servers, controller types and applications, gateways, routers and other network devices, and power supplies.
2. Complete listing and description of each report, log and trend for format and timing and events which initiate generation.
3. System and product operation under each potential failure condition including, but not limited to, the following:
 - a. Loss of power.
 - b. Loss of network communication signal.
 - c. Loss of controller signals to inputs and outputs.
 - d. Operator workstation failure.
 - e. Server failure.
 - f. Gateway failure.
 - g. Network failure
 - h. Controller failure.
 - i. Instrument failure.
 - j. Control damper and valve actuator failure.
 - k. **<Insert potential failure conditions>**.
4. Complete bibliography of documentation and media to be delivered to Owner.
5. Description of testing plans and procedures.
6. Description of Owner training.

G. Samples:

1. For each of the following exposed product, installed in finished space for approval of selection of aesthetic characteristics:
 - a. Gas instruments specified in Section 230923.16 "Gas Instruments."
 - b. Moisture instruments specified in Section 230923.19 "Moisture Instruments."
 - c. Motion instruments specified in Section 230923.21 "Motion Instruments."
 - d. Pressure instruments specified in Section 230923.23 "Pressure Instruments."
 - e. Temperature instruments specified in Section 230923.27 "Temperature Instruments."
2. **<Insert devices>**.

H. Delegated-Design Submittal: For DDC system products and installation indicated as being delegated.

1. Supporting documentation showing DDC system design complies with performance requirements indicated, including calculations and other documentation necessary to prove compliance.
2. Schedule and design calculations for control dampers and actuators.
 - a. Flow at Project design and minimum flow conditions.
 - b. Face velocity at Project design and minimum airflow conditions.
 - c. Pressure drop across damper at Project design and minimum airflow conditions.
 - d. AMCA 500-D damper installation arrangement used to calculate and schedule pressure drop, as applicable to installation.
 - e. Maximum close-off pressure.
 - f. Leakage airflow at maximum system pressure differential (fan close-off pressure).
 - g. Torque required at worst case condition for sizing actuator.
 - h. Actuator selection indicating torque provided.
 - i. Actuator signal to control damper (on, close or modulate).
 - j. Actuator position on loss of power.
 - k. Actuator position on loss of control signal.
3. Schedule and design calculations for control valves and actuators.
 - a. Flow at Project design and minimum flow conditions.
 - b. Pressure-differential drop across valve at Project design flow condition.
 - c. Maximum system pressure-differential drop (pump close-off pressure) across valve at Project minimum flow condition.
 - d. Design and minimum control valve coefficient with corresponding valve position.
 - e. Maximum close-off pressure.
 - f. Leakage flow at maximum system pressure differential.
 - g. Torque required at worst case condition for sizing actuator.
 - h. Actuator selection indicating torque provided.
 - i. Actuator signal to control damper (on, close or modulate).
 - j. Actuator position on loss of power.
 - k. Actuator position on loss of control signal.
4. Schedule and design calculations for selecting flow instruments.
 - a. Instrument flow range.
 - b. Project design and minimum flow conditions with corresponding accuracy, control signal to transmitter and output signal for remote control.
 - c. Extreme points of extended flow range with corresponding accuracy, control signal to transmitter and output signal for remote control.
 - d. Pressure-differential loss across instrument at Project design flow conditions.
 - e. Where flow sensors are mated with pressure transmitters, provide information for each instrument separately and as an operating pair.

1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

1. Plan drawings and corresponding product installation details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - a. Product installation location shown in relationship to room, duct, pipe, and equipment.
 - b. Structural members to which products will be attached.
 - c. Wall-mounted instruments located in finished space showing relationship to light switches, fire-alarm devices, and other installed devices.
 - d. Size and location of wall access panels for products installed behind walls and requiring access.
2. Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - a. Ceiling components.
 - b. Size and location of access panels for products installed above inaccessible ceiling assemblies and requiring access.
 - c. Items penetrating finished ceiling including the following:
 - 1) Lighting fixtures.
 - 2) Air outlets and inlets.
 - 3) Speakers.
 - 4) Sprinklers.
 - 5) Access panels.
 - 6) Motion sensors.
 - 7) Pressure sensors.
 - 8) Temperature sensors and other DDC control system instruments.
 - 9) **<Insert item>**.

B. Qualification Data:

1. Systems Provider Qualification Data:
 - a. Resume of project manager assigned to Project.
 - b. Resumes of application engineering staff assigned to Project.
 - c. Resumes of installation and programming technicians assigned to Project.
 - d. Resumes of service technicians assigned to Project.
 - e. Brief description of past project including physical address, floor area, number of floors, building system cooling and heating capacity and building's primary function.
 - f. Description of past project DDC system, noting similarities to Project scope and complexity indicated.
 - g. Names of staff assigned to past project that will also be assigned to execute work of this Project.

- h. Owner contact information for past project including name, phone number, and e-mail address.
 - i. Contractor contact information for past project including name, phone number, and e-mail address.
 - j. Architect[**and Engineer**] contact information for past project including name, phone number, and e-mail address.
 - 2. Manufacturer's qualification data.
 - 3. Testing agency's qualifications data.
 - C. Welding certificates.
 - D. Product Certificates:
 - 1. Data Communications Protocol Certificates: Certifying that each proposed DDC system component complies with ASHRAE 135.
 - 2. Data Communications Protocol Certificates: Certifying that each proposed DDC system component complies with LonWorks.
 - 3. **<Insert list of products>**.
 - E. Product Test Reports: For each product that requires testing to be performed by **[manufacturer] [manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.
 - F. Preconstruction Test Reports: For each separate test performed.
 - G. Source quality-control reports.
 - H. Field quality-control reports.
 - I. Sample Warranty: For manufacturer's warranty.
- 1.7 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For DDC system to include in emergency, operation and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Project Record Drawings of as-built versions of submittal Shop Drawings provided in electronic PDF format.
 - b. Testing and commissioning reports and checklists of completed final versions of reports, checklists, and trend logs.
 - c. As-built versions of submittal Product Data.
 - d. Names, addresses, e-mail addresses and 24-hour telephone numbers of Installer and service representatives for DDC system and products.
 - e. Operator's manual with procedures for operating control systems including logging on and off, handling alarms, producing point reports, trending data, overriding computer control and changing set points and variables.

- f. Programming manuals with description of programming language and syntax, of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.
- g. Engineering, installation, and maintenance manuals that explain how to:
 - 1) Design and install new points, panels, and other hardware.
 - 2) Perform preventive maintenance and calibration.
 - 3) Debug hardware problems.
 - 4) Repair or replace hardware.
- h. Documentation of all programs created using custom programming language including set points, tuning parameters, and object database.
- i. Backup copy of graphic files, programs, and database on electronic media such as DVDs.
- j. List of recommended spare parts with part numbers and suppliers.
- k. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware including computer equipment and sensors.
- l. Complete original-issue copies of furnished software, including operating systems, custom programming language, operator workstation software, and graphics software.
- m. Licenses, guarantees, and warranty documents.
- n. Recommended preventive maintenance procedures for system components, including schedule of tasks such as inspection, cleaning, and calibration; time between tasks; and task descriptions.
- o. Owner training materials.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials and parts that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. Include product manufacturers' recommended parts lists for proper product operation over **[four] <Insert time period>**-year period following warranty period. Parts list shall be indicated for each year.
- C. Furnish parts, as indicated by manufacturer's recommended parts list, for product operation during **[one] [two] <Insert time period>**-year period following warranty period.
- D. Furnish quantity indicated of matching product(s) in Project inventory for each unique size and type of following:
 - 1. Network Controller: **[One] <Insert quantity>**.
 - 2. Programmable Application Controller: **[One] <Insert quantity>**.
 - 3. Application-Specific Controller: **[One] <Insert quantity>**.
 - 4. **[Room]** Carbon Dioxide Sensor and Transmitter: **[One] <Insert quantity>**.
 - 5. **[Room]** Moisture Sensor and Transmitter: **[One] <Insert quantity>**.

6. **[Room]**Pressure Sensor and Transmitter: **[One] <Insert quantity>**.
7. **[Room]**Temperature Sensor**[and Transmitter]: [One] <Insert quantity>**.
8. General-Purpose Relay: **[One] <Insert quantity>**.
9. Multifunction Time-Delay Relay: **[One] <Insert quantity>**.
10. Latching Relay: **[One] <Insert quantity>**.
11. Current-Sensing Relay: **[One] <Insert quantity>**.
12. Combination On-Off Status Sensor and On-Off Relay: **[One] <Insert quantity>**.
13. Transformer: **[One] <Insert quantity>**.
14. DC Power Supply: **[One] <Insert quantity>**.
15. Supply of **[20] <Insert number>** percent spare fiber-optic cable splice organizer cabinets for several re-terminations.
16. **<Insert product>**.

1.9 QUALITY ASSURANCE

A. DDC System Manufacturer Qualifications:

1. Nationally recognized manufacturer of DDC systems and products.
2. DDC systems with similar requirements to those indicated for a continuous period of **[five] [10] <Insert number>** years within time of bid.
3. DDC systems and products that have been successfully tested and in use on at least **[three] [five] <Insert number>** past projects.
4. Having complete published catalog literature, installation, operation and maintenance manuals for all products intended for use.
5. Having full-time in-house employees for the following:
 - a. Product research and development.
 - b. Product and application engineering.
 - c. Product manufacturing, testing, and quality control.
 - d. Technical support for DDC system installation training, commissioning, and troubleshooting of installations.
 - e. Owner operator training.

B. DDC System Provider Qualifications:

1. Authorized representative of, and trained by, DDC system manufacturer.
2. In-place facility located within **<Insert distance>** of Project.
3. Demonstrated past experience with installation of DDC system products being installed for period within **[three] [five] <Insert number>** consecutive years before time of bid.
4. Demonstrated past experience on **[five] <Insert number>** projects of similar complexity, scope and value.
5. Each person assigned to Project shall have demonstrated past experience.
6. Staffing resources of competent and experienced full-time employees that are assigned to execute work according to schedule.
7. Service and maintenance staff assigned to support Project during warranty period.
8. Product parts inventory to support on-going DDC system operation for a period of not less than **[5] <Insert number>** years after Substantial Completion.

9. DDC system manufacturer's backing to take over execution of Work if necessary to comply with requirements indicated. Include Project-specific written letter, signed by manufacturer's corporate officer, if requested.
- C. Testing Agency Qualifications: Member company of NETA or an NRTL.
1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.
- D. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 3. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
 4. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."
- E. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- F. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and products and for fabrication and installation.
1. Build mockups of completed installation where products are exposed to view and are located in areas with aesthetic requirements that warrant special attention, including the following spaces:
 - a. **<Insert specific locations for mockups>.**
 2. Build mockups of completed installation for areas indicated on Drawings.
 3. Approval of mockups does not constitute approval of deviations from Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
- 1.10 PRECONSTRUCTION TESTING
- A. Preconstruction Testing Service: **[Owner will engage] [Engage]** a qualified testing agency to perform preconstruction testing on field mockups.
1. **<Insert configurations of assemblies>.**
 2. Include test assemblies representative of proposed materials and construction.
 3. Build mockup at testing agency facility using personnel, materials, and methods of construction that will be used at Project site.
 4. Notify Architect **[seven] <Insert number>** days in advance of dates and times of tests.
- B. Preconstruction Testing: Performed by a qualified testing agency on manufacturer's standard assemblies.
1. **<Insert preconstruction testing requirements>.**

1.11 WARRANTY

- A. **Manufacturer's Warranty:** Manufacturer and Installer agree to repair or replace products that fail in materials or workmanship within specified warranty period.
1. Failures shall be adjusted, repaired, or replaced at no additional cost or reduction in service to Owner.
 2. Include updates or upgrades to software and firmware if necessary to resolve deficiencies.
 - a. Install updates only after receiving Owner's written authorization.
 3. Warranty service shall occur during normal business hours and commence within **[16] [24] <Insert number>** hours of Owner's warranty service request.
 4. Warranty Period: **[Two] <Insert number>** year(s) from date of Substantial Completion.
 - a. For Gateway: **[Two] [Three] <Insert number>**-year parts and labor warranty for each.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
- B. **Basis-of-Design Product:** Subject to compliance with requirements, provide [product indicated on Drawings] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. [Alerton Inc.](#)
 2. [American Auto-Matrix.](#)
 3. [Automated Logic Corporation.](#)
 4. [Delta Controls Inc.](#)
 5. [Honeywell International Inc.](#)
 6. [Invensys Building Systems.](#)
 7. [Johnson Controls, Inc.](#)
 8. [KMC Controls \(formerly Kreuter Manufacturing Company\).](#)
 9. [Siemens Building Technologies, Inc.](#)
 10. [Schneider Electric USA, Inc.](#)
 11. [Teletrol Systems Incorporated.](#)
 12. [Trane.](#)
 13. **<Insert manufacturer's name>.**

2.2 DDC SYSTEM DESCRIPTION

- A. Microprocessor-based monitoring and control including analog/digital conversion and program logic. A control loop or subsystem in which digital and analog information is received and processed by a microprocessor, and digital control signals are generated based on control algorithms and transmitted to field devices to achieve a set of predefined conditions.
1. DDC system shall consist of a[**high-speed,**] peer-to-peer network of distributed DDC controllers[, **other network devices**], operator interfaces, and software.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 WEB ACCESS

- A. DDC system shall be [**Web based**] [**or**] [**Web compatible**].
1. Web-Based Access to DDC System:
 - a. DDC system software shall be based on server thin-client architecture, designed around open standards of Web technology. DDC system server shall be accessed using a Web browser over DDC system network, using Owner's LAN, and remotely over Internet[**through Owner's LAN**].
 - b. Intent of thin-client architecture is to provide operators complete access to DDC system via a Web browser. No special software other than a Web browser shall be required to access graphics, point displays, and trends; to configure trends, points, and controllers; and to edit programming.
 - c. Web access shall be password protected.
 2. Web-Compatible Access to DDC System:
 - a. [**Operator workstation**] [**and**] [**or**] [**server**] shall perform overall system supervision and configuration, graphical user interface, management report generation, and alarm annunciation.
 - b. DDC system shall support Web browser access to building data. Operator using a standard Web browser shall be able to access control graphics and change adjustable set points.
 - c. Web access shall be password protected.

2.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design DDC system to satisfy requirements indicated.
- B. Delegated Design: Engage a qualified professional to design DDC system to satisfy requirements indicated.

1. System Performance Objectives:
 - a. DDC system shall manage HVAC systems.
 - b. DDC system control shall operate HVAC systems to achieve optimum operating costs while using least possible energy and maintaining specified performance.
 - c. DDC system shall respond to power failures, HVAC equipment failures, and adverse and emergency conditions encountered through connected I/O points.
 - d. DDC system shall operate while unattended by an operator and through operator interaction.
 - e. DDC system shall record trends and transaction of events and produce report information such as performance, energy, occupancies, and equipment operation.

- C. Surface-Burning Characteristics: Products installed in ducts, equipment, and return-air paths shall comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Flame-Spread Index: **[25]** <Insert value> or less.
 2. Smoke-Developed Index: **[50]** <Insert value> or less.

- D. DDC System Speed:
 1. Response Time of Connected I/O:
 - a. AI point values connected to DDC system shall be updated at least every **[five]** **[two]** seconds for use by DDC controllers. Points used globally shall also comply with this requirement.
 - b. BI point values connected to DDC system shall be updated at least every **[five]** **[two]** <Insert number> seconds for use by DDC controllers. Points used globally shall also comply with this requirement.
 - c. AO points connected to DDC system shall begin to respond to controller output commands within **[two]** **[one]** second(s). Global commands shall also comply with this requirement.
 - d. BO point values connected to DDC system shall respond to controller output commands within **[two]** **[one]** <Insert number> second(s). Global commands shall also comply with this requirement.

 2. Display of Connected I/O:
 - a. Analog point COV connected to DDC system shall be updated and displayed at least every **[10]** **[five]** <Insert number> seconds for use by operator.
 - b. Binary point COV connected to DDC system shall be updated and displayed at least every **[10]** **[five]** <Insert number> seconds for use by operator.
 - c. Alarms of analog and digital points connected to DDC system shall be displayed within **[45]** **[30]** **[15]** <Insert number> seconds of activation or change of state.

- d. Graphic display refresh shall update within [**eight**] [**four**] <Insert number> seconds.
 - e. Point change of values and alarms displayed from workstation to workstation when multiple operators are viewing from multiple workstations shall not exceed graphic refresh rate indicated.
- E. Network Bandwidth: Design each network of DDC system to include at least [**30**] <Insert number> percent available spare bandwidth with DDC system operating under normal and heavy load conditions indicated. Calculate bandwidth usage, and apply a safety factor to ensure that requirement is satisfied when subjected to testing under worst case conditions.
- F. DDC System Data Storage:
1. Include server(s) with disk drive data storage to archive not less than [**24**] [**48**] [**60**] <Insert number> consecutive months of historical data for all I/O points connected to system, including alarms, event histories, transaction logs, trends and other information indicated.
 2. When logged onto a server, operator shall be able to also interact with any DDC controller connected to DDC system as required for functional operation of DDC system.
 3. Server(s) shall be used for application configuration; for archiving, reporting and trending of data; for operator transaction archiving and reporting; for network information management; for alarm annunciation; and for operator interface tasks and controls application management.
 4. Server(s) shall use IT industry-standard database platforms such as Microsoft SQL Server and Microsoft Data Engine (MSDE).
- G. Future Expandability:
1. DDC system size shall be expandable to an ultimate capacity of at least [**two**] [**three**] [**four**] <Insert number> times total I/O points indicated.
 2. Additional DDC controllers, I/O and associated wiring shall be all that is needed to achieve ultimate capacity. Initial network infrastructure shall be designed and installed to support ultimate capacity.
 3. Operator interfaces installed initially shall not require hardware and software additions and revisions for ultimate capacity.
- H. Input Point Displayed Accuracy: Input point displayed values shall meet following end-to-end overall system accuracy, including errors associated with meter, sensor, transmitter, lead wire or cable, and analog to digital conversion.
1. Energy:
 - a. Thermal: Within [**5**] [**3**] [**1**] <Insert number> percent of reading.
 - b. Electric Power: Within [**1**] <Insert number> percent of reading.
 - c. Requirements indicated on Drawings for meters not supplied by utility.
 2. Flow:

- a. Air: Within [5] [2] <Insert number> percent of design flow rate.
 - b. Air (Terminal Units): Within [10] [5] <Insert number> percent of design flow rate.
 - c. Water: Within [2] [5] <Insert number> percent of design flow rate.
 - d. Steam: Within [5] <Insert number> percent of design flow rate.
3. Gas:
- a. Carbon Dioxide: Within [50] <Insert value> ppm.
 - b. Carbon Monoxide: Within [5] <Insert number> percent of reading.
 - c. Oxygen: Within [5] <Insert number> percent of reading.
 - d. Refrigerant: Within [50] <Insert value> ppm.
4. Moisture (Relative Humidity):
- a. Air: Within [5] [2] <Insert number> percent RH.
 - b. Space: Within [5] [2] <Insert number> percent RH.
 - c. Outdoor: Within [5] [2] <Insert number> percent RH.
5. Level: Within [5] [2] <Insert number> percent of reading.
6. Pressure:
- a. Air, Ducts and Equipment: [1] [0.5] <Insert number> percent of instrument [range] [span].
 - b. Space: Within [1] [0.5] [0.25] <Insert number> percent of instrument [range] [span].
 - c. Water: Within [1] [0.5] [0.25] <Insert number> percent of instrument [range] [span].
 - d. Steam: Within [1] [0.5] [0.25] <Insert number> percent of instrument [range] [span].
7. Speed: Within [10] [5] <Insert number> percent of reading.
8. Temperature, Dew Point:
- a. Air: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - b. Space: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - c. Outdoor: Within [3 deg F (1.5 deg C)] [2 deg F (1 deg C)] <Insert value>.
9. Temperature, Dry Bulb:
- a. Air: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - b. Space: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - c. Outdoor: Within [2 deg F (1 deg C)] [1 deg F (0.5 deg C)] <Insert value>.
 - d. Chilled Water: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - e. Condenser Water: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - f. Heating Hot Water: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.

- g. Energy Recovery Runaround Liquid: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - h. Steam: Within [2 deg F (1 deg C)] [1 deg F (0.5 deg C)] <Insert value>.
 - i. Temperature Difference: Within [0.25 deg F (0.15 deg C)] <Insert value>.
 - j. <Insert system>.
 - k. Other Temperatures Not Indicated: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
10. Temperature, Wet Bulb:
- a. Air: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - b. Space: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - c. Outdoor: Within [2 deg F (1 deg C)] [1 deg F (0.5 deg C)] <Insert value>.
11. Vibration: Within [5] [10] <Insert number> percent of reading.
- I. Precision of I/O Reported Values: Values reported in database and displayed shall have following precision:
- 1. Current:
 - a. Milliamperes: Nearest 1/100th of a milliampere.
 - b. Amperes: Nearest 1/10th of an ampere up to 100 A; nearest ampere for 100 A and more.
 - 2. Energy:
 - a. Electric Power:
 - 1) Rate (Watts): Nearest 1/10th of a watt through 1000 W.
 - 2) Rate (Kilowatts): Nearest 1/10th of a kilowatt through 1000 kW; nearest kilowatt above 1000 kW.
 - 3) Usage (Kilowatt-Hours): Nearest kilowatt through 10,000 kW; nearest 10 kW between 10,000 and 100,000 kW; nearest 100 kW for above 100,000 kW.
 - b. Thermal, Rate:
 - 1) Heating: For Btu/h, nearest Btu/h up to 1000 Btu/h; nearest 10 Btu/h between 1000 and 10,000 Btu/h; nearest 100 Btu/h for above 10,000 Btu/h. For Mbh, round to nearest Mbh up to 1000 Mbh; nearest 10 Mbh between 1000 and 10,000 Mbh; nearest 100 Mbh above 10,000 Mbh (For watts, nearest watt up to 1000 W; for kilowatts, round to nearest kilowatt up to 1000 kW; nearest 10 kW between 1000 and 10,000 kW; nearest 100 kW for above 10,000 kW).
 - 2) Cooling: For tons, nearest ton up to 1000 tons; nearest 10 tons between 1000 and 10,000 tons; nearest 100 tons above 10,000 tons (For watts, nearest watt up to 1000 W; for kilowatts, round to nearest kilowatt up to 1000 kW; nearest 10 kW between 1000 and 10,000 kW; nearest 100 kW for above 10,000 kW).

- c. Thermal, Usage:
 - 1) Heating: For Btu, nearest Btu up to 1000 Btu; nearest 10 Btu between 1000 and 10,000 Btu; nearest 100 Btu for above 10,000 Btu. For Mbtu, round to nearest Mbtu up to 1000 Mbtu; nearest 10 Mbtu between 1000 and 10,000 Mbtu; nearest 100 Mbtu above 10,000 Mbtu (For watt-hours, nearest watt-hour up to 1000 Wh; for kilowatt-hours, round to nearest kilowatt-hour up to 1000 kWh; nearest 10 kWh between 1000 and 10,000 kWh; nearest 100 kWh for above 10,000 kWh).
 - 2) Cooling: For ton-hours, nearest ton-hours up to 1000 ton-hours; nearest 10 ton-hours between 1000 and 10,000 ton-hours; nearest 100 tons above 10,000 tons (For watt-hours, nearest watt-hour up to 1000 Wh; for kilowatt-hours, round to nearest kilowatt-hour up to 1000 kWh; nearest 10 kWh between 1000 and 10,000 kWh; nearest 100 kWh for above 10,000 kWh).
3. Flow:
 - a. Air: Nearest 1/10th of a cfm through 100 cfm; nearest cfm between 100 and 1000 cfm; nearest 10 cfm between 1000 and 10,000 cfm; nearest 100 cfm above 10,000 cfm (Nearest 1/10th of a L/s through 100 L/s; nearest L/s between 100 and 1000 L/s; nearest 10 L/s between 1000 and 10,000 L/s; nearest 100 L/s above 10,000 L/s).
 - b. Water: Nearest 1/10th gpm through 100 gpm; nearest gpm between 100 and 1000 gpm; nearest 10 gpm between 1000 and 10,000 gpm; nearest 100 gpm above 10,000 gpm (Nearest 1/10th of a L/s through 100 L/s; nearest L/s between 100 and 1000 L/s; nearest 10 L/s between 1000 and 10,000 L/s; nearest 100 L/s above 10,000 L/s).
 - c. Steam: Nearest 1/10th lb/hr through 100 lbs/hr; nearest lbs/hr between 100 and 1000 lbs/hr; nearest 10 lbs/hr above 1000 lbs/hr (Nearest 1/10th of a L/s through 100 L/s; nearest L/s between 100 and 1000 L/s; nearest 10 L/s between 1000 and 10,000 L/s; nearest 100 L/s above 10,000 L/s).
4. Gas:
 - a. Carbon Dioxide (ppm): Nearest ppm.
 - b. Carbon Monoxide (ppm): Nearest ppm.
 - c. Oxygen (Percentage): Nearest 1/10th of 1 percent.
 - d. Refrigerant (ppm): Nearest ppm.
5. Moisture (Relative Humidity):
 - a. Relative Humidity (Percentage): Nearest 1 percent.
6. Level: Nearest 1/100th of an inch through 10 inches; nearest 1/10 of an inch between 10 and 100 inches; nearest inch above 100 inches (Nearest 1/100th of a mm through 10 mm; nearest 1/10th of a mm between 10 and 100 mm; nearest mm above 100 mm).
7. Speed:

- a. Rotation (rpm): Nearest 1 rpm.
 - b. Velocity: Nearest 1/10th fpm through 100 fpm; nearest fpm between 100 and 1000 fpm; nearest 10 fpm above 1000 fpm (Nearest 1/100th of a M/s through 10 M/s; nearest 1/10th of a M/s above 10 M/s).
8. Position, Dampers and Valves (Percentage Open): Nearest 1 percent.
9. Pressure:
- a. Air, Ducts and Equipment: Nearest 1/10th in. w.c. (Nearest Pa up to 1000 Pa; nearest 10 Pa above 1000 Pa).
 - b. Space: Nearest 1/100th in. w.c. (Nearest 1/10th Pa).
 - c. Steam: Nearest 1/10th psig through 100 psig; nearest psig above 100 psig (Nearest kPa through 1000 kPa; nearest 10 kPa above 1000 kPa).
 - d. Water: Nearest 1/10 psig through 100 psig; nearest psig above 100 psig (Nearest kPa through 1000 kPa; nearest 10 kPa above 1000 kPa).
10. Temperature:
- a. Air, Ducts and Equipment: Nearest 1/10th of a degree.
 - b. Outdoor: Nearest degree.
 - c. Space: Nearest 1/10th of a degree.
 - d. Chilled Water: Nearest 1/10th of a degree.
 - e. Condenser Water: Nearest 1/10th of a degree.
 - f. Heating Hot Water: Nearest degree.
 - g. Heat Recovery Runaround: Nearest 1/10th of a degree.
 - h. Steam: Nearest degree.
11. Vibration: Nearest 1/10th in/s (Nearest 1/10th mm/s).
12. Voltage: Nearest 1/10 volt up to 100 V; nearest volt above 100 V.
- J. Control Stability: Control variables indicated within the following limits:
1. Flow:
 - a. Air, Ducts and Equipment, except Terminal Units: Within [5] [2] <Insert number> percent of design flow rate.
 - b. Air, Terminal Units: Within [10] [5] <Insert number> percent of design flow rate.
 - c. Water: Within [2] [5] <Insert number> percent of design flow rate.
 - d. Steam: Within [5] <Insert number> percent of design flow rate.
 2. Gas:
 - a. Carbon Dioxide: Within [50] <Insert value> ppm.
 - b. Carbon Monoxide: Within [5] <Insert number> percent of reading.
 - c. Oxygen: Within [5] <Insert number> percent of reading.
 3. Moisture (Relative Humidity):
 - a. Air: Within [5] [2] <Insert number> percent RH.

- b. Space: Within [5] [2] <Insert number> percent RH.
 - c. Outdoor: Within [5] [2] <Insert number> percent RH.
 4. Level: Within [5] [2] <Insert number> percent of reading.
 5. Pressure:
 - a. Air, Ducts and Equipment: [1] [0.5] <Insert number> percent of instrument [range] [span].
 - b. Space: Within [1] [0.5] [0.25] <Insert number> percent of instrument [range] [span].
 - c. Water: Within [1] [0.5] [0.25] <Insert number> percent of instrument [range] [span].
 - d. Steam: Within [1] [0.5] [0.25] <Insert number> percent of instrument [range] [span].
 6. Temperature, Dew Point:
 - a. Air: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - b. Space: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 7. Temperature, Dry Bulb:
 - a. Air: Within [2 deg F (1 deg C)] [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - b. Space: Within [2 deg F (1 deg C)] [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - c. Chilled Water: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - d. Condenser Water: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - e. Heating Hot Water: Within [2 deg F (1 deg C)] [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - f. Energy Recovery Runaround Liquid: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - g. <Insert system>.
 8. Temperature, Wet Bulb:
 - a. Air: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
 - b. Space: Within [1 deg F (0.5 deg C)] [0.5 deg F (0.2 deg C)] <Insert value>.
- K. Environmental Conditions for Controllers, Gateways, and Routers:
 1. Products shall operate without performance degradation under ambient environmental temperature, pressure, and humidity conditions encountered for installed location.
 - a. If product alone cannot comply with requirement, install product in a protective enclosure that is isolated and protected from conditions

impacting performance. Enclosure shall be internally insulated, electrically heated, cooled and ventilated as required by product and application.

2. Products shall be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Products not available with integral enclosures complying with requirements indicated shall be housed in protective secondary enclosures. Installed location shall dictate the following NEMA 250 enclosure requirements:
 - a. Outdoors, Protected: **[Type 2] [Type 3] [Type 12] <Insert type>**.
 - b. Outdoors, Unprotected: **[Type 4] [Type 4X]**.
 - c. Indoors, Heated with Filtered Ventilation: **[Type 1] [Type 2] <Insert type>**.
 - d. Indoors, Heated with Non-Filtered Ventilation: **[Type 2] [Type 12] <Insert type>**.
 - e. Indoors, Heated and Air Conditioned: **[Type 1] <Insert type>**.
 - f. Mechanical Equipment Rooms:
 - 1) Chiller and Boiler Rooms: **[Type 12] [Type 4] [Type 4X] <Insert type>**.
 - 2) Air-Moving Equipment Rooms: **[Type 1] [Type 2] [Type 12] <Insert type>**.
 - g. Localized Areas Exposed to Washdown: **[Type 4] [Type 4X] <Insert type>**.
 - h. Within Duct Systems and Air-Moving Equipment Not Exposed to Possible Condensation: **[Type 2] [Type 3] [Type 12] <Insert type>**.
 - i. Within Duct Systems and Air-Moving Equipment Exposed to Possible Condensation: **[Type 4] [Type 4X] <Insert type>**.
 - j. Hazardous Locations: Explosion-proof rating for condition.
 - k. **<Insert location and enclosure requirements>**.
- L. Environmental Conditions for Instruments and Actuators:
 1. Instruments and actuators shall operate without performance degradation under the ambient environmental temperature, pressure, humidity, and vibration conditions specified and encountered for installed location.
 - a. If instruments and actuators alone cannot comply with requirement, install instruments and actuators in protective enclosures that are isolated and protected from conditions impacting performance. Enclosure shall be internally insulated, electrically heated[, **cooled**] and ventilated as required by instrument and application.
 2. Instruments, actuators, and accessories shall be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Instruments and actuators not available with integral enclosures complying with requirements indicated shall be housed in protective secondary enclosures. Installed location shall dictate the following NEMA 250 enclosure requirements:
 - a. Outdoors, Protected: **[Type 2] [Type 3] [Type 12] <Insert type>**.

- b. Outdoors, Unprotected: **[Type 4] [Type 4X]**.
- c. Indoors, Heated with Filtered Ventilation: **[Type 1] [Type 2] <Insert type>**.
- d. Indoors, Heated with Non-Filtered Ventilation: **[Type 2] [Type 12] <Insert type>**.
- e. Indoors, Heated and Air-conditioned: **[Type 1] <Insert type>**.
- f. Mechanical Equipment Rooms:
 - 1) Chiller and Boiler Rooms: **[Type 12] [Type 4] [Type 4X] <Insert type>**.
 - 2) Air-Moving Equipment Rooms: **[Type 1] [Type 2] [Type 12] <Insert type>**.
- g. Localized Areas Exposed to Washdown: **[Type 4] [Type 4X] <Insert type>**.
- h. Within Duct Systems and Air-Moving Equipment Not Exposed to Possible Condensation: **[Type 2] [Type 3] [Type 12] <Insert type>**.
- i. Within Duct Systems and Air-Moving Equipment Exposed to Possible Condensation: **[Type 4] [Type 4X] <Insert type>**.
- j. Hazardous Locations: Explosion-proof rating for condition.
- k. **<Insert location and enclosure requirements>**.

M. DDC System Reliability:

- 1. Design, install and configure DDC controllers, **[gateways,] [routers,] [and] <Insert product>** to yield a MTBF of at least **[40,000] [20,000] <Insert number>** hours, based on a confidence level of at least **[90] <Insert number>** percent. MTBF value shall include any failure for any reason to any part of products indicated.
- 2. If required to comply with MTBF indicated, include DDC system and product redundancy to maintain DCC system, and associated systems and equipment that are being controlled, operational and under automatic control.
- 3. Critical systems and equipment that require a higher degree of DDC system redundancy than MTBF indicated shall be indicated on Drawings.

N. Electric Power Quality:

- 1. Power-Line Surges:
 - a. Protect **[susceptible]** DDC system products connected to ac power circuits from power-line surges to comply with requirements of IEEE C62.41.
 - b. Do not use fuses for surge protection.
 - c. Test protection in the normal mode and in the common mode, using the following two waveforms:
 - 1) 10-by-1000-mic.sec. waveform with a peak voltage of 1500 V and a peak current of 60 A.
 - 2) 8-by-20-mic.sec. waveform with a peak voltage of 1000 V and a peak current of 500 A.
- 2. Power Conditioning:

- a. Protect [**susceptible**] DDC system products connected to ac power circuits from irregularities and noise rejection. Characteristics of power-line conditioner shall be as follows:
 - 1) At 85 percent load, output voltage shall not deviate by more than plus or minus 1 percent of nominal when input voltage fluctuates between minus 20 percent to plus 10 percent of nominal.
 - 2) During load changes from zero to full load, output voltage shall not deviate by more than plus or minus 3 percent of nominal.
 - 3) Accomplish full correction of load switching disturbances within five cycles, and 95 percent correction within two cycles of onset of disturbance.
 - 4) Total harmonic distortion shall not exceed 3-1/2 percent at full load.
 3. Ground Fault: Protect products from ground fault by providing suitable grounding. Products shall not fail due to ground fault condition.
- O. Backup Power Source:
1. HVAC systems and equipment served by a backup power source shall have associated DDC system products that control such systems and equipment also served from a backup power source.
- P. UPS:
1. DDC system products powered by UPS units shall include the following:
 - a. Desktop operator workstations.
 - b. Printers.
 - c. Servers.
 - d. Gateways.
 - e. DDC controllers[, **except application-specific controllers**].
 2. DDC system instruments and actuators powered by UPS units shall include the following:
 - a. Instruments associated with the following systems controlled by DDC system:
 - 1) **<Insert list of systems>**.
 - b. Dampers and actuators associated with the following systems controlled by DDC system:
 - 1) **<Insert list of systems>**.
 - c. Valves and actuators associated with the following systems controlled by DDC system:
 - 1) **<Insert list of systems>**.

Q. Continuity of Operation after Electric Power Interruption:

1. Equipment and associated factory-installed controls, field-installed controls, electrical equipment, and power supply connected to building normal and backup power systems shall automatically return equipment and associated controls to operating state occurring immediately before loss of normal power, without need for manual intervention by operator when power is restored either through backup power source or through normal power if restored before backup power is brought online.

2.5 PANEL-MOUNTED, MANUAL OVERRIDE SWITCHES

A. Manual Override of Control Dampers:

1. Include panel-mounted, two-position, selector switch for each automatic control damper being controlled by DDC controller.
2. Label each switch with damper designation served by switch.
3. Label switch positions to indicate either "Manual" or "Auto" control signal to damper.
4. With switch in "Auto" position signal to control damper actuator shall be control loop output signal from DDC controller.
5. With switch in "Manual" position, signal to damper actuator shall be controlled at panel with either an integral or separate switch to include local control.
 - a. For Binary Control Dampers: Manual two-position switch shall have "Close" and "Open" switch positions indicated. With switch in "Close" position, damper shall close. With switch in "Open" position, damper shall open.
 - b. For Analog Control Dampers: A gradual switch shall have "Close" and "Open" switch limits indicated. Operator shall be able to rotate switch knob to adjust damper to any position from close to open.
6. DDC controller shall monitor and report position of each manual override selector switch. With switch placed in "manual" position, DDC controller shall signal an override condition to alert operator that damper is under manual, not automatic, control.
7. Configure manual override switches to allow operator to manually operate damper while at panel without DDC controller **[installed] [and] [operational]**.
8. Terminal equipment including **[VAV units,] [fan-coil units,] [and] [unit heaters]** do not require manual override unless otherwise indicated by sequence of operation.

B. Manual Override of Control Valves:

1. Include panel-mounted, two-position, selector switch for each automatic control valve being controlled by a DDC controller.
2. Label each switch with valve designation served by switch.
3. Label switch positions to indicate either "Manual" or "Auto" control signal to valve.
4. With switch in "Auto" position, signal to control-valve actuator shall be a control loop output signal from DDC controller.

5. With switch in "Manual" position, signal to valve actuator shall be controlled at panel with either an integral or a separate switch to include local control.
 - a. For Binary Control Dampers: Manual two-position switch shall have "Close" and "Open" switch positions indicated. With switch in "Close" position, damper shall close. With switch in "Open" position, damper shall open.
 - b. For Analog Control Dampers: A gradual switch shall have "Open" and "Close" switch limits indicated. Operator shall be able to rotate switch knob to adjust damper to any position from close to open.
6. DDC controller shall monitor and report position of each manual override selector switch. With switch placed in "manual" position, DDC controller shall signal an override condition to alert operator that valve is under manual, not automatic, control.
7. Configure manual override switches to allow operator to manually operate valve while at panel without DDC controller **[installed] [and] [operational]**.
8. Terminal equipment including **[VAV units,] [fan-coil units,] [and] [unit heaters]** do not require manual override unless otherwise indicated by sequence of operation.

2.6 SYSTEM ARCHITECTURE

- A. System architecture shall consist of no more than **[two] [or] [three] <Insert number>** levels of LANs.
 1. Level one LAN shall connect network controllers and operator workstations.
 2. **[Level one] [or] [Level two]** LAN shall connect programmable application controllers to other programmable application controllers, and to network controllers.
 3. **[Level two] [or] [Level three]** LAN shall connect application-specific controllers to programmable application controllers and network controllers.
 4. **[Level two] [or] [Level three]** LAN shall connect application-specific controllers to application-specific controllers.
- B. Minimum Data Transfer and Communication Speed:
 1. LAN Connecting Operator Workstations and Network Controllers: **[100] [10] [2.5] [1.25] <Insert value>** Mbps.
 2. LAN Connecting Programmable Application Controllers: **[1000] [100] <Insert value>** kbps.
 3. LAN Connecting Application-Specific Controllers: **[115,000] [76,800] [38,400] [19,200] <Insert value>** bps.
- C. DDC system shall consist of dedicated **[and separated]** LANs that are not shared with other building systems and tenant data and communication networks.
- D. System architecture shall be modular and have inherent ability to expand to not less than **[two] [three] <Insert number>** times system size indicated with no impact to performance indicated.

- E. System architecture shall perform modifications without having to remove and replace existing network equipment.
- F. Number of LANs and associated communication shall be transparent to operator. All I/O points residing on any LAN shall be capable of global sharing between all system LANs.
- G. System design shall eliminate dependence on any single device for system alarm reporting and control execution. Each controller shall operate independently by performing its' own control, alarm management and historical data collection.
- H. Special Network Architecture Requirements:
 - 1. Air-Handling Systems: For control applications of an air-handling system that consists of air-handling unit(s) and VAV terminal units, include a dedicated LAN of application-specific controllers serving VAV terminal units connected directly to controller that is controlling air-handling system air-handling unit(s). Basically, create a DDC system LAN that aligns with air-handling system being controlled.
 - 2. **<Insert additional requirements>**.

2.7 DDC SYSTEM OPERATOR INTERFACES

- A. Operator Means of System Access: Operator shall be able to access entire DDC system through any of multiple means, including, but not limited to, the following:
 - 1. Desktop and portable operator workstation with hardwired connection through LAN port.
 - 2. Portable operator terminal with hardwired connection through LAN port.
 - 3. Portable operator workstation with wireless connection through LAN router.
 - 4. PDA with wireless connection through LAN router.
 - 5. Remote connection using outside of system personal computer or PDA through Web access.
 - 6. Remote connection using portable operator workstation and telephone dial-up modem.
- B. Access to system, regardless of operator means used, shall be transparent to operator.
- C. Network Ports: For hardwired connection of desktop or portable operator workstation. Network port shall be easily accessible, properly protected, clearly labeled, and installed at the following locations:
 - 1. Each mechanical equipment room.
 - 2. Each boiler room.
 - 3. Each chiller room or outdoor chiller yard.
 - 4. Each cooling tower location.
 - 5. Each different roof level with roof-mounted air-handling units or rooftop units.
 - 6. Security system command center.
 - 7. Fire-alarm system command center.

D. Desktop Workstations:

1. Connect to DDC system Level one LAN through a communications port directly on LAN or through a communications port on a DDC controller.
2. Able to communicate with any device located on any DDC system LAN.
3. Able to communicate, with modems, remotely with any device connected to any DDC system LAN.
4. Communication via a modem shall not interfere with LAN activity and LAN activity shall not prevent workstation from handling incoming calls.

E. Portable Workstations:

1. Connect to DDC system Level one LAN through a communications port directly on LAN or through a communications port on a DDC controller.
2. Able to communicate with any device located on any DDC system LAN.
3. Connect to DDC system [**Level two**] [**or**] [**Level three**] LAN through a communications port on an application-specific controller, or a room temperature sensor connected to an application-specific controller.
4. Connect to system through a wireless router connected to Level one LAN.
5. Portable workstation shall be able to communicate with any device connected to any system LAN regardless of point of physical connection to system.
6. Monitor, program, schedule, adjust set points, and report capabilities of I/O connected anywhere in system.
7. Have dynamic graphic displays that are identical to desktop workstations.

F. POT:

1. Connect DDC controller through a communications port local to controller.
2. Able to communicate with any DDC system controller that is directly connected [**or with LAN**] [**or connected to DDC system**].

G. Personal Digital Assistant:

1. Connect to system through a wireless router connected to LAN.
2. Able to communicate with any DDC controller connected to DDC system.

H. Telephone Communications:

1. Through use of a standard modem, operator shall be able to communicate with any device connected to any system LAN.
2. Have auto-dial and auto-answer communications to allow desktop and portable workstations and DDC controllers to communicate with remote workstations and remote DDC controllers via telephone lines.

a. Desktop and Portable Operator Workstation Computers with Modems:

- 1) Operators shall be able to perform all control functions, report functions, and database generation and modification functions as if directly connected to system LAN.

- 2) Have routines to automatically answer calls, and either file or display information sent remotely.
- 3) Communications taking place over telephone lines shall be completely transparent to operator.
- 4) Dial-up program shall maintain a user-definable cross-reference and associated telephone numbers so it is not required to remember or manually dial telephone numbers.

b. DDC Controllers:

- 1) Not have modems unless specifically indicated for a unique controller.
- 2) Controllers with modems shall automatically place calls to report critical alarms, or to upload trend and historical information for archiving.
- 3) Analyze and prioritize alarms to minimize initiation of calls.
- 4) Buffer noncritical alarms in memory and report them as a group of alarms, or until an operator manually requests an upload.
- 5) Make provisions for handling busy signals, no-answers, and incomplete data transfers.
- 6) Call default devices when communications cannot be established with primary devices.

I. Critical Alarm Reporting:

1. Operator-selected critical alarms shall be sent by DDC system to notify operator of critical alarms that require immediate attention.
2. DDC system shall send alarm notification to multiple recipients that are assigned for each alarm.
3. DDC system shall notify recipients by any or all means, including e-mail, text message, and prerecorded phone message to mobile and landline phone numbers.

J. Simultaneous Operator Use: Capable of accommodating up to **[five] [10] [20] <Insert number>** simultaneous operators that are accessing DDC system through any one of operator interfaces indicated.

2.8 NETWORKS

A. Acceptable networks for connecting operator workstations and network controllers include the following:

1. ATA 878.1, ARCNET.
2. CEA-709.1-C.
3. IP.
4. IEEE 8802-3, Ethernet.
5. **<Insert type>**.

- B. Acceptable networks for connecting programmable application controllers include the following:
1. ATA 878.1, ARCNET.
 2. CEA-709.1-C.
 3. IP.
 4. IEEE 8802-3, Ethernet.
 5. **<Insert type>**.
- C. Acceptable networks for connecting application-specific controllers include the following:
1. ATA 878.1, ARCNET.
 2. CEA-709.1-C.
 3. EIA-485A.
 4. IP.
 5. IEEE 8802-3, Ethernet.
 6. **<Insert type>**.

2.9 NETWORK COMMUNICATION PROTOCOL

- A. Network communication protocol(s) used throughout entire DDC system shall be open to public and available to other companies for use in making future modifications to DDC system.
- B. ASHRAE 135 Protocol:
1. ASHRAE 135 communication protocol shall be sole and native protocol used throughout entire DDC system.
 2. DDC system shall not require use of gateways except to integrate HVAC equipment and other building systems and equipment, not required to use ASHRAE 135 communication protocol.
 3. If used, gateways shall connect to DDC system using ASHRAE 135 communication protocol and Project object properties and read/write services indicated by interoperability schedule.
 4. Operator workstations, controllers, and other network devices shall be tested and listed by BACnet Testing Laboratories.
- C. CEA-709.1-C Protocol:
1. DDC system shall be an open implementation of LonWorks technology using CEA 709.1-C communication protocol and using LonMark SNVTs as defined in LonMark SNVT list exclusively for communication throughout DDC system.
 2. LNS shall be used for all network management including addressing and binding of network variables.
 - a. Final LNS database shall be submitted with Project closeout submittals.
 - b. All devices shall be online and commissioned into LNS database.

3. All devices connected to DDC system network(s) shall use CEA-709.1-C protocol and be installed so SCPT output from any node on network can be bound to any other node in the domain.

D. Industry Standard Protocols:

1. DDC system shall use any one or a combination of the following industry standard protocols for network communication while complying with other DDC system requirements indicated:
 - a. ASHRAE 135.
 - b. CEA-709.1-C.
 - c. Modbus Application Protocol Specification V1.1b.
 - d. **<Insert standard protocol>**.
2. Operator workstations [**and network controllers**] shall communicate through [**ASHRAE 135**] [**or**] [**CEA-709.1-C**] protocol.
3. Portions of DDC system networks using ASHRAE 135 communication protocol shall be an open implementation of network devices complying with ASHRAE 135. Network devices shall be tested and listed by BACnet Testing Laboratories.
4. Portions of DDC system networks using CEA-709.1-C communication protocol shall be an open implementation of LonWorks technology using CEA-709.1-C communication protocol and using LonMark SNVTs as defined in LonMark SNVT list exclusively for DDC system.
5. Portions of DDC system networks using Modbus Application Protocol Specification V1.1b communication protocol shall be an open implementation of network devices and technology complying with Modbus Application Protocol Specification V1.1b.
6. Gateways shall be used to connect networks and network devices using different protocols.

2.10 DDC SYSTEM WIRELESS NETWORKS

- A. Use [**Zigbee**] [**or**] [**an open industry standard and technology used by multiple DDC system manufacturers**] **<Insert wireless technology>** technology to create a wireless mesh network to provide wireless connectivity for network devices at multiple system levels including communications from programmable application controllers and application-specific controllers to temperature sensors and from network controllers to programmable application controllers and application-specific controllers.
- B. Installer shall design wireless networks to comply with DDC system performance requirements indicated. Wireless network devices shall co-exist on same network with hardwired devices.
- C. Hardwired controllers shall be capable of retrofit to wireless devices with no special software.
- D. A wireless coordinator shall provide a wireless interface between programmable application controllers, application-specific controllers, and network controllers.

E. Wireless Coordinators:

1. Each wireless mesh network shall use wireless coordinator(s) for initiation and formation of network.
2. Use direct sequence spread spectrum RF technology.
3. Operate on the 2.4-GHz ISM Band.
4. Comply with IEEE 802.15.4 for low-power, low duty-cycle RF transmitting systems.
5. FCC compliant to 47 CFR 15, Subpart B, Class A.
6. Operate as a bidirectional transceiver with sensors and routers to confirm and synchronize data transmission.
7. Capable of communication with sensors and routers up to a maximum distance of **250 feet (76 m)** in line of sight.
8. Include visual indicators to provide diagnostic information required for operator verification of operation.

F. Wireless Routers:

1. Each wireless mesh network shall use wireless routers with any controller to provide a wireless interface to a network controller, through a wireless coordinator.
2. Use direct sequence spread spectrum RF technology.
3. Operate on the 2.4-GHz ISM Band.
4. Comply with IEEE 802.15.4 for low-power, low duty-cycle RF transmitting systems.
5. FCC compliant to 47 CFR 15, Subpart B, Class A.
6. Operate as a bidirectional transceiver with other mesh network devices to ensure network integrity.
7. Capable of communication with other mesh network devices at a maximum distance of **250 feet (76 m)** in line of sight.
8. Include indication for use in commissioning and troubleshooting.

G. Wireless Temperature Sensors:

1. Wireless temperature sensors shall sense and transmit room temperatures, temperature set point, room occupancy notification and low battery condition to an associated router.
2. Use direct sequence spread spectrum RF technology.
3. Operate on the 2.4-GHz ISM Band.
4. Comply with IEEE 802.15.4 for low-power, low duty-cycle RF transmitting systems.
5. FCC compliant to CFR 15, Subpart B, Class A.
6. Include set point adjustment between **55 to 85 deg F (13 to 30 deg C)**.
7. Multiple sensors shall be able to report to a router connected to a DDC controller for averaging or high and low selection.

H. One-to-One Wireless Network Receivers:

1. One-to-one wireless receivers shall receive wireless RF signals containing temperature data from multiple wireless room temperature sensors and

communicate information to programmable application controllers or application-specific controllers.

- a. Use direct sequence spread spectrum RF technology.
- b. Operate on the 2.4-GHz ISM Band.
- c. Comply with IEEE 802.15.4 for low-power, low duty-cycle RF transmitting systems.
- d. FCC compliant to 47 CFR 15, Subpart B, Class A.
- e. Operate as a bidirectional transceiver with the sensors to confirm and synchronize data transmission.
- f. Capable of communication up to a distance of 200 feet (61 m).
- g. Include visual indication of the following:
 - 1) Power.
 - 2) Receiver activity.
 - 3) Wireless RF transmission from wireless sensors.
 - 4) No transmission, weak signal, adequate signal or excellent signal.

I. One-to-One Wireless Network Sensors:

1. One-to-one wireless sensors shall sense and report room temperatures to one-to-one receiver.
 - a. Use direct sequence spread spectrum RF technology.
 - b. Operate on the 2.4-GHz ISM Band.
 - c. Comply with IEEE 802.15.4 for low-power, low duty-cycle RF transmitting systems.
 - d. FCC compliant to CFR 15, Subpart B, Class A.
 - e. Include set point adjustment between 55 to 85 deg F (13 to 30 deg C).

2.11 DESKTOP OPERATOR WORKSTATIONS

A. Basis-of-Design Product: Subject to compliance with requirements, provide [Dell's "Precision T-series"] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. <Insert manufacturer's name>.

B. Performance Requirements:

1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
2. Energy Star compliant.

C. Personal Computer:

1. Minimum Processor Speed: <Insert gigahertz>.
2. RAM:
 - a. Capacity: [24] [48] <Insert value> [GB] [TB].

- b. Speed and Type: **[1333]** <Insert value> MHz, <Insert type>.
 - c. Expandable Capacity: **[24]** **[72]** <Insert value> **[GB]** **[TB]**.
3. Hard Drive:
 - a. Number of Hard Drives: **[One]** **[Two]** <Insert number>.
 - b. Capacity: <Insert number and measurement unit>.
 - c. Minimum Average Seek Time: <Insert number and measurement unit>.
 - d. Cache Buffer Size: <Insert number and measurement unit>.
 - e. <Insert requirements>.
4. Second Hard Drive:
 - a. Capacity: <Insert number and measurement unit>.
 - b. Minimum Average Seek Time: <Insert number and measurement unit>.
 - c. Cache Buffer Size: <Insert number and measurement unit>.
 - d. <Insert requirements>.
5. Optical Drive:
 - a. Type: <Insert type>.
 - b. Minimum Average Access Time: <Insert number> ms.
 - c. Data Transfer Speed: <Insert number> **[MB]** **[TB]**/s.
 - d. Reading Formats: Data, audio, recordable, <Insert other> and rewritable.
6. Optical Read and Write Drive:
 - a. Include with at least 2 MB of data buffer.
 - b. Type: <Insert type>.
 - c. Minimum Data Buffer Capacity: <Insert number and measurement unit>.
 - d. Minimum Average Access Time: <Insert number> ms.
 - e. Nominal Data Transfer Rates:
 - 1) Reading: <Insert number> **[MB]** **[TB]**/s.
 - 2) Writing: <Insert number> **[MB]** **[TB]**/s.
 - f. Average access time of 150 ms or less.
 - g. MTBF of at least 100,000 power-on hours.
7. At least four expansion slots of **[32]** **[64]** <Insert number> bit.
8. Video Card:
 - a. Resolution: **[1920 by 1200]** <Insert values> pixels.
 - b. RAM: <Insert number> **[MB]** **[GB]** **[TB]**.
 - c. Controller Speed: <Insert number> **[MHz]** **[GHz]**.
 - d. On-Board Memory Speed: <Insert number> **[MHz]** **[GHz]**.
 - e. On-Board Memory Data Width: <Insert number> bit.
9. Sound Card:
 - a. At least 128 voice wavetable synthesis.

- b. Capable of delivering three-dimensional sound effects.
 - c. High-resolution 16-bit stereo digital audio recording and playback with user-selectable sample rates up to 48,000 Hz.
 - 10. Network Interface Card: Include card with connection, as applicable.
 - a. 10-100-1000 base TX Ethernet with RJ45 connector port.
 - b. 100 base FX Ethernet with SC or ST port.
 - 11. Cable Modem:
 - a. **<Insert number>** Mbps.
 - b. Certified to comply with DOCSIS Cable Modem to Customer Premise Equipment Interface Specification, Version 3.0 and backward compatible with earlier versions.
 - c. **[Ethernet] [or] [USB]** connectivity.
 - 12. Optical Modem: Full duplex link for connection to fiber-optic cable provided.
 - 13. I/O Ports:
 - a. Two second-generation USB 2.0 ports on front panel, six on back panel, and three internal on motherboard.
 - b. One serial port.
 - c. One parallel port.
 - d. Two PS/2 ports.
 - e. One RJ-45.
 - f. One stereo line-in and headphone line-out on back panel.
 - g. One microphone and headphone connector on front panel.
 - h. One IEEE 1394 on front and back panel with PCI-e card.
 - i. One ESATA port on back panel.
 - 14. Battery: Life of at least three years to maintain system clock/calendar and ROM, as a minimum.
- D. Keyboard:
- 1. 101 enhanced keyboard.
 - 2. Full upper- and lowercase ASCII keyset, numeric keypad, dedicated cursor control keypad, and 12 programmable function keys.
 - 3. Wireless operation within up to **72 inches (1800 mm)** in front of workstation.
- E. Pointing Device:
- 1. Either a two- or three-button mouse.
 - 2. Wireless operation within up to **72 inches (1800 mm)** in front of workstation.
- F. Flat Panel Display Monitor:
- 1. Display:
 - a. Color display with **<Insert inches (mm)>** diagonal viewable area.

- b. **[Digital] [or] [analog]** input signal.
- c. Aspect Ratio: **[16 to 9] <Insert value>**.
- d. Antiglare display.
- e. Response Time: **<Insert number>** ms.
- f. Dynamic Contrast Ratio: **[50000 to 1] <Insert ratio>**.
- g. Brightness: **[250 cd/sq. m] <Insert value>**.
- h. Tilt adjustable base.
- i. Energy Star compliant.
- j. Resolution: **[1920 by 1080] <Insert value>** pixels at 60 Hz with pixel size of **[0.277] <Insert number>** mm or smaller.
- k. Number of Displays: **[One] [Two] <Insert number>**.

G. Speakers:

1. Two, with individual controls for volume, bass and treble.
2. Signal to Noise Ratio: At least 65 dB.
3. Power: At least 4 W per speaker/channel.
4. Magnetic shielding to prevent distortion on the video monitor.

H. I/O Cabling: Include applicable cabling to connect I/O devices.

2.12 PORTABLE OPERATOR WORKSTATIONS

A. Basis-of-Design Product: Subject to compliance with requirements, provide **[Dell's "Latitude"] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. **<Insert manufacturer's name>**.

B. Performance Requirements:

1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
2. Energy Star compliant.
3. Hardware and software shall support local downloading to DDC controllers.
4. Data transfer rate to DDC controller shall be at network speed.

C. Processor:

1. Minimum Processor Speed: **<Insert gigahertz>**.
2. RAM:
 - a. Capacity: **<Insert value> [GB] [TB]**.
 - b. Speed and Type: **<Insert value> MHz, <Insert type>**.
 - c. Expandable Capacity: **<Insert value> [GB] [TB]**.
3. Hard Drive:
 - a. Number of Hard Drives: **[One] [Two] <Insert number>**.
 - b. Capacity: **<Insert number and measurement unit>**.

- c. Minimum Average Seek Time: **<Insert number and measurement unit>**.
 - d. Cache Buffer Size: **<Insert number and measurement unit>**.
 - e. **<Insert requirements>**.
4. Video Card: **<Insert number and measurement unit>** of RAM.
- D. Input and Output Ports:
 1. Serial port.
 2. Shared port for external keyboard or mouse.
 3. Four USB 2.0 ports.
 4. Ethernet port.
 5. IEEE 1394 integrated port.
 6. Serial infrared communications port.
- E. Battery:
 1. 9-cell, 81 Wh lithium ion battery and ac adapter.
 2. Battery life of at least three years.
 3. Battery charge time of less than three hours.
 4. Spare Battery(ies). **[One] [Two]**.
- F. Keyboard:
 1. 85-key **[backlit]** keyboard.
 2. Full upper- and lowercase ASCII keyset.
- G. Integral Pointing Device: Touchpad with two buttons or equivalent pointing device.
- H. Display:
 1. **<Insert inches (mm)>** diagonal or larger high-definition WLED color display.
 2. Antiglare screen.
 3. **[1920 by 1080]** **<Insert value>** pixel resolution.
 4. Brightness: 300 nits.
- I. Network Interface Card: Include card with connection, as application.
 1. 10-100-1000 base TX Ethernet with RJ45 connector port.
 2. 100 base FX Ethernet with SC or ST port.
- J. Digital Video Disc Rewrite Recorder (DVD+/-RW):
 1. Compatible with DVD disks and data, audio, recordable, and rewritable compact disks.
 2. Nominal Data Transfer Rates:
 - a. Reading: **<Insert number> [MB] [TB]/s**.
 - b. Writing: **<Insert number> [MB] [TB]/s**.
 3. 160-ms access time.

K. Accessories:

1. Leather carrying case.
2. Docking station.
3. Wireless-N communication card.
4. Bluetooth module with 2.1 standard technologies.
5. Mobile broadband card.
6. Wireless optical mouse.
7. **<Insert value> [GB] [TB]** portable hard drive.
8. Light-sensitive Web cam and noise-cancelling digital array microphone.
9. Cable with network jackets on each end. Minimum cable length shall be **<Insert length>**.

2.13 POT

- A. Description: Handheld device with integral keypad or touch screen operator interface.
- B. Display: Multiple lines of text display for use in operator interaction with DDC system.
- C. Cable: Flexible **[coiling]** cable, at least **36 inches (900 mm)** long, with a plug-in jack for connection to DDC controllers, network ports or instruments with an integral LAN port. As an alternative to hardwired connection, POT shall be accessible to DDC controllers through a wireless network connection.
- D. POT shall be powered through network connection.
- E. Connection of POT to DDC system shall not interrupt or interfere with normal network operation in any way, prevent alarms from being transmitted, or preclude central initiated commands and system modification.
- F. POT shall give operator the ability to do the following:
 1. Display and monitor BI point status.
 2. Change BO point set point (on or off, open or closed).
 3. Display and monitor analog point values.
 4. Change analog control set points.
 5. Command a setting of AO point.
 6. Display and monitor I/O point in alarm.
 7. Add a new or delete an existing I/O point.
 8. Enable and disable I/O points, initiators, and programs.
 9. Display and change time and date.
 10. Display and change time schedules.
 11. Display and change run-time counters and run-time limits.
 12. Display and change time and event initiation.
 13. Display and change control application and DDC parameters.
 14. Display and change programmable offset values.
 15. Access DDC controller initialization routines and diagnostics.
 16. **<Insert requirements>**.

2.14 SERVERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide **[Dell's "PowerEdge T series"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. <Insert manufacturer's name>.
- B. Performance Requirements:
1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
 2. Energy Star compliant.
 3. Minimum Processor Speed: <Insert gigahertz>.
 4. RAM:
 - a. Capacity: <Insert value> [GB] [TB].
 - b. Speed and Type: <Insert value> MGz, <Insert type>.
 - c. Expandable Capacity: <Insert value> [GB] [TB].
 5. Redundant Array of Independent Disks: [Zero] [One] [Two] [Three] [Four] [Five] <Insert number> configuration.
 6. Drive Bays: Eight at 2.5 inches (65 mm) or eight at 3.5 inches (90 mm).
 7. Hard-Drive Storage: [Two] [Three] [Four] drives each with <Insert value> [GB] [TB] storage and nominal rotational speed of 7200 rpm.
 8. Network Interface: Dual port Ethernet.
 9. DVD +RW Drive.
 10. Color, flat-screen display with <Insert inches (mm)> diagonal viewable area.
 11. Keyboard and mouse.
 12. Next-day on-site warranty for [two] [three] <Insert number>-year period following Substantial Completion.
- C. Servers shall include the following:
1. Full-feature backup server (server and backup minimum requirement).
 2. Software licenses.
 3. CAT-5e or CAT-6 cable installation between server(s) and network.
- D. Web Server:
1. If required to be separate, include Web server hardware and software to match, except backup server is not required.
 2. Firewalls between server Web and networks.
 3. Password protection for access to server from Web server.
 4. CAT-5e or CAT 6 cable installation between the server(s) and building Ethernet network.
- E. Power each server through a [dedicated] UPS unit.

2.15 PRINTERS

A. Black and White Laser Printer:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Hewlett-Packard Company's "LazerJet 2420 Series"] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**.
2. **[1200 by 1200] <Insert value>** dots per inch resolution.
3. First sheet printed within 10 seconds.
4. **<Insert number>** page per minute rated print speed at best quality mode.
5. Print buffer with at least **<Insert value>** MB of RAM, expandable to at least 288 MBs.
6. Complies with Energy Star requirements.
7. Capable of handling letter- and legal-size paper and overhead transparencies.
8. Two paper trays; one tray with **<Insert number>** sheet capacity, and one tray with **<Insert number>** sheet capacity.
9. At least **<Insert number>** page toner/cartridge capacity.

B. Color Laser Printer:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Hewlett-Packard Company's "LazerJet CP4025dn Series"] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**.
2. **[1200 by 1200] <Insert value>** dots per inch resolution black and white, **[1200 by 1200] <Insert value>** dots per inch resolution black and white and color.
3. First sheet printed within 10 seconds.
4. **<Insert number>** page per minute rated print speed at best quality mode.
5. Print buffer with at least **[512] <Insert value>** MB of RAM, expandable to at least **[one] <Insert value>** GB.
6. Complies with Energy Star requirements.
7. Capable of handling letter- and legal-size paper and overhead transparencies.
8. Two paper trays; one tray with **<Insert number>** sheet capacity, and one tray with **500 <Insert number>** sheet capacity.
9. Two-sided printing.
10. At least **<Insert number>** page toner/cartridge capacity.

C. Color Inkjet Printer:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Hewlett-Packard Company's "InkJet 2800dt Series"] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **<Insert manufacturer's name>**.
 2. Inkjet technology with true four-color printing (black, cyan, magenta, and yellow).
 3. Print quality of [**1200 by 600**] **<Insert value>** dots per inch with black on inkjet paper and [**4800 by 1200**] **<Insert value>** dots per inch color printing on premium photo paper.
 4. Rated speed of **<Insert number>** pages per minute printing black and white in normal mode and **<Insert number>** pages per minute printing color in normal mode.
 5. Two paper trays; one tray with **<Insert number>** sheet capacity, and one tray with **<Insert number>** sheet capacity.
 6. Capable of handling letter- and legal-size paper and overhead transparencies.
 7. **<Insert number>** MB of RAM.
 8. Duplex printing (printing on both sides of paper).
- D. Dot Matrix Printer:
1. Basis-of-Design Product: Subject to compliance with requirements, provide [**Epson America Inc.'s "LQ-2090"**] **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**.
 2. Letter-quality, wide-carriage, 24-pin dot matrix printer.
 3. **<Insert number>** kb print buffer.
 4. Minimum Print Speed:
 - a. 330 characters per second (draft).
 - b. 110 characters per second (letter quality).
 5. Seven print fonts.
 6. Continuous - forms feed with manual single sheet feed.
 7. Capable of handling **16-inch-** (400-mm-) wide continuous-feed paper.

2.16 SYSTEM SOFTWARE

- A. System Software Minimum Requirements:
1. Real-time multitasking and multiuser [**32-**] [**or**] [**64-**]bit operating system that allows concurrent multiple operator workstations operating and concurrent execution of multiple real-time programs and custom program development.
 2. Operating system shall be capable of operating DOS and Microsoft Windows applications.
 3. Database management software shall manage all data on an integrated and non-redundant basis. Additions and deletions to database shall be without detriment to existing data. Include cross linkages so no data required by a program can be deleted by an operator until that data have been deleted from respective programs.

4. Network communications software shall manage and control multiple network communications to provide exchange of global information and execution of global programs.
5. Operator interface software shall include day-to-day operator transaction processing, alarm and report handling, operator privilege level and data segregation control, custom programming, and online data modification capability.
6. Scheduling software shall schedule centrally based time and event, temporary, and exception day programs.

B. Operator Interface Software:

1. Minimize operator training through use of English language pronouncing and English language point identification.
2. Minimize use of a typewriter-style keyboard through use of a pointing device similar to a mouse.
3. Operator sign-off shall be a manual operation or, if no keyboard or mouse activity takes place, an automatic sign-off.
4. Automatic sign-off period shall be programmable from one to 60 minutes in one-minute increments on a per operator basis.
5. Operator sign-on and sign-off activity shall be recorded and sent to printer.
6. Security Access:
 - a. Operator access to DDC system shall be under password control.
 - b. An alphanumeric password shall be field assignable to each operator.
 - c. Operators shall be able to access DDC system by entry of proper password.
 - d. Operator password shall be same regardless of which computer or other interface means is used.
 - e. Additions or changes made to passwords shall be updated automatically.
 - f. Each operator shall be assigned an access level to restrict access to data and functions the operator is capable of performing.
 - g. Software shall have at least five access levels.
 - h. Each menu item shall be assigned an access level so that a one-for-one correspondence between operator assigned access level(s) and menu item access level(s) is required to gain access to menu item.
 - i. Display menu items to operator with those capable of access highlighted. Menu and operator access level assignments shall be online programmable and under password control.
7. Data Segregation:
 - a. Include data segregation for control of specific data routed to a workstation, to an operator or to a specific output device, such as a printer.
 - b. Include at least [32] **<Insert number>** segregation groups.
 - c. Segregation groups shall be selectable such as "fire points," "fire points on second floor," "space temperature points," "HVAC points," and so on.
 - d. Points shall be assignable to multiple segregation groups. Display and output of data to printer or monitor shall occur where there is a match of

- operator or peripheral segregation group assignment and point segregations.
- e. Alarms shall be displayed and printed at each peripheral to which segregation allows, but only those operators assigned to peripheral and having proper authorization level will be allowed to acknowledge alarms.
 - f. Operators and peripherals shall be assignable to multiple segregation groups and all assignments are to be online programmable and under password control.
8. Operators shall be able to perform commands including, but not limited to, the following:
- a. Start or stop selected equipment.
 - b. Adjust set points.
 - c. Add, modify, and delete time programming.
 - d. Enable and disable process execution.
 - e. Lock and unlock alarm reporting for each point.
 - f. Enable and disable totalization for each point.
 - g. Enable and disable trending for each point.
 - h. Override control loop set points.
 - i. Enter temporary override schedules.
 - j. Define holiday schedules.
 - k. Change time and date.
 - l. Enter and modify analog alarm limits.
 - m. Enter and modify analog warning limits.
 - n. View limits.
 - o. Enable and disable demand limiting.
 - p. Enable and disable duty cycle.
 - q. Display logic programming for each control sequence.
 - r. **<Insert requirements>**.
9. Reporting:
- a. Generated automatically and manually.
 - b. Sent to displays, printers, and disk files.
 - c. Types of Reporting:
 - 1) General listing of points.
 - 2) List points currently in alarm.
 - 3) List of off-line points.
 - 4) List points currently in override status.
 - 5) List of disabled points.
 - 6) List points currently locked out.
 - 7) List of items defined in a "Follow-Up" file.
 - 8) List weekly schedules.
 - 9) List holiday programming.
 - 10) List of limits and deadbands.
10. Summaries: For specific points, for a logical point group, for an operator selected group(s), or for entire system without restriction due to hardware configuration.

C. Graphic Interface Software:

1. Include a full interactive graphical selection means of accessing and displaying system data to operator. Include at least five levels with the penetration path operator assignable (for example, site, building, floor, air-handling unit, and supply temperature loop). Native language descriptors assigned to menu items are to be operator defined and modifiable under password control.
2. Include a hierarchical-linked dynamic graphic operator interface for accessing and displaying system data and commanding and modifying equipment operation. Interface shall use a pointing device with pull-down or penetrating menus, color, and animation to facilitate operator understanding of system.
3. Include at least 10 levels of graphic penetration with the hierarchy operator assignable.
4. Descriptors for graphics, points, alarms, and such shall be modified through operator's workstation under password control.
5. Graphic displays shall be online user definable and modifiable using the hardware and software provided.
6. Data to be displayed within a graphic shall be assignable regardless of physical hardware address, communication or point type.
7. Graphics are to be online programmable and under password control.
8. Points may be assignable to multiple graphics where necessary to facilitate operator understanding of system operation.
9. Graphics shall also contain software points.
10. Penetration within a graphic hierarchy shall display each graphic name as graphics are selected to facilitate operator understanding.
11. Back-trace feature shall permit operator to move upward in the hierarchy using a pointing device. Back trace shall show all previous penetration levels. Include operator with option of showing each graphic full screen size with back trace as horizontal header or by showing a "stack" of graphics, each with a back trace.
12. Display operator accessed data on the monitor.
13. Operator shall select further penetration using pointing device to click on a site, building, floor, area, equipment, and so on. Defined and linked graphic below that selection shall then be displayed.
14. Include operator with means to directly access graphics without going through penetration path.
15. Dynamic data shall be assignable to graphics.
16. Display points (physical and software) with dynamic data provided by DDC system with appropriate text descriptors, status or value, and engineering unit.
17. Use color, rotation, or other highly visible means, to denote status and alarm states. Color shall be variable for each class of points, as chosen by operator.
18. Points shall be dynamic with operator adjustable update rates on a per point basis from [one] <Insert value> second to over a [minute] <Insert value>.
19. For operators with appropriate privilege, points shall be commanded directly from display using pointing device.
 - a. For an analog command point such as set point, current conditions and limits shall be displayed and operator can position new set point using pointing device.

- b. For a digital command point such as valve position, valve shall show its current state such as open or closed and operator could select alternative position using pointing device.
 - c. Keyboard equivalent shall be available for those operators with that preference.
 - 20. Operator shall be able to split or resize viewing screen into quadrants to show one graphic on one quadrant of screen and other graphics or spreadsheet, bar chart, word processing, curve plot and other information on other quadrants on screen. This feature shall allow real-time monitoring of one part of system while displaying other parts of system or data to better facilitate overall system operation.
 - 21. Help Features:
 - a. On-line context-sensitive help utility to facilitate operator training and understanding.
 - b. Bridge to further explanation of selected keywords. Document shall contain text and graphics to clarify system operation.
 - 1) If help feature does not have ability to bridge on keywords for more information, a complete set of user manuals shall be provided in an indexed word-processing program, which shall run concurrently with operating system software.
 - c. Available for Every Menu Item:
 - 1) Index items for each system menu item.
 - 22. Graphic generation software shall allow operator to add, modify, or delete system graphic displays.
 - a. Include libraries of symbols depicting HVAC symbols such as fans, coils, filters, dampers, valves pumps, and electrical symbols[**similar to those indicated**].
 - b. Graphic development package shall use a pointing device in conjunction with a drawing program to allow operator to perform the following:
 - 1) Define background screens.
 - 2) Define connecting lines and curves.
 - 3) Locate, orient, and size descriptive text.
 - 4) Define and display colors for all elements.
 - 5) Establish correlation between symbols or text and associated system points or other displays.
- D. Project-Specific Graphics: Graphics documentation including, but not limited to, the following:
- 1. Site plan showing each building, and additional site elements, which are being controlled or monitored by DDC system.

2. Plan for each building floor, including interstitial floors, and each roof level of each building, showing the following:
 - a. Room layouts with room identification and name.
 - b. Locations and identification of all monitored and controlled HVAC equipment and other equipment being monitored and controlled by DDC system.
 - c. Location and identification of each hardware point being controlled or monitored by DDC system.
 - d. **<Insert requirements>**.
3. Control schematic for each of following, including a graphic system schematic representation[, **similar to that indicated on Drawings,**] with point identification, set point and dynamic value indication[, **sequence of operation**] [**and**] [**control logic diagram**].
4. Graphic display for each piece of equipment connected to DDC system through a data communications link. Include dynamic indication of all points associated with equipment.
5. DDC system network riser diagram that shows schematic layout for entire system including all networks and all controllers, [**gateways**] [**operator workstations**] [**and**] [**other network devices**].

E. Customizing Software:

1. Software to modify and tailor DDC system to specific and unique requirements of equipment installed, to programs implemented and to staffing and operational practices planned.
2. Online modification of DDC system configuration, program parameters, and database using menu selection and keyboard entry of data into preformatted display templates.
3. As a minimum, include the following modification capability:
 - a. Operator assignment shall include designation of operator passwords, access levels, point segregation, and auto sign-off.
 - b. Peripheral assignment capability shall include assignment of segregation groups and operators to consoles and printers, designation of backup workstations and printers, designation of workstation header points and enabling and disabling of printout of operator changes.
 - c. System configuration and diagnostic capability shall include communications and peripheral port assignments, DDC controller assignments to network, DDC controller enable and disable, assignment of command trace to points and application programs and initiation of diagnostics.
 - d. System text addition and change capability shall include English or native language descriptors for points, segregation groups and access levels and action messages for alarms, run time and trouble condition.
 - e. Time and schedule change capability shall include time and date set, time and occupancy schedules, exception and holiday schedules and daylight savings time schedules.
 - f. Point related change capability shall include the following:

- 1) System and point enable and disable.
 - 2) Run-time enable and disable.
 - 3) Assignment of points to segregation groups, calibration tables, lockout, and run time and to a fixed I/O value.
 - 4) Assignment of alarm and warning limits.
- g. Application program change capability shall include the following:
- 1) Enable and disable of software programs.
 - 2) Programming changes.
 - 3) Assignment of comfort limits, global points, time and event initiators, time and event schedules and enable and disable time and event programs.
4. Software shall allow operator to add points, or groups of points, to DDC system and to link them to energy optimization and management programs. Additions and modifications shall be online programmable using operator workstation, downloaded to other network devices and entered into their databases. After verification of point additions and associated program operation, database shall be uploaded and recorded on hard drive and disk for archived record.
5. Include high-level language programming software capability for implementation of custom DDC programs. Software shall include a compiler, linker, and up- and down-load capability.
6. Include a library of DDC algorithms, intrinsic control operators, arithmetic, logic and relational operators for implementation of control sequences. Also include, as a minimum, the following:
- a. Proportional control (P).
 - b. Proportional plus integral (PI).
 - c. Proportional plus integral plus derivative (PID).
 - d. Adaptive and intelligent self-learning control.
- 1) Algorithm shall monitor loop response to output corrections and adjust loop response characteristics according to time constant changes imposed.
 - 2) Algorithm shall operate in a continuous self-learning manner and shall retain in memory a stored record of system dynamics so that on system shut down and restart, learning process starts from where it left off.
7. Fully implemented intrinsic control operators including sequence, reversing, ratio, time delay, time of day, highest select AO, lowest select AO, analog controlled digital output, analog control AO, and digitally controlled AO.
8. Logic operators such as "And," "Or," "Not," and others that are part of a standard set available with a high-level language.
9. Arithmetic operators such as "Add," "Subtract," "Multiply," "Divide," and others that are part of a standard set available with a high-level language.
10. Relational operators such as "Equal To," "Not Equal To," "Less Than," "Greater Than," and others that are part of a standard set available with a high-level language.

F. Alarm Handling Software:

1. Include alarm handling software to report all alarm conditions monitored and transmitted through DDC controllers[, **gateways**] [**and other network devices**].
2. Include first in, first out handling of alarms according to alarm priority ranking, with most critical alarms first, and with buffer storage in case of simultaneous and multiple alarms.
3. Alarm handling shall be active at all times to ensure that alarms are processed even if an operator is not currently signed on to DDC system.
4. Alarms display shall include the following:
 - a. Indication of alarm condition such as "Abnormal Off," "Hi Alarm," and "Low Alarm."
 - b. "Analog Value" or "Status" group and point identification with native language point descriptor such as "Space Temperature, Building 110, 2nd Floor, Room 212."
 - c. Discrete per point alarm action message, such as "Call Maintenance Dept. Ext-5561."
 - d. Include extended message capability to allow assignment and printing of extended action messages. Capability shall be operator programmable and assignable on a per point basis.
5. Alarms shall be directed to appropriate operator workstations, printers, and individual operators by privilege level and segregation assignments.
6. Send e-mail alarm messages to designated operators.
7. Send e-mail, page, text and voice messages to designated operators for critical alarms.
8. Alarms shall be categorized and processed by class.
 - a. Class 1:
 - 1) Associated with fire, security and other extremely critical equipment monitoring functions; have alarm, trouble, return to normal, and acknowledge conditions printed and displayed.
 - 2) Unacknowledged alarms to be placed in unacknowledged alarm buffer.
 - 3) All conditions shall cause an audible sound and shall require individual acknowledgment to silence audible sound.
 - b. Class 2:
 - 1) Critical, but not life-safety related, and processed same as Class 1 alarms, except do not require individual acknowledgment.
 - 2) Acknowledgement may be through a multiple alarm acknowledgment.
 - c. Class 3:
 - 1) General alarms; printed, displayed and placed in unacknowledged alarm buffer queues.

- 2) Each new alarm received shall cause an audible sound. Audible sound shall be silenced by "acknowledging" alarm or by pressing a "silence" key.
- 3) Acknowledgement of queued alarms shall be either on an individual basis or through a multiple alarm acknowledgement.
- 4) Alarms returning to normal condition shall be printed and not cause an audible sound or require acknowledgment.

d. Class 4:

- 1) Routine maintenance or other types of warning alarms.
 - 2) Alarms to be printed only, with no display, no audible sound and no acknowledgment required.
9. Include an unacknowledged alarm indicator on display to alert operator that there are unacknowledged alarms in system. Operator shall be able to acknowledge alarms on an individual basis or through a multiple alarm acknowledge key, depending on alarm class.
10. To ensure that no alarm records are lost, it shall be possible to assign a backup printer to accept alarms in case of failure of primary printer.

G. Reports and Logs:

1. Include reporting software package that allows operator to select, modify, or create reports using DDC system I/O point data available.
2. Each report shall be definable as to data content, format, interval, and date.
3. Report data shall be sampled and stored on DDC controller, within storage limits of DDC controller, and then uploaded to archive on **[workstation]** **[server]** for historical reporting.
4. Operator shall be able to obtain real-time logs of all I/O points by type or status, such as alarm, point lockout, or normal.
5. Reports and logs shall be stored on **[workstation]** **[and]** **[server]** hard drives in a format that is readily accessible by other standard software applications, including spreadsheets and word processing.
6. Reports and logs shall be readily printed and set to be printed either on operator command or at a specific time each day.

H. Standard Reports: Standard DDC system reports shall be provided and operator shall be able to customize reports later.

1. All I/O: With current status and values.
2. Alarm: All current alarms, except those in alarm lockout.
3. Disabled I/O: All I/O points that are disabled.
4. Alarm Lockout I/O: All I/O points in alarm lockout, whether manual or automatic.
5. Alarm Lockout I/O in Alarm: All I/O in alarm lockout that are currently in alarm.
6. Logs:
 - a. Alarm history.
 - b. System messages.
 - c. System events.

d. Trends.

- I. Custom Reports: Operator shall be able to easily define any system data into a daily, weekly, monthly, or annual report. Reports shall be time and date stamped and shall contain a report title.
- J. Tenant Override Reports: Prepare Project-specific reports.
 1. Weekly report showing daily total time in hours that each tenant has requested after-hours HVAC.
 2. Monthly report showing daily total time in hours that each tenant has requested after-hours HVAC.
 3. Annual summary report that shows after-hours HVAC usage on a monthly basis.
- K. HVAC Equipment Reports: Prepare Project-specific reports.
 1. Chiller Report: Daily report showing operating conditions of each chiller according to ASHRAE 147, including, but not limited to, the following:
 - a. Chilled-water entering temperature.
 - b. Chilled-water leaving temperature.
 - c. Chilled-water flow rate.
 - d. Chilled-water inlet and outlet pressures.
 - e. Evaporator refrigerant pressure and temperature.
 - f. Condenser refrigerant pressure and liquid temperature.
 - g. Condenser-water entering temperature.
 - h. Condenser-water leaving temperature.
 - i. Condenser-water flow rate.
 - j. Refrigerant levels.
 - k. Oil pressure and temperature.
 - l. Oil level.
 - m. Compressor refrigerant discharge temperature.
 - n. Compressor refrigerant suction temperature.
 - o. Addition of refrigerant.
 - p. Addition of oil.
 - q. Vibration levels or observation that vibration is not excessive.
 - r. Motor amperes per phase.
 - s. Motor volts per phase.
 - t. Refrigerant monitor level (PPM).
 - u. Purge exhaust time or discharge count.
 - v. Ambient temperature (dry bulb and wet bulb).
 - w. Date and time logged.
 2. **<Insert requirements for each type of HVAC equipment requiring a report>.**
- L. Utility Reports: Prepare Project-specific reports.
 1. Electric Report:

- a. Include weekly report showing daily electrical consumption and peak electrical demand with time and date stamp for each meter.
 - b. Include monthly report showing the daily electrical consumption and peak electrical demand with time and date stamp for each meter.
 - c. Include annual report showing the monthly electrical consumption and peak electrical demand with time and date stamp for each meter.
 - d. For each weekly, monthly, and annual report, include sum total of submeters combined by load type, such as lighting, receptacles, and HVAC equipment showing daily electrical consumption and peak electrical demand.
 - e. For each weekly, monthly, and annual report, include sum total of all submeters in building showing electrical consumption and peak electrical demand.
2. Natural Gas Report:
- a. Include weekly report showing daily natural gas consumption and peak natural gas demand with time and date stamp for each meter.
 - b. Include monthly report showing the daily natural gas consumption and peak natural gas demand with time and date stamp for each meter.
 - c. Include annual report showing the monthly natural gas consumption and peak natural gas demand with time and date stamp for each meter.
 - d. For each weekly, monthly, and annual report, include sum total of submeters combined by load type, such as boilers and service water heaters showing daily natural gas consumption and peak natural gas demand.
 - e. For each weekly, monthly, and annual report, include sum total of all submeters in building showing natural gas consumption and peak natural gas demand.
3. Service Water Report:
- a. Include weekly report showing daily service water consumption and peak service water demand with time and date stamp for each meter.
 - b. Include monthly report showing the daily service water consumption and peak service water demand with time and date stamp for each meter.
 - c. Include annual report showing the monthly service water consumption and peak service water demand with time and date stamp for each meter.
 - d. For each weekly, monthly, and annual report, include sum total of submeters combined by load type, such as cooling tower makeup and irrigation showing daily service water consumption and peak service water demand.
 - e. For each weekly, monthly, and annual report, include sum total of all submeters in building showing service water consumption and peak service water demand.
4. **<Insert requirements for each utility requiring a report>.**
- M. Energy Reports: Prepare Project-specific daily, weekly, monthly [**and annual**] [, **annual and since-installed**] energy reports.

1. Prepare report for each purchased energy utility, indicating the following:
 - a. Time period being reported with beginning and end date, and time indicated.
 - b. Consumption in units of measure commonly used to report specific utility consumption over time.
 - c. Gross area served by utility.
 - d. Consumption per unit area served using utility-specific unit of measure.
 - e. Cost per utility unit.
 - f. Utility cost per unit area.
 - g. Convert all utilities to a common energy consumption unit of measure and report for each utility.
 - h. Consumption per unit area using common unit of measure.

2. Prepare report for each renewable energy source, indicating the following:
 - a. Time period being reported with beginning and end date, and time indicated.
 - b. Harvested energy in units of measure commonly used to report specific harvested energy consumption over time.
 - c. Gross area served by renewable energy source.
 - d. Harvested energy per unit area served using specific unit of measure.
 - e. Cost per purchased utility unit displaced by renewable energy.
 - f. Cost savings attributed to harvested energy source.
 - g. Cost savings per unit area attributed to harvested energy.
 - h. Convert all renewable energy sources to a common energy consumption unit of measure and report for each.
 - i. Harvested energy per unit area using common unit of measure.

3. Prepare purchased energy utility report for each submetered area that indicates the following:
 - a. Time period being reported with beginning and end date, and time indicated.
 - b. Gross area served.
 - c. Energy consumption by energy utility type.
 - d. Energy consumption per unit area by energy utility type.
 - e. Total energy consumption of all utilities in common units of measure.
 - f. Total energy consumption of all utilities in common units of measure per unit area.
 - g. Unit energy cost by energy utility type.
 - h. Energy cost by energy utility type.
 - i. Energy cost per unit area by energy utility type.
 - j. Total cost of all energy utilities.
 - k. Total cost of all energy utilities per unit area.

4. Prepare Project total purchased energy utility report that combines all purchased energy utilities and all areas served. Project total energy report shall indicate the following:

- a. Time period being reported with beginning and end date, and time indicated.
 - b. Gross area served.
 - c. Energy consumption by energy utility type.
 - d. Energy consumption per unit area by energy utility type.
 - e. Total energy consumption of all utilities in common units of measure.
 - f. Total energy consumption of all utilities in common units of measure per unit area.
 - g. Unit energy cost by energy utility type.
 - h. Energy cost by energy utility type.
 - i. Energy cost per unit area by energy utility type.
 - j. Total cost of all energy utilities.
 - k. Total cost of all energy utilities per unit area.
- N. HVAC System Efficiency Reports: Prepare Project-specific [**daily**] [**weekly**] [**monthly**] [**and annual**] [, **annual and since-installed**] HVAC system efficiency reports.
1. Prepare report for [**each**] chilled-water system, indicating the following:
 - a. Time period being reported with beginning and end date, and time indicated.
 - b. Cooling energy supplied during time period.
 - c. Power energy consumed during time period by cooling equipment used to produce cooling energy supplied. [**List power consumed for each individual piece of equipment in system and summed total of all equipment in system.**]
 - d. Energy efficiency coefficient of performance determined by dividing power energy consumed into cooling energy supplied.
 - e. Energy efficiency determined by dividing cooling energy supplied into power energy consumed.
 - f. Units of measure used in report shall be consistent with units indicated for system.
 2. Prepare report for [**each**] hot-water system, indicating the following:
 - a. Time period being reported with beginning and end date, and time indicated.
 - b. Cooling energy supplied during time period.
 - c. Fuel consumed during time period by boilers used to produce heating energy supplied. [**List fuel consumed for each individual piece of equipment in system and summed total of all equipment in system.**]
 - d. Energy efficiency determined by dividing heating energy supplied into fuel energy consumed.
 - e. Units of measure used in report shall be consistent with units indicated for system.
 3. Prepare report for [**each**] steam system, indicating the following:
 - a. Time period being reported with beginning and end date, and time indicated.

- b. Cooling energy supplied during time period.
 - c. Fuel consumed during time period by boilers used to produce heating energy supplied. [**List fuel consumed for each individual piece of equipment in system and summed total of all equipment in system.**]
 - d. Energy efficiency determined by dividing heating energy supplied into fuel energy consumed.
 - e. Units of measure used in report shall be consistent with units indicated for system.
4. <Insert requirements for each HVAC system requiring a report>.
- O. PUE Reports: Prepare Project-specific [daily] [weekly] [monthly] [and annual] [, **annual and since-installed**] PUE reports.
1. Prepare separate report for each [tenant] <Insert category>.
 2. Prepare Project PUE report that combines PUE and all tenants served.
 3. Calculate PUE following guidelines in [The Green Grid, White Paper No. 22] <Insert requirements>.
- P. Weather Reports:
1. Include daily report showing the following:
 - a. Daily minimum, maximum, and average outdoor dry-bulb temperature.
 - b. Daily minimum, maximum, and average outdoor wet-bulb temperature.
 - c. Daily minimum, maximum, and average outdoor dew point temperature.
 - d. Number of heating degree-days for each day calculated from a base temperature of [55 deg F (13 deg C)] <Insert temperature>.
 - e. Number of cooling degree-days for each day calculated from a base temperature of [65 deg F (18 deg C)] <Insert temperature>.
 - f. Daily minimum, maximum, and average outdoor carbon dioxide level.
 - g. Daily minimum, maximum, and average relative humidity.
 - h. Daily minimum, maximum, and average barometric pressure.
 - i. Daily minimum, maximum, and average wind speed and direction.
 2. Include weekly report showing the following:
 - a. Daily minimum, maximum, and average outdoor dry-bulb temperature.
 - b. Daily minimum, maximum, and average outdoor wet-bulb temperature.
 - c. Daily minimum, maximum, and average outdoor dew point temperature.
 - d. Number of heating degree-days for each day calculated from a base temperature of [55 deg F (13 deg C)] <Insert temperature>.
 - e. Number of cooling degree-days for each day calculated from a base temperature of [65 deg F (18 deg C)] <Insert temperature>.
 - f. Weekly minimum, maximum, and average outdoor carbon dioxide level.
 - g. Daily minimum, maximum, and average relative humidity.
 - h. Daily minimum, maximum, and average barometric pressure.
 - i. Daily minimum, maximum, and average wind speed and direction.
 3. Include monthly report showing the following:

- a. Daily minimum, maximum, and average outdoor dry-bulb temperature.
 - b. Daily minimum, maximum, and average outdoor wet-bulb temperature.
 - c. Daily minimum, maximum, and average outdoor dew point temperature.
 - d. Number of heating degree-days for each day calculated from a base temperature of [55 deg F (13 deg C)] <Insert temperature>.
 - e. Number of cooling degree-days for each day calculated from a base temperature of [65 deg F (18 deg C)] <Insert temperature>.
 - f. Monthly minimum, maximum, and average outdoor carbon dioxide level.
 - g. Daily minimum, maximum, and average relative humidity.
 - h. Daily minimum, maximum, and average barometric pressure.
 - i. Daily minimum, maximum, and average wind speed and direction.
4. Include annual (12-month) report showing the following:
- a. Monthly minimum, maximum, and average outdoor dry-bulb temperature.
 - b. Monthly minimum, maximum, and average outdoor wet-bulb temperature.
 - c. Monthly minimum, maximum, and average outdoor dew point temperature.
 - d. Number of heating degree-days for each month calculated from a base temperature of [55 deg F (13 deg C)] <Insert temperature>.
 - e. Number of cooling degree-days for each month calculated from a base temperature of [65 deg F (18 deg C)] <Insert temperature>.
 - f. Annual minimum, maximum, and average outdoor carbon dioxide level.
 - g. Monthly minimum, maximum, and average relative humidity.
 - h. Daily minimum, maximum, and average barometric pressure.
 - i. Daily minimum, maximum, and average wind speed and direction.

Q. Standard Trends:

1. Trend all I/O point present values, set points, and other parameters indicated for trending.
2. Trends shall be associated into groups, and a trend report shall be set up for each group.
3. Trends shall be stored within DDC controller and uploaded to hard drives automatically on reaching [75] <Insert value> of DDC controller buffer limit, or by operator request, or by archiving time schedule.
4. Preset trend intervals for each I/O point after review with Owner.
5. Trend intervals shall be operator selectable from 10 seconds up to 60 minutes. Minimum number of consecutive trend values stored at one time shall be 100 per variable.
6. When drive storage memory is full, most recent data shall overwrite oldest data.
7. Archived and real-time trend data shall be available for viewing numerically and graphically by operators.

R. Custom Trends: Operator shall be able to define a custom trend log for any I/O point in DDC system.

1. Each trend shall include interval, start time, and stop time.
2. Data shall be sampled and stored on DDC controller, within storage limits of DDC controller, and then uploaded to archive on [workstation] [server] hard drives.

3. Data shall be retrievable for use in spreadsheets and standard database programs.

S. Programming Software:

1. Include programming software to execute sequences of operation indicated.
2. Include programming routines in simple and easy to follow logic with detailed text comments describing what the logic does and how it corresponds to sequence of operation.
3. Programming software shall be **[as follows] [any of the following] [one of the following]**:
 - a. Graphic Based: Programming shall use a library of function blocks made from preprogrammed code designed for DDC control systems.
 - 1) Function blocks shall be assembled with interconnection lines that represent to control sequence in a flowchart.
 - 2) Programming tools shall be viewable in real time to show present values and logical results of each function block.
 - b. Menu Based: Programming shall be done by entering parameters, definitions, conditions, requirements and constraints.
 - c. Line by Line and Text Based: Programming shall declare variable types such as local, global, real, integer, and so on, at the beginning of the program. Use descriptive comments frequently to describe programming code.
4. Include means for detecting programming errors and testing software control strategies with a simulation tool before implementing in actual control. Simulation tool may be inherent with programming software or as a separate product.

T. Database Management Software:

1. Where a separate SQL database is used for information storage, DDC system shall include database management software that separates database monitoring and managing functions by supporting multiple separate windows.
2. Database secure access shall be accomplished using standard SQL authentication including ability to access data for use outside of DDC system applications.
3. Database management function shall include summarized information on trend, alarm, event, and audit for the following database management actions:
 - a. Backup.
 - b. Purge.
 - c. Restore.
4. Database management software shall support the following:
 - a. Statistics: Display database server information and trend, alarm, event, and audit information on database.

- b. Maintenance: Include method of purging records from trend, alarm, event, and audit databases by supporting separate screens for creating a backup before purging, selecting database, and allowing for retention of a selected number of day's data.
 - c. Backup: Include means to create a database backup file and select a storage location.
 - d. Restore: Include a restricted means of restoring a database by requiring operator to have proper security level.
5. Database management software shall include information of current database activity, including the following:
 - a. Ready.
 - b. Purging record from a database.
 - c. Action failed.
 - d. Refreshing statistics.
 - e. Restoring database.
 - f. Shrinking a database.
 - g. Backing up a database.
 - h. Resetting Internet information services.
 - i. Starting network device manager.
 - j. Shutting down the network device manager.
 - k. Action successful.
6. Database management software monitoring functions shall continuously read database information once operator has logged on.
7. Include operator notification through on-screen pop-up display and e-mail message when database value has exceeded a warning or alarm limit.
8. Monitoring settings window shall have the following sections:
 - a. Allow operator to set and review scan intervals and start times.
 - b. E-mail: Allow operator to create and review e-mail and phone text messages to be delivered when a warning or an alarm is generated.
 - c. Warning: Allow operator to define warning limit parameters, set reminder frequency and link e-mail message.
 - d. Alarm: Allow operator to define alarm limit parameters, set reminder frequency and link e-mail message.
 - e. Database Login: Protect system from unauthorized database manipulation by creating a read access and a write access for each of trend, alarm, event, and audit databases as well as operator proper security access to restore a database.
9. Monitoring settings taskbar shall include the following informational icons:
 - a. Normal: Indicates by color and size, or other easily identifiable means that all databases are within their limits.
 - b. Warning: Indicates by color and size, or other easily identifiable means that one or more databases have exceeded their warning limit.
 - c. Alarm: Indicates by color and size, or other easily identifiable means that one or more databases have exceeded their alarm limit.

2.17 OFFICE APPLICATION SOFTWARE

- A. **Basis-of-Design Product:** Subject to compliance with requirements, include Microsoft's "Office Professional" <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. <Insert manufacturer's name>.
- B. Include current version of office application software at time of Substantial Completion.
- C. Office application software package shall include multiple separate applications and use a common platform for all applications, similar to Microsoft's "Office Professional."
1. Database.
 2. E-mail.
 3. Presentation.
 4. Publisher.
 5. Spreadsheet.
 6. Word processing.

2.18 MAINTENANCE MANAGEMENT SOFTWARE

- A. Scope:
1. Include complete and functional software-driven maintenance management system. Software shall perform scheduling of preventive maintenance and generation of work orders, for mechanical and electrical equipment and systems.
 2. Work orders shall be automatically generated from alarm conditions, run time, and calendar time. Each work order generated shall list parts, tools, craftspeople, and define task to be performed.
 3. Work order generated shall be used to schedule a repair or preventive maintenance routine.
 4. Work order shall be used to track completion of work, parts used and total cost of repair.
 5. A database shall include an inventory tracking system. Work orders generated shall automatically update inventory database to show quantity of tools, repair parts, and expendables used for a work order.
 6. Work orders and preventive maintenance schedules shall be printed on a dedicated printer assigned solely to maintenance management function.
- B. Additional Hardware Requirements:
1. Maintenance management software shall not require additional hardware, except for an additional printer that is dedicated to maintenance management.
 2. Maintenance management software shall be integrated into DDC system.
- C. Software Requirements:
1. From main menu of maintenance management system, it shall be possible through selection of icons to penetrate to individual functions described below.

2. Work Orders:
 - a. Automatically generate work orders initiated from alarm conditions, accumulated run time or calendar time. Work orders generated shall specify a particular task to be accomplished including the labor, material and tools needed to accomplish work.
 - b. Include at least two of the following types of work orders:
 - 1) Corrective and emergency maintenance work orders shall be generated for a specific job or repair for emergency, breakdown, or scheduled work.
 - 2) Preventive maintenance that are used on a periodic basis to generate preventive maintenance work orders.
 - c. Include the following functions:
 - 1) Work Order Tracking: Perform every function related to processing work orders including creating, approving and initiating work orders, checking their status history and closing or reworking them when appropriate.
 - 2) Work Requests: Report any problems that require corrective maintenance activity generated by dispatchers and those people designated to request work orders.
 - 3) Quick Reporting: Report work done on an open work order or a small job.
 - 4) Work Manager: Specify the type of labor to be applied to a specific work order at specific times. It shall include the capability to dispatch one or more laborers to top-priority jobs on as-needed basis and to interrupt work in progress to reassign labor to higher priority tasks.
 - d. Reports:
 - 1) Daily Maintenance Schedule by Supervisor: List a schedule of open work orders for a specified date by supervisor.
 - 2) Equipment Cost Roll-up Report: Include a roll-up of equipment costs incurred since the date the report was last run.
 - 3) Delinquent Work Order Report: List open work orders whose target completion date is earlier than the date the report is run.
 - 4) Employee Job Assignments: List labor codes that have job assignments for the specified date.
 - 5) Daily Work Order Assignment: List work orders that have labor assignments for the specified date.
 - 6) Estimated versus Actual Work Order Costs: List a cost summary of outstanding work orders.
 - 7) Open Work Orders Report: List open work orders for locations and equipment.
3. Inventory:

- a. Include an inventory tracking system to keep track of stocked, non-stocked and special-order items.
- b. Link inventory tracking to database and when items are consumed, as noted on a work order issued by system, inventory of stocked items shall be automatically updated.
- c. Include the following functions:
 - 1) Inventory Control: Enter, display, and update information on each inventory item. It shall allow viewing of master inventory records that are independent of storeroom locations or item/location records. Include a screen that lists inventory transactions that move items in or out of inventory or from one storeroom location to another. Minimum information tracked shall include the following:
 - a) Vendors supply items.
 - b) Item balances, including the bin and lot level for each storeroom location.
 - c) Alternative items.
 - 2) Issues and Transfers: Issue stock directly from inventory, with or without a work order. When transfer of stock from one location to another location occurs, provide appropriate adjustments in stock balance record. Include a trace record of stock transfers from one storeroom to another.
 - 3) Item Assembly Structures: Include modeling of equipment with inventory items and building of equipment and location hierarchies.
 - 4) Metered Material Usage:
 - a) Track usage by a piece of equipment.
 - b) Record against a standing work order for a selected piece of equipment.
 - c) Material usage transaction shall be written for each item of material used and be provided as an input to calculation for per unit material consumption report for a piece of equipment.
- d. Reports:
 - 1) Inventory Analysis Report: List for a given storeroom location, inventory items analysis information that allows quick identification of which inventory items represent greatest monetary investment for dollar value and rate of turnover.
 - 2) Inventory Cycle Count Report: List for a specified storeroom, inventory items that are due to be cycle-counted, based on cycle-count frequency and last count date.
 - 3) Economic Order Quantity Report: For a given storeroom location, display optimum economic ordering quantity for items in selected results set.
 - 4) Inventory Pick Report: A pick list, by work order for items needed to be pulled from a designated storeroom's inventory for work orders having a target start date of specified date.

- 5) Suggested Order Report: List inventory items in selected results set that are due to be recorded, for a specified storeroom location, based on the following calculation: Suggest a reorder if current balance minus reserve quantity plus on-order quantity is less than reorder point.
- 6) Reorder Point Report: List selected set of items and optimum minimum level to have in stock based on demand, lead delivery time and a reserve safety stock.
- 7) Inventory Valuation Report: Gives an accounting of cost of current inventory, for inventory records in a designated storeroom location.
- 8) Item Order Status: Lists items on order.
- 9) List of Expired Items: Lists expired lot items in a storeroom. Report shall include item number, description, expiration date, bin number, lot number, manufacturer lot number, and quantity of expired items in that lot and bin.
- 10) Item Availability at All Locations: Lists alternative storeroom locations for selected items.
- 11) Where Used Report: List equipment on which item is recorded as being used.

4. Equipment:

- a. Include equipment and location records; establish relationships between equipment, between locations, and between equipment and locations; track maintenance costs; and enter and review meter readings.
- b. Include the following functions:
 - 1) Equipment: Store equipment numbers and corresponding information including equipment class, location, vendor, up/down status and maintenance costs for each piece of equipment. Include building of equipment assemblies. Equipment assemblies hierarchical ordering shall be provided for arrangement of buildings, departments, equipment, and sub-assemblies.
 - 2) Operating Locations: Facilitate creation of records for operating locations of equipment, and track equipment that is used in multiple locations. In addition, allow hierarchical organization of equipment operating in facility by means of grouping equipment locations into areas of responsibility.
 - 3) Failure Codes: Develop and display failure hierarchies to acquire an accurate history of types of failures that affect equipment and operating locations.
 - 4) Condition Monitoring: Display time related or limit measurements recorded for a piece of equipment. It shall be possible to generate work orders from this screen and to take immediate action on problem conditions.
- c. Reports:
 - 1) Availability Statistic by Location: List equipment availability by location over a user-specified time period.

- 2) Equipment Failure Summary: List total number of failures by problem code for a piece of equipment for a specified time period.
 - 3) Detailed Equipment Failure Report by Equipment: List of failure reports for the current piece of equipment for a specified time period.
 - 4) Equipment Hierarchy Report: List of equipment.
 - 5) Equipment History Graphs: Include a graphical report in histogram format that displays equipment breakdown history over a specified period.
 - 6) Equipment Measurement Report: Tabular listing and description of each measurement point for a piece of equipment and the history of measurements taken for that point.
 - 7) Maintenance Cost by Equipment: List of transactions costs for elected equipment in the specified date range.
 - 8) Failure Count by Equipment: Graphically report the number of failures for each piece of equipment showing number of failures for each piece of equipment over a specified time period, occurrence of each problem code within set of failures and failures by problem code.
 - 9) Failure Analysis Graphs: Graphically report number of failures for each piece of equipment over a specified time period, number of occurrences of each problem code within set of failures and failures by problem code.
 - 10) Failure Code Hierarchy Report: List of failure codes in each level of the failure hierarchy.
 - 11) Location Failure Summary: A summary for each selected location of failures reported and any hierarchy level locations for specified time period.
 - 12) Failure Summary by Location: A summary of failures for the selected location and their subordinate locations that are part of the hierarchical system.
 - 13) Detailed Failure Report by Location: List all failures for selected location and its subordinate locations that are part of a hierarchical system.
 - 14) Maintenance Cost by System: List of total costs reported in a given date range for locations in selected hierarchical system.
 - 15) Location Hierarchy Report: Lists member locations of a hierarchical system displayed in hierarchical fashion.
5. Purchasing:
- a. Include preparation and generation of purchase requisitions and purchase orders; to report receipt of both items and services, match invoices with purchase orders and receipts and define and convert foreign currencies.
 - b. Include the following functions:
 - 1) Purchase Requisition: Create and process purchase requisitions for items and services.
 - 2) Purchase Orders: Create and process purchase orders for items and services from scratch or from purchase requisitions. Record receipts of items and services.

- 3) Invoices: Include functionality to match purchase orders with invoices and receipts. It shall also be possible to match a service receipt to an invoice. Project for entering of an invoice for bills that do not require purchase orders or receipts.
 - 4) Currency Management: Define currencies and specify exchange rates. Include preparation of purchase requisitions and purchase orders in currency of vendor, while tracking costs in systems base currency.
- c. Reports:
- 1) Invoice Approval Report: Include an approval form for entered invoices.
 - 2) Inventory Receipts Register: List purchase orders and inventory received for the user-specified time frame.
 - 3) Direct Purchase Back-Order Report: List of items ordered as a direct purchase not received by the required delivery date.
 - 4) Standard Purchase Order: A printing of primary purchase order with vendors shipping information, and items purchased.
 - 5) Purchase Order Status Report: List of purchase orders whose status has changed during a certain time period.
 - 6) Standard Purchase Requisition: A printing of primary purchase requisition, including vendor name and shipping information.
6. Job Plans:
- a. Include creation of a detailed description of work to be performed by a work order. The job plan shall contain operations, procedures, and list of estimated material, labor, and tools required for work.
7. Labor:
- a. Store information on employees, contractors, and crafts and include the following functions:
 - 1) Labor: Create, modify, and view employee records. Employee records shall contain pay rate, overtime worked, overtime refused, specials skills and certifications.
 - 2) Crafts: Create, modify, and view craftspeople records.
 - 3) Labor Reporting: Report labor usage by employee or craft externally from the work orders module.
 - b. Reports:
 - 1) Employee Attendance Analysis: List of planned attendance, actual attendance, vacation and sick time in hours as a percentage of planned attendance for selected employees for specified time period.
 - 2) Labor Productivity Analysis: List of actual labor hours by labor report category showing each by percentage.

- 3) Labor Availability versus Commitments by Crafts: A graphical report that details available labor hours versus committed work order hours by craft and day.
8. Calendars:
 - a. Establish calendar records indicating working time for equipment, location, craft, and labor records.
9. Resources:
 - a. Include entry and retrieval of data associated with resources required to maintain facility and to include the following functions:
 - 1) Companies: Establish and update data on vendors and other companies.
 - 2) Tools: Create and maintain information on the tools used on jobs. The information contained within this module shall be available to job plans and work orders.
 - 3) Service Contracts: Specify information on service contracts with vendors or manufacturers.
10. Custom Applications:
 - a. Include creation of customized database tables and application screens that supplement functions specified.
11. Setup:
 - a. Include configuration of database, security, and setup applications.
 - b. Perform the following functions:
 - 1) Reports and Other Applications: Register reports and other applications for use within system.
 - 2) Documents: Enter, track, and link information from Drawings to equipment and inventory items.
 - 3) Chart of Accounts: Add or modify accounts; set up financial periods; enter inventory accounts, company accounts, and resource recovery accounts; and define tax codes and rates.
 - 4) Signature Security: Establish each user's access rights to modules, applications, screens, and options.
 - 5) Database Configuration: Customize database, including adjusting field lengths and modifying data types.
 - 6) Application Setup: Change position of icons and menu items on the main menu screen.
 - 7) Application Launching: Allow for connecting of third-party applications to data fields and push buttons.
12. Utilities:

- a. Include utilities module that allows system administrator to customize system and to maintain database.
- b. Include the following functions:
 - 1) Interactive SQL: Include access to database for database management functions of import/export and backup.
 - 2) Edit Windows: Display a dialog box to customize an application.
 - 3) Archive Data: Remove records from database and store them for future reference.

D. Documentation:

1. Include complete documentation for the system consisting of a User Manual and Systems Administrator Guide.
2. User Manual shall describe how to use each application module and screen with step-by-step instructions detailing entry and retrieval of data for functions specified.
3. Include a step-by-step description of how each report is defined and retrieved.
4. Bind documentation and clearly title it indicating volume number and use.

2.19 ASHRAE 135 GATEWAYS

- A. Include BACnet communication ports, whenever available as an equipment OEM standard option, for integration via a single communication cable. BACnet-controlled plant equipment includes, but is not limited to, boilers, chillers, **<Insert equipment,>** and variable-speed drives.
- B. Include gateways to connect BACnet to legacy systems, existing non-BACnet devices, and existing non-BACnet DDC-controlled equipment, only when specifically requested and approved by Owner.
- C. Include with each gateway an interoperability schedule showing each point or event on legacy side that BACnet "client" will read, and each parameter that BACnet network will write to. Describe this interoperability of BACnet services, or BIBBs, defined in ASHRAE 135, Annex K.
- D. Gateway Minimum Requirements:
 1. Read and view all readable object properties on non-BACnet network to BACnet network and vice versa where applicable.
 2. Write to all writeable object properties on non-BACnet network from BACnet network and vice versa where applicable.
 3. Include single-pass (only one protocol to BACnet without intermediary protocols) translation from non-BACnet protocol to BACnet and vice versa.
 4. Comply with requirements of Data Sharing Read Property, Data Sharing Write Property, Device Management Dynamic Device Binding-B, and Device Management Communication Control BIBBs according to ASHRAE 135.
 5. Hardware, software, software licenses, and configuration tools for operator-to-gateway communications.

6. Backup programming and parameters on CD media and the ability to modify, download, backup, and restore gateway configuration.

2.20 ASHRAE 135 PROTOCOL ANALYZER

- A. Analyzer and required cables and fittings for connection to ASHRAE 135 network.
- B. Analyzer shall include the following minimum capabilities:
 1. Capture and store to a file data traffic on all network levels.
 2. Measure bandwidth usage.
 3. Filtering options with ability to ignore select traffic.

2.21 CEA-709.1-C NETWORK HARDWARE

- A. Routers:
 1. Network routers, including routers configured as repeaters, shall comply with requirements of CEA-709.1-C and include connection between two or more CEA-709.3 TP/FT-10 channels or between two or more CEA-709.3 TP/FT-10 channels and a TP/XF-1250 channel.
 2. IP Routers:
 - a. Perform layer three routing of CEA-709.1-C packets over an IP network according to CEA-852-B.
 - b. Include appropriate connection to the IP network and connections to CEA-709.3 TP/FT-10 or TP/XF-1250 network.
 - c. Support the Dynamic Host Configuration Protocol for IP configuration and use of a CEA-852-B Configuration Server (for CEA-852-B configuration), but shall not rely on these services for configuration.
 - d. Capable of manual configuration via a console RS-232 port.
- B. Gateways:
 1. Perform bidirectional protocol translation from one non-CEA-709.1-C protocol to CEA-709.1-C.
 2. Incorporate a network connection to a TP/FT-10 network according to CEA-709.3 and a connection for a non-CEA-709.1-C network.

2.22 WIRELESS ROUTERS FOR OPERATOR INTERFACE

- A. Single-Band Wireless Routers:
 1. **Manufacturers:** Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. [Cisco Linksys](#).
 - b. [D-Link Corporation/D-Link Systems, Inc.](#)
 - c. [Netgear Inc.](#)
 - d. <Insert manufacturer's name>.
2. Description: High-speed router with integral Ethernet ports.
 3. Technology: IEEE 802.11n; [2.4] <Insert number>-GHz speed band.
 4. Speed: Up to [300] <Insert number> Mbps.
 5. Compatibility: IEEE 802.11n/g/b/a wireless devices.
 6. Ethernet Ports: Four, gigabit (1000 Mbps).
 7. Wireless Security: Wi-Fi Protected Access (WPA) and WPA2 according to IEEE 802.11i.
- B. Dual-Band Wireless Routers:
1. **Manufacturers:** Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Cisco Linksys](#).
 - b. [D-Link Corporation/D-Link Systems, Inc.](#)
 - c. [Netgear Inc.](#)
 - d. <Insert manufacturer's name>.
 2. Description: High-speed, dual-band router with integral Ethernet ports and USB port.
 3. Technology: IEEE 802.11n; 2.4- and 5-GHz speed bands.
 4. Speed: Up to [300] <Insert number> Mbps on 2.4-GHz band and up to [450] <Insert number> Mbps on 5-GHz band.
 5. Compatibility: IEEE 802.11n/g/b/a wireless devices.
 6. Ethernet Ports: Four, gigabit (1000 Mbps).
 7. USB Port: One, USB 2.0 or 3.0.
 8. Wireless Security: Wi-Fi Protected Access (WPA) and WPA2 according to IEEE 802.11i.

2.23 DDC CONTROLLERS

- A. DDC system shall consist of a combination of network controllers, programmable application controllers and application-specific controllers to satisfy performance requirements indicated.
- B. DDC controllers shall perform monitoring, control, energy optimization and other requirements indicated.
- C. DDC controllers shall use a multitasking, multiuser, real-time digital control microprocessor with a distributed network database and intelligence.

- D. Each DDC controller shall be capable of full and complete operation as a completely independent unit and as a part of a DDC system wide distributed network.
- E. Environment Requirements:
1. Controller hardware shall be suitable for the anticipated ambient conditions.
 2. Controllers located in conditioned space shall be rated for operation at [32 to 120 deg F (Zero to 50 deg C)] <Insert temperature range>.
 3. Controllers located outdoors shall be rated for operation at [40 to 150 deg F (40 to 65 deg C)] <Insert temperature range>.
- F. Power and Noise Immunity:
1. Controller shall operate at 90 to 110 percent of nominal voltage rating and shall perform an orderly shutdown below 80 percent of nominal voltage.
 2. Operation shall be protected against electrical noise of 5 to 120 Hz and from keyed radios with up to 5 W of power located within 36 inches (900 mm) of enclosure.
- G. DDC Controller Spare Processing Capacity:
1. Include spare processing memory for each controller. RAM, PROM, or EEPROM will implement requirements indicated with the following spare memory:
 - a. Network Controllers: [50] [60] [70] <Insert value> percent.
 - b. Programmable Application Controllers: Not less than [60] [70] [80] <Insert number> percent.
 - c. Application-Specific Controllers: Not less than [70] [80] [90] <Insert number> percent.
 2. Memory shall support DDC controller's operating system and database and shall include the following:
 - a. Monitoring and control.
 - b. Energy management, operation, and optimization applications.
 - c. Alarm management.
 - d. Historical trend data of all connected I/O points.
 - e. Maintenance applications.
 - f. Operator interfaces.
 - g. Monitoring of manual overrides.
- H. DDC Controller Spare I/O Point Capacity: Include spare I/O point capacity for each controller as follows:
1. Network Controllers:
 - a. [10] [20] <Insert number> percent of each AI, AO, BI, and BO point connected to controller.
 - b. Minimum Spare I/O Points per Controller:
 - 1) AIs: [Two] [Three] <Insert number>.

- 2) AOs: **[Two]** **[Three]** <Insert number>.
 - 3) BIs: **[Three]** **[Five]** <Insert number>.
 - 4) BOs: **[Three]** **[Five]** <Insert number>.
2. Programmable Application Controllers:
- a. **[10]** **[20]** <Insert number> percent of each AI, AO, BI, and BO point connected to controller.
 - b. Minimum Spare I/O Points per Controller:
 - 1) AIs: **[Two]** **[Three]** <Insert number>.
 - 2) AOs: **[Two]** **[Three]** <Insert number>.
 - 3) BIs: **[Three]** **[Five]** <Insert number>.
 - 4) BOs: **[Three]** **[Five]** <Insert number>.
3. Application-Specific Controllers:
- a. **[10]** <Insert number> percent of each AI, AO, BI, and BO point connected to controller.
 - b. Minimum Spare I/O Points per Controller:
 - 1) AIs: **[One]** **[Two]** <Insert number>.
 - 2) AOs: **[One]** **[Two]** <Insert number>.
 - 3) BIs: **[One]** **[Two]** <Insert number>.
 - 4) BOs: **[One]** **[Two]** <Insert number>.
- I. Maintenance and Support: Include the following features to facilitate maintenance and support:
1. Mount microprocessor components on circuit cards for ease of removal and replacement.
 2. Means to quickly and easily disconnect controller from network.
 3. Means to quickly and easily access connect to field test equipment.
 4. Visual indication that controller electric power is on, of communication fault or trouble, and that controller is receiving and sending signals to network.
- J. General Requirements for CEA-709.1-C DDC Controllers:
1. Controllers shall be LonMark certified.
 2. Distinguishable and accessible switch, button, or pin, when pressed shall broadcast its 48-bit Node ID and Program ID over network.
 3. TP/FT-10 transceiver according to CEA-709.3 and connections for TP/FT-10 control network wiring.
 4. TP/XF-1250 transceiver according to CEA-709.3 and connections for TP/XF-1250 control network wiring.
 5. Communicate using CEA-709.1-C protocol.
 6. Controllers configured into subnets, as required, to comply with performance requirements indicated.
 7. Network communication through LNS network management and database standard for CEA-709.1-C network devices.

8. Locally powered, not powered through network connection.
9. Functionality required to support applications indicated, including, but not limited to, the following:
 - a. Input and outputs indicated and as required to support sequence of operation and application in which it is used. SNVTs shall have meaningful names identifying the value represented by an SNVT. Unless an SNVT of an appropriate engineering type is unavailable, all network variables shall be of an SNVT with engineering units appropriate to value the variable represents.
 - b. Configurable through SCPTs defined in LonMark SCPT List, operator-defined UCPTs, network configuration inputs (NCIs) of an SNVT type defined in LonMark SNVT List, NCIs of an operator-defined network variable type, or hardware settings on controller itself for all settings and parameters used by application in which it is used.
10. Programmable controllers shall conform to LonMark Interoperability Guidelines and have LonMark certification.

K. Input and Output Point Interface:

1. Hardwired input and output points shall connect to network, programmable application, and application-specific controllers.
2. Input and output points shall be protected so shorting of point to itself, to another point, or to ground will not damage controller.
3. Input and output points shall be protected from voltage up to 24 V of any duration so that contact will not damage controller.
4. AIs:
 - a. AIs shall include monitoring of low-voltage (zero- to 10-V dc), current (4 to 20 mA) and resistance signals from thermistor and RTD sensors.
 - b. AIs shall be compatible with, and field configurable to, sensor and transmitters installed.
 - c. Controller AIs shall perform analog-to-digital (A-to-D) conversion with a minimum resolution of [8] [12] <Insert value> bits or better to comply with accuracy requirements indicated.
 - d. Signal conditioning including transient rejection shall be provided for each AI.
 - e. Capable of being individually calibrated for zero and span.
 - f. Incorporate common-mode noise rejection of at least 50 dB from zero to 100 Hz for differential inputs, and normal-mode noise rejection of at least 20 dB at 60 Hz from a source impedance of 10000 ohms.
5. AOs:
 - a. Controller AOs shall perform analog-to-digital (A-to-D) conversion with a minimum resolution of [8] [12] <Insert value> bits or better to comply with accuracy requirements indicated.
 - b. Output signals shall have a range of [4 to 20 mA dc] [or] [zero- to 10-V dc] as required to include proper control of output device.

- c. Capable of being individually calibrated for zero and span.
 - d. AOs shall not exhibit a drift of greater than 0.4 percent of range per year.
6. BIs:
- a. Controller BIs shall accept contact closures and shall ignore transients of less than 5-ms duration.
 - b. Isolation and protection against an applied steady-state voltage of up to 180-V ac peak.
 - c. BIs shall include a wetting current of at least 12 mA to be compatible with commonly available control devices and shall be protected against effects of contact bounce and noise.
 - d. BIs shall sense "dry contact" closure without external power (other than that provided by the controller) being applied.
 - e. Pulse accumulation input points shall comply with all requirements of BIs and accept up to 10 pulses per second for pulse accumulation. Buffer shall be provided to totalize pulses. Pulse accumulator shall accept rates of at least 20 pulses per second. The totalized value shall be reset to zero on operator's command.
7. BOs:
- a. Controller BOs shall include relay contact closures or triac outputs for momentary and maintained operation of output devices.
 - 1) Relay contact closures shall have a minimum duration of 0.1 second. Relays shall include at least 180 V of isolation. Electromagnetic interference suppression shall be provided on all output lines to limit transients to non-damaging levels. Minimum contact rating shall be 1 A at 24-V ac.
 - 2) Triac outputs shall include at least 180 V of isolation. Minimum contact rating shall be 1 A at 24-V ac.
 - b. BOs shall include for two-state operation or a pulsed low-voltage signal for pulse-width modulation control.
 - c. BOs shall be selectable for either normally open or normally closed operation.
 - d. Include tristate outputs (two coordinated BOs) for control of three-point floating-type electronic actuators without feedback.
 - e. Limit use of three-point floating devices to VAV terminal unit control applications, **[and other applications indicated on Drawings,] <Insert applications>**. Control algorithms shall operate actuator to one end of its stroke once every **[12] [24] <Insert time>** hours for verification of operator tracking.

2.24 NETWORK CONTROLLERS

A. General Network Controller Requirements:

1. Include adequate number of controllers to achieve performance indicated.
2. System shall consist of one or more independent, standalone, microprocessor-based network controllers to manage global strategies indicated.
3. Controller shall have enough memory to support its operating system, database, and programming requirements.
4. Data shall be shared between networked controllers and other network devices.
5. Operating system of controller shall manage input and output communication signals to allow distributed controllers to share real and virtual object information and allow for central monitoring and alarms.
6. Controllers [**that perform scheduling**] shall have a real-time clock.
7. Controller shall continually check status of its processor and memory circuits. If an abnormal operation is detected, controller shall assume a predetermined failure mode and generate an alarm notification.
8. Controllers shall be fully programmable.

B. Communication:

1. Network controllers shall communicate with other devices on DDC system [**Level one**] <Insert level> network.
2. Network controller also shall perform routing if connected to a network of programmable application and application-specific controllers.

C. Operator Interface:

1. Controller shall be equipped with a service communications port for connection to a portable operator's workstation[**or PDA**].
2. Local Keypad and Display:
 - a. Equip controller with local keypad and digital display for interrogating and editing data.
 - b. Use of keypad and display shall require security password.

D. Serviceability:

1. Controller shall be equipped with diagnostic LEDs or other form of local visual indication of power, communication, and processor.
2. Wiring and cable connections shall be made to field-removable, modular terminal strips or to a termination card connected by a ribbon cable.
3. Controller shall maintain BIOS and programming information in event of a power loss for at least [**72**] [**96**] <Insert number> hours.

2.25 PROGRAMMABLE APPLICATION CONTROLLERS

A. General Programmable Application Controller Requirements:

1. Include adequate number of controllers to achieve performance indicated.
2. Controller shall have enough memory to support its operating system, database, and programming requirements.
3. Data shall be shared between networked controllers and other network devices.

4. Operating system of controller shall manage input and output communication signals to allow distributed controllers to share real and virtual object information and allow for central monitoring and alarms.
5. Controllers [**that perform scheduling**] shall have a real-time clock.
6. Controller shall continually check status of its processor and memory circuits. If an abnormal operation is detected, controller shall assume a predetermined failure mode and generate an alarm notification.
7. Controllers shall be fully programmable.

B. Communication:

1. Programmable application controllers shall communicate with other devices on network.

C. Operator Interface:

1. Controller shall be equipped with a service communications port for connection to a portable operator's workstation[**or PDA**].
2. Local Keypad and Display:
 - a. Equip controller with local keypad and digital display for interrogating and editing data.
 - b. Use of keypad and display shall require security password.

D. Serviceability:

1. Controller shall be equipped with diagnostic LEDs or other form of local visual indication of power, communication, and processor.
2. Wiring and cable connections shall be made to field-removable, modular terminal strips or to a termination card connected by a ribbon cable.
3. Controller shall maintain BIOS and programming information in event of a power loss for at least 72 hours.

2.26 APPLICATION-SPECIFIC CONTROLLERS

A. Description: Microprocessor-based controllers, which through hardware or firmware design are dedicated to control a specific piece of equipment. Controllers are not fully user-programmable but are configurable and customizable for operation of equipment they are designed to control.

1. Capable of standalone operation and shall continue to include control functions without being connected to network.
2. Data shall be shared between networked controllers and other network devices.

B. Communication: Application-specific controllers shall communicate with other application-specific controller and devices on network, and to programmable application and network controllers.

- C. Operator Interface: Controller shall be equipped with a service communications port for connection to a portable operator's workstation. [**Connection shall extend to port on space temperature sensor that is connected to controller.**]
- D. Serviceability:
 - 1. Controller shall be equipped with diagnostic LEDs or other form of local visual indication of power, communication, and processor.
 - 2. Wiring and cable connections shall be made to field-removable, modular terminal strips or to a termination card connected by a ribbon cable.
 - 3. Controller shall use nonvolatile memory and maintain all BIOS and programming information in event of power loss.

2.27 CONTROLLER SOFTWARE

- A. General Controller Software Requirements:
 - 1. Software applications shall reside and operate in controllers. Editing of applications shall occur at operator workstations.
 - 2. I/O points shall be identified by up to [30] <Insert number>-character point name and up to [16] <Insert number>-character point descriptor. Same names shall be used at operator workstations.
 - 3. Control functions shall be executed within controllers using DDC algorithms.
 - 4. Controllers shall be configured to use stored default values to ensure fail-safe operation. Default values shall be used when there is a failure of a connected input instrument or loss of communication of a global point value.
- B. Security:
 - 1. Operator access shall be secured using individual security passwords and user names.
 - 2. Passwords shall restrict operator to points, applications, and system functions as assigned by system manager.
 - 3. Operator log-on and log-off attempts shall be recorded.
 - 4. System shall protect itself from unauthorized use by automatically logging off after last keystroke. The delay time shall be operator-definable.
- C. Scheduling: Include capability to schedule each point or group of points in system. Each schedule shall consist of the following:
 - 1. Weekly Schedule:
 - a. Include separate schedules for each day of week.
 - b. Each schedule should include the capability for start, stop, optimal start, optimal stop, and night economizer.
 - c. Each schedule may consist of up to 10 events.
 - d. When a group of objects are scheduled together, include capability to adjust start and stop times for each member.

2. Exception Schedules:
 - a. Include ability for operator to designate any day of the year as an exception schedule.
 - b. Exception schedules may be defined up to a year in advance. Once an exception schedule is executed, it will be discarded and replaced by regular schedule for that day of week.
3. Holiday Schedules:
 - a. Include capability for operator to define up to 99 special or holiday schedules.
 - b. Schedules may be placed on scheduling calendar and will be repeated each year.
 - c. Operator shall be able to define length of each holiday period.
- D. System Coordination:
 1. Include standard application for proper coordination of equipment.
 2. Application shall include operator with a method of grouping together equipment based on function and location.
 3. Group may then be used for scheduling and other applications.
- E. Binary Alarms:
 1. Each binary point shall be set to alarm based on operator-specified state.
 2. Include capability to automatically and manually disable alarming.
- F. Analog Alarms:
 1. Each analog object shall have both high and low alarm limits.
 2. Alarming shall be able to be automatically and manually disabled.
- G. Alarm Reporting:
 1. Operator shall be able to determine action to be taken in event of an alarm.
 2. Alarms shall be routed to appropriate operator workstations based on time and other conditions.
 3. Alarm shall be able to start programs, print, be logged in event log, generate custom messages, and display graphics.
- H. Remote Communication:
 1. System shall have ability to dial out in the event of an alarm.
- I. Electric Power Demand Limiting:
 1. Demand-limiting program shall monitor building or other operator-defined electric power consumption from signals connected to electric power meter or from a watt transducer or current transformer.

2. Demand-limiting program shall predict probable power demand such that action can be taken to prevent exceeding demand limit. When demand prediction exceeds demand limit, action will be taken to reduce loads in a predetermined manner. When demand prediction indicates demand limit will not be exceeded, action will be taken to restore loads in a predetermined manner.
3. Demand reduction shall be accomplished by the following means:
 - a. Reset air-handling unit supply temperature set points.
 - b. Reset space temperature set points.
 - c. De-energize equipment based on priority.
4. Demand-limiting parameters, frequency of calculations, time intervals, and other relevant variables shall be based on the means by which electric power service provider computes demand charges.
5. Include demand-limiting prediction and control for any individual meter monitored by system or for total of any combination of meters.
6. Include means operator to make the following changes online:
 - a. Addition and deletion of loads controlled.
 - b. Changes in demand intervals.
 - c. Changes in demand limit for meter(s).
 - d. Maximum shutoff time for equipment.
 - e. Minimum shutoff time for equipment.
 - f. Select rotational or sequential shedding and restoring.
 - g. Shed and restore priority.
7. Include the following information and reports, to be available on an hourly, daily, weekly, monthly and annual basis:
 - a. Total electric consumption.
 - b. Peak demand.
 - c. Date and time of peak demand.
 - d. Daily peak demand.
- J. Maintenance Management: System shall monitor equipment status and generate maintenance messages based on operator-designated run-time, starts, and calendar date limits.
- K. Sequencing: Include application software based on sequences of operation indicated to properly sequence chillers, boilers, and other applicable HVAC equipment.
- L. Control Loops:
 1. Support any of the following control loops, as applicable to control required:
 - a. Two-position (on/off, open/close, slow/fast) control.
 - b. Proportional control.
 - c. Proportional plus integral (PI) control.
 - d. Proportional plus integral plus derivative (PID) control.

- 1) Include PID algorithms with direct or reverse action and anti-windup.
- 2) Algorithm shall calculate a time-varying analog value used to position an output or stage a series of outputs.
- 3) Controlled variable, set point, and PID gains shall be operator-selectable.

e. Adaptive (automatic tuning).

M. Staggered Start: Application shall prevent all controlled equipment from simultaneously restarting after a power outage. Order which equipment (or groups of equipment) is started, along with the time delay between starts, shall be operator-selectable.

N. Energy Calculations:

1. Include software to allow instantaneous power or flow rates to be accumulated and converted to energy usage data.
2. Include an algorithm that calculates a sliding-window average (rolling average). Algorithm shall be flexible to allow window intervals to be operator specified (such as 15, 30, or 60 minutes).
3. Include an algorithm that calculates a fixed-window average. A digital input signal shall define start of window period (such as signal from utility meter) to synchronize fixed-window average with that used by utility.

O. Anti-Short Cycling:

1. BO points shall be protected from short cycling.
2. Feature shall allow minimum on-time and off-time to be selected.

P. On and Off Control with Differential:

1. Include an algorithm that allows a BO to be cycled based on a controlled variable and set point.
2. Algorithm shall be direct- or reverse-acting and incorporate an adjustable differential.

Q. Run-Time Totalization:

1. Include software to totalize run-times for all BI [**and BO**] points.
2. A high run-time alarm shall be assigned, if required, by operator.

2.28 ENCLOSURES

A. General Enclosure Requirements:

1. House each controller and associated control accessories in a [**single**] enclosure. Enclosure shall serve as central tie-in point for control devices such as switches, transmitters, transducers, power supplies and transformers.
2. Do not house more than one controller in a single enclosure.
3. Include enclosure door with key locking mechanism. Key locks alike for all enclosures and include one pair of keys per enclosure.

4. Equip doors of enclosures housing controllers and components with analog or digital displays with windows to allow visual observation of displays without opening enclosure door.
5. Individual wall-mounted single-door enclosures shall not exceed [36 inches (900 mm)] <Insert dimension> wide and [48 inches (1200 mm)] [60 inches (1500 mm)] <Insert dimension> high.
6. Individual wall-mounted double-door enclosures shall not exceed [60 inches (1500 mm)] <Insert dimension> wide and [36 inches (900 mm)] <Insert dimension> high.
7. Freestanding enclosures shall not exceed [48 inches (1200 mm)] <Insert dimension> wide and [72 inches (1800 mm)] <Insert dimension> high.
8. Include wall-mounted enclosures with brackets suitable for mounting enclosures to wall or freestanding support stand as indicated.
9. Supply each enclosure with a complete set of as-built schematics, tubing, and wiring diagrams and product literature located in a pocket on inside of door. [**For enclosures with windows, include pocket on bottom of enclosure.**]

B. Internal Arrangement:

1. Internal layout of enclosure shall group and protect pneumatic, electric, and electronic components associated with a controller, but not an integral part of controller.
2. Arrange layout to group similar products together.
3. Include a barrier between line-voltage and low-voltage electrical and electronic products.
4. Factory or shop install products, tubing, cabling, and wiring complying with requirements and standards indicated.
5. Terminate field cable and wire using heavy-duty terminal blocks.
6. Include spare terminals, equal to not less than [10] [20] <Insert number> percent of used terminals.
7. Include spade lugs for stranded cable and wire.
8. Install a maximum of two wires on each side of a terminal.
9. Include enclosure field power supply with a toggle-type switch located at entrance inside enclosure to disconnect power.
10. Include enclosure with a line-voltage nominal 20-A GFCI duplex receptacle for service and testing tools. Wire receptacle on hot side of enclosure disconnect switch and include with a 5-A circuit breaker.
11. Mount products within enclosure on removable internal panel(s).
12. Include products mounted in enclosures with engraved, laminated phenolic nameplates (black letters on a white background). The nameplates shall have at least 1/4-inch- (6-mm-) high lettering.
13. Route tubing cable and wire located inside enclosure within a raceway with a continuous removable cover.
14. Label each end of cable, wire, and tubing in enclosure following an approved identification system that extends from field I/O connection and all intermediate connections throughout length to controller connection.
15. Size enclosure internal panel to include at least [25] <Insert number> percent spare area on face of panel.

C. Environmental Requirements:

1. Evaluate temperature and humidity requirements of each product to be installed within each enclosure.
2. Calculate enclosure internal operating temperature considering heat dissipation of all products installed within enclosure and ambient effects (solar, conduction and wind) on enclosure.
3. Where required by application, include temperature-controlled electrical heat to maintain inside of enclosure above minimum operating temperature of product with most stringent requirement.
4. Where required by application, include temperature-controlled ventilation fans with filtered louver(s) to maintain inside of enclosure below maximum operating temperature of product with most stringent requirement.
5. Include temperature-controlled cooling within the enclosure for applications where ventilation fans cannot maintain inside temperature of enclosure below maximum operating temperature of product with most stringent requirement.
6. Where required by application, include humidity-controlled electric dehumidifier or cooling to maintain inside of enclosure below maximum relative humidity of product with most stringent requirement and to prevent surface condensation within enclosure.

D. Wall-Mounted, NEMA 250, Type 1:

1. **Basis-of-Design Product:** Subject to compliance with requirements, provide **[Hoffman's (a brand of Pentair Technical Products) "Contractor Series"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
2. Enclosure shall be NRTL listed according to UL 50 or UL 50E.
3. Construct enclosure of steel, not less than:
 - a. Enclosure size less than 24 in. (600 mm): [0.053 in. (1.35 mm)] [or] [0.067 in. (1.7 mm)] thick.
 - b. Enclosure size 24 in. (600 mm) and larger: [0.067 in. (1.7 mm)] [or] [0.093 in. (2.36 mm)] thick.
4. Finish enclosure inside and out with polyester powder coating that is electrostatically applied and then baked to bond to substrate.
 - a. Exterior color shall be [white] [NSF/ANSI 61 gray] [selected by Architect] [manufacturer's standard] <Insert color>.
 - b. Interior color shall be [white] [NSF/ANSI 61 gray] [manufacturer's standard].
5. Hinged door full size of front face of enclosure and supported using:
 - a. Enclosures sizes less than 36 in. (900 mm) tall: Multiple butt hinges.
 - b. Enclosures sizes 36 in. (900 mm) tall and larger: Continuous piano hinges.

6. Removable internal panel with a white polyester powder coating that is electrostatically applied and then baked to bond to substrate.
 - a. Size less than 24 in. (600 mm): **[Solid] [or] [Perforated]** steel, 0.053 in. (1.35 mm) thick.
 - b. Size 24 in. (600 mm) and larger: Solid **[aluminum, 0.10 in. (3 mm)] [or] [steel, 0.093 in. (2.36 mm)]** thick.
 7. Internal panel mounting hardware, grounding hardware and sealing washers.
 8. Grounding stud on enclosure body.
 9. Thermoplastic pocket on inside of door for record Drawings and Product Data.
- E. Wall Mounted NEMA 250, Types 4 and 12:
1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Hoffman's (a brand of Pentair Technical Products) "Concept Series"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
 2. Enclosure shall be NRTL listed according to UL 508A.
 3. Seam and joints are continuously welded and ground smooth.
 4. Where recessed enclosures are indicated, include enclosures with face flange for flush mounting.
 5. Externally formed body flange around perimeter of enclosure face for continuous perimeter seamless gasket door seal.
 6. Single-door enclosure sizes up to 60 inches tall by 36 inches wide (1500 mm tall by 900 mm wide).
 7. Double-door enclosure sizes up to 36 inches tall by 60 inches wide (900 mm tall by 1500 mm wide).
 8. Construct enclosure of steel, not less than the following:
 - a. Size Less Than 24 Inches (600 mm): **[0.053 inch (1.35 mm)] [or] [0.067 inch (1.7 mm)]** thick.
 - b. Size 24 Inches (600 mm) and Larger: **0.067 inch (1.7 mm)** thick.
 9. Finish enclosure with polyester powder coating that is electrostatically applied and then baked to bond to substrate.
 - a. Exterior color shall be **[white] [NSF/ANSI 61 gray] [as selected by Architect] [manufacturer's standard]** <Insert color>.
 - b. Interior color shall be **[white] [NSF/ANSI 61 gray] [manufacturer's standard]**.
 10. Corner-formed door, full size of enclosure face, supported using multiple concealed hinges with easily removable hinge pins.
 - a. Sizes through 24 Inches (600 mm) Tall: Two hinges.

- b. Sizes between **24 Inches** (600 mm) through **48 Inches** (1200 mm) Tall: Three hinges.
 - c. Sizes Larger **48 Inches** (1200 mm) Tall: Four hinges.
 11. Double-door enclosures with overlapping door design to include unobstructed full-width access.
 - a. Single-door enclosures **48 inches** (1200 mm) and taller, and all double-door enclosures, with three-point (top, middle and bottom) latch system.
 12. Removable internal panel with a white polyester powder coating that is electrostatically applied and then baked to bond to substrate.
 - a. Size Less Than **24 Inches** (600 mm): **[Solid] [or] [perforated]** steel, **0.053 inch** (1.35 mm) thick.
 - b. Size **24 Inches** (600 mm) and Larger: Solid **[aluminum, 0.10 inch** (3 mm)] **[or] [steel, 0.093 inch** (2.36 mm)] thick.
 13. Internal panel mounting studs with hardware, grounding hardware, and sealing washers.
 14. Grounding stud on enclosure body.
 15. Thermoplastic pocket on inside of door for record Drawings and Product Data.
- F. Wall-Mounted, NEMA 250, Type 4X SS:
 1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Hoffman's (a brand of Pentair Technical Products) "Concept Type 4X or Continuous Hinge with 3-Point Latch Type 4X Enclosures"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
 2. Enclosure shall be NRTL listed according to UL 508A.
 3. Seam and joints are continuously welded and ground smooth.
 4. Externally formed body flange around perimeter of enclosure face for continuous perimeter seamless gasket door seal.
 5. Construct enclosure of **[Type 304] [Type 316L]** stainless steel, not less than the following:
 - a. Size Less Than **24 Inches** (600 mm): **0.053 inch** (1.35 mm) thick.
 - b. Size **24 Inches** (600 mm) and Larger: **0.067 inch** (1.7 mm) thick.
 6. Outside body and door of enclosure with brushed No. 4 finish.
 7. Corner-formed door, full size of enclosure face, supported using multiple concealed hinges with easily removable hinge pins.
 - a. Sizes through **24 Inches** (600 mm) Tall: Two hinges.
 - b. Sizes between **24 Inches** (600 mm) through **48 Inches** (1200 mm) Tall: Three hinges.

- c. Sizes Larger **48 Inches** (1200 mm) Tall: Four hinges.
 8. Corner-formed door, full size of enclosure face, supported using continuous piano hinge full length of door.
 9. Doors fitted with three-point (top, middle, and bottom) latch system with single, heavy-duty, liquid-tight Type 316 stainless-steel handle with integral locking mechanism.
 10. Removable internal panel shall be **0.093-inch** (2.36-mm) solid steel with a white polyester powder coating that is electrostatically applied and then baked to bond to substrate.
 11. Internal panel mounting studs and hardware, grounding hardware, and sealing washers.
 12. Install corrosion-resistant polyester vent drain in a stainless-steel sleeve at the bottom of enclosure.
 13. Include enclosure with stainless-steel mounting brackets.
- G. Freestanding, NEMA 250, Type 1:
 1. **Basis-of-Design Product:** Subject to compliance with requirements, provide **[Hoffman's (a brand of Pentair Technical Products) "Free-Stand Series"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
 2. Enclosure shall be NRTL listed according to UL 508A.
 3. Seam and joints are continuously welded and ground smooth.
 4. Externally formed body flange around perimeter of enclosure face.
 5. Single-door enclosure sizes up to **84 inches tall by 36 inches wide** (2100 mm tall by 900 mm wide).
 6. Double-door enclosure sizes up to **84 inches tall by 72 inches wide** (2100 mm tall by 900 mm wide).
 7. Construct enclosure of steel, not less than **0.067 inch** (1.7 mm) thick.
 8. Finish enclosure with polyester powder coating that is electrostatically applied and then baked to bond to substrate.
 - a. Exterior color shall be **[white] [NSF/ANSI 61 gray] [as selected by Architect] [manufacturer's standard] <Insert color>**.
 - b. Interior color shall be **[white] [NSF/ANSI 61 gray] [manufacturer's standard]**.
 9. Corner-formed flush door, full size of enclosure face, supported using four concealed hinges with easily removable hinge pins.
 10. Double-door enclosures with overlapping door design to include unobstructed full-width access.
 11. Doors with three-point (top, middle, and bottom) latch system with single heavy-duty handle and integral locking mechanism.
 12. Removable back covers.

13. Removable solid steel internal panel, **0.093 inch (2.36 mm)** thick, with a white polyester powder coating that is electrostatically applied and then baked to bond to substrate.
14. Internal panel mounting studs with hardware, grounding hardware, and sealing washers.
15. Grounding stud on enclosure body.
16. Thermoplastic pocket on inside of door for record Drawings and Product Data.
17. Nominal **4-inch- (100-mm-)** tall integral lifting base, not less than **0.123 inch (3.12 mm)** thick, with predrilled holes for attachment to mounting surface.
18. Each top end of enclosure fitted with lifting tabs, not less than **0.172 inch (4.37 mm)** thick.
19. Internal rack-mount shelves and angles as required by application.

H. Freestanding, NEMA 250, Types 4 and 12:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Hoffman's (a brand of Pentair Technical Products) "Free-Stand Series"]** **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**.
2. Enclosure shall be NRTL listed according to UL 508A.
3. Seam and joints are continuously welded and ground smooth.
4. Externally formed body flange around perimeter of enclosure face.
5. Type 12 Enclosure Sizes:
 - a. Single-door enclosure sizes up to **90 inches tall by 36 inches wide (2250 mm tall by 900 mm wide)**.
 - b. Double-door enclosure sizes up to **90 inches tall by 72 inches wide (2250 mm tall by 900 mm wide)**.
6. Type 4 Enclosure Sizes:
 - a. Single-door enclosure sizes up to **72 inches tall by 36 inches wide (1800 mm tall by 900 mm wide)**.
7. Construct enclosure of steel, not less than **0.093 inch (2.36 mm)** thick.
8. Finish enclosure with polyester powder coating that is electrostatically applied and then baked to bond to substrate.
 - a. Exterior color shall be **[white] [NSF/ANSI 61 gray] [as selected by Architect] [manufacturer's standard] <Insert color>**.
 - b. Interior color shall be **[white] [NSF/ANSI 61 gray] [manufacturer's standard]**.
9. Corner-formed door with continuous perimeter oil-resistant gasket supported using continuous piano hinge full length of door.

10. Doors fitted with three-point (top, middle, and bottom) latch system with latching rod rollers and single, heavy-duty oil-tight handle with integral locking mechanism.
 11. Removable solid steel internal panel, **0.093 inch (2.36 mm)** thick, with a white polyester powder coating that is electrostatically applied and then baked to bond to substrate.
 12. Internal panel mounting studs with hardware, grounding hardware, and sealing washers.
 13. Grounding stud on enclosure body.
 14. Thermoplastic pocket on inside of door for record Drawings and Product Data.
 15. Top of enclosure fitted with no fewer than two lifting eyes.
 16. Internal rack-mount shelves and angles as required by application.
- I. Accessories:
1. Electric Heater:
 - a. Aluminum housing with brushed finish.
 - b. Thermostatic control with adjustable set point from **zero to 100 deg F** (Minus 18 to 38 deg C).
 - c. Capacity: 100, 200, 400, and 800 W as required by application.
 - d. Fan draws cool air from bottom of enclosure and passes air across thermostat and heating elements before being released into enclosure cavity. Heated air is discharged through the top of heater.
 2. Ventilation Fans, Filtered Intake and Exhaust Grilles:
 - a. Number and size of fans, filters, and grilles as required by application.
 - b. Compact cooling fans engineered for 50,000 hours of continuous operation without lubrication or service.
 - c. Fans capable of being installed on any surface and in any position within enclosure for spot cooling or air circulation.
 - d. Thermostatic control with adjustable set point from **32 to 140 deg F** (Zero to 60 deg C).
 - e. Airflow Capacity at Zero Pressure:
 - 1) **4-Inch (100-mm) Fan: 100 cfm (47 L/s).**
 - 2) **6-Inch (150-mm) Fan: 240 cfm (113 L/s).**
 - 3) **10-Inch (250-mm) Fan: 560 cfm (264 L/s).**
 - f. Maximum operating temperature of **158 deg F (70 deg C).**
 - g. **4-inch (100-mm)** fan thermally protected and provided with permanently lubricated ball-bearings.
 - h. **6- and 10-inch (150- and 250-mm)** fans with ball-bearing construction and split capacitor motors thermally protected to avoid premature failure.
 - i. Dynamically balanced impellers molded from polycarbonate material.
 - j. Fan furnished with power cord and polarized plug for power connection.
 - k. Fan brackets, finger guards, and mounting hardware provided with fans to complete installation.

- I. Removable Intake and Exhaust Grilles: **[ABS plastic] [or] [stainless steel]** of size to match fan size and suitable for NEMA 250, Types 1 and 12 enclosures.
 - m. Filters for NEMA 250, Type 1 Enclosures: Washable **[foam] [or] [aluminum]**, of a size to match intake grille.
 - n. Filters for NEMA 250, Type 12 Enclosures: Disposable, of a size to match intake grille.
3. Air Conditioner:
 - a. Electric-powered, self-contained air-conditioning unit specially designed for electrical enclosures to maintain temperature inside enclosure below ambient temperature outside enclosure.
 - b. Thermostatic control with adjustable set point from **60 to 120 deg F** (16 to 49 deg C).
 - c. Enclosure side or top mounting with unit capacity as required by application.
 - d. Designed for closed-loop cooling with continuous operation in ambient environments up to **125 deg F** (52 deg C).
 - e. HFC refrigerant.
 - f. Reusable and washable air filter.
 - g. High-performance, industrial-grade, and high-efficiency fans.
 - h. Furnished with power cord and polarized plug for power connection.
 - i. Condensate management system with base pan side drain.
 - j. Mounting hardware, gaskets, mounting template, and instruction manual furnished with unit.
 - k. Outdoor units equipped with head pressure control for low ambient operation, compressor heater, coated condenser coil, and thermostat.
4. Thermoelectric Humidifier:
 - a. ABS plastic enclosure.
 - b. Capacity of **8 oz. (0.24 L)** of water per 24 hours.
 - c. Built-in drain captures moisture and plastic hose directs moisture to outside enclosure through a drain.
 - d. Controlled to maintain enclosure relative humidity at an adjustable set point.
 - e. Unit power supply shall be internally wired to enclosure electrical power source.
5. Framed Fixed Window Kit for NEMA 250, Types 4, 4X, and 12 Enclosures:
 - a. **0.25-inch- (6-mm-)** thick, scratch-resistant acrylic or polycarbonate window mounted in a metal frame matching adjacent door material.
 - b. Enclosure types, except NEMA 250 Type 1, shall have a continuous gasket material around perimeter of window and frame to provide watertight seal.
 - c. Window kit shall be factory or shop installed before shipment to Project.
6. Frameless Fixed Window Kit for NEMA 250, Type 1 Enclosures:

- a. **0.125-inch-** (3-mm-) thick, polycarbonate window mounted in enclosure door material.
 - b. Window attached to door with screw fasteners and continuous strip of high-strength double-sided tape around window perimeter.
 - c. Window kit shall be factory or shop installed before shipment to Project.
7. Frame Fixed or Hinged Window Kit for NEMA 250, Types 1 and 12 Enclosures:
- a. **0.25-inch-** (6-mm-) thick, scratch-resistant acrylic or polycarbonate window mounted in a metal frame matching adjacent door material.
 - b. Enclosure types, except NEMA 250 Type 1, shall have a continuous gasket material around perimeter of window and frame to provide watertight seal.
 - c. Window kit shall be factory or shop installed before shipment to Project.
8. Bar handle with keyed cylinder lock set.

2.29 RELAYS

A. General-Purpose Relays:

1. Basis-of-Design Product: Subject to compliance with requirements, provide [**Siemens Building Technologies' "Furnas, 46 PA series"**] <Insert **manufacturer's name; product name or designation**> or comparable product by one of the following:
 - a. <Insert **manufacturer's name**>.
2. Relays shall be heavy duty and rated for at least 10 A at 250-V ac and 60 Hz.
3. Relays shall be either double pole double throw (DPDT) or three-pole double throw, depending on the control application.
4. Use a plug-in-style relay with an eight-pin octal plug for DPDT relays and an 11-pin octal plug for three-pole double-throw relays.
5. Construct the contacts of either silver cadmium oxide or gold.
6. Enclose the relay in a clear transparent polycarbonate dust-tight cover.
7. Relays shall have LED indication and a manual reset and push-to-test button.
8. Performance:
 - a. Mechanical Life: At least 10 million cycles.
 - b. Electrical Life: At least 100,000 cycles at rated load.
 - c. Pickup Time: 15 ms or less.
 - d. Dropout Time: 10 ms or less.
 - e. Pull-in Voltage: 85 percent of rated voltage.
 - f. Dropout Voltage: 50 percent of nominal rated voltage.
 - g. Power Consumption: 2 VA.
 - h. Ambient Operating Temperatures: **Minus 40 to 115 deg F** (Minus 40 to 46 deg C).
9. Equip relays with coil transient suppression to limit transients to non-damaging levels.

10. Plug each relay into an industry-standard, 35-mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
11. Relay socket shall have screw terminals. Mold into the socket the coincident screw terminal numbers and associated octal pin numbers.

B. Multifunction Time-Delay Relays:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Siemens Building Technologies' "Furnas, 46 PT series"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
2. Relays shall be continuous duty and rated for at least 10 A at 240-V ac and 60 Hz.
3. Relays shall be DPDT relay with up to eight programmable functions to provide on/off delay, interval, and recycle timing functions.
4. Use a plug-in-style relay with either an 8- or 11-pin octal plug.
5. Construct the contacts of either silver cadmium oxide or gold.
6. Enclose the relay in a dust-tight cover.
7. Include knob and dial scale for setting delay time.
8. Performance:
 - a. Mechanical Life: At least 10 million cycles.
 - b. Electrical Life: At least 100,000 cycles at rated load.
 - c. Timing Ranges: Multiple ranges from 0.1 seconds to 100 minutes.
 - d. Repeatability: Within 2 percent.
 - e. Recycle Time: 45 ms.
 - f. Minimum Pulse Width Control: 50 ms.
 - g. Power Consumption: 5 VA or less at 120-V ac.
 - h. Ambient Operating Temperatures: **Minus 40 to 115 deg F** (Minus 40 to 46 deg C).
9. Equip relays with coil transient suppression to limit transients to non-damaging levels.
10. Plug each relay into an industry-standard, 35-mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
11. Relay socket shall have screw terminals. Mold into the socket the coincident screw terminal numbers and associated octal pin numbers.

C. Latching Relays:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Siemens Building Technologies' "Furnas, 46 PF series"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.

2. Relays shall be continuous duty and rated for at least 10 A at 250-V ac and 60 Hz.
3. Relays shall be either DPDT or three-pole double throw, depending on the control application.
4. Use a plug-in-style relay with a multibladed plug.
5. Construct the contacts of either silver cadmium oxide or gold.
6. Enclose the relay in a clear transparent polycarbonate dust-tight cover.
7. Performance:
 - a. Mechanical Life: At least 10 million cycles.
 - b. Electrical Life: At least 100,000 cycles at rated load.
 - c. Pickup Time: 15 ms or less.
 - d. Dropout Time: 10 ms or less.
 - e. Pull-in Voltage: 85 percent of rated voltage.
 - f. Dropout Voltage: 50 percent of nominal rated voltage.
 - g. Power Consumption: 2 VA.
 - h. Ambient Operating Temperatures: **Minus 40 to 115 deg F** (Minus 40 to 46 deg C).
8. Equip relays with coil transient suppression to limit transients to non-damaging levels.
9. Plug each relay into an industry-standard, 35-mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
10. Relay socket shall have screw terminals. Mold into the socket the coincident screw terminal numbers and associated octal pin numbers.

D. Current Sensing Relay:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Square D's (a brand of Schneider Electric) "DEN series"]** <Insert **manufacturer's name; product name or designation**> or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**.
2. Monitors ac current.
3. Independent adjustable controls for pickup and dropout current.
4. Energized when supply voltage is present and current is above pickup setting.
5. De-energizes when monitored current is below dropout current.
6. Dropout current is adjustable from 50 to 95 percent of pickup current.
7. Include a current transformer, if required for application.
8. House current sensing relay and current transformer in its own enclosure. Use NEMA 250, Type 12 enclosure for indoors and NEMA 250, Type 4 for outdoors.

E. Combination On-Off Status Sensor and On-Off Relay:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Functional Devices, Inc.'s "RIBX series"]** <Insert **manufacturer's name; product name or designation**> or comparable product by one of the following:

- a. **<Insert manufacturer's name>**.
2. Description:
 - a. On-off control and status indication in a single device.
 - b. LED status indication of activated relay and current trigger.
 - c. Closed-Open-Auto override switch located on the load side of the relay.
3. Performance:
 - a. Ambient Temperature: **Minus 30 to 140 deg F** (Minus 34 to 60 deg C).
 - b. Voltage Rating: Single-phase loads rated for 300-V ac. Three-phase loads rated for 600-V ac.
4. Status Indication:
 - a. Current Sensor: Integral sensing for single-phase loads up to 20 A and external solid or split sensing ring for three-phase loads up to 150 A.
 - b. Current Sensor Range: As required by application.
 - c. Current Set Point: **[Fixed] [Adjustable] [Fixed or adjustable as required by application]**.
 - d. Current Sensor Output:
 - 1) Solid-state, single-pole double-throw contact rated for 30-V ac and dc and for 0.4 A.
 - 2) Solid-state, single-pole double-throw contact rated for 120-V ac and 1.0 A.
 - 3) Analog, zero- to 5- or 10-V dc.
 - 4) Analog, 4 to 20 mA, loop powered.
5. Relay: Single-pole double-throw, continuous-duty coil; rated for 10-million mechanical cycles.
6. Enclosure: NEMA 250, Type 1 enclosure.

2.30 ELECTRICAL POWER DEVICES

A. Transformers:

1. Transformer shall be sized for the total connected load, plus an additional 25 percent of connected load.
2. Transformer shall be at least **[40] [100] <Insert value> VA**.
3. Transformer shall have both primary and secondary fuses.

B. Power-Line Conditioner:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Controlled Power Company's "Series 800A"] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**.

2. General Power-Line Conditioner Requirements:
 - a. Design to ensure maximum reliability, serviceability, and performance.
 - b. Overall function of the power-line conditioner is to receive raw, polluted electrical power and purify it for use by electronic equipment. The power-line conditioner shall provide isolated, regulated, transient, and noise-free sinusoidal power to loads served.
3. Standards: NRTL listed per UL 1012.
4. Performance:
 - a. Single phase, continuous, 100 percent duty rated KVA/KW capacity. Design to supply power for linear or nonlinear, high crest factor, resistive and reactive loads.
 - b. Automatically regulate output voltage to within 2 percent or better with input voltage fluctuations of plus 10 to minus 20 percent of nominal when system is loaded 100 percent. Use Variable Range Regulation to obtain improved line voltage regulation when operating under less than full load conditions.
 - 1) At 75 Percent Load: Output voltage automatically regulated to within 3 percent with input voltage fluctuations of plus 10 to minus 35 percent of nominal.
 - 2) At 50 Percent Load: Output voltage automatically regulated to within 3 percent with input voltage fluctuations of plus 10 to minus 40 percent of nominal.
 - 3) At 25 Percent Load: Output voltage automatically regulated to within 3 percent with input voltage fluctuations of plus 10 to minus 45 percent of nominal.
 - c. With input voltage distortion of up to 40 percent, limit the output voltage sine wave to a maximum harmonic content of 5 percent.
 - d. Automatically regulate output voltage to within 2.5 percent when load (resistive) changes from zero percent to 100 percent to zero percent.
 - e. Output voltage returns to 95 percent of nominal level within two cycles and to 100 percent within three cycles when the output is taken from no load to full resistive load or vice-versa. Recovery from partial resistive load changes is corrected in a shorter period of time.
 - f. K Factor: 30, designed to operate with nonlinear, non-sinusoidal, high crest factor loads without overheating.
 - g. Input power factor within 0.95 approaching unity with load power factor as poor as 0.6.
 - h. Attenuate load-generated odd current harmonics 23 dB at the input.
 - i. Electrically isolate the primary from the secondary. Meet isolation criteria as defined in NFPA 70, Article 250-5D.
 - j. Lighting and Surge Protection: Compares to UL 1449 rating of 330 V when subjected to Category B3 (6000 V/3000 A) combination waveform as established by IEEE C62.41.
 - k. Common-mode noise attenuation of 140 dB.
 - l. Transverse-mode noise attenuation of 120 dB.

- m. With loss of input power for up to 16.6 ms, the output sine wave remains at usable ac voltage levels.
 - n. Reliability of 200,000 hours' MTBF.
 - o. At full load, when measured at 1-m distance, audible noise is not to exceed 54 dB.
 - p. Approximately 92 percent efficient at full load.
5. Transformer Construction:
- a. Ferroresonant, dry type, convection cooled, 600V class. Transformer windings of Class H (220 deg C) insulated copper.
 - b. Use a Class H installation system throughout with operating temperatures not to exceed 150 deg C over a 40-deg C ambient temperature.
 - c. Configure transformer primary for multi-input voltage. Include input terminals for source conductors and ground.
 - d. Manufacture transformer core using M-6 grade, grain-oriented, stress-relieved transformer steel.
 - e. Configure transformer secondary in a 240/120-V split with a 208-V tap or straight 120 V, depending on power output size.
 - f. Electrically isolate the transformer secondary windings from the primary windings. Bond neutral conductor to cabinet enclosure and output neutral terminal.
 - g. Include interface terminals for output power hot, neutral and ground conductors.
 - h. Label leads, wires and terminals to correspond with circuit wiring diagram.
 - i. Vacuum impregnate transformer with epoxy resin.
6. Cabinet Construction:
- a. Design for panel or floor mounting.
 - b. NEMA 250, Type 1, general-purpose, indoor enclosure.
 - c. Manufacture the cabinet from heavy gauge steel complying with UL 50.
 - d. Include a textured baked-on paint finish.
- C. Transient Voltage Suppression and High-Frequency Noise Filter Unit:
- 1. **Basis-of-Design Product:** Subject to compliance with requirements, provide [**Current Technology's (a brand of Thomas & Betts Power Solutions) "Load Guard Model MSU45 series"**] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
 - 2. The maximum continuous operating voltage shall be at least 125 percent.
 - 3. The operating frequency range shall be 47 to 63 Hz.
 - 4. Protection modes according to NEMA LS-1.
 - 5. The rated single-pulse surge current capacity, for each mode of protection, shall be no less than the following:
 - a. Line to Neutral: 45,000 A.

- b. Neutral to Ground: 45,000 A.
 - c. Line to Ground: 45,000 A.
 - d. Per Phase: 90,000 A.
6. Clamping voltages shall be in compliance with test and evaluation procedures defined in NEMA LS-1. Maximum clamping voltage shall be as follows:
 - a. Line to Neutral: 360 V.
 - b. Line to Ground: 360 V.
 - c. Neutral to Ground: 360 V.
7. Electromagnetic interference and RF interference noise rejection or attenuation values shall comply with test and evaluation procedures defined in NEMA LS-1.
 - a. Line to Neutral:
 - 1) 100 kHz: 42 dB.
 - 2) 1 MHz: 25 dB.
 - 3) 10 MHz: 21 dB.
 - 4) 100 MHz: 36 dB.
 - b. Line to Ground:
 - 1) 100 kHz: 16 dB.
 - 2) 1 MHz: 55 dB.
 - 3) 10 MHz: 81 dB.
 - 4) 100 MHz: 80 dB.
8. Unit shall have LED status indicator that extinguishes to indicate a failure.
9. Unit shall be listed by an NRTL as a transient voltage surge suppressor per UL 1449, and as an electromagnetic interference filter per UL 1283.
10. Unit shall not generate any appreciable magnetic field.
11. Unit shall not generate an audible noise.

D. DC Power Supply:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Acopian Technical Company, Inc.'s "25J series"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
2. Plug-in style suitable for mating with a standard eight-pin octal socket. Include the power supply with a mating mounting socket.
3. Enclose circuitry in a housing.
4. Include both line and load regulation to ensure a stable output. To protect both the power supply and the load, power supply shall have an automatic current limiting circuit.
5. Performance:

- a. Output voltage nominally 25-V dc within 5 percent.
- b. Output current up to 100 mA.
- c. Input voltage nominally 120-V ac, 60 Hz.
- d. Load regulation within 0.5 percent from zero- to 100-mA load.
- e. Line regulation within 0.5 percent at a 100-mA load for a 10 percent line change.
- f. Stability within 0.1 percent of rated volts for 24 hours after a 20-minute warmup.

2.31 UNINTERRUPTABLE POWER SUPPLY (UPS) UNITS

A. 250 through 1000 VA:

1. Basis-of-Design Product: Subject to compliance with requirements, include **[Oneac-Powervar Solutions' "ONePlus series"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
2. UPS units shall provide continuous, regulated output power without using their batteries during brownout, surge, and spike conditions.
3. Load served shall not exceed 75 percent of UPS rated capacity, including power factor of connected loads.
 - a. Larger-capacity units shall be provided for systems with larger connected loads.
 - b. UPS shall provide **[five]** <Insert number> minutes of battery power.
4. Performance:
 - a. Input Voltage: Single phase, 120- or 230-V ac, compatible with field power source.
 - b. Load Power Factor Range (Crest Factor): 0.65 to 1.0.
 - c. Output Voltage: 101- to 132-V ac, while input voltage varies between 89 and 152-V ac.
 - d. On Battery Output Voltage: Sine wave.
 - e. Inverter overload capacity shall be minimum 150 percent for 30 seconds.
 - f. Recharge time shall be a maximum of six hours to 90 percent capacity after full discharge to cutoff.
 - g. Transfer Time: 6 ms.
 - h. Surge Voltage Withstand Capacity: IEEE C62.41, Categories A and B; 6 kV/200 and 500 A; 100-kHz ringwave.
5. UPS shall be automatic during fault or overload conditions.
6. Unit with integral line-interactive, power condition topology to eliminate all power contaminants.
7. Include front panel with power switch and visual indication of power, battery, fault and temperature.

8. Unit shall include an audible alarm of faults and front panel silence feature.
9. Unit with four NEMA WD 1, NEMA WD 6 Configuration 5-15R receptacles.
10. UPS shall include dry contacts (digital output points) for low battery condition and battery-on (primary utility power failure)[**and connect the points to the DDC system**].
11. Batteries shall be sealed lead-acid type and be maintenance free. Battery replacement shall be front accessible by user without dropping load.
12. Include tower models installed in ventilated cabinets to the particular installation location.

B. 1000 through 3000 VA:

1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Toshiba International Corporation, Industrial Division's "1000 series"]** **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**.
2. UPS units shall provide continuous, regulated output power without using their batteries during brownout, surge, and spike conditions.
3. Load served shall not exceed 75 percent of UPS rated capacity, including power factor of connected loads.
 - a. Larger-capacity units, or multiple units, shall be provided for systems with larger connected loads.
 - b. UPS shall provide **[five] [10] <Insert number>** minutes of battery power.
4. Performance:
 - a. Input Voltage: Single phase, 120-V ac, plus 20 to minus 30 percent.
 - b. Power Factor: Minimum 0.97 at full load.
 - c. Output Voltage: Single phase, 120-V ac, within 3 percent, steady state with rated output current of 10.0 A, 30.0-A peak.
 - d. Inverter overload capacity shall be minimum 150 percent for 30 seconds.
 - e. Recharge time shall be a maximum of eight hours to 90 percent capacity.
5. UPS bypass shall be automatic during fault or overload conditions.
6. UPS shall include dry contacts (digital output points) for low battery condition and battery-on (primary utility power failure)[**and connect the points to the DDC system**].
7. Batteries shall be sealed lead-acid type and be maintenance free.
8. Include tower models installed in ventilated cabinets or rack models installed on matching racks, as applicable to the particular installation location and space availability/configuration.

2.32 PIPING AND TUBING

A. Pneumatic, and Pressure Instrument Signal Air, Tubing and Piping:

1. Products in this paragraph are intended for use with the following:
 - a. Main air and signal air to pneumatically controlled instruments, actuators and other control devices and accessories.
 - b. Signal air between pressure instruments, such as sensors, switches, transmitters, controllers and accessories.
2. Copper Tubing:
 - a. Seamless phosphor deoxidized copper, soft annealed or drawn tempered, with chemical and physical properties according to ASTM B 75.
 - b. Performance, dimensions, weight, and tolerance according to ASTM B 280.
 - c. Diameter, as required by application, not less than nominal 0.25 inch (6 mm).
 - d. Wall thickness, as required by the application, but not less than 0.030 inch (0.8 mm).
3. Copper Tubing Connectors and Fittings:
 - a. Brass, compression type.
 - 1) Basis-of-Design Product: Subject to compliance with requirements, provide [**Parker Hannifin Corp.'s "CPI"**] **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a) **<Insert manufacturer's name>**.
 - b. Brass, solder-joint type.
 - 1) Basis-of-Design Product: Subject to compliance with requirements, provide [**Mueller Industries, Inc.'s "Streamline"**] **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a) **<Insert manufacturer's name>**.
4. Galvanized-Steel Piping:
 - a. Galvanized pipe shall be ASTM A 53/A 53M, Schedule 40.
 - b. Fittings, galvanized malleable iron, ASME B16.3, Class 150.
5. Polyethylene Tubing:
 - a. Fire-resistant black virgin polyethylene according to ASTM D 1248, Type 1, Class C and Grade 5.
 - b. Tubing shall comply with stress crack test according to ASTM D 1693.
 - c. Diameter, as required by application, of not less than nominal 0.25 inch (6 mm).
6. Polyethylene Tubing Connectors and Fittings:

- a. Brass, barbed fittings.
 - 1) Basis-of-Design Product: Subject to compliance with requirements, provide [**Parker Hannifin Corp.'s "Poly-Tite"**] <Insert **manufacturer's name; product name or designation**> or comparable product by one of the following:
 - a) <Insert **manufacturer's name**>.
 - b. Brass, compression type.
 - 1) Basis-of-Design Product: Subject to compliance with requirements, provide [**Parker Hannifin Corp.'s "Poly-Tite"**] <Insert **manufacturer's name; product name or designation**> or comparable product by one of the following:
 - a) <Insert **manufacturer's name**>.
- B. Process Tubing:
1. Products in this paragraph are intended for signals to instruments connected to liquid and steam systems.
 2. Copper Tubing:
 - a. Seamless phosphor deoxidized copper, soft annealed or drawn tempered with chemical and physical properties according to ASTM B 75.
 - b. Performance, dimensions, weight, and tolerance according to ASTM B 280.
 - c. Diameter, as required by application, of not less than nominal **0.25 inch** (6 mm).
 - d. Wall thickness, as required by application, but not less than **0.030 inch** (0.8 mm).
 3. Copper Tubing Connectors and Fittings:
 - a. Brass, compression type.
 - 1) Basis-of-Design Product: Subject to compliance with requirements, provide [**Parker Hannifin Corp.'s "CPI"**] <Insert **manufacturer's name; product name or designation**> or comparable product by one of the following:
 - a) <Insert **manufacturer's name**>.
 - b. Brass, solder-joint type.
 - 1) Basis-of-Design Product: Subject to compliance with requirements, provide [**Mueller Industries, Inc.'s "Streamline"**] <Insert **manufacturer's name; product name or designation**> or comparable product by one of the following:
 - a) <Insert **manufacturer's name**>.

4. Stainless-Steel Tubing:
 - a. Seamless Type 316 stainless steel, Grade TP, cold drawn, annealed and pickled, free from scale.
 - b. Chemical and physical properties according to ASTM A 269.
 - c. Diameter, as required by application, of not less than nominal 0.25 inch (6 mm).
 - d. Wall thickness, as required by application, but not less than 0.035 inch (0.9 mm).
 - e. Furnish stainless-steel tubing in [20-foot (6-mm)] straight random lengths.
5. Stainless-Steel Tubing Connectors and Fittings:
 - a. Connectors and fittings shall be stainless steel, with stainless-steel collets, flareless type.
 - 1) Basis-of-Design Product: Subject to compliance with requirements, provide [Parker Hannifin Corp.'s "CPI"] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a) <Insert manufacturer's name>.
 - b. Connect instruments to tubing with connectors having compression connector on one end and IPS or NPT thread on other end.

2.33 CONTROL WIRE AND CABLE

- A. Wire: Single conductor control wiring above 24 V.
 1. Wire size shall be at least [No. 18] [No. 16] [No. 14] <Insert value> AWG.
 2. Conductor shall be 7/24 soft annealed copper strand with 2- to 2.5-inch (50- to 65-mm) lay.
 3. Conductor insulation shall be 600 V, Type THWN or Type THHN, and 90 deg C according to UL 83.
 4. Conductor colors shall be black (hot), white (neutral), and green (ground).
 5. Furnish wire on spools.
- B. Single Twisted Shielded Instrumentation Cable above 24 V:
 1. Wire size shall be a minimum [No. 18] [No. 20] [No. 22] <Insert value> AWG.
 2. Conductors shall be a twisted, 7/24 soft annealed copper strand with a 2- to 2.5-inch (50- to 65-mm) lay.
 3. Conductor insulation shall have a Type THHN/THWN or Type TFN rating.
 4. Shielding shall be 100 percent type, 0.35/0.5-mil aluminum/Mylar tape, helically applied with 25 percent overlap, and aluminum side in with tinned copper drain wire.
 5. Outer jacket insulation shall have a 600-V, 90-deg C rating and shall be Type TC cable.

6. For twisted pair, conductor colors shall be black and white. For twisted triad, conductor colors shall be black, red, and white.
7. Furnish wire on spools.

C. Single Twisted Shielded Instrumentation Cable 24 V and Less:

1. Wire size shall be a minimum [No. 18] [No. 20] [No. 22] <Insert value> AWG.
2. Conductors shall be a twisted, 7/24 soft annealed copper stranding with a 2- to 2.5-inch (50- to 65-mm) lay.
3. Conductor insulation shall have a nominal 15-mil thickness, constructed from flame-retardant PVC.
4. Shielding shall be 100 percent type, 1.35-mil aluminum/polymer tape, helically applied with 25 percent overlap, and aluminum side in with tinned copper drain wire.
5. Outer jacket insulation shall have a 300-V, 105-deg C rating and shall be Type PLTC cable.
6. For twisted pair, conductor colors shall be black and white. For twisted triad, conductor colors shall be black, red, and white.
7. Furnish wire on spools.

D. LAN and Communication Cable: Comply with DDC system manufacturer requirements for network being installed.

1. Cable shall be plenum rated.
2. Cable shall comply with NFPA 70.
3. Cable shall have a unique color that is different from other cables used on Project.
4. Copper Cable for Ethernet Network:
 - a. [100BASE-TX] [1000BASE-T] [or] [1000BASE-TX].
 - b. TIA/EIA 586, [Category 5e] [or] [Category 6].
 - c. Minimum [No. 24] [No. 22] AWG solid.
 - d. [Shielded Twisted Pair (STP)] [or] [Unshielded Twisted Pair (UTP)].
 - e. Thermoplastic insulated conductors, enclosed in a thermoplastic outer jacket, Class CMP as plenum rated.

2.34 RACEWAYS FOR CONTROL WIRING, CABLING, AND TUBING

A. Metal Conduits, Tubing, and Fittings:

1. **Manufacturers:** Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [AFC Cable Systems Inc.](#)
 - b. [Allied Tube & Conduit.](#)
 - c. [Anamet Electrical, Inc.](#)
 - d. [Current Technology Inc.](#)

- e. [Electri-Flex Company](#).
 - f. [O-Z/Gedney; an EGS Electrical Group brand; an Emerson Industrial Automation business](#).
 - g. [Picoma Industries](#).
 - h. [Republic Conduit](#).
 - i. [Robroy Industries](#).
 - j. [Southwire Company](#).
 - k. [Western Tube and Conduit Corporation](#).
 - l. [Wheatland Tube Company](#).
 - m. **<Insert manufacturer's name>**.
2. Listing and Labeling: Metal conduits, tubing, and fittings shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 3. GRC: Comply with NEMA ANSI C80.1 and UL 6.
 4. ARC: Comply with NEMA ANSI C80.5 and UL 6A.
 5. IMC: Comply with NEMA ANSI C80.6 and UL 1242.
 6. PVC-Coated Steel Conduit: PVC-coated **[rigid steel conduit] [IMC]**.
 - a. Comply with NEMA RN 1.
 - b. Coating Thickness: **0.040 inch** (1 mm), minimum.
 7. EMT: Comply with NEMA ANSI C80.3 and UL 797.
 8. FMC: Comply with UL 1; **[zinc-coated steel] [or] [aluminum]**.
 9. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.
 10. Fittings for Metal Conduit: Comply with NEMA ANSI FB 1 and UL 514B.
 - a. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 1203 and NFPA 70.
 - b. Fittings for EMT:
 - 1) Material: **[Steel] [or] [die cast]**.
 - 2) Type: **[Setscrew] [or] [compression]**.
 - c. Expansion Fittings: PVC or steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external bonding jumper.
 - d. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of **0.040 inch** (1 mm), with overlapping sleeves protecting threaded joints.
 11. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.
- B. Nonmetallic Conduits, Tubing, and Fittings:
1. **Manufacturers**: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available**

manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [AFC Cable Systems.](#)
 - b. [Anamet Electrical, Inc.](#)
 - c. [CANTEX Inc.](#)
 - d. [Carlson Electrical Products.](#)
 - e. [CertainTeed Corporation.](#)
 - f. [Condux International, Inc.](#)
 - g. [Current Technology Inc.](#)
 - h. [Dura-Line.](#)
 - i. [Electri-Flex Company.](#)
 - j. [Kraloy.](#)
 - k. [Niedax-Kleinhuis USA, Inc.](#)
 - l. [RACO; Hubbell.](#)
 - m. **<Insert manufacturer's name>.**
2. Listing and Labeling: Nonmetallic conduits, tubing, and fittings shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 3. ENT: Comply with NEMA TC 13 and UL 1653.
 4. RNC: [**Type EPC-40-PVC**] **<Insert type>**, complying with NEMA TC 2 and UL 651 unless otherwise indicated.
 5. LFNC: Comply with UL 1660.
 6. Rigid HDPE: Comply with UL 651A.
 7. Continuous HDPE: Comply with UL 651A.
 8. Coilable HDPE: Preassembled with conductors or cables, and complying with ASTM D 3485.
 9. RTRC: Comply with UL 2515A and NEMA TC 14.
 10. Fittings for ENT and RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.
 11. Fittings for LFNC: Comply with UL 514B.
 12. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less.
 13. Solvent cements and adhesive primers shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

C. Metal Wireways and Auxiliary Gutters:

1. **Manufacturers:** Subject to compliance with requirements, [**provide products by the following**] [**provide products by one of the following**] [**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. [Cooper B-Line, Inc.; a division of Cooper Industries.](#)
 - b. [Hoffman; a brand of Pentair Equipment Protection.](#)
 - c. [MonoSystems, Inc.](#)

- d. [Square D; by Schneider Electric.](#)
 - e. <Insert manufacturer's name>.
 2. Description: Sheet metal, complying with UL 870 and NEMA 250, [Type 1] [Type 3R] [Type 4] [Type 12] <Insert type> unless otherwise indicated, and sized according to NFPA 70.
 - a. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 3. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
 4. Wireway Covers: [Hinged] [Screw-cover] [Flanged-and-gasketed] type unless otherwise indicated.
 5. Finish: Manufacturer's standard enamel finish.
 - D. Surface Metal Raceways: Galvanized steel with snap-on covers complying with UL 5. [Manufacturer's standard enamel finish in color as selected by Architect] [Prime coated, ready for field painting].
 1. [Manufacturers:](#) Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [MonoSystems, Inc.](#)
 - b. [Panduit Corp.](#)
 - c. [Wiremold / Legrand.](#)
 - d. <Insert manufacturer's name>.
- 2.35 CONTROL POWER WIRING AND RACEWAYS
- A. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" electrical power conductors and cables.
 - B. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for electrical power raceways and boxes.
- 2.36 FIBER-OPTIC CABLE, CONNECTORS, AND RACEWAY
- A. Cables:
 1. [Manufacturers:](#) Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [AMP NETCONNECT; a Tyco Electronics brand, a TE Connectivity Ltd. company.](#)
- b. [AT&T.](#)
- c. [Belden Inc.](#)
- d. [Berk-Tek.](#)
- e. [Communications Specialties, Inc.](#)
- f. [Corning Cable Systems.](#)
- g. [Optical Cable Corporation.](#)
- h. [Times Fiber Communications, Inc.](#)
- i. **<Insert manufacturer's name>.**

2. Performance Requirements:

- a. Fiber: Multimode graded index. Core/cladding size shall be either 62.5/125 or 100/140 micrometers.
- b. Numerical Aperture:
 - 1) 62.5/125 Micrometer Fiber: 0.275 plus or minus 0.015.
 - 2) 100/140 Micrometer Fiber: 0.29 plus or minus 0.015.
- c. Maximum Attenuation:
 - 1) 850 nm: 6.0 dB/km.
 - 2) 1300 nm: 5.0 dB/km.
- d. Minimum Bandwidth Dispersion: 300 Mhz-km at 850 nm.
- e. Core/Cladding Index Difference: 0.3 percent plus or minus 0.05 percent, measured using refractive rear field measurement procedure.
- f. Color-code finished fibers for easy identification.
- g. Splice Loss: Fibers shall be spliced together to form a longer fiber using a commercially available fiber splicing machine recommended by cable manufacturer. Maximum loss per fiber splice shall be 0.20 dB.
- h. Connection: Fibers shall be connected using fiber-optic connectors. Nominal connector loss shall not be greater than 1 dB.
- i. Fiber-optic cable shall be suitable for use with 100Base-FX or 100Base-SX standard (as applicable) as defined in IEEE 802.3.

3. Mechanical and Environmental Requirements:

- a. Tensile Strength: Fiber cable shall withstand a minimum tensile strength of 2700 N with maximum elongation of less than 0.5 percent.
- b. Bending Radius: Minimum static bending radius for cable shall be 10 times outside diameter for non-armored cables and 20 times outside diameter for armored cables. Non-armored cables shall withstand being flexed at minimum static bending radius plus or minus 90 degrees for at least 20 cycles at 20 to 40 cycles per minute at 20 deg C. Armored cables shall withstand being flexed at minimum static bending radius plus or minus 90 degrees for at least 10 cycles at 20 to 40 cycles per minute at 20 deg C.
- c. Vibration: Cable shall withstand a vibration test with vibration amplitude of 5 mm and frequency of 10 cycles per second for at least five hours.

- d. Twist: Cable shall withstand twisting of 360 degrees over a length of 2 m for at least 10 cycles at 10 cycles per minute.
 - e. Temperature: Cable shall withstand the following temperatures:
 - 1) Installation: Minus 30 to 70 deg C.
 - 2) Operation: Minus 40 to 70 deg C.
 - 3) Storage/Shipping: Minus 40 to 70 deg C.
 - f. Lifetime: Average lifetime of a 2-km, 12-fiber cable shall be at least 20 years when installed in a natural ambient environment. End of useful life shall be reached if failing to comply with requirements indicated or a spontaneous catastrophic fiber failure.
 - g. Crush Resistance: Cable shall withstand a compressive force of 705 N/cm for armored cables and 600 N/cm for non-armored cables. There shall be no attenuation increase after force is removed.
4. Cable Structure:
- a. Number of Fibers: Supply the required number of fibers in each cable for DDC system indicated, plus not less than 50 percent spare. Cable structure shall have fibers grouped for easy handling.
 - b. Strength Members: Include cable with strength members to satisfy mechanical and environmental conditions indicated.
 - c. Cable Core: Core shall consist of stranded buffer tubes around a central member of appropriate geometric size and shall be filled and bound to maintain core integrity. A fibrous strength member may be stranded around core to provide necessary strength for cable.
 - d. Cable Jacket: Protect cable by an extruded-polyethylene jacket.
 - e. Cable Armor: For cables requiring extra mechanical protection, one or two layers of galvanized corrugated steel tape coated by an anticorrosive compound shall be either helically or longitudinally applied over standard outer jacket. Apply a second outer jacket of polyethylene over coated steel tape. Thickness of sheaths and jackets are not specified as long as mechanical and environmental conditions are satisfied.
 - f. Cable Installation: Cables shall be suitable for a semiprotected outdoor installation.
5. Packaging and Shipping:
- a. Seal both ends of each length of cable.
 - b. Test individual fibers in each cable before shipping to verify compliance with Specifications.

B. Connectors:

- 1. **Manufacturers:** Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [AMP NETCONNECT; a Tyco Electronics brand, a TE Connectivity Ltd. company.](#)
 - b. [AT&T.](#)
 - c. [Communications Specialties, Inc.](#)
 - d. [Corning Cable Systems.](#)
 - e. [Current Technology Inc.](#)
 - f. [Data Base Access Systems, Inc.](#)
 - g. [EOTec; a brand of Ultra Electronics, Nuclear Sensors & Process Instrumentation.](#)
 - h. [Liteway, Inc.](#)
 - i. [Times Fiber Communications, Inc.](#)
 - j. **<Insert manufacturer's name>.**
2. Performance Requirements:
- a. Type: Fiber-optic connectors shall be either Type ST or Type SMA. Use either connector type exclusively. No substitutions are allowed.
 - b. Insertion Loss: Connector shall have an insertion loss of not greater than 1 dB.
 - c. Coupling Tolerance: Connector shall withstand at least 500 couplings with insertion loss within 0.25-dB tolerance limit.
 - d. Mechanical Requirements:
 - 1) Connector shall enclose outermost coating of single fiber cable and be able to be mated or unmated without using a tool.
 - 2) Mount connector rigidly in a metal frame.
 - 3) Connector shall allow a semiskilled person to properly install connector to a single fiber easily in a field environment with simple tools.
- C. Splice Organizer Cabinet:
1. **Manufacturers:** Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [3M.](#)
 - b. [ADC.](#)
 - c. [AMP NETCONNECT; a Tyco Electronics brand, a TE Connectivity Ltd. company.](#)
 - d. [Communications Specialties, Inc.](#)
 - e. [Corning Cable Systems.](#)
 - f. [Liteway, Inc.](#)
 - g. **<Insert manufacturer's name>.**
 2. Minimum Capacity: Each splice organizer shall accommodate number of connectors required for DDC system indicated, plus 100 percent spare.
 3. Mounting: Wall mount the splice organizer cabinet.

D. Raceways:

1. **Manufacturers:** Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Anixterl Inc.
 - b. Condux International, Inc.
 - c. Dura-Line.
 - d. Pacific Plastics, Inc.
 - e. **<Insert manufacturer's name>.**
2. Mechanical and Performance Requirements:
 - a. Construction: Nonmetallic, flexible raceway system manufactured specifically for routing fiber-optic cables.
 - b. Suitable for use in return-air plenums, air-handling rooms, above ceilings and under access floors.
 - c. Exhibit low smoke generation and flame-spread characteristics, and have high-temperature service tolerance.
 - d. Size raceway according to NFPA 70 requirements for communications cables.
 - e. Tensile Strength at Yield: 10,800 psi.
 - f. Elongation at Break: 25 percent.

E. Cable Identification:

1. **Basis-of-Design Product:** Subject to compliance with requirements, provide **[Mueller Industries, Inc.'s "Streamline"] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>.**
2. Labeling product shall be self-laminating cable marker.
3. Cable labeling shall include numeric designation, source, destination, and cable type.

2.37 ACCESSORIES

A. Pneumatic Pressure Gages:

1. Pressure gages shall a **1.5-inch-** (38-mm-) diameter face for pressures up through **30 psig** (207 kPa) and **2.5-inch-** (65-mm-) diameter face for greater pressures.
2. Include separate gages for branch pressure and main pressure lines.
3. White dial face with black printing.
4. Include **1-psig** (6.9-kPa) increment for scale ranges through **30 psig** (207 kPa) and **2-psig** (13.8-kPa) increment for larger ranges.
5. Accuracy: Within 1 percent of full-scale range.

B. Pressure Electric Switches:

1. Diaphragm-operated snap acting switch.
2. Set point adjustable from 3 to 20 psig (21 to 138 kPa).
3. Differential adjustable from 2 to 6 psig (14 to 41 kPa).
4. Rated for resistance loads at 120-V ac.
5. Body and switch housing shall be metal.

C. Damper Blade Limit Switches:

1. Sense positive open and/or closed position of the damper blades.
2. NEMA 250, Type 13, oil-tight construction.
3. Arrange for the mounting application.
4. Additional waterproof enclosure when required by its environment.
5. Arrange to prevent "over-center" operation.

D. I/P and E/P Transducers:

1. Commercial Grade:

- a. Basis-of-Design Product: Subject to compliance with requirements, provide **[MAMAC Systems, Inc.'s "Model EP-313"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1) <Insert manufacturer's name>.

- b. The transducer shall convert an AO signal to a stepped pneumatic signal. Unless otherwise required by the operating sequence, use a 3- to 15-psig (21- to 103-kPa) pneumatic signal for pneumatic actuation.
- c. Construct the entire assembly so that shock and vibration will neither harm the transducer nor affect its accuracy.
- d. Transducer shall have auto/manual output switch, manual output control and an output pressure gage.
- e. Accuracy: Within 1.0 percent of the output span.
- f. Linearity: Within 0.5 percent of the output span.
- g. Output Capacity: Not less than 550 scim at 15 psig (103 kPa).
- h. Transducer shall have separate zero and span calibration adjustments.
- i. The transducer shall withstand up to 40 psig (276 kPa) of supply pressure without damage.
- j. For use on only modulating pneumatic outputs that are associated with terminal units, including fan-coil units, VAV units, unit heaters, and <Insert equipment>.

2. Industrial Grade:

- a. Basis-of-Design Product: Subject to compliance with requirements, provide **[Fisher's (a brand of Emerson Electric Co.) "Type 646"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1) <Insert manufacturer's name>.

- b. The transducer shall convert an AO signal to a proportional pneumatic signal. Unless otherwise required by the operating sequence, use a 3- to 15-psig (21- to 103-kPa) pneumatic signal for pneumatic actuation. A stepped pneumatic signal is unacceptable.
- c. Construct the entire assembly so that shock and vibration will neither harm the transducer nor affect its accuracy.
- d. Suitable for operation in an ambient temperature range of minus 40 to 150 deg F (minus 40 to 66 deg C).
- e. Accuracy: Within 0.5 percent of the output span.
- f. Linearity: Within 0.5 percent of the output span.
- g. Output Capacity: Not less than 5 scfm.
- h. Transducer shall have zero and span calibration adjustments.
- i. The transducer shall withstand up to 50 psig (345 kPa) of supply pressure without damage.
- j. For use on all modulating pneumatic outputs, not requiring a commercial-grade transducer.

E. E/P Switch:

- 1. Construct the body of cast aluminum or brass; three pipe body (common, normally open, and normally closed).
- 2. Internal construction of steel, copper or brass.
- 3. Air Connections: Barb.
- 4. Rating of 30 psig (207 kPa) when installed in systems below 25 psig (172 kPa) and of 150 psig (1034 kPa) when installed in systems above 25 psig (172 kPa).
- 5. Include coil transient suppression.

F. Instrument Enclosures:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide **[Hoffman's (a brand of Pentair Technical Products) "Concept Series" or "Freestanding Series"]** <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
- 2. Include instrument enclosure for secondary protection to comply with requirements indicated in "Performance Requirements" Article.
- 3. NRTL listed and labeled to UL 50.
- 4. Sized to include at least 25 percent spare area on subpanel.
- 5. Instrument(s) mounted within enclosure on internal subpanel(s).
- 6. Enclosure face with engraved, laminated phenolic nameplate for each instrument within enclosure.
- 7. Enclosures housing pneumatic instruments shall include main pressure gage and a branch pressure gage for each pneumatic device, installed inside.
- 8. Enclosures housing multiple instruments shall route tubing and wiring within enclosure in a raceway having a continuous removable cover.

9. Enclosures larger than [12 inches (300 mm)] <Insert dimension> shall have a hinged full-size face cover.
10. Equip enclosure with lock and common key.

G. Manual Valves:

1. Needle Type:

- a. Basis-of-Design Product: Subject to compliance with requirements, provide [Parker Hannifin Corp.'s "V series"] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - 1) <Insert manufacturer's name>.
- b. PTFE packing.
- c. Construct of brass for use with copper and polyethylene tubing and of stainless steel for use with stainless-steel tubing.
- d. Aluminum T-bar handle.
- e. Include tubing connections.

2. Ball Type:

- a. Basis-of-Design Product: Subject to compliance with requirements, provide [NIBCO INC.'s "T-580-70-66"] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - 1) <Insert manufacturer's name>.
- b. Body: Bronze ASTM B 62 or ASTM B 61.
- c. Ball: Type 316 stainless steel.
- d. Stem: Type 316 stainless steel.
- e. Seats: Reinforced PTFE.
- f. Packing Ring: Reinforced PTFE.
- g. Lever: Stainless steel with a vinyl grip.
- h. 600 WOG.
- i. Threaded end connections.

H. Wall-Mounted Portable Operator's Workstation Cabinet:

1. **Basis-of-Design Product:** Subject to compliance with requirements, provide [Lowell Manufacturing Company's "Model L83-5S"] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>.
2. Surface-mounted wall cabinet for tilt-out operation of laptop computers and PDAs.
3. Cabinet shall have a load limit of 50 lb (23 kg).
4. Cabinet shall include the following:

- a. Oil-filled dampers for controlled lowering of equipment to operational position.
 - b. 3RU EIA mounting rails.
 - c. Removable laptop shelf.
 - d. Separate top compartment with mounting area, hinged rail, and security lock.
 - e. Front ventilation slots.
 - f. Knockouts for conduit connections on top and bottom of cabinet.
5. Cabinet shall be constructed of steel and painted with a powder-coat epoxy.
 6. Inside center of backbox shall have provision to mount a field-furnished and -installed, single gang electrical outlet box.

2.38 IDENTIFICATION

A. Instrument Air Pipe and Tubing:

1. Engraved tag shall bear the following information:
 - a. Service (Example): "Instrument Air."
 - b. Pressure Range (Example): 0 to 30 psig (0 to 200 kPa).
2. Letter size shall be a minimum of [0.25 inch (6 mm)] <Insert dimension> high.
3. Tag shall consist of white lettering on blue background.
4. Tag shall be engraved phenolic consisting of three layers of rigid laminate. Top and bottom layers are color-coded blue with contrasting white center exposed by engraving through outer layer.
5. Include tag with a brass grommet, chain, and S-hook.

B. Control Equipment, Instruments, and Control Devices:

1. Engraved tag bearing unique identification.
 - a. Include instruments with unique identification identified by equipment being controlled or monitored, followed by point identification.
2. Letter size shall be as follows:
 - a. Operator Workstations: Minimum of [0.5 inch (13 mm)] <Insert dimension> high.
 - b. Servers: Minimum of [0.5 inch (13 mm)] <Insert dimension> high.
 - c. Printers: Minimum of [0.5 inch (13 mm)] <Insert dimension> high.
 - d. DDC Controllers: Minimum of [0.5 inch (13 mm)] <Insert dimension> high.
 - e. Gateways: Minimum of [0.5 inch (13 mm)] <Insert dimension> high.
 - f. Repeaters: Minimum of [0.5 inch (13 mm)] <Insert dimension> high.
 - g. Enclosures: Minimum of [0.5 inch (13 mm)] <Insert dimension> high.
 - h. Electrical Power Devices: Minimum of [0.25 inch (6 mm)] <Insert dimension> high.
 - i. UPS units: Minimum of [0.5 inch (13 mm)] <Insert dimension> high.

- j. Accessories: Minimum of [0.25 inch (6 mm)] <Insert dimension> high.
 - k. Instruments: Minimum of [0.25 inch (6 mm)] <Insert dimension> high.
 - l. Control Damper and Valve Actuators: Minimum of [0.25 inch (6 mm)] <Insert dimension> high.
3. Tag shall consist of white lettering on black background.
 4. Tag shall be engraved phenolic consisting of three layers of rigid laminate. Top and bottom layers are color-coded black with contrasting white center exposed by engraving through outer layer.
 5. Tag shall be fastened with drive pins.
 6. Instruments, control devices and actuators with Project-specific identification tags having unique identification numbers following requirements indicated and provided by original manufacturer do not require an additional tag.
- C. Valve Tags:
1. Brass tags and brass chains attached to valve.
 2. Tags shall be at least [1.5 inches (38 mm)] <Insert dimension> in diameter.
 3. Include tag with unique valve identification indicating control influence such as flow, level, pressure, or temperature; followed by location of valve, and followed by three-digit sequential number. For example: TV-1.001.
 4. Valves with Project-specific identification tags having unique identification numbers following requirements indicated and provided by original manufacturer do not require an additional tag.
- D. Raceway and Boxes:
1. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
 2. Paint cover plates on junction boxes and conduit same color as the tape banding for conduits. After painting, label cover plate "HVAC Controls," using an engraved phenolic tag.
 3. For raceways housing pneumatic tubing, add a phenolic tag labeled "HVAC Instrument Air Tubing."
 4. For raceways housing air signal tubing, add a phenolic tag labeled "HVAC Air Signal Tubing."
- E. Equipment Warning Labels:
1. Acrylic label with pressure-sensitive adhesive back and peel-off protective jacket.
 2. Lettering size shall be at least 14-point type with white lettering on red background.
 3. Warning label shall read "CAUTION-Equipment operated under remote automatic control and may start or stop at any time without warning. Switch electric power disconnecting means to OFF position before servicing."
 4. Lettering shall be enclosed in a white line border. Edge of label shall extend at least [0.25 inch (6 mm)] <Insert dimension> beyond white border.

2.39 SOURCE QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to evaluate the following according to industry standards for each product, and to verify DDC system reliability specified in performance requirements:
1. DDC controllers.
 2. Gateways.
 3. Routers.
 4. Operator workstations.
 5. **<Insert product>**.
- B. Product(s) **[and] [material(s)]** will be considered defective if **[it does] [they do]** not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
1. Verify compatibility with and suitability of substrates.
- B. Examine roughing-in for products to verify actual locations of connections before installation.
1. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
 2. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- C. Examine walls, floors, roofs, and ceilings for suitable conditions where product will be installed.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 DDC SYSTEM INTERFACE WITH OTHER SYSTEMS AND EQUIPMENT

- A. Communication Interface to Equipment with Integral Controls:
1. DDC system shall have communication interface with equipment having integral controls and having a communication interface for remote monitoring or control.

2. Equipment to Be Connected:

- a. Domestic water booster pumps specified in Section 221123.13 "Domestic-Water Packaged Booster Pumps."
- b. Air-terminal units specified in Section 233600 "Air Terminal Units."
- c. Kitchen hoods specified in Section 233813 "Commercial-Kitchen Hoods."
- d. Boilers specified in Section 235213 "Electric Boilers."
- e. Boilers specified in Section 235216 "Condensing Boilers."
- f. Boilers specified in Section 235223 "Cast-Iron Boilers."
- g. Boilers specified in Section 235233 "Water-Tube Boilers."
- h. Boilers specified in Section 235239 "Fire-Tube Boilers."
- i. Feedwater equipment specified in Section 235313 "Boiler Feedwater Pumps."
- j. Deaerators specified in Section 235316 "Deaerators."
- k. Chillers specified in Section 236413.13 "Direct-Fired Absorption Water Chillers."
- l. Chillers specified in Section 236413.16 "Indirect-Fired Absorption Water Chillers."
- m. Chillers specified in Section 236416 "Centrifugal Water Chillers."
- n. Chillers specified in Section 236419 "Reciprocating Water Chillers."
- o. Chillers specified in Section 236423 "Scroll Water Chillers."
- p. Chillers specified in Section 236426 "Rotary-Screw Water Chillers."
- q. Cooling towers specified in Section 236500 "Cooling Towers."
- r. Heat wheels and heat exchangers specified in Section 237200 "Air-to-Air Energy Recovery Equipment."
- s. Air-handling units specified in Section 237313 "Modular Indoor Central-Station Air-Handling Units."
- t. Rooftop units specified in Section 237413 "Packaged, Outdoor, Central-Station Air-Handling Units."
- u. Dedicated outdoor-air units specified in Section 237433 "Dedicated Outdoor-Air Units."
- v. Packaged terminal air-conditioners specified in Section 238113.11 "Packaged Terminal Air-Conditioners, Through-Wall Units," Section 238113.12 "Packaged Terminal Air-Conditioners, Freestanding Units," and Section 238113.13 "Packaged Terminal Air-Conditioners, outdoor, wall-mounted units."
- w. Computer-room air-conditioning units specified in Section 238123 "Computer-Room Air-Conditioners."
- x. Fan-coil units specified in Section 238219 "Fan Coil Units."
- y. Unit ventilators specified in Section 238223 "Unit Ventilators."
- z. Humidifiers specified in Section 238413 "Humidifiers."
- aa. Dehumidification units specified in Section 238416 "Mechanical Dehumidification Units."
- bb. Switchboards specified in Section 262300 "Low-Voltage Switchgear."
- cc. Motor-control centers specified in Section 262419 "Motor-Control Centers."
- dd. Variable-frequency controllers specified in Section 262923 "Variable-Frequency Motor Controllers."
- ee. Generator sets specified in Section 263213 "Engine Generators."
- ff. UPS specified in Section 263353 "Static Uninterruptible Power Supply."
- gg. Refrigerant monitoring.

hh. **<Insert equipment and Section number and title>.**

B. Communication Interface to Other Building Systems:

1. DDC system shall have a communication interface with systems having a communication interface.
2. Systems to Be Connected:
 - a. Elevators specified in Section 142100 "Electric Traction Elevators."
 - b. Elevators specified in Section 142113 "Electric Traction Freight Elevators."
 - c. Elevators specified in Section 142400 "Hydraulic Elevators."
 - d. Elevators specified in Section 142413 "Hydraulic Freight Elevators."
 - e. Escalators specified in Section 143100 "Escalators."
 - f. Automated water treatment systems specified in Section 232500 "HVAC Water Treatment."
 - g. Automated water treatment systems specified in Section 232516 "Water Treatment for Open-Loop Hydronic Systems."
 - h. Automated water treatment systems specified in Section 232519 "Water Treatment for Steam System Feedwater."
 - i. Power monitoring specified in Section 260913 "Electrical Power Monitoring and Control."
 - j. Lighting controls specified in Section 260926 "Lighting Control Panelboards."
 - k. Lighting controls specified in Section 260943.16 "Addressable-Fixture Lighting Controls."
 - l. Lighting controls specified in Section 260943.23 "Relay-Based Lighting Controls."
 - m. Fire-alarm system specified in Section 283111 "Digital, Addressable Fire Alarm System."
 - n. Fire-alarm system specified in Section 283112 "Zoned (DC Loop) Fire-Alarm System."
 - o. Access controls specified in Section 281300 "Access Control."
 - p. Intrusion detection specified in Section 281600 "Intrusion Detection."
 - q. Perimeter security specified in Section 281643 "Perimeter Security Systems."
 - r. **<Insert system and Section number and title>.**

3.3 DDC SYSTEM INTERFACE WITH EXISTING SYSTEMS

A. Interface with Existing Systems:

1. DDC systems shall interface existing systems to achieve integration.
2. Monitoring and Control of DDC System by Existing Control System:
 - a. DDC system performance requirements shall be satisfied when monitoring and controlling DDC system by existing control system.
 - b. Operator of existing system shall be able to upload, download, monitor, trend, control and program every input and output point in DDC system

- from existing control system using existing control system software and operator workstations.
- c. Remote monitoring and control from existing control system shall not require operators of existing control system to learn new software.
 - d. Interface of DDC system into existing control system shall be transparent to operators of existing control system and allow operators to **[program, monitor, and control]** **[monitor and control]** DDC system from any operator workstation connected to existing control system.
 - e. **<Insert requirements>**.
3. Integration of Existing Control System into DDC System:
- a. Existing control system performance requirements shall be satisfied when monitoring and controlling existing control system through DDC system.
 - b. Operator shall be able to upload, download, monitor, alarm, report, trend, control and program every input and output point in existing system from DDC system using operator workstations and software provided. The combined systems shall share one database.
 - c. Interface of existing control system I/O points into DDC system shall be transparent to operators. All operational capabilities shall be identical regardless of whether I/O already exists or I/O is being installed.
 - d. **<Insert requirements>**.
- B. Integration with Existing Enterprise System:
1. DDC system shall interface with an existing enterprise system to adhere to Owner standards already in-place and to achieve integration.
 2. Owner's control system integrator will provide the following services:
 - a. Enterprise system expansion and development of graphics, logs, reports, trends and other operational capabilities of enterprise system for I/O being added to DDC control system for use by enterprise system operators.
 - b. Limited assistance during commissioning to extent of DDC system integration with existing enterprise system.
 - c. Prepare on-site demonstration mockup of integration of DDC system to be installed with existing system before installing DDC system.
 3. Engage Owner's control system integrator to provide the following services:
 - a. Enterprise system expansion and development of graphics, logs, reports, trends and other operational capabilities of enterprise system for I/O being added to DDC control system for use by enterprise system operators.
 - b. Limited assistance during commissioning to extent of DDC system integration with existing enterprise system.
 - c. Prepare on-site demonstration mockup of integration of DDC system to be installed with existing system before installing DDC system.
 4. Control System Integrator Contact Information:
 - a. Company: **<Insert name>**.

- b. Company Street Address: **<Insert address>**.
 - c. Company Contact: **<Insert name>**.
 - d. Phone Number: **<Insert phone number>**.
 - e. E-mail Address: **<Insert e-mail address>**.
5. Attend meetings with control system integrator to integrate DDC system.

3.4 CONTROL DEVICES FOR INSTALLATION BY INSTALLERS

- A. Deliver selected control devices, specified in indicated HVAC instrumentation and control device Sections, to identified equipment and systems manufacturers for factory installation and to identified installers for field installation.
- B. Deliver the following to duct fabricator and Installer for installation in ductwork. Include installation instructions to Installer and supervise installation for compliance with requirements.
1. DDC control dampers, which are specified in Section **230923.12** "DDC Control Dampers."
 2. Airflow sensors and switches, which are specified in Section **230923.14** "Flow Instruments."
 3. Pressure sensors, which are specified in Section **230923.23** "Pressure Instruments."
 4. **<Insert additional control devices>**.
- C. Deliver the following to plumbing and HVAC piping installers for installation in piping. Include installation instructions to Installer and supervise installation for compliance with requirements.
1. DDC control valves, which are specified in Section **230923.11** "Control Valves."
 2. Pipe-mounted flow meters, which are specified in Section **230923.14** "Flow Instruments."
 3. Pipe-mounted sensors, switches, and transmitters. Flow meters are specified in Section **230923.14** "Flow Instruments." Liquid[**and steam**] temperature sensors, switches, and transmitters are specified in Section **230923.27** "Temperature Instruments."
 4. Tank-mounted sensors, switches, and transmitters. Pressure sensors, switches, and transmitters are specified in Section **230923.23** "Pressure Instruments." Liquid[**and steam**] temperature sensors, switches, and transmitters are specified in Section **230923.27** "Temperature Instruments."
 5. Pipe- and tank-mounted thermowells. Liquid[**and steam**] thermowells are specified in Section **230923.27** "Temperature Instruments."
 6. **<Insert additional control devices>**.

3.5 CONTROL DEVICES FOR EQUIPMENT MANUFACTURER FACTORY INSTALLATION

- A. Deliver the following to air-handling unit manufacturer for factory installation. Include installation instructions to air-handling unit manufacturer[**and supervise installation for compliance with requirements**].
1. **[Programmable application] [or] [application-specific]** controller.
 2. Unit-mounted DDC control dampers and actuators, which are specified in Section **230923.12** "Control Dampers."
 3. Unit-mounted airflow sensors, switches and transmitters, which are specified in Section **230923.14** "Flow Instruments."
 4. Unit-mounted gas sensors and transmitters, which are specified in Section **230923.16** "Gas Instruments."
 5. Unit-mounted leak-detection switches, which are specified in Section **230923.18** "Leak-Detection Instruments."
 6. Unit-mounted speed sensors, switches and transmitters, which are specified in Section **230923.24** "DDC Speed Instruments."
 7. Unit-mounted pressure sensors, switches and transmitters, which are specified in Section **230923.23** "Pressure Instruments."
 8. Unit-mounted temperature sensors, switches, and transmitters. Air-temperature sensors, switches, and transmitters are specified in Section **230923.27** "Temperature Instruments."
 9. Relays.
 10. **<Insert additional control devices>**.
- B. Deliver the following to terminal unit manufacturer for factory installation. Include installation instructions to terminal unit manufacturer.
1. **[Programmable application] [or] [application-specific]** controller.
 2. Electric damper actuator. Dampers actuators are specified in Section **230923.12** "Control Dampers."
 3. Unit-mounted flow and pressure sensors, transmitters, and transducers. Flow sensors, transmitters, and transducers are specified in Section **230923.14** "Flow Instruments." Pressure sensors, switches, and transmitters are specified in Section **230923.23** "Pressure Instruments."
 4. Unit-mounted temperature sensors. Air-temperature sensors, switches, and transmitters are specified in Section **230923.27** "Temperature Instruments."
 5. Relays.
 6. **<Insert additional control devices>**.
- C. Deliver the following to fan-coil unit manufacturer for factory installation. Include installation instructions to fan-coil unit manufacturer.
1. **[Programmable application] [or] [application-specific]** controller.
 2. Unit-mounted temperature sensors. Air-temperature sensors, switches, and transmitters are specified in Section **230923.27** "Temperature Instruments."
 3. Flow and pressure switches. Air and liquid flow sensors, transmitters, and transducers are specified in Section **230923.14** "Flow Instruments." Pressure

sensors, switches, and transmitters are specified in Section **230923.23** "Pressure Instruments."

4. Leak-detection switches, which are specified in Section **230923.18** "Leak-Detection Instruments."
5. Relays.
6. **<Insert additional control devices>**.

3.6 GENERAL INSTALLATION REQUIREMENTS

- A. Install products to satisfy more stringent of all requirements indicated.
- B. Install products level, plumb, parallel, and perpendicular with building construction.
- C. Support products, tubing, piping wiring, and raceways. Brace products to prevent lateral movement and sway or a break in attachment when subjected to a **<Insert value>** force.
- D. If codes and referenced standards are more stringent than requirements indicated, comply with requirements in codes and referenced standards.
- E. Fabricate openings and install sleeves in ceilings, floors, roof, and walls required by installation of products. Before proceeding with drilling, punching, and cutting, check for concealed work to avoid damage. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- F. Firestop penetrations made in fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."
- G. Seal penetrations made in acoustically rated assemblies. Comply with requirements in Section 079200 "Joint Sealants."
- H. Welding Requirements:
 1. Restrict welding and burning to supports and bracing.
 2. No equipment shall be cut or welded without approval. Welding or cutting will not be approved if there is risk of damage to adjacent Work.
 3. Welding, where approved, shall be by inert-gas electric arc process and shall be performed by qualified welders according to applicable welding codes.
 4. If requested on-site, show satisfactory evidence of welder certificates indicating ability to perform welding work intended.
- I. Fastening Hardware:
 1. Stillson wrenches, pliers, and other tools that damage surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening fasteners.
 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.

- J. If product locations are not indicated, install products in locations that are accessible and that will permit service and maintenance from floor, equipment platforms, or catwalks without removal of permanently installed furniture and equipment.
- K. Corrosive Environments:
1. Avoid or limit use of materials in corrosive airstreams and environments, including, but not limited to, the following:
 - a. Laboratory exhaust-air streams.
 - b. Process exhaust-air streams.
 2. When conduit is in contact with a corrosive airstream and environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment. Comply with requirements for installation of raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."
 3. Where instruments are located in a corrosive airstream and are not corrosive resistant from manufacturer, field install products in NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.7 OPERATOR WORKSTATION INSTALLATION

- A. Desktop Operator Workstations Installation:
1. Install operator workstation(s) at location(s) directed by Owner.
 2. Install multiple-receptacle power strip with cord for use in connecting multiple workstation components to a single duplex electrical power receptacle.
 3. Install software on workstation(s) and verify software functions properly.
 4. Develop Project-specific graphics, trends, reports, logs, and historical database.
 5. Power [**each**] workstation through a [**dedicated**] UPS unit. Locate UPS adjacent to workstation.
- B. Portable Operator Workstations Installation:
1. Turn over portable operator workstations to Owner at Substantial Completion.
 2. Install software on workstation(s) and verify software functions properly.
- C. Color Graphics Application:
1. Use system schematics indicated as starting point to create graphics.
 2. Develop Project-specific library of symbols for representing system equipment and products.
 3. Incorporate digital images of Project-completed installation into graphics where beneficial to enhance effect.
 4. Submit sketch of graphic layout with description of all text for each graphic for Owner's[**and Architect's**] review before creating graphic using graphics software.
 5. Seek Owner input in graphics development once using graphics software.

6. Final editing shall be done on-site with Owner's[**and Architect's**] review and feedback.
7. Refine graphics as necessary for Owner acceptance.
8. On receiving Owner acceptance, print a hard copy for inclusion in operation and maintenance manual. Prepare a scanned copy PDF file of each graphic and include with softcopy of DDC system operation and maintenance manual.

D. Wall-Mounted Portable Operator's Workstation Cabinet Installation:

1. Install wall-mounted portable operator's workstation cabinet(s) at location(s) indicated on Drawings.
2. Install wall-mounted portable operator's workstation cabinet(s) at following location(s) and at locations directed by Owner:
 - a. Each mechanical room.
 - b. Chiller room.
 - c. Boiler room.
 - d. **<Insert location>**.
3. Connect each cabinet to **[120-V, single-phase, 60Hz]** **<Insert power requirements>** field power source, and install single gang electrical box with **[NEMA WD 6, Type 20R duplex]** **<Insert receptacle type>** receptacle and metal cover plate in cabinet. Comply with requirements in Section 262726 "Wiring Devices."
4. Connect each cabinet to Ethernet network and install an Ethernet network port for connection to portable operator workstation Ethernet cable. Comply with requirements in Section 271500 "Communications Horizontal Cabling."

3.8 POT INSTALLATION

- A. Install **[one]** **[two]** **<Insert quantity>** portable operator terminal(s).
- B. Turn over POTs to Owner at Substantial Completion.
- C. Install software on each POT and verify that software functions properly.

3.9 SERVER INSTALLATION

- A. Install **[one]** **[two]** **<Insert quantity>** server(s) at location(s) directed by Owner.
- B. Install number of servers required to suit requirements indicated. Review Project requirements and indicate layout of proposed location in Shop Drawings.
- C. Install software indicated on server(s) and verify that software functions properly.
- D. Develop Project-specific graphics, trends, reports, logs, and historical database.
- E. Power servers through **[dedicated]** UPS unit. Locate UPS adjacent to server.

3.10 PRINTER INSTALLATION

- A. Provide the following printer(s) at location(s) directed by Owner:
1. Black and White Laser: Quantity, [**one**] [**one per desktop workstation**] <Insert quantity>.
 2. Color Laser: Quantity, [**one**] [**one per desktop workstation**] <Insert quantity>.
 3. Color Inkjet: Quantity, [**one**] [**one per desktop workstation**] <Insert quantity>.
 4. Dot Matrix: Quantity, [**one**] [**one per desktop workstation**] <Insert quantity>.
- B. Install printer software on workstations and verify that software functions properly.

3.11 GATEWAY INSTALLATION

- A. Install gateways if required for DDC system communication interface requirements indicated.
1. Install gateway(s) required to suit indicated requirements.
 - a. <Insert requirements>.
- B. Test gateway to verify that communication interface functions properly.

3.12 ROUTER INSTALLATION

- A. Install routers if required for DDC system communication interface requirements indicated.
1. Install router(s) required to suit indicated requirements.
 - a. <Insert requirements>.
- B. Test router to verify that communication interface functions properly.

3.13 CONTROLLER INSTALLATION

- A. Install controllers in enclosures to comply with indicated requirements.
- B. Connect controllers to field power supply[**and to UPS units where indicated**].
- C. Install controller with latest version of applicable software and configure to execute requirements indicated.
- D. Test and adjust controllers to verify operation of connected I/O to achieve performance indicated requirements while executing sequences of operation.
- E. Installation of Network Controllers:

1. Quantity and location of network controllers shall be determined by DDC system manufacturer to satisfy requirements indicated.
2. Install controllers in a protected location that is easily accessible by operators.
3. Top of controller shall be within [72 inches (1800 mm)] [84 inches (2100 mm)] <Insert dimension> of finished floor.

F. Installation of Programmable Application Controllers:

1. Quantity and location of programmable application controllers shall be determined by DDC system manufacturer to satisfy requirements indicated.
2. Install controllers in a protected location that is easily accessible by operators.
3. Top of controller shall be within [72 inches (1800 mm)] [84 inches (2100 mm)] <Insert dimension> of finished floor.

G. Application-Specific Controllers:

1. Quantity and location of application-specific controllers shall be determined by DDC system manufacturer to satisfy requirements indicated.
2. For controllers not mounted directly on equipment being controlled, install controllers in a protected location that is easily accessible by operators.

3.14 INSTALLATION OF WIRELESS ROUTERS FOR OPERATOR INTERFACE

- A. Install wireless routers to achieve optimum performance and best possible coverage.
- B. Mount wireless routers in a protected location that is within 60 inches (1500 mm) of floor and easily accessible by operators.
- C. Connect wireless routers to field power supply and to UPS units if network controllers are powered through UPS units.
- D. Install wireless router with latest version of applicable software and configure wireless router with WPA2 security and password protection. Create access password with not less than 12 characters consisting of letters and numbers and at least one special character. Document password in operations and maintenance manuals for reference by operators.
- E. Test and adjust wireless routers for proper operation with portable workstation and other wireless devices intended for use by operators.

3.15 ENCLOSURES INSTALLATION

- A. Install the following items in enclosures, to comply with indicated requirements:
 1. Gateways.
 2. Routers.
 3. Controllers.
 4. Electrical power devices.
 5. UPS units.

6. Relays.
7. Accessories.
8. Instruments.
9. Actuators
10. **<Insert devices>**.

B. Attach wall-mounted enclosures to wall using the following types of steel struts:

1. For NEMA 250, [**Type 1**] **<Insert type>** Enclosures: Use [**painted steel**] [**galvanized-steel**] [**corrosion-resistant-coated steel**] strut and hardware.
2. For NEMA 250, [**Type 4**] [**Type 4X**] **<Insert type>** Enclosures and Enclosures Located Outdoors: Use stainless-steel strut and hardware.
3. Install plastic caps on exposed cut edges of strut.

C. Align [**top**] [**or**] [**bottom**] of adjacent enclosures[**of like size**].

D. Install floor-mounted enclosures located [**in mechanical equipment rooms**] on concrete housekeeping pads. Attach enclosure legs using [**galvanized-**] [**or**] [**stainless-**]steel anchors.

E. Install continuous and fully accessible wireways to connect conduit, wire, and cable to multiple adjacent enclosures. Wireway used for application shall have protection equal to NEMA 250 rating of connected enclosures.

3.16 ELECTRIC POWER CONNECTIONS

A. Connect electrical power to DDC system products requiring electrical power connections.

B. Design of electrical power to products not indicated with electric power is delegated to DDC system provider and installing trade. Work shall comply with NFPA 70 and other requirements indicated.

C. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers" for electrical power circuit breakers.

D. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power conductors and cables.

E. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for electrical power raceways and boxes.

3.17 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements in Section 260553 "Identification for Electrical Systems" for identification products and installation.

- B. Install engraved phenolic nameplate with unique identification on face for each of the following:
1. Operator workstation.
 2. Server.
 3. Printer.
 4. Gateway.
 5. Router.
 6. Protocol analyzer.
 7. DDC controller.
 8. Enclosure.
 9. Electrical power device.
 10. UPS unit.
 11. Accessory.
- C. Install engraved phenolic nameplate with unique instrument identification on face of each instrument connected to a DDC controller.
- D. Install engraved phenolic nameplate with identification on face of each control [**damper**] [**and**] [**valve**] actuator connected to a DDC controller.
- E. Where product is installed above accessible tile ceiling, also install matching engraved phenolic nameplate with identification on face of ceiling grid located directly below.
- F. Where product is installed above an inaccessible ceiling, also install engraved phenolic nameplate with identification on face of access door directly below.
- G. Warning Labels:
1. Shall be permanently attached to equipment that can be automatically started by DDC control system.
 2. Shall be located in highly visible location near power service entry points.

3.18 NETWORK INSTALLATION

- A. Install fiber-optic cable when connecting between the following network devices and when located in different buildings on campus, or when distance between devices exceeds **<Insert distance>**:
1. Operator workstations.
 2. Operator workstations and network controllers.
 3. Network controllers.
 4. **<Insert network device>**.
- B. Install copper [**or fiber-optic**] cable when connecting between the following network devices [**located in same building**]:
1. Operator workstations.
 2. Operator workstations and network controllers.
 3. Network controllers.

4. **<Insert network device>.**

C. Install copper cable when connecting between the following:

1. Gateways.
2. Gateways and network controllers or programmable application controllers.
3. Routers.
4. Routers and network controllers or programmable application controllers.
5. Network controllers and programmable application controllers.
6. Programmable application controllers.
7. Programmable application controllers and application-specific controllers.
8. Application-specific controllers.
9. **<Insert network device>.**

D. Install network cable in continuous raceway.

1. Where indicated on Drawings, cable trays may be used for copper cable in lieu of conduit.

3.19 NETWORK NAMING AND NUMBERING

A. Coordinate with Owner and provide unique naming and addressing for networks and devices.

B. ASHRAE 135 Networks:

1. MAC Address:

- a. Every network device shall have an assigned and documented MAC address unique to its network.
- b. Ethernet Networks: Document MAC address assigned at its creation.
- c. ARCNET or MS/TP networks: Assign from 00 to 64.

2. Network Numbering:

- a. Assign unique numbers to each new network.
- b. Provide ability for changing network number through device switches or operator interface.
- c. DDC system, with all possible connected LANs, can contain up to 65,534 unique networks.

3. Device Object Identifier Property Number:

- a. Assign unique device object identifier property numbers or device instances for each device network.
- b. Provide for future modification of device instance number by device switches or operator interface.
- c. LAN shall support up to 4,194,302 unique devices.

4. Device Object Name Property Text:

- a. Device object name property field shall support 32 minimum printable characters.
 - b. Assign unique device "Object Name" property names with plain-English descriptive names for each device.
 - 1) Example 1: Device object name for device controlling boiler plant at Building 1000 would be "HW System B1000."
 - 2) Example 2: Device object name for a VAV terminal unit controller could be "VAV unit 102".
5. Object Name Property Text for Other Than Device Objects:
- a. Object name property field shall support 32 minimum printable characters.
 - b. Assign object name properties with plain-English names descriptive of application.
 - 1) Example 1: "Zone 1 Temperature."
 - 2) Example 2 "Fan Start and Stop."
6. Object Identifier Property Number for Other Than Device Objects:
- a. Assign object identifier property numbers according to **[Drawings] [or] [tables]** indicated.
 - b. If not indicated, object identifier property numbers may be assigned at Installer's discretion but must be approved by Owner in advance, be documented and be unique for like object types within device.

3.20 PIPING AND TUBING INSTALLATION

A. Above-Grade Pneumatic and Air Signal Piping and Tubing Installation:

1. Material Application:
 - a. Install copper tubing, except as follows:
 - 1) Tubing Exposed to View: Polyethylene tubing installed in raceways may be used in lieu of copper tubing.
 - 2) Concealed Tubing: Polyethylene tubing may be used in lieu of copper tubing when **[concealed behind accessible ceilings] [and] [concealed in walls and connecting wall-mounted instruments with recessed connections]**.
 - b. Install copper tubing for sizes up through **[NPS 1 (DN 25)]** <Insert size> and install galvanized-steel pipe for larger sizes, except as follows:
 - 1) Tubing Exposed to View: Polyethylene tubing installed in raceways may be used in lieu of copper tubing where exposed to view.
 - 2) Concealed Tubing: Polyethylene tubing may be used in lieu of copper tubing when **[concealed behind accessible ceilings] [and]**

[concealed in walls and connecting wall-mounted instruments with recessed connections].

- c. Install copper tubing[, **unless other accessible materials are indicated,**] for pneumatic main and control signals to instruments including, but not limited to, the following:
 - 1) Pneumatic actuators.
 - 2) I/P transducers.
 - 3) Sensors.
 - 4) Switches.
 - 5) Transmitters.
 - 6) **<Insert instrument>**.
 - d. Install copper tubing[, **unless other accessible materials are indicated,**] for air signals to instruments including, but not limited to, the following:
 - 1) Sensors.
 - 2) Switches.
 - 3) Transmitters.
 - 4) **<Insert instrument>**.
 - e. Install drawn-temper copper tubing, except within **36 inches (900 mm)** of device terminations tubing shall be annealed-tempered copper tubing.
 - f. Install compression fittings to connect copper tubing to instruments, control devices, and accessories.
 - g. Install **[barbed] [or] [compression]** fittings to connect polyethylene tubing to instruments, control devices, and accessories.
2. Routing:
- a. Do not expose tubing in finished spaces, such as spaces with ceilings; occupied spaces, offices, and conference rooms, unless expressly approved in writing by Architect. Tubing may be exposed in areas without ceilings.
 - b. Where tubing is installed in finished occupied spaces, install the tubing in surface metal raceway with appropriate fittings only where not feasible to conceal in wall, above ceiling or behind architectural enclosures or covers.
 - c. Install piping and tubing plumb and parallel to and at right angles with building construction.
 - d. Install multiple runs of tubing or piping in equally spaced parallel lines.
 - e. Piping and tubing shall not interfere with access to valves, equipment, duct and equipment access doors, or obstruct personnel access and passageways of any kind.
 - f. Coordinate with other trades before installation to prevent proposed piping and tubing from interfering with pipe, duct, terminal equipment, light fixtures, conduit and cable tray space. If changes to Shop Drawings are necessary due to field coordination, document changes on record Drawings.

- k. Thread pipe on a threading machine. Ream inner edges of pipe ends, file, and grind to remove burrs.
 - l. Wrap pipe threads of fittings on pneumatic lines with a single wrap of PTFE tape.
 - m. Protect piping and tubing from entrance of foreign matter.
 7. Conduit in which nonmetallic tubing is installed shall not exceed 50 percent fill. Support conduit according to NFPA 70 unless otherwise indicated.
- B. Below-Grade Pneumatic and Air Signal Piping and Tubing Installation:
 1. Install tubing below grade in a continuous 4-inch (100-mm), Schedule 80, PVC conduit.
 2. Install at a depth of at least 24 inches (600 mm) below finished grade.
 3. Install tubing in raceways dedicated to tubing. Do not combine electrical conductors and tubing in raceways.
- C. Identify piping and tubing as follows:
 1. Every 50 feet (15 m) of straight run.
 2. At least once for each branch within 36 inches (900 mm) of main tee.
 3. At each change in direction.
 4. Within 36 inches (900 mm) of each ceiling, floor, roof and wall penetration.
 5. Where exposed to and where concealed from view, including above ceiling plenums, shafts, and chases.
 6. At each valve.
 7. Mark each instrument tube connection with a number-coded identification. Each unique tube shall have same unique number at instrument connection and termination at opposite end of tube.
- D. Isolation Valves Installation:
 1. Install valves full size of piping and tubing.
 2. Install at the following locations:
 - a. At each branch.
 - b. Before and after each PRV.
 - c. Before and after each air dryer.
 - d. At each control device.
 3. Valves shall be located to be readily accessible from floor.
- E. Process Tubing Installation:
 1. Install process tubing for signal to instruments in liquid and steam systems. Instruments include, but are not limited to, the following:
 - a. Meters.
 - b. Sensors.
 - c. Switches.

d. Transmitters.

2. Support tubing according to MSS SP-69, Table 3, but at intervals no less than 60 inches (1500 mm).
3. Install NPS 1/2 (DN 15) process tubing for industrial-grade sensors, transmitters, and switches. Install stainless-steel bushings where required.
4. Make tubing bends with a bending tool. Flattened or wrinkled bends are unacceptable.
5. Support tubing independent of other trades.
6. Route tubing parallel to and at right angles to building construction.
7. Install tubing concealed in areas with ceilings.
8. Install a dirt leg with an isolation valve and threaded plug in drain valve at each connection to a transmitter and switch.
9. Insulate process piping connected to hot water and steam systems for personnel protection if the surface temperature exceeds 120 deg F (49 deg C). Only insulate piping within maintenance personnel reach from floor, platform, or catwalk.
10. Wrap pipe threads of fitting in process tubing with service temperatures below 350 deg F (177 deg C) with a single wrap of PTFE tape.
11. Coat pipe threads of fittings on process tubing in services with temperatures exceeding 350 deg F (177 deg C) with pipe compound before being made up to reduce the possibility of galling.
12. Do not make tubing connections to a fitting before completing makeup of the connection.
13. Check tubing for correct diameter and wall thickness. Cut the tube ends square and deburred. Exercise care during cutting to keep tubing round.
14. Do not install fittings close to a bend. A length of straight tubing, not deformed by bending, is required for a proper connection.
15. Align tubing with fitting when installed. Avoid springing tube into position.
16. Install tubing with extreme care exercised to keep foreign matter out of system. Open tubing ends shall be kept plugged to keep out dust, dirt and moisture.
17. Do not attach tubing to equipment that may be removed frequently for maintenance or may impart vibration and expansion from temperature change.
18. Protect exposed tubing in mechanical equipment rooms from inadvertent mechanical damage within [76 inches (1800 mm)] [84 inches (2100 mm)] [96 inches (2400 mm)] <Insert dimension> above floor. Use aluminum channel reversed and secured over tubing to protect tubing from damage.

F. Isolation Valves Installation:

1. Install valves full size of piping and tubing.
2. Install isolation valves at the following locations:
 - a. Process connection.
 - b. Inlet to each instrument including, sensors, transmitters, switches, gages, and other control devices.
3. Locate valves to be readily accessible from floor.

3.21 CONTROL WIRE, CABLE AND RACEWAYS INSTALLATION

- A. Comply with NECA 1.
- B. Comply with TIA 568-C.1.
- C. Wiring Method: Install cables in raceways and cable trays[**except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used**]. Conceal raceway and cables except in unfinished spaces.
 - 1. Install plenum cable in environmental air spaces, including plenum ceilings.
 - 2. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
 - 3. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."
- D. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- E. Field Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- F. Conduit Installation:
 - 1. Install conduit expansion joints where conduit runs exceed **200 feet (60 m)**, and conduit crosses building expansion joints.
 - 2. Coordinate conduit routing with other trades to avoid conflicts with ducts, pipes and equipment and service clearance.
 - 3. Maintain at least **3-inch (75-mm)** separation where conduits run axially above or below ducts and pipes.
 - 4. Limit above-grade conduit runs to **100 feet (30 m)** without pull or junction box.
 - 5. Do not install raceways or electrical items on any "explosion-relief" walls, or rotating equipment.
 - 6. Do not fasten conduits onto the bottom side of a metal deck roof.
 - 7. Flexible conduit is permitted only where flexibility and vibration control is required.
 - 8. Limit flexible conduit to **3 feet (1 m)** long.
 - 9. Conduit shall be continuous from outlet to outlet, from outlet to enclosures, pull and junction boxes, and shall be secured to boxes in such manner that each system shall be electrically continuous throughout.
 - 10. Direct bury conduits underground or install in concrete-encased duct bank where indicated.
 - a. Use rigid, nonmetallic, Schedule 80 PVC.
 - b. Provide a burial depth according to NFPA 70, but not less than **24 inches (600 mm)**.
 - 11. Secure threaded conduit entering an instrument enclosure, cabinet, box, and trough, with a locknut on outside and inside, such that conduit system is

electrically continuous throughout. Provide a metal bushing on inside with insulated throats. Locknuts shall be the type designed to bite into the metal or, on inside of enclosure, shall have a grounding wedge lug under locknut.

12. Conduit box-type connectors for conduit entering enclosures shall have an insulated throat.
13. Connect conduit entering enclosures in wet locations with box-type connectors or with watertight sealing locknuts or other fittings.
14. Offset conduits where entering surface-mounted equipment.
15. Seal conduit runs used by sealing fittings to prevent the circulation of air for the following:
 - a. Conduit extending from interior to exterior of building.
 - b. Conduit extending into pressurized duct and equipment.
 - c. Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
 - d. **<Insert requirement>**.

G. Wire and Cable Installation:

1. Cables serving a common system may be grouped in a common raceway. Install control wiring and cable in separate raceway from power wiring. Do not group conductors from different systems or different voltages.
2. Install cables with protective sheathing that is waterproof and capable of withstanding continuous temperatures of 90 deg C with no measurable effect on physical and electrical properties of cable.
 - a. Provide shielding to prevent interference and distortion from adjacent cables and equipment.
3. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
4. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
5. UTP Cable Installation:
 - a. Comply with TIA 568-C.2.
 - b. Do not untwist UTP cables more than **1/2 inch (12 mm)** from the point of termination, to maintain cable geometry.
6. Installation of Cable Routed Exposed under Raised Floors:
 - a. Install plenum-rated cable only.
 - b. Install cabling after the flooring system has been installed in raised floor areas.
 - c. Coil cable [**6 feet (1.8 m)**] **<Insert dimension>** long not less than [**12 inches (300 mm)**] **<Insert dimension>** in diameter below each feed point.

7. Identify each wire on each end and at each terminal with a number-coded identification tag. Each wire shall have a unique tag.
8. Provide strain relief.
9. Terminate wiring in a junction box.
 - a. Clamp cable over jacket in junction box.
 - b. Individual conductors in the stripped section of the cable shall be slack between the clamping point and terminal block.
10. Terminate field wiring and cable not directly connected to instruments and control devices having integral wiring terminals using terminal blocks.
11. Install signal transmission components according to IEEE C2, REA Form 511a, NFPA 70, and as indicated.
12. Keep runs short. Allow extra length for connecting to terminal boards. Do not bend flexible coaxial cables in a radius less than 10 times the cable OD. Use sleeves or grommets to protect cables from vibration at points where they pass around sharp corners and through penetrations.
13. Ground wire shall be copper and grounding methods shall comply with IEEE C2. Demonstrate ground resistance.
14. Wire and cable shall be continuous from terminal to terminal without splices.
15. Use insulated spade lugs for wire and cable connection to screw terminals.
16. Use shielded cable to transmitters.
17. Use shielded cable to temperature sensors.
18. Perform continuity and meager testing on wire and cable after installation.
19. Do not install bruised, kinked, scored, deformed, or abraded wire and cable. Remove and discard wire and cable if damaged during installation, and replace it with new cable.
20. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
21. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
22. Protection from Electro-Magnetic Interference (EMI): Provide installation free of (EMI). As a minimum, comply with the following requirements:
 - a. Comply with BICSI TDMM and TIA 569-C for separating unshielded cable from potential EMI sources, including electrical power lines and equipment.
 - b. Separation between open cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
 - 1) Electrical Equipment Rating Less Than 2 kVA: A minimum of **5 inches** (127 mm).
 - 2) Electrical Equipment Rating between 2 and 5 kVA: A minimum of **12 inches** (300 mm).
 - 3) Electrical Equipment Rating More Than 5 kVA: A minimum of **24 inches** (610 mm).
 - c. Separation between cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:

- 1) Electrical Equipment Rating Less Than 2 kVA: A minimum of **2-1/2 inches** (64 mm).
 - 2) Electrical Equipment Rating between 2 and 5 kVA: A minimum of **6 inches** (150 mm).
 - 3) Electrical Equipment Rating More Than 5 kVA: A minimum of **12 inches** (300 mm).
- d. Separation between cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
- 1) Electrical Equipment Rating Less Than 2 kVA: No requirement.
 - 2) Electrical Equipment Rating between 2 and 5 kVA: A minimum of **3 inches** (76 mm).
 - 3) Electrical Equipment Rating More Than 5 kVA: A minimum of **6 inches** (150 mm).
- e. Separation between Cables and Electrical Motors and Transformers, 5 kVA or 5 HP and Larger: A minimum of **48 inches** (1200 mm).
- f. Separation between Cables and Fluorescent Fixtures: A minimum of **5 inches** (127 mm).

3.22 FIBER-OPTIC CABLE SYSTEM INSTALLATION

- A. Comply with TIA 568-C.3, except where requirements indicated are more stringent.
- B. Raceway Installation:
1. Install continuous raceway for routing fiber-optic cables.
 2. Install raceways continuously between pull boxes and junction boxes. Raceways shall enter and be secured to enclosures.
 3. Make bends in raceway using large-radius preformed ells. Field bending shall be according to NFPA 70 minimum radii requirements. Use only equipment specifically designed for material and size involved.
 4. Install no more than the equivalent of two 90-degree bends in any pathway run. Support within **12 inches** (300 mm) of changes in direction. Use long radius elbows for all fiber-optic cables.
 5. Entire raceway shall be complete and raceway interior cleaned before installation of fiber-optic cables.
 6. Securely fasten raceway to building structure using clamps and clips designed for purpose.
 7. Install nylon or polyethylene pulling line in raceways. Clearly label as "pulling line," indicating source and destination.
- C. Fiber-Optic Cable Installation:
1. Route cables as efficiently as possible, minimizing amount of cable required.
 2. Continuously lubricate cables during pulling-in process.

3. Do not exceed maximum pulling tensions provided by cable manufacturer. Monitor cable pulling tension with a mechanical tension meter.
4. Arrange cables passing through pull boxes to obtain maximum clearance among cables within box.
5. As cables emerge from intermediate point pull boxes, coil cable in a figure eight pattern with loops not less than **24 inches (600 mm)** in diameter.
6. Terminate fiber-optic cables in a fiber-optic splice organizer cabinet, unless connected equipment can accept fiber-optic cables directly. Terminate cables with connectors.
7. Install and connect appropriate opto-electronic equipment and fiber jumper cables between opto-electronic equipment and fiber-optic cable system to DDC system fiber-optic cable system. Verify interface compatibility.

D. Cable and Raceway Identification:

1. Label cables at both ends. Labels shall be typed, not handwritten.
2. Mark raceways at each pull box indicating the type and number of cables within.

3.23 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 3. Testing of Pneumatic and Air-Signal Tubing:
 - a. Test for leaks and obstructions.
 - b. Disconnect each pipe and tubing line before a test is performed, and blowout dust, dirt, trash, condensate and other foreign materials with compressed air. Use commercially pure compressed air or nitrogen as distributed in gas cylinders. Air from an oil-free compressor with an air dryer is an acceptable alternative for the test.
 - c. After foreign matter is expelled and line is free from obstructions, plug far end of tubing run.
 - d. Connect a pressure source to near end of run with a needle valve between air supply and tubing run.
 - e. Connect a pressure gage accurate to within 0.5 percent of test between the shutoff needle valve and tubing run under test.
 - f. For system pressures above **30 psig (207 kPa)**, apply a pressure of 1.5 times operating pressure. Record pressure in tubing run every 10 minutes

for one hour. Allowable drop in pressure in one-hour period shall not exceed 1 psig (6.9 kPa).

- g. For system pressures 30 psig (207 kPa) and below, apply a pressure of 2.0 times operating pressure to piping and tubing run. Record pressure in tubing run every 5 minutes for one hour. Allowable drop in pressure in one-hour period shall not exceed 0.5 psig (3.5 kPa).

D. Testing:

1. Perform preinstallation, in-progress, and final tests, supplemented by additional tests, as necessary.
2. Preinstallation Cable Verification: Verify integrity and serviceability for new cable lengths before installation. This assurance may be provided by using vendor verification documents, testing, or other methods. As a minimum, furnish evidence of verification for cable attenuation and bandwidth parameters.
3. In-Progress Testing: Perform standard tests for correct pair identification and termination during installation to ensure proper installation and cable placement. Perform tests in addition to those specified if there is any reason to question condition of material furnished and installed. Testing accomplished is to be documented by agency conducting tests. Submit test results for Project record.
4. Final Testing: Perform final test of installed system to demonstrate acceptability as installed. Testing shall be performed according to a test plan supplied by DDC system manufacturer. Defective Work or material shall be corrected and retested. As a minimum, final testing for cable system, including spare cable, shall verify conformance of attenuation, length, and bandwidth parameters with performance indicated.
5. Test Equipment: Use a fiber-optic time domain reflectometer for testing of length and optical connectivity.
6. Test Results: Record test results and submit copy of test results for Project record.

3.24 DDC SYSTEM I/O CHECKOUT PROCEDURES

- A. Check installed products before continuity tests, leak tests, and calibration.
- B. Check instruments for proper location and accessibility.
- C. Check instruments for proper installation on direction of flow, elevation, orientation, insertion depth, or other applicable considerations that will impact performance.
- D. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material, and support.
- E. For pneumatic products, verify that air supply for each product is properly installed.
- F. Control Damper Checkout:
 1. For pneumatic dampers, verify that pressure gages are provided in each air line to damper actuator and positioner.

2. Verify that control dampers are installed correctly for flow direction.
3. Verify that proper blade alignment, either parallel or opposed, has been provided.
4. Verify that damper frame attachment is properly secured and sealed.
5. Verify that damper actuator and linkage attachment is secure.
6. Verify that actuator wiring is complete, enclosed, and connected to correct power source.
7. Verify that damper blade travel is unobstructed.

G. Control Valve Checkout:

1. For pneumatic valves, verify that pressure gages are provided in each air line to valve actuator and positioner.
2. Verify that control valves are installed correctly for flow direction.
3. Verify that valve body attachment is properly secured and sealed.
4. Verify that valve actuator and linkage attachment is secure.
5. Verify that actuator wiring is complete, enclosed, and connected to correct power source.
6. Verify that valve ball, disc or plug travel is unobstructed.
7. After piping systems have been tested and put into service, but before insulating and balancing, inspect each valve for leaks. Adjust or replace packing to stop leaks. Replace the valve if leaks persist.

H. Instrument Checkout:

1. Verify that instrument is correctly installed for location, orientation, direction, and operating clearances.
2. Verify that attachment is properly secured and sealed.
3. Verify that conduit connections are properly secured and sealed.
4. Verify that wiring is properly labeled with unique identification, correct type, and size and is securely attached to proper terminals.
5. Inspect instrument tag against approved submittal.
6. For instruments with tubing connections, verify that tubing attachment is secure and isolation valves have been provided.
7. For flow instruments, verify that recommended upstream and downstream distances have been maintained.
8. For temperature instruments:
 - a. Verify sensing element type and proper material.
 - b. Verify length and insertion.

3.25 DDC SYSTEM I/O ADJUSTMENT, CALIBRATION AND TESTING:

- A. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
- B. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.

- C. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.
- D. Equipment and procedures used for calibration shall comply with instrument manufacturer's written instructions.
- E. Provide diagnostic and test equipment for calibration and adjustment.
- F. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. An installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
- G. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
- H. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
- I. Comply with field testing requirements and procedures indicated by ASHRAE's Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.
- J. Analog Signals:
 - 1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
 - 2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
 - 3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.
- K. Digital Signals:
 - 1. Check digital signals using a jumper wire.
 - 2. Check digital signals using an ohmmeter to test for contact making or breaking.
- L. Control Dampers:
 - 1. Stroke and adjust control dampers following manufacturer's recommended procedure, from 100 percent open to 100 percent closed and back to 100 percent open.
 - 2. Stroke control dampers with pilot positioners. Adjust damper and positioner following manufacturer's recommended procedure, so damper is 100 percent closed, 50 percent closed and 100 percent open at proper air pressure.
 - 3. Check and document open and close cycle times for applications with a cycle time less than 30 seconds.
 - 4. For control dampers equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.
- M. Control Valves:

1. Stroke and adjust control valves following manufacturer's recommended procedure, from 100 percent open to 100 percent closed and back to 100 percent open.
2. Stroke control valves with pilot positioners. Adjust valve and positioner following manufacturer's recommended procedure, so valve is 100 percent closed, 50 percent closed and 100 percent open at proper air pressures.
3. Check and document open and close cycle times for applications with a cycle time less than 30 seconds.
4. For control valves equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

N. Meters: Check sensors at zero, 50, and 100 percent of Project design values.

O. Sensors: Check sensors at zero, 50, and 100 percent of Project design values.

P. Switches: Calibrate switches to make or break contact at set points indicated.

Q. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistant source.

3.26 DDC SYSTEM CONTROLLER CHECKOUT

A. Verify power supply.

1. Verify voltage, phase, and hertz.
2. Verify that protection from power surges is installed and functioning.
3. Verify that ground fault protection is installed.
4. If applicable, verify if connected to UPS unit.
5. If applicable, verify if connected to a backup power source.
6. If applicable, verify that power conditioning units, transient voltage suppression and high-frequency noise filter units are installed.

B. Verify that wire and cabling is properly secured to terminals and labeled with unique identification.

C. Verify that spare I/O capacity is provided.

3.27 DDC CONTROLLER I/O CONTROL LOOP TESTS

A. Testing:

1. Test every I/O point connected to DDC controller to verify that safety and operating control set points are as indicated and as required to operate controlled system safely and at optimum performance.
2. Test every I/O point throughout its full operating range.

3. Test every control loop to verify operation is stable and accurate.
4. Adjust control loop proportional, integral, and derivative settings to achieve optimum performance while complying with performance requirements indicated. Document testing of each control loop's precision and stability via trend logs.
5. Test and adjust every control loop for proper operation according to sequence of operation.
6. Test software and hardware interlocks for proper operation. Correct deficiencies.
7. Operate each analog point at the following:
 - a. Upper quarter of range.
 - b. Lower quarter of range.
 - c. At midpoint of range.
8. Exercise each binary point.
9. For every I/O point in DDC system, read and record each value at operator workstation, at DDC controller and at field instrument simultaneously. Value displayed at operator workstation, at DDC controller and at field instrument shall match.
10. Prepare and submit a report documenting results for each I/O point in DDC system and include in each I/O point a description of corrective measures and adjustments made to achieve desired results.

3.28 DDC SYSTEM VALIDATION TESTS

- A. Perform validation tests before requesting final review of system. Before beginning testing, first submit Pretest Checklist and Test Plan.
- B. After approval of Test Plan, execute all tests and procedures indicated in plan.
- C. After testing is complete, submit completed test checklist.
- D. Pretest Checklist: Submit the following list with items checked off once verified:
 1. Detailed explanation for any items that are not completed or verified.
 2. Required mechanical installation work is successfully completed and HVAC equipment is working correctly.
 3. HVAC equipment motors operate below full-load amperage ratings.
 4. Required DDC system components, wiring, and accessories are installed.
 5. Installed DDC system architecture matches approved Drawings.
 6. Control electric power circuits operate at proper voltage and are free from faults.
 7. Required surge protection is installed.
 8. DDC system network communications function properly, including uploading and downloading programming changes.
 9. Using BACnet protocol analyzer, verify that communications are error free.
 10. Each controller's programming is backed up.
 11. Equipment, products, tubing, wiring cable, and conduits are properly labeled.
 12. All I/O points are programmed into controllers.
 13. Testing, adjusting, and balancing work affecting controls is complete.
 14. Dampers and actuators zero and span adjustments are set properly.

15. Each control damper and actuator goes to failed position on loss of power.
16. Valves and actuators zero and span adjustments are set properly.
17. Each control valve and actuator goes to failed position on loss of power.
18. Meter, sensor, and transmitter readings are accurate and calibrated.
19. Control loops are tuned for smooth and stable operation.
20. View trend data where applicable.
21. Each controller works properly in standalone mode.
22. Safety controls and devices function properly.
23. Interfaces with fire-alarm system function properly.
24. Electrical interlocks function properly.
25. Operator workstations and other interfaces are delivered, all system and database software is installed, and graphic are created.
26. Record Drawings are completed.

E. Test Plan:

1. Prepare and submit a validation test plan including test procedures for performance validation tests.
2. Test plan shall address all specified functions of DDC system and sequences of operation.
3. Explain detailed actions and expected results to demonstrate compliance with requirements indicated.
4. Explain method for simulating necessary conditions of operation used to demonstrate performance.
5. Include a test checklist to be used to check and initial that each test has been successfully completed.
6. Submit test plan documentation [10] [20] <Insert number> business days before start of tests.

F. Validation Test:

1. Verify operating performance of each I/O point in DDC system.
 - a. Verify analog I/O points at operating value.
 - b. Make adjustments to out-of-tolerance I/O points.
 - 1) Identify I/O points for future reference.
 - 2) Simulate abnormal conditions to demonstrate proper function of safety devices.
 - 3) Replace instruments and controllers that cannot maintain performance indicated after adjustments.
2. Simulate conditions to demonstrate proper sequence of control.
3. Readjust settings to design values and observe ability of DDC system to establish desired conditions.
4. After 24 Hours following Initial Validation Test:
 - a. Re-check I/O points that required corrections during initial test.
 - b. Identify I/O points that still require additional correction and make corrections necessary to achieve desired results.

5. After 24 Hours of Second Validation Test:
 - a. Re-check I/O points that required corrections during second test.
 - b. Continue validation testing until I/O point is normal on two consecutive tests.
 6. Completely check out, calibrate, and test all connected hardware and software to ensure that DDC system performs according to requirements indicated.
 7. After validation testing is complete, prepare and submit a report indicating all I/O points that required correction and how many validation re-tests it took to pass. Identify adjustments made for each test and indicate instruments that were replaced.
- G. DDC System Response Time Test:
1. Simulate HLC.
 - a. Heavy load shall be an occurrence of **[50]** <Insert number> percent of total connected binary COV, one-half of which represent an "alarm" condition, and **[50]** <Insert number> percent of total connected analog COV, one-half of which represent an "alarm" condition, that are initiated simultaneously on a one-time basis.
 2. Initiate 10 successive occurrences of HLC and measure response time to typical alarms and status changes.
 3. Measure with a timer having at least 0.1-second resolution and 0.01 percent accuracy.
 4. Purpose of test is to demonstrate DDC system, as follows:
 - a. Reaction to COV and alarm conditions during HLC.
 - b. Ability to update DDC system database during HLC.
 5. Passing test is contingent on the following:
 - a. Alarm reporting at printer beginning no more than **[two]** <Insert number> seconds after the initiation (time zero) of HLC.
 - b. All alarms, both binary and analog, are reported and printed; none are lost.
 - c. Compliance with response times specified.
 6. Prepare and submit a report documenting HLC tested and results of test including time stamp and print out of all alarms.
- H. DDC System Network Bandwidth Test:
1. Test network bandwidth usage on all DDC system networks to demonstrate bandwidth usage under DDC system normal operating conditions and under simulated HLC.
 2. To pass, none of DDC system networks shall use more than 70 percent of available bandwidth under normal and HLC operation.

3.29 DDC SYSTEM WIRELESS NETWORK VERIFICATION

- A. DDC system Installer shall design wireless DDC system networks to comply with performance requirements indicated.
- B. Installer shall verify wireless network performance through field testing and shall document results in a field test report.
- C. Testing and verification of all wireless devices shall include, but not be limited to, the following:
 - 1. Speed.
 - 2. Online status.
 - 3. Signal strength.

3.30 FINAL REVIEW

- A. Submit written request to Architect **[and] [Construction Manager]** when DDC system is ready for final review. Written request shall state the following:
 - 1. DDC system has been thoroughly inspected for compliance with contract documents and found to be in full compliance.
 - 2. DDC system has been calibrated, adjusted and tested and found to comply with requirements of operational stability, accuracy, speed and other performance requirements indicated.
 - 3. DDC system monitoring and control of HVAC systems results in operation according to sequences of operation indicated.
 - 4. DDC system is complete and ready for final review.
- B. Review by **[Architect] [and] [Construction Manager]** shall be made after receipt of written request. A field report shall be issued to document observations and deficiencies.
- C. Take prompt action to remedy deficiencies indicated in field report and submit a second written request when all deficiencies have been corrected. Repeat process until no deficiencies are reported.
- D. Should more than two reviews be required, DDC system manufacturer and Installer shall compensate entity performing review for total costs, labor and expenses, associated with third and subsequent reviews. Estimated cost of each review shall be submitted and approved by DDC system manufacturer and Installer before making the review.
- E. Prepare and submit closeout submittals **[and begin procedures indicated in "Extended Operation Test" Article]** when no deficiencies are reported.
- F. A part of DDC system final review shall include a demonstration to parties participating in final review.

1. Provide staff familiar with DDC system installed to demonstrate operation of DDC system during final review.
2. Provide testing equipment to demonstrate accuracy and other performance requirements of DDC system that is requested by reviewers during final review.
3. Demonstration shall include, but not be limited to, the following:
 - a. Accuracy and calibration of [10] [20] <Insert number> I/O points randomly selected by reviewers. If review finds that some I/O points are not properly calibrated and not satisfying performance requirements indicated, additional I/O points may be selected by reviewers until total I/O points being reviewed that satisfy requirements equals quantity indicated.
 - b. HVAC equipment and system hardwired and software safeties and life-safety functions are operating according to sequence of operation. Up to [10] [20] <Insert number> I/O points shall be randomly selected by reviewers. Additional I/O points may be selected by reviewers to discover problems with operation.
 - c. Correct sequence of operation after electrical power interruption and resumption after electrical power is restored for randomly selected HVAC systems.
 - d. Operation of randomly selected dampers and valves in normal-on, normal-off and failed positions.
 - e. Reporting of alarm conditions for randomly selected alarms, including different classes of alarms, to ensure that alarms are properly received by operators and operator workstations.
 - f. Trends, summaries, logs, and reports set-up for Project.
 - g. For up to [three] <Insert number> HVAC systems randomly selected by reviewers, use graph trends to show that sequence of operation is executed in correct manner and that HVAC systems operate properly through complete sequence of operation including different modes of operations indicated. Show that control loops are stable and operating at set points and respond to changes in set point of 20 percent or more.
 - h. Software's ability to communicate with controllers, operator workstations, uploading and downloading of control programs.
 - i. Software's ability to edit control programs off-line.
 - j. Data entry to show Project-specific customizing capability including parameter changes.
 - k. Step through penetration tree, display all graphics, demonstrate dynamic update, and direct access to graphics.
 - l. Execution of digital and analog commands in graphic mode.
 - m. Spreadsheet and curve plot software and its integration with database.
 - n. Online user guide and help functions.
 - o. Multitasking by showing different operations occurring simultaneously on four quadrants of split screen.
 - p. System speed of response compared to requirements indicated.
 - q. For Each [Network] [and] [Programmable Application] Controller:
 - 1) Memory: Programmed data, parameters, trend, and alarm history collected during normal operation is not lost during power failure.
 - 2) Operator Interface: Ability to connect directly to each type of digital controller with a portable operator workstation and PDA. Show that

- maintenance personnel interface tools perform as indicated in manufacturer's technical literature.
- 3) Standalone Ability: Demonstrate that controllers provide stable and reliable standalone operation using default values or other method for values normally read over network.
 - 4) Electric Power: Ability to disconnect any controller safely from its power source.
 - 5) Wiring Labels: Match control drawings.
 - 6) Network Communication: Ability to locate a controller's location on network and communication architecture matches Shop Drawings.
 - 7) Nameplates and Tags: Accurate and permanently attached to control panel doors, instrument, actuators, and devices.
- r. For Each Operator Workstation:
- 1) I/O points lists agree with naming conventions.
 - 2) Graphics are complete.
 - 3) UPS unit, if applicable, operates.
- s. Communications and Interoperability: Demonstrate proper interoperability of data sharing, alarm and event management, trending, scheduling, and device and network management.[**Use ASHRAE 135 protocol analyzer to help identify devices, view network traffic, and verify interoperability.**] Requirements must be met even if only one manufacturer's equipment is installed.
- 1) Data Presentation: On each operator workstation, demonstrate graphic display capabilities.
 - 2) Reading of Any Property: Demonstrate ability to read and display any used readable object property of any device on network.
 - 3) Set Point and Parameter Modifications: Show ability to modify set points and tuning parameters indicated.[**Modifications are made with messages and write services initiated by an operator using workstation graphics, or by completing a field in a menu with instructional text.**]
 - 4) Peer-to-Peer Data Exchange: Network devices are installed and configured to perform without need for operator intervention to implement Project sequence of operation and to share global data.
 - 5) Alarm and Event Management: Alarms and events are installed and prioritized according to Owner. Demonstrate that time delays and other logic are set up to avoid nuisance tripping. Show that operators with sufficient privileges are permitted.
 - 6) Schedule Lists: Schedules are configured for start and stop, mode change, occupant overrides, and night setback as defined in sequence of operations.
 - 7) Schedule Display and Modification: Ability to display any schedule with start and stop times for calendar year. Show that all calendar entries and schedules are modifiable from any connected operator workstation by an operator with sufficient privilege.

- 8) Archival Storage of Data: Data archiving is handled by operator workstation and server and local trend archiving and display is accomplished.
- 9) Modification of Trend Log Object Parameters: Operator with sufficient privilege can change logged data points, sampling rate, and trend duration.
- 10) Device and Network Management:
 - a) Display of network device status.
 - b) Display of BACnet Object Information.
 - c) Silencing devices transmitting erroneous data.
 - d) Time synchronization.
 - e) Remote device re-initialization.
 - f) Backup and restore network device programming and master database(s).
 - g) Configuration management of routers.

t. <Insert additional requirements>.

3.31 EXTENDED OPERATION TEST

- A. Extended operation test is intended to simulate normal operation of DDC system by Owner.
- B. Operate DDC system for an operating period of [14] [21] [28] <Insert number> consecutive calendar days following Substantial Completion. Coordinate exact start date of testing with Owner.
- C. Provide an operator familiar with DDC system installed to man an operator workstation [**while on-site**] during eight hours of each normal business day occurring during operating period.
- D. During operating period, DDC system shall demonstrate correct operation and accuracy of monitored and controlled points as well as operation capabilities of sequences, logs, trends, reports, specialized control algorithms, diagnostics, and other software indicated.
 1. Correct defects of hardware and software when it occurs.
- E. Definition of Failures and Downtime during Operating Period:
 1. Failed I/O point constituting downtime is an I/O point failing to perform its intended function consistently and a point physically failed due to hardware and software.
 2. Downtime is when any I/O point in DDC system is unable to fulfill its' required function.
 3. Downtime shall be calculated as elapsed time between a detected point failure as confirmed by an operator and time point is restored to service.

4. Maximum time interval allowed between DDC system detection of failure occurrence and operator confirmation shall be 0.5 hours.
 5. Downtime shall be logged in hours to nearest 0.1 hour.
 6. Power outages shall not count as downtime, but shall suspend test hours unless systems are provided with UPS and served through a backup power source.
 7. Hardware or software failures caused by power outages shall count as downtime.
- F. During operating period, log downtime and operational problems are encountered.
1. Identify source of problem.
 2. Provide written description of corrective action taken.
 3. Record duration of downtime.
 4. Maintain log showing the following:
 - a. Time of occurrence.
 - b. Description of each occurrence and pertinent written comments for reviewer to understand scope and extent of occurrence.
 - c. Downtime for each failed I/O point.
 - d. Running total of downtime and total time of I/O point after each problem has been restored.
 5. Log shall be available to Owner for review at any time.
- G. For DDC system to pass extended operation test, total downtime shall not exceed [1] [2] <Insert number> percent of total point-hours during operating period.
1. Failure to comply with minimum requirements of passing at end of operating period indicated shall require that operating period be extended one consecutive day at a time until DDC system passes requirement.
- H. Evaluation of DDC system passing test shall be based on the following calculation:
1. Downtime shall be counted on a point-hour basis where total number of DDC system point-hours is equal to total number of I/O points in DDC system multiplied by total number of hours during operating period.
 2. One point-hour of downtime is one I/O point down for one hour. Three points down for five hours is a total of 15 point-hours of downtime. Four points down for one-half hour is 2 point-hours of downtime.
 3. Example Calculation: Maximum allowable downtime for 30-day test when DDC system has 1000 total I/O points (combined analog and binary) and has passing score of 1 percent downtime is computed by 30 days x 24 h/day x 1000 points x 1 percent equals 7200 point-hours of maximum allowable downtime.
- I. Prepare test and inspection reports.
- ### 3.32 ADJUSTING
- A. Occupancy Adjustments: When requested within [12] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit

actual occupied conditions. Provide up to **[two]** **<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.33 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three]** **[six]** **[nine]** **[12]** **<Insert number>** months' full maintenance by DDC system manufacturer's authorized service representative. Include **[monthly]** **[quarterly]** **[semiannual]** **[annual]** preventive maintenance, repair, or replacement of worn or defective components, cleaning, calibration, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.34 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for **[one]** **[two]** **<Insert number>** year(s).
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within **[one]** **[two]** **<Insert number>** year(s) from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
1. Upgrade Notice: At least **[30]** **<Insert number>** days to allow Owner to schedule and access system and to upgrade computer equipment if necessary.

3.35 DEMONSTRATION

- A. Engage a factory-authorized service representative with complete knowledge of Project-specific system installed to train Owner's maintenance personnel to adjust, operate, and maintain DDC system.
- B. Extent of Training:
1. Base extent of training on scope and complexity of DDC system indicated and training requirements indicated. Provide extent of training required to satisfy requirements indicated even if more than minimum training requirements are indicated.
 2. Inform Owner of anticipated training requirements if more than minimum training requirements are indicated.
 3. Minimum Training Requirements:
 - a. Provide not less than **[five]** **[10]** **[15]** **<Insert number>** days of training total.
 - b. Stagger training over multiple training classes to accommodate Owner's requirements. All training shall occur before end of warranty period.
 - c. Total days of training shall be broken into not more than **[two]** **[three]** **[four]** **<Insert number>** separate training classes.

- d. Each training class shall be not less than **[one] [two] [three]** <Insert number> consecutive day(s).

C. Training Schedule:

1. Schedule training with Owner **[20]** <Insert number> business days before expected Substantial Completion.
2. Schedule training to provide Owner with at least **[10] [15] [20]** <Insert number> business days of notice in advance of training.
3. Training shall occur within normal business hours at a mutually agreed on time. Unless otherwise agreed to, training shall occur Monday through Friday, except on U.S. Federal holidays, with two morning sessions and two afternoon sessions. Each morning session and afternoon session shall be split in half with **[15] [30]** <Insert number>-minute break between sessions. Morning and afternoon sessions shall be separated by **[30] [60]** <Insert number>-minute lunch period. Training, including breaks and excluding lunch period, shall not exceed **[eight]** <Insert number> hours per day.
4. Provide staggered training schedule as requested by Owner.

D. Training Attendee List and Sign-in Sheet:

1. Request from Owner in advance of training a proposed attendee list with name, phone number, and e-mail address.
2. Provide a preprinted sign-in sheet for each training session with proposed attendees listed and no fewer than six blank spaces to add additional attendees.
3. Preprinted sign-in sheet shall include training session number, date and time, instructor name, phone number and e-mail address, and brief description of content to be covered during session. List attendees with columns for name, phone number, e-mail address and a column for attendee signature or initials.
4. Circulate sign-in sheet at beginning of each session and solicit attendees to sign or initial in applicable location.
5. At end of each training day, send Owner an e-mail with an attachment of scanned copy (PDF) of circulated sign-in sheet for each session.

E. Training Attendee Headcount:

1. Plan in advance of training for **[two] [three] [five]** <Insert number> attendees.
2. Make allowance for Owner to add up to **[one] [two]** <Insert number> attendee(s) at time of training.
3. Headcount may vary depending on training content covered in session. Attendee access may be restricted to some training content for purposes of maintaining system security.

F. Training Attendee Prior Knowledge: For guidance in planning required training and instruction, assume attendees have the following:

1. **[High school] [High school and technical school] [High school and four-year college]** <Insert level> education and degree.
2. **[Basic] [Intermediate] [Advanced]** user knowledge of computers and office applications.

3. **[Basic] [Intermediate] [Advanced]** knowledge of HVAC systems.
4. **[Basic] [Intermediate] [Advanced]** knowledge of DDC systems.
5. **[Basic] [Intermediate] [Advanced]** knowledge of DDC system and products installed.

G. Attendee Training Manuals:

1. Provide each attendee with a color hard copy of all training materials and visual presentations.
2. Hard-copy materials shall be organized in a three-ring binder with table of contents and individual divider tabs marked for each logical grouping of subject matter. Organize material to provide space for attendees to take handwritten notes within training manuals.
3. In addition to hard-copy materials included in training manual, provide each binder with a sleeve or pocket that includes a DVD or flash drive with PDF copy of all hard-copy materials.

H. Instructor Requirements:

1. One or multiple qualified instructors, as required, to provide training.
2. Instructors shall have not less than **[five] <Insert number>** years of providing instructional training on not less than **[five] <Insert number>** past projects with similar DDC system scope and complexity to DDC system installed.

I. Organization of Training Sessions:

1. Organize training sessions into logical groupings of technical content and to reflect different levels of operators having access to system. Plan training sessions to accommodate the following three levels of operators:
 - a. Daily operators.
 - b. Advanced operators.
 - c. System managers and administrators.
2. Plan and organize training sessions to group training content to protect DDC system security. Some attendees may be restricted to some training sessions that cover restricted content for purposes of maintaining DDC system security.

J. Training Outline:

1. Submit training outline for Owner review at least **[10] <Insert number>** business day before scheduling training.
2. Outline shall include a detailed agenda for each training day that is broken down into each of four training sessions that day, training objectives for each training session and synopses for each lesson planned.

K. On-Site Training:

1. Owner will provide conditioned classroom or workspace with ample desks or tables, chairs, power and data connectivity for instructor and each attendee.

2. Instructor shall provide training materials, projector, and other audiovisual equipment used in training.
3. Provide as much of training located on-site as deemed feasible and practical by Owner.
4. On-site training shall include regular walk-through tours, as required, to observe each unique product type installed with hands-on review of operation, calibration, and service requirements.
5. Operator workstation provided with DDC system shall be used in training. If operator workstation is not indicated, provide a temporary workstation to convey training content.

L. Off-Site Training:

1. Provide conditioned training rooms and workspace with ample tables, desks, or tables, chairs, power and data connectivity for each attendee.
2. Provide capability to remotely access to Project DDC system for use in training.
3. Provide a workstation for use by each attendee.

M. Training Content for Daily Operators:

1. Basic operation of system.
2. Understanding DDC system architecture and configuration.
3. Understanding each unique product type installed including performance and service requirements for each.
4. Understanding operation of each system and equipment controlled by DDC system including sequences of operation, each unique control algorithm, and each unique optimization routine.
5. Operating operator workstations, printers and other peripherals.
6. Logging on and off system.
7. Accessing graphics, reports, and alarms.
8. Adjusting and changing set points and time schedules.
9. Recognizing DDC system malfunctions.
10. Understanding content of operation and maintenance manuals including control drawings.
11. Understanding physical location and placement of DDC controllers and I/O hardware.
12. Accessing data from DDC controllers.
13. Operating portable operator workstations.
14. Review of DDC testing results to establish basic understanding of DDC system operating performance and HVAC system limitations as of Substantial Completion.
15. Running each specified report and log.
16. Displaying and demonstrating each data entry to show Project-specific customizing capability. Demonstrating parameter changes.
17. Stepping through graphics penetration tree, displaying all graphics, demonstrating dynamic updating, and direct access to graphics.
18. Executing digital and analog commands in graphic mode.
19. Demonstrating control loop precision and stability via trend logs of I/O for not less than 10 percent of I/O installed.

20. Demonstrating DDC system performance through trend logs and command tracing.
21. Demonstrating scan, update, and alarm responsiveness.
22. Demonstrating spreadsheet and curve plot software, and its integration with database.
23. Demonstrating on-line user guide, and help function and mail facility.
24. Demonstrating multitasking by showing dynamic curve plot, and graphic construction operating simultaneously via split screen.
25. Demonstrating the following for HVAC systems and equipment controlled by DDC system:
 - a. Operation of HVAC equipment in normal-off, -on and failed conditions while observing individual equipment, dampers, and valves for correct position under each condition.
 - b. For HVAC equipment with factory-installed software, show that integration into DDC system is able to communicate with DDC controllers or gateways, as applicable.
 - c. Using graphed trends, show that sequence of operation is executed in correct manner, and HVAC systems operate properly through complete sequence of operation including seasonal change, occupied and unoccupied modes, warm-up and cool-down cycles and other modes of operation indicated.
 - d. Hardware interlocks and safeties function properly and DDC system performs correct sequence of operation after electrical power interruption and resumption after power is restored.
 - e. Reporting of alarm conditions for each alarm, and confirm that alarms are received at assigned locations, including operator workstations.
 - f. Each control loop responds to set point adjustment and stabilizes within time period indicated.
 - g. Sharing of previously graphed trends of all control loops to demonstrate that each control loop is stable and set points are being maintained.
26. **<Insert requirement>**.

N. Training Content for Advanced Operators:

1. Making and changing workstation graphics.
2. Creating, deleting, and modifying alarms including annunciation and routing.
3. Creating, deleting, and modifying point trend logs including graphing and printing on an ad-hoc basis and operator-defined time intervals.
4. Creating, deleting, and modifying reports.
5. Creating, deleting, and modifying points.
6. Creating, deleting, and modifying programming including ability to edit control programs off-line.
7. Creating, deleting, and modifying system graphics and other types of displays.
8. Adding DDC controllers and other network communication devices such as gateways and routers.
9. Adding operator workstations.
10. Performing DDC system checkout and diagnostic procedures.
11. Performing DDC controllers operation and maintenance procedures.

12. Performing operator workstation operation and maintenance procedures.
13. Configuring DDC system hardware including controllers, workstations, communication devices, and I/O points.
14. Maintaining, calibrating, troubleshooting, diagnosing, and repairing hardware.
15. Adjusting, calibrating, and replacing DDC system components.
16. **<Insert requirement>**.

O. Training Content for System Managers and Administrators:

1. DDC system software maintenance and backups.
2. Uploading, downloading, and off-line archiving of all DDC system software and databases.
3. Interface with Project-specific, third-party operator software.
4. Understanding password and security procedures.
5. Adding new operators and making modifications to existing operators.
6. Operator password assignments and modification.
7. Operator authority assignment and modification.
8. Workstation data segregation and modification.
9. **<Insert requirement>**.

P. Video of Training Sessions:

1. Provide a digital video and audio recording of each training session. Create a separate recording file for each session.
2. Stamp each recording file with training session number, session name, and date.
3. Provide Owner with **[two]** **<Insert number>** copies of digital files on DVDs or flash drives for later reference and for use in future training.
4. Owner retains right to make additional copies for intended training purposes without having to pay royalties.

END OF SECTION 230923

SECTION 230923.11 - CONTROL VALVES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes control valves and actuators for DDC systems.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230933 "Electric and Electronic Control System for HVAC" for electric/electronic control valves and actuators in electric and electronic control systems.
 - 3. Section 230943 "Pneumatic Control System for HVAC" for pneumatic control valves and actuators in pneumatic control systems.
 - 4. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section 230923.11.

1.3 DEFINITIONS

- A. Cv: Design valve coefficient.
- B. DDC: Direct-digital control.
- C. NBR: Nitrile butadiene rubber.
- D. PTFE: Polytetrafluoroethylene
- E. RMS: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:

1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Operating characteristics, electrical characteristics, and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
3. Product description with complete technical data, performance curves, and product specification sheets.
4. Installation, operation, and maintenance instructions, including factors affecting performance.

B. Shop Drawings:

1. Include plans, elevations, sections, and[**mounting**] details.
2. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Include diagrams for pneumatic signal and main air tubing.

C. Delegated-Design Submittal:

1. Schedule and design calculations for control valves and actuators, including the following:
 - a. Flow at project design and minimum flow conditions.
 - b. Pressure differential drop across valve at project design flow condition.
 - c. Maximum system pressure differential drop (pump close-off pressure) across valve at project minimum flow condition.
 - d. Design and minimum control valve coefficient with corresponding valve position.
 - e. Maximum close-off pressure.
 - f. Leakage flow at maximum system pressure differential.
 - g. Torque required at worst case condition for sizing actuator.
 - h. Actuator selection indicating torque provided.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plan drawings and corresponding product installation details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Control valve installation location shown in relationship to room, duct, pipe, and equipment.
2. Size and location of wall access panels for control valves installed behind walls.
3. Size and location of ceiling access panels for control valves installed above inaccessible ceilings.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For control valves to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label products to comply with ASME Boiler and Pressure Vessel Code where required by authorities having jurisdiction.
- C. Delegated Design: Engage a qualified professional[**engineer**], as defined in Section 014000 "Quality Requirements," to size products where indicated as delegated design.
- D. Ground Fault: Products shall not fail due to ground fault condition when suitably grounded.
- E. Backup Power Source: Systems and equipment served by a backup power source shall have associated control valve actuators served from a backup power source.
- F. Environmental Conditions:
 - 1. Provide electric control valve actuators, with protective enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Electric control valve actuators not available with integral enclosures, complying with requirements indicated, shall be housed in protective secondary enclosures.
 - a. Hazardous Locations: Explosion-proof rating for condition.
- G. Determine control valve sizes and flow coefficients by ISA 75.01.01.
- H. Control valve characteristics and rangeability shall comply with ISA 75.11.01.
- I. Selection Criteria:
 - 1. Control valves shall be suitable for operation at following conditions:
 - a. Chilled Water: **<Insert pressure and coincident temperature requirements>**.
 - b. Condenser Water: **<Insert pressure and coincident temperature requirements>**.
 - c. Heat Recovery: **<Insert pressure and coincident temperature requirements>**.

- d. Heating Hot Water: **<Insert pressure and coincident temperature requirements>**.
 - e. Steam: **<Insert pressure and coincident temperature requirements>**.
 - f. **<Insert system and requirements>**.
2. Control valve shutoff classifications shall be FCI 70-2, Class IV or better unless otherwise indicated.
 3. Valve pattern, three-way or straight through, shall be as indicated on Drawings.
 4. Modulating straight-through pattern control valves shall have equal percentage flow-throttling characteristics unless otherwise indicated.
 5. Modulating three-way pattern water valves shall have linear flow-throttling characteristics. The total flow through the valve shall remain constant regardless of the valve's position.
 6. Modulating butterfly valves shall have **[linear] [or] [equal percentage]** flow-throttling characteristics.
 7. Fail positions unless otherwise indicated:
 - a. Chilled Water: **[Close] [Last position] [Open]**.
 - b. Condenser Water: **[Close] [Last position] [Open]**.
 - c. Heat Recovery: **[Close] [Last position] [Open]**.
 - d. Heating Hot Water: **[Close] [Last position] [Open]**.
 - e. Steam: **[Close] [Last position] [Open]**.
 - f. **<Insert system and fail position>**.
 8. Globe-type control valves shall pass the design flow required with not more than 95 percent of stem lift unless otherwise indicated.
 9. Rotary-type control valves, such as ball and butterfly valves, shall have Cv falling between 65 and 75 degrees of valve full open position and minimum valve Cv between 15 and 25 percent of open position.
 10. Selection shall consider viscosity, flashing, and cavitation corrections.
 11. Valves shall have stable operation throughout full range of operation, from design to minimum Cv.
 12. Minimum Cv shall be calculated at **[10] <Insert number>** percent of design flow, with a coincident pressure differential equal to the system design pump head.
 13. In water systems, select modulating control valves at terminal equipment for a design Cv based on a pressure drop of **[5 psig ((34 kPa))] [7 psig ((48 kPa))] <Insert value>** at design flow unless otherwise indicated.
 14. Modulating valve sizes for steam service shall provide a pressure drop at design flow equal to lesser of the following:
 - a. **[50] <Insert number>** percent of the valve inlet pressure.
 - b. **[50] <Insert number>** percent of the absolute steam pressure at the valve inlet.
 15. Two-position control valves shall be line size unless otherwise indicated.
 16. In water systems, use ball- or globe-style control valves for two-position control for valves **NPS 2 ((DN 50))** and smaller and butterfly style for valves larger than **NPS 2 (DN 50)**.
 17. In steam systems, use ball- or globe-style control valves regardless of size.
 18. Pneumatic, two-position control valves shall provide a smooth opening and

closing characteristic slow enough to avoid water hammer. Valves with pneumatic actuators shall have an adjustable opening time (valve full closed to full open) and an adjustable closing time (valve full open to full closed) ranging from zero to 10 seconds. Opening and closing times shall be independently adjustable.

19. Control valve, pneumatic-control signal shall not exceed **200 feet (60 m)**. For longer distances, provide an electric/electronic control signal to the valve and an electric solenoid valve or electro-pneumatic transducer at the valve to convert the control signal to pneumatic.

2.2 BALL-STYLE CONTROL VALVES

A. Ball Valves with Single Port and Characterized Disk:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Belimo Americas (USA), Inc., Belimo Automation AG**; B2 series.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Pressure Rating for **NPS 1 ((DN 25))** and Smaller: Nominal 600 WOG.
3. Pressure Rating for **NPS 1-1/2 (DN 38)** through **NPS 2 (DN 50)**: Nominal 400 WOG.
4. Close-off Pressure: **200 psig (1379 kPa)**.
5. Process Temperature Range: **Zero to 212 deg F (Minus 18 to plus 100 deg C)**.
6. Body and Tail Piece: Cast bronze ASTM B 61, ASTM B 62, ASTM B 584, or forged brass with nickel plating.
7. End Connections: Threaded (NPT) ends.
8. Ball: **[Chrome-plated brass or bronze] [or] [300 series stainless steel]**.
9. Stem and Stem Extension:
 - a. Material to match ball.
 - b. Blowout-proof design.
 - c. Sleeve or other approved means to allow valve to be opened and closed without damaging the insulation or the vapor barrier seal.
10. Ball Seats: Reinforced PTFE.
11. Stem Seal: Reinforced PTFE packing ring with a threaded packing ring follower to retain the packing ring under design pressure with the linkage removed. Alternative means, such as EPDM O-rings, are acceptable if an equivalent cycle endurance can be demonstrated by testing.
12. Flow Characteristic: Equal percentage.

B. Ball Valves with Two Ports and Characterized Disk:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. [Belimo Americas \(USA\), Inc., Belimo Automation AG](#); B3 series.
 - b. <Insert manufacturer's name; product name or designation>.
2. Pressure Rating for NPS 1 (DN 25) and Smaller: Nominal 600 WOG.
 3. Pressure Rating for NPS 1-1/2 (DN 38) through NPS 2 (DN 50): Nominal 400 WOG.
 4. Close-off Pressure: 200 psig (1379 kPa).
 5. Process Temperature Range: Zero to 212 deg F (Minus 18 to plus 100 deg C).
 6. Body and Tail Piece: Cast bronze ASTM B 61, ASTM B 62, ASTM B 584, or forged brass with nickel plating.
 7. End Connections: Threaded (NPT) ends.
 8. Ball: **[Chrome-plated brass or bronze] [or] [300 series stainless steel]**.
 9. Stem and Stem Extension:
 - a. Material to match ball.
 - b. Blowout-proof design.
 - c. Sleeve or other approved means to allow valve to be opened and closed without damaging the insulation or the vapor barrier seal.
 10. Ball Seats: Reinforced PTFE.
 11. Stem Seal: Reinforced PTFE packing ring with a threaded packing ring follower to retain the packing ring under design pressure with the linkage removed. Alternative means, such as EPDM O-rings, are acceptable if an equivalent cycle endurance can be demonstrated by testing.
 12. Flow Characteristics for A-Port: Equal percentage.
 13. Flow Characteristics for B-Port: Modified for constant common port flow.
- C. Ball Valves with Single Port and Segmented Ball:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Valve Solutions, Inc.](#); V series.
 - b. <Insert manufacturer's name; product name or designation>.
 2. Performance:
 - a. Process Temperature Rating: Minus 20 to plus 450 deg F (Minus 29 to plus 232 deg C).
 - b. ASME B16.34, **[Class 150] [or] [Class 300]**.
 - c. Leakage: FCI 70-2, Class IV.
 - d. Rangeability: 300 to 1.
 - e. Rotation: Zero to 90 degrees.
 - f. Equal percentage flow characteristic.
 3. ASME B16.10 face-to-face dimensions.
 4. Valves NPS 2 (DN 50) and Smaller: Threaded (NPT) ends.
 5. Valves NPS 2-1/2 (DN 65) through NPS 6 (DN 150): Flanged ends suitable for mating to ASME B16.5 flanges.

6. Body: **[Carbon] [or] [stainless]** steel.
7. Ball and Shaft: Stainless steel.
8. Shaft and Segmented Ball: Pinned and welded.
9. Ball Seat: Graphite.
10. Packing: PTFE V-rings and graphite packing follower.
11. Replaceable seat, ball, and shaft packing.
12. Label each valve with following:
 - a. Manufacturer's name, model number, and serial number.
 - b. Body size.
 - c. Flow directional arrow.

D. Ball Valves with Segmented Ball, Three-Way Pattern:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Valve Solutions, Inc.;** V series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Arrangement: Two single-port valves mated to a fabricated tee with interconnecting mechanical linkage.
3. Performance:
 - a. Process Temperature Rating: **Minus 20 to plus 450 deg F** (Minus 29 to plus 232 deg C).
 - b. ASME B16.34, **[Class 150] [or] [Class 300]**.
 - c. Leakage: FCI 70-2, Class IV.
 - d. Rangeability: 300 to 1.
 - e. Rotation: Zero to 90 degrees.
 - f. Equal percentage flow characteristic.
4. Face-to-Face Dimensions: ASME B16.10.
5. Valves **NPS 3 (DN 80)** through **NPS 6 (DN 150)**: Flanged ends suitable for mating to ASME B16.5 flanges.
6. Body: **[Carbon] [or] [stainless]** steel.
7. Ball and Shaft: Stainless steel.
8. Shaft and Segmented Ball: Pinned and welded.
9. Ball Seat: Graphite.
10. Packing: PTFE V-rings and graphite packing follower.
11. Replaceable seat, ball, and shaft packing.
12. Label each valve with following:
 - a. Manufacturer's name, model number, and serial number.
 - b. Body size.
 - c. Flow directional arrow.

E. Ball Valves with Full Ball and Characterized V-Notch:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Flow-Tek, a subsidiary of Bray International, Inc.;** Triad and F series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Process Temperature Rating: **Minus 20 to plus 500 deg F** (Minus 29 to plus 232 deg C).
 - b. ASME B16.34, Class 600 for **NPS 2 (DN 50)** and smaller; **[Class 150] [or] [Class 300]** for larger than **NPS 2 (DN 50)**.
 - c. Leakage: FCI 70-2, Class VI, bi-directional.
 - d. Rangeability: Varies from 200 to 1 up to 800 to 1 based on notch pattern of ball.
 - e. Rotation: Zero to 90 degrees.
 - f. Equal percentage flow characteristic.
 - g. Full port.
3. Face-to-Face Dimension: ASME B16.10 long pattern.
4. Valves **NPS 2 (DN 50)** and Smaller: ASME B1.20.1 threaded (NPT) ends and three-piece body.
5. Valves **NPS 2-1/2 (DN 65)** through **NPS 12 (DN 300)**: Flanged ends suitable for mating to ASME B16.5 flanges and two-piece body.
6. Hole in the stem slot of each ball equalizes pressure between the body cavity and the line media flow.
7. Replaceable seat, ball, and shaft packing.
8. Body: **[Carbon] [or] [stainless]** steel.
9. Ball and Shaft: Stainless steel.
10. Ball Seat: RPTFE.
11. Stem Seals for Valves **NPS 2 (DN 50)** and Smaller: Live-loaded, self-adjusting, primary and secondary sealing using Belleville washers.
 - a. Primary Seal: Combination of thrust washer and thrust washer protector.
 - b. Secondary Seal: Adjustable stem packing composed of RPTFE V-rings.
12. Stem Seals for Valves Larger than **NPS 2 (DN 50)**: Independent packing gland, adjusted without removing mounting hardware or operator, and contoured to uniformly distribute load across packing.
 - a. Primary Seal: Combination of thrust washer and thrust washer protector.
 - b. Secondary Seal: Adjustable stem packing composed of RPTFE V-rings.
13. Label each valve with following:
 - a. Manufacturer's name, model number, and serial number.
 - b. Body size.
 - c. Flow directional arrow.

F. Industrial-Grade Ball Valves:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Fisher Valves & Instruments, Emerson Electric Co.; V150 or V300 series.
 - b. <Insert manufacturer's name; product name or designation>.
2. Performance:
 - a. Process Temperature Rating: Minus 20 to plus 450 deg F (Minus 29 to plus 232 deg C).
 - b. ASME B16.34, [Class 150] [or] [Class 300].
 - c. Leakage: FCI 70-2, Class VI.
 - d. Rangeability: 300 to 1.
 - e. Rotation: Zero to 90 degrees.
 - f. Modified equal percentage flow characteristic.
3. Face-to-Face Dimensions: Comply with ASME B16.10 short pattern.
4. Body: Cast steel ASTM A 216/A 216M WCB.
5. Flanged Body: Suitable for mating to ASME B16.5 flanges.
6. Shaft: 316 stainless-steel ball, 17-4 PH stainless steel.
7. Ball Seat: Reinforced PTFE.
8. PTFE V-ring packing, 316 stainless-steel packing follower.
9. Replaceable seat, ball, and shaft packings.
10. Replaceable 316 stainless-steel shaft bushings with PTFE linings.
11. Corrosion-resistant nameplate indicating the following:
 - a. Manufacturer's name, model number, and serial number.
 - b. Body size.
 - c. Body and trim materials.
 - d. Trim type.
 - e. Body and flange rating.
 - f. Arrow indicating direction of flow.

G. Pressure-Independent Ball Valves NPS 2 (DN 50) and Smaller:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Belimo Americas (USA), Inc., Belimo Automation AG; PICCV series.
 - b. <Insert manufacturer's name; product name or designation>.
2. Performance:
 - a. Pressure Rating: 600 psig (4137 kPa) for NPS 1 (DN 25) and 400 psig (2528 kPa) for NPS 1-1/2 and NPS 2 (DN 38 and DN 50).
 - b. Close-off pressure of 200 psig (1379 kPa).

- c. Process Temperature Range: Between zero to 212 deg F (minus 18 to plus 100 deg C).
 - d. Rangeability: 100 to 1.
3. Integral Pressure Regulator: Located upstream of ball to regulate pressure, to maintain a constant pressure differential while operating within a pressure differential range of 5 to 50 psig ((34 to 345 kPa)).
 4. Body: Forged brass, nickel plated, and with threaded ends.
 5. Ball: Chrome-plated brass.
 6. Stem and Stem Extension: Chrome-plated brass, blowout-proof design.
 7. Stem sleeve or other approved means to allow valve to be opened and closed without damaging field-applied insulation and insulation vapor barrier seal.
 8. Ball Seats: Reinforced PTFE.
 9. Stem Seal: Reinforced PTFE packing ring stem seal with threaded packing ring follower to retain the packing ring under design pressure with the linkage removed. Alternative means, such as EPDM O-rings, are acceptable if equivalent cycle endurance can be achieved.
 10. Flow Characteristic: Equal percentage.

2.3 BUTTERFLY-STYLE CONTROL VALVES

A. Commercial-Grade, Two-Way Butterfly Valves:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Keystone, a brand of Tyco Flow Control;** Figure 222 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Bi-directional bubble tight shutoff at 250 psig (1724 kPa).
 - b. Comply with MSS SP-67 or MSS SP-68.
 - c. Rotation: Zero to 90 degrees.
 - d. Linear or modified equal percentage flow characteristic.
3. Body: Cast iron ASTM A 126, Class B, ductile iron ASTM A 536 or cast steel ASTM A 216/A 216M WCB fully lugged, suitable for mating to ASME B16.5 flanges.
4. Disc: 316 stainless steel.
5. Shaft: 316 or 17-4 PH stainless steel.
6. Seat: Reinforced EPDM or reinforced PTFE with retaining ring.
7. Shaft Bushings: Reinforced PTFE or stainless steel.
8. Replaceable seat, disc, and shaft bushings.
9. Corrosion-resistant nameplate indicating:
 - a. Manufacturer's name, model number, and serial number.
 - b. Body size.

- c. Body and trim materials.
- d. Flow arrow.

B. Commercial-Grade, Three-Way Butterfly Valves:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. **Keystone, a brand of Tyco Flow Control;** Figure 222 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Arrangement: Two valves mated to a fabricated tee with interconnecting mechanical linkage.
3. Performance:
 - a. Bi-directional bubble tight shutoff at **250 psig** (1724 kPa).
 - b. Comply with MSS SP-67 or MSS SP-68.
 - c. Rotation: Zero to 90 degrees.
 - d. Linear or modified equal percentage flow characteristic.
4. Body: Cast iron ASTM A 126, Class B, ductile iron ASTM A 536 or cast steel ASTM A 216/A 216M WCB fully lugged, suitable for mating to ASME B16.5 flanges.
5. Disc: 316 stainless steel.
6. Shaft: 316 or 17-4 PH stainless steel.
7. Seat: Reinforced EPDM or reinforced PTFE seat with retaining ring.
8. Shaft Bushings: Reinforced PTFE or stainless steel.
9. Replaceable seat, disc, and shaft bushings.
10. Corrosion-resistant nameplate indicating:
 - a. Manufacturer's name, model number, and serial number.
 - b. Body size.
 - c. Body and trim materials.
 - d. Flow arrow.

C. Industrial-Grade Butterfly Valves:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. **Fisher Valves & Instruments, Emerson Electric Co.;** 8532 and 8580 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Process Temperature Rating: **Minus 200 to plus 849 deg F** (Minus 129 to plus 454 deg C).
 - b. ASME B16.34, [**Class 150**] [or] [**Class 300**] for larger sizes.

- c. Complies with MSS SP-68.
 - d. Leakage: FCI 70-2, Class VI, bi-directional.
 - e. Rangeability: 100 to 1.
 - f. Rotation: Zero to 90 degrees.
 - g. Linear or modified equal percentage flow characteristic.
3. Body: Cast steel ASTM A 216/A 216M WCB, fully lugged, suitable for mating to ASME B16.5 flanges.
 4. Disc: ASTM A 351/A 351M, CF3M or CF8M stainless steel.
 5. Shaft: 17-4 PH stainless steel.
 6. Seat: Reinforced PTFE with retaining ring.
 7. Shaft Bushings: Reinforced PTFE or stainless steel.
 8. Replaceable seat, disc, and shaft bushings.
 9. Corrosion-resistant nameplate indicating:
 - a. Manufacturer's name, model number, and serial number.
 - b. Body size.
 - c. Body and trim materials.
 - d. Body rating.
 - e. Arrow indicating direction of flow.

2.4 GLOBE-STYLE CONTROL VALVES

A. General Globe-Style Valve Requirements:

1. Globe-style control valve body dimensions shall comply with ISA 75.08.01.
2. Construct the valves to be serviceable from the top.
3. For cage guided valves, trim shall be field interchangeable for different valve flow characteristics, such as equal percentage, linear, and quick opening.
4. Reduced trim for one nominal size smaller shall be available for industrial valves **NPS 1 (DN 25)** and larger.
5. Replaceable seats and plugs.
6. Furnish each control valve with a corrosion-resistant nameplate indicating the following:
 - a. Manufacturer's name, model number, and serial number.
 - b. Body and trim size.
 - c. Arrow indicating direction of flow.

B. Two-Way Globe Valves **NPS 2 (DN 50)** and Smaller:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Johnson Controls, Controls Group;** VG7000 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Globe Style: Single port.

3. Body: Cast bronze or forged brass with ASME B16.5, Class 250 rating.
4. End Connections: Threaded.
5. Bonnet: Screwed.
6. Packing: PTFE V-ring.
7. Plug: Top guided.
8. Plug, Seat, and Stem: **[Brass] [or] [stainless steel]**.
9. Process Temperature Range: 35 to 248 deg F (2 to 120 deg C).
10. Ambient Operating Temperature: 35 to 150 deg F (2 to 65 deg C).
11. Leakage: FCI 70-2, Class IV.
12. Rangeability: 25 to 1.
13. Equal percentage flow characteristic.

C. Three-Way Globe Valves **NPS 2 (DN 50)** and Smaller:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Johnson Controls, Controls Group;** VG7000 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Globe Style: Mix flow pattern.
3. Body: Cast bronze or forged brass with ASME B16.5, Class 250 rating.
4. End Connections: Threaded.
5. Bonnet: Screwed.
6. Packing: PTFE V-ring.
7. Plug: Top guided.
8. Plug, Seat, and Stem: **[Brass] [or] [stainless steel]**.
9. Process Temperature Range: 35 to 248 deg F (2 to 120 deg C).
10. Ambient Operating Temperature: 35 to 150 deg F (2 to 65 deg C).
11. Leakage: FCI 70-2, Class IV.
12. Rangeability: 25 to 1.
13. Linear flow characteristic.

D. Two-Way Globe Valves **NPS 2-1/2 to NPS 6 (DN 65 to DN 150):**

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Johnson Controls, Controls Group;** VG2000 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Globe Style: Single port.
3. Body: Cast iron complying with ASME B61.1, Class 125.
4. End Connections: Flanged, suitable for mating to ASME B16.5, Class 150 flanges.
5. Bonnet: Bolted.
6. Packing: PTFE cone-ring.
7. Plug: Top or bottom guided.

8. Plug, Seat, and Stem: Brass or stainless steel.
 9. Process Temperature Rating: **35 to 281 deg F** (2 to 138 deg C).
 10. Leakage: 0.1 percent of maximum flow.
 11. Rangeability: Varies with valve size between 6 and 10 to 1.
 12. Modified linear flow characteristic.
- E. Three-Way Globe Valves **NPS 2-1/2 to NPS 6** (DN 65 to DN 150):
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Johnson Controls, Controls Group;** VG2000 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Globe Style: Mix flow pattern.
 3. Body: Cast iron complying with ASME B61.1, Class 125.
 4. End Connections: Flanged suitable for mating to ASME B16.5, Class 150 flanges.
 5. Bonnet: Bolted.
 6. Packing: PTFE cone-ring.
 7. Plug: Top or bottom guided.
 8. Plug, Seat, and Stem: Brass or stainless steel.
 9. Process Temperature Rating: **35 to 281 deg F** (2 to 138 deg C).
 10. Leakage: 0.1 percent of maximum flow.
 11. Rangeability: Varies with valve size between 6 and 10 to 1.
 12. Modified linear flow characteristic.
- F. Industrial-Grade Straight-Through Globe Valves **NPS 3/4** (DN 20) and Smaller:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Fisher Valves & Instruments, Emerson Electric Co.;** 24000 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Globe Style: Single port.
 3. Body: ASTM B 62 bronze complying with ASME B16.5, Class 250.
 4. End Connections: Threaded.
 5. Bonnet: Screwed or bolted.
 6. Packing: PTFE V-ring.
 7. Plug: Top or cage guided; balanced or unbalanced.
 8. Plug, Seat, and Stem: 316 stainless steel, 17-4 PH stainless-steel cage.
 9. Process Temperature Range: **Minus 20 to plus 400 deg F** (Minus 29 to plus 204 deg C).
 10. Ambient Operating Temperature: **Minus 20 to plus 150 deg F** (Minus 29 to plus 71 deg C).
 11. Leakage: FCI 70-2, Class IV.
 12. Equal percentage flow characteristic.

G. Industrial-Grade Straight-Through Globe Valves **NPS 1 (DN 25)** and Larger:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Fisher Valves & Instruments, Emerson Electric Co.;** ET series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Globe Style: Single port.
3. Body: Cast iron or cast steel.
4. End Connections for **NPS 2 (DN 50):** Threaded.
5. End Connections for **NPS 2-1/2 (DN 65)** and Larger: Raised face flanged.
6. Bonnet: Bolted.
7. Packing: PTFE V-ring.
8. Plug: Cage guided and unbalanced.
9. Plug, Seat, and Stem: 416 stainless-steel plug and seat, 17-4 PH stainless-steel cage and 316 stainless-steel stem.
10. Valve Stem: Thread and pin stem to plug.
11. Valve Stem Finish: Polished to 5 microinches rms or less.
12. Plug and Seat Surfaces: Hardened facing.
13. Process Temperature Range: **Zero to 450 deg F** ((Minus 18 to plus 232 deg C)).
14. Ambient Operating Temperature: **Minus 20 to plus 150 deg F** (Minus 29 to plus 71 deg C).
15. Leakage: FCI 70-2, **[Class IV] [Class V] [Class VI]**.
16. Flow Characteristic: **[Equal percentage] [Linear] [Quick opening]**.

2.5 SOLENOID VALVES

A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

1. **ASCO Valve, Inc.;** 8210 series.
2. **<Insert manufacturer's name; product name or designation>.**

B. Description:

1. Action: Either normally open or normally closed in the event of electrical power failure as required by the application.
2. Size to close against the system pressure.
3. Manual override capable.
4. Heavy-duty assembly.
5. Body: **[Brass] [or] [stainless steel]**.
6. Seats and Discs: NBR or PTFE.
7. Solenoid Enclosure: NEMA 250, Type 4.

2.6 SELF-CONTAINED TEMPERATURE REGULATING VALVE

A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

1. Jordan Valve, a division of Richards Industries; Mark 80 series.
2. **<Insert manufacturer's name; product name or designation>**.

B. Description:

1. Self-contained and self-operated temperature regulating valve. Direct acting or reverse acting as required by application.
2. Direct Acting: A rise in temperature at the sensing bulb vaporizes some of the liquid in the bulb, forcing the remaining liquid through a capillary to apply pressure at the diaphragm, in turn closing the valve. The valve shall fail open.
3. Reverse Acting: A rise in temperature at the sensing bulb vaporizes some of the liquid in the bulb, forcing the remaining liquid through a capillary to apply pressure at the diaphragm, in turn opening the valve. The valve shall fail close.
4. Body: Carbon steel.
5. Trim and Seats: 300 series stainless steel.
6. Yoke: Cast iron.
7. Actuator: 300 series stainless steel.
8. End Connections: Threaded.
9. Capillary, Bulb, and Armor: 300 series stainless steel.
10. Thermal Fill Material: Match to the temperature range.
11. Thermowell: Type 316 stainless-steel thermowell sized to fit the bulb and pipe.

C. Operational Characteristics: Control flow from between 5 to 100 percent of rated capacity.

D. Interchangeable trim for one size smaller.

E. Valve Leakage: Comply with FCI 70-2, Class IV.

F. Temperature Range: Match application.

1. Drains from Hot Equipment to Sanitary Sewer System: 105 to 165 deg F ((40 to 74 deg C)).
2. **<Insert description of applications>**.

G. Valve Size: Size to pass the design flow required with not more than 95 percent of the stem lift while operating at design pressure.

2.7 PNEUMATIC CONTROL VALVE ACTUATORS

A. Actuators for Hydronic Control Valves: Shutoff against system pump shutoff head.

B. Actuators for Steam Control Valves: Shutoff against **[1.2] [1.5] <Insert number>** times steam design pressure.

- C. Position indicator and graduated scale on each actuator.
- D. Provide diaphragm action (air-to-open, air-to-close), as required by the sequence of operation, in the event of air supply failure.
- E. For each modulating control valve, provide a positive positioner with the valve actuator. The positioners shall operate on a **3- to 15-psig** (21- to 103-kPa) input signal unless otherwise required to satisfy control sequences of operation. Integrally mount each positioner with an air regulator, air set, and gauges for supply, input, and output. The positioner shall have the following performance characteristics:
 - 1. Linearity: Plus or minus 1 percent of the output signal span.
 - 2. Hysteresis: 0.5 percent of span.
- F. Diaphragms shall be replaceable.
- G. Actuator Construction:
 - 1. Cast-iron or steel diaphragm casing and plate. Cast aluminum is acceptable on valves **NPS 4** ((DN 100)) and smaller.
 - 2. Cast iron or steel yoke. Cast aluminum is acceptable on valves **NPS 4** ((DN 100)) and smaller.
 - 3. Reinforced synthetic rubber or nitrile diaphragm.
 - 4. Steel or steel alloy spring, stem, and spring adjuster.
- H. Rate actuators for not less than 1.2 times the main air pressure to the valve, minimum **30 psig** ((207 kPa)).

2.8 ELECTRIC AND ELECTRONIC CONTROL VALVE ACTUATORS

- A. Actuators for Hydronic Control Valves: Capable of closing valve against system pump shutoff head.
- B. Actuators for Steam Control Valves: Shutoff against **[1.2] [1.5] <Insert number>** times steam design pressure.
- C. Position indicator and graduated scale on each actuator.
- D. Type: Motor operated, with or without gears, electric and electronic.
- E. Voltage: **[Voltage selection delegated to professional designing control system] [24-V ac] [120-V ac] <Insert requirement>**.
- F. Deliver torque required for continuous uniform movement of controlled device from limit to limit when operated at rated voltage.
- G. Function properly within a range of 85 to 120 percent of nameplate voltage.
- H. Construction:

1. For Actuators Less Than 100 W: Fiber or reinforced nylon gears with steel shaft, copper alloy or nylon bearings, and pressed steel enclosures.
 2. For Actuators from 100 to 400 W: Gears ground steel, oil immersed, shaft hardened steel running in bronze, copper alloy or ball bearings. Operator and gear trains shall be totally enclosed in dustproof cast-iron, cast-steel, or cast-aluminum housing.
 3. For Actuators Larger Than 400 W: Totally enclosed reversible induction motors with auxiliary hand crank and permanently lubricated bearings.
- I. Field Adjustment:
1. Spring Return Actuators: Easily switchable from fail open to fail closed in the field without replacement.
 2. Gear Type Actuators: External manual adjustment mechanism to allow manual positioning when the actuator is not powered.
- J. Two-Position Actuators: Single direction, spring return, or reversing type.
- K. Modulating Actuators:
1. Operation: Capable of stopping at all points across full range, and starting in either direction from any point in range.
 2. Control Input Signal:
 - a. Three Point, Tristate, or Floating Point: Clockwise and counter-clockwise inputs. One input drives actuator to open position and other input drives actuator to close position. No signal of either input remains in last position.
 - b. Proportional: Actuator drives proportional to input signal and modulates throughout its angle of rotation. Suitable for **[zero- to 10-]** **[or]** **[2- to 10-]**V dc **[and]** **[4- to 20-mA]** signals.
 - c. Pulse Width Modulation (PWM): Actuator drives to a specified position according to pulse duration (length) of signal from a dry contact closure, triac sink, or source controller.
 - d. Programmable Multi-Function:
 - 1) Control Input, Position Feedback, and Running Time: Factory or field programmable.
 - 2) Diagnostic: Feedback of hunting or oscillation, mechanical overload, mechanical travel, and mechanical load limit.
 - 3) Service Data: Include, at a minimum, number of hours powered and number of hours in motion.
- L. Position Feedback:
1. **[Equip]** **[Where indicated, equip]** two-position actuators with limits switches or other positive means of a position indication signal for remote monitoring of **[open]** **[and]** **[close]** position.
 2. **[Equip]** **[Where indicated, equip]** modulating actuators with a position feedback through **[current]** **[or]** **[voltage]** signal for remote monitoring.
 3. Provide a position indicator and graduated scale on each actuator indicating

open and closed travel limits.

M. Fail-Safe:

1. Where indicated, provide actuator to fail to an end position.
2. Internal spring return mechanism to drive controlled device to an end position (open or close) on loss of power.
3. Batteries, capacitors, and other non-mechanical forms of fail-safe operation are acceptable only where uniquely indicated.

N. Integral Overload Protection:

1. Provide against overload throughout the entire operating range in both directions.
2. Electronic overload, digital rotation sensing circuitry, mechanical end switches, or magnetic clutches are acceptable methods of protection.

O. Valve Attachment:

1. Unless otherwise required for valve interface, provide an actuator designed to be directly coupled to valve shaft without the need for connecting linkages.
2. Attach actuator to valve drive shaft in a way that ensures maximum transfer of power and torque without slippage.
3. Bolt and set screw method of attachment is acceptable only if provided with at least two points of attachment.

P. Temperature and Humidity:

1. Temperature: Suitable for operating temperature range encountered by application with minimum operating temperature range of [minus 20 to plus 120 deg F ((minus 29 to plus 49 deg C))] <Insert temperature range>.
2. Humidity: Suitable for humidity range encountered by application; minimum operating range shall be from [5 to 95] <Insert number(s)> percent relative humidity, non-condensing.

Q. Enclosure:

1. Suitable for ambient conditions encountered by application.
2. NEMA 250, Type 2 for indoor and protected applications.
3. NEMA 250, Type 4 or Type 4X for outdoor and unprotected applications.
4. Provide actuator enclosure with heater and control where required by application.

R. Stroke Time:

1. Operate valve from fully closed to fully open within [15] [60] [75] [90] [150] <Insert number> seconds.
2. Operate valve from fully open to fully closed within [15] [60] [75] [90] [150] <Insert number> seconds.
3. Move valve to failed position within [5] [15] [30] <Insert number> seconds.
4. Select operating speed to be compatible with equipment and system operation.

S. Sound:

1. Spring Return: 62 dBA.
2. Non-Spring Return: 45 dBA.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for valves installed in piping to verify actual locations of piping connections before installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CONTROL VALVE APPLICATIONS

- A. Control Valves:
 1. Select from valves specified in "Control Valves" Article to achieve performance requirements and characteristics indicated while subjected to full range of system operation encountered.
 2. **<Insert system> System, <Insert unique application>, Two-Way Applications Controlled by Flow: [Ball valves with single port and characterized disk] [Ball valves with single port and segmented ball] [Ball valves with full ball and characterized V-notch] [Industrial-grade ball valves] [Pressure-independent ball valves] [Butterfly-style valves, commercial-grade, two-way valves] [Butterfly-style valves, industrial-grade valves] [Globe-style, two-way valves] [Globe-style, industrial-grade, straight-through valves].**
 3. **<Insert system> System, <Insert unique application>, Two-Way Applications Controlled by Pressure: [Ball valves with single port and characterized disk] [Ball valves with single port and segmented ball] [Ball valves with full ball and characterized V-notch] [Industrial-grade ball valves] [Pressure-independent ball valves] [Butterfly-style valves, commercial-grade, two-way valves] [Butterfly-style valves, industrial-grade valves] [Globe-style, two-way valves] [Globe-style, industrial-grade, straight-through valves].**
 4. **<Insert system> System, <Insert unique application>, Two-Way Applications Controlled by Temperature: [Ball valves with single port and characterized disk] [Ball valves with single port and segmented ball] [Ball valves with full ball and characterized V-notch] [Industrial-grade ball valves] [Pressure-independent ball valves] [Butterfly-style valves, commercial-grade, two-way valves] [Butterfly-style valves, industrial-grade valves] [Globe-style, two-way valves] [Globe-style, industrial-grade,**

straight-through valves] [Solenoid valves] [Self-contained temperature regulating valves].

5. **<Insert system> System, <Insert unique application>, Three Way, Controlled by Temperature: [Ball valves with two ports and characterized disk] [Ball valves with segmented ball, three-way pattern] [Butterfly-style valves, commercial-grade, three-way valves] [Globe-style, three-way valves].**
6. **Steam System, <Insert unique application>, Two Way, Controlled by Temperature: [Ball valves with single port and segmented ball] [Ball valves with full ball and characterized V-notch] [Industrial-grade ball valves] [Globe-style, two-way valves] [Globe-style, industrial-grade, straight-through valves].**

3.3 INSTALLATION, GENERAL

- A. Furnish and install products required to satisfy most stringent requirements indicated.
- B. Install products level, plumb, parallel, and perpendicular with building construction.
- C. Properly support instruments, tubing, piping, wiring, and conduits to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a **<Insert value>** force.
- D. Provide ceiling, floor, roof, and wall openings, and sleeves required by installation. Before proceeding with drilling, punching, or cutting, check location first for concealed products that could potentially be damaged. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- E. Firestop penetrations made in fire-rated assemblies and seal penetrations made in acoustically rated assemblies.
- F. Fastening Hardware:
 1. Stillson wrenches, pliers, and other tools that will cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for assembling and tightening nuts.
 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- G. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- H. Corrosive Environments:
 1. Use products that are suitable for environment to which they will be subjected.
 2. If possible, avoid or limit use of materials in corrosive environments, including, but not limited to, the following:

- a. Laboratory exhaust airstreams.
 - b. Process exhaust airstreams.
3. Use Type 316 stainless-steel tubing and fittings when in contact with a corrosive environment.
 4. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 5. Where control devices are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.4 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.5 CONTROL VALVES

- A. Install pipe reducers for valves smaller than line size. Position reducers as close to valve as possible but at distance to avoid interference and impact to performance. Install with manufacturer-recommended clearance.
- B. Install flanges or unions to allow drop-in and -out valve installation.
- C. Where indicated, install control valve with three-valve bypass manifold to allow for control valve isolation and removal without interrupting system flow by providing manual throttling valve in bypass pipe.
 1. **<Insert applications>**.
- D. Install drain valves in piping upstream and downstream of each control valve installed in a three-valve manifold and for each control valve larger than [NPS 2 ((DN 50))] [NPS 4 ((DN 100))] **<Insert nominal pipe size>**.
- E. Install pressure temperature taps in piping upstream and downstream of each control valve larger than [NPS 1 (DN 25)] [NPS 2 ((DN 50))] **<Insert nominal pipe size>**.
- F. Valve Orientation:

1. Where possible, install globe and ball valves installed in horizontal piping with stems upright and not more than 15 degrees off of vertical, not inverted.
2. Install valves in a position to allow full stem movement.
3. Where possible, install butterfly valves that are installed in horizontal piping with stems in horizontal position and with low point of disc opening with direction of flow.

G. Clearance:

1. Locate valves for easy access and provide separate support of valves that cannot be handled by service personnel without hoisting mechanism.
2. Install valves with at least **12 inches (300 mm)** of clear space around valve and between valves and adjacent surfaces.

H. Threaded Valves:

1. Note internal length of threads in valve ends, and proximity of valve internal seat or wall, to determine how far pipe should be threaded into valve.
2. Align threads at point of assembly.
3. Apply thread compound to external pipe threads, except where dry seal threading is specified.
4. Assemble joint, wrench tight. Apply wrench on valve end as pipe is being threaded.

I. Flanged Valves:

1. Align flange surfaces parallel.
2. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly with a torque wrench.

3.6 CONNECTIONS

- A. Connect electrical devices and components to electrical grounding system. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.7 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with valve identification on valve[**and on face of ceiling directly below valves concealed above ceilings**].

3.8 CLEANING

- A. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels, and other foreign materials from exposed interior and exterior surfaces.
- B. Wash and shine glazing.
- C. Polish glossy surfaces to a clean shine.

3.9 CHECKOUT PROCEDURES

- A. Control Valve Checkout:
 - 1. Check installed products before continuity tests, leak tests, and calibration.
 - 2. Check valves for proper location and accessibility.
 - 3. Check valves for proper installation for direction of flow, elevation, orientation, insertion depth, or other applicable considerations that will impact performance.
 - 4. For pneumatic products, verify air supply for each product is properly installed.
 - 5. For pneumatic valves, verify that pressure gauges are provided in each air line to valve actuator and positioner.
 - 6. Verify that control valves are installed correctly for flow direction.
 - 7. Verify that valve body attachment is properly secured and sealed.
 - 8. Verify that valve actuator and linkage attachment are secure.
 - 9. Verify that actuator wiring is complete, enclosed, and connected to correct power source.
 - 10. Verify that valve ball, disc, and plug travel are unobstructed.
 - 11. After piping systems have been tested and put into service, but before insulating and balancing, inspect each valve for leaks. Adjust or replace packing to stop leaks. Replace the valve if leaks persist.

3.10 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Stroke and adjust control valves following manufacturer's recommended procedure, from 100 percent open to 100 percent closed back to 100 percent open.
- B. Stroke control valves with pilot positioners. Adjust valve and positioner following manufacturer's recommended procedure, so valve is 100 percent closed, 50 percent closed, and 100 percent open at proper air pressures.
- C. Check and document open and close cycle times for applications with a cycle time of less than 30 seconds.
- D. For control valves equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

END OF SECTION 230923.11

SECTION 230923.12 - CONTROL DAMPERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes control dampers and actuators for DDC systems.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.12**.

1.3 DEFINITIONS

- A. DDC: Direct-digital control.
- B. RMS: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
 - 1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Operating characteristics, electrical characteristics, and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
 - 3. Product description with complete technical data, performance curves, and product specification sheets.
 - 4. Installation instructions, including factors affecting performance.
- B. Shop Drawings:

1. Include plans, elevations, sections, and [**mounting**] details.
2. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Include diagrams for air and process signal tubing.
5. Include diagrams for pneumatic signal and main air tubing.

C. Delegated-Design Submittal:

1. Schedule and design calculations for control dampers and actuators, including the following.
 - a. Flow at project design and minimum flow conditions.
 - b. Face velocity at project design and minimum airflow conditions.
 - c. Pressure drop across damper at project design and minimum airflow conditions.
 - d. AMCA 500D damper installation arrangement used to calculate and schedule pressure drop, as applicable to installation.
 - e. Maximum close-off pressure.
 - f. Leakage airflow at maximum system pressure differential (fan close-off pressure).
 - g. Torque required at worst case condition for sizing actuator.
 - h. Actuator selection indicating torque provided.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plan drawings and corresponding product installation details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Product installation location shown in relationship to room, duct, and equipment.
 2. Size and location of wall access panels for control dampers and actuators installed behind walls.
 3. Size and location of ceiling access panels for control dampers and actuators installed above inaccessible ceilings.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For control dampers to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label products to comply with ASME Boiler and Pressure Vessel Code where required by authorities having jurisdiction.
- C. Delegated Design: Engage a qualified professional[**engineer**], as defined in Section 014000 "Quality Requirements," to size products where indicated as delegated design.
- D. Ground Fault: Products shall not fail due to ground fault condition when suitably grounded.
- E. Backup Power Source: Systems and equipment served by a backup power source shall have associated control damper actuators served from a backup power source.
- F. Environmental Conditions:
 - 1. Provide electric control-damper actuators, with protective enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Electric control-damper actuators not available with integral enclosures, complying with requirements indicated, shall be housed in protective secondary enclosures.
 - a. Hazardous Locations: Explosion-proof rating for condition.
- G. Selection Criteria:
 - 1. Control dampers shall be suitable for operation at following conditions:
 - a. Supply Air: **<Insert pressure and coincident temperature requirements>**.
 - b. Return Air: **<Insert pressure and coincident temperature requirements>**.
 - c. Outdoor Air: **<Insert pressure and coincident temperature requirements>**.
 - d. Mixed Air: **<Insert pressure and coincident temperature requirements>**.
 - e. Exhaust Air: **<Insert pressure and coincident temperature requirements>**.
 - f. **<Insert system and requirements>**.
 - 2. Fail positions unless otherwise indicated:
 - a. Supply Air: **[Close] [Last position] [Open]**.
 - b. Return Air: **[Close] [Last position] [Open]**.
 - c. Outdoor Air: **[Close] [Last position] [Open]**.

- d. Mixed Air: **[Close] [Last position] [Open]**.
 - e. Exhaust Air: **[Close] [Last position] [Open]**.
 - f. **<Insert system and requirements>**.
3. Dampers shall have stable operation throughout full range of operation, from design to minimum airflow over varying pressures and temperatures encountered.
 4. Select modulating dampers for a pressure drop of **[2] [5] <Insert number>** percent of fan total static pressure unless otherwise indicated.
 5. Two-position dampers shall be full size of duct or equipment connection unless otherwise indicated.
 6. Pneumatic, two-position control dampers shall provide a smooth opening and closing characteristic slow enough to avoid excessive pressure. Dampers with pneumatic actuators shall have an adjustable opening time (valve full closed to full open) and an adjustable closing time (valve full open to full closed) ranging from zero to 10 seconds. Opening and closing times shall be independently adjustable.
 7. Control-damper, pneumatic-control signal shall not exceed **200 feet (60 m)**. For longer distances, provide an electric/electronic control signal to the damper and an electric solenoid valve or electro-pneumatic transducer at the damper to convert the control signal to pneumatic.

2.2 RECTANGULAR CONTROL DAMPERS

A. General Requirements:

1. Unless otherwise indicated, use parallel blade configuration for two-position control, equipment isolation service, and when mixing two airstreams. For other applications, use opposed blade configuration.
2. Factory assemble multiple damper sections to provide a single damper assembly of size required by the application.
3. Damper actuator shall be factory installed by damper manufacturer as integral part of damper assembly. Coordinate actuator location and mounting requirements with damper manufacturer.

B. Rectangular Dampers with Aluminum Airfoil Blades:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Ruskin Company;** CD50 series.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Performance:
 - a. Leakage: AMCA 511, Class 1A. Leakage shall not exceed **3 cfm/sq. ft. (15.2 L/s per sq. m)** against **1-in. wg (250-Pa)** differential static pressure.
 - b. Pressure Drop: **0.05-in. wg (12.5 Pa)** at **1500 fpm (7.6 m/s)** across a

24-by-24-inch (600-by-600-mm) damper when tested according to AMCA 500-D, figure 5.3.

- c. Velocity: Up to 6000 fpm (30 m/s).
- d. Temperature: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
- e. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.
- f. Damper shall have AMCA seal for both air leakage and air performance.

3. Construction:

a. Frame:

- 1) Material: ASTM B 211, Alloy 6063 T5 extruded-aluminum profiles, 0.07 inch (1.8 mm) thick.
- 2) Hat-shaped channel with integral flange(s). Mating face shall be a minimum of 1 inch (25 mm).
- 3) Width not less than 5 inches (125 mm).

b. Blades:

- 1) Hollow, airfoil, extruded aluminum.
- 2) Parallel or opposed blade configuration as required by application.
- 3) Material: ASTM B 211, Alloy 6063 T5 aluminum, 0.07 inch (1.8 mm) thick.
- 4) Width not to exceed 6 inches (150 mm).
- 5) Length as required by close-off pressure, not to exceed 48 inches (1200 mm).

c. Seals:

- 1) Blades: Replaceable, mechanically attached extruded silicone, vinyl, or plastic composite.
- 2) Jams: Stainless steel, compression type.

d. Axles: 0.5-inch- (13-mm-) diameter [plated] [or] [stainless] steel, mechanically attached to blades.

e. Bearings:

- 1) Molded synthetic or stainless-steel sleeve mounted in frame.
- 2) Where blade axles are installed in vertical position, provide thrust bearings.

f. Linkage:

- 1) Concealed in frame.
- 2) Constructed of aluminum and [plated] [or] [stainless] steel.
- 3) Hardware: Stainless steel.

g. Transition:

- 1) For round and flat oval duct applications, provide damper assembly with integral transitions to mate to adjoining field connection.
 - 2) Factory mount damper in a sleeve with a close transition to mate to field connection.
 - 3) Damper size and sleeve shall be connection size plus 2 inches (50 mm).
 - 4) Sleeve length shall be not less than 12 inches (300 mm) for dampers without jackshafts and shall be not less than 16 inches (450 mm) for dampers with jackshafts.
 - 5) Sleeve material shall match adjacent duct.
- h. Additional Corrosion Protection for Corrosive Environments:
- 1) Provide anodized finish for aluminum surfaces in contact with airstream. Anodized finish shall be a minimum of 0.0007 inch (0.018 mm) thick.
 - 2) Axles, damper linkage, and hardware shall be constructed of Type 316L stainless steel.
4. Airflow Measurement:
- a. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) **Ruskin Company;** AMS50 series.
 - 2) **<Insert manufacturer's name; product name or designation>.**
 - b. Where indicated, provide damper assembly with integral airflow monitoring.
 - c. Zero- to 10-V dc or 4- to 20-mA scaled output signal for remote monitoring of actual airflow.
 - d. Accuracy shall be within 5 percent of the actual flow rate between the range of minimum and design airflow. For applications with a large variation in range between the minimum and design airflow, configure the damper sections and flow measurement assembly as required to comply with the stated accuracy over the entire modulating range.
 - e. Provide a straightening device as part of the flow measurement assembly to achieve the specified accuracy with configuration indicated.
 - f. Suitable for operation in untreated and unfiltered air.
 - g. Provide temperature and altitude compensation and correction to maintain accuracy over temperature range encountered at site altitude.
 - h. Provide automatic zeroing feature.
5. Airflow Control:
- a. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- 1) [Ruskin Company](#); IAQ50X series.
- 2) **<Insert manufacturer's name; product name or designation>**.

- b. Where indicated, provide damper assembly with integral airflow measurement and control.
- c. A factory-furnished and -calibrated controller shall be programmed, in nonvolatile EPROM, with application-specific airflow set point and range.
- d. The controller and actuator shall communicate to control the desired airflow.
- e. The controller shall receive a zero- to 10-V dc input signal and report a zero- to 20-mA output signal that is proportional to the airflow.
- f. Airflow measurement and control range shall be suitable for operation between **150 to 2000 fpm** (0.8 to 10 m/s).
- g. Ambient Operating Temperature Range: **Minus 40 to plus 140 deg F** (Minus 40 to plus 60 deg C).
- h. Ambient Operating Humidity Range: 5 to 95 percent relative humidity, non-condensing.
- i. Provide unit with control transformer rated for not less than 85 VA. Provide transformer with primary and secondary protection and primary disconnecting means. Coordinate requirements with field power connection.
- j. Provide screw terminals for interface to field wiring.
- k. Factory mount electronics within a NEMA 250, Type 1 painted steel enclosure.

C. Rectangular Dampers with Steel Airfoil Blades:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Ruskin Company](#); CD60 series.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Performance:
 - a. Leakage: AMCA 511, Class 1A. Leakage shall not exceed **3 cfm/sq. ft.** (15.2 L/s per sq. m) against **1-in. wg** (250-Pa) differential static pressure.
 - b. Pressure Drop: **0.06-in. wg** (15 Pa) at **1500 fpm** (7.6 m/s) across a **24-by-24-inch** (600-by-600-mm) damper when tested according to AMCA 500-D, figure 5.3.
 - c. Velocity: Up to **6000 fpm** (30 m/s).
 - d. Temperature: **Minus 40 to plus 185 deg F** (Minus 40 to plus 85 deg C).
 - e. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.
 - f. Damper shall have AMCA seal for both air leakage and air performance.
3. Construction:
 - a. Frame:

- 1) Material: ASTM A 653/A 653M galvanized-steel profiles, 0.06 inch (1.6 mm) thick.
 - 2) Hat-shaped channel with integral flanges. Mating face shall be a minimum of 1 inch (25 mm).
 - 3) Width not less than 5 inches (125 mm).
- b. Blades:
- 1) Hollow, airfoil, galvanized steel.
 - 2) Parallel or opposed blade configuration as required by application.
 - 3) Material: ASTM A 653/A 653M galvanized steel, 0.05 inch (1.3 mm) thick.
 - 4) Width not to exceed 6 inches (150 mm).
 - 5) Length as required by close-off pressure, not to exceed 48 inches (1200 mm).
- c. Seals:
- 1) Blades: Replaceable, mechanically attached extruded silicone, vinyl, or plastic composite.
 - 2) Jambs: Stainless steel, compression type.
- d. Axles: 0.5-inch- (13-mm-) diameter [plated] [or] [stainless] steel, mechanically attached to blades.
- e. Bearings:
- 1) Stainless steel mounted in frame.
 - 2) Where blade axles are installed in vertical position, provide thrust bearings.
- f. Linkage:
- 1) Concealed in frame.
 - 2) Constructed of aluminum and [plated] [or] [stainless] steel.
 - 3) Hardware: Stainless steel.
- g. Transition:
- 1) For round and flat oval duct applications, provide damper assembly with integral transitions to mate to adjoining field connection.
 - 2) Factory mount damper in a sleeve with a close transition to mate to field connection.
 - 3) Damper size and sleeve shall be connection size plus 2 inches (50 mm).
 - 4) Sleeve length shall be not less than 12 inches (300 mm) for dampers without jackshafts and shall be not less than 16 inches (450 mm) for dampers with jackshafts.
 - 5) Sleeve material shall match adjacent duct.
- h. Additional Corrosion Protection for Corrosive Environments:

- 1) Provide epoxy finish for surfaces in contact with airstream.
- 2) Axles, damper linkage, and hardware shall be constructed of Type 316L stainless steel.

D. Industrial-Duty Rectangular Dampers with Steel Airfoil Blades:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Ruskin Company;** CD30AF series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Performance:**
 - a. Leakage: Leakage shall not exceed **3 cfm/sq. ft. (15.2 L/s per sq. m)** against **1-in. wg (250-Pa)** differential static pressure.
 - b. Pressure Drop: **0.06-in. wg (15 Pa)** at **2000 fpm (10 m/s)** across a **48-by-48-inch (1200-by-1200-mm)** damper when tested according to AMCA 500-D, figure 5.3.
 - c. Velocity: Up to **4000 fpm (20 m/s)**.
 - d. Temperature: **Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C)**.
 - e. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length, minimum **10-in. wg (2500 Pa)**.
3. **Construction:**
 - a. **Frame:**
 - 1) Material: **[Galvanized] [or] [stainless]** steel, **0.11 inch (2.8 mm)** thick.
 - 2) C-shaped channel. Mating face shall be a minimum of **1 inch (25 mm)**.
 - 3) Width not less than **[3 inches ((75 mm))] [blade width plus 2 inches ((50 mm))]**.
 - b. **Blades:**
 - 1) Hollow, airfoil, **[galvanized] [or] [stainless]** steel.
 - 2) Parallel or opposed blade configuration as required by application.
 - 3) Material: **[Galvanized] [or] [stainless]** steel, **0.06 inch (1.6 mm)** thick.
 - 4) Width not to exceed **[6 inches (150 mm)] [8 inches ((200 mm))]**.
 - 5) Length not to exceed **[36 inches ((900 mm))] [48 inches ((1200 mm))] [60 inches ((1500 mm))]**.
 - c. **Seals:**
 - 1) Blades: Replaceable, mechanically attached EPDM or extruded silicone.
 - 2) Jams: Stainless steel, double compression type.

- d. Axles: **0.5- or 0.75-inch-** ((13- or 19-mm-)) diameter [**plated**] [**or**] [**stainless**] steel, mechanically attached to blades[**and continuous from end to end**].
 - e. Bearings:
 - 1) Stainless-steel sleeve type mounted in frame.
 - 2) Where blade axles are installed in vertical position, provide thrust bearings.
 - f. Linkage:
 - 1) Face linkage exposed to airstream.
 - 2) Constructed of [**plated**] [**or**] [**stainless**] steel.
 - 3) Hardware: Stainless steel.
- E. Rectangular Dampers with Aluminum Flat Blades:
- 1. **Products:** Subject to compliance with requirements, [**provide the following**] [**provide one of the following**] [**available products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. **Ruskin Company**; CD51 series.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - 2. Performance:
 - a. Leakage: Leakage shall not exceed **3.2 cfm/sq. ft.** (16.2 L/s per sq. m) against **1-in. wg** (250-Pa) differential static pressure.
 - b. Pressure Drop: **0.07-in. wg** (17.5 Pa) at **1500 fpm** (7.6 m/s) across a **24-by-24-inch** (600-by-600-mm) damper when tested according to AMCA 500-D, figure 5.3.
 - c. Velocity: Up to **2000 fpm** (10 m/s).
 - d. Temperature: **Minus 50 to plus 250 deg F** (Minus 46 to plus 121 deg C).
 - e. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length, not to exceed **3-in. wg** (750 Pa).
 - f. Damper shall have AMCA seal for both air leakage and air performance.
 - 3. Construction:
 - a. Frame:
 - 1) Material: ASTM B 211, Alloy 6063 T5 extruded-aluminum profiles, **0.12 inch** (3.2 mm) thick.
 - 2) Hat-shaped channel[**with integral flanges**].
 - 3) Width not less than **5 inches** (125 mm).
 - b. Blades:
 - 1) Flat blades of extruded aluminum.
 - 2) Parallel or opposed blade configuration as required by application.

- 3) Material: ASTM B 211, Alloy 6063 T5 extruded-aluminum profiles, **0.12 inch** (3.2 mm) thick.
- 4) Width not to exceed **6 inches** (150 mm).
- 5) Length as required by close-off pressure, not to exceed **48 inches** (1200 mm).

c. Seals:

- 1) Blades: Replaceable, mechanically attached extruded silicone, vinyl, or plastic composite.
- 2) Jamb: Stainless steel, compression type.

d. Axles: **0.5-inch-** ((13-mm-))diameter [**plated**] [**or**] [**stainless**] steel, mechanically attached to blades.

e. Bearings:

- 1) Molded-synthetic sleeve, mounted in frame.
- 2) Where blade axles are installed in vertical position, provide thrust bearings.

f. Linkage:

- 1) Concealed in frame.
- 2) Constructed of [**plated**] [**or**] [**stainless**] steel.
- 3) Hardware: Stainless steel.

g. Transition:

- 1) For round and flat oval duct applications, provide damper assembly with integral transitions to mate to adjoining field connection.
- 2) Factory mount damper in a sleeve with a close transition to mate to field connection.
- 3) Damper size and sleeve shall be connection size plus **2 inches** (50 mm).
- 4) Sleeve length shall be not less than **12 inches** (300 mm) for dampers without jackshafts and shall be not less than **16 inches** (450 mm) for dampers with jackshafts.
- 5) Sleeve material shall match adjacent duct.

h. Additional Corrosion Protection for Corrosive Environments:

- 1) Provide anodized finish for aluminum surfaces in contact with airstream. Anodized finish shall be a minimum of **0.0007 inch** (0.018 mm) thick.
- 2) Axles, damper linkage, and hardware shall be constructed of Type 316L stainless steel.

F. Rectangular Dampers with Steel Flat Blades:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Ruskin Company;** CD36 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Performance:**
 - a. Leakage: Leakage shall not exceed **4.8 cfm/sq. ft. (24.3 L/s per sq. m)** against **1-in. wg (250-Pa)** differential static pressure.
 - b. Pressure Drop: **0.1-in. wg (25 Pa)** at **1500 fpm (7.6 m/s)** across a **24-by-24-inch (600-by-600-mm)** damper when tested according to AMCA 500-D, figure 5.3.
 - c. Velocity: Up to **1500 fpm (7.6 m/s)**.
 - d. Temperature: **Minus 25 to plus 180 deg F (Minus 32 to plus 82 deg C)**.
 - e. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length, not to exceed **4-in. wg (1000 Pa)**.
 - f. Damper shall have AMCA seal for both air leakage and air performance.
3. **Construction:**
 - a. **Frame:**
 - 1) Material: **[Galvanized] [or] [stainless]** steel, **0.06 inch (1.6 mm)** thick.
 - 2) Hat-shaped channel **[with integral flanges]**.
 - 3) Width not less than **5 inches (125 mm)**.
 - b. **Blades:**
 - 1) Flat blades with multiple grooves positioned axially for reinforcement.
 - 2) Parallel or opposed blade configuration as required by application.
 - 3) Material: **[Galvanized] [or] [stainless]** steel, **0.06 inch (1.6 mm)** thick.
 - 4) Width not to exceed **6 inches (150 mm)**.
 - 5) Length as required by close-off pressure, not to exceed **48 inches (1200 mm)**.
 - c. **Seals:**
 - 1) Blades: Replaceable, mechanically attached, PVC-coated polyester.
 - 2) Jams: Stainless steel, compression type.
 - d. Axles: **0.5-inch- (13-mm-)** diameter **[plated] [or] [stainless]** steel, mechanically attached to blades.
 - e. **Bearings:**
 - 1) Molded-synthetic sleeve, mounted in frame.
 - 2) Where blade axles are installed in vertical position, provide thrust bearings.

- f. Linkage:
- 1) Concealed in frame.
 - 2) Constructed of **[plated] [or] [stainless]** steel.
 - 3) Hardware: Stainless steel.

G. Insulated Rectangular Dampers:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **TAMCO;** 9000ECT series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Performance:**
 - a. Leakage: AMCA 511, Class 1A. Leakage shall not exceed **3 cfm/sq. ft. (15.2 L/s per sq. m)** against **1-in. wg (250-Pa)** differential static pressure and shall not exceed **4.9 cfm/sq. ft. (25 L/s per sq. m)** against **4-in. wg (1000-Pa)** differential static pressure at **minus 40 deg F (minus 40 deg C)**.
 - b. Pressure Drop: **0.1-in. wg (25 Pa)** at **1500 fpm (7.6 m/s)** across a **24-by-24-inch (600-by-600-mm)** damper when tested according to AMCA 500-D, figure 5.3.
 - c. Velocity: Up to **4000 fpm (20 m/s)**.
 - d. Temperature: **Minus 100 to plus 185 deg F (Minus 73 to plus 85 deg C)**.
 - e. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.
 - f. Damper shall have AMCA seal for both air leakage and air performance.
3. **Construction:**
 - a. **Frame:**
 - 1) Material: ASTM B 211, Alloy 6063 T5 extruded-aluminum profiles, **0.08 inch (2.0 mm)** thick.
 - 2) C-shaped channel with integral flange(s). Mating face shall be a minimum of **1 inch (25 mm)**.
 - 3) Width not less than **4 inches (100 mm)**.
 - 4) Entire frame shall be thermally broken by means of polyurethane resin pockets, complete with thermal cuts.
 - 5) Damper frame shall be insulated with polystyrafoam on four sides.
 - b. **Blades:**
 - 1) Hollow shaped, extruded aluminum.
 - 2) Blades shall be internally insulated with expanded polyurethane foam and shall be thermally broken. Complete blade shall have an insulating factor of R-2.29 and a temperature index of 55.
 - 3) Parallel or opposed blade configuration as required by application.

- 4) Material: ASTM B 211, Alloy 6063 T5 aluminum, **0.08 inch** (2.0 mm) thick.
 - 5) Width not to exceed **6 inches** (150 mm).
 - 6) Length as required by close-off pressure, not to exceed **48 inches** (1200 mm).
- c. Seals: Blade and frame seals shall be of flexible silicone and secured in an integral slot within the aluminum extrusions.
- d. Axles: **0.44-inch-** (11-mm-) diameter **[plated] [or] [stainless]** steel, mechanically attached to blades.
- e. Bearings:
- 1) Bearings shall be composed of a Celcon inner bearing fixed to axle, rotating within a polycarbonate outer bearing inserted in the frame, resulting in no metal-to-metal or metal-to-plastic contact.
 - 2) Where blade axles are installed in vertical position, provide thrust bearings.
- f. Linkage:
- 1) Concealed in frame.
 - 2) Constructed of aluminum and **[plated] [or] [stainless]** steel.
 - 3) Hardware: Stainless steel.
- g. Transition:
- 1) For round and flat oval duct applications, provide damper assembly with integral transitions to mate to adjoining field connection.
 - 2) Factory mount damper in a sleeve with a close transition to mate to field connection.
 - 3) Damper size and sleeve shall be connection size plus **2 inches** (50 mm).
 - 4) Sleeve length shall be not less than **12 inches** (300 mm) for dampers without jackshafts and shall be not less than **16 inches** (450 mm) for dampers with jackshafts.
 - 5) Sleeve material shall match adjacent duct.
- h. Additional Corrosion Protection for Corrosive Environments:
- 1) Provide anodized finish for aluminum surfaces in contact with airstream. Anodized finish shall be a minimum of **0.0007 inch** (0.018 mm) thick.
 - 2) Axles, damper linkage, and hardware shall be constructed of Type 316L stainless steel.

2.3 ROUND CONTROL DAMPERS

A. Round Dampers, Sleeve Type:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Ruskin Company;** CDRS25 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Leakage: Leakage shall not exceed **0.15 cfm/in.** (0.0028 L/s per mm) of perimeter blade at **4-in. wg** (1000-Pa) differential static pressure.
 - b. Pressure Drop: **0.02-in. wg** (5 Pa) at **1500 fpm** (7.6 m/s) across a **12-inch** (300-mm) damper when tested according to AMCA 500-D, figure 5.3.
 - c. Velocity: Up to **4000 fpm** (20 m/s).
 - d. Temperature: **Minus 25 to plus 200 deg F** (Minus 32 to plus 93 deg C).
 - e. Pressure Rating: **8-in. wg** (2000 Pa) for sizes through **12 inches** (300 mm), **6-in. wg** (1500 Pa) for larger sizes.
3. Construction:
 - a. Frame:
 - 1) Material: **[Galvanized] [or] [stainless]** steel, **0.04 in** (1.0 mm) thick.
 - 2) Outward rolled stiffener beads positioned approximately **1 inch** (25 mm) inboard of each end.
 - 3) Sleeve-type connection for mating to adjacent ductwork.
 - 4) Size Range: **4 to 24 inches** (100 to 600 mm).
 - 5) Length not less than **7 inches** (175 mm).
 - 6) Provide **2-inch** (50-mm) sheet metal standoff for mounting actuator.
 - b. Blade: Double-thickness circular flat blades sandwiched together and constructed of **[galvanized] [or] [stainless]** steel.
 - c. Blade Seal: Polyethylene foam seal sandwiched between two sides of blades and fully encompassing blade edge.
 - d. Axle: **0.5-inch-** (13-mm-) diameter **[plated] [or] [stainless]** steel, mechanically attached to blade.
 - e. Bearings: Stainless-steel sleeve pressed into frame.

B. Round Dampers, Flanged Type:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Ruskin Company;** CDR82 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:

- a. Leakage: Leakage shall not exceed 0.15 cfm/in. (0.0028 L/s per mm) of perimeter blade at 4-in. wg (1000-Pa) differential static pressure.
 - b. Pressure Drop: 0.03-in. wg (7.5 Pa) at 1500 fpm (7.6 m/s) across a 12-inch (300-mm) damper when tested according to AMCA 500-D, figure 5.3.
 - c. Velocity: Up to 4000 fpm (20 m/s).
 - d. Temperature: Minus 25 to plus 250 deg F (Minus 32 to plus 121 deg C).
 - e. Pressure Rating: 8-in. wg (2000 Pa) for sizes through 36 inches (900 mm) in diameter, 6-in. wg (1500 Pa) for larger sizes.
3. Construction:
- a. Frame:
 - 1) Size Range: 4 to 60 inches (100 to 1500 mm).
 - 2) Material: [Galvanized] [or] [stainless] steel.
 - a) Sizes through 24 Inches (600 mm) in Diameter: 0.15 inch (4 mm) thick.
 - b) Sizes 26 through 48 Inches (650 through 1200 mm) in Diameter: 0.25 inch (6 mm) thick.
 - c) Larger Sizes: 0.31 inch (8 mm) thick.
 - 3) Flanges:
 - a) Outward rolled with bolt holes on each end of frame for mating to adjacent ductwork.
 - b) Face: Not less than 1.25 inch (31 mm) for damper sizes through 12 inches (300 mm) in diameter, 1.5 inch (38 mm) for damper sizes 14 through 24 inches (350 through 600 mm) in diameter, and 2 inches (50 mm) for larger sizes.
 - 4) Length (Flange Face to Face): Not less than 8 inches (200 mm).
 - 5) Provide 3-inch (75-mm) sheet metal standoff for mounting actuator.
 - b. Blade: Reinforced circular flat blade constructed of [galvanized] [or] [stainless] steel.
 - 1) Sizes through 24 Inches (600 mm): 0.15 inch (4 mm) thick.
 - 2) Sizes 26 through 48 Inches ((650 through 1200 mm)): 0.19 inch ((5 mm)) thick.
 - 3) Larger Sizes: 0.25 inch (6 mm) thick.
 - c. Blade Stop: Full circumference, located in airstream, minimum 0.5 by 0.25 inch (13 by 6 mm) [galvanized-] [or] [stainless-] steel bar.
 - d. Blade Seal: Neoprene, mechanically attached to blade and fully encompassing blade edge.
 - e. Axle: [Plated] [or] [stainless] steel, mechanically attached to blade.
 - 1) Sizes through 14 Inches ((350 mm)): 0.5 inch (13 mm) in diameter.
 - 2) Sizes 16 through 42 Inches (400 through 1050 mm): 0.75 inch (19 mm)

- in diameter.
- 3) Larger Sizes: 1 inch (25 mm) in diameter.

f. Bearings: Stainless-steel sleeve pressed into frame.

2.4 GENERAL CONTROL-DAMPER ACTUATORS REQUIREMENTS

- A. Actuators shall operate related damper(s) with sufficient reserve power to provide smooth modulating action or two-position action and proper speed of response at velocity and pressure conditions to which the damper is subjected.
- B. Actuators shall produce sufficient power and torque to close off against the maximum system pressures encountered. Actuators shall be sized to close off against the fan shutoff pressure as a minimum requirement.
- C. The total damper area operated by an actuator shall not exceed 80 percent of manufacturer's maximum area rating.
- D. Provide one actuator for each damper assembly where possible. Multiple actuators required to drive a single damper assembly shall operate in unison.
- E. Avoid the use of excessively oversized actuators which could overdrive and cause linkage failure when the damper blade has reached either its full open or closed position.
- F. Use jackshafts and shaft couplings in lieu of blade-to-blade linkages when driving axially aligned damper sections.
- G. Provide mounting hardware and linkages for connecting actuator to damper.
- H. Select actuators to fail in desired position in the event of a power failure.
- I. Actuator Fail Positions: [**See Drawings.**][**As indicated below:**]
 - 1. Exhaust Air: [Close] [Last position] [Open].
 - 2. Outdoor Air: [Close] [Last position] [Open].
 - 3. Supply Air: [Close] [Last position] [Open].
 - 4. Return Air: [Close] [Last position] [Open].
 - 5. <Insert system and fail position>.

2.5 PNEUMATIC ACTUATORS

- A. Where two or more actuators are installed for interrelated operation in unison, such as dampers used for mixing, provide the dampers with a positive positioner.
- B. Equip pneumatic modulating actuators with a positive positioner, having the following performance characteristics:
 - 1. Linearity: Plus or minus 1 percent of output signal span.

2. Hysteresis: 0.5 percent of the span.
- C. Provide each positioner with an integrally mounted air set and pressure gauges for supply, input and output. Positioners shall operate on a 3- to 15-psig (21- to 103-kPa) input signal unless otherwise required to satisfy the control sequences of operation.
- D. Rate actuators for a pressure of at least 25 psig (172 kPa).
- E. Provide actuators with replaceable diaphragms.
- F. Actuator Construction:
 1. Construct the diaphragm casing and plate of cast iron, steel, or cast aluminum.
 2. Construct the yoke of cast iron, steel, or cast aluminum.
 3. Construct the diaphragm of reinforced synthetic rubber or nitrile.
 4. Construct the spring, stem, and spring adjuster of steel or steel alloy.
- G. Provide actuator with adjustable stops for both maximum and minimum positions.
- H. Provide a position indicator and graduated scale on each actuator. Indicate open and closed travel limits.

2.6 ELECTRIC AND ELECTRONIC ACTUATORS

- A. Type: Motor operated, with or without gears, electric and electronic.
- B. Voltage:
 1. **[See Drawings] [Voltage selection is delegated to professional designing control system] [24 V] [120 V] <Insert requirement>.**
 2. Actuator shall deliver torque required for continuous uniform movement of controlled device from limit to limit when operated at rated voltage.
 3. Actuator shall function properly within a range of 85 to 120 percent of nameplate voltage.
- C. Construction:
 1. Less Than 100 W: Fiber or reinforced nylon gears with steel shaft, copper alloy or nylon bearings, and pressed steel enclosures.
 2. 100 up to 400 W: Gears ground steel, oil immersed, shaft-hardened steel running in bronze, copper alloy, or ball bearings. Operator and gear trains shall be totally enclosed in dustproof cast-iron, cast-steel, or cast-aluminum housing.
 3. Greater Than 400 W: Totally enclosed reversible induction motors with auxiliary hand crank and permanently lubricated bearings.
- D. Field Adjustment:
 1. Spring return actuators shall be easily switchable from fail open to fail closed in the field without replacement.
 2. Provide gear-type actuators with an external manual adjustment mechanism to

allow manual positioning of the damper when the actuator is not powered.

- E. Two-Position Actuators: Single direction, spring return, or reversing type.
- F. Modulating Actuators:
1. Capable of stopping at all points across full range, and starting in either direction from any point in range.
 2. Control Input Signal:
 - a. Three Point, Tristate, or Floating Point: Clockwise and counter-clockwise inputs. One input drives actuator to open position, and other input drives actuator to close position. No signal of either input remains in last position.
 - b. Proportional: Actuator drives proportional to input signal and modulates throughout its angle of rotation. Suitable for **[zero- to 10-]** **[or]** **[2- to 10-]**V dc **[and]** **[4- to 20-mA]** signals.
 - c. Pulse Width Modulation (PWM): Actuator drives to a specified position according to a pulse duration (length) of signal from a dry-contact closure, triac sink or source controller.
 - d. Programmable Multi-Function:
 - 1) Control input, position feedback, and running time shall be factory or field programmable.
 - 2) Diagnostic feedback of hunting or oscillation, mechanical overload, mechanical travel, and mechanical load limit.
 - 3) Service data, including at a minimum, number of hours powered and number of hours in motion.
- G. Position Feedback:
1. **[Equip]** **[Where indicated, equip]** two-position actuators with limits switches or other positive means of a position indication signal for remote monitoring of **[open]** **[and]** **[close]** position.
 2. **[Equip]** **[Where indicated, equip]** modulating actuators with a position feedback through **[current]** **[or]** **[voltage]** signal for remote monitoring.
 3. Provide a position indicator and graduated scale on each actuator indicating open and closed travel limits.
- H. Fail-Safe:
1. Where indicated, provide actuator to fail to an end position.
 2. Internal spring return mechanism to drive controlled device to an end position (open or close) on loss of power.
 3. Batteries, capacitors, and other non-mechanical forms of fail-safe operation are acceptable only where uniquely indicated.
- I. Integral Overload Protection:
1. Provide against overload throughout the entire operating range in both directions.
 2. Electronic overload, digital rotation sensing circuitry, mechanical end switches, or

magnetic clutches are acceptable methods of protection.

J. Damper Attachment:

1. Unless otherwise required for damper interface, provide actuator designed to be directly coupled to damper shaft without need for connecting linkages.
2. Attach actuator to damper drive shaft in a way that ensures maximum transfer of power and torque without slippage.
3. Bolt and set screw method of attachment is acceptable only if provided with at least two points of attachment.

K. Temperature and Humidity:

1. Temperature: Suitable for operating temperature range encountered by application with minimum operating temperature range of [minus 20 to plus 120 deg F ((minus 29 to plus 49 deg C))] <Insert temperature range>.
2. Humidity: Suitable for humidity range encountered by application; minimum operating range shall be from [5 to 95] <Insert numbers> percent relative humidity, non-condensing.

L. Enclosure:

1. Suitable for ambient conditions encountered by application.
2. NEMA 250, Type 2 for indoor and protected applications.
3. NEMA 250, Type 4 or Type 4X for outdoor and unprotected applications.
4. Provide actuator enclosure with a heater and controller where required by application.

M. Stroke Time:

1. Operate damper from fully closed to fully open within [15] [60] [75] [90] [150] <Insert number> seconds.
2. Operate damper from fully open to fully closed within [15] [60] [75] [90] [150] <Insert number> seconds.
3. Move damper to failed position within [5] [15] [30] <Insert number> seconds.
4. Select operating speed to be compatible with equipment and system operation.
5. Actuators operating in smoke control systems comply with governing code and NFPA requirements.

N. Sound:

1. Spring Return: 62 dBA.
2. Non-Spring Return: 45 dBA.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for dampers and instruments installed in duct systems to verify actual locations of connections before installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CONTROL-DAMPER APPLICATIONS

- A. Control Dampers:
- B. Select from damper types indicated in "Control Dampers" Article to achieve performance requirements and characteristics indicated while subjected to full range of system operation encountered.
 - 1. Rectangular Exhaust Air Duct Applications with SMACNA Construction Class <Insert value> and Velocities to <Insert value>: **[Rectangular dampers with aluminum airfoil blades] [Industrial-duty rectangular dampers with steel airfoil blades] [Rectangular dampers with aluminum flat blades] [Insulated rectangular dampers] [Round dampers, sleeve type] [Round dampers, flange type]**.
 - 2. Round Exhaust Air Duct Applications with SMACNA Construction Class <Insert value> and Velocities to <Insert value>: **[Rectangular dampers with aluminum airfoil blades] [Industrial-duty rectangular dampers with steel airfoil blades] [Rectangular dampers with aluminum flat blades] [Insulated rectangular dampers] [Round dampers, sleeve type] [Round dampers, flange type]**.
 - 3. Rectangular Outdoor Air Duct Applications with SMACNA Construction Class <Insert value> and Velocities to <Insert value>: **[Rectangular dampers with aluminum airfoil blades] [Industrial-duty rectangular dampers with steel airfoil blades] [Rectangular dampers with aluminum flat blades] [Insulated rectangular dampers] [Round dampers, sleeve type] [Round dampers, flange type]**.
 - 4. Round Outdoor Air Duct Applications with SMACNA Construction Class <Insert value> and Velocities to <Insert value>: **[Rectangular dampers with aluminum airfoil blades] [Industrial-duty rectangular dampers with steel airfoil blades] [Rectangular dampers with aluminum flat blades] [Insulated rectangular dampers] [Round dampers, sleeve type] [Round dampers, flange type]**.
 - 5. Rectangular Return Air Duct Applications with SMACNA Construction Class

- <Insert value> and Velocities to <Insert value>: [Rectangular dampers with aluminum airfoil blades] [Industrial-duty rectangular dampers with steel airfoil blades] [Rectangular dampers with aluminum flat blades] [Insulated rectangular dampers] [Round dampers, sleeve type] [Round dampers, flange type].
6. Round Return Air Duct Applications with SMACNA Construction Class <Insert value> and Velocities to <Insert value>: [Rectangular dampers with aluminum airfoil blades] [Industrial-duty rectangular dampers with steel airfoil blades] [Rectangular dampers with aluminum flat blades] [Insulated rectangular dampers] [Round dampers, sleeve type] [Round dampers, flange type].
 7. Rectangular Supply Air Duct Applications with SMACNA Construction Class <Insert value> and Velocities to <Insert value>: [Rectangular dampers with aluminum airfoil blades] [Industrial-duty rectangular dampers with steel airfoil blades] [Rectangular dampers with aluminum flat blades] [Insulated rectangular dampers] [Round dampers, sleeve type] [Round dampers, flange type].
 8. Round Supply Air Duct Applications with SMACNA Construction Class <Insert value> and Velocities to <Insert value>: [Rectangular dampers with aluminum airfoil blades] [Industrial-duty rectangular dampers with steel airfoil blades] [Rectangular dampers with aluminum flat blades] [Insulated rectangular dampers] [Round dampers, sleeve type] [Round dampers, flange type].

3.3 INSTALLATION, GENERAL

- A. Furnish and install products required to satisfy most stringent requirements indicated.
- B. Properly support dampers and actuators, tubing, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a <Insert valve> force.
- C. Provide ceiling, floor, roof, and wall openings and sleeves required by installation. Before proceeding with drilling, punching, or cutting, check location first for concealed products that could potentially be damaged. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- D. Seal penetrations made in fire-rated and acoustically rated assemblies.
- E. Fastening Hardware:
 1. Stillson wrenches, pliers, or other tools that will cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for assembling and tightening nuts.
 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.

- F. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- G. Corrosive Environments:
1. Use products that are suitable for environment to which they will be subjected.
 2. If possible, avoid or limit use of materials in corrosive environments, including, but not limited to, the following:
 - a. Laboratory exhaust airstreams.
 - b. Process exhaust airstreams.
 - c. **<Insert applications>**.
 3. Use Type 316 stainless-steel tubing and fittings when in contact with a corrosive environment.
 4. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 5. Where actuators are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.4 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.5 CONTROL DAMPERS

- A. Install smooth transitions, not exceeding **[15] [30] <Insert number>** degrees, to dampers smaller than adjacent duct. Install transitions as close to damper as possible but at distance to avoid interference and impact to performance. Consult manufacturer for recommended clearance.
- B. Clearance:
1. Locate dampers for easy access and provide separate support of dampers that cannot be handled by service personnel without hoisting mechanism.
 2. Install dampers with at least **24 inches (600 mm)** of clear space on sides of

dampers requiring service access.

C. Service Access:

1. Dampers and actuators shall be accessible for visual inspection and service.
2. Install access door(s) in duct or equipment located upstream of damper to allow service personnel to hand clean any portion of damper, linkage, and actuator. Comply with requirements in Section 233300 "Air Duct Accessories."

D. Install dampers straight and true, level in all planes, and square in all dimensions. Install supplementary structural steel reinforcement for large multiple-section dampers if factory support alone cannot handle loading.

E. Attach actuator(s) to damper drive shaft.

F. For duct-mounted and equipment-mounted dampers installed outside of equipment, install a visible and accessible indication of damper position from outside.

3.6 CONNECTIONS

A. Connect electrical devices and components to electrical grounding system. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.7 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Install engraved phenolic nameplate with damper identification on damper[**and on face of ceiling where damper is concealed above ceiling**].

3.8 CHECKOUT PROCEDURES

A. Control-Damper Checkout:

1. Check dampers for proper location and accessibility.
2. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material, and support.
3. For pneumatic products, verify air supply for each product is properly installed.
4. For pneumatic dampers, verify that pressure gages are provided in each air line to damper actuator and positioner.
5. Verify that control dampers are installed correctly for flow direction.
6. Verify that proper blade alignment, either parallel or opposed, has been provided.
7. Verify that damper frame attachment is properly secured and sealed.
8. Verify that damper actuator and linkage attachment are secure.
9. Verify that actuator wiring is complete, enclosed, and connected to correct power source.

10. Verify that damper blade travel is unobstructed.

3.9 ADJUSTMENT, CALIBRATION, AND TESTING:

- A. Stroke and adjust control dampers following manufacturer's recommended procedure, from 100 percent open to 100 percent closed back to 100 percent open.
- B. Stroke control dampers with pilot positioners. Adjust damper and positioner following manufacturer's recommended procedure, so damper is 100 percent closed, 50 percent closed, and 100 percent open at proper air pressure.
- C. Check and document open and close cycle times for applications with a cycle time of less than 30 seconds.
- D. For control dampers equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

END OF SECTION 230923.12

SECTION 230923.13 - ENERGY METERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes thermal and electric power energy meters that connect to DDC systems.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.13**.

1.3 DEFINITIONS

- A. DDC: Direct-digital control.
- B. Ethernet: Local area network based on IEEE 802.3.1 standards.
- C. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.
- D. I/O: Input/output.
- E. RMS: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.
- F. RS-232: A TIA standard for asynchronous serial data communications between terminal devices.
- G. RS-485: A TIA standard for multipoint communications using two twisted pairs.
- H. RTD: Resistance temperature detector.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 2. Operating characteristics, electrical characteristics, and furnished accessories indicating electrical power requirements.
 3. Product description with complete technical data, performance curves, and product specification sheets.
- B. LEED Submittals: Product data for energy instruments for use in showing compliance with measurement and verification credit.
- C. Shop Drawings:
1. Include plans, elevations, sections, and[**mounting**] details.
 2. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each product requiring a certificate.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For energy meters to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 THERMAL ENERGY METERS

- A. Performance Requirements: Manufacturer shall certify that each energy meter indicated complies with specified performance requirements and characteristics.
1. Product certificates are required.
- B. Insertion-Type Thermal Energy Meters:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Onicon Incorporated**; System 10 series.

- b. **<Insert manufacturer's name; product name or designation>.**
2. Description:
 - a. Factory-packaged meter consisting of supply and return temperature sensors, flow sensor, digital display, keypad user interface, installation hardware, color-coded interconnecting cabling, and installation instructions.
 - b. Each thermal energy meter shall be individually calibrated and provided with calibration certification traceable to NIST.
3. Alphanumeric display of the following on face of enclosure:
 - a. Total energy consumption.
 - b. Energy rate.
 - c. Flow rate.
 - d. Supply temperature.
 - e. Return temperature.
 - f. Visual indication of power status (on/off) on face of enclosure.
4. Electronics Enclosure:
 - a. Remote from temperature and flow sensors.
 - b. NEMA 250, Type 12 or Type 13 for indoor applications and NEMA 250, Type 4 or Type 4X for outdoor applications.
 - c. Labeled terminal strip for field wiring connections.
5. Programming:
 - a. Factory programmed for specific application and field programmable through keypad on face of enclosure.
 - b. Programmed parameters and total energy consumption shall be stored in non-volatile EEPROM memory.
6. Output Signals:
 - a. Total Energy Consumption: Isolated solid-state dry contact with 100 mA, 50-V rating and contact duration of 0.5, 1, 2, or 6 seconds.
 - b. Energy Rate, Flow Rate, Supply Temperature, Return Temperature: 4 to 20 mA or zero- to 10-V dc for each.
 - c. In lieu of hardwired analog signals, a serial communication interface may be used.
7. Serial Communication Interface: Compatible with host to share total energy consumption, energy rate, flow rate, and supply and return temperature data.
8. Temperature Sensors:
 - a. Temperature range matched to application.
 - b. Differential temperature accuracy within **0.15 deg F (0.08 deg C)** over the calibrated range.
 - c. NEMA 250, Type 4 junction box with thermal isolation.

- d. Stainless-steel thermowell with **NPS 1/2 (DN 15) NPT** connection for each sensor.
9. Flow Sensor:
- a. Suitable for an operating pressure of at least **200 psig (1378 kPa)**.
 - b. Meters in hot-water systems shall be suitable for maximum system temperatures encountered, but not less than **250 deg F (121 deg C)**.
 - c. Pressure drop not to exceed **1 psig (6.89 kPa)** at **20-fps (6.1-m/s)** flow velocity in **NPS 2 (DN 50)** pipe and decreasing in large pipe with lower velocity.
 - d. Sensor Accuracy:
 - 1) Within 1 percent of actual flow between the flow velocity range of **3 to 30 fps (0.9 to 9 m/s)**.
 - 2) Within 2 percent of actual flow between the flow velocity range of **0.4 to 20 fps (0.1 to 6.1 m/s)**.
 - 3) Within 0.5 percent of actual reading at the calibrated velocity.
 - e. Wet calibrate and tag each sensor to standards traceable to NIST, and provide each sensor with a certificate of calibration.
 - f. Provide single turbine sensors for pipe size **NPS 2 (DN 50)** and smaller. Provide dual turbine sensors for pipe size **NPS 2-1/2 (DN 65)** and larger. Provide bidirectional dual turbine sensors where installed in bypass piping.
 - g. For sensors with dual contra-rotating turbine elements, provide each turbine element with its own rotational sensing system and an averaging circuit to reduce measurement errors due to a poor flow profile.
 - h. Rotational sensing of each turbine shall be accomplished electronically by sensing impedance change. The sensor shall have an integral frequency output linear with flow rate and individual top and bottom turbine outputs for diagnostic purposes.
 - i. Provide the flow sensor complete with installation hardware necessary to enable insertion and removal from the pipe without system shutdown.
 - j. Construct turbine elements of polypropylene with sapphire jewel bearings and tungsten carbide shafts. Construct wetted metal components of Type 316 stainless steel, including the installation hardware.
 - k. House the sensor electronics in a NEMA 250, Type 4 weathertight aluminum enclosure with a gasketed cover. Housing shall include connection for field-installed conduit.
 - l. Sensor cable length shall be sufficient to connect to display module.
 - m. Sensor housing shall have full-port [**Type 316 stainless-steel**] ball valve for system isolation.
10. Power Supply:
- a. Field Power: 120-V ac, 60 Hz unless otherwise required by the application.
 - b. Internal Power: As required by flow meter.

C. In-Line, Compact-Type Thermal Energy Meters:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Onicon Incorporated;** System 30 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Description:**
 - a. Factory-packaged meter consisting of supply and return temperature sensors, flow sensor, digital display, operator interface, installation hardware, interconnecting cabling, and installation instructions.
 - b. Each thermal energy meter shall be individually calibrated and provided with calibration certifications traceable to NIST.
 - c. Meter limited to flow rates between **0.8 and 38 gpm** (0.05 to 2.4 L/s).
 - d. Meter mode of operation shall be field configurable to accommodate two pipe systems that change from between heating and cooling.
3. **Alphanumeric display of the following on face of enclosure:**
 - a. Total energy consumption.
 - b. Energy rate.
 - c. Flow rate.
 - d. Supply temperature.
 - e. Return temperature.
4. **Diagnostic Lights:**
 - a. Meter equipped with diagnostic indicator lights that confirm the operation of the microprocessor and its input circuitry.
 - b. Red LED labeled "BTU" shall flash as energy is transferred.
 - c. Red LED labeled "FLOW" shall flash at a rate that is proportional to the liquid flow rate. An unlit LED indicates no flow signal.
5. **Programming:**
 - a. Meter shall be factory programmed for specific application.
 - b. Programmed parameters and total energy consumption shall be stored in non-volatile memory.
6. **Output Signals:**
 - a. Mode 1 and Mode 2 Total Energy Consumption: Isolated solid-state dry contact with 100 mA, 50-V rating and contact duration of 0.5, 1, 2, or 6 seconds.
 - b. Factory-set isolated analog output for energy rate, flow rate, or temperature difference: 4 to 20 mA, zero to 5 or 10 V.
 - c. In lieu of hardwired output signals, a serial communication interface may be used.

7. Serial Communication Interface: Compatible with host to share total energy consumption, energy rate, flow rate, and supply and return temperature data.
8. Temperature Sensors:
 - a. Temperature range matched to application.
 - b. Differential temperature accuracy within 0.15 deg F (0.08 deg C) over the calibrated range.
 - c. One temperature sensor shall be built into the body of the flow sensor.
 - d. Second sensor shall be provided with brass thermowell with NPS 1/2 ((DN 15)) sweat fitting or NPS 1/4 ((DN 6)) NPT connection.
9. Flow Sensor:
 - a. Ambient Temperature: 40 to 120 deg F (4 to 49 deg C).
 - b. Process Temperature: 32 to 200 deg F (0 to 93 deg C).
 - c. Maximum Process Pressure: 400 psig (2758 kPa).
 - d. Pressure Drop: 3 psig (20 kPa) at 38 gpm (2.4 L/s).
 - e. Accuracy:
 - 1) Within 1 percent of actual flow over flow rate range of 5.7 to 38 gpm (0.4 to 2.4 L/s).
 - 2) Within 2 percent of actual flow over flow rate range of 0.8 to 38 gpm (0.05 to 2.4 L/s).
 - 3) Within 0.5 percent of actual reading at the calibrated velocity.
 - f. Construct flow sensor body of brass.
 - g. Furnish with two tail pieces to facilitate connection to the piping system. One end of each tail piece shall be a compression fitting with retaining nut, and the other end shall either be a sweat fitting for copper or a threaded nipple with NPT threads.
 - h. Process Connections: NPS 3/4 or NPS 1 (DN 20 or DN 25).
 - i. House electronics in a NEMA 250, Type 4 weathertight aluminum enclosure with a gasketed cover. Housing shall include connection for field-installed conduit.
 - j. Sensor cable length shall be sufficient to connect to display module.
10. Power Supply:
 - a. Field Power: 24-V ac, 50 or 60 Hz unless otherwise required by the application.

2.2 ELECTRIC POWER METERS

- A. Performance Requirements: Manufacturer shall certify that each energy meter indicated complies with specified performance requirements and characteristics.
 1. Product certificates are required.
- B. Fully Programmable Multifunction Electric Power Meter:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Siemens Building Technologies, Inc.;** 9330 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Hardware:**
 - a. **Voltage Inputs:** Three voltage inputs, capable of measuring from zero- to 347-V rms (line to neutral) or from zero- to 600-V rms (line to line). The device shall have provisions for direct connection for wye (Star) systems up to 347/600-V ac. For higher voltage systems, PTs with 120-, 277-, or 347-V ac secondary shall be supported. Voltage inputs shall provide the following:
 - 1) 1500-V ac continuous surge protection.
 - 2) 25 percent of full-scale voltage over range capability.
 - b. **Current Inputs:** Three 5-A nominal (10-A full-scale) current inputs. Current inputs shall be transformer coupled and accept CTs with 5-A nominal (10-A full-scale) outputs. Current inputs shall provide the following:
 - 1) 300-A surge protection for one second.
 - 2) 25 percent of full-scale current continuous over range capability.
 - c. **Power Supply:** 95- to 240-V ac (within 10 percent) at 47 to 440 Hz, 110- to 300-V dc, or 20- to 60-V dc power source. Load shall not exceed 12 W.
 - d. **On-board I/O:**
 - 1) Four digital (status) inputs.
 - 2) Four optically isolated, Darlington transistor digital (status) outputs with the following features:
 - a) Outputs shall have the ability to be used to provide pulse outputs according to any energy consumption levels.
 - b) Outputs shall be scalable to within 1,000,000,000 units per pulse.
 - 3) Four analog I/O operator selectable from:
 - a) Milliamp inputs.
 - b) Zero- to 20-mA inputs.
 - c) Four zero- to 1-mA outputs.
 - d) Four zero- to 20-mA outputs.
 - e) Four zero- to 1-mA inputs and four zero- to 1-mA outputs.
 - f) Four zero- to 20-mA inputs and four zero- to 20-mA outputs.
 - 4) Analog inputs and outputs shall be accurate to within 0.3 percent of full scale.

- e. Provisions for future external I/O: Instrument shall support the following provisions for I/O for future applications. The external I/O shall support up to four digital output devices and shall support the following devices:
- 1) 120-V ac, 3.5 A, N.O. solid-state relay.
 - 2) 120-V ac, 3.5 A, zero voltage turn-on, manual override relay.
 - 3) 240-V ac, 3.5 A, N.O. solid-state relay.
 - 4) 240-V ac, 3.5 A, zero voltage turn-on, manual override relay.
 - 5) 60-V dc, 3.5 A, N.O. solid-state relay.
 - 6) 60-V dc, 1.5 mA, zero voltage turn-on, manual override relay.
 - 7) 60-V dc, 1.0 A, low-leakage, N.O. solid-state relay.
 - 8) 200-V dc, 1.0 A, N.O. solid-state relay.
 - 9) 100-V dc, 0.5 A, N.O. mechanical relay.
- f. Communications:
- 1) Provide the following built-in communication ports of standard technology, as defined by IEEE:
 - a) Two optically isolated RS-485 communication ports, supporting data rates from 1200 to 19200 bits per second.
 - b) One front-panel infrared optical port for RS-232 communications, supporting data rates from 1200 to 19200 bits per second. This port shall support an ANSI Type II optocoupler.
 - c) Ethernet port that has a gateway that allows the host system to communicate through the Ethernet port to additional metering devices connected to the card's COM2 RS-485 port. The device shall have provisions for an internal Ethernet port compatible with 10Base-T Ethernet. The Ethernet port shall be terminated using an RJ-45 connector.
 - d) Internal 33.6-kbps modem that has a gateway that allows the host system to communicate through the modem port to additional metering devices connected to the card's COM1 RS-485 port. The internal modem shall be certified for use on North American telephone systems only. The modem port shall be terminated using either an RJ11 or a captured wire connector.
 - 2) Communication ports shall support the following communication capabilities, independently configurable:
 - a) SEAbus/ION protocol.
 - b) Modbus RTU protocol.
 - c) DNP 3.0 protocol.
 - d) Simultaneous access through all communication ports to any measured or derived parameter.
 - e) Protocols shall be field configurable from the front display, or via communication ports, and be capable of being accomplished without resetting the meter or interrupting its

- operation in any way.
- f) Provisions for flash firmware that can be field upgraded through any communication port, without de-commissioning the instrument or de-energizing the circuit or equipment. The firmware-upgrade procedure shall be robust and able to recover from power failure during an upgrade.
 - g) Support time synchronization broadcast messages from a host computer system.
- g. Mounting Options:
- 1) **3.6-by-3.6-inch** (92-by-92-mm) panel cutout, using sliding clamps tightened by thumbscrews.
 - 2) Transducer-type base unit with a remote backlit digital display, with cable for remote display applications.
 - 3) Transducer-type base unit with no display, locally mounted.
 - 4) Allow operator to remove and replace the display panel without removing the instrument from the equipment in which it is mounted.
- h. Front-Panel Display:
- 1) Programmable buttons that allow access to eight data display screens.
 - 2) Display measured parameter with its corresponding label.
 - 3) Display any four parameters simultaneously using alphanumeric characters.
 - 4) Display any two parameter simultaneously using large alphanumeric characters.
 - 5) Display any parameter using very large alphanumeric characters.
 - 6) Display basic voltage, current, and power readings using extra-large alphanumeric characters.
 - 7) Allow the operator to change parameter labels.
 - 8) Feature a programmable time-out interval and adjustable contrast.
- i. Enclosure: If installation requires meter to be installed in a dedicated enclosure, install meter in an NRTL-listed enclosure suitable for operating environment at meter location.
- 1) Indoors: NEMA 250, **[Type 1]** [or] **[Type 12]**.
 - 2) Outdoors: NEMA 250, **[Type 4]** [or] **[Type 4X]**.
- j. Memory: 512 kBs of non-volatile RAM to store the following:
- 1) Setup data.
 - 2) A time-stamped event log with the following features:
 - 3) Support at least 500 events.
 - a) Number of records in the log shall be programmable.
 - b) Each event record shall record the date and time of the event, the cause and effect of the event, and the priority of the event.

- c) Events relating to set-point activity, relay operation, and self-diagnostics shall be recorded in the event log.
 - d) Time stamps shall have a resolution of one millisecond.
 - e) Time stamps shall be able to be synchronized to within 100 ms between devices on the same serial communication medium.
 - f) Minimum event recording response time shall be one second.
 - g) The priority of set-point events shall be programmable.
 - 4) Two programmable data recorders that can each store up to 16 channels of historical trend data with the following features:
 - a) Each data recorder shall be able to record any parameter, either measured or derived.
 - b) Each data recorder shall be enabled and triggered manually or through internal operating conditions, including periodic timer or set-point activity.
 - c) The number of records (depth) of each data recorder and the overflow conditions (stop-when-full or circular) shall be programmable.
 - d) Memory shall be dynamically allocated between data recorders and event log to allow storage of any 16 parameters at 15-minute intervals for not less than 30 days.
 - 5) Min/Max data for any monitored parameter.
3. Instrument:
 - a. Display Web pages over a standard Internet browser. Web pages shall include real-time instantaneous values, accumulated energy values, and total harmonic distortion.
 - b. Automatically e-mail alarm notifications or scheduled system status updates. E-mail messages sent shall be received as ordinary e-mail message.
 - c. Data logs shall be sent on an event-driven or scheduled basis.
 - d. Accommodate high-speed Modbus TCP communications when connected to Ethernet port.
4. Instrument shall measure and calculate the following information at one-second intervals:
 - a. Voltage line-to-neutral and line-to-line for each phase and average of all three phases.
 - b. Percent voltage unbalance.
 - c. Current for each phase and average of three phases.
 - d. Percent current unbalance.
 - e. kW for each phase and total of three phases.
 - f. kVAR for each phase and total of three phases.
 - g. kVA for each phase and total of three phases.
 - h. kWh for total of three phases, provided as accumulating import, export, net, and total readings.

- i. kVARh for total of three phases, provided as accumulating import, export, net, and total readings.
 - j. kVAh for total of three phases, provided as an accumulating net reading.
 - k. Power factor for each phase and total of three phases.
 - l. Frequency.
 - m. Harmonic distortion for each voltage and current input, provided as individual harmonic magnitudes up to the 15th harmonic and as total odd, total even, and total overall harmonic distortion; readings given as a percentage of fundamental.
 - n. K-Factor calculations of the first 15 harmonics for all current inputs.
5. Operator interface features are as follows:
- a. Capable of calculating the following information for any reading at one-second intervals:
 - 1) Thermal demand calculations for any parameter, with operator-programmable length of demand period to match local utility billing method.
 - 2) Sliding window demands for any parameter with operator-programmable length of demand period and number of subperiods to match local utility billing method.
 - 3) Predicted Demand calculations of sliding window demand parameters, with operator-programmable predictive response characteristics.
 - 4) Minimum value for any measured parameter.
 - 5) Maximum value for any measured parameter.
 - 6) Derived values for any combination of measured or calculated parameter, using the following arithmetic, trigonometric, and logic functions (equivalent PLC capabilities):
 - a) Arithmetic functions: division, multiplication, addition, subtraction, power, absolute value, square root, average, max, min, rms, sum, sum-of-squares, unary minus, integer ceiling, integer floor, modulus, exponent, PI.
 - b) Trigonometric Functions: COS, SIN, TAN, ARCCOS, ARCSIN, ARCTAN, LN, and LOG10.
 - c) Logic Functions: Equal to, equal to or more than, equal to or less than, more than or less than, less than, more than, and, "OR," "NOT," and "IF."
 - d) Thermocouple Linearization Functions: Type J, Type K, Type R, Type RTD, or Type T.
 - e) Temperature Conversion Functions: C to F, F to C.
 - b. Support direct display of all parameters on the front panel or remote display in user-programmable groups, using plain language labels. Simultaneous access to all parameters shall be available through any communication port.
 - c. Field programmable as follows:

- 1) Basic Parameters: Voltage input scale, voltage mode (wye, delta, single phase), current input scale, auxiliary input and output scales, and communication setup parameters are programmable from the front panel.
 - 2) Parameters described above, plus additional set-point/relay and data log setup parameters, shall be programmed via the communication port using a portable or remotely located computer terminal.
 - 3) Using ION modules, support customized configurations of all operating parameters.
 - 4) Provisions to ensure that programming through a computer can be secured by user ID and password.
 - 5) Provisions to ensure that programming through the front panel is secured by password.
- d. Provisions for creating periodic or non-periodic schedules for up to two years. Schedules may be used to perform the following functions:
- 1) Demand control.
 - 2) Load scheduling.
 - 3) Logging.
 - 4) Periodic resetting.
6. Alarming and set-point control shall include following minimum requirements:
- a. Set-point control of internal recording mechanisms and all digital output relays as follows:
 - 1) 12 programmable set points, each of which shall respond to out-of-range and alarm conditions for any measured parameter.
 - a) Each set point shall have one-second minimum response time.
 - b) Each set point shall have programmable pick-up and dropout levels (high and low limits) and time delays on operate and release.
 - c) Activity of each set point shall generate an event of a programmable priority. Priority levels shall support up to 256 levels of alarm severity.
 - d) Any set point shall be programmable to any operating condition, and any number of available set points shall be concurrently programmable to operate on a particular condition to support multiple threshold conditions.
 - 2) Set points shall be programmable to operate on any over or under condition for the following:
 - a) Any voltage or current input or average.
 - b) Voltage or current imbalance.
 - c) kW or kVAR forward or reverse.
 - d) kVA.
 - e) Power factor lag or lead.

- f) Frequency.
 - g) kW or current demand on any phase or total or average.
 - h) Individual harmonic distortion on any phase input.
 - i) Total harmonic distortion on any phase input.
 - j) Total even or odd harmonic distortion on any phase input.
 - k) Any maximum or minimum value.
 - l) Multiple energy accumulation conditions.
 - m) Phase reversal.
 - n) Pulse count levels.
 - o) Any internally derived value.
- 3) Any set-point condition shall be able to control any number of digital output relays in an AND or an OR configuration, using pulse mode or latch mode operation, for control and alarm purposes. Digital outputs shall also be operable remotely via any communication port.
 - 4) Any set-point condition shall be able to provide breaker trip relay operation.
 - 5) Consecutive alarm conditions and triggers shall be supported with no "dead" time between events. There shall be no need for a rearming delay time between events.
 - 6) It shall be possible to use any logical combination of any number of available set-point conditions to control any internal or external function or event.
 - 7) Digital outputs shall support pulse output relay operation for kWh total, kWh imported, kWh exported, kVARh total, kVARh imported, kVARh exported, and kVAh values.

C. Multifunction Electric Power Meter:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Siemens Building Technologies, Inc.;** 9200 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Hardware:**
 - a. **Voltage Inputs:** Three voltage inputs capable of measuring from zero- to 400-V rms (line to neutral) or from zero- to 690-V rms (line to line). The instrument shall have provisions for direct connection for wye (Star) systems up to 347/600-V ac. For higher-voltage systems, PTs with 120-, 277-, or 347-V ac secondaries shall be supported. Voltage inputs shall provide the following:
 - 1) 1500-V ac continuous surge protection.
 - 2) 25 percent of full-scale voltage over range capability.

- b. Current Inputs: Three 5-A nominal (6-A full-scale) current inputs. Current inputs shall be transformer coupled and accept CTs with 5-A nominal (6-A full-scale) outputs. Current inputs shall provide the following:
 - 1) 120-A surge protection for one second.
 - 2) 20 percent of nominal current continuous over range capability.
- c. Power Supply: 100- to 240-V ac (within 10 percent) at 50 to 60 Hz, 110- to 300-V dc, or 20- to 60-V dc power source. Load shall not exceed 15 W.
- d. Onboard I/O:
 - 1) Two Form A solid-state digital (status) outputs with the following features:
 - a) The ability to be used to provide pulse outputs according to any energy consumption levels.
 - b) Rated 200-V ac/dc with a maximum current of 100 mA.
- e. Communications:
 - 1) Provide the following built-in communication ports of standard technology, as defined by the IEEE:
 - a) One optically isolated RS-485 communication port, supporting data rates from 1200 to 19200 bits per second.
 - 2) Communication ports shall support the following communication capabilities, independently configurable:
 - a) PML protocol.
 - b) Modbus RTU protocol.
 - c) Shall provide simultaneous access through all communication ports to any measured or derived parameter.
 - d) Protocols shall be field configurable from the front display, or via communication ports, and be capable of being accomplished without resetting the meter or interrupting its operation in any way.
 - e) Support time synchronization broadcast messages from a host computer system.
- f. Mounting and Display:
 - 1) The instrument shall support the following mounting options:
 - a) 3.6-by-3.6-inch (92-by-92-mm) panel cutout, using sliding clamps tightened by thumbscrews.
 - b) ANSI 4-inch (100-mm) round cut-out.
 - c) Transducer-type base unit with a remote LED display with cable for remote display applications.
 - d) Transducer-type base unit only with no display locally mounted.

- e) Allow the operator to remove and replace the display panel without removing the instrument from the equipment in which it is mounted.
 - g. Enclosure: If installation requires meter to be installed in a dedicated enclosure, install meter in an NRTL-listed enclosure suitable for operating environment at meter location.
 - 1) Indoors: NEMA 250, **[Type 1]** [or] **[Type 12]**.
 - 2) Outdoors: NEMA 250, **[Type 4]** [or] **[Type 4X]**.
 - h. Memory: Sufficient non-volatile (RAM) to store setup data and accumulated energy values.
3. The instrument shall measure and calculate the following information:
- a. Voltage line-to-neutral and line-to-line for each phase and average of three phases.
 - b. Current for each phase and average of three phases.
 - c. Peak current demand.
 - d. Neutral current.
 - e. Power (kW).
 - f. Peak power demand (kW).
 - g. Energy (kWh) import/export.
 - h. Power factor total.
 - i. Frequency.
4. Operator interface features are as follows:
- a. Capable of calculating the following information for any reading at one-second intervals:
 - 1) Sliding window demands for any parameter with operator-programmable length of demand period and number of subperiods to match local utility billing method.
 - b. Support direct display of all parameters on the front panel or remote display in user-programmable groups, using plain language labels. Simultaneous access to all parameters shall be available through any communication port.
 - c. Field programmable as follows:
 - 1) Basic Parameters: Voltage input scale, voltage mode (wye, delta, single phase), current input scale, auxiliary input and output scales, and communication setup parameters are programmable from the front panel.
 - 2) Using ION modules, support customized configurations of all operating parameters.
 - 3) Provisions to ensure that programming through a computer can be secured by user ID and password.

- 4) Provisions to ensure that programming through the front panel is secured by password.
- 5) Digital outputs shall support pulse output relay operation for kWh total, kWh imported, kWh exported, kVARh total, kVARh imported, kVARh exported, and kVAh values.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 THERMAL ENERGY METER APPLICATIONS

- A. **<Insert equipment type>, <Insert service>.**

3.3 ELECTRIC POWER METER APPLICATIONS

- A. **<Insert equipment type>: [Fully programmable, multifunction, electric power meter] [Multifunction, electric power meter].**

3.4 INSTALLATION, GENERAL

- A. Install products level, plumb, parallel, and perpendicular with building construction.
- B. Support instruments, tubing, piping wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a **<Insert value>** force.
- C. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.

3.5 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.6 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of systems and equipment Installer] [manufacturer's authorized service representative]**. Include **[monthly] [quarterly] [semiannual] [annual]** preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper **<Insert equipment>** operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.7 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain instrumentation and control devices.
- B. Coordinate video with operation and maintenance manuals and classroom instruction for use by Owner in operating, maintaining, and troubleshooting.
- C. Record videos on DVD disks.
- D. Owner shall have right to make additional copies of video for internal use without paying royalties.

END OF SECTION 230923.13

SECTION 230923.14 - FLOW INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Airflow sensors.
2. Airflow switches.
3. Airflow transmitters.
4. Liquid flow meters.
5. Liquid flow sensors.
6. Liquid flow switches.
7. Liquid flow transmitters.

- B. Related Requirements:

1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.14**.

1.3 DEFINITIONS

- A. Ethernet: Local area network based on IEEE 802.3 standards.
- B. HART: Highway addressable remote transducer protocol is the global standard for sending and receiving digital information across analog wires between smart devices and control or monitoring systems through bi-directional communication that provides data access between intelligent field instruments and host systems. A host can be any software application from technician's hand-held device or laptop to a plant's process control, asset management, safety, or other system using any control platform.
- C. PEEK: polyetheretherketone.
- D. PTFE: Polytetrafluoroethylene.
- E. PPS: Polyphenylene sulfide.

- F. RS-485: A TIA standard for multipoint communications using two twisted pairs.
- G. RTD: Resistance temperature detector.
- H. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
 - 1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Operating characteristics; electrical characteristics; and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
 - 3. Product description with complete technical data, performance curves, and product specification sheets.
 - 4. Installation instructions, including factors affecting performance.
- B. LEED Submittals: Product data for flow instruments for use in showing compliance with requirements in ASHRAE 62.1.
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and [**mounting**] details.
 - 2. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
 - 4. Include diagrams for air and process signal tubing.
 - 5. Number-coded identification system for unique identification of wiring, cable, and tubing ends.
- D. Delegated-Design Submittal:
 - 1. Schedule and design calculations for flow instruments, including the following.
 - a. Flow at Project design and minimum flow conditions.
 - b. Pressure drop at Project design and minimum flow conditions.

1.5 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each product requiring a certificate.
- B. Product Test Reports: For each product, for tests performed by [**manufacturer and witnessed by a qualified testing agency**] [**a qualified testing agency**].

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For instruments to include in operation and maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials and parts that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. Provide parts, as indicated by manufacturer's recommended parts list, for product operation during [one] [two] <Insert number>-year period following warranty period.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Select and size products to achieve specified performance requirements.
- B. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 GENERAL REQUIREMENTS FOR FLOW INSTRUMENTS

- A. Air sensors and transmitters shall have an extended range of [10] [20] <Insert number> percent above Project design flow and [10] [20] <Insert number> percent below minimum Project flow to signal abnormal flow conditions and to provide flexibility for changes in operation.
- B. Liquid and steam sensors, meters, and transmitters shall have an extended range of [10] [20] <Insert number> percent above Project design flow and [10] [20] <Insert number> percent below Project minimum flow to signal abnormal flow conditions and to provide flexibility for changes in operation.

2.3 AIRFLOW SENSORS:

- A. Performance Requirements:
 - 1. Adjustable for changes in system operational parameters.
 - 2. Airflow Sensor and Transmitter Range: Extended range of [10] [20] <Insert number> percent above Project design flow and [10] [20] <Insert number> percent below minimum Project flow to signal abnormal flow conditions.
 - 3. Manufacturer shall certify that each flow instrument indicated complies with specified performance requirements and characteristics.

- a. Product certificates are required.
- B. Pitot-Tube Airflow Sensor Station:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Air Monitor Corporation;** Fan Evaluator.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Description: Multiple total- and static-pressure sensors positioned at the center of equal area of the station cross section and interconnected by respective averaging manifolds.
 - a. Stations **4 sq. ft. (0.4 sq. m)** and Smaller: One total-pressure sensor and one static-pressure sensor for every **16 sq. in. (103 sq. cm)** of station area.
 - b. Stations Larger than **4 sq. ft. (0.4 sq. m)**: One total-pressure sensor and one static-pressure sensor for every **36 sq. in. (232 sq. cm)** of station area.
 3. Casing: Galvanized sheet steel at least **0.079 inch (2.0 mm)** thick with coating complying with ASTM A 653/A 653M, **G90 ((Z275))**. Casings shall be stainless steel, **0.0781 inch (2.0 mm)** thick, when connected to stainless duct and aluminum, **0.063 inch (1.6 mm)** thick, when connected to aluminum duct.
 - a. Joints and Seams: Continuously weld. Clean galvanized areas damaged by welding and coat with aluminum paint.
 - b. Casing Depth: At least **8 inches (200 mm)**.
 - c. Casing Flanges: Outward flange, minimum flange face **1.5 inches (38 mm)**.
 - d. Casing Configuration and Size: Match shape (rectangular, round, flat oval) and same size as adjacent duct unless otherwise indicated.
 4. Include an open parallel cell air straightener or air equalizer honeycomb mechanically fastened to casing.
 - a. Construct straightener or equalizer from Type 3003 aluminum or Type 316 stainless steel, depending on casing material. Use stainless steel for units with stainless-steel casings.
 5. Construct pressure sensor array from drawn copper or stainless-steel tubing. Use stainless steel for units with stainless-steel casings. Copper tubing shall comply with ASTM B 75 and ASTM B 280. Minimum tube wall thickness shall be **0.030 inch (0.8 mm)**. Include internal piping and external pressure transmitter ports.
 6. Station Labeling: Identification label on each station casing indicating model number, size, area, and application-specific airflow range.
 7. Performance:
 - a. Pressure Loss: **0.015-inch wg (3.8 Pa)** at **1000 fpm (5 m/s)**, or **0.085-inch wg (22.5 Pa)** at **2000 fpm (10 m/s)**.

- b. Accuracy: Within 2 percent of actual airflow.
- c. Self-Generated Sound: NC 40 and sound level within the duct shall not be amplified.
- d. Performance rated and tested according to AMCA 610. Each station shall bear the AMCA seal.

C. Pitot-Tube Fan Inlet Airflow Traverse Sensor:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Air Monitor Corporation;** Volu-probe/ **[FI] [or] [FI/SS]**.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Traverse manifold designed for mounting in fan inlets.
3. Contain multiple total- and static-pressure sensors placed at concentric area centers along the exterior surface of cylindrical manifold and internally connected to their respective averaging manifolds. Sensors shall not protrude beyond the surface of the manifold nor be adversely affected by particle contamination present in airstream.
4. Manifold (two per inlet) shall have dual end support swivel brackets suitable for mounting in the fan inlet bell and symmetrical averaging signal takeoffs and fittings.
5. Sensors shall be capable of producing steady, non-pulsating signals of standard total- and static-pressure without need for flow corrections or factors, with an accuracy of 3 percent of actual flow over a turndown range of 6 to 1.
6. Manifold Materials: **[Copper or anodized aluminum] [or] [Type 316 stainless steel]**.
7. Unless otherwise required by application and without affecting the fan and sensor performance, nominal diameter copper and aluminum manifolds shall be the following:
 - a. For Fan Inlets Smaller than **20 Inches** (500 mm): **0.375 inch** (9 mm).
 - b. For Fan Inlets **20 Inches** (500 mm) and Larger: **0.75 inch** (19 mm).
8. Unless otherwise required by application and without affecting the fan and sensor performance, nominal diameter stainless-steel manifolds shall be the following:
 - a. For Fan Inlets Smaller than **20 Inches** (500 mm): **0.375 inch** (9 mm).
 - b. For Fan Inlets **20 through 48 Inches** (500 through 1200 mm): **0.75 inch** (19 mm).
 - c. For Fan Inlets Larger than **48 Inches** (1200 mm): **1.0 inch** (25 mm).

D. Piezometer Ring Fan Inlet Airflow Sensor:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. Twin City Fan & Blower; Piezometer Ring.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. In lieu of externally mounted fan inlet airflow sensors, option to provide fans with airflow measurement integral to fan inlet cones for continuous measurement of air volume flow rate.
 3. Multiple pressure sensor points strategically placed along the circumference of the inlet cone and internally connected to an averaging ring manifold located behind the inlet cone.
 4. Sensor points shall not protrude beyond the surface of the inlet cone nor be adversely affected by particle contamination present in the airstream.
 5. Sensor shall produce steady, non-pulsating signals to achieve accuracy within 5 percent of actual airflow.
 6. Sensor shall be non-intrusive and not impact fan performance.
 7. Product shall be a standard offering of the fan manufacturer and include published literature with supporting test data to validate sensor performance.

E. Thermal Airflow Station:

1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. Ebtron, Inc.; Gold Series.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Source Limitations: Obtain airflow and temperature measuring sensors and transmitters from single manufacturer.
3. Description: Airflow station shall consist of one or more sensor probes **[mounted in a casing,]**and a remotely mounted microprocessor-based transmitter.
4. Performance:
 - a. Capable of independently processing up to **[16] <Insert number>** independently wired sensor assemblies.
 - b. Airflow rate of each sensor assembly shall be equally weighted and averaged by transmitter prior to output.
 - c. Temperature of each sensor assembly shall be velocity weighted and averaged by transmitter prior to output.
 - d. Listed and labeled by an NRTL as successfully tested as an assembly according to UL 873, "Temperature-Indicating and Regulating Equipment."
 - e. Components shall be interconnected by exposed NRTL-listed plenum-rated cable or non-listed cable placed in conduit.
 - f. Each flow station shall be factory calibrated at a minimum of **[16] <Insert number>** airflow rates and **[three] <Insert number>** temperatures to standards that are traceable to NIST.
 - g. Airflow Accuracy: Within **[2] [3] [5] <Insert number>** percent of reading over the entire operating airflow range.

- 1) Devices whose accuracy is combined accuracy of transmitter and sensor probes must demonstrate that total accuracy meets the performance requirements throughout the measurement range.
 - h. Temperature Accuracy: Within **0.2 deg F** (0.11 deg C) over entire operating range of **minus 20 to plus 140 deg F** (minus 29 to plus 60 deg C).
 - i. Sensor Ambient Operating Temperature Range: **Minus 20 to plus 160 deg F** (Minus 29 to plus 71 deg C).
 - j. Transmitter Ambient Operating Temperature Range: **Minus 20 to plus 120 deg F** (Minus 29 to plus 49 deg C).
 - k. Sensor and Transmitter Ambient Operating Humidity Range: Zero to 99 percent, non-condensing.
 - l. Instrument shall compensate for changes in air temperature and density throughout calibrated velocity range for seasonal extremes at Project location.
 - m. Pressure Drop: **0.05-inch wg** (12.5 Pa) at **2000 fpm** (10.2 m/s) across a **24-by-24-inch** (600-by-600-mm) area.
 - n. Instruments mounted in throat or face of fan inlet cone shall not negatively influence fan performance by reducing flow more than **[1] [2] <Insert number>** percent of Project design flow or negatively impact fan-generated sound. Losses in performance shall be documented with submittal data, and adjustments to compensate for performance impact shall be made to fan in order to deliver Project design airflow indicated.
5. Sensor Assemblies:
- a. Each sensor probe shall contain two individually wired, hermetically sealed bead-in-glass thermistors.
 - b. Mount thermistors in sensor using a marine-grade, waterproof epoxy.
 - c. Thermistor leads shall be protected and not exposed to the environment.
 - d. Each sensor assembly shall independently determine airflow rate and temperature at each measurement point.
 - e. Each sensor probe shall have an integral cable for connection to remotely mounted transmitter.
 - f. Sensor Probe Material: Gold anodized, extruded 6063 aluminum tube or Type 304 stainless steel.
 - g. Probe Assembly Mounting Brackets Material: Type 304 stainless steel.
6. Casing:
- a. Factory mount sensor probes in an airflow station casing to create a single assembly for field mounting.
 - b. Material: Galvanized sheet steel at least **0.079 inch** (2.0 mm) thick with coating complying with ASTM A 653/A 653M, **G90** ((Z275)). Casings shall be stainless steel, **0.0781 inch** (2.0 mm) thick, when connected to stainless duct and aluminum, **0.063 inch** (1.6 mm) thick, when connected to aluminum duct.
 - c. Joints and Seams: Continuously weld. Clean galvanized areas damaged by welding and coat with zinc-rich paint.
 - d. Casing Depth: At least **8 inches** (200 mm).

- e. Include casing inlet and discharge connections with a minimum [1.5-inch (40-mm)] [2-inch ((50-mm))] <Insert dimension> face flange.

7. Transmitter:

- a. Integral digital display capable of simultaneously displaying total airflow and average temperature, individual airflow, and temperature readings of each independent sensor assembly.
- b. Capable of field configuration and diagnostics using an onboard push-button interface and digital display.

- 1) Include an integral power switch to operate on 24-V ac (isolation not required) and include the following:

- a) Integral protection from transients and power surges.
- b) Circuitry to ensure reset after power disruption, transients, and brownouts.
- c) Integral transformer to convert field power source to operating voltage required by instrument.

- c. Remote Signal Interface:

- 1) Linear Analog Signals for Airflow[**and Temperature**]: Fuse protected and isolated, [field selectable,] [zero- to 10-V dc] [or] [4 to 20 mA].
- 2) RS-485: BACnet-ARCNET, BACnet-MS/TP, and Modbus-RTU.
- 3) 10 Base-T Ethernet: BACnet Ethernet, BACnet-IP, Modbus-TCP, and TCP/IP.
- 4) LonWorks free topology.

2.4 AIRFLOW SWITCHES

A. Polymer Film Sail Switch:

- 1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [Honeywell International Inc., Building Solutions](#); Model S688A.
- b. <Insert manufacturer's name; product name or designation>.

- 2. Performance:

- a. Suitable for applications operating at velocities up to 400 fpm (2.0 m/s).
- b. Suitable for mounting with air direction in horizontal, vertical up or down.
- c. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- d. Voltage: 24-, 120-, 240-V ac.
- e. Normally Open Full Load Current: 2 A at 120-V ac.
- f. Normally Closed Full Load Current: 1 A at 120-V ac.
- g. Normally open switch actuates at 250 fpm (1.3 m/s) and opens at 75 fpm

- (0.4 m/s).
 - h. Normally closed switch actuates at 75 fpm (0.4 m/s) and closes at 250 fpm (1.3 m/s).
 - i. Maximum Process Temperature: 170 deg F (77 deg C).
 - j. Maximum Ambient Temperature: 125 deg F (52 deg C).
- 3. Construction:
 - a. Polyester film sail encasing a wire frame.
 - b. Sail actuates a SPDT snap switch.
 - c. Enclosure Material: Zinc-plated steel.
 - d. Enclosure with removable cover.
 - e. NEMA 250, Type 1 enclosure.
 - f. Removable spring counterbalances sail to allow mounting in either vertical (up or down) or horizontal airflow.
 - g. Electrical Connections: Screw terminals.
 - h. Conduit Connections: 1/2-inch (16-mm) trade size conduit knock outs on top and bottom.

B. Stainless-Steel Single Vane Switch:

- 1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Model 530.
 - b. **<Insert manufacturer's name; product name or designation>.**
- 2. Description:
 - a. Velocities up to 2000 fpm (10.2 m/s).
 - b. Suitable for mounting with air direction in horizontal.
- 3. Performance:
 - a. Voltage: 125-, 240-, and 480-V ac.
 - b. Full Load Current: 9.8 A at 125-V ac.
 - c. Field-Adjustable Velocity Set Point: 400 to 1600 fpm (2.0 to 8.2 m/s).
 - d. Maximum Process Temperature: 180 deg F (82 deg C).
 - e. Maximum Ambient Temperature: 125 deg F (52 deg C).
- 4. Construction:
 - a. Stainless-steel vane.
 - b. Vane actuates a SPDT snap switch.
 - c. Enclosure Material: Die-cast metal.
 - d. Enclosure with removable cover.
 - e. NEMA 250, Type 1 enclosure.
 - f. Screw set-point adjustment.
 - g. Electrical Connections: Screw terminals.

- h. Conduit Connections: 1-inch (27-mm) trade size conduit knockouts on top and bottom.

2.5 AIRFLOW TRANSMITTERS

A. Airflow Transmitter with 0.10 Percent Accuracy and Auto-Zero Feature:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Air Monitor Corporation; Veltron II.
 - b. <Insert manufacturer's name; product name or designation>.
2. Transmitter shall receive total- and static-pressure signals from a primary element, amplify signals, extract the square root, and scale the signals to produce 4- to 20-mA dc output signals linear to airflow.
3. NEMA 250, Type 1 enclosure.
4. Construct assembly so that shock, vibration, and pressures surges of up to 1 psig (6.9 kPa) will neither harm transmitter, nor affect its accuracy.
5. Transmitter with automatic zeroing circuit capable of automatically readjusting transmitter zero at predetermined time intervals. The automatic zeroing circuit shall re-zero transmitter to within 0.1 percent of true zero.
6. Performance:
 - a. Range: As required by application and at least 10 percent below minimum airflow and 10 percent greater than design airflow.
 - b. Calibrated Span: Field adjustable, minus 40 percent of the range.
 - c. Accuracy: Within 0.10 percent of natural span.
 - d. Repeatability: Within 0.15 percent of calibrated span.
 - e. Linearity: Within 0.2 percent of calibrated span.
 - f. Hysteresis and Deadband (Combined): Less than 0.2 percent of calibrated span.
7. Integral digital LED or digital display for continuous indication of airflow.

B. Airflow Transmitters with 0.25 Percent Accuracy and Auto-Zero Feature:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Air Monitor Corporation; DPT 2500 Plus.
 - b. <Insert manufacturer's name; product name or designation>.
2. Transmitter shall receive total- and static-pressure signals from a flow element, amplify signals, extract the square foot, and scale the signals to produce 4- to 20-mA dc output signals linear to airflow.
3. NEMA 250, Type 1 enclosure.

4. Construct assembly so shock, vibration, and pressures surges of up to 1 psig (6.9 kPa) will neither harm transmitter, nor affect its accuracy.
 5. Transmitter with automatic zeroing circuit capable of automatically readjusting transmitter zero at predetermined time intervals. The automatic zeroing circuit shall re-zero the transmitter to within 0.1 percent of true zero.
 6. Performance:
 - a. Range: As required by application and at least 10 percent below minimum airflow and 10 percent greater than design airflow.
 - b. Calibrated Span: Field adjustable, minus 40 percent of the range.
 - c. Accuracy: Within 0.25 percent of natural span.
 - d. Repeatability: Within 0.15 percent of calibrated span.
 - e. Linearity: Within 0.2 percent of calibrated span.
 - f. Hysteresis and Deadband (Combined): Less than 0.2 percent of calibrated span.
 7. Integral digital display for continuous indication of airflow.
- C. Pressure Differential Transmitters for Airflow Measurement:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Setra Systems, Inc.](#); Model 267.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Performance:
 - a. Range: As required by application and at least 10 percent below minimum airflow and 10 percent greater than design airflow.
 - b. Accuracy: Within [1] [0.5] [0.4] [0.25] percent of the full-scale range.
 - c. Hysteresis: Within 0.10 percent of full scale.
 - d. Repeatability: Within 0.05 percent of full scale.
 - e. Stability: Within one percent of span per year.
 - f. Overpressure: 10 psig (69 kPa).
 - g. Temperature Limits: Zero to 150 deg F (Minus 18 to plus 66 deg C).
 - h. Compensate Temperature Limits: 40 to 150 deg F (4 to 66 deg C).
 - i. Thermal Effects: 0.033 percent of full scale per degree F.
 - j. Shock and vibration shall not harm the transmitter.
 3. Output Signals:
 - a. Analog Current Signal:
 - 1) Two-wire, 4- to 20-mA dc current source.
 - 2) Signal capable of operating into 800-ohm load.
 - b. Analog Voltage Signal:

- 1) Three wire, zero to **[5] [10]** V.
 - 2) Minimum Load Resistance: 1000 ohms.
4. Display: Four-digit digital with minimum **0.4-inch-** (10-mm-) high numeric characters.
 5. Operator Interface:
 - a. Zero and span adjustments located behind cover.
 6. Construction:
 - a. Plastic casing with removable plastic cover.
 - b. Fittings: Swivel fittings for connection to copper tubing or barbed fittings for connection to polyethylene tubing. Fittings on bottom of instrument case.
 - c. Screw terminal block for wire connections.
 - d. Vertical plane mounting.
 - e. NEMA 250, Type 4.
 - f. Mounting Bracket: Appropriate for installation.
- D. Pressure Differential Indicating Transmitter, Switch, and Controller for Airflow Measurement:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series DH3 Digihelic.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Description:
 - a. Three-in-one instrument, including digital display, control relay switches, and a transmitter with a current output.
 - b. Field configurable for pressure, velocity, and volumetric flow applications through user interface.
 - c. Select instrument range based on application.
 3. Performance:
 - a. Accuracy including hysteresis and repeatability:
 - 1) Ranges Less than **5-Inch wg** (1250 Pa): Within 1 percent.
 - 2) Other Ranges: Within 0.5 percent at **77 deg F** (25 deg C).
 - b. Stability: Within 1 percent per year.
 - c. Response Time: 250 ms.
 - d. Overpressure:
 - 1) Ranges Less than **50-Inch wg** (12.5 kPa): **5 psi** ((34.5 kPa).)
 - 2) Range of **100-Inch wg** (25 kPa): **9 psi** (62 kPa).

- e. Temperature Limits: 32 to 140 deg F (Zero to 60 deg C).
 - f. Thermal Effects: 0.020 percent per deg F ((deg C)).
 - g. Warm-up Period: One hour.
4. Controller: Programming through menu keys to access five menus.
 - a. Security level.
 - b. Pressure, velocity, or flow application.
 - c. Engineering units.
 - d. K-factor for use with flow application.
 - e. Set-point control only; set-point and alarm operation; alarm operation as high, low, or high/low with manual; or automatic reset and delay.
 - f. View high and low readings.
 - g. Digital dampening for smoothing erratic applications.
 - h. Scaling of analog output to fit range and field calibration.
 5. Display:
 - a. Four-digit digital, with minimum 0.4-inch- (10-mm-) high alphanumeric characters.
 - b. Four LED indicators; two LEDs for set point and two LEDs for alarm status.
 6. Operator Interface:
 - a. Set-point adjustment through keypad on face of instrument.
 - b. Zero and span adjustments accessible through menu.
 - c. Programming through keypad.
 7. Output Analog Signal: Two-wire, 4- to 20-mA dc current source; capable of operating into a 900-ohm load.
 8. Output Digital Signal: Two, SPDT relays; each rated for 1 A at 30-V ac or 30-V dc.
 9. Construction:
 - a. Die-cast aluminum casing and bezel.
 - b. Connections on side and back.
 - c. Vertical plane mounting.
 - d. NEMA 250, Type 1 rating.
 - e. Nominal 4-inch- (100-mm-) diameter face.
 - f. Mounting Bracket: Appropriate for installation.

2.6 LIQUID FLOW METERS

A. General Requirements for Liquid Flow Meters:

1. Adjustable for changes in system operational parameters.
2. Liquid and Steam Sensors, Meters, and Transmitters: Extended range of [10] [20] <Insert number> percent above Project design flow and [10] [20] <Insert number> percent below Project minimum flow to signal abnormal flow

- conditions.
3. Manufacturer shall certify that each flow instrument indicated complies with specified performance requirements and characteristics.
 4. Product certificates are required.
- B. Insertion Paddle Wheel Flow Meter, **NPS 2 (DN 50)**:
1. **Products**: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **Data Industrial, Badger Meter, Inc.**; Series 200 Sensor with Series 500 Transmitter.
 - b. **<Insert manufacturer's name; product name or designation>**.
 2. Description: Insertion-type meter with a non-magnetic spinning paddle wheel.
 3. Performance:
 - a. Range: **0.5 to 30 fps** (0.15 to 9.1 mps).
 - b. Accuracy: Within 1 percent of full scale over flow range.
 - c. Linearity: Within 0.2 percent of full scale over flow range.
 - d. Repeatability: Within 0.3 percent of full scale over flow range.
 - e. Ambient Temperature: **14 to 150 deg F** (Minus 10 to plus 66 deg C).
 - f. Maximum Process Temperature: **[221 deg F ((105 deg C))] [285 deg F ((141 deg C))]**.
 - g. Maximum Pressure: **400 psig at 100 deg F** (2758 kPa at 38 deg C).
 4. Output Signal: Frequency pulse.
 5. Construction:
 - a. Wetted Metal Parts, Including Sensor Sleeve, Mounting Adapter, and Isolation Valve: **[Brass] [Type 316 stainless steel]**.
 - b. Shaft: **[Tungsten carbide] [Titanium] [Hastalloy C] [Monel] [Type 316 stainless steel]**.
 - c. Impeller: **[Nylon] [Tefzel]**.
 - d. Process Connection: **NPS 2 ((DN 50))**.
 - e. Instrument Isolation Valve: **[Gate] [Full port ball]** valve for system isolation.
 - f. Insertion Depth: Threaded positioning nut for accurate sensor depth in the pipe.
 - g. Electronics Enclosure:
 - 1) Polyphenylene sulfide (PPS) with Viton seal.
 - 2) Electrical Connection: Cable furnished with sensor.
 6. Transmitter:
 - a. User-adjustable scale to refine resolution of flow range over 4- to 20-mA signal.
 - b. Enclosure Material: Polycarbonate with tongue and groove, with neoprene sealed cover.

- c. NEMA 250, Type 4X enclosure.
 - d. Electrical Connection: Screw terminals.
 - e. Linearity less than one percent.
 - f. Output Response Time: 6 seconds for 10 to 90 percent step.
 - g. Load resistance of 650 ohms at 24-V dc.
 - h. Operating Temperature: **Minus 32 to plus 122 deg F** (Minus 36 to plus 50 deg C).
 - i. Digital display of flow rate.
- C. Insertion Paddle Wheel Flow Meter, **NPS 1** (DN 25):
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Data Industrial, Badger Meter, Inc.**; SDI Series.
 - b. **<Insert manufacturer's name; product name or designation>**.
 2. Description:
 - a. Insertion-type meter with a non-magnetic spinning paddle wheel.
 - b. Each meter shall be wet calibrated at factory to standards traceable to NIST and provided with a certificate of calibration.
 - c. Programming kit including cable connector and Microsoft-Windows-compatible software.
 - d. Where indicated, provide meter with bi-directional flow measurement.
 3. Performance:
 - a. Range: **0.33 to 20 fps** (0.1 to 6.1 m/s).
 - b. Accuracy: Within **[0.5] [1]** percent of flow rate.
 - c. Repeatability: Within 0.5 percent.
 - d. Ambient Temperature: **14 to 150 deg F** ((Minus 10 to plus 66 deg C)).
 - e. Maximum Process Temperature: **300 deg F** (149 deg C) with PEEK sensor tip.
 - f. Maximum Pressure: **350 psig at 300 deg F** (2413 kPa at 149 deg C) with PEEK sensor tip.
 - g. Pressure Drop: Up to **0.5 psig at 10 fps** (3.5 kPa at 3 m/s) for pipe sizes **NPS 1-1/2** (DN 20) and larger.
 4. Output Signal:
 - a. Unidirectional Flow Meter: Frequency pulse.
 - b. Unidirectional Flow Meter: Analog, two wire, loop-powered, 4- to 20-mA signal.
 - c. Unidirectional Flow Meter: Scaled pulse.
 - d. Bi-directional Flow Meter: Analog 4- to 20-mA signal plus direction.
 - e. Bi-directional Flow Meter: Scaled pulse.
 5. Operator Interface:

- a. Programming: Instrument programming through computer and programming kit.
 - b. Digital Display: Eight-character digital display of flow rate, flow totalization, input, output, and flow direction for bi-directional meters.
6. Construction:
- a. Wetted Metal Parts (Including Sensor Stem, Mounting Adapter, and Isolation Valve): Type 316 stainless steel.
 - b. Sensor Tip: PPS or PEEK.
 - c. Shaft: Tungsten carbide.
 - d. Impeller: Stainless steel.
 - e. Process Connection: **NPS 1 (DN 25)**.
 - f. Instrument Isolation Valve: Full port ball valve for system isolation.
 - g. Insertion Depth: Threaded positioning nut for accurate sensor depth in the pipe.
 - h. Electronics Enclosure:
 - 1) Polypropylene with Viton-sealed acrylic cover.
 - 2) Removable cover.
 - 3) NEMA 250, Type 4X.
 - 4) Electrical Connection: Screw terminals.
 - 5) Conduit Connection: **1/2-inch ((16-mm))**trade size.

D. Insertion Turbine Flow Meter:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Onicon Incorporated;** F-1100 Series Sensor with D-1200 Series Remote Display Module for pipe sizes **NPS 1-1/4 to NPS 2 (DN 32 to DN 50)**, Onicon F-1200 Series Sensor with D-1200 Series Remote Display Module for pipe sizes **NPS 2-1/2 (DN 65)** and larger.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Description:
 - a. Operating pressure of **300 psig (2068 kPa)** with a temperature of **200 deg F (93 deg C)**.
 - b. Meters in hot water systems shall be suitable for maximum system temperatures encountered, but not less than **250 deg F (121 deg C)**.
 - c. Pressure drop not to exceed **1 psig (6.9 kPa)** at **20-fps (6.1-m/s)** flow velocity in a **NPS 2 (DN 50)** pipe and decreasing in large pipe with lower velocity.
 - d. Sensor Accuracy:
 - 1) Within 1 percent of actual flow between the flow velocity range of **3 to 30 fps (0.9 to 9.1 m/s)**.
 - 2) Within 2 percent of actual flow between the flow velocity range of **0.4 to 20 fps (0.1 to 6.1 m/s)**.

- 3) Within 0.5 percent of actual reading at the calibrated velocity.
 - e. Wet calibrate and tag sensors to standards traceable to NIST, and provide each sensor with a certificate of calibration.
3. Sensor:
- a. For Pipe Sizes **NPS 2 (DN 50)** and Smaller: Single turbine sensors.
 - b. For Pipe Sizes **NPS 2-1/2 (DN 65)** and Larger: Dual turbine sensors.
 - c. Piping with Bi-directional Flow: Bi-directional dual turbine sensors.
 - d. Dual turbine sensors shall have dual, contra-rotating turbine elements, each turbine element with its own rotational sensing system, and an averaging circuit.
 - e. Rotational sensing of each turbine shall be accomplished electronically by sensing electronic impedance change (non-magnetic and non-photoelectric).
 - f. Sensor shall have an integral frequency output linear with flow rate. For dual turbine units, with individual top and bottom turbine outputs for diagnostic purposes.
 - g. Bi-directional sensors shall have isolated solid-state dry contacts with a contact rating of 100 mA at 50 V. The contacts shall close when the flow in direction of arrow is **0.18 fps (0.05 m/s)** or more.
 - h. Flow sensor shall be complete with installation hardware necessary to enable insertion and removal from pipe without system shutdown.
 - i. Construct turbine elements of polypropylene with sapphire jewel bearings and tungsten carbide shafts. Construct wetted metal components of Type 316 stainless steel, including installation hardware.
 - j. House sensor electronics in a NEMA 250, Type 4 enclosure.
 - k. Enclosure shall include connection(s) for field-installed conduit.
 - l. Sensor shall have cable of length sufficient to connect to display module.
 - m. Sensor housing shall have full port [**Type 316 stainless-steel**] ball valve for system isolation.
4. Display Module:
- a. Remote from sensor.
 - b. House in a NEMA 250, Type 4X enclosure.
 - c. Label terminal strip for all wiring connections.
 - d. 120-V ac power supply with 24-V dc output to power the flow sensor.
 - e. Remote Interface:
 - 1) Hardwired Analog Outputs for Flow Rate and Totalization: 4 to 20 mA and zero- to 10-V dc.
 - 2) Serial Communication Interface: Compatible with host to share flow rate and totalized flow data.
 - 3) Outputs linear to within 0.1 percent of calibrated span.
 - f. Digital display for flow rate and totalized flow.
 - 1) At least eight display digits for totalization.

- 2) Bi-directional units with separate digital display for flow and totalization in each direction.
- g. Local reset of flow totalization.
- h. Program and data shall be stored in nonvolatile memory in event of power loss.
- i. For bi-directional units, with display of flow direction (contacts open or closed).

E. Inline Turbine Flow Meter:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Onicon Incorporated;** F-1300 Series Sensor with D-1200 Series Remote Display Module.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Description:**
 - a. Available in **NPS 3/4 and NPS 1** (DN 20 and DN 25).
 - b. Operating pressure of **300 psig** (2068 kPa) with a temperature of **200 deg F** (93 deg C).
 - c. Meters in hot water systems shall be suitable for maximum system temperatures encountered, but not less than **250 deg F** (121 deg C).
 - d. Pressure drop not to exceed **3 psig at 38 gpm** (21 kPa at 2.4 L/s).
 - e. **Sensor Accuracy:**
 - 1) Within 2 percent of actual flow between the flow range of **0.8 to 38 gpm** (0.05 to 2.4 L/s).
 - 2) Within 0.5 percent of actual reading at the calibrated velocity.
 - f. Wet calibrate and tag sensors to standards traceable to NIST, and provide each sensor with a certificate of calibration.
3. **Sensor:**
 - a. Rotational sensing of turbine shall be accomplished electronically by sensing electronic impedance change (non-magnetic and non-photoelectric).
 - b. Sensor shall have an integral frequency output linear with flow rate.
 - c. Sensor shall have threaded union on each end.
 - d. Construct turbine elements of polypropylene with sapphire jewel bearings and tungsten carbide shafts.
 - e. Construct wetted metal components of brass or stainless steel.
 - f. House sensor electronics in a NEMA 250, Type 4 enclosure.
 - g. Enclosure shall include connection(s) for field-installed conduit.
 - h. Sensor shall have cable of length sufficient to connect to display module.

4. Display Module:

- a. Remote from sensor.
- b. Enclosure: NEMA 250, Type 4X.
- c. Label terminal strip for all wiring connections.
- d. 120-V ac power supply with 24-V dc output to power the flow sensor.
- e. Remote Interface:
 - 1) Hardwired Analog Outputs for Flow Rate and Totalization: 4 to 20 mA and zero- to 10-V dc.
 - 2) Serial Communication Interface: Compatible with host to share flow rate and totalized flow data.
 - 3) Outputs linear to within 0.1 percent of calibrated span.
- f. Digital display of flow rate and totalized flow.
- g. At least eight display digits for totalization.
- h. Local reset of flow totalization.
- i. Program and data shall be stored in nonvolatile memory in the event of power loss.

F. In-line Body Electromagnetic Flow Meter:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Onicon Incorporated;** F-3200 Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Description:**
 - a. No moving parts.
 - b. Suitable for flow measurement of fluids with electrical conductivity more than 5 microsiemens per cm.
 - c. Inherent bi-directional flow measurement.
 - d. Flow measurement with three pipe diameters upstream and two pipe diameters downstream.
 - e. Wet calibrate and tag meters to standards traceable to NIST, and provide each meter with a certificate of calibration.
 - f. Transmitter **[integral to] [remote from]** meter.
3. **Performance:**
 - a. Accuracy for Velocities between **3.3 and 33 fps** (1 and 10 m/s): Within 0.2 percent of reading.
 - b. Accuracy for Velocities between **1.0 and 3.3 fps** (0.3 and 1 m/s): Within 0.75 percent of reading.
 - c. Accuracy for Velocities Less than **1.0 fps** ((0.3 m/s)): Within **0.0075 fps** (0.0023 m/s).
 - d. Ambient Temperature: **Minus 4 to plus 140 deg F** (Minus 20 to plus 60 deg C).

- e. Process Temperature: **Minus 4 to 212 deg F** (Minus 20 to plus 100 deg C).
 - f. Pressure: **[225 psig (1551 kPa)] [580 psig (3999 kPa)]**.
4. Analog Output Current Signal:
- a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into 1000-ohm load.
 - c. Isolated.
5. Digital Output Signal: Two, programmable, digital/pulse outputs configurable for frequency, pulse, or directional flow.
6. Operator Interface:
- a. Keypad.
 - b. Digital Display: Multiple-line digital display of alphanumeric characters.
 - c. LED for normal and alarm operation.
7. Construction:
- a. Body: **[Epoxy-coated carbon steel] [Type 316 stainless steel]**.
 - b. Body Liner Material: **[PTFE] [Ebonite] [Polypropylene]**.
 - c. Flow Tube: Type 304 stainless steel.
 - d. Connection: **[150 Class flange] [300 Class flange] [Threaded] [Wafer]**.
 - e. Electrodes: Type 316 stainless steel. Quantity determined by manufacturer based on application.
 - f. Electronics Enclosure:
 - 1) Painted aluminum.
 - 2) Removable cover.
 - 3) NEMA 250, Type 6.
- G. Insertion Electromagnetic Flow Meter:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Onicon Incorporated;** F-3500 Series[**with D/B-1200 Series remote display module**].
 - b. **<Insert manufacturer's name; product name or designation>**.
 2. Description:
 - a. No moving parts.
 - b. Suitable for flow measurement of fluids with electrical conductivity between 20 to 60000 microsiemens per centimeter.
 - c. Suitable for pipe sizes **NPS 3 through NPS 72** (DN 80 through DN 1800).
 - d. Wet calibrate and tag meters to standards traceable to NIST, and provide each meter with a certificate of calibration.
 - e. Continuous auto-zero function.

- f. Transmitter integral to meter.
3. Performance:
- a. Flow Range: 0.25 to 20 fps (0.08 to 6.1 m/s).
 - b. Accuracy for Velocities between 2 and 20 fps (0.6 to 6.1 m/s): Within 1 percent of reading.
 - c. Accuracy for Velocities Less than 2 fps (0.6 m/s): Within 0.02 fps (0.006 m/s).
 - d. Ambient Temperature: Minus 5 to 150 deg F (Minus 21 to plus 66 deg C).
 - e. Process Temperature: 15 to 250 deg F (Minus 9 to plus 121 deg C).
 - f. Pressure: 400 psig (2758 kPa).
4. Output Signals:
- a. Field-selectable analog signals.
 - 1) Current Signal (Isolated): 4 to 20 mA.
 - 2) Voltage Signal (Isolated): Zero- to [5] [10]-V dc.
 - b. Digital Signal: Dry-contact closure signaling fault condition.
 - c. Frequency Signal: Zero- to 15-V peak pulse, zero to 500 Hz.
 - d. Scalable Pulse Output:
 - 1) Isolated solid-state dry contact.
 - 2) Contact Rating: 100 mA at 50-V dc.
 - 3) Pulse Duration: 0.5, 1, 2, or 6 seconds.
5. Construction:
- a. Wetted Metal Parts: Type 316 stainless steel.
 - b. Sensor Head: Polysulfone.
 - c. Process Connection: 1-inch (25-mm).
 - d. Instrument Isolation Valve: Full port Type 316 stainless-steel ball valve for system isolation.
 - e. Electrodes: Type 316 stainless steel.
 - f. Electronics Enclosure:
 - 1) Painted aluminum.
 - 2) Removable cover.
 - 3) NEMA 250, Type 4.
 - 4) Electrical Connection: PVC-jacketed cable, 10 feet (3 m) long.
 - 5) Conduit Connection: 1/2-inch ((16 mm))trade size.
6. Display Module:
- a. Remote from meter.
 - b. House in a NEMA 250, Type 4X enclosure.
 - c. Label terminal strip for all wiring connections.
 - d. 120-V ac power supply with 24-V dc output to power the flow sensor.
 - e. Input Signal from Meter: Zero- to 15-V pulse output.

- f. Output Signals: Additional output signals furnished with flow meter connected to display module terminal strip.
- g. Auxiliary Output Signals: Analog current output (isolated) shall be 4 to 20 mA.
- h. Auxiliary Output Signals: Analog voltage output (isolated) shall be zero to [5] [10] V.
- i. Auxiliary Output Signals: Digital output (isolated) shall be solid-state dry contacts rated for 100 mA at 50 V.
- j. Digital Display:
 - 1) Flow rate.
 - 2) Totalized flow.
 - 3) At least six display digits for flow rate and eight display digits for totalization.
 - 4) Bi-directional units with separate digital display for flow and totalization in each direction.
- k. Local reset of flow totalization.
- l. Program and data shall be stored in nonvolatile memory in the event of power loss.
- m. For bi-directional units, provide LED display of flow direction (contacts open or closed).

H. Vortex Shedding Flow Meter with Integral Temperature Measurement:

- 1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. **Onicon Incorporated;** F-2200 Series[with D-2100 Series remote display].
 - b. <Insert manufacturer's name; product name or designation>.
- 2. Description:
 - a. Flow measurement using vortex shedder body with integral 1000-ohm platinum RTD.
 - b. Meter **NPS 3/8 through NPS 8** (DN 10 through DN 200).
 - c. Each meter shall be factory calibrated at five points from **zero to 250 fps** (zero to 76 m/s) and tagged accordingly against the manufacturer's flow standards. The manufacturer shall provide a certificate of calibration for meter.
 - d. Each meter shall be programmed using project-specific application data.
 - e. Meter shall include integral diagnostics to verify installation conditions and proper operation.
- 3. Performance:
 - a. Volumetric Flow Accuracy: Within 1 percent of reading for meter **NPS 1** (DN 25) and larger; within 2 percent of reading for smaller sizes.
 - b. Mass Flow Accuracy: Within 1.5 percent of reading for **NPS 1** (DN 25) and

- larger; within 2.5 percent of reading for smaller sizes.
- c. Ambient Temperature: **Zero to 132 deg F** (Minus 18 to plus 56 deg C).
 - d. Process Temperature: **25 to 464 deg F** (Minus 4 to plus 240 deg C).
 - e. Pressure: Equal to flange rating.
4. Output Signals:
- a. Analog Current Signal of Flow Rate:
 - 1) Two-wire, 4- to 20-mA dc current source.
 - 2) Signal capable of operating into 1000-ohm load.
 - b. Digital Signal: Pulse output for flow totalization. Two wire, scaled pulse, 0.5 Hz, 100 mA at 30-V dc.
5. Operator Interface:
- a. Keypad.
 - b. Digital Display: Two-line digital display of alphanumerical characters. The meter shall display flow rate, flow totalization, and temperature and support field programming of all parameters.
6. Construction:
- a. Material: Type 316L stainless steel for sizes through **NPS 4 (DN 100)**; Type 304 stainless steel for larger sizes.
 - b. Connection: **[Class 300] [Class 600]** flange.
 - c. Vortex Shedder: Unalloyed titanium.
 - d. Shedder Seal: Nickel-plated Inconel.
 - e. Enclosure:
 - 1) Epoxy-painted cast aluminum.
 - 2) Removable screw-on cover.
 - 3) NEMA 250, Type 4X.
 - 4) Electrical Connection: Screw terminals.
 - 5) Conduit Connection: Two, **1/2-inch ((16-mm))**trade size.
7. Remote Display Module:
- a. Remote from meter.
 - b. House in a NEMA 250, Type 4 enclosure.
 - c. Label terminal strip for all wiring connections.
 - d. 120-V ac power supply with 24-V dc output to power the flow meter.
 - e. Input Signal from Meter: Analog current, 4 to 20 mA.
 - f. Output Signals:
 - 1) Analog Current Output: Two wire, 4 to 20 mA, maximum loop resistance 275 ohms.
 - 2) Digital Output (Isolated): Solid-state dry contacts rated for 100 mA at 50-V dc.

- g. Digital Display:
 - 1) Flow rate.
 - 2) Totalized flow.
 - 3) Display Digits: 3.5 for flow rate and 8 for totalization.
 - h. Local reset of flow totalization.
 - i. Program and data shall be stored in nonvolatile memory in the event of power loss.
8. Upstream Flow Straightener:
- a. Flow straightener where required by installation.
 - b. Straightener shall be wafer type, constructed of Type 304 stainless steel, designed to be installed between field-installed flanges.
 - c. Straightener size shall match meter size.
- I. Vortex Shedding Flow Meter with Integral Pressure and Temperature Measurement:
- 1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Onicon Incorporated**; F-2500 Series.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - 2. Description:
 - a. Mass flow measurement corrected for density using vortex shedder body with integral piezoelectric pressure sensors and 1000-ohm platinum RTD.
 - b. Meter **NPS 1/2 through NPS 12 (DN 15 through DN 300)**.
 - c. Each meter shall be factory calibrated at five points from **Zero to 250 fps (0 to 76 m/s)** and tagged accordingly against the manufacturer's flow standards. The manufacturer shall provide a certificate of calibration for meter.
 - d. Each meter shall be programmed using project-specific application data.
 - e. Meter shall include integral diagnostics to verify installation conditions and proper operation.
 - 3. Performance:
 - a. Volumetric Flow Accuracy for Liquid: Within 0.75 percent of reading for Reynolds numbers 20000 and larger.
 - b. Volumetric Flow Accuracy for Steam and Gas: Within 1 percent of reading for Reynolds numbers 20000 and larger.
 - c. Mass Flow Accuracy for Steam and Gas: Within 1.5 percent of reading for Reynolds numbers 20000 and larger.
 - d. Repeatability: Within 0.1 percent.
 - e. Long-Term Stability: Within 0.1 percent per year.
 - f. Ambient Temperature: **Minus 40 to plus 185 deg F** (Minus 40 to plus 85 deg

- C).
 - g. Process Temperature: **Minus 40 to plus 464 deg F** (Minus 40 to plus 240 deg C).
 - h. Pressure: Equal to flange rating.
- 4. Output Signals:
 - a. Analog Current Signal of Flow Rate:
 - 1) Two-wire, 4- to 20-mA dc current source.
 - 2) Signal capable of operating into 1000-ohm load.
 - b. Analog Current Signals for Pressure and Temperature: Separate 4- to 20-mA signals for gage pressure and temperature.
 - c. Digital Signal:
 - 1) Pulse output for flow totalization. Two wire, scaled pulse, 0.5 Hz, 100 mA at 30-V dc.
 - 2) HART, FSK protocol.
- 5. Operator Interface:
 - a. Keypad.
 - b. Digital Display: Two-line digital display of alphanumeric characters. The meter shall display flow rate, flow totalization, pressure, temperature, and support field programming of all parameters.
- 6. Construction:
 - a. Material: Type 316L stainless steel.
 - b. Connection: **[Class 150] [Class 300] [Class 600]** flange.
 - c. Enclosure:
 - 1) Epoxy-painted cast aluminum.
 - 2) Removable screw-on cover.
 - 3) NEMA 250, Type 6.
 - 4) Electrical Connection: Screw terminals.
 - 5) Conduit Connection: Two, **1/2-inch** (16-mm) trade size.
- 7. Upstream Flow Straightener:
 - a. Meter manufacturer shall provide flow straightener where required by installation to comply with manufacturer's installation recommendations.
 - b. Straightener shall be wafer type, constructed of Type 304 stainless steel, designed to be installed between field-installed flanges.
 - c. Straightener size shall match meter size.
- J. Vortex Shedding Flow Meter for Hazardous Environments:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Rosemount, Inc., Emerson Electric Co.;** 8800C Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Standard: ASME MFC-6M.
3. Description:
 - a. FM Approved for hazardous environments.
 - 1) Intrinsically safe for Class I, Division 1, Groups A, B, C, and D; Class II and III, Division 1, Groups E, F, and G.
 - 2) Explosion-Proof for Class I, Division 1, Groups B, C, and D.
 - 3) Dust-Ignition-Proof for Class II and III, Division 1, Groups E, F, and G.
 - b. Sensor shall be isolated from process and replaceable without breaking process seals.
 - c. Meter immune to vibration.
 - d. Clog-free design eliminates gaskets and ports.
 - e. Meter **NPS 1/2 through NPS 12 (DN 15 through DN 300).**
 - f. Each meter shall be factory calibrated and provided with a certificate of calibration.
 - g. Meter shall be furnished with a permanently attached stainless-steel tag.
 - h. Meter shall include integral diagnostics to verify proper operation.
4. Performance:
 - a. Flow Accuracy: Within 0.65 percent of reading plus 0.025 percent of span for Reynolds numbers 20000 and larger.
 - b. Repeatability: Within 0.1 percent of flow rate.
 - c. Long-Term Stability: Within 0.1 percent of flow rate per year.
 - d. Response Time: Greater of three vortex shedding cycles or 0.2 seconds.
 - e. Dampening: Adjustable between 0.2 to 255 seconds.
 - f. Ambient Temperature: **Minus 58 to plus 250 deg F (Minus 50 to plus 121 deg C).**
 - g. Humidity: Zero to 95 percent noncondensing.
 - h. Process Temperature: **Minus 40 to plus 450 deg F (Minus 40 to plus 232 deg C).**
 - i. Pressure: Equal to flange rating.
5. Output Signals:
 - a. Analog Current Signal of Flow Rate:
 - 1) Two-wire, 4- to 20-mA dc current source.
 - 2) Signal capable of operating into 1000-ohm load.

- b. Digital Signal:
 - 1) Pulse output for flow totalization.
 - 2) HART protocol.
- 6. Digital Display: Digital display of alphanumeric characters. The meter shall display flow rate, flow totalization, percent of range, and current output.
- 7. Body and Flanges:
 - a. Material: Type 316L stainless steel.
 - b. Connection: ASME B16.5, **[Class 150]** **[Class 300]** **[Class 600]** flange.
 - c. Enclosure:
 - 1) Polyurethane-painted cast aluminum.
 - 2) Removable screw-on cover.
 - 3) NEMA 250, Type 4X.
 - 4) Electrical Connection: Screw terminals.
 - 5) Conduit Connection: 1/2-inch (16-mm) trade size.

2.7 LIQUID FLOW SENSORS (PRIMARY ELEMENTS)

A. Averaging Pitot Tubes:

- 1. **Products:** Subject to compliance with requirements, **[provide the following]** **[provide one of the following]** **[available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Rosemount, Inc., Emerson Electric Co.;** Model 485 Annubar.
 - b. **<Insert manufacturer's name; product name or designation>.**
- 2. Standards: ASME MFC-12M.
- 3. Description:
 - a. Sensor shall include isolation valves and connections that are suitable for connecting to a remote pressure instrument.
 - b. Sensor shall consist of high- and low-pressure plenums and be able to accommodate an integral RTD.
 - c. Sensor's cross-sectional tee shape shall allow flow separation at a fixed point independent of flow rate, pressure, or temperature with a stable flow coefficient maintained over a wide range of Reynolds numbers.
 - d. Sensor shape shall promote less-turbulent zones on the backside of the sensor. Individual sensing ports shall be located in this less-turbulent region to measure low pressure. Number of sensing ports shall be a function of the pipe size.
 - e. High pressure shall be measured by a frontal slot design extending full length of sensor. Number of slots shall be a function of pipe size.
 - f. Manufacturer shall submit on request independent testing documentation (product test reports), demonstrating compliance with specified performance.

4. Performance:[**Product test reports are required.**]
 - a. Discharge Coefficient Factor: Within 0.75 percent of flow rate.
 - b. Repeatability: Within 0.1 percent.
 - c. Flow Turndown: 10:1.
 - d. Sensor Size for Pipe Size **NPS 2 through NPS 8** (DN 50 through DN 200): Minimum rod Reynolds number of 6000; probe width of **0.59 inch** ((15 mm)).
 - e. Sensor Size for Pipe Size **NPS 6 through NPS 36** (DN 150 through DN 900): Minimum rod Reynolds number of 12500; probe width of **1.060 inch** ((27 mm)).
 - f. Sensor Size for Pipe Size **NPS 12 through NPS 72** (DN 300 through DN 1800): Minimum rod Reynolds number of 25000; probe width of **1.953 inches** (50 mm).
 - g. Process Temperature Limit: **500 deg F** (260 deg C).
 - h. Process Pressure Limit: Equal to flange rating.

5. Construction:
 - a. Sensor Surface Finish: Front surface textured for high-Reynolds-number applications to create a more turbulent boundary layer on front surface of sensor and produce a more predictable and repeatable separation of flow at edge of sensor.
 - b. Sensor Material: Type 316 stainless steel.
 - c. Packing Gland:
 - 1) Wetted Parts: Type 316 stainless steel.
 - 2) Packing Material: Graphite.
 - d. Isolation Valve: Type 316 stainless-steel full port ball valve configured to remove sensor while isolating process.
 - e. Flanged In-line Pipe Spool:
 - 1) Mount sensor in a flanged section of pipe.
 - 2) Pipe material to match adjacent pipe.
 - 3) Flanges to match adjacent pipe.

B. Venturis:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Preso Meters, Division of Racine Federated, Inc.**; Model VB, CV and SSM Series.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. On request, submit independent testing documentation (product test reports), demonstrating compliance with specified performance.
3. Standard: ASME MFC-3M.
4. Performance:

- a. Accuracy within 0.5 percent of measured flow throughout flow range from design to 10 percent of design flow.
 - b. Accuracy with five pipe diameters of straight pipe upstream and two pipe diameters downstream.
 - c. Size and beta ratio shall be matched with transmitter to provide accuracy of entire assembly within 1 percent of design flow rate, when the flow rate is allowed to vary between 10 to 100 percent of the design.
5. Construction:
- a. One-piece bronze or brass construction with threaded connections for pipe sizes **NPS 1/2 through NPS 2** ((DN 15 to DN 50)).
 - b. One-piece plated cast steel with flanged connections for pipe sizes **NPS 2-1/2 through NPS 8** ((DN 65 to DN 200)), and fabricated steel with flanged connections for larger sizes.
 - c. Sensing Taps: Two, accurately located built-in sensing taps, nipples, shut-off valves, and quick connect coupling.
 - d. Identification Tag: Attached to each venturi with a chain and label indicating pipe size, venturi series, station identification, and meter reading at flow rate and pressure differential.
 - e. Use venturi with pressure differential transmitter.

C. Orifice Plates:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Rosemount, Inc., Emerson Electric Co.;** Model 405 Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Standards: ASME MFC-3M or ASME MFC-14M.
3. Performance:
 - a. Orifice plates shall be sharp, square-edged concentric type.
 - b. Shop fabricate and calibrate orifice meter runs through **NPS 2** (DN 50).
 - c. Field fabricate orifice runs **NPS 3** (DN 80) and larger.
 - d. Meter run piping or tubing shall be uniform internal surface, which is free of internal grooves and striations, but is not polished. Out of roundness shall not exceed 0.5 percent. A reduction of the pipe diameter or distortion caused by welding is unacceptable.
 - e. Size orifice plates for **100-inch wg** (24.9-kPa) pressure differential, except that the absolute value of the meter range shall not exceed the absolute value of the flowing pressure.
 - f. Ratio of orifice diameter to actual internal pipe diameter d/B (beta) shall be between 0.70 and 0.30.
 - g. Locate orifice plates in horizontal or vertical lines in accordance with good metering practice.
 - h. Minimum upstream and downstream straight pipe shall comply with ASME Fluid Meters Research Committee Reports.

4. Construction:
 - a. Fabricate the orifice plate and matching companion flanges of Type 316 stainless steel.
 - b. Transmitter connection shall be at least **NPS 1/2 (DN 15)**.
 - c. Stamp the orifice plates with the number and the orifice bore on the handle of the plate.
5. Use orifice plate with pressure differential transmitter.
6. Calibration information and calculations shall comply with either of the referenced standards for each orifice plate.

D. Segmented Wedge Flow Sensor:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Preso Meters, Division of Racine Federated, Inc.**; COIN Series.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Description: Pressure differential design using a segmented or segmental wedge installed in a straight section of pipe.
3. Performance: **[Product test reports are required.]**
 - a. Accuracy within 0.5 percent of the measured flow over flow range from design flow to 10 percent of design flow.
 - b. Accuracy with 10 pipe diameters of straight pipe upstream and five pipe diameters downstream.
 - c. Repeatability shall be within 0.2 percent over flow range.
 - d. Discharge coefficient shall be linear and stable throughout the flow range.
 - e. Determine H/ID ratios to meet specified performance.
 - f. Capable of bi-directional flow measurement with no degradation of performance, with flow in either direction.
 - g. Suitable for working pressure of **200 psig at 200 deg F** (1379 kPa at 93 deg C).
4. Construction:
 - a. Pipe: Type 316 stainless steel with inside diameter to match adjacent pipe. Length determined by manufacturer.
 - b. Wedge: Type 316 stainless-steel segmented angled wedge equal on both sides.
 - c. Flanges: Class 150 **[weld neck] [raised face]**, Type 316 stainless steel.
 - d. Instrument Connections: **NPS 1/2 (DN 15)**, Class 3000, Type 316 stainless-steel half couplings.
 - e. Identification Tag: Stamped or engraved stainless steel.
5. Use with a pressure differential transmitter.

E. Portable Meter Package for Liquid Flow Sensors:

1. Metal-reinforced-plastic carrying case.
2. Waterproof meter with nominal **6-inch (150-mm)** round dial face.
3. Meter with dual rupture-proof liquid-filled bellows having integral temperature compensation.
4. Meter with external range and zero adjustment.
5. Multiple meters in package, if required to accommodate venturis with a wide range of pressure signals.
6. Two connecting hoses, [**10-feet (3-m)**] **<Insert dimension>** long, with quick connect couplings compatible with venturi couplings.
7. Two brass blowdown valves with Buna-N seals and blowdown hoses.
8. Instruction book with flow versus differential curves.
9. Suitable for working pressure of **200 psig (1380 kPa)** at **200 deg F (93.3 deg C)**.
10. Portable meter package to connect to flow sensor without disturbing connection to pressure differential transmitter. Provide isolation valves at connections.
11. Turn over to Owner at Project completion.

2.8 LIQUID FLOW SWITCHES

A. Liquid Flow Switch (Bellows Type):

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **W. E. Anderson, Division of Dwyer Instruments, Inc.**; Series FS-2.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Description:
 - a. Field-adjustable four-vane combinations.
 - b. Field-adjustable set-point adjustment screw.
 - c. Suitable for pipe sizes **NPS 1 through NPS 8 (DN 25 through DN 200)**.
 - d. Switch mounted vertically in horizontal pipe.
3. Performance:
 - a. Flow Rate Actuation and De-actuation: Varies with vane combination and set-point adjustment.
 - b. Pressure Limit: **145 psig (1000 kPa)**.
 - c. Temperature Limit: **230 deg F (110 deg C)**.
 - d. Electrical Rating: 10 A resistive, 3 A conductive at 250-V ac.
 - e. Switch Type: SPDT snap switch.
4. Wetted Parts Construction:
 - a. Bellows: Tin-bronze.
 - b. Vanes: Stainless steel.

- c. Body: Forged brass.
 - d. Process Connection: **NPS 1** (DN 25)).
 5. Enclosure:
 - a. Die-cast aluminum alloy.
 - b. NEMA 250, Type 4.
 - c. Electrical Connection: Cable gland with attached wire leads.
- B. Liquid Flow Switch (Magnetic Type):
 1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **W. E. Anderson, Division of Dwyer Instruments, Inc.**; Series V4.
 - b. **<Insert manufacturer's name; product name or designation>**.
 2. Description:
 - a. Field-adjustable five-vane combinations.
 - b. Suitable for pipe sizes **NPS 1-1/2 through NPS 20** (DN 40 to DN 500).
 - c. Mounting Suitable for Application: Switch vertically mounted in horizontal pipe, or switch horizontally mounted in vertical pipe with flow up.
 - d. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous-environment Class I, Groups C and D; Class II, Groups E, F, and G.
 3. Performance:
 - a. Flow Rate Actuation and De-actuation: Varies with vane combination.
 - b. Pressure Limit: **1000 psig** (6895 kPa) for brass body, **2000 psig** (13790 kPa) for Type 316 stainless-steel body.
 - c. Temperature Range: **Minus 4 to plus 275 deg F** (Minus 20 to plus 135 deg C).
 - d. Electrical Rating: 10 A at 125/250-V ac.
 - e. Switch Type: **[SPDT] [DPDT]** snap switch.
 4. Wetted Parts Construction:
 - a. Vanes: Type 316 stainless steel.
 - b. Body: **[Brass] [Type 316 stainless steel]**.
 - c. Magnetic Keeper: **[Type 430 stainless steel] [Type 316 stainless steel]**.
 - d. Process Connection: **NPS 1-1/2** (DN 40).
 5. Enclosure:
 - a. Die-cast aluminum alloy.
 - b. Threaded cover.
 - c. NEMA 250, Type 4.
 - d. Electrical Connection: Terminal block.
 - e. Conduit Connection: **3/4-inch** (21-mm) trade size.

C. Liquid Flow Switch (Magnetic Type) for Small-Diameter Pipe:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. W. E. Anderson, Division of Dwyer Instruments, Inc.; Series V6.
 - b. <Insert manufacturer's name; product name or designation>.
2. Description:
 - a. Suitable for pipe sizes **NPS 1/2 through NPS 2** (DN 15 through DN 50).
 - b. Mounting Suitable for Application: Switch vertically mounted in horizontal pipe, or switch horizontally mounted in vertical pipe with flow up.
 - c. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous-environment Class I, Groups A, B, C, and D; Class II, Groups E, F, and G.
3. Performance:
 - a. Flow Rate Actuation and De-actuation: Not adjustable.
 - b. Pressure Limit of Body: **1000 psig** (6895 kPa) for brass, **2000 psig** (13790 kPa) for Type 303 stainless-steel body.
 - c. Pressure Limit of Tee: **250 psig** (1724 kPa) for brass, **1000 psig** (6895 kPa) for malleable iron, and **2000 psig** (13790 kPa) for forged carbon steel and stainless steel.
 - d. Temperature Range: **Minus 4 to plus 220 deg F** (Minus 20 to plus 104 deg C).
 - e. Electrical Rating: 5 A at 125/250-V ac.
 - f. Switch Type: [**SPDT**] [**DPDT**] snap switch.
4. Wetted Parts Construction (Lower Body):
 - a. Vanes: Type 301 stainless steel.
 - b. Body: [**Brass**] [**Type 303 stainless steel**].
 - c. Magnet: Ceramic.
 - d. Process Connection: **NPS 1/2** (DN 15).
5. Enclosure (Upper Body):
 - a. [**Brass**] [**Type 303 stainless steel**].
 - b. NEMA 250, Type 4.
 - c. Electrical Connection: Terminal block.
 - d. Conduit Connection: **3/4-inch** (21-mm) trade size.
6. Integral Mounting Tee Furnished with Switch:
 - a. [**Brass**] [**Forged carbon steel**] [**Malleable iron**] [**Stainless steel**].
 - b. Size: [**Match adjacent pipe**] <Insert size>.
 - c. Connection: Threaded pipe.

2.9 LIQUID FLOW TRANSMITTERS

A. Pressure Differential Transmitter with 0.07 Percent Accuracy for Flow Measurement [in Hazardous Environment]:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. **Rosemount, Inc., Emerson Electric Co.;** Model 3051CD.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. FM Approved for hazardous environments.
 - a. Intrinsically safe for Classes I, II, and III, Divisions 1 and 2, Groups A through H.
 - b. Explosion-Proof for Class I, Division 1, Groups B, C, and D.
 - c. Dust-Ignition-Proof for Class II, Division 1, Groups E, F, and G.
 - d. Dust-Ignition-Proof for Class III, Division 1.
3. Performance:
 - a. Range: **Minus 250- to 250-inch wg** (Minus 62.5 to 62.5 kPa).
 - b. Span: Field adjustable.
 - c. Minimum Span: **2.5-inch wg** (500 Pa).
 - d. Accuracy: Within 0.07 percent of span or better.
 - e. Stability: Within 0.125 percent of upper range limit for 5 years.
 - f. Overpressure Limits: **3626 psig** (25000 kPa).
 - g. Process Temperature Limits: **Minus 40 to plus 250 deg F** (Minus 40 to plus 121 deg C).
 - h. Ambient Temperature Limits: **Minus 40 to plus 185 deg F** (Minus 40 to plus 85 deg C).
 - i. Temperature Effect: Within 0.025 percent of upper range limit plus 0.125 percent of span.
 - j. Shock and vibration shall not harm the transmitter.
4. Analog Output Current Signal:
 - a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into 1000-ohm load.
 - c. Digital signal based on HART protocol carried with current signal.
 - d. Dampening: Field selectable zero to 30 seconds.
5. Operator Interface: Zero and span adjustments located behind cover.
6. Display: Five-digit, two-line digital display with **0.4 inch** (10 mm) high alphanumeric characters.
7. Construction:
 - a. Nonwetted parts of transmitter constructed of aluminum or stainless steel.
 - b. Enclosure with removable cover on each side.

- c. Wetted parts of transmitter constructed of Type 316 stainless steel.
 - d. **NPS 1/2 (DN 15)** process connections on bottom of instrument.
 - e. Drain/vent valve on low- and high-pressure connections.
 - f. Two **1/2-inch (16-mm)** trade size conduit connection on side of instrument enclosure.
 - g. Screw terminal block for wire connections.
 - h. NEMA 250, Type 4X.
 - i. Mounting bracket suitable for installation.
 8. Five-Valve Manifold:
 - a. Each transmitter shall have integrally mounted manifold.
 - b. Construct manifold body of Type 316 stainless steel.
 - c. Manifold shall have **NPS 1/2 (DN 15)** process connections.
- B. Liquid Pressure Differential Transmitter for Flow Measurement:
 1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series 645.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Performance:
 - a. Range: Approximately 2 times the set point.
 - b. Span: Adjustable plus or minus 1 mA, non-interactive.
 - c. Accuracy: Within 0.25 percent of full scale.
 - d. Maximum Operating Pressure: 2.5 times range.
 - e. Temperature Limits: **Zero to 175 deg F** (Minus 18 to plus 79 deg C).
 - f. Compensate Temperature Limits: **30 to 150 deg F** (Minus 1 to plus 66 deg C).
 - g. Thermal Effects: 0.02 percent of full scale per degree F.
 - h. Response Time: 30 to 50 ms.
 - i. Shock and vibration shall not harm the transmitter.
 3. Analog Output Current Signal:
 - a. Two wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into 1000-ohm load.
 4. Operator Interface:
 - a. Zero and span adjustments located behind cover.
 - b. Bleed screws on side of body, two screws on low-pressure side, and one screw on high-pressure side, for air in line and pressure cavity.
 5. Construction:
 - a. Aluminum and stainless-steel enclosure with removable cover.
 - b. Wetted parts of transmitter constructed of 17-4 PH or 300 series stainless

- steel.
 - c. NPS 1/4 (DN 8) process connections on side of instrument enclosure.
 - d. Knock out for 1/2-inch (15-mm) trade size conduit connection on side of instrument enclosure.
 - e. Screw terminal block for wire connections.
 - f. NEMA 250, Type 4X.
 - g. Mounting bracket shall be suitable for installation.
6. Transmitter shall have three-valve manifold. Construct manifold of brass, bronze, or stainless steel. Manifold shall have NPS 1/4 (DN 8) process connections.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Provide the services of an independent inspection agency to confirm that proposed mounting locations comply with requirements indicated and approved submittals.
 - 1. Indicate dimensioned locations with mounting height for all surface-mounted products to walls and ceilings on shop drawings.
 - 2. Do not begin installation without submittal approval of mounting location.
- E. Complete installation rough-in only after confirmation by independent inspection is complete and approval of location is documented for review by Owner and Architect on request.
- F. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTRUMENT APPLICATIONS

- A. Select from instrument types to achieve performance requirements and characteristics indicated while subjected to full range of system operation encountered.
- B. Duct-Mounted Airflow Sensors:

1. Measured Velocities [500 fpm (2.5 m/s)] <Insert value> and Less: Thermal airflow station.
 2. Measured Velocities Greater than [500 fpm (2.5 m/s)] <Insert value>: [Pitot-tube airflow sensor station] [Thermal airflow station].
- C. Damper-Mounted Airflow Sensors:
1. Measured Velocities [400 fpm (2.0 m/s)] <Insert value> and Less: Thermal airflow station.
 2. Measured Velocities Greater than [500 fpm (2.5 m/s)] <Insert value>: [Pitot-tube airflow sensor station] [Thermal airflow station] [Damper with integral flow measurement] [Damper with integral flow control].
- D. Fan-Mounted Airflow Sensors:
1. Measured Velocities [500 fpm (2.5 m/s)] <Insert value> and Less: Thermal airflow station.
 2. Measured Velocities Greater than [500 fpm (2.5 m/s)] <Insert value>: [Pitot-tube fan inlet airflow sensor station] [Piezometer ring fan inlet airflow sensor] [Thermal airflow station].
- E. Airflow Switches:
1. Measured Velocities 400 fpm (2.0 m/s) and Less: Polymer film sail switch.
 2. Measured Velocities Greater than 400 fpm (2.0 m/s): Stainless-steel single-vane switch.
- F. Airflow Transmitters for Use with Pitot-Tube-Type Sensors:
1. Exhaust Air Airflow: [Airflow transmitter with 0.10 percent accuracy and auto-zero feature] [Airflow transmitter with 0.25 percent accuracy and auto-zero feature] [Pressure differential transmitter for airflow measurement] [Pressure differential indicating transmitter, switch, and controller for airflow measurement].
 2. Outdoor Air Airflow: [Airflow transmitter with 0.10 percent accuracy and auto-zero feature] [Airflow transmitter with 0.25 percent accuracy and auto-zero feature] [Pressure differential transmitter for airflow measurement] [Pressure differential indicating transmitter, switch and controller for airflow measurement].
 3. Return Air Airflow: [Airflow transmitter with 0.10 percent accuracy and auto-zero feature] [Airflow transmitter with 0.25 percent accuracy and auto-zero feature] [Pressure differential transmitter for airflow measurement] [Pressure differential indicating transmitter, switch, and controller for airflow measurement].
 4. Supply Air Airflow: [Airflow transmitter with 0.10 percent accuracy and auto-zero feature] [Airflow transmitter with 0.25 percent accuracy and auto-zero feature] [Pressure differential transmitter for airflow measurement] [Pressure differential indicating transmitter, switch, and controller for airflow measurement].

G. Liquid Flow Sensors (Primary Elements):

1. **<Insert system> System, <Insert unique application>: [Averaging pitot tubes] [Venturis] [Orifice plates] [Segmented wedge].**

H. Liquid Flow Meters:

1. **<Insert system> System, <Insert unique application>: [Insertion paddle wheel transmitter] [Turbine flow meter] [Electromagnetic flow meter] [Vortex shedding flow meter with integral temperature measurement] [Vortex shedding flow meter with integral pressure and temperature measurement] [Vortex shedding flow meter for hazardous environments].**

I. Liquid Flow Switches:

1. **<Insert system> System, <Insert unique application>: [Bellows type] [Magnetic type].**

J. Liquid Flow Transmitters:

1. **<Insert system> System, <Insert unique application>: [Pressure differential transmitter with 0.07 percent accuracy for flow measurement] [Liquid pressure differential transmitter].**

3.3 INSTALLATION, GENERAL

- A. Furnish and install products required to satisfy more stringent of all requirements indicated.
- B. Install products level, plumb, parallel, and perpendicular with building construction.
- C. Properly support instruments, tubing, piping wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a **<Insert value>** force.
- D. Install ceiling, floor, roof, and wall openings and sleeves required by installation. Before proceeding with drilling, punching, or cutting, check location first for concealed products that could potentially be damaged. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- E. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- F. Corrosive Environments:
1. Use products that are suitable for environment to which they will be subjected.
 2. If possible, avoid or limit use of materials in corrosive environments, including, but not limited to, the following:

- a. Laboratory exhaust airstreams.
 - b. Process exhaust airstreams.
 - c. **<Insert requirement>**.
3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings with a corrosive-resistant coating that is suitable for environment.
 4. Where instruments are located in a corrosive environment and are not corrosive resistant from the manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.4 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.5 INSTRUMENTS, GENERAL INSTALLATION REQUIREMENTS

- A. Mounting Location:
 1. Rough-in: Outline instrument-mounting locations before setting instruments and routing cable, wiring, tubing, and conduit to final location.
 2. Install switches and transmitters for air and liquid flow associated with individual air-handling units and connected ductwork and piping near air-handlings units co-located in air-handling unit system control panel, to provide service personnel a single and convenient location for inspection and service.
 3. Install liquid and steam flow switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 4. Install airflow switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 5. Mount switches and transmitters not required to be mounted within system control panels on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
 6. Install instruments in steam, liquid, and liquid-sealed-piped services below their process connection point. Slope tubing down to instrument with a slope of [2] [3] **<Insert number>** percent.

7. Install instruments in dry gas and non-condensable-vapor piped services above their process connection point. Slope process connection lines up to instrument with a minimum slope of [2] [3] <Insert number> percent.

B. Mounting Height:

1. Mount instruments in user-occupied space to match mounting height of light switches unless otherwise indicated on Drawings. Mounting height shall comply with codes and accessibility requirements.
2. Mount switches and transmitters, located in mechanical equipment rooms and other similar space not subject to code, state, and federal accessibility requirements, within a range of 42 to 72 inches (1050 to 1800 mm) above the adjacent floor, grade, or service catwalk or platform.
 - a. Make every effort to mount at 60 inches (1500 mm).

- C. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static-pressure class and leakage and seal classes indicated using neoprene gaskets or grommets.

3.6 FLOW INSTRUMENTS INSTALLATION

A. Airflow Sensors:

1. Install sensors in straight sections of duct with manufacturer-recommended straight duct upstream and downstream of sensor.
2. Installed sensors shall be accessible for visual inspection and service. Install access door(s) in duct or equipment located upstream of sensor, to allow service personnel to hand clean sensors.

B. Liquid and Steam Sensors:

1. Install sensors in straight sections of piping with manufacturer-recommended straight piping upstream and downstream of sensor.
2. Alert manufacturer where installation cannot accommodate recommended clearance, and solicit recommendations for field modifications to installation, such as flow straighteners, to improve condition.
3. Install pipe reducers for in-line sensors smaller than line size. Position reducers at distance from sensor to avoid interference and impact on accuracy.
4. Install in-line sensors with flanges or unions to provide drop-in and -out installation.

C. Liquid Flow Meters:

1. Install meters in straight sections of piping with manufacturer-recommended straight piping upstream and downstream of sensor.
2. Install pipe reducers for in-line meters smaller than line size. Install reducers at distance from meter to avoid interference and impact on accuracy.
3. Install in-line meters with flanges or unions to provide drop-in and -out

installation.

4. Insertion Meters:

- a. Install system process connections full size of meter connection, but not less than [NPS 1 (DN 25)] [NPS 1-1/2 (DN 40)] [NPS 2 (DN 50)] **<Insert pipe size>**. Provide [stainless-steel] bushing if required to mate to system connection.
- b. Install meter in top dead center of horizontal pipe positioned in an accessible location to allow for inspection and replacement.
- c. In applications where top-dead-center location is not possible due to field constraints, install meter at location along top half of pipe if acceptable by manufacturer for mounting orientation.

D. Liquid Switches:

1. Install system process connection full size of switch connection, but not less than [NPS 1 ((DN 25))] [NPS 1-1/2 ((DN 40))] [NPS 2 ((DN 50))] **<Insert pipe size>**. Install [stainless-steel] bushing if required to mate switch to system connection.
2. Install switch in top dead center of horizontal pipe positioned in an accessible location to allow for inspection and replacement.
3. In applications where top-dead-center location is not possible due to field constraints, install switch at location along top half of pipe if switch is acceptable by manufacturer for mounting orientation.

E. Transmitters:

1. Install airflow transmitters serving an air system in a single location adjacent to or within system control panel.
2. Install liquid flow transmitters, not integral to sensors, in vicinity of sensor. Where multiple flow transmitters serving same system are located in same room, co-locate transmitters by system to provide service personnel a single and convenient location for inspection and service.

3.7 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification[**and on face of ceiling directly below instruments concealed above ceilings**].

3.8 CLEANING

- A. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels, and other foreign materials from exposed interior and exterior surfaces.
- B. Wash and shine glazing.

- C. Polish glossy surfaces to a clean shine.

3.9 CHECKOUT PROCEDURES

A. Description:

1. Check out installed products before continuity tests, leak tests, and calibration.
2. Check instruments for proper location and accessibility.
3. Check instruments for proper installation with respect to direction of flow, elevation, orientation, insertion depth, or other applicable considerations that will impact performance.
4. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material, and support.

B. Flow Instrument Checkout:

1. Verify that sensors are installed correctly with respect to flow direction.
2. Verify that sensor attachment is properly secured and sealed.
3. Verify that processing tubing attachment is secure and isolation valves have been provided.
4. Inspect instrument tag against approved submittal.
5. Verify that recommended upstream and downstream distances have been maintained.

3.10 ADJUSTMENT, CALIBRATION, AND TESTING

A. Description:

1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
3. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.
4. Equipment and procedures used for calibration shall meet instrument manufacturer's recommendations.
5. Provide diagnostic and test equipment for calibration and adjustment.
6. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
8. If after-calibration-indicated performance cannot be achieved, replace out-of-tolerance instruments.
9. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of

specific requirements, and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.

C. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

D. Sensors: Check sensors at zero, 50, and 100 percent of Project design values.

E. Switches: Calibrate switches to make or break contact at set points indicated.

F. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistance source.

3.11 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of systems and equipment Installer] [manufacturer's authorized service representative]**. Include **[monthly] [quarterly] [semiannual] [annual]** preventive maintenance, repair, or replacement of worn or defective components, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.12 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain instrumentation and control devices.
- B. Coordinate video with operation and maintenance manuals and classroom instruction for use by Owner in operating, maintaining, and troubleshooting.
- C. Record videos on DVD disks.
- D. Owner shall have right to make additional copies of video for internal use without

paying royalties.

END OF SECTION 230923.14

SECTION 230923.16 - GAS INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes the Following Gas Instruments:
 - 1. Carbon-dioxide sensors and transmitters.
 - 2. Combination carbon dioxide and VOC sensors and transmitters.
 - 3. Single-point oxygen monitoring system.
 - 4. Multipoint carbon-monoxide monitoring system.
 - 5. VOC sensors and transmitters.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.16**.

1.3 DEFINITIONS

- A. NDIR: Nondispersive infrared.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
 - 1. Operating characteristics, electrical characteristics, and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
 - 2. Installation instructions, including factor affecting performance.
 - 3. Product description with complete technical data, performance curves, product specification sheets.

- B. LEED Submittals: Product data of carbon dioxide instruments for use in showing compliance with requirements in ASHRAE 62.1.
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and **[mounting]**details.
 - 2. Include diagrams for power, signal, and control wiring.
 - 3. Number-coded identification system for unique identification of wiring, cable, and tubing ends.
- D. Samples: For each exposed product installed in finished space.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plan drawings and corresponding product installation details, drawn to scale, on which wall-mounted instruments located in finished space are shown and coordinated with each other, showing relationship to light switches, fire alarm devices, and other installed devices using input from installers of the items involved.
- B. Product Test Reports: For each product, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For gas instruments to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 CARBON-DIOXIDE SENSORS AND TRANSMITTERS

- A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1. **Vaisala Inc.;** GMW 20 series for wall-mounted space applications and GMD 20 series for duct-mounted applications.
 - 2. **<Insert manufacturer's name; product name or designation>.**
- B. Description:
 - 1. NDIR technology or equivalent technology providing long-term stability and reliability.
 - 2. Two-wire, 4-20 mA output signal, linearized to carbon-dioxide concentration in ppm.

C. Construction:

1. House electronics in an ABS plastic enclosure. Provide equivalent of NEMA 250, Type 1 enclosure for wall-mounted space applications and NEMA 250, Type 4 for duct-mounted applications.
2. Equip with digital display for continuous indication of carbon-dioxide concentration.

D. Performance:

1. Measurement Range: Zero to 2000 ppm.
2. Accuracy: Within 2 percent of reading, plus or minus 30 ppm.
3. Repeatability: Within 1 percent of full scale.
4. Temperature Dependence: Within 0.05 percent of full scale over an operating range of 25 to 110 deg F (minus 4 to 43 deg C).
5. Long-Term Stability: Within 5 percent of full scale after more than five years.
6. Response Time: Within 60 seconds.
7. Warm-up Time: Within five minutes.

E. Provide calibration kit. Turn over to Owner at start of warranty period.

2.2 COMBINATION CARBON-DIOXIDE AND VOC SENSORS AND TRANSMITTERS

A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

1. [Siemens Building Technologies, Inc.](#); QPA20 series.
2. **<Insert manufacturer's name; product name or designation>.**

B. Description:

1. NDIR technology or equivalent technology that provides long-term stability and reliability.
2. Senses and responds to combined concentration of more than 30 contaminants commonly found in indoor environments.

C. Output Signal: Zero to 10-V dc.

D. Performance:

1. Carbon-Dioxide Range: Zero to 2000 ppm.
2. Carbon-Dioxide Accuracy: Within 50 ppm, plus 2 percent measured value.
3. VOC Range: Zero to 2000 ppm.
4. VOC Sensitivity Ranges: Field selectable, low, normal, high.
5. Ambient Temperature: 32 to 122 degrees F.
6. Ambient Relative Humidity: 5 to 95 percent non-condensing.

E. Enclosure: White plastic.

- F. Electrical Connections: Screw terminals.
- G. Display: Digital, LCD.

2.3 SINGLE-POINT OXYGEN MONITORING SYSTEM

- A. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - 1. [MSA Instrument Division, Inc.](#); Toxgard II Monitor System.
 - 2. <Insert manufacturer's name; product name or designation>.
- B. Description:
 - 1. System shall measure and display a single gas concentration, provide local audio and visual alarms when preset limits are exceeded, and send output signals of gas concentration and detected alarms.
 - 2. System shall require no periodic maintenance other than periodic checking of sensor response to a known concentration of gas.
 - 3. System shall be designed to provide for installation, setup, and start-up from outside of unit enclosure without need to open the enclosure door.
 - 4. System shall be factory calibrated and ready for operation after installation.
 - 5. Monitor shall be internally wired to accommodate a single-point field power connection.
- C. Performance:
 - 1. Range: Full scale, zero to 25 percent oxygen.
 - 2. Zero Drift: Within 1 percent per year.
 - 3. Span Drift: Within 10 percent per year.
 - 4. Repeatability: Within 1 percent of full scale.
 - 5. Linearity: Within 2 percent of full scale.
 - 6. Step Change Response Time: Within 12 seconds.
- D. Enclosure:
 - 1. NEMA 250, Type 4X.
 - 2. Access to the inside of enclosure, as well as to controller, display, and wiring connections, shall be through full-length door on front of enclosure.
 - 3. Door with shatterproof window sized to provide viewing of visual display and indicator lights.
 - 4. Equip enclosure with mounting brackets for the purpose of attaching the unit to a flat surface.
 - 5. Provide door with key lock access to inside enclosure.
- E. Controller:
 - 1. Password-protected access through full-function keypad.
 - 2. Set:

- a. Real-time clock.
 - b. Alarm levels.
 - c. Change span-gas values.
 - d. Display date of last calibration.
 - e. Display minimum, maximum, and average gas values.
 - f. Change address, future calibration time, and date.
3. Automatic return-to-normal-operation feature after calibration.
 4. Date stamps last successful calibration.
 5. Time and date stamps events.
 6. Selectable lockout of output signals during calibration.
 7. Logs minimum, maximum, and average gas concentrations over selected time intervals.
- F. Visual Display:
1. Four-digit LED or backlight LCD display visible from front face of enclosure.
 2. Value displayed shall be a direct reading of gas concentration.
 3. Displays system status indicators.
 4. Visual Alarm Indication:
 - a. Three separate alarm levels: Caution, Warning, and Alarm.
 - b. Separate strobes for Warning and Alarm conditions. Externally mount the two strobes on top of enclosure.
 5. Indication of sensor nearing end of its useful life based on the sensor output, not on the time the sensor was in service.
 6. Displays average, minimum, and maximum gas concentrations of the sensor over selected time.
 7. Malfunction Indication Alarm: Displays a separate unique character when an over range or under range condition exists, a sensor signal sensor is lost, or a set-point error or memory failure occurs.
- G. Audible Alarm:
1. Provides an audible horn when an alarm condition occurs.
 2. Horn shall be rated for 95 dB with selectable output tones.
 3. Mount horn inside or on exterior of enclosure.
 4. Activate horn through a horn relay. Horn relay shall be form "A" contacts and set as normally open and common.
- H. Operator Interface:
1. Door Audible Alarm Acknowledge Switch:
 - a. Push-button switch located on front door shall silence audible alarm.
 - b. Switch shall reset latched alarms if normal gas conditions exist. Visual alarms shall remain on as long as alarms are exceeded.

2. Operating Modes and Parameters Selection: Selections listed shall be accomplished by the use of switches, jumpers, or remote control not involving the use of tools.
 - a. Display range value.
 - b. Latching or nonlatching mode for the alarm set points.
 - c. Upscale or downscale acting alarms.
- I. Output Signal:
1. Relays:
 - a. Provide one relay for each set-point level for each of the three alarm levels.
 - b. Provide one relay for fault conditions.
 - c. Alarm and fault relays shall be form "C," SPDT. Contacts shall be rated for 5 A resistive at 250-V ac or 30-V dc.
 - d. Contacts shall be capable of being selected normally open or normally closed.
 - e. Alarm relays shall be normally de-energized. The fault relay shall be normally energized.
 2. Analog Output:
 - a. Two-wire, 4- to 20-mA, **[isolated] [nonisolated] [isolated or nonisolated]** current source.
 - b. Signal capable of operating into a 600-ohm load.
 3. Digital Communication:
 - a. Bidirectional sending and receiving of digital signals.
 - b. Digital signals shall comply with FTT-10-based communication.
 - c. Protocol shall be LonTalk supported by Lon Works.
 - d. Signal speed shall be no greater than 78.1 kBs per second.
- J. Sensor:
1. Electrochemical fuel-cell type does not require periodic addition of reagents.
 2. Sensor shall be replaceable without the need for tools.
 3. Sensors shall have a minimum useful life of one year. Replace failed sensors at no charge within first year.
 4. Mount sensor externally on the side or bottom of enclosure. Where indicated on Drawings, mount sensor remote from enclosure.
 5. Remote Mounting:
 - a. Provide sensor in a separate enclosure. Enclosure shall be NEMA 250, Type 4X, except when sensor is installed in a hazardous location, then enclosure shall be an explosion-proof type suitable for the application.
 - b. Provide sensor with cable for connecting to monitor.
 - c. Provide sensor with mounting hardware suitable for application.
 - d. For duct-mounted applications, the sensor installation shall provide kit for

calibration of the sensor without removing sensor from duct.

K. Gas Sampling Pump:

1. Where required by application, provide a pump mounted inside the enclosure to provide a motive force to induce flow of gas sample across the sensor.
2. Signal to the sensor from the pump shall be in digital communication format to eliminate radio-frequency interference (RFI) and electromagnetic interference (EMI).
3. A flow sensor shall activate a relay when the gas sample falls below the acceptable flow rate to the sensor and shall indicate a loss of gas flow on the display.
4. Introduction of a calibration gas to the gas sensor shall be through an integral push-button valve. This push-button valve shall return to monitoring the sampled area when released.

L. Battery Backup:

1. Provide battery backup power supply to continue normal operation if normal power source is interrupted.
2. Transfer to battery backup shall be automatic and shall be indicated on the display.
3. Mount battery backup power supply inside enclosure.
4. Battery backup shall be continuously charged during normal operation.
5. Battery life shall be at least 0.5 hours with strobes flashing, alarm conditions asserted, and horn sounding.

M. Calibration:

1. Calibrate and adjust functions through nonintrusive hand-held wireless remote control without opening enclosure door.
2. Enter calibration mode through hand-held wireless remote control unit. The display of the monitor shall instruct the user on when to apply zero and span gas. The system shall automatically adjust its internal settings to the proper calibration values without further intervention by the user. On completion of a successful calibration, the system shall exit the calibration mode. Date stamp of last successful calibration is retained in the system internal memory, with capability to be indicated on display. If calibration is unsuccessful for any reason, the display shall show an unsuccessful calibration attempt and revert to its previous calibration settings.
3. Wireless method shall employ a digitally encoded infrared light beam.
4. Hand-held wireless remote control shall let the user perform sensor zeroing and calibration.
5. Hand-held wireless remote control shall let the user perform sensor zeroing and calibration, as well as activate all functions and features of the monitor.
6. The monitor infrared link shall not be affected by natural and man-made low-level ambient light.

N. Automatic Calibration System:

1. Provide automatic calibration of all oxygen monitors installed. Number of automatic calibration systems shall be determined by supplier based on location and quantity of oxygen monitors.
2. Automatic calibration system shall, without manual intervention, periodically perform a complete calibration of the sensor.
3. System shall exchange digital signals with sensor.
4. Automatic calibration shall be adjustable from as many as three times per day to only once every 30 days.
5. Sensor alarms shall be suppressed or disabled until the automatic calibration cycle is completed.
6. Manual calibration of the sensor shall be initiated at any time with a hand-held infrared remote control without the need to disable or turn off the automatic calibration system.
7. House the system in a separate NEMA 250, Type 4X enclosure from the oxygen monitoring system. Enclosure shall have provisions for wall mounting.
8. Digital displays shall indicate zero and when span gas is being applied to the sensor, the status, and any fault condition.
9. Provide with a separate valve condulet to monitor the condition of the calibration cylinders attached to the calibration system. Insufficient gas pressure to calibrate the sensor shall light the fault indicator.

2.4 MULTIPOINT CARBON-MONOXIDE MONITORING SYSTEM

- A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

1. [MSA Instrument Division, Inc.](#); MultiGard.
2. **<Insert manufacturer's name; product name or designation>.**

- B. Description:

1. Each sampling point shall monitor any variation in the carbon-monoxide concentration level.
2. Each sampling point shall be individually piped to the monitoring system.
3. Provide **[each]** sampling point with a 0.3-micron filter.
4. Each sampling point shall be an alarm point.
5. A dual-head diaphragm pump shall draw an air sample through piping system and through a microprocessor-controlled sequencer feeding an analyzer with a new sample every **[15] <Insert number>** seconds.
6. Sample time shall be adjustable in 1 second increments from zero to 60 minutes.
7. Span and zero calibration gas shall be automatically initiated by the microprocessor. System shall also provide manual initiation of span and zero calibration gas.
8. Analyzer output shall be corrected by the microprocessor.
9. Monitoring system shall have **[8] [16] [24] [32]** sample points.
10. System shall operate on 120-V ac, single-phase, 60-Hz power.
11. Final adjustment; calibration, testing, and startup of the system shall be performed by a trained representative of manufacturer.

C. Analyzer:

1. Analyzer shall operate using principle of nondispersive infrared absorption.
2. Sampling response time shall be within 10 seconds.
3. Zero drift and span drift shall be less than 1 percent of full scale within a 24-hour period.
4. Repeatability shall be within 1 percent of full scale.
5. Accuracy shall be within 1 percent of full scale.
6. Calibration range shall be zero to 500 ppm.
7. Digital display on analyzer face with scale shall be in ppm.
8. Temperature shall be compensated from 30 to 120 deg F ((minus 1 to 49 deg C)) ambient temperature.

D. Control and Display:

1. Each sample shall send a 4-20 mA output signal proportional to the highest concentration.
2. Alphanumeric visual display of current analyzer concentration reading shall be in ppm or another industry-accepted measurement.
3. Visual indication for sample analyzing, sample high-concentration alarm, analyzer malfunction, and calibration.
4. Any number and configuration of sample points shall be capable of being bypassed.
5. Each sample point shall be capable of being manually sampled through an override feature.
6. System parameters shall be stored in nonvolatile memory.
7. Provide at least an eight-hour battery backup of current alarm status. Battery shall be rechargeable.

E. Enclosure:

1. NEMA 250, **[Type 1] [or] [Type 12]**.
2. Hinged and locking door, full size of face.
3. House all system components. Multiple adjoining enclosures are acceptable if joined to a common support structure.

F. Calibration Equipment:

1. Provide equipment necessary to automatically and manually calibrate the system, including, but not be limited to, the following:
 - a. Regular assembly.
 - b. Zero cap.
 - c. Calibration cap.
 - d. Two cylinders filled with calibration gas.
 - e. Instruction book.
 - f. Carrying case.

2.5 VOC SENSORS AND TRANSMITTERS

- A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
1. **Building Automation Products Inc.;** BA/AQS.
 2. **<Insert manufacturer's name; product name or designation>.**
- B. Description:
1. VOC sensor shall use an oxidizing element that varies resistance with contaminant gases.
 2. Senses and responds to combined concentration of more than 30 contaminants commonly found in indoor environments.
- C. Output Signal: Zero to **[5] [or] [10]**-V dc with minimum load resistance of 4000 ohms.
- D. Performance:
1. Measurement Range: Zero to 100 percent.
 2. Ambient Temperature: **32 to 140 deg F** (zero to 60 deg C).
 3. Ambient Relative Humidity: 5 to 95 percent non-condensing.
- E. Enclosure: Lexan.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Furnish and install products required to satisfy more stringent of all requirements indicated.
- B. Install products level, plumb, parallel, and perpendicular with building construction.
- C. Properly support instruments, tubing, piping, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to seismic loads.
- D. Fastening Hardware:
 - 1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by using excessive force or oversized wrenches.
 - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- E. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- F. Corrosive Environments:
 - 1. Use products that are suitable for environment to which they are subjected.
 - 2. If possible, avoid or limit use of materials in corrosive environments, including but not limited to, the following:
 - a. Laboratory exhaust airstreams.
 - b. Process exhaust airstreams.
 - c. **<Insert requirements>**.
 - 3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 - 4. Where instruments are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.3 ELECTRICAL POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."

- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.4 INSTRUMENTS, GENERAL INSTALLATION REQUIREMENTS

A. Mounting Location:

1. Install transmitters for gas associated with individual air-handling units and associated connected ductwork and piping near air-handlings units co-located in air-handling unit system control panel, to provide service personnel a single and convenient location for inspection and service.
2. Install gas switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
3. Mount switches and transmitters not required to be mounted within system control panels on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer's mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
4. Install instruments in dry gas and non-condensable vapor piped services above their process connection point. Slope process connection lines up to instrument with a minimum slope of [2] [3] <Insert number> percent.

B. Mounting Height:

1. Mount instruments in user-occupied space to match mounting height of light switches unless otherwise indicated on Drawings. Mounting height shall comply with codes and accessibility requirements.
2. Mount switches and transmitters located in mechanical equipment rooms and other similar space not subject to code, state, and federal accessibility requirements within a range of 42 to 72 inches (1.1 to 1.6 m) above the adjacent floor, grade, or service catwalk or platform.
 - a. Make every effort to mount at 60 inches ((1.5 m)).

- C. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static-pressure class and leakage and seal classes indicated, using neoprene gaskets or grommets.

3.5 CARBON-MONOXIDE MONITORING SYSTEM

- A. Install sample points in monitored area to provide accurate measurement of gas concentration.
- B. Install exposed sampling points with a finished appearance consistent with other materials in space. Submit proposed products to be installed for review and approval.

- C. Individually install each sample point to the carbon-monoxide monitoring system.
- D. Install tubing in a minimum size of **NPS 3/8 (DN 10)**.
- E. Use compression fittings at connections to equipment.
- F. If not indicated on Drawings, locate carbon-monoxide monitoring system in a secured and serviceable location accessible to authorized personnel.
- G. Support carbon-monoxide monitoring system from floor or wall. Support floor-mounted systems using a structural channel frame. Provide mounting brackets.

3.6 OXYGEN MONITORING SYSTEM

- A. Install monitor in space to provide an accurate measurement of gas concentration.
- B. Support oxygen monitoring system from wall.

3.7 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification on face.

3.8 CHECKOUT PROCEDURES

- A. Check out installed products before continuity tests, leak tests, and calibration.
- B. Check instruments for proper location and accessibility.
- C. Check instruments for proper installation on direction of flow, elevation, orientation, insertion depth, or other applicable considerations that impact performance.
- D. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material, and support.

3.9 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:
 - 1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
 - 2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and

- adjustment.
3. For each analog instrument, perform a three-point calibration test for both linearity and accuracy.
 4. Equipment and procedures used for calibration shall comply with instrument manufacturer's written recommendations.
 5. Provide diagnostic and test equipment for calibration and adjustment.
 6. Field instruments and equipment used to test and calibrate installed instruments shall have an accuracy of at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
 7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
 8. If, after calibration, indicated performance cannot be achieved, replace out-of-tolerance instruments.
 9. Comply with field-testing requirements and procedures in ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.
- B. Analog Signals:
1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
 2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
 3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.
- C. Digital Signals:
1. Check digital signals using a jumper wire.
 2. Check digital signals using an ohmmeter to test for contact.
- D. Meters: Check sensors at zero, 50, and 100 percent of Project design values.
- E. Sensors: Check sensors at zero, 50, and 100 percent of Project design values.
- F. Switches: Calibrate switches to make or break contact at set points indicated.
- G. Transmitters:
1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
 2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistance source.
- 3.10 MAINTENANCE SERVICE
- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of**

gas system and equipment installer] [manufacturer's authorized service representative]. Include **[monthly] [quarterly] [semiannual] [annual]** preventive maintenance, repair, or replacement of worn or defective components, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.11 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain instrumentation and control devices.
- B. Coordinate gas instrument demonstration video with operation and maintenance manuals and classroom instruction for use by Owner in operating, maintaining, and troubleshooting.
- C. Record videos on DVD disks.
- D. Owner shall have right to make additional copies of video for internal use without paying royalties.

END OF SECTION 230923.16

SECTION 230923.17 - LEVEL INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes liquid-level switches, sensors, and transmitters.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.17**.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include operating characteristics; electrical characteristics; and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
 - 2. Include product description with complete technical data, performance curves, and product specification sheets.
- B. Shop Drawings:
 - 1. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Include diagrams for power, signal, and control wiring.
 - 3. Include number-coded identification system for unique identification of wiring, cable, and tubing ends.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For level instruments, to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Environmental Conditions:
- Instruments shall operate without performance degradation under the ambient environmental temperature, pressure, humidity, and vibration conditions specified and encountered for installed location.
 - If instrument alone cannot comply with requirement, install instrument in a protective enclosure that is isolated and protected from conditions impacting performance. Enclosure shall be internally insulated, electrically heated[**and cooled**], filtered, and ventilated as required by instrument and application.

2.2 LEVEL SWITCHES

- A. Liquid-Level Switch (Magnetic Type with Float):
- Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - [W. E. Anderson Division, Dwyer Instruments, Inc.](#); Series L4.
 - <Insert manufacturer's name; product name or designation>**.
 - Description:
 - Mounting Suitable for Application: Horizontal or vertical switch mounting.
 - Float arm with hinge design limits vertical movement to prevent sticking.
 - Replaceable float with threaded connection.
 - Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments (Class I, Groups C and D; Class II, Groups E, F, and G).
 - Performance:
 - Level Actuation and De-Actuation: **0.75-inch (20-mm)** deadband.
 - Body Pressure Limit: **1000 psig ((6895kPa))** for brass body; **2000 psig (13790 kPa)** for Type 316 stainless-steel body.
 - Float Pressure Limit: **150 psig (1034 kPa)**.
 - Temperature Range: **Minus 4 to 275 deg F (Minus 20 to 135 deg C)**.

- e. Electrical Rating: 10 A at 125/250-V ac.
 - f. Switch Type: **[SPDT] [DPDT]** snap switch.
4. Wetted Parts Construction:
- a. Float and Rod: Type 316 stainless steel.
 - b. Body: **[Brass] [Type 316 stainless steel]**.
 - c. Magnetic Keeper: **[Type 430 stainless steel] [Type 316 stainless steel]**.
 - d. Process Connection: **NPS 1-1/2 (DN 40) NPT**.
 - e. Enclosure:
 - 1) Die-cast aluminum alloy.
 - 2) Threaded cover.
 - 3) NEMA 250, Type 4.
 - 4) Electrical Connection: Terminal block.
 - 5) Conduit Connection: **NPS 3/4 (NPS 20) NPT**.
- B. Electrode-Type Liquid-Level Switches:
- 1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Proximity Division, Dwyer Instruments, Inc.;** Model DPL110.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - 2. Description:
 - a. Conductivity technology.
 - b. Dual point level settings.
 - c. No moving parts.
 - d. Adjustable sensitivity.
 - 3. Performance:
 - a. Pressure Limit: **30 psig (207 kPa)**.
 - b. Temperature Limit: **212 deg F (100 deg C)**.
 - c. Power Supply: 120-V ac, 50 or 60 Hz.
 - d. Electrical Rating: 5 A at 240-V ac.
 - e. Switch Type: SPDT snap switch.
 - 4. Probes:
 - a. Electrodes: **0.125-inch (6-mm) diameter**.
 - b. Material: Type 316 stainless steel.
 - c. Length: To suit application up to **72 inches (1800 mm)**.
 - d. Process Connection: **NPS 1 (DN 25) NPT**.
 - e. Enclosure:
 - 1) Polypropylene.
 - 2) NEMA 250, Type 6.

3) Electrical Connection: Cable and standard octal socket.

C. RF Admittance-Type Liquid-Level Switches:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Proximity Division, Dwyer Instruments, Inc.;** Series CLS2.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Description:**
 - a. Capacitive technology.
 - b. No moving parts.
 - c. Not affected by sticky, dusty, or clingy materials that coat or build up on probe.
 - d. Immune to external radio frequency (RF) sources.
 - e. Sensitivity: Eight selectable settings.
 - f. Mounting: Horizontal or vertical.
3. **Performance:**
 - a. Pressure Limit: **365 psig** (2517 kPa).
 - b. Ambient Temperature Range: **Minus 40 to 185 deg F** (Minus 40 to 85 deg C).
 - c. Process Temperature Range: **Minus 40 to 250 deg F** (Minus 40 to 121 deg C).
 - d. Universal Power Supply: 12- to 240-V ac and dc.
 - e. Electrical Rating: 8 A at 120- and 240-V ac.
 - f. Switch Type: SPDT snap switch, selectable for normally open or closed operation.
 - g. Response Time: 0.2 seconds.
 - h. Time Delay: Adjustable, zero to 60 seconds.
4. **Probes:**
 - a. Material: Type 316 stainless steel.
 - b. Insulator Material: PVDF.
 - c. Length: To suit application up to **72 inches** (1800 mm).
 - d. Process Connection: **NPS 1** (DN 25) NPT.
 - e. Enclosure:
 - 1) NEMA 250, Type 4X.
 - 2) Electrical Connection: Screw terminals on removable terminal block.
 - 3) Conduit Connection: **NPS 1/2** (DN 15) NPT.

2.3 LEVEL TRANSMITTERS

A. RF Admittance-Type Liquid-Level Sensor and Transmitter:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Ametek Drexelbrook;** Universal II 508 series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Description:** Complete package with electronic unit, sensing element, connecting cable.
 - a. Continuous level transmitter shall produce an output signal that is proportional to level.
 - b. Measurement shall be free from effects of changes in temperature, density, or acoustic noise in vapor space above level.
 - c. Continuous measurement shall be independent of changes in material density and unaffected by presence of material clinging to sensing element.
 - d. No moving parts and no routine cleaning and recalibration necessary.
 - e. Electronic unit shall be integral to sensing element or mounted remotely up to **100 feet (30 m)** away from sensor.
 - f. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments (Class I, Groups C and D; Class II, Groups E, F, and G).
3. **Sensor:**
 - a. Material: Teflon-coated **[Type 304] [Type 316]** stainless steel.
 - b. Length: To suit installation.
 - c. Connection: **NPS 3/4 (NPS 20) NPT[or flanged].**
4. **Electronic unit housed in NEMA 250, Type 4X enclosure.**
 - a. **Calibrated Range:** Varies with application. At least **[10] [20] <Insert number>** percent beyond high- and low-level set point and alarm levels.
 - b. **Accuracy:** Within 1 percent of calibrated range.
 - c. Two wire, loop powered.
 - d. **Supply Voltage:** 11.5 to 50-V dc.
 - e. **Maximum Load:** 625 ohms at 24-V dc.
 - f. **Output Signal:** 4 to 20 mA dc.
 - g. **Response Time:** 0.5 to 30 seconds, adjustable.
 - h. **Temperature Range:** **Minus 40 to 165 deg F (Minus 40 to 74 deg C).**
 - i. **Zero and Span Adjustments:** Non-interacting.
 - j. **Visual Indication:** Continuous digital display of level.
 - k. **Field-changeable failsafe condition and phasing in event measurement** requires changes to optimize level reading.
 - l. Free from effects of radio frequency interference.
 - m. Free from harmful effects of static electricity on sensing element with discharges of up to 10 A without damage.
 - n. Adjustable time delay (signal dampening).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments to verify actual locations of connections before installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Install products level, plumb, parallel, and perpendicular with building construction.
- B. Properly support instruments, tubing, piping wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement, sway, or a break in attachment when subjected to a <Insert value> force.
- C. Fastening Hardware:
 - 1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by using excessive force or oversized wrenches.
 - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- D. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- E. Mount switches and transmitters not subject to code, state, and federal accessibility requirements within a range of 42 to 72 inches (1.1 to 1.6 m) above the adjacent floor, grade or service catwalk, or platform.
 - 1. Make every effort to mount at 60 inches (1.5 m).
- F. Corrosive Environments:
 - 1. Use products that are suitable for environment to which they are subjected.
 - 2. If possible, avoid or limit use of materials in corrosive environments.

3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
4. Where instruments are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.3 ELECTRICAL POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.4 LEVEL INSTRUMENTS INSTALLATION

- A. Mounting Location: Rough-in instrument-mounting locations before setting instruments and routing, cable, wiring, tubing, and conduit to final location.

3.5 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification on face.

3.6 CHECKOUT PROCEDURES

- A. Check out installed products before continuity tests, leak tests, and calibration.
- B. Check instruments for proper location and accessibility.
- C. Check instruments for proper installation on direction of elevation, orientation, insertion depth, or other applicable considerations that impact performance.

3.7 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:

1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
3. For each analog instrument, perform a three-point calibration test for both linearity and accuracy.
4. Equipment and procedures used for calibration shall comply with instrument manufacturer's written recommendations.
5. Provide diagnostic and test equipment for calibration and adjustment.
6. Field instruments and equipment used to test and calibrate installed instruments shall have an accuracy of at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
8. If, after calibration, indicated performance cannot be achieved, replace out-of-tolerance instruments.
9. Comply with field-testing requirements and procedures in ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.

C. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

D. Switches: Calibrate switches to make or break contact at setpoints indicated.

E. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistance source.

3.8 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of**

system and equipment Installer] [manufacturer's authorized service representative]. Include **[monthly] [quarterly] [semiannual] [annual]** preventive maintenance, repair, or replacement of worn or defective components, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.9 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain instrumentation and control devices.
- B. Coordinate level instrument demonstration video with operation and maintenance manuals and classroom instruction for use by Owner in operating, maintaining, and troubleshooting.
- C. Record videos on DVD disks.
