- D. Owner shall have right to make additional copies of video for internal use without paying royalties.

END OF SECTION 230923.17

SECTION 230923.18 - LEAK-DETECTION INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes the following types of leak-detection switches:
 - 1. Point-type, leak-detection switches.
 - 2. Cable-type, leak-detection switches.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.18**.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
 - 1. Operating characteristics, electrical characteristics, and furnished accessories indicating control signal, default control signal with loss of power, and electrical power requirements.
 - 2. Product description with complete technical data and product specification sheets.
 - 3. Installation operation and maintenance instructions including factors affecting performance.
- B. Shop Drawings:
 - 1. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Include diagrams for power, signal, and control wiring.
 - 3. Include number-coded identification system for unique identification of wiring, cable, and tubing ends.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: To include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 LEAK-DETECTION SWITCHES

- A. Point-Type, Leak-Detection Switches:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. W. E. Anderson Division, Dwyer Instruments, Inc; Series WD2.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Features: Audible and visual alarm with relay output for remote indication.
3. Alarm activated based on change in resistance.
4. Performance:
 - a. Service: Water.
 - b. Temperature Limits: **32 to 122 deg F** (zero to 50 deg C).
 - c. Switch Type: SPDT relay.
 - d. Electric Connection: Cable attached.
5. Construction: Acrylic, ABS plastic.
6. Field Power: 24-V ac or dc.

- B. Cable-Type, Leak-Detection Switches:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. W. E. Anderson Division, Dwyer Instruments, Inc; Series WD.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Control Module Features:
 - a. Power and alarm LEDs.
 - b. Alarm test switch.
 - c. Continuous tape integrity self check.
3. Performance:
 - a. Service: Water, or other conductive liquid.
 - b. Switch Type: DPDT.
 - c. Electric Connection: Screw terminals.

- d. Conduit Connection: 0.5 inch (13 mm).
4. Construction:
 - a. Control Module Enclosure: Extruded aluminum.
 - b. Tape: Hydrophobic with connector on each end.
 - c. Tape Length: [60 inches ((1500 mm))] [10 feet (3 m)] [15 feet (4.5 m)] [25 feet (7.5 m)]. Field extendable.
 5. Field Power: 24-V ac or 24- to 30-V dc.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 LEAK-DETECTION INSTRUMENT APPLICATION

- A. **<Insert application>: [Leak-detection switches (point type)] [Leak-detection switches (cable type)].**

3.3 INSTALLATION, GENERAL

- A. Properly support instruments, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a **<Insert value>** force.
- B. Fastening Hardware:
 1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force, or by oversized wrenches.
 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- C. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required

for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.

3.4 CONNECTIONS

- A. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power connections.

3.5 INSTALLATION

- A. Mount switches not required to be mounted within system control panels on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.

3.6 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification[**and on face of ceiling directly below instruments concealed above ceilings**].

3.7 CHECKOUT PROCEDURES

- A. Check installed products before continuity tests and calibration.
- B. Check instruments for proper location and accessibility.
- C. Check instruments for proper installation for applicable considerations that impact performance.

3.8 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:
 - 1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
 - 2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
 - 3. Equipment and procedures used for calibration shall meet instrument manufacturer's written recommendations.
 - 4. Provide diagnostic and test equipment for calibration and adjustment.

5. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
6. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
7. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.

B. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

C. Switches: Calibrate switches to make or break contact at set points indicated.

3.9 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of systems and equipment installer] [manufacturer's authorized service representative]**. Include **[monthly] [quarterly] [semiannual] [annual]** preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper **<Insert equipment>** operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.10 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain instrumentation and control devices.
- B. Coordinate video with operation and maintenance manuals and classroom instruction for use by Owner in operating, maintaining, and troubleshooting.
- C. Record videos on DVD disks.
- D. Owner shall have right to make additional copies of video for internal use without paying royalties.

END OF SECTION 230923.18

SECTION 230923.19 - MOISTURE INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes moisture switches, sensors, and transmitters.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.19**.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
 - 1. Operating characteristics, electrical characteristics, and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
 - 2. Product description with complete technical data, performance curves, and product specification sheets.
- B. Shop Drawings:
 - 1. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Include diagrams for power, signal, and control wiring.
 - 3. Include number-coded identification system for unique identification of wiring, cable, and tubing ends.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: To include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MOISTURE SWITCHES

- A. Humidistat for Duct Applications:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **TAC Brand, Schneider Electric United States;** Model HC-201.
b. **<Insert manufacturer's name; product name or designation>.**

2. Description:

- a. Two-position control.
b. Field-adjustable set point.
c. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

3. Performance:

- a. Relative Humidity Range: 15 to 95 percent.
b. Relative Humidity Differential: 5 percent.
c. Ambient Temperature: **40 to 135 deg F** (4 to 57 deg C).
d. Voltage: 120-V ac.
e. Current: 7.2 FLA.
f. Switch Type: SPDT snap switch.

4. Construction:

- a. Enclosure: Metal, NEMA 250, Type 1.
b. Electrical Connections: Screw terminals.

- B. Humidistat for Space Applications:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **TAC Brand, Schneider Electric United States;** Model HC-101.
b. **<Insert manufacturer's name; product name or designation>.**

2. Description:

- a. Two-position control.
 - b. Field-adjustable set point.
 - c. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. Performance:
- a. Relative Humidity Range: 10 to 90 percent.
 - b. Relative Humidity Differential: 5 percent.
 - c. Ambient Temperature: 40 to 135 deg F (4 to 57 deg C).
 - d. Voltage: 24-V ac.
 - e. Pilot Duty: 60 VA.
 - f. Switch Type: SPDT snap switch.
4. Construction:
- a. Enclosure: Plastic, NEMA 250, Type 1.
 - b. Electrical Connections: Cable, 6 inches (150 mm) long.

2.2 MOISTURE SENSORS AND TRANSMITTERS

A. Sensors and Transmitters with Digital Display:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Vaisala Inc.;** Model HMT100 Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Accuracy including non-linearity, hysteresis, and repeatability: Within 2 percent from zero to 90 percent relative humidity and within 2.5 percent from 90 to 100 percent relative humidity when operating between 60 to 77 deg F (16 to 25 deg C).
 - b. Relative Humidity Range: Zero to 100 percent.
 - c. Factory calibrated and NIST traceable with certificate included.
3. Construction:
 - a. Provide housing with integral sensor for room applications.
 - b. Provide housing with remote sensor probe for ducted applications.
 - 1) Duct Sensor Body: 300 series stainless steel or chrome-plated aluminum, at least 2 inches (50 mm) long for duct-mounted applications.
 - 2) Provide sensor with cable for field installation in conduit.
 - 3) For duct-mounted applications, thread the sensor assembly for connection to a threaded mounting flange.

- c. Provide general-purpose humidity sensor unless application requires special requirements. Provide sensor with sintered stainless-steel filter for duct applications.
 - d. Housing shall be ABS/PC plastic or powder-coated aluminum.
 - e. Housing Classification: NEMA 250, Type 4 or 4X.
 - f. Provide housing with wall-mounting plate.
4. Output Signal: 2-wire, 4- to 20-mA output signal with a drive capacity of at least 500 ohms at 24-V dc.
 5. Provide unit with a digital display of relative humidity in percent.

B. Sensor and Transmitter without Display:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Vaisala Inc.;** HMW 60 Series (for space applications) and HMD 60 Series (for duct and equipment applications).
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Accuracy including non-linearity, hysteresis, and repeatability: Within 2 percent from zero to 90 percent relative humidity and within 3 percent from 90 to 95 percent relative humidity when operating at **68 deg F (20 deg C)**.
 - b. Relative Humidity Range:
 - 1) Duct: Zero to 100 percent.
 - 2) Space: Zero to 95 percent relative.
 - c. Factory calibrated and NIST traceable with certificate included.
3. Construction for Space Applications:
 - a. Housing with integral sensor.
 - b. Housing shall be ABS plastic or powder-coated aluminum.
 - c. Enclosure: NEMA 250, Type 4.
 - d. Provide housing with a wall-mounting plate.
4. Construction for Duct and Equipment Applications:
 - a. Housing with integral sensor.
 - b. Duct Sensor Body: 300 series stainless steel.
 - c. Provide sensor with sintered stainless-steel filter for duct applications.
 - d. Housing shall be cast aluminum.
 - e. Enclosure: NEMA 250, Type 4.
5. Output Signal: Two-wire, 4- to 20-mA output signal with drive capacity of at least 500 ohms at 24-V dc.

C. Sensor and Transmitter without Display:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **MAMAC Systems, Inc.;** Models HU-224 (for space applications) and HU-225 (for duct applications).
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Relative Humidity Range: Zero to 100 percent.
 - b. Accuracy: Within **[2] [or] [3]** percent.
 - c. Operating Temperatures: **Minus 30 to 130 deg F** (Minus 1 to 54 deg C).
 - d. Hysteresis: Within 1 percent.
3. Construction:
 - a. Duct-type sensor for duct-mounted applications. Integral-type sensor for room or space applications.
 - b. Sensor Body: 300 series stainless steel, **6 inches (150 mm)** long for duct-mounted applications.
 - c. For outdoor **[and duct]** applications, install circuitry in a NEMA 250, Type 4 or 4X enclosure.
4. Output Signal:
 - a. Two-wire, 4- to 20-mA output signal with a drive capacity of at least 600 ohms at 24-V dc.
 - b. Non-interacting zero and span adjustments.

D. Combination Humidity and Temperature Sensor and Transmitter with Display:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Vaisala Inc.;** Model HMT330 Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Description:
 - a. Factory package consisting of humidity and temperature sensor, digital display, keypad user interface, installation hardware, interconnecting sensor cabling, installation instructions, and operating manual.
 - b. Each transmitter shall be individually calibrated and provided with NIST traceable calibration certifications.
 - c. Provide a service cable for connecting to a notebook computer and Microsoft Windows compatible software.

3. Display:
 - a. Alphanumeric display of the following on the face of the enclosure:
 - 1) Percent relative humidity.
 - 2) Absolute humidity.
 - 3) Mixing ratio.
 - 4) Dry-bulb temperature.
 - 5) Wet-bulb temperature.
 - 6) Dew point temperature.
 - 7) Enthalpy.
 - b. Visual display of measurement trends, and minimum and maximum values over a one-year period.
4. Electronics Enclosure:
 - a. Integral to sensors for wall- (room-)mounted applications and remote from temperature and humidity sensors for duct and equipment applications.
 - b. NEMA 250, Type 4 or 4X.
 - c. Labeled terminal strip for field wiring connections.
 - d. **1/2-inch** ((16-mm))trade size threaded conduit connection.
5. Programming:
 - a. Transmitter parameters shall be field programmable through keypad on the face of the enclosure.
 - b. Programmed parameters shall be stored in nonvolatile EEPROM.
6. Output Signals:
 - a. Three Analog Outputs: 4 to 20 mA or zero to 10-V dc for each output. [**Option to use a serial communication interface.**]
7. Temperature Sensor:
 - a. Temperature range matched to application, but not less than **minus 40 to 140 deg F** (minus 40 to 60 deg C).
 - b. Within **0.5 deg F** (0.3 deg C) accuracy over the temperature range of **50 to 100 deg F** (10 to 38 deg C) and within **1 deg F** (0.6 deg C) over the remainder of the range.
 - c. Provide duct installation kit for duct applications.
8. Humidity Sensor:
 - a. Relative Humidity Measurement Range: Zero to 100 percent.
 - b. Response time in still air within 40 seconds.
 - c. Accuracy including non-linearity, hysteresis, and repeatability:
 - 1) For Temperature Between **59 and 77 Deg F** (15 to 25 Deg C) and Relative Humidity between Zero and 90 Percent: Within 1 percent.

- 2) For Temperature between **59 and 77 Deg F** (15 to 25 Deg C) and Relative Humidity between 90 and 100 Percent: Within 1.7 percent.
 - 3) For Temperature between **Minus 4 and 104 Deg F** (Minus 20 to 40 Deg C): Within 1 percent plus 0.008 times relative humidity reading.
 - 4) For Temperature between **Minus 40 and 356 Deg F** (Minus 40 to 180 Deg C): Within 1.5 percent plus 0.015 times the relative humidity reading.
 - d. Sintered, stainless-steel filter, protecting sensor.
 - e. Provide duct installation kit for duct applications.
9. Power Supply:
- a. Field Power: 120-V ac, 60 Hz unless otherwise required by the application.
 - b. Internal Power: As required by transmitter.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 MOISTURE INSTRUMENT APPLICATIONS

- A. **<Insert application>: [Sensor and transmitter with digital display] [Sensor and transmitter without display] [Combination humidity and temperature sensor and transmitter with display].**

3.3 INSTALLATION, GENERAL

- A. Install products level, plumb, parallel, and perpendicular with building construction.
- B. Properly support instruments, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a **<Insert value>** force.
- C. Fastening Hardware:

1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- D. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- E. Corrosive Environments:
1. Use products that are suitable for environment to which they are subjected.
 2. If possible, avoid or limit use of materials in corrosive environments.
 3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 4. Where instruments are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.4 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.5 MOISTURE INSTRUMENTS INSTALLATION

- A. Mounting Location: Rough-in instrument-mounting locations before setting instruments and routing, cable, wiring, tubing, and conduit to final location.
- B. Mounting Height:
 1. Mount instruments in user-occupied space to match mounting height of light switches unless otherwise indicated on Drawings. Mounting height shall comply with codes and accessibility requirements.
 2. Mount switches and transmitters located in mechanical equipment rooms and other similar space not subject to code, state, and Federal accessibility

requirements within a range of 42 to 72 inches ((1.1 to 1.6 m))above the adjacent floor, grade, or service catwalk or platform.

- a. Make every effort to mount at 60 inches (1.5 m).

3.6 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification[**on face of ceiling directly below instruments concealed above ceilings**].

3.7 CHECKOUT PROCEDURES

- A. Check installed products before continuity tests and calibration.
- B. Check instruments for proper location and accessibility.
- C. Check instruments for proper installation on direction of flow, elevation, orientation, insertion depth, or other applicable considerations that impact performance.

3.8 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:
 1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
 2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
 3. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.
 4. Equipment and procedures used for calibration shall meet instrument manufacturer's written instructions.
 5. Provide diagnostic and test equipment for calibration and adjustment.
 6. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
 7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
 8. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
 9. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of

specific requirements, and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistance source.

C. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

D. Sensors: Check sensors at zero, 50, and 100 percent of Project design values.

E. Switches: Calibrate switches to make or break contact at set points indicated.

F. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistance source.

3.9 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of systems and equipment Installer] [manufacturer's authorized service representative]**. Include **[monthly] [quarterly] [semiannual] [annual]** preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper **<Insert equipment>** operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.10 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain instrumentation and control devices.
- B. Coordinate video with operation and maintenance manuals and classroom instruction for use by Owner in operating, maintaining, and troubleshooting.
- C. Record videos on DVD disks.
- D. Owner shall have right to make additional copies of video for internal use without

paying royalties.

END OF SECTION 230923.19

SECTION 230923.21 - MOTION INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. PIR motion sensors.
 - 2. Ultrasonic motion sensors.
 - 3. Dual-technology motion sensors.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.21**.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include operating characteristics; electrical characteristics; and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
 - 2. Include product description with complete technical data, performance curves, and product specification sheets.
- B. Shop Drawings:
 - 1. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Include diagrams for power, signal, and control wiring.
 - 3. Include number-coded identification system for unique identification of wiring, cable, and tubing ends.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plan drawings and corresponding product installation details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Product installation location shown in relationship to visual range and obstructions.
 2. Wall- and ceiling-mounted instruments located in finished space showing relationship to other installed devices.
- B. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For motion instruments to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 INDOOR MOTION SENSORS

- A. **Manufacturers:** Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
- B. **Basis-of-Design Product:** Subject to compliance with requirements, provide [product indicated on Drawings] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. [Bryant Electric; a Hubbell Incorporated company.](#)
 2. [Cooper Industries, Inc.](#)
 3. [Hubbell Building Automation, Inc.; a Hubbell Incorporated company.](#)
 4. [Leviton Manufacturing Co., Inc.](#)
 5. [Lightolier Controls; a Philips group brand.](#)
 6. [Lithonia Lighting; Acuity Brands Lighting, Inc.](#)
 7. [Lutron Electronics Co., Inc.](#)
 8. [NSi Industries, LLC; TORK Products.](#)
 9. [RAB Lighting.](#)
 10. [Sensor Switch, Inc.; an Acuity Brands company.](#)
 11. [Square D; a brand of Schneider Electric.](#)
 12. [WattStopper.](#)
 13. <Insert manufacturer's name>.
- C. Description: Wall- or ceiling-mounted, solid-state units with a separate relay unit.

1. Operation: Unless otherwise indicated, turn on when covered area is occupied and off when unoccupied; with a time delay for turning off, adjustable over a minimum range of 1 to 15 minutes.
 2. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.
 3. Relay Unit: Dry contacts rated for 20-A load at 120- and 277-V ac. Power supply to sensor shall be 24-V dc, 150 mA, Class 2 power source as defined by NFPA 70.
 4. Mounting:
 - a. Sensor: Suitable for mounting in any position on a standard outlet box.
 - b. Relay: Externally mounted through a 1/2-inch (13-mm) knock out in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
 5. Indicator: Digital display, to show when motion is being detected during testing and normal operation of the sensor.
 6. Bypass Switch: Override the on function in case of sensor failure.
- D. PIR Type: Ceiling mounting; detect occupancy by sensing a combination of heat and movement in coverage area.
1. Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm).
 2. Detection Coverage (Room): Detect occupancy anywhere in a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 3. Detection Coverage (Corridor): Detect occupancy within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling.
- E. Ultrasonic Type: Ceiling mounting; detect occupancy by sensing a change in pattern of reflected ultrasonic energy in coverage area.
1. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).
 2. Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft. (56 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 4. Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of 2000 sq. ft. (186 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 5. Detection Coverage (Corridor): Detect occupancy anywhere within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling in a corridor not wider than 14 feet (4.3 m).

- F. Dual-Technology Type: Ceiling mounting; detect occupancy by using a combination of PIR and ultrasonic detection methods in coverage area. A particular technology or combination of technologies that controls on-off functions shall be field selectable by operating controls on unit.
1. Sensitivity Adjustment: Separate for each sensing technology.
 2. Detector Sensitivity: Detect occurrences of **6-inch-** (150-mm-) minimum movement of any portion of a human body that presents a target of not less than **36 sq. in.** (232 sq. cm), and detect a person of average size and weight moving not less than **12 inches** (305 mm) in either a horizontal or a vertical manner at an approximate speed of **12 inches/s** (305 mm/s).
 3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of **1000 sq. ft.** (93 sq. m) when mounted on a **96-inch-** (2440-mm-) high ceiling. Apply occupancy detectors where indicated.

2.2 SWITCHBOX-MOUNTED MOTION SENSORS

- A. **Manufacturers:** Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
- B. **Basis-of-Design Product:** Subject to compliance with requirements, provide [product indicated on Drawings] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. [Bryant Electric; a Hubbell Incorporated company.](#)
 2. [Cooper Industries, Inc.](#)
 3. [Hubbell Building Automation, Inc.; a Hubbell Incorporated company.](#)
 4. [Leviton Manufacturing Co., Inc.](#)
 5. [Lightolier Controls; a Philips Group brand.](#)
 6. [Lithonia Lighting; Acuity Brands Lighting, Inc.](#)
 7. [Lutron Electronics Co., Inc.](#)
 8. [NSi Industries, LLC; TORK Products.](#)
 9. [RAB Lighting.](#)
 10. [Sensor Switch, Inc.; an Acuity Brands company.](#)
 11. [Square D; a brand of Schneider Electric.](#)
 12. [WattStopper.](#)
 13. **<Insert manufacturer's name>.**
- C. **General Requirements for Sensors:** Automatic-wall-switch occupancy sensor, suitable for mounting in a single gang switchbox.
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Operating Ambient Conditions: Dry interior conditions, **32 to 120 deg F** (zero to 49 deg C).
 3. Switch Rating: Not less than 800-VA fluorescent at 120 V, 1200-VA fluorescent at 277 V, and 800-W incandescent.

D. Wall-Switch Sensor Tag WS1:

1. Standard Range: 180-degree field of view, field adjustable from 180 to 40 degrees; with a minimum coverage area of [900 sq. ft. (84 sq. m)] [2100 sq. ft (196 sq. m)].
2. Sensing Technology: [PIR] [Dual technology - PIR and ultrasonic].
3. Switch Type: [SP.] [SP, dual circuit.] [SP, manual "on," automatic "off."] [SP, field selectable automatic "on," or manual "on" automatic "off."]
4. Voltage: [Match the circuit voltage] [120 V] [277 V] [Dual voltage, 120 and 277 V]; [passive-infrared] [dual-technology] type.
5. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc (108 to 1600 lux). The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
6. Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
7. Concealed "off" time-delay selector at 30 seconds, and 5, 10, and 20 minutes.
8. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.

E. Wall-Switch Sensor Tag WS2:

1. Standard Range: 210-degree field of view, with a minimum coverage area of 900 sq. ft. (84 sq. m).
2. Sensing Technology: PIR.
3. Switch Type: [SP.] [SP, dual circuit.] [SP, manual "on," automatic "off."] [SP, field selectable automatic "on," or manual "on" automatic "off."]
4. Voltage: [Match the circuit voltage] [120 V] [277 V] [Dual voltage, 120 and 277 V]; [passive-infrared] [dual-technology] type.
5. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc (108 to 1600 lux). The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
6. Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
7. Concealed "off" time-delay selector at 30 seconds, and 5, 10, and 20 minutes.
8. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SENSOR INSTALLATION

- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.
- B. Coordinate layout and installation of wall-mounted devices with other wall-mounted devices. Align centerline with adjacent devices. Align centerline with devices above.
- C. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.3 ELECTRICAL POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.4 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to evaluate lighting control devices and perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning

controls and equipment.

- D. Motion instruments will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Occupancy Adjustments: When requested within [12] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting sensors to suit actual occupied conditions. Provide up to [two] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.
 - 1. Verify operation at outer limits of detector range. Set time delay to suit Owner's operations.

3.7 DEMONSTRATION

- A. Coordinate demonstration of products specified in this Section with demonstration requirements for direct-digital control systems specified in Section 230923 "Direct-Digital Control System for HVAC."
- B. [Engage a factory-authorized service representative to train] [Train] Owner's maintenance personnel to adjust, operate, and maintain lighting control devices.

END OF SECTION 230923.21

SECTION 230923.22 - POSITION INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes position limit switches for use in direct-digital control systems for HVAC.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.22**.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include operating characteristics, electrical characteristics, and furnished accessories indicating default control signal with loss of power and electrical power requirements.
 - 2. Include product description with complete technical data and product specification sheets.
- B. Shop Drawings:
 - 1. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Include diagrams for power, signal, and control wiring.
 - 3. Include number-coded identification system for unique identification of wiring.

PART 2 - PRODUCTS

2.1 POSITION LIMIT SWITCHES

A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

1. **Omron;** Model D4A.
2. **<Insert manufacturer's name; product name or designation>.**

B. Description: Select type of actuating head (plunger, roller lever, or rod) to suit application.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Performance:

1. Life expectancy: Not less than 30 million mechanical operations and 750,000 electrical operations.
2. Operating Frequency: 300 mechanical operations per minute and 30 electrical operations per minute.
3. Voltage: 125-, 250-, 480-, and 600-V ac or 8-, 12-, 14-, 24-, 30-, 48-, 125-, and 250-V dc, as required by application.
4. Current Rating: As required by application.
5. Temperature Rise: 50 deg C.
6. Ambient Temperature: **14 to 175 deg F** (Minus 10 to 79 deg C).
7. Ambient Relative Humidity: 35 to 95 percent.

D. Construction:

1. NEMA 250, Type 4X enclosure.
2. Switch Type: SPDT or DPDT, as required by application.
3. Status indicator integral to switch. Field switchable to light when contacts are actuated and operating, or contacts are free and not operating.
4. Electrical Connection: Screw or plug-in terminals.
5. Conduit Connection: **NPS 1/2** ((DN 50)).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for instruments installed in duct systems to verify actual locations

of connections before installation.

- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Install products level, plumb, parallel, and perpendicular with building construction.
- B. Properly support instruments, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement, sway, or a break in attachment when subjected to a <Insert value> force.
- C. Fastening Hardware:
 - 1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 - 2. Tighten bolts and nuts firmly and uniformly. Do not to overstress threads by using excessive force or oversized wrenches.
 - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- D. Install products in locations that are accessible and that permit maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- E. Corrosive Environments:
 - 1. Use products that are suitable for environment to which they are subjected.
 - 2. If possible, avoid or limit use of materials in corrosive environments, including, but not limited to:
 - a. Laboratory exhaust airstreams.
 - b. Process exhaust airstreams.
 - 3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 - 4. Where instruments are located in a corrosive environment and are not corrosive resistant from the manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.3 ELECTRICAL POWER

- A. Furnish and install electrical power to products requiring electrical connections.

- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.4 POSITION INSTRUMENTS INSTALLATION

- A. Mounting Location:
 - 1. Rough-in instrument-mounting locations before setting instruments and routing, cable, wiring, and conduit to final location.
 - 2. Use manufacturer mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
- B. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static-pressure class and leakage and seal classes indicated, using neoprene gaskets or grommets.

3.5 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Digital Signals:
 - 1. Check digital signals using a jumper wire.
 - 2. Check digital signals using an ohmmeter to test for contact.
- B. Switches: Calibrate switches to make or break contact at set points indicated.

END OF SECTION 230923.22

SECTION 230923.23 - PRESSURE INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Air-pressure sensors.
2. Air-pressure switches.
3. Air-pressure transmitters.
4. Liquid-pressure switches.
5. Liquid-pressure transmitters.

- B. Related Requirements:

1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.23**.

1.3 DEFINITIONS

- A. HART: Highway addressable remote transducer protocol is the global standard for sending and receiving digital information across analog wires between smart devices and control or monitoring systems through bi-directional communication that provides data access between intelligent field instruments and host systems. A host can be any software application from technician's hand-held device or laptop to a control, asset management, safety, or other system using any control platform.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:

1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Operating characteristics; electrical characteristics; and furnished accessories indicating process operating range, accuracy over range, control signal over

- range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
3. Product description with complete technical data, performance curves, and product specification sheets.
 4. Installation instructions, including factors affecting performance.

B. Shop Drawings:

1. Include plans, elevations, sections, and [**mounting**] details.
2. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Number-coded identification system for unique identification of wiring, cable, and tubing ends.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plan drawings and corresponding product installation details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Product installation location shown in relationship to room, duct, pipe, and equipment.
2. Wall-mounted instruments located in finished space, showing relationship to light switches, fire alarm devices, and other installed devices.
3. Size and location of wall access panels for instruments installed behind walls.
4. Size and location of ceiling access panels for instruments installed in accessible ceilings.

B. Product Certificates: For each product requiring a certificate.

C. Product Test Reports: For each product requiring test performed by [**manufacturer and witnessed by a qualified testing agency**] [**a qualified testing agency**].

D. Source quality-control reports.

E. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For instruments to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Environmental Conditions:

1. Instruments shall operate without performance degradation under the ambient environmental temperature, pressure, humidity, and vibration conditions specified and encountered for installed location.
 - a. If instrument alone cannot comply with requirement, install instrument in a protective enclosure that is isolated and protected from conditions impacting performance. Enclosure shall be internally insulated, electrically heated[**and cooled**], filtered, and ventilated as required by instrument and application.
2. Instruments and accessories shall be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Instruments not available with integral enclosures complying with requirements indicated shall be housed in protective secondary enclosures. Instrument-installed location shall dictate following NEMA 250 enclosure requirements:
 - a. Outdoors, Protected: **[Type 2] [Type 3] [Type 12] <Insert type>**.
 - b. Outdoors, Unprotected: **[Type 4] [Type 4X] <Insert type>**.
 - c. Indoors, Heated with Filtered Ventilation: **[Type 1] [Type 2] <Insert type>**.
 - d. Indoors, Heated with Nonfiltered Ventilation: **[Type 2] [Type 12] <Insert type>**.
 - e. Indoors, Heated and Air-Conditioned: **[Type 1] <Insert type>**.
 - f. Mechanical Equipment Rooms:
 - 1) Chiller and Boiler Rooms: **[Type 12] [Type 4] [Type 4X] <Insert type>**.
 - 2) Air-Moving Equipment Rooms: **[Type 1] [Type 2] [Type 12] <Insert type>**.
 - g. Localized Areas Exposed to Washdown: **[Type 4] [Type 4X] <Insert type>**.
 - h. Within Duct Systems and Air-Moving Equipment Not Exposed to Possible Condensation: **[Type 2] [Type 3] [Type 12] <Insert type>**.
 - i. Within Duct Systems and Air-Moving Equipment Exposed to Possible Condensation: **[Type 4] [Type 4X] <Insert type>**.
 - j. Hazardous Locations: Explosion-proof rating for condition.
 - k. **<Insert location and enclosure requirements>**.

2.2 AIR-PRESSURE SENSORS

A. Duct Insertion Static Pressure Sensor:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Model A 301 Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Insertion length shall be at **[4 inches (100 mm)] [6 inches (150 mm)] [8 inches (200 mm)] [12 inches (300 mm)]**.
 3. Sensor with four radial holes of **0.04-inch (1-mm)** diameter.
 4. **[Brass] [or] [stainless-steel]** construction.
 5. Sensor with threaded end support, sealing washers and nuts.
 6. Connection: **NPS 1/4 (DN 6)** compression fitting.
 7. Suitable for flat oval, rectangular, and round duct configurations.
- B. Duct Insertion Static Pressure Sensor:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **MAMAC Systems, Inc.;** Model A-520.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Sensor probe with two opposing orifices designed to reduce error-associated air velocity.
 3. Sensor insertion length shall be **[4 inches (100 mm)] [or] [8 inches (200 mm)]**.
 4. Construct sensor of **[6061-T6 aluminum alloy] [or] [Type 304 stainless steel]**.
 5. Connection: Threaded, **NPS 1/8 (DN 6)** swivel fitting for connection to copper tubing or **NPS 1/4 (DN 10)** barbed fitting for connection to polyethylene tubing.
 6. Sensor probe attached to a mounting flange with neoprene gasket and two holes for fasteners.
 7. Mounting flange shall suitable for flat oval, rectangular, and round duct configurations.
 8. Pressure Rating: **10 psig (69 kPa)**.
- C. Duct Traverse Static Pressure Sensor:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Air Monitor Corporation;** STAT probe.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Sensor shall traverse the duct cross section and have at least one pickup point every **6 inches ((150mm))** along length of sensor.
 3. Construct sensor of 18-gage Type T6063-T5 extruded and anodized aluminum.
 4. Sensor supported with threaded rod, sealing washer, and nut at one end and a mounting plate with gasket at other end.

5. Mounting plate with threaded, **NPS 3/8 (DN 12)** compression fitting for connection to tubing.
6. Accuracy within 1 percent of actual operating static pressure.
7. Dual offset static sensor design shall provide accurate sensing of duct static pressure in the presence of turbulent and rotational airflows with a maximum 30 degree yaw and pitch.
8. Suitable for velocities of **100 to 10000 fpm (0.51 to 51 m/s)** and temperatures of up to **200 deg F (93 deg C)**.
9. Sensor air resistance shall be less than 0.1 times the velocity pressure at probe-operating velocity.
10. Suitable for flat oval, rectangular, and round duct configurations.

D. Outdoor Static Pressure Sensor:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Model A306.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Provides average outdoor pressure signal.
3. Sensor with no moving parts.
4. Kit includes sensor, vinyl tubing mounting hardware.

E. Outdoor Static Pressure Sensor:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Model A420.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Provides average outdoor pressure signal.
3. Sensor with no moving parts.
4. NEMA 250, Type 4X enclosure.
5. Pressure Connection: Brass barbed fitting for **NPS 1/4 ((DN 10))** tubing.
6. Conduit fitting around pressure fitting for sensor support and protection to pressure connection.

F. Outdoor Static Pressure Sensor:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Air Monitor Corporation;** SOAP.
 - b. **<Insert manufacturer's name; product name or designation>.**

2. Sensor with no moving parts.
 3. Operation not affected and impaired by rain and snow.
 4. Sensing plates constructed of 0.1406-inch (3.6-mm) Type 316 stainless steel.
 5. Accuracy within:
 - a. 1 percent of the actual outdoor atmospheric pressure when subjected to varying horizontal radial wind velocities up to 40 mph.
 - b. 2 percent of the actual outdoor atmospheric pressure while subjected to varying radial wind velocities up to 40 mph with approach angles up to 30 degrees to horizontal.
 - c. 3 percent of the actual outdoor atmospheric pressure while subjected to varying radial wind velocities up to 40 mph with approach angles up to 60 degrees to horizontal.
 - d. Threaded, NPS 2 (DN 50) connection.
- G. Space Static Pressure Sensor for Wall Mounting:
1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Dwyer Instruments, Inc.; Model A420.
 - b. <Insert manufacturer's name; product name or designation>.
 2. 100-micron filter mounted in stainless-steel wall plate senses static pressure.
 3. Wall plate provided with gasket and screws, and sized to fit standard single-gang electrical box.
 4. Back of sensor plate fitted with brass barbed fitting for tubing connection.
- H. Space Static Pressure Sensor for Wall Mounting:
1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. MAMAC Systems, Inc.; Model A523.
 - b. <Insert manufacturer's name; product name or designation>.
 2. White ABS plastic wall plate with integral sensing port to sense static pressure.
 3. Wall plate provided with matching colored screws and sized to fit standard single-gang electrical box.
 4. Back of sensor plate fitted with brass union fitting for tubing connection.
 5. Pressure rating: 10 psig (69kPa).
- I. Space Static Pressure Sensor for Wall Mounting:
1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:

- a. Air Monitor Corporation; Model SAP/B.
 - b. <Insert manufacturer's name; product name or designation>.
2. **[Aluminum] [Stainless-steel]** wall plate with perforated center arranged to sense space static pressure. Exposed surfaces are provided with brush finish.
 3. Wall plate provided with screws and sized to fit standard single-gang electrical box.
 4. Back of sensor plate fitted with multiple sensing ports, pressure impulse suppression chamber, airflow shielding, and **0.125-inch (3-mm)** fitting for tubing connection.
 5. Performance: Within 1 percent of actual room static pressure in vicinity of sensor while being subjected to an air velocity of **1000 fpm (5.1 m/s)** from a 360-degree radial source.
- J. Space Static Pressure Sensor for Recessed Ceiling Mounting:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Air Monitor Corporation; Model SAP/R.
 - b. <Insert manufacturer's name; product name or designation>.
 2. **[Aluminum] [Stainless-steel]** round plate with perforated center arranged to sense space static pressure. Exposed surfaces provided with brush finish.
 3. Sensor intended for flush mount on face of ceiling with pressure chamber recessed in ceiling plenum.
 4. Back of sensor plate fitted with multiple sensing ports, pressure impulse suppression chamber, airflow shielding, and **0.125-inch (3-mm)** fitting for concealed tubing connection.
 5. Performance: Within 1 percent of actual room static pressure in vicinity of sensor while being subjected to an air velocity of **1000 fpm (5.1 m/s)** from a 360-degree radial source.
- K. Space Static Pressure Sensor for Exposed or Suspended Mounting:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Air Monitor Corporation; **[Model SAP/S for surface mounted] [Model SAP/P for suspended mount]**.
 - b. <Insert manufacturer's name; product name or designation>.
 2. Performance: Within 1 percent of actual room static pressure in vicinity of sensor while being subjected to an air velocity of **1000 fpm (5.1 m/s)** from a 360-degree radial source.
 3. **[Aluminum] [Stainless steel]** with perforations arranged to sense space static pressure. Exposed surfaces provided with brush finish.
 4. Sensor fitted with multiple sensing ports, pressure impulse suppression chamber,

- and airflow shielding.
- 5. Surface-mounted sensor provided with solid mounting plate intended for mount to ceiling with pressure chamber exposed to view.
- 6. Surface-mounted sensor with **0.125-inch (3-mm)** fitting for exposed tubing connection.
- 7. Suspended sensor intended for pendent mount with pressure chamber exposed to view.
- 8. Suspended sensor with **NPS 1/2 (DN 15)** fitting for exposed pipe or tubing connection.

2.3 AIR-PRESSURE SWITCHES

A. Air-Pressure Differential Switch:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series 1900.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Diaphragm operated to actuate an SPDT snap switch.
 - a. Fan safety shutdown applications: Switch with manual reset.
3. Electrical Connections: Three-screw configuration, including one screw for common operation and two screws for field-selectable normally open or closed operation.
4. Enclosure Conduit Connection: Knock out or threaded connection.
5. User Interface: Screw-type set-point adjustment located inside removable enclosure cover.
6. High and Low Process Connections: Threaded, **NPS 1/8 (DN 6)**.
7. Enclosure:
 - a. Dry Indoor Installations: NEMA 250, Type 1.
 - b. Outdoor and Wet Indoor Installations: NEMA 250, Type 4.
 - c. Hazardous Environments: Explosion proof.
8. Operating Data:
 - a. Electrical Rating: 15 A at 120- to 480-V ac.
 - b. Pressure Limits:
 - 1) Continuous: **45 inches wg (11.2 kPa)**.
 - 2) Surge: **10 psig (68.9 kPa)**.
 - c. Temperature Limits: **Minus 30 to 180 deg F (Minus 34 to 82 deg C)**.
 - d. Operating Range: Approximately 2 times set point.
 - e. Repeatability: Within 3 percent.
 - f. Listed and labeled as defined in NFPA 70, by a qualified testing agency,

and marked for intended location and application.

B. Air-Pressure Differential Switch with Set-Point Indicator:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series 1630.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Diaphragm operated to actuate an SPDT snap switch.
3. Electrical Connections: Three-screw configuration, including one screw for common operation and two screws for field-selectable normally open or closed operation.
4. Enclosure Conduit Connection: Knock out or threaded connection.
5. User Interface: Screw-type set-point adjustment with enclosed set-point indicator and scale.
6. High and Low Process Connections: Threaded, **NPS 1/8 (DN 6)**.
7. Enclosure:
 - a. Dry Indoor Installations: NEMA 250, Type 1.
 - b. Outdoor and Wet Indoor Installations: NEMA 250, Type 4.
 - c. Hazardous Environments: Explosion proof.
8. Operating Data:
 - a. Electrical Rating: 15 A at 120- to 480-V ac.
 - b. Pressure Limits:
 - 1) Continuous: **10 psig (69 kPa)**.
 - 2) Surge: **25 psig (172 kPa)**.
 - c. Temperature Limits: **Minus 30 to 110 deg F (Minus 34 to 43 deg C)**.
 - d. Operating Range: Approximately 2 times set point.
 - e. Repeatability: Within 1 percent.
 - f. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Air-Pressure Differential Switch with Dual Scale Adjustable Set Point:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series ADPS.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Diaphragm operated to actuate an SPDT snap switch.
3. Electrical Connections: Push-on screw terminals.
4. Enclosure Conduit Connection: Knock out or threaded connection.

5. User Interface: Dual scale set-point adjustment knob located inside removable enclosure cover.
 6. High and Low Process Connections: Slip-on tubing connections.
 7. Enclosure:
 - a. Dry Indoor Installations: NEMA 250, Type 13.
 8. Operating Data:
 - a. Electrical Rating: 1.5 A at 250-V ac.
 - b. Pressure Limits: 40 inches wg (10 kPa)
 - c. Temperature Limits: Minus 4 to 185 deg F (Minus 20 to 85 deg C).
 - d. Operating Range: Approximately 2 times set point.
- D. Air-Pressure Differential Indicating Switch:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Photohelic Series 3000.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Combination gage with low- and high-limit switches.
 3. Nominal 4-inch- (100-mm-) diameter analog indication with white dial face, graduated black markings, pointer to indicate measured value, and a separate adjustable pointer for each switch set point.
 4. Switch zero and set-point **[tamperproof]** adjustment screws or knobs on the dial face.
 5. Each switch used as a safety limit shall have a manual reset button local to switch.
 6. Switch Type: Each set point shall have two Form C relays, DPDT.
 7. Electrical Connections: Screw terminals.
 8. Enclosure Conduit Connection: NPS 3/4 (DN 20) threaded connection.
 9. High and Low Process Connections: Threaded, NPS 1/8 (DN 6).
 10. Enclosure:
 - a. Dry Indoor Installations: NEMA 250, Type 1.
 - b. Outdoor and Wet Indoor Installations: NEMA 250, Type 4.
 - c. Hazardous Environments: Explosion proof.
 11. Operating Data:
 - a. Electrical Rating: 10 A at 120- to 240-V ac.
 - b. Pressure Limits: 25 psig (172 kPa).
 - c. Temperature Limits: 20 to 120 deg F (Minus 7 to 49 deg C).
 - d. Operating Range: Approximately twice normal operating range unless otherwise required for application.
 - e. Accuracy:

- 1) 4 percent for ranges through 0.5 in. wg (125 Pa).
 - 2) 2 percent for ranges 1 in. wg (250 Pa) and greater.
- f. Repeatability: Within 1 percent of full scale.
 - g. Switch Deadband: One pointer width and within 1 percent of full scale for each switch set point.
 - h. Power Supply: [24] [or] [120]-V ac, 50/60 Hz.
 - i. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.4 AIR-PRESSURE TRANSMITTERS

A. Air-Pressure Differential Transmitter:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Setra Systems, Inc.; Model 267.
 - b. <Insert manufacturer's name; product name or designation>.
2. Performance:
 - a. Range: Approximately 2 times set point.
 - b. Accuracy: Within [1] [0.5] [0.4] [0.25] percent of the full-scale range.
 - c. Hysteresis: Within 0.10 percent of full scale.
 - d. Repeatability: Within 0.05 percent of full scale.
 - e. Stability: Within 1 percent of span per year.
 - f. Overpressure: 10 psig (69 kPa).
 - g. Temperature Limits: Zero to 150 deg F (Minus 18 to 66 deg C).
 - h. Compensate Temperature Limits: 40 to 150 deg F (4 to 66 deg C).
 - i. Thermal Effects: 0.033 percent of full scale per degree F.
 - j. Shock and vibration shall not harm the transmitter.
3. Output Signals:
 - a. Analog Current Signal:
 - 1) Two-wire, 4- to 20-mA dc current source.
 - 2) Signal capable of operating into 800-ohm load.
 - b. Analog Voltage Signal:
 - 1) Three wire, zero to [5] [10] V.
 - 2) Minimum Load Resistance: 1000 ohms.
4. Display: Four-digit digital display with minimum 0.4-inch- (10-mm-) high numeric characters.
5. Operator Interface: Zero and span adjustments located behind cover.
6. Construction:

- a. Plastic casing with removable plastic cover.
- b. Threaded, **NPS 1/4 (DN 10)** swivel fittings for connection to copper tubing or **NPS 3/16 (DN 7)** barbed fittings for connection to polyethylene tubing. Fittings on bottom of instrument case.
- c. Screw terminal block for wire connections.
- d. Vertical plane mounting.
- e. NEMA 250, Type 4.
- f. Provide mounting bracket suitable for installation.

B. Air Pressure Differential Transmitter:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Ashcroft Inc.;** Model XLDP.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Range: Approximately 2 times set point.
 - b. Accuracy: Within **[0.25] [0.5]** percent of the span at reference temperature of **70 deg F (21 deg C)**.
 - c. Hysteresis: Within 0.02 percent of the span.
 - d. Repeatability: Within 0.05 percent of the calibrated span.
 - e. Stability: Within 0.25 percent of span per year.
 - f. Overpressure: **15 psig (103 kPa)**.
 - g. Temperature Limits: **Minus 20 to 160 deg F (Minus 29 to 71 deg C)**.
 - h. Compensate Temperature Limits: **35 to 135 deg F (2 to 57 deg C)**.
 - i. Thermal Effects: 0.015 percent of full scale per degree F.
 - j. Warm-up Time: Within 5 seconds.
 - k. Response Time: **[5 ms] [250 ms] [One second]**.
 - l. Shock and vibration shall not harm the transmitter.
3. Output Signals:
 - a. Analog Current Signal:
 - 1) Two-wire, 4- to 20-mA dc current source.
 - 2) Signal capable of operating into 1000-ohm load.
 - b. Analog Voltage Signal:
 - 1) Three wire, zero to **[5] [6] V**.
 - 2) Minimum Load Resistance: 1000 ohms.
4. Operator Interface:
 - a. Zero and span adjustments within 10 percent of full span.
 - b. Potentiometer adjustments located on face of transmitter.

5. Construction:

- a. Type 300 stainless-steel enclosure.
- b. Swivel fittings for connection to copper tubing or barbed fittings for connection to polyethylene tubing. Fittings on front of instrument enclosure.
- c. Screw terminal block for wire connections.
- d. Vertical plane mounting.
- e. NEMA 250, Type 2.
- f. Mounting Bracket: Appropriate for installation.
- g. Reverse wiring protected.
- h. Calibrate to NIST-traceable standards and provide each transmitter with a certificate of calibration.

C. Air-Pressure Differential Transmitters for Hazardous Environments:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **Ashcroft Inc.;** Model iXLDP.
- b. **<Insert manufacturer's name; product name or designation>.**

2. FM Approved for hazardous environments. Intrinsically safe for Classes I, II, and III; Divisions 1 and 2; Groups A through H.

3. Performance:

- a. Range: Approximately 2 times set point.
- b. Accuracy: Within **[0.25] [0.5]** percent of the span at reference temperature of 70 degrees F.
- c. Hysteresis: Within 0.02 percent of the span.
- d. Repeatability: Within 0.05 percent of the calibrated span.
- e. Stability: Within 0.25 percent of span per year.
- f. Overpressure: **20 psig (138 kPa).**
- g. Temperature Limits: **Minus 20 to 185 deg F (Minus 29 to 85 deg C).**
- h. Compensate Temperature Limits: **Zero to 160 deg F (Minus 18 to 71 deg C).**
- i. Thermal Effects: 0.01 percent of full scale per degree F.
- j. Warm-up Time: Within 5 seconds.
- k. Response Time: **[8 ms] [250 ms].**
- l. Shock and vibration shall not harm the transmitter.

4. Output Signals:

a. Analog Current Signal:

- 1) Two-wire, 4- to 20-mA dc current source.
- 2) Signal capable of operating into 1000-ohm load.

b. Analog Voltage Signal:

- 1) Three wire, zero to **[5] [6]** V.

- 2) Minimum Load Resistance: 1000 ohms.
 5. Operator Interface:
 - a. Zero and span adjustments within 10 percent of full span.
 - b. Potentiometer adjustments located on face of transmitter.
 6. Construction:
 - a. Type 300 stainless-steel enclosure.
 - b. Swivel fittings for connection to tubing. Fittings on bottom of instrument enclosure.
 - c. Two **1/2-inch (16-mm)** trade size conduit connections isolated from electronics.
 - d. Screw terminal block for wire connections.
 - e. Vertical plane mounting.
 - f. NEMA 250, Type 4X.
 - g. Mounting Bracket: Appropriate for installation.
 7. Reverse wiring protected.
 8. Calibrate to NIST-traceable standards and provide each transmitter with a certificate of calibration.
- D. Air-Pressure Differential Indicating Transmitter:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series DM-2000.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Performance:
 - a. Range: Approximately 2 times set point.
 - b. Accuracy Including Hysteresis and Repeatability: Within 1 percent of full scale at **77 deg F (25 deg C)**.
 - c. Stability: Within 1 percent of full scale per year.
 - d. Overpressure: **10 psig (69 kPa)**.
 - e. Temperature Limits: **20 to 120 deg F (Minus 7 to 49 deg C)**.
 - f. Thermal Effects: 0.055 percent of full scale per degree F.
 3. Display: Four-digit digital display with minimum **0.4-inch- ((10-mm-))** high numeric characters.
 4. Operator Interface:
 - a. Zero and span adjustments.
 - b. Selectable engineering units.
 5. Analog Output Current Signal:

- a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into a 1200-ohm load.
 6. Construction:
 - a. Plastic casing with clear plastic cover.
 - b. Integral fittings for plastic tubing connections on side of instrument case for high- and low-pressure connections.
 - c. Terminal block for wire connections.
 - d. Vertical plane mounting.
 - e. NEMA 250, Type 1.
 - f. Nominal 4-inch ((100-mm)) diameter face.
 - g. Mounting Bracket: Appropriate for installation.
- E. Air-Pressure Differential Indicating Transmitter:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series 616W.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Performance:
 - a. Range: Approximately 2 times set point.
 - b. Accuracy including hysteresis and repeatability: Within 0.25 percent of full scale.
 - c. Stability: Within 1 percent of full scale per year.
 - d. Overpressure: Varies with range. At least 1.5 times range.
 - e. Temperature Limits: **Zero to 140 deg F** (Minus 18 to 60 deg C).
 - f. Compensate Temperature Limits: **20 to 120 deg F** (Minus 7 to 49 deg C).
 - g. Thermal Effects: 0.02 percent of full scale per degree F.
 3. Display: Digital with minimum **0.4-inch-** (10-mm-) high numeric characters.
 4. Operator Interface: Zero and span adjustments.
 5. Analog Output Current Signal:
 - a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into a 1200-ohm load.
 6. Construction:
 - a. Plastic casing with removable clear plastic cover.
 - b. Integral barbed fittings for rubber or plastic tubing connections on bottom of instrument case for high- and low-pressure connections.
 - c. Screw terminal block for wire connections.
 - d. Vertical plane mounting.
 - e. NEMA 250, Type 4X.
 - f. Mounting Bracket: Appropriate for installation.

F. Air-Pressure Differential Indicating Transmitter with Field-Selectable Features:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series MS.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Field-Selectable Features:
 - a. Field configurable for pressure and velocity applications through user interface.
 - b. Field selectable from one of three pressure ranges both in SI (metric) and inch-pound (IP) units of measure.
 - c. Select range based on application. Range shall be approximately 2 times set point.
3. Performance:
 - a. Accuracy Including Hysteresis and Repeatability:
 - 1) Within 2 percent for **0.10 in. wg (25 Pa)**, **1.0 in. wg (250 Pa)** and all bi-directional ranges.
 - 2) Within 1 percent for other ranges.
 - b. Stability: Within 1 percent of full scale per year.
 - c. Response Time: Adjustable 0.5- to 15-second time constant with 95 percent response within 1.5 to 45 seconds.
 - d. Overpressure: **1 psig (6.9 kPa)** maximum operating; **10 psig (69 kPa)** burst pressure.
 - e. Temperature Limits: **Zero to 150 deg F (Minus 18 to 66 deg C)**.
4. Display: Four-digit digital display with minimum **0.4-inch- (10-mm-)** high numeric characters.
5. Operator Interface:
 - a. Selectable pressure ranges, where indicated.
 - b. Zero and span adjustments.
 - c. Selectable air velocity mode with square root function.
 - d. Adjustable signal dampening
6. Analog Output Current Signal:
 - a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into a 1200-ohm load.
7. Analog Output Voltage Signal:
 - a. Three wire, zero to 10 V.
 - b. Minimum Load Resistance: 1000 ohms.

8. Construction:
- a. Plastic casing with removable clear plastic cover.
 - b. NPS 3/16 (DN 7) nominal ID plastic tubing connections on side of instrument case for high- and low-pressure connections.
 - c. NPS 1/2 (DN 15) NPS threaded connection for conduit.
 - d. Terminal block for wire connections.
 - e. Vertical plane mounting.
 - f. NEMA 250, Type 4X.
 - g. Nominal 4-inch- (100-mm-) diameter face.
 - h. Mounting Bracket: Appropriate for installation.
- G. Air-Pressure Differential Transmitter with 0.10 Percent Accuracy and Auto Zero Feature:
1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Air Monitor Corporation; Veltron II.
 - b. <Insert manufacturer's name; product name or designation>.
 2. Description:
 - a. 4- to 20-mA dc output signal.
 - b. NEMA 250, Type 1 enclosure.
 - c. Construct the assembly so that shock, vibration, and pressure surges of up to 1 psig (6.9 kPa) will neither harm nor affect the accuracy of the transmitter.
 - d. Transmitter with automatic zeroing circuit capable of automatically readjusting the transmitter to zero at predetermined time intervals. The automatic zeroing circuit shall re-zero the transmitter to within 0.1 percent of true zero.
 - e. Performance:
 - 1) Range: Approximately 2 times set point.
 - 2) Calibrated Span: Field adjustable, minus 40 percent of the range.
 - 3) Accuracy: Within 0.10 percent of natural span.
 - 4) Repeatability: Within 0.15 percent of calibrated span.
 - 5) Linearity: Within 0.2 percent of calibrated span.
 - 6) Hysteresis and deadband (combined): Less than 0.2 percent of calibrated span.
 - f. Integral digital display for continuous indication of pressure differential.
- H. Air-Pressure Differential Transmitter with 0.25 Percent Accuracy and Auto Zero Feature:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Air Monitor Corporation**; DPT 2500 Plus.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Description:
 - a. 4- to 20-mA dc output signal.
 - b. NEMA 250, Type 1 enclosure.
 - c. Construct assembly so shock, vibration, and pressure surges of up to 1 psig (6.9 kPa) will neither harm nor affect the accuracy of the transmitter.
 - d. Transmitter with automatic zeroing circuit capable of automatically readjusting the transmitter to zero at predetermined time intervals. The automatic zeroing circuit shall re-zero transmitter to within 0.1 percent of true zero.
 - e. Performance:
 - 1) Range: As required by application and at least 10 percent below minimum airflow and 10 percent greater than design airflow.
 - 2) Calibrated Span: Field adjustable, minus 40 percent of the range.
 - 3) Accuracy: Within 0.25 percent of natural span.
 - 4) Repeatability: Within 0.15 percent of calibrated span.
 - 5) Linearity: Within 0.2 percent of calibrated span.
 - 6) Hysteresis and deadband (combined): Less than 0.2 percent of calibrated span.
 - f. Integral digital display for continuous indication of pressure differential.
- I. Air-Pressure Differential Indicating Transmitter, Switch, and Controller:
 1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.**; Series DH3 Digihelic.
 - b. **<Insert manufacturer's name; product name or designation>**.
 2. Description:
 - a. Three-in-one instrument, including digital display, control relay switches, and a transmitter with a current output.
 - b. Field configurable for pressure, velocity, and volumetric flow applications through user interface.
 - c. Select instrument range based on application. Range shall be approximately 2 times set point.
 3. Performance:

- a. Accuracy Including Hysteresis and Repeatability:
 - 1) Within 1 percent for ranges less than 5 in. wg (1250 Pa).
 - 2) Within 0.5 percent at 77 deg F (25 deg C) for other ranges.
 - b. Stability: Within 1 percent per year.
 - c. Response Time: 250 ms.
 - d. Overpressure: 5 psig (34 kPa) for instrument ranges less than 50 in wg (12.5 kPa) and 9 psig (62 kPa) for 100 in. wg (25 kPa) range.
 - e. Temperature Limits: 32 to 140 deg F (Zero to 60 deg C).
 - f. Thermal Effects: 0.020 percent per degree F.
 - g. Warm-up Period: One hour.
4. Controller Programming through Menu Keys to Access Five Menus:
- a. Security level.
 - b. Pressure, velocity, or flow application.
 - c. Engineering units.
 - d. K-factor for use with flow application.
 - e. Set-point control only; set-point and alarm operation; and alarm operation as high, low, or high/low with manual or automatic reset and delay.
 - f. View high and low readings.
 - g. Digital dampening for smoothing erratic applications.
 - h. Scaling of analog output to fit range and field calibration.
5. Display:
- a. Digital, four-digit display with backlight, with 0.4-inch- (10-mm-) high alphanumeric characters.
 - b. Four indicators; two for set point and two for alarm status.
6. Operator Interface:
- a. Set-point adjustment through keypad on face of instrument.
 - b. Zero and span adjustments accessible through menu.
 - c. Programming through keypad.
7. Analog Output Signal:
- a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into a 900-ohm load.
8. Digital Output Signal:
- a. Two SPDT relays.
 - b. Each rated for one amp at 30-V ac or dc.
9. Construction:
- a. Die cast-aluminum casing and bezel.
 - b. Threaded, NPS 1/8 (DN 6) connections on side and back.

- c. Vertical plane mounting.
- d. NEMA 250, Type 1.
- e. Nominal **4-inch-** (100-mm-) diameter face.
- f. Mounting Bracket: Appropriate for installation.

2.5 LIQUID-PRESSURE SWITCHES

A. Liquid Gage Pressure Switch, Diaphragm Operated, Low Pressure:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. [Mercoïd Controls, Division of Dwyer Instruments, Inc.](#); Series AP.
- b. **<Insert manufacturer's name; product name or designation>.**

2. Description:

- a. Diaphragm operated to actuate an SPDT snap switch.
- b. Electrical Connections: Screw terminal.
- c. Enclosure Conduit Connection: Knock out or threaded connection.
- d. User Interface: External screw with visual set-point adjustment.
- e. Process Connection: Threaded, **NPS 1/4 (DN 10)**.
- f. Enclosure:
 - 1) Dry Indoor Installations: NEMA 250, Type 1.
 - 2) Outdoor and Wet Indoor Installations: NEMA 250, Type 4.
 - 3) Hazardous Environments: Explosion proof.

3. Operating Data:

- a. Electrical Rating: 15 A at 120-V ac.
- b. Pressure Limits:
 - 1) Range **1 to 30 psig** (7 to 207 kPa): **60 psig** (414 kPa).
 - 2) Range **10 to 125 psig** (69 to 862 kPa): **160 psig** (1103 kPa).
- c. Temperature Limits: **Minus 30 to 150 deg F** (Minus 35 to 66 deg C).
- d. Operating Range: [**1 to 30 psig** (7 to 207 kPa)] [**10 to 250 psig** (69 to 862 kPa)].
- e. Deadband: Fixed.

4. Pressure Chamber Material: **[Steel] [or] [Stainless steel]**.

5. Diaphragm Material: **[Nylon] [or] [PTFE]**.

B. Liquid Gage Pressure Switch-Diaphragm Operated:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. [Mercoild Controls, Division of Dwyer Instruments, Inc.](#); Series SA 1000.
 - b. <Insert manufacturer's name; product name or designation>.
2. Diaphragm operated to actuate a [SPDT] [or] [DPDT] snap switch.
 3. Electrical Connections: Screw terminal.
 4. Enclosure Conduit Connection: Knock out or threaded connection.
 5. User Interface: Internal hex nut set-point adjustment with enclosed set-point indicator and scale.
 - a. Process Connection: Threaded, [NPS 1/4 (DN 6)] [or] [NPS 1/2 (DN 15)].
 6. Enclosure:
 - a. Dry Indoor Installations: NEMA 250, Type 1, 12.
 - b. Outdoor and Wet Indoor Installations: NEMA 250, Type 4X[**with drain**].
 - c. Hazardous Environments: Explosion proof.
 7. Operating Data:
 - a. Electrical Rating: 15 A at 120-, 240-, and 480-V ac.
 - b. Pressure Limits: 1200 psig (8274 kPa).
 - c. Ambient Temperature Limits: Minus 30 to 180 deg F (Minus 35 to 82 deg C).
 - d. Process Temperature Limits: Minus 4 to 167 deg F (Minus 20 to 75 deg C).
 - e. Adjustable Operating Range: [10 to 150 psig (69 to 1034 kPa)] [20 to 250 psig (138 to 1724 kPa)] [30 to 500 psig (207 to 3447 kPa)].
 - f. Deadband: Adjustable.
 8. Pressure Chamber Material: [Aluminum] [or] [brass] [or] [stainless steel].
 9. Diaphragm Material: [Buna-N] [or] [fluorocarbon].
- C. Liquid Gage Pressure Switch-Bourdon Tube Operated:
1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Dwyer Instruments, Inc.](#); Series DA, DS.
 - b. <Insert manufacturer's name; product name or designation>.
 2. Description:
 - a. Bourdon tube operated to actuate a [SPDT] [DPDT] snap switch.
 - b. Provide switches used in safety limiting applications with [auto] [manual] reset.
 - c. Wetted Materials: [Brass] [or] [Type 403 stainless steel] [or] [Type 316 stainless steel].
 - d. Electrical Connections: Screw terminal.
 - e. Enclosure Conduit Connection: Knock out or threaded connection.
 - f. User Interface: Thumbscrew set-point adjustment with enclosed set-point indicator and scale.

- g. Process Connection: Threaded, **NPS 1/4 (DN 10)**.
- h. Enclosure:
 - 1) Dry Indoor Installations: NEMA 250, Type 1.
 - 2) Outdoor and Wet Indoor Installations: NEMA 250, Type 4.
 - 3) Hazardous Environments: Explosion proof.
- i. Operating Data:
 - 1) Electrical Rating: **[5] [10]** A at 120-V ac.
 - 2) Pressure Limits: Equal to maximum pressure in full-scale range, but not less than system design pressure rating.
 - 3) Temperature Limits: **180 deg F (82 deg C)**.
 - 4) Operating Range: Approximately 2 times set point, but not less than system design pressure rating.
 - 5) Deadband: **[Adjustable] [Fixed] [Adjustable or fixed as required by application]**.
- j. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Liquid-Pressure Differential Switch with Set-Point Indicator:

- 1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series DP.
 - b. **<Insert manufacturer's name; product name or designation>**.
- 2. Description:
 - a. **[Brass] [or] [Type 316 stainless-steel]** double opposing bellows operate to actuate a SPDT snap switch.
 - b. Electrical Connections: Screw terminal.
 - c. Enclosure Conduit Connection: Knock out or threaded connection.
 - d. User Interface: Thumbscrew set-point adjustment with enclosed set-point indicator and scale.
 - e. High and Low Process Connections: Threaded, **NPS 1/8 (DN 3)**.
 - f. Enclosure:
 - 1) Dry Indoor Installations: NEMA 250, Type 1.
 - 2) Outdoor and Wet Indoor Installations: NEMA 250, Type 4.
 - 3) Hazardous Environments: Explosion proof.
 - g. Operating Data:
 - 1) Electrical Rating: 15 A at 120- to 240-V ac.
 - 2) Pressure Limits: At least 5 times full-scale range, but not less than system design pressure rating.

- 3) Temperature Limits: **Minus 10 to 180 deg F** (Minus 23 to 82 deg C).
- 4) Operating Range: Approximately 2 times set point.
- 5) Deadband: **[Adjustable] [Fixed] [Adjustable or fixed as required by application]**.

E. Liquid-Pressure Differential Switch:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **Ashcroft Inc.;** LPA, S Series.
- b. **<Insert manufacturer's name; product name or designation>.**

2. Description:

- a. Type 316 stainless-steel double opposing bellows operate to actuate an SPDT snap switch.
- b. Wetted materials: Type 316 stainless steel.
- c. Seal: **[Buna-N] [or] [Viton]**.
- d. Electrical Connections: Screw terminal.
- e. Enclosure Conduit Connection: Knock out or threaded connection.
- f. User Interface: Thumbscrew set-point adjustment with enclosed set-point indicator and scale.
- g. High and Low Process Connections: Threaded, **NPS 1/4 (DN 10)**.
- h. Enclosure: NEMA 250, Type 4 or 4X.
- i. Operating Data:
 - 1) Electrical Rating: 10 A at 120- to 240-V ac.
 - 2) Pressure Limits: **Zero to 500 psig** ((Zero to 3447 kPa).)
 - 3) Ambient Temperature Limits: **Minus 20 to 150 deg F** (Minus 29 to 66 deg C).
 - 4) Process Temperature Limits: **20 to 300 deg F** (Minus 7 to 149 deg C).
 - 5) Operating Range: 2 times set point, unless otherwise required by application.
 - 6) Deadband: **[Adjustable] [Fixed] [Adjustable or fixed as required by application]**.
- j. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.6 LIQUID-PRESSURE TRANSMITTERS

A. Liquid Gage Pressure Transmitter with Adjustable Span[**for Hazardous Environments**]:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. [Rosemount Inc., Emerson Electric Co.](#); Model 3051CG.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Hazardous Classification: FM Approved for hazardous environments.
- a. Intrinsically safe for Classes I, II, and III; Divisions 1 and 2; Groups A through H.
 - b. Explosion proof for Class I; Division 1; Groups B, C, and D.
 - c. Dust ignition proof for Class II, Division 1, Groups E, F, and G.
 - d. Dust ignition proof for Class III, Division 1.
3. Performance:
- a. Range: **Minus 300 to 300 psig** (Minus 2068 to 2068 kPa).
 - b. Span: Field adjustable.
 - c. Minimum Span: **3 psig** (21 kPa).
 - d. Reference Accuracy: Within 0.07 percent of span or better.
 - e. Stability: Within 0.125 percent of upper range limit for 5 years.
 - f. Overpressure Limits: **3626 psig** (25 000 kPa).
 - g. Process Temperature Limits: **Minus 40 to 250 deg F** (Minus 40 to 121 deg C).
 - h. Ambient Temperature Limits: **Minus 40 to 185 deg F** (Minus 40 to 85 deg C).
 - i. Temperature Effect: Within 0.025 percent of upper range limit plus 0.125 percent of span.
 - j. Shock and vibration shall not harm the transmitter.
4. Analog Output Current Signal:
- a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into 1000-ohm load.
 - c. Digital signal based on HART protocol carried with current signal.
 - d. Dampening: Field selectable from zero to 30 seconds.
5. Operator Interface: Zero and span adjustments located behind cover.
6. Display: Digital, five-digit, two-line display with **0.4-inch-** (10-mm-) high alphanumeric characters.
7. Construction:
- a. Non-wetted parts of transmitter constructed of aluminum or stainless steel.
 - b. Enclosure with removable cover on each side.
 - c. Wetted parts of transmitter constructed of Type 316 stainless steel.
 - d. Threaded, **NPS 1/2** (DN 15) process connection on bottom of instrument.
 - e. Drain/vent valve on process connection.
 - f. Two **1/2-inch** (16-mm) trade size conduit connections on side of instrument enclosure.
 - g. Screw terminal block for wire connections.
 - h. NEMA 250, Type 4X.
 - i. Mounting Bracket: Appropriate for installation.

B. Liquid-Pressure Differential Transmitter with Adjustable Span[for Hazardous Environments]:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Rosemount Inc., Emerson Electric Co.;** Model 3051CD.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Hazardous Classification: FM Approved for hazardous environments.
 - a. Intrinsically safe for Classes I, II, and III; Divisions 1 and 2; Groups A through H.
 - b. Explosion proof for Class I, Division 1, Groups B, C, and D.
 - c. Dust ignition proof for Class II, Division 1, Groups E, F, and G.
 - d. Dust ignition proof for Class III, Division 1.
3. Performance:
 - a. Range: **Minus 300 to 300 psig** (Minus 2068 to 2068 kPa).
 - b. Span: Field adjustable.
 - c. Minimum Span: **3 psig** (21 kPa).
 - d. Reference Accuracy: Within 0.07 percent of span or better.
 - e. Stability: Within 0.125 percent of upper range limit for 5 years.
 - f. Overpressure Limits: **3626 psig** (25 000 kPa).
 - g. Process Temperature Limits: **Minus 40 to 250 deg F** (Minus 40 to 121 deg C).
 - h. Ambient Temperature Limits: **Minus 40 to 185 deg F** (Minus 40 to 85 deg C).
 - i. Temperature Effect: Within 0.025 percent of upper range limit plus 0.125 percent of span.
 - j. Shock and vibration shall not harm the transmitter.
4. Analog Output Current Signal:
 - a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into 1000-ohm load.
 - c. Digital signal based on HART protocol carried with current signal.
 - d. Dampening: Field selectable from zero to 30 seconds.
5. Operator Interface: Zero and span adjustments located behind cover.
6. Display: Digital, five-digit, two-line display with **0.4-inch-** (10-mm-) high alphanumeric characters.
7. Construction:
 - a. Non-wetted parts of transmitter constructed of aluminum or stainless steel.
 - b. Enclosure with removable cover on each side.
 - c. Wetted parts of transmitter constructed of Type 316 stainless steel.
 - d. Threaded, **NPS 1/2** (DN 15) process connection on bottom of instrument.
 - e. Drain/vent valve on process connection.
 - f. Two **1/2-inch** (16-mm) trade size conduit connections on side of instrument enclosure.
 - g. Screw terminal block for wire connections.
 - h. NEMA 250, Type 4X.

i. Mounting Bracket: Appropriate for installation.

C. Liquid-Pressure Differential Transmitter:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Dwyer Instruments, Inc.;** Series 645.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Range: Approximately 2 times set point.
 - b. Span: Adjustable plus or minus one milliamp, noninteractive.
 - c. Accuracy: Within 0.25 percent of full scale.
 - d. Pressure: Maximum operating pressure 2.5 times range.
 - e. Temperature Limits: **Zero to 175 deg F (Minus 18 to 79 deg C).**
 - f. Compensate Temperature Limits: **30 to 150 deg F (Minus 1 to 66 deg C).**
 - g. Thermal Effects: 0.02 percent of full scale per degree F.
 - h. Response Time: 30 to 50 ms.
 - i. Shock and vibration shall not harm the transmitter.
3. Analog Output Current Signal:
 - a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into 1000-ohm load.
4. Operator Interface:
 - a. Zero and span adjustments located behind cover.
 - b. Bleed screws on side of body, two screws on low-pressure side, and one screw on high-pressure side, for air in line and pressure cavity.
5. Construction:
 - a. Aluminum and stainless-steel enclosure with removable cover.
 - b. Wetted parts of transmitter constructed of 17-4 PH or 300 Series stainless steel.
 - c. Threaded, **NPS 1/4 (DN 10)** process connections on side of instrument enclosure.
 - d. Knock out for **1/2-inch (16-mm)** nominal conduit connection on side of instrument enclosure.
 - e. Screw terminal block for wire connections.
 - f. NEMA 250, Type 4X.
 - g. Mounting Bracket: Appropriate for installation.
6. Three-valve manifold. Construct manifold of brass, bronze, or stainless steel. Manifold shall have threaded, **NPS 1/4 (DN 10)** process connections.

D. Liquid-Pressure Differential Transmitter:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Setra Systems, Inc.;** Model 230.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. **Performance:**
 - a. Range: Approximately 2 times the set point.
 - b. Span: Adjustable plus or minus one milliamp, noninteractive.
 - c. Accuracy: Within 0.25 percent of full scale.
 - d. Hysteresis: Within 0.1 percent of full scale.
 - e. Repeatability: Within 0.05 percent of full scale.
 - f. Maximum Working Pressure: **250 psig (1724 kPa).**
 - g. Temperature Limits: **Zero to 175 deg F (Minus 18 to 79 deg C).**
 - h. Compensate Temperature Limits: **30 to 150 deg F (Minus 1 to 66 deg C).**
 - i. Thermal Effects: 0.02 percent of full scale per degree F.
 - j. Response Time: 30 to 50 ms.
 - k. Shock and vibration shall not harm the transmitter.
3. **Analog Output Current Signal:**
 - a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into 1000-ohm load.
4. **Analog Output Voltage Signal:**
 - a. Three wire, zero to **[5] [10]** V.
 - b. Minimum Load Resistance: 1000 ohms.
5. **Operator Interface:**
 - a. Zero and span adjustments located behind cover.
 - b. Bleed screws on side of body, two screws on low-pressure side, and one screw on high-pressure side, for air in line and pressure cavity.
6. **Construction:**
 - a. Aluminum and stainless-steel enclosure with removable cover.
 - b. Wetted parts of transmitter constructed of 17-4 PH or 300 Series stainless steel.
 - c. Threaded, **NPS 1/4 (DN 10)** process connections on side of instrument enclosure.
 - d. Knock out for **1/2-inch (15-mm)** nominal conduit connection on side of instrument enclosure.
 - e. Screw terminal block for wire connections.
 - f. NEMA 250, Type 4.
 - g. Mounting Bracket: Appropriate for installation.

7. Provide transmitter with three-valve manifold. Construct manifold of brass, bronze, or stainless steel. Provide manifold with NPS 1/4 (DN 10) NPT process connections.

E. Liquid-Pressure Differential Transmitter with Field-Selectable Range:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Dwyer Instruments, Inc.; Series WWDP.
 - b. <Insert manufacturer's name; product name or designation>.
2. Performance:
 - a. Field-Selectable Range:
 - 1) 5, 10, 25, 50 psig (34, 69, 172, 345 kPa).
 - 2) 10, 20, 50, 100 psig (69, 138, 345, 689 kPa).
 - 3) 25, 50, 125, 250 psig (172, 345, 862, 1724 kPa).
 - b. Field-selectable unidirectional or bidirectional range.
 - c. Accuracy: Within 1 percent of the full-scale range, except lowest selectable range within 2 percent.
 - d. Stability: Within 0.5 percent of span per year.
 - e. Pressure: Maximum operating pressure equal to highest pressure in range.
 - f. Overpressure: Proof pressure 2.2 times full scale; burst pressure 40 times full scale.
 - g. Temperature Limits: Minus 44 to 185 deg F (Minus 42 to 85 deg C).
 - h. Compensate Temperature Limits: 32 to 130 deg F (Zero to 54 deg C).
 - i. Thermal Effects: 2 percent of full scale per 100 deg F (56 deg C).
 - j. Response Time: Field selectable from 1 to 5 seconds.
 - k. Shock and vibration shall not harm the transmitter.
3. Configurable Analog Output Current Signal:
 - a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into 1000-ohm load.
4. Configurable Analog Output Voltage Signals:
 - a. Three wire, zero to 5 V, zero to 10 V, and 1 to 5 V.
 - b. Minimum Load Resistance: 1000 ohms.
5. Display: Four-digit LCD with minimum 0.4-inch- (10-mm-) high numeric characters.
6. Operator Interface:
 - a. Digital zero button located behind cover.
 - b. Range selector located behind cover.

7. Construction:

- a. Cast-aluminum enclosure with removable cover.
- b. Wetted parts of transmitter constructed of 17-4 PH stainless steel.
- c. Threaded, **NPS 1/8 (DN 6)** process connections on bottom of instrument enclosure.
- d. **1/2-inch (16-mm)** trade size connection for conduit on bottom of instrument enclosure.
- e. Screw terminal block for wire connections.
- f. Vertical plane mounting.
- g. NEMA 250, Type 4.
- h. Mounting Bracket: Appropriate for installation.

F. Liquid-Pressure Differential Transmitter with Field-Selectable Ranges:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **MAMAC Systems, Inc.;** PR-283.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Performance:
 - a. Field-Selectable Ranges:
 - 1) **5, 10, 20 psig** (34, 69, 138 kPa).
 - 2) **25, 50, 100 psig** (172, 345, 689 kPa).
 - 3) **75, 150, 300 psig** (517, 1034, 2068 kPa).
 - b. Accuracy: Within 1 percent of the full-scale range.
 - c. Static Pressure: 2 times full-scale range.
 - d. Overpressure: Proof pressure 3 times full-scale range, burst pressure 5 times full scale.
 - e. Compensate Temperature Limits: **Zero to 180 deg F** (Minus 18 to 82 deg C).
 - f. Thermal Effects: 0.025 percent of full scale per degree F.
 - g. Shock and vibration shall not harm the transmitter.
3. Analog Output Current Signal:
 - a. Two-wire, 4- to 20-mA dc current source.
 - b. Signal capable of operating into 1000-ohm load.
4. Analog Output Voltage Signals:
 - a. Three wire, field selectable from zero to 5 V or zero to 10 V.
 - b. Minimum Load Resistance: 1000 ohms.
5. Operator Interface:
 - a. Zero button located behind cover.

- b. Range selector located behind cover.
6. Construction:
- a. 0.0478-inch- (1.214-mm-) thick, corrosion-resistant steel enclosure with baked-enamel finish.
 - b. Removable front cover.
 - c. Wetted parts of transmitter constructed of 17-4 PH stainless steel.
 - d. Threaded, NPS 1/8 (DN 6) process connections on bottom of instrument enclosure.
 - e. 1/2 inch (16 mm) trade size conduit on side of instrument enclosure.
 - f. Screw terminal block for wire connections.
 - g. Vertical plane mounting.
 - h. NEMA 250, Type 4.
 - i. Mounting Bracket: Appropriate for installation.
7. Provide transmitter with three-valve manifold.
- a. Construct manifold of Type 316 stainless steel.
 - b. Manifold with threaded, NPS 1/4 ((DN 10)) process connections.

2.7 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect assembled pressure instruments, as indicated by instrument requirements. Affix standards organization's certification and label.
- B. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PRESSURE INSTRUMENT APPLICATIONS

A. Duct-Mounted Static Pressure Sensors:

1. **<Insert system> System, <Insert unique application>: [Duct insertion static pressure sensor] [Duct traverse static pressure sensor].**

B. Space Static Pressure Sensors:

1. **<Insert system> System, <Insert unique application>: [Space static pressure sensor for wall mounting] [Space static pressure sensor for recessed ceiling mounting] [Space static pressure sensor for exposed or suspended mounting].**

C. Air-Pressure Differential Switches:

1. **<Insert system> System, <Insert unique application>: [Air-pressure differential switch] [Air-pressure differential switch with set-point indicator] [Air-pressure differential switch with dual scale adjustable set point] [Air-pressure-differential indicating].**

D. Air-Pressure Differential Transmitters:

1. **Duct, <Insert system> System, <Insert unique application>: [Air-pressure differential transmitter] [Air-pressure differential transmitter for hazardous environments] [Air-pressure differential indicating transmitter] [Air-pressure differential transmitter with 0.10 percent accuracy and auto zero feature] [Air-pressure differential transmitter with 0.25 percent accuracy and auto zero feature] [Air-pressure differential indicating transmitter, switch, and controller].**
2. **Space, <Insert system> System, <Insert unique application>: [Air-pressure differential transmitter] [Air-pressure differential transmitter for hazardous environments] [Air-pressure differential indicating transmitter] [Air-pressure differential transmitter with 0.10 percent accuracy and auto zero feature] [Air-pressure differential transmitter with 0.25 percent accuracy and auto zero feature] [Air-pressure differential indicating transmitter, switch, and controller].**

E. Liquid Gage Pressure Switches:

1. **<Insert system> System, <Insert unique application>: [Liquid gage pressure switch, diaphragm operated, low pressure] [Liquid gage pressure switch, diaphragm operated] [Liquid gage pressure switch, bourdon-tube operated].**

F. Liquid-Pressure Differential Switches:

1. **<Insert system> System, <Insert unique application>: [Liquid-pressure differential switch with set-point indicator] [Liquid-pressure differential switch].**

G. Liquid-Pressure Differential Transmitters:

1. **<Insert system> System, <Insert unique application>: [Liquid-pressure differential transmitter with adjustable span] [Liquid-pressure differential transmitter] [Liquid-pressure differential transmitter with field-selectable range].**

3.3 INSTALLATION, GENERAL

- A. Install products level, plumb, parallel, and perpendicular with building construction.
- B. Properly support instruments, tubing, piping wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement, sway, or a break in attachment when subjected to a **<Insert value>** force.
- C. Provide ceiling, floor, roof, wall openings, and sleeves required by installation. Before proceeding with drilling, punching, or cutting, check location first for concealed products that could potentially be damaged. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- D. Fastening Hardware:
1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 2. Tighten bolts and nuts firmly and uniformly. Do not to overstress threads by using excessive force or oversized wrenches.
 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- E. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- F. Corrosive Environments:
1. Use products that are suitable for environment to which they are subjected.
 2. If possible, avoid or limit use of materials in corrosive environments.
 3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 4. Where instruments are located in a corrosive environment and are not corrosive resistant from the manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.4 ELECTRICAL POWER

- A. Furnish and install electrical power to products requiring electrical connections.

- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.5 PRESSURE INSTRUMENT INSTALLATION

A. Mounting Location:

1. Rough-in: Outline instrument-mounting locations before setting instruments and routing, cable, wiring, tubing, and conduit to final location.
2. Install switches and transmitters for air and liquid pressure associated with individual air-handling units and associated connected ductwork and piping near air-handlings units co-located in air-handling unit system control panel, to provide service personnel a single and convenient location for inspection and service.
3. Install liquid and steam pressure switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
4. Install air-pressure switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
5. Mount switches and transmitters not required to be mounted within system control panels on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
6. Install instruments (except pressure gages) in steam, liquid, and liquid-sealed piped services below their process connection point. Slope tubing down to instrument with a slope of [2] [3] <Insert number> percent.
7. Install instruments in dry gas and noncondensable vapor piped services above their process connection point. Slope process connection lines up to instrument with a minimum slope of [2] [3] <Insert number> percent.

- B. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static pressure class and leakage and seal classes indicated using neoprene gaskets or grommets.

C. Duct Pressure Sensors:

1. Install sensors using manufacturer's recommended upstream and downstream distances.
2. Unless indicated on Drawings, locate sensors approximately [50] [67] [75] percent of distance of longest hydraulic run. Location of sensors shall be submitted and approved before installation.
3. Install mounting hardware and gaskets to make sensor installation airtight.

4. Route tubing from the sensor to transmitter.
5. Use compression fittings at terminations.
6. Install sensor in accordance with manufacturer's instructions.
7. Support sensor to withstand maximum air velocity, turbulence, and vibration encountered to prevent instrument failure.

D. Outdoor Pressure Sensors:

1. Install roof-mounted sensor in least-noticeable location and as far away from exterior walls as possible.
2. Locate wall-mounted sensor in an inconspicuous location.
3. Submit sensor location for approval before installation.
4. Verify signal from sensor is stable and consistent to all connected transmitters. Modify installation to achieve proper signal.
5. Route outdoor signal pipe full size of sensor connection to transmitters. Install branch connection of size required to match to transmitter.
6. Install sensor signal pipe with dirt leg and drain valve below roof penetration.
7. Insulate signal pipe with flexible elastomeric insulation as required to prevent condensation.
8. Connect roof-mounted signal pipe exposed to outdoors to building grounding system.

E. Air-Pressure Differential Switches:

1. Install air-pressure sensor in system for each switch connection. Install sensor in an accessible location for inspection and replacement.
2. A single sensor may be used to share a common signal to multiple pressure instruments.
3. Install access door in duct and equipment to access sensors that cannot be inspected and replaced from outside.
4. Route **NPS 3/8 (DN 12)** tubing from sensor to switch connection.
5. Do not mount switches on rotating equipment.
6. Install switches in a location free from vibration, heat, moisture, or adverse effects, which could damage the switch and hinder accurate operation.
7. Install switches in an easily accessible location serviceable from floor.
8. Install switches adjacent to system control panel if within **[50 feet (15 m)] <Insert distance>**; otherwise, locate switch in vicinity of system connection.

F. Liquid-Pressure Differential Switches:

1. Where process connections are located in mechanical equipment room, install switch in convenient and accessible location near system control panel.
2. Where process connections are installed outside mechanical rooms, route processing tubing to mechanical room housing system control panel and locate switch near system control panel.
3. Where multiple switches serving same system are installed in same room, install switches by system to provide service personnel a single and convenient location for inspection and service.
4. System process tubing connection shall be full size of switch connection, but not less than **[NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)] [NPS 1 (DN 25)]**. Install[

5. **stainless-steel**] bushing if required to mate switch to system connection.
6. Connect process tubing from point of system connection and extend to switch.
7. Install isolation valves in process tubing as close to system connection as practical.
8. Install dirt leg and drain valve at each switch connection.
9. Do not mount switches on rotating equipment.
10. Install switches in a location free from vibration, heat, moisture, or adverse effects, which could damage the switch and hinder accurate operation.
11. Install switches in an easily accessible location serviceable from floor.

G. Liquid-Pressure Transmitters:

1. Where process connections are installed in mechanical equipment room, install transmitter in convenient and accessible location near system control panel.
2. Where process connections are installed outside mechanical rooms, route processing tubing to mechanical room housing system control panel and locate transmitter near system control panel.
3. Where multiple transmitters serving same system are installed in same room, install transmitters by system to provide service personnel a single and convenient location for inspection and service.
4. System process tubing connection shall be full size of switch connection, but not less than [NPS 1/2 (DN 15)] [NPS 3/4 (DN 20)] [NPS 1 (DN 25)]. Install [**stainless-steel**] bushing if required to mate switch to system connection.
5. Connect process tubing from point of system connection and extend to transmitter.
6. Install isolation valves in process tubing as close to system connection as practical.
7. Install dirt leg and drain valve at each transmitter connection.
8. Do not mount transmitters on equipment.
9. Install in a location free from vibration, heat, moisture, or adverse effects, which could damage and hinder accurate operation.

3.6 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification[**and on face of ceiling directly below instruments concealed above ceilings**].

3.7 CHECKOUT PROCEDURES

- A. Check out installed products before continuity tests, leak tests, and calibration.
- B. Check instruments for proper location and accessibility.

- C. Check instruments for proper installation with respect to direction of flow, elevation, orientation, insertion depth, or other applicable considerations that impact performance.

3.8 ADJUSTMENT, CALIBRATION, AND TESTING

A. Description:

1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
3. For each analog instrument, perform a three-point calibration test for both linearity and accuracy.
4. Equipment and procedures used for calibration shall comply with instrument manufacturer's recommendations.
5. Provide diagnostic and test equipment for calibration and adjustment.
6. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
8. If, after calibration, indicated performance cannot be achieved, replace out-of-tolerance instruments.
9. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.

C. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

D. Sensors: Check sensors at zero, 50, and 100 percent of project design values.

E. Switches: Calibrate switches to make or break contact at set points indicated.

F. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of project design values.

3.9 ADJUSTING

- A. Occupancy Adjustments: When requested within [**12**] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.10 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include [**three**] [**six**] [**nine**] [**12**] months' full maintenance by [**skilled employees of systems and equipment Installer**] [**manufacturer's authorized service representative**]. Include [**monthly**] [**quarterly**] [**semiannual**] [**annual**] preventive maintenance, repair, or replacement of worn or defective components, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.11 DEMONSTRATION

- A. [**Engage a factory-authorized service representative to train**] [**Train**] Owner's maintenance personnel to adjust, operate, and maintain instrumentation and control devices.
- B. Coordinate pressure instrument demonstration video with operation and maintenance manuals and classroom instruction for use by Owner in operating, maintaining, and troubleshooting.
- C. Record videos on DVD disks.
- D. Owner shall have right to make additional copies of video for internal use without paying royalties.

END OF SECTION 230923.23

SECTION 230923.24 - SPEED INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes speed switches for direct-digital controls for HVAC.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.24**.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
 - 1. Operating characteristics, electrical characteristics, and furnished accessories indicating operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
 - 2. Product description with complete technical data and product specification sheets.
 - 3. Installation operation and maintenance instructions, including factors affecting performance.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and [**mounting**] details.
 - 2. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
 - 4. Include number-coded identification system for unique identification of wiring.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: To include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 ROTATIONAL SPEED SWITCHES

- A. Rotational Speed Switch (Non-Contact Type):

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. Proximity Controls, Division of Dwyer Instruments, Inc.; Series NSS.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. **Description:**
 - a. Speed switch, sensor, and electronics housed in enclosure.
 - b. Shaft-end-mounted disc, or split collar wrap generates an alternating magnetic field sensed by the switch.
 - c. Dust, dirt, and grease proof.
 - d. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments Class I, Group D; Class II, Groups E, F, and G; and Class III.
3. **Performance:**
 - a. Field-Adjustable Range: **[10 to 100] [100 to 5000]** rpm.
 - b. Temperature Limits: **Minus 40 to 140 deg F** (Minus 40 to 60 deg C).
 - c. Electrical Rating: 5 A at 115-V ac.
 - d. Switch Type: SPDT.
 - e. Gap Distance: Approximately **0.375 inch** ((9) mm).
4. **Operator Interface:** Potentiometer.
5. **Enclosure Construction:**
 - a. **[PVC] [Cast aluminum]**.
 - b. Removable cover.
 - c. NEMA 250, Type 4X.
 - d. Electrical Connection: Wiring, **12 inches** (300 mm) long, furnished with switch.
 - e. Conduit Connection: **1-inch** (27-mm) trade size.
6. **Disc, Guard, and Mounting Bracket Construction:**
 - a. Magnetic Disc: Nylon or PVC.
 - b. Disc Guard: Stainless steel.

- c. Mounting Bracket: Aluminum with stainless-steel shaft.
- B. Rotational Speed Switch (Contact Type):
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Proximity Controls, Division of Dwyer Instruments, Inc.;** Series DSS.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Description:
 - a. Speed switch, sensor, and electronics housed in one enclosure.
 - b. Photoelectric technology.
 - c. Suitable for mounting in any orientation.
 - d. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments Class I, Groups C and D; and Class II, Groups F and G.
 3. Performance:
 - a. Three Field-Adjustable Ranges: 0.1 to 10, 1 to 100, and 10 to 1000 rpm.
 - b. De-Energize Set Point: 15 to 20 percent lower than energize speed range.
 - c. Repeatability: Within 2 percent of maximum speed in range.
 - d. Rotation: Clockwise or counterclockwise.
 - e. Temperature Limits: **Minus 40 to 140 deg F** (Minus 40 to 60 deg C).
 - f. Electrical Rating: 3 A at 120- or 240-V ac.
 - g. Switch Type: SPDT.
 4. Operator Interface: Adjustment screw.
 5. Enclosure Construction:
 - a. Aluminum.
 - b. Screw cover.
 - c. NEMA 250, Type 4X.
 - d. Electrical Connection: Screw terminals.
 - e. Conduit Connection: Two, **3/4-inch** (21-mm) trade size.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Speed-Switch Applications:

- 1. **<Insert application>**: Speed switch, [**contact**] [**non-contact**] type.

- B. Install products level, plumb, parallel, and perpendicular with building construction.

- C. Properly support speed-switch wiring and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a **<Insert value>** force.

- D. Fastening Hardware:

- 1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.

- E. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.

- F. Corrosive Environments:

- 1. Use products that are suitable for environment to which they are subjected.
 - 2. If possible, avoid or limit use of materials in corrosive environments.
 - 3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 - 4. Where instruments are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.3 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.

- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."

- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.4 SPEED-SWITCH INSTALLATIONS

- A. Use manufacturer's mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
- B. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static-pressure class and leakage and seal classes indicated using neoprene gaskets or grommets.

3.5 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification[**and on face of ceiling directly below instruments concealed above ceilings**].

3.6 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:
 1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
 2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
 3. Equipment and procedures used for calibration shall meet instrument manufacturer's written instructions.
 4. Provide diagnostic and test equipment for calibration and adjustment.
 5. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
 6. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
 7. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
 8. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements and to supplement requirements indicated.
- B. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

C. Switches: Calibrate switches to make or break contact at set points indicated.

3.7 ADJUSTING

- A. Occupancy Adjustments: When requested within [**12**] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 230923.24

SECTION 230923.27 - TEMPERATURE INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Air temperature sensors.
2. Combination air temperature sensors and switches.
3. Air temperature switches.
4. Air temperature RTD transmitters.
5. Liquid and steam temperature sensors.
6. High-end, commercial-grade, liquid, and steam temperature sensors.
7. Industrial-grade liquid and steam temperature sensors.
8. Liquid temperature switches.
9. High-end, commercial-grade, liquid, and steam temperature transmitters.
10. Industrial-grade liquid and steam temperature transmitters.

- B. Related Requirements:

1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.27**.

1.3 DEFINITIONS

- A. HART (Highway Addressable Remote Transducer) Protocol: The global standard for sending and receiving digital information across analog wires between smart devices and control or monitoring systems through bidirectional communication that provides data access between intelligent field instruments and host systems. A host can be any software application from a technician's hand-held device or laptop to a plant's process control, asset management, safety, or other system using any control platform.
- B. RTD: Resistance temperature detector.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 2. Operating characteristics, electrical characteristics, and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
 3. Product description with complete technical data, performance curves, and product specification sheets.
 4. Installation operation and maintenance instructions, including factors affecting performance.
- B. Shop Drawings:
1. Include plans, elevations, sections, and [**mounting**] details.
 2. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.
 4. Include number-coded identification system for unique identification of wiring, cable, and tubing ends.
- C. Samples: For each exposed product installed in finished space.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plan drawings and corresponding product installation details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Product installation location shown in relationship to room, duct, pipe, and equipment.
 2. Wall-mounted instruments located in finished space showing relationship to light switches, fire-alarm devices, and other installed devices.
 3. Sizes and locations of wall access panels for instruments installed behind walls.
 4. Sizes and locations of ceiling access panels for instruments installed in inaccessible ceilings.
- B. Product Certificates: For each product requiring a certificate.
- C. Product Test Reports: For each product, for tests performed by [**manufacturer and witnessed by a qualified testing agency**] [**a qualified testing agency**].
- D. Field quality-control reports.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials and parts that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. Provide **[one] [two] <Insert quantity>** matching product(s) in Project inventory for each unique size and type of the following:
 - 1. **<Insert product>**.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Environmental Conditions:
 - 1. Instruments shall operate without performance degradation under the ambient environmental temperature, pressure, humidity, and vibration conditions specified and encountered for installed location.
 - a. If instrument alone cannot meet requirement, install instrument in a protective enclosure that is isolated and protected from conditions impacting performance. Enclosure shall be internally insulated, electrically heated[**and cooled**], filtered, and ventilated as required by instrument and application.
 - 2. Instruments and accessories shall be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Instruments not available with integral enclosures complying with requirements indicated shall be housed in protective secondary enclosures. Instrument's installed location shall dictate following NEMA 250 enclosure requirements:
 - a. Outdoors, Protected: **[Type 2] [Type 3] [Type 12] <Insert type>**.
 - b. Outdoors, Unprotected: **[Type 4] [Type 4X]**.
 - c. Indoors, Heated with Filtered Ventilation: **[Type 1] [Type 2] <Insert type>**.
 - d. Indoors, Heated with Non-Filtered Ventilation: **[Type 2] [Type 12] <Insert type>**.
 - e. Indoors, Heated and Air Conditioned: **[Type 1] <Insert type>**.
 - f. Mechanical Equipment Rooms:
 - 1) Chiller and Boiler Rooms: **[Type 12] [Type 4] [Type 4X] <Insert type>**.
 - 2) Air-Moving Equipment Rooms: **[Type 1] [Type 2] [Type 12] <Insert type>**.
 - g. Localized Areas Exposed to Washdown: **[Type 4] [Type 4X] <Insert type>**.
 - h. Within Duct Systems and Air-Moving Equipment Not Exposed to Possible Condensation: **[Type 2] [Type 3] [Type 12] <Insert type>**.

- i. Within Duct Systems and Air-Moving Equipment Exposed to Possible Condensation: **[Type 4] [Type 4X] <Insert type>**.
- j. Hazardous Locations: Explosion-proof rating for condition.
- k. **<Insert location and enclosure requirements>**.

2.2 AIR TEMPERATURE SENSORS

A. Platinum RTDs: Common Requirements:

1. 100 or 1000 ohms at zero deg C and a temperature coefficient of 0.00385 ohm/ohm/deg C.
2. Two-wire, PTFE-insulated, 22-gage stranded copper leads.
3. Performance Characteristics:
 - a. Range: **Minus 50 to 275 deg F** (Minus 46 to 135 deg C).
 - b. Interchangeable Accuracy: At **32 deg F** (zero deg C) within **0.5 deg F** (0.3 deg C).
 - c. Repeatability: Within **0.5 deg F** (0.3 deg C).
 - d. Self-Heating: Negligible.
4. Transmitter Requirements:
 - a. Transmitter required for each 100-ohm RTD.
 - b. Transmitter optional for 1000-ohm RTD, contingent on compliance with end-to-end control accuracy.

B. Platinum RTD, Single-Point Air Temperature Duct Sensors:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Minco;** S400 Series PD or PF.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. **[100] [or] [1000]** ohms.
3. Temperature Range: **Minus 50 to 275 deg F** ((Minus 45 to 135 deg C).)
4. Probe: Single-point sensor with a stainless-steel sheath.
5. Length: As required by application to achieve tip at midpoint of air tunnel, up to **18 inches** ((450 mm) long).
6. Enclosure: Junction box with removable cover; NEMA 250, Type 1 for indoor applications and Type 4 for outdoor applications.
7. Gasket for attachment to duct or equipment to seal penetration airtight.
8. Conduit Connection: **1/2-inch** ((16-mm) trade size.)

C. Platinum RTD, Air Temperature Averaging Sensors:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. Minco; S400 Series PD or PF.
 - b. <Insert manufacturer's name; product name or designation>.
2. [100] [or] [1000] ohms.
 3. Temperature Range: Minus 50 to 275 deg F ((Minus 45 to 135 deg C).)
 4. Multiple sensors to provide average temperature across entire length of sensor.
 5. Rigid probe of aluminum, brass, copper, or stainless-steel sheath.
 6. Flexible probe of aluminum, brass, copper, or stainless-steel sheath and formable to a 4-inch (100-mm) radius.
 7. Length: As required by application to cover entire cross section of air tunnel.
 8. Enclosure: Junction box with removable cover; NEMA 250, Type 1 for indoor applications and Type 4 for outdoor applications.
 9. Gasket for attachment to duct or equipment to seal penetration airtight.
 10. Conduit Connection: 1/2-inch ((16-mm) trade size.)
- D. Platinum RTD Outdoor Air Temperature Sensors:
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Minco; S400 Series PD or PF.
 - b. <Insert manufacturer's name; product name or designation>.
 2. [100] [or] [1000] ohms.
 3. Temperature Range: Minus 50 to 275 deg F ((Minus 45 to 135 deg C).)
 4. Probe: Single-point sensor with a stainless-steel sheath.
 5. Solar Shield: Stainless steel.
 6. Enclosure: NEMA 250, Type 4 or 4X junction box or combination conduit and outlet box with removable cover and gasket.
 7. Conduit Connection: 1/2-inch (16-mm) trade size.
- E. Platinum RTD Space Air Temperature Sensors:
1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Minco; S400 Series PD or PF.
 - b. <Insert manufacturer's name; product name or designation>.
 2. [100] [or] [1000] ohms.
 3. Temperature Range: Minus 50 to 212 deg F ((Minus 45 to 100 deg C).)
 4. Sensor assembly shall include a temperature sensing element mounted under a [bright white, non-yellowing, plastic] [flush, brushed-aluminum] cover.
 5. Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
 6. Concealed wiring connection.
- F. Thermal Resistors (Thermistors): Common Requirements:

1. 10,000 ohms at 25 deg C and a temperature coefficient of 23.5 ohms/ohm/deg C.
 2. Two-wire, PTFE-insulated, 22-gage stranded copper leads.
 3. Performance Characteristics:
 - a. Range: **Minus 50 to 275 deg F** (Minus 46 to 135 deg C).
 - b. Interchangeable Accuracy: At **77 deg F** (25 deg C) within **0.5 deg F** (0.3 deg C).
 - c. Repeatability: Within **0.5 deg F** (0.3 deg C).
 - d. Drift: Within **0.5 deg F** (0.3 deg C) over 10 years.
 - e. Self-Heating: Negligible.
 4. Transmitter optional, contingent on compliance with end-to-end control accuracy.
- G. Thermistor, Single-Point Duct Air Temperature Sensors:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Minco;** TS400 Series TB.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Temperature Range: **Minus 50 to 275 deg F** ((Minus 45 to 135 deg C).)
 3. Probe: Single-point sensor with a stainless-steel sheath.
 4. Length: As required by application to achieve tip at midpoint of air tunnel, up to **18 inches** ((450 mm) long).
 5. Enclosure: Junction box with removable cover; NEMA 250, Type 1 for indoor applications and Type 4 for outdoor applications.
 6. Gasket for attachment to duct or equipment to seal penetration airtight.
 7. Conduit Connection: **1/2- inch** (16-mm) trade size.
- H. Thermistor Averaging Air Temperature Sensors:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Minco;** TS400 Series TB.
 - b. **<Insert manufacturer's name; product name or designation>.**
 2. Temperature Range: **Minus 50 to 275 deg F** ((Minus 45 to 135 deg C).)
 3. Multiple sensors to provide average temperature across entire length of sensor.
 4. Rigid probe of aluminum, brass, copper, or stainless-steel sheath.
 5. Flexible probe of aluminum, brass, copper, or stainless-steel sheath and formable to a **4-inch** (100-mm) radius.
 6. Length: As required by application to cover entire cross section of air tunnel.
 7. Enclosure: Junction box with removable cover; NEMA 250, Type 1 for indoor applications and Type 4 for outdoor applications.
 8. Gasket for attachment to duct or equipment to seal penetration airtight.
 9. Conduit Connection: **1/2-inch** (16-mm) trade size.

I. Thermistor Outdoor Air Temperature Sensors:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Minco;** TS400 Series TB.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Temperature Range: **Minus 50 to 275 deg F** ((Minus 45 to 135 deg C).)
3. Probe: Single-point sensor with a stainless-steel sheath.
4. Solar Shield: Stainless steel.
5. Enclosure: NEMA 250, Type 4 or 4X junction box or combination conduit and outlet box with removable cover and gasket.
6. Conduit Connection: **1/2-inch** (16-mm) trade size.

J. Thermistor Space Air Temperature Sensors:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Minco;** TS400 Series TB.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Temperature Range: **Minus 50 to 212 deg F** ((Minus 45 to 100 deg C).)
3. Sensor assembly shall include a temperature sensing element mounted under a **[bright white, non-yellowing, plastic] [flush, brushed-aluminum]** cover.
4. Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
5. Concealed wiring connection.

K. Space Air Temperature Sensors for Use with DDC Controllers Controlling Terminal Units:

1. **[100-] [or] [1000-]ohm platinum RTD[or thermistor].**
2. Thermistor:
 - a. Pre-aged, burned in, and coated with glass; inserted in a metal sleeve; and entire unit encased in epoxy.
 - b. Thermistor drift shall be less than plus or minus **0.5 deg F** (0.3 deg C) over 10 years.
3. Temperature Transmitter Requirements:
 - a. Mating transmitter required with each 100-ohm RTD.
 - b. Mating transmitters optional for 1000-ohm RTD and thermistor, contingent on compliance with end-to-end control accuracy.
4. Provide digital display of sensed temperature.
5. Provide sensor with local control.

- a. Local override to turn HVAC on.
- b. Local adjustment of temperature set point.
- c. Both features shall be capable of manual override through control system operator.

2.3 COMBINATION AIR TEMPERATURE SENSOR AND SWITCH

- A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
1. **Minco;** Model AS103759 PF38EXXB2L.
 2. **<Insert manufacturer's name; product name or designation>.**
- B. Source Limitations: Obtain temperature-measuring sensors and transmitters and airflow from single manufacturer.
- C. Combination temperature sensor and switch in same instrument.
- D. Air Temperature Switch:
1. Factory preset set point of **38 deg F (3 deg C)**. Field-adjustable set point from **30 to 44 deg F (minus 1 to 7 deg C)**.
 2. Responsive to coldest **12-inch ((300-mm))** section of sensor length.
 3. DPST latching relay rated at 25 A and 120-V ac, with powered controller, coil, and manual rest at panel. Wire one leg to fan start circuit and other leg to signal a remote alarm.
- E. Air Temperature Sensor:
1. Temperature-averaging type over sensor length. Length to be determined by installing trade to provide uniform coverage over air tunnel. Consult manufacturer for recommendations.
 2. Platinum RTD with a value of 1000 ohms at zero deg C and a temperature coefficient of 0.00385 ohm/ohm/deg C.
 3. Accuracy: Within **0.9 deg F (0.5 deg C)**.
 4. Output Signal: 4 to 20 mA for connection to remote monitoring.
 5. Encase RTDs in a flexible nominal **0.375-inch- (9-mm-)** diameter sheath constructed of brass.
 6. Lead wires shall be 18-gage AWG copper.
 7. Enclosure: NEMA 250, Type 4.

2.4 AIR TEMPERATURE SWITCHES

- A. Thermostat and Switch for Low Temperature Control in Duct Applications:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. [Honeywell International Inc., Building Solutions](#); L482A.
 - b. [Siemens](#); 134-1504.
 - c. **<Insert manufacturer's name; product name or designation>**.
2. Description:
- a. Two-position control.
 - b. Field-adjustable set point.
 - c. Manual reset.
 - d. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. Performance:
- a. Operating Temperature Range: **15 to 55 deg F** (Minus 9 to 13 deg C).
 - b. Temperature Differential: **5 deg F** (2.8 deg C), non-adjustable and additive.
 - c. Enclosure Ambient Temperature: **Minus 20 to 140 deg F** (Minus 11 to 60 deg C).
 - d. Sensing Element Maximum Temperature: **250 deg F** (121 deg C).
 - e. Voltage: 120-V ac.
 - f. Current: 16 FLA.
 - g. Switch Type: Two SPDT snap switches operate on coldest **12-inch** (300-mm) section along element length.
4. Construction:
- a. Vapor-Filled Sensing Element: Nominal **20 feet** (6 m) long.
 - b. Dual Temperature Scale: Fahrenheit and Celsius visible on face.
 - c. Set-Point Adjustment: Screw.
 - d. Enclosure: Painted metal, NEMA 250, Type 1.
 - e. Electrical Connections: Screw terminals.
 - f. Conduit Connection: **1/2-inch** (16-mm) trade size.
- B. Thermostat and Switch for High Temperature Control in Duct Applications:
1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [TAC Brand, Schneider Electric United States](#); Model TA-3433.
 - b. **<Insert manufacturer's name; product name or designation>**.
 2. Source Limitations: Obtain temperature-measuring sensors and transmitters and airflow from single manufacturer.
 3. Description:
 - a. Two-position control.
 - b. Field-adjustable set point.
 - c. Manual reset.
 - d. Listed and labeled as defined in NFPA 70, by a qualified testing agency,

and marked for intended location and application.

4. Performance:

- a. Temperature Range: 100 to 160 deg F (38 to 71 deg C).
- b. Temperature Differential: 5 deg F (2.8 deg C).
- c. Ambient Temperature: Zero to 260 deg F (Minus 18 to 127 deg C).
- d. Voltage: 120-V ac.
- e. Current: 16 FLA.
- f. Switch Type: SPDT snap switch.

5. Construction:

- a. Sensing Element: Helical bimetal.
- b. Enclosure: Metal, NEMA 250, Type 1.
- c. Electrical Connections: Screw terminals.
- d. Conduit Connection: 1/2-inch (16-mm) trade size.

2.5 AIR TEMPERATURE RTD TRANSMITTERS

A. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:

1. **Minco**; TT Series.
2. **<Insert manufacturer's name; product name or designation>**.

B. Source Limitations: Obtain temperature-measuring sensors and transmitters and airflow from single manufacturer.

C. House electronics in NEMA 250 enclosure.

1. Duct: [Type 1] [Type 2] [Type 3].
2. Outdoor: [Type 4] [or] [Type 4X].
3. Space: Type 1.

D. Conduit Connection: 1/2-inch ((16-mm) trade size.)

E. Functional Characteristics:

1. Input:
 - a. 100-ohm platinum RTD temperature coefficient of 0.00385 ohm/ohm/deg C, two-wire sensors.
 - b. 1000-ohm platinum RTD temperature coefficient of 0.00385 ohm/ohm/deg C, two-wire sensors.
2. Span (Adjustable):
 - a. Space: 40 to 90 deg F (4 to 32 deg C).

- b. Supply Air Cooling and Heating: 40 to 120 deg F (4 to 49 deg C).
 - c. Supply Air Cooling Only: 40 to 90 deg F (4 to 32 deg C).
 - d. Supply Air Heating Only: 40 to 120 deg F (4 to 49 deg C).
 - e. Exhaust Air: 50 to 100 deg F (10 to 38 deg C).
 - f. Return Air: 50 to 100 deg F (10 to 38 deg C).
 - g. Mixed Air: Minus 40 to 140 deg F (Minus 40 to 60 deg C).
 - h. Outdoor: Minus 40 to 140 deg F (Minus 40 to 60 deg C).
3. Output: 4- to 20-mA dc, linear with temperature; RFI insensitive; minimum drive load of 600 ohms at 24-V dc.
 4. Zero and span field adjustments, plus or minus 5 percent of span. Minimum span of 50 deg F (28 deg C).
 5. Match sensor with temperature transmitter and factory calibrate together.

F. Performance Characteristics:

1. Calibration Accuracy: Within 0.1 percent of the span.
2. Stability: Within 0.2 percent of the span for at least 6 months.
3. Combined Accuracy: Within 0.5 percent.

2.6 LIQUID AND STEAM TEMPERATURE SENSORS, COMMERCIAL GRADE

A. RTD:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **MAMAC Systems, Inc.;** 703D Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Description:
 - a. Platinum with a value of **[100] [or] [1000]** ohms at zero deg C and a temperature coefficient of 0.00385 ohm/ohm/deg C.
 - b. Encase RTD in a stainless-steel sheath with a **0.25-inch** (6-mm) OD.
 - c. Sensor Length: **4, 6, or 8 inches** ((100, 150, or 200 mm)) as required by application.
 - d. Process Connection: Threaded, **NPS 1/2** ((DN 15).)
 - e. Two-stranded copper lead wires.
 - f. Powder-coated steel enclosure, NEMA 250, Type 4.
 - g. Conduit Connection: **1/2-inch** ((16-mm) trade size.)
 - h. Performance Characteristics:
 - 1) Range: **Minus 40 to 210 deg F** (Minus 40 to 99 deg C).
 - 2) Interchangeable Accuracy: Within **0.54 deg F** (0.3 deg C) at **32 deg F** (zero deg C).

B. Thermowells:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **MAMAC Systems, Inc.;** A500 Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Stem: **[Straight] [or] [stepped]** shank formed from solid bar stock.
3. Material: **[Brass] [or] [stainless steel]**.
4. Process Connection: Threaded, **NPS 3/4 (DN 20)**.
5. Sensor Connection: Threaded, **NPS 1/2 (DN 15)**.
6. Bore: Sized to accommodate sensor with tight tolerance between sensor and well.
7. Furnish thermowells installed in insulated pipes and equipment with an extended neck.
8. Length: **4, 6, or 8 inches ((100, 150, or 200 mm))** as required by application.
9. Thermowells furnished with heat-transfer compound to eliminate air gap between wall of sensor and thermowell and to reduce time constant.

2.7 LIQUID AND STEAM TEMPERATURE SENSORS, HIGH-END COMMERCIAL GRADE

A. RTD:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Minco;** RTD Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Resistance temperature sensors shall comply with IEC 60751, Class B requirements.
3. Platinum with a value of 100 ohms at zero deg C and a temperature coefficient of 0.00385 ohm/ohm/deg C.
4. Encase RTD in a Type 316 stainless-steel sheath with a **0.25-inch (8-mm)** OD.
5. Provide **[two] [three] [four]**-wire, PTFE-insulated, nickel-coated, 22-gage, stranded copper leads.
6. Provide spring-loaded RTDs for thermowell installations.
7. Performance Characteristics:
 - a. Range: **Minus 328 to 932 deg F (Minus 200 to 500 deg C)**.
 - b. Interchangeable Accuracy: Within **0.54 deg F (0.3 deg C)** at **32 deg F (zero deg C)**.
 - c. Stability: Within 0.05 percent maximum ice-point resistance shift after 1000 hours at **752 deg F (400 deg C)**.
 - d. Hysteresis: Within 0.04 percent of range.
 - e. Response Time: 62.8 percent of change in 4 seconds with water flowing across sensor at **3 fps (0.9 m/s)**.

B. Thermowells:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Minco;** TW Series.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Stem: **[Straight] [or] [stepped] [or] [tapered]** shank formed from solid bar stock.
3. Material: **[Type 304] [or] [Type 316]** stainless steel.
4. Process Connection: Threaded, **NPS 3/4 (DN 20)**
5. Sensor Connection: Threaded, **NPS 1/2 (DN 15)**
6. Bore: Sized to accommodate sensor with tight tolerance between sensor and well.
7. Furnish thermowells installed in insulated pipes and equipment with an extended neck that extends beyond the face of the insulation covering.
8. Length: As required by application and pipe size.
9. Thermowells furnished with heat-transfer compound to eliminate air gap between wall of sensor and thermowell and to reduce time constant.

C. Connection Heads:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Minco;** CH 359 Connection Head.
 - b. **<Insert manufacturer's name; product name or designation>.**
2. Housing: Low-copper cast-aluminum alloy, complying with NEMA 250, Type 4.
3. Terminals: Six or eight as required by sensor.
4. Conduit Connection: **1/2-inch (16-mm)** trade size.
5. Sensor Connection: **NPS 1/2 (DN 15).**

- D. Assembly: Sensor manufacturer shall furnish sensor, thermowell, and sensor connection head to provide a matched assembly.

2.8 LIQUID AND STEAM TEMPERATURE SENSORS, INDUSTRIAL GRADE

A. RTD:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **Rosemount Inc., Emerson Electric Co.;** Series 78S.
 - b. **<Insert manufacturer's name; product name or designation>.**

2. Resistance temperature sensors shall comply with IEC 60751, Class A requirements.
3. Platinum with a value of 100 ohms at zero deg C and a temperature coefficient of 0.00385 ohm/ohm/deg C.
4. Encase RTD in a Type 316 stainless-steel sheath with a 0.25-inch (8-mm) OD.
5. Provide [two] [three] [four]-wire, PTFE-insulated, nickel-coated, 22-gage, stranded copper leads.
6. Provide spring-loaded RTDs for thermowell installations.
7. Performance Characteristics:
 - a. Range: Minus 328 to 932 deg F (Minus 200 to 500 deg C).
 - b. Interchangeable Accuracy: Within 0.27 deg F (0.15 deg C) at 32 deg F (zero deg C).
 - c. Stability: Within 0.05 percent maximum ice-point resistance shift after 1000 hours at 752 deg F (400 deg C).
 - d. Hysteresis: Within 0.04 percent of range.
 - e. Response Time: 62.8 percent of change in 4 seconds with water flowing across sensor at 3 fps ((0.9 m/s)).
 - f. Self-Heating: 18-mW minimum power dissipation required to cause a 1.8 deg F (1 deg C) temperature measurement error in water flowing at 3 fps ((0.9 m/s)).

B. Thermowells:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. Rosemount Inc., Emerson Electric Co.; Series 91.
 - b. <Insert manufacturer's name; product name or designation>.
2. Stem: [Straight] [or] [stepped] [or] [tapered] shank formed from solid bar stock.
3. Material: [Type 304] [or] [Type 316] stainless steel.
4. Process Connection: Threaded, NPS 3/4 (DN 20), or flange-face, [NPS 1 (DN 25)] [NPS 1-1/2 (DN 38)] [NPS 2 (DN 50)], [Class 150] [Class 300] ASME B16.5.
5. Sensor Connection: Threaded, NPS 1/2 (DN 15).
6. Bore: Sized to accommodate sensor with tight tolerance between sensor and well.
7. Furnish thermowells installed in insulated pipes and equipment with an extended neck that extends beyond the face of the insulation covering.
8. Length: As required by application and pipe size.
9. Thermowells furnished with heat-transfer compound to eliminate air gap between wall of sensor and thermowell and to reduce time constant.

C. Connection Heads:

1. **Products:** Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [Rosemount Inc., Emerson Electric Co.](#); Connection Head.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Housing: Low-copper cast-aluminum alloy, complying with NEMA 250, Type 4.
 3. Terminals: Six or eight as required by sensor, nickel-plated brass.
 4. Conduit Connection: **1/2-inch** (16-mm) trade size.
 5. Sensor Connection: Threaded, **NPS 1/2** (DN 15).
- D. Assembly: Sensor manufacturer shall furnish sensor, thermowell, and sensor connection head to provide a matched assembly.

2.9 LIQUID TEMPERATURE SWITCHES

A. Thermostat and Switch for Temperature Control in Pipe Applications:

1. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Honeywell International Inc., Building Solutions](#); L6006C.
 - b. **<Insert manufacturer's name; product name or designation>**.
2. Description:
 - a. Two-position control.
 - b. Field-adjustable set point.
 - c. Manual reset.
 - d. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. Performance:
 - a. Operating Temperature Range: **65 to 200 deg F** (18 to 3 deg C).
 - b. Temperature Differential Deadband: **5 to 30 deg F** (3 to 17 deg C), adjustable.
 - c. Enclosure Ambient Temperature: **150 deg F** (66 deg C).
 - d. Sensing Element Pressure Rating: **200 psig** (1379 kPa).
 - e. Voltage: 120-V ac.
 - f. Current: 8 FLA.
 - g. Switch Type: SPDT snap switch.
4. Construction:
 - a. Vapor-Filled Immersion Element: Copper, nominal **3 inches** (75 mm) long.
 - b. Temperature Scale: Fahrenheit, visible on face.
 - c. Set-Point Adjustment: Screw.
 - d. Enclosure: Painted metal, NEMA 250, Type 1.
 - e. Electrical Connections: Screw terminals.
 - f. Conduit Connection: **3/4-inch** ((21-mm) trade size).

2.10 LIQUID AND STEAM TEMPERATURE TRANSMITTERS, COMMERCIAL GRADE

- A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
1. **Minco;** TT Series.
 2. **<Insert manufacturer's name; product name or designation>.**
- B. House electronics in NEMA 250, **[Type 4] [or] [Type 4X]** enclosure.
- C. Enclosure Connection: **1/2-inch (16-mm)** trade size.
- D. Functional Characteristics:
1. Input: 100-ohm platinum RTD temperature coefficient of 0.00385 ohm/ohm/deg C, **[two-] [or] [three-]**wire sensors.
 2. Default Span (Adjustable):
 - a. Chilled Water: **Zero to 100 deg F** (Minus 18 to 38 deg C).
 - b. Condenser Water: **Zero to 120 deg F** (Minus 18 to 49 deg C).
 - c. Heating Hot Water: **32 to 212 deg F** ((Zero to 100 deg C)).
 - d. Heat Recovery: **Zero to 120 deg F** (Minus 18 to 49 deg C).
 - e. **<Insert system and span>.**
 3. Output: 4- to 20-mA dc, linear with temperature; RFI insensitive; minimum drive load of 600 ohms at 24-V dc.
 4. Zero and span field adjustments, plus or minus 5 percent of span. Minimum span of **50 deg F (28 deg C)**.
 5. Match sensor with temperature transmitter and factory calibrate together. Each matched sensor and transmitter set shall include factory calibration data traceable to NIST.
- E. Performance Characteristics:
1. Calibration Accuracy: Within 0.1 percent of the span.
 2. Stability: Within 0.2 percent of the span for at least 6 months.
 3. Combined Accuracy: Within 0.5 percent.

2.11 LIQUID AND STEAM TEMPERATURE TRANSMITTERS, INDUSTRIAL GRADE

- A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
1. **Rosemount Inc., Emerson Electric Co.;** Model 644.
 2. **<Insert manufacturer's name; product name or designation>.**
- B. Hazard Classification: FM Approved for hazardous environments.

1. Intrinsically safe for Classes I, II, and III; Division 1; Groups A through G.
2. Explosion proof for Class I; Division 1; Groups B, C, and D.
3. Dust-ignition proof for Classes II and III; Division 1; Groups E, F, and G.

C. Performance:

1. Digital Accuracy: Within 0.27 deg F (0.15 deg C) with a 180 deg F (82 deg C) span.
2. Digital to Analog Accuracy: Within 0.03 percent of span.
3. Total Accuracy: Within 0.32 deg F (0.18 deg C) with a 180 deg F (82 deg C) span.
4. Stability: Within 0.15 percent of output reading for 24 months.
5. Ambient Temperature Limits: Minus 4 to 185 deg F (Minus 20 to 85 deg C).
6. Humidity Limits: Zero to 99 percent.

D. Electronics Enclosure:

1. Materials: Aluminum alloy or stainless steel.
2. NEMA 250, Type 4X enclosure.
3. Conduit Connections: 1/2-inch (16-mm) trade size.
4. Mounting kit to suit application.

E. Functional Characteristics:

1. Input: 100-ohm platinum RTD temperature coefficient of 0.00385 ohm/ohm/deg C.
2. Range: Minus 328 to 1562 deg F (Minus 200 to 850 deg C).
3. Field-Adjustable Span: 18 deg F (10 deg C) minimum.
4. Default Spans:
 - a. Chilled Water: Zero to 100 deg F (Minus 18 to 38 deg C).
 - b. Condenser Water: Zero to 120 deg F ((Minus 18 to 49 deg C)).
 - c. Heating Hot Water: 32 to 212 deg F (Zero to 100 deg C).
 - d. Heat Recovery: Zero to 120 deg F (Minus 18 to 49 deg C).
 - e. <Insert system and span>.
5. Output Signal:
 - a. 4- to 20-mA dc, linear with temperature.
 - b. Digital signal based on HART protocol carried with current signal.
 - c. RFI insensitive.
 - d. Minimum drive load of 600 ohms at 24-V dc.
6. Self-Calibration: The analog-to-digital measurement circuitry automatically self-calibrates for each temperature update by comparing the dynamic measurement to extremely stable and accurate internal reference elements.
7. Digital display of engineering units.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 TEMPERATURE INSTRUMENT APPLICATIONS

- A. Air Temperature Sensors:
 - 1. Duct, <Insert application>: [Thermistor] [100-ohm platinum RTD] [1000-ohm platinum RTD].
 - 2. Outdoor, <Insert application>: [Thermistor] [100-ohm platinum RTD] [1000-ohm platinum RTD].
 - 3. Space, <Insert application>: [Thermistor] [100-ohm platinum RTD] [1000-ohm platinum RTD].
- B. Air Temperature Transmitters:
 - 1. Duct, <Insert application>: [Not required] [Air temperature RTD transmitter].
 - 2. Outdoor, <Insert application>: [Not required] [Air temperature RTD transmitter].
 - 3. Space, <Insert application>: [Not required] [Air temperature RTD transmitter].
- C. Liquid and Steam Temperature Sensors:
 - 1. <Insert system> System, <Insert unique application>: [Liquid and steam temperature sensor, commercial grade] [Liquid and steam temperature sensor, high-end commercial grade] [Liquid and steam temperature sensor, industrial grade].
- D. Liquid and Temperature Transmitters:
 - 1. <Insert system> System, <Insert unique application>: [Liquid and steam temperature transmitter, commercial grade] [Liquid and steam temperature transmitter, industrial grade].

3.3 INSTALLATION, GENERAL

- A. Install products level, plumb, parallel, and perpendicular with building construction.
- B. Properly support instruments, tubing, piping, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a <Insert value> force.
- C. Fastening Hardware:
 - 1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- D. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- E. Corrosive Environments:
 - 1. Use products that are suitable for environment to which they are subjected.
 - 2. If possible, avoid or limit use of materials in corrosive environments.
 - 3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 - 4. Where instruments are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.4 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.5 TEMPERATURE INSTRUMENT INSTALLATIONS

A. Mounting Location:

1. Roughing In:

- a. Outline instrument mounting locations before setting instruments and routing cable, wiring, tubing, and conduit to final location.
 - b. Provide independent inspection to confirm that proposed mounting locations comply with requirements indicated and approved submittals.
 - 1) Indicate dimensioned locations with mounting height for all surface-mounted products on Shop Drawings.
 - 2) Do not begin installation without submittal approval of mounting location.
 - c. Complete installation rough-in only after confirmation by independent inspection is complete and approval of location is documented for review by Owner and Architect on request.
2. Install switches and transmitters for air and liquid temperature associated with individual air-handling units and associated connected ductwork and piping near air-handling units co-located in air-handling unit system control panel to provide service personnel a single and convenient location for inspection and service.
 3. Install liquid and steam temperature switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 4. Install air temperature switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 5. Mount switches and transmitters on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer's mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.

B. Special Mounting Requirements:

1. Protect products installed outdoors from solar radiation, building and wind effect with stand-offs and shields constructed of **[Type 316 stainless] <Insert material>**.
2. Temperature instruments having performance impacted by temperature of mounting substrate shall be isolated with an insulating barrier located between instrument and substrate to eliminate effect. Where instruments requiring insulation are located in finished space, conceal insulating barrier in a cover matching the instrument cover.

C. Mounting Height:

1. Mount temperature instruments in user-occupied space to match mounting height of light switches unless otherwise indicated on Drawings. Mounting height shall comply with codes and accessibility requirements.
 2. Mount switches and transmitters located in mechanical equipment rooms and other similar space not subject to code or state and Federal accessibility requirements within a range of **42 to 72 inches** ((1.1 to 1.6 m)) above the adjacent floor, grade, or service catwalk or platform.
 - a. Make every effort to mount at **60 inches** (1500 mm).
- D. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static-pressure class and leakage and seal classes indicated using neoprene gaskets or grommets.
- E. Space Temperature Sensor Installation:
1. Conceal assembly in an electrical box of sufficient size to house sensor and transmitter, if provided.
 2. Install electrical box with a faceplate to match sensor cover if sensor cover does not completely cover electrical box.
 3. In finished areas, recess electrical box within wall.
 4. In unfinished areas, electrical box may be surface mounted if electrical light switches are surface mounted. Use a cast-aluminum electric box for surface-mounted installations.
 5. Align electrical box with other electrical devices such as visual alarms and light switches located in the vicinity to provide a neat and well-thought-out arrangement. Where possible, align in both horizontal and vertical axis.
- F. Outdoor Air Temperature Sensor Installation:
1. Mount sensor in a discrete location facing north.
 2. Protect installed sensor from solar radiation and other influences that could impact performance.
 3. If required to have a transmitter, mount transmitter remote from sensor in an accessible and serviceable location indoors.
- G. Single-Point Duct Temperature Sensor Installation:
1. Install single-point-type, duct-mounted, supply- and return-air temperature sensors. Install sensors in ducts with sensitive portion of the element installed in center of duct cross section and located to sense near average temperature. Do not exceed **24 inches** (610 mm) in sensor length.
 2. Install return-air sensor in location that senses return-air temperature without influence from outdoor or mixed air.
 3. Rigidly support sensor to duct and seal penetration airtight.
 4. If required to have transmitter, mount transmitter remote from sensor at accessible and serviceable location.
- H. Averaging Duct Temperature Sensor Installation:

1. Install averaging-type air temperature sensor for temperature sensors located within air-handling units, similar equipment, and large ducts with air tunnel cross-sectional area of **20 sq. ft. (1.86 sq. m)** and larger.
 2. Install sensor length to maintain coverage over entire cross-sectional area. Install multiple sensors where required to maintain the minimum coverage.
 3. Fasten and support sensor with manufacturer-furnished clips to keep sensor taut throughout entire length.
 4. If required to have transmitter, mount transmitter in an accessible and serviceable location.
- I. Low-Limit Air Temperature Switch Installation:
1. Install multiple low-limit switches to maintain coverage over entire cross-sectional area of air tunnel.
 2. Fasten and support sensing element with manufacturer-furnished clips to keep element taut throughout entire length.
 3. Mount switches outside of airstream at a location and mounting height to provide easy access for switch set-point adjustment and manual reset.
 4. Install on entering side of cooling coil unless otherwise indicated on Drawings.
- J. Liquid Temperature Sensor Installation:
1. Assembly shall include sensor, thermowell[**and connection head**].
 2. For pipe **NPS 4 (DN 100)** and larger, install sensor and thermowell length to extend into pipe between 50 to 75 percent of pipe cross section.
 3. For pipe smaller than **NPS 4 (DN 100)**:
 - a. Install reducers to increase pipe size to **NPS 4 ((DN 100))**at point of thermowell installation.
 - b. For pipe sizes **NPS 2-1/2 and NPS 3 (DN 65 and DN 80)**, thermowell and sensor may be installed at pipe elbow or tee to achieve manufacturer-recommended immersion depth in lieu of increasing pipe size.
 - c. Minimum insertion depth shall be **2-1/2 inches (65 mm)**.
 4. Install matching thermowell.
 5. Fill thermowell with heat-transfer fluid before inserting sensor.
 6. Tip of spring-loaded sensors shall contact inside of thermowell.
 7. For insulated piping, install thermowells with extension neck to extend beyond face of insulation.
 8. Install thermowell in top dead center of horizontal pipe positioned in an accessible location to allow for inspection and replacement. If top dead center location is not possible due to field constraints, install thermowell at location along top half of pipe.
 9. For applications with transmitters, mount transmitter remote from sensor in an accessible and serviceable location from floor[**service platform or catwalk**].

3.6 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification[**and on face of ceiling directly below instruments concealed above ceilings**].

3.7 CLEANING

- A. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels, and other foreign materials from exposed interior and exterior surfaces.
- B. Wash and shine glazing.
- C. Polish glossy surfaces to a clean shine.

3.8 CHECK-OUT PROCEDURES

- A. Check installed products before continuity tests, leak tests, and calibration.
- B. Check temperature instruments for proper location and accessibility.
- C. Verify sensing element type and proper material.
- D. Verify location and length.
- E. Verify that wiring is correct and secure.

3.9 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:
 - 1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
 - 2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
 - 3. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.
 - 4. Equipment and procedures used for calibration shall meet instrument manufacturer's written instructions.
 - 5. Provide diagnostic and test equipment for calibration and adjustment.
 - 6. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked

- by an instrument with an accuracy of 0.5 percent.
7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
 8. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
 9. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistance source.

C. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

D. Sensors: Check sensors at zero, 50, and 100 percent of Project design values.

E. Switches: Calibrate switches to make or break contact at set points indicated.

F. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistance source.

3.10 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and installations, including connections.

C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:

1. Perform according to manufacturer's written instruction.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Prepare test and inspection reports.

3.11 ADJUSTING

- A. Occupancy Adjustments: When requested within [12] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [two] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.12 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include [three] [six] [nine] [12] months' full maintenance by **skilled employees of systems and equipment Installer** [manufacturer's authorized service representative]. Include [monthly] [quarterly] [semiannual] [annual] preventive maintenance, repair or replacement of worn or defective components, cleaning and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.13 DEMONSTRATION

- A. **Engage a factory-authorized service representative to train** [Train] Owner's maintenance personnel to adjust, operate, and maintain temperature instruments.
- B. Provide a complete set of instructional videos covering each product specified and installed and showing the following:
 - 1. Software programming.
 - 2. Calibration and test procedures.
 - 3. Operation and maintenance requirements and procedures.
 - 4. Troubleshooting procedures.
- C. Coordinate video with operation and maintenance manuals and classroom instruction for use by Owner in operating, maintaining, and troubleshooting.
- D. Record videos on DVD disks.
- E. Owner shall have right to make additional copies of video for internal use without paying royalties.

END OF SECTION 230923.27

SECTION 230923.33 - VIBRATION INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes vibration switches and combination switch and transmitters connected to direct digital control systems for HVAC.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.33**.

1.3 DEFINITIONS

- A. RMS: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
 - 1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Operating characteristics, electrical characteristics, and furnished accessories indicating default control signal with loss of power, calibration data specific to each unique application, and electrical power requirements.
 - 3. Product description with complete technical data, performance curves, and product specification sheets.
 - 4. Installation operation and maintenance instructions including factors affecting performance.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and[**mounting**] details.

2. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Include number-coded identification system for unique identification of wiring and cable.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: To include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MECHANICAL VIBRATION SWITCHES

- A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 1. **Metrix Instrument Co.;** Model 5550.
 2. **<Insert manufacturer's name; product name or designation>.**
- B. Description: Inertia-sensitive armature mechanism trips on high vibration and operates snap action switch.
- C. Performance:
 1. Frequency Range: Zero to 3600 rpm.
 2. Vibration Range: Zero to **[2] [5] [10]** g.
 3. Temperature Limits: **Minus 40 to 158 deg F** (Minus 40 to 70 deg C).
 4. Electrical Rating: 15 A at 125- or 480-V ac.
 5. Switch Type: **[SPDT] [DPDT]** snap switch.
 6. Start Delay: 20 to 30 seconds, by applying reset voltage at start signal to prevent switch from tripping.
- D. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments Class I, Groups B, C, and D; Class II, Groups E, F, and G.
- E. Operator Interface:
 1. Vibration Set-Point Adjustment: Zero to 100 percent of range.
 2. Push-button reset on switch face and reset coil for remote reset.
- F. Enclosure Construction:
 1. Cast aluminum.
 2. NEMA 250, **[Type 4] [or] [Type 4X]**.
 3. Electrical Connection: Screw terminals.

4. Conduit Connection: **3/4-inch** (21-mm) trade size.

2.2 ELECTRONIC VIBRATION SWITCHES

- A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

1. **Metrix Instrument Co.;** Model 5477.
2. **<Insert manufacturer's name; product name or designation>.**

- B. Description:

1. Accelerometer-based velocity response.
2. Single set point.

- C. Performance:

1. Frequency Range: 3 to 500 Hz.
2. Vibration Range: Zero to **1.0 inch** (25.4 mm) per second.
3. Temperature Limits: **Minus 4 to 167 deg F** (Minus 20 to 75 deg C).
4. Electrical Rating: 5-A inductive, 60-A surge for one cycle; normally open-triac leakage is 10 mA.
5. Trip Logic: Field-selectable, normally open-/normally closed-triac, non-latching, automatic reset.
6. Start Trip Timer: 30 seconds.
7. Monitor Trip Delay: 3 seconds.

- D. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for hazardous environments Class I, Groups C and D; Class II, Groups E, F, and G.

- E. Operator Interface:

1. Vibration Set-Point Adjustment: Externally adjustable with tamperproof gradual dial.
2. Trip Indicator: Flashing red LED.
3. Digital Display: 2.5-digit numerical display of vibration level.

- F. Enclosure Construction:

1. Cast aluminum.
2. Screw-on cover.
3. NEMA 250, Type 4.
4. Electrical Connection: Two wires, **24 inches** (600 mm) long.
5. Conduit Connection: **1/2-inch** (16-mm) trade size, sealed entry.
6. Flange mounting adapter, as applicable.

2.3 COMBINATION VIBRATION SWITCH AND TRANSMITTERS

A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

1. **Metrix Instrument Co.;** PRO6000 Series.
2. **<Insert manufacturer's name; product name or designation>.**

B. Description:

1. Input sensitivity.
2. Full-scale vibration range.
3. Mode: Peak or rms.
4. Trip delay.
5. Start delay.
6. Relay State: Latching or non-latching.
7. Relay: Non-energized, normally open or energized, normally closed.

C. Accelerometer integral to unit with capability of multiple remote sensor inputs.

1. Instrument furnished with programming and setup software.

D. Performance:

1. Frequency Range for Integral Accelerometer: 2 to 1000 Hz.
2. Ambient Temperature Limits: **Minus 40 to 185 deg F** (Minus 40 to 85 deg C).
3. Humidity: 100 percent condensing.

E. Analog Output Current Signal:

1. Two-wire, 4- to 20-mA dc current source.
2. Signal capable of operating into 1000-ohm load.

F. Digital Output Signal: **[Single] [Dual]** relay(s).

G. Operator Interface:

1. USB or keypad configurable.
2. Digital Display: Two lines of display.

H. Enclosure Construction:

1. Cast aluminum.
2. Screw-on cover.
3. NEMA 250, Type 4X.
4. Electrical Connection: Screw terminals.
5. Conduit Connection: **3/4-inch (21-mm)** trade size.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 VIBRATION INSTRUMENT APPLICATIONS

- A. **<Insert application>: [Mechanical switch] [Electronic switch] [Combination switch and transmitter].**

3.3 INSTALLATION

- A. Install products level, plumb, parallel, and perpendicular with building construction.
- B. Use manufacturer's mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
- C. Properly support instrument wiring and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a **<Insert value>** force.
- D. Fastening Hardware:
 - 1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- E. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.
- F. Corrosive Environments:
 - 1. Use products that are suitable for environment to which they are subjected.
 - 2. If possible, avoid or limit use of materials in corrosive environments.
 - 3. When conduit is in contact with a corrosive environment, use Type 316

stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.

4. Where instruments are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.4 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.5 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification.

3.6 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:
 1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
 2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
 3. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.
 4. Equipment and procedures used for calibration shall comply with instrument manufacturer's written instructions.
 5. Provide diagnostic and test equipment for calibration and adjustment.
 6. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
 7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.

8. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
9. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.

C. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

D. Switches: Calibrate switches to make or break contact at set points indicated.

3.7 ADJUSTING

- A. Occupancy Adjustments: When requested within [12] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [two] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 230923.33

SECTION 230923.43 - WEATHER STATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes weather stations connected to direct-digital controls for HVAC.
- B. Related Requirements:
 - 1. Section 230923 "Direct-Digital Control System for HVAC" for control equipment and software, relays, electrical power devices, uninterruptible power supply units, wire, and cable.
 - 2. Section 230993 "Sequence of Operations for HVAC Controls" for requirements that relate to Section **230923.43**.

1.3 DEFINITIONS

- A. I/O: Input/output.
- B. RS-232: A TIA standard for asynchronous serial data communications between terminal devices.
- C. RS-485: A TIA standard for multipoint communications using two twisted pairs.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
 - 1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Operating characteristics, electrical characteristics, and furnished accessories indicating control signal over range, electrical power requirements, and limitations of ambient operating environment including temperature and humidity.
 - 3. Product description with complete technical data, performance curves, and product specification sheets.
 - 4. Installation operation and maintenance instructions including factors affecting performance.

B. Shop Drawings:

1. Include plans, elevations, sections, and **[mounting]** details.
2. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Include number-coded identification system for unique identification of wiring, cable, and tubing ends.

1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For weather stations to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 WEATHER STATION

- A. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

1. **WeatherHawk;** Series 500.
2. **<Insert manufacturer's name; product name or designation>.**

B. Description:

1. Weather station shall measure and record wind speed and direction, air temperature and relative humidity, barometric pressure, solar radiation, and rain.
2. Design weather station for applications with minimal visual impact, high reliability, and a long interval between routine servicing.
3. Weather station shall use solid-state sensors with no moving parts.
4. Weather station shall not be impaired by heavy snowfall or freezing conditions that produce rime ice. Provide a thermostatically controlled heater element in the sensor head that keeps the wind sensor elements and the precipitation sensor surface free of snow and ice to **minus 62 deg F** (minus 52 deg C).
5. Weather station shall directly connect to host device, or wirelessly connect to a host device through a fully integrated, industrial-grade, 916-MHz spread spectrum radio-frequency communications technology. Where required by application, replace 916-MHz radio-frequency components with 922-MHz and 2.4-GHz radio-frequency components to comply with local, regional, and national radio-frequency licensing requirements.

6. RS-232 serial data I/O shall be located on the bottom of the weather station and used as a second serial communications port, for programming and testing the system, or for direct data downloads using a personal computer or personal digital assistant.
7. Weather station shall be provided with a mounting system supplied by weather station manufacturer that is suitable for the installation.

C. Sensor Technology:

1. Wind speed and direction shall use acoustic techniques. Sensor shall consist of three equally spaced ultrasonic transducers in a horizontal plane. Values of any two array paths shall enable computation of both wind speed and direction, and a signal processing technique shall enable the measurement to be calculated using the two array paths of the best quality.
2. Rain shall be measured using a stainless-steel piezometric impact surface that counts the raindrops and measures their acoustic signature, integrating that information to provide a near-real-time value for rainfall amount and rate.
3. Barometric pressure, relative humidity, air temperature, and solar radiation measurements shall be made by scientific grade sensors.
4. Air-temperature and relative-humidity sensors shall be combined in an integrated, user-replaceable unit that requires no calibration.
 - a. Relative humidity sensor shall be a thin-polymer, capacitive sensor.
 - b. Air-temperature sensor shall be a capacitive ceramic sensor.
5. Barometric pressure shall be measured with a capacitive silicon, temperature-corrected, strain gage.
6. Solar radiation shall be measured by a silicon pyranometer with a cut filter limiting the spectral exposure to the 300- to 1100-nm wavelength.

D. Performance:

1. Air Temperature:
 - a. Range: **Minus 60 to 140 deg F** (Minus 51 to 60 deg C).
 - b. Accuracy: Within **0.9 deg F** (0.5 deg C).
 - c. Resolution: **0.1 deg F** (0.06 deg C).
2. Relative Humidity:
 - a. Range: Zero to 100 percent.
 - b. Accuracy: Within 3 percent over the range of zero to 90 percent and within 5 percent between 90 to 100 percent.
 - c. Resolution: 0.1 percent.
3. Barometric Pressure:
 - a. Range: **17.72- to 32.48-in. Hg** (450 to 825 mm).
 - b. Accuracy: **0.015-in. Hg** (0.38 mm) between **32 to 86 deg F** (0 to 30 deg C).
 - c. Resolution: **0.03-in. Hg** (0.76 mm) between **minus 60 to 140 deg F** (minus 51

to 60 deg C).

4. Solar Radiation:

- a. Spectral Range: 300 to 1100 nm.
- b. Reproducibility: Within 2 percent.
- c. Output: 0.2 mV per watts per square meters.
- d. Range: Zero to 1000 W per square meters.
- e. Temperature Range: **Minus 40 to 130 deg F** (Minus 40 to 54 deg C).

5. Rain:

- a. Collecting Area: **9.3 sq. in.** (6000 sq. mm).
- b. Range: **Zero to 7.87 inches** (Zero to 200 mm) per hour.
- c. Accuracy: Within 5 percent.
- d. Resolution: **0.001 inch** (0.025 mm).

6. Wind Direction:

- a. Azimuth: Zero to 360 degrees.
- b. Response Time: 250 ms.
- c. Accuracy: Within 2 degrees.
- d. Resolution: 1 degree.

7. Wind Speed:

- a. Range: **Zero to 134 mph** (Zero to 216 km/h).
- b. Response Time: 0.25 second.
- c. Accuracy: Greater of **0.67 mph** (1.1 km/h) or 2 percent.
- d. Resolution: **0.22 mph** (0.35 km/h).

8. Data Storage: 60 days of hourly data.

E. Output Signals:

1. RS-232 or RS-485 serial interface directly from weather station to host.
2. In applications that cannot accept a serial signal, provide a serial-to-analog converter.
3. Serial-to-Analog Converter:
 - a. **Products:** Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1) **Nokeval Oy;** 7470 Series.
 - 2) **<Insert manufacturer's name; product name or designation>.**
 - b. Serial converter designed to add analog outputs for measuring instruments that have only serial output.
 - c. Configure to give analog outputs from all measuring sensors and calculated

- parameters.
 - d. Each converter shall have four analog outputs with a 4- to 20-mA signal.
 - e. Provide multiple converters for applications requiring more points.
 - f. Converter requires a 24-V dc power supply.
- F. Communication Interface:
- 1. Weatherproof serial cables shall be used to connect the RS-232 I/O on the weather station. Cables shall use nickel-plated brass DB-9 connectors for corrosion resistance and include a Sanoprene jacket suitable for both high-ultraviolet and direct-burial environments.
 - 2. An RF4xx spread spectrum radio-frequency transceiver shall be provided with every wireless weather station.
- G. Unit shall be provided with a 120-V ac, 60-Hz power supply, a serial cable, and an antenna.
- H. Software:
- 1. Data Transfer Protocols, Software, and Data Interface Hardware: Weather stations that communicate using a proprietary protocol shall be provided with a software development kit to enable a qualified software developer in development of software drivers for third-party devices or software.
 - 2. Manufacturer shall submit description and pricing information of software application offerings for weather station management, data acquisition and logging, report generation, and data display for review and consideration.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install products level, plumb, parallel, and perpendicular with building construction.
- B. Properly support weather station, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to forces that are consistent with building code structural design requirements.

C. Fastening Hardware:

1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.

D. Corrosive Environments:

1. Use products that are suitable for environment to which they are subjected.
2. If possible, avoid or limit use of materials in corrosive environments.
3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
4. Where components are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.3 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.4 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification.

3.5 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:

1. Calibrate each weather station installed that is not factory calibrated and provided with calibration documentation.
2. Provide a written description of proposed field procedures and equipment used for calibrating. Submit procedures before calibration and adjustment.
3. For each analog signal, make a three-point test of calibration for both linearity and accuracy.
4. Equipment and procedures used for calibration shall comply with instrument manufacturer's written instructions.
5. Provide diagnostic and test equipment for calibration and adjustment.
6. Field instruments and equipment used to test and calibrate installed weather stations shall have accuracy at least twice the instrument accuracy being calibrated. For example, an installed weather station with a signal accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
7. Calibrate each weather station according to instrument instruction manual supplied by manufacturer.
8. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
9. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistance source.

C. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Prepare test and inspection reports.

3.7 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.

3.8 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of systems and equipment Installer] [manufacturer's authorized service representative]**. Include **[monthly] [quarterly] [semiannual] [annual]** preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper **<Insert equipment>** operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain weather stations.
- B. Provide a complete set of instructional videos covering each product specified and installed and showing the following:
1. Software programming.
 2. Calibration and test procedures.
 3. Operation and maintenance requirements and procedures.
 4. Troubleshooting procedures.
- C. Coordinate video with operation and maintenance manuals and classroom instruction for use by Owner in operating, maintaining, and troubleshooting.
- D. Record videos on DVD disks.
- E. Owner shall have right to make additional copies of video for internal use without paying royalties.

END OF SECTION 230923.43

SECTION 230993 - SEQUENCE OF OPERATIONS FOR HVAC CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes control sequences for HVAC systems, subsystems, and equipment.
- B. Related Sections include the following:
 - 1. Section 230900 "Instrumentation and Control for HVAC" for control equipment and devices and for submittal requirements.

1.3 DEFINITIONS

- A. DDC: Direct digital control.
- B. VAV: Variable air volume.

1.4 HEATING CONTROL SEQUENCES

- A. Heating-Water Supply Temperature Control:
 - 1. Input Device: [**Thermostat**] [**Thermistor temperature sensor**] [**Resistance temperature sensor**].
 - 2. Output Device: Control valve.
 - 3. Action: Modulate control valve to maintain heating-water supply temperature.
 - 4. Display:
 - a. Heating-water supply temperature.
 - b. Heating-water supply temperature set point.
 - c. Control-valve position.
- B. Heating-Water Supply Temperature Reset:
 - 1. Input Device: [**Electric, outdoor-air-reset controller**] [**Outdoor-air sensor**].
 - 2. Output Device: [**Unitary controller**] [**DDC system software**].
 - 3. Action: Reset heating-water supply temperature in straight-line relationship with

outdoor-air temperature for the following conditions:

- a. [195 deg F (90 deg C)] <Insert highest heating temperature> heating water when outdoor-air temperature is [minus 30 deg F (minus 35 deg C)] <Insert lowest outdoor-air temperature>.
- b. [130 deg F (54 deg C)] <Insert lowest heating temperature> heating water when outdoor-air temperature is 75 deg F (24 deg C).
- c. [150 deg F (65 deg C)] <Insert temperature> minimum, heating-water temperature.

4. Display:

- a. Outdoor-air temperature.
- b. Heating-water supply temperature.
- c. Heating-water supply temperature set point.

C. Control Primary Circulating Pump(s):

1. Input Device: [Thermostat] [DDC system].
2. Output Device: [Starter] [DDC system command to starter] relay.
3. Action: Energize pump(s) at outdoor-air temperatures below [65 deg F (18 deg C)] <Insert temperature>.
4. Display:
 - a. Outdoor-air temperature.
 - b. Operating status of primary circulating pump(s).

1.5 CENTRAL REFRIGERATION EQUIPMENT SEQUENCES

A. Start and Stop Condenser-Water Pump(s):

1. Enable: Allow pump to start when water is in cooling tower:
 - a. Input Device: Water pressure transducer.
 - b. Output Device: Hard wired through motor starter[; DDC system binary output].
 - c. Action: Confirm water in cooling-tower sump.
2. Enable: When outdoor-air temperature conditions are met:
 - a. Input Device: [Space thermostat] [DDC system outdoor-air temperature].
 - b. Output Device: Hard wired through motor starter[; DDC system binary output].
 - c. Action: Confirm outdoor-air temperature is above 50 deg F (10 deg C).
3. Enable: When demand conditions are met:
 - a. Input Device: DDC system software demand.
 - b. Action: Confirm cooling demand from ventilation system(s).

4. Initiate:
 - a. Input Device: **[Time clock] [DDC system time schedule]**.
 - b. Output Device: **[Time clock] [Binary output]**.
 - c. Action: Energize pump(s).

5. Display:
 - a. Low-level cooling-tower sump alarm.
 - b. Outdoor-air temperature.
 - c. Cooling (software) demand indication.
 - d. Time and time schedule.
 - e. Condenser-water pump(s) on-off status.
 - f. Condenser-water pump(s) on-off indication.

- B. Start and Stop Chilled-Water Pump(s):
 1. Input Device: Flow switch in condenser-water circuit.
 2. Output Device: **[Starter] [DDC system command to starter]** relay.
 3. Action: Energize pump(s).
 4. Display:
 - a. Chilled-water flow indication.
 - b. Chilled-water pump(s) on-off status.
 - c. Chilled-water pump(s) on-off indication.

- C. Start and Stop Cooling-Tower Fans(s):
 1. Input Device: Flow switch in condenser-water circuit.
 2. Output Device: **[Starter] [DDC system command to starter]** relay.
 3. Action: Energize fan(s).
 4. Display:
 - a. Condenser-water flow indication.
 - b. Cooling-tower fan(s) on-off indication.

- D. Start and Stop Refrigeration Machine(s):
 1. Input Device: Flow switch in condenser-water circuit. **[Flow switch in chilled-water circuit.]**
 2. Output Device: **[Refrigeration] [DDC system command to refrigeration]** machine terminal strip.
 3. Action: Energize refrigeration machine(s) internal control circuit.
 4. Display:
 - a. Condenser-water flow indication.
 - b. Chilled-water flow indication.
 - c. Refrigeration machine on-off indication.
 - d. Chilled-water supply and return temperature.
 - e. Chilled-water temperature control-point adjustment.

E. Start and Stop Chiller(s):

1. Input Device: Flow switches in condenser-water and chilled-water circuit.
2. Output Device: **[Chiller] [DDC system command to chiller]** terminal strip.
3. Action: Energize chiller internal control circuit.
4. Display:
 - a. Condenser-water flow indication.
 - b. Chilled-water flow indication.
 - c. Chiller(s) on-off status.
 - d. Chiller(s) on-off indication.
 - e. Chilled-water supply and return temperature.
 - f. Chilled-water temperature control-point adjustment.

F. Alternate Chiller(s):

1. Input Device: **[Electric alternator] [DDC system software]**.
2. Output Device: **[Chiller] [DDC system command to chiller]** terminal strip.
3. Action: Operate chiller(s) on lead-lag, alternating each startup.
4. Action: Adding and dropping chiller(s) as follows: **<Insert sequence and parameters.>**
5. Display: Chiller(s) on-off indication.

G. Alarm Chiller(s) Start Failure:

1. Input Device: Chiller **[control panel terminal strip contact] [software signal]**.
2. Output Device: **[Analog control panel] [DDC system alarm]**.
3. Action: Signal alarm.
4. Display: Chiller "failure-to-start" indication.

H. Chilled-Water Level:

1. Input Device: Expansion tank **[level switch] [liquid sensor]**.
2. Output Device: **[Electric relay signal to alarm panel] [DDC system alarm]**.
3. Action: Signal alarm.
4. Display: Expansion tank low-level alarm.

I. Chilled-Water Supply Temperature:

1. Input Device: Temperature **[sensor] [transmitter]** in common chilled-water supply piping.
2. Output Device: **[Integral chiller controls] [DDC system signal to chiller control panel]**.
3. Action: Maintain constant leaving chilled-water temperature[**reset according to highest cooling demand**].
 - a. Display: Chilled-water supply temperature.

J. Condenser-Water Temperature:

1. Input Device: Temperature **[sensor] [transmitter]** in cooling-tower sump.

2. Output Device: [**Bypass control valve**] [**Cooling-tower fan starter relay**] [**DDC system command to cooling-tower fan starter relay**].
 3. Action: Modulate control valve open to cooling tower and closed to bypass and cycle tower fan(s) [**on and off**][**and to low speed and then to high speed**] to maintain [**65 deg F (18 deg C)**] [**70 deg F (21 deg C)**] sump temperature.[**Close valve when unoccupied.**]
 4. Display:
 - a. Condenser-water sump (return) control-point temperature.
 - b. Condenser-water sump (return) temperature.
 - c. Control-valve position.
 - d. Cooling-tower fan(s) on-off indication.
 - e. Condenser-water supply temperature.
- K. Cooling-Tower Sump Heater:
1. Input Device: Sump temperature [**sensor**] [**transmitter**].
 2. Output Device: [**Electric relay**] [**DDC system command to electric relay**] [**and solenoid valve**].
 3. Action: Energize sump heater[; **drain sump on low temperature**].
 4. Display:
 - a. Cooling-tower sump temperature.
 - b. Cooling-tower sump heater on-off indication.
 - c. Cooling-tower dump indication.
- L. Operator Station Display: Indicate the following on operator workstation display terminal:
1. DDC system graphic.
 2. DDC system status, on-off.
 3. Low-level cooling-tower sump alarm.
 4. Outdoor-air temperature.
 5. Cooling (software) demand indication.
 6. Time and time schedule.
 7. Condenser-water pump(s) on-off status.
 8. Condenser-water pump(s) on-off indication.
 9. Condenser-water flow indication.
 10. Chilled-water pump(s) on-off status.
 11. Chilled-water pump(s) on-off indication.
 12. Cooling-tower fan(s) on-off indication.
 13. Chilled-water flow indication.
 14. Refrigeration machine on-off indication.
 15. Chilled-water supply temperature.
 16. Chilled-water return temperature.
 17. Chilled-water temperature control-point adjustment.
 18. Chiller(s) on-off status.
 19. Chiller(s) on-off indication.
 20. Chiller "failure-to-start" indication.
 21. Expansion tank low-level alarm.

22. Condenser-water sump (return) control-point temperature.
23. Condenser-water sump (return) temperature.
24. Condenser-water control-valve position.
25. Cooling-tower fan(s) on-off indication.
26. Condenser-water supply temperature.
27. Cooling-tower sump temperature.
28. Cooling-tower sump heater on-off indication.
29. Cooling-tower dump indication.
30. Chilled-water pressure drop through chiller.
31. Entering condenser-water temperature.
32. Leaving condenser-water temperature.
33. Condenser-water pressure drop through chiller.
34. Chiller condenser-water supply and return temperature.
35. Chiller chilled-water supply and return temperature.
36. System capacity in tons.

1.6 AIR-HANDLING-UNIT CONTROL SEQUENCES

A. Start and Stop Supply Fan(s):

1. Enable: Freeze Protection:
 - a. Input Device: Duct-mounted averaging element thermostat, located before supply fan.
 - b. Output Device: Hard wired through motor starter; **[analog alarm panel]** **[DDC system alarm]**.
 - c. Action: Allow start if duct temperature is above **37 deg F (3 deg C)**; signal alarm if fan fails to start as commanded.
2. Enable: High-Temperature Protection:
 - a. Input Device: Duct-mounted thermostat, located in return air.
 - b. Output Device: Hard wired through motor starter; **[analog alarm panel]** **[DDC system alarm]**.
 - c. Action: Allow start if duct temperature is below **300 deg F (150 deg C)**.
3. Enable: Smoke Control:
 - a. Input Device: Duct-mounted smoke detector, located in **[return]** **[supply]** air.
 - b. Output Device: Hard wired through motor starter; **[analog alarm panel]** **[DDC system alarm]**.
 - c. Action: Allow start if duct is free of products of combustion.
4. Initiate: Occupied Time Schedule:
 - a. Input Device: **[Time clock]** **[DDC system time schedule]**.
 - b. Output Device: **[Time clock]** **[Binary output]** to motor starter.
 - c. Action: Energize fan(s).

5. Initiate: Unoccupied Time Schedule:
 - a. Input Device: **[Room thermostat] [DDC system demand]**.
 - b. Output Device: **[Room thermostat] [Binary output]** to motor starter.
 - c. Action: Energize fan(s).
 6. Unoccupied Ventilation:
 - a. Input Device: **[Time clock and room thermostat] [DDC system time schedule and output]**.
 - b. Output Device: **[Room thermostat] [DDC system binary output]** to motor starter.
 - c. Action: Cycle fan(s) during unoccupied periods.
 7. Display: Supply-fan on-off indication.
- B. Supply Fan(s) Variable-Volume Control:
1. Occupied Time Schedule:
 - a. Input Device: **[Time clock] [DDC system time schedule]**.
 - b. Output Device: **[Time clock] [Binary output]**.
 - c. Action: Enable control.
 2. Volume Control:
 - a. Input Device: **[Static-pressure transmitter] [Differential-pressure switch]** sensing supply-duct static pressure referenced to conditioned-space static pressure.
 - b. Output Device: **[Receiver controller] [DDC system analog output] [DDC system analog output to digital-to-pneumatic transducer]** to modulating damper actuator. Set inlet guide vanes to **[minimum] [closed]** position when fan is stopped.
 - c. Action: Maintain constant supply-duct static pressure.
 3. Volume Control:
 - a. Input Device: **[Static-pressure transmitter] [Differential-pressure switch]** sensing supply-duct static pressure referenced to conditioned-space static pressure.
 - b. Output Device: **[Receiver controller] [DDC system analog output]** to motor speed controller. Set variable-speed drive to minimum speed when fan is stopped.
 - c. Action: Maintain constant supply-duct static pressure.
 4. High Pressure:
 - a. Input Device: Static-pressure transmitter sensing supply-duct static pressure referenced to static pressure outside the duct.
 - b. Output Device: **[Receiver controller] [DDC system binary output]** to **[alarm panel] [motor starter]**.

- c. Action: Stop fan and signal alarm when static pressure rises above excessive-static-pressure set point.
- 5. Display:
 - a. Supply-fan-discharge static-pressure indication.
 - b. Supply-fan-discharge static-pressure set point.
 - c. Supply-fan airflow rate.
 - d. Supply-fan [**inlet vane position**] [**speed**].
- C. Start and Stop Return Fan(s):
 - 1. Initiate: Occupied Time Schedule:
 - a. Input Device: [**Time clock**] [**DDC system time schedule**].
 - b. Output Device: [**Time clock**] [**Binary output**] to motor starter.
 - c. Action: Energize fans when supply fans are energized.
 - 2. Initiate: Unoccupied Time Schedule:
 - a. Input Device: [**Room thermostat**] [**DDC system demand**].
 - b. Output Device: [**Room thermostat**] [**Binary output**] to motor starter.
 - c. Action: Energize fans when supply fans are energized.
 - 3. Unoccupied Ventilation:
 - a. Input Device: [**Time clock and room thermostat**] [**DDC system time schedule and output**].
 - b. Output Device: [**Room thermostat**] [**DDC system binary output**] to motor starter.
 - c. Action: Cycle fan(s) during unoccupied periods.
 - 4. Display: Return-fan on-off indication.
- D. Return Fan(s) Variable-Volume Control:
 - 1. Occupied Time Schedule:
 - a. Input Device: [**Time clock**] [**DDC system time schedule**].
 - b. Output Device: [**Time clock**] [**Binary output**].
 - c. Action: Enable control.
 - 2. Volume Control:
 - a. Input Device: [**Static-pressure transmitter**] [**Differential-pressure switch**] sensing building static pressure referenced to outdoor static pressure.
 - b. Output Device: [**Receiver controller**] [**DDC system analog output**] [**DDC system analog output to digital-to-pneumatic transducer**] to modulating damper actuator. Set inlet guide vanes to [**minimum**] [**closed**] position when fan is stopped.
 - c. Action: Maintain constant building static pressure.

3. Volume Control:
 - a. Input Device: [**Static-pressure transmitter**] [**Differential-pressure switch**] sensing building static pressure referenced to outdoor static pressure.
 - b. Output Device: [**Receiver controller**] [**DDC system analog output**] to motor speed controller. Set variable-speed drive to minimum speed when fan is stopped.
 - c. Action: Maintain constant building static pressure.
 4. Display:
 - a. Return-air static-pressure indication.
 - b. Return-air static-pressure set point.
 - c. Return-fan airflow rate.
 - d. Return-fan [**inlet vane position**] [**speed**].
 - e. Building static-pressure indication.
 - f. Building static-pressure set point.
- E. Return Fan(s) Variable-Volume Control:
1. Occupied Time Schedule:
 - a. Input Device: [**Time clock**] [**DDC system time schedule**].
 - b. Output Device: [**Time clock**] [**Binary output**].
 - c. Action: Enable control.
 2. Volume Control:
 - a. Input Device: [**Static-pressure transmitter**] [**Differential-pressure switch**] sensing building static pressure referenced to outdoor static pressure.
 - b. Output Device: [**Receiver controller**] [**DDC system analog output**] [**DDC system analog output to digital-to-pneumatic transducer**] to modulating damper actuator. Set inlet guide vanes to [**minimum**] [**closed**] position when fan is stopped.
 - c. Action: Maintain constant building static pressure.
 3. Volume Control:
 - a. Input Device: [**Static-pressure transmitter**] [**Differential-pressure switch**] sensing building static pressure referenced to outdoor static pressure.
 - b. Output Device: [**Receiver controller**] [**DDC system analog output**] to motor speed controller. Set variable-speed drive to minimum speed when fan is stopped.
 - c. Action: Maintain constant building static pressure.
 4. Display:
 - a. Return-fan-discharge static-pressure indication.
 - b. Return-fan-discharge static-pressure set point.
 - c. Return-fan airflow rate.

d. Return-fan [**inlet vane position**] [**speed**].

F. Preheat Coil:

1. Freeze Protection:

- a. Input Device: Duct-mounted averaging element thermostat, located after preheat coil.
- b. Output Device: Hard wired through motor starter; [**analog alarm panel**] [**DDC system alarm**].
- c. Action: Allow start if duct temperature is above **33 deg F** (1 deg C).

2. Occupied Time Schedule:

- a. Input Device: [**Time clock**] [**DDC system time schedule**].
- b. Output Device: [**Time clock**] [**Binary output**] to motor starter.
- c. Action: Energize coil circulating pump(s).

3. [**Supply**] [**Discharge**]-Air Temperature:

- a. Input Device: [**Time clock and duct-mounted thermostat**] [**DDC system time schedule and electronic temperature sensor**].
- b. Output Device: Modulating control valve.
- c. Action: Maintain air temperature set point of **55 deg F** (13 deg C).

4. Unoccupied Time Schedule:

- a. Input Device: [**Time clock and duct-mounted thermostat mounted in outdoor air**] [**DDC system time schedule and outdoor-air temperature**].
- b. Output Device: [**Time clock**] [**Binary output**] to motor starter.
- c. Action: Energize coil circulating pump(s) when outdoor-air temperature falls below **35 deg F** (2 deg C).

5. Display:

- a. Preheat-coil air-temperature indication.
- b. Preheat-coil air-temperature set point.
- c. Preheat-coil pump operation indication.
- d. Preheat-coil control-valve position.

G. Mixed-Air Control:

1. Occupied Time Schedule:

- a. Input Device: [**Time clock**] [**DDC system time schedule**].
- b. Output Device: [**Pneumatic relay**] [**DDC system output**].
- c. Action: Enable control.

2. Minimum Position:

- a. Input Device: [**Time clock**] [**DDC system time schedule**].

- b. Output Device: **[Receiver controller] [DDC system analog output] [DDC system analog output to digital-to-pneumatic transducer]** to modulating damper actuator(s).
 - c. Action: Open **[minimum outdoor-air dampers] [outdoor-air dampers to minimum position]**.
 3. Heating Reset:
 - a. Input Device: **[Room thermostat] [DDC system software]**.
 - b. Output Device: **[Receiver controller] [DDC system analog output] [DDC system analog output to digital-to-pneumatic transducer]** to modulating damper actuator(s).
 - c. Action: **[Close minimum outdoor-air dampers] [Set outdoor-air dampers to minimum position]**.
 4. **[Supply] [Mixed]-Air Temperature:**
 - a. Input Device: **[Duct-mounted thermostat] [Electronic temperature sensor]**.
 - b. Output Device: **[Receiver controller] [DDC system analog output] [DDC system analog output to digital-to-pneumatic transducer]** to modulating damper actuator(s).
 - c. Action: Modulate outdoor-, return-, and relief-air dampers to maintain air temperature set point of **55 deg F (13 deg C)**.
 5. Cooling Reset:
 - a. Input Device: Outdoor- and return-air, duct-mounted **[thermostats] [electronic temperature sensors]**.
 - b. Output Device: **[Receiver controller] [DDC system analog output] [DDC system analog output to digital-to-pneumatic transducer]** to damper actuator(s).
 - c. Action: Set outdoor-air dampers to minimum position when outdoor-air **[temperature exceeds return-air temperature] [enthalpy exceeds return-air enthalpy]**.
 6. Unoccupied Time Schedule:
 - a. Input Device: **[Time clock] [DDC system time schedule]**.
 - b. Output Device: **[Receiver controller] [DDC system analog output] [DDC system analog output to digital-to-pneumatic transducer]** to modulating damper actuator(s).
 - c. Action: Position outdoor- and relief-air dampers closed and return-air dampers open.
 7. Display:
 - a. Mixed-air-temperature indication.
 - b. Mixed-air-temperature set point.
 - c. Mixed-air damper position.

H. Humidifier:

1. Occupied Time Schedule:

- a. Input Device: **[Time clock] [DDC system time schedule]** and airflow switch
- b. Output Device: **[Pneumatic relay] [DDC system output]**.
- c. Action: Enable control.

2. Humidity:

- a. Input Device: **[Room humidistat] [Return-air, duct-mounted humidistat] [DDC system]**.
- b. Output Device: **[Receiver controller] [DDC system analog output] [DDC system analog output to digital-to-pneumatic transducer] [enables humidifier] [modulates control valve to maintain humidity] [cycles pump to maintain humidity] [cycles pump and modulates control valve to maintain humidity]** in straight-line relationship for the following conditions:
 - 1) 20 percent when outdoor-air temperature is **[minus 30 deg F (minus 35 deg C)] <Insert temperature>**.
 - 2) 40 percent when outdoor-air temperature is **[75 deg F (24 deg C)] <Insert temperature>**.
- c. Action: Modulate outdoor-, return-, and relief-air dampers to maintain air temperature set point of **[55 deg F (13 deg C)] <Insert temperature>**.

3. Display:

- a. Relative humidity indication.
- b. Relative humidity set point.
- c. Relative humidity control-valve position.

I. Filters: During occupied periods, when fan is running, differential air-pressure transmitters exist.

1. Occupied Time Schedule:

- a. Input Device: **[Time clock] [DDC system time schedule]**.
- b. Output Device: **[Electric relay] [DDC system output]**.
- c. Action: Enable control.

2. Differential Pressure:

- a. Input Device: **[Differential-pressure switches] [Pressure transmitter]**.
- b. Output Device: **[Analog alarm panel] [DDC system alarm]**.
- c. Action: Signal alarm on low- and high-pressure conditions.

3. Display:

- a. Filter air-pressure-drop indication.
- b. Filter low-air-pressure set point.
- c. Filter high-air-pressure set point.

J. **[Hydronic] [Steam]** Heating Coil:

1. Occupied Time Schedule:

- a. Input Device: **[Time clock] [DDC system time schedule]**.
- b. Output Device: **[Time clock] [Binary output]**.
- c. Action: Enable control.

2. **[Supply] [Discharge]**-Air Temperature:

- a. Input Device: **[Duct-mounted thermostat] [Electronic temperature sensor]**.
- b. Output Device: Normally **[open] [closed]** modulating control valve.
- c. Action: Maintain supply-air temperature set point of **55 deg F (13 deg C)**.

3. Temperature Reset:

- a. Input Device: **[Duct-mounted thermostat] [Electronic temperature sensor]** in return air.
- b. Output Device: **[Direct to receiver controller] [DDC system]** in straight-line relationship for the following conditions:

- 1) **[65 deg F (18 deg C)] <Insert temperature>** when return-air temperature is **[70 deg F (21 deg C)] <Insert temperature>**.
- 2) **[55 deg F (13 deg C)] <Insert temperature>** when return-air temperature is **[75 deg F (24 deg C)] <Insert temperature>**.

- c. Action: Reset supply-air temperature set point of **55 deg F (13 deg C)**.

4. Temperature Reset:

- a. Input Device: **[Load analyzer] [DDC system]** with input from room **[thermostats] [temperature sensors]**.
- b. Output Device: **[Direct to receiver controller] [DDC system]**.
- c. Action: Reset supply-air temperature in response to greatest heating demand.

5. Unoccupied Time Schedule:

- a. Input Device: **[Time clock and room thermostat] [DDC system time schedule and output]**.
- b. Output Device: **[Room thermostat (cycling fan)] [DDC system binary output]**.
- c. Action: **[Enable normal control] [Return valve to normal position]** when fan is cycled on.

6. Display:

- a. Fan-discharge air-temperature indication.
- b. Fan-discharge air-temperature set point.
- c. Heating-coil air-temperature indication.
- d. Heating-coil air-temperature set point.
- e. Heating-coil pump operation indication.
- f. Heating-coil control-valve position.
- g. Hot-deck air-temperature indication.
- h. Hot-deck air-temperature set point.

K. Hydronic Cooling Coil:

1. Occupied Time Schedule:

- a. Input Device: **[Time clock] [DDC system time schedule]**.
- b. Output Device: **[Time clock] [Binary output]**.
- c. Action: Enable control.

2. **[Supply] [Discharge]-Air Temperature:**

- a. Input Device: **[Duct-mounted thermostat] [Electronic temperature sensor]**.
- b. Output Device: Normally **[open] [closed]** modulating control valve.
- c. Action: Maintain supply-air temperature set point of **55 deg F (13 deg C)**.

3. Temperature Reset:

- a. Input Device: **[Duct-mounted thermostat] [Electronic temperature sensor]** in return air.
- b. Output Device: **[Direct to receiver controller] [DDC system]** in straight-line relationship for the following conditions:
 - 1) **[65 deg F (18 deg C)] <Insert temperature>** when return-air temperature is **[70 deg F (21 deg C)] <Insert temperature>**.
 - 2) **[55 deg F (13 deg C)] <Insert temperature>** when return-air temperature is **[75 deg F (24 deg C)] <Insert temperature>**.
- c. Action: Reset supply-air temperature set point of **55 deg F (13 deg C)**.

4. Temperature Reset:

- a. Input Device: **[Load analyzer] [DDC system]** with input from room **[thermostats] [temperature sensors]**.
- b. Output Device: **[Direct to receiver controller] [DDC system]**.
- c. Action: Reset supply-air temperature in response to greatest heating demand.

5. Unoccupied Time Schedule:

- a. Input Device: **[Time clock] [DDC system time schedule]**.
- b. Output Device: **[Time clock] [Binary output]**.
- c. Action: Disable control.

6. Display:
 - a. Fan-discharge air-temperature indication.
 - b. Fan-discharge air-temperature set point.
 - c. Cooling-coil air-temperature indication.
 - d. Cooling-coil air-temperature set point.
 - e. Cooling-coil control-valve position.
 - f. Cold-deck air-temperature indication.
 - g. Cold-deck air-temperature set point.

- L. Multizone Damper Control:
 1. Occupied Time Schedule:
 - a. Input Device: **[Time clock] [DDC system time schedule]**.
 - b. Output Device: **[Time clock] [Binary output]**.
 - c. Action: Enable control.

 2. Room Temperature:
 - a. Input Device: **[Room thermostat] [Electronic temperature sensor]**.
 - b. Output Device: Damper actuator.
 - c. Action: Maintain room temperature.

 3. Display:
 - a. Room temperature indication.
 - b. Room temperature set point.
 - c. Multizone damper position.

- M. Coordination of Air-Handling Unit Sequences: Ensure that preheat, mixed-air, heating-coil, and cooling-coil controls have common inputs and do not overlap in function.

- N. Operator Station Display: Indicate the following on operator workstation display terminal:
 1. DDC system graphic.
 2. DDC system on-off indication.
 3. DDC system occupied/unoccupied mode.
 4. Outdoor-air-temperature indication.
 5. Supply-fan on-off indication.
 6. Supply-fan-discharge static-pressure indication.
 7. Supply-fan-discharge static-pressure set point.
 8. Supply-fan airflow rate.
 9. Supply-fan **[inlet vane position] [speed]**.
 10. Return-fan on-off indication.
 11. Return-air static-pressure indication.
 12. Return-air static-pressure set point.
 13. Return-fan airflow rate.

14. Return-fan [**inlet vane position**] [**speed**].
15. Building static-pressure indication.
16. Building static-pressure set point.
17. Preheat-coil air-temperature indication.
18. Preheat-coil air-temperature set point.
19. Preheat-coil pump operation indication.
20. Preheat-coil control-valve position.
21. Mixed-air-temperature indication.
22. Mixed-air-temperature set point.
23. Mixed-air damper position.
24. Relative humidity indication.
25. Relative humidity set point.
26. Relative humidity control-valve position.
27. Filter air-pressure-drop indication.
28. Filter low-air-pressure set point.
29. Filter high-air-pressure set point.
30. Fan-discharge air-temperature indication.
31. Fan-discharge air-temperature set point.
32. Heating-coil air-temperature indication.
33. Heating-coil air-temperature set point.
34. Heating-coil pump operation indication.
35. Heating-coil control-valve position.
36. Hot-deck air-temperature indication.
37. Hot-deck air-temperature set point.
38. Cooling-coil air-temperature indication.
39. Cooling-coil air-temperature set point.
40. Cooling-coil control-valve position.
41. Cold-deck air-temperature indication.
42. Cold-deck air-temperature set point.
43. Room temperature indication.
44. Room temperature set point.
45. Multizone damper position.

1.7 TERMINAL UNIT OPERATING SEQUENCE

A. Cabinet Unit Heater, [**Hydronic**] [**Steam**]:

1. Room Temperature:
 - a. Input Device: [**Room thermostat**] [**Electronic temperature sensor**].
 - b. Output Device: [**Room thermostat**] [**DDC system binary output**].
 - c. Action: Cycle fan to maintain temperature.
2. Low-Temperature Safety:
 - a. Input Device: Line-voltage, on-off thermostat, pipe mounted.
 - b. Output Device: Hard wired.
 - c. Action: Stop fan when [**return heating-water**] [**condensate**] temperature falls below **35 deg F (2 deg C)**.

3. Display:
 - a. Room temperature indication.
 - b. Room temperature set point.

- B. Cabinet Unit Heater, Electric: Room thermostat cycles fan and sequences stages of heating.

- C. Unit Heater, **[Hydronic]** **[Steam]**:
 1. Room Temperature:
 - a. Input Device: **[Room thermostat]** **[Electronic temperature sensor]**.
 - b. Output Device: **[Room thermostat]** **[DDC system binary output]**.
 - c. Action: Cycle fan to maintain temperature.

 2. Low-Temperature Safety:
 - a. Input Device: Line-voltage, on-off thermostat, pipe mounted.
 - b. Output Device: Hard wired.
 - c. Action: Stop fan when **[return heating-water]** **[condensate]** temperature falls below **35 deg F (2 deg C)**.

 3. Display:
 - a. Room temperature indication.
 - b. Room temperature set point.

- D. Unit Heater, Electric: Room thermostat cycles fan and sequences stages of heating.

- E. Combustion-Air Unit Heaters:
 1. Room Temperature:
 - a. Input Device: **[Room thermostat]** **[Electronic temperature sensor]**.
 - b. Output Device: **[Pneumatic]** **[Electronic]** control-valve operator.
 - c. Action: Modulate valve to maintain temperature.

 2. Display:
 - a. Room temperature indication.
 - b. Room temperature set point.
 - c. Control-valve position.

- F. Radiant Heating Cable, Electric: Room thermostat cycles power.

- G. Radiant Heating Panel, Electric: Room thermostat cycles power.

- H. Radiant Heating Panel, Hydronic:
 1. Room Temperature:

- a. Input Device: **[Room thermostat] [Electronic temperature sensor]**.
 - b. Output Device: **[Pneumatic] [Electronic]** control-valve operator.
 - c. Action: Modulate valve to maintain temperature.
 2. Display:
 - a. Room temperature indication.
 - b. Room temperature set point.
 - c. Control-valve position.
- I. Two-Pipe, Single-Coil, Fan-Coil Unit:
 1. Occupied Time Schedule:
 - a. Input Device: **[Fan switch] [Time clock] [DDC system time schedule]**.
 - b. Output Device: **[Time clock] [Binary output]**.
 - c. Action: Start and stop fan and enable control.
 2. Room Temperature:
 - a. Input Device: **[Room thermostat] [Electronic temperature sensor]** in **[room] [return air]**.
 - b. Output Device: **[Pneumatic] [Electronic]** control-valve operator.
 - c. Action: Modulate valve to maintain temperature.
 3. DDC System Changeover:
 - a. Input Device: **[Thermostat] [Electronic temperature sensor] [in supply-water] [on supply-water piping] [DDC system]**.
 - b. Output Device: **[Hard-wired relay] [DDC system software]**.
 - c. Action: Reverse control-valve action to switch from heating to cooling.
 4. Display:
 - a. DDC system graphic.
 - b. DDC system on-off indication.
 - c. DDC system occupied/unoccupied mode.
 - d. Room temperature indication.
 - e. Room temperature set point.
 - f. Control-valve position.
 - g. Supply-water temperature indication.
- J. Four-Pipe, Hydronic Fan-Coil Unit:
 1. Occupied Time Schedule:
 - a. Input Device: **[Fan switch] [Time clock] [DDC system time schedule]**.
 - b. Output Device: **[Time clock] [Binary output]**.
 - c. Action: Start and stop fan, and enable control.
 2. Room Temperature:

- a. Input Device: **[Room thermostat] [Electronic temperature sensor]**.
 - b. Output Device: **[Pneumatic] [Electronic]** control-valve operators.
 - c. Action: Modulate multiport control valves to maintain temperature.
3. Display:
- a. DDC system graphic.
 - b. DDC system on-off indication.
 - c. DDC system occupied/unoccupied mode.
 - d. Room temperature indication.
 - e. Room temperature set point.
 - f. Control-valve position.
- K. Unit Ventilator: Room thermostat modulates heating-and-cooling control valves; airstream thermostats modulate outdoor- and return-air dampers as follows:
1. Occupied Time Schedule:
 - a. Input Device: **[Fan switch] [Time clock] [DDC system time schedule]**.
 - b. Output Device: **[Time clock] [Binary output]**.
 - c. Action: Start and stop fan, move outdoor- and return-air dampers to **[minimum] [maximum]** outdoor-air position, and enable control.
 2. Room Temperature - Valves:
 - a. Input Device: **[Room thermostat] [Electronic temperature sensor]**.
 - b. Output Device: **[Pneumatic] [Electronic]** control-valve operators.
 - c. Action: Modulate heating-water supply control valve and chilled-water supply control valve in sequence to maintain temperature.
 3. Room Temperature - Dampers:
 - a. Input Device: **[Thermostat] [Electronic temperature sensor]** in mixed air.
 - b. Output Device: **[Pneumatic] [Electronic]** control damper actuators.
 - c. Action: Modulate outdoor- and return-air dampers to maintain temperature.
 4. Supply-Air Temperature Limit:
 - a. Input Device: **[Thermostat] [Electronic temperature sensor]** in discharge air.
 - b. Output Device: **[Pneumatic] [Electronic]** control-valve operators and control damper actuators.
 - c. Action: Override room thermostat to control valves and dampers to prevent discharge air from dropping below a minimum set point.
 5. Warm-up Cycle:
 - a. Input Device: **[Time clock] [DDC system time schedule]**.
 - b. Output Device: **[Hard-wired relay] [DDC system binary output]**.
 - c. Action: Open heating-water supply control valve, close outdoor-air damper, and open return-air damper.

6. Display:
 - a. DDC system graphic.
 - b. DDC system on-off indication.
 - c. DDC system occupied/unoccupied mode.
 - d. Room temperature indication.
 - e. Room temperature set point.
 - f. Control-valve position.
 - g. Damper position.

- L. Heating Coils, [**Hydronic**] [**Steam**]:
 1. Room Temperature:
 - a. Input Device: [**Room thermostat**] [**Electronic temperature sensor**].
 - b. Output Device: [**Pneumatic**] [**Electronic**] [**Electric**] control-valve operators.
 - c. Action: [**Modulate**] [**Cycle**] valve to maintain temperature.

 2. Display:
 - a. Room temperature indication.
 - b. Room temperature set point.
 - c. Control-valve position.

- M. Heating Coils, Electric: Room thermostat [**cycles coils**] [**sequences stages of heating**].

- N. Radiators and Convectors, [**Hydronic**] [**Steam**]:
 1. Occupancy:
 - a. Input Device: Occupancy sensor.
 - b. Output Device: DDC system binary output.
 - c. Action: Report occupancy and enable occupied temperature set point.

 2. Room Temperature:
 - a. Input Device: [**Room thermostat**] [**Electronic temperature sensor**].
 - b. Output Device: [**Pneumatic**] [**Electronic**] [**Electric**] control-valve operators.
 - c. Action: [**Modulate**] [**Cycle**] valve to maintain temperature.
 - 1) Occupied Temperature: **75 deg F** (24 deg C).
 - 2) Unoccupied Temperature: **65 deg F** (18 deg C).

 3. Display:
 - a. Room/area served.
 - b. Room temperature indication.
 - c. Room temperature set point.
 - d. Room temperature set point, occupied.
 - e. Room temperature set point, occupied standby.

- f. Room temperature set point, unoccupied.
 - g. Control-valve position as percent open.
- O. Radiators and Convectors, Electric: Room thermostat [**cycles coils**] [**sequences stages of heating**].
- P. Constant-Volume, Terminal Air Units, [**Hydronic**] [**Steam**]:
- 1. Occupancy:
 - a. Input Device: Occupancy sensor.
 - b. Output Device: DDC system binary output.
 - c. Action: Report occupancy and enable occupied temperature set point.
 - 1) Occupied Temperature: **75 deg F** (24 deg C).
 - 2) Unoccupied Temperature: **65 deg F** (18 deg C).
 - 2. Room Temperature:
 - a. Input Device: [**Room thermostat**] [**Electronic temperature sensor**].
 - b. Output Device: [**Pneumatic**] [**Electronic**] [**Electric**] control-valve operators.
 - c. Action: [**Modulate**] [**Cycle**] valve to maintain temperature.
 - 3. Display:
 - a. Room/area served.
 - b. Room occupied/unoccupied.
 - c. Room temperature indication.
 - d. Room temperature set point.
 - e. Room temperature set point, occupied.
 - f. Room temperature set point, unoccupied.
 - g. Control-valve position as percent open.
- Q. VAV, Terminal Air Units with [**Hydronic**] [**Steam**] Coils:
- 1. Occupancy:
 - a. Input Device: Occupancy sensor.
 - b. Output Device: DDC system binary output.
 - c. Action: Report occupancy and enable occupied temperature set point.
 - 1) Occupied Temperature: **75 deg F** (24 deg C).
 - 2) Unoccupied Temperature: **65 deg F** (18 deg C).
 - 2. Room Temperature:
 - a. Input Device: [**Room thermostat**] [**Electronic temperature sensor**].
 - b. Output Device: [**Pneumatic**] [**Electronic**] damper actuators and control-valve operators.
 - c. Action: Modulate damper and valve to maintain temperature.

- 1) Sequence damper from full open to minimum position, then valve from closed to fully open.
3. Display:
- a. Room/area served.
 - b. Room occupied/unoccupied.
 - c. Room temperature indication.
 - d. Room temperature set point.
 - e. Room temperature set point, occupied.
 - f. Room temperature set point, unoccupied.
 - g. Air-damper position as percent open.
 - h. Control-valve position as percent open.
- R. Dual-Duct, VAV, Terminal Air Units:
1. Occupancy:
 - a. Input Device: Occupancy sensor.
 - b. Output Device: DDC system binary output.
 - c. Action: Report occupancy and enable occupied temperature set point.
 - 1) Occupied Temperature: 75 deg F (24 deg C).
 - 2) Unoccupied Temperature: 65 deg F (18 deg C).
 2. Room Temperature:
 - a. Input Device: **[Room thermostat] [Electronic temperature sensor]**.
 - b. Output Device: **[Pneumatic] [Electronic]** damper actuators.
 - c. Action: Modulate dampers to maintain temperature.
 - 1) Sequence when space temperature is below set point: Close VAV damper to minimum position, open hot-deck dampers and close cold-deck dampers, then open VAV damper.
 - 2) Sequence when space temperature is above set point: Close VAV damper to minimum position, close hot-deck dampers and open cold-deck dampers, then open VAV damper.
 3. Display:
 - a. Room/area served.
 - b. Room occupied/unoccupied.
 - c. Room temperature indication.
 - d. Room temperature set point.
 - e. Room temperature set point, occupied.
 - f. Room temperature set point, unoccupied.
 - g. VAV damper position as percent open.
 - h. Hot-deck damper position as percent open.
 - i. Cold-deck damper position as percent open.

1.8 VENTILATION SEQUENCES

- A. Combustion-Air, Makeup Unit Control, Electric: Start fan when served appliance burner starts; room thermostat sequences stages of heating.
- B. Combustion-Air, Makeup Unit Control, [**Hydronic**] [**Steam**]: Start fan when served appliance burner starts; room thermostat [**cycles**] [**modulates**] control valve.
- C. Gravity Roof Ventilator: [**Occupancy sensor**] [**Room thermostat**] opens dampers.
- D. Exhaust Fan: [**Occupancy sensor**] [**Interlock with light switch**] [**Room thermostat**] cycles fan.
- E. Kitchen Exhaust Fan: Occupancy sensor starts fan and energizes makeup air unit.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 230993

SECTION 230993.11 - SEQUENCE OF OPERATIONS FOR HVAC DDC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes control sequences for DDC for HVAC systems, subsystems, and equipment.
- B. Related Requirements:
 - 1. Section 230923 "DDC Systems for HVAC" for control equipment.

1.3 DEFINITIONS

- A. Analog Output: Proportional output signal (zero- to 10-V dc, 4 to 20 mA).
- B. Binary Output: On/off output signal or contact closure.
- C. DDC: Direct digital control.
- D. Digital Output: Data output that must be interpreted digitally.

1.4 ACTION SUBMITTALS

- A. Product Data:
 - 1. An instrumentation list for each controlled system. Label each element of the controlled system in table format. Show, in the table element name, type of device, manufacturer, model number, and control device product data sheet number.
 - 2. A complete description of the operation of the control system, including sequences of operation. Include and reference a schematic diagram of the controlled system.
- B. Shop Drawings:
 - 1. Riser diagrams showing control network layout, communication protocol, and wire types.

2. Schematic diagram of each controlled system. Include all control points labeled with point names shown or listed. Show the location of control elements in the system.
3. Wiring diagram for each controlled system. Show all control elements labels. Where a control element is the same as that shown on the control system schematic, label with the same name. Label all terminals.

1.5 HEATING CONTROL SEQUENCES

A. Control Circulating Pump(s):

1. Input Device:
 - a. Device: [**Air-temperature sensor**] [or] [**air-temperature sensor with air-temperature RTD transmitter**] <Insert device>.
 - b. Location: [**Outdoor-air**] [**Room**] <Insert location>.
 - c. Transference: DDC controller.
2. Output Device:
 - a. Device: Command to electric relay.
 - b. Location: Motor controller.
 - c. Transference: Starter relay.
3. Action:
 - a. Energize pump(s) at outdoor-air temperatures below [**65 deg F (18 deg C)**] <Insert temperature>.
 - b. Energize pump(s) at room temperatures below [**72 deg F (22 deg C)**] <Insert temperature>.
 - c. Enable [**additional circulating pump(s)**] [, **alternate pump(s)**] [, **heating-water supply temperature control**] [and] [, **heating-water supply temperature reset**] control sequences.

B. Additional Circulating Pump(s):

1. Input Device:
 - a. Device: Liquid pressure differential [**switch**] [**transmitter**].
 - b. Location: Between the primary supply and return piping.
 - c. Transference: DDC controller.
2. Output Device:
 - a. Device: Binary output.
 - b. Location: Motor controller.
 - c. Transference: Starter relay.
3. Action:

- a. Energize pump(s) and maintain operation when differential pressure drops below [30] <Insert number> percent of specified pump head.
 - b. Energize pump(s) and maintain operation when differential pressure drops below <Insert pressure differential in psig (kPa)> of specified pump head.
- C. Circulating Pump(s) Failure Alarm:
1. Input Device:
 - a. Device: Liquid pressure differential [switch] [transmitter].
 - b. Location: Between the primary supply and return piping.
 - c. Transference: DDC controller.
 2. Output Device:
 - a. Device: DDC controller.
 - b. Transference: Operator's workstation.
 3. Action:
 - a. Signal alarm condition, no pressure differential between supply and return piping.
- D. Alternate Pump(s):
1. Input:
 - a. Device: DDC controller.
 - b. Location: Software, <Insert software definition>.
 - c. Transference: Software.
 2. Output Device:
 - a. Device: DDC controller.
 - b. Location: Motor controller.
 - c. Transference: Motor-controller relay.
 3. Action: Operate pump(s) on lead-lag, alternating each startup.
 4. Action: Operate pump(s) on lead-lag, alternating on <Insert value> run hours.
- E. Control Circulating Pump(s) Speed:
1. Input Device:
 - a. Device: Liquid pressure differential transmitter.
 - b. Location: Heating supply and return piping.
 - c. Transference: DDC controller.
 2. Output Device:
 - a. Device: Analog command.

- b. Location: Motor controller.
 - c. Transference: Variable-frequency motor controller.
 3. Action:
 - a. Control pump speed to maintain pressure differential of <Insert psig (kPa)>.
- F. Heating-Water Supply Temperature Control:
 1. Input:
 - a. Device: **[Liquid temperature sensor] [or] [liquid temperature sensor with liquid temperature transmitter]**.
 - b. Location: Heating-water supply.
 - c. Transference: DDC controller.
 2. Output:
 - a. Device: Control-valve actuator.
 - b. Location: Heating-water supply.
 - c. Transference: Control-valve actuator.
 3. Action:
 - a. Modulate control valve to maintain heating-water supply temperature.
 - b. Reset heating-water supply temperature in straight-line relationship with outdoor-air temperature for the following conditions:
 - 1) **[195 deg F (90 deg C)] <Insert highest heating temperature>** heating water when outdoor-air temperature is **[minus 30 deg F (minus 35 deg C)] <Insert lowest outdoor-air temperature>**.
 - 2) **[130 deg F (54 deg C)] <Insert lowest heating temperature>** heating water when outdoor-air temperature is **75 deg F (24 deg C)**.
- G. Heating-Water Supply Temperature Reset:
 1. Input:
 - a. Device: **[Liquid temperature sensor] [Liquid temperature sensor with liquid temperature transmitter]**.
 - b. Location: Outdoor-air and heating-water supply.
 - c. Transference: DDC controller.
 2. Output:
 - a. Device: DDC controller to boiler controls.
 - b. Location: Local panel.
 - c. Transference: Boiler control panel.
 3. Action:

- a. Reset heating-water supply temperature in response to greatest heating demand to maintain at least one cooling control valve 90 percent open.
- b. Reset heating-water supply temperature in straight-line relationship with outdoor-air temperature for the following conditions:
 - 1) [195 deg F (90 deg C)] <Insert highest heating temperature> heating water when outdoor-air temperature is [minus 30 deg F (minus 35 deg C)] <Insert lowest outdoor-air temperature>.
 - 2) [130 deg F (54 deg C)] <Insert lowest heating temperature> heating water when outdoor-air temperature is [75 deg F (24 deg C)] <Insert highest outdoor-air temperature>.
 - 3) [150 deg F (65 deg C)] <Insert temperature> minimum heating-water temperature.

H. Indicate the following on the operator's workstation display terminal:

1. DDC system graphic.
2. DDC system status, on-off.
3. Outdoor-air temperature.
4. Room temperature.
5. Circulating pump(s) on-off status (enabled or disabled).
6. Circulating pump(s) on-off indication (operating or not operating).
7. Additional circulating pump(s) pressure differential.
8. Additional circulating pump(s) pressure differential set point.
9. Additional circulating pump(s) on-off indication (operating or not operating).
10. Circulating pump(s) alarm pressure differential.
11. Circulating pump(s) alarm pressure differential set point.
12. Alarm (circulating pump(s) failure).
13. Circulating pump(s) speed pressure differential.
14. Circulating pump(s) speed pressure differential set point.
15. Circulating pump(s) speed.
16. Heating-water supply temperature.
17. Heating-water return temperature.
18. Heating-water control-valve position.
19. Heating-water supply temperature set point.
20. Heating-water control-point output valve.

1.6 CENTRAL CHILLED-WATER SYSTEM SEQUENCES

A. Central Chilled-Water System Time Schedule:

1. Occupied Time Schedule:
 - a. Input:
 - 1) Device: DDC controller.
 - 2) Location: Time schedule.
 - 3) Transference: DDC controller.

- b. Output:
 - 1) Device: DDC controller.
 - c. Action:
 - 1) Enable startup, initiation, and control.
 - 2) Energize condenser-water pumps on occupied/unoccupied cycle.
 - 3) Energize condenser-water pumps on day/night cycle.
 - 4) After chilled-water system shutdown, operate pump(s) for an additional **[3 minutes]** <Insert time>.
2. Display:
- a. Time and time schedule.
- B. Start and Stop Condenser-Water Pump(s):
- 1. Enable:
 - a. Input:
 - 1) Device: **[Level] [Liquid pressure]** switch.
 - 2) Location: **[Cooling tower sump] [Pump suction]**.
 - b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Transference: Motor-controller relay.
 - c. Action: Confirm adequate water level **[in cooling-tower sump] [at pump suction]** and energize pump(s).
 - 2. Enable:
 - a. Input:
 - 1) Device: **[Level transmitter] [or] [liquid pressure transmitter]**.
 - 2) Location: **[Cooling tower sump] [Pump suction]**.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Binary output.
 - 2) Location: Motor controller.
 - 3) Transference: Motor-controller relay.
 - c. Action: Confirm adequate water level **[in cooling-tower sump] [at pump suction]** at pressures above <Insert psig (kPa)> and energize pump(s).

3. Enable:
 - a. Input:
 - 1) Device: DDC controller outdoor-air temperature.
 - 2) Location: Outdoors.
 - 3) Transference: Binary output.
 - b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action: Confirm outdoor-air temperature is above [50 deg F (10 deg C)] <Insert temperature> and energize pump(s).
4. Enable:
 - a. Input:
 - 1) Device: DDC controller.
 - 2) Location: Software demand.
 - 3) Transference: Binary output.
 - b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action: Confirm cooling demand from ventilation system(s) and energize pump(s).
5. Display:
 - a. Low-level cooling-tower sump alarm.
 - b. Outdoor-air temperature.
 - c. Cooling (software) demand indication.
 - d. Time and time schedule.
 - e. Condenser-water pump(s) on-off status (enabled or disabled).
 - f. Condenser-water pump(s) on-off indication (operating or not operating).

C. Start and Stop Chilled-Water Pump(s):

1. Input:
 - a. Device: [Flow] [Pressure differential] switch.
 - b. Location: Chilled-water piping.
 - c. Transference: [Control voltage relay] [DDC controller].

2. Output:
 - a. Device: **[Hard wired] [Binary output]**.
 - b. Location: Motor controller.
 - c. Transference: Starter relay.
 3. Action: Energize pump(s) when the condenser-water pump(s) and system start.
 4. Display:
 - a. Chilled-water flow indication.
 - b. Chilled-water pump(s) on-off status (enabled or disabled).
 - c. Chilled-water pump(s) on-off indication (operating or not operating).
- D. Start and Stop Cooling-Tower Fan(s):
1. Input:
 - a. Device: **[Flow] [Pressure differential]** switch.
 - b. Location: Condenser-water piping.
 - c. Transference: **[Control relay] [DDC controller]**.
 2. Output:
 - a. Device: **[Hard wired] [Binary output]**.
 - b. Location: Motor controller.
 - c. Transference: Starter relay.
 3. Action: Energize fan(s) when the condenser-water pump(s) and system start.
 4. Display:
 - a. Condenser-water flow indication.
 - b. Cooling-tower fan(s) on-off indication (operating or not operating).
- E. Start and Stop Chillers:
1. Input:
 - a. Device: **[Flow] [or] [pressure differential]** switch.
 - b. Location: Chilled-[**and condenser-**]water piping.
 - c. Transference: **[Chiller controls] [DDC controller]**.
 2. Output:
 - a. Device: **[Hard wired] [Binary output]**.
 - b. Location: Chiller control panel.
 - c. Transference: Chiller controls.
 3. Action: Energize chiller(s) internal control circuit when the condenser-water and chilled-water pump(s), and system start.
 4. Display:

- a. Condenser-water flow indication.
- b. Chilled-water flow indication.
- c. Chiller on-off indication (operating or not operating).
- d. Chilled-water supply and return temperature.
- e. Chilled-water temperature control-point adjustment.

F. Start and Stop Chiller(s):

1. Input:

- a. Device: Flow switches.
- b. Location: Condenser-water and chilled-water circuit.
- c. Transference: [**Chiller terminal strip**] [**DDC system**].

2. Output:

- a. Device: [**Hard wired**] [**Binary output**].
- b. Location: Chiller control panel.
- c. Transference: Chiller controls.

3. Action: Energize chiller internal control circuit when the condenser-water and chilled-water pump(s), and system start.

4. Display:

- a. Condenser-water flow indication.
- b. Chilled-water flow indication.
- c. Chiller(s) on-off status (enabled or disabled).
- d. Chiller(s) on-off indication (operating or not operating).
- e. Chilled-water supply and return temperature.
- f. Chilled-water temperature control-point adjustment.

G. Alternate Chiller(s):

1. Input:

- a. Device: DDC controller.
- b. Location: DDC software, <**Insert software definition**>.
- c. Transference: DDC software.

2. Output Device:

- a. Device: DDC controller command to chiller.
- b. Location: Chiller control panel.
- c. Transference: Chiller controls.

3. Action:

- a. Operate chiller(s) on lead-lag, [**alternating each startup**] [**based on adjustable runtime hour set point**].
- b. Start additional chiller when load exceeds capacity of operating chillers as follows:

- 1) When common chilled-water supply temperature exceeds set point for a **[30-minute]** <Insert time> period.
 - 2) When chiller power draw has reached its operator adjustable high limit for a **[30-minute]** <Insert time> period.
 - 3) When combination of outdoor temperature and time schedule ensure enough run-time before time schedule shutdown.
- c. Stop chiller when load capacity of operating chillers drops to less than **[110]** <Insert number> percent of capacity of next chiller to be shut down for a **[30-minute]** <Insert time> period.
4. Action: <Insert sequence and parameters>.
 5. Display: Chiller(s) on-off indication (operating or not operating).
- H. Alarm Chiller(s) Start Failure:
1. Input:
 - a. Device: **[Software signal]** **[Hardwired]** <Insert devices>.
 - b. Location: Chiller control panel.
 - c. Transference: DDC controller.
 2. Output:
 - a. Device: DDC controller.
 - b. Transference: Operator's workstation.
 3. Action: Signal alarm on signal from chiller control panel.
 4. Display:
 - a. Chiller "failure-to-start" indication.
 - b. <Insert chiller controller alarm points>.
- I. Start and Stop Chiller(s):
1. Input:
 - a. Device: Chiller control panel.
 - b. Location: Chiller.
 - c. Transference: DDC controller.
 2. Output:
 - a. Device: DDC controller.
 - b. Transference: Operator's workstation.
 3. Action: Report chiller electronic control, operating, and alarm functions.
 4. Display:
 - a. <See chiller Sections for listing>.

J. Chilled-Water Level:

1. Input:
 - a. Device: **[Level switch] [Liquid level sensor]**.
 - b. Location: Expansion tank.
 - c. Transference: DDC controller.
2. Input:
 - a. Device: Liquid gage pressure switch.
 - b. Location: Makeup-water piping downstream from pressure-reducing valve.
 - c. Transference: DDC controller.
3. Output:
 - a. Device: DDC controller.
 - b. Transference: Operator's workstation.
4. Action: Signal alarm on **[expansion tank low level] [low pressure]**.
5. Display: **[Expansion tank low-level] [Low-pressure]** alarm.

K. Chilled-Water Supply Temperature:

1. Input:
 - a. Device: **[Liquid temperature sensor] [or] [liquid temperature sensor with liquid temperature transmitter]**.
 - b. Location: **[Common]** chilled-water supply piping.
 - c. Transference: DDC controller.
2. Output:
 - a. Device: DDC controller signal.
 - b. Location: Local panel.
 - c. Transference: Chiller control panel.
3. Action: Maintain chilled-water supply temperature.
 - a. Reset chilled-water supply temperature in response to greatest cooling demand to maintain at least one cooling control valve 90 percent open.
 - b. Reset chilled-water supply temperature in straight-line relationship with outdoor-air temperature for the following conditions:
 - 1) **[44 deg F (7 deg C)] <Insert highest chilled-water temperature>** chilled water when outdoor-air temperature is **[80 deg F (26 deg C)] <Insert highest outdoor-air temperature>**.
 - 2) **[54 deg F (12 deg C)] <Insert lowest chilled-water temperature>** chilled water when outdoor-air temperature is **[60 deg F (15 deg C)] <Insert lowest operating outdoor-air temperature>**.

- c. Reset chilled-water supply temperature based on constant return chilled-water temperature of [54 deg F (12 deg C)] <Insert temperature>.
 - d. <Insert reset strategy>.
 4. Display:
 - a. Chilled-water supply temperature.
 - b. Chilled-water supply temperature set point.
- L. Condenser-Water Temperature:
 1. Input:
 - a. Device: [Liquid temperature sensor] [Liquid temperature sensor with liquid temperature transmitter].
 - b. Location: [Cooling-tower sump] [Common condenser-water supply piping].
 - c. Transference: DDC controller.
 2. Output:
 - a. Device: Analog output.
 - b. Location: DDC controller.
 - c. Transference: Control-valve actuator.
 3. Action: Modulate control valve open to cooling tower and closed to bypass to maintain when condenser-water supply temperature is above [85 deg F (29 deg C)] <Insert value> temperature set point. Modulate control valve closed to cooling tower and open to bypass when condenser-water supply temperature is below [55 deg F (13 deg C)] <Insert value> temperature set point.
 4. Output:
 - a. Device: DDC controller control relay.
 - b. Location: DDC controller.
 - c. Transference: Fan starter relay.
 5. Action: Cycle tower fan(s) on and off to maintain [55 deg F (13 deg C)] <Insert value> temperature set point.
 6. Action: Cycle tower fan(s) on and off to maintain condenser-water supply temperature in straight-line relationship with outdoor-air temperature for the following conditions:
 - a. [85 deg F (29 deg C)] <Insert highest condenser-water temperature> condenser water when outdoor-air temperature is [80 deg F (26 deg C)] <Insert highest outdoor-air temperature>.
 - b. [55 deg F (13 deg C)] <Insert lowest condenser-water temperature> condenser water when outdoor-air temperature is [55 deg F (13 deg C)] <Insert lowest operating outdoor-air temperature>.
 7. Output:

- a. Device: DDC controller digital output.
 - b. Location: DDC controller.
 - c. Transference: Fan variable-speed controller.
 8. Action: Cycle tower fan(s) on and modulate fan speed from minimum to maximum to maintain [55 deg F (13 deg C)] <Insert value> temperature set point.
 9. Action: Cycle tower fan(s) on and off to maintain condenser-water supply temperature in straight-line relationship with outdoor-air temperature for the following conditions:
 - a. [85 deg F (29 deg C)] <Insert highest condenser-water temperature> condenser water when outdoor-air temperature is [80 deg F (26 deg C)] <Insert highest outdoor-air temperature>.
 - b. [55 deg F (13 deg C)] <Insert lowest condenser-water temperature> condenser water when outdoor-air temperature is [55 deg F (13 deg C)] <Insert lowest operating outdoor-air temperature>.
 10. Display:
 - a. Control-valve(s) position.
 - b. Cooling-tower fan(s) on-off indication (operating or not operating).
 - c. Cooling-tower fan(s) speed.
 - d. Condenser-water supply temperature.
 - e. Condenser-water supply temperature set point.
 - f. Condenser-water return temperature.
- M. Cooling-Tower Sump Heater:
1. Input:
 - a. Device: [Two-stage] thermostat.
 - b. Location: Cooling tower sump.
 - c. Transference: Heater relay and control-valve actuator.
 2. Output:
 - a. Device: Heater relay and control-valve actuator.
 - b. Location: Electric heater control panel and control-valve actuator in sump drain.
 - c. Transference: Electric heater contactor and control-valve actuator.
 3. Action:
 - a. Energize sump heater if sump temperature falls below [40 deg F (4.5 deg C)] <Insert value> temperature set point.
 - b. Open control valve in sump heater drain piping if sump temperature falls below [35 deg F (1.5 deg C)] <Insert value> temperature set point.
 4. Display:
 - a. Cooling-tower sump temperature.

- b. Cooling-tower sump heater on-off indication (operating or not operating).
- c. Cooling-tower control valve open-close indication.

N. Cooling-Tower Sump Heater:

1. Input:

- a. Device: **[Liquid temperature sensor] [or] [liquid temperature sensor with liquid temperature transmitter]**.
- b. Location: Cooling tower sump.
- c. Transference: DDC controller.

2. Output:

- a. Device: Binary output.
- b. Location: Electric heater control panel **[and solenoid valve in sump drain] [and control-valve actuator in sump drain]**.
- c. Transference: Electric heater contactor **[and solenoid valve] [and control-valve actuator]**.

3. Action:

- a. Energize sump heater if sump temperature falls below **<Insert value>** temperature set point.
- b. Open control valve in sump heater drain piping if sump temperature falls below **<Insert value>** temperature set point.

4. Display:

- a. Cooling-tower sump temperature.
- b. Cooling-tower sump heater on-off indication (operating or not operating).
- c. Cooling-tower control valve open-close indication.

O. Control Circulating Pump(s) Speed:

1. Input Device:

- a. Device: **[Liquid pressure differential transmitter] [Liquid flow meter] [Liquid flow sensor]**.
- b. Location: Chilled-water supply and return piping **[and condenser-water supply and return piping]** to chiller.
- c. Transference: DDC controller.

2. Output Device:

- a. Device: DDC controller.
- b. Location: Motor controller.
- c. Transference: Pump variable-speed controller.

3. Action:

- a. Control pump speed to maintain flow through chiller.
- b. Report pressure drop and flow.

P. Circulation through Chiller:

1. Input Device:

- a. Device: [**Liquid pressure differential transmitter**] [**Liquid flow meter**] [**Liquid flow sensor**].
- b. Location: Chilled-water supply and return piping[**and condenser-water supply and return piping**] to chiller.
- c. Transference: DDC controller.

2. Output Device:

- a. Device: DDC controller.

3. Action:

- a. Report pressure drop and flow through chiller.

Q. Indicate the following on the operator's workstation display terminal:

1. DDC system graphic.
2. DDC system status, on-off.
3. Low-level cooling-tower sump alarm.
4. Outdoor temperature.
5. Cooling (software) demand indication.
6. Time and time schedule.
7. Condenser-water pump(s) on-off status (enabled or disabled).
8. Condenser-water pump(s) on-off indication (operating or not operating).
9. Condenser-water flow indication.
10. Chilled-water pump(s) on-off status (enabled or disabled).
11. Chilled-water pump(s) on-off indication (operating or not operating).
12. Cooling-tower fan(s) on-off indication (operating or not operating).
13. Chilled-water flow indication.
14. Refrigeration machine on-off indication (operating or not operating).
15. Chilled-water supply temperature.
16. Chilled-water return temperature.
17. Chilled-water temperature control-point adjustment.
18. Chiller(s) on-off status (enabled or disabled).
19. Chiller(s) on-off indication (operating or not operating).
20. Chiller "failure-to-start" indication.
21. Expansion tank low-level alarm.
22. Condenser-water sump (return) control-point temperature.
23. Condenser-water sump (return) temperature.
24. Condenser-water control-valve position.
25. Cooling-tower fan(s) on-off indication (operating or not operating).
26. Condenser-water supply temperature.
27. Cooling-tower sump temperature.

28. Cooling-tower sump heater on-off indication (operating or not operating).
29. Cooling-tower sump drain indication.
30. Chiller(s) power input (instantaneous).
31. Chilled-water pressure drop through chiller.
32. Chilled-water flow through chiller.
33. Condenser-water pressure drop through chiller.
34. Condenser-water flow through chiller.
35. Chiller condenser-water supply and return temperature.
36. Chiller chilled-water supply and return temperature.
37. System capacity in tons.
38. **<Insert requirement>**.

1.7 AIR-HANDLING-UNIT CONTROL SEQUENCES

A. Air-Handling Unit Time Schedule:

1. Occupied Time Schedule:

a. Input:

- 1) Device: DDC controller.
- 2) Location: Time schedule.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: DDC controller.

c. Action:

- 1) Enable startup, initiation, and control.
- 2) Energize unit on occupied/unoccupied cycle.
- 3) Energize unit on day/night cycle.
- 4) Energize unit on duty cycle.
- 5) Energize return-air fans [**30 seconds**] **<Insert time>** after supply fans are energized.
- 6) Do not enable mixed-air control during morning warm-up period.
 - a) Unoccupied: Position outdoor-air[**and relief-air**] dampers closed and return-air dampers open.
- 7) Do not enable humidifier control during morning warm-up period.
- 8) Enable control of heating coil(s) during morning warm-up period.
- 9) Energize coil circulating pump(s).
- 10) Return heating control valves to normal position when unit is cycled on.
- 11) Do not enable cooling-coil control during morning warm-up period.

B. Start and Stop Supply Fan(s):

1. Enable:
 - a. Input:
 - 1) Device: Low limit temperature switch with [manual] [automatic] reset.
 - 2) Location: Upstream of cooling coil.
 - 3) Transference: Starter relay.
 - b. Output:
 - 1) Device: Hard wired to motor controller[and DDC controller].
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action:
 - 1) Allow start if temperature is above [37 deg F (3 deg C)] <Insert temperature>.
 - 2) Signal alarm if fan fails to start as commanded.
2. Enable:
 - a. Input:
 - 1) Device: Low limit temperature switch with [manual] [automatic] reset.
 - 2) Location: [Supply airstream] <Insert location>.
 - 3) Transference: Starter relay.
 - b. Output:
 - 1) Device: Hard wired to motor controller[and DDC controller].
 - 2) Location: Motor controller.
 - 3) Input Transference: Starter relay.
 - c. Action:
 - 1) Allow start if temperature is below [120 deg F (49 deg C)] <Insert temperature>.
 - 2) Signal alarm if fan fails to start as commanded.
3. Enable:
 - a. Input:
 - 1) Device: Smoke detector with auxiliary contact [manual] [automatic] reset.
 - 2) Location: Duct mounted [before] [and] [after] [supply fan] [air-handling unit].
 - 3) Location: Mounted in air-handling unit.

- 4) Transference: Starter relay.
 - b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Output Device: Hard wired through motor controller; DDC controller alarm.
 - d. Action:
 - 1) Allow start if airstream is free of products of combustion.
 - 2) Signal alarm if fan fails to start as commanded.
- C. Supply Fan(s) Variable-Volume Control:
1. Fan Speed Control:
 - a. Input:
 - 1) Device: Air pressure transmitter.
 - 2) Location: Supply-duct static pressure referenced to ambient-space static pressure.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Transference: Variable-frequency motor controller.
 - c. Action:
 - 1) Maintain constant supply-duct static-pressure set point of **<Insert value>**.
 - 2) Set-Point Reset (for Systems with DDC of Individual Zone Terminals): Reset static-pressure set point based on the zone requiring the most pressure; reset set point lower until one zone damper is nearly wide open.
 - 3) Set variable-frequency drive to minimum speed when fan is stopped.
 2. Fan Airflow:
 - a. Input:
 - 1) Device: Airflow **[sensor] [transmitter]**.
 - 2) Location: Supply duct.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: DDC controller.

- c. Action: Report supply-duct airflow.
 - 3. High Pressure:
 - a. Input:
 - 1) Device: Air pressure switch.
 - 2) Location: Supply duct referenced to outside the duct.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Binary output; DDC controller.
 - 2) Transference: Starter relay; operator's workstation.
 - c. Action: When static pressure rises above excessive-static-pressure set point of **<Insert value>**:
 - 1) Stop fan.
 - 2) Signal alarm.
- D. Return Fan(s) Variable-Volume Control:
 - 1. Fan Speed Control:
 - a. Input:
 - 1) Device: Airflow [**sensor**] [**transmitter**].
 - 2) Location: Supply airstream and return airstream.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Variable-frequency drive.
 - 3) Transference: Variable-frequency drive controller.
 - c. Action:
 - 1) Maintain constant airflow offset between supply- and return-air fans.
 - 2) Set variable-frequency drive to minimum speed when fan is stopped.
 - 2. Fan Speed Control:
 - a. Input:
 - 1) Device: Air pressure [**sensor**] [**differential transmitter**].
 - 2) Location: Indoor space static pressure referenced to outdoor static pressure.
 - 3) Transference: DDC controller.

- b. Output:
 - 1) Device: Analog output.
 - 2) Transference: Variable-frequency motor controller.
- c. Action:
 - 1) Maintain constant indoor static-pressure set point of [0.02-inch wg (5 Pa)] <Insert value> positive for outdoors.
 - 2) Set variable-frequency drive to minimum speed when fan is stopped.
- d. Action: Maintain constant indoor static pressure.

E. Preheat Coil:

- 1. Freeze Protection:
 - a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter] [Thermostat].**
 - 2) Location: After preheat coil.
 - 3) Transference: **[DDC controller] [Starter relay].**
 - b. Output:
 - 1) Device: **[Binary output] [Hard wired].**
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action: Allow start if duct temperature is above [33 deg F (1 deg C)] <Insert temperature>.
- 2. Low-Temperature Operation:
 - a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter] <Insert device>.**
 - 2) Location: Outdoor air.
 - 3) Transference: DDC controller.
 - b. Output Device:
 - 1) Device: Binary output.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action:

- 1) Energize coil circulating pump(s) at outdoor-air temperatures below **[35 deg F (2 deg C)] <Insert temperature>**.
3. **[Supply] [Discharge]-Air Temperature:**
 - a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter]**.
 - 2) Location: **[Supply] [Discharge]** airstream.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Control valve.
 - 3) Transference: Control-valve actuator.
 - c. Action: Maintain air-temperature set point of **[55 deg F (13 deg C)] <Insert temperature>**.
- F. Mixed-Air Control:
1. Minimum Position:
 - a. Input:
 - 1) Device: DDC controller.
 - 2) Location: Time schedule.
 - 3) Transference: DDC controller.
 - b. Input:
 - 1) Device: Flow measuring station.
 - 2) Location: Outdoor-air intake.
 - 3) Transference: DDC controller.
 - c. Output:
 - 1) Device: Analog output.
 - 2) Location: Outdoor damper.
 - 3) Transference: Damper actuator(s).
 - d. Action:
 - 1) Open **[minimum outdoor-air dampers] [outdoor-air dampers to minimum position]**.
 - 2) Modulate outdoor-air dampers to maintain minimum airflow at set point of **<Insert value>**.
 2. Heating Reset:

- a. Input:
 - 1) Device: DDC controller.
 - 2) Location: Software.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Outdoor dampers.
 - 3) Transference: Damper actuator(s).
 - c. Action: **[Close minimum outdoor-air dampers] [Set outdoor-air dampers to minimum position].**
3. Carbon Dioxide Reset:
- a. Input:
 - 1) Device: Carbon dioxide transmitter.
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Dampers.
 - 3) Transference: Damper actuator(s).
 - c. Action: Reset minimum outdoor-air damper position to maintain carbon dioxide set point of **<Insert value>**.
4. **[Supply] [Mixed]-Air Temperature:**
- a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter].**
 - 2) Location: **[Supply-airstream] [Mixed-air plenum] <Insert location>**.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Damper section.
 - 3) Transference: Damper actuator(s).
 - c. Action:

- 1) Modulate outdoor-, return-, and relief-air dampers to maintain air-temperature set point of [55 deg F (13 deg C)] **<Insert temperature>**.
 - 2) Do not enable control during morning warm-up period.
5. Cooling Reset:
- a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter] [and moisture sensors and transmitters]**.
 - 2) Location: Outdoor- and return-air ducts.
 - 3) Input Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Outdoor- and return-air ducts.
 - 3) Transference: Damper actuator(s).
 - c. Action: Set outdoor-air dampers to minimum position when outdoor-air **[temperature exceeds return-air temperature] [enthalpy exceeds return-air enthalpy]**.

G. Humidifier:

1. Input:
 - a. Device: Moisture sensor and transmitter.
 - b. Location: **[Return airstream] [Supply airstream] [Space] <Insert location>**.
 - c. Transference: DDC controller.
2. Output:
 - a. Device: Analog output.
 - b. Location: Humidifier.
 - c. Transference: **[Valve actuator] [and] [pump]**.
3. Action:
 - a. **[Modulate humidity control valve] [Cycle humidifier pump] [Cycle humidifier pump and modulate humidity control valve]**.
 - b. Maintain humidity in straight-line relationship for the following conditions:
 - 1) 20 percent when outdoor-air temperature is [minus 30 deg F (minus 35 deg C)] **<Insert temperature>**.
 - 2) 40 percent when outdoor-air temperature is [75 deg F (24 deg C)] **<Insert temperature>**.

H. Evaporative Cooler:

1. Temperature:

a. Input:

- 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter]**.
- 2) Location: **[Supply] [Discharge]** airstream.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Evaporative cooler.
- 3) Transference: **[Valve actuator] [and] [pump]**.

c. Action:

- 1) **[Modulate evaporative cooler control valve] [and] [cycle evaporative cooler pump]**.
- 2) Maintain air-temperature set point of **[55 deg F (13 deg C)] <Insert temperature>**.

2. Humidity Limit:

a. Input:

- 1) Device: Moisture sensor and transmitter.
- 2) Location: **[Return airstream] [Supply airstream] [Space] <Insert location>**.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Evaporative cooler.
- 3) Transference: **[Valve actuator] [and] [pump]**.

c. Action:

- 1) Return **[humidity control valve] [humidifier pump] [humidifier pump and humidity control valve]** to their normal position.
- 2) Signal high humidity alarm.

I. Filters:

1. Differential Pressure:

a. Input:

- 1) Device: Pressure differential [**switch**] [**transmitter**].
- 2) Location: Filter bank.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: DDC controller.
- 2) Location: DDC controller.
- 3) Transference: Operator's workstation.

c. Action: Signal alarm on [**low- and**]high-pressure conditions.

J. [**Hydronic**] [**Steam**] Heating Coil:

1. [**Supply**] [**Discharge**]-Air Temperature:

a. Input:

- 1) Device: [**Air-temperature sensor**] [**or**] [**air-temperature sensor with air-temperature RTD transmitter**].
- 2) Location: [**Supply**] [**Discharge**]-air [**duct**] <Insert location>.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Heating-coil control valve.
- 3) Input Transference: Normally [**open**] [**closed**] valve actuator.

c. Action:

- 1) Maintain supply-air-temperature set point of [**55 deg F (13 deg C)**] <Insert temperature> by modulating heating-coil control valve.
- 2) Maintain supply-air-temperature set point in straight-line relationship for the following conditions:
 - a) [**65 deg F (18 deg C)**] <Insert temperature> when return-air temperature is [**70 deg F (21 deg C)**] <Insert temperature>.
 - b) [**55 deg F (13 deg C)**] <Insert temperature> when return-air temperature is [**75 deg F (24 deg C)**] <Insert temperature>.
- 3) Maintain supply-air-temperature set point within limits in response to space temperature reset:
 - a) Minimum [**55 deg F (13 deg C)**] <Insert temperature>.
 - b) Maximum [**131 deg F (55 deg C)**] <Insert temperature>.
- 4) During morning warm-up period, maintain supply-air-temperature set point of [**80 deg F (27 deg C)**] <Insert temperature>.

2. Space Temperature Reset:

- a. Input:
 - 1) Device: Space **[air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter]**.
 - 2) Location: Indoor spaces served by system.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Heating-coil control valve.
 - 3) Input Transference: Normally **[open] [closed]** valve actuator.
 - c. Action:
 - 1) Reset supply-air temperature in response to greatest heating demand.
 - 2) Supply-Air-Temperature Reset: Reset the supply-air temperature to outdoor temperature at least 25 percent of the difference between the design supply-air temperature and the design room air temperature.
3. Low-Temperature Operation:
- a. Input Device:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter] <Insert device>**.
 - 2) Location: Outdoor air.
 - 3) Transference: DDC controller.
 - b. Output Device:
 - 1) Device: Binary output.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action:
 - 1) Energize coil circulating pump(s) at outdoor-air temperatures below **[35 deg F (2 deg C)] <Insert temperature>**.

K. Hydronic Cooling Coil:

1. **[Supply] [Discharge]-Air Temperature:**
 - a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [transmitter]**.
 - 2) Location: **[Supply] [Discharge]-air [duct] <Insert location>**.
 - 3) Transference: DDC controller.

- b. Output:
 - 1) Device: Analog output.
 - 2) Location: Cooling-coil valve.
 - 3) Input Transference: Valve actuator.
- c. Action:
 - 1) Maintain supply-air-temperature set point of [55 deg F (13 deg C)] **<Insert temperature>** by modulating cooling-coil control valve.
 - 2) Maintain supply-air-temperature set point within limits in response to space temperature reset:
 - a) Minimum [55 deg F (13 deg C)] **<Insert temperature>**.
 - b) Maximum [68 deg F (20 deg C)] **<Insert temperature>**.
 - 3) Supply-Air-Temperature Reset: Reset the supply-air temperature to outdoor temperature at least 25 percent of the difference between the design supply-air temperature and the design room air temperature.

2. Temperature Reset:

- a. Input:
 - 1) Device: [Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter].
 - 2) Location: Return-air [duct] **<Insert location>**.
 - 3) Transference: DDC controller.
- b. Output:
 - 1) Device: Analog output.
 - 2) Location: Cooling-coil control valve.
 - 3) Transference: Valve actuator.
- c. Action: Reset supply-air temperature in straight-line relationship for the following conditions:
 - 1) [65 deg F (18 deg C)] **<Insert temperature>** when return-air temperature is [70 deg F (21 deg C)] **<Insert temperature>**.
 - 2) [55 deg F (13 deg C)] **<Insert temperature>** when return-air temperature is [75 deg F (24 deg C)] **<Insert temperature>**.
- d. Action:
 - 1) Reset supply-air temperature in response to greatest cooling demand.
 - 2) Supply-Air-Temperature Reset: Reset the supply-air temperature to outdoor temperature at least 25 percent of the difference between the design supply-air temperature and the design room air

temperature.

3. Space Temperature Reset:

a. Input:

- 1) Device: Space [air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter].
- 2) Location: Spaces served by system.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Cooling coil.
- 3) Input Transference: Valve actuator.

c. Action:

- 1) Reset supply-air temperature in response to greatest cooling demand.
- 2) Supply-Air-Temperature Reset: Reset the supply-air temperature to outdoor temperature at least 25 percent of the difference between the design supply-air temperature and the design room air temperature.

4. Space Humidity Reset:

a. Input:

- 1) Device: Humidity sensor and transmitter.
- 2) Location: Return-air [duct] <Insert location>.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Cooling-coil control valve.
- 3) Transference: Valve actuator.

- c. Action: Reset supply-air temperature to [55 deg F (13 deg C)] <Insert temperature> to maintain space relative humidity of [45] <Insert number> percent.

L. Multizone Damper Control:

1. Spaces Temperature:

a. Input Device:

- 1) Device: **[Air-temperature sensors] [or] [air-temperature sensor with air-temperature RTD transmitter].**
 - 2) Location: Spaces served by system.
 - 3) Transference: DDC controller.
- b. Output:
- 1) Device: Analog output.
 - 2) Location: Multizone head.
 - 3) Transference: Damper actuators.
- c. Action: Maintain the following space temperature set points:
- 1) Occupied Cooling Temperature: **[75 deg F (24 deg C)] <Insert temperature>.**
 - 2) Occupied Heating Temperature: **[70 deg F (24 deg C)] <Insert temperature>.**
 - 3) Unoccupied Cooling Temperature: **[85 deg F (24 deg C)] <Insert temperature>.**
 - 4) Unoccupied Heating Temperature: **[65 deg F (18 deg C)] <Insert temperature>.**
- M. Coordination of Air-Handling Unit Sequences: Ensure that preheat, mixed-air, heating-coil, and cooling-coil controls have common inputs and do not overlap in function.
- N. Indicate the following on the operator's workstation display terminal:
1. DDC system graphic.
 2. DDC system on-off indication (operating or not operating).
 3. DDC system occupied/unoccupied mode.
 4. Outdoor-air-temperature indication.
 5. Supply-fan on-off indication (operating or not operating).
 6. Supply duct static-pressure indication.
 7. Supply duct static-pressure set point.
 8. Supply-fan airflow rate.
 9. Supply-fan speed.
 10. Return-fan on-off indication (operating or not operating).
 11. Space static-pressure indication.
 12. Space static-pressure set point.
 13. Return-fan airflow rate.
 14. Return-fan speed.
 15. Preheat-coil air-temperature indication.
 16. Preheat-coil air-temperature set point.
 17. Preheat-coil pump on-off indication (operating or not operating).
 18. Preheat-coil control-valve position.
 19. Mixed-air-temperature indication.
 20. Mixed-air-temperature set point.
 21. Mixed-air damper position.
 22. Relative humidity indication.

23. Relative humidity set point.
24. Relative humidity control-valve position.
25. Filter air-pressure-drop indication.
26. Filter low-air-pressure drop set point.
27. Filter high-air-pressure drop set point.
28. **[Supply] [Discharge]**-air-temperature indication.
29. **[Supply] [Discharge]**-air-temperature set point.
30. Heating-coil leaving-air-temperature indication.
31. Heating-coil leaving-air-temperature set point.
32. Heating-coil pump on-off indication (operating or not operating).
33. Heating-coil control-valve position.
34. Hot-deck air-temperature indication.
35. Hot-deck air-temperature set point.
36. Cooling-coil leaving-air-temperature indication.
37. Cooling-coil leaving-air-temperature set point.
38. Cooling-coil control-valve position.
39. Cold-deck air-temperature indication.
40. Cold-deck air-temperature set point.
41. Space temperature indication.
42. Space temperature set point.
43. Multizone damper position.

1.8 TERMINAL UNIT OPERATING SEQUENCE

A. Cabinet Unit Heater, **[Hydronic] [Steam]**:

1. Space Temperature:
 - a. Input:
 - 1) Device: Line-voltage thermostat.
 - 2) Location: Space.
 - b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action: Cycle fan to maintain **[75 deg F (24 deg C)] <Insert value>** space temperature.
2. Space Temperature:
 - a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter]**.
 - 2) Location: Occupied space.

- 3) Transference: DDC controller.
 - b. Output Device:
 - 1) Device: Binary output.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Output Device:
 - 1) Device: Analog output.
 - 2) Location: Control valve.
 - 3) Transference: Control-valve actuator.
 - d. Action: [**Cycle fan**] [**Modulate valve**] to maintain [75 deg F (24 deg C)] <Insert value> space temperature.
3. Low-Temperature Safety:
- a. Input Device: Line-voltage, on-off thermostat; mounted.
 - 1) Device: Line-voltage thermostat.
 - 2) Location: [**Return heating-water**] [**Condensate**] pipe.
 - b. Output Device:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Input Transference: Starter relay.
 - c. Action: Stop fan when [**return heating-water**] [**condensate**] temperature falls below [35 deg F (2 deg C)] <Insert temperature>.
- B. Cabinet Unit Heater, Electric:
1. Input:
 - a. Device: Line-voltage thermostat.
 - b. Location: Occupied space.
 2. Output:
 - a. Device: Hard wired.
 - b. Location: Motor-controller and heater relay.
 - c. Transference: Starter relay.
 3. Action: Cycle fan to maintain [75 deg F (24 deg C)] <Insert value> space temperature.
- C. Unit Heater, [**Hydronic**] [**Steam**]:

1. Space Temperature:
 - a. Input:
 - 1) Device: Line-voltage thermostat.
 - 2) Location: Space.
 - b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action: Cycle fan to maintain [75 deg F (24 deg C)] <Insert value> space temperature.
2. Space Temperature:
 - a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter]**.
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - b. Output Device:
 - 1) Device: Binary output.
 - 2) Transference: Starter relay.
 - c. Output Device:
 - 1) Device: Analog output.
 - 2) Location: Control valve.
 - 3) Transference: Control-valve actuator.
 - d. Action: **[Cycle fan] [Modulate valve]** to maintain [75 deg F (24 deg C)] <Insert value> space temperature.
3. Low-Temperature Safety:
 - a. Input Device: Line-voltage, on-off thermostat; pipe mounted.
 - 1) Device: Line-voltage thermostat.
 - 2) Location: **[Return heating-water] [Condensate]** pipe.
 - b. Output Device:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Input Transference: Starter relay.

- c. Action: Stop fan when **[return heating-water] [condensate]** temperature falls below **[35 deg F (2 deg C)] <Insert temperature>**.
 - D. Unit Heater, Electric: Space thermostat cycles fan and sequences stages of heating.
 1. Space Temperature:
 - a. Input:
 - 1) Device: Electric multistage thermostat.
 - 2) Location: Space.
 - b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Unit control panel.
 - 3) Transference: Electric multistage contactors.
 - c. Action: Sequence electric coil stages to maintain **[75 deg F (24 deg C)] <Insert value>** space temperature.
 - E. Combustion-Air Unit Heaters:
 1. Space Temperature:
 - a. Input:
 - 1) Device: Thermostat.
 - 2) Location: Space.
 - b. Output:
 - 1) Device: Low-voltage wiring.
 - 2) Location: Control valve.
 - 3) Transference: Valve actuator.
 - c. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter]**.
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - d. Output:
 - 1) Device: Analog output.
 - 2) Location: Control valve.
 - 3) Transference: Valve actuator.
 - e. Action: Modulate valve to maintain **[75 deg F (24 deg C)] <Insert value>** space temperature.

F. Radiant Heating Cable, Electric:

1. Space Temperature:

a. Input:

- 1) Device: Electric thermostat.
- 2) Location: Space.

b. Output:

- 1) Device: Line-voltage wiring.
- 2) Location: Junction box.
- 3) Transference: Cable.

- c. Action: Cycle power to maintain [75 deg F (24 deg C)] <Insert value> space temperature set point.

G. Radiant Heating Panel, Electric:

1. Space Temperature:

a. Input:

- 1) Device: Electronic thermostat.
- 2) Location: Space.

b. Output:

- 1) Device: Low-voltage wiring.
- 2) Location: Junction box.
- 3) Transference: Line-voltage relay.

- c. Action: Cycle power to maintain the following space temperature set points:

- 1) Occupied: [75 deg F (24 deg C)] <Insert temperature>.
- 2) Unoccupied: [65 deg F (18 deg C)] <Insert temperature>.

d. Radiant Heating Panel, Hydronic:

2. Space Temperature:

a. Input:

- 1) Device: Electronic thermostat.
- 2) Location: Space.

b. Output:

- 1) Device: Low-voltage wiring.
- 2) Location: Control valve.

- 3) Transference: Valve actuator.
 - c. Action: Cycle valve open and closed to maintain temperature set point.
 - d. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter].**
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - e. Output:
 - 1) Device: DDC analog output.
 - 2) Location: Control valve.
 - 3) Transference: Valve actuator.
 - f. Action: Modulate valve to maintain the following space temperature set points:
 - 1) Occupied: [75 deg F (24 deg C)] **<Insert temperature>.**
 - 2) Unoccupied: [65 deg F (18 deg C)] **<Insert temperature>.**
- H. Two-Pipe, Single-Coil, Fan-Coil Unit:
1. Manual Start:
 - a. Input:
 - 1) Device: Fan switch.
 - 2) Location: Integral to thermostat.
 - b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action: Start and stop fan.
 2. Space Temperature:
 - a. Input:
 - 1) Device: Electronic thermostat.
 - 2) Location: Space.
 - b. Output:
 - 1) Device: Low-voltage wiring.
 - 2) Location: Control valve.
 - 3) Transference: Valve.

- c. Action: Modulate valve to maintain the following space temperature set points:
 - 1) Occupied Cooling Temperature: [75 deg F (24 deg C)] <Insert temperature>.
 - 2) Occupied Heating Temperature: [70 deg F (24 deg C)] <Insert temperature>.
 - 3) Unoccupied Cooling Temperature: [85 deg F (24 deg C)] <Insert temperature>.
 - 4) Unoccupied Heating Temperature: [65 deg F (18 deg C)] <Insert temperature>.
3. Occupied Time Schedule:
 - a. Input:
 - 1) Device: DDC controller.
 - 2) Location: Time schedule.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Binary output.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action: Start and stop fan.
4. Space Temperature:
 - a. Input:
 - 1) Device: Air-temperature sensor.
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Control valve.
 - 3) Transference: Valve actuator.
 - c. Action: Modulate valve to maintain the following space temperature set points:
 - 1) Occupied: [75 deg F (24 deg C)] <Insert temperature>.
 - 2) Unoccupied: [65 deg F (18 deg C)] <Insert temperature>.
 - d. System Changeover:
 - e. Input:

- 1) Device: Liquid temperature sensor **[or] [liquid temperature sensor with liquid transmitter]**.
 - 2) Location: Supply-water piping.
 - 3) Transference: DDC controller.
 - f. Output:
 - 1) Device: Binary output.
 - 2) Location: Control valve.
 - 3) Transference: Valve actuator.
 - g. Action: Reverse control-valve action to switch from heating to cooling.
- I. Four-Pipe, Hydronic Fan-Coil Unit:
 1. Occupied Time Schedule:
 - a. Input:
 - 1) Device: DDC controller.
 - 2) Location: Time schedule.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Binary output.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay.
 - c. Action: Start and stop fan, and enable control.
 2. Space Temperature:
 - a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter]**.
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Control valve.
 - 3) Transference: Valve actuators.
 - c. Action: Modulate control valves to maintain the following space temperature set points:
 - 1) Occupied Cooling Temperature: **[75 deg F (24 deg C)] <Insert temperature>**.

- 2) Occupied Heating Temperature: [70 deg F (24 deg C)] **<Insert temperature>**.
- 3) Unoccupied Cooling Temperature: [85 deg F (24 deg C)] **<Insert temperature>**.
- 4) Unoccupied Heating Temperature: [65 deg F (18 deg C)] **<Insert temperature>**.

J. Unit Ventilator:

1. Occupied Time Schedule:

a. Input:

- 1) Device: DDC controller.
- 2) Location: Time schedule.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Binary output.
- 2) Location: Fan motor controller and damper.
- 3) Transference: Starter relay and damper actuators.

- c. Action: Start and stop fan, move outdoor- and return-air dampers to **[minimum] [maximum]** outdoor-air position, and enable control.

2. Space Temperature - Valves:

a. Input:

- 1) Device: **[Air-temperature sensor] [or] [transmitter]**.
- 2) Location: Space.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Control valve.
- 3) Transference: Valve actuator.

- c. Action: Modulate heating-water control valve and chilled-water control valve in sequence to maintain the following space temperature set points:

- 1) Occupied Cooling Temperature: [75 deg F (24 deg C)] **<Insert temperature>**.
- 2) Occupied Heating Temperature: [70 deg F (24 deg C)] **<Insert temperature>**.
- 3) Unoccupied Cooling Temperature: [85 deg F (24 deg C)] **<Insert temperature>**.
- 4) Unoccupied Heating Temperature: [65 deg F (18 deg C)] **<Insert temperature>**.

3. Space Temperature - Dampers:
 - a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature RTD transmitter]**.
 - 2) Location: Mixed-air plenum.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Dampers.
 - 3) Transference: Damper actuators.
 - c. Action: Modulate outdoor- and return-air dampers to maintain the following space temperature set points:
 - 1) Occupied Cooling Temperature: **[75 deg F (24 deg C)] <Insert temperature>**.
 - 2) Occupied Heating Temperature: **[70 deg F (24 deg C)] <Insert temperature>**.
 - 3) Unoccupied Cooling Temperature: **[85 deg F (24 deg C)] <Insert temperature>**.
 - 4) Unoccupied Heating Temperature: **[65 deg F (18 deg C)] <Insert temperature>**.
4. Supply-Air-Temperature Limit:
 - a. Input:
 - 1) Device: **[Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter]**.
 - 2) Location: Discharge air.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Control valve and dampers.
 - 3) Transference: Valve and damper actuators.
 - c. Action: Override space temperature set point to control valves and dampers to prevent discharge air from dropping below a minimum set point of **<Insert value>**.
5. Warm-up Cycle:
 - a. Input:
 - 1) Device: DDC controller.

- 2) Location: Time schedule.
- 3) Input Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Control valve and damper.
- 3) Transference: Valve and damper actuators.

- c. Action: Open heating-water control valve, close outdoor-air damper, and open return-air damper.

K. Heating Coils, [**Hydronic**] [**Steam**]:

1. Space Temperature:

a. Input:

- 1) Device: [**Air-temperature sensor**] [or] [**air-temperature sensor with air-temperature RTD transmitter**].
- 2) Location: Space.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Control valve.
- 3) Transference: Valve actuator.

- c. Action: Modulate valve to maintain the following space temperature set points:

- 1) Occupied Cooling Temperature: [75 deg F (24 deg C)] <Insert temperature>.
- 2) Occupied Heating Temperature: [70 deg F (24 deg C)] <Insert temperature>.
- 3) Unoccupied Cooling Temperature: [85 deg F (24 deg C)] <Insert temperature>.
- 4) Unoccupied Heating Temperature: [65 deg F (18 deg C)] <Insert temperature>.

L. Heating Coils, Electric:

1. Space Temperature:

a. Input:

- 1) Device: Electric thermostat.
- 2) Location: Space.
- 3) Transference: Low-voltage control.

- b. Output:
 - 1) Device: Pilot relays.
 - 2) Location: Heating-coil electrical cabinet.
 - 3) Transference: Line-voltage relays.
- c. Action: Sequence stages of heating to maintain [75 deg F (24 deg C)] <Insert value> space temperature.

M. Radiators and Convectors, [**Hydronic**] [**Steam**]:

- 1. Occupancy:
 - a. Input:
 - 1) Device: Occupancy sensor.
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: DDC controller.
 - c. Action: Report occupancy and enable occupied temperature set point.
- 2. Space Temperature:
 - a. Input:
 - 1) Device: [**Air-temperature sensor**] [**or**] [**air-temperature sensor with air-temperature RTD transmitter**].
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Control valve.
 - 3) Transference: Valve actuator.
 - c. Action: Modulate valve to maintain [75 deg F (24 deg C)] <Insert value> space temperature set point.
 - 1) Occupied Temperature: [75 deg F (24 deg C)] <Insert temperature>.
 - 2) Unoccupied Temperature: [65 deg F (18 deg C)] <Insert temperature>.

N. Radiators and Convectors, Electric:

- 1. Space Temperature:

- a. Input:
 - 1) Device: Electric thermostat.
 - 2) Location: Space.
 - 3) Transference: Low-voltage control.
 - b. Output:
 - 1) Device: Pilot relays.
 - 2) Location: Radiator electrical cabinet.
 - 3) Transference: Line-voltage relays.
 - c. Action: Sequence stages of heating to maintain [75 deg F (24 deg C)] <Insert value> space temperature set point.
- O. Constant-Volume, Terminal Air Units, [Hydronic] [Steam]:
1. Occupancy:
 - a. Input:
 - 1) Device: Occupancy sensor.
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: DDC controller.
 - c. Action: Report occupancy and enable occupied temperature set point.
 2. Space Temperature:
 - a. Input:
 - 1) Device: [Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter].
 - 2) Location: Space.
 - 3) Transference: DDC controller.
 - b. Output:
 - 1) Device: Analog output.
 - 2) Location: Control valve.
 - 3) Transference: Valve actuator.
 - c. Action: Modulate valve to maintain the following space temperature set points:
 - 1) Occupied Cooling Temperature: [75 deg F (24 deg C)] <Insert temperature>.

- 2) Occupied Heating Temperature: [70 deg F (24 deg C)] **<Insert temperature>**.
- 3) Unoccupied Cooling Temperature: [85 deg F (24 deg C)] **<Insert temperature>**.
- 4) Unoccupied Heating Temperature: [65 deg F (18 deg C)] **<Insert temperature>**.

P. Variable-Air-Volume Terminal Air Units with [Hydronic] [Steam] Coils:

1. Occupancy:

a. Input:

- 1) Device: Occupancy sensor.
- 2) Location: Space.
- 3) Transference: DDC controller.

b. Device: DDC controller.

c. Action: Report occupancy and enable occupied temperature set point.

- 1) Occupied Cooling Temperature: [75 deg F (24 deg C)] **<Insert temperature>**.
- 2) Occupied Heating Temperature: [70 deg F (24 deg C)] **<Insert temperature>**.
- 3) Unoccupied Cooling Temperature: [85 deg F (24 deg C)] **<Insert temperature>**.
- 4) Unoccupied Heating Temperature: [65 deg F (18 deg C)] **<Insert temperature>**.

2. Space Temperature:

a. Input:

- 1) Device: [Air-temperature sensor] [or] [transmitter].
- 2) Location: Space.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Control damper and valve actuators.
- 3) Input Transference: Control damper and valves.

c. Action: Modulate damper and valve to maintain the following space temperature set points:

- 1) Occupied Cooling Temperature: [75 deg F (24 deg C)] **<Insert temperature>**.
- 2) Occupied Heating Temperature: [70 deg F (24 deg C)] **<Insert temperature>**.

- 3) Unoccupied Cooling Temperature: [85 deg F (24 deg C)] <Insert temperature>.
- 4) Unoccupied Heating Temperature: [65 deg F (18 deg C)] <Insert temperature>.
- 5) Modulate damper actuator from full open to minimum position.
- 6) When damper is at minimum position, modulate reheat coil valve from closed to open.
- 7) If occupied space temperature is not maintained with valve open, modulate damper actuator from minimum position to [100] <Insert number> percent open.
- 8) Reverse the sequence for full heating to full cooling.

Q. Dual-Duct, Variable-Air-Volume Terminal Air Units:

1. Occupancy:

a. Input:

- 1) Device: Occupancy sensor.
- 2) Location: Space.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: DDC controller.

c. Action: Report occupancy and enable occupied temperature set point.

- 1) Occupied Temperature: [75 deg F (24 deg C)] <Insert temperature>.
- 2) Unoccupied Temperature: [65 deg F (18 deg C)] <Insert temperature>.

2. Space Temperature:

a. Input:

- 1) Device: [Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter].
- 2) Location: Space.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Damper actuator(s).
- 3) Transference: Dampers.

c. Action: Modulate dampers to maintain the following space temperature set points:

- 1) Occupied Cooling Temperature: [75 deg F (24 deg C)] <Insert temperature>.
- 2) Occupied Heating Temperature: [70 deg F (24 deg C)] <Insert temperature>.
- 3) Unoccupied Cooling Temperature: [85 deg F (24 deg C)] <Insert temperature>.
- 4) Unoccupied Heating Temperature: [65 deg F (18 deg C)] <Insert temperature>.
- 5) When occupied space temperature is below set point, close cold-deck damper to minimum position and open hot-deck damper.
- 6) When occupied space temperature is above set point, close hot-deck damper to minimum position and open cold-deck damper.

R. Sequence Control:

1. Space Temperature:

a. Input:

- 1) Device: [Air-temperature sensor] [or] [air-temperature sensor with air-temperature RTD transmitter].
- 2) Location: Space.
- 3) Transference: DDC controller.

b. Output:

- 1) Device: Analog output.
- 2) Location: Control damper and valve actuators.
- 3) Input Transference: Control dampers and valves.

c. Action: Modulate valves and dampers to maintain the following space temperature set points:

- 1) Occupied Cooling Temperature: [75 deg F (24 deg C)] <Insert temperature>.
- 2) Occupied Heating Temperature: [70 deg F (24 deg C)] <Insert temperature>.
- 3) Unoccupied Cooling Temperature: [85 deg F (24 deg C)] <Insert temperature>.
- 4) Unoccupied Heating Temperature: [65 deg F (18 deg C)] <Insert temperature>.
- 5) Modulate damper actuator from open to minimum position.
- 6) When damper is at minimum position, modulate finned-tube radiation valve from closed to fully open.
- 7) When finned-tube radiation valve is fully open, modulate reheat coil valve from closed to fully open.
- 8) If occupied space temperature is not maintained with both valves open, modulate damper actuator from minimum position to [100] <Insert number> percent open.
- 9) Reverse the sequence for full heating to full cooling.

S. Indicate the following on the operator's workstation display terminal:

1. DDC system graphic.
2. DDC system on-off indication (operating or not operating).
3. DDC system occupied/unoccupied mode.
4. Outdoor-air-temperature indication.
5. Cabinet Unit Heater, Hydronic:
 - a. Space temperature indication.
 - b. Space temperature set point.
 - c. Fan on.
6. Unit Heater, Hydronic:
 - a. Space temperature indication.
 - b. Space temperature set point.
 - c. Fan on.
7. Combustion-Air Unit Heaters:
 - a. Space temperature indication.
 - b. Space temperature set point.
 - c. Control-valve position.
8. Radiant Heating Panel, Hydronic:
 - a. Space temperature indication.
 - b. Space temperature set point.
 - c. Control-valve position.
9. Two-Pipe, Single-Coil, Fan-Coil Unit:
 - a. Space temperature indication.
 - b. Space temperature set point.
 - c. Control-valve position.
 - d. Supply-water temperature indication.
10. Four-Pipe, Hydronic Fan-Coil Unit:
 - a. Space temperature indication.
 - b. Space temperature set point.
 - c. Control-valve position.
11. Unit Ventilator:
 - a. DDC system on-off indication (operating or not operating).
 - b. Space temperature indication.
 - c. Space temperature set point.
 - d. Control-valve position.
 - e. Damper position.

12. Heating Coils, Hydronic:
 - a. Space temperature indication.
 - b. Space temperature set point.
 - c. Control-valve position.

13. Radiators and Convectors, Hydronic:
 - a. Space/area served.
 - b. Space temperature indication.
 - c. Space temperature set point.
 - d. Space temperature set point, occupied.
 - e. Space temperature set point, occupied standby.
 - f. Space temperature set point, unoccupied.
 - g. Control-valve position as percentage open.

14. Constant-Volume, Terminal Air Units, Hydronic:
 - a. Space/area served.
 - b. Space occupied/unoccupied.
 - c. Space temperature indication.
 - d. Space temperature set point, occupied.
 - e. Space temperature set point, unoccupied.
 - f. Control-valve position as percentage open.

15. Variable-Air-Volume Terminal Air Units with Hydronic Coils:
 - a. Space/area served.
 - b. Space occupied/unoccupied.
 - c. Space temperature indication.
 - d. Space temperature set point.
 - e. Space cooling and heating temperature set point, occupied.
 - f. Space cooling and heating temperature set point, unoccupied.
 - g. Air-damper position as percentage open.
 - h. Control-valve position as percentage open.

16. Dual-Duct, Variable-Air-Volume Terminal Air Units:
 - a. Space/area served.
 - b. Space occupied/unoccupied.
 - c. Occupied space temperature indication.
 - d. Occupied space temperature set point, occupied.
 - e. Occupied space temperature set point, unoccupied.
 - f. Hot-deck damper position as percentage open.
 - g. Cold-deck damper position as percentage open.

17. Sequence Control:
 - a. Space/area served.
 - b. Space occupied/unoccupied.

- c. Space temperature indication.
- d. Space temperature set point, occupied.
- e. Space temperature set point, unoccupied.
- f. Damper position as percentage open.
- g. Control-valve positions as percentage open.

1.9 VENTILATION SEQUENCES

A. Combustion-Air, Makeup Unit Control, Electric:

1. Initiation:

a. Input:

- 1) Device: Auxiliary contact.
- 2) Location: Served appliance.

b. Output:

- 1) Device: Hard wired.
- 2) Location: Served appliance.
- 3) Transference: Starter relay and electric solenoid.

c. Action: Start fan when appliance burner starts.

2. Space Temperature:

a. Input:

- 1) Device: Electronic multistage thermostat.
- 2) Location: Space.

b. Output:

- 1) Device: Hard wired.
- 2) Location: Unit control panel.
- 3) Transference: Electric multistage contactors.

c. Action: Sequence electric coil stages to maintain [75 deg F (24 deg C)] <Insert value> space temperature.

B. Combustion-Air, Makeup Unit Control, [Hydronic] [Steam]:

1. Initiation:

a. Input:

- 1) Device: Auxiliary contact.
- 2) Location: Served appliance.

- b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Motor controller.
 - 3) Transference: Starter relay and electric solenoid.
 - c. Action: Start fan when appliance burner starts.
2. Space Temperature:
- a. Input:
 - 1) Device: Electronic thermostat.
 - 2) Location: Space.
 - b. Output:
 - 1) Device: Hard wired.
 - 2) Location: Control valve.
 - 3) Transference: Valve actuator.
 - c. Action: Modulate control valve to maintain [75 deg F (24 deg C)] <Insert value> space temperature set point.
- C. Gravity Roof Ventilator:
- 1. Input:
 - a. Device: [**Occupancy sensor**] [**Electric thermostat**].
 - b. Location: Space.
 - 2. Output:
 - a. Device: Hard wired.
 - b. Location: Control damper.
 - c. Transference: Damper actuator.
 - 3. Action: Open control damper when space [**is occupied**] [**temperature rises above set point**].
- D. Exhaust Fan: [**Occupancy sensor**] [**Light switch**] [**Room thermostat**].
- 1. Input:
 - a. Device: [**Occupancy sensor**] [**Light switch**] [**Electric thermostat**].
 - b. Location: Space.
 - 2. Output:
 - a. Device: Hard wired.
 - b. Location: Motor controller.

- c. Transference: Starter relay.
 3. Action: Cycle fan on when [**space is occupied**] [**lights are turned on**] [**space temperature rises above set point**].
- E. Kitchen Exhaust Fan: Occupancy sensor.
 1. Input:
 - a. Device: Occupancy sensor.
 - b. Location: Space.
 2. Output:
 - a. Device: Hard wired.
 - b. Location: Motor controller.
 - c. Transference: Starter relay.
 3. Action: Start fan and energize makeup air unit when space is occupied.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 230993.11

SECTION 230994 - INDUSTRIAL CONTROL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Provide all labor, equipment, and material necessary for complete and fully operational control system, as shown on the drawings and as specified herein.
- B. The control system shall include all control devices, sensors, valves, actuators, gauges, meters, control panels, and control wiring and instrument air piping as specified and required to fulfill the intent of the drawings and specifications. Coordinate all work with the equipment suppliers and the Division 26 installers.
- C. Provide all completion services as specified, including final system performance verification, to ensure that the system functions as specified. Completion services shall be in accordance with Division 01 requirements.
- D. Refer to other Division 23 and to Division 26 sections for requirements for interfacing controls and instrumentation with mechanical equipment and systems.
- E. Conform to Division 26 sections for raceways, cables and conductors, terminations and splices, boxes, cabinets, supports, hangers, seals, and other applicable requirements governing the installation of the electrical components of the controls systems.

1.3 REFERENCE STANDARDS

- A. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents.
 - 1. American National Standards Institute
 - a. ANSI/NFPA 70 - National Electrical Code.
 - 2. Instrument Society of America (ISA):
 - a. ISA-S5.1: Standard for Instrumentation Symbols and Identification.

3. International Building Code (IBC) with the Denver Amendments.
4. International Fire Code (IFC) with the Denver Amendments.
5. National Fire Protection Association (NFPA):
 - a. NFPA 30 – Flammable and Combustible Liquids Code.
6. Underwriters' Laboratories (UL):
 - a. Provide electrical components and assemblies which have been UL listed and labeled.

1.4 ACTION SUBMITTALS

- A. Submit with bid a statement of qualifications including: Reference projects of a similar nature and scope, including contract amounts, and resumes of key personnel who will be assigned to this project.
- B. Submit shop drawings and product data under provisions of Section 230400 "Basic HVAC Requirements".
- C. Submit the following not less than ten (10) days prior to beginning any installation:
 1. Product Data: Submit for all components. Include manufacturer's installation instructions.
 - a. Include data substantiating that materials comply with requirements.
 2. Control system schematic and system riser diagram, complete with valve schedules and a written description of the control sequence referring to the control components identified on drawings in sequence by tag number.
 3. General outline drawings of equipment showing overall dimensions, location of major components and weights.
 4. Specification sheets on programmable controller equipment.
 5. Software documentation including written description of the program, source code, memory maps, written description of sub-routines, interrupts, and listing of database information.
 6. Schematic diagrams for electrical items showing external connections, terminal block numbers, internal wiring diagrams, one-line diagrams, and point-to-point wiring diagrams including wire identification on each item of instrumentation.
 7. Control panel drawings, including: layout of graphic panel face, with all switches, LED's, and instruments; detailed internal panel layout including all instrumentation components and wire ways.
 8. A bill of materials and a spare parts list.
- D. For automatic valve actuators, include calculations demonstrating that actuators for valves larger than 2-inch size will have ample positioning force to ensure positive performance for opening, including consideration of tendency of valves to stick in the closed position (particularly when having been kept in the closed position for long periods of time).

- E. Submit the results of functional and diagnostic tests and calibrations to the DEN Project Manager for final system acceptance.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- B. Project Record Documents:
 - 1. Revise shop drawings to reflect actual installation and operating sequences.
 - 2. Include data specified in "Submittals" in final "Record Documents" form.
 - 3. At completion of work, submit report of checkout of control systems.
- C. Operation and Maintenance Data:
 - 1. Submit prior to system demonstration by Contractor.
 - 2. Include Operating Instructions for starting, stopping, adjustment, and regulation.
 - 3. Inspection and Maintenance Instructions, including schedules and procedures for equipment replacement, adjustments, cleaning and cleaning materials, protection, testing, calibration and calibration tolerances.
 - 4. Operating Instructions, including equipment characteristics, and operating procedures.
 - 5. Maintenance Instructions and Procedures: Schedule of routine maintenance, maintenance procedures, and trouble-shooting.
 - 6. Parts list and recommended spare parts list.
 - 7. Warranty arrangements.
 - 8. Include interconnection wiring diagrams for complete field installed system with identified and tag numbered system components and devices.
 - 9. Include keyboard and graphic illustrations and step-by-step procedures indexed for each operator function.

1.6 QUALITY ASSURANCE

- A. Control System Supplier: Shall have a complete engineering, sales, installation, and service organization with successful experience in the design, system application programming, installation, and start-up of at least five (5) similar systems.

- B. Electrical and Mechanical Installation: Shall be by trained electricians and mechanics in the continuous employment of an installer whose normal business is the installation of automatic control systems.
- C. Regulatory Requirements: Control wiring shall comply with all applicable codes and regulations and Division 26 Sections.

1.7 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements".

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Provide products in sizes and of capacities indicated, and as required by the application, conforming to manufacturers' standard materials and components as published in their product information.
- B. All furnished products, including those listed in the Specifications by manufacturer and model number, will be acceptable subject to meeting all contract requirements.

2.2 APPROVED SUPPLIERS

- A. Manufacturers: Subject to compliance with requirements, provide industrial control systems by one of the following:
 1. Custom Controls, Inc., Kansas City, MO.
 2. Control Instruments, Inc., Atlanta, GA.
 3. **<Insert manufacturer's name>**
 4. or approved equal.

2.3 CONTROL WIRING

- A. Electrical Wiring: Provide as required for the control system, including electrical interlock wiring. Comply with the National Electrical Code, local codes, and Division 26 Sections of these specifications. Provide transient protection for all outdoor control circuits.

2.4 CONTROL TRANSFORMERS

- A. Provide control transformers as required for a complete and fully operational control system.
- B. Transformers to have adequate capacity for all connected controls. Input and output voltages to be as required for the control power voltage available, and the voltages required by the control components.

2.5 INSTRUMENT AIR SUPPLY

- A. Provide instrument air supply to provide clean, dry, control quality instrument air to the control system. System operating pressure to be 150 psig.
- B. Provide duplex air compressor as indicated. Size compressor to provide adequate air for the system without operating more than 50 percent of the time. The air compressor shall be of the instrument air quality type operating at not more than 500 fpm piston speeds and low temperature to minimize oil vaporization and carryover.
- C. Provide receiver tanks complete with ASME label, pressure gauge, relief valve, automatic drain trap piped to convenient drain, and necessary openings as indicated on drawings. Size compressor receiver tank to require no more than ten starts per hour of an individual compressor. Receiver tanks shall comply with applicable state and local codes, as well as OSHA standards.
- D. Dryers: Provide dryers to remove condensable contaminants from the air, such as oil and water. Provide dryer for full system capacity.
 - 1. Aftercooler Dryer: Mechanical refrigeration non-cycling type rated at not less than 1/4 HP with a refrigeration capacity to assure a dew point of 10 degrees F at 150 psi with inlet air at 150 psi and 100 degrees F, operating at 100 degrees F ambient temperature. Pressure drop across unit not to exceed 2.75 psi at rated capacity.
 - 2. Regenerative Desiccant Dryer: Dual pressure vessel towers containing activated alumina desiccant beds. Air flow rated shall be less than 60 ft./min. at 150 psig, with minimum contact time of 4.5 seconds. Operating pressure drop shall be less than 3 psi at rated flow, output pressure dew point less than -40 degrees F. Provide with front-mounted electrical control box with solid state timer set for 10 minute regeneration cycle time.
 - 3. Assembly shall include the following:
 - a. Integral 40 micron particulate afterfilter.
 - b. Automatic condensate drain trap.
 - c. Green "power on" pilot light.
 - d. Red "high air temperature" warning pilot light.
 - e. Provision for connection of a remote alarm.
- E. Provide the following instrument air accessories: Submicron filter assembly, including replaceable cartridge type filter with transparent bowl and metal bowl guard. Filter

element shall be effective in removing 98 percent of any oil leaving the Aftercooler, and solid particles as small as 0.6 microns. Provide a trap to automatically discharge any liquid contaminants retained in the filter bowl.

- F. For duplex air compressor, provide an electric alternator system that will:
 - 1. Alternate the lead/lag compressor on each start.
 - 2. Energize the lag compressor in the event that the lead compressor either fails to start, or fails to deliver sufficient air capacity.
- G. Provide combination starter(s) with the compressor.

2.6 CONTROL AIR PIPING

- A. Steel Piping: PVC coated schedule 40 seamless steel piping, welded, or threaded connections as indicated.
- B. Seamless Copper Tubing: Type K or L, ANSI/ASTM B 88; with cast-bronze solder joint fittings, ANSI B16.18; or wrought copper solder-joint fittings, ANSI B16.22; except brass compression type fittings at connections to equipment.
- C. Polyethylene Tubing: Black, flame retardant, virgin polyethylene, conforming to modified ASTM D1693 test.
 - 1. Fittings: UL approved rod or forged brass rated to 200 psig at 100 degrees F.
 - 2. Joints: Compression or barbed type.

2.7 PRESSURE GAGE TAPS

- A. Gage Cock: Tee or lever handle, brass for maximum 250 psig.
- B. Needle Valve: Stainless Steel for maximum 250 psig.
- C. Pulsation Damper: Pressure snubber, brass with 1/4 inch connections.

2.8 DIAL THERMOMETERS

- A. [4-1/2] <Insert size> inch diameter dial in stainless steel case, adjustable angle with front recalibration, bimetallic helix actuated with silicone fluid damping, white with black markings and black pointer, hermetically sealed Lexan lens, stainless steel stem, one percent of full scale accuracy, calibrated in degrees F.

2.9 THERMOMETER SUPPORTS

- A. Socket: 304 stainless steel separable sockets for thermometer stems with or without extensions as required, and with cap and chain.

2.10 STATIC PRESSURE GAGES

- A. [4-1/2] <Insert size> inch diameter (unless otherwise indicated) dial in metal case, diaphragm actuated, glycerin filled, black figures on white background, front recalibration adjustment with tubing, static pressure tips. Pressure gauges shall be graduated in psi. Range shall be from 0 to 150 percent of the system operating pressure at the point where the gauge is installed.

2.11 PRIMARY FLOW ELEMENTS

- A. Fixed installation flow meter, Panametrics Model DF868-1-11-10100-0 or approved equivalent, digital display with graphic capability, data logging capability, two 4-20mA (0-20mA) isolated outputs and RS232 output, Single Channel, 100-120VAC power supply, NEMA 4X weatherproof epoxy coated enclosure with window and external keyboard suitable for Class I, Div. 2 Groups A,B,C,D hazardous areas, four software selectable frequency(rate) or pulse(totalizer) assignable outputs.
- B. Clamp-on transducers, hazardous location, FM approved. Class I, Div. 1, Groups C & D, shear wave for 2 inch (50 mm) and larger pipe.
1. Manufacturers: Subject to compliance with requirements, provide industrial control systems by one of the following:
- a. Panametrics, Model C-PB-10-N-B-AX.
 - b. <Insert manufacturer's name>
 - c. or approved equal.
- C. Universal clamping fixture, with transducer brackets and chains for single or double traverse installations for use on pipes 2 inch to 24 inch (50 mm to 600 mm) O.D.
1. Manufacturers: Subject to compliance with requirements, provide by one of the following:
- a. Panametrics, Model UC-F-P-24-0.
 - b. <Insert manufacturer's name>
 - c. or approved equal.
- D. Pair of transducer cables, 50 feet (15.25 m) length with BNC connectors and flying leads for connection to Model DF868 flow meter.
1. Manufacturers: Subject to compliance with requirements, provide one of the following:
- a. Panametrics, Model 704-658-50.
 - b. <Insert manufacturer's name>
 - c. or approved equal.
- E. Standard silicone grease coupling for fixed/temporary installations, temperature range: -40 to 65 deg C.

1. Manufacturers: Subject to compliance with requirements, provide one of the following:
 - a. Panametrics, Model CPL-1
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.
 2. Flow probe:
 - a. Manufacturers: Subject to compliance with requirements, provide one of the following:
 - 1) Thermal Instrument Company, Model 62.
 - 2) **<Insert manufacturer's name>**
 - 3) or approved equal.
- F. Provide manufacturer's field engineer on site for 3 days for startup calibration and instructing the DEN Project Manager's personnel.

2.12 POSITIVE DISPLACEMENT FLOW METERS

- A. The Flow Meters listed below shall be of the double case, straight through, rotary vane, positive displacement type.
- B. Meters shall have steel housing, standard trim, and Viton seals. Meters shall be rated for 150 PSI maximum working pressure and have 150 lb. ANSI RF flanges. Meter shall have a +/- 0.25 percent linearity and +/- 0.02 percent repeatability over the flow range shown below. Meters shall be equipped with the following accessories:
 1. Automatic Temperature Compensator, field adjustable for different products with deactivation.
 2. Preset Counter with a 4 SPDT microswitch and control handle kit.
 3. Large numerical counter and ticket printer. Ticket printer shall have a self-closing weatherproof cover.
 4. High resolution photo-electric pulse transmitter, 100 pulses per gallon plus one verification pulse per revolution.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Smith Meter, Models E3-S1 and G6-S1.
 2. Brooks Instrument Co., Models B-72DB and B-92DEB.
 3. **<Insert manufacturer's name>**
 4. or approved equal.

2.13 TURBINE FLOW METERS

- A. Magnetic pickup type full bore turbine. ANSI 150 psig flanged carbon steel body with all stainless steel internals. All electronics, including magnetic pick-up and

pre-amplifier, and all electrical connections shall be in [**NEMA-7 explosion-proof**]
<Insert type> enclosure.

- B. Flowmeter K-factor accuracy of +/- 0.15% over a 10:1 flow range, repeatability of +/- 0.02%.
- C. Provide with set-stop type [fuel] <Insert type> loading flow control valve and [fuel] <Insert type> loading totalizer/controller of the same manufacturer as the flow meter, as specified in the following.
- D. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Smith Meter Inc., GL - Series.
 - 2. Brooks Instrument Co., Parity Series.
 - 3. <Insert manufacturer's name>
 - 4. or approved equal.

2.14 [**LOADING STATION**] <Insert type> FLOW CONTROL VALVES

- A. Two-stage set stop type flow limiting control valve to control delivery flow rate and limit pressure surges on batch delivery shutdown.
- B. ANSI 150 psig carbon steel body with all stainless steel internals, and Viton seals. Self-contained hydraulic pilot or piston type flow control with dual 120 VAC solenoids for 2-stage flow control and gradual flow shutdown. Valves will be controlled by the batch totalizer/controller.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Smith Meter Co., Model 210 Electro-Hydraulic Set-stop Valve.
 - 2. Brooks Instrument Co., Model 788 DVC.
 - 3. or approved equal.

2.15 [**LOADING STATION**] <Insert type> TOTALIZER/CONTROLLERS

- A. Electronic loading station flow totalizer/controller, connected to turbine flow meter and set stop flow control valve, [**hazardous service; Class 1, Division 1, Group D,**] [**Type 4X weather and corrosion resistant**] enclosure, 120 VAC power supply. Unit shall be of the same manufacturer as the loading station flow meter and set stop valve.
- B. Features: 2-line LCD or Vacuum Fluorescent display; ticket printer; sealed keypad for entering operator ID number, access code, delivery flow rate, and preset total delivery; temperature compensation per API standard tables; digital valve control; permissive interface to dead-man switch and truck grounding, overfill and line connection safeties; EIA RS-485 communication port.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of

the following:

1. Smith Meter, Inc., Accuload II - STD
2. Brooks Instrument Co., Petrocount IMS Control Unit and IMS Remote Access Unit.
3. **<Insert manufacturer's name>**
4. or approved equal.

2.16 [REFUELER] OVERFILL PROTECTION AND GROUNDING SYSTEM

- A. Electronic safety interlock system for [refueler] **<Insert type>** loading stations incorporating: a dead-man switch, verification of grounding connection to enable initiation of loading, and overfill protection incorporating an optic high level probe. An override keyswitch shall be provided to enable loading of [refuelers] **<Insert type>** not equipped with a compatible interface. Green (permit) and red (non-permit) indicating lights shall be located on the controller enclosure.
- B. Override keyswitch shall override the overfill protection and grounding verification functions only. Override keyswitch shall not override the dead-man switch.
- C. All controller electronics shall be located in a **[NEMA-7 explosion-proof] <Insert type>** enclosure. All wiring between the controller and the [refueler] **<Insert type>**, and all [refueler] **<Insert type>** mounted components shall be U.L. listed as intrinsically safe.
- D. **[Refueler] <Insert type>** trucks shall be fitted with compatible components to enable system operation.
- E. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Scully. ST-35-115 ELK/D overfill protection controller.
 2. ST-47-1155 ELK Groundhog.
 3. **<Insert manufacturer's name>**
 4. or approved equal.

2.17 FLOW SWITCHES

- A. Thermal Flow Switch: Solid state electronic thermal flow switch, 4000 psi maximum working pressure, 316 stainless thermal flow probe, 1" NPT fitting, **[explosion-proof] <Insert type>** switch enclosure.
 1. Electrical: 120 VAC power supply, DPDT relay output. Switch threshold point adjustable from 0.05 to 0.5 ft./sec.
 2. Operating Environment: **[Class 1, Division 1, Group D,]** ambient temperature from -40 to + 160 degrees F.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Flow Technology Inc., Uniprobe Model UP-01.
 - b. Fluid Components, Inc., Model FR72-4.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
- B. Vane Operated Flow Switch: Multi-layer vane for use in pipe sizes from 1-1/2" to 8" diameter. 2000 psig maximum operating pressure, 1/1/2" NPT fitting.
1. Electrical: SPDT snap acting micro switch rated at 5 amps at 125 V AC. **[NEMA-7 explosion-proof] <Insert type>** switch enclosure.
 2. Operating Environment: **[Class 1, Division 1, Group D,]** ambient temperature from -40 to +160 degrees F.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. W. E. Anderson, Model-V4-2-U.
 - b. Magnetrol, Model F10.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
- C. Vane Operated Flow Switch: Tee mounted vane actuated flow switch for use in pipe sizes from 1/2" to 1-1/2" diameter.
1. Electrical: SPDT snap acting micro switch rated at 5 amps at 125 VAC. **[NEMA-7 explosion-proof] <Insert type>** switch enclosure.
 2. Operating Environment: **[Class 1, Division 1, Group D,]** ambient temperature from -40 to +160 degrees F.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. W. E. Anderson, Model V6.
 - b. Magnetrol, Model F50.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
 4. Service: **[Sump Separator Pumps] <Insert type>**.

2.18 ELECTRIC LEVEL SWITCHES

- A. Electronic Thermal Level Switches: Solid state electronic thermal level switch, 316 stainless steel probe, 316 stainless NPT fitting, level accuracy of +/- 1/16 inch, response time of 1.0 sec. or less.
1. Electrical 120 VAC power supply, SPDT relay output rated at 2 amps at 120 VAC. **[NEMA-7 explosion-proof] <Insert type>** enclosure.
 2. Operating Environment: **[Class 1, Division 1, Group D,]** ambient temperature from -20 to +160 degrees F.
 3. Probe with level accuracy of +/- 1/4 inch and response time of 5.0 sec. or less may be used where listed.

4. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 1.0 sec. response: Fluid Components Inc., Model FR72LL.
 - b. 5.0 sec. response: Fluid Components Inc., Model 8-66.
 - c. or approved equal.

- B. External Cage Float Type Level Switches: Float activated magnetic level switch with carbon steel float cage, 316 stainless steel float and 400 stainless steel magnetic sleeve.
 1. Electrical: 2 mercury switches (1-N.O. and 1-N.C.) within NEMA 7 and 9 enclosure.
 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Magnetrol, Model 75.
 - b. Mercoïd, Model 201.
 - c. SOR Inc., Model 101.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.

2.19 WATER/[FUEL] INTERFACE LEVEL SWITCHES

- A. Provided with each filter-separator as shown under Division 23.
- B. Associated control wiring provided under this Section.

2.20 TANK LEVEL GAUGING

- A. Temperature compensated hydrostatic tank level gauging system utilizing three pressure transmitters and RTD temperature probe. Provide hydrostatic interface unit at each tank, complete with pressure and temperature transmitters.
- B. Pressure Transmitters: Rosemont Model 3001 C hydrostatic pressure transmitter: +/- 0.02 percent full scale accuracy, 316 stainless steel isolating diaphragm, suitable for use in **[Class 1, Division 1, Group D]** **<Insert application>** application, 316 stainless steel drain/vent spacer.
- C. Hydrostatic Interface Unit: Rosemont Model 7501 HIU, software configurable, 7-digit liquid crystal display, **[explosion proof]** **<Insert type>** enclosure, and digital communication bus to tank scanning unit. Provide with isolated contact outputs for high, intermediate, and low level. Level setpoints shall be adjustable. **[Provide RS-485 interface modules to interface HIU's to PC-based front end via MODBUS network.]**
- D. System Software: Rosemont Model 3801 Smart Tank System Software. Tank gauging software package shall reside under and operate through the tank farm operator interface executive software package. Software protocol shall be provided to the

software integrating contractor as required for compatible interface. The software package shall be capable of:

1. Concurrent operation, background scanning, and report and display generation. Software shall pull data from each of the HIU's to enable viewing all measured and programmed tank parameters on a real-time basis. Operator shall be able to perform diagnostic tests, and to configure tanks. Provide the following display screens as part of the software package: tank constants, strapping table, tank scanning unit detail, alarm log, tank detail, tank summary, tank groups, alarm summary, tank configurations, and tank diagnostics/status and report generation.
- E. Hand Held Interface: Provide two hand held interface units that can be connected to an HIU to enter, display, and alter tank information, and to view all measured and calculated data for the tank.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Rosemont, Model 268 smart interface.
 - b. Foxboro, PC-DOS based Tank Expert System.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.

2.21 PRESSURE TRANSMITTERS

- A. Electronic 2-wire, explosion-proof pressure indicating transmitter. Provide with isolation and nulling valves as required. Transmitter span shall be adjustable over a 5:1 ratio, with the system operating pressure approximately in the center of the transmitter span. Maximum over pressure rating of not less than 900 psig. 316 stainless steel body and wetted parts.
- B. Electronic pressure transducer shall provide 4-20 MA output signal proportional to measured pressure. Accuracy shall be +/- 0.25 percent of calibrated span, stability of +/- 0.25% of range for 6 months. Provide with integral scale calibrated from 0-300 psig. All electrical components shall be in [FM approved Class 1, Div. 1, Group D explosion proof and] NEMA 4X enclosure.
- C. Operating Environment: [**Class 1, Division 1, Group D,**] ambient temperature -40 to +160 degrees F.
- D. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Foxboro, Model 821GM.
 2. Rosemont, Model 1151GP.
 3. **<Insert manufacturer's name>**
 4. or approved equal.

2.22 PRESSURE SWITCHES

- A. Adjustable range [**explosion-proof**] <Insert type> pressure switch. Operating pressures up to 2 psig, stainless steel wetted parts, viton seals, 1/4 inch NPT pressure connection. All electrical components in NEMA 7 and 9 weathertight enclosure.
- B. Electrical: Hermetically sealed SPDT switch rated 15 amps at 125 VAC. U.L. Listed for [**Class 1, Division 1, Group D**] <Insert type> location.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. SOR, Models 6L-K45, 6L-K5 and 6L-K3.
 - 2. <Insert manufacturer's name>
 - 3. or approved equal.

2.23 DIFFERENTIAL PRESSURE SWITCHES

- A. Adjustable range opposed piston, explosion proof differential pressure switch. Operating differential pressures up to 2 psig, stainless steel wetted parts, 1/4 inch NPT pressure connections. All electrical parts in NEMA-7 weather tight enclosure.
- B. Electrical: Hermetically sealed SPDT switch rated 15 amps at 125 VAC. U.L. Listed for [**Class 1, Div. 1, Group D**] <Insert application> location.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. SOR, Models 13S-K5 and 14S-K5.
 - 2. <Insert manufacturer's name>
 - 3. or approved equal.

2.24 TEMPERATURE TRANSMITTERS

- A. 100 Ohm platinum RTD with unit mounted 2-wire 4-20 MA transmitter. NEMA 7 and 9 enclosure, U.L. Listed for [**Class 1, Division 1, Group D**] <Insert application> service. Accuracy to +/- 0.2% of span, repeatability to +/- 0.1% of span. Provide with 24 VDC power supply.
- B. Transmitter span shall be adjustable from 70 to 210 degrees F, range shall be adjustable to 360 degrees F.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Foxboro, 893 Series.
 - 2. Rosemont, Model 444.
 - 3. <Insert manufacturer's name>
 - 4. or approved equal.

2.25 CONTROL RELAYS

- A. Plug-in type general purpose control relays with coil voltage and number of contacts as required and as indicated on drawings. Where the number of contacts required exceeds the number available on a single relay, provide cascaded relays. Provide with plug-in relay socket with numbered wire terminals corresponding to the relay pin numbers. Contacts shall be rated for a minimum of 10 amps at 125 VAC.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Square D.
 - 2. Potter-Brumfield.
 - 3. Struthers-Dunn.
 - 4. **<Insert manufacturer's name>**
 - 5. or approved equal.

2.26 TIMING RELAYS

- A. Plug-in type electronic timing relays for timing function, coil voltage and number of contacts as indicated on drawings. Provide with plug-in relay socket with numbered wire terminals corresponding to the relay pin numbers. Contacts shall be rated for a minimum of 10 amps at 125 VAC.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Square D.
 - 2. Potter-Brumfield.
 - 3. **<Insert manufacturer's name>**
 - 4. or approved equal.

2.27 DC POWER SUPPLY

- A. Provide regulated DC power supply for all two- and three-wire transmitters as required. Power supply to be located in NEMA-4 enclosure [**outside of the hazardous zone**].
- B. Power supply to be rated for operation in ambient conditions from -40 to +160 degrees F. Input power of 115 VAC +/- 10 percent.

2.28 CURRENT LOOP INDICATORS

- A. Panel mounted loop-powered 3-1/2 digit LCD indicator, with trailing "dummy zero" and adjustable decimal point. Indication shall be in standard engineering units (GPM and PSIG) proportional to 4-20 ma input signal.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Action Instruments, Model V-560.
2. **<Insert manufacturer's name>**
3. or approved equal.

2.29 INDICATING TOTALIZING RECORDERS

A. 100 MM Strip Chart Recorders:

1. Programmable electronic 2-variable recorder: 4-20 ma inputs; 40 character, 2-line vacuum fluorescent digital display; 9-digit totalizer; retransmission of input variable. Displayed, totalized, and recorded variables shall be in standard programmed engineering units. Accuracy of +/- 0.1% of span. Provide with hand held programmer.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Chessel, Model 345.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.

B. 10-Inch Circular Chart Recorders:

1. Programmable electronic totalizer controller: four 4-20 ma inputs; 40-character, 2-line vacuum fluorescent digital display; 9-digit totalizer, calculation of derived variables. Displayed, totalized, and recorded variables shall be in standard programmable engineering units. Accuracy of +/- 0.25% of span.
2. Totalizer shall sum 4 retransmitted 4-20 ma flow signals and shall display, totalize and record the total system flow rate.
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Chessel, Model 390.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.

2.30 OXYGEN SENSING AND ALARMS

A. Oxygen deficiency sensor and control unit: Control unit shall accept input from single or dual oxygen sensors (provide single sensor for each control unit) and activate 3 different color LED's at individual programmable alarm levels. (Yellow - caution, amber - warning, red - alarm).

1. Controller shall contain 3-digit LED display, and 2 control buttons to enable display of measured level and alarm set points for each channel, and to enable changing the alarm setpoints for each channel.
2. Electrical: Input power requirement: 100 VA at 115 VAC. Auxiliary alarm relays for each alarm level for each channel (6 - total) rated at 5 amps at 115 VAC. Controller enclosure: [**Explosion proof; Class-1, Division - 1, Group D**] **<Insert**

application>

3. Alarm Indication: Provide alarm indication panel at valve pit entrance, immediately below hatch. Alarm indication panel shall contain 3 alarm indication pilot lights, visible from outside of the valve pit (green - power on, amber - caution/warning, red - alarm) and a lamp test pushbutton, accessible from outside of the valve pit. Alarm indication panel shall be **[Explosion proof; Class-1, Division - 1, Group D]** <Insert application>.

2.31 FLOW CONTROL VALVES (FCV)

- A. The Flow Control Valves listed below shall be a combination rate of flow control and **[fuel]** <Insert type> shutoff valve with solenoid override shutoff and both open and closed position switches.
 1. Valve shall automatically limit the rate of flow to a predetermined maximum regardless of fluctuations in upstream or downstream pressure, and it shall close tight when actuating pressure is applied. Valve shall be a hydraulically-operated, pilot-controlled, diaphragm type globe pattern valve. Main valve body shall be cast steel with 150 lb. ANSI B16.5 flanges and stainless steel trim. Valve shall be rated for 275 psi working pressure. Main valve shall have a single renewable seat and a resilient disc with a rectangular cross section being contained on three and one-half sides by a disc retainer and disc guide. Valve stem shall be guided at both ends by a bearing in the valve cover and an integral bearing in the valve seat. The diaphragm assembly shall be the only moving part and shall form a sealed chamber in the upper portion of the valve, separating operating pressure from line pressure. Diaphragm shall consist of nylon fabric bonded with synthetic rubber and shall not be used as a seating surface. If diaphragm becomes damaged, the valve shall close tight. Packing glands and/or stuffing boxes are not permitted. All necessary repairs shall be possible without removing the valve from the line. Valve shall be equipped with a position indicator.
 2. Pilot control shall be a direct-acting diaphragm valve designed to close when the actuating pressure differential increases beyond the spring setting. Actuating differential pressure shall be produced by a thin-edged stainless steel orifice plate installed in an orifice flange located at valve inlet. Pilot control system shall also contain a diaphragm actuated three-way auxiliary valve which, when closed, automatically closes the main valve. Pilot valves shall have bronze bodies with stainless steel internal trim. Tubing and fittings shall be stainless steel minimum 1/2 inch diameter. Pilot supply line shall include a strainer.
 3. Two position switches shall be provided. One switch shall close when the valve is in the full closed position. The second switch shall close when the valve is open. Switch trip point shall be adjustable. Switches shall be DP-DT Type rated for 15 amps, 125 volts AC. Switches shall have aluminum housing with stainless steel trim. Switches shall be rated **[Class 1, Division 1, Group D, explosion-proof]** <Insert application> and weatherproof.
 4. Solenoid valves shall have brass body, stainless steel trim. Valves shall have watertight and explosion-proof **[(Class 1, Group D)]** <Insert application> enclosure. Valves shall operate on 115 volts AC. Main valve shall close when the solenoid is de-energized. Both opening and closing speeds shall be adjustable.
 5. Valves shall be a Model 40AF-2C-2 Combination Rate of Flow Control and **[Fuel]**

<Insert type> Shutoff Valves as manufactured by Cla-Val Co., Newport Beach, California.

2.32 PRESSURE CONTROL VALVES (PCV)

- A. Pressure control valves shall maintain a constant upstream or downstream pressure as indicated, closing to limit or opening to relieve excess pressure, and shall maintain close pressure limits without causing surges. Provide valves with solenoid override shutoff as indicated, and 2 position indicating limit switches.
1. Valve shall be a hydraulically-operated, diaphragm actuated globe pattern valve. Valve body shall be cast steel with 150 lb. ANSI B16.5 flanges and stainless steel trim. Valve shall be rated for 275 psi working pressure. Valve shall contain a resilient synthetic rubber disc with a rectangular cross section, contained on three and one-half sides by a disc retainer and disc guide forming a tight seal against a single renewable seat insert. Valve stem shall be guided at both ends by a bearing in the valve cover and an integral bearing in the valve seat. The diaphragm assembly shall be the only moving part and shall form a sealed chamber in the upper portion of the valve, separating operating pressure from line pressure. Diaphragm shall consist of nylon fabric bonded with synthetic rubber and shall not be used as a seating surface. If diaphragm becomes damaged, the valve shall close tight. Packing glands and/or stuffing boxes are not permitted, and there shall be no pistons operating the valve or pilot controls. All necessary repairs shall be possible without removing the valve from the line. Valve shall be equipped with a position indicator.
 2. Pilot control shall be a direct- or reverse-acting adjustable, spring-loaded diaphragm valve designed to permit or restrict flow as required when controlling pressure exceeds spring setting. Pilot control system shall operate such that as excess line pressure is dissipated or limited, the main valve shall close to a positive, drip-tight seating. Pilot valves shall have bronze bodies with stainless steel internal trim. Tubing and fittings shall be stainless steel minimum 1/2 inch diameter. Pilot supply line shall include a flow clean strainer.
 3. Valves shall be as manufactured by Cla-Val Co., Newport Beach, California.

2.33 PRESSURE DIFFERENTIAL CONTROL VALVES (PDCV)

- A. Pressure differential control valves shall respond to differential changes across control pilot. All increase in differential above a set point shall cause the main valve to open. Valve shall modulate to maintain a relatively constant differential pressure. Main valve shall be a hydraulically-operated, diaphragm-actuated globe pattern valve. Valve body shall be cast steel with 150 lb. ANSI B16.5 flanges and stainless steel trim. Valve shall be rated for 275 psi working pressure. Valve shall contain a resilient synthetic rubber disc with a rectangular cross section, contained on three and one-half sides by a disc retainer and disc guide forming a tight seal against a single renewable seat insert. Valve stem shall be guided at both ends by a bearing in the valve cover and an integral bearing in the valve seat. The diaphragm assembly shall be the only moving part and shall form a sealed chamber in the upper portion of the valve, separating operating pressure from line pressure. Diaphragm shall consist of nylon fabric bonded

with synthetic rubber and shall not be used as a seating surface. Packing glands and/or stuffing boxes are not permitted, and there shall be no pistons operating the valve or pilot controls. All necessary repairs shall be possible without removing the valve from the line. Valve shall be equipped with a position indicator.

- B. Pilot control shall be a pressure differential control. Pilot valves shall have bronze bodies with stainless steel internal trim. Tubing and fittings shall be stainless steel. Pilot supply line shall include a strainer and orifice assembly. Differential control adjustment shall be provided.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cla-Val Co., Newport Beach, California, Model 250AF Differential Pressure Relief Valves.
 - 2. **<Insert manufacturer's name>**
 - 3. or approved equal.

2.34 TANK VALVES

- A. Valves: Fail closed/Fail safe, through-conduit gate valve to provide positive fire safe shutoff of both inlet and outlet lines. Actuators shall be sized to operate the valves at the pressures and flows encountered, and shall be selected to provide ample force to overcome the tendency of valves (particularly when kept in the closed position for long periods of time) to resist actuation.
 - 1. Valve flanges shall be 150 lb. class, ANSI B16.5; Fire safety listing shall be to API-6FA.
 - 2. Gate and seats: Reverse-ported, moly-disulfide treated, steel slab gate; two hardened steel floating seats, each with TFE face inserts and two peripheral elastomer O-rings; T94 valve trim.
 - 3. Actuators: Valves shall be provided with pneumatic actuators for operation with 150 psig instrument air supply, as specified below.
 - 4. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. W-K-M, Saf-T-Seal Through-Conduit Gate Valve.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.
- B. Actuators for 12" Valves: Spring return, pneumatic diaphragm type actuator for normally closed/fail safe valve operation.
 - 1. Actuator shall be fire safe listed with valve to API-6FA.
 - 2. Actuators shall be sized for operation with 150 psig nominal instrument air supply. Provide 2 position indicating limit switches with actuator (1 for full open and 1 for full closed indication). Provide 3-way **[explosion proof]** **<Insert type>** solenoid with 120 VAC coil, mounted on piped to actuator. Solenoid shall have minimum 1/2 inch ports, solenoid coil shall be rated for continuous energization.

3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. W-K-M, Saf-T-Gard Diaphragm Actuator.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.

- C. Actuators for 20" and 30" valves: Spring return, pneumatic piston type actuator and bonnet plate assembly for adaptation to W-K-M reverse acting gate valve. Valve operation shall be normally closed/fail safe.
 1. Actuator and valve assembly shall be fire safe to API-6FA.
 2. Actuators shall be sized for 150 psig nominal, instrument air supply. Provide 2 position indication limit switches with actuator (1 for full open and 1 for full closed indication). Provide 3-way [**explosion-proof**] **<Insert type>** solenoid with 120 VAC coil, mounted on and piped to actuator. Solenoid shall have minimum 1/2 inch ports for 20 inch valves and 3/4 inch ports for 30" valves. Solenoid coil shall be rated for continuous energization.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Axelson, MHA Piston Pneumatic Actuator and Bonnet plate assembly.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.

2.35 EMERGENCY FUEL SHUTOFF (EFSO) VALVES

- A. EFSO Valves shall be butterfly valves as specified in Section 220523. Provide with compatible actuators as specified below.

- B. Pneumatic Cylinder Actuators: Provide spring return type pneumatic cylinder actuators for operation on 100 psig dry nitrogen supply. Actuator shall be configured for normally closed valve operation.
 1. Size actuator such that valve will fully open against system pressure within 10 sec. after energizing three-way solenoid valve, and will fully close off, bubble tight, against system design flows within five (5) seconds of de-energizing three-way solenoid valve.
 2. The central housing of the actuator shall be of one-piece integral construction to eliminate possibility of bearing misalignment. A weather-tight vent shall be provided in the housing to prevent possible pressure build-up. Piston and rods shall be of cold-finished, ground, and polished steel. All bearing surfaces shall be coated with a lubricant that includes a corrosion inhibitor. Actuator shall be designed to withstand constant operating pressure in an ambient environment from -20 to +200 degrees F.
 3. Provide 2 explosion proof limit switches with actuator (1 for full open and 1 for full closed indication). Provide explosion proof 3-way E-P solenoid, with 24 VDC coil with actuator. Solenoid shall be sized for valve operation as described, and coil shall be rated for continuous energization.

4. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. GH Bettis.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.

2.36 ELECTRIC MOTORIZED VALVE ACTUATORS

- A. Provide electric motorized 90 degrees actuators where indicated. Actuators shall be sized to operate the valves at the pressures and flows encountered, and shall be selected to provide ample force to overcome the tendency of valves (particularly when kept in the closed position for long periods of time) to resist actuation. Actuators shall be electric motor driven in both directions, and shall incorporate both limit switch and torque limit de-energization.
- B. Actuator motors shall be 460 V, 3 phase. Actuator shall be suitable for outdoor mounting in an ambient environment from -20 to +100 degrees F.
- C. Provide with local mechanical position indicator; local open/close/stop, and local/remote control switches, terminals for remote open/close control operation, and limit switches for full open and full closed indication.
- D. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Limitorque.
 2. Auma.
 3. **<Insert manufacturer's name>**
 4. or approved equal.

2.37 PROGRAMMABLE LOGIC CONTROLLER

- A. A programmable controller manufactured to NEMA ICS 3, with component circuit boards manufactured to NEMA ICS 2. Programmable controller system shall be microprocessor based with solid state memory. Programmable controller system shall include CPU's, multiplexers, programmer interface, I/O modules, power supply, and all power and data cables to function as a complete system.
- B. Basic Configuration: Dual CPU's configured as "on line" processor and "hot" back-up, with both local and remote I/O modules connected to CUP's via a multiplexed data trunk. CUP's shall interface with the master PC-based operator station via direct data link operating at not less than 57.6 K Baud. Provide interface hardware as required for installation in PC expansion slot.
- C. Central Processing Units (CPU's): The CPU's shall be self-contained units that will provide Ladder Rung program execution and support local or remote programming. The CUP's will provide I/O scanning, and support peripheral communication. Each CPU shall as a minimum, support up to 3000 I/O points distributed in up to 20 I/O

racks, both local and remote. Each CPU shall have a memory capacity of not less than 48K, 16 bit words. The on line CPU will communicate with the I/O modules via multiplexed twin axial data trunk operating at not less than 57.6 K Baud. The programming instruction set shall support the following functions as a minimum:

1. Language characteristics: Ladder diagram, code listing, or extended BASIC language.
2. Logic operations: AND, OR, XOR, NOT, IF, THEN, ELSE, GO TO, GREATER THAN, LESS THAN.
3. Math operations: Addition, subtraction, division, multiplication, square root, absolute value, truncate, round, exponentiation, natural logarithm, common logarithm, and trigonometric functions.
4. The processor mode shall be selected by a front panel mounted keyswitch, and shall include run, program, and test modes.

D. Input/Output System: Provide complete I/O stations, both local and remote, as indicated on the drawings and as required for system operation. Each I/O station shall be complete including all required power supplies, backplane, communication interface module, and I/O point modules. Provide the indicated number of input and output points of each type for each I/O station, plus a minimum of 25 percent but not less than two spare I/O points of each type. (No spare analog output points need be provided.) The I/O modules shall include the following features:

1. Isolation shall be used between all internal logic and external power circuits. The isolation shall meet the minimum specification of 1500 VRMS.
2. Each I/O module shall contain visual indication of ON/OFF status of individual input and output points.
3. Discrete output modules shall be provided with self-contained fuses for overload and short circuit protection of the module.
4. Each I/O module shall contain built-in wire duct and shall be of "dead-front" construction.

E. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D Company, Model 500.
2. Allen Bradley, 1785 PLC-5/60.
3. Texas Instruments, Model 565.
4. **<Insert manufacturer's name>**
5. or approved equal.

2.38 OPERATOR INTERFACE HARDWARE

A. System operator interface shall be through either of 2 personal computers interconnected via fiber-optic data trunk. The master PC shall be located in the Control Building, as shown on the plans, and the second to be located in the airport operations center.

B. Master/Server CPU: 80386 based PC with 80387 co-processor, and minimum 16 MB

of RAM, with a clock speed of not less than 33 mHz. Provide with: 120 MB hard disk, and 1.2 MB 5-1/4 inch and 1.44 MB 3-1/2 inch floppy drives, 101 character ASCII standard keyboard VGA driver board, and 5 communication ports, and Ethernet board.

- C. Remote Monitor CPU: 80386 based PC with 80387 co-processor and minimum 4 MB of RAM, with a clock speed of not less than 30 Hz. Provide with: 120 MB hard disk, and 1.2 MB 5-1/4 inch and 1.44 MB 3-1/2 inch floppy drives, 101 character ASCII Standard keyboard and VGA driver board, and Ethernet board.
- D. Display Driver CPU's: 80386 based PC with 80387 co-processor, 2 MB of RAM, and a clock speed of 20 MHz. Provide with 20 MB hard disk and 1.2 MB, 5-1/4 inch floppy drive, and Ethernet interface board.

2.39 OPERATOR INTERFACE SOFTWARE

- A. Microsoft-Windows based color-graphic supervisory operator interface software package to facilitate monitoring of the **[fueling]** <Insert type> systems operation, and selection of systems operating parameters. The system software shall drive four independent monitor screens at the master control station, and network the **[fueling]** <Insert type> system monitoring functions to a remote monitoring station via an Ethernet network.
- B. Provide interface drivers for the following **[fueling]** <Insert type> system software packages. If the interface driver does not currently exist in the supervisory software package, the Contractor shall write the required driver.
 - 1. Programmable Logic Controller (PLC) monitoring and programming software.
 - 2. Hydrostatic Tank Gauging System software package.
 - 3. Remote **[fuel]** <Insert type> loading station inventory control software package.
 - 4. Leak detection system monitoring software package.
 - 5. Corrosion protection system monitoring software package.
- C. System operation shall be through a mouse. Real-time graphic displays of the entire **[fueling]** <Insert type> system, based on the system flow diagrams will update displayed variable values once per second. All system alarms shall be displayed in a protected area of the selected alarm monitor and the remote monitor station. Alarm logs shall be automatically directed to the alarm printer. The system shall record and display trend logs for up to four selected variables on a single screen, and record trend logs for up to 32 simultaneous selected variables. Displayed trend logs shall update on a real-time basis. The software package shall support custom report generation through compatible interface with Lotus 1-2-3 or other similar package.
- D. The Installer shall provide all software required for efficient operation of all functions required by this specification. Software shall be modular in design for flexibility in expansion or revision of the system.
- E. System software will consist of real-time operating system containing all points and functions as described herein. The most current operating system, including the most current parameter changes and modifications, will be contained on the disk, to provide

their operator with the most current source of data to reload CPU and controller memory after power loss or system failure.

- F. The system shall use English language for each point identification. To facilitate different building operators, the system shall accept multiple English language identifiers for each system operator.
- G. The system shall recognize all inputs as functions or commands to be performed. The system's handling of operator inputs, such as requests to start a motor, output a log, change a time program, acknowledge an alarm, or do any of the other commands described in this specification, shall be in a similar format.
- H. Operator access to the system shall be via user defined passwords providing at least five access levels. Each operator shall gain access to the system by entering a unique name and password combination.
- I. A help program shall be provided to list program commands and inputs/outputs available to an operator for the access level cleared for that operator.
- J. Input Process:
 - 1. Select from menu one of four general types of commands based upon password clearance, command points, information points, build parameters, and modify parameters. Commands not available by password clearance shall be detected from video display.
 - 2. Enter memory changes through keyboard or graphically through use of the mouse.
 - 3. Select entry modes, Aid or Direct, based on operator's degree of capability and familiarity with system.
 - 4. Aid Mode shall prompt operator through each step indicating available options.
 - 5. Direct Mode shall allow experienced operator to input command string directly.
 - 6. Enter commands as alpha/numeric character strings, or graphically via menu selection with the mouse. Where commands require data for limits, setpoint, and time, enter value in same engineering units as controlled variable.
 - 7. Operator input shall not inhibit alarm reporting. Echo input on associated output device, to either execute or abort.
- K. Information Access: Obtain point status information from any designated output device with access command. Point status consists of point identification, numerical value (analog points) and associated engineering units, and individual function label indicating that point is on or off or in Alarm Normal condition. Output includes date and time of execution.
- L. The system shall have the ability to download new or modified system parameters from the central console to each Controller and its resident software. Upon receipt of these new parameters, the Controller shall change its operating database to reflect the new parameters and will operate under these parameters until again modified.
- M. Database Creation and Modification: The operator shall have as a minimum, the capability to:

1. Add and delete points.
 2. Modify any point parameter.
 3. Change, add, or delete English language descriptors.
 4. Change, add, or delete engineering units.
 5. Change, add, or delete points in start/stop programs trend logs, etc.
 6. Select analog alarm limits.
 7. Adjust analog differentials.
 8. Create custom relationships between points, such that the user can implement software interlocks, master/slave relationships, and virtual points.
 9. Create back-up copies of the system database, and reload the database into the system.
 10. Create and modify graphics through graphics builder algorithm via the mouse and function icons, and Autocad import capability.
- N. Database Save/Restore:
1. Provide program which allows saving or restoring of operating data.
 2. **Hard drive** shall save or restore system operating data.
- O. Report Generation: Through compatible interface with Lotus 1-2-3 or equivalent package.
1. The system shall contain a full test editor for the creation of custom reports.
 2. All reports created shall have full access to the systems database for the purpose of embedding any selected point into a report location for ease of display and view.
 3. The system shall permit full programmability for report generation. The following logical and mathematical operators must be provided: Greater than, less than, equal to, not equal to, add, subtract, multiply, divide, square root, and/or comparators, absolute value, and modulus. All of the above operators shall be capable of being used in an easy to follow English language based program to trigger generation and/or change formats of specific reports.
 4. The system shall allow for report grouping so that predefined or selected reports may be generated by a single request.
 5. The report generator shall have the ability to conduct mathematical calculations at report time so not to burden the CPU with processing which will not be required until generation time.
 6. A report shall be configurable to ask for user input that can be used in the calculation and generation of a report.
 7. The system must include a programmable looping function to allow for the repeated generation of one report containing different data.
 8. A report must be capable of being configured to invoke another executable software programs at generation time.
 9. All report programs shall be capable of time of day, day of week, or day of year scheduling.
- P. Points Editor:
1. The system shall incorporate a full screen forms based points editor which shall allow for both a terse system name and a verbose English language name to be

- assigned for all points configured in the system.
2. The number of points that are configurable for any device shall only be limited by hard disk space.
 3. All points in the system shall be accessible via an on-line directory for immediate use to avoid the need for a points reference notebooks or any other written material.
 4. Point grouping shall be allowed so that operator defined groups allows the recall by name to view the status of a preselected group of points.
 5. Automatic and manual storage and reload ability of full programming database and points configuration for stand-alone controllers.

Q. Color Graphic or CAD Configuration:

1. The system shall allow for CAD creation of all as build documentation via CAD software. This must allow for all job drawings, to be used directly by the system for its graphics.
2. There must be supplied standard full screen stencils, commonly used symbols and useful shapes to assist in graphic construction. It shall be possible copy shapes and symbols from one graphic to another via Windowing by simply outlining the shape or symbol with a mouse and moving it to the new window. To minimize graphic construction time this must be allowable without the need to exit either window.
3. All graphic panels shall be allowed to be linked in any order configured by the user to provide for hierarchical logical system penetration. This linking shall be defined to occur automatically or through a user defined selectable point on a graphic panel. The user must also be capable of selecting any graphic via the use of a pull down window anywhere in the system.
4. The number of system points or animations to be displayed on a specific graphic is limited only by available memory or screen size. There shall be no restriction as to which graphics may contain which system database point.
5. Status indication of a graphic object may be through the use of operator selected colors, patterns, or dynamic animations. There shall be no limit as to the number of events that may be defined to trigger a graphic indication or animation. Animations shall include but not be limited to objects changing representation, objects changing screen location, objects changing size in proportion to a database value, bar graphics, line graphics, objects rotation proportional to a database value, level display, object blinking or changing color, text changing, or the changing of a complete graphic panel.
6. Operator interface to enable the commanding of modifying of control devices or database points from a graphic must allow a form of real life control panel interaction. This panel shall allow the operator the ability to define dynamic animations per defined objects such as, but not limited to, toggle switches, slide switches, pointing devices, push buttons, rotary switches, analog gauges, digital gauges, analog bar indicator or popup mouse keypads. All animations will function in their real life sense for device modification, database point modification, report generation, or system program interaction through the movement of an animation or the entry of data via an on screen digital pad with only a mouse. There shall be no limit as to the number of animations per graphic or the number of animations per object.

R. Alarms:

1. There shall be a full screen forms based alarm definition screen that allows the user to define each alarm level and the action that will take place if this level is met. The system must allow a minimum of 32 alarm levels that the operator may specify. The alarm summary display shall list the last 60 alarm entries.
2. Alarm processing must occur via simple range testing with the option of logical or complex mathematical expressions to meet more complex needs. Under no circumstances shall another system application stop the processing sequence of alarm processing. The system shall be capable of multirange checks on point values.
3. Actions which may be programmed to take place automatically on the event of an alarm condition to notify the operator must be capable of but not limited to the following:
 - a. Display of the appropriate graphic panel, with the option of representing the alarm with an animation, in which the operator may both view the problem and take corrective measures using the interactive mouse.
 - b. Produce an audible "ICON" which must indicate the number of alarms that are currently pending.
 - c. Generate an operator customized report.
 - d. Display a minimum 64 character (custom per point) alarm message box to the screen.
 - e. Any of the above ((a or b) and c and d) shall be configurable to occur simultaneously.
4. The number of alarms, which may be defined in the system or on any one specific point, shall be limited only by hard disk space.
5. The state at which a point is considered in alarm shall be user definable. This will allow the user to define the state change that will trigger an alarm condition in the system.
6. From a pull down menu the user must be able to acknowledge many point in alarm, all points which are in alarm, all points in a specific level which are in alarm, all points between selected levels which are in alarm, all points which have returned to normal or all points that were in alarm but have returned to normal.
7. The system shall permit the definition of which users are allowed to acknowledge an alarm and which users are allowed to view an alarm. Security features must be configurable for each alarm in the system so that a user, even though given a specific level password, can be locked out from viewing or acknowledging a specific alarm.

S. Spreadsheet:

1. The system shall provide the real time and concurrent ability to analyze, manipulate, and/or graph data from its database with its fully functional spreadsheet application. This application must run concurrently with other system applications.
2. The user shall be able to enter, calculate or manipulate any data directly from the system database within a spreadsheet using the full functionality of Lotus 1-2-3

- while also being offered the ability to have any resultant of an operation within the spread sheet modify a system database point.
3. It shall be possible for a spreadsheet to spawn a communications link with a controller for the purposes of gathering data for a calculation or charting function.
- T. Programmability:
1. The system shall possess the ability to be programmed to spawn specific functions and/or control decisions automatically.
 2. The systems programming language shall be capable of conducting full mathematical operations and bullion logical expressions on all points in the systems database. It shall be a high level, English language based, easy to learn, operating system. All calculations must be the ability to be spawned based on system runtime events such as time, date, calculated value, or operator request. All calculations shall be global to all system applications for the purposes of graphic representation, data transfer, alarm indications, and report generation.
 3. Mathematical operations or functions supported shall include at a minimum: Absolute value, average value, exponential, factorial, fractional truncation, log base 10, trigonometric, maximum/minimum, natural log, rounding, scientific notation, and square root.
 4. The systems programmability shall allow for the collection of data from all field panels connected to all 5 operating subsystems. Times and occurrence of such a collection must be 100% configurable by the operator in the following formats:
 - a. Time based: his would occur when information is stored at preprogrammed intervals by the operator.
 - b. Change of Value based: The collection of data would occur when a system database point changes beyond a threshold that was predefined by the operator via the systems programmability.
 - c. Field Panel Request: The collection of data by the system would occur when a request to collect is issued by a direct connected or remote field panel.
 - d. Programmed Request: The collection of data would occur based on a result calculated by the systems operator defined programs.
- U. Functions Execution/Communications:
1. The system must permit but not be limited to simultaneous operation of a minimum of four of the following functions:
 2. Alarm processing/definition, graphic creation/interaction, system program execution, schedule modification, spreadsheet operation, report generation/creation.
 3. All system communication speeds to both local and remote panels shall be user selectable from 300 baud to 57.6 K baud. All local system spawn communications shall contain error checking to minimize corrupt data transmission. Any remote telemetry communication devices shall utilize internal error checking.
- V. Advisories:

1. Lockout summary that contains status of points in locked out condition.
2. Continuously interrogate system hardware and programmable control units for failure or tampering and report if operation or not operational.
3. Power failure detection, time and date.
4. System communication failure with operator device, field interface unit, point, programmable control unit.

W. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Iconics, Genesis Control Series.
2. U.S. Data, Factory Link software package.
3. Wonderware, InTouch Version 3.2.
4. or approved equal.

2.40 LIMIT SWITCHES

A. Provide limit switches and accessories (cams, triggers, etc.) to indicate valve positions as indicated on the drawings and as specified herein. Provide switches that are U.L. listed for **[Class 1, Division 1, Group D]** <Insert application> application, and shall be suitable for a minimum of 5 amps at 120 VAC.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square-D.
2. Allen-Bradley.
3. <Insert manufacturer's name>
4. or approved equal.

2.41 LEVEL TRANSMITTER

A. RF capacitance type level transmitter for **[Class 1, Division 1, Group D]** <Insert application> application in an outdoor environment; 115 VAC power supply; 4-20 ma DC transmitter output; transmitter enclosure shall meet NEMA 4, 7 and 9 requirements.

2.42 LEVEL SWITCHES

A. Magnetic float type level switches: sliding magnetic float(s) shall activate switches located in probe tube. Provide with relay output contacts rated for minimum 5 amps at 120 VAC. Assembly shall be U.L. listed for **[Class 1, Division 1, Group D]** <Insert application> application, and shall be suitable for outdoor operation.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Magnetrol.

2. B/W Magnetek.
3. **<Insert manufacturer's name>**
4. or approved equal.

PART 3 - EXECUTION

3.1 GENERAL

- A. Install all system components in accordance with manufacturers' recommendations, roughing in drawings and details on drawings. Provide all necessary interconnections, services, and adjustments necessary for a complete and operable system.
- B. All electrical work shall be in accordance with the NEC and Division 26 of these Specifications.
- C. All setpoints shown on the drawings and in the operating sequences are approximate initial values only. All setpoints shall be adjustable.

3.2 EXAMINATION

- A. Verify that systems are ready to receive work.
- B. Beginning of installation means installer accepts existing conditions.

3.3 INSPECTION

- A. Inspect work in progress in accordance with project documents.

3.4 DELIVERY, STORAGE AND HANDLING

- A. Provide factory shipping cartons for each piece of equipment and control device. Provide factory applied plastic end caps on each length of pipe and tube. Maintain cartons and end caps through shipping, storage and handling as required to prevent equipment and pipe-end damage, and to eliminate dirt and moisture from equipment and inside of pipe and tube. Store equipment and materials inside and protected from weather.

3.5 IDENTIFICATION SYSTEM

- A. Piping and Wiring: Tag control piping and wiring at each end, and at necessary junction points. Match the tagging number indicated on the shop drawings.

3.6 ELECTRIC WIRING

- A. All electric wiring shall be in accordance with ANSI/NFPA 70, and Division 26 Sections.
- B. Control Wiring: Install control wiring, without splices between terminal points, color-coded, and numbered on both ends. Install in neat, workmanlike manner, securely fastened. Install in accordance with Division 26 Sections.
 - 1. Install circuits over 25-volt with color-coded 90 degrees F, 600 volt insulation, minimum No. 14 AWG wire in conduit.
 - 2. Install circuits under 25-volt with color-coded minimum No. 16 wire in conduit with high temperature (105 degrees F (41 degrees C)) plastic insulation on each conductor and plastic sheath over all. Provide shielded cables where indicated on plans or where required by the instrument provided.
 - 3. Provide surge protection on all control and control power circuits routed outside of the control building. Surge protection shall consist of surge suppressors, transient protectors and optical isolated relays as applicable.

3.7 INSTRUMENT AIR SUPPLY

- A. Mount compressor and tank unit on vibration isolation consisting of springs, with minimum of one inch static deflection and one inch clearance to floor. Isolate air supply with wire-braid reinforced rubber hose.
- B. Supply instrument air from compressor units through filter, dryers, pressure relief valve, with pressure gages, and shutoff and bypass valves.
- C. Install pressure regulating station consisting of pressure regulating valve, particle filter, valved bypass, pressure gage on inlet and outlet, and pressure relief valve.
- D. Locate refrigerated air dryer in discharge air line from tank, and desiccant dryer in discharge line from refrigerated dryer. Mount refrigerated dryer on wall on rubber in shear mounts. Install pressure regulator downstream of dryer. Pipe automatic drain to nearest floor drain.

3.8 CONTROL AIR PIPING

- A. Tubing, pipe and fittings shall conform to Specifications for air piping.
- B. Main instrument air line from compressor to **[fuel] <Insert type>** tanks shall be PVC coated steel pipe. Route pipe in same trench as electrical conduit. All other instrument air piping shall be copper, minimum 1/2 inch diameter or steel pipe, minimum 3/4 inch diameter, except for final connections to actuators, which shall be wire braid reinforced rubber tubing of not over 2 feet in length.
- C. All tubing shall be run parallel to building and equipment lines and shall be continuously supported. Tubing may be supported from walls, pipe racks, walkways or piping. When supporting tubing from insulated pipe the tubing shall be supported

outside the insulation. When tubing spans open areas it shall be continuously supported from punched angle supports made for such purpose.

- D. All tubing shall be stretched to straighten without reducing the O.D. of the tubing. All bends shall be made with mechanical tubing benders to avoid flattening of bends. Tubing shall be installed so that sags and low spots are avoided.
- E. Piping and tubing shall be installed to use as few fittings as possible.
- F. All air lines shall be blown out before installation. After piping is installed, it shall be pressured to 200 psi and all joints soap-tested for leaks.

3.9 INSTALLATION - SOFTWARE

- A. Load and debug all software required for an operable control system as specified, including database, operational parameters, system and application programs.

3.10 DATA CABLES

- A. General: Install all signal transmission components in accordance with ANSI C2, Form 511A, and Division 26 requirements.
- B. Keep cable runs as short as possible, allowing extra length for connections to terminal boards.
- C. Do not bend flexible coaxial cables in a radius less than ten times the cable outside diameter. Use sleeves or grommets to protect cables from vibration at points where they pass around sharp corners or through penetrations.
- D. Grounding shall be in accordance with ANSI C2. All ground wire shall be copper.
- E. Provide transient protection for all non-fiber optic data cables exiting the control building. Transient protection devices shall be compatible with the type of data cable and the communication baud rate.

3.11 CONTROL PANELS

- A. Mount control panels adjacent to associated equipment on vibration-free walls or free-standing angle iron supports. One cabinet may accommodate more than one system. Provide engraved plastic nameplates for instrument and controls inside cabinet and engraved lamoid nameplates on cabinet face.

3.12 TESTING

- A. General: Provide DEN Project Manager-approved operation and acceptance testing of the complete system in accordance with Section [017515 "**System Startup, Testing and Training**"] <Insert section>. The DEN Project Manager's representative will

witness all tests.

- B. Field Test: When installation of the system is complete, calibrate equipment and verify transmission media operation before the system is placed on-line. All testing, calibrating, adjusting, and final field tests shall be completed by the Installer. Provide a detailed cross-check of each sensor within the system by making a comparison between the reading at the sensor and a standard traceable to the National Bureau of Standards. Provide a cross-check of each control point within the system by making a comparison between the control command and the field controlled device. Verify that all systems are operable from local controls in the specified failure mode upon PLC failure or loss of power.

1. Submit the results of functional and diagnostic tests and calibrations to the DEN Project Manager for final system acceptance.

3.13 COMPLETION SERVICES

- A. Start-Up Service: Start up system in accordance with manufacturers' recommendations, and in accordance with Section [017515 "System Startup, Testing and Training"] <Insert section>.
- B. Adjustment: Upon completion of the project, adjust and validate all instruments and other equipment provided under this Section.
- C. Demonstrations: Upon completion of the work, demonstrate system operation to DEN Project Manager's designated representative, for verification of proper operation.
- D. Training: Provide minimum eighty (80) hours of training for DEN Project Manager's operating personnel. Training shall include explanation of drawings and operation and maintenance manuals, walk-through of the job to locate control components, and explanation of adjustment, calibration, and replacement procedures.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement will be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this section. The cost of the work

described in this section shall be included in the Lump Sum Contract price.

END OF SECTION 230800

SECTION 231113 - FACILITY FUEL-OIL PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Fuel-oil pipes, tubes, and fittings.
 - 2. Double-containment piping and fittings.
 - 3. Piping specialties.
 - 4. Manual fuel-oil shutoff valves.
 - 5. Specialty valves.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- B. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- C. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and dimensions of individual components and profiles.
 - 2. Include, where applicable, rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. For valves, include pressure rating, capacity, settings, and electrical connection data of selected models. Provide manufacturers catalog information. Indicate

- valve data and ratings.
4. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For fuel-oil piping.
1. Include system layout, pipe sizes, location, plans, elevations sections, hangers, and supports for multiple pipes.
 2. Include details of location of anchors, alignment guides, and expansion joints and loops.
 3. Scale: [1/4 inch per foot (1:50)] <Insert scale>.
- C. Delegated-Design Submittal: For fuel-oil piping indicated to comply with performance requirements and design criteria.
1. Include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 2. Detail fabrication and assembly of anchors and seismic restraints.
 3. Design Calculations: Calculate requirements for selecting seismic restraints.
 4. Detail fabrication and assembly of pipe anchors, hangers, supports for multiple pipes, and attachments of the same to building structure.

1.5 INFORMATIONAL SUBMITTALS

Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Plans and details, drawn to scale, on which fuel-oil piping is shown and coordinated with other installations, using input from installers of the items involved.
- B. Site Survey: Plans, drawn to scale, on which fuel-oil piping and tanks are shown and coordinated with other services and utilities.
- C. Brazing certificates.
- D. Welding certificates.
 1. Include welders certification of compliance with [ASME SEC 9] [AWS D1.1.] [NCPWB Standard Procedure Specifications] <Insert requirement> and section 059990 "Welding".
- E. Contractor shall submit fully dimensioned spool drawings for all welded piping work. Drawings shall indicate all weld types, sizes, and materials to be used. Spool drawings shall be submitted in compliance with Division 01 requirements. Other file formats will not be accepted.
- F. Pneumatic Leak Test:

1. Contractor shall submit drawings and procedures of the pneumatic leak test to the DEN Project Manager no later than two (2) weeks prior to testing. Contractor may not proceed with tests unless approved in writing by the DEN Project Manager.

G. Field quality-control reports. Include the following:

1. Test procedures used.
2. Test results that comply with requirements.
3. Failed test results and corrective action taken to achieve requirements.

H. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fuel-oil equipment and accessories to include in emergency, operation, and maintenance manuals.

1. Include installation instructions, spare parts lists [, **exploded assembly views**].

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1. Record actual location of piping system, storage tanks, and system components.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Provide [**two**] **<Insert quantity>** repacking kits for each size valve.

1.8 QUALITY ASSURANCE

A. Valves: Manufacturer's name and pressure rating marked on valve body.

B. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.

C. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

D. Pipe Welding Qualifications: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code.

E. Conform to [**applicable**] [**EPA Regulations**] **<Insert requirements>** for installation of fuel oil system.

- F. Provide certificate of compliance from **[authority having jurisdiction]** **<Insert requirements>** indicating approval of installation of fuel oil system.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Lift and support fuel-oil storage tanks only at designated lifting or supporting points, as shown on Shop Drawings. Do not move or lift tanks unless empty.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store pipes and tubes with protective PE coating to avoid damaging the coating and to protect from direct sunlight.
- D. Store PE pipes and valves protected from direct sunlight.

1.10 FIELD CONDITIONS

- A. Interruption of Existing Fuel-Oil Service: Do not interrupt fuel-oil service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary fuel-oil supply according to requirements indicated:
1. Notify DEN Project Manager no fewer than **[two]** **<Insert number>** days in advance of proposed interruption of fuel-oil service.
 2. Do not proceed with interruption of fuel-oil service without DEN Project Manager's written permission.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of flexible, double-containment piping and related equipment that fail in materials or workmanship within specified warranty period.
1. Failures due to defective materials or workmanship for materials including piping, dispenser sumps, watertight sump entry boots, terminations, and other end fittings.
 2. Warranty Period: Minimum **[10]** **[30]** **<Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with ASME B31.9, "Building Services Piping," for fuel-oil piping materials, installation, testing, and inspecting.
- C. Fuel-Oil Valves: Comply with UL 842 and have service mark initials "WOG" permanently marked on valve body.
- D. Comply with requirements of the EPA and of state and local authorities having jurisdiction. Include recording of fuel-oil piping.

2.2 PERFORMANCE REQUIREMENTS

- A. Maximum Operating-Pressure Ratings: 3-psig (21-kPa) fuel-oil supply pressure at oil-fired appliances.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design restraints and anchors and multiple pipe supports and hangers for fuel-oil piping.

2.3 PIPES, TUBES, AND FITTINGS

- A. See "Outdoor Piping Schedule" and "Indoor Piping Schedule" articles for where pipes, tubes, fittings, and joining materials are applied in various services.
- B. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
 - 1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
 - 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M, for butt and socket welding.
 - 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
 - 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - a. Material Group: 1.1.
 - b. End Connections: Threaded or butt welding to match pipe.
 - c. Lapped Face: Not permitted underground.
 - d. Gasket Materials: Asbestos free, ASME B16.20 metallic, or ASME B16.21 nonmetallic, gaskets compatible with fuel oil.
 - e. Bolts and Nuts: ASME B18.2.1, cadmium-plated steel.

5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
 - a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.

2.4 DOUBLE-CONTAINMENT PIPE AND FITTINGS

A. Flexible, Double-Containment Piping: Comply with UL 971.

1. Both the primary and secondary piping systems shall be installed and integrity tested in accordance with the manufacturer's published installation instructions.
2. Design:
 - a. The piping system shall consist of a UL/ULC listed flexible inner primary pipe contained within a ULC listed flexible outer containment pipe, each making connection within a series of surface access containment chambers. All piping runs shall be continuous, whereby there shall be no fittings or piping connections for either the primary or secondary containment pipe which are not visible or accessible from aboveground. The secondary containment piping shall be sized to allow complete removal of the primary piping without excavation. The secondary containment system shall provide watertight containment of the tank's piping and its associated fittings, and of the piping runs.
 - b. Product Compatibility: All components of the Double-Wall Piping System shall be compatible with the products to be stored.
 - c. Corrosion Resistance: All components of the Double-wall Piping System shall be made of non-corrosive materials, or if metallic, such as the fittings and couplings, isolated from corrosion causing agents.
3. Structural Integrity: The outer secondary containment system shall be of such design and materials to have sufficient strength to withstand the maximum underground burial loads and tested in accordance with AASHTO M294. The flexible inner primary piping system shall be capable of withstanding liquid pressure five times greater than the designed operating pressures.
4. Integrity Testing: The outer secondary containment systems shall undergo an air pressure hold test (3 to 5 psi) after installation and before the final backfill. The flexible inner primary piping system shall be subject to 60 psi air pressure hold test prior to final backfill.
5. Monitoring Capability: The design of the secondary containment system shall permit any leak in the primary piping system to be detected by a leak detection system.
6. Access Chambers: Surface access containment chambers shall be located at the tank containing the tank's submersible pump and, where indicated, at locations of terminations of the piping runs. These access chambers shall meet the following requirements:

- a. Provide product-tight connection.
 - b. Provide product-tight pipe and conduit exits.
 - c. Provide sufficient strength to keep out surrounding backfill material.
 - d. Made of non-corrosive, product-compatible and dielectric materials.
7. Aboveground Terminations: Where piping runs transition from buried to aboveground extensions, flexible secondary containment tube shall be terminated by installation of a riser pipe and termination plug, incorporating compression seal and plug with female ports as required for aboveground extension of hard piping.
8. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
- a. Environ Products, Inc.
 - b. OPW.
 - c. Total Containment, Inc.- Enviroflex.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
9. Pipe Materials: PVDF complying with ASTM D 3222 for carrier pipe with mechanical couplings to seal carrier, and PE pipe complying with ASTM D 4976 for containment piping.
10. **[Fiberglass] [PE]** sumps.
11. Watertight sump entry boots, pipe adapters with test ports and tubes, coaxial fittings, and couplings.
12. Minimum Operating Pressure Rating: **10 psig** (69 kPa).
13. Plastic to Steel Pipe Transition Fittings: Factory-fabricated fittings with plastic end matching or compatible with carrier piping, and steel pipe end complying with ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
14. Include design and fabrication of double-containment pipe and fitting assemblies with provision for field installation of cable leak-detection system in annular space between carrier and containment piping.
- B. Rigid, Double-Containment Piping: Comply with UL 971.
1. All underground fuel piping shall be provided as a double containment system. Containment piping and fittings shall be by the same manufacturer.
 2. All underground fuel piping shall be provided as a double containment system. Containment piping and fittings shall be by the same manufacturer.
 3. Underground Piping:
 - a. Underground piping shall be double contained (pipe-in-a-pipe). All containment pipe shall be nonmetal, FRP or approved equivalent. **[Carrier pipe shall be welded steel for sizes larger than 4-inch, with materials and assembly as specified by this Section.]** For sizes 4-inch and smaller, carrier pipe may consist of UL labeled FRP piping material, of type and manufacture suitable for hydrocarbon piping service and rated for a working pressure of 100 psig. FRP carrier piping shall conform to ASTM D-1599, D-2310, and D-2996 as applicable, with fittings, adhesives and curing, proof testing performance, and jointing methods in conformance

with requirements specified. Where FRP carrier piping is used, include all required adapters required for connections to valves or other equipment components, and transitions to steel piping sections.

- b. Except for in-line fittings, fittings for non-metallic piping shall be of the compression molded type, manufactured by use of an epoxy molding compound. Molding compound shall be reinforced with a minimum of 45% chopped glass fiber. In-line fittings shall be filament-wound.
 - 1) Adhesives and curing agents shall be UL Listed DS-8000 series products, with adhesives heat cured in accordance with UL requirements and the manufacturer's instructions.
- c. Nonmetallic pipe and fittings shall be joined using matching tapered spigot and bell/coupling joining system, installed in conformity with manufacturer's instructions. For joining any piping cut in the field, Contractor shall prepare ends by use of a special tapering tool available from the piping products manufacturer, designed to produce proper taper for engagement with fittings.
- d. The inner carrier pipe shall be supported within the containment pipe with doughnut type support rings designed to permit constrained movement of the inner pipe due to thermal expansion. The support rings shall be designed to permit gravity flow of fluids in the annulus between the carrier pipe and containment pipe. The spacing of the support rings shall be determined by the piping system manufacturer to provide adequate support and constraint of the carrier pipe and insure structural integrity of the containment pipe at the burial depths shown on the drawings.
- e. Containment pipe joining methods shall be as recommended by the piping system manufacturer for the system installed.
- f. All double containment pipe fittings shall be designed to permit gravity flow of liquids in the annulus between the carrier pipe and the containment pipe. All fittings shall be prefabricated at the factory for field installation.
- g. Double containment piping fittings and joining methods shall permit radiographic inspection (for steel pipe) and visual inspection of inner carrier pipe under compressed air and hydrostatic tests prior to final closure of the outer containment pipe. Upon completion of all testing and inspection work (and any repairs made necessary), along with field wrapping of joints of steel carrier piping, containment pipe joint closure sleeves shall be positioned as required and sealed in accordance with manufacturer's recommendations. Submit step-by-step procedures to the DEN Project Manager for review and approval.
- h. The double-contained piping system installation shall include coordination of the piping system installation with the leak detection system specified.
- i. For double contained piping system terminations in pits, tank vaults and at risers to aboveground continuations, provide gland seal closures equivalent to the following:
 - 1) PermAlert ESP Drawing DP-107.
 - 2) or approved equal.

4. **Manufacturers:** Subject to compliance with requirements, provide products by

one of the following:

- a. [Ameron International; Fiberglass Pipe Group.](#)
 - b. [Conley Corporation.](#)
 - c. [Perma-Pipe, Inc.](#)
 - d. [Smith Fiberglass; a Brand of National Oilwell Varco.](#)
 - e. [Tricon Piping Systems Inc.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
5. RTRP: ASTM D 2996 or ASTM D 2997 carrier and containment piping and mechanical couplings to seal carrier and containment piping or individually bonded joints.
- a. Minimum Operating-Pressure Rating for RTRP **NPS 2 and NPS 3** (DN 50 and DN 80): **150 psig** (1035 kPa).
 - b. Minimum Operating-Pressure Rating for RTRP **NPS 4 and NPS 6** (DN 100 and DN 150): **125 psig** (860 kPa). Compliance with UL 971 is not required for **NPS 6** (DN 150) and larger piping.
 - c. Fittings: RTRF complying with ASTM D 2996 or ASTM D 2997 and made by RTRP manufacturer; watertight sump entry boots, termination, or other end fittings.
6. Leak-Detection System: Include design and fabrication of double-containment pipe and fitting assemblies with provision for field installation of cable leak-detection system in annular space between carrier and containment piping.

2.5 FLANGED INSULATING JOINTS

- A. Flanged insulating assemblies shall be used for electrostatically isolating cathodically protected pipeline from cathodically unprotected assemblies. Subject to compliance with requirements, provide one of the following:
1. LineBacker Type "E" as manufactured by Pipeline Seal and Insulator, Inc.
 2. or approved equal.
- B. Insulating joint shall consist of a full face insulating gasket, insulating bolt sleeves and double quantity of insulating washers and stainless steel washers.
- C. Insulating materials shall be as follows:
1. Gasket: NEMA Grade G10 retainer conforming to ASTM D 229 with Teflon ring seal on each side of the retainer. Minimum dielectric strength shall be 500 volts per mil (VPM). Compressive strength shall be 50,000 psi. Water absorption shall not exceed 0.05 percent.
 2. Sleeves: Shall be 1/32-inch wall thickness, length to suit two class 150 lb. weld neck flanges, insulating gaskets and valve body thickness. Sleeve shall provide "full" insulation of studs; minimum dielectric strength shall be 500 VPM. Material shall be NEMA Grade G10.

3. Insulating washers: NEMA Grade G10, 1/8-inch thick (minimum).

D. Install in accordance with requirements in Article 3 of this Section.

2.6 CASING INSULATORS AND END SEALS

A. Provide concentric insulators in pipe casing at intervals recommended by the insulator manufacturer to support pipe without sags along the flow line gradient shown on the drawings or as directed by the DEN Project Manager.

B. Insulators shall keep inner double-containment piping and vapor return piping in concentric alignment throughout the casing length without obstructing continuous draining and venting capabilities of the casing.

C. Install one full insulator within 6 inches of each end of casing.

D. Firmly bolt insulators around the pipe without damaging the pipe or its coating.

E. Provide casing insulators of such sizes to properly fit the pipe within the casing.

F. End seals shall have one-piece flexible S-shaped seal with stainless steel bands and clamps.

G. Subject to compliance with requirements, provide one of the following:

1. Model A12G-2 steel insulators, 12 inch wide steel band with polyvinyl chloride liner and 2-inch wide reinforced plastic runners and Model S End Seals as manufactured by Pipeline Seal and Insulator, Inc.
2. or approved equal.

2.7 PIPING SPECIALTIES

A. Metallic Flexible Connectors:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [American Flexible Hose Co., Inc.](#)
 - b. [Flexicraft Industries.](#)
 - c. [FLEX-ING, Inc.](#)
 - d. [Hose Master, LLC.](#)
 - e. [Metraflex Company \(The\).](#)
 - f. [Proco Products, Inc.](#)
 - g. [Tru-Flex Metal Hose LLC.](#)
 - h. [Unaflex.](#)
 - i. **<Insert manufacturer's name>.**
 - j. or approved equal.

2. Listed and labeled for aboveground and underground applications by an NRTL acceptable to authorities having jurisdiction.
3. Stainless-steel bellows with woven, flexible, bronze or stainless-steel, wire-reinforcing protective jacket.
4. Minimum Operating Pressure: **150 psig** (1035 kPa).
5. End Connections: Socket, flanged, or threaded end to match connected piping.
6. Maximum Length: **30 inches** (762 mm.)
7. Swivel end, **50-psig** (345-kPa) maximum operating pressure.
8. Factory-furnished anode for connection to cathodic protection.

B. Nonmetallic Flexible Connectors:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [American Flexible Hose Co., Inc.](#)
- b. [Flexicraft Industries.](#)
- c. [FLEX-ING, Inc.](#)
- d. [Tru-Flex Metal Hose LLC.](#)
- e. **<Insert manufacturer's name>**.
- f. or approved equal.

2. Listed and labeled for underground applications by an NRTL acceptable to authorities having jurisdiction.
3. PTFE bellows with woven, flexible, bronze, or stainless-steel, wire-reinforcing protective jacket.
4. Minimum Operating Pressure: **150 psig** (1035 kPa).
5. End Connections: Socket, flanged, or threaded end to match connected piping.
6. Maximum Length: **30 inches** (762 mm.)
7. Swivel end, **50-psig** (345-kPa) maximum operating pressure.
8. Factory-furnished anode.

C. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for **NPS 2 (DN 50)** and smaller; flanged ends for **NPS 2-1/2 (DN 65)** and larger.
3. Strainer Screen: **[60] [80]**-mesh startup strainer and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: **125 psig** (860 kPa).

D. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for **NPS 2 (DN 50)** and smaller; flanged ends for **NPS 2-1/2 (DN 65)** and larger.
3. Strainer Screen: **[60] [80]**-mesh startup strainer and perforated stainless-steel basket with 50 percent free area.

4. CWP Rating: 125 psig (860 kPa).

E. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: [60] [80]-mesh startup strainer and perforated stainless-steel basket with 57 percent free area.
4. CWP Rating: 750 psig (5170 kPa).

F. Manual Air Vents:

1. Body: Bronze.
2. Internal Parts: Nonferrous.
3. Operator: Screwdriver or thumbscrew.
4. Inlet Connection: NPS 1/2 (DN 15).
5. Discharge Connection: NPS 1/8 (DN 6).
6. CWP Rating: 150 psig (1035 kPa).
7. Maximum Operating Temperature: 225 deg F (107 deg C).

2.8 JOINING MATERIALS

- A. Joint Compound and Tape for Threaded Joints: Suitable for fuel oil.
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F (540 deg C) complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.
- D. Bonding Adhesive for RTRP and RTRF: As recommended by piping and fitting manufacturer.

2.9 SPECIALTY VALVES

A. Pressure Relief Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Anderson Greenwood; Division of Tyco Flow Control.
 - b. Fulflo Specialties, Inc.
 - c. Webster Fuel Pumps & Valves; a division of Capital City Tool, Inc.
 - d. OPW.
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.

2. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
3. Body: Brass, bronze, or cast steel.
4. Springs: Stainless steel, interchangeable.
5. Seat and Seal: Nitrile rubber.
6. Orifice: Stainless steel, interchangeable.
7. Factory-Applied Finish: Baked enamel.
8. Maximum Inlet Pressure: [150 psig (1035 kPa)] <Insert pressure>.
9. Relief Pressure Setting: [60 psig (414 kPa)] <Insert pressure>.

B. Oil Safety Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Anderson Greenwood; Division of Tyco Flow Control.](#)
 - b. [Fulflo Specialties, Inc.](#)
 - c. [OPW.](#)
 - d. [Webster Fuel Pumps & Valves; a division of Capital City Tool, Inc.](#)
 - e. <Insert manufacturer's name>.
 - f. or approved equal.
2. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
3. Body: Brass, bronze, or cast steel.
4. Springs: Stainless steel.
5. Seat and Diaphragm: Nitrile rubber.
6. Orifice: Stainless steel, interchangeable.
7. Factory-Applied Finish: Baked enamel.
8. Manual override port.
9. Maximum Inlet Pressure: [60 psig (414 kPa)] <Insert pressure>.
10. Maximum Outlet Pressure: [3 psig (21 kPa)] <Insert pressure>.

C. Emergency Shutoff Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [EMCO Wheaton; a Gardner Denver company.](#)
 - b. [Franklin Fueling Systems.](#)
 - c. [OPW.](#)
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
2. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
3. [Single] [Double] poppet valve.
4. Body: ASTM A 126, cast iron.
5. Disk: FPM.
6. Poppet Spring: Stainless steel.

7. Stem: Plated brass.
8. O-Ring: FPM.
9. Packing Nut: PTFE-coated brass.
10. Fusible link to close valve at **165 deg F** (74 deg C).
11. Thermal relief to vent line pressure buildup due to fire.
12. Air test port.
13. Maximum Operating Pressure: **0.5 psig** (3.45 kPa).

2.10 MECHANICAL LEAK-DETECTION VALVES

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Franklin Fueling Systems](#).
 2. [Red Jacket Pumps; a division of Veeder-Root](#).
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
- C. Body: ASTM A 126, cast iron.
- D. O-Rings: Elastomeric compatible with fuel oil.
- E. Piston and Stem Seals: PTFE.
- F. Stem and Spring: Stainless steel.
- G. Piston Cylinder: burnished brass.
- H. Indicated Leak Rate: Maximum **3 gph** (3 mL/s) at **10 psig** (69 kPa).
- I. Leak Indication: Reduced flow.

2.11 LEAK-DETECTION AND MONITORING SYSTEM

- A. Cable and Sensor System: Comply with UL 1238.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Caldwell Instruments Inc.](#)
 - b. [Containment Solutions, Inc.](#)
 - c. [Franklin Fueling Systems](#).
 - d. [Gems Sensors & Controls](#).
 - e. [Highland Tank & Manufacturing Company, Inc.](#)
 - f. [INCON](#).
 - g. [In-Situ, Inc.](#)

- h. [MSA; Instrument Div.](#)
 - i. [Perma-Pipe, Inc.](#)
 - j. [Pneumercator Inc.](#)
 - k. [Tyco Thermal Controls LLC.](#)
 - l. [Veeder-Root; a Danaher Corporation company.](#)
 - m. <Insert manufacturer's name>.
 - n. or approved equal.
2. Calibrated leak-detection and monitoring system with probes and other sensors and remote alarm panel for fuel-oil piping.
 3. Include fittings and devices required for testing.

2.12 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant PE film warning tape manufactured for marking and identifying underground utilities, a minimum of **6 inches (152 mm)** wide and **4 mils (0.1 mm)** thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to **30 inches (762 mm)** deep; colored yellow.

2.13 CAUTIONARY SIGNAGE

- A. For installations in which above-ground fuel system piping or storage vessels are exposed to temperatures of 10 degrees F or less, provide conspicuous signs or painted warnings adjacent to fuel system fill stations stating as follows:
 1. **CAUTION: FUEL ADDED TO STORAGE MUST BE FORMULATED TO PROVIDE COLD-WEATHER POUR-POINT OF FROM -12 TO -15 DEGREES F**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas for compliance with requirements for installation tolerances and other conditions affecting performance of fuel-oil piping.
- B. Examine installation of fuel-burning equipment and fuel-handling and storage equipment to verify actual locations of piping connections before installing fuel-oil piping.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

- A. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.
- B. Verify that excavations are to required grade, dry, and not over-excavated.

3.3 PREPARATION

- A. Close equipment shutoff valves before turning off fuel oil to premises or piping section.
- B. Comply with NFPA 30 and NFPA 31 requirements for prevention of accidental ignition.
- C. Ream pipe and tube ends. Remove burrs. **[Bevel plain end ferrous pipe.]**
- D. Remove scale and dirt, on inside and outside, before assembly.
- E. Prepare piping connections to equipment with flanges or unions.
- F. Excavate in accordance with Division 31 for work of this Section.
- G. Backfill in accordance with Division 31 for work of this Section.

3.4 HANDLING PIPE

- A. Shipping, delivering, and installing pipe and accessories shall be handled in such manner as to ensure a sound undamaged condition. Particular care shall be taken not to injure pipe coating and containment pipe when storing pipe, lowering it into trench and when backfilling.
- B. No other pipe or materials of any kind shall be placed inside a pipe or fitting after the coating has been applied.
- C. Storage rack materials shall be 6 inches in bearing width and placed not more than 6 feet apart.
- D. Do not rack pipe more than four sections in height.
- E. Protect and prevent movement of all racked pipe by use of suitable padded material between sections.
- F. All trucks handling coated pipe shall have properly padded bolsters, padded chains, and padded binders so as to not damage the coating.
- G. Pipe shall not be dropped or rolled off the truck, but shall be carefully lowered onto skids using padded mechanical equipment.
- H. Coated, wrapped, and double-contained sections of pipe must be lifted with nylon slings of approved width and shall not be dragged or pulled into position.

3.5 LAYING UNDERGROUND PIPE

- A. Lay, embed, and maintain all underground pipelines to the flow-line elevation and grades shown on the drawings or as approved by the DEN Project Manager. Pipelines shall be graded uniformly between invert elevations.
- B. Excavation, backfill, and compaction shall be in accordance with Division 31. Trench backfill from not less than six inches below the bottom of the pipe to not less than six inches above the top of the pipe shall consist of bedding material as specified.
- C. The full length of each section of pipe shall rest solidly upon the bedding material.
- D. Any pipe that has the grade or joint disturbed after being laid shall be taken up and relaid.
- E. Do not lay pipe in water or when trench conditions are, in the judgment of the DEN Project Manager, unsuitable.
- F. Anchor pipe during installation to prevent flotation prior to backfilling and placing into service.
- G. When work is not in progress, securely close open ends of pipe or fittings using approved expanding type watertight plugs to prevent trench water, earth, or other foreign substance from entering the pipe or fittings.
- H. **[Pipe coating shall be inspected with an electronic holiday tester in accordance with Section 15195 prior to backfilling.]**

3.6 WELDING

- A. Welding electrodes shall be designed and made for use with the specific pipe metal to which it is applied and shall conform to the applicable AWS Specifications for welding rods and electrodes. Welding electrodes shall be suitably shielded.
- B. Welding shall be accomplished by the use of the shielded metallic arc process and shall be performed in strict accordance with the requirements of ANSI B31.9.

3.7 PIPING INSTALLATION - GENERAL

- A. Install in accordance with manufacturer's instructions **[and AP1 1615]**.
- B. Provide non-conducting dielectric fittings wherever jointing dissimilar metals. Install to NACE RP-01-69.

NACE RP-01-69 - Control of External Corrosion on Underground or Submerged Piping Systems.

- C. Route piping in orderly manner and maintain gradient.
- D. Install interior piping to conserve building space and not interfere with use of space.

- E. Group piping whenever practical at common elevations.
- F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- G. Provide clearance for installation of insulation and access to valves and fittings.
- H. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Division 08.
- I. Establish elevations of buried piping outside the building to ensure not less than [3] <Insert depth> ft of cover.
- J. Where pipe support members are welded to structural building framing, scrape, brush clean, weld, and apply one coat of zinc rich primer.
- K. Prepare pipe, fittings, supports, and accessories not prefinished, ready for finish painting. Refer to Division 09.
- L. Identify piping systems, including underground piping. Refer to Section 230553 "Identification for HVAC Piping and Equipment".
- M. Install valves with stems upright or horizontal, not inverted.
- N. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.
- O. Lever handle valves: Install valve handle so that the handle opens in the direction of fluid flow.

3.8 OUTDOOR PIPING INSTALLATION

- A. Install Underground Fuel-Oil Piping Buried:
 - 1. Under Compacted Backfill: [18 inches (457 mm)] <Insert dimension> below finished grade.
 - 2. Under Asphalt 2 Inches (51 mm) Thick: 8 inches (203 mm) below bottom of asphalt.
 - 3. Under 4 Inches (102 mm) of Reinforced Concrete in Areas Subject to Vehicle Traffic: 4 inches (102 mm) below bottom of concrete.
 - 4. If fuel-oil piping is installed with less than [12 inches (305 mm)] <Insert dimension> of cover to finished grade, install in containment piping.
 - 5. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.
- B. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining, to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer. Review protective coating damage with DEN Project

- Manager prior to repair.
3. Replace pipe having damaged PE coating with new pipe.
- C. Install double-containment, fuel-oil pipe at a minimum slope of 1 percent downward toward fuel-oil storage tank sump.
 - D. Install vent pipe at a minimum slope of 2 percent downward toward fuel-oil storage tank sump.
 - E. Assemble and install entry boots for pipe penetrations through sump sidewalls for liquid-tight joints.
 - F. Install metal pipes and tubes, fittings, valves, and flexible connectors at piping connections to AST and UST.
 - G. Install fittings for changes in direction in rigid pipe.
 - H. Install system components with pressure rating equal to or greater than system operating pressure.

3.9 INDOOR PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction to allow for mechanical installations.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings at a height that allows sufficient space for ceiling panel removal.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Comply with requirements for equipment specifications for roughing-in requirements.
- I. Conceal pipe installations in walls, pipe spaces, or utility spaces; above ceilings; below grade or floors; and in floor channels unless indicated to be exposed to view.
- J. Prohibited Locations:

1. Do not install fuel-oil piping in or through HVAC ducts and plenums, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 2. Do not install fuel-oil piping in solid walls or partitions.
- K. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- L. Connect branch piping from top or side of horizontal piping.
- M. Install unions in pipes NPS 2 (DN 50) and smaller at final connection to each piece of equipment and elsewhere as indicated. Unions are not required on flanged devices.
- N. Do not use fuel-oil piping as grounding electrode.
- O. Install sleeves and sleeve seals for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- P. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.10 VALVE INSTALLATION

- A. Install manual fuel-oil shutoff valves on branch connections to fuel-oil appliance.
- B. Install valves in accessible locations.
- C. Install oil safety valves at inlet of each oil-fired appliance.
- D. Install pressure relief valves in distribution piping between the supply and return lines.
- E. Install one-piece, bronze ball valve with hose end connection at low points in fuel-oil piping. Comply with requirements in Section 230523.12 "Ball Valves for HVAC Piping."
- F. Install manual air vents at high points in fuel-oil piping.
- G. Install emergency shutoff valves at dispensers.

3.11 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs

and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to "Quality Assurance" Article.
1. Bevel plain ends of steel pipe.
 2. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tubing" Chapter.
- F. Flanged Joints: Install gasket material, size, type, and thickness for service application. Install gasket concentrically positioned.
- G. Flared Joints: Comply with SAE J513. Tighten finger tight then use wrench according to fitting manufacturer's written instructions. Do not overtighten.
- H. Fiberglass-Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.12 FLANGED INSULATING JOINTS

- A. Install insulating joints at the locations indicated on the drawings. Where not shown on the drawings, they shall be installed at the first flange (within the structure) nearest to the structure's wall or the first flange wherever underground piping comes aboveground.
- B. Flange assemblies shall provide a minimum resistance of one million ohms measured between each stud and both flanges when tested in the dry condition.

3.13 HANGER AND SUPPORT INSTALLATION

- A. Pipe hanger and support and equipment support materials and installation requirements are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
 1. NPS 1-1/4 (DN 32) and Smaller: Maximum span, 84 inches (2130 mm); minimum rod size, 3/8 inch (10 mm).
 2. NPS 1-1/2 (DN 40): Maximum span, 108 inches (2740 mm); minimum rod size, 3/8 inch (10 mm).

3. **NPS 2 (DN 50)**: Maximum span, **10 feet (3 m)**; minimum rod size, **3/8 inch (10 mm)**.
 4. **NPS 2-1/2 (DN 65)**: Maximum span, **11 feet (3.4 m)**; minimum rod size, **1/2 inch (13 mm)**.
 5. **NPS 3 (DN 80)**: Maximum span, **12 feet (3.7 m)**; minimum rod size, **1/2 inch (13 mm)**.
 6. **NPS 4 (DN 100)**: Maximum span, **13 feet (4 m)**; minimum rod size, **5/8 inch (16 mm)**.
- C. Support vertical steel pipe at each floor and at spacing not greater than **15 feet (4.5 m)**.
- D. Install hangers for horizontal, drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:
1. **NPS 3/4 (DN 20) and Smaller**: Maximum span, **60 inches (1524 mm)**; minimum rod size, **3/8 inch (10 mm)**.
 2. **NPS 1 (DN 25)**: Maximum span, **72 inches (1830 mm)**; minimum rod size, **3/8 inch (10 mm)**.
 3. **NPS 1-1/4 (DN 32)**: Maximum span, **84 inches (2130 mm)**; minimum rod size, **3/8 inch (10 mm)**.
 4. **NPS 1-1/2 and NPS 2 (DN 40 and DN 50)**: Maximum span, **96 inches (2440 mm)**; minimum rod size, **3/8 inch (10 mm)**.
 5. **NPS 2-1/2 (DN 65)**: Maximum span, **108 inches (2740 mm)**; minimum rod size, **1/2 inch (13 mm)**.
 6. **NPS 3 (DN 80)**: Maximum span, **10 feet (3 m)**; minimum rod size, **1/2 inch (13 mm)**.
 7. **NPS 4 (DN 100)**: Maximum span, **11 feet (3.4 m)**; minimum rod size, **5/8 inch (16 mm)**.
- E. Support vertical copper tube at each floor and at spacing not greater than **10 feet (3 m)**.
- 3.14 LEAK-DETECTION AND MONITORING SYSTEM INSTALLATION
- A. Install leak-detection and monitoring system. Install alarm panel inside building where indicated.
 - B. Double-Containment, Fuel-Oil Piping: Install leak-detection sensor [**probes at low points in piping**] [**cable probes in interstitial space of double-containment piping**].
- 3.15 CONNECTIONS
- A. Where installing piping adjacent to equipment, allow space for service and maintenance.
 - B. Install unions, in piping **NPS 2 (DN 50)** and smaller, adjacent to each valve and at final connection to each piece of equipment having threaded pipe connection.

- C. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.
- D. Connect piping to equipment with shutoff valve and union. Install union between valve and equipment.
- E. Install flexible piping connectors at final connection to burners or oil-fired appliances.

3.16 LABELING AND IDENTIFYING

- A. Nameplates, pipe identification, valve tags, and signs are specified in Section 230553 "Identification for HVAC Piping and Equipment."
- B. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplates and signs on or near each service regulator, service meter, and earthquake valve.
 - 1. Text: In addition to identifying unit, distinguish between multiple units; inform operator of operational requirements; indicate safety and emergency precautions; and warn of hazards and improper operations.
- C. Install detectable warning tape directly above fuel-oil piping, [12 inches (304 mm)] <Insert dimension> below finished grade, except [6 inches (152 mm)] <Insert dimension> below subgrade under pavements and slabs. Terminate tracer wire in an accessible area, and identify as "tracer wire" for future use with plastic-laminate sign.
 - 1. Piping: Over underground fuel-oil distribution piping.

3.17 FIELD QUALITY CONTROL

Pipe test pressures in this article are required by NFPA 31. Verify requirements with authorities having jurisdiction.

- A. Pressure Test Piping: Minimum hydrostatic or pneumatic test-pressures measured at highest point in system:
 - 1. Fuel-Oil Distribution Piping: Minimum [5 psig (34.5 kPa)] <Insert dimension> for minimum [30] <Insert time> minutes.
 - 2. Fuel-Oil, Double-Containment Piping:
 - a. Carrier Pipe: Minimum [5 psig (34.5 kPa)] <Insert dimension> for minimum [30] <Insert time> minutes.
 - b. Containment Conduit: Minimum [5 psig (34.5 kPa)] <Insert dimension> for minimum [60] <Insert time> minutes.
 - 3. Suction Piping: Minimum 20-in. Hg (68 kPa) for minimum [30] <Insert time> minutes.
 - 4. Isolate storage tanks if test pressure in piping will cause pressure in storage tanks to exceed 10 psig (69 kPa).

- B. Inspect and test fuel-oil piping according to NFPA 31, "Tests of Piping" Paragraph, and in accordance with Leak Testing article below, and according to requirements of authorities having jurisdiction.
- C. Test leak-detection and monitoring system for accuracy by manually operating sensors and checking against alarm panel indication.
- D. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Bleed air from fuel-oil piping using manual air vents.
- F. Fuel-oil piping and equipment will be considered defective if it does not pass tests and inspections.
- G. Prepare test and inspection reports.

3.18 LEAK TESTING:

- A. Provide temporary equipment for testing, including pump and gages. Test piping system before insulation is installed, wherever feasible, and remove control devices before testing. Subject entire piping systems to leak tests, either as a whole, or in sections; but leave no part untested.
- B. Test gauges shall have a range that provide for the test pressure to be in the middle third of the gauge scale.
- C. Contractor shall provide written notification to the DEN Project Manager and DEN Inspector at least 48 hours before performing leak test. Perform all tests in the presence of the authorized City representative.
- D. Hydrostatic Leak Test:
 - 1. Perform hydrostatic leak test on all piping systems.
 - 2. Hydrostatic Leak Test Procedure:
 - a. Leak test procedures shall comply with ASME B31.9.
 - b. Fill piping systems with clear water, vent all air, and pressurize at 150% of operating pressure, (but not less than 100 psi) for 2 hours. Test fails if leakage is observed, or pressure drop exceeds 5% of test pressure.
- E. Pneumatic Leak Test:
 - 1. General: Pneumatic leak tests shall only be used on piping with restricted access, under freezing conditions, or where water leakage would damage critical DEN operational equipment. Contractor shall submit a written request for test in accordance with the Submittals article of this Section.
 - 2. Pneumatic Test Procedure:
 - a. Contractor shall submit safety plan for pneumatic testing prior to test.

- b. General: Compressed gas poses the risk of sudden release of stored energy. For that reason, pneumatic testing shall be used only within the following limitations:
 - 1) The piping system does not contain cast iron pipe or plastic pipe subject to brittle failure.
 - 2) The system does not contain soldered or solvent cement joints over NPS 2.
 - 3) The test pressure does not exceed 150 psig.
 - c. Test Medium: The gas shall be nonflammable and nontoxic.
 - d. Preliminary Test: Prior to application of full pneumatic test pressure, a preliminary test of not more than 10 psig shall be applied to reveal possible major leaks. Pneumatic Test Pressure:
 - 1) Except as limited in subparagraph below, the test pressure shall not exceed 1.25 times the design pressure. Pressure shall be applied in several stages, allowing time for the system to reach equilibrium at each stage.
 - 2) The test pressure shall not exceed the maximum allowable pneumatic test pressure for any vessel, pump, valve, or other component in the system under test.
 - e. Examination for Leakage: After the preliminary test, pressure shall be raised in stages of not more than 25% up to full pneumatic test pressure, allowing time for equalization of strains and detection of major leaks at each stage. Following the application of test pressure for at least 10 minutes, the pressure may be reduced to design pressure and examination shall be made for leakage of the piping. Leaks may be detected by soap bubble, halogen gas, scented gas, test gage monitoring, ultrasonic, or other suitable means. If leaks are found, pressure shall be vented, appropriate repair or replacement shall be made, and the pneumatic test repeated until no leakage is found.
 - f. Contractor shall measure the surface temperature of the pipe for the duration of testing. The pneumatic test will be deemed successful only when the test pressure can be held at a constant pipe surface temperature for a period of no less than 10 continuous minutes. Record of the pipe temperatures and pressures during the duration of the test shall be submitted to the DEN Project Manager following completion of the test.
3. Testing shall be witnessed by DEN Mechanical Inspector and DEN Project Manager or Designated Representative.
 4. Repair piping systems which fail required piping test, by disassembly and reinstallation, using new materials to extent required to overcome leakage. Do not use chemicals, stop-leak compounds, mastics, or other temporary repair methods.
 5. Drain test water from piping systems after testing and repair work that has been completed.
 6. Prepare written report of testing procedures and result.

3.19 OUTDOOR PIPING SCHEDULE

- A. Underground Fuel-Oil Piping: **[Flexible]** **[Rigid]**, double-containment piping. Size indicated is carrier-pipe size.
- B. Underground fuel-oil-tank fill and vent piping shall be **[one of]** the following:
1. **[NPS 2 (DN 50)]** **<Insert pipe size>** and Smaller: Steel pipe, steel or malleable-iron threaded fittings, and threaded joints. Coat pipe and fittings with protective coating for steel piping.
 2. **[NPS 2-1/2 (DN 65)]** **<Insert pipe size>** and Larger: Steel pipe, steel welding fittings, and welded joints. Coat pipe and fittings with protective coating for steel piping.
- C. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- D. Aboveground fuel-oil piping shall be **[one of]** the following:
1. **[NPS 2 (DN 50)]** **<Insert pipe size>** and Smaller: Steel pipe, steel or malleable-iron threaded fittings, and threaded joints.
 2. **[NPS 2-1/2 (DN 65)]** **<Insert pipe size>** and Larger: Steel pipe, steel welding fittings, and welded joints.
 3. **[Annealed]** **[Drawn]**-temper copper tube with wrought-copper fittings and brazed joints.

3.20 INDOOR PIPING SCHEDULE

- A. Aboveground fuel-oil piping shall be **[one of]** the following:
1. **[NPS 1/2 (DN 15)]** **<Insert pipe size>** and Smaller: Annealed-temper copper pipe, wrought copper fittings, and brazed or flared joints.
 2. **[NPS 5/8 to NPS 2 (DN 18 to DN 50)]** **<Insert pipe size>**: **[Steel pipe, steel or malleable-iron threaded fittings, and threaded joints]**

3.21 **[NPS 2-1/2 (DN 65)]** **<Insert pipe size>** and Larger: **[Steel pipe, steel fittings, and welded or flanged joints]** SHUTOFF VALVE SCHEDULE

- A. Valves for aboveground distribution piping **NPS 2 (DN 50)** and smaller shall be **[one of]** the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, **[full]** **[regular]**-port, bronze ball valves with bronze trim.
- B. Distribution piping valves for pipe **NPS 2-1/2 (DN 65)** and larger shall be **[one of]** the following:
1. Two-piece, **[full]** **[regular]**-port, bronze ball valves with bronze trim.
 2. Bronze, **[nonlubricated]** **[lubricated]** plug valve.

- C. Valves in branch piping for single appliance shall be **one of** the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, **full** **regular**-port, bronze ball valves with bronze trim.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 231113

SECTION 231123 - FACILITY NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Pipes, tubes, and fittings.
 - 2. Piping specialties.
 - 3. Piping and tubing joining materials.
 - 4. Valves.
 - 5. Pressure regulators.
 - 6. Service meters.
 - 7. Concrete bases.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

1.4 PERFORMANCE REQUIREMENTS

- A. Minimum Operating-Pressure Ratings:
 - 1. Piping and Valves: [100 psig (690 kPa)] <Insert value> minimum unless otherwise indicated.
 - 2. Service Regulators: [65 psig (450 kPa)] [100 psig (690 kPa)] <Insert value> minimum unless otherwise indicated.

3. Minimum Operating Pressure of Service Meter: [5 psig (34.5 kPa)] [10 psig (69 kPa)] [20 psig (138 kPa)] [65 psig (450 kPa)] <Insert value>.
 - B. Natural-Gas System Pressure within Buildings: [0.5 psig (3.45 kPa) or less] [More than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa)] [More than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa)] <Insert pressure range>.
 - C. Natural-Gas System Pressures within Buildings: Two pressure ranges. Primary pressure is more than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa), and is reduced to secondary pressure of 0.5 psig (3.45 kPa) or less.
 - D. Natural-Gas System Pressures within Buildings: Two pressure ranges. Primary pressure is more than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa), and is reduced to secondary pressure of more than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa).
 - E. Natural-Gas System Pressures within Buildings: Three pressure ranges. Primary pressure is more than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa), and is reduced to secondary pressures of more than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa), and is reduced again to pressures of 0.5 psig (3.45 kPa) or less.
 - F. Design values of fuel gas supplied for these systems are as follows:
 1. Nominal Heating Value: 834 Btu/ 1,000 cu. ft.
 2. Nominal Specific Gravity: 0.65.
 - G. Delegated Design: Design restraints and anchors for natural-gas piping and equipment, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- 1.5 ACTION SUBMITTALS
- A. Product Data: For each type of the following:
 1. Piping specialties.
 2. Corrugated, stainless-steel tubing with associated components.
 3. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
 4. Pressure regulators. Indicate pressure ratings and capacities, and settings of selected models.
 5. Service meters. Indicate pressure ratings and capacities. Include bypass fittings, bypass fittings and meter bars, meter bars, supports.
 6. Dielectric fittings.
 7. Include data substantiating that materials comply with requirements.
 - B. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion

joints and loops. [**Show different pressure zones and indicate pressure for each zone.**]

1. Shop Drawing Scale: [**1/4 inch per foot (1:50)**] **<Insert scale>**.
2. Detail mounting, supports, and valve arrangements for[**service meter assembly and**] pressure regulator assembly.
3. Wiring Diagrams: Power, signal, and control wiring. Differentiate between manufacturer-installed and field-installed wiring.

C. Delegated-Design Submittal: For natural-gas piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.
- B. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.
- C. Qualification Data: For qualified professional engineer.
- D. Installer certificates for piping systems.
- E. Welding certificates. Include welders certification of compliance with [**ASME SEC 9**] [**AWS D1.1.**] **<Insert requirement>** and section 059990 "Welding".
- F. Field quality-control reports. Indicate and interpret test results for compliance with performance requirements.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For natural gas specialties and accessories, [**motorized gas valves**] [**pressure regulators**] [**and**] [**service meters**] to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- C. ANSI Standard: Comply with ANSI Z223.1, "National Fuel Gas Code."
- D. FM Standard: Provide components listed in FM's "Fire Protection Approval Guide" if specified to be FM approved.
- E. IAS Standard: Provide components listed in IAS's "Directory of A. G. A. and C. G. A Certified Appliances and Accessories" if specified to be IAS listed.
- F. UL Standard: Provide components listed in UL's "Gas and Oil Equipment Directory" if specified to be UL listed.
- G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping according to requirements of authorities having jurisdiction. Handle cautiously to avoid spillage and ignition. Notify fuel gas supplier. Handle flammable liquids used by Installer with proper precautions and do not leave on premises from end of one day to beginning of next day.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.
- D.

1.10 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.
- B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide purging and startup of natural-gas supply according to requirements indicated:

1. Notify DEN Project Manager no fewer than **[five (5)] <Insert number>** days in advance of proposed interruption of natural-gas service.
2. Do not proceed with interruption of natural-gas service without DEN Project Manager's written permission.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Section 083113 "Access Doors and Frames."

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

See Part 3 piping schedule articles to determine where pipes, tubes, fittings, and joining materials are applied in various services.

- A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
 1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - a. Material Group: 1.1.
 - b. End Connections: Threaded or butt welding to match pipe.
 - c. Lapped Face: Not permitted underground.
 - d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
 - e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
 5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.

- a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.
6. Mechanical Couplings:
 - a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1) Dresser Piping Specialties; Division of Dresser, Inc.
 - 2) Smith-Blair, Inc.
 - 3) **<Insert manufacturer's name>**.
 - 4) or approved equal.
 - b. **[Stainless-steel] [Steel]** flanges and tube with epoxy finish.
 - c. Buna-nitrile seals.
 - d. **[Stainless-steel] [Steel]** bolts, washers, and nuts.
 - e. Coupling shall be capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
 - f. Steel body couplings installed underground on plastic pipe shall be factory equipped with anode.
- B. Corrugated, Stainless-Steel Tubing: Comply with ANSI/IAS LC 1.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. OmegaFlex, Inc.
 - b. Parker Hannifin Corporation; Parflex Division.
 - c. Titeflex.
 - d. Tru-Flex Metal Hose Corp.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Tubing: ASTM A 240/A 240M, corrugated, Series 300 stainless steel.
 3. Coating: PE with flame retardant.
 - a. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1) Flame-Spread Index: **[25] <Insert value>** or less.
 - 2) Smoke-Developed Index: **[50] [450] <Insert value>** or less.
 4. Fittings: Copper-alloy mechanical fittings with ends made to fit and listed for use with corrugated stainless-steel tubing and capable of metal-to-metal seal without gaskets. Include brazing socket or threaded ends complying with ASME B1.20.1.
 5. Striker Plates: Steel, designed to protect tubing from penetrations.
 6. Manifolds: Malleable iron or steel with factory-applied protective coating. Threaded connections shall comply with ASME B1.20.1 for pipe inlet and corrugated tubing outlets.
 7. Operating-Pressure Rating: **5 psig (34.5 kPa)**.

C. Drawn-Temper Copper Tube: Comply with [ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 837, Type G].

1. Copper Fittings: ASME B16.22, wrought copper, and streamlined pattern.
2. Brazing Filler Metals: AWS A5.8, Silver Classification BAg-1. Filler metal containing phosphorus is prohibited.
3. Bronze Flanges and Flanged Fittings: ASME B16.24, Class 150.
 - a. Gasket Material: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
 - b. Bolts and Nuts: ASME B18.2.1, carbon steel or stainless steel.
4. Protective Coating for Underground Tubing: Factory-applied, extruded PE a minimum of 0.022 inch (0.56 mm) thick.

D. Annealed-Temper Copper Tube: Comply with [ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 837, Type G].

1. Copper Fittings: ASME B16.22, wrought copper, and streamlined pattern.
2. Brazing Filler Metals: AWS A5.8, Silver Classification BAg-1. Filler metal containing phosphorus is prohibited.
3. Flare Fittings: Comply with ASME B16.26 and SAE J513.
 - a. Copper fittings with long nuts.
 - b. Metal-to-metal compression seal without gasket.
 - c. Dryseal threads complying with ASME B1.20.3.
4. Protective Coating for Underground Tubing: Factory-applied, extruded PE a minimum of 0.022 inch (0.56 mm) thick.

E. Tin-Lined Copper Tube: ASTM B 280, seamless, annealed, with interior tin-plated lining.

1. Flare Fittings: Comply with ASME B16.26 and SAE J513.
 - a. Copper fittings with long nuts.
 - b. Metal-to-metal compression seal without gasket.
 - c. Dryseal threads complying with ASME B1.20.3.
2. Brazing Filler Metals: AWS A5.8, Silver Classification BAg-1. Filler metal containing phosphorus is prohibited.

2.2 PIPING SPECIALTIES

A. Appliance Flexible Connectors:

1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.
3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
4. Corrugated stainless-steel tubing with polymer coating.

5. Operating-Pressure Rating: 0.5 psig (3.45 kPa).
6. End Fittings: Zinc-coated steel.
7. Threaded Ends: Comply with ASME B1.20.1.
8. Maximum Length: 72 inches (1830 mm.)

B. Quick-Disconnect Devices: Comply with ANSI Z21.41.

1. Copper-alloy convenience outlet and matching plug connector.
2. Nitrile seals.
3. Hand operated with automatic shutoff when disconnected.
4. For indoor or outdoor applications.
5. Adjustable, retractable restraining cable.

C. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
3. Strainer Screen: [40] [60]-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig (862 kPa).

D. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
3. Strainer Screen: [40] [60]-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig (862 kPa).

E. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: [40] [60]-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
4. CWP Rating: 750 psig (5170 kPa).

F. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.3 PROTECTIVE COATING

A. Furnish pipe and fittings with factory-applied, corrosion-resistant polyethylene coating

for use in corrosive atmosphere.

2.4 JOINING MATERIALS

- A. Joint Compound and Tape: Suitable for natural gas.
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F (540 deg C) complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

2.5 MANUAL GAS SHUTOFF VALVES

- A. See "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles for where each valve type is applied in various services.
- B. General Requirements for Metallic Valves, NPS 2 (DN 50) and Smaller: Comply with ASME B16.33.
 - 1. CWP Rating: [125 psig (862 kPa)] <Insert pressure>.
 - 2. Threaded Ends: Comply with ASME B1.20.1.
 - 3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
 - 4. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 - 5. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch (25 mm) and smaller.
 - 6. Service Mark: Valves 1-1/4 inches (32 mm) to NPS 2 (DN 50) shall have initials "WOG" permanently marked on valve body.
- C. General Requirements for Metallic Valves, NPS 2-1/2 (DN 65) and Larger: Comply with ASME B16.38.
 - 1. CWP Rating: [125 psig (862 kPa)] <Insert pressure>.
 - 2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
 - 3. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 - 4. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- D. Gas Stops: Bronze body with AGA stamp, plug type with bronze plug and flat or square head, ball type with chrome-plated brass ball and lever handle, or butterfly valve with stainless-steel disc and fluorocarbon elastomer seal and lever handle; 2-psig (13.8-kPa) minimum pressure rating.
- E. One-Piece, Bronze Ball Valve with Bronze Trim: MSS SP-110.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [BrassCraft Manufacturing Company; a Masco company.](#)
 - b. [Conbraco Industries, Inc.; Apollo Div.](#)
 - c. [Lyall, R. W. & Company, Inc.](#)
 - d. [McDonald, A. Y. Mfg. Co.](#)
 - e. [Perfection Corporation; a subsidiary of American Meter Company.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
 2. Body: Bronze, complying with ASTM B 584.
 3. Ball: Chrome-plated brass.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE; blowout proof.
 6. Packing: Separate packnut with adjustable-stem packing threaded ends.
 7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 8. CWP Rating: 600 psig (4140 kPa).
 9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- F. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [BrassCraft Manufacturing Company; a Masco company.](#)
 - b. [Conbraco Industries, Inc.; Apollo Div.](#)
 - c. [Lyall, R. W. & Company, Inc.](#)
 - d. [McDonald, A. Y. Mfg. Co.](#)
 - e. [Perfection Corporation; a subsidiary of American Meter Company.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
 2. Body: Bronze, complying with ASTM B 584.
 3. Ball: Chrome-plated bronze.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE; blowout proof.
 6. Packing: Threaded-body packnut design with adjustable-stem packing.
 7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 8. CWP Rating: 600 psig (4140 kPa).
 9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

G. Two-Piece, Regular-Port Bronze Ball Valves with Bronze Trim: MSS SP-110.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [BrassCraft Manufacturing Company; a Masco company.](#)
 - b. [Conbraco Industries, Inc.; Apollo Div.](#)
 - c. [Lyall, R. W. & Company, Inc.](#)
 - d. [McDonald, A. Y. Mfg. Co.](#)
 - e. [Perfection Corporation; a subsidiary of American Meter Company.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
2. Body: Bronze, complying with ASTM B 584.
3. Ball: Chrome-plated bronze.
4. Stem: Bronze; blowout proof.
5. Seats: Reinforced TFE.
6. Packing: Threaded-body packnut design with adjustable-stem packing.
7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
8. CWP Rating: **600 psig** (4140 kPa).
9. Listing: Valves **NPS 1** (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

H. Bronze Plug Valves: MSS SP-78.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Lee Brass Company.](#)
 - b. [McDonald, A. Y. Mfg. Co.](#)
 - c. **<Insert manufacturer's name>.**
 - d. or approved equal.
2. Body: Bronze, complying with ASTM B 584.
3. Plug: Bronze.
4. Ends: Threaded, socket, or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
5. Operator: Square head or lug type with tamperproof feature where indicated.
6. Pressure Class: **125 psig** (862 kPa).
7. Listing: Valves **NPS 1** (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

I. Cast-Iron, Nonlubricated Plug Valves: MSS SP-78.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [McDonald, A. Y. Mfg. Co.](#)
 - b. [Mueller Co.; Gas Products Div.](#)
 - c. [Xomox Corporation; a Crane company.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Body: Cast iron, complying with ASTM A 126, Class B.
 3. Plug: Bronze or nickel-plated cast iron.
 4. Seat: Coated with thermoplastic.
 5. Stem Seal: Compatible with natural gas.
 6. Ends: Threaded or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 7. Operator: Square head or lug type with tamperproof feature where indicated.
 8. Pressure Class: **125 psig** (862 kPa).
 9. Listing: Valves **NPS 1 (DN 25)** and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- J. Cast-Iron, Lubricated Plug Valves: MSS SP-78.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Flowserve.](#)
 - b. [Homestead Valve; a division of Olson Technologies, Inc.](#)
 - c. [McDonald, A. Y. Mfg. Co.](#)
 - d. [Milliken Valve Company.](#)
 - e. [Mueller Co.; Gas Products Div.](#)
 - f. [R&M Energy Systems, A Unit of Robbins & Myers, Inc.](#)
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Body: Cast iron, complying with ASTM A 126, Class B.
 3. Plug: Bronze or nickel-plated cast iron.
 4. Seat: Coated with thermoplastic.
 5. Stem Seal: Compatible with natural gas.
 6. Ends: Threaded or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 7. Operator: Square head or lug type with tamperproof feature where indicated.
 8. Pressure Class: **125 psig** (862 kPa).
 9. Listing: Valves **NPS 1 (DN 25)** and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- K. PE Ball Valves: Comply with ASME B16.40.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Kerotest Manufacturing Corp.](#)
 - b. [Lyall, R. W. & Company, Inc.](#)
 - c. [Perfection Corporation; a subsidiary of American Meter Company.](#)
 - d. **<Insert manufacturer's name>.**
 - e. or approved equal.
2. Body: PE.
3. Ball: PE.
4. Stem: Acetal.
5. Seats and Seals: Nitrile.
6. Ends: Plain or fusible to match piping.
7. CWP Rating: [80 psig (552 kPa)] **<Insert pressure>.**
8. Operating Temperature: [Minus 20 to plus 140 deg F (Minus 29 to plus 60 deg C)] **<Insert temperature range>.**
9. Operator: Nut or flat head for key operation.
10. Include plastic valve extension.
11. Include tamperproof locking feature for valves where indicated on Drawings.

L. Valve Boxes:

1. Cast-iron, two-section box.
2. Top section with cover with "GAS" lettering.
3. Bottom section with base to fit over valve and barrel a minimum of 5 inches (125 mm) in diameter.
4. Adjustable cast-iron extensions of length required for depth of bury.
5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head, and with stem of length required to operate valve.

2.6 MOTORIZED GAS VALVES

A. Automatic Gas Valves: Comply with ANSI Z21.21.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [ASCO Power Technologies, LP; Division of Emerson.](#)
 - b. [Dungs, Karl, Inc.](#)
 - c. [Eaton Corporation; Controls Div.](#)
 - d. [Eclipse Combustion, Inc.](#)
 - e. [Honeywell International Inc.](#)
 - f. [Johnson Controls.](#)
 - g. **<Insert manufacturer's name>.**
 - h. or approved equal.
2. Body: Brass or aluminum.
3. Seats and Disc: Nitrile rubber.

4. Springs and Valve Trim: Stainless steel.
5. Normally closed.
6. Visual position indicator.
7. **[Electrical] [Mechanical]** operator for actuation by appliance automatic shutoff device.

B. Electrically Operated Valves: Comply with UL 429.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASCO Power Technologies, LP; Division of Emerson.
 - b. Dungs, Karl, Inc.
 - c. Eclipse Combustion, Inc.
 - d. Goyen Valve Corp.; Tyco Environmental Systems.
 - e. Magnatrol Valve Corporation.
 - f. Parker Hannifin Corporation; Climate & Industrial Controls Group; Skinner Valve Div.
 - g. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Pilot operated.
3. Body: Brass or aluminum.
4. Seats and Disc: Nitrile rubber.
5. Springs and Valve Trim: Stainless steel.
6. 120-V ac, 60 Hz, Class B, continuous-duty molded coil, and replaceable.
7. NEMA ICS 6, Type 4, coil enclosure.
8. Normally closed.
9. Visual position indicator.

2.7 EARTHQUAKE VALVES

A. Earthquake Valves: Comply with ASCE 25.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Vanguard Valves, Inc.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
2. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction.
3. Maximum Operating Pressure: **5 psig** (34.5 kPa).
4. Cast-aluminum body with nickel-plated chrome steel internal parts.
5. Nitrile-rubber valve washer.
6. Sight windows for visual indication of valve position.
7. Threaded end connections complying with ASME B1.20.1.

8. Wall mounting bracket with bubble level indicator.

B. Earthquake Valves: Comply with ASCE 25.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Pacific Seismic Products, Inc.](#)
- b. **<Insert manufacturer's name>**.
- c. or approved equal.

2. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction.

3. Maximum Operating Pressure: [0.5 psig (3.45 kPa)] [7 psig (48 kPa)] [60 psig (414 kPa)].

4. Cast-aluminum body with stainless-steel internal parts.

5. Nitrile-rubber, reset-stem o-ring seal.

6. Valve position, open or closed, indicator.

7. Composition valve seat with clapper held by spring or magnet locking mechanism.

8. Level indicator.

9. End Connections: Threaded for valves NPS 2 (DN 50) and smaller; flanged for valves NPS 2-1/2 (DN 65) and larger.

2.8 PRESSURE REGULATORS

A. General Requirements:

1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 (DN 50) and smaller; flanged for regulators NPS 2-1/2 (DN 65) and larger.

B. Service Pressure Regulators: Comply with ANSI Z21.80.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Actaris.](#)
- b. [American Meter Company.](#)
- c. [Fisher Control Valves and Regulators; Division of Emerson Process Management.](#)
- d. [Invensys.](#)
- e. [Richards Industries; Jordan Valve Div.](#)
- f. **<Insert manufacturer's name>**.
- g. or approved equal.

2. Body and Diaphragm Case: Cast iron or die-cast aluminum.

3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: [100 psig (690 kPa)] <Insert pressure>.

C. Line Pressure Regulators: Comply with ANSI Z21.80.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Actaris](#).
 - b. [American Meter Company](#).
 - c. [Eclipse Combustion, Inc.](#)
 - d. [Fisher Control Valves and Regulators; Division of Emerson Process Management](#).
 - e. [Invensys](#).
 - f. [Maxitrol Company](#).
 - g. [Richards Industries; Jordan Valve Div.](#)
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: [2 psig (13.8 kPa)] [5 psig (34.5 kPa)] [10 psig (69 kPa)] <Insert pressure>.

- D. Appliance Pressure Regulators: Comply with ANSI Z21.18.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Canadian Meter Company Inc.](#)
 - b. [Eaton Corporation; Controls Div.](#)
 - c. [Harper Wyman Co.](#)
 - d. [Maxitrol Company.](#)
 - e. [SCP, Inc.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Body and Diaphragm Case: Die-cast aluminum.
 3. Springs: Zinc-plated steel; interchangeable.
 4. Diaphragm Plate: Zinc-plated steel.
 5. Seat Disc: Nitrile rubber.
 6. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
 7. Factory-Applied Finish: Minimum three-layer polyester and polyurethane paint finish.
 8. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
 9. Maximum Inlet Pressure: [1 psig (6.9 kPa)] [2 psig (13.8 kPa)] [5 psig (34.5 kPa)] **<Insert pressure>**.

2.9 SERVICE METERS

- A. Diaphragm-Type Service Meters: Comply with [ANSI B109.1] [ANSI B109.2].
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Actaris.](#)
 - b. [American Meter Company.](#)
 - c. [Invensys.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Case: Die-cast aluminum.
 3. Connections: Steel threads.
 4. Diaphragm: Synthetic fabric.
 5. Diaphragm Support Bearings: Self-lubricating.
 6. Compensation: Continuous temperature[**and pressure**].
 7. Meter Index: [**Cubic feet**] [**Liters**] [**Cubic feet and liters**].
 8. Meter Case and Index: Tamper resistant.
 9. Remote meter reader compatible.
 10. Maximum Inlet Pressure: [100 psig (690 kPa)] **<Insert pressure>**.
 11. Pressure Loss: Maximum [0.5-inch wg (124 Pa)] [2.0-inch wg (498 Pa)] **<Insert pressure differential>**.

12. Accuracy: Maximum plus or minus [1.0] <Insert number> percent.
- B. Rotary-Type Service Meters: Comply with ANSI B109.3.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [American Meter Company](#).
 - b. [Invensys](#).
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
 2. Case: Extruded aluminum.
 3. Connection: Flange.
 4. Impellers: Polished aluminum.
 5. Rotor Bearings: Self-lubricating.
 6. Compensation: Continuous temperature[and pressure].
 7. Meter Index: [Cubic feet] [Liters] [Cubic feet and liters].
 8. Tamper resistant.
 9. Remote meter reader compatible.
 10. Maximum Inlet Pressure: [100 psig (690 kPa)] <Insert pressure>.
 11. Accuracy: Maximum plus or minus [2.0] <Insert number> percent.
- C. Turbine Meters: Comply with ASME MFC-4M.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [American Meter Company](#).
 - b. [Invensys](#).
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
 2. Housing: Cast iron or welded steel.
 3. Connection Threads or Flanges: Steel.
 4. Turbine: Aluminum or plastic.
 5. Turbine Bearings: Self-lubricating.
 6. Compensation: Continuous temperature[and pressure].
 7. Meter Index: [Cubic feet] [Liters] [Cubic feet and liters].
 8. Tamper resistant.
 9. Remote meter reader compatible.
 10. Maximum Inlet Pressure: [100 psig (690 kPa)] <Insert pressure>.
 11. Accuracy: Maximum plus or minus [2.0] <Insert number> percent.
- D. Service-Meter Bars:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Actaris](#).

- b. [American Meter Company](#).
 - c. [Lyall, R. W. & Company, Inc.](#)
 - d. [McDonald, A. Y. Mfg. Co.](#)
 - e. [Mueller Co.; Gas Products Div.](#)
 - f. [Perfection Corporation; a subsidiary of American Meter Company](#).
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Malleable- or cast-iron frame for supporting service meter.
 3. Include offset swivel pipes, meter nuts with o-ring seal, and factory- or field-installed dielectric unions.
 4. Omit meter offset swivel pipes if service-meter bar dimensions match service-meter connections.
- E. Service-Meter Bypass Fittings:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Lyall, R. W. & Company, Inc.](#)
 - b. [Williamson, T. D., Inc.](#)
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Ferrous, tee, pipe fitting with capped side inlet for temporary natural-gas supply.
 3. Integral ball-check bypass valve.
- ## 2.10 DIELECTRIC FITTINGS
- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Capitol Manufacturing Company](#).
 - b. [Central Plastics Company](#).
 - c. [Hart Industries International, Inc.](#)
 - d. [Jomar International Ltd.](#)
 - e. [Matco-Norca, Inc.](#)
 - f. [McDonald, A. Y. Mfg. Co.](#)
 - g. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
 - h. [Wilkins; a Zurn company](#).
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.

2. Description:

- a. Standard: ASSE 1079.
- b. Pressure Rating: [125 psig (860 kPa) **minimum at 180 deg F** (82 deg C)] [150 psig (1035 kPa)] [250 psig (1725 kPa)].
- c. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flanges:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Capitol Manufacturing Company.](#)
- b. [Central Plastics Company.](#)
- c. [Matco-Norca, Inc.](#)
- d. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
- e. [Wilkins; a Zurn company.](#)
- f. **<Insert manufacturer's name>.**
- g. or approved equal.

2. Description:

- a. Standard: ASSE 1079.
- b. Factory-fabricated, bolted, companion-flange assembly.
- c. Pressure Rating: [125 psig (860 kPa) **minimum at 180 deg F** (82 deg C)] [150 psig (1035 kPa)] [175 psig (1200 kPa)] [300 psig (2070 kPa)].
- d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Insulating Kits:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Advance Products & Systems, Inc.](#)
- b. [Calpico, Inc.](#)
- c. [Central Plastics Company.](#)
- d. [Pipeline Seal and Insulator, Inc.](#)
- e. **<Insert manufacturer's name>.**
- f. or approved equal.

2. Description:

- a. Nonconducting materials for field assembly of companion flanges.
- b. Pressure Rating: [150 psig (1035 kPa)] **<Insert pressure>.**
- c. Gasket: Neoprene or phenolic.
- d. Bolt Sleeves: Phenolic or polyethylene.
- e. Washers: Phenolic with steel backing washers.

2.11 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of **6 inches (150 mm)** wide and **4 mils (0.1 mm)** thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to **30 inches (750 mm)** deep; colored yellow.
- B. Reference Section 230553 "Identification of HVAC Piping and Equipment".

2.12 CONCRETE BASES

- A. Description: Precast, reinforced concrete base, made of 3000-psi- minimum, 28-day compressive strength concrete, and measuring 4 inches thick and 4 inches larger in each dimension than supported item, unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Close equipment shutoff valves before turning off natural gas to premises or piping section.
- B. Perform leakage test as specified in Article 3 to determine that all equipment is turned off in affected piping section.
 - 1. Comply with ANSI Z223.1, "Prevention of Accidental Ignition" Paragraph.
- C. Inspect natural-gas piping according to **[NFPA 54] [the International Fuel Gas Code]** to determine that natural-gas utilization devices are turned off in piping section affected.
- D. Comply with **[NFPA 54] [the International Fuel Gas Code]** requirements for prevention of accidental ignition.

3.3 OUTDOOR PIPING INSTALLATION

- A. Comply with **[NFPA 54] [the International Fuel Gas Code]** for installation and purging of natural-gas piping.
- B. Install underground, natural-gas piping buried at least **[36 inches (900 mm)] <Insert value>** below finished grade. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.
 - 1. If natural-gas piping is installed less than **36 inches (900 mm)** below finished grade, install it in containment conduit.
- C. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
 - 3. Replace pipe having damaged PE coating with new pipe.
- D. Copper Tubing with Protective Coating:
 - 1. Apply joint cover kits over tubing to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
- E. Install fittings for changes in direction and branch connections.
- F. Install pressure gage **[downstream] [upstream and downstream]** from each service regulator. Pressure gages are specified in Section 230519 "Meters and Gages for HVAC Piping."

3.4 SERVICE ENTRANCE PIPING

- A. Extend fuel gas piping and connect to fuel gas distribution for service entrance to building.
 - 1. Exterior fuel gas distribution system piping, service pressure regulator, and service meter will be provided by gas utility.
- B. Install dielectric fitting downstream from and adjacent to each service meter unless meter is supported from service-meter bar with integral dielectric fitting. Install shutoff valve downstream from and adjacent to dielectric fitting. Refer to Section 230500 "Common Work Results for HVAC" for dielectric fittings.

3.5 INDOOR PIPING INSTALLATION

- A. Comply with **[NFPA 54] [the International Fuel Gas Code]** for installation and purging of natural-gas piping.

- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Verify final equipment locations for roughing-in.
- L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
 - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches (75 mm) long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
- P. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.

1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit, subject to approval of authorities having jurisdiction, whether or not such spaces are used as plenums. Do not locate valves above ceilings.
 2. In Floors: Install natural-gas piping with welded or brazed joints and protective coating in cast-in-place concrete floors, subject to approval of authorities having jurisdiction. Cover piping to be cast in concrete slabs with minimum of 1-1/2 inches (38 mm) of concrete. Piping may not be in physical contact with other metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
 3. In Floor Channels: Install natural-gas piping in floor channels, subject to approval of authorities having jurisdiction. Channels must have cover and be open to space above cover for ventilation.
 4. In Walls or Partitions: Do not install concealed piping in solid partitions. Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
 - a. Exception: Tubing passing through partitions or walls does not require striker barriers.
 5. Prohibited Locations:
 - a. Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 - b. Do not install natural-gas piping in solid walls or partitions.
- Q. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- R. Connect branch piping from top or side of horizontal piping.
- S. Install unions in pipes **NPS 2 (DN 50)** and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
- T. Install corrugated, stainless-steel tubing system according to manufacturer's written instructions. Include striker plates to protect tubing from puncture where tubing is restrained and cannot move.
- U. Do not use natural-gas piping as grounding electrode.
- V. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- W. Install pressure gage [**downstream**] [**upstream and downstream**] from each line regulator. Pressure gages are specified in Section 230519 "Meters and Gages for HVAC Piping."

- X. Install flanges on valves, specialties, and equipment having NPS 2-1/2 and larger connections.
- Y. Install vent piping for gas pressure regulators and gas trains, extend outside building, and vent to atmosphere. Terminate vents with turned-down, reducing-elbow fittings with corrosion-resistant insect screens in large end.
- Z. Install containment conduits for gas piping below slabs, within building, in gastight conduits extending minimum of 4 inches outside building, and vented to atmosphere. Terminate vents with turned-down, reducing-elbow fittings with corrosion-resistant insect screens in large end. Prepare and paint outside of conduits with coal-tar, epoxy-polyamide paint according to SSPC-Paint 16.
- AA. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- BB. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- CC. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.6 SERVICE-METER ASSEMBLY INSTALLATION

- A. Install service-meter assemblies aboveground[, **on concrete bases**].
- B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.
- C. Install strainer on inlet of service-pressure regulator and meter set.
- D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.
- E. Install pressure gauge [**downstream**] [**upstream and downstream**] from each service pressure regulator.
- F. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.
- G. Install service meters downstream from pressure regulators.
 - 1. Service meters with connections NPS 1 and smaller on meter bars.
 - 2. Service meters with connections larger than NPS 1 supported from piping or set on concrete bases.

- H. Install metal bollards to protect meter assemblies. Comply with requirements in Section 055000 "Metal Fabrications" for pipe bollards.

3.7 VALVE INSTALLATION

- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.
- B. Install underground valves with valve boxes.
- C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
- D. Install earthquake valves aboveground outside buildings according to listing.
- E. Install anode for metallic valves in underground PE piping.

3.8 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
 - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
 - 2. Cut threads full and clean using sharp dies.
 - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
 - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
 - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
 - 1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
 - 2. Bevel plain ends of steel pipe.
 - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
 - 1. Brazed Joints: Make with brazing alloy with melting point greater than 1000oF.
 - 2. Brazing alloys containing phosphorus are prohibited.

- F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.
- G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not overtighten.
- H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
 - 1. Plain-End Pipe and Fittings: Use butt fusion.
 - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.9 HANGER AND SUPPORT INSTALLATION

- A. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- C. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
 - 1. NPS 1 (DN 25) and Smaller: Maximum span, 96 inches (2438 mm); minimum rod size, 3/8 inch (10 mm).
 - 2. NPS 1-1/4 (DN 32): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
 - 3. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
 - 4. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Maximum span, 10 feet (3 m); minimum rod size, 1/2 inch (13 mm).
 - 5. NPS 4 (DN 100) and Larger: Maximum span, 10 feet (3 m); minimum rod size, 5/8 inch (15.8 mm).
- D. Install hangers for horizontal drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:
 - 1. NPS 3/8 (DN 10): Maximum span, 48 inches (1220 mm); minimum rod size, 3/8 inch (10 mm).
 - 2. NPS 1/2 and NPS 5/8 (DN 15 and DN 18): Maximum span, 72 inches (1830 mm); minimum rod size, 3/8 inch (10 mm).
 - 3. NPS 3/4 and NPS 7/8 (DN 20 and DN 22): Maximum span, 84 inches (2134 mm); minimum rod size, 3/8 inch (10 mm).
 - 4. NPS 1 (DN 25): Maximum span, 96 inches (2440 mm); minimum rod size, 3/8 inch (10 mm).
- E. Install hangers for horizontal, corrugated stainless-steel tubing with the following maximum spacing and minimum rod sizes:

1. NPS 3/8 (DN 10): Maximum span, 48 inches (1220 mm); minimum rod size, 3/8 inch (10 mm).
2. NPS 1/2 (DN 15): Maximum span, 72 inches (1830 mm); minimum rod size, 3/8 inch (10 mm).
3. NPS 3/4 (DN 20) and Larger: Maximum span, 96 inches (2440 mm); minimum rod size, 3/8 inch (10 mm).

3.10 CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.
- B. Drawings indicate general arrangement of fuel gas piping, fittings, and specialties.
- C. Install piping adjacent to appliances to allow service and maintenance.
- D. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
- E. Install piping adjacent to appliances to allow service and maintenance of appliances.
- F. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches (1800 mm) of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
- G. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.
- H. Ground equipment.
 1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
 2. Do not use gas pipe as grounding electrode.

3.11 LABELING AND IDENTIFYING

- A. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for piping and valve identification.
- B. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each service meter, pressure regulator, and specialty valve.
 1. Text: In addition to name of identified unit, distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.

- C. Install detectable warning tape directly above gas piping, **12 inches** (300 mm) below finished grade, except **6 inches** (150 mm) below subgrade under pavements and slabs.

3.12 PAINTING

- A. Comply with requirements in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting" for painting interior and exterior natural-gas piping.

- B. Paint exposed, exterior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.

1. Alkyd System: MPI EXT 5.1D.

- a. Prime Coat: Alkyd anticorrosive metal primer.
- b. Intermediate Coat: Exterior alkyd enamel matching topcoat.
- c. Topcoat: Exterior alkyd enamel **[(flat)] [(semigloss)] [(gloss)]**.
- d. Color: **[Gray]** <Insert color>.

- C. Paint exposed, interior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.

1. Latex Over Alkyd Primer System: MPI INT 5.1Q.

- a. Prime Coat: **[Alkyd anticorrosive]** **[Quick-drying alkyd]** metal primer.
- b. Intermediate Coat: Interior latex matching topcoat.
- c. Topcoat: Interior latex **[(flat)] [(low sheen)] [(eggshell)] [(satin)] [(semigloss)] [(gloss)]**.
- d. Color: **[Gray]** <Insert color>.

2. Alkyd System: MPI INT 5.1E.

- a. Prime Coat: **[Alkyd anticorrosive]** **[Quick-drying alkyd]** metal primer.
- b. Intermediate Coat: Interior alkyd matching topcoat.
- c. Topcoat: Interior alkyd **[(flat)] [(eggshell)] [(semigloss)] [(gloss)]**.
- d. Color: **[Gray]** <Insert color>.

- D. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.13 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base **[according to seismic codes at Project]**.

1. Locate bases at service meters and service regulators.
2. Excavate earth and make level beds to support bases. Set bases level with top surface projecting approximately 3 inches (75 mm) above grade.

3. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on [18-inch (450-mm)] <Insert dimension> centers around the full perimeter of the base.
5. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
6. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
7. Install anchor bolts to elevations required for proper attachment to supported equipment.
8. Use [3000-psi (20.7-MPa)] <Insert value>, 28-day, compressive-strength concrete and reinforcement as specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]

3.14 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 1. Test, inspect, and purge natural gas according to [NFPA 54] [the International Fuel Gas Code] and authorities having jurisdiction, and as per TESTING PIPING SYSTEMS Article below.
- C. Natural-gas piping will be considered defective if it does not pass tests and inspections.
- D. Repair leaks and defects with new materials and retest system until satisfactory results are obtained.
- E. Report test results promptly and in writing to DEN Project Manager and authorities having jurisdiction.
- F. Verify capacities and pressure ratings of service meters, pressure regulators, valves, and specialties.
- G. Verify correct pressure settings for pressure regulators.
- H. Verify that specified piping tests are complete.
- I. Prepare test and inspection reports.

3.15 TESTING PIPING SYSTEMS

- A. Perform all tests in the presence of the authorized City representative when required. Contractor shall provide inspector 48-hour prior notice of test; also notify DEN Project Manager.

- B. No piping or joint shall be left untested. All leaks shall be repaired and the piping system shall be re-tested until satisfactory results are obtained.
- C. Pneumatic Leak Test:
1. General: Pneumatic leak tests shall only be used on natural gas piping, piping with restricted access, piping exposed to freezing conditions, or where water leakage would damage critical DEN operational equipment. Contractor shall submit a written request for test in accordance with the SUBMITTALS Article of this specification section.
 2. Test all natural gas piping prior to initial operation, to assure tightness. The test medium shall be air, or inert gas. Pipe joints shall be left exposed for examination during the test. A pressure test shall be maintained for a period of twelve (12) hours and precautions shall be taken to avoid excessive pressure. The test pressure to be used shall be no less than 1-1/2 times the proposed maximum working pressure, but not less than 10 psig, irrespective of design pressure. There shall be no loss of pressure during test. The piping system shall be visually examined for signs of leakage or other defects. All exposed joints shall be checked by means of a soap bubble test or other foaming agent test. In the event repairs or additions are made following the pressure test, the affected piping shall be retested. After test is completed and prior to putting piping systems into operation, completely purge system. Purging medium may be same as piping medium as long as piping medium can be introduced at a moderately rapid and continuous rate
 3. Pneumatic Test Procedure:
 - a. Contractor shall submit safety plan for pneumatic testing prior to test.
 - b. General: Compressed gas poses the risk of sudden release of stored energy. For that reason, pneumatic testing shall be used only within the following limitations:
 - 1) The piping system does not contain cast iron pipe or plastic pipe subject to brittle failure.
 - 2) The system does not contain soldered or solvent cement joints over NPS 2.
 - 3) The test pressure does not exceed 150 psig.
 - c. Test Medium: The gas shall be nonflammable and nontoxic.
 - d. Preliminary Test: Prior to application of full pneumatic test pressure, a preliminary test of not more than 10 psig shall be applied to reveal possible major leaks. Pneumatic Test Pressure:
 - 1) Except as limited in 2) below, the test pressure shall not exceed 1.25 times the design pressure. Pressure shall be applied in several stages, allowing time for the system to reach equilibrium at each stage.
 - 2) The test pressure shall not exceed the maximum allowable pneumatic test pressure for any vessel, pump, valve, or other component in the system under test.

- e. Examination for Leakage: After the preliminary test, pressure shall be raised in stages of not more than 25% up to full pneumatic test pressure, allowing time for equalization of strains and detection of major leaks at each stage. Following the application of test pressure for at least 10 minutes, the pressure may be reduced to design pressure and examination shall be made for leakage of the piping. Leaks may be detected by soap bubble, halogen gas, scented gas, test gage monitoring, ultrasonic, or other suitable means. If leaks are found, pressure shall be vented, appropriate repair or replacement shall be made, and the pneumatic test repeated until no leakage is found.
 - f. Contractor shall measure the surface temperature of the pipe for the duration of testing. The pneumatic test will be deemed successful only when the test pressure can be held at a constant pipe surface temperature for a period of no less than 10 continuous minutes. Record of the pipe temperatures and pressures during the duration of the test shall be submitted to the DEN Project Manager following completion of the test.
- D. Testing shall be witnessed by DEN Mechanical Inspector and DEN Project Manager or Designated Representative.
- E. Repair piping systems that fail required piping test, by disassembly and reinstallation, using new materials to extent required to overcome leakage. Do not use chemicals, stop-leak compounds, mastics, or other temporary repair methods.
- F. Prepare written report of testing procedures and result. Submit in accordance with Section 23400 "Basic HVAC Requirements".
- 3.16 ADJUSTING
- A. Adjust controls and safety devices. Replace damaged and malfunctioning controls and safety devices.
- 3.17 DEMONSTRATION
- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain earthquake valves.
- 3.18 OUTDOOR PIPING SCHEDULE
- A. Underground natural-gas piping shall be[**one of**] the following:
 - 1. Steel pipe with wrought-steel fittings and welded joints, or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.
 - 2. **[Annealed] [Drawn]**-temper copper tube with wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
 - B. Aboveground natural-gas piping shall be[**one of**] the following:
 - 1. Steel pipe with malleable-iron fittings and threaded joints.

2. Steel pipe with wrought-steel fittings and welded joints.
 3. **[Annealed] [Drawn]**-temper copper tube with wrought-copper fittings and brazed joints.
- C. Branch Piping in Cast-in-Place Concrete to Single Appliance: Annealed-temper copper tube with wrought-copper fittings and **[brazed] [flared]** joints. Install piping embedded in concrete with no joints in concrete.
- D. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- 3.19 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG (3.45 kPa)
- A. Aboveground, branch piping **[NPS 1 (DN 25)]** <Insert pipe size> and smaller shall be **one of** the following:
1. Corrugated stainless-steel tubing with mechanical fittings having socket or threaded ends to match adjacent piping.
 2. Annealed-temper, tin-lined copper tube with flared joints and fittings.
 3. Annealed-temper, copper tube with wrought-copper fittings and **[brazed] [flared]** joints.
 4. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping shall be **one of** the following:
1. Steel pipe with malleable-iron fittings and threaded joints.
 2. Steel pipe with wrought-steel fittings and welded joints.
 3. Drawn-temper copper tube with wrought-copper fittings and brazed joints.
- C. Underground, below building, piping shall be **one of** the following:
1. Steel pipe with malleable-iron fittings and threaded joints.
 2. Steel pipe with wrought-steel fittings and welded joints.
- D. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- E. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.
- 3.20 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 0.5 PSIG (3.45 kPa) AND LESS THAN 5 PSIG (34.5 kPa)
- A. Aboveground, branch piping **[NPS 1 (DN 25)]** <Insert pipe size> and smaller shall be **one of** the following:

1. Corrugated stainless-steel tubing with mechanical fittings having socket or threaded ends to match adjacent piping.
 2. Annealed-temper, tin-lined copper tube with flared joints and fittings.
 3. Annealed-temper, copper tube with wrought-copper fittings and **[brazed] [flared]** joints.
 4. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping shall be **[one of]** the following:
1. Steel pipe with malleable-iron fittings and threaded joints.
 2. Steel pipe with steel welding fittings and welded joints.
 3. Drawn-temper copper tube with wrought-copper fittings and brazed joints.
- C. Underground, below building, piping shall be **[one of]** the following:
1. Steel pipe with malleable-iron fittings and threaded joints.
 2. Steel pipe with wrought-steel fittings and welded joints.
- D. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat underground pipe and fittings with protective coating for steel piping.
- E. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.
- 3.21 **INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 5 PSIG**
(34.5 kPa)
- A. Aboveground Piping: Maximum operating pressure more than **[5 psig (34.5 kPa)]** **<Insert pressure>**.
- B. Aboveground, Branch Piping: Steel pipe with steel welding fittings and welded joints.
- C. Aboveground, distribution piping shall be **[one of]** the following:
1. Steel pipe with steel welding fittings and welded joints.
 2. Drawn-temper copper tube with wrought-copper fittings and brazed joints.
- D. Underground, below building, piping shall be **[one of]** the following:
1. Steel pipe with malleable-iron fittings and threaded joints.
 2. Steel pipe with wrought-steel fittings and welded joints.
- E. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- F. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.22 UNDERGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Connections to Existing Gas Piping: Use valve and fitting assemblies made for tapping utility's gas mains and listed by an NRTL.
- B. Underground:
 - 1. PE valves.
 - 2. NPS 2 (DN 50) and Smaller: Bronze plug valves.
 - 3. NPS 2-1/2 (DN 65) and Larger: Cast-iron, [lubricated] [nonlubricated] plug valves.

3.23 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Valves for pipe sizes NPS 2 (DN 50) and smaller at service meter shall be[**one of**] the following:
 - 1. One-piece, bronze ball valve with bronze trim.
 - 2. Two-piece, [full] [regular]-port, bronze ball valves with bronze trim.
 - 3. Bronze plug valve.
- B. Valves for pipe sizes NPS 2-1/2 (DN 65) and larger at service meter shall be[**one of**] the following:
 - 1. Two-piece, [full] [regular]-port, bronze ball valves with bronze trim.
 - 2. Bronze plug valve.
 - 3. Cast-iron, nonlubricated plug valve.
- C. Distribution piping valves for pipe sizes NPS 2 (DN 50) and smaller shall be[**one of**] the following:
 - 1. One-piece, bronze ball valve with bronze trim.
 - 2. Two-piece, [full] [regular]-port, bronze ball valves with bronze trim.
 - 3. Bronze plug valve.
- D. Distribution piping valves for pipe sizes NPS 2-1/2 (DN 65) and larger shall be[**one of**] the following:
 - 1. Two-piece, [full] [regular]-port, bronze ball valves with bronze trim.
 - 2. Bronze plug valve.
 - 3. Cast-iron, [nonlubricated] [lubricated] plug valve.
- E. Valves in branch piping for single appliance shall be[**one of**] the following:
 - 1. One-piece, bronze ball valve with bronze trim.
 - 2. Two-piece, [full] [regular]-port, bronze ball valves with bronze trim.
 - 3. Bronze plug valve.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 231123

SECTION 231126 - FACILITY LIQUEFIED-PETROLEUM GAS PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Pipes, tubes, and fittings.
 - 2. Piping specialties.
 - 3. Piping and tubing joining materials.
 - 4. Valves.
 - 5. Pressure regulators.
 - 6. Service meters.
 - 7. Storage containers.
 - 8. Transport truck unloading facility specialties.
 - 9. Pumps.
 - 10. Vaporizers.
 - 11. Air mixers.
 - 12. Concrete bases.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. LPG: Liquefied-petroleum gas.

1.4 PERFORMANCE REQUIREMENTS

- A. Minimum Operating-Pressure Ratings:
1. For Piping Containing Only Vapor:
 - a. Piping and Valves: [125 psig (862 kPa)] <Insert pressure> unless otherwise indicated.
 2. For Piping Containing Liquid:
 - a. Piping between Shutoff Valves: [350 psig (2413 kPa)] <Insert pressure> unless otherwise indicated.
 - b. Piping Other Than Above: [250 psig (1723 kPa)] <Insert pressure> unless otherwise indicated.
 - c. Valves and Fittings: [250 psig (1723 kPa)] <Insert pressure> unless otherwise indicated.
 3. Minimum Operating Pressure of Service Meter: [5 psig (34.5 kPa)] [10 psig (69 kPa)] [20 psig (138 kPa)] [65 psig (450 kPa)] <Insert pressure>.
 - B. LPG System Pressure within Buildings: One pressure range. [0.5 psig (3.45 kPa) or less] [More than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa)] [More than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa)].
 - C. LPG System Pressures within Buildings: Two pressure ranges. Primary pressure is more than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa) and is reduced to secondary pressure of 0.5 psig (3.45 kPa) or less.
 - D. LPG System Pressures within Buildings: Two pressure ranges. Primary pressure is more than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa) and is reduced to secondary pressure of more than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa).
 - E. LPG System Pressures within Buildings: Three pressure ranges. Primary pressure is more than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa) and is reduced to secondary pressures of more than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa) and is reduced again to pressures of 0.5 psig (3.45 kPa) or less.
 - F. Design values of fuel gas supplied for these systems are as follows:
 1. Nominal Heating Value: <Insert value> Btu/ 1,000 cu. ft.
 2. Nominal Specific Gravity: <Insert value>
 - G. Delegated Design: Design restraints and anchors for LPG piping and equipment, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - H. Seismic Performance: Vaporizers and storage container supports shall withstand the effects of earthquake motions determined according to [SEI/ASCE 7] <Insert requirement>.

1. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of the following:

1. Piping specialties.
2. Corrugated stainless-steel tubing with associated components.
3. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
4. Pressure regulators. Indicate pressure ratings and capacities, and settings of selected models.
5. Service meters. Indicate [**pressure ratings and**] capacities. Include [**bypass fittings**] [**bypass fittings and meter bars**] [**meter bars**] [**supports**].
6. Dielectric fittings.
7. Storage containers.
8. Transport truck unloading specialties.
9. Pumps.
10. Vaporizers.
11. Air mixers.
12. Include data substantiating that materials comply with requirements.

B. Shop Drawings: For facility LPG piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops. [**Show different pressure zones and indicate pressure for each zone.**]

1. Shop Drawing Scale: [**1/4 inch per foot (1:50)**] <Insert scale>.
2. Detail mounting, supports, and valve arrangements for [**service meter assembly and**] pressure regulator assembly.

C. Delegated-Design Submittal: For LPG piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.

1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans and details, drawn to scale, on which LPG piping is shown and coordinated with other installations, using input from installers of the items involved.

- B. Site Survey: Plans, drawn to scale, on which LPG piping is shown and coordinated with other services and utilities.
- C. Qualification Data: For qualified professional engineer.
- D. Installer certificates for piping systems.
- E. Seismic Qualification Certificates: Submit certification that vaporizer, air mixer, storage container supports, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- F. Welding certificates. Include welders certification of compliance with **[ASME SEC 9]** **[AWS D1.1.]** <Insert requirement> and section 059990 "Welding".
- G. Field quality-control reports. Indicate and interpret test results for compliance with performance requirements.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For LPG equipment, specialties, and accessories to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- C. ANSI Standard: Comply with ANSI Z223.1, "National Fuel Gas Code."
- D. FM Standard: Provide components listed in FM's "Fire Protection Approval Guide" if specified to be FM approved.
- E. IAS Standard: Provide components listed in IAS's "Directory of A. G. A. and C. G. A Certified Appliances and Accessories" if specified to be IAS listed.

- F. UL Standard: Provide components listed in UL's "Gas and Oil Equipment Directory" if specified to be UL listed.
- G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Handling Flammable Liquids: Remove and dispose of liquids from existing LPG piping according to requirements of authorities having jurisdiction. Handle cautiously to avoid spillage and ignition. Notify LPG supplier. Handle flammable liquids used by Installer with proper precautions and do not leave on premises from end of one day to beginning of next day.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store pipes and tubes with protective PE coating to avoid damaging coating and protect from direct sunlight.
- D. Protect stored PE pipes and valves from direct sunlight.

1.10 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.
- B. Interruption of Existing LPG Service: Do not interrupt LPG service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide purging and startup of LPG supply according to requirements indicated:
 - 1. Notify DEN Project Manager no fewer than **[five (5)]** <Insert number> days in advance of proposed interruption of LPG service.
 - 2. Do not proceed with interruption of LPG service without DEN Project Manager's written permission.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Section 083113 "Access Doors and Frames."

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

Black steel pipe has traditionally been used for gas piping. Other materials include copper, brass, and stainless steel. Use material required for specific conditions and avoid conditions detrimental to piping. Before selecting materials, contact gas supplier to find out if gas contains corrosive materials such as hydrogen sulfide, carbon dioxide, or moisture.

See Part 3 piping schedule articles to determine where pipes, tubes, fittings, and joining materials are applied in various services.

- A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedules 40 and 80, Type E or S, Grade B.
1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - a. Material Group: 1.1.
 - b. End Connections: Threaded or butt welding to match pipe.
 - c. Lapped Face: Not permitted underground.
 - d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
 - e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground, and stainless steel underground.
 5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
 - a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.
 6. Mechanical Couplings:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Dresser Piping Specialties; Division of Dresser, Inc.

- 2) [Smith-Blair, Inc.](#)
 - 3) **<Insert manufacturer's name>**.
 - 4) or approved equal.
- b. **[Stainless-steel] [Steel]** flanges and tube with epoxy finish.
 - c. Buna-nitrile seals.
 - d. **[Stainless-steel] [Steel]** bolts, washers, and nuts.
 - e. Coupling shall be capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
 - f. Steel body couplings installed underground on plastic pipe shall be factory equipped with anode.
- B. Corrugated, Stainless-Steel Tubing: Comply with ANSI/IAS LC 1.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [OmegaFlex, Inc.](#)
 - b. [Parker Hannifin Corporation; Parflex Division.](#)
 - c. [Titeflex.](#)
 - d. [Tru-Flex Metal Hose Corp.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Tubing: ASTM A 240/A 240M, corrugated, Series 300 stainless steel.
 3. Coating: PE with flame retardant.
 - a. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1) Flame-Spread Index: **[25] <Insert value>** or less.
 - 2) Smoke-Developed Index: **[50] [450] <Insert value>** or less.
 4. Fittings: Copper-alloy mechanical fittings with ends made to fit and listed for use with corrugated stainless-steel tubing and capable of metal-to-metal seal without gaskets. Include brazing socket or threaded ends complying with ASME B1.20.1.
 5. Striker Plates: Steel, designed to protect tubing from penetrations.
 6. Manifolds: Malleable iron or steel with factory-applied protective coating. Threaded connections shall comply with ASME B1.20.1 for pipe inlet and corrugated tubing outlets.
 7. Operating-Pressure Rating: **5 psig (34.5 kPa)**.
- C. Drawn-Temper Copper Tube: Comply with **[ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 837, Type G]**.
1. Copper Fittings: ASME B16.22, wrought copper, and streamlined pattern.
 2. Brazing Filler Metals: AWS A5.8, Silver Classification BAg-1. Filler metal containing phosphorus is prohibited.
 3. Bronze Flanges and Flanged Fittings: ASME B16.24, Class 150.

- a. Gasket Material: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
 - b. Bolts and Nuts: ASME B18.2.1, carbon steel or stainless steel.
4. Protective Coating for Underground Tubing: Factory-applied, extruded PE a minimum of **0.022 inch** (0.56 mm) thick.
- D. Annealed-Temper Copper Tube: Comply with [ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 837, Type G].
1. Copper Fittings: ASME B16.22, wrought copper, and streamlined pattern.
 2. Brazing Filler Metals: AWS A5.8, Silver Classification BAg-1. Filler metal containing phosphorus is prohibited.
 3. Flare Fittings: Comply with ASME B16.26 and SAE J513.
 - a. Copper fittings with long nuts.
 - b. Metal-to-metal compression seal without gasket.
 - c. Dryseal threads complying with ASME B1.20.3.
 4. Protective Coating for Underground Tubing: Factory-applied, extruded PE a minimum of **0.022 inch** (0.56 mm) thick.
- E. Tin-Lined Copper Tube: ASTM B 280, seamless, annealed, with interior tin-plated lining.
1. Flare Fittings: Comply with ASME B16.26 and SAE J513.
 - a. Copper fittings with long nuts.
 - b. Metal-to-metal compression seal without gasket.
 - c. Dryseal threads complying with ASME B1.20.3.
 2. Brazing Filler Metals: AWS A5.8, Silver Classification BAg-1. Filler metal containing phosphorus is prohibited.

2.2 PIPING SPECIALTIES

A. Flexible Piping Joints:

1. Approved for LPG service.
2. Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
3. Minimum working pressure of **250 psig** (1723 kPa) and **250 deg F** (121 deg C) operating temperature.
4. Flanged- or threaded-end connections to match equipment connected and shall be capable of minimum **3/4-inch** (20-mm) misalignment.
5. Maximum **36-inch** (914-mm) length for liquid LPG lines.

B. Appliance Flexible Connectors:

1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.

3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
 4. Corrugated stainless-steel tubing with polymer coating.
 5. Operating-Pressure Rating: 0.5 psig (3.45 kPa).
 6. End Fittings: Zinc-coated steel.
 7. Threaded Ends: Comply with ASME B1.20.1.
 8. Maximum Length: 72 inches (1830 mm.)
- C. Quick-Disconnect Devices: Comply with ANSI Z21.41.
1. Copper-alloy convenience outlet and matching plug connector.
 2. Nitrile seals.
 3. Hand operated with automatic shutoff when disconnected.
 4. For indoor or outdoor applications.
 5. Adjustable, retractable restraining cable.
- D. Y-Pattern Strainers:
1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
 2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
 3. Strainer Screen: [40] [60]-mesh startup strainer and perforated stainless-steel basket with 50 percent free area.
 4. CWP Rating: 125 psig (862 kPa).
- E. Basket Strainers:
1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
 2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
 3. Strainer Screen: [40] [60]-mesh startup strainer and perforated stainless-steel basket with 50 percent free area.
 4. CWP Rating: 125 psig (862 kPa).
- F. T-Pattern Strainers:
1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
 2. End Connections: Grooved ends.
 3. Strainer Screen: [40] [60]-mesh startup strainer and perforated stainless-steel basket with 57 percent free area.
 4. CWP Rating: 750 psig (5170 kPa).
- G. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.3 PROTECTIVE COATING

- A. Furnish pipe and fittings with factory-applied, corrosion-resistant polyethylene coating for use in corrosive atmosphere.

2.4 JOINING MATERIALS

- A. Joint Compound and Tape: Suitable for LPG.
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- C. Brazing Filler Metals: Alloy with melting point greater than **1000 deg F** (540 deg C) complying with AWS A5.8/A5.8M.

2.5 MANUAL GAS SHUTOFF VALVES

- A. See "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles for where each valve type is applied in various services.
- B. Metallic Valves, **NPS 2 (DN 50)** and Smaller for Liquid Service: Comply with ASME B16.33 and UL 842.
 - 1. CWP Rating: [**250 psig** (1723 kPa)] **<Insert pressure>**.
 - 2. Threaded Ends: Comply with ASME B1.20.1.
 - 3. Socket ends for brazed joints.
 - 4. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 - 5. Listing by CSA or agency acceptable to authorities having jurisdiction for valves **1 inch** (25 mm) and smaller.
 - 6. Valves **1-1/4 inch** (32 mm) and larger shall be suitable for LPG service, with "WOG" indicated on valve body.
- C. General Requirements for Metallic Valves, **NPS 2 (DN 50)** and Smaller for Vapor Service: Comply with ASME B16.33.
 - 1. CWP Rating: [**125 psig** (862 kPa)] **<Insert pressure>**.
 - 2. Threaded Ends: Comply with ASME B1.20.1.
 - 3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
 - 4. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 - 5. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves **1 inch** (25 mm) and smaller.
 - 6. Service Mark: Valves **1-1/4 inch** (32 mm) to **NPS 2 (DN 50)** shall have initials "WOG" permanently marked on valve body.

- D. General Requirements for Metallic Valves, **NPS 2-1/2 (DN 65)** and Larger: Comply with ASME B16.38.
1. CWP Rating: [**125 psig** (862 kPa)] **<Insert pressure>**.
 2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
 3. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 4. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- E. Gas Stops: Bronze body with AGA stamp, plug type with bronze plug and flat or square head, ball type with chrome-plated brass ball and lever handle, or butterfly valve with stainless-steel disc and fluorocarbon elastomer seal and lever handle; 2-psig (13.8-kPa) minimum pressure rating.
- F. One-Piece, Bronze Ball Valve with Bronze Trim: MSS SP-110.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [BrassCraft Manufacturing Company; a Masco company.](#)
 - b. [Conbraco Industries, Inc.; Apollo Div.](#)
 - c. [Lyll, R. W. & Company, Inc.](#)
 - d. [McDonald, A. Y. Mfg. Co.](#)
 - e. [Perfection Corporation; a subsidiary of American Meter Company.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Body: Bronze, complying with ASTM B 584.
 3. Ball: Chrome-plated brass.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE; blowout proof.
 6. Packing: Separate packnut with adjustable-stem packing threaded ends.
 7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 8. CWP Rating: **600 psig** (4143 kPa).
 9. Listing: Valves **NPS 1 (DN 25)** and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for LPG service with "WOG" indicated on valve body.
- G. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [BrassCraft Manufacturing Company; a Masco company.](#)
 - b. [Conbraco Industries, Inc.; Apollo Div.](#)
 - c. [Lyll, R. W. & Company, Inc.](#)
 - d. [McDonald, A. Y. Mfg. Co.](#)

- e. [Perfection Corporation; a subsidiary of American Meter Company.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Body: Bronze, complying with ASTM B 584.
 3. Ball: Chrome-plated bronze.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE; blowout proof.
 6. Packing: Threaded-body packnut design with adjustable-stem packing.
 7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 8. CWP Rating: **600 psig** (4143 kPa).
 9. Listing: Valves **NPS 1** (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for LPG service with "WOG" indicated on valve body.
- H. Two-Piece, Regular-Port Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [BrassCraft Manufacturing Company; a Masco company.](#)
 - b. [Conbraco Industries, Inc.; Apollo Div.](#)
 - c. [Lyll, R. W. & Company, Inc.](#)
 - d. [McDonald, A. Y. Mfg. Co.](#)
 - e. [Perfection Corporation; a subsidiary of American Meter Company.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Body: Bronze, complying with ASTM B 584.
 3. Ball: Chrome-plated bronze
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE.
 6. Packing: Threaded-body packnut design with adjustable-stem packing.
 7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 8. CWP Rating: **600 psig** (4140 kPa).
 9. Listing: Valves **NPS 1** (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for LPG service with "WOG" indicated on valve body.
- I. Bronze Plug Valves: MSS SP-78.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Lee Brass Company.](#)
 - b. [McDonald, A. Y. Mfg. Co.](#)

- c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Body: Bronze, complying with ASTM B 584.
 3. Plug: Bronze.
 4. Ends: Threaded, socket, or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 5. Operator: Square head or lug type with tamperproof feature where indicated.
 6. Pressure Class: **125 psig** (862 kPa).
 7. Listing: Valves **NPS 1 (DN 25)** and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 8. Service: Suitable for LPG service with "WOG" indicated on valve body.
- J. Cast-Iron, Nonlubricated Plug Valves: MSS SP-78.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. McDonald, A. Y. Mfg. Co.
 - b. Mueller Co.; Gas Products Div.
 - c. Xomox Corporation; a Crane company.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Body: Cast iron, complying with ASTM A 126, Class B.
 3. Plug: Bronze or nickel-plated cast iron.
 4. Seat: Coated with thermoplastic.
 5. Stem Seal: Compatible with LPG.
 6. Ends: Threaded or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 7. Operator: Square head or lug type with tamperproof feature where indicated.
 8. Pressure Class: **125 psig** (862 kPa).
 9. Listing: Valves **NPS 1 (DN 25)** and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for LPG service with "WOG" indicated on valve body.
- K. Cast-Iron, Lubricated Plug Valves: MSS SP-78.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Flowserve.
 - b. Homestead Valve; a Division of Olson Technologies, Inc.
 - c. McDonald, A. Y. Mfg. Co.
 - d. Milliken Valve Company.
 - e. Mueller Co.; Gas Products Div.
 - f. R&M Energy Systems; a subsidiary of Robbins & Myers, Inc.
 - g. **<Insert manufacturer's name>**.

- h. or approved equal.
 - 2. Body: Cast iron, complying with ASTM A 126 Class B.
 - 3. Plug: Bronze or nickel-plated cast iron.
 - 4. Seat: Coated with thermoplastic.
 - 5. Stem Seal: Compatible with LPG.
 - 6. Ends: Threaded or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 - 7. Operator: Square head or lug type with tamperproof feature where indicated.
 - 8. Pressure Class: **125 psig** (862 kPa).
 - 9. Listing: Valves **NPS 1 (DN 25)** and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 - 10. Service: Suitable for LPG service with "WOG" indicated on valve body.
- L. PE Ball Valves: Comply with ASME B16.40.
- 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. **Kerotest Manufacturing Corp.**
 - b. **Lyall, R. W. & Company, Inc.**
 - c. **Perfection Corporation; a subsidiary of American Meter Company.**
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 - 2. Body: PE.
 - 3. Ball: PE.
 - 4. Stem: Acetal.
 - 5. Seats and Seals: Nitrile.
 - 6. Ends: Plain or fusible to match piping.
 - 7. CWP Rating: [**80 psig** (552 kPa)] **<Insert pressure>**.
 - 8. Operating Temperature: [**Minus 20 to plus 140 deg F** (Minus 29 to plus 60 deg C)] **<Insert temperature range>**.
 - 9. Operator: Nut or flat head for key operation.
 - 10. Include plastic valve extension.
 - 11. Include tamperproof locking feature for valves where indicated on Drawings.
- M. Valve Boxes:
- 1. Cast-iron, two-section box.
 - 2. Top section with cover with "GAS" lettering.
 - 3. Bottom section with base to fit over valve and barrel a minimum of **5 inches** (125 mm) in diameter.
 - 4. Adjustable cast-iron extensions of length required for depth of bury.
 - 5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head and with stem of length required to operate valve.

2.6 MOTORIZED GAS VALVES

A. Hydrostatic Relief Valves: Comply with NFPA 58.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Engineered Controls International, Inc.; RegO Products.](#)
 - b. [Fisher Control Valves and Regulators; Division of Emerson Process Management.](#)
 - c. [Murray Equipment, Inc.](#)
 - d. [Sherwood; a division of Harsco Corporation.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Operating Pressure: [350 psig (2413 kPa)] **<Insert pressure>**.
3. Body: Brass.
4. Spring: Stainless steel.
5. Disc and Seat: Nitrile.
6. Brass body and stainless-steel, spring-operated valve with resilient rubber disc seat and protective cap.
7. Factory set and tested.
8. Listing: Valves listed and labeled by an NRTL acceptable to authorities having jurisdiction.
9. Valve shall reseal after relieving pressure.

B. Automatic Gas Valves: Comply with ANSI Z21.21.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [ASCO.](#)
 - b. [ASCO Power Technologies, LP; Division of Emerson.](#)
 - c. [ASCO Valve Canada; Division of Emerson Electric Canada Limited.](#)
 - d. [Dungs, Karl, Inc.](#)
 - e. [Eaton Corporation; Controls Div.](#)
 - f. [Eclipse Combustion, Inc.](#)
 - g. [Honeywell International Inc.](#)
 - h. [Johnson Controls.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Body: Brass or aluminum.
3. Seats and Disc: Nitrile rubber.
4. Springs and Valve Trim: Stainless steel.
5. Normally closed.
6. Visual position indicator.
7. **[Electrical] [Mechanical]** operator for actuation by appliance automatic shutoff device.

C. Electrically Operated Valves: Comply with UL 429.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [ASCO](#).
 - b. [ASCO Power Technologies, LP; Division of Emerson](#).
 - c. [Dungs, Karl, Inc.](#)
 - d. [Eclipse Combustion, Inc.](#)
 - e. [Goyen Valve Corp.; Tyco Environmental Systems](#).
 - f. [Magnatrol Valve Corporation](#).
 - g. [Parker Hannifin Corporation; Climate & Industrial Controls Group; Skinner Valve Div.](#)
 - h. [Watts Regulator Co.; Division of Watts Water Technologies, Inc.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Pilot operated.
3. Body: Brass or aluminum.
4. Seats and Disc: Nitrile rubber.
5. Springs and Valve Trim: Stainless steel.
6. 120-V ac, 60 Hz, Class B, continuous-duty molded coil, replaceable.
7. NEMA ICS 6, Type 4, coil enclosure.
8. Normally closed.
9. Visual position indicator.

2.7 EARTHQUAKE VALVES

A. Earthquake Valves: Comply with ASCE 25.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Vanguard Valves, Inc.](#)
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
2. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction.
3. Maximum Operating Pressure: 5 psig (34.5 kPa).
4. Cast-aluminum body with nickel-plated chrome steel internal parts.
5. Nitrile-rubber valve washer.
6. Sight windows for visual indication of valve position.
7. Threaded-end connections complying with ASME B1.20.1.

B. Earthquake Valves: Comply with ASCE 25.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Pacific Seismic Products, Inc.](#)
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
2. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 3. Maximum Operating Pressure: [0.5 psig (3.45 kPa)] [7 psig (48 kPa)] [60 psig (414 kPa)].
 4. Cast-aluminum body with stainless-steel internal parts.
 5. Nitrile-rubber, reset-stem O-ring seal.
 6. Valve position, open or closed, indicator.
 7. Composition valve seat with clapper held by spring or magnet locking mechanism.
 8. Level indicator.
 9. End Connections: Threaded for valves NPS 2 (DN 50) and smaller; flanged for valves NPS 2-1/2 (DN 65) and larger.

2.8 PRESSURE REGULATORS

A. General Requirements:

1. Single stage and suitable for LPG.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 (DN 50) and smaller; flanged for regulators NPS 2-1/2 (DN 65) and larger.

B. Service Pressure Regulators: Comply with ANSI Z21.80.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Actaris](#).
 - b. [American Meter Company](#).
 - c. [Fisher Control Valves and Regulators; Division of Emerson Process Management](#).
 - d. [Invensys](#).
 - e. [Richards Industries; Jordan Valve Div.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.

8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: [100 psig (690 kPa)] <Insert pressure>.

C. Line Pressure Regulators: Comply with ANSI Z21.80.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Actaris.](#)
- b. [American Meter Company.](#)
- c. [Eclipse Combustion, Inc.](#)
- d. [Fisher Control Valves and Regulators; Division of Emerson Process Management.](#)
- e. [Invensys.](#)
- f. [Maxitrol Company.](#)
- g. [Richards Industries; Jordan Valve Div.](#)
- h. <Insert manufacturer's name>.
- i. or approved equal.

2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: [2 psig (13.8 kPa)] [5 psig (34.5 kPa)] [10 psig (69 kPa)] <Insert pressure>.

D. Appliance Pressure Regulators: Comply with ANSI Z21.18.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Canadian Meter Company Inc.](#)
- b. [Eaton Corporation; Controls Div.](#)
- c. [Harper Wyman Co.](#)

- d. [Maxitrol Company](#).
 - e. [SCP, Inc.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Body and Diaphragm Case: Die-cast aluminum.
 3. Springs: Zinc-plated steel; interchangeable.
 4. Diaphragm Plate: Zinc-plated steel.
 5. Seat Disc: Nitrile rubber.
 6. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
 7. Factory-Applied Finish: Minimum three-layer polyester and polyurethane paint finish.
 8. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
 9. Maximum Inlet Pressure: [1 psig (6.9 kPa)] [2 psig (13.8 kPa)] [5 psig (34.5 kPa-)] **<Insert pressure>**.

2.9 SERVICE METERS

In first paragraph below, retain first option for units having capacities of 500 cfm (3935 mL/s) and less and second for units having capacities more than 500 cfm (3935 mL/s).

- A. Diaphragm-Type Service Meters: Comply with [ANSI B109.1] [ANSI B109.2].
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Actaris](#).
 - b. [American Meter Company](#).
 - c. [Invensys](#).
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Case: Die-cast aluminum.
 3. Connections: Steel threads.
 4. Diaphragm: Synthetic fabric.
 5. Diaphragm Support Bearings: Self-lubricating.
 6. Compensation: Continuous temperature[**and pressure**].
 7. Meter Index: [**Cubic feet**] [**Liters**] [**Cubic feet and liters**].
 8. Meter Case and Index: Tamper resistant.
 9. Remote meter reader compatible.
 10. Maximum Inlet Pressure: [100 psig (690 kPa)] **<Insert pressure>**.
 11. Pressure Loss: Maximum [0.5-inch wg (124 Pa)] [2.0-inch wg (498 Pa)] **<Insert pressure differential>**.
 12. Accuracy: Maximum plus or minus [1.0] **<Insert number>** percent.
- B. Rotary-Type Service Meters: Comply with ANSI B109.3.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [American Meter Company](#).
 - b. [Invensys](#).
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Case: Extruded aluminum.
 3. Connection: Flange.
 4. Impellers: Polished aluminum.
 5. Rotor Bearings: Self-lubricating.
 6. Compensation: Continuous temperature[**and pressure**].
 7. Meter Index: [**Cubic feet**] [**Liters**] [**Cubic feet and liters**].
 8. Tamper resistant.
 9. Remote meter reader compatible.
 10. Maximum Inlet Pressure: [100 psig (690 kPa)] **<Insert pressure>**.
 11. Accuracy: Maximum plus or minus [2.0] **<Insert number>** percent.
- C. Turbine Meters: Comply with ASME MFC-4M.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [American Meter Company](#).
 - b. [Invensys](#).
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Housing: Cast iron or welded steel.
 3. Connection Threads or Flanges: Steel.
 4. Turbine: Aluminum or plastic.
 5. Turbine Bearings: Self-lubricating.
 6. Compensation: Continuous temperature[**and pressure**].
 7. Meter Index: [**Cubic feet**] [**Liters**] [**Cubic feet and liters**].
 8. Tamper resistant.
 9. Remote meter reader compatible.
 10. Maximum Inlet Pressure: [100 psig (690 kPa)] **<Insert pressure>**.
 11. Accuracy: Maximum plus or minus [2.0] **<Insert number>** percent.
- D. Service-Meter Bars:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Actaris](#).
 - b. [American Meter Company](#).
 - c. [Lyll, R. W. & Company, Inc.](#)
 - d. [McDonald, A. Y. Mfg. Co.](#)
 - e. [Mueller Co.; Gas Products Div.](#)
 - f. [Perfection Corporation; a subsidiary of American Meter Company.](#)
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.

2. Malleable- or cast-iron frame for supporting service meter.
3. Include offset swivel pipes, meter nuts with o-ring seal, and factory- or field-installed dielectric unions.
4. Omit meter offset swivel pipes if service-meter bar dimensions match service-meter connections.

E. Service-Meter Bypass Fittings:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Lyll, R. W. & Company, Inc.](#)
 - b. [Williamson, T. D., Inc.](#)
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Ferrous, tee, pipe fitting with capped side inlet for temporary LPG supply.
3. Integral ball-check bypass valve.

2.10 DIELECTRIC FITTINGS

A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

B. Dielectric Unions:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Capitol Manufacturing Company.](#)
 - b. [Central Plastics Company.](#)
 - c. [Hart Industries International, Inc.](#)
 - d. [Jomar International Ltd.](#)
 - e. [Matco-Norca, Inc.](#)
 - f. [McDonald, A. Y. Mfg. Co.](#)
 - g. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
 - h. [Wilkins; a Zurn company.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Description:
 - a. Standard: ASSE 1079.
 - b. Pressure Rating: [125 psig (860 kPa) **minimum at 180 deg F (82 deg C)**] [150 psig (1035 kPa)] [250 psig (1725 kPa)].
 - c. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flanges:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Capitol Manufacturing Company.](#)
 - b. [Central Plastics Company.](#)
 - c. [Matco-Norca, Inc.](#)
 - d. [Watts Regulator Co.; a division of Watts Water Technologies, Inc.](#)
 - e. [Wilkins; a Zurn company.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
2. Description:
 - a. Standard: ASSE 1079.
 - b. Factory-fabricated, bolted, companion-flange assembly.
 - c. Pressure Rating: [125 psig (860 kPa) **minimum at 180 deg F** (82 deg C)] [150 psig (1035 kPa)] [175 psig (1200 kPa)] [300 psig (2070 kPa)].
 - d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Insulating Kits:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Advance Products & Systems, Inc.](#)
 - b. [Calpico, Inc.](#)
 - c. [Central Plastics Company.](#)
 - d. [Pipeline Seal and Insulator, Inc.](#)
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.
2. Description:
 - a. Nonconducting materials for field assembly of companion flanges.
 - b. Pressure Rating: [150 psig (1035 kPa)] **<Insert pressure>.**
 - c. Gasket: Neoprene or phenolic.
 - d. Bolt Sleeves: Phenolic or polyethylene.
 - e. Washers: Phenolic with steel backing washers.

2.11 STORAGE CONTAINERS

- A. Description: Factory fabricated, complying with requirements in NFPA 58 and ASME Boiler and Pressure Vessel Code and bearing the ASME label. Tanks shall be rated for 250-psig (1723-kPa) minimum working pressure.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [American Welding & Tank.](#)

- b. [Hanson, Roy E. Jr. Mfg.](#)
 - c. [Trinity Industries, Inc.](#)
 - d. [United Industries Group, Inc.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Liquid outlet and vapor inlet and outlet connections shall have shutoff valves with excess-flow safety shutoff valves and bypass and back-pressure check valves with smaller than **0.039-inch** (1-mm) drill-size hole to equalize pressure. Liquid-fill connection shall have backflow check valve.
 - a. Connections: Color-code and tag valves to indicate type.
 - 1) Liquid fill and outlet, red.
 - 2) Vapor inlet and outlet, yellow.
3. Level gage shall indicate current level of liquid in the container. Gages shall also indicate storage container contents; e.g., "Butane," "50-50 LPG Mix," or "Propane."
4. Pressure relief valves, type and number as required by NFPA 58, connected to vapor space and having discharge piping same size as relief-valve outlet and long enough to extend at least **84 inches** (2130 mm) directly overhead. Identify relief valves as follows:
 - a. Discharge pressure in **psig** (kPa).
 - b. Rate of discharge for standard air in **cfm** (L/s).
 - c. Manufacturer's name.
 - d. Catalog or model number.
5. Container pressure gage.
6. For outdoor installation, exposed metal surfaces mechanically cleaned, primed, and painted for resistance to corrosion.
7. Ladders for access to valves more than **72 inches** (1830 mm) aboveground.
8. Stainless-Steel Nameplate: Attach to aboveground storage container or to adjacent structure for underground storage container.
 - a. Name and address of supplier or trade name of container.
 - b. Water capacity in gallons and liters.
 - c. Design pressure in **psig** (kPa).
 - d. Statement, "This container shall not contain a product having a vapor pressure in excess of **<Insert maximum pressure in psig (kPa) at 100 deg F (37.8 deg C)>**."
 - e. Outside surface area in sq. ft. (sq. m).
 - f. Year of manufacture.
 - g. Shell thickness in inches (mm).
 - h. Overall length in feet (m).
 - i. OD in feet (m).
 - j. Manufacturer's serial number.
 - k. ASME Code label.

9. Felt support pads and two concrete or painted-steel saddles per storage container. Corrosion protection required at container-to-felt contact.
10. Tie straps for each saddle.
11. Straps and anchors for tie-down slab.
12. Asphalt-based coating for corrosion protection.
13. Container connections and valves protected in manway at top of storage container.
14. Manway equipped with ventilation louvers.

2.12 TRANSPORT TRUCK UNLOADING FACILITY

A. Description: Comply with requirements in NFPA 58.

1. Support structure consisting of a minimum **6-inch (150-mm)** steel channel or **6-by-4-inch (150-by-100-mm)** rectangular steel tubing, a minimum of **36 inches (914 mm)** above and below grade.
2. Liquid-fill and vapor-return, quick-disconnect fittings.
3. Liquid and vapor shutoff valves with hydrostatic relief valves mounted between the quick-disconnect fittings and shutoff valves.
4. Excess-flow safety shutoff valve in vapor-return line.
5. Backflow check valve in liquid-fill line.
6. Remote emergency shutoff valve station with underground cable to the vapor emergency shutoff valve.

2.13 PUMPS

A. Description: Factory-assembled and -tested, duplex, positive-displacement, belt drive.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Blackmer; a Dover Resources company.
 - b. Corken, Inc.; a unit of IDEX Corporation.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.

B. Pump Construction:

1. Casing: Ductile-iron casing with threaded gage tappings at inlet and outlet.
2. Internal Pressure Relief Valve: For pump protection in addition to the external pressure relief valves.
3. Impeller: Carbon or composite vane in cast-iron rotor.
4. Pump Shaft: Carbon steel.
5. Seal: Mechanical with Buna-N O-ring.
6. Pump Bearings: Ball bearings with grease fittings.
7. Baseplate: Bent carbon-steel channel or structural channel.

- C. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 2. Motor Speeds: Single.
 3. Bearings: [**Permanently lubricated**] [**Grease-lubricated**] ball bearings.
 4. Class I, Division 1, Group D requirements per NFPA 70.
- D. Factory-Installed Piping and Specialties:
1. Pipe: ASTM A 53/A 53M, Type E or S, Grade B; Schedule 40 black steel with welded fittings and joints or Schedule 80 for threaded malleable-iron fittings and joints.
 2. Piping Specialties for Each Pump:
 - a. Bypass valve.
 - b. Isolation valves.
 - c. Unions for each connection.
 - d. Check valve.
 - e. Basket strainer.
 - f. Pressure gages for suction and discharge connections.
 - g. Hydrostatic relief valve.
 - h. Pilot-operated, pressure-regulating valve.
- E. Braided-jacket flexible connectors for suction and discharge connections.
- F. Pump and Piping Finish: For outdoor installation, exposed metal surfaces mechanically cleaned, primed, and painted for resistance to corrosion.
- G. Controls:
1. Explosion-proof controls enclosure.
 2. Magnetic starter package with automatic alternator.
 3. Pressure-activated start and stop.
 4. Lag pump starts if lead pump fails.
 5. Audible and visual indication of pump failure.
- H. Capacities and Characteristics[**for Each Pump**]:
1. Capacity: <Insert gph (mL/s)>.
 2. Minimum Working Pressure: [350 psig (2413 kPa)] <Insert pressure>.
 3. Continuous Fluid Temperature: [250 deg F (121 deg C)] <Insert temperature>.
 4. Total Dynamic Head: <Insert psig (kPa)>.
 5. Inlet and Outlet Size: <Insert NPS (DN)>.
 6. Return Size: <Insert NPS (DN)>.
 7. Pump Speed: <Insert rpm>.
 8. Motor Speed: <Insert rpm>.
 9. Motor Horsepower: <Insert value>.

10. Electrical Characteristics:

- a. Volts: **[240] [480] <Insert value>**.
- b. Phase: **[Single] [Three]**.
- c. Hertz: 60.
- d. Full-Load Amperes: **<Insert value>**.
- e. Minimum Circuit Ampacity: **<Insert value>**.
- f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.14 VAPORIZERS

- A. Description: Factory-fabricated, -assembled, and -tested vaporizer with heat exchanger sealed pressure-tight, built on a steel base; including insulated jacket, flue-gas vent, liquid fuel supply and vapor connections, and controls. Assembly shall be FMG labeled and comply with NFPA 58 and NFPA 70.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Algas-SDI.
- b. Alternate Energy Systems, Inc.
- c. Ely Energy, Inc.
- d. Ransome Manufacturing: a division of Meeder Equipment Company.
- e. **<Insert manufacturer's name>**.
- f. or approved equal.

- B. Fabricate base and attachment to vaporizers with reinforcement strong enough to resist vaporizer movement during a seismic event when steel base is anchored to a concrete base.

C. Casing:

1. Mineral-fiber insulation, a minimum of **2 inches (50 mm)** thick, surrounding the heat exchanger.
2. Integral one-piece skid with forklift access holes.
3. Lifting lugs on top of vaporizer.
4. Flue rain cap and bird screen.
5. Sheet metal jacket with screw-fastened closures and **[baked-enamel] [powder-coat]** protective finish.
6. Mounting base to secure boiler to concrete base.
7. Control Compartment Enclosure: NEMA 250, Type 4, enclosure housing control panels for LPG-fired vaporizers. Explosion-proof control compartment construction required for electric vaporizers.

D. LPG Liquid and Vapor Circuit Specialties:

1. Y-type strainer with drain valve at inlet.
2. Vaporizer coil safety pressure relief valve.
3. Vaporizer coil blowdown valve.

4. Vapor outlet isolation valve.
 5. Pressure gages, a minimum of 2-1/2 inches (63 mm) in diameter, at liquid inlet and vapor discharge. Gages shall have operating-temperature ranges so normal operating range is at approximately 50 percent of full range.
 6. Inlet safety solenoid valve to close with off-normal operation alarm.
 7. Backflow check valve in bypass around inlet safety solenoid valve.
 8. Liquid carryover or float-type safety shutoff switch.
 9. LPG Vapor Filter: Steel shell designed and manufactured per ASME Boiler and Pressure Vessel Code, Section VIII, Division 1; factory mounted on vaporizer discharge. Shells larger than 5 inches (125 mm) shall be ASME "U" stamped. Fill with stainless-steel, woven-mesh coalescing element to remove 99 percent of particles larger than 10 microns. 250-psig (1723-kPa) minimum working pressure. Finish with corrosion-resistant coating for an exterior application. Include factory-mounted and -piped, differential pressure gage with gage cocks in and out, and minimum NPS 3/4 (DN 20) full-port, ball-type drain valve.
- E. Direct-Type, Direct-Fired Heat Exchanger:
1. Description: ASME-rated and -stamped, LPG, vaporizer coil contained in an enclosure insulated with at least 2-inch- (50-mm-) thick, mineral-fiber board enclosure with a burner.
 2. Burner Tubes and Orifices: Stainless steel.
 - a. Gas Train: Control devices and burner control sequence shall be FMG labeled. Include shutoff valve, high- and low-pressure safety switches, pressure regulator, and main- and pilot-control valves.
 - b. Pilot: Standing pilot with 100 percent main-valve and pilot safety shutoff.
 3. Burner Operating Controls:
 - a. Controls shall maintain safe operating conditions. Mechanical burner safety controls limit operation of the burner.
 - b. High-Pressure Cutoff: Manual reset stops burner if operating conditions rise above maximum design pressure.
 - c. Operating Vapor-Pressure Control: Factory piped and mounted to control burner.
- F. Indirect-Type, Direct-Fired Heat Exchanger:
1. Description: ASME-rated and -stamped, LPG, vaporizer vessel with a replaceable, immersion-type, electric heating element.
 2. Heating Element Operating Controls:
 - a. Operating controls shall maintain safe operating conditions. Safety controls limit operation of the element.[**Microprocessor-based control system integrates safety and operating controls.**]
 - b. Operating Vapor-Pressure Control: Factory wired and mounted to control heating element.
 - c. High-Pressure Cutoff: Manual reset stops burner if operating conditions rise above maximum design pressure.

- d. Alarm Bell and Rotary Beacon: Factory mounted on control panel with silence switch; shall sound alarm for out-of-normal conditions.
- e. Control Transformer: 115-V maximum control voltage.

G. Direct-Type, Water-Bath Heat Exchanger:

1. Description: Straight, steel fire tubes welded into steel headers with ASME-rated and -stamped, helical, LPG, vaporizer coil submerged in water bath. Include the following:
 - a. Water bath filled with water/glycol solution designed to prevent freezing at [minus 30 deg F (minus 34 deg C)] <Insert temperature>.
 - b. Water-bath, high- and low-level sight glasses.
 - c. Low-water cutoff to stop burner and annunciate alarm.
 - d. Water/glycol fill and vent fitting.
 - e. Minimum NPS 3/4 (DN 20) hose-end drain valves.
 - f. Operating high- and low-limit aquastat controllers.
 - g. Water-bath temperature gage; a minimum of 2-1/2 inches (63 mm) in diameter. Gages shall have operating-temperature ranges so normal operating range is at approximately 50 percent of full range.
2. Burner Tubes and Orifices: Stainless steel.
 - a. Gas Train: Control devices and burner modulation control sequence shall be FMG labeled. Include shutoff valve, high- and low-pressure safety switches, pressure regulator, and main- and pilot-control valves.
 - b. Pilot: [Intermittent-electric-spark] [Hot-surface] pilot ignition with 100 percent main-valve and pilot safety shutoff with electronic supervision of burner flame.
3. Burner Operating Controls:
 - a. Operating controls shall maintain safe operating conditions. Safety controls limit operation of the burner. [**Microprocessor-based control system integrates safety and operating controls.**]
 - b. Operating Water-Bath Temperature Control: Factory wired and mounted to control burner.
 - c. High-Temperature and High-Pressure Cutoff: Manual reset stops burner if operating conditions rise above maximum design temperature or vapor pressure.
 - d. Alarm Bell and Rotary Beacon: Factory mounted on control panel with silence switch; shall sound alarm for out-of-normal conditions.
 - e. Control Transformer: 115-V maximum control voltage.

H. Indirect-Type, Water-Bath Heat Exchanger:

1. Description: Immersion-type, electric heating element with ASME-rated and -stamped, helical, LPG, vaporizer coil submerged in water bath. Include the following:

- a. Water bath filled with water/glycol solution designed to prevent freezing at [minus 30 deg F (minus 34 deg C)] <Insert temperature>.
 - b. Water-bath, high- and low-level sight glasses.
 - c. Low-water cutoff to stop electric heater and annunciate alarm.
 - d. Water/glycol fill and vent fitting.
 - e. Minimum NPS 3/4 (DN 20) hose-end drain valves.
 - f. Operating high- and low-limit aquastat controllers.
 - g. Water-bath temperature gage; a minimum of 2-1/2 inches (63 mm) in diameter. Gages shall have operating-temperature ranges so normal operating range is at approximately 50 percent of full range.
2. Electric Heater Operating Controls:
- a. Controls shall maintain safe operating conditions. Safety controls limit operation of the electric element. [**Microprocessor-based control system integrates safety and operating controls.**]
 - b. Operating Water-Bath Temperature Control: Factory wired and mounted to control burner.
 - c. High-Temperature and High-Pressure Cutoff: Manual reset stops burner if operating conditions rise above maximum design temperature or pressure.
 - d. Alarm Bell and Rotary Beacon: Factory mounted on control panel with silence switch; shall sound alarm for out-of-normal conditions.
 - e. Control Transformer: 115-V maximum control voltage.
- I. Building Management System Interface: Factory-installed hardware and software to enable building management system to monitor and control set points and display vaporizer status and alarms.
- J. Capacities and Characteristics:
1. Heating Fuel: [Propane] [Butane] [Electric].
 2. Vaporization Heat Exchanger:
 - a. Minimum Working-Pressure Rating: [250 psig (1723 kPa)] <Insert value>.
 - b. Test Pressure: [375 psig (2586 kPa)] <Insert value>.
 3. LPG Vaporization Rate: <Insert gph (mL/s)>.
 4. Entering-LPG Temperature: [Minus 30 deg F (Minus 34 deg C)] <Insert temperature>.
 5. Leaving-LPG Temperature: [80 deg F (26.7 deg C)] <Insert temperature>.
 6. Discharge-LPG Pressure: [90 psig (621 kPa)] <Insert value>.
 7. Burner Gas Input: <Insert Btu/h (kW)>.
 8. Electric Burner Input: <Insert kilowatts>.
 9. Water-Bath Shell Operating Pressure: [Atmospheric] <Insert psig (kPa)>.
 10. Water-Bath Operating Temperature: [160 deg F (71 deg C)] <Insert temperature>.
 11. Electrical Characteristics:
 - a. Volts: [120] [240] [480] <Insert value>.
 - b. Phase: [Single] [Three].

- c. Hertz: 60.
- d. Minimum Circuit Ampacity: **<Insert value>**.
- e. Maximum Overcurrent Protection: **<Insert amperage>**.

2.15 AIR MIXERS

- A. Description: Factory-fabricated, -assembled, -calibrated, and -tested[, **blower-assisted**] air mixer with surge tank, built on a steel base; including vapor supply and discharge connections, and controls. Assembly shall be FMG labeled and comply with NFPA 58 and NFPA 70.
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Algas-SDI.
 - b. Alternate Energy Systems, Inc.
 - c. Ely Energy, Inc.
 - d. Ransome Manufacturing; a division of Meeder Equipment Company.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
- B. Fabricate base and attachment to mixers with reinforcement strong enough to resist air mixer movement during a seismic event when steel base is anchored to a concrete base.
- C. Mounting Skid, Panels, and Surge Tank:
 1. Integral one-piece skid with forklift access holes.
 2. Lifting lugs on top of air mixer.
 3. **[Baked-enamel] [Powder-coat]** protective finish.
 4. Mounting base to secure boiler to concrete base.
 5. Control Compartment Enclosure: NEMA 250, Type 4, enclosure housing control panels.
 6. ASME-stamped surge tank with venturi, isolation valves, excess-flow safeties, and safety relief valves.
- D. Blower: Positive-displacement, rotary-lobe type.
 1. Motor: Single speed, with **[permanently lubricated] [grease-lubricated]** ball bearings. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
- E. LPG Circuit Specialties:
 1. Venturi solenoid valves.
 2. Venturi nozzles, minimum of 3, for minimum of 10:1 turndown capacity.
 3. Venturi silencers.
 4. Mist filter and strainer with pressure differential gage, and blowdown ball valve.
 5. Inlet and outlet isolation valves.

6. Pressure gages, a minimum of **2-1/2 inches (63 mm)** in diameter, at inlet and discharge. Gages shall have operating-temperature ranges so normal operating range is at approximately 50 percent of full range.

F. Air-Mixer Controls:

1. Controls shall maintain safe operating conditions. The following safety controls limit the operation of the air mixer. All safety controls are manual reset.
 - a. Low-inlet-vapor pressure.
 - b. High- or low-discharge pressure.
2. Alarm Bell and Rotary Beacon: Factory mounted on control panel with silence switch; shall sound alarm for out-of-normal conditions.
3. Control Transformer: 115-V maximum control voltage.

G. Mount on common skid with vaporizer.

H. Capacities and Characteristics:

1. Heating Fuel: [**Propane**] [**Butane**].
2. Air Mixer:
 - a. Outlet Pressure: [**20 psig (138 kPa)**] **<Insert value>**.
 - b. Test Pressure: [**30 psig (207 kPa)**] **<Insert value>**.
3. Entering LPG:
 - a. Temperature: [**90 deg F (32 deg C)**] **<Insert temperature>**.
 - b. Inlet Pressure: [**20 psig (138 kPa)**] **<Insert value>**.
4. Mixed Gas:
 - a. Pressure: [**20 psig (138 kPa)**] **<Insert value>**.
 - b. Higher Heating Value: [**1430 Btu/cu. ft. (53 339 kJ/cu. m)**] **<Insert value>**.
 - c. Specific Gravity: [**1.3**] **<Insert value>**.
 - d. Flow Rate: **<Insert gph (mL/s)>**.
5. Electrical Characteristics:
 - a. Volts: [**120**] [**240**] [**480**] **<Insert value>**.
 - b. Phase: [**Single**] [**Three**].
 - c. Hertz: 60.
 - d. Minimum Circuit Ampacity: **<Insert value>**.
 - e. Maximum Overcurrent Protection: **<Insert amperage>**.

2.16 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant PE film warning tape manufactured for marking and identifying underground utilities, a minimum of **6 inches**

(150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (750 mm) deep; colored yellow.

- B. Reference Section 230553 "Identification of HVAC Piping and Equipment".

2.17 CONCRETE BASES

- A. Description: Precast, reinforced concrete base, made of 3000-psi- minimum, 28-day compressive strength concrete, and measuring 4 inches thick and 4 inches larger in each dimension than supported item, unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for LPG piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

- A. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.

3.3 PREPARATION

- A. Close equipment shutoff valves before turning off LPG to premises or piping section.
- B. Perform leakage test as specified in Article 3 to determine that all equipment is turned off in affected piping section.
 - 1. Comply with ANSI Z223.1, "Prevention of Accidental Ignition" Paragraph.
- C. Inspect LPG piping according to NFPA 58 and [NFPA 54] [the International Fuel Gas Code] to determine that LPG utilization devices are turned off in piping section affected.
- D. Comply with NFPA 58 and [NFPA 54] [the International Fuel Gas Code] requirements for prevention of accidental ignition.

3.4 OUTDOOR PIPING INSTALLATION

- A. Comply with NFPA 58 and **[NFPA 54] [the International Fuel Gas Code]** requirements for installation and purging of LPG piping.
- B. Install underground, LPG piping buried at least **[36 inches (900 mm)] <Insert dimension>** below finished grade. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.
 - 1. If LPG piping is installed less than **36 inches (914 mm)** below finished grade, install it in containment conduit.
- C. Install underground, PE, LPG piping according to ASTM D 2774.
- D. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
 - 3. Replace pipe having damaged PE coating with new pipe.
- E. Copper Tubing with Protective Coating:
 - 1. Apply joint cover kits over tubing to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
- F. Install fittings for changes in direction and branch connections.
- G. Joints for connection to inlets and outlets on vaporizers, air mixers, regulators, and valves may be flanged or threaded to match the equipment.
- H. Install pressure gage **[downstream] [upstream and downstream]** from each service regulator. Pressure gages are specified in Section 230519 "Meters and Gages for HVAC Piping."

3.5 SERVICE ENTRANCE PIPING

- A. Extend LPG piping and connect to fuel gas distribution for service entrance to building.
 - 1. Exterior LPG distribution system piping, service pressure regulator and service meter will be provided by gas utility.
- B. Install dielectric fitting downstream from and adjacent to each service meter unless meter is supported from service-meter bar with integral dielectric fitting. Install shutoff valve downstream from and adjacent to dielectric fitting. Refer to Section 230500 "Common Work Results for HVAC" for dielectric fittings.

3.6 INDOOR PIPING INSTALLATION

- A. Comply with **[NFPA 54] [the International Fuel Gas Code]** for installation and purging of LPG piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install LPG piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Verify final equipment locations for roughing-in.
- L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where readily accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
 - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than **3 inches (75 mm)** long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.

- P. Concealed Location Installations: Except as specified below, install concealed LPG piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.
1. Above Accessible Ceilings: LPG piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit, subject to approval of authorities having jurisdiction, whether or not such spaces are used as plenums. Do not locate valves above ceilings.
 2. In Floors: Install LPG piping with welded or brazed joints and protective coating in cast-in-place concrete floors, subject to approval of authorities having jurisdiction. Cover piping to be cast in concrete slabs with minimum of 1-1/2 inches (38 mm) of concrete. Piping may not be in physical contact with other metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quickset additives or cinder aggregate.
 3. In Floor Channels: Install LPG piping in floor channels, subject to approval of authorities having jurisdiction. Channels must have cover and be open to space above cover for ventilation.
 4. In Walls or Partitions: Do not install concealed piping in solid partitions. Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
 - a. Exception: Tubing passing through partitions or walls does not require striker barriers.
 5. Prohibited Locations:
 - a. Do not install LPG piping in or through circulating air ducts, clothes, or trash chutes, chimneys, or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 - b. Do not install LPG piping in solid walls or partitions.
- Q. Install fuel gas piping at uniform grade of 0.1% slope upward toward risers.
- R. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- S. Connect branch piping from top or side of horizontal piping.
- T. Install unions in pipes NPS 2 (DN 50) and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
- U. Install corrugated, stainless-steel tubing system according to manufacturer's written instructions. Include striker plates to protect tubing from puncture where tubing is restrained and cannot move.
- V. Do not use LPG piping as grounding electrode.

- W. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- X. Install pressure gage [**downstream**] [**upstream and downstream**] from each line regulator. Pressure gages are specified in Section 230519 "Meters and Gages for HVAC Piping."
- Y. Install flanges on valves, specialties, and equipment having NPS 2-1/2 and larger connections.
- Z. Install vent piping for gas pressure regulators and gas trains, extend outside building, and vent to atmosphere. Terminate vents with turned-down, reducing-elbow fittings with corrosion-resistant insect screens in large end.
- AA. Install containment conduits for gas piping below slabs, within building, in gastight conduits extending minimum of 4 inches outside building, and vented to atmosphere. Terminate vents with turned-down, reducing-elbow fittings with corrosion-resistant insect screens in large end. Prepare and paint outside of conduits with coal-tar, epoxy-polyamide paint according to SSPC-Paint 16.
- BB. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- CC. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- DD. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.7 SERVICE-METER ASSEMBLY INSTALLATION

- A. Install service-meter assemblies aboveground[, **on concrete bases**].
- B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.
- C. Install strainer on inlet of service-pressure regulator and meter set.
- D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.
- E. Install pressure gauge [**downstream**] [**upstream and downstream**] from each service pressure regulator.
- F. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.

- G. Install service meters downstream from pressure regulators.
 - 1. Service meters with connections NPS 1 and smaller on meter bars.
 - 2. Service meters with connections larger than NPS 1 supported from piping or set on concrete bases.

- H. Install metal bollards to protect meter assemblies. Comply with requirements in Section 055000 "Metal Fabrications" for pipe bollards.

3.8 VALVE INSTALLATION

- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.
- B. Install underground valves with valve boxes.
- C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
- D. Install earthquake valves aboveground outside buildings according to listing.
- E. Install anode for metallic valves in underground PE piping.

3.9 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
 - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
 - 2. Cut threads full and clean using sharp dies.
 - 3. Ream threaded pipe ends to remove burrs and restore full ID of pipe.
 - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
 - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
 - 1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
 - 2. Bevel plain ends of steel pipe.
 - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Ch. 22, "Pipe and Tube."
 - 1. Brazed Joints: Make with brazing alloy with melting point greater than 1000oF.
 - 2. Brazing alloys containing phosphorus are prohibited.
- F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for LPG service. Install gasket concentrically positioned.
- G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not overtighten.
- H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
 - 1. Plain-End Pipe and Fittings: Use butt fusion.
 - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.10 HANGER AND SUPPORT INSTALLATION

- A. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- C. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
 - 1. NPS 1 (DN 25) and Smaller: Maximum span, 96 inches (2438 mm); minimum rod size, 3/8 inch (10 mm).
 - 2. NPS 1-1/4 (DN 32): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
 - 3. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
 - 4. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Maximum span, 10 feet (3 m); minimum rod size, 1/2 inch (13 mm).
 - 5. NPS 4 (DN 100) and Larger: Maximum span, 10 feet (3 m); minimum rod size, 5/8 inch (16 mm).
- D. Install hangers for horizontal, drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:
 - 1. NPS 3/8 (DN 10): Maximum span, 48 inches (1220 mm); minimum rod size, 3/8 inch (10 mm).
 - 2. NPS 1/2 and NPS 5/8 (DN 15 and DN 18): Maximum span, 72 inches (1830 mm); minimum rod size, 3/8 inch (10 mm).

3. **NPS 3/4 and NPS 7/8** (DN 20 and DN 22): Maximum span, **84 inches** (2134 mm); minimum rod size, **3/8 inch** (10 mm).
 4. **NPS 1** (DN 25): Maximum span, **96 inches** (2440 mm); minimum rod size, **3/8 inch** (10 mm).
- E. Install hangers for horizontal, corrugated stainless-steel tubing with the following maximum spacing and minimum rod sizes:
1. **NPS 3/8** (DN 10): Maximum span, **48 inches** (1220 mm); minimum rod size, **3/8 inch** (10 mm).
 2. **NPS 1/2** (DN 15): Maximum span, **72 inches** (1830 mm); minimum rod size, **3/8 inch** (10 mm).
 3. **NPS 3/4** (DN 20) and Larger: Maximum span, **96 inches** (2440 mm); minimum rod, **3/8 inch** (10 mm).

3.11 CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.
- B. Drawings indicate general arrangement of LPG piping, fittings, and specialties.
- C. Install piping adjacent to appliances to allow service and maintenance.
- D. Install LPG piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
- E. Install piping adjacent to appliances to allow service and maintenance of appliances.
- F. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within **72 inches** (1830 mm) of each gas-fired appliances and equipment. Install union between valve and appliances or equipment.
- G. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.
- H. Ground equipment.
 1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
 2. Do not use gas pipe as grounding electrode.

3.12 TRANSPORT TRUCK UNLOADING FACILITY

- A. Install transport truck unloading in a cast-in-place concrete base, **48 inches** (1220 mm) square by **36 inches** (914 mm) deep. Set top of concrete base at least **6 inches** (150 mm) above finished grade.

- B. Install remote emergency shutoff station with cable release in an accessible location, a minimum of **25 feet (7.6 m)** and a maximum of **100 feet (30 m)** away from transport truck unloading.
- C. Install at least two **6-inch- (150-mm-)** diameter metal bollards set in and filled with concrete on both sides of transport truck unloading. Bollard length shall be at least **48 inches (1220 mm)** above and below grade, with concrete encasement a minimum of **12 inches (305 mm)** in diameter.

3.13 STORAGE CONTAINER INSTALLATION

- A. Fill storage container to at least 80 percent capacity with [**butane**] [**propane**].
- B. Install piping connections with swing joints or flexible connectors to allow for storage container settlement and for thermal expansion and contraction.
- C. Ground containers according to NFPA 780. Grounding is specified in Section 264113 "Lightning Protection for Structures."
- D. Set storage containers in felt pads on concrete or steel saddles. Install corrosion protection at container-to-felt contact.
- E. Install tie-downs over storage containers on saddles with proper tension.
- F. Set concrete saddles on dowels set in concrete base. Anchor steel saddles to concrete base.
- G. Set storage container on concrete ballast base large enough to offset buoyancy of empty storage container immersed in water.
- H. Install tie-down straps over container anchored in ballast base and repair damaged coating.
- I. Backfill with a minimum coverage for underground or mounded storage containers according to NFPA 58.
- J. Backfill with pea gravel as required in Section 312000 "Earth Moving."
- K. Install cathodic protection for storage container. Cathodic protection is specified in Section 264200 "Cathodic Protection."

3.14 PUMP INSTALLATION

- A. Install pumps with access space for periodic maintenance including removal of motors, impellers, and accessories.
- B. Set pumps on and anchored to concrete base.
- C. Install suction piping with minimum fittings and change of direction.

- D. Connect liquid suction to container, supply to vaporizer, and return line to container.

3.15 VAPORIZER INSTALLATION

- A. Install vaporizer with access space for periodic maintenance.
- B. Set vaporizers on and anchor to concrete base.
- C. Connect liquid line from pump set, and vapor supply to distribution piping.
- D. Install backup connection from vapor space of container to inlet of pressure-regulating valve at vaporizer discharge to bypass the vaporizer during maintenance. Install shutoff valves to change source from vaporizer to storage container.

3.16 AIR MIXER WITH VAPORIZER INSTALLATION

- A. Install air mixer with vaporizer with access space for periodic maintenance.
- B. Set air mixer with vaporizer on and anchor to concrete base.
- C. Connect liquid line from pump set, and mixed gas supply to distribution piping.
- D. Install backup connection from vapor space of container to inlet of pressure-regulating valve at vaporizer discharge to bypass vaporizer during maintenance. Install shutoff valves to change source from vaporizer to storage container.
- E. Replace filters at Substantial Completion if air mixer was operated during construction.

3.17 LABELING AND IDENTIFYING

- A. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for piping and valve identification.
- B. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each service meter, pressure regulator, and specialty valve.
 - 1. Text: In addition to name of identified unit, distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.
- C. Install detectable warning tape directly above gas piping, **12 inches** (305 mm) below finished grade, except **6 inches** (150 mm) below subgrade under pavements and slabs.

3.18 PAINTING

- A. Comply with requirements in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting" for painting interior and exterior LPG piping.
- B. Paint exposed, exterior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components with factory-applied paint or protective coating.
1. Alkyd System: MPI EXT 5.1D.
 - a. Prime Coat: Alkyd anticorrosive metal primer.
 - b. Intermediate Coat: Exterior alkyd enamel matching topcoat.
 - c. Topcoat: Exterior alkyd enamel [(flat)] [(semigloss)] [(gloss)].
 - d. Color: [Gray] <Insert color>.
- C. Paint exposed, interior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components with factory-applied paint or protective coating.
1. Latex Over Alkyd Primer System: MPI INT 5.1Q.
 - a. Prime Coat: [Alkyd anticorrosive] [Quick-drying alkyd] metal primer.
 - b. Intermediate Coat: Interior latex matching topcoat.
 - c. Topcoat: Interior latex [(flat)] [(low sheen)] [(eggshell)] [(satin)] [(semigloss)] [(gloss)].
 - d. Color: [Gray] <Insert color>.
 2. Alkyd System: MPI INT 5.1E.
 - a. Prime Coat: [Alkyd anticorrosive] [Quick-drying alkyd] metal primer.
 - b. Intermediate Coat: Interior alkyd matching topcoat.
 - c. Topcoat: Interior alkyd [(flat)] [(eggshell)] [(semigloss)] [(gloss)].
 - d. Color: [Gray] <Insert color>.
- D. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.19 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base[**according to seismic codes at Project**].
1. Locate bases at service meters and service regulators.
 2. Excavate earth and make level beds to support bases. Set bases level with top surface projecting approximately 3 inches (75 mm) above grade.
 3. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.

4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on [18-inch (451-mm)] <Insert dimension> centers around the full perimeter of the base.
5. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
6. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
7. Install anchor bolts to elevations required for proper attachment to supported equipment.
8. Use [3000-psig (20.7-MPa)] <Insert value>, 28-day, compressive-strength concrete and reinforcement as specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]

3.20 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 1. Test, inspect, and purge LPG according to NFPA 58 and [NFPA 54] [the International Fuel Gas Code] and requirements of authorities having jurisdiction, and as per Testing Piping Systems article below.
- C. LPG piping will be considered defective if it does not pass tests and inspections.
- D. Repair leaks and defects with new materials and retest system until satisfactory results are obtained.
- E. Report test results promptly and in writing to DEN Project Manager and authorities having jurisdiction.
- F. Verify capacities and pressure ratings of service meters, pressure regulators, valves, and specialties.
- G. Verify correct pressure settings for pressure regulators.
- H. Verify that specified piping tests are complete.
- I. Prepare test and inspection reports.

3.21 TESTING PIPING SYSTEMS

- A. Perform all tests in the presence of the authorized City representative when required. Contractor shall provide inspector 48-hour prior notice of test; also notify DEN Project Manager.
- B. No piping or joint shall be left untested. All leaks shall be repaired and the piping system shall be re-tested until satisfactory results are obtained.

C. Pneumatic Leak Test:

1. General: Pneumatic leak tests shall only be used on natural gas piping, piping with restricted access, piping exposed to freezing conditions, or where water leakage would damage critical DEN operational equipment. Contractor shall submit a written request for test in accordance with the Submittals Article of this specification section.
2. Test all natural gas piping prior to initial operation, to assure tightness. The test medium shall be air, or inert gas. Pipe joints shall be left exposed for examination during the test. A pressure test shall be maintained for a period of twelve (12) hours and precautions shall be taken to avoid excessive pressure. The test pressure to be used shall be no less than 1-1/2 times the proposed maximum working pressure, but not less than 10 psig, irrespective of design pressure. There shall be no loss of pressure during test. The piping system shall be visually examined for signs of leakage or other defects. All exposed joints shall be checked by means of a soap bubble test or other foaming agent test. In the event repairs or additions are made following the pressure test, the affected piping shall be retested. After test is completed and prior to putting piping systems into operation, completely purge system. Purging medium may be same as piping medium as long as piping medium can be introduced at a moderately rapid and continuous rate
3. Pneumatic Test Procedure:
 - a. Contractor shall submit safety plan for pneumatic testing prior to test.
 - b. General: Compressed gas poses the risk of sudden release of stored energy. For that reason, pneumatic testing shall be used only within the following limitations:
 - 1) The piping system does not contain cast iron pipe or plastic pipe subject to brittle failure.
 - 2) The system does not contain soldered or solvent cement joints over NPS 2.
 - 3) The test pressure does not exceed 150 psig.
 - c. Test Medium: The gas shall be nonflammable and nontoxic.
 - d. Preliminary Test: Prior to application of full pneumatic test pressure, a preliminary test of not more than 10 psig shall be applied to reveal possible major leaks. Pneumatic Test Pressure:
 - 1) Except as limited in 2) below, the test pressure shall not exceed 1.25 times the design pressure. Pressure shall be applied in several stages, allowing time for the system to reach equilibrium at each stage.
 - 2) The test pressure shall not exceed the maximum allowable pneumatic test pressure for any vessel, pump, valve, or other component in the system under test.
 - e. Examination for Leakage: After the preliminary test, pressure shall be raised in stages of not more than 25% up to full pneumatic test pressure, allowing time for equalization of strains and detection of major leaks at each

stage. Following the application of test pressure for at least 10 minutes, the pressure may be reduced to design pressure and examination shall be made for leakage of the piping. Leaks may be detected by soap bubble, halogen gas, scented gas, test gage monitoring, ultrasonic, or other suitable means. If leaks are found, pressure shall be vented, appropriate repair or replacement shall be made, and the pneumatic test repeated until no leakage is found.

- f. Contractor shall measure the surface temperature of the pipe for the duration of testing. The pneumatic test will be deemed successful only when the test pressure can be held at a constant pipe surface temperature for a period of no less than 10 continuous minutes. Record of the pipe temperatures and pressures during the duration of the test shall be submitted to the DEN Project Manager following completion of the test.

- D. Testing shall be witnessed by DEN Mechanical Inspector and DEN Project Manager or Designated Representative.
- E. Repair piping systems which fail required piping test, by disassembly and reinstallation, using new materials to extent required to overcome leakage. Do not use chemicals, stop-leak compounds, mastics, or other temporary repair methods.
- F. Prepare written report of testing procedures and result. Submit in accordance with Section 23400 "Basic HVAC Requirements".

3.22 ADJUSTING

- A. Adjust controls and safety devices. Replace damaged and malfunctioning controls and safety devices.

3.23 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain LPG equipment.

3.24 OUTDOOR PIPING SCHEDULE

- A. Underground LPG liquid pipingshall be[**one of**] the following:
1. Schedule 40 steel pipe with wrought-steel fittings and welded joints, or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.
 2. **[Annealed]** **[Drawn]**-temper copper tube, **[Type K (Type A)]** **[Type L (Type B)]** with wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
- B. Aboveground LPG liquid pipingshall be[**one of**] the following:

1. [NPS 2 (DN 50)] <Insert pipe size> and Smaller: [Schedule 40] [Schedule 80] steel pipe, malleable-iron threaded fittings and threaded [and seal welded] joints. Coat pipe and fittings with protective coating for steel piping.
 2. [NPS 2-1/2 (DN 65)] <Insert pipe size> and Larger: Schedule 40, steel pipe with wrought-steel fittings and welded joints, or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.
 3. [Annealed] [Drawn]-temper copper tube, Type L (Type B,) with wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
- C. Underground LPG vapor piping shall be [one of] the following:
1. Schedule 40, steel pipe with wrought-steel fittings and welded joints, or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.
 2. [Annealed] [Drawn]-temper copper tube, Type L (Type B) with wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
- D. Aboveground LPG vapor piping shall be [one of] the following:
1. Schedule 40, steel pipe with malleable-iron fittings and threaded joints.
 2. Schedule 40, steel pipe with wrought-steel fittings and welded joints, or mechanical couplings.
 3. [Annealed] [Drawn]-temper copper tube, Type L (Type B,) with wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
- E. Branch Piping in Cast-in-Place Concrete to Single Appliance: Annealed-temper copper, with wrought-copper fittings and [brazed] [flared] joints. Install piping embedded in concrete with no joints in concrete.
- F. Containment Conduit: Schedule 40, steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- 3.25 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG (3.45 kPa)
- A. Aboveground, branch piping [NPS 1 (DN 25)] <Insert pipe size> and smaller shall be [one of] the following:
1. Corrugated stainless-steel tubing with mechanical fittings having socket or threaded ends to match adjacent piping.
 2. Annealed-temper, tin-lined copper tube with flared joints and fittings.
 3. Annealed-temper copper tube with wrought-copper fittings and [brazed] [flared] joints.
 4. Schedule 40, steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping shall be [one of] the following:

1. Schedule 40, steel pipe with malleable-iron fittings and threaded joints.
 2. Schedule 40, steel pipe with wrought-steel fittings and welded joints.
 3. Drawn-temper copper tube, **Type L (Type B)** with wrought-copper fittings and brazed joints.
- C. Underground, below building, piping shall be **one of** the following:
1. Schedule 40, steel pipe with malleable-iron fittings and threaded joints.
 2. Schedule 40, steel pipe with wrought-steel fittings and welded joints.
- D. Containment Conduit: Schedule 40, steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- E. Containment Conduit Vent Piping: Schedule 40, steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.
- 3.26 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN **0.5 PSIG** (3.45 kPa) AND LESS THAN **5 PSIG** (34.5 kPa)
- A. Aboveground, branch piping [**NPS 1 (DN 25)**] **<Insert pipe size>** and smaller shall be **one of** the following:
1. Corrugated stainless-steel tubing with mechanical fittings having socket or threaded ends to match adjacent piping.
 2. Annealed-temper, tin-lined copper tube with flared joints and fittings.
 3. Annealed-temper copper tube, **Type L (Type B)** with wrought-copper fittings and **[brazed] [flared]** joints.
 4. Schedule 40, steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping shall be **one of** the following:
1. Schedule 40, steel pipe with malleable-iron fittings and threaded joints.
 2. Schedule 40, steel pipe with steel welding fittings and welded joints.
 3. Drawn-temper copper tube, [**Type L (Type B)**] [**Type G**] with wrought-copper fittings and brazed joints.
- C. Underground, below building, piping shall be **one of** the following:
1. Schedule 40, steel pipe with malleable-iron fittings and threaded joints.
 2. Schedule 40, steel pipe with wrought-steel fittings and welded joints.
- D. Containment Conduit: Schedule 40, steel pipe with wrought-steel fittings and welded joints. Coat underground pipe and fittings with protective coating for steel piping.
- E. Containment Conduit Vent Piping: Schedule 40, steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.27 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 5 PSIG
(34.5 kPa)

- A. Aboveground Piping: Maximum operating pressure more than [5 psig (34.5 kPa)] <Insert pressure>.
- B. Aboveground, Branch Piping: Schedule 40, steel pipe with steel welding fittings and welded joints.
- C. Aboveground, distribution piping shall be [one of] the following:
 - 1. Schedule 40, steel pipe with steel welding fittings and welded joints.
 - 2. Drawn-temper copper tube, [Type L (Type B)] [Type G] with wrought-copper fittings and brazed joints.
- D. Underground, below building, piping shall be [one of] the following:
 - 1. Schedule 40, steel pipe with malleable-iron fittings and threaded joints.
 - 2. Schedule 40, steel pipe with wrought-steel fittings and welded joints.
- E. Containment Conduit: Schedule 40, steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- F. Containment Conduit Vent Piping: Schedule 40, steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.28 UNDERGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Connections to Existing Gas Piping: Use valve and fitting assemblies made for tapping utility's gas mains and listed by an NRTL.
- B. Underground Vapor Piping:
 - 1. PE valves.
 - 2. NPS 2 (DN 50) and Smaller: Bronze, [lubricated] [nonlubricated] plug valves.
 - 3. NPS 2-1/2 (DN 65) and Larger: Cast-iron, [lubricated] [nonlubricated] plug valves.

3.29 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Aboveground Liquid Piping:
 - 1. Two-piece, [full] [regular]-port, bronze ball valves with bronze trim.
- B. Valves for pipe NPS 2 (DN 50) and smaller at service meter shall be [one of] the following:
 - 1. One-piece, bronze ball valve with bronze trim.

2. Two-piece, **[full]** **[regular]**-port, bronze ball valves with bronze trim.
 3. Bronze plug valve.
- C. Valves for pipe **NPS 2-1/2 (DN 65)** and larger at service meter shall be **[one of]** the following:
1. Two-piece, **[full]** **[regular]**-port, bronze ball valves with bronze trim.
 2. Bronze plug valve.
 3. Cast-iron, nonlubricated plug valve.
- D. Distribution piping valves for pipe **NPS 2 (DN 50)** and smaller shall be **[one of]** the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, **[full]** **[regular]**-port, bronze ball valves with bronze trim.
 3. Bronze plug valve.
- E. Distribution piping valves for pipe **NPS 2-1/2 (DN 65)** and larger shall be **[one of]** the following:
1. Two-piece, **[full]** **[regular]**-port, bronze ball valves with bronze trim.
 2. Bronze plug valve.
 3. Cast-iron, **[nonlubricated]** **[lubricated]** plug valve.
- F. Valves in branch piping for single appliance shall be **[one of]** the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, **[full]** **[regular]**-port, bronze ball valves with bronze trim.
 3. Bronze plug valve.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 231126

SECTION 231213 - FACILITY FUEL-OIL PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Submersible fuel-oil storage tank pumps.
 - 2. Simplex fuel-oil pumps.
 - 3. Duplex fuel-oil pumps.
 - 4. Triplex fuel-oil pumps.
 - 5. Fuel-oil maintenance systems.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- B. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- C. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and dimensions of individual components and profiles.
 - 2. Include, where applicable, certified performance curves and rated capacities, operating characteristics, final impeller dimensions, electrical characteristics, and furnished specialties and accessories for each type of product indicated. Indicate pump's operating point on curves.

3. Include data substantiating that materials comply with requirements.

B. Shop Drawings: For fuel-oil pumps.

1. Show pump layout and connections.
2. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
3. Include construction details and dimensions of individual components for fuel-oil pumps.
4. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
5. Wiring Diagrams: Power, signal, and control wiring.
6. Scale: [1/4 inch per foot (1:50)] <Insert scale>.

C. Delegated-Design Submittal: For fuel-oil pumps.

1. Detail fabrication and assembly of anchors and seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.
3. Detail fabrication and assembly of hangers, supports, and attachments of the same to building structure.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified professional engineer.

B. Seismic Qualification Certificates: For fuel-oil pumps from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.

D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fuel-oil pumps and fuel-oil maintenance systems to include in emergency, operation, and maintenance manuals.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

- 1. Drive Belt: [**One**] <Insert number> for each belt-driven pump.

1.8 QUALITY ASSURANCE

- A. Source Limitations: Obtain fuel-oil pumps through one source from a single manufacturer.
- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of fuel-oil pumps and are based on the specific system indicated. Refer to Division 01.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.
- B. Store pumps in dry location.
- C. Retain protective covers for flanges and protective coatings during storage.
- D. Protect bearings and couplings against damage from sand, grit, and other foreign matter.
- E. Comply with pump manufacturer's written rigging instructions.

1.10 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 Basic HVAC Requirements.

1.11 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

- 1. Minimum one or 10% of quantity pumps delivered.

2. Mechanical Seals: [**One (1)**] <Insert number> mechanical seal(s) for each pump.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Statically and dynamically balance rotating parts.
- B. Construction to permit complete servicing without breaking piping or motor connections.
- C. Pump connections to be flanged.

2.2 PERFORMANCE REQUIREMENTS

- A. Maximum Operating-Pressure Ratings: **3-psig (21-kPa)** fuel-oil supply pressure at oil-fired appliances.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design restraint and anchors for fuel-oil pumps, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Seismic Performance: Factory-installed support attachments for pumps shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**] <Insert requirement>.
 1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.

2.3 SUBMERSIBLE FUEL-OIL STORAGE TANK PUMPS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. Franklin Fueling Systems.
2. Red Jacket Pumps; a division of Veeder-Root.
3. **<Insert manufacturer's name>.**
4. or approved equal.

B. **Description:** Comply with UL 79, UL 87, and UL 343.

1. Impeller: Turbine.
2. Housing and Volute: Cast iron.
3. Bearings: Bronze, self-lubricating.
4. Seals: Mechanical.
5. Shaft: Polished steel.
6. Suspension Piping: Telescoping to accommodate tank diameter and depth of bury.
7. Base: Steel.
8. Pressure Relief: Built in.
9. Discharge Check Valve: Built in.
10. Drive: Direct, close coupled.

C. **Controls:** Pump controller panel complying with UL 353 and UL 508C and with interlock and terminals for connections to fuel-oil-burning equipment.

1. Maintain minimum manifold pressure with outdoor-air temperature less than [60 deg F (16 deg C)] **<Insert temperature>.**
2. Seven-day schedule.
3. Stage multiple pumps to maintain pressure at a common supply manifold.
4. Alternate pumps to equalize run time.
5. Alarm motor failure.
6. Manual reset dry-run protection.
7. Stop pumps if fuel level falls below pump suction.
8. De-energize and sound alarm for pump, locked-rotor condition.
9. Sound alarm for open circuit and for high and low voltage.
10. Lights shall indicate normal power on, run, and off conditions.
11. Interface with automatic control system. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" to control and indicate the following:
 - a. Start/stop pump set when required by schedule, fuel-fired appliance operation, day tank level control, or weather conditions.
 - b. Operating status.
 - c. Alarm off-normal status.

D. **Capacities and Characteristics:**

1. Number of Stages: **<Insert number>.**

2. Capacity: <Insert gph (L/s)>.
3. Discharge Pressure: <Insert psig (kPa)>.
4. Outlet Size: <Insert NPS (DN)>.
5. Motor Speed: <Insert rpm>.
6. Motor Horsepower: <Insert value>.
7. Electrical Characteristics:
 - a. Volts: [120] [208] [240] <Insert value>.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage.>

2.4 SIMPLEX FUEL-OIL TRANSFER PUMPS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [DESMI INC./Rotan Pumps.](#)
2. [Earth Safe Systems.](#)
3. [Haight Pumps; Division of Baker Mfg.](#)
4. [Preferred Utilities Manufacturing Corporation.](#)
5. [Suntec Industries Incorporated.](#)
6. [Tuthill Corporation; Tuthill Pump Div.](#)
7. [Viking Pump Inc.; a Unit of IDEX Corporation.](#)
8. [Webster Fuel Pumps & Valves; a division of Capital City Tool, Inc.](#)
9. <Insert manufacturer's name>.
10. or approved equal.

- B. Description: Comply with UL 343 and HI 3.1-3.5.

1. Type: Positive-displacement, rotary type.
2. Impeller: [Steel gear with crescent] [Carbon vane].
3. Housing: Cast-iron foot mounted.
4. Bearings: Bronze, self-lubricating.
5. Shaft: Polished steel.
6. Seals: Mechanical.
7. Base: Steel.
8. Pressure Relief: Built in.
9. Discharge Check Valve: Built in.

- C. Drive: [V-belt with guard; gear reducer; or direct, close coupled] [V-belt with guard] [Gear reducer] [Direct, close coupled].

- D. Controls:

1. Maintain minimum manifold pressure with outdoor-air temperature less than [60 deg F (16 deg C)] <Insert temperature>.

2. Seven-day schedule.
3. Alarm motor failure.
4. Manual reset dry-run protection.
5. Stop pump if fuel level falls below pump suction.
6. De-energize and sound alarm for pump, locked-rotor condition.
7. Sound alarm for open circuit and for high and low voltage.
8. Lights shall indicate normal power on, run, and off conditions.
9. Interface with automatic control system. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" to control and indicate the following:
 - a. Start/stop pump set when required by schedule, fuel-fired appliance operation, day tank level control, or weather conditions.
 - b. Operating status.
 - c. Alarm off-normal status.

E. Capacities and Characteristics:

1. Number of Stages: **<Insert number>**.
2. Capacity: **<Insert gph (L/s)>**.
3. Inlet Vacuum: **<Insert inches Hg (kPa)>**.
4. Discharge Pressure: **<Insert psig (kPa)>**.
5. Inlet and Outlet Size: **<Insert NPS (DN)>**.
6. Motor Speed: **<Insert rpm>**.
7. Motor Horsepower: **<Insert value>**.
8. Electrical Characteristics:
 - a. Volts: **[120] [208] [240] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.5 **[DUPLEX] [TRIPLEX] FUEL-OIL TRANSFER PUMP SETS**

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Alyan Pump Company](#).
2. [Earth Safe Systems](#).
3. [Hydronic Modules Corporation](#).
4. [Preferred Utilities Manufacturing Corporation](#).
5. [Smith-Koch, Inc.; a Geiger company](#).
6. [Webster Fuel Pumps & Valves; a division of Capital City Tool, Inc.](#)
7. **<Insert manufacturer's name>**.
8. or approved equal.

B. Description: Comply with HI 3.1-3.5.

1. Type: Positive-displacement, rotary type.
 2. Impeller: [**Steel gear with crescent**] [**Carbon vane**].
 3. Housing: Cast-iron foot mounted.
 4. Bearings: Bronze, self-lubricating.
 5. Shaft: Polished steel.
 6. Seals: Mechanical.
 7. Base: Steel.
 8. Pressure Relief: Built in.
 9. Discharge Check Valve: Built in.
- C. Drive: [**V-belt with guard, gear reducer, or direct close coupled**] [**V-belt with guard**] [**Gear reducer**] [**Direct close coupled**].
- D. Controls:
1. Maintain minimum manifold pressure with outdoor-air temperature less than [**60 deg F (16 deg C)**] <Insert temperature>.
 2. Seven-day schedule.
 3. Stage multiple pumps to maintain pressure at a common supply manifold.
 4. Alternate pumps to equalize run time.
 5. Alarm motor failure.
 6. Manual reset dry-run protection.
 7. Stop pumps if fuel level falls below pump suction.
 8. De-energize and sound alarm for pump, locked-rotor condition.
 9. Sound alarm for open circuit and for high and low voltage.
 10. Lights shall indicate normal power on, run, and off conditions.
 11. Interface with automatic control system. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" to control and indicate the following:
 - a. Start/stop pump set when required by schedule, fuel-fired appliance operation, day tank level control, or weather conditions.
 - b. Operating status.
 - c. Alarm off-normal status.
- E. Piping Furnished with Pumps: Steel with ferrous fittings and threaded or welded joints.
- F. Strainers Furnished with Pumps: Duplex, basket type with corrosion-resistant-metal-screen baskets.
- G. Capacities and Characteristics:
1. Number of Stages: <Insert number>.
 2. Capacity (Each Pump): <Insert gph (L/s)>.
 3. Inlet Vacuum: <Insert inches Hg (kPa)>.
 4. Discharge Pressure: <Insert psig (kPa)>.
 5. Inlet and Outlet Size: <Insert NPS (DN)>.
 6. Motor Speed: <Insert rpm>.
 7. Motor Horsepower (Each Pump): <Insert value>.
 8. Electrical Characteristics (Pump Set):

- a. Volts: [120] [208] [240] <Insert value>.
- b. Phase: [Single] [Three].
- c. Hertz: 60.
- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

2.6 FUEL MAINTENANCE SYSTEM

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Fuel Technologies International, LLC](#).
 2. <Insert manufacturer's name>.
 3. or approved equal.
- B. **Description:** Factory-fabricated and wired fuel maintenance system for fuel-oil filtration; with enclosure, filter, fuel-oil pump, and controls.
1. System shall be FMG approved and listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 2. Enclosure: NEMA 250, Type 3R, painted steel containing pumps, filters, accessories, and controls. Hinged door on the front of enclosure.
 3. Pump: Comply with HI 3.1-3.5, steel gear with crescent, positive displacement, direct coupled, rotary type.
 4. Materials: Cast-iron housing; bronze bearings; steel shaft; mechanical seals; and built-in, pressure relief bypass valve.
 5. Piping: Steel with malleable-iron fittings and threaded joints or wrought-steel fittings and welded joints.
 6. Spin-On, Replaceable, Multistage Filters:
 - a. Stage 1: 100-mesh strainer.
 - b. Stage 2: Centrifuge to separate particulates and water from oil.
 - c. Stage 3: Coalescing water and particulate filter.
 - d. Stage 4: 30-micron particulate removal.
 - e. Stage 5: 10-micron particulate removal.
 - f. Stage 6: Minimum 99.5 percent water removal with see-through bowl and water-sensor probe.
 - g. Stage 7: [1.5] [3]-micron particulate removal.
 7. Multiple-Tank Manifolds:
 - a. Manifold fabricated of Schedule 80, black steel pipe and threaded nipples for [two] [three] [four] tanks.
 - b. Solenoid valves for supply and return piping to each tank.
 - c. Strainers for each tank supply connection.
 8. Programmable Logic Controller:

- a. Alarm on maximum **15-in. Hg** (51-kPa) vacuum at pump suction indicating plugged filter.
 - b. Alarm on high water level in filter.
 - c. Alarm leak in enclosure.
 - d. Touch screen; with minimum 2-line, 20-character, backlit, LCD display.
 - e. Controller strip heater with thermostat.
9. Interface with automatic control system is specified in Section 230900 "Instrumentation and Control for HVAC" to control and indicate the following:
- a. Start/stop system when required by schedule.
 - b. Operating status.
 - c. Alarm off-normal status.

C. Capacities and Characteristics:

1. Capacity (Each Pump): [**3 gpm** (0.19 L/s)] [**8 gpm** (0.50 L/s)] [**24 gpm** (1.5 L/s)] **<Insert value>**.
2. Maximum Suction Lift: [**15 feet** (4.6 m)] **<Insert value>**.
3. Inlet and Outlet Size: **<Insert NPS (DN)>**.
4. Motor Horsepower (Each Pump): **<Insert value>**.
5. Electrical Characteristics (Pump Set):
 - a. Volts: [**120**] [**208**] [**240**] **<Insert value>**.
 - b. Phase: [**Single**] [**Three**].
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.7 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 2. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 3. Motor Bearings: **<Insert requirements>**.
 4. Unusual Service Conditions:
 - a. Ambient Temperature: **<Insert deg C>**.
 - b. Altitude: **<Insert feet ((m))>** above sea level.
 - c. High humidity.
 - d. **<Insert conditions>**.

5. Efficiency: Premium efficient.
6. NEMA Design: **<Insert designation>**.
7. Service Factor: **<Insert value>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for fuel-oil pumps to verify actual locations of pump connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

- A. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.

3.3 PREPARATION

- A. Close equipment shutoff valves before turning off fuel oil to premises or piping section.
- B. Comply with NFPA 30 and NFPA 31 requirements for prevention of accidental ignition.

3.4 INSTALLATION - GENERAL

- A. Decrease from line size, with long radius reducing elbows or reducers. Support piping adjacent to pump such that no weight is carried on pump casings. Provide supports under elbows on pump suction and discharge line sizes 4 inches and over.
- B. Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.
- C. Qualified millwright to check, align, and certify base mounted pumps prior to start-up.

3.5 FUEL-OIL PUMP INSTALLATION

- A. Submersible Pumps:
 1. Suspend pumps from supply piping and anchored to bottom of tank.
- B. Transfer Pumps:

1. Install pumps with access space for periodic maintenance including removal of motors, impellers, and accessories.
 2. Set pumps on and anchor to concrete base.
 3. Pump Mounting:
 - a. Install base-mounted pumps on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete.]" [Section 033053 "Miscellaneous Cast-in-Place Concrete."]**
 - b. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - c. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
 4. Equipment Mounting: Install in-line pumps with continuous-thread hanger rods and **[elastomeric hangers] [spring hangers] [spring hangers with vertical-limit stop]** of size required to support weight of in-line pumps.
 - a. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - b. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- C. Install two-piece, full-port ball valves at suction and discharge of pumps. Comply with requirements in Section 230523.12 "Ball Valves for HVAC Piping."
- D. Install mechanical leak-detector valves at pump discharge.
- E. Install **[Y-pattern] [basket] [T-pattern]** strainer on inlet side of simplex fuel-oil pumps.
- F. Install check valve on discharge of simplex fuel-oil pumps.
- G. Install suction piping with minimum fittings and change of direction.
- H. Install vacuum and pressure gage, upstream and downstream, respectively, at each pump to measure the differential pressure across the pump. Pressure gages are specified in Section 230519 "Meters and Gages for HVAC Piping."
- 3.6 FUEL MAINTENANCE SYSTEM INSTALLATION
- A. Install suction line, with foot valve, at one end of storage tank, **1 inch (25 mm)** from the bottom of tank.
 - B. Install return line at the opposite end of storage tank from suction line.
- 3.7 LABELING AND IDENTIFYING
- A. Install nameplates and signs on each fuel-oil pump. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment."

3.8 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Start fuel-oil transfer pumps to verify for proper operation of pump, and check for leaks.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Fuel-oil pumps will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.9 DEMONSTRATION

- A. [**Engage a factory-authorized service representative to train**] [Train] Owner's maintenance personnel to adjust, operate, and maintain [**fuel-oil pumps**] <Insert other>.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 231213

SECTION 231313 - FACILITY UNDERGROUND FUEL-OIL STORAGE TANKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Composite, steel, fuel-oil USTs.
 - 2. Jacketed, steel, fuel-oil USTs.
 - 3. FRP fuel-oil USTs.
 - 4. Liquid-level gage systems.
 - 5. Leak-detection systems.
 - 6. Fuel oil.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. FPM: Vinylidene fluoride-hexafluoropropylene copolymer rubber.
- B. FRP: Glass-fiber-reinforced plastic.
- C. UST: Underground storage tank.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and dimensions of individual components and profiles.
 - 2. Tank specifications. Include, where applicable, rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Leak-detection and monitoring system.
 - 4. Tank manufacturer's installation checklist.
 - 5. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: For underground fuel-oil storage tanks.
1. Complete tank system drawings, fully dimensioned. Include plans, elevations, sections, and ballast pads and anchors, and lifting or supporting points.
 2. Complete details of tanks and piping. Include details of equipment assemblies, piping, fittings, manways, ladders, hold-down straps, and other accessories. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Shop Drawing Scale: [1/4 inch per foot (1:50)] <Insert scale>.

1.5 INFORMATIONAL SUBMITTALS

- A. Site Survey: Plans, drawn to scale, on which underground fuel-oil storage tanks are shown and coordinated with other services and utilities.
- B. Tank manufacturer's installation checklist and warranty.
- C. Bill of materials.
- D. Manufacturer shall submit certification that Equipment will comply with performance requirements as specified.
- E. Manufacturer shall submit certified test report for shop leakage test.
- F. Contractor shall submit proof of state licensing or certification to perform UST work.
- G. Contractor shall submit certification that UST system installation method is approved by the implementing regulatory agency.
- H. Contractor shall obtain, complete, and submit to DEN UST notification forms within ten (10) days of completing UST installation.
- I. Field quality-control reports.
- J. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- B. Tank strapping calibration report.

1.7 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Firms regularly engaged in the manufacture of steel underground storage tanks of the types and sizes required, whose products have been

in satisfactory use in similar service for not less than five (5) years.

- B. **Manufacturer's Certification:** The tank manufacturer shall certify that surface preparation and tank coating systems are in accordance with the specifications. Proof of **[UL 58 construction]** and STI-P3 label is required. Submit manufacturer's certification of the following:
1. Surface preparation conformance.
 2. Interior coating performance.
 3. UL label.
 4. STI-P3 label.
- C. **Installer Qualifications:**
1. Installation contractor shall have had a minimum of five (5) years experience in the installation of tanks of similar type, size, and configuration.
 2. FRP tanks; trained and certified by the tank manufacturer.
- D. **Performance Characteristics:** Tanks shall be built in strict accordance with NFPA 30 and shall be labeled by Underwriters' Laboratories (UL) [and the Steel Tank Institute (STI)].
- E. **Underground Fuel-Oil Storage Tanks:** Comply with requirements of the EPA and of state and local authorities having jurisdiction, including recording fuel-oil storage tanks.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to site under provisions of Section Division 01.
- B. Store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements".
- C. Lift and support fuel-oil storage tanks only at designated lifting or supporting points, as shown on Shop Drawings. Do not move or lift tanks unless empty.

1.9 WARRANTY

- A. **Special Warranty:** Manufacturer agrees to repair or replace components of fuel-oil storage tanks that fail in materials or workmanship within specified warranty period.
1. **Storage Tanks:**
 - a. Failures include, but are not limited to, the following when used for storage of fuel oil at temperatures not exceeding **[150 deg F (66 deg C)] <Insert temperature>**:
 - 1) Structural failures including cracking, breakup, and collapse.
 - 2) Corrosion failure including external and internal corrosion of steel tanks.

- b. Warranty Period: Minimum **[thirty (30)] <Insert number>** years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 TANKS - GENERAL

A. Construction:

1. The Contractor shall provide the tanks with the capacities, sizes and appurtenances as shown on the drawings. Construct tank with nozzles, manways, **[and internal ladders]** as detailed on the drawings. **[No items in contact with fuel shall be fabricated of copper, copper-alloy, zinc, or galvanized materials.]** Prior to fabrication of tanks, re-confirm required sizes of nozzles and openings as required for installation of pumps or other equipment.
2. The tanks shall be installed on anti-flotation slabs and secured by hold-down straps as indicated by the drawings, and in conformity with tank manufacturer's recommendations.

B. Pipe and Fittings:

1. Steel Pipe: Steel pipe shall be Grade B, black, welded or seamless pipe ASTM A 53 or API 5L, Furnace butt-welded pipe may be used in sizes 2-inches and smaller. Sizes smaller than 2-inches shall be Schedule 80. Sizes 2-inch and larger shall be Schedule 40 for sizes up to and including 10 inches.
2. Welding Fittings: Welding fittings shall conform to ANSI B16.9 and ASTM A 234, Grade WPB for use with carbon steel pipe. Welding outlets shall be standard weight forged steel conforming to ASTM A 181, Grade 1.
3. Forged Welding Flanges: Flanges shall be carbon steel conforming to ANSI B16.5, Class 150, except as otherwise specified. Flanged facings shall correspond to the equipment to which the piping is joined. Materials shall conform to the requirements of ASTM A 181 or to ASTM A 105.
4. Bolting: Flange bolts and nuts shall conform to the requirements of ASTM A 307, Grade B, square bolt heads and hexagon nuts.
5. Threaded Steel Fittings: Threaded fittings, shall be Pressure Class 3000 conforming to ANSI B16.11. Fittings material shall be ASTM A 105.
6. Nipples: Carbon Steel pipe nipples shall be of the same material as the pipe they join and shall conform to the requirements of ASTM A 733.

C. Interior Finishes:

1. Interior surfaces shall be coated by the manufacturer.

2. Interior ferrous metal surfaces shall be protected by polyurethane coating as per requirements of Section 220505 "Coatings and Corrosion Protection".
3. Protective wood covers shall be bolted to all flange nozzles and all tank couplings shall be plugged to protect interior of tank until installation.

D. Interior Finishes:

1. Interior surfaces shall be coated by the manufacturer.
2. Interior ferrous metal surfaces shall be coated with material meeting the requirements of MIL C 4556D. Refer to Section 220505 "Coatings and Corrosion Protection".
3. Total dry film thickness shall be 6.0 mils minimum.
4. Protective wood covers shall be bolted to all flange nozzles and all tank couplings shall be plugged to protect interior of tank until installation.
5. Color shall be white.

- E. Exterior Surfaces: The exterior of the tank, including manhole cover and extensions, shall be cleaned and coated in accordance with STI-P3, and shall be protected by factory-installed [**magnesium**] [**zinc**] sacrificial anode system as required for STI-P3 certification.

2.2 STEEL, FUEL-OIL UST WITH STI-P3

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Ace Tank & Fueling Equipment, LLC.](#)
2. [Adamson Global Technology Corporation.](#)
3. [Brown Tank LLC.](#)
4. [Clawson Tank Company.](#)
5. [Hamilton Tanks.](#)
6. [Highland Tank & Manufacturing Company, Inc.](#)
7. [Kennedy Tank and Manufacturing Company, Inc.](#)
8. [Modern Welding Company, Inc.](#)
9. [Palmer Manufacturing & Tank Inc.](#)
10. [Service Welding & Machine Co., Inc.](#)
11. [Steel Tank & Fabricating Co., Inc.](#)
12. [Watco Tanks, Inc.](#)
13. [We-Mac Manufacturing, Inc.](#)
14. <Insert manufacturer's name>.
15. or approved equal.

- B. Description: UL 58 and STI P3, double-wall, horizontal, steel tank; with cathodic protection and electrical isolation.

1. Containment Method: STI-P3, [**Type I, with primary and secondary walls in contact**] [**Type II, with interstitial space**].
2. Provide interstitial space monitoring for detection of leakage. [**The interstitial monitoring system shall be capable of distinguishing between the**

presence of water and hydrocarbons].

- C. Construction: Fabricated with welded carbon steel tank plate. All shell seams shall be made by butt welding; lap joints are not acceptable. Weld joints shall be ground smooth. Suitable for operation at atmospheric pressure and for storing liquids with specific gravity up to 1.1; fabricated for the following loads:
1. Depth of Bury: **36 inches** (900 mm) from top of tank to finished surface.
 2. External Hydrostatic Pressure: To withstand general buckling with safety factor of 2:1 if hole is fully flooded.
 3. Surface Loads: AASHTO's "Specifications for Highway Bridges," H-20 axle loads of **32,000 lb** (14 515 kg).
- D. Corrosion-Protection System: Protect tank and factory-installed piping by engineered and installed corrosion-protection system according to STI P3, with means of monitoring cathodic protection.
- E. Capacities and Characteristics:
1. Capacity: **<Insert gal. (L)>**.
 2. Diameter: **<Insert feet (m)>**.
 3. Length: **<Insert feet (m)>**.
 4. Connection Sizes:
 - a. Fill Line: **<Insert NPS (DN)>**.
 - b. Vent Line: **<Insert NPS (DN)>**.
 - c. Outlet: **<Insert NPS (DN)>**.
 - d. Return: **<Insert NPS (DN)>**.
 - e. Gage: **<Insert NPS (DN)>**.
 5. Manholes:
 - a. Number Required: **<Insert number>**.
 - b. Diameter: **<Insert inches (mm)>**.
 6. Fuel-Oil Grade Number: **[Grade No. 1] [Grade No. 2] [Diesel] <Insert grade>**.

2.3 COMPOSITE, STEEL, FUEL-OIL UST

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Ace Tank & Fueling Equipment, LLC.](#)
 2. [Adamson Global Technology Corporation.](#)
 3. [Brown Tank LLC.](#)
 4. [Clawson Tank Company.](#)
 5. [Hall Tank Co.](#)
 6. [Hamilton Tanks.](#)
 7. [Highland Tank & Manufacturing Company, Inc.](#)

8. [Lannon Tank Corporation](#).
 9. [Modern Welding Company, Inc.](#)
 10. [Palmer Manufacturing & Tank Inc.](#)
 11. [Service Welding & Machine Co., Inc.](#)
 12. [Watco Tanks, Inc.](#)
 13. [We-Mac Manufacturing, Inc.](#)
 14. <Insert manufacturer's name>.
 15. or approved equal.
- B. Description: UL 58, double-wall, horizontal, composite tank; with coating complying with UL 1746 and STI F894.
1. Containment Method: STI F894, [Type I, with primary and secondary walls in contact] [Type II, with interstitial space]. Provide interstitial space monitoring for detection of leakage. [**The interstitial monitoring system shall be capable of distinguishing between the presence of water and hydrocarbons**].
- C. Construction: Fabricated with welded carbon steel plate. All shell seams shall be made by butt welding; lap joints are not acceptable. Factory coating according to UL 1746 and STI F894; suitable for operation at atmospheric pressure and for storing liquids with specific gravity up to 1.1; fabricated for the following loads:
1. Depth of Bury: **36 inches** (900 mm) from top of tank to finished surface.
 2. External Hydrostatic Pressure: To withstand general buckling with safety factor of 2:1 if hole is fully flooded.
 3. Surface Loads: AASHTO's "Specifications for Highway Bridges," H-20 axle loads of **32,000 lb** (14 515 kg).
- D. Capacities and Characteristics:
1. Capacity: <Insert gal. (L)>.
 2. Diameter: <Insert feet (m)>.
 3. Length: <Insert feet (m)>.
 4. Connection Sizes:
 - a. Fill Line: <Insert NPS (DN)>.
 - b. Vent Line: <Insert NPS (DN)>.
 - c. Outlet: <Insert NPS (DN)>.
 - d. Return: <Insert NPS (DN)>.
 - e. Gage: <Insert NPS (DN)>.
 5. Manholes:
 - a. Number Required: <Insert number>.
 - b. Diameter: <Insert inches (mm)>.
 6. Fuel-Oil Grade Number: [**Grade No. 1**] [**Grade No. 2**] [**Diesel**] <Insert grade>.

2.4 JACKETED, STEEL, FUEL-OIL UST

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Ace Tank & Fueling Equipment, LLC.](#)
2. [Cardinal Tank Corp.](#)
3. [Clawson Tank Company.](#)
4. [Hamilton Tanks.](#)
5. [Highland Tank & Manufacturing Company, Inc.](#)
6. [Kennedy Tank and Manufacturing Company, Inc.](#)
7. [Lannon Tank Corporation.](#)
8. [Modern Welding Company, Inc.](#)
9. [Palmer Manufacturing & Tank Inc.](#)
10. [Service Welding & Machine Co., Inc.](#)
11. [Watco Tanks, Inc.](#)
12. **<Insert manufacturer's name>.**
13. or approved equal.

B. **Description:** Jacketed, horizontal, steel tank; complying with UL 58, and with plastic or fiberglass jacket and corrosion-protection system according to UL 1746[**and STI F922**].

C. **Construction:** Tank fabricated with welded carbon steel plate. All shell seams shall be made by butt welding; lap joints are not acceptable. Jacket fabricated with plastic or fiberglass and vacuum-sealed interstitial space; suitable for operation at atmospheric pressure and with integral leak-detection device. Tank fabricated for the following loads:

1. Depth of Bury: **36 inches** (900 mm) from top of tank to finished surface.
2. External Hydrostatic Pressure: To withstand general buckling with safety factor of 2:1 if hole is fully flooded.
3. Surface Loads: AASHTO's "Specifications for Highway Bridges," H-20 axle loads of **32,000 lb** (14 515 kg).

D. **Capacities and Characteristics:**

1. Capacity: **<Insert gal. (L)>.**
2. Diameter: **<Insert feet (m)>.**
3. Length: **<Insert feet (m)>.**
4. Connection Sizes:
 - a. Fill Line: **<Insert NPS (DN)>.**
 - b. Vent Line: **<Insert NPS (DN)>.**
 - c. Outlet: **<Insert NPS (DN)>.**
 - d. Return: **<Insert NPS (DN)>.**
 - e. Gage: **<Insert NPS (DN)>.**
5. Manholes:

- a. Number Required: **<Insert number>**.
 - b. Diameter: **<Insert inches (mm)>**.
6. Fuel-Oil Grade Number: **[Grade No. 1] [Grade No. 2] [Diesel] <Insert grade>**.

2.5 FRP FUEL-OIL UST

- A. **Manufacturers: Subject to compliance with requirements, provide products by the following:**
1. [Containment Solutions, Inc.](#)
 2. [Palmer Manufacturing & Tank Inc.](#)
 3. [Xerxes Corporation.](#)
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. **Description: Horizontal, FRP UST; UL 1316, double wall, with interstitial space[and integral, hydrostatic, leak-detection and monitoring system].**
- C. **Construction: Fabricated with fiberglass-reinforced polyester resins; suitable for operation at atmospheric pressure; fabricated for the following loads:**
1. **Internal Load: Tanks shall withstand without leakage a 5 psig air pressure test (3 psig for testing 12-foot diameter tanks) with a 5 to 1 safety factor. Contractor shall individually test tanks for leakage prior to installation.**
 2. **Vacuum Test: To insure structural integrity, each tank shall be vacuum tested by the tank manufacturer at the factory to 11.5 inches of mercury. A copy of each test report shall be delivered to the DEN Project Manager within 30 days of the date of testing.**
 3. **Depth of Bury: 36 inches (900 mm) from top of tank to finished surface.**
 4. **External Hydrostatic Pressure: Tanks shall be capable of withstanding <Insert value> feet of overburden with the hole fully flooded with a 7 to 1 safety factor against general buckling.**
 5. **Surface Loads: AASHTO's "Specifications for Highway Bridges," H-20 axle loads of 32,000 lb (14 515 kg).**
 6. **Tanks shall support accessory equipment such as heating coils, drop tubes, submersible pumps and ladders, when installed according to manufacturer's recommendations and limitations.**
- D. **Product Storage:**
1. **Tanks shall be capable of storing petroleum products with a specific gravity up to 1.1.**
 2. **Tanks shall be vented to atmosphere. Tanks shall not be subjected to internal pressures, except as required for use with vapor recovery or emissions control systems, provided that pressure or vacuum does not exceed 1 psig.**
 3. **Tanks shall be capable of storing gasoline or gasohol (10% ethanol and 90% gasoline mixture) 90.5% gasoline and 9.5% Oxinol-50* (4.75% methanol and 4.75% GTBA mixture), Dupont EPA waiver (gasoline with 5% methanol and a**

minimum of 2.5% cosolvent, the blend may contain a maximum concentration of up to 3.7 weight percent oxygen in the final fuel); MTBE (methyl tertiary butyl ether) - gasoline with up to 20% by volume of MTBE; gasoline/water/ethanol or methanol blend motor fuels including neat or near neat methanol or ethanol fuel at ambient temperatures jet fuel, aviation gasoline; kerosene; diesel fuel; new or used motor oil; potable water at ambient underground temperatures; or used for fuel oil at temperatures not to exceed 150 degrees F.

E. Materials:

1. Tanks shall be manufactured with 100% resin and glass fiber reinforcement with no sand fillers.

F. Interstitial Space: Tanks shall have a space between the primary and secondary shell walls to allow for the free flow and containment of all leaked product from the primary tank. Space also allows the insertion of monitoring device(s) through a monitoring fitting.

G. Capacities and Characteristics:

1. Capacity: <Insert gal. (L)>.
2. Diameter: <Insert feet (m)>.
3. Length: <Insert feet (m)>.
4. Connection Sizes:
 - a. Fill Line: <Insert NPS (DN)>.
 - b. Vent Line: <Insert NPS (DN)>.
 - c. Outlet: <Insert NPS (DN)>.
 - d. Return: <Insert NPS (DN)>.
 - e. Gage: <Insert NPS (DN)>.
5. Manholes:
 - a. Number Required: <Insert number>.
 - b. Diameter: <Insert inches (mm)>.
6. Fuel-Oil Grade Number: [Grade No. 1] [Grade No. 2] [Diesel] <Insert grade>.

2.6 FUEL-OIL UST ACCESSORIES

- A. Tank Manholes: 22-inch- (560-mm-) minimum diameter; bolted, flanged, and gasketed, with extension collar; for access to inside of tank.
1. Except as otherwise specified or shown, manways shall be 22" internal diameter, flanged and complete with UL listed gaskets, plated bolts and covers.
 2. Locations shall be as shown on the Drawings.
 3. Where indicated or required for the project, provide manufacturer's standard manway extension tubes. **[Extension tubes shall be of FRP construction on**

FRP tanks.]

4. Manway covers shall be equipped with fittings welded in place for piping connections as shown by drawing details. Provide specially fabricated covers to accommodate installation of submersible pumps.
- B. Steel Tank Masonry Supports: Two [6-by-6-by-3/8-inch (150-by-150-by-10-mm)] <Insert dimensions> steel angles, [72 inches (1800 mm)] <Insert dimension> long, located longitudinally on tank on each side of manholes and continuously welded in place.
- C. Threaded pipe connection fittings on top of tank for fill, supply, return, vent, sounding, and gaging; in locations and of sizes indicated. Include cast-iron plugs for shipping.
- D. NPT Threaded Fittings:
1. All threaded fittings shall be constructed of a material consistent with the requirements of the UL label and located as shown on the drawings.
 2. All standard threaded fittings shall be half couplings and shall be 4-inch NPT. Provide reducers for smaller connection sizes where shown or required.
 3. NPT fittings shall withstand a minimum of 150 foot-pounds torque and 1,000 foot-pounds bending moment, both with a 2:1 safety factor.
 4. Suction lines shall be field-installed and shall terminate a minimum of 4 inches from tank bottom.
 5. Submersible pumps shall be installed as detailed on the drawings.
- E. Monitor Fittings:
1. Each monitor fitting shall consist of a 4" NPT fitting on the secondary tank.
 2. Tanks with a capacity of 3,000 gallons or greater shall have two monitor fittings, one near each end of the tank. Tanks less than 3,000 gallon capacity shall have one monitor fitting.
- F. Submersible Pump Sump Probes:
1. Probes shall be constructed of a material, which is suitable for prolonged complete immersion in any of the fluids listed in UL Standard for Safety 1316, Table 14.1, all columns.
 2. Sensors shall detect the presence of liquid in the sump when the liquid level has risen to a maximum of one inch above the bottom of the probe as located in its permanent mounting position. The permanent mounting position shall be determined by the Contractor at the time of installation.
 3. The probe shall be capable of being mounted in the sump in a manner, which allows adjustment of height. The probe must be mounted so that an increase in the liquid level does not interfere with the normal operation of the sensor.
 4. Probe mounting assemblies shall be arranged to protect the probe from damage arising from normal work activities, which may take place within the sump.
 5. Sensors shall be capable of providing reliable operation at a distance of up to 500 feet from the control panel.
- G. Operating Parameters:

1. Temperature 0 to 150 degrees F.
 2. Voltage: 110 or 120 VAC, 50/60 Hz
- H. Striker Plates: Inside tank, on bottom below fill, vent, sounding, gage, and other tube openings.
- I. Lifting Lugs: For handling and installation.
- J. Ladders: Carbon-steel ladder inside tank, anchored to top and bottom. Include reinforcement of tank at bottom of ladder.
- K. Supply Tubes: Extension of supply piping fitting into tank, terminating **6 inches (150 mm)** above tank bottom and cut at a 45-degree angle.
- L. FRP Supply Tubes:
1. Fill tubes shall be manufacturer's standard FRP product or, at Contractor's option, aluminum fabrications, located as shown on the drawings.
 2. FRP tubes shall be 4" diameter with 6" x 4" double tapped reduced bushing and include a 6" NPT fitting on the tank. Aluminum tubes shall be 4" diameter and fit directly into a 4" NPT fitting. Tube ends shall be cut at a 45-degree angle, and tubes shall terminate a minimum of 4" from bottom of tank.
- M. Sounding and Gage Tubes: Extension of fitting into tank, terminating **6 inches (150 mm)** above tank bottom and cut at a 45-degree angle.
- N. Containment Sumps: **[Fiberglass] [PE]** with sump base, add-on extension pieces as required, sump top, lid, and gasket-seal joints. Include sump entry boots for pipe penetrations through sidewalls.
- O. Sump Entry Boots: Two-part pipe fitting for field assembly and of size required to fit over pipe. Include gaskets shaped to fit sump sidewall, sleeves, seals, and clamps as required for liquid-tight pipe penetrations.
- P. Anchor Straps: Storage tank manufacturer's standard anchoring system, with straps, strap-insulating material, cables, and turnbuckles; of strength at least one and one-half times maximum uplift force of empty tank without backfill in place.
- Q. Filter Mat: Geotextile woven or spun filter fabric, in 1 or more layers, for minimum total weight of **[3 oz./sq. yd. (101.7 g/sq. m)] <Insert dimension>**.
- R. Overfill Prevention Valves: Factory fabricated or shop or field assembled from manufacturer's standard components. Include drop tube, cap, fill nozzle adaptor, check valve mechanism or other devices, and vent if required to restrict flow at 95 percent of tank capacity and to provide complete shutoff of filling at **[98] [99] <Insert other>** percent of tank capacity.
- S. Heating Coils:
1. Heating coils shall be installed in a separate manway and shall be standard items supplied by tank manufacturer.

2. Coil locations shall be as shown on drawings.

2.7 LIQUID-LEVEL GAGE SYSTEM

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Caldwell Systems Corporation.](#)
 2. [Clawson Tank Company.](#)
 3. [Franklin Fueling Systems.](#)
 4. [Highland Tank & Manufacturing Company, Inc.](#)
 5. [INCON.](#)
 6. [King Engineering Corp.](#)
 7. [Krueger Sentry Gauge.](#)
 8. [Pneumercator Inc.](#)
 9. [Preferred Utilities Manufacturing Corporation.](#)
 10. [Rochester Gauges, Inc.](#)
 11. [Tuthill Corporation; Tuthill Transfer Systems; Sotera Systems.](#)
 12. [Uehling Instrument Company.](#)
 13. [Venture Measurement Company, LLC.](#)
 14. **<Insert manufacturer's name>.**
 15. or approved equal.
- B. Description: Calibrated, liquid-level gage system complying with [**UL 180 with floats**] [**UL 1238 with probes**] or other sensors and remote annunciator panel.
- C. Annunciator Panel: With visual and audible, high-tank-level and low-tank-level alarms, fuel indicator with registration in **gallons** (liters), and overfill alarm. Include gage volume range that covers fuel-oil storage capacity.
- D. Controls: Electrical, operating on [**120**] **<Insert voltage>**-V ac.

2.8 LEAK-DETECTION AND MONITORING SYSTEM

- A. Cable and Sensor System: Comply with UL 1238.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Caldwell Systems Corporation.](#)
 - b. [Containment Solutions, Inc.](#)
 - c. [Franklin Fueling Systems.](#)
 - d. [Gems Sensors & Controls Inc.](#)
 - e. [Highland Tank & Manufacturing Company, Inc.](#)
 - f. [INCON, Inc.](#)
 - g. [In-Situ, Inc.](#)
 - h. [MSA; Instrument Div.](#)
 - i. [Perma-Pipe, Inc.](#)

- j. [Pentair Thermal Management](#).
 - k. [Pneumercator Inc.](#)
 - l. [Raychem Corp; Tyco Electronics Corporation](#).
 - m. [Tuthill Corporation; Tuthill Transfer Systems; Sotera Systems](#).
 - n. [Veeder-Root; a Danaher Corporation company](#).
 - o. <Insert manufacturer's name>.
 - p. or approved equal.
2. Calibrated, leak-detection and monitoring system with probes and other sensors and remote alarm panel for fuel-oil storage tanks and fuel-oil piping.
 3. Include fittings and devices required for testing.
 4. Controls: Electrical, operating on [120] <Insert voltage>-V ac.
 5. Calibrated, liquid-level gage complying with [UL 180 with floats] [UL 1238 with probes] or other sensors and remote annunciator panel.
 6. Remote Annunciator Panel: With visual and audible, high-tank-level and low-tank-level alarms, fuel indicator with registration in gallons (liters), and overflow alarm. Include gage volume range that covers fuel-oil storage capacity.
 7. Controls: Electrical, operating on [120] <Insert voltage>-V ac.
- B. Hydrostatic System: Comply with UL 1238.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Caldwell Systems Corporation](#).
 - b. [Containment Solutions, Inc.](#)
 - c. [Franklin Fueling Systems](#).
 - d. [Gems Sensors & Controls Inc.](#)
 - e. [Highland Tank & Manufacturing Company, Inc.](#)
 - f. [INCON, Inc.](#)
 - g. [In-Situ, Inc.](#)
 - h. [MSA; Instrument Div.](#)
 - i. [Pentair Thermal Management](#).
 - j. [Perma-Pipe, Inc.](#)
 - k. [Pneumercator Inc.](#)
 - l. [Raychem Corp; Tyco Electronics Corporation](#).
 - m. [Tuthill Corporation; Tuthill Transfer Systems; Sotera Systems](#).
 - n. [Veeder-Root; a Danaher Corporation company](#).
 - o. <Insert manufacturer's name>.
 - p. or approved equal.
 2. Calibrated, leak-detection and monitoring system with brine antifreeze solution, reservoir sensor, and electronic control panel to monitor leaks in inner and outer tank walls.
 3. Include fittings and devices required for testing.
 4. Controls: Electrical, operating on [120] <Insert voltage>-V ac.
 5. Calibrated, liquid-level gage complying with [UL 180 with floats] [UL 1238 with probes] or other sensors and remote annunciator panel.
 6. Remote Annunciator Panel: With visual and audible, high-tank-level and low-tank-level alarms; fuel indicator with registration in gallons ((liters)); and

- overfill alarm. Include gage volume range that covers fuel-oil storage capacity.
7. Controls: Electrical, operating on [120] <Insert voltage>-V ac.

2.9 FUEL OIL

- A. Fuel Oil: ASTM D 396, [Grade No. 1] [Grade No. 2].
- B. Diesel Fuel Oil: ASTM D 975, [Grade Low Sulfur] [Grade No. 1-D, special purpose] [Grade No. 2-D, general purpose], high volatility.

2.10 CONCRETE MANHOLES

- A. Precast Concrete Manhole Sections: ASTM C 478 (ASTM C 478M), base and concentric-cone sections with integral ladder or steps.
- B. Cast-Iron Frame and Cover: Heavy-duty, water-resistant, cast-iron manhole frame, gasket, and bolted cover; [24-inch- (609-mm-)] <Insert dimension> diameter, inside opening dimension; [8-inch (203-mm)] <Insert dimension> frame riser height.

2.11 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches (152 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (762 mm) deep; colored yellow.

2.12 SOURCE QUALITY CONTROL

- A. Pressure test and inspect fuel-oil storage tanks, after fabrication and before shipment, according to ASME and the following:
1. Horizontal, Steel USTs with the STI-P3 Corrosion-Protection System: UL 58 and STI P3.
 2. [Composite] [Composite and Jacketed] [Jacketed], Steel USTs: UL 58.
 3. FRP USTs: UL 1316.
- B. Affix standards organization's code stamp.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Unloading and Handling: Before unloading tanks, ensure that equipment used to lift

tanks has adequate rating for handling the load. Prepare the unloading and storage area by removing all rocks and debris, and arrange for supply of sandbags or tires to be used as chocks.

1. Factory-installed lifting lugs shall be used for lifting tanks; chain, cable, or other sling methods shall not be used. Use guy ropes to guide tanks as needed; do not move tanks by rolling them.
2. Whenever tanks are stored at site, they shall be chocked in place to prevent rolling. Tie-downs may be required under high wind conditions.

- B. Inspection: After delivery and before pre-installation testing, visually inspect the entire surface area for indications of damage, such as holes, cracks, or deep scrapes. If damage is detected, do not attempt repairs; contact tank manufacturer for evaluation and determination of appropriate action.

3.2 EXAMINATION

- A. Examine roughing-in for underground fuel-oil storage tanks to verify actual locations.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 EARTHWORK

- A. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.
- B. Excavate to sufficient depth for a minimum of **36 inches (900 mm)** of earth cover from top of tank to finished grade. Allow for cast-in-place, concrete-ballast base plus **6 inches (150 mm)** of sand or pea gravel between ballast base and tank. Extend excavation at least **12 inches (300 mm)** around perimeter of tank.
- C. Backfill excavation with clean sand or pea gravel in **12-inch (305-mm)** lifts and tamp backfill lift to consolidate.
- D. Install filter mat between top of backfill material and earth fill.

3.4 PRE-INSTALLATION TESTING

- A. Before lowering tanks into final position, Contractor shall conduct a pre-installation test for each tank. Test pressure and test manifolds shall conform to manufacturer's recommendations. Contractor shall exercise caution to minimize the possibility of physical injuries or property damage, which could be caused by failure of any tank components under air-pressurized conditions.
1. Should any tank fail its test, Contractor shall not attempt repairs. Notify DEN Project Manager in writing. Contact tank manufacturer and comply with manufacturer's recommendations.

- B. Test Procedure: Comply with Field Quality Control article of this Section.

3.5 FUEL-OIL UST INSTALLATION

- A. Set tie-down eyelets for hold-down straps in concrete-ballast base and tie to reinforcing steel.
- B. Place 6 inches (152 mm) of clean sand or pea gravel (rounded particles, size between 1/8" and 3/4") on top of concrete-ballast base, evenly graded and thoroughly compacted, prior to tank placement.
- C. Tanks shall be unloaded and placed on the sand bed using crane and the rigging procedures required by the manufacturer. Use the tank lifting lugs for lifting into place. The use of slings around the tank is not permitted, nor is the use of chock blocks of any sort. During handling, carefully inspect the tank for coating damage and repair any damage whatsoever before proceeding.
- D. After placement, check tank to insure proper, uniform slope. The elevation shall be confirmed. Place the tank as required for the nozzles to be level in all directions.
- E. Before proceeding with backfill, install the hold down straps and tighten the turnbuckles securely and evenly throughout the length of the tank. The bottom and sides of tanks shall be fully and evenly supported by hand shoveling and tamping. Use clean sand to backfill up to 12" above the top of tank. Hand-guided power equipment can be used to place fill in 6" layers, compacted to a minimum of 95% maximum dry density, after the bottom quadrant is filled. A minimum of four density tests per tank to be performed. Clean, noncorrosive, well tamped gravel shall be used for backfill from a point 12" above the tank to subgrade for concrete slab.
- F.
- G.
- H. Install tank leak-detection and monitoring devices.
 - 1. Coordinate installation of the leak detection monitoring systems as specified with Division 26 and controls and instrumentation work.
- I. Install containment sumps.
- J. Install steel USTs with the STI-P3 corrosion-protection system according to STI R821 and STI R891. Protect anodes during tank placement and backfilling operations.
- K. Install composite, steel USTs according to STI R913 and STI R891.
- L. Install jacketed, steel USTs according to STI R923 and STI R891.
- M. Install FRP USTs with FRP hold-down straps, manhole extensions, and manhole risers.

- N. Do not fill the tank, even partially, before the bottom quadrant is backfilled. The level of product shall not exceed the level of compacted backfill at any time.
- O. Do not fill tanks until initial cleaning [**and tank strapping**] are performed, as outlined in articles below.
- P. Do not fill tank until approved to do so in writing by DEN Project Manager.
- Q. Test tanks in accordance with UL 142 standards and submit written test report.

3.6 BACKFILLING UST

- A. Backfill material shall be washed and free flowing, conforming to requirements of ASTM C 33, sizes 6 through 8. No more than 5 percent, by weight, of the material may pass through a #8 sieve. Backfill material shall not be mixed with sand or native soil.
- B. Tanks subject to traffic loads shall have a cover depth of at least 18 [**36**] inches of backfill plus 9 inches of asphaltic concrete pavement (or 6 inches of reinforced concrete pavement cover). Where both traffic loading and high water table conditions exist, cover depth of backfill shall be 30 [**36**] inches.
- C. Tanks shall be bedded on a smooth and uniform 12-inch (minimum) layer of approved backfill material, adjusted to provide tank pitch if required by drawing details. After tanks have been placed and leveled, the first diameter reading shall be taken, followed by anchoring tanks securely to anti-flotation slabs or deadman anchors as required by drawing details.
 - 1. Place one 12-inch lift of backfill material, and work material (by hand) completely beneath the tank body and domes to provide full support, using a probe long enough to reach under the tank to push backfill into place. Repeat this step for a second 12-inch lift.
 - 2. Install remainder of backfill in lifts not exceeding 12 inches, ensuring that no voids will exist adjacent to tanks. For all backfilling, exercise care to prevent damage to tanks from use of tamping bars or other tools.
- D. When backfill is flush with top of tank, an intermediate diameter reading shall be taken as an in-process check, and pre-installation air pressure tests, including soap solution testing of accessible areas, shall be repeated.

3.7 LIQUID-LEVEL GAGE SYSTEM INSTALLATION

- A. Install liquid-level gage system. Install panel inside building where indicated.

3.8 LEAK-DETECTION AND MONITORING SYSTEM INSTALLATION

- A. Install leak-detection and monitoring system. Install alarm panel inside building where indicated.

1. Double-Wall, Fuel-Oil Storage Tanks: **[Install probes] [Install probes or use factory-installed integral probes] [Use factory-installed integral probes]** in interstitial space.
2. Single-Wall, Fuel-Oil Storage Tanks: Install probes as indicated.
3. Double-Containment, Fuel-Oil Piping: Install leak-detection sensor **[probes in fuel-oil storage tank containment sumps and at low points in piping] [cable probes in interstitial space of double-containment piping]**.
4. Install liquid-level gage.

3.9 LABELING AND IDENTIFYING

- A. Nameplates, pipe identification, and signs are specified in Section 230553 "Identification for HVAC Piping and Equipment."
- B. Install detectable warning tape directly above UST, **[12 inches (304 mm)] <Insert dimension>** below finished grade, except **[6 inches (152 mm)] <Insert dimension>** below subgrade under pavements and slabs.
 1. Terminate tracer wire in an accessible area, and identify as "tracer wire" for future use with plastic-laminate sign.
 2. Install over edges of each UST.

3.10 INITIAL CLEANING

- A. The tanks shall be left in a completely clean and dry state. Close all uncovered openings with plywood covers fastened in a manner suitable for a permanent connection. Damage caused to the tank by the entry of foreign substances prior to coatings application shall be remedied by the Contractor at no additional cost to the Owner.

3.11 TANK STRAPPING

- A. After all installation work is complete, prepare a calibration table for the tanks showing the volume of fuel in gallons in the tank to the nearest tenth of a gallon at any height of liquid in hundredths of a foot units when measured by a steel tape lowered through the manual gauge well. Calibrate the tank in accordance with API 2550 for critical measurement. Calibration table shall be prepared by precisely metering integrated flow into each tank, simultaneously taking accurate depth measurements; calculation method of preparing the table is not acceptable. Furnish a certified record of the calibration for each tank to the DEN Project Manager.

3.12 FIELD QUALITY CONTROL

- A. Submit detailed procedures for testing methods for approval before starting tank installation. This includes all radiographing, pressure testing, and holiday testing.
- B. Upon request by DEN Project Manager, tank manufacturer shall have a representative

on Site during installation and testing of tank and representative shall remain until installation and testing are complete.

- C. Tests may be witnessed by DEN Project Manager.
1. Notify DEN Project Manager seven (7) days in advance of testing.
- D. Tanks shall be field tested for leakage immediately prior to installation.
- E. Tank tightness testing procedure after tank has been lowered into place and anchored, but before piping joints are concealed with backfill or other construction:
1. Tighten all tank connection fittings.
 2. Soap entire tank and fittings.
 3. Pressurize the tank with air to no more than 5 psig and visually inspect for leaks.
 - a. Use an air gauge with one-pound increments so that changes in pressure can be easily observed.
 - b. Retighten all leaking fittings until such leakage is stopped.
 - c. All damaged areas on the tank, which are found to be leaking shall be brought to the attention of the manufacturer's installation representative. The manufacturer's representative shall submit the proposed repair method to DEN Project Manager for review and acceptance.
 - d. Test shall not be considered complete until pressure has been maintained for two hours during which no leaks are detected.
 4. Tanks which have been repaired and those, which have been dropped or impacted after test shall be retested. Tanks shall continue to be retested until a successful leakage test is obtained.
- F. At least five (5) days' written notice shall be given to Engineer and DEN Project Manager for acceptance test to provide time to arrange for immediate fill of buried tanks with fuel after testing is complete. No liquid shall be put into the tank until sufficient backfill material has been placed outside to support it. Under no circumstances shall liquid be put into the tank to a level above the backfill height at any time during the installation.
- G. Tank Coating Testing Procedure:
1. Contractor shall make a detailed inspection with an appropriate voltage holiday tester of all tank coatings and joint coatings preceding the lowering of the tank.
 2. Holiday tester voltage shall not be higher than the manufacturer's recommended voltage for the coating tested. Testing shall be for holidays only and not to test the dielectric strength of the coating materials.
 3. All holidays and damaged or broken places in the coating shall be repaired in a workmanlike manner at Contractor's expense using the methods specified for field-applied external protective pipe coating and procedure in Section 220505 "Coatings and Corrosion Protection" and as recommended by manufacturer.
- H. Electrically test all insulating flanges and joints.

- I. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 1. Tanks: Minimum hydrostatic or compressed-air test pressures for fuel-oil storage tanks that have not been factory tested and do not bear the ASME code stamp or a listing mark acceptable to authorities having jurisdiction:
 - a. Double-Wall Tanks:
 - 1) Inner Tanks: Minimum **3 psig** (20.7 kPa) and maximum **5 psig** (34.5 kPa).
 - 2) Interstitial Space: Minimum **3 psig** (20.7 kPa) and maximum **5 psig** (34.5 kPa), or **5.3-in. Hg** (18-kPa) vacuum.
 - b. Where vertical height of fill and vent pipes is such that the static head imposed on the bottom of the tank is greater than **10 psig** (69 kPa), hydrostatically test the tank and fill and vent pipes to a pressure equal to the static head thus imposed.
 - c. Maintain the test pressure for one hour.
- J. USTs will be considered defective if they do not pass tests and inspections.
- K. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 231313

SECTION 231323 - FACILITY ABOVEGROUND FUEL-OIL STORAGE TANKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Vertical, steel, fuel-oil ASTs.
 - 2. Horizontal, steel, fuel-oil ASTs.
 - 3. Containment-dike, steel, fuel-oil ASTs.
 - 4. Insulated, steel, fuel-oil ASTs.
 - 5. Concrete-vaulted, steel, fuel-oil ASTs.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. AST: Aboveground storage tank.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's installation and testing instructions.
 - 2. Include construction details, material descriptions, and dimensions of individual components and profiles.
 - 3. Tank specifications. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 4. Fuel-oil storage tank accessories.
 - 5. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Complete tank system drawings, fully dimensioned. Include plans, elevations, sections, and ballast pads and anchors, and lifting or supporting points.
 - 2. Indicate dimensions, components, and location and size of each field connection.
 - 3. Shop Drawing Scale: [1/4 inch per foot (1:50)] <Insert scale>.

1.5 INFORMATIONAL SUBMITTALS

- A. Site Survey: Plans, drawn to scale, on which fuel-oil storage tanks are shown and coordinated with other services and utilities.
- B. Qualification Data: For qualified professional engineer.
- C. Submit tank erector name and prior experience listing of projects.
- D. Seismic Qualification Certificates: For ASTs, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- E. Brazing certificates.
- F. Welding certificates.
- G. Field quality-control reports.
- H. Submit tank strapping charts after tanks are erected and field measurements have been made.
- I. Provide calculations for buoyancy of floating suction swingline.
- J. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fuel-oil equipment and accessories to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Contractor shall also provide a complete set of fabrication and erection drawings of the tanks at the Site which are to be kept up to date as as-constructed drawings during erection. At completion of erection, erection drawings shall be provided to DEN Project Manager.

1.7 QUALITY ASSURANCE

- A. EPA Compliance: Comply with EPA and state and local authorities having jurisdiction. Include recording of fuel-oil storage tanks and monitoring of tanks.
- B. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.8 DELIVERY, STORAGE AND HANDLING

- A. Comply with manufacturer's rigging and installation instructions.
- B. Special Precautions:
 - 1. The tank erector shall give special consideration to, and include adequate provisions for, prevention of tank shell damage during erection, due to high winds. Suitable structural bracing of the shell, both internally and externally, shall be provided and used at all times to prevent damage from winds.
 - 2. If damage from winds does occur, such as shell buckling or collapse, repairs shall be expedited to ensure minimal or no negative impact to the construction schedule. All additional materials required shall be provided and repair work performed at no cost to DEN. Any construction schedule time extensions resulting from wind damage shall result in no additional cost to DEN Project Manager.
 - 3. Any necessary repairs shall be performed in accordance with API 650 and API 653 as a minimum. Additionally, all damaged plates shall be replaced at the discretion of DEN. Final acceptance of any required repairs shall be by DEN. Note that visible defects, resulting from wind damage and allowed by the API standards may not be acceptable to DEN, potentially requiring repair or replacement of shell or bottom plates at no cost to DEN.

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of fuel-oil storage tanks that fail in materials or workmanship within specified warranty period.
 - 1. Storage Tanks:
 - a. Failures include, but are not limited to, the following when used for storage of fuel oil at temperatures not exceeding [150 deg F (66 deg C)] **<Insert temperature>**:
 - 1) Structural failures including cracking, breakup, and collapse.
 - 2) Corrosion failure including external and internal corrosion of steel tanks.
 - b. Warranty Period: [30] **<Insert number>** years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design restraint and anchors for fuel-oil ASTs, and equipment, including comprehensive engineering analysis, using performance requirements and design criteria indicated.
- B. Seismic Performance: Factory-installed support attachments for AST shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified **[and the unit will be fully operational after the seismic event].**"

2.2 STEEL **[FUEL]** STORAGE TANKS - GENERAL

- A. Tank: Closed type, conforming to UL 142 requirements **[and bearing UL stamp]**, of heavy gage welded steel (0.25 inch minimum thickness), with shop applied exterior prime coat.
1. All shell seams shall be made by buttwelding; lap joints are not acceptable. Weld joints shall be ground smooth.
- B. Construct tank with nozzles, manways, **[floating suction,]** **[and internal ladders]** as detailed on the drawings. **[No items in contact with fuel shall be fabricated of copper, copper-alloy, zinc, or galvanized materials.] [Include railed top access platforms as detailed, along with tappings for installation of accessories. Manufacturer shall include railed catwalks and access stairway as specified and shown on the drawings, with fabrication and assembly of all exterior access appurtenances in conformance with Division 05 requirements.]**
1. All manways shall be furnished complete with **[UL listed]** gaskets, bolts and covers. **[At least one manway cover for each tank shall be fitted with emergency pressure release feature conforming to requirements of NFPA 30.]**
- C. Provide fill, pump-out, **[drainable sump,]** and vent provisions as detailed. Include hold-down straps and turnbuckles as required for anchorage to supporting construction shown on the drawings.

- D. Provide grounding lug for each tank (1-1/2" x 1-1/2" x 1/4" steel, with 1/2" drilled hole), welded to bottom of tank adjacent to supporting pier for connection to grounding system under Division 26 work as indicated. Grounding lug shall not be painted.
- E. Interior Finishes:
1. Interior surfaces shall be coated by the manufacturer.
 2. Interior ferrous metal surfaces shall be protected by polyurethane coating as specified in Section 220505 "Coatings and Corrosion Protection".
 3. Protective wood covers shall be bolted to all flange nozzles and all tank couplings shall be plugged to protect interior of tank until installation.
- F. Interior Finishes:
1. Interior surfaces shall be coated by the manufacturer.
 2. Interior ferrous metal surfaces shall be coated with material meeting the requirements of MIL C 4556D. Refer to Section 220505 "Coatings and Corrosion Protection".
 3. Total dry film thickness shall be 6.0 mils minimum.
 4. Protective wood covers shall be bolted to all flange nozzles and all tank couplings shall be plugged to protect interior of tank until installation.
 5. Color shall be white.
- G. Exterior Surfaces:
1. The exterior of the tank, including manhole cover and extensions, shall be cleaned and coated in accordance with Division 09 requirements
- H. Fittings -Threaded - NPT:
1. All threaded fittings on UL-labeled tanks for storage of petroleum products shall be of a material and construction consistent with the requirements of the UL label. All fittings to be supplied with threaded plugs.
 2. All standard threaded fittings of 4-inch or smaller diameter shall be 4-inch half couplings. Reducers shall be used for smaller final connections.
 3. Thread Standards: All threaded fittings shall have machine tolerances in accordance with the ANSI standard for each fitting size.
 4. Inlet/Outlet connections: Note requirement that flanged inlet and outlet flanged connections must be of nominal pipe size 4 inches larger than the nominal sizes (6 inch and 8 inch, respectively) of the fire safety valves to be provided for inlets and outlets under Section 335243.13 "Aviation Fuel Piping, Valves and Fittings". Inlet and outlet nozzles shall be dual-flange type, with internal flange concentrically installed with, and of same size as, external flange. Coordinate for overall nozzle length with installation of fire safety valves.
 5. Provide, in accordance with UL 142 standards, tank shell reinforcing rings or plates for nozzles and openings for which size and/or imposed strains make shell reinforcement necessary.
- I. Ladders: Shall be standard carbon steel or stainless steel and shall be supplied by the tank manufacturer. Refer to drawings for location.

- J. Lifting Lugs: Provide lifting lugs on all tanks. Lugs shall be capable of withstanding weight of tank with a safety factor of 3 to 1.
- K. Floating Suction Swingline Assembly:
1. Provide flanged swing joints, Staytite or approved equivalent, with bronze bushings pressed into yoke mounted to the inside flange, same size as suction nozzle. Locate as indicated on drawings.
 2. Swing line pipe shall be fabricated of type 6048 aluminum or Schedule 10 steel conforming to ASTM A 53 or API 5L seamless or electric resistance welded. Pipe size to be same as suction nozzle. Steel pipe shall be coated inside before installation with two coat epoxy system conforming with MIL-C-4556-E.
 3. Design the swing pipe inlets for maximum velocity of 5 feet per second with flow rate of [1,600] <Insert value> gallons per minute.
 4. Provide pipe supports, with appropriate pipe support cradles, to support the swing line assembly a minimum of 12 inches above the bottom of the tank.
 5. Provide floats as necessary to ensure flotation of swing line, and position floats to ensure that fluid inlet is always at least 1'-0" below the surface of the liquid. Provide buoyancy calculations as specified under submittals requirements of this section.
 6. Provide stainless steel rope tether (ASTM A 492-82), secured to bottom of tank, to prevent swing line from contacting top of tank.
 7. Pneumatically test floats for leaks. Floats shall be equipped with suitable plugs for testing.
 8. Provide, for each tank, external target-type indicator to indicate operating height of floating suction assembly.

2.3 MATERIALS

- A. Material shall be carbon steel tank plate in conformance with standards referenced above, and suitable for the minimum design temperature of minus 25 degrees F [in accordance with API-650].
- B. Pipe and fittings:
1. Steel Pipe: Steel pipe shall be Grade B, black, welded or seamless pipe ASTM A 53; or API 5L, Furnace butt-welded pipe may be used in sizes 2-inches and smaller. Sizes smaller than 2-inches shall be Schedule 80. Sizes 2-inch and larger shall be Schedule 40 for sizes up to and including 10 inches.
 2. Welding Fittings: Welding fittings shall conform to ANSI B16.9 and ASTM A 234, Grade WPB for use with carbon steel pipe. Welding outlets shall be standard weight forged steel conforming to ASTM A 181, Grade 1.
 3. Forged Welding Flanges: Flanges shall be carbon steel conforming to ANSI B16.5, Class 150, except as otherwise specified. Flanged facings shall correspond to the equipment to which the piping is joined. Materials shall conform to the requirements of ASTM A 181 or to ASTM A 105.
 4. Bolting: Flange bolts and nuts shall conform to the requirements of ASTM A 307, Grade B, square bolt heads and hexagon nuts.
 5. Threaded Steel Fittings: Threaded fittings, shall be Pressure Class 3000 conforming to ANSI B16.11. Fittings material shall be ASTM A 105.

6. Nipples: Carbon Steel pipe nipples shall be of the same material as the pipe they join and shall conform to the requirements of ASTM A 733.
7. Gaskets: Gaskets for use with flanged connections shall be 1/8 inch thick and shall conform to the requirements of Section 335243.13 "Aviation Fuel Piping, Valves and Fittings".

2.4 VERTICAL, STEEL, FUEL-OIL AST

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Ace Tank & Fueling Equipment, LLC.](#)
 2. [Adamson Global Technology Corporation.](#)
 3. [Brown Tank LLC.](#)
 4. [Buffalo Tank Company, Inc.](#)
 5. [Cardinal Tank Corp.](#)
 6. [Clawson Tank Company.](#)
 7. [Hall Tank Co.](#)
 8. [Highland Tank & Manufacturing Company, Inc.](#)
 9. [Modern Welding Company, Inc.](#)
 10. [Palmer Manufacturing & Tank Inc.](#)
 11. [Steel Tank & Fabricating Co., Inc.](#)
 12. [Watco Tanks, Inc.](#)
 13. [We-Mac Manufacturing, Inc.](#)
 14. **<Insert manufacturer's name>.**
 15. or approved equal.
- B. Description: UL 142, single-wall, vertical, steel tank.
- C. Description: UL 142[**and STI F921**], double-wall, vertical, steel tank; with primary- and secondary-containment walls and interstitial space.
- D. Construction: Fabricated with welded, carbon steel suitable for operation at atmospheric pressure and for storing fuel oil with specific gravity up to 1.1 and maintained temperature up to **150 deg F** (66 deg C).
- E. Capacities and Characteristics:
1. Capacity: **<Insert gal. (L)>.**
 2. Diameter: **<Insert feet (m)>.**
 3. Length: **<Insert feet (m)>.**
 4. Connection Sizes:
 - a. Fill Line: **<Insert NPS (DN)>.**
 - b. Vent Line: **<Insert NPS (DN)>.**
 - c. Outlet: **<Insert NPS (DN)>.**
 - d. Return: **<Insert NPS (DN)>.**
 - e. Gage: **<Insert NPS (DN)>.**

5. Manholes:
 - a. Number Required: **<Insert number>**.
 - b. Diameter: **<Insert inches (mm)>**.
6. Fuel-Oil Grade Number: **[Grade No. 1] [Grade No. 2] [Diesel] <Insert grade>**.

2.5 HORIZONTAL, STEEL, FUEL-OIL AST

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Ace Tank & Fueling Equipment, LLC.](#)
 2. [Adamson Global Technology Corporation.](#)
 3. [Brown Tank LLC.](#)
 4. [Buffalo Tank Company, Inc.](#)
 5. [Cardinal Tank Corp.](#)
 6. [Clawson Tank Company.](#)
 7. [Hall Tank Co.](#)
 8. [Highland Tank & Manufacturing Company, Inc.](#)
 9. [Modern Welding Company, Inc.](#)
 10. [Palmer Manufacturing & Tank Inc.](#)
 11. [Safe-T-Tank Corp.](#)
 12. [Steel Tank & Fabricating Co., Inc.](#)
 13. [Watco Tanks, Inc.](#)
 14. [We-Mac Manufacturing, Inc.](#)
 15. **<Insert manufacturer's name>**.
 16. or approved equal.
- B. Description: UL 142, single-wall, horizontal, steel tank.
- C. Description: UL 142[**and STI F921**], double-wall, horizontal, steel tank; with primary- and secondary-containment walls and interstitial space.
- D. Construction: Fabricated with welded, carbon steel; suitable for operation at atmospheric pressure and for storing fuel oil with specific gravity up to 1.1 and with maintained temperature up to **150 deg F** (66 deg C).
- E. Supports: Manufacturer's standard structural steel welded to tank.
- F. Supports: Manufacturer's standard type[**and number**], steel or cast-iron cradles, for field installation.
 1. Number of Supports: **<Insert number>**.
- G. Capacities and Characteristics:
 1. Capacity: **<Insert gal. (L)>**.
 2. Diameter: **<Insert feet (m)>**.
 3. Length: **<Insert feet (m)>**.

4. Connection Sizes:
 - a. Fill Line: <Insert NPS (DN)>.
 - b. Vent Line: <Insert NPS (DN)>.
 - c. Outlet: <Insert NPS (DN)>.
 - d. Return: <Insert NPS (DN)>.
 - e. Gage: <Insert NPS (DN)>.
5. Manholes:
 - a. Number Required: <Insert number>.
 - b. Diameter: <Insert inches (mm)>.
6. Fuel-Oil Grade Number: [Grade No. 1] [Grade No. 2] [Diesel] <Insert grade>.

2.6 CONTAINMENT-DIKE, STEEL, FUEL-OIL AST

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Areo Power Unitized Fueler Inc.](#)
 2. [Buffalo Tank Company, Inc.](#)
 3. [Cardinal Tank Corp.](#)
 4. [Hall Tank Co.](#)
 5. [Highland Tank & Manufacturing Company, Inc.](#)
 6. [Modern Welding Company, Inc.](#)
 7. [Palmer Manufacturing & Tank Inc.](#)
 8. [Safe-T-Tank Corp.](#)
 9. [Watco Tanks, Inc.](#)
 10. [We-Mac Manufacturing, Inc.](#)
 11. <Insert manufacturer's name>.
 12. or approved equal.
- B. Description: UL 142 and STI F911, single-wall, horizontal, steel tank; with [**open or enclosed**] [**enclosed**], secondary-containment dike with capacity greater than tank capacity.
- C. Construction: Fabricated with welded, carbon steel; suitable for operation at atmospheric pressure and for storing fuel oil with specific gravity up to 1.1 and with maintained temperature up to **150 deg F** (66 deg C).
- D. Capacities and Characteristics:
 1. Capacity: <Insert gal. (L)>.
 2. Diameter: <Insert feet (m)>.
 3. Length: <Insert feet (m)>.
 4. Connection Sizes:
 - a. Fill Line: <Insert NPS (DN)>.

- b. Vent Line: **<Insert NPS (DN)>**.
 - c. Outlet: **<Insert NPS (DN)>**.
 - d. Return: **<Insert NPS (DN)>**.
 - e. Gage: **<Insert NPS (DN)>**.
5. Manholes:
- a. Number Required: **<Insert number>**.
 - b. Diameter: **<Insert inches (mm)>**.
6. Fuel-Oil Grade Number: **[Grade No. 1] [Grade No. 2] [Diesel] <Insert grade>**.

2.7 INSULATED, STEEL, FUEL-OIL AST

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Ace Tank & Fueling Equipment, LLC.](#)
 2. [Adamson Global Technology Corporation.](#)
 3. [Areo Power Unitized Fueler Inc.](#)
 4. [Brown Tank LLC.](#)
 5. [ConVault, Inc.](#)
 6. [Hamilton Tanks.](#)
 7. [Highland Tank & Manufacturing Company, Inc.](#)
 8. [Modern Welding Company, Inc.](#)
 9. [Palmer Manufacturing & Tank Inc.](#)
 10. [Steel Tank & Fabricating Co., Inc.](#)
 11. [We-Mac Manufacturing, Inc.](#)
 12. **<Insert manufacturer's name>**.
 13. or approved equal.
- B. Description: **[UL 142 and UL 2085] [UL 142, UL 2085, and STI F941]**, thermally insulated and fire-resistant, double-wall, horizontal, steel tank; with primary- and secondary-containment walls and insulation and with interstitial space.
- C. Construction: Fabricated with welded, carbon steel and insulation; suitable for operation at atmospheric pressure and for storing fuel oil with specific gravity up to 1.1 and with test temperature according to UL 2085.
- D. Capacities and Characteristics:
1. Capacity: **<Insert gal. (L)>**.
 2. Diameter: **<Insert feet (m)>**.
 3. Length: **<Insert feet (m)>**.
 4. Connection Sizes:
 - a. Fill Line: **<Insert NPS (DN)>**.
 - b. Vent Line: **<Insert NPS (DN)>**.
 - c. Outlet: **<Insert NPS (DN)>**.

- d. Return: <Insert NPS (DN)>.
 - e. Gage: <Insert NPS (DN)>.
5. Manholes:
- a. Number Required: <Insert number>.
 - b. Diameter: <Insert inches (mm)>.
6. Fuel-Oil Grade Number: [Grade No. 1] [Grade No. 2] [Diesel] <Insert grade>.

2.8 CONCRETE-VAULTED, STEEL, FUEL-OIL AST

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Cardinal Tank Corp.](#)
2. [ConVault, Inc.](#)
3. [EcoVault, Inc.](#)
4. <Insert manufacturer's name>.
5. or approved equal.

B. Description: [UL 142 and UL 2085] [UL 142, UL 2085, and STI F941]; thermally insulated, fire-resistant and protected, double-wall, horizontal, steel tank; with primary- and secondary-containment walls and insulation and with interstitial space.

C. Construction: Fabricated with welded, carbon steel and insulation and encased in concrete that will protect from bullets; suitable for operation at atmospheric pressure and for storing fuel oil with specific gravity up to 1.1 and with test temperature according to UL 2085.

D. Capacities and Characteristics:

1. Capacity: <Insert gal. (L)>.
2. Diameter: <Insert feet (m)>.
3. Length: <Insert feet (m)>.
4. Connection Sizes:
 - a. Fill Line: <Insert NPS (DN)>.
 - b. Vent Line: <Insert NPS (DN)>.
 - c. Outlet: <Insert NPS (DN)>.
 - d. Return: <Insert NPS (DN)>.
 - e. Gage: <Insert NPS (DN)>.
5. Manholes:
 - a. Number Required: <Insert number>.
 - b. Diameter: <Insert inches (mm)>.
6. Fuel-Oil Grade Number: [Grade No. 1] [Grade No. 2] [Diesel] <Insert grade>.

2.9 SHOP PAINTING OF AST

- A. Apply manufacturer's standard prime coat to exterior steel surface of AST[**and supports**].
- B. Prepare exterior steel surface of AST[**and tank supports**].
- C. Shop Cleaning: After fabrication, blast clean according to [SSPC-SP 6/NACE No. 3] [SSPC-SP 10/NACE No. 2].
- D. After cleaning, remove dust or residue from cleaned surfaces.
- E. If surface develops rust before prime coat is applied, repeat surface preparation.
- F. Apply manufacturer's standard prime coat to shop-cleaned, dry surface same day as surface preparation.
- G. Apply manufacturer's standard two-component, epoxy finish coats.

2.10 FUEL-OIL AST ACCESSORIES

- A. Tank Manholes: **22-inch-** (560-mm-) minimum diameter; bolted, flanged, and gasketed; centered on top of tank.
- B. Tank Manholes: **22-inch-** (560-mm-) minimum diameter; bolted, flanged, and gasketed; on top and at side of tank.
- C. Threaded pipe connection fittings on top of tank, for fill, supply, return, vent, sounding, and gaging. Include cast-iron plugs for shipping.
- D. Threaded pipe connection fittings on top or sides of tank as indicated, for fill, supply, return, vent, sounding, and gaging. Include cast-iron plugs for shipping.
- E. Striker Plates: Inside tank, on bottom below fill, vent, sounding, gage, and other tube openings.
- F. Lifting Lugs: For handling and installation.
- G. Ladders: Carbon-steel ladder inside tank, anchored to top and bottom, and located as indicated. Include reinforcement of tank at bottom of ladder.
- H. Ladders: Carbon-steel ladder outside tank, anchored to top and side wall. Comply with requirements in Section 055000 "Metal Fabrications" for exterior steel ladder.
 - 1. Cage: Include welded steel cage around ladders for tanks [20 feet (6 m)] <Insert dimension> high or higher.
- I. Supply Tube: Extension of supply piping fitting into tank, terminating **6 inches** (150 mm) above tank bottom and cut at a **45-degree angle** (1:1 slope).

- J. Sounding and Gage Tubes: Extension of fitting into tank, terminating **6 inches** (150 mm) above tank bottom and cut at a **45-degree angle** (1:1 slope).

2.11 LIQUID-LEVEL GAGE SYSTEM

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Caldwell Systems Corporation.](#)
2. [Clawson Tank Company.](#)
3. [Franklin Fueling Systems.](#)
4. [Highland Tank & Manufacturing Company, Inc.](#)
5. [INCON.](#)
6. [King Engineering Corp.](#)
7. [Krueger Sentry Gauge.](#)
8. [Pneumercator Inc.](#)
9. [Preferred Utilities Manufacturing Corporation.](#)
10. [Rochester Gauges, Inc.](#)
11. [Tuthill Corporation; Tuthill Transfer Systems; Sotera Systems.](#)
12. [Uehling Instrument Company.](#)
13. [Venture Measurement Company, LLC.](#)
14. **<Insert manufacturer's name>.**
15. or approved equal.

- B. Description: Calibrated liquid-level gage system complying with [**UL 180 with floats**] [**UL 1238 with probes**] or other sensors and remote annunciator panel.

- C. Annunciator Panel: With visual and audible, high-tank-level and low-tank-level alarms; fuel indicator with registration in **gallons** (liters); and overfill alarm. Include gage volume range that covers fuel-oil storage capacity.

- D. Controls: Electrical, operating on [**120**] **<Insert voltage>**-V ac.

2.12 LEAK-DETECTION AND MONITORING SYSTEM

- A. Cable and Sensor System: Comply with UL 1238.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Caldwell Systems Corporation.](#)
- b. [Containment Solutions, Inc.](#)
- c. [Franklin Fueling Systems.](#)
- d. [Gems Sensors & Controls Inc.](#)
- e. [Highland Tank & Manufacturing Company, Inc.](#)
- f. [INCON.](#)
- g. [In-Situ, Inc.](#)
- h. [MSA; Instrument Div.](#)

- i. [Pentair Thermal Management](#).
 - j. [Perma-Pipe, Inc.](#)
 - k. [Pneumercator Inc.](#)
 - l. [Raychem Corp; Tyco Electronics Corporation](#).
 - m. [Tuthill Corporation; Tuthill Transfer Systems; Sotera Systems](#).
 - n. [Veeder-Root; a Danaher Corporation company](#).
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.
 2. Calibrated leak-detection and monitoring system with probes and other sensors and remote alarm panel for fuel-oil storage tanks and fuel-oil piping.
 3. Include fittings and devices required for testing.
 4. Controls: Electrical, operating on [120] **<Insert voltage>**-V ac.
 5. Calibrated liquid-level gage complying with [UL 180 with floats] [UL 1238 with probes] or other sensors and remote annunciator panel.
 6. Remote Annunciator Panel: With visual and audible, high-tank-level and low-tank-level alarms; fuel indicator with registration in gallons ((liters);) and overfill alarm. Include gage volume range that covers fuel-oil storage capacity.
 7. Controls: Electrical, operating on [120] **<Insert voltage>**-V ac.
- B. Hydrostatic System: Comply with UL 1238.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Caldwell Systems Corporation](#).
 - b. [Containment Solutions, Inc.](#)
 - c. [Franklin Fueling Systems](#).
 - d. [Gems Sensors & Controls Inc.](#)
 - e. [Highland Tank & Manufacturing Company, Inc.](#)
 - f. [INCON](#).
 - g. [In-Situ, Inc.](#)
 - h. [MSA; Instrument Div.](#)
 - i. [Pentair Thermal Management](#).
 - j. [Perma-Pipe, Inc.](#)
 - k. [Pneumercator Inc.](#)
 - l. [Raychem Corp; Tyco Electronics Corporation](#).
 - m. [Tuthill Corporation; Tuthill Transfer Systems; Sotera Systems](#).
 - n. [Veeder-Root; a Danaher Corporation company](#).
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.
 2. Calibrated leak-detection and monitoring system with brine antifreeze solution, reservoir sensor, and electronic control panel to monitor leaks in inner and outer tank walls.
 3. Include fittings and devices required for testing.
 4. Controls: Electrical, operating on [120] **<Insert voltage>**-V ac.
 5. Calibrated liquid-level gage complying with [UL 180 with floats] [UL 1238 with probes] or other sensors and remote annunciator panel.
 6. Remote Annunciator Panel: With visual and audible, high-tank-level and

- low-tank-level alarms; fuel indicator with registration in gallons (liters); and overflow alarm. Include gage volume range that covers fuel-oil storage capacity.
7. Controls: Electrical, operating on [120] <Insert voltage>-V ac.

2.13 FUEL OIL

- A. Fuel Oil: ASTM D 396, [Grade No. 1] [Grade No. 2].
- B. Diesel Fuel Oil: ASTM D 975, [Grade Low Sulfur] [Grade No. 1-D, special purpose] [Grade No. 2-D, general purpose], high volatility.

2.14 SOURCE QUALITY CONTROL

- A. Pressure test and inspect fuel-oil storage tanks, after fabrication and before shipment, according to ASME and the following:
1. [Vertical] [Vertical or Horizontal] [Horizontal], Single-Wall Steel ASTs: UL 142.
 2. [Vertical] [Vertical or Horizontal] [Horizontal], Double-Wall Steel ASTs: UL 142, STI F921, and STI R931.
 3. Horizontal, Containment-Dike, Steel ASTs: UL 142 and STI F911.
 4. Horizontal, [Concrete-Vaulted] [Concrete-Vaulted and Insulated] [Insulated], Steel ASTs: UL 142 and UL 2085.
- B. Affix standards organization's code stamp.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for aboveground fuel-oil storage tanks to verify actual locations.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

- A. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.
- B. Allow for cast-in-place, concrete base.

3.3 INSTALLATION - GENERAL

- A. Install tanks in strict conformity with manufacturer's instructions. [Install hold-down straps, secured to anchor bolts provided as Division 03 work.]

- B. Test tanks in accordance with UL 142 standards and submit written test report.

3.4 FUEL-OIL AST INSTALLATION

- A. Install tank bases and supports.
- B. Concrete Bases: Anchor AST to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on [18-inch (457-mm)] <Insert dimension> centers around the full perimeter of the base.
 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 6. Use [3000-psi (20.7-MPa)] <Insert dimension>, 28-day, compressive-strength concrete and reinforcement as specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]
- C. Connect piping and vent fittings.
- D. Install ground connections.
- E. Install tank leak-detection and monitoring devices.
- F. Install steel ASTs according to STI R912.
- G. Install insulated and concrete-vaulted, steel ASTs according to STI R942.
- H. Fill storage tanks with fuel oil.

3.5 LIQUID-LEVEL GAGE SYSTEM INSTALLATION

- A. Install liquid-level gage system. Install panel inside building where indicated.

3.6 LEAK-DETECTION AND MONITORING SYSTEM INSTALLATION

- A. Install leak-detection and monitoring system. Install alarm panel inside building where indicated.

1. Double-Wall, Fuel-Oil Storage Tanks: **[Install probes] [Install probes or use factory-installed integral probes] [Use factory-installed integral probes]** in interstitial space.
2. Single-Wall, Fuel-Oil Storage Tanks: Install probes as indicated.
3. Double-Containment, Fuel-Oil Piping: Install leak-detection sensor **[probes in fuel-oil storage tank containment sumps and at low points in piping] [cable probes in interstitial space of double-containment piping]**.
4. Install liquid-level gage.

3.7 LABELING AND IDENTIFYING

- A. Nameplates, pipe identification, and signs are specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.8 FIELD PAINTING OF AST

- A. Prepare and touch up damaged exterior surface of AST **[and supports]** as specified in "Shop Painting of AST" Article.
- B. Prepare exterior steel surface of AST **[and tank supports]**.
- C. Field Cleaning: After fabrication, blast clean according to **[SSPC-SP 6/NACE No. 3] [SSPC-SP 10/NACE No. 2]**.
- D. After cleaning, remove dust or residue from cleaned surfaces.
- E. If surfaces develop rust before prime coat is applied, repeat surface preparation.
- F. Prepare surface of AST **[and supports]** and apply painting systems according to specifications in Section 099600 "High-Performance Coatings" for **[severe] [moderate] [mild]** environment **[high-gloss] [semigloss]** finish for ferrous metal.

3.9 LIGHTING SYSTEMS

- A. Lighting system shall be installed as indicated on electrical Drawings and as specified in Division 26 and coordinated with Work of this Section.

3.10 LIGHTNING PROTECTION SYSTEMS

- A. Lightning protection system shall be installed as indicated on electrical Drawings and as specified in Division 26 and coordinated with the Work of this Section.

3.11 FIRE PROTECTION

- A. Fire protection equipment shall be provided as specified in Division 21 and coordinated with the Work of this Section.

3.12 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Tanks: Minimum hydrostatic or compressed-air test pressures for fuel-oil storage tanks that have not been factory tested and do not bear the ASME code stamp or a listing mark acceptable to authorities having jurisdiction:
 - a. Single-Wall Tanks: Minimum **3 psig** (20.7 kPa) and maximum **5 psig** (34.5 kPa).
 - b. Double-Wall Tanks:
 - 1) Inner Tanks: Minimum **3 psig** (20.7 kPa) and maximum **5 psig** (34.5 kPa).
 - 2) Interstitial Space: Minimum **3 psig** (20.7 kPa) and maximum **5 psig** (34.5 kPa), or **5.3-in. Hg** (18-kPa) vacuum.
 - c. Where vertical height of fill and vent pipes is such that the static head imposed on the bottom of the tank is greater than **10 psig** (69 kPa), hydrostatically test the tank and fill and vent pipes to a pressure equal to the static head thus imposed.
 - d. Maintain the test pressure for one hour.
- C. ASTs will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.13 INITIAL CLEANING

- A. The tanks shall be left in a completely clean and dry state. Close all uncovered openings with plywood covers fastened in a manner suitable for a permanent connection. Damage caused to the tank by the entry of foreign substances prior to coatings application shall be remedied by the Contractor at no additional cost to the Owner.

3.14 TANK STRAPPING

- A. After all installation work is complete, prepare a calibration table for the tanks showing the volume of fuel in gallons in the tank to the nearest tenth of a gallon at any height of liquid in hundredths of a foot units when measured by a steel tape lowered through the manual gauge well. Calibrate the tank in accordance with API 2550 for critical measurement. Calibration table shall be prepared by precisely metering integrated flow into each tank, simultaneously taking accurate depth measurements; calculation method of preparing the table is not acceptable. Furnish a certified record of the

calibration for each tank to the DEN Project Manager.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 231323

SECTION 232113 - HYDRONIC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes pipe and fitting materials and joining methods for the following:
 - 1. Hot-water heating piping.
 - 2. Chilled-water piping.
 - 3. Dual-temperature heating and cooling water piping.
 - 4. Condenser-water piping.
 - 5. Glycol cooling-water piping.
 - 6. Makeup-water piping.
 - 7. Condensate-drain piping.
 - 8. Blowdown-drain piping.
 - 9. Air-vent piping.
 - 10. Safety-valve-inlet and -outlet piping.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: Include data on pipe materials, pipe fittings, and accessories. Provide manufacturers catalogue information. Include flow and pressure drop curves based on manufacturer's testing for diverting fittings, calibrated balancing valves, and automatic flow-control valves. Include the following:
 - 1. Plastic pipe and fittings with solvent cement.
 - 2. RTRP and RTRF with adhesive.
 - 3. Pressure-seal fittings.
 - 4. Chemical treatment.
 - 5. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4.1: For solvent cements and adhesive

primers, documentation indicating that products comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

- C. Shop Drawings: For buried runs of insulated piping [**and <Insert other>**], submit drawings accurately showing piping layout, indicating:
1. Lengths of each straight section of piping run and calculated amount of expansion or contraction applicable for each straight section of run based on design temperature range of piping system contents.
 2. Details of provisions, which will be applied (where needed, based on manufacturer's recommendations and subject to the DEN Project Manager's approval) to accommodate expansion and contraction in a manner acceptably protecting the installation and adequately maintaining effectiveness of insulation.
- D. Shop Drawings: Detail fabrication of pipe anchors, hangers, special pipe support assemblies, alignment guides, expansion joints and loops, and their attachment to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
- E. Delegated-Design Submittal:
1. Design calculations and detailed fabrication and assembly of pipe anchors and alignment guides, hangers and supports for multiple pipes, expansion joints and loops, and attachments of the same to the building structure.
 2. Locations of pipe anchors and alignment guides and expansion joints and loops.
 3. Locations of and details for penetrations, including sleeves and sleeve seals for exterior walls, floors, basement, and foundation walls.
 4. Locations of and details for penetration and firestopping for fire- and smoke-rated wall and floor and ceiling assemblies.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Piping layout, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Suspended ceiling components.
 2. Other building services.
 3. Structural members.
- B. Qualification Data: For Installer.
- C. Welding certificates. Include welders certification of compliance with [**ASME SEC 9**] [**AWS D1.1.**] **<Insert requirement>**.
- D. Pneumatic Leak Test:

1. Contractor shall submit drawings and procedures of the pneumatic leak test to the DEN Project Manager no later than two (2) weeks prior to testing. Contractor may not proceed with tests unless approved in writing by the DEN Project Manager.
- E. Field Quality Control Test Reports: Written reports of tests specified in Part 3 of this Section. Include the following:
1. Test procedures used.
 2. Test results that comply with requirements.
 3. Failed test results and corrective action taken to achieve requirements.
- F. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project site.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For hydronic specialties and special-duty valves to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
1. Record actual locations of valves, piping and anchors.
- C. Contractor shall submit fully dimensioned spool drawings for all welded piping work. Drawings shall indicate all weld types, sizes, and materials to be used. Drawings to be submitted in current DEN approved format as per requirements of Division 01. Other file formats will not be accepted.

1.6 EXTRA STOCK

- A. Provide [**two (2)**] <Insert number> repacking kits for each size and valve type.

1.7 QUALITY ASSURANCE

- A. Manufacture: Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.
- B. Manufacturer's Qualifications:
1. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum [**three (3)**] <Insert number> years documented experience.
- C. Installer Qualifications:

1. Installer: Company specializing in performing the Work of this Section [**with minimum five (5)**] <Insert requirements> years documented experience].
 2. Installers of Pressure-Sealed Joints: Installers shall be certified by pressure-seal joint manufacturer as having been trained and qualified to join piping with pressure-seal pipe couplings and fittings.
 3. Fiberglass Pipe and Fitting Installers: Installers of RTRF and RTRP shall be certified by manufacturer of pipes and fittings as having been trained and qualified to join fiberglass piping with manufacturer-recommended adhesive.
- D. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- E. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
1. Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation.
 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
 3. Provide certificate of compliance from [**authority having jurisdiction**] <Insert authority> indicating approval of welders.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements" Division 01 requirements.
- B. Accept components on site in shipping containers with labeling in place. Inspect for damage. Collect and save installation instructions for DEN Project Manager's use.
- C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
- D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature unless otherwise indicated:
1. Hot-Water Heating Piping: <Insert psig (kPa)> at [200 deg F (121 deg C)] <Insert temperature>.
 2. Chilled-Water Piping: <Insert psig (kPa)> at [200 deg F (93 deg C)] <Insert temperature>.
 3. Dual-Temperature Heating and Cooling Water Piping: <Insert psig (kPa)> at [200 deg F (93 deg C)] <Insert temperature>.
 4. Condenser-Water Piping: <Insert psig (kPa)> at [150 deg F (66 deg C)] <Insert temperature>.
 5. Glycol Cooling-Water Piping: <Insert psig (kPa)> at [150 deg F (66 deg C)] <Insert temperature>.
 6. Makeup-Water Piping: [80 psig (552 kPa)] <Insert value> at [150 deg F (66 deg C)] <Insert temperature>.
 7. Condensate-Drain Piping: [150 deg F (66 deg C)] <Insert temperature>.
 8. Blowdown-Drain Piping: [200 deg F (93 deg C)] <Insert temperature>.
 9. Air-Vent Piping: [200 deg F (93 deg C)] <Insert temperature>.
 10. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.

2.2 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tubing: [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 88, Type M (ASTM B 88M, Type C)].
- B. Annealed-Temper Copper Tubing: ASTM B 88, Type K (ASTM B 88M, Type A).
- C. DWV Copper Tubing: ASTM B 306, Type DWV.
- D. Copper or Bronze Pressure-Seal Fittings:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. NIBCO INC.
 - b. Viega.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
 2. Housing: Copper.
 3. O-Rings and Pipe Stops: EPDM.
 4. Tools: Manufacturer's special tools.
 5. Minimum 200-psig (1379-kPa) working-pressure rating at 250 deg F (121 deg C).

E. Copper, Mechanically Formed Tee Option: For forming T-branch on copper water tube.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [T-DRILL Industries Inc.](#)
- b. **<Insert manufacturer's name>.**
- c. or approved equal.

F. Wrought-Copper Unions: ASME B16.22.

2.3 STEEL PIPE AND FITTINGS

A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; welded and seamless, Grade B, and wall thickness as indicated in "Piping Applications" Article.

B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125 and 250 as indicated in "Piping Applications" Article.

C. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300 as indicated in "Piping Applications" Article.

D. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in "Piping Applications" Article.

E. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in "Piping Applications" Article.

F. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.

G. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:

1. Material Group: 1.1.
2. End Connections: Butt welding.
3. Facings: Raised face.

H. Steel Pressure-Seal Fittings:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. [Victaulic Company.](#)
- b. **<Insert manufacturer's name>.**
- c. or approved equal.

2. Housing: Steel.
3. O-Rings and Pipe Stop: EPDM.

4. Tools: Manufacturer's special tool.
5. Minimum 300-psig (2070-kPa) working-pressure rating at 230 deg F (110 deg C).

- I. Steel Pipe Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.

2.4 PLASTIC PIPE AND FITTINGS

- A. CPVC Plastic Pipe: ASTM F 441/F 441M, with wall thickness as indicated in "Piping Applications" Article.
 1. CPVC Plastic Pipe Fittings: Socket-type pipe fittings, ASTM F 438 for Schedule 40 pipe; ASTM F 439 for Schedule 80 pipe.
- B. PVC Plastic Pipe: ASTM D 1785, with wall thickness as indicated in "Piping Applications" Article.
 1. PVC Plastic Pipe Fittings: Socket-type pipe fittings, ASTM D 2466 for Schedule 40 pipe; ASTM D 2467 for Schedule 80 pipe.

2.5 FIBERGLASS PIPE AND FITTINGS

- A. RTRP: ASTM D 2996, filament-wound pipe with tapered bell and spigot ends for adhesive joints.
- B. RTRF: Compression or spray-up/contact molded of same material, pressure class, and joining method as pipe.
- C. Flanges: ASTM D 4024. Full-face gaskets suitable for the service, minimum 1/8-inch (3.2-mm) thick, 60-70 durometer. ASTM A 307, Grade B, hex head bolts with washers.

2.6 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness unless otherwise indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux

according to ASTM B 813.

- E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
- F. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- G. Solvent Cements for Joining Plastic Piping:
 - 1. CPVC Piping: ASTM F 493.
 - a. CPVC solvent cement shall have a VOC content of 490 g/L or less.
 - b. Adhesive primer shall have a VOC content of 550 g/L or less.
 - c. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 2. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
 - a. PVC solvent cement shall have a VOC content of 510 g/L or less.
 - b. Adhesive primer shall have a VOC content of 550 g/L or less.
 - c. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- H. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.
 - 1. Fiberglass adhesive shall have a VOC content of 80 g/L or less.
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- I. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

2.7 TRANSITION FITTINGS

- A. Plastic-to-Metal Transition Fittings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Charlotte Pipe and Foundry Company.

- b. [IPEX Inc.](#)
 - c. [KBI \(King Bros. Industries\).](#)
 - d. **<Insert manufacturer's name>.**
 - e. or approved equal.
2. One-piece fitting with one threaded brass or copper insert and one solvent-cement-joint end of material and wall thickness to match plastic pipe material.

B. Plastic-to-Metal Transition Unions:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Charlotte Pipe and Foundry Company.](#)
 - b. [IPEX Inc.](#)
 - c. [KBI \(King Bros. Industries\).](#)
 - d. [NIBCO INC;](#) Model #T/S-1710.
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.
2. Brass or copper end, solvent-cement-joint end of material and wall thickness to match plastic pipe material, rubber gasket, and threaded union.

2.8 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

B. Dielectric Unions:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [A.Y. McDonald Mfg. Co.](#)
 - b. [Capitol Manufacturing Company.](#)
 - c. [Central Plastics Company.](#)
 - d. [Hart Industries International, Inc.](#)
 - e. [Jomar International, Ltd.](#)
 - f. [Matco-Norca.](#)
 - g. [Watts Regulator Co.](#)
 - h. [Zurn Industries, LLC; AquaSpec Commercial Faucet Products.](#)
 - i. **<Insert manufacturer's name>.**
 - j. or approved equal.
2. Description:
 - a. Standard: ASSE 1079.
 - b. Pressure Rating: **[125 psig (860 kPa) minimum at 180 deg F (82 deg C)]**

- [150 psig (1035 kPa)] [250 psig (1725 kPa)] <Insert value>.
- c. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flanges:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
- a. [Capitol Manufacturing Company.](#)
 - b. [Central Plastics Company.](#)
 - c. [Matco-Norca.](#)
 - d. [Watts Regulator Co.](#)
 - e. [Zurn Industries, LLC; AquaSpec Commercial Faucet Products.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
2. Description:
- a. Standard: ASSE 1079.
 - b. Factory-fabricated, bolted, companion-flange assembly.
 - c. Pressure Rating: [125 psig (860 kPa) **minimum at 180 deg F (82 deg C)**] [150 psig (1035 kPa)] [175 psig (1200 kPa)] [300 psig (2070 kPa)] <Insert value>.
 - d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Insulating Kits:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
- a. [Advance Products & Systems, Inc.](#)
 - b. [Calpico, Inc.](#)
 - c. [Central Plastics Company.](#)
 - d. [Pipeline Seal and Insulator, Inc.](#)
 - e. <Insert manufacturer's name>.
 - f. or approved equal.
2. Description:
- a. Nonconducting materials for field assembly of companion flanges.
 - b. Pressure Rating: [150 psig (1035 kPa)] <Insert value>.
 - c. Gasket: Neoprene or phenolic.
 - d. Bolt Sleeves: Phenolic or polyethylene.
 - e. Washers: Phenolic with steel backing washers.

E. Dielectric Nipples:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Elster Perfection.](#)
- b. [Grinnell Mechanical Products.](#)
- c. [Matco-Norca.](#)
- d. [Precision Plumbing Products, Inc.](#)
- e. [Victaulic Company.](#)
- f. <Insert manufacturer's name>.
- g. or approved equal.

2. Description:

- a. Standard: IAPMO PS 66.
- b. Electroplated steel nipple, complying with ASTM F 1545.
- c. Pressure Rating: [300 psig (2070 kPa) at 225 deg F (107 deg C)] <Insert value and temperature>.
- d. End Connections: Male threaded.
- e. Lining: Inert and noncorrosive, propylene.

2.9 BYPASS CHEMICAL FEEDER

- A. Description: Welded steel construction; 125-psig (860-kPa) working pressure; 5-gal. (19-L) capacity; with fill funnel and inlet, outlet, and drain valves.

1. Chemicals: Specially formulated, based on analysis of makeup water, to prevent accumulation of scale and corrosion in piping and connected equipment.

PART 3 - EXECUTION

3.1 ENVIRONMENTAL REQUIREMENTS

- A. Do not install underground piping when bedding is wet or frozen.

3.2 GENERAL

- A. Where more than one piping system material is specified, ensure system components are compatible and joined to ensure the integrity of the system is not jeopardized. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.
- B. Use unions, flanges, and couplings downstream of valves and at equipment or apparatus connections. Do not use direct welded connections to valves, equipment, or other apparatus.
- C. Use non-conducting dielectric waterway fittings or insulating flanges whenever jointing dissimilar metals in piping systems. Dielectric fittings shall have end connections that match the adjoining pipe.
- D. Provide pipe hangers and supports in accordance with [ASTM B31.9] [MSS SP69]

unless indicated otherwise.

- E. Use **[gate] [ball] [or] [butterfly]** valves for shut off and to isolate equipment, part of systems, or vertical risers.
- F. Use **[globe] [ball] [or] [butterfly]** valves for throttling, bypass, or manual flow control services.
- G. Use spring loaded check valves on discharge of **[condenser water] <Insert type>** pumps where more than one pump supplies water to a common header.
- H. Use plug cocks for throttling service. Use non lubricated plug cocks only when shut off or isolating valves are also provided.
- I. Use butterfly valves **[in heating water systems] [in chilled and condenser water systems] [in heating, chilled and condenser water systems]** interchangeably with gate and globe valves.
- J. Use only butterfly valves in chilled and condenser water systems for throttling and isolation service.
- K. Butterfly valves shall be lug type.
- L. Use 3/4 inch ball valves with cap for drains at main shut off valves, low points of piping, bases of vertical risers, and at equipment. **[Pipe to nearest floor drain.]**

3.3 PIPING APPLICATIONS

- A. Hot-water heating piping, aboveground, **[NPS 2 (DN 50) and smaller] <Insert pipe size range>**, shall be **[any of]** the following:
 - 1. **[Type L (Type B)] [Type M (Type C)]**, drawn-temper copper tubing, wrought-copper fittings, and **[soldered] [brazed]** joints.
 - 2. **[Schedule 40]**, Grade B, Type 96 steel pipe fittings; cast-iron flanges and flange fittings; and threaded joints.
- B. Hot-water heating piping, aboveground, **[NPS 2-1/2 (DN 65) and larger] <Insert pipe size range>**, shall be **[any of]** the following:
 - 1. Schedule 40 or STD Schedule steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- C. Hot-water heating piping installed belowground and within slabs shall be **[either of]** the following:
- D. Steel Pipe: ASTM A 53, Schedule 40, **[0.375 inch wall for sizes 12 inch and over,] black [with ASME C105 polyethylene jacket, or double layer, half-lapped 10 mil polyethylene tape]**.
- E. Fittings: ASTM A 234 forged steel welding type. **[With double layer, half-lapped 10 mil polyethylene tape.]**

- F. Joints: AWS D1.1, welded.
- G. Casing: **[Closed glass cell insulation.] [Polyurethane insulation with high density polyethylene jacket and heat shrink sleeves.] <Insert type>**
- H. Chilled-water piping, aboveground, **[NPS 2 (DN 50) and smaller] <Insert pipe size range>**, shall be **[any of]** the following:
1. **[Type L (Type B)] [Type M (Type C)]**, drawn-temper copper tubing, wrought-copper fittings, and **[soldered] [brazed] [pressure-seal]** joints.
 2. **[Schedule 40] [Schedule 80]** steel pipe, fittings; cast-iron flanges and flange fittings; and threaded joints.
- I. Chilled-water piping, aboveground, **[NPS 2-1/2 (DN 65) and larger] <Insert pipe size range>**, shall be **[any of]** the following:
1. **[Type L (Type B)] [Type M (Type C)]**, drawn-temper copper tubing, wrought-copper fittings, and **[soldered] [brazed]** joints.
 2. Schedule 40 or STD Schedule steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- J. Chilled-water piping installed belowground and within slabs shall be **[either of]** the following:
1. Steel Pipe: ASTM A 53, Schedule 40, **[0.375 inch wall for sizes 12 inch and over,] black [with AWWA C105 polyethylene jacket, or double layer, half-lapped 10 mil polyethylene tape].**
 - a. Fittings: ASTM A 234, forged steel welding type.
 - b. Joints: AWS D1.1, welded.
 - c. Casing: **[Closed glass cell insulation.] [Polyurethane insulation with high density polyethylene jacket and heat shrink sleeves.] <Insert type>**.
 2. Ductile Iron Pipe: AWWA C151 **[with AWWA C105 polyethylene jacket, or double layer, half-lapped 10 mil polyethylene tape].**
 - a. Fittings: AWWA C110, ductile iron, standard thickness.
 - b. Joints: AWWA C111, rubber gasket with mechanical joint restraint.
 3. PVC Pipe: ASTM D 1785, Schedule 40, **[and Schedule 80 for sizes 8 inch and larger,]** or ASTM D 2241, SDR 21 or 26.
 - a. Fittings: ASTM D 2466, or ASTM D 2467, PVC.
 - b. Joints: ASTM D 2855, solvent weld.
 4. FRP Pipe: ASTM D 2310, fiberglass reinforced thermosetting resin plastic.
 - a. Fittings: Fiberglass reinforced epoxy.
 - b. Joints: **[Hub and spigot with rubber gasket.] [Non threaded, union or flanged coupling.]**

- K. Dual-temperature heating and cooling water piping, aboveground, [NPS 2 (DN 50) and smaller] <Insert pipe size range>, shall be [any of] the following:
1. [Type L (Type B)] [Type M (Type C)], drawn-temper copper tubing, wrought-copper fittings, and [soldered] [brazed] joints.
 2. Schedule 40 steel pipe fittings, flange fittings, and threaded joints.
- L. Dual-temperature heating and cooling water piping, aboveground, [NPS 2-1/2 (DN 65) and larger] <Insert pipe size range>, shall be [any of] the following:
1. Schedule 40 or STD Schedule steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- M. Condenser-water piping, aboveground, [NPS 2 (DN 50) and smaller] <Insert pipe size range>, shall be [any of] the following:
1. [Type L (Type B)] [Type M (Type C)], drawn-temper copper tubing, wrought-copper fittings, and [soldered] [brazed] joints.
 2. [Schedule 80] [Schedule 40] steel pipe; fittings, flange fittings, and threaded joints.
- N. Condenser-water piping, aboveground, [NPS 2-1/2 (DN 65) and larger] <Insert pipe size range>, shall be [any of] the following:
1. [Type L (Type B)] [Type M (Type C)], drawn-temper copper tubing, wrought-copper fittings, and [soldered] [brazed] joints.
 2. [Schedule 80] [Schedule 40] [Schedule 30] [Schedule 20] steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
 3. [Schedule 80] [Schedule 40] [Schedule 30] [Schedule 20] steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.
 4. [Schedule 40] [Schedule 80] CPVC plastic pipe and fittings and solvent-welded joints.
 5. RTRP and RTRF with adhesive or flanged joints.
- O. Condenser-water piping installed belowground and within slabs shall be [either of] the following:
1. Steel Pipe: ASTM A 53, Schedule 40, [0.375 inch wall for sizes 12 inch and over,] black[.] [with AWWA C105 polyethylene jacket, or double layer, half-lapped 10 mil polyethylene tape.]
 - a. Fittings: ASTM A 234, forged steel welding type[.] [with double layer, half-lapped 10 mil polyethylene tape.]
 - b. Joints: Screwed for pipe 2 inch and under; AWS D1.1, welded for pipe over 2 inch.
 2. Ductile Iron Pipe: AWWA C151.
 - a. Fittings: AWWA C110, ductile iron, standard thickness.
 - b. Joints: AWWA C111, rubber gasket with mechanical joint restraint.

3. PVC Pipe: ASTM D 1785, Schedule 40, [**and Schedule 80 for sizes 8 inch and larger,**] or ASTM D 2241, SDR 21 or 26.
 - a. Fittings: ASTM D 2466 or ASTM D 2467, PVC.
 - b. Joints: ASTM D 2855, solvent weld.

- P. Glycol piping, aboveground, [**NPS 2 (DN 50) and smaller**] <Insert pipe size range>, shall be [**any of**] the following:
 1. [**Type L (Type B)**] [**Type M (Type C)**], drawn-temper copper tubing, wrought-copper fittings, and [**soldered**] [**brazed**] joints.
 2. Schedule 40 fittings, flange fittings, and threaded joints.

- Q. Glycol piping, aboveground, [**NPS 2-1/2 (DN 65) and larger**] <Insert pipe size range>, shall be [**any of**] the following:
 1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.

- R. Glycol piping installed belowground and within slabs shall be [**either of**] the following:
 1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
 2. [**Schedule 40**] [**Schedule 80**] PVC or CPVC plastic pipe and fittings, and solvent-welded joints.

- S. Makeup-water piping installed aboveground shall be [**either of**] the following:
 1. [**Type L (Type B)**] [**Type M (Type C)**], drawn-temper copper tubing, wrought-copper fittings, and [**soldered**] [**brazed**] joints.
 2. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.

- T. Makeup-Water Piping Installed Belowground and within Slabs:
 1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.

- U. Condensate-Drain Piping: [**Type M (Type C)**] [**Type DWV**], drawn-temper copper tubing, wrought-copper fittings, and soldered joints [**or Schedule 40 PVC plastic pipe and fittings and solvent-welded joints**].

- V. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.

- W. Air-Vent Piping:
 1. Inlet: Same as service where installed with metal-to-plastic transition fittings for plastic piping systems according to piping manufacturer's written instructions.
 2. Outlet: **Type L or M**, annealed-temper copper tubing with soldered or flared joints.

- X. Safety-Valve-Inlet and -Outlet Piping for Hot-Water Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed with metal-to-plastic transition fittings for plastic piping systems according to piping manufacturer's written instructions.
- Y. Medium Temperature Pre-Insulated Underground Piping System:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ferro-Therm as manufactured by Thermacor Process, L.P., of Fort Worth, Texas.
 - b. **<Insert manufacturer>**
 - c. or approved equal.
 2. Carrier pipe shall be steel ASTM A-53, Grade B., ERW (Type E) or seamless (Type 5), Schedule 40 for sizes 2" and larger, and shall be ASTM A-106/A-53, seamless, Schedule 40 for sizes 1-1/2" and smaller. Condensate return piping shall be Schedule 80. When practical, piping shall be provided in 40-foot double-random lengths. All carbon steel pipe shall have ends cut square and beveled for butt-welding. Straight sections of factory insulated pipe shall have 6" of exposed pipe at each end for field joint fabrication.
 3. Insulation shall be polyurethane foam either spray applied or high pressure injected with one shot into the annular space between carrier pipe and jacket. Insulation shall be rigid, 90-95% closed cell polyurethane with a 2.0 to 3.0 pounds per cubic foot density and k-factor of 0.14 and shall conform to ASTM C-591. Maximum operating temperature shall not exceed 250 degrees F. Insulation thickness shall be as defined by the following table for the piping sizes required:

Pipe Size (inches)	Jacket Size (inches)	Insulation Thickness (inches)
0.75	5.4	2.0
1	5.4	1.9
1.5	5.4	1.7
2	5.4	1.4
2.5	6.68	1.7
3	6.68	1.4
4	8.68	1.9
5	8.68	1.4
6	10.85	2.0
8	12.85	1.9
10	14.125	1.5
12	16.144	1.5

4. Jacketing material shall be extruded, black, high density polyethylene (HDPE), having a wall thickness not less than 125 mils for pipe sizes less than or equal to 12", 150 mils for jacket sizes larger than 12" to 24", and 175 mils for jacket sizes greater than 24". No FRP, HDUP, or tape jacket allowed.

5. Moisture barrier end seals shall be factory applied, sealed to the jacket and carrier pipe. End seals shall be certified as having passed a 20-foot head pressure test. End seals shall be high temperature mastic completely sealing the exposed end of the insulation. Field applied end seals shall be installed at any field cut to the piping before continuing with the installation.
6. Straight run joints shall be field-insulated per the manufacturer's instructions, using polyurethane foam poured in an HDPE sleeve and sealed with a heat shrink sleeve. All joint closures and insulation shall occur at straight sections of pipe. All insulation and jacketing materials shall be furnished by the piping system manufacturer.
7. Fittings shall be the manufacturer's standard components, factory prefabricated and preinsulated fittings with polyurethane foam to the thickness specified and jacketed with a one piece seamless molded HDPE fitting cover, a butt fusion welded, or an extrusion welded and mitered HDPE jacket. Carrier pipe fittings shall be butt-welded, except sizes smaller than 2" shall be socket-welded. Fittings include expansion loops, elbows, tees, reducers and anchors. Elbows, loops, offsets, or any other direction changes shall conform to the standards set by ANSI B31.1, Code for Power Piping.
8. Expansion/contraction compensation will be accomplished utilizing factory prefabricated and preinsulated expansion elbows, Z-bends, expansion loops and anchors specifically designed for the intended application. External expansion compensation utilizing flexible expansion pads (minimum one inch thickness), extending on either side, both inside and outside the radius of the fittings shall be used with all fittings having expansion in excess of 1/2".

Z. High Temperature Pre-Insulated Underground Piping System:

1. Preinsulated Piping: Furnish a complete HDPE jacketed system of factory preinsulated steel piping for the **[Steam] [Condensate Return] [High Temperature Heating Water]** piping system. All preinsulated pipe, fittings, insulating materials, and technical support shall be provided by the Preinsulated Piping System manufacturer.
2. A complete layout of the system, showing anchors, expansion provisions, and building entrance details, shall be provided by the preinsulated pipe manufacturer. Means for expansion must be made in pipe offsets or loops.
3. The system shall be HT-406 as manufactured by Thermacor Process, L.P., of Fort Worth, Texas, or approved substitute.
4. Carrier pipe shall be steel ASTM A-53, Grade B., ERW (Type E) or seamless (Type 5), Schedule 40 for sizes 2" and larger, and shall be ASTM A-106, Grade B, Schedule 40 for sizes 1-1/2" and smaller. Condensate return piping shall be Schedule 80. When practical, piping shall be provided in 40-foot double-random lengths. All carbon steel pipe shall have ends cut square and beveled for butt-welding.
 - a. Straight sections of factory insulated pipe shall have 6" of exposed pipe at each end for field joint fabrication.
5. Insulation shall be polyisocyanurate insulation bonded to both the jacketing and carrier pipe and either spray applied or high pressure injected with one shot into

- the annular space between carrier pipe and jacket with a minimum thickness of 2.5" for systems operating below 366 degrees F. Insulation shall be rigid, 90% - 95% closed cell at 70 degrees F with not less than 2.4 pounds per cubic foot density, having a compressive strength of not less than 30 psi and a k-Factor of 0.14 at 70 degrees F and 0.24 at 366 degrees F. Maximum operating temperature of the polyisocyanurate system shall not exceed 366 degrees F.
6. Jacketing material shall be extruded, black, high density polyethylene (HDPE), having a minimum wall thickness of 175 mils for jacket sizes less than or equal to 12", 200 mils for jacket sizes greater than 12" to 24", and 225 mils for jacket sizes greater than 24". The jacket throughout the entire system shall incorporate electric fusion, butt fusion, or extrusion welding at all fittings, joint closures, or other points of connection. This shall create a jacket that is seamless throughout the entire system with the exception of anchors, whose water shed rings shall be sealed with a Raychem Dirax or Canusa GTS-65 wrap prohibiting the ingress of water.
 7. Moisture barrier end seals shall be factory applied, sealed to the jacket and carrier pipe. End seals shall be certified as having passed a 20-foot head pressure test. End seals shall be high temperature mastic completely sealing the exposed end of the insulation. Field applied end seals shall be installed at any field cut to the piping before continuing with the installation.
 8. Straight run joints shall be insulated using high temperature sectional foam to the thickness specified and jacketed with a pressure testable joint closure, either an electro-fusion welded split sleeve HDPE joint closure, Canusa Supercase, or Raychem Rayjoint. The joint will be pressure tested at 5 psi for 5 minutes while simultaneously soap tested at the joint closure's seams for possible leaks. After passing the pressure test, a closure patch is welded (as per specified joint closure instructions) over the test hole. All joint closures and insulation shall occur at straight sections of pipe.
 9. Fittings shall be factory prefabricated and preinsulated with polyisocyanurate to the thickness specified and jacketed with a one piece seamless molded HDPE fitting cover, a butt fusion welded, or an extrusion welded and mitered HDPE jacket. No taping or hot air welding will be allowed. All fitting jackets/covers shall be connected to the straight lengths of pipe by electrofusion, butt fusion, or extrusion welding. Carrier pipe fittings shall be butt-welded, except for sizes smaller than 2", which shall be socket-welded. Fittings include expansion loops, elbows, tees, reducers, and anchors. Elbows, loops, offsets, or any other direction changes shall conform to the standards set by ANSI B31 .1, Code for Power Piping.
 10. Expansion/contraction compensation will be accomplished utilizing factory prefabricated and preinsulated expansion elbows, Z-bends, expansion loops and anchors specifically designed for the intended application. Flexible expansion pads shall be utilized for external expansion compensation on all fittings having expansion in excess of 1/2". Expansion pads shall be a minimum one inch thick and shall extend to cover both the inside and outside radius of the fittings. Anchors shall be 1/2-inch thick steel plates welded to the carrier pipe and shall incorporate a steel water shed ring, sized to allow the jacket to slide underneath, that shall be sealed to the HDPE jacket with a Raychem Dirax or Canusa GTS-65 wrap. Anchors shall be located per manufacturers recommendations.

AA. Radiant Heating Piping:

1. Copper Tubing: ASTM B 88, Type [K,] [L,] annealed.
 - a. Fittings: ASME B16.22, wrought copper.
 - b. Joints: **[Solder, lead free,] [ASTM B 32,] [95-5 tin-antimony, or tin and silver, with melting range 430 to 535 degrees F.] [Braze, AWS A5.8 BCuP silver/phosphorus/copper alloy with melting range 1190 - 1480 degrees F.]**
 2. Polybutylene Pipe: ASTM 3309, 100 psig at 180 degrees F and 200 psig at 73 degrees F, **[gray] [black]** color.
 - a. Fittings: ASTM F 845 PB, or brass or copper.
 - b. Joints: Mechanical compression fittings or insert fittings with copper compression rings.
 3. Polyethylene Pipe: ASTM F 876 and ASTM F 877, cross-linked polyethylene, 100 psig operating pressure at 180 degrees F.
 - a. Fittings: Brass and copper.
 - b. Joints: Mechanical compression fittings.
 4. Composite Polyethylene Pipe: Aluminum tube laminated between two layers of **[high density] [cross-linked]** polyethylene, **[150] [125] <Insert number>** psig operating pressure at maximum **[140] [180] <Insert number>** degrees F.
 - a. Fittings: Brass flared compression.
 - b. Joints: Fittings adapt to copper tubing or copper tube fittings, threaded pipe and fittings, and copper compression fittings.
 5. Hose: Composite hose with nitrile liner, braided fiber reinforcing, neoprene cover, 150 psig operating pressure at 205 degrees F.
 - a. Fittings: Copper.
 - b. Joints: Nipple with stainless steel clamp.
- BB. Equipment Drains and Overflows:
1. Steel Pipe: ASTM A 53, Schedule 40 galvanized.
 - a. Fittings: Galvanized cast iron, or ASTM B 16.3 malleable iron.
 - b. Joints: Threaded.
 2. Copper Tubing: ASTM B 88, Type **[M and DWV,] [M,] [L,]** hard drawn.
 - a. Fittings: ASME B16.18, cast brass, or ASME B16.22 solder wrought copper.
 - b. Joints: Solder, lead free, **[ASTM B 32,]** 95-5 tin-antimony, or tin and silver, with melting range 430 to 535 degrees F.

3.4 PIPING INSTALLATIONS

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Select system components with pressure rating equal to or greater than system operating pressure.
- K. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- L. Install drains, consisting of a tee fitting, NPS 3/4 (DN 20) ball valve, and short NPS 3/4 (DN 20) threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- M. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
- N. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- O. Install branch connections to mains using [**mechanically formed**] tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
- P. Install valves according to Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," Section 230523.14 "Check Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."
- Q. Install unions in piping, [NPS 2 (DN 50)] <Insert pipe size> and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

- R. Install flanges in piping, [NPS 2-1/2 (DN 65)] <Insert pipe size> and larger, at final connections of equipment and elsewhere as indicated.
- S. Install shutoff valve immediately upstream of each dielectric fitting.
- T. Comply with requirements in Section 230516 "Expansion Fittings and Loops for HVAC Piping" for installation of expansion loops, expansion joints, anchors, and pipe alignment guides.
- U. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for identifying piping.
- V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.5 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Use dielectric [nipples] [unions].
- C. Dielectric Fittings for [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Use dielectric [flanges] [flange kits] [nipples].
- D. Dielectric Fittings for [NPS 5 (DN 125)] <Insert pipe size> and Larger: Use dielectric flange kits.

3.6 HANGERS AND SUPPORTS

- A. Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" for hanger, support, and anchor devices. Comply with the following requirements for maximum spacing of supports.
- B. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Install the following pipe attachments:

1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet (6 m) long.
 2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet (6 m) or longer.
 3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet (6 m) or longer, supported on a trapeze.
 4. Spring hangers to support vertical runs.
 5. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
 6. On plastic pipe, install pads or cushions on bearing surfaces to prevent hanger from scratching pipe.
- D. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
1. NPS 3/4 (DN 20): Maximum span, 7 feet (2.1 m).
 2. NPS 1 (DN 25): Maximum span, 7 feet (2.1 m).
 3. NPS 1-1/2 (DN 40): Maximum span, 9 feet (2.7 m).
 4. NPS 2 (DN 50): Maximum span, 10 feet (3 m).
 5. NPS 2-1/2 (DN 65): Maximum span, 11 feet (3.4 m).
 6. NPS 3 (DN 80) and Larger: Maximum span, 12 feet (3.7 m).
- E. Install hangers for drawn-temper copper piping with the following maximum spacing and minimum rod sizes:
1. NPS 3/4 (DN 20): Maximum span, 5 feet (1.5 m); minimum rod size, 1/4 inch (6.4 mm).
 2. NPS 1 (DN 25): Maximum span, 6 feet (1.8 m); minimum rod size, 1/4 inch (6.4 mm).
 3. NPS 1-1/4 ((DN 32):)Maximum span, 7 feet (2.1 m); minimum rod size, 3/8 inch (10 mm).
 4. NPS 1-1/2 (DN 40): Maximum span, 8 feet (2.4 m); minimum rod size, 3/8 inch (10 mm).
 5. NPS 2 (DN 50): Maximum span, 8 feet (2.4 m); minimum rod size, 3/8 inch (10 mm).
 6. NPS 2-1/2 (DN 65): Maximum span, 9 feet (2.7 m); minimum rod size, 3/8 inch (10 mm).
 7. NPS 3 (DN 80) and Larger: Maximum span, 10 feet (3 m); minimum rod size, 3/8 inch (10 mm).
- F. Plastic Piping Hanger Spacing: Space hangers according to pipe manufacturer's written instructions for service conditions. Avoid point loading. Space and install hangers with the fewest practical rigid anchor points.
- G. Fiberglass Piping Hanger Spacing: Space hangers according to pipe manufacturer's written instructions for service conditions. Avoid point loading. Space and install hangers with the fewest practical rigid anchor points.
- H. Support vertical runs at roof, at each floor, and at 10-foot (3-m) intervals between floors.

3.7 PIPE JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- D. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
- E. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- F. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
- G. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- H. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - 1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 - 2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
 - 3. PVC Pressure Piping: Join ASTM D 1785 schedule number, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule number PVC pipe and socket fittings according to ASTM D 2855.
 - 4. PVC Nonpressure Piping: Join according to ASTM D 2855.
- I. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.
- J. Mechanically Formed, Copper-Tube-Outlet Joints: Use manufacturer-recommended tool and procedure, and brazed joints.
- K. Pressure-Sealed Joints: Use manufacturer-recommended tool and procedure. Leave insertion marks on pipe after assembly.

3.8 FLANGES, UNIONS, COUPLINGS, AND MECHANICAL JOINT RESTRAINTS

A. Unions for Pipe 2 Inches and Under:

1. Ferrous Piping: 150 psig malleable iron, threaded.
2. Copper Pipe: Bronze, soldered joints.

B. Flanges for Pipe Over 2 Inches:

1. Ferrous Piping: 150 psig forged steel, slip on.
2. Copper Piping: Bronze.
3. Gaskets: 1/16 inch thick non-asbestos preformed gaskets, aramid fibers with nitrile (NBR) binder; Durlon "8500 Green", Garlock "IFG 5500", or approved equal.

C. Dielectric Waterway Fittings: Dielectric fittings designed to effectively separate dissimilar metals exposed to water or other electrolytes, conforming to NSF and ASTM F492 standards for continuous use at temperatures up to 225 degrees F and pressures up to 300 psi. Fittings to have electro-zinc-plated steel casings providing for maintained exterior electrical continuity, threaded ends as applicable, and inert linings. Provide "ClearFlow" units as manufactured by Perfection Corporation or approved substitute.

D. Mechanical Joint Restraints for Ductile Iron Pipe: Mechanical joint restraint shall be incorporated in the design of the follower gland and shall include a restraining mechanism which, when actuated, imparts multiple wedging action against the pipe, increasing its resistance as the pressure increases. Flexibility of the joint shall be maintained after burial. Glands shall be manufactured of ductile iron conforming to ASTM A 536-80. Restraining devices shall be of ductile iron heat treated to a minimum hardness of 370 BHN. Dimensions of the gland shall be such that it can be used with the standardized mechanical joint bell and tee-head bolts conforming to AWWA A21.11 and AWWA C153/A21.53 of latest revision. Twist-off nuts, sized same as tee-head bolts, shall be used to insure proper actuating of restraining devices. The mechanical joint restraint device shall have a working pressure of at least 250 psi with a minimum safety factor of 2:1 and shall be EBAA Iron, Inc. SERIES 1100 MEGALUG or equal.

3.9 INSULATING JOINTS

A. Except as otherwise specifically indicated, insulating joint assemblies shall be provided at all riser locations where buried metallic piping **[(other than copper piping 2 inches or smaller in size)]** transitions to above-ground extensions. Assemblies shall consist of dielectric fittings or insulating flange assemblies as appropriate for the application.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. LineBacker Type "E" as manufactured by Pipeline Seal and Insulator, Inc.
 - b. or approved equal.

- B. Insulating joint assemblies shall conform to the following requirements:
1. Flanged joints shall include full face insulating gaskets, insulating bolt sleeves and double quantity of insulating washers and stainless steel washers.
 2. Insulating materials shall be as follows:
 - a. Gasket: NEMA Grade G10 retainer conforming to ASTM D 229 with Teflon ring seal on each side of the retainer. Minimum dielectric strength shall be 500 volts per mil (VPM). Compressive strength shall be 50,000 psi. Water absorption shall be 0.05 percent (max.)
 - b. Sleeves: Shall be 1/32-inch wall thickness, length to suit two class 150 lb. weld neck flanges, insulating gaskets and valve body thickness. Sleeve shall provide "full" insulation of studs; minimum dielectric strength shall be 500 VPM. Material shall be NEMA Grade G10.
 - c. Insulating washers: NEMA Grade G10, 1/8-inch thick (minimum).
- C. Install insulating joints at the locations indicated on the drawings. Where not shown on the drawings, they shall be installed within 24 inches of the location at which underground piping transitions to above-ground or within-structure extension.
- D. Insulating assemblies shall provide a minimum resistance of 500,000 ohms when tested in the dry condition.

3.10 TERMINAL EQUIPMENT CONNECTIONS

- A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install control valves in accessible locations close to connected equipment.
- C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- D. Install ports for pressure gages and thermometers at coil inlet and outlet connections. Comply with requirements in Section 230519 "Meters and Gages for HVAC Piping."

3.11 CLEANING, FLUSHING, AND INSPECTING

- A. Clean and flush system, with clear water, of all dirt, metal chips, sand, and foreign matter. After flushing, remove, clean, and replace all strainer baskets or screens. Inspect each run of each system for completion of joints, supports, accessory items, and obvious leaks.
- B. Examine and inspect piping in accordance with ANSI B31.1, Chapter VI.

3.12 FIELD QUALITY CONTROL

- A. Prepare hydronic piping according to ASME B31.9 and as follows:

1. Leave joints, including welds, uninsulated and exposed for examination during test.
2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.

B. Perform the following tests on hydronic piping:

1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
3. Isolate expansion tanks and determine that hydronic system is full of water.
4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times the "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
5. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
6. Prepare written report of testing.

C. Leak Testing:

1. Provide temporary equipment for testing, including pump and gages. Test piping system before insulation is installed, wherever feasible, and remove control devices before testing. Subject entire piping systems to leak tests, either as a whole, or in sections; but leave no part untested.
2. Test gauges shall have a range that provide for the test pressure to be in the middle third of the gauge scale.
3. Contractor shall provide written notification to the DEN Project Manager and DEN Inspector at least 48 hours before performing leak test. Perform all tests in the presence of the authorized City representative.
4. Hydrostatic Leak Test:
 - a. Perform hydrostatic leak test on all piping systems.
 - b. Hydrostatic Leak Test Procedure:

- 1) Leak test procedures shall comply with ASME B31.9.
 - 2) Fill piping systems with clear water, vent all air, and pressurize at 110% of operating pressure, (but not less than 100 psi) for 1 hour. Test fails if leakage is observed, or pressure drop exceeds 5% of test pressure.
5. Pneumatic Leak Test:
- a. General: Pneumatic leak tests shall only be used on piping with restricted access, under freezing conditions, or where water leakage would damage critical DEN operational equipment. Contractor shall submit a written request for test in accordance with the Submittals paragraphs of this specification Section.
 - b. Pneumatic Test Procedure:
 - 1) Contractor shall submit safety plan for pneumatic testing prior to test.
 - 2) General: Compressed gas poses the risk of sudden release of stored energy. For that reason, pneumatic testing shall be used only within the following limitations:
 - a) The piping system does not contain cast iron pipe or plastic pipe subject to brittle failure.
 - b) The system does not contain soldered or solvent cement joints over NPS 2.
 - c) The test pressure does not exceed 150 psig.
 - 3) Test Medium: The gas shall be nonflammable and nontoxic.
 - 4) Preliminary Test: Prior to application of full pneumatic test pressure, a preliminary test of not more than 10 psig shall be applied to reveal possible major leaks. Pneumatic Test Pressure:
 - a) Except as limited in 2) below, the test pressure shall not exceed 1.25 times the design pressure. Pressure shall be applied in several stages, allowing time for the system to reach equilibrium at each stage.
 - b) The test pressure shall not exceed the maximum allowable pneumatic test pressure for any vessel, pump, valve, or other component in the system under test.
 - 5) Examination for Leakage: After the preliminary test, pressure shall be raised in stages of not more than 25% up to full pneumatic test pressure, allowing time for equalization of strains and detection of major leaks at each stage. Following the application of test pressure for at least 10 minutes, the pressure may be reduced to design pressure and examination shall be made for leakage of the piping. Leaks may be detected by soap bubble, halogen gas, scented gas, test gage monitoring, ultrasonic, or other suitable means. If leaks are found, pressure shall be vented, appropriate repair or replacement shall be made, and the pneumatic test repeated until no leakage is found.

- 6) Contractor shall measure the surface temperature of the pipe for the duration of testing. The pneumatic test will be deemed successful only when the test pressure can be held at a constant pipe surface temperature for a period of no less than 10 continuous minutes. Record of the pipe temperatures and pressures during the duration of the test shall be submitted to the DEN Project Manager following completion of the test.
6. Testing shall be witnessed by DEN Mechanical Inspector and DEN Project Manager or Designated Representative.
 7. Repair piping systems which fail required piping test, by disassembly and reinstallation, using new materials to extent required to overcome leakage. Do not use chemicals, stop-leak compounds, mastics, or other temporary repair methods.
 8. Drain test water from piping systems after testing and repair work that has been completed.
 9. Prepare written report of testing procedures and result.
- D. Perform the following before operating the system:
1. Open manual valves fully.
 2. Inspect pumps for proper rotation.
 3. Set makeup pressure-reducing valves for required system pressure.
 4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
 5. Set temperature controls so all coils are calling for full flow.
 6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
 7. Verify lubrication of motors and bearings.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232113

SECTION 232113.13 - UNDERGROUND HYDRONIC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Copper tube and fittings.
 - 2. Steel pipes and fittings.
 - 3. Ductile-iron pipe and fittings.
 - 4. Plastic pipe and fittings.
 - 5. Fiberglass pipe and fittings.
 - 6. Transition fittings.
 - 7. Conduit piping system.
 - 8. Cased piping system.
 - 9. Loose-fill insulation.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. The following are industry abbreviations for plastic and rubber piping materials:
 - 1. CPVC: Chlorinated polyvinyl chloride plastic.
 - 2. EPDM: Ethylene-propylene-diene terpolymer rubber.
 - 3. NBR: Acrylonitrile-butadiene rubber.
 - 4. PTFE: Polytetrafluoroethylene plastic.
 - 5. PVC: Polyvinyl chloride plastic.
 - 6. RTRP: Fiberglass, reinforced-thermosetting-resin pipe.
- B. Thermal Conductivity and Apparent Thermal Conductivity (k-Value): As defined in ASTM C 168. In this Section, these values are the result of the formula $Btu \times in./h \times sq. ft. \times deg F$ or $W/m \times K$ at the temperature differences specified. Values are expressed as Btu or W.
 - 1. Example: Apparent Thermal Conductivity (k-Value): 0.26 or 0.037.

1.4 PERFORMANCE REQUIREMENTS

- A. Provide components and installation capable of producing hydronic piping systems with the following minimum working-pressure ratings:
1. Hot-Water Piping: [100 psig (690 kPa)] [150 psig (1035 kPa)] <Insert value> at [200 deg F (93 deg C)] <Insert temperature>.
 2. Chilled-Water Piping: [100 psig (690 kPa)] [150 psig (1035 kPa)] <Insert value> at [200 deg F (93 deg C)] <Insert temperature>.
 3. Condenser-Water Piping: [100 psig (690 kPa)] [150 psig (1035 kPa)] <Insert value> at [150 deg F (66 deg C)] <Insert temperature>.

1.5 ACTION SUBMITTALS

- A. Product Data: For the following:
1. Conduit piping. Include carrier piping, insulation type and k-value, casing, and major components for each conduit piping system.
 2. Cased piping. Include carrier piping, insulation type and k-value, jacket, end seals, and major components for each cased piping system.
 3. Loose-fill insulation.
 4. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit EQ 4.1: For adhesives, documentation including printed statement of VOC content and chemical components.
- C. Shop Drawings: For underground hydronic piping. Signed and sealed by a professional engineer.
1. Calculate requirements for expansion compensation for underground piping.
 2. Show expansion compensators, offsets, and loops with appropriate materials to allow piping movement in the required locations. Show anchors and guides that restrain piping movement with calculated loads, and show concrete thrust block dimensions.
 3. Show pipe sizes, locations, and elevations. Show piping in trench, conduit, and cased pipe with details showing clearances between piping, and show insulation thickness.

1.6 INFORMATIONAL SUBMITTALS

- A. Profile Drawings: Show system piping in elevation. Draw profiles at horizontal scale of not less than 1 inch equals 50 feet (1:500) and at vertical scale of not less than 1 inch equals 5 feet (1:50). Indicate manholes and piping. Show types, sizes, materials, and elevations of other utilities crossing hydronic piping.
- B. Qualification Data: For qualified Installer.

- C. Welding certificates.
 - 1. Welders' certificates for welding processes and operators.
- D. Material Test Reports: For **[conduit] [cased]** piping.
- E. Source quality-control reports.
- F. Field Quality Control Test Reports: Written reports of tests specified in Part 3 of this Section. Include the following:
 - 1. Test procedures used.
 - 2. Test results that comply with requirements.
 - 3. Failed test results and corrective action taken to achieve requirements.
- G. Warranties: Special warranties specified in this Section.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For hydronic specialties and special-duty valves to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of valves, piping and anchors.
- C. Contractor shall submit fully dimensioned spool drawings for all welded piping work. Drawings shall indicate all weld types, sizes, and materials to be used. Drawings to be submitted in current DEN approved format as per requirements of Division 01. Other file formats will not be accepted.

1.8 EXTRA STOCK

- A. Provide **[two (2)] <Insert number>** repacking kits for each size and valve type.

1.9 QUALITY ASSURANCE

- A. Manufacture: Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.
- B. Manufacturer's Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum **[three (3)] <Insert number>** years documented experience.

C. Installer Qualifications:

1. Installer: Company specializing in performing the Work of this Section [**with minimum five (5)**] <Insert requirements> years documented experience].

D. Fiberglass Pipe and Fitting Installers: Installers of RTRF and RTRP shall be certified by manufacturer of pipes and fittings as having been trained and qualified to join fiberglass piping with manufacturer-recommended adhesive.

E. Welding Qualifications: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX.

1. Comply with provisions in ASME B31.9, "Building Services Piping", for materials, products, and installation.
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

F. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation.

1.10 COORDINATION

- A. Coordinate pipe-fitting pressure classes with products specified in related Sections to allow matching of flange boltholes.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements" Division 01 requirements.
- B. Accept components on site in shipping containers with labeling in place. Inspect for damage. Collect and save installation instructions for DEN Project Manager's use.
- C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
- D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

1.12 WARRANTY

- A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.
- B. Special Warranty: Submit a written warranty, executed by Contractor, to repair dry, testable, conduit systems and replace components damaged by failure.

- C. Warranty Period: Manufacturer's standard, but not less than five (5) <Insert number> years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tubing: [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 88, Type M (ASTM B 88M, Type C)].
- B. DWV Copper Tube: ASTM B 306, drainage tube.
- C. Wrought-Copper Fittings: ASME B16.22.
- D. Wrought-Copper Unions: ASME B16.22.
- E. Cast-Copper Fittings: ASME B16.18.
- F. Bronze Flanges: ASME B16.24, Class 150 cast bronze with solder-joint end. Furnish Class 300 if required to match system, operating pressure, or companion flanges.
- G. Copper, Grooved-End Fittings: ASTM B 75, copper tube or ASTM B 584 bronze casting with dimensions matching piping.
- H. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- I. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.

2.2 STEEL PIPES AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, [black] [galvanized] with plain ends; type, grade, and wall thickness as indicated in "Piping Application" Article.
- B. Cast-Iron, Threaded Fittings: ASME B16.4; [Class 125] [and] [Class 250].
- C. Malleable-Iron, Threaded Fittings: ASME B16.3, [Class 150] [and] [Class 300].
- D. Malleable-Iron Unions: ASME B16.39; [Class 150] [Class 250] [and] [Class 300].

- E. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, **[Class 125] [and] [Class 250]**; raised ground face, and bolt holes spot faced.
- F. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.
- G. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - 1. Material Group: 1.1.
 - 2. End Connections: Butt welding.
 - 3. Facings: Raised face.
- H. Steel Welding Fittings: **[ASME B16.9] [and] [ASTM A 234/A 234M]**, seamless or welded.
 - 1. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- I. Grooved-End-Pipe Couplings for Galvanized-Steel Piping: AWWA C606 for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gaskets suitable for hot and cold water, and bolts and nuts.
- J. Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.
- K. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos free, **1/8-inch (3.2-mm)** maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and -bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- L. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

2.3 DUCTILE-IRON PIPE AND FITTINGS

- A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151/A21.51, with mechanical-joint bell and plain spigot end.
 - 1. Standard-Pattern, Mechanical-Joint Fittings: AWWA C110/A21.10, ductile or gray iron.
 - 2. Compact-Pattern, Mechanical-Joint Fittings: AWWA C153/A21.53, ductile iron.
 - a. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

2.4 PLASTIC PIPE AND FITTINGS

A. CPVC Plastic:

1. Pipe: ASTM F 441/F 441M, Schedules 40 and 80, plain ends as indicated in "Piping Application" Article.
2. Pipe Fittings: Socket-type pipe fittings, ASTM F 438 for Schedule 40 pipe; ASTM F 439 for Schedule 80 pipe.
3. Solvent Cements: ASTM F 493.
 - a. Use CPVC solvent cement that has a VOC content of 490 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. PVC Plastic:

1. Pipe: ASTM D 1785, Schedules 40 and 80, plain ends as indicated in "Piping Application" Article.
2. Pipe Fittings: Socket-type pipe fittings, ASTM D 2466 for Schedule 40 pipe; ASTM D 2467 for Schedule 80 pipe.
3. Solvent Cements: ASTM D 2564. Include primer according to ASTM F 656.
 - a. Use PVC solvent cement that has a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

2.5 FIBERGLASS PIPE AND FITTINGS

A. RTRP: ASTM D 2996, filament-wound pipe with tapered bell and spigot ends for adhesive joints.

B. RTRF: Compression or spray up/contact molded of same material, pressure class, and joining method as pipe.

C. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

1. Use fiberglass adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Flanges: ASTM D 4024. Full-face gaskets suitable for the service, minimum 1/8-inch- (3.2-mm-) thick, 60-70 durometer. ASTM A 307, Grade B, hex-head bolts with washers.

2.6 TRANSITION FITTINGS

- A. Plastic-to-Metal Transition Fittings: **[CPVC]** **[and]** **[PVC]** one-piece fitting with one threaded brass or copper insert and one Schedule 80 solvent-cemented-joint end.

2.7 CONDUIT PIPING SYSTEM

- A. Description: Factory-fabricated and -assembled, airtight and watertight, drainable, pressure-tested piping with conduit, inner pipe supports, and insulated carrier piping. Fabricate so insulation can be dried in place by forcing dry air through conduit.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Insul-Tek Piping Systems, Inc.](#)
- b. [Perma-Pipe, Inc.](#)
- c. [Rovanco Piping Systems, Inc.](#)
- d. [Thermacor Process, L.P.](#)
- e. **<Insert manufacturer's name>**.
- f. or approved equal.

- B. Carrier Pipe: **[Copper tube and fittings]** **[Standard-weight, steel pipe and fittings]** **[Schedule 40, steel pipe and fittings]** **[Schedule 80, steel pipe and fittings]** **[Ductile-iron pipe and fittings]** **[Plastic pipe and fittings]** **[Fiberglass pipe and fittings]**.

- C. Carrier Pipe Insulation:

1. Mineral-Wool Pipe Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, **[Type I 850 deg F (454 deg C)]** **[Type II, 1200 deg F (649 deg C)]**, Grade A.
 - a. Bands: ASTM A 666, Type 304, stainless steel, **3/4 inch (19 mm)** wide, **0.020 inch (0.5 mm)** thick.
2. Calcium Silicate Pipe Insulation: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
 - a. Bands: ASTM A 666, Type 304, stainless steel, **3/4 inch (19 mm)** wide, **0.020 inch (0.5 mm)** thick.
3. Polyisocyanurate Foam Pipe Insulation: Unfaced, preformed, rigid cellular polyisocyanurate material intended for use as thermal insulation.
 - a. Comply with ASTM C 591, Type I or Type IV, except thermal conductivity (k-value) shall not exceed **0.19 Btu x in./h x sq. ft. x deg F (0.027 W/m x K)** at **75 deg F (24 deg C)** after 180 days of aging.

- b. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less for thickness up to **1-1/2 inches (38 mm)** as tested by ASTM E 84.
 - c. Fabricate shapes according to ASTM C 450 and ASTM C 585.
 4. Polyurethane Foam Pipe Insulation: Unfaced, preformed, rigid cellular polyurethane material intended for use as thermal insulation.
 - a. Comply with ASTM C 591, Type I or Type IV, except thermal conductivity (k-value) shall not exceed **0.19 Btu x in./h x sq. ft. x deg F (0.027 W/m x K)** at **75 deg F (24 deg C)** after 180 days of aging.
 - b. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less for thickness up to **1-1/2 inches (38 mm)** as tested by ASTM E 84.
 - c. Fabricate shapes according to ASTM C 450 and ASTM C 585.
- D. Minimum Clearance:
 1. Between Carrier Pipe Insulation and Conduit: **1 inch (25 mm)**.
 2. Between Insulation of Multiple Carrier Pipes: **3/16 inch (4.75 mm)**.
 3. Between Bottom of Carrier Pipe Insulation and Conduit: **1 inch (25 mm)**.
 4. Between Bottom of Bare, Carrier Pipe and Casing: **1-3/8 inches (35 mm)**.
- E. Conduit: Spiral wound, steel.
 1. Finish: With two coats of fusion-bonded epoxy, minimum 20 mils (0.50 mm) thick.
 2. Cover: With polyurethane foam insulation with an HDPE jacket; thickness indicated in "Piping Application" Article.
- F. Conduit: Galvanized Steel:
 1. Galvanized steel, 0.138 inch thick, hot-dip galvanized on interior and exterior after manufacture.
 2. Finish: Finish exterior of conduit with 3/16-inch- thick coating of high-melting-point asphalt with interposed layer of fiberglass screen and one outer wrap of asphalt-impregnated, fiberglass-reinforced pipeline felt applied spirally under tension.
- G. Conduit: Steel:
 1. Steel, 0.1345 inch thick. Finish interior of conduit with one coat of oven-cured epoxy, 6 mils thick.
 2. Finish: Finish exterior of conduit with 3/16-inch- thick coating of high-melting-point asphalt with interposed layer of fiberglass screen and one outer wrap of asphalt-impregnated, fiberglass-reinforced pipeline felt applied spirally under tension.
- H. Piping Supports within Conduit: Corrugated galvanized steel with a maximum spacing

of 10 feet (3 m).

- I. Fittings: Factory-fabricated and -insulated elbows and tees. Elbows may be bent pipe equal to carrier pipe. Tees shall be factory fabricated and insulated, and shall be compatible with the carrier pipe.
- J. Expansion Offsets and Loops: Size casing to contain piping expansion.
- K. Accessories include the following:
 - 1. Water Shed: Terminal end protector for carrier pipes entering building through floor, 3 inches (75 mm) deep and 2 inches (50 mm) larger than casing; terminate casing 20 inches (500 mm) above the floor level.
 - 2. Guides and Anchors: Steel plate welded to carrier pipes and to casing, complete with vent and drainage openings inside casing.
 - 3. End Seals: Steel plate welded to carrier pipes and to casing, complete with drain and vent openings on vertical centerline.
 - 4. Gland Seals: Packed stuffing box and gland follower mounted on steel plate, welded to end of casing, permitting axial movement of carrier piping, with drain and vent connections on vertical centerline.
 - 5. Leak Plates: Steel plate flange, 4 inches larger than casing and welded to casing only.
 - 6. Joint Kit: Half-shell, pourable or split insulation and shrink-wrap sleeve.
- L. Manholes: Black steel with lifting eyes.
 - 1. Finish: Spray-applied urethane, minimum 30 mils (0.75 mm) thick.
 - 2. Access: 30-inch- (750-mm-) diameter waterproof cover with gasket, ladder, and two 6-inch (150-mm) vents, one high and one low, extending above grade with rain caps.
 - 3. Conduit Stub-Outs and Seals: Welded steel with drain and vent openings.
 - 4. Sump: 12 inches (300 mm) in diameter, 12 inches (300 mm) deep.
 - 5. Floatation Anchor: Oversized bottom keyed into concrete base.
- M. Source Quality Control: Factory test conduit to 15 psig (105 kPa) for a minimum of two minutes with no change in pressure. Factory test carrier pipe to 150 percent of the operating pressure of system. Furnish test certificates.

2.8 CASED PIPING SYSTEM

- A. Description: Factory-fabricated piping with carrier pipe, insulation, and casing.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Insul-Tek Piping Systems, Inc.
 - b. Perma-Pipe, Inc.
 - c. Rovanco Piping Systems, Inc.
 - d. Thermacor Process, L.P.

- e. [Thermal Pipe Systems](#).
 - f. [Urecon Ltd.](#)
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
- B. Carrier Pipe: [**Copper tube and fittings**] [**Standard-weight, steel pipe and fittings**] [**Schedule 40, steel pipe and fittings**] [**Schedule 80, steel pipe and fittings**] [**Ductile-iron pipe and fittings**] [**Plastic pipe and fittings**] [**Fiberglass pipe and fittings**].
- C. Carrier Pipe Insulation:
- 1. Polyurethane Foam Pipe Insulation: Rigid, cellular, high-pressure injected between carrier pipe and jacket.
 - a. Comply with ASTM C 591; thermal conductivity (k-value) shall not exceed **0.14 Btu x in./h x sq. ft. x deg F (0.020 W/m x K) at 75 deg F (24 deg C)** after 180 days of aging.
- D. Casing: [**HDPE**] [**Filament-wound, fiberglass-reinforced polyester resin**] [**PVC**] [**0.034-inch- (0.85-mm-) thick, spiral-wound, lock-seam galvanized steel**] [**0.032-inch- (0.80-mm-) thick, spiral-wound, lock-seam aluminum**] [**0.025-inch- (0.65-mm-) thick, spiral-wound, lock-seam stainless steel**].
- E. Casing accessories include the following:
- 1. Joint Kit: Half-shell, pourable or split insulation, casing sleeve, and shrink-wrap sleeve.
 - 2. Expansion Blanket: Elastomeric foam, formed to fit over piping.
 - 3. End Seals: Shrink wrap the casing material to seal watertight around casing and carrier pipe.
- F. Manholes: Black steel with lifting eyes.
- 1. Finish: Spray-applied urethane, minimum **30 mils (0.75 mm)** thick.
 - 2. Access: **30-inch- (750-mm-)** diameter waterproof cover with gasket, ladder, and two **6-inch (150-mm)** vents, one high and one low, extending above grade with rain caps.
 - 3. Conduit Stub-Outs and Seals: Welded steel with drain and vent openings.
 - 4. Sump: **12 inches (300 mm)** in diameter, **12 inches (300 mm)** deep.
 - 5. Floatation Anchor: Oversized bottom keyed into concrete base.
- G. Source Quality Control: Factory test the carrier pipe to 150 percent of the operating pressure of system. Furnish test certificates.

2.9 LOOSE-FILL INSULATION

A. Granular, Loose-Fill Insulation: Inorganic, nontoxic, nonflammable, sodium potassium aluminum silicate with calcium carbonate filler. Include chemical treatment that renders insulation hydrophobic.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Gilsulate International, Inc.](#)
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
2. Thermal Conductivity (k-Value): **0.60 at 175 deg F** (0.087 at 79 deg C) and **0.65 at 300 deg F** (0.094 at 149 deg C).
3. Application Temperature Range: **35 to 800 deg F** (2 to 426 deg C).
4. Dry Density: **40 to 42 lb/cu. ft.** (640 to 672 kg/cu. m).
5. Strength: **12,000 lb/sq. ft.** (58 600 kg/sq. m).

B. Powder, Loose-Fill Insulation: Inert, nontoxic, nonflammable, calcium carbonate particles. Include chemical treatment that renders insulation hydrophobic.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [DriTherm International Inc.](#)
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
2. Thermal Conductivity (k-Value): ASTM C 177, **0.58 at 100 deg F** (0.084 at 37 deg C) and **0.68 at 300 deg F** (0.098 at 149 deg C).
3. Application Temperature Range: **Minus 273 to plus 480 deg F** (Minus 169 to plus 250 deg C).
4. Dry Density: Approximately **60 lb/cu. ft.** (960 kg/cu. m).
5. Strength: **12,000 lb/sq. ft.** (58 600 kg/sq. m).

2.10 EXPANSION JOINTS

A. Single, Metal-Bellows, Packless Expansion Joints: Stainless-steel bellows type, complying with EJMA standards and the following:

1. Pressure Rating: 150 psig minimum.
2. Temperature Rating: 400 deg F minimum.
3. End Connections: Flanged, unless otherwise indicated.
4. Limit Rods: Include if indicated.

B. Double, Metal-Bellows, Packless Expansion Joints: Stainless-steel double-bellows type with integral base, complying with EJMA standards and the following:

1. Pressure Rating: 150 psig minimum.

2. Temperature Rating: 400 deg F minimum.
 3. End Connections: Flanged, unless otherwise indicated.
 4. Limit Rods: Include if indicated.
- C. Single, Slip-Type, Packed Expansion Joints: Carbon-steel or steel-pipe body with steel-pipe sliding sleeve and limit stop, stuffing box with packing, and the following:
1. Pressure Rating: 150 psig minimum.
 2. Temperature Rating: 600 deg F minimum.
 3. End Connections: Flanged, unless otherwise indicated.
 4. Base: Include integral base for units to be mounted on supports.
 5. Drain: Include tapped and plugged drain outlet in body, unless otherwise indicated.
 6. Vent: Include tapped and plugged vent in body if indicated.
- D. Double, Slip-Type, Packed Expansion Joints: Carbon-steel or steel-pipe body with integral base, with two steel-pipe sliding sleeves and limit stops, two stuffing boxes with packing, and the following:
1. Pressure Rating: 150 psig minimum.
 2. Temperature Rating: 600 deg F minimum.
 3. End Connections: Flanged, unless otherwise indicated.
 4. Drain: Include tapped and plugged drain outlets in body, unless otherwise indicated.
 5. Vent: Include tapped and plugged vent in body if indicated.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. See Section 312000 "Earth Moving" for excavating, trenching, and backfilling.

3.2 ENVIRONMENTAL REQUIREMENTS

- A. Do not install underground piping when bedding is wet or frozen.

3.3 GENERAL

- A. Where more than one piping system material is specified, ensure system components are compatible and joined to ensure the integrity of the system is not jeopardized. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.
- B. Use unions, flanges, and couplings downstream of valves and at equipment or apparatus connections. Do not use direct welded connections to valves, equipment, or other apparatus.

- C. Use non-conducting dielectric waterway fittings or insulating flanges whenever jointing dissimilar metals in piping systems. Dielectric fittings shall have end connections that match the adjoining pipe.

3.4 PIPING APPLICATION

A. Hot-Water Heating Piping:

1. [NPS 2 (DN 50) and smaller] <Insert pipe size range> shall be [any of] the following:
 - a. [Type L (Type B)] [Type M (Type C)], drawn-temper copper tubing, wrought-copper fittings, and [soldered] [brazed] [pressure-seal] joints.
 - b. [Schedule 40] [Schedule 30] [Schedule 20] steel pipe; [Class 125, cast-iron] [Class 150, malleable-iron] [Class 250, cast-iron] [Class 300, malleable-iron] fittings; cast-iron flanges and flange fittings; and threaded joints.
 - c. Schedule 5 steel pipe; steel, pressure-seal couplings and fittings; and pressure-seal joints.
 - d. [Schedule 40] [Schedule 80] CPVC plastic pipe and fittings and solvent-welded joints.
 - e. Loose-Fill Insulation: [Granular] [Powder].
2. [NPS 2-1/2 (DN 65) and larger] <Insert pipe size range> shall be [any of] the following:
 - a. [Type L (Type B)] [Type M (Type C)], drawn-temper copper tubing, wrought-copper fittings, and [soldered] [brazed] joints.
 - b. [Schedule 40] [Schedule 30] [Schedule 20] steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
 - c. [Schedule 40] [Schedule 80] CPVC plastic pipe and fittings and solvent-welded joints.
 - d. RTRP and RTRF with adhesive or flanged joints.
 - e. Loose-Fill Insulation: [Granular] [Powder].
3. Conduit piping with [mineral-wool] [calcium silicate] [polyisocyanurate] [polyurethane] carrier-pipe insulation and with [coated] [coated and insulated] conduit.
 - a. Carrier Pipe Insulation Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.
 - b. Conduit Insulation Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.
4. Cased piping with polyurethane carrier-pipe insulation.
 - a. Piping Insulation Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.

B. Chilled-Water Piping:

1. [NPS 2 (DN 50) and smaller] <Insert pipe size range> shall be [any of] the following:
 - a. [Type L (Type B)] [Type M (Type C)], drawn-temper copper tubing, wrought-copper fittings, and [soldered] [brazed] [pressure-seal] joints.
 - b. [Schedule 40] [Schedule 30] [Schedule 20] steel pipe; [Class 125, cast-iron] [Class 150, malleable-iron] [Class 250, cast-iron] [Class 300, malleable-iron] fittings; cast-iron flanges and flange fittings; and threaded joints.
 - c. Schedule 5 steel pipe; steel, pressure-seal couplings and fittings; and pressure-seal joints.
 - d. [Schedule 40] [Schedule 80] CPVC plastic pipe and fittings and solvent-welded joints.
 - e. Loose-Fill Insulation: [Granular] [Powder].
2. [NPS 2-1/2 (DN 65) and larger] <Insert pipe size range> shall be [any of] the following:
 - a. [Type L (Type B)] [Type M (Type C)], drawn-temper copper tubing, wrought-copper fittings, and [soldered] [brazed] joints.
 - b. [Schedule 40] [Schedule 30] [Schedule 20] steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
 - c. Mechanical-joint, ductile-iron pipe; [standard-] [or] [compact-] pattern mechanical-joint fittings; and mechanical joints.
 - d. [Schedule 40] [Schedule 80] CPVC plastic pipe and fittings and solvent-welded joints.
 - e. RTRP and RTRF with adhesive or flanged joints.
 - f. Loose-Fill Insulation: [Granular] [Powder].
3. Conduit piping with [mineral-wool] [calcium silicate] [polyisocyanurate] [polyurethane] carrier-pipe insulation and with [coated] [coated and insulated] conduit.
 - a. Piping Insulation Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.
 - b. Conduit Insulation Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.
4. Cased piping with polyurethane carrier-pipe insulation.
 - a. Piping Insulation Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.

C. Condenser-Water Piping:

1. [NPS 2 (DN 50) and smaller] <Insert pipe size range> shall be [any of] the following:

- a. [Type L (Type B)] [Type M (Type C)], drawn-temper copper tubing, wrought-copper fittings, and [soldered] [brazed] [pressure-seal] joints.
 - b. [Schedule 40] [Schedule 30] [Schedule 20] steel pipe; [Class 125, cast-iron] [Class 150, malleable-iron] [Class 250, cast-iron] [Class 300, malleable-iron] fittings; cast-iron flanges and flange fittings; and threaded joints.
 - c. Schedule 5 steel pipe; steel, pressure-seal couplings and fittings; and pressure-seal joints.
 - d. [Schedule 40] [Schedule 80] CPVC plastic pipe and fittings and solvent-welded joints.
 - e. Loose-Fill Insulation: [Granular] [Powder].
2. [NPS 2-1/2 (DN 65) and larger] <Insert pipe size range> shall be[any of] the following:
- a. [Type L (Type B)] [Type M (Type C)], drawn-temper copper tubing, wrought-copper fittings, and [soldered] [brazed] joints.
 - b. [Schedule 40] [Schedule 30] [Schedule 20] steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
 - c. Mechanical-joint, ductile-iron pipe; [standard-] [or] [compact-] pattern mechanical-joint fittings; and mechanical joints.
 - d. [Schedule 40] [Schedule 80] CPVC plastic pipe and fittings and solvent-welded joints.
 - e. RTRP and RTRF with adhesive or flanged joints.
 - f. Loose-Fill Insulation: [Granular] [Powder].
3. Conduit piping with [mineral-wool] [calcium silicate] [polyisocyanurate] [polyurethane] carrier-pipe insulation and with [coated] [coated and insulated] conduit.
- a. Piping Insulation Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.
 - b. Conduit Insulation Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.
4. Cased piping with polyurethane carrier-pipe insulation.
- a. Piping Insulation Thickness: [1 inch (25 mm)] [2 inches (50 mm)] <Insert dimension>.

3.5 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

- B. Remove standing water in the bottom of trench.
- C. Do not backfill piping trench until field quality-control testing has been completed and results approved.
- D. Install piping at uniform grade of 0.2 percent. Install drains, consisting of a tee fitting, NPS 3/4 (D 20) ball valve, and short NPS 3/4 (DN 20) threaded nipple with cap, at low points and elsewhere as required for system drainage. Install manual air vents at high points.
- E. In conduits, install drain valves at low points consisting of tee fitting, 3/4-inch NPS ball valve, and short 3/4-inch NPS threaded nipple and cap, and manual air vents at high points.
- F. Locate groups of pipes parallel to each other, spaced to permit valve servicing. Install piping to allow application of insulation plus 1-inch clearance around insulation.
- G. Make reductions in pipe sizes using eccentric reducer fitting installed with level side up.
- H. Install couplings according to manufacturer's written instructions.
- I. Install components with pressure rating equal to or greater than system operating pressure.
- J. Install piping free of sags and bends.
- K. Install fittings for changes in direction and branch connections. Install branch connections to mains using tee fittings with takeoff out bottom of main.
- L. See Section 230517 "Sleeves and Sleeve Seals for HVAC Piping" for sleeves and mechanical sleeve seals through exterior building walls.
- M. Secure anchors with concrete thrust blocks. Concrete is specified in Section 033000 "Cast-in-Place Concrete."
- N. See Section 264200 "Cathodic Protection" for cathodic devices and connections to piping and conduit systems.

3.6 LOOSE-FILL INSULATION INSTALLATION

- A. Do not disturb the bottom of trench; otherwise, compact and stabilize it to ensure proper support.
- B. Remove standing water in the bottom of trench.
- C. Bed the pipe on a minimum 6-inch (150-mm) layer of granular fill material with a minimum 6-inch (150-mm) clearance between the pipes.

- D. Form insulation trench by excavation or by installing drywall side forms to establish required height and width of the insulation.
- E. Support piping with proper pitch, separation, and clearance to backfill or side forms using temporary supporting devices that can be removed after back filling with insulation.
- F. Place insulation and backfill after field quality-control testing has been completed and results approved.
- G. Apply bitumastic coating to carbon-steel anchors and guides. Pour concrete thrust blocks and anchors. See Section 033000 "Cast-in-Place Concrete" for concrete and reinforcement.
- H. Wrap piping at expansion loops and offsets with mineral-wool insulation of thickness appropriate for calculated expansion amount.
- I. Pour loose-fill insulation to required dimension agitating insulation to eliminate voids around piping.
- J. Remove temporary hangers and supports.
- K. Cover loose-fill insulation with polyethylene sheet a minimum of 4 mils (0.10 mm) thick, and empty loose-fill insulation bags on top.
- L. Manually backfill 6 inches (150 mm) of clean backfill. If mechanical compaction is required, manually backfill to 12 inches (300 mm) before using mechanical-compaction equipment.

3.7 JOINT CONSTRUCTION

- A. See Section 330500 "Common Work Results for Utilities" for basic piping joint construction.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Piping Connections: Unless otherwise indicated, make piping connections as specified below:
 - 1. Install unions in piping 2-inch NPS and smaller adjacent to each valve and at final connection to each piece of equipment with 2-inch NPS or smaller threaded pipe connection.
 - 2. Install flanges in piping 2-1/2-inch NPS and larger adjacent to flanged valves and at final connection to each piece of equipment with flanged pipe connection.
- E. Install pipe expansion joints according to manufacturer's written instructions.

1. Align expansion joints to avoid end loading and torsional stress.
 2. Underground align expansion-joint guide and secure with concrete thrust blocks.
- F. Install pipe alignment guides on piping that adjoins pipe expansion joints. Anchor underground piping with concrete thrust blocks.
- G. Install pipe anchors to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
1. Fabricate and install anchors by welding steel shapes, plates, and bars to piping and to structure. Comply with ASME B31.9 and AWS D1.1.
 2. Where pipe expansion joints are indicated, install pipe anchors and alignment guides according to expansion joint manufacturer's written instructions to control movement.
- H. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- I. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Ch. 35, "Pipe and Tubing," using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
- J. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- K. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
- L. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- M. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
 3. PVC Pressure Piping: Join ASTM D 1785 schedule number, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule number PVC pipe and socket fittings according to ASTM D 2855.

- N. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.
- O. Pressure-Sealed Joints: Use manufacturer-recommended tool and procedure. Leave insertion marks on pipe after assembly.
- P. Conduit and Cased Piping Joints: Assemble sections and finish joints with pourable or split insulation and exterior jacket sleeve, and apply shrink-wrap seals.

3.8 IDENTIFICATION

- A. Install continuous plastic underground warning tapes during back filling of trenches for underground hydronic piping. Locate tapes **6 to 8 inches** (150 to 200 mm) below finished grade, directly over piping. See Section 312000 "Earth Moving" for warning-tape materials and devices and their installation.

3.9 CLEANING

- A. Inspect finish of exposed, hydronic piping, including outlets, valves, specialties, and devices, after installation is complete. Remove burrs, dirt, and debris. Repair damaged finishes including chips, scratches, and abrasions.
- B. Clean and flush hydronic piping. Remove, clean, and replace strainer screens. Remove disposable fine-mesh strainers in pump suction diffusers after cleaning and flushing piping but before balancing.

3.10 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. Prepare hydronic piping for testing according to ASME B31.9 and as follows:
 - a. Leave joints, including welds, uninsulated and exposed for examination during test.

- b. Fill system with water. Where there is risk of freezing, air or a safe, compatible liquid may be used.
 - c. Isolate equipment. Do not subject equipment to test pressure.
 - d. Install relief valve set at pressure no more than one-third higher than test pressure.
 - e. Use vents installed at high points to release trapped air while filling system.
2. Test hydronic piping as follows:
- a. Subject hydronic piping to hydrostatic test pressure that is not less than 1.5 times the design pressure.
 - b. After hydrostatic test pressure has been applied for 10 minutes, examine joints for leakage. Eliminate leaks by tightening, repairing, or replacing components as appropriate, and repeat hydrostatic test until no leaks exist.
3. Test conduit as follows:
- a. Seal vents and drains and subject conduit to **15 psig (105 kPa)** for four hours with no loss of pressure. Repair leaks and retest as required.
- E. Prepare test and inspection reports.

3.11 COMMISSIONING

- A. Fill systems.
- B. Open valves to fully open position.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232113.13

SECTION 232113.33 - GROUND-LOOP HEAT-PUMP PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes piping for [**horizontal**] [**vertical**], direct-buried, ground-loop, heat-pump systems.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Pipe and fittings.
 - 2. Joining method and equipment.
 - 3. Propylene glycol solution.
 - 4. Include data substantiating that materials comply with requirements.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Borehole backfilling and drilling operations reports.
- C. Dimensioned site layout.
- D. Startup performance results.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of valves, piping and anchors.

1.6 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PIPES AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Centennial Plastics, LLC.](#)
 2. [Chevron-Phillips Chemical Company; Performance Pipe Division.](#)
 3. [Lamson Pipe Company.](#)
 4. **<Insert manufacturer's name>.**
 5. or approved equal.
- B. HDPE Pipe: ASTM D 3035.
- C. Molded PE Fittings: ASTM D 2683 or ASTM D 3261, ASTM F 1055 PE resin, socket, butt-fusion or electro-fusion type, made to match PE pipe dimensions and class.
- D. U-Bend Assembly: Factory fabricated with embossed depth stamp every [24 inches (600 mm)] [36 inches (900 mm)] **<Insert dimension>** from U-bend.
- E. Ground-Loop, Heat-Pump Piping Minimum Working Pressure: [160 psig (1100 kPa)] [200 psig (1380 kPa)] **<Insert value>.**
- F. Ground-Loop, Heat-Pump Piping Operating Temperature: Between 23 and 104 deg F (minus 5 and plus 40 deg C).

2.2 BOREHOLE BACKFILL

- A. Seal Material: Bentonite clay with thermal conductivity greater than 1.07 Btu/h x sq. ft. x deg F (0.7 W/sq. m x K) according to ASTM D 5334.
- B. Permeability: Not more than 1 nm/s according to ASTM D 5084

2.3 ANTIFREEZE SOLUTION

- A. Propylene Glycol: Minimum 99 percent propylene glycol with corrosion inhibitors and environmental stabilizer additives to be mixed with water to protect piping circuit and connected equipment from physical damage caused by freezing or corrosion.

- B. Quantity: Sufficient solution for initial system startup and for preventive maintenance for one year from date of Substantial Completion.
- C. Dilution Water: Chloride content shall be less than 25 ppm, sulfate content less than 25 ppm, and hardness less than 100 ppm.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Excavating, trenching, warning tape, and backfilling are specified in Section 312000 "Earth Moving."

3.2 HORIZONTAL PIPING INSTALLATION

- A. Separate trenches by 10 feet (3 m) minimum unless otherwise indicated. Remove rocks in trenches that could contact pipe.
- B. Backfill.
- C. Extend pipe from trench onto bottom of body of water at an elevation that is at least 12 inches (300 mm) below frost line. Seal membrane or impervious liner under body of water after installing piping.
- D. Install HDPE piping in trenches according to ASTM D 2774 or ASTM F 645.
 - 1. Clean HDPE pipe and fittings and make heat-fusion joints according to ASTM D 2657. Minimize number of joints.
- E. Purge, flush, and pressure test piping before backfilling trenches.
- F. Install continuous detectable warning tape for underground piping. Locate tape a minimum of [24 inches (600 mm)] <Insert dimension> below finished grade, directly over piping. Underground warning tapes are specified in Section 312000 "Earth Moving."

3.3 VERTICAL PIPING INSTALLATION

- A. Install HDPE piping in boreholes according to ASTM D 2774 or ASTM F 645.
 - 1. Clean HDPE pipe and fittings and make heat-fusion joints according to ASTM D 2657. Minimize number of joints.
- B. Purge, flush, and pressure test piping before backfilling boreholes.
- C. Completely fill the borehole from bottom to top with backfill material.

- D. Install the header piping **4 to 6 inches** (100 to 150 mm) deep and install the horizontal piping from the header to the boreholes.
- E. Extend the horizontal piping and connect to ground-loop heat-pump piping systems at outside face of building wall in locations and pipe sizes indicated.
 - 1. Terminate water-service piping at building wall until building ground-loop heat-pump piping systems are installed. Terminate piping with caps. Make connections to building ground-loop heat-pump piping systems when those systems are installed.
- F. Backfill the horizontal piping and header trenches.
- G. Fill the entire piping loop with water or antifreeze solution.
- H. Maintain records of backfilling on-site.
- I. Mark borehole locations, header pipes, and horizontal runs with metallic locator tape as specified in Section 230553 "Identification for HVAC Piping and Equipment."
- J. Seal penetrations through building walls.
- K. Wall sleeves are specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- L. Mechanical sleeve seals are specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."

3.4 ANTIFREEZE SOLUTION FILL

- A. Fill system with required quantity of propylene glycol and water to provide [**minus 10 deg F** (minus 23 deg C)] **<Insert temperature>** freezing temperature.
- B. Test dilute solution using gas chromatography to verify concentration of propylene glycol, and forward report to DEN Project Manager.

3.5 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.

3.6 FIELD QUALITY CONTROL

- A. Piping Tests: Fill piping 24 hours before testing and apply test pressure to stabilize piping. Use potable water only.
- B. Hydrostatic Tests: Test at not less than 1-1/2 times the pipe working-pressure rating or 300 percent of system design pressure, whichever is more[, **allowing for static pressure of borehole depth**].

1. Increase pressure in 50-psig (345-kPa) increments and inspect each joint between increments. Hold at test pressure for 30 minutes. Slowly increase to next test pressure increment and hold for 30 minutes. After testing at maximum test pressure, reduce pressure to 30 psig (207 kPa). Hold for 90 minutes, and measure pressure at 30-minute intervals. Repair leaks and retest until no leaks exist.
 2. Maintain a minimum pipe velocity of 24 in./s (610 mm/s) for a minimum of 15 minutes to remove all air.
- C. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232113.33

SECTION 232116 - HYDRONIC PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes special-duty valves and specialties for the following:
 1. Hot-water heating piping.
 2. Chilled-water piping.
 3. Dual-temperature heating and cooling water piping.
 4. Condenser-water piping.
 5. Glycol cooling-water piping.
 6. Makeup-water piping.
 7. Condensate-drain piping.
 8. Blowdown-drain piping.
 9. Air-vent piping.
 10. Safety-valve-inlet and -outlet piping.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of the following:
 1. Valves: Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
 2. Air-control devices.
 3. Hydronic specialties.
 4. Provide product data for manufactured products and assemblies required for this project. Include component rough in requirements, service sizes, and finishes. Include product description, model, dimensions, and weight.
 5. Include data substantiating that materials comply with requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.
 1. Include installation instructions, assembly views, lubrication instructions, and replacement parts list.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

- 1. Record actual locations of expansion tanks and air separators.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.
- B. Provide one (1) extra 10 gallon drum of propylene glycol.

1.6 MAINTENANCE SERVICE FOR GLYCOL-PROTECTED SYSTEMS

- A. Perform project visit, 30 days after system startup, to make glycol fluid concentration analysis on site with refractive index measurement instrument. Provide written report of findings to maintenance personnel, covering corrective actions needed including analysis and amounts of glycol or water added as part of Contract work. Include pH analysis of system contents and perform work required to adjust pH to a level of 8.0 or higher, and add inhibitors needed to maintain pH.

1.7 QUALITY ASSURANCE

- A. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
 - 1. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 01.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect and handle products under provisions of Division 1.
- B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
- C. Provide temporary protective coating on cast iron and steel valves.
- D. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
- E. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature unless otherwise indicated:
1. Hot-Water Heating Piping: <Insert psig (kPa)> at [250 deg F (121 deg C)] <Insert temperature>.
 2. Chilled-Water Piping: <Insert psig (kPa)> at [200 deg F (93 deg C)] <Insert temperature>.
 3. Dual-Temperature Heating and Cooling Water Piping: <Insert psig (kPa)> at [200 deg F (93 deg C)] <Insert temperature>.
 4. Condenser-Water Piping: <Insert psig (kPa)> at [150 deg F (66 deg C)] <Insert temperature>.
 5. Glycol Cooling-Water Piping: <Insert psig (kPa)> at [150 deg F (66 deg C)] <Insert temperature>.
 6. Makeup-Water Piping: [80 psig (552 kPa)] <Insert value> at [150 deg F (66 deg C)] <Insert temperature>.
 7. Condensate-Drain Piping: [150 deg F (66 deg C)] <Insert temperature>.
 8. Blowdown-Drain Piping: [200 deg F (93 deg C)] <Insert temperature>.
 9. Air-Vent Piping: [200 deg F (93 deg C)] <Insert temperature>.
 10. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.

2.2 VALVES

- A. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," Section 230523.14 "Check Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."
- B. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Section 230923.11 "Control Valves."
- C. Plastic Ball Valves:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [American Valve, Inc.](#)

- b. [Asahi/America.](#)
 - c. [Charlotte Pipe and Foundry Company.](#)
 - d. [Colonial Engineering.](#)
 - e. [George Fischer Inc.](#)
 - f. [Hayward Industrial Products, Inc.](#)
 - g. [IPEX Inc.](#)
 - h. [Jomar International, Ltd.](#)
 - i. [KBI \(King Bros. Industries\).](#)
 - j. [Legend Valve.](#)
 - k. [NIBCO INC.](#)
 - l. [Plast-O-Matic Valves, Inc.](#)
 - m. [SMC The Specialty Mfg. Co.](#)
 - n. [Thermoplastic Valves Inc.](#)
 - o. [Watts Regulator Co.](#)
 - p. **<Insert manufacturer's name>.**
 - q. or approved equal.
2. Body: One-, two-, or three-piece CPVC or PVC to match piping.
 3. Ball: Full-port CPVC or PVC to match piping.
 4. Seats: PTFE.
 5. Seals: EPDM.
 6. End Connections: Socket, union, or flanged.
 7. Handle Style: Tee shape.
 8. CWP Rating: Equal to piping service.
 9. Maximum Operating Temperature: Equal to piping service.
 10. Comply with MSS SP-122.

D. Plastic Butterfly Valves:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [American Valve, Inc.](#)
 - b. [Asahi/America.](#)
 - c. [Colonial Engineering.](#)
 - d. [George Fischer Inc.](#)
 - e. [Hayward Industrial Products, Inc.](#)
 - f. [IPEX Inc.](#)
 - g. [Legend Valve.](#)
 - h. [NIBCO INC.](#)
 - i. [Plast-O-Matic Valves, Inc.](#)
 - j. [SMC The Specialty Mfg. Co.](#)
 - k. [Thermoplastic Valves Inc.](#)
 - l. [Watts Regulator Co.](#)
 - m. **<Insert manufacturer's name>.**
 - n. or approved equal.
2. Body: PVC or CPVC to match piping wafer type for installation between flanges.
3. Disc: EPDM-coated steel.
4. Seats: PTFE.

5. Handle Style: Locking lever.
6. CWP Rating: Equal to piping service.
7. Maximum Operating Temperature: Equal to piping service.

E. Plastic Check Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [American Valve, Inc.](#)
 - b. [Asahi/America.](#)
 - c. [Colonial Engineering.](#)
 - d. [George Fischer Inc.](#)
 - e. [Hayward Industrial Products, Inc.](#)
 - f. [IPEX Inc.](#)
 - g. [KBI \(King Bros. Industries\).](#)
 - h. [Legend Valve.](#)
 - i. [NIBCO INC.](#)
 - j. [Plast-O-Matic Valves, Inc.](#)
 - k. [SMC The Specialty Mfg. Co.](#)
 - l. [Thermoplastic Valves Inc.](#)
 - m. [Watts Regulator Co.](#)
 - n. **<Insert manufacturer's name>.**
 - o. or approved equal.
2. Body: One-, two-, or three-piece PVC or CPVC to match piping.
3. Ends: Socket or flanged.
4. Seats: PTFE.
5. Check Style: Swing or ball type.
6. CWP Rating: Equal to piping service.
7. Maximum Operating Temperature: Equal to piping service.

F. Bronze, Calibrated-Orifice, Balancing Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Armstrong Pumps, Inc.](#)
 - b. [Bell & Gossett Domestic Pump.](#)
 - c. [Flow Design Inc.](#)
 - d. [Gerand Engineering Co.](#)
 - e. [Griswold Controls.](#)
 - f. [Nexus Valve, Inc.](#)
 - g. [Taco.](#)
 - h. [Tour & Andersson](#); available through Victaulic Company.
 - i. **<Insert manufacturer's name>.**
 - j. or approved equal.
2. Pre-set Balance Feature: Valves to be designed to allow installing contractor to pre-set balance schedule.

3. Body: Bronze, ball or plug type with calibrated orifice or venturi.
4. Ball: Brass or stainless steel.
5. Plug: Resin.
6. Seat: PTFE.
7. End Connections: Threaded or socket.
8. Pressure Gage Connections: Integral seals for portable differential pressure meter.
9. Handle Style: Lever, with memory stop to retain set position.
10. CWP Rating: Minimum 125 psig (860 kPa).
11. Maximum Operating Temperature: 250 deg F (121 deg C).
12. Valves to have differential pressure read-out ports across valve seat area, with read-out ports be fitted with internal EPT insert and check valve.
13. Valve bodies to have 1/4" NPT tapped drain/purge port.
14. Valves to have memory stop feature to allow valve to be closed for service and then reopened to set point without disturbing balance position.
15. All valves to have calibrated nameplate to assure specific valve setting.
16. Valves to be leak-tight at full rated working pressure.

G. Steel, Calibrated-Orifice, Balancing Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Armstrong Pumps, Inc.](#)
 - b. [Bell & Gossett Domestic Pump.](#)
 - c. [Flow Design Inc.](#)
 - d. [Gerand Engineering Co.](#)
 - e. [Griswold Controls.](#)
 - f. [Nexus Valve, Inc.](#)
 - g. [Taco.](#)
 - h. [Tour & Andersson.](#)
 - i. **<Insert manufacturer's name>.**
 - j. or approved equal.
2. Pre-set Balance Feature: Valves to be designed to allow installing contractor to pre-set balance schedule.
3. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
4. Ball: Brass or stainless steel.
5. Stem Seals: EPDM O-rings.
6. Disc: Glass and carbon-filled PTFE.
7. Seat: PTFE.
8. End Connections: Flanged.
9. Pressure Gage Connections: Integral seals for portable differential pressure meter.
10. Handle Style: Lever, with memory stop to retain set position.
11. CWP Rating: Minimum 125 psig (860 kPa).
12. Maximum Operating Temperature: 250 deg F (121 deg C).
13. Valves to have differential pressure read-out ports across valve seat area, with read-out ports be fitted with internal EPT insert and check valve.

14. Valves 4"-8" shall be fitted with a bronze seat, replaceable bronze disc with EPDM seal insert and stainless steel stem.
 15. Valves to have memory stop feature to allow valve to be closed for service and then reopened to set point without disturbing balance position.
 16. All valves to have calibrated nameplate to assure specific valve setting.
 17. Valves to be leak-tight at full rated working pressure.
- ?. Diaphragm-Operated, Pressure-Reducing Valves: ASME labeled.
18. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [AMTROL, Inc.](#)
 - b. [Armstrong Pumps, Inc.](#)
 - c. [Bell & Gossett Domestic Pump.](#)
 - d. [Conbraco Industries, Inc.](#)
 - e. [Spence Engineering Company, Inc.](#)
 - f. [Watts Regulator Co.](#)
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 19. Body: Bronze or brass.
 20. Disc: Glass and carbon-filled PTFE.
 21. Seat: Brass.
 22. Stem Seals: EPDM O-rings.
 23. Diaphragm: EPT.
 24. Low inlet-pressure check valve.
 25. Inlet Strainer: **<Insert materials>**, removable without system shutdown.
 26. Valve Seat and Stem: Noncorrosive.
 27. Valve Size, Capacity, and Operating Pressure: Selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.
- H. Diaphragm-Operated Safety Valves: ASME labeled.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [AMTROL, Inc.](#)
 - b. [Armstrong Pumps, Inc.](#)
 - c. [Bell & Gossett Domestic Pump.](#)
 - d. [Conbraco Industries, Inc.](#)
 - e. [Spence Engineering Company, Inc.](#)
 - f. [Watts Regulator Co.](#)
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Body: Bronze or brass.
 3. Disc: Glass and carbon-filled PTFE.
 4. Seat: Brass.
 5. Stem Seals: EPDM O-rings.

6. Diaphragm: EPT.
7. Wetted, Internal Work Parts: Brass and rubber.
8. Inlet Strainer: **<Insert materials>**, removable without system shutdown.
9. Valve Seat and Stem: Noncorrosive.
10. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

I. Automatic Flow-Control Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Flow Design Inc.](#)
 - b. [Griswold Controls.](#)
 - c. [Nexus Valve, Inc.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Body: Brass or ferrous metal.
3. Piston and Spring Assembly: **[Stainless steel] [Corrosion resistant]**, tamper proof, self-cleaning, and removable.
4. Combination Assemblies: Include bronze or brass-alloy ball valve.
5. Identification Tag: Marked with zone identification, valve number, and flow rate.
6. Size: Same as pipe in which installed.
7. Performance: Maintain constant flow, plus or minus 5 percent over system pressure fluctuations.
8. Minimum CWP Rating: **[175 psig (1207 kPa)] [300 psig (2070 kPa)]**.
9. Maximum Operating Temperature: **[200 deg F (93 deg C)] [250 deg F (121 deg C)]**.

2.3 PUMP SUCTION FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide one of the following:
1. Bell & Gossett ITT.
 2. Taco Inc.
 3. or approved equal.
- B. Fitting: Angle pattern, cast-iron body, threaded for 2 inch and smaller, flanged for 2-1/2 inch and larger, rated for 175 psig working pressure, with inlet vanes, cylinder strainer with 3/16 inch diameter openings, disposable fine mesh strainer to fit over cylinder strainer, and permanent magnet located in flow stream and removable for cleaning. Pressure drop at maximum pump flow shall not exceed 2 psig.
- C. Accessories: Adjustable foot support, blowdown tapping in bottom, gage tapping in side.

2.4 FLOW SWITCHES:

- A. Manufacturers: Subject to compliance with requirements, provide one of the following:
1. Honeywell, Inc.
 2. Watts Regulator.
 3. Johnson Control.
 4. Potter-Roemer Inc.
 5. or approved equal.
- B. Brass construction, threaded for insertion into piping system, packless, with paddle with removable segments, vapor proof electrical compartment with switches.
- C. Schedule 2 - Water Flow Sensing Elements:
1. PRODUCT DATA SHEET 1 - Dual turbine, impedance sensing flow meter with bright tin plated brass wetted parts.
 2. PRODUCT DATA SHEET 2 - Accuracy shall be 2% of actual reading from 0.4 to 20 feet per second.
 3. PRODUCT DATA SHEET 3 - Pressure drop shall be less than 1 PSI at 1100 feet per minute.
 4. PRODUCT DATA SHEET 4 - Meter shall be rated for operating pressures up to 400 PSI and temperatures up to 200 degrees F.
 5. PRODUCT DATA SHEET 5 - Approved product: Onicon, Model 1210 series.

2.5 PRESSURE AND TEMPERATURE PLUGS

- A. Manufacturers: Subject to compliance with requirements, provide one of the following:
1. Duro Instrument Co.
 2. Trerice Co.
 3. Universal.
 4. Weksler.
 5. or approved equal.
- B. Stainless steel combination pressure-temperature test plugs with neoprene valve core where shown on the drawings. Provide [2] <Insert number>" bi-metal pocket test thermometers with 0 to 220 degrees F scale and plug adapter to the DEN Project Manager. Provide two 0-100 psi, 4-1/2" dial NPT conn. pressure gauges with pressure gauge adaptors to DEN Project Manager.

2.6 AIR-CONTROL DEVICES

- A. Manual Air Vents:
1. Manual Type: Short vertical sections of 2 inch diameter pipe to form air chamber, with 1/8 inch brass needle valve at top of chamber.
 2. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [AMTROL, Inc.](#)
 - b. [Armstrong Pumps, Inc.](#)
 - c. [Bell & Gossett Domestic Pump.](#)
 - d. [Nexus Valve, Inc.](#)
 - e. [Taco, Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
3. Body: Bronze.
 4. Internal Parts: Nonferrous.
 5. Operator: Screwdriver or thumbscrew.
 6. Inlet Connection: NPS 1/2 (DN 15).
 7. Discharge Connection: NPS 1/8 (DN 6).
 8. CWP Rating: 150 psig (1035 kPa).
 9. Maximum Operating Temperature: 225 deg F (107 deg C).
- B. Automatic Air Vents:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [AMTROL, Inc.](#)
 - b. [Armstrong Pumps, Inc.](#)
 - c. [Bell & Gossett Domestic Pump.](#)
 - d. [Nexus Valve, Inc.](#)
 - e. [Taco, Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 2. Body: Bronze or cast iron.
 3. Internal Parts: Nonferrous.
 4. Operator: Noncorrosive metal float.
 5. Inlet Connection: NPS 1/2 (DN 15).
 6. Discharge Connection: NPS 1/4 (DN 8).
 7. CWP Rating: 150 psig (1035 kPa).
 8. Maximum Operating Temperature: 240 deg F (116 deg C).
 9. Float Type: Brass body, copper, polypropylene, or solid non-metallic float, stainless steel valve and valve seat; suitable for system operating temperature and pressure; with isolating valve. Minimum ratings not less than 250 degrees F and 150 psi working pressure.
 10. Washer Type: Brass with hydroscopic fiber discs, vent ports, adjustable cap for manual shut-off, and integral spring loaded ball check valve.
- C. Expansion Tanks:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [AMTROL, Inc.](#)
 - b. [Armstrong Pumps, Inc.](#)

- c. [Bell & Gossett Domestic Pump](#).
 - d. [Taco, Inc.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Tank: Welded steel, rated for 125-psig (860-kPa) working pressure and 375 deg F (191 deg C) maximum operating temperature, with taps in bottom of tank for tank fitting and taps in end of tank for gage glass. Tanks shall be factory tested after taps are fabricated and shall be labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 3. Air-Control Tank Fitting: Cast-iron body, copper-plated tube, brass vent tube plug, and stainless-steel ball check, 100-gal. (379-L) unit only; sized for compression-tank diameter. Provide tank fittings for 125-psig (860-kPa) working pressure and 250 deg F (121 deg C) maximum operating temperature.
 4. Tank Drain Fitting: Brass body, nonferrous internal parts; 125-psig (860-kPa) working pressure and 240 deg F (116 deg C) maximum operating temperature; constructed to admit air to compression tank, drain water, and close off system.
 5. Gage Glass: Full height with dual manual shutoff valves, **[3/4-inch- (20-mm-)]** **<Insert dimension>** diameter gage glass, and slotted-metal glass guard.

D. **[Diaphragm] [Bladder]-Type Expansion Tanks:**

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [AMTROL, Inc.](#)
 - b. [Armstrong Pumps, Inc.](#)
 - c. [Bell & Gossett Domestic Pump](#).
 - d. [Taco, Inc.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Tank: Welded steel, rated for 125-psig (860-kPa) working pressure and 375 deg F (191 deg C) maximum operating temperature. Factory test after taps are fabricated and supports installed and are labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
3. **[Diaphragm] [Bladder]:** Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
4. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.
5. Accessories: Pressure gage and air-charging fitting, tank drain; precharge to **[12]** **<Insert number>** psig.
6. Automatic Cold Water Fill Assembly: Pressure reducing valve, **[reduced pressure] [double check valve]** back flow preventer, test cocks, strainer, vacuum breaker, and valved by-pass.
7. Size: As scheduled on the drawings.

E. Tangential-Type Air Separators:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [AMTROL, Inc.](#)
 - b. [Armstrong Pumps, Inc.](#)
 - c. [Bell & Gossett Domestic Pump.](#)
 - d. [Taco, Inc.](#)
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.
2. Tank: Welded steel; ASME constructed and labeled for 125-psig (860-kPa) minimum working pressure and 375 deg F (191 deg C) maximum operating temperature.
 3. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.
 4. Tangential Inlet and Outlet Connections: Threaded for NPS 2 (DN 50) and smaller; flanged connections for NPS 2-1/2 (DN 65) and larger.
 5. Blowdown Connection: Threaded.
 6. Size: Match system flow capacity.
- F. In-Line Air Separators:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [AMTROL, Inc.](#)
 - b. [Armstrong Products, Inc.](#)
 - c. [Bell & Gossett Domestic Pump.](#)
 - d. [Taco, Inc.](#)
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.
 2. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
 3. Maximum Working Pressure: Up to 175 psig (1207 kPa).
 4. Maximum Operating Temperature: Up to 300 deg F (149 deg C).
- G. Air Purgers:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [AMTROL, Inc.](#)
 - b. [Armstrong Pumps, Inc.](#)
 - c. [Bell & Gossett Domestic Pump.](#)
 - d. [Taco, Inc.](#)
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.
 2. Body: Cast iron with internal baffles that slow the water velocity to separate the air from solution and divert it to the vent for quick removal.
 3. Maximum Working Pressure: 150 psig (1035 kPa).
 4. Maximum Operating Temperature: 250 deg F (121 deg C).

2.7 HYDRONIC PIPING SPECIALTIES

A. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
3. Strainer Screen: Stainless-steel, [20] [40] [60]-mesh strainer, or perforated stainless-steel basket.
4. CWP Rating: 125 psig (860 kPa).

B. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
3. Strainer Screen: [40] [60]-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig (860 kPa).

C. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Flanged ends.
3. Strainer Screen: [40] [60]-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
4. CWP Rating: 750 psig (5170 kPa).

D. Stainless-Steel Bellow, Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
2. End Connections: Threaded or flanged to match equipment connected.
3. Performance: Capable of 3/4-inch (20-mm) misalignment.
4. CWP Rating: 150 psig (1035 kPa).
5. Maximum Operating Temperature: 250 deg F (121 deg C).

E. Spherical, Rubber, Flexible Connectors:

1. Body: Fiber-reinforced rubber body.
2. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
3. Performance: Capable of misalignment.
4. CWP Rating: 150 psig (1035 kPa).
5. Maximum Operating Temperature: 250 deg F (121 deg C).

- F. Expansion Fittings: Comply with requirements in Section 230516 "Expansion Fittings and Loops for HVAC Piping." Section 15124 "Expansion Fittings and Loops for HVAC Piping."

2.8 GLYCOL SYSTEM

- A. Mixing Tank: [45] <Insert number> gallon steel drum with fittings suitable for filling and hand pump for charging, rubber hose for connection of hand pump to system.
- B. Storage Tank: Closed type, welded steel constructed, tested and stamped in accordance with Section 8D of ASME Code; 125 psi rating; cleaned, prime coated, and supplied with steel support saddles. Construct with tapings for installation of accessories.
- C. Expansion Tank: Diaphragm expansion tank and vent fitting with air separator, and automatic air vent.
- D. Air Pressure Reducing Station: Pressure reducing valve with shut-off valves, strainer, check valve, and needle valve bypass.
- E. Glycol Solution: Inhibited propylene glycol and water solution mixed 50-50.
- F.

PART 3 - EXECUTION

3.1 VALVE APPLICATIONS

- A. Install shutoff-duty valves at each branch connection to supply mains and at supply connection to each piece of equipment.
- B. Install [throttling-duty] [calibrated-orifice, balancing] valves at each branch connection to return main.
- C. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.
- D. Install check valves at each pump discharge and elsewhere as required to control flow direction.
- E. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.
- F. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

3.2 HYDRONIC SPECIALTIES INSTALLATION

- A. Install specialties in accordance with manufacturer's instructions to provide intended performance.
- B. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.
- C. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Install manual vents at heat-transfer coils and elsewhere as required for air venting.
- D. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.
- E. Install in-line air separators in pump suction. Install drain valve on air separators NPS 2 (DN 50) and larger.
- F. Install tangential air separator in pump suction. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.
- G. Install expansion tanks above the air separator. Install tank fitting in tank bottom and charge tank. Use manual vent for initial fill to establish proper water level in tank.
 - 1. Install tank fittings that are shipped loose.
 - 2. Support tank from floor or structure above with sufficient strength to carry weight of tank, piping connections, fittings, plus tank full of water. Do not overload building components and structural members.
- H. Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure that tank is properly charged with air to suit system Project requirements.
- I. Where large air quantities can accumulate, provide enlarged air collection standpipes.
- J. For automatic air vents in ceiling spaces or other concealed locations, provide vent tubing to nearest drain.
- K. Provide air separator on suction side of system circulation pump and connect to expansion tank.
- L. Provide valved drain and hose connection on strainer blow down connection.
- M. Provide pump suction fitting on suction side of base mounted centrifugal pumps[.] [**where indicated.**] Remove temporary strainers after cleaning systems.
- N. Provide combination pump discharge valve on discharge side of base mounted centrifugal pumps[.] [**where indicated.**]
- O. Provide isolation valves on water inlet to terminal heating units such as radiation, unit heaters, and fan coil unit.

- P. Provide flow-setting balancing valves on water outlet from terminal heating units.
- Q. Provide relief valves on pressure tanks, low pressure side of reducing valves, heat exchangers, and expansion tanks.
- R. Select system relief valve capacity so that it is greater than make-up pressure reducing valve capacity. Select equipment relief valve capacity to exceed rating of connected equipment.
- S. Pipe relief valve outlet to nearest floor drain.
- T. Where one line vents several relief valves, make cross sectional area equal to sum of individual vent areas.
- U. Clean and flush glycol system before adding glycol solution.
- V. Feed glycol solution to system through make-up line with pressure regulator, venting system high points. [**Set to fill at 12 psig.**] [**Pressure system cold at 5 psig.**]
- W. Perform tests determining strength of ethylene glycol and water solution and submit written test results.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232116

SECTION 232123 - HYDRONIC PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Close-coupled, in-line centrifugal pumps.
 - 2. Close-coupled, end-suction centrifugal pumps.
 - 3. Separately coupled, horizontally mounted, in-line centrifugal pumps.
 - 4. Separately coupled, vertically mounted, in-line centrifugal pumps.
 - 5. Separately coupled, base-mounted, end-suction centrifugal pumps.
 - 6. Separately coupled, base-mounted, double-suction centrifugal pumps.
 - 7. Separately coupled, vertically mounted, double-suction centrifugal pumps.
 - 8. Separately coupled, vertically mounted, turbine centrifugal pumps.
 - 9. Wet-rotor pumps.
 - 10. Automatic condensate pump units.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Buna-N: Nitrile rubber.
- B. EPT: Ethylene propylene terpolymer.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of pump. Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated. Indicate pump's operating point on curves.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each pump.

1. Show pump layout and connections.
2. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
3. Include diagrams for power, signal, and control wiring.

C. Millwright's Certificate: Certify that base mounted pumps have been aligned.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.
 1. Include installation instructions, assembly views, lubrication instructions, and replacement parts list.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Mechanical Seals: [**One (1)**] <Insert number> mechanical seal(s) for each pump.
 2. Provide two (2) sets of cartridges for each side-stream filter.

1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain hydronic pumps through one source from a single manufacturer.
- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of hydronic pumps and are based on the specific system indicated. Refer to Division 1.
- C. Manufacturer: Company specializing in manufacture, assembly, and field performance of pumps with minimum of five (5) years experience.
- D. Alignment: Base mounted pumps shall be aligned by qualified millwright.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.8 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect, and handle products under provisions of Division 1.
- B. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.
- C. Store pumps in clean, dry location.
- D. Retain protective covers for flanges and protective coatings during storage. Maintain in place until installation.
- E. Protect bearings and couplings against damage from sand, grit, and other foreign matter.
- F. Comply with pump manufacturer's written rigging instructions.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CLOSE-COUPLED, IN-LINE CENTRIFUGAL PUMPS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Armstrong Pumps Inc.](#)
 - 2. [Aurora Pump; Division of Pentair Pump Group.](#)
 - 3. [Crane Pumps & Systems.](#)
 - 4. [Flowserve Corporation.](#)
 - 5. [Grundfos Pumps Corporation.](#)
 - 6. [ITT Corporation; Bell & Gossett.](#)
 - 7. [Mepco, LLC.](#)
 - 8. [PACO Pumps.](#)
 - 9. [Patterson Pump Co.; a subsidiary of the Gorman-Rupp Co.](#)
 - 10. [Peerless Pump Company.](#)

11. [TACO Incorporated.](#)
 12. [Thrush Company Inc.](#)
 13. <Insert manufacturer's name>.
 14. or approved equal.
- B. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally or vertically.
- C. Pump Construction:
1. Casing: Radially split, cast iron, with threaded gage tappings at inlet and outlet[, **replaceable bronze wear rings,**] and threaded [**companion-flange**] [**union-end**] connections.
 2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For constant-speed pumps, trim impeller to match specified performance.
 3. Pump Shaft: [**Steel, with copper-alloy shaft sleeve**] [**Stainless steel**].
 4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and [**Buna-N**] [**EPT**] bellows and gasket. Include water slinger on shaft between motor and seal.
 5. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
 6. Pump Bearings: [**Permanently lubricated ball bearings**] [**Oil lubricated; bronze-journal or thrust type**].
- D. Motor: Single speed and rigidly mounted to pump casing.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 - b. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 - c. Motor Bearings: [**Permanently lubricated**] [**Grease-lubricated**] ball bearings.
 - d. Unusual Service Conditions:
 - 1) Ambient Temperature: <Insert deg C>.
 - 2) Altitude: <Insert feet (meters)> above sea level.
 - 3) High humidity.
 - 4) <Insert conditions>.

- e. Efficiency: Premium efficient.
- f. NEMA Design: **<Insert designation>**.
- g. Service Factor: **<Insert value>**.

E. Capacities and Characteristics:

- 1. Capacity: **<Insert gpm (L/s)>**.
- 2. Total Dynamic Head: **<Insert feet (kPa)>**.
- 3. Maximum Operating Pressure: **[175 psig (1204 kPa)] [250 psig (1720 kPa)]**.
- 4. Maximum Continuous Operating Temperature: **[225 deg F (107 deg C)] [250 deg F (120 deg C)]**.
- 5. Inlet and Outlet Size: **<Insert NPS (DN)>**.
- 6. Impeller Size: **<Insert inches (mm)>**.
- 7. Motor Speed: **<Insert rpm>**.
- 8. Motor Horsepower: **<Insert value>**.
- 9. Electrical Characteristics:
 - a. Volts: **[120] [240] [208] [460] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.2 CLOSE-COUPLED, END-SUCTION CENTRIFUGAL PUMPS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- 1. [American-Marsh Pumps.](#)
- 2. [Armstrong Pumps Inc.](#)
- 3. [Aurora Pump; Division of Pentair Pump Group.](#)
- 4. [Buffalo Pumps, Inc.](#)
- 5. [Crane Pumps & Systems.](#)
- 6. [Flowserve Corporation.](#)
- 7. [ITT Corporation; Bell & Gossett.](#)
- 8. [ITT Corporation; Goulds Pumps.](#)
- 9. [Lancaster Pump.](#)
- 10. [Mepco, LLC.](#)
- 11. [PACO Pumps.](#)
- 12. [Patterson Pump Co.; a subsidiary of the Gorman-Rupp Co.](#)
- 13. [Peerless Pump Company.](#)
- 14. [Scot Pump; Div. of Ardox Corp.](#)
- 15. [TACO Incorporated.](#)
- 16. [Thrush Company Inc.](#)
- 17. **<Insert manufacturer's name>**.
- 18. or approved equal.

- B. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, end-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally.
- C. Pump Construction:
1. Casing: Radially split, cast iron, with[**replaceable bronze wear rings,**] drain plug at bottom and air vent at top of volute, threaded gage tappings at inlet and outlet, and [**threaded companion-flange**] [**flanged**] connections.
 2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For constant-speed pumps, trim impeller to match specified performance.
 3. Pump Shaft: [**Steel, with copper-alloy shaft sleeve**] [**Stainless steel**].
 4. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and [**Buna-N**] [**EPT**] bellows and gasket. Include water slinger on shaft between motor and seal.
 5. Pump Bearings: [**Permanently lubricated ball bearings**] [**Oil lubricated; bronze-journal or thrust type**].
- D. Motor: Single speed and rigidly mounted to pump casing with integral pump support.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 - b. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 - c. Motor Bearings: [**Permanently lubricated**] [**Grease-lubricated**] ball bearings.
 - d. Unusual Service Conditions:
 - 1) Ambient Temperature: <Insert deg C>.
 - 2) Altitude: <Insert feet (meters)> above sea level.
 - 3) High humidity.
 - 4) <Insert conditions>.
 - e. Efficiency: Premium efficient.
 - f. NEMA Design: <Insert designation>.
 - g. Service Factor: <Insert value>.
- E. Capacities and Characteristics:
1. Capacity: <Insert gpm (L/s)>.
 2. Total Dynamic Head: <Insert feet (kPa)>.

3. Maximum Operating Pressure: **175 psig** (1204 kPa).
4. Maximum Continuous Operating Temperature: **[225 deg F (107 deg C)] [250 deg F (120 deg C)]**.
5. Inlet and Outlet Size: **<Insert NPS (DN)>**.
6. Impeller Size: **<Insert inches (mm)>**.
7. Motor Speed: **<Insert rpm>**.
8. Motor Horsepower: **<Insert value>**.
9. Electrical Characteristics:
 - a. Volts: **[120] [240] [208] [460] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.3 SEPARATELY COUPLED, HORIZONTALLY MOUNTED, IN-LINE CENTRIFUGAL PUMPS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Armstrong Pumps Inc.](#)
2. [Aurora Pump; Division of Pentair Pump Group.](#)
3. [Flowserve Corporation.](#)
4. [Grundfos Pumps Corporation.](#)
5. [ITT Corporation; Bell & Gossett.](#)
6. [Mepco, LLC.](#)
7. [PACO Pumps.](#)
8. [Scot Pump; Div. of Ardox Corp.](#)
9. [TACO Incorporated.](#)
10. [Thrush Company Inc.](#)
11. **<Insert manufacturer's name>**.
12. or approved equal.

- B. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally.

- C. Pump Construction:

1. Casing: Radially split, cast iron, with threaded gage tappings at inlet and outlet, and threaded **[companion-flange] [union-end]** connections.
2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, and keyed to shaft. For pumps not frequency-drive controlled, trim impeller to match specified performance.
3. Pump Shaft: **[Steel, with copper-alloy shaft sleeve] [Stainless steel]**.
4. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and **[Buna-N] [EPT]** bellows and gasket. Include water

5. slinger on shaft between motor and seal.
5. Pump Bearings: [**Permanently lubricated ball bearings**] [**Oil lubricated; bronze-journal or thrust type**].
- D. Shaft Coupling: [**Molded-rubber insert with interlocking spider**] [**Interlocking frame with interconnecting springs**] capable of absorbing vibration.
- E. Motor: Single speed and [**resiliently**] [**rigidly**] mounted to pump casing.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 - b. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 - c. Motor Bearings: [**Permanently lubricated**] [**Grease-lubricated**] ball bearings.
 - d. Unusual Service Conditions:
 - 1) Ambient Temperature: <Insert deg C>.
 - 2) Altitude: <Insert feet (meters)> above sea level.
 - 3) High humidity.
 - 4) <Insert conditions>.
 - e. Efficiency: Premium efficient.
 - f. NEMA Design: <Insert designation>.
 - g. Service Factor: <Insert value>.
- F. Capacities and Characteristics:
1. Capacity: <Insert gpm (L/s)>.
 2. Total Dynamic Head: <Insert feet (kPa)>.
 3. Maximum Operating Pressure: 175 psig (1204 kPa).
 4. Maximum Continuous Operating Temperature: [225 deg F (107 deg C)] [250 deg F (120 deg C)].
 5. Inlet and Outlet Size: <Insert NPS (DN)>.
 6. Impeller Size: <Insert inches (mm)>.
 7. Motor Speed: <Insert rpm>.
 8. Motor Horsepower: <Insert value>.
 9. Electrical Characteristics:
 - a. Volts: [120] [240] [208] [460] <Insert value>.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.

- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

2.4 SEPARATELY COUPLED, VERTICALLY MOUNTED, IN-LINE CENTRIFUGAL PUMPS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- 1. [Armstrong Pumps Inc.](#)
- 2. [Aurora Pump; Division of Pentair Pump Group.](#)
- 3. [Crane Pumps & Systems.](#)
- 4. [Flowserve Corporation.](#)
- 5. [ITT Corporation; Bell & Gossett.](#)
- 6. [Mepco, LLC.](#)
- 7. [PACO Pumps.](#)
- 8. [Peerless Pump Company.](#)
- 9. [Patterson Pump Co.; a subsidiary of the Gorman-Rupp Co.](#)
- 10. [TACO Incorporated.](#)
- 11. [Thrush Company Inc.](#)
- 12. <Insert manufacturer's name>.
- 13. or approved equal.

B. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted vertically.

C. Pump Construction:

- 1. Casing: Radially split, cast iron, with threaded gage tappings at inlet and outlet[, **replaceable bronze wear rings,**] and threaded [**companion-flange**] [**union-end**] connections.
- 2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For pumps not frequency-drive controlled, trim impeller to match specified performance.
- 3. Pump Shaft: [**Steel, with copper-alloy shaft sleeve**] [**Stainless steel**].
- 4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and [**Buna-N**] [**EPT**] bellows and gasket. Include water slinger on shaft between motor and seal.
- 5. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
- 6. Pump Bearings: [**Permanently lubricated ball bearings**] [**Oil lubricated; bronze-journal or thrust type**].

D. Shaft Coupling: Axially split spacer coupling.

E. Motor: Single speed and rigidly mounted to pump casing with lifting eyebolt and

supporting lugs in motor enclosure.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 - b. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 - c. Motor Bearings: [**Permanently lubricated**] [**Grease-lubricated**] ball bearings.
 - d. Unusual Service Conditions:
 - 1) Ambient Temperature: <Insert deg C>.
 - 2) Altitude: <Insert feet (meters)> above sea level.
 - 3) High humidity.
 - 4) <Insert conditions>.
 - e. Efficiency: Premium efficient.
 - f. NEMA Design: <Insert designation>.
 - g. Service Factor: <Insert value>.

F. Capacities and Characteristics:

1. Capacity: <Insert gpm (L/s)>.
2. Total Dynamic Head: <Insert feet (kPa)>.
3. Maximum Operating Pressure: [**175 psig (1204 kPa)**] [**250 psig (1720 kPa)**].
4. Maximum Continuous Operating Temperature: [**225 deg F (107 deg C)**] [**250 deg F (120 deg C)**].
5. Inlet and Outlet Size: <Insert NPS (DN)>.
6. Impeller Size: <Insert inches (mm)>.
7. Motor Speed: <Insert rpm>.
8. Motor Horsepower: <Insert value>.
9. Electrical Characteristics:
 - a. Volts: [**120**] [**240**] [**208**] [**460**] <Insert value>.
 - b. Phase: [**Single**] [**Three**].
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

2.5 SEPARATELY COUPLED, BASE-MOUNTED, END-SUCTION CENTRIFUGAL PUMPS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [American-Marsh Pumps.](#)
2. [Armstrong Pumps Inc.](#)
3. [Aurora Pump; Division of Pentair Pump Group.](#)
4. [Buffalo Pumps, Inc.](#)
5. [Crane Pumps & Systems.](#)
6. [Flowserve Corporation.](#)
7. [ITT Corporation; Bell & Gossett.](#)
8. [Mepco, LLC.](#)
9. [PACO Pumps.](#)
10. [Peerless Pump Company.](#)
11. [Scot Pump; Div. of Ardox Corp.](#)
12. [TACO Incorporated.](#)
13. [Thrush Company Inc.](#)
14. **<Insert manufacturer's name>.**
15. or approved equal.

B. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, end-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for base mounting, with pump and motor shafts horizontal.

C. Pump Construction:

1. Casing: Radially split, cast iron, with[**replaceable bronze wear rings,**] threaded gage tappings at inlet and outlet, drain plug at bottom and air vent at top of volute, and [**threaded companion-flange**] [**flanged**] connections.[**Provide integral mount on volute to support the casing, and provide attached piping to allow removal and replacement of impeller without disconnecting piping or requiring the realignment of pump and motor shaft.**]
2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For pumps not frequency-drive controlled, trim impeller to match specified performance.
3. Pump Shaft: [**Steel, with copper-alloy shaft sleeve**] [**Stainless steel**].
4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and [**Buna-N**] [**EPT**] bellows and gasket.
5. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
6. Pump Bearings: Grease-lubricated ball bearings in cast-iron housing with grease fittings.

D. Shaft Coupling: Molded-rubber insert and interlocking spider capable of absorbing vibration. [**Couplings shall be drop-out type to allow disassembly and removal without removing pump shaft or motor.**] [**EPDM coupling sleeve for variable-speed applications.**]

- E. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.
- F. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A 36/A 36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor.
- G. Motor: Single speed, secured to mounting frame, with adjustable alignment.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: **[Open, dripproof] [Totally enclosed, fan cooled] [Totally enclosed, air over] [Open, externally ventilated] [Totally enclosed, nonventilated] [Severe duty] [Explosion proof] [Dust-ignition-proof machine]**.
 - b. Enclosure Materials: **[Cast iron] [Cast aluminum] [Rolled steel]**.
 - c. Motor Bearings: **[Permanently lubricated] [Grease-lubricated]** ball bearings.
 - d. Unusual Service Conditions:
 - 1) Ambient Temperature: **<Insert deg C>**.
 - 2) Altitude: **<Insert feet (meters)>** above sea level.
 - 3) High humidity.
 - 4) **<Insert conditions>**.
 - e. Efficiency: Premium efficient.
 - f. NEMA Design: **<Insert designation>**.
 - g. Service Factor: **<Insert value>**.
- H. Capacities and Characteristics:
1. Capacity: **<Insert gpm (L/s)>**.
 2. Total Dynamic Head: **<Insert feet (kPa)>**.
 3. Maximum Operating Pressure: **[175 psig (1204 kPa)] [250 psig (1720 kPa)]**.
 4. Maximum Continuous Operating Temperature: **[225 deg F (107 deg C)] [250 deg F (120 deg C)]**.
 5. Inlet and Outlet Size: **<Insert NPS (DN)>**.
 6. Impeller Size: **<Insert inches (mm)>**.
 7. Motor Speed: **<Insert rpm>**.
 8. Motor Horsepower: **<Insert value>**.
 9. Electrical Characteristics:
 - a. Volts: **[120] [240] [208] [460] <Insert value>**.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: 60.

- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

2.6 SEPARATELY COUPLED, BASE-MOUNTED, DOUBLE-SUCTION CENTRIFUGAL PUMPS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [American-Marsh Pumps.](#)
2. [Armstrong Pumps Inc.](#)
3. [Aurora Pump; Division of Pentair Pump Group.](#)
4. [Buffalo Pumps, Inc.](#)
5. [Crane Pumps & Systems.](#)
6. [Flowserve Corporation.](#)
7. [ITT Corporation; Bell & Gossett.](#)
8. [Mepco, LLC.](#)
9. [PACO Pumps.](#)
10. [Patterson Pump Co.; a subsidiary of the Gorman-Rupp Co.](#)
11. [Peerless Pump Company.](#)
12. [TACO Incorporated.](#)
13. <Insert manufacturer's name>.
14. or approved equal.

B. Description: Factory-assembled and -tested, centrifugal, impeller-between-bearings, separately coupled, double-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for base mounting, with pump and motor shafts horizontal.

C. Pump Construction:

1. Casing: [**Radially**] [**Horizontally**] split, cast iron, with[**replaceable bronze wear rings,**] threaded gage tappings at inlet and outlet, drain plug at bottom and air vent at top of volute, and ASME B16.1, [**Class 125**] [**Class 250**] flanges.[**Casing supports shall allow removal and replacement of impeller without disconnecting piping.**]
2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, and keyed to shaft. For pumps not frequency-drive controlled, trim impeller to match specified performance.
3. Pump Shaft: Stainless steel.
4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and [**Buna-N**] [**EPT**] bellows and gasket.
5. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
6. Pump Bearings: Grease-lubricated ball bearings in cast-iron housing with grease fittings.

- D. Shaft Coupling: Molded-rubber insert and interlocking spider capable of absorbing vibration. [**Couplings shall be drop-out type to allow disassembly and removal without removing pump shaft or motor.**] [**EPDM coupling sleeve for variable-speed applications.**]
- E. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.
- F. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A 36/A 36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor.
- G. Motor: Single speed, secured to mounting frame, with adjustable alignment.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 - b. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 - c. Motor Bearings: Grease lubricated.
 - d. Unusual Service Conditions:
 - 1) Ambient Temperature: <Insert deg C>.
 - 2) Altitude: <Insert feet (meters)> above sea level.
 - 3) High humidity.
 - 4) <Insert conditions>.
 - e. Efficiency: Premium efficient.
 - f. NEMA Design: <Insert designation>.
 - g. Service Factor: <Insert value>.
- H. Capacities and Characteristics:
1. Capacity: <Insert gpm (L/s)>.
 2. Total Dynamic Head: <Insert feet (kPa)>.
 3. Maximum Operating Pressure: [**175 psig (1204 kPa)**] [**250 psig (1720 kPa)**].
 4. Maximum Continuous Operating Temperature: [**225 deg F (107 deg C)**] [**250 deg F (120 deg C)**].
 5. Inlet and Outlet Size: <Insert NPS (DN)>.
 6. Impeller Size: <Insert inches (mm)>.
 7. Motor Speed: <Insert rpm>.
 8. Motor Horsepower: <Insert value>.
 9. Electrical Characteristics:

- a. Volts: [**120**] [**240**] [**208**] [**460**] <Insert value>.
- b. Phase: [**Single**] [**Three**].
- c. Hertz: 60.
- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

2.7 SEPARATELY COUPLED, VERTICALLY MOUNTED, DOUBLE-SUCTION CENTRIFUGAL PUMPS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Armstrong Pumps Inc.](#)
2. [Aurora Pump; Division of Pentair Pump Group.](#)
3. [Buffalo Pumps, Inc.](#)
4. [Flowserve Corporation.](#)
5. [ITT Corporation; Bell & Gossett.](#)
6. [Meeco, LLC.](#)
7. [PACO Pumps.](#)
8. [Pentair Water; Fairbanks Morse.](#)
9. [Peerless Pump Company.](#)
10. [TACO Incorporated.](#)
11. <Insert manufacturer's name>.
12. or approved equal.

B. Description: Factory-assembled and -tested, centrifugal, impeller-between-bearings, separately coupled, double-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted vertically.

C. Pump Construction:

1. Casing: Radially split, cast iron, with[**replaceable bronze wear rings,**] threaded gage tappings at inlet and outlet, drain plug at bottom of volute, mounting support, and ASME B16.1, [**Class 125**] [**Class 250**] flanges.
2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, and keyed to shaft. For pumps not frequency-drive controlled, trim impeller to match specified performance.
3. Pump Shaft: Stainless steel.
4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and [**Buna-N**] [**EPT**] bellows and gasket.
5. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
6. Pump Bearings: Grease-lubricated ball bearings in cast-iron housing with grease fittings.

D. Shaft Coupling: Molded-rubber insert and interlocking spider capable of absorbing vibration.

- E. Motor: Single speed and secured to casing.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 - b. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 - c. Motor Bearings: Grease lubricated.
 - d. Unusual Service Conditions:
 - 1) Ambient Temperature: <Insert deg C>.
 - 2) Altitude: <Insert feet (meters)> above sea level.
 - 3) High humidity.
 - 4) <Insert conditions>.
 - e. Efficiency: Premium efficient.
 - f. NEMA Design: <Insert designation>.
 - g. Service Factor: <Insert value>.
- F. Capacities and Characteristics:
1. Capacity: <Insert gpm (L/s)>.
 2. Total Dynamic Head: <Insert feet (kPa)>.
 3. Maximum Operating Pressure: [175 psig (1204 kPa)] [250 psig (1720 kPa)].
 4. Maximum Continuous Operating Temperature: [225 deg F (107 deg C)] [250 deg F (120 deg C)].
 5. Inlet and Outlet Size: <Insert NPS (DN)>.
 6. Impeller Size: <Insert inches (mm)>.
 7. Motor Speed: <Insert rpm>.
 8. Motor Horsepower: <Insert value>.
 9. Electrical Characteristics:
 - a. Volts: [120] [240] [208] [460] <Insert value>.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

2.8 SEPARATELY COUPLED, VERTICALLY MOUNTED, TURBINE CENTRIFUGAL PUMPS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [American-Marsh Pumps.](#)
2. [Aurora Pump; Division of Pentair Pump Group.](#)
3. [Crane Pumps & Systems.](#)
4. [Flowserve Corporation.](#)
5. [Mepco, LLC.](#)
6. [PACO Pumps.](#)
7. [Patterson Pump Co.: a subsidiary of the Gorman-Rupp Co.](#)
8. [Peerless Pump Company.](#)
9. [Pentair Water; Fairbanks Morse.](#)
10. **<Insert manufacturer's name>.**
11. or approved equal.

B. Description: Factory-assembled and -tested, [**single-stage**] [**multistage**], centrifugal, impeller-between-bearings, end-suction pump as defined in HI 2.1-2.2 and HI 2.3; designed for installation with pump and motor shafts mounted vertically and projecting into a sump.

C. Pump Construction:

1. Pump Bowl: Cast iron, with [**cone**] [**basket**] strainer[, **replaceable bronze wear ring,**] and suction bell.[**Water passages of intermediate bowls shall be coated with porcelain enamel.**]
2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced and keyed to shaft. For pumps not frequency-drive controlled, trim impeller to match specified performance.
3. Pump Shaft: [**Carbon**] [**Stainless**] steel sized according to manufacturer's requirements.
4. Pump Bearings: Water-lubricated bronze and rubber sleeve bearings in cast-iron housing.
5. Pump Column: ASTM A 53/A 53M, Grade B steel pipe.
6. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and [**Buna-N**] [**EPT**] bellows and gasket. Include water slinger on shaft between motor and seal.
7. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.

D. Shaft Coupling: Keyed with locking collets.

E. Discharge Head: ASME B16.1, [**Class 125**] [**Class 250**] discharge flange with threaded gage tapping. Top of discharge head shall have a registered fit to accurately locate the driver.

F. Drive Ratchet: Nonreversing ratchet.

- G. Hollow Shaft Motor: Single speed and secured to discharge head.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Enclosure: [**Open, dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 - b. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 - c. Motor Bearings: Grease lubricated.
 - d. Unusual Service Conditions:
 - 1) Ambient Temperature: <Insert deg C>.
 - 2) Altitude: <Insert feet (meters)> above sea level.
 - 3) High humidity.
 - 4) <Insert conditions>.
 - e. Efficiency: Premium efficient.
 - f. NEMA Design: <Insert designation>.
 - g. Service Factor: <Insert value>.
- H. Capacities and Characteristics:
1. Capacity: <Insert gpm (L/s)>.
 2. Total Dynamic Head: <Insert feet (kPa)>.
 3. Minimum Static Head: <Insert feet (kPa)>.
 4. Maximum Operating Pressure: 175 psig (1204 kPa).
 5. Maximum Continuous Operating Temperature: 200 deg F (93 deg C).
 6. Outlet Size: <Insert NPS (DN)>.
 7. Impeller Size: <Insert inches (mm)>.
 8. Motor Speed: <Insert rpm>.
 9. Motor Horsepower: <Insert value>.
 10. Electrical Characteristics:
 - a. Volts: [120] [240] [208] [460] <Insert value>.
 - b. Phase: [Single] [Three].
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.

2.9 WET-ROTOR PUMPS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Armstrong Pumps Inc.](#)
 2. [Flowserve Corporation.](#)
 3. [Grundfos Pumps Corporation.](#)
 4. [ITT Corporation; Bell & Gossett.](#)
 5. [TACO Incorporated.](#)
 6. **<Insert manufacturer's name>.**
 7. or approved equal.
- B. Description: Factory-assembled and -tested, wet-rotor pump.
- C. Pump Construction:
1. Body: [**100 percent lead-free bronze**] [**Stainless steel**] [**Cast iron**].
 2. Impeller: [**Polypropylene**] [**Noryl**].
 3. Pump Shaft: Ceramic.
 4. Bearings. Double-sintered carbon.
- D. Motor: [**Single**] [**Three**] speed.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Efficiency: Premium efficient.
 - b. NEMA Design: **<Insert designation>.**
 - c. Service Factor: **<Insert value>.**
- E. Capacities and Characteristics:
1. Capacity: **<Insert gpm (L/s)>.**
 2. Total Dynamic Head: **<Insert feet (kPa)>.**
 3. Maximum Operating Pressure: **150 psig (1132 kPa).**
 4. Maximum Continuous Operating Temperature: **[225 deg F (107 deg C)] [230 deg F (111 deg C)].**
 5. Inlet and Outlet Size: **<Insert NPS (DN)>.**
 6. Impeller Size: **<Insert inches (mm)>.**
 7. Motor Speed: **<Insert rpm>.**
 8. Motor Horsepower: **<Insert value>.**
 9. Electrical Characteristics:
 - a. Volts: **[120] <Insert value>.**
 - b. Phase: **[Single] [Three].**

- c. Hertz: 60.
- d. Full-Load Amperes: **<Insert value>**.
- e. Minimum Circuit Ampacity: **<Insert value>**.
- f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.10 AUTOMATIC CONDENSATE PUMP UNITS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Beckett Corporation](#).
2. [Hartell Pumps Div.; Milton Roy Co.](#)
3. [Little Giant Pump Co.](#)
4. [Mepco, LLC](#).
5. **<Insert manufacturer's name>**.
6. or approved equal.

B. Description: Packaged units with corrosion-resistant pump, plastic tank with cover, and automatic controls. Include factory- or field-installed check valve and a **72-inch** (1800-mm-) minimum, electrical power cord with plug.

C. Capacities and Characteristics:

1. Capacity: **<Insert gpm (L/s)>**.
2. Total Dynamic Head: **<Insert feet (kPa)>**.
3. Maximum Height to Inlet: **<Insert inches (mm)>**.
4. Inlet and Outlet Size: **<Insert NPS (DN)>**.
5. Motor Speed: **<Insert rpm>**.
6. Motor Horsepower: **<Insert value>**.
7. Electrical Characteristics:
 - a. Volts: **[120] <Insert value>**.
 - b. Phase: Single.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.11 PUMP SPECIALTY FITTINGS

A. Suction Diffuser:

1. Angle pattern.
2. **[175-psig (1204-kPa)] [300-psig (2060-kPa)]** pressure rating, **[cast] [ductile]-iron** body and end cap, pump-inlet fitting.
3. Bronze startup and bronze or stainless-steel permanent strainers.
4. Bronze or stainless-steel straightening vanes.
5. Drain plug.

6. Factory-fabricated support.
- B. Triple-Duty Valve:
1. Angle or straight pattern.
 2. [175-psig (1204-kPa)] [300-psig (2060-kPa)] pressure rating, [cast] [ductile]-iron body, pump-discharge fitting.
 3. Drain plug and bronze-fitted shutoff, balancing, and check valve features.
 4. Brass gage ports with integral check valve and orifice for flow measurement.

PART 3 - EXECUTION

3.1 PERFORMANCE REQUIREMENTS

- A. Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

3.2 EXAMINATION

- A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.
- C. Examine foundations and inertia bases for suitable conditions where pumps are to be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 CONCRETE BASES

- A. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
- B. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
- C. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
- D. Install anchor bolts to elevations required for proper attachment to supported equipment.
- E. Cast-in-place concrete materials and placement requirements are specified in Division

3. Comply with requirements of Division 3.

3.4 PUMP INSTALLATION

- A. Comply with **[HI 1.4]** **[and]** **[HI 2.4]**.
- B. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories.
- C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
- D. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.
- E. Equipment Mounting:
 - 1. Install base-mounted pumps on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete.]"** **[Section 033053 "Miscellaneous Cast-in-Place Concrete.]"**
 - a. Disconnect coupling before setting. Do not reconnect couplings until alignment procedure is complete.
 - b. Support pump baseplate on rectangular metal blocks and shims, or on metal wedges with small taper, at points near foundation bolts to provide a gap of 3/4 to 1-1/2 inches between pump base and foundation for grouting.
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- F. Equipment Mounting: Install in-line pumps with continuous-thread hanger rods and **[elastomeric hangers]** **[spring hangers]** **[spring hangers with vertical-limit stop]** of size required to support weight of in-line pumps. Fabricate brackets or supports as required.
 - 1. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

3.5 ALIGNMENT

- A. Engage a factory-authorized service representative to assist Contractor and perform alignment service.
- B. Align pump and motor shafts and piping connections after setting on foundation, grout

has been set and foundation bolts have been tightened, and piping connections have been made.

- C. Comply with requirements in Hydronics Institute standards for alignment of pump and motor shaft. Add shims to the motor feet and bolt motor to base frame. Do not use grout between motor feet and base frame.

- 1. Adjust pump and motor shafts for angular and offset alignment by methods specified in [HI 1.1-1.5] [HI 2.1-2.5].

- D. Comply with pump and coupling manufacturers' written instructions.

- E. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

3.6 CONNECTIONS

- A. Comply with requirements for piping specified in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

- B. Where installing piping adjacent to pump, allow space for service and maintenance.

- C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.

- D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.

- E. Install [**check, shutoff, and throttling valves**] [**check valve and throttling valve with memory stop**] [**triple-duty valve**] on discharge side of pumps.

- F. Install [**Y-type strainer**] [**suction diffuser**] and shutoff valve on suction side of pumps.

- G. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.

- H. Install pressure gages on pump suction and discharge or at integral pressure-gage tapping, or install single gage with multiple-input selector valve.

- I. Install check valve and gate or ball valve on each condensate pump unit discharge.

- J. Install electrical connections for power, controls, and devices.

- K. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

- L. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.7 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Check piping connections for tightness.
 3. Clean strainers on suction piping.
 4. Perform the following startup checks for each pump before starting:
 - a. Verify bearing lubrication.
 - b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
 - c. Verify that pump is rotating in the correct direction.
 5. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
 6. Start motor.
 7. Open discharge valve slowly.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain hydronic pumps.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232123

SECTION 232300 - REFRIGERANT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Refrigerant pipes and fittings.
 - 2. Refrigerant piping valves and specialties.
 - 3. Refrigerants.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of valve and refrigerant piping specialty. Provide general assembly of specialties, including manufacturers' catalogue information. Provide manufacturers catalog data including load capacity.
 - 1. Include pressure drop, based on manufacturer's test data, for the following:
 - a. Thermostatic expansion valves.
 - b. Solenoid valves.
 - c. Hot-gas bypass valves.
 - d. Filter dryers.
 - e. Strainers.
 - f. Pressure-regulating valves.
 - g. Include data substantiating that materials comply with requirements.
- B. Design Data: Submit design data indicating pipe sizing. Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers.
- C. Shop Drawings:
 - 1. Show layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes; flow capacities; valve arrangements and locations; slopes of horizontal runs; oil traps; double risers; wall and floor penetrations; and equipment connection details.

2. Show piping size and piping layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.
3. Show interface and spatial relationships between piping and equipment.
4. Shop Drawing Scale: [1/4 inch equals 1 foot (1:50)] **<Insert value>**.

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Field quality-control reports. Indicate results of leak test, acid test.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.
 1. Include instructions for changing cartridges, assembly views, spare parts lists.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 1. Record exact locations of equipment and refrigeration accessories on record drawings.

1.6 MAINTENANCE MATERIALS

- A. Provide two (2) refrigeration oil test kits each containing everything required to conduct one (1) test.
- B. Provide two (2) containers each with **<Insert number>** pounds of **<Insert type>** refrigerant.
- C. Provide two (2) filter-dryer cartridges of each type.

1.7 QUALITY ASSURANCE

- A. Installer: Company specializing in performing the work of this section with minimum of three (3) years experience.
- B. Design piping system under direct supervision of a Professional Engineer experienced in design of this work and licensed in the State of Colorado.

- C. Welding Qualifications: Qualify procedures and personnel according to 2010 ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
- D. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."
- E. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."
- F. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.8 PRODUCT STORAGE AND HANDLING

- A. Dehydrate and charge components such as piping and receivers, seal prior to shipment, until connected into system.
- B. Deliver and store piping and specialties in shipping containers with labeling in place.
- C. Store piping with end caps in place to ensure that piping interior and exterior are clean when installed.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Line Test Pressure for Refrigerant R-134a:
 - 1. Suction Lines for Air-Conditioning Applications: **115 psig** (793 kPa).
 - 2. Suction Lines for Heat-Pump Applications: **225 psig** (1551 kPa).
 - 3. Hot-Gas and Liquid Lines: **225 psig** (1551 kPa).
- B. Line Test Pressure for Refrigerant R-407C:
 - 1. Suction Lines for Air-Conditioning Applications: **230 psig** (1586 kPa).
 - 2. Suction Lines for Heat-Pump Applications: **380 psig** (2620 kPa).
 - 3. Hot-Gas and Liquid Lines: **380 psig** (2620 kPa).
- C. Line Test Pressure for Refrigerant R-410A:
 - 1. Suction Lines for Air-Conditioning Applications: **300 psig** (2068 kPa).
 - 2. Suction Lines for Heat-Pump Applications: **535 psig** (3689 kPa).

3. Hot-Gas and Liquid Lines: 535 psig (3689 kPa).

2.2 COPPER TUBE AND FITTINGS

- A. Copper Tube: [ASTM B 88, Type K or L (ASTM B 88M, Type A or B)] [ASTM B 280, Type ACR].
- B. Wrought-Copper Fittings: ASME B16.22.
- C. Wrought-Copper Unions: ASME B16.22.
- D. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
- E. Brazing Filler Metals: AWS A5.8/A5.8M.
- F. Flexible Connectors:
 1. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.
 2. End Connections: Socket ends.
 3. Offset Performance: Capable of minimum 3/4-inch (20-mm) misalignment in minimum 7-inch- (180-mm-) long assembly.
 4. Working Pressure Rating: Factory test at minimum 500 psig (3450 kPa).
 5. Maximum Operating Temperature: 250 deg F (121 deg C).

2.3 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; type, grade, and wall thickness as selected in piping application articles.
- B. Wrought-Steel Fittings: ASTM A 234/A 234M, for welded joints.
- C. Steel Flanges and Flanged Fittings: ASME B16.5, steel, including bolts, nuts, and gaskets, bevel-welded end connection, and raised face.
- D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- E. Flanged Unions:
 1. Body: Forged-steel flanges for NPS 1 to NPS 1-1/2 (DN 25 to DN 40) and ductile iron for NPS 2 to NPS 3 (DN 50 to DN 80). Apply rust-resistant finish at factory.
 2. Gasket: Fiber asbestos free.
 3. Fasteners: Four plated-steel bolts, with silicon bronze nuts. Apply rust-resistant finish at factory.
 4. End Connections: Brass tailpiece adapters for solder-end connections to copper tubing.
 5. Offset Performance: Capable of minimum 3/4-inch (20-mm) misalignment in

- minimum **7-inch**- (180-mm-) long assembly.
6. Pressure Rating: Factory test at minimum **400 psig** (2760 kPa).
 7. Maximum Operating Temperature: **330 deg F** (165 deg C).

F. Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, stainless-steel-wire-reinforced protective jacket.
2. End Connections:
 - a. **NPS 2** (DN 50) and Smaller: With threaded-end connections.
 - b. **NPS 2-1/2** (DN 65) and Larger: With flanged-end connections.
3. Offset Performance: Capable of minimum **3/4-inch** (20-mm) misalignment in minimum **7-inch**- (180-mm-) long assembly.
4. Pressure Rating: Factory test at minimum **500 psig** (3450 kPa).
5. Maximum Operating Temperature: **250 deg F** (121 deg C).

2.4 VALVES AND SPECIALTIES

A. Diaphragm Packless Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)
 - b. [Heldon Technologies.](#)
 - c. [Henry Technologies.](#)
 - d. [Mueller Industries, Inc.](#)
 - e. [Parker.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
2. Body and Bonnet: Forged brass or cast bronze; globe design with straight-through or angle pattern.
3. Diaphragm: Phosphor bronze and stainless steel with stainless-steel spring.
4. Operator: Rising stem and hand wheel.
5. Seat: Nylon.
6. End Connections: Socket, union, or flanged.
7. Working Pressure Rating: **500 psig** (3450 kPa).
8. Maximum Operating Temperature: **275 deg F** (135 deg C).

B. Packed-Angle Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)
 - b. [Heldon Technologies.](#)

- c. [Henry Technologies.](#)
 - d. [Mueller Industries, Inc.](#)
 - e. [Parker.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
2. Body and Bonnet: Forged brass or cast bronze.
 3. Packing: Molded stem, back seating, and replaceable under pressure.
 4. Operator: Rising stem.
 5. Seat: Nonrotating, self-aligning polytetrafluoroethylene.
 6. Seal Cap: Forged-brass or valox hex cap.
 7. End Connections: Socket, union, threaded, or flanged.
 8. Working Pressure Rating: **500 psig** (3450 kPa).
 9. Maximum Operating Temperature: **275 deg F** (135 deg C).

C. Check Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)
 - b. [Emerson Climate Technologies.](#)
 - c. [Heldon Technologies.](#)
 - d. [Henry Technologies.](#)
 - e. [Mueller Industries, Inc.](#)
 - f. [Parker.](#)
 - g. **<Insert manufacturer's name>.**
 - h. or approved equal.
2. Body: Ductile iron, forged brass, or cast bronze; globe pattern.
3. Bonnet: Bolted ductile iron, forged brass, or cast bronze; or brass hex plug.
4. Piston: Removable polytetrafluoroethylene seat.
5. Closing Spring: Stainless steel.
6. Manual Opening Stem: Seal cap, plated-steel stem, and graphite seal.
7. End Connections: Socket, union, threaded, or flanged.
8. Maximum Opening Pressure: **0.50 psig** (3.4 kPa).
9. Working Pressure Rating: **500 psig** (3450 kPa).
10. Maximum Operating Temperature: **275 deg F** (135 deg C).

D. Service Valves:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)
 - b. [Emerson Climate Technologies.](#)
 - c. [Heldon Technologies.](#)
 - d. [Henry Technologies.](#)
 - e. [Mueller Industries, Inc.](#)
 - f. [Parker.](#)

4. Seat: Polytetrafluoroethylene.
 5. End Connections: Threaded.
 6. Working Pressure Rating: 400 psig (2760 kPa).
 7. Maximum Operating Temperature: 240 deg F (116 deg C).
- G. Thermostatic Expansion Valves: Comply with AHRI 750.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)
 - b. [Emerson Climate Technologies.](#)
 - c. [Heldon Technologies.](#)
 - d. [Henry Technologies.](#)
 - e. [Mueller Industries, Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 2. Body, Bonnet, and Seal Cap: Forged brass or steel.
 3. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
 4. Packing and Gaskets: Non-asbestos.
 5. Capillary and Bulb: Copper tubing filled with refrigerant charge.
 6. Suction Temperature: [40 deg F (4.4 deg C)] <Insert temperature>.
 7. Superheat: [**Adjustable**] [**Nonadjustable**].
 8. Reverse-flow option (for heat-pump applications).
 9. End Connections: Socket, flare, or threaded union.
 10. Working Pressure Rating: [700 psig (4820 kPa)] [450 psig (3100 kPa)] <Insert value>.
- H. Electronic Expansion Valves:
1. Valve:
 - a. Brass body with flared or solder connection, needle valve with floating needle and machined seat, stepper motor drive.
 - b. Capacity: Nominal <Insert number> tons.
 - c. Electrical Characteristics: 12 VA, 12 volts DC.
 2. Evaporation Control System:
 - a. Electronic microprocessor based unit in enclosed case, proportional integral control with adaptive superheat, maximum operating pressure function, preselection allowance for electrical defrost and hot gas bypass.
 - b. Electrical Characteristics: 12 VA, 115 volts, single phase, 50/60 Hz.
 3. Refrigeration System Control: Electronic microprocessor based unit in enclosed case, with proportional integral control of valve, on/off thermostat, air temperature alarm (high and low), solenoid valve control, liquid injection adaptive superheat control, maximum operating pressure function, night setback thermostat, timer for defrost control.

- I. Hot-Gas Bypass Valves: Comply with UL 429; listed and labeled by an NRTL.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)
 - b. [Heldon Technologies.](#)
 - c. [Henry Technologies.](#)
 - d. [Parker.](#)
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.
 2. Body, Bonnet, and Seal Cap: Ductile iron or steel.
 3. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
 4. Packing and Gaskets: Non-asbestos.
 5. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
 6. Seat: Polytetrafluoroethylene.
 7. Equalizer: **[Internal] [External]**.
 8. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with **1/2-inch (16-GRC)** conduit adapter and **[24] [115] [208]-V** ac coil.
 9. End Connections: Socket.
 10. Set Pressure: **<Insert psig (kPa)>.**
 11. Throttling Range: Maximum **5 psig (34 kPa)**.
 12. Working Pressure Rating: **500 psig (3450 kPa)**.
 13. Maximum Operating Temperature: **240 deg F (116 deg C)**.
- J. Straight-Type Strainers:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)
 - b. [Heldon Technologies.](#)
 - c. [Henry Technologies.](#)
 - d. [Parker.](#)
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.
 2. Body: Welded steel with corrosion-resistant coating.
 3. Screen: 100-mesh stainless steel.
 4. End Connections: Socket or flare.
 5. Working Pressure Rating: **500 psig (3450 kPa)**.
 6. Maximum Operating Temperature: **275 deg F (135 deg C)**.
- K. Angle-Type Strainers:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)

- b. [Heldon Technologies](#).
 - c. [Henry Technologies](#).
 - d. [Parker](#).
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Body: Forged brass or cast bronze.
 3. Drain Plug: Brass hex plug.
 4. Screen: 100-mesh monel.
 5. End Connections: Socket or flare.
 6. Working Pressure Rating: **500 psig** (3450 kPa).
 7. Maximum Operating Temperature: **275 deg F** (135 deg C).
- L. Moisture/Liquid Indicators:
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division](#).
 - b. [Emerson Climate Technologies](#).
 - c. [Heldon Technologies](#).
 - d. [Henry Technologies](#).
 - e. [Parker](#).
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Body: Forged brass.
 3. Window: Replaceable, clear, fused glass window with indicating element protected by filter screen.
 4. Indicator: Color coded to show moisture content in parts per million (ppm).
 5. Minimum Moisture Indicator Sensitivity: Indicate moisture above 60 ppm.
 6. End Connections: Socket or flare.
 7. Working Pressure Rating: **500 psig** (3450 kPa).
 8. Maximum Operating Temperature: **240 deg F** (116 deg C).
 9. UL listed.
- M. Replaceable-Core Filter Dryers: Comply with AHRI 730.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Danfoss LLC; Refrigeration & Air-Conditioning Division](#).
 - b. [Emerson Climate Technologies](#).
 - c. [Heldon Technologies](#).
 - d. [Henry Technologies](#).
 - e. [Parker](#).
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.

2. Body and Cover: Painted-steel shell with ductile-iron cover, stainless-steel screws, and neoprene gaskets.
3. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
4. Desiccant Media: Activated [alumina] [charcoal].
5. Designed for reverse flow (for heat-pump applications).
6. End Connections: Socket.
7. Access Ports: NPS 1/4 (DN 8) connections at entering and leaving sides for pressure differential measurement.
8. Maximum Pressure Loss: [2 psig (14 kPa)] <Insert value>.
9. Rated Flow: <Insert tons (kW)>.
10. Working Pressure Rating: 500 psig (3450 kPa).
11. Maximum Operating Temperature: 240 deg F (116 deg C).

N. Permanent Filter Dryers: Comply with AHRI 730.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)
- b. [Emerson Climate Technologies.](#)
- c. [Heldon Technologies.](#)
- d. [Henry Technologies.](#)
- e. [Parker.](#)
- f. <Insert manufacturer's name>.
- g. or approved equal.

2. Body and Cover: Painted-steel shell.
3. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
4. Desiccant Media: Activated [alumina] [charcoal].
5. Designed for reverse flow (for heat-pump applications).
6. End Connections: Socket.
7. Access Ports: NPS 1/4 (DN 8) connections at entering and leaving sides for pressure differential measurement.
8. Maximum Pressure Loss: [2 psig (14 kPa)] <Insert value>.
9. Rated Flow: <Insert tons (kW)>.
10. Working Pressure Rating: 500 psig (3450 kPa).
11. Maximum Operating Temperature: 240 deg F (116 deg C).

O. Mufflers:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Danfoss LLC; Refrigeration & Air-Conditioning Division.](#)
- b. [Emerson Climate Technologies.](#)
- c. [Heldon Technologies.](#)
- d. [Henry Technologies.](#)
- e. <Insert manufacturer's name>.
- f. or approved equal.

2. Body: Welded steel with corrosion-resistant coating.
3. End Connections: Socket or flare.
4. Working Pressure Rating: 500 psig (3450 kPa).
5. Maximum Operating Temperature: 275 deg F (135 deg C).

P. Receivers: Comply with AHRI 495.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Heldon Technologies](#).
 - b. [Henry Technologies](#).
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Comply with 2010 ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
3. Comply with UL 207; listed and labeled by an NRTL.
4. Body: Welded steel with corrosion-resistant coating.
5. Tappings: Inlet, outlet, liquid level indicator, and safety relief valve.
6. End Connections: Socket or threaded.
7. Working Pressure Rating: 500 psig (3450 kPa).
8. Maximum Operating Temperature: 275 deg F (135 deg C).

Q. Liquid Accumulators: Comply with AHRI 495.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Emerson Climate Technologies](#).
 - b. [Heldon Technologies](#).
 - c. [Henry Technologies](#).
 - d. [Parker](#).
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Body: Welded steel with corrosion-resistant coating.
3. End Connections: Socket or threaded.
4. Working Pressure Rating: 500 psig (3450 kPa).
5. Maximum Operating Temperature: 275 deg F (135 deg C).

R. Flexible Connectors:

1. Corrugated stainless steel hose with single layer of stainless steel exterior braiding, minimum 9 inches long with copper tube ends; for maximum working pressure [500] [400] [350] [300] psig.

2.5 REFRIGERANTS

A. ASHRAE 34, R-134a: Tetrafluoroethane.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Arkema Inc.](#)
 - b. [DuPont; Fluorochemicals Div.](#)
 - c. [Honeywell International Inc.; Genetron Refrigerants.](#)
 - d. [Mexichem Fluor Inc.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.

- B. ASHRAE 34, R-407C: Difluoromethane/Pentafluoroethane/1,1,1,2-Tetrafluoroethane.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Arkema Inc.](#)
 - b. [DuPont; Fluorochemicals Div.](#)
 - c. [Honeywell International Inc.; Genetron Refrigerants.](#)
 - d. [Mexichem Fluor Inc.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.

- C. ASHRAE 34, R-410A: Pentafluoroethane/Difluoromethane.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Arkema Inc.](#)
 - b. [DuPont; Fluorochemicals Div.](#)
 - c. [Honeywell International Inc.; Genetron Refrigerants.](#)
 - d. [Mexichem Fluor Inc.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Ream pipe and tube ends. Remove burrs.
- B. Remove scale and dirt on inside and outside before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

3.2 SYSTEM - GENERAL

- A. Where more than one piping system material is specified ensure system components are compatible and joined to ensure the integrity of the system is not jeopardized.

- Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.
- B. Provide pipe hangers and supports in accordance with **[ASTM B31.5]** **[MSS SP69]** unless indicated otherwise, and in conformance with Section 230529 "Hangers and Supports for HVAC Piping and Equipment".
- C. Liquid Indicators:
1. Use line size liquid indicators in main liquid line leaving condenser.
 2. If receiver is provided, install in liquid line leaving receiver.
 3. Use line size on leaving side of liquid solenoid valves.
- D. Valves:
1. Use service valves on suction and discharge of compressors.
 2. Use gage taps at compressor inlet and outlet.
 3. Use gage taps at hot gas bypass regulators, inlet and outlet.
 4. Use check valves on compressor discharge.
 5. Use check valves on condenser liquid lines on multiple condenser systems.
- E. Refrigerant Charging (Packed Angle) Valve: Use in liquid line between receiver shut-off valve and expansion valve.
- F. Strainers:
1. Use line size strainer upstream of each automatic valve.
 2. Where multiple expansion valves with integral strainers are used, use single main liquid line strainer.
 3. On steel piping systems, use strainer in suction line.
 4. Use shut-off valve on each side of strainer.
- G. Pressure Relief Valves: Use on ASME receivers **[and pipe to outdoors]**.
- H. Permanent Filter-Driers:
1. Use in low temperature systems.
 2. Use in systems utilizing hermetic compressors.
 3. Use filter-driers for each solenoid valve.
- I. Replaceable Cartridge Filter-Driers:
1. Use vertically in liquid line adjacent to receivers.
 2. Use filter-driers for each solenoid valve.
 3. Provide isolation valves and bypass valve for each filter-drier.
- J. Solenoid Valves:
1. Use in liquid line of systems operating with single pump-out or pump-down compressor control.
 2. Use in liquid line of single or multiple evaporator systems, upstream of each

- expansion valve.
3. Use in oil bleeder lines from flooded evaporators to stop flow of oil and refrigerant into the suction line when system shuts down.

K. Receivers:

1. Use on systems [5] <Insert number> tons and larger, sized to accommodate pump down charge.
2. Use on systems with long piping runs.

L. Flexible Connectors: Utilize at or near compressors where piping configuration does not absorb vibration.

3.3 PIPING APPLICATIONS FOR REFRIGERANT R-134a

- A. Suction Lines [NPS 1-1/2 (DN 40) and Smaller] <Insert pipe size range> for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
- B. Suction Lines [NPS 4 (DN 100) and Smaller] [NPS 2 to NPS 4 (DN 50 to DN 100)] <Insert pipe size range> for Conventional Air-Conditioning Applications: Copper, [Type ACR] [Type L (B)], drawn-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
- C. Hot-Gas and Liquid Lines[, and Suction Lines for Heat-Pump Applications]: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
- D. Hot-Gas and Liquid Lines[, and Suction Lines for Heat-Pump Applications]: Copper, [Type ACR] [Type K (A)] [Type L (B)], drawn-temper tubing and wrought-copper fittings with soldered joints.
- E. Hot-Gas and Liquid Lines[, and Suction Lines for Heat-Pump Applications]:
 1. [NPS 1-1/2 (DN 40) and Smaller] <Insert pipe size range>: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
 2. [NPS 1-1/2 (DN 40) and Smaller] <Insert pipe size range>: Copper, [Type ACR] [Type K (A)] [Type L (B)], drawn-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
 3. [NPS 4 (DN 100)] <Insert pipe size>: Copper, [Type ACR] [Type K (A)] [Type L (B)], drawn-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
- F. Safety-Relief-Valve Discharge Piping: Schedule 40, black-steel and wrought-steel fittings with welded joints.
- G. Safety-Relief-Valve Discharge Piping: Copper, [Type ACR] [Type K (A)] [Type L (B)], drawn-temper tubing and wrought-copper fittings with soldered joints.

H. Safety-Relief-Valve Discharge Piping:

1. [NPS 1-1/2 (DN 40) and Smaller] <Insert pipe size range>: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
2. [NPS 1-1/2 (DN 40) and Smaller] <Insert pipe size range>: Copper, [Type ACR] [Type L (B)], drawn-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
3. [NPS 4 (DN 100)] <Insert pipe size>: Copper, [Type ACR] [Type K (A)] [Type L (B)], drawn-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.

3.4 PIPING APPLICATIONS FOR REFRIGERANT R-407C

- A. Suction Lines [NPS 1-1/2 (DN 40) and Smaller] <Insert pipe size range> for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
- B. Suction Lines [NPS 4 (DN 100) and Smaller] [NPS 2 to NPS 4 (DN 50 to DN 100)] <Insert pipe size range> for Conventional Air-Conditioning Applications: Copper, [Type ACR] [Type L (B)], drawn-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
- C. Hot-Gas and Liquid Lines[, and Suction Lines for Heat-Pump Applications]: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
- D. Hot-Gas and Liquid Lines[, and Suction Lines for Heat-Pump Applications]: Copper, [Type ACR] [Type K (A)] [Type L (B)], drawn-temper tubing and wrought-copper fittings with soldered joints.
- E. Hot-Gas and Liquid Lines[, and Suction Lines for Heat-Pump Applications]:
1. [NPS 1 (DN 25) and Smaller] <Insert pipe size range>: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
 2. [NPS 1 (DN 25) and Smaller] <Insert pipe size range>: Copper, [Type ACR] [Type L (B)], drawn-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
 3. [NPS 1-1/4 to NPS 2 (DN 32 to DN 50)] <Insert pipe size range>: Copper, Type K (A), annealed- or drawn-temper tubing and wrought-copper fittings with [brazed] [or] [soldered] joints.
 4. [NPS 4 (DN 100)] <Insert pipe size>: Copper, [Type ACR] [Type K (A)] [Type L (B)], drawn-temper tubing and wrought-copper fittings with soldered joints.
- F. Safety-Relief-Valve Discharge Piping: Schedule 40, black-steel and wrought-steel fittings with welded joints.
- G. Safety-Relief-Valve Discharge Piping: Copper, [Type ACR] [Type K (A)] [Type L (B)],

drawn-temper tubing and wrought-copper fittings with soldered joints.

H. Safety-Relief-Valve Discharge Piping:

1. **[NPS 1 (DN 25) and Smaller]** <Insert pipe size range>: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
2. **[NPS 1 (DN 25) and Smaller]** <Insert pipe size range>: Copper, **[Type ACR]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
3. **[NPS 1-1/4 to NPS 2 (DN 32 to DN 50)]** <Insert pipe size range>: Copper, Type **K (A)**, annealed- or drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
4. **[NPS 4 (DN 100)]** <Insert pipe size>: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with soldered joints.

3.5 PIPING APPLICATIONS FOR REFRIGERANT R-410A

- A. Suction Lines **[NPS 1-1/2 (DN 40) and Smaller]** <Insert pipe size range> for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
- B. Suction Lines **[NPS 3-1/2 (DN 90) and Smaller]** **[NPS 2 to NPS 3-1/2 (DN 50 to DN 90)]** <Insert pipe size range> for Conventional Air-Conditioning Applications: Copper, **[Type ACR]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
- C. Suction Lines **[NPS 4 (DN 100) and Smaller]** <Insert pipe size range> for Conventional Air-Conditioning Applications: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with soldered joints.
- D. Hot-Gas and Liquid Lines[, **and Suction Lines for Heat-Pump Applications**]: Copper, **[Type ACR]** **[Type L (B)]**, annealed- or drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
- E. Hot-Gas and Liquid Lines[, **and Suction Lines for Heat-Pump Applications**]: Copper, Type **K (A)**, annealed- or drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
- F. Hot-Gas and Liquid Lines[, **and Suction Lines for Heat-Pump Applications**]: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with 95-5 tin-antimony soldered joints.
- G. Hot-Gas and Liquid Lines[, **and Suction Lines for Heat-Pump Applications**]: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with Alloy HB soldered joints.
- H. Hot-Gas and Liquid Lines[, **and Suction Lines for Heat-Pump Applications**]:

1. **[NPS 5/8 (DN 18) and Smaller]** <Insert pipe size range>: Copper, **[Type ACR]** **[Type L (B)]**, annealed- or drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
 2. **[NPS 3/4 to NPS 1 (DN 20 to DN 25) and Smaller]** <Insert pipe size range>: Copper, Type **K (A)**, annealed- or drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
 3. **[NPS 1-1/4 (DN 32) and Smaller]** <Insert pipe size range>: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with 95-5 tin-antimony soldered joints.
 4. **[NPS 1-1/2 to NPS 2 (DN 40 to DN 50)]** <Insert pipe size range>: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with Alloy HB soldered joints.
- I. Hot-Gas and Liquid Lines[, and Suction Lines for Heat-Pump Applications] **[NPS 2 to NPS 4 (DN 50 to DN 100)]** <Insert pipe size range>: Schedule 40, black-steel and wrought-steel fittings with welded joints.
- J. Safety-Relief-Valve Discharge Piping: Copper, **[Type ACR]** **[Type L (B)]**, annealed- or drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
- K. Safety-Relief-Valve Discharge Piping: Copper, Type **K (A)**, annealed- or drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
- L. Safety-Relief-Valve Discharge Piping: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with 95-5 tin-antimony soldered joints.
- M. Safety-Relief-Valve Discharge Piping: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with Alloy HB soldered joints.
- N. Safety-Relief-Valve Discharge Piping:
1. **[NPS 5/8 (DN 18) and Smaller]** <Insert pipe size range>: Copper, **[Type ACR]** **[Type L (B)]**, annealed- or drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
 2. **[NPS 3/4 to NPS 1 (DN 20 to DN 25) and Smaller]** <Insert pipe size range>: Copper, Type **K (A)**, annealed- or drawn-temper tubing and wrought-copper fittings with **[brazed]** **[or]** **[soldered]** joints.
 3. **[NPS 1-1/4 (DN 32) and Smaller]** <Insert pipe size range>: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with 95-5 tin-antimony soldered joints.
 4. **[NPS 1-1/2 to NPS 2 (DN 40 to DN 50)]** <Insert pipe size range>: Copper, **[Type ACR]** **[Type K (A)]** **[Type L (B)]**, drawn-temper tubing and wrought-copper fittings with Alloy HB soldered joints.
- O. Safety-Relief-Valve Discharge Piping **[NPS 2 to NPS 4 (DN 50 to DN 100)]** <Insert pipe size range>: Schedule 40, black-steel and wrought-steel fittings with welded joints.

3.6 VALVE AND SPECIALTY APPLICATIONS

- A. Install **[diaphragm packless] [packed-angle]** valves in suction and discharge lines of compressor.
- B. Install service valves for gage taps at inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of valves and strainers.
- C. Install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.
- D. Except as otherwise indicated, install **[diaphragm packless] [packed-angle]** valves on inlet and outlet side of filter dryers.
- E. Install a full-size, three-valve bypass around filter dryers.
- F. Install solenoid valves upstream from each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at top.
- G. Install thermostatic expansion valves as close as possible to distributors on evaporators.
 - 1. Install valve so diaphragm case is warmer than bulb.
 - 2. Secure bulb to clean, straight, horizontal section of suction line using two bulb straps. Do not mount bulb in a trap or at bottom of the line.
 - 3. If external equalizer lines are required, make connection where it will reflect suction-line pressure at bulb location.
- H. Install safety relief valves where required by 2010 ASME Boiler and Pressure Vessel Code. Pipe safety-relief-valve discharge line to outside according to ASHRAE 15.
- I. Install moisture/liquid indicators in liquid line at the inlet of the thermostatic expansion valve or at the inlet of the evaporator coil capillary tube.
- J. Install strainers upstream from and adjacent to the following unless they are furnished as an integral assembly for the device being protected:
 - 1. Solenoid valves.
 - 2. Thermostatic expansion valves.
 - 3. Hot-gas bypass valves.
 - 4. Compressor.
- K. Install filter dryers in liquid line between compressor and thermostatic expansion valve, **and in the suction line at the compressor**.
- L. Install receivers sized to accommodate pump-down charge.
- M. Install flexible connectors at compressors.

3.7 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.
- B. Install refrigerant piping according to ASHRAE 15.
- C. Install refrigeration specialties in accordance with manufacturer's instructions.
- D. Route piping in orderly manner, with plumbing parallel to building structure, and maintain gradient.
- E. Install piping to conserve building space and not interfere with use of space.
- F. Group piping whenever practical at common elevations and locations. Slope piping one percent in direction of oil return.
- G. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- H. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- I. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- J. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- K. Install piping adjacent to machines to allow service and maintenance.
- L. Arrange piping to return oil to compressor. Provide traps and loops in piping, and provide double risers as required. Slope horizontal piping 0.40 percent in direction of flow.
- M. Provide clearance for installation of insulation and access to valves and fittings.
- N. Install piping free of sags and bends.
- O. Install fittings for changes in direction and branch connections.
- P. Select system components with pressure rating equal to or greater than system operating pressure.
- Q. Refer to Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC" for solenoid valve controllers, control wiring, and sequence of operation.

- R. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- S. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Section 083113 "Access Doors and Frames" if valves or equipment requiring maintenance is concealed behind finished surfaces.
- T. Install refrigerant piping in protective conduit where installed belowground.
- U. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.
- V. Slope refrigerant piping as follows:
1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
 2. Install horizontal suction lines with a uniform slope downward to compressor.
 3. Install traps and double risers to entrain oil in vertical runs.
 4. Liquid lines may be installed level.
- W. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.
1. Flood piping system with nitrogen when brazing.
- X. Before installation of steel refrigerant piping, clean pipe and fittings using the following procedures:
1. Shot blast the interior of piping.
 2. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through tubing by means of a wire or electrician's tape.
 3. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
 4. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
 5. Finally, draw a clean, dry, lintless cloth through the tube or pipe.
 6. Safety-relief-valve discharge piping is not required to be cleaned but is required to be open to allow unrestricted flow.
- Y. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.
- Z. Where pipe support members are welded to structural building frame, brush clean, and apply one coat of zinc rich primer to welding.
- AA. Prepare unfinished pipe, fittings, supports, and accessories ready for finish painting. Refer to Division 9.

- BB. Insulate piping and equipment; refer to Section 230719 "HVAC Piping Insulation" and Section 230716 "HVAC Equipment Insulation".
- CC. Follow ASHRAE 15 procedures for charging and purging of systems and for disposal of refrigerant.
- DD. Provide replaceable cartridge filter-driers, with isolation valves and valved bypass.
- EE. Locate expansion valve sensing bulb immediately downstream of evaporator on suction line.
- FF. Provide external equalizer piping on expansion valves with refrigerant distributor connected to evaporator.
- GG. Install flexible connectors at right angles to axial movement of compressor, parallel to crankshaft.
- HH. Lever handle valves: Install valve handle so that the handle opens in the direction of fluid flow.
- II. Provide electrical connection to solenoid valves. Comply with requirements of Division 26.
- JJ. Identify refrigerant piping and valves according to Section 230553 "Identification for HVAC Piping and Equipment."
- KK. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- LL. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- MM. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."
- NN. Fully charge completed system with refrigerant after testing.

3.8 PIPE JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Fill pipe and fittings with an inert gas (nitrogen or carbon dioxide), during brazing or welding, to prevent scale formation.

- D. Soldered Joints: Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook."
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."
 - 1. Use Type BCuP (copper-phosphorus) alloy for joining copper socket fittings with copper pipe.
 - 2. Use Type BAg (cadmium-free silver) alloy for joining copper with bronze or steel.
- F. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and to restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.
- H. Welded Joints: Construct joints according to AWS D10.12M/D10.12.
- I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.9 HANGERS AND SUPPORTS

- A. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Install the following pipe attachments:
 - 1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet (6 m) long.
 - 2. Roller hangers and spring hangers for individual horizontal runs 20 feet (6 m) or longer.
 - 3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet (6 m) or longer, supported on a trapeze.
 - 4. Spring hangers to support vertical runs.
 - 5. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- C. Install hangers for copper tubing with the following maximum spacing and minimum rod diameters:
 - 1. NPS 1/2 (DN 15): Maximum span, 78 inches (1950 mm); minimum rod, 3/8 inch (9.5 mm).
 - 2. NPS 5/8 (DN 18): Maximum span, 78 inches (1950 mm); minimum rod, 3/8 inch

3. (9.5 mm).
NPS 1 (DN 25): Maximum span, 78 inches (1950 mm); minimum rod, 3/8 inch (9.5 mm).
4. NPS 1-1/4 (DN 32): Maximum span, 78 inches (1950 mm); minimum rod, 3/8 inch (9.5 mm).
5. NPS 1-1/2 (DN 40): Maximum span, 10 feet (3.33 m); minimum rod, 3/8 inch (9.5 mm).
6. NPS 2 (DN 50): Maximum span, 10 feet (3.33 m); minimum rod, 3/8 inch (9.5 mm).
7. NPS 2-1/2 (DN 65): Maximum span, 10 feet (3.33 m); minimum rod, 1/2 inch (13 mm).
8. NPS 3 (DN 80): Maximum span, 10 feet (3.33 m); minimum rod, 1/2 inch (13 mm).
9. NPS 4 (DN 100): Maximum span, 10 feet (3.7 m); minimum rod, 5/8 inch (16 mm).

D. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 2 (DN 50): Maximum span, 10 feet (3 m); minimum rod, 3/8 inch (9.5 mm).
2. NPS 2-1/2 (DN 65): Maximum span, 10 feet (3 m); minimum rod, 1/2 inch (13 mm).
3. NPS 3 (DN 80): Maximum span, 10 feet (3.7 m); minimum rod, 1/2 inch (13 mm).
4. NPS 4 (DN 100): Maximum span, 10 feet (3 m); minimum rod, 5/8 inch (16 mm).
5. NPS 6 (DN 150): Maximum span, 10 feet (3 m); minimum rod, 5/8 inch (16 mm).
6. NPS 8 (DN 200): Maximum span, 14 feet (4.3 m); minimum rod, 7/8 inch (22 mm).
7. NPS 10 (DN 250): Maximum span, 14 feet (4.3 m); minimum rod, 7/8 inch (22 mm).
8. NPS 12 (DN 300): Maximum span, 14 feet (4.3 m); minimum rod, 7/8 inch (22 mm).

E. Support multifloor vertical runs at least at each floor.

3.10 FIELD QUALITY CONTROL

A. Test Witnesses: System testing shall be witnessed by DEN Mechanical Inspector, DEN Project Manager and/or a DEN appointed representative. Provide a written request for testing a minimum of 72 hours prior to test.

B. Perform the following tests and inspections:

1. Comply with ASME B31.5, Chapter VI.
2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in "Performance Requirements" Article.
 - a. Fill system with nitrogen to the required test pressure.
 - b. System shall maintain test pressure at the manifold gage throughout duration of test.
 - c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
 - d. Remake leaking joints using new materials, and retest until no leakage and satisfactory results are achieved.

- C. Prepare test and inspection reports.

3.11 SYSTEM CHARGING

- A. Charge system using the following procedures:
 1. Install core in filter dryers after leak test but before evacuation.
 2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers (67 Pa). If vacuum holds for 12 hours, system is ready for charging.
 3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig (14 kPa).
 4. Charge system with a new filter-dryer core in charging line.

3.12 ADJUSTING

- A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.
- B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
- C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.
- D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
 1. Open shutoff valves in condenser water circuit.
 2. Verify that compressor oil level is correct.
 3. Open compressor suction and discharge valves.
 4. Open refrigerant valves except bypass valves that are used for other purposes.
 5. Check open compressor-motor alignment and verify lubrication for motors and bearings.
- E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232300

SECTION 232500 - HVAC WATER TREATMENT

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes the following HVAC water-treatment systems:
 - 1. Manual and automatic chemical-feed equipment and controls.
 - 2. Ozone-generator biocide equipment and controls.
 - 3. Stainless-steel pipes and fittings.
 - 4. UV-irradiation unit, biocide equipment, and controls.
 - 5. Chemical treatment test equipment.
 - 6. Chemicals.
 - 7. HVAC makeup-water softeners.
 - 8. RO equipment for HVAC makeup water.
 - 9. Water filtration equipment.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. EEPROM: Electrically erasable, programmable read-only memory.
- B. RO: Reverse osmosis.
- C. TSS: Total suspended solids are solid materials, including organic and inorganic, that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.4 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, water-pressure drops, shipping, installed and operating weights, operating characteristics, connection requirements, and furnished specialties and accessories for the following products:
1. Bypass feeders.
 2. Water meters.
 3. Inhibitor injection timers.
 4. pH controllers.
 5. TSS controllers.
 6. Biocide feeder timers.
 7. Chemical solution tanks.
 8. Injection pumps.
 9. Ozone generators.
 10. UV-irradiation units.
 11. Chemical test equipment.
 12. Chemical material safety data sheets.
 13. Water softeners.
 14. RO units.
 15. Multimedia filters.
 16. Self-cleaning strainers.
 17. Replaceable bag- or cartridge-type filters.
 18. Centrifugal separators.
 19. Agitators.
 20. Control equipment and devices.
 21. Filters.
 22. Chemical feeders.
 23. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Pretreatment and chemical[, **and ozone-generator biocide**][, **and UV-irradiation biocide**] treatment equipment showing tanks, maintenance space required, and piping connections to HVAC systems.
- C. 1. Include plans, elevations, sections, and attachment details.
1. Indicate system schematic, equipment locations, and controls schematics, electrical characteristics, and connection requirements.
 2. Detail equipment assemblies indicating dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For [**water softeners**] [**RO equipment**] [**water filtration units**] and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
- B. Water Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.
- C. Field quality-control reports. Indicate start-up of treatment systems when completed and operating properly. Indicate analysis of system water after cleaning and after treatment.
- D. Submit certificate of compliance from authority having jurisdiction indicating approval of chemicals and their proposed disposal.
- E. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project Site.
- F. Other Informational Submittals:
1. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in "Performance Requirements" Article.
 2. Water Analysis: Illustrate water quality available at Project site.
 3. Passivation Confirmation Report: Verify passivation of galvanized-steel surfaces, and confirm this observation in a letter to Architect.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sensors, injection pumps, **[water softeners,]** **[RO equipment,]** **[water filtration units,]** and controllers to include in emergency, operation, and maintenance manuals.
1. Include data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step-by-step instructions on test procedures including target concentrations.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
1. Record actual locations of equipment and piping, including sampling points and location of chemical injectors.

1.7 MAINTENANCE MATERIALS

- A. Provide sufficient chemicals for treatment and testing during warranty period.

1.8 MAINTENANCE SERVICE

- A. Provide monthly technical service visits to perform field inspections and make water analysis on site. Detail findings in writing on proper practices, chemical treating requirements, and corrective actions needed. Submit two (2) copies of field service report after each visit.
- B. Provide laboratory and technical assistance services during this maintenance period.
- C. Provide onsite inspections of equipment during scheduled or emergency shutdown to properly evaluate success of water treatment program, and make recommendations in writing based upon these inspections.
- D. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above to inhibit corrosion and scale formation for hydronic piping and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion and shall include the following:
 - 1. Initial water analysis and HVAC water-treatment recommendations.
 - 2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
 - 3. Periodic field service and consultation.
 - 4. Customer report charts and log sheets.
 - 5. Laboratory technical analysis.
 - 6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

1.9 QUALITY ASSURANCE

- A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.
- B. Installer Qualifications: An experienced installer who is an authorized representative of the chemical treatment manufacturer for both installation and maintenance of chemical treatment equipment required for this Project with minimum of three (3) years experience.
- C. Manufacturers: Companies specializing in manufacturing the products specified in this Section with minimum of five (5) years documented experience. Companies shall have local representatives with water analysis laboratories and full time service personnel.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Conform to applicable code for addition of non-potable chemicals to building mechanical systems, and for to public sewage systems.
- F. Products Requiring Electrical Connection: Listed and classified by Underwriters'

Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.10 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements" and Division 1.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Ampion Corp.](#)
2. [Anderson Chemical Company.](#)
3. [Aqua-Chem, Inc.](#)
4. [Barclay Water Management, Inc.](#)
5. [Boland.](#)
6. [Cascade Water Services, Inc.](#)
7. [Earthwise Environmental Inc.](#)
8. [General Electric Company; GE Water & Process Technologies.](#)
9. [H-O-H Water Technology, Inc.](#)
10. [Metro Group, Inc. \(The\); Metropolitan Refining Div.](#)
11. [Nalco; an Ecolab company.](#)
12. [Watcon, Inc.](#)
13. [Water Services Inc.](#)
14. **<Insert manufacturer's name>.**
15. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Water quality for HVAC systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of HVAC equipment without creating a hazard to operating personnel or to the environment.
- B. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics,

operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.

- C. Closed hydronic systems, including **[hot-water heating] [chilled water] [dual-temperature water] [and] [glycol cooling]**, shall have the following water qualities:
1. pH: Maintain a value within **[9.0 to 10.5] <Insert range>**.
 2. "P" Alkalinity: Maintain a value within **[100 to 500] <Insert range>** ppm.
 3. Boron: Maintain a value within **[100 to 200] <Insert range>** ppm.
 4. Chemical Oxygen Demand: Maintain a maximum value of **[100] <Insert number>** ppm.
 5. Soluble Copper: Maintain a maximum value of **[0.20] <Insert number>** ppm.
 6. TSS: Maintain a maximum value of **[10] <Insert number>** ppm.
 7. Ammonia: Maintain a maximum value of **[20] <Insert number>** ppm.
 8. Free Caustic Alkalinity: Maintain a maximum value of **[20] <Insert number>** ppm.
 9. Microbiological Limits:
 - a. Total Aerobic Plate Count: Maintain a maximum value of **[1000] <Insert number>** organisms/mL.
 - b. Total Anaerobic Plate Count: Maintain a maximum value of **[100] <Insert number>** organisms/mL.
 - c. Nitrate Reducers: Maintain a maximum value of **[100] <Insert number>** organisms/mL.
 - d. Sulfate Reducers: Maintain a maximum value of **[zero] <Insert number>** organisms/mL.
 - e. Iron Bacteria: Maintain a maximum value of **[zero] <Insert number>** organisms/mL.
 10. **<Insert other requirements if necessary>**.
- D. Steam Boiler and Steam Condensate:
1. Steam Condensate:
 - a. pH: Maintain a value within **[7.8 to 8.4] <Insert range>**.
 - b. Total Alkalinity: Maintain a value within **[5 to 50] <Insert range>** ppm.
 - c. Chemical Oxygen Demand: Maintain a maximum value of **[15] <Insert number>** ppm.
 - d. Soluble Copper: Maintain a maximum value of **[0.20] <Insert number>** ppm.
 - e. TSS: Maintain a maximum value of **[10] <Insert number>** ppm.
 - f. Ammonia: Maintain a maximum value of **[20] <Insert number>** ppm.
 - g. Total Hardness: Maintain a maximum value of **[2] <Insert number>** ppm.
 - h. **<Insert other requirements if necessary>**.
 2. Steam boiler operating at **15 psig (104 kPa)** and less shall have the following water qualities:

- a. "OH" Alkalinity: Maintain a value within [200 to 400] <Insert range> ppm.
 - b. TSS: Maintain a value within [600 to 3000] <Insert range> ppm.
 - c. <Insert other requirements if necessary>.
3. Steam boiler operating at more than 15 psig (104 kPa) shall have the following water qualities:
- a. "OH" Alkalinity: Maintain a value within [200 to 400] <Insert range> ppm.
 - b. TSS: Maintain a value within [600 to 1200] <Insert range> ppm to maximum 30 times RO water TSS.
 - c. <Insert other requirements if necessary>.
- E. Open hydronic systems, including [condenser] [fluid-cooler spray] water, shall have the following water qualities:
1. pH: Maintain a value within [8.0 to 9.1] <Insert range>.
 2. "P" Alkalinity: Maintain a maximum value of [100] <Insert number> ppm.
 3. Chemical Oxygen Demand: Maintain a maximum value of [100] <Insert number> ppm.
 4. Soluble Copper: Maintain a maximum value of [0.20] <Insert number> ppm.
 5. TSS: Maintain a maximum value of [10] <Insert number> ppm.
 6. Ammonia: Maintain a maximum value of [20] <Insert number> ppm.
 7. Free "OH" Alkalinity: Maintain a maximum value of [zero] <Insert number> ppm.
 8. Microbiological Limits:
 - a. Total Aerobic Plate Count: Maintain a maximum value of [10,000] <Insert number> organisms/mL.
 - b. Total Anaerobic Plate Count: Maintain a maximum value of [1000] <Insert number> organisms/mL.
 - c. Nitrate Reducers: Maintain a maximum value of [100] <Insert number> organisms/mL.
 - d. Sulfate Reducers: Maintain a maximum value of [zero] <Insert number> organisms/mL.
 - e. Iron Bacteria: Maintain a maximum value of [zero] <Insert number> organisms/mL.
 9. Polymer Testable: Maintain a minimum value within [10 to 40] <Insert range>.
 10. <Insert other requirements if necessary>.
- F. Passivation for Galvanized Steel: For the first 60 days of operation.
1. pH: Maintain a value within [7 to 8] <Insert range>.
 2. Calcium Carbonate Hardness: Maintain a value within [100 to 300] <Insert range> ppm.
 3. Calcium Carbonate Alkalinity: Maintain a value within [100 to 300] <Insert range> ppm.

2.3 MANUAL CHEMICAL-FEED EQUIPMENT

- A. Bypass Feeders: Steel, with corrosion-resistant exterior coating, minimum **3-1/2-inch (89-mm)** fill opening in the top, and **NPS 3/4 (DN 20)** bottom inlet and top side outlet. Quarter turn or threaded fill cap with gasket seal and diaphragm to lock the top on the feeder when exposed to system pressure in the vessel.
1. Capacity: [2 gal. (7.6 L)] [5 gal. (19 L)] **<Insert value>**.
 2. Minimum Working Pressure: [125 psig (860 kPa)] [175 psig (1210 kPa)] **<Insert value>**.

2.4 AUTOMATIC CHEMICAL-FEED EQUIPMENT

A. Water Meter:

1. AWWA C700, oscillating-piston, magnetic-drive, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: **150 psig (1035 kPa)**.
4. Maximum Pressure Loss at Design Flow: **3 psig (20 kPa)**.
5. Registration: **Gallons (Liters)** or **cubic feet (cubic meters)**.
6. End Connections: Threaded.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac, and that will close at adjustable increments of total flow.

B. Water Meter:

1. AWWA C701, turbine-type, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: **100 psig (690 kPa)**.
4. Maximum Pressure Loss at Design Flow: **3 psig (20 kPa)**.
5. Registration: **Gallons (Liters)** or **cubic feet (cubic meters)**.
6. End Connections: Threaded.
7. Controls: Low-voltage signal capable of transmitting **1000 feet (305 m)**.

C. Water Meter:

1. AWWA C701, turbine-type, totalization meter.
2. Body: [**Bronze**] [**Epoxy-coated cast iron**].
3. Minimum Working-Pressure Rating: **150 psig (1035 kPa)**.
4. Maximum Pressure Loss at Design Flow: **3 psig (20 kPa)**.
5. Registration: **Gallons (Liters)** or **cubic feet (cubic meters)**.
6. End Connections: Flanged.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac, and that will close at adjustable increments of total flow.

D. Inhibitor Injection Timers:

1. Microprocessor-based controller with digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. [**Interface for start/stop and status**

indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."]

2. Programmable timers with infinite adjustment over full range, and mounted in cabinet with hand-off-auto switches and status lights.
3. Test switch.
4. Hand-off-auto switch for chemical pump.
5. Illuminated legend to indicate feed when pump is activated.
6. Programmable lockout timer with indicator light. Lockout timer to deactivate the pump and activate alarm circuits.
7. Digital display makeup totalizer to measure amount of makeup and bleed-off water from two water meter inputs.

E. pH Controller:

1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 14 units. Incorporate solid-state integrated circuits and digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
2. Digital display and touch pad for input.
3. Sensor probe adaptable to sample stream manifold.
4. High, low, and normal pH indication.
5. High or low-pH-alarm-light trip points, field adjustable; with silence switch.
6. Hand-off-auto switch for acid pump.
7. Internal adjustable hysteresis or deadband.

F. TSS Controller:

1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 5000 micromhos. Incorporate solid-state integrated circuits and digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
2. Digital display and touch pad for input.
3. Sensor probe adaptable to sample stream manifold.
4. High, low, and normal conductance indication.
5. High- or low-conductance-alarm-light trip points, field adjustable; with silence switch.
6. Hand-off-auto switch for solenoid bleed-off valve.
7. Bleed-off valve activated indication.
8. Internal adjustable hysteresis or deadband.
9. Bleed Valves:
 - a. Cooling Systems: Forged-brass body, globe pattern, general-purpose solenoid with continuous-duty coil, or motorized valve.
 - b. Steam Boilers: Motorized ball valve, steel body, and TFE seats and seals.

G. Biocide Feeder Timer:

1. Microprocessor-based controller with digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
 2. 24-hour timer with 14-day skip feature to permit activation any hour of day.
 3. Precision, solid-state, bleed-off lockout timer and clock-controlled biocide pump timer. Prebleed and bleed lockout timers.
 4. Solid-state alternator to enable use of two formulations.
 5. 24-hour display of time of day.
 6. 14-day display of day of week.
 7. Battery backup so clock is not disturbed by power outages.
 8. Hand-off-auto switches for biocide pumps.
 9. Biocide A and Biocide B pump running indication.
- H. Chemical Solution Tanks:
1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
 2. Molded cover with recess for mounting pump.
 3. Capacity: [30 gal. (114 L)] [50 gal. (189 L)] [120 gal. (454 L)] <Insert value>.
- I. Chemical Solution Injection Pumps:
1. Self-priming, positive displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
 2. Adjustable flow rate.
 3. Metal and thermoplastic construction.
 4. Built-in relief valve.
 5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- J. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A 269, Type 304, stainless steel for steam boiler injection assemblies.
- K. Injection Assembly:
1. Quill: Minimum **NPS 1/2 (DN 15)** with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
 2. Ball Valve: [**Three**] [**Two**]-piece stainless steel, as described in "Stainless-Steel Pipes and Fittings" Article; selected to fit quill.
 3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
 4. Assembly Pressure/Temperature Rating: Minimum **600 psig (4137 kPa)** at **200 deg F (93 deg C)**.

2.5 OZONE-GENERATOR BIOCIDES EQUIPMENT

- A. Corona discharge generator with stainless-steel generating cells and transformer housed in a NEMA 250, Type 4 enclosure. Assembly shall be suitable for continuous duty. Provide site glasses to verify proper operation of generator.
- B. Water-cooled generators shall be provided with cooling water at maximum [70 deg F (21 deg C)] <Insert value> and [35 psig (241 kPa)] <Insert value>.
- C. Generator vessels exposed to system pressure shall be constructed according to ASME Boiler and Pressure Vessel Code and be equipped with pressure relief valve.
- D. External air compressor or induced airflow through a cleanable prefilter supplies concentrated oxygen through a molecular sieve with minus 62 deg F (minus 52 deg C) dew point to avoid the formation of nitric acid.
- E. Microprocessor-based control with software in EEPROM, surge protection, high-temperature cutout, and operational status lights. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
- F. Ozone Contactors:
 - 1. Bubble diffusers.
 - 2. Induction injection nozzle.
 - 3. Injectors with static mixers.
- G. Ozone Detector and Alarm Devices:
 - 1. Detector:
 - a. Sensor: Metal dioxide semiconductor.
 - b. Concentration Range: [0.01 to 0.14] <Insert range> ppm.
 - c. Accuracy: Plus or minus 20 percent of range.
 - d. Sensitivity: 0.01 ppm.
 - e. Response Time: Maximum 10 seconds.
 - f. Operating Temperature: 50 to 100 deg F (10 to 38 deg C).
 - g. Relative Humidity: 20 to 95 percent, noncondensing over the operating temperature range.
 - 2. Horns:
 - a. Electric-vibrating-polarized type.
 - b. 24-V dc, with provision for housing the operating mechanism behind a grille.
 - c. Horns shall produce a sound-pressure level of 90 dBA, measured 10 feet (3 m) from the horn.
 - d. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

3. Visible Alarm Devices:

- a. Xenon strobe lights listed in UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate.
- b. Rated Light Output: **[75] [110] <Insert number>** candela.
- c. Strobe Leads: Factory connected to screw terminals.

H. Self-Contained Breathing Apparatus: Open-circuit, pressure-demand compressed air includes completely assembled, portable, self-contained devices designed for hazardous breathing environment application.

1. Face Piece: EPDM or silicone rubber construction material, one-size-fits-all with double-sealing edge, stainless-steel speaking diaphragm and lens retainer, five adjustable straps to hold face piece to head (two straps on each side and one on top), exhalation valve in mask, close-fitting nose piece to ensure no CO₂ buildup, and perspiration drain to avoid skin irritation and to prevent eyepiece, spectacle, and lens fogging.
2. Backplate: Orthopedically designed of **[chemical and impact-resistant, glass-fiber composite] [aluminum]**.
3. Harness and Carrier Assembly: Large triangular back pad, backplate, and adjustable waist and shoulder straps. Modular in design, detachable components, and easy to clean and maintain. Shoulder straps padded with flame-resistant material, reinforced with stainless-steel cable, and attached with T-nuts, washers, and screws.
4. Air Cylinder: **[30] [45] [60]**-minute, low-pressure, air-supply-loaded **[fiberglass] [aluminum] [steel]** cylinders fitted with quick-fill assembly for refilling and air transfer.
5. Wall-Mounting Cabinet: Leakproof, corrosion-resistant, clear, plastic case.
6. Tested and Certified: By the National Institute for Occupational Safety and Health and by the Mine Safety and Health Administration, according to 42 CFR 84, Subpart H.

2.6 STAINLESS-STEEL PIPES AND FITTINGS

- A. Stainless-Steel Tubing: Comply with ASTM A 269, Type 316.
- B. Stainless-Steel Fittings: Comply with ASTM A 815/A 815M, Type 316, Grade WP-S.
- C. Two-Piece, Full-Port, Stainless-Steel Ball Valves: ASTM A 351/A 351M, Type 316 stainless-steel body; ASTM A 276, Type 316 stainless-steel stem and vented ball, carbon-filled TFE seats, threaded body design with adjustable stem packing, threaded ends, and **250-psig (1725-kPa)** Steam Working Pressure and **600-psig (4140-kPa)** Cold Working Pressure ratings.
- D. Three-Piece, Full-Port, Stainless-Steel Ball Valves: ASTM A 351/A 351M, Type 316 stainless-steel body; ASTM A 276, Type 316 stainless-steel stem and vented ball, threaded body design with adjustable stem packing, threaded ends, and **150-psig (1035-kPa)** Steam Working Pressure and **600-psig (4140-kPa)** Cold Working Pressure rating.

2.7 UV BIOCIDES EQUIPMENT

- A. Target Irradiation: Minimum 30,000 microwatts x s/sq. cm.
- B. Light Source Vessels:
 - 1. ASTM A 666, Type 304 stainless steel.
 - 2. Construct for minimum [150 psig (1035 kPa)] <Insert value> at [150 deg F (65 deg C)] <Insert value> according to ASME Boiler and Pressure Vessel Code, and equipped with pressure relief valve.
 - 3. Light Source Sleeve: Quartz, with EPDM O-ring seals.
 - 4. Light Source: Replaceable UV lamp producing minimum target irradiation of 254-nm wavelength light.
- C. Controls: Interlock with pumps to operate when water is circulating.

2.8 CHEMICAL TREATMENT TEST EQUIPMENT

- A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounting cabinet for testing pH, TSS, inhibitor, chloride, alkalinity, and hardness; sulfite and testable polymer tests for high-pressure boilers; and oxidizing biocide test for open cooling systems.
- B. Sample Cooler:
 - 1. Tube: Sample.
 - a. Size: NPS 1/4 (DN 8) tubing.
 - b. Material: ASTM A 666, Type 316 stainless steel.
 - c. Pressure Rating: Minimum 2000 psig (13 790 kPa).
 - d. Temperature Rating: Minimum 850 deg F (454 deg C).
 - 2. Shell: Cooling water.
 - a. Material: ASTM A 666, Type 304 stainless steel.
 - b. Pressure Rating: Minimum 250 psig (1725 kPa).
 - c. Temperature Rating: Minimum 450 deg F (232 deg C).
 - 3. Capacities and Characteristics:
 - a. Tube: Sample.
 - 1) Flow Rate: [0.25 gpm (0.016 L/s)] <Insert value>.
 - 2) Entering Temperature: [400 deg F (204 deg C)] <Insert value>.
 - 3) Leaving Temperature: [88 deg F (31 deg C)] <Insert value>.
 - 4) Pressure Loss: [6.5 psig (44.8 kPa)] <Insert value>.
 - b. Shell: Cooling water.
 - 1) Flow Rate: [3 gpm (0.19 L/s)] <Insert value>.

- 2) Entering Temperature: [70 deg F (21 deg C)] <Insert value>.
- 3) Pressure Loss: [1.0 psig (6.89 kPa)] <Insert value>.

C. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.

1. [Two] <Insert number>-station rack for closed-loop systems.
2. [Four] <Insert number>-station rack for open-loop systems.

2.9 CHEMICALS

A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment and that can attain water quality specified in "Performance Requirements" Article.

B. Water Softener Chemicals:

1. Mineral: High-capacity, sulfonated-polystyrene ion-exchange resin that is stable over entire pH range with good resistance to bead fracture from attrition or shock. Resin exchange capacity minimum 30,000 grains/cu. ft. (69 kg/cu. m) of calcium carbonate of resin when regenerated with 15 lb (6.8 kg) of salt.
2. Salt for Brine Tanks: High-purity sodium chloride, free of dirt and foreign material. Rock and granulated forms are unacceptable.

2.10 HVAC MAKEUP-WATER SOFTENER

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [CSI Water Treatment Systems.](#)
2. [Culligan International Company.](#)
3. [CUNO Incorporated.](#)
4. [Diamond Water Conditioning; a Griesbach company.](#)
5. [Diamond Water Systems, Inc.](#)
6. [Ecodyne Industrial.](#)
7. [Hungerford & Terry, Inc.](#)
8. [Kinetico Incorporated.](#)
9. [Marlo Incorporated.](#)
10. [Parker Boiler.](#)
11. [Pentair, Inc.](#)
12. [RainSoft; a division of Aquion Water Treatment Products.](#)
13. [Water King, Inc.](#)
14. <Insert manufacturer's name>.
15. or approved equal.

B. Description: Twin mineral tanks and one brine tank, factory mounted on skid.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Fabricate supports and attachments to tanks with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure as recommended in writing by manufacturer.
- E. Mineral Tanks:
1. Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 2. Fabricate and label Fiber Reinforced Plastic filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section X, if indicated.
 3. Pressure Rating: [100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] <Insert value> minimum.
 4. Wetted Components: Suitable for water temperatures from [40 to at least 100 deg F (5 to at least 38 deg C)] <Insert range>.
 5. Freeboard: 50 percent, minimum, for backwash expansion above the normal resin bed level.
 6. Support Legs or Skirt: Constructed of structural steel, welded, or bonded to tank before testing and labeling.
 7. Finish: Hot-dip galvanized on exterior and interior of tank after fabrication.
 8. Upper Distribution System: Single-point type, fabricated from galvanized-steel pipe and fittings.
 9. Lower Distribution System: Hub and radial-arm or header-lateral type; fabricated from PVC pipe and fittings with individual, fine-slotted, nonclogging polyethylene strainers; arranged for even-flow distribution through resin bed.
- F. Controls: Automatic; factory mounted on mineral tanks and factory wired.
1. Adjustable duration of regeneration steps.
 2. Push-button start and complete manual operation override.
 3. Pointer on pilot-control valve shall indicate cycle of operation.
 4. Means of manual operation of pilot-control valve if power fails.
 5. Main Operating Valves: Industrial, automatic, multiport, diaphragm type with the following features:
 - a. Slow opening and closing, nonslam operation.
 - b. Diaphragm guiding on full perimeter from fully open to fully closed.
 - c. Isolated dissimilar metals within valve.
 - d. Self-adjusting, internal, automatic brine injector that draws brine and rinses at constant rate independent of pressure.
 - e. Float-operated brine valve to automatically measure the correct amount of brine to the softener and refill with fresh water.
 - f. Sampling cocks for soft water.
 6. Flow Control: Automatic control of backwash and flush rates over variations in operating pressures that do not require field adjustments. Equip mineral tanks with automatic-reset-head water meter that electrically activates cycle controller

to initiate regeneration at preset total in **gallons (liters)** and that automatically resets after regeneration to preset total in **gallons (liters)** for next service run. Include alternator to regenerate one mineral tank with the other in service.

- G. Brine Tank: Combination measuring and wet-salt storing system.
1. Tank and Cover Material: Fiberglass a minimum of **3/16 inch (4.8 mm)** thick; or molded polyethylene a minimum of **3/8 inch (9.5 mm)** thick.
 2. Brine Valve: Float operated and plastic fitted for automatic control of brine withdrawn and freshwater refill.
 3. Size: Large enough for at least four regenerations at full salting.
- H. Factory-Installed Accessories:
1. Piping, valves, tubing, and drains.
 2. Sampling cocks.
 3. Main-operating-valve position indicators.
 4. Water meters.
- I. Water Test Kit: Include in wall-mounting enclosure for water softener.
- J. Capacities and Characteristics:
1. Continuous Service Flow Rate: **<Insert gpm (L/s)>** at **15-psig (104-kPa)** pressure loss.
 2. Peak Service Flow Rate: **<Insert gpm (L/s)>** at **25-psig (173-kPa)** pressure loss.
 3. Water Consumption: **<Insert gal./day (cu. m/day)>**.
 4. Water Demand: **<Insert number>** hours/day.
 5. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
 - g. Interrupting Capacity: **<Insert amperage>**.

2.11 RO EQUIPMENT FOR HVAC MAKEUP WATER

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [CSI Water Treatment Systems.](#)
 2. [Culligan International Company.](#)
 3. [CUNO Incorporated.](#)
 4. [Diamond Water Conditioning; a Griesbach company.](#)
 5. [Ecodyne Industrial.](#)
 6. [Hungerford & Terry, Inc.](#)

7. [Kinetico Incorporated.](#)
 8. [Marlo Incorporated.](#)
 9. [Pentair, Inc.](#)
 10. [RainSoft; a division of Aquion Water Treatment Products.](#)
 11. [Water & Power Technologies, Inc.](#)
 12. [Water King, Inc.](#)
 13. **<Insert manufacturer's name>.**
 14. or approved equal.
- B. Description: Factory fabricated and tested with RO membrane elements in housings, high-pressure pumps and motors, controls, valves, and prefilter; mounted on skid.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Fabricate supports and attachments to tanks with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure as recommended in writing by manufacturer.
- E. Skid Assembly: Welded-steel frame coated with epoxy protective finish.
- F. RO Membrane and Housing:
1. Element: Thin-film composite with U-cup brine seal with minimum 98 percent salt rejection based on 2000-ppm water supplied at **225 psig (1551 kPa)** and **77 deg F (25 deg C)**.
 2. Housing: ASTM A 666, Type 304 stainless steel with PVC end caps held in place with stainless-steel straps.
- G. High-Pressure Pumps and Motors:
1. Pump:
 - a. Vertical, multistage centrifugal operating at 3500 rpm with ASTM A 666, Type 304 stainless-steel casing, shaft, impellers, and inlet and discharge casting.
 - b. Bearings shall be tungsten carbide and ceramic.
 - c. Cast-iron frame and flanged suction and discharge connections.
 - d. Motor: NEMA-standard, C-faced totally enclosed, fan cooled motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- H. Controls:
1. Microprocessor-based controller with digital display.
 2. Interlock for remote start/stop control.
 3. Membrane flush sequence when pumps shut down.
 4. Run time indicator.

5. Low-pressure safety cutoff.
 6. Panel-mounted gages as follows:
 - a. Product and concentrate.
 - b. Inlet, cartridge filter outlet, RO feed, RO concentrate, and RO product pressures.
 - c. Product conductivity monitor.
- I. Valves:
1. Stainless-steel pump, concentrate, and recycle throttling valves rated for minimum 300 psig (2068 kPa).
 2. Automatic inlet shutoff valve, diaphragm type; solenoid actuated, normally closed, and constructed of glass-reinforced noryl thermoplastic.
 3. PVC valves with EPDM seats and seals for isolation at inlet, and check and sample valves at product and concentrate. Sample valves at cartridge filter outlet, concentrate, and product outlet.
- J. Prefilter:
1. Housing: Polypropylene with built-in relief or vent valve.
 2. Element: Spun-wound polypropylene.
- K. Inlet Water Tempering Valve: Thermostatic water-tempering valve to maintain [77 deg F (25 deg C)] <Insert value> inlet water temperature to RO unit.
- L. Activated Carbon Filter:
1. Media Tank: Fiberglass-reinforced polyester rated for minimum 150 psig (1035 kPa) with internal backwash distributor and filtered water collector.
 2. Media: 12-by-40-mesh, bituminous coal-based activated carbon.
 3. Backwash Valve: Piston-operated control valve with drain-line, flow-control orifice.
 4. Backwash Control: Seven-day time clock.
- M. Atmospheric Storage Tank:
1. Tank: Polyethylene single piece with closed top and flat bottom with manway in top, 0.2-micron filter vent, inlet, discharge, and drain piping connections, and bulkhead fittings for level controls.
 2. Control: Level switches start and stop RO unit. Low-level limit shall stop repressurization pumps and signal an alarm.
- N. Repressurization Pumps:
1. Pumps: Two close-coupled, single-stage centrifugal pumps with mechanical seals. Wetted components ASTM A 666, Type 316 stainless steel.
 2. Controls: NEMA-4X pump control panel constructed of fiberglass to control pumps, one operating and one standby, with automatic alternator and fail-over control.

3. Motor: Open, drip proof motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- O. Water Test Kit: Include in wall-mounting cabinet for RO unit.
- P. Capacities and Characteristics:
 1. RO Product Flow Rate: <Insert gpm (L/s)>.
 2. Total Water Flow Rate: <Insert gpm (L/s)>.
 3. Daily Water Consumption: <Insert gal./day (cu. m/day)>.
 4. Water Demand: <Insert number> hours/day.
 5. Storage Tank Size: <Insert gal. (L)>.
 6. RO Inlet Operating Temperature: [77 deg F (25 deg C)] <Insert value>.
 7. High-Pressure Pump:
 - a. Discharge Pressure: <Insert psig (kPa)>.
 - b. Flow Rate: <Insert gpm (L/s)>.
 - c. Horsepower: <Insert value>.
 - d. Motor Speed: [3500] <Insert number> rpm.
 8. Repressure Pumps:
 - a. Discharge Pressure: <Insert psig (kPa)>.
 - b. Flow Rate: <Insert gpm (L/s)>.
 - c. Horsepower: <Insert value>.
 - d. Motor Speed: [3500] <Insert number> rpm.
 9. Prefilter Design (at Total Water Flow Rate):
 - a. Filter Efficiency: [98] <Insert number> percent.
 - b. Particle Size: [5] <Insert number> microns and larger.
 - c. Clean Pressure Loss: [2 psig (14 kPa)] <Insert value>.
 - d. Replacement Pressure Loss: [6 psig (41 kPa)] <Insert value>.
 10. Electrical Characteristics (Single-Point Connection):
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
 - g. Interrupting Capacity: <Insert amperage>.

2.12 FILTRATION EQUIPMENT

A. Multimedia Filters:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Diamond Water Systems, Inc.](#)
 - b. [Everfilt.](#)
 - c. [LAKOS: Claude Laval Corporation.](#)
 - d. [Miami Filter LLC.](#)
 - e. [PEP Filters, Inc.](#)
 - f. [Puroflux Corporation.](#)
 - g. [United Industries, Inc.](#)
 - h. **<Insert manufacturer's name>.**
 - i. or approved equal.
2. Description: Factory-fabricated and -tested, simplex, multimedia filter system of filter tank, media, strainer, circulating pump, piping, and controls for removing particles from water.
 - a. Filter Tank: Corrosion resistant with distribution system and media.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - a. Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - b. Fabricate and label FRP filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section X, if indicated.
 - c. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - d. Steel Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
 - e. FRP Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Type A, integral; [**Designation E, 125-psig (0.862-MPa)**] [**or**] [**Designation F, 150-psig (1.034-MPa)**] pressure category flanges of grade same as tank material according to ASTM D 5421.
 - f. Motorized Valves: Flanged or grooved-end, ductile-iron butterfly type with [**EPDM**] **<Insert material>** valve seat and stem seal; with ASTM B 148 aluminum bronze disc.
 - g. Strainer: Basket type mounted on pump suction.
 - h. Piping: ASTM A 53/A 53M, Type S, F, or E; Grade B, Schedule 40 black steel, with flanged, grooved, or threaded joints and malleable, steel welding, or ductile-iron fittings.
 - i. Piping: **ASTM B 88, Type L (ASTM B 88M, Type B)** copper water tube, copper-alloy solder-joint fittings and brazed, flanged, or grooved joints.
 - j. Safety Valves: Automatic pressure relief.

- k. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.
- 1) Casing: Radially split, cast iron.
 - 2) Pressure Rating: [125 psig (860 kPa)] [150 psig (1035 kPa)] minimum.
 - 3) Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
 - 4) Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
 - 5) Seal: Mechanical.
 - 6) Motor: ODP motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- l. Controls: Automatic control of circulating pump and tank backwash; factory wired for single electrical connection.
- 1) Panel: NEMA 250, [Type 4] <Insert type> enclosure with time clock and pressure gages.
 - 2) Pump: Automatic and manual switching; manual switch position bypasses safeties and controls.
 - 3) Backwash: Automatic; with time clock and differential pressure switch.
 - 4) Backwash Valve: Tank mounted with valves interlocked to single actuator.
- m. Support: Skid mounting.[**Fabricate supports and base and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.**]
4. Capacities and Characteristics:
- a. Filter Design:
- 1) Water Flow: <Insert gpm (L/s)>.
 - 2) Clean Pressure Loss: [5 psig (34.5 kPa)] <Insert value>.
 - 3) Maximum Media Flow Rate: [15 gpm/sq. ft. (10.2 L/s per sq. m)] <Insert value>.
 - 4) Filtration Efficiency: [98] <Insert number> percent.
 - 5) Particle-Specific Gravity: [1.8] <Insert number>.
 - 6) Particle Size: [5] [10] [20] [45] <Insert number> microns.
- b. Filter Tank: With internal distribution piping.
- 1) Pressure Rating: <Insert psig (kPa)>.
 - 2) Diameter: <Insert inches (mm)>.
 - 3) Inlet and Outlet Size: <Insert NPS (DN)>.
 - 4) Blowdown Piping Outlet Size: <Insert NPS (DN)>.
- c. Filter Media: <Insert material>.

- d. Start Backwash Pressure Loss: [13 psig (90 kPa)] <Insert value>.
- e. Backwash Period: [10] <Insert number> minutes.
- f. Circulating Pump:
 - 1) Capacity: <Insert gpm (L/s)>.
 - 2) Total Dynamic Head: <Insert feet (kPa)>.
 - 3) Motor Speed: <Insert number> rpm.
 - 4) Inlet Size: <Insert NPS (DN)>.
 - 5) Outlet Size: <Insert NPS (DN)>.
- g. Pump Motor Size and Electrical Characteristics:
 - 1) Horsepower: <Insert value>.
 - 2) Volts: [120] [208] [240] [277] [480] <Insert number> V.
 - 3) Phase: [Single] [Three].
 - 4) Hertz: [60] <Insert number> Hz.
- h. Unit Electrical Characteristics:
 - 1) Full-Load Amperes: <Insert value>.
 - 2) Minimum Circuit Ampacity: <Insert value>.
 - 3) Maximum Overcurrent Protection: <Insert amperage>.
 - 4) Interrupting Capacity: <Insert amperage>.

B. Self-Cleaning Strainers:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Everfilt](#).
 - b. [Hayward Flow Control Systems, Inc.](#)
 - c. [Islip Flow Controls Inc.](#)
 - d. [Orival, Inc.](#)
 - e. [Sure Flow Equipment Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
2. Description: Factory-fabricated and -tested, ASTM A 126, Class B, cast-iron or steel, self-cleaning strainer system of tank, strainer, backwash arm or cleaning spiral, drive and motor, piping, and controls for removing particles from water.
 - a. Fabricate and label ASTM A 126, Class B, cast-iron or steel strainer tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - b. Pipe Connections:
 - 1) NPS 2 (DN 50) and Smaller: Threaded according to ASME B1.20.1.
 - 2) NPS 2-1/2 (DN 65) and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.

3. Motorized Valves: Flanged or grooved-end, ductile-iron angle type with **[EPDM]** **<Insert material>** valve seat and stem seal; with ASTM B 148 aluminum bronze disc.
4. Strainer: ASTM A 666, Type 316 stainless steel.
5. Piping: ASTM A 53/A 53M, Type S, F, or E; Grade B, Schedule 40 black steel, with flanged, grooved, or threaded joints and malleable, steel welding, or ductile-iron fittings.
6. Safety Valves: Automatic pressure relief.
7. Backwash Arm Drive:
 - a. Drive Casing: Cast iron.
 - b. Worm Gears: Immersed in oil.
 - c. Motor: ODP motor supported on the strainer-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
8. Controls: Automatic control of backwash; factory wired for single electrical connection.
 - a. Panel: NEMA 250, **[Type 4]** **<Insert type>** enclosure with time clock and pressure gages.
 - b. Backwash Arm Drive: Automatic and manual switching; manual switch position bypasses safeties and controls.
 - c. Backwash: Automatic; with time clock and differential pressure switch.
 - d. Backwash Valve: Electric actuator.
9. Support: Skid mounting. **[Fabricate supports and base and attachment to tank with reinforcement strong enough to resist strainer movement during a seismic event when strainer base is anchored to building structure.]**
10. Capacities and Characteristics:
 - a. Strainer Design:
 - 1) Water Flow: **<Insert gpm (L/s)>**.
 - 2) Clean Pressure Loss: **[5 psig (34.5 kPa)] <Insert value>**.
 - 3) Strainer Mesh: **[40] [60] [80] <Insert number>**.
 - b. Strainer Tank: With internal distribution piping.
 - 1) Material: **[Cast iron] [Steel] <Insert material>**.
 - 2) Pressure Rating: **[150 psig (1034 kPa)] <Insert value>**.
 - 3) Inlet and Outlet Size: **<Insert NPS (DN)>**.
 - 4) Backwash Piping Outlet Size: **<Insert NPS (DN)>**.
 - c. Start Backwash: **[10 psig (69 kPa)] <Insert value>**.
 - d. Backwash Period: **[5] <Insert number>** minutes.
 - e. Drive Motor Size and Electrical Characteristics:
 - 1) Horsepower: **<Insert value>**.
 - 2) Volts: **[120] [208] [240] [277] [480] <Insert number>** V.

- 3) Phase: **[Single]** **[Three]**.
- 4) Hertz: **[60]** **<Insert number>** Hz.

f. Unit Electrical Characteristics:

- 1) Full-Load Amperes: **<Insert value>**.
- 2) Minimum Circuit Ampacity: **<Insert value>**.
- 3) Maximum Overcurrent Protection: **<Insert amperage>**.
- 4) Interrupting Capacity: **<Insert amperage>**.

C. **[Bag]** **[Cartridge]**-Type Filters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Cycron Corporation.
- b. Eden Equipment Company.
- c. Filter Specialists, Inc.
- d. Filtration Systems; Mechanical Mfg. Corporation.
- e. Hayward Flow Control Systems, Inc.
- f. Parker Hannifin Corp.; Process Filtration Div.
- g. Pentair, Inc.
- h. PEP Filters, Inc.
- i. RainSoft; a division of Aquion Water Treatment Products.
- j. Rosedale Products, Inc.
- k. RPA Process Technologies.
- l. Shelco Filters.
- m. Siemens Water Technologies.
- n. **<Insert manufacturer's name>**.
- o. or approved equal.

2. Description: Floor-mounting housing with filter **[bags]** **[cartridges]** for removing particles from water.

- a. Housing: Corrosion resistant; designed to separate inlet from outlet and to direct inlet through **[bag]** **[cartridge]**-type water filter; with **[bag support and]**base, feet, or skirt.
 - 1) Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - 2) Steel Housing Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
 - 3) Plastic Housing Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: **150-psig (1035-kPa)** plastic flanges.

b. **[Bag]** **[Cartridge]**: Replaceable; of shape to fit housing.

3. Capacities and Characteristics:

- a. Filter Design:
 - 1) Water Flow Rate: <Insert gpm (L/s)>.
 - 2) Filtration Efficiency: [98] <Insert number> percent.
 - 3) Particle Size: [10] [20] <Insert number> microns and larger.
 - 4) Clean Pressure Loss: [2 psig (14 kPa)] <Insert value>.
 - 5) Pressure Loss at Replacement: [6 psig (41 kPa)] <Insert value>.

- b. Housing:
 - 1) Material: [Carbon steel] [Plastic].
 - 2) Pressure Rating: <Insert psig (kPa)>.
 - 3) Seal Material: [Nitrile Rubber] <Insert material>.
 - 4) Diameter: <Insert inches (mm)>.
 - 5) Height or Length: <Insert inches (mm)>.
 - 6) Inlet and Outlet Size: <Insert NPS (DN)>.
 - 7) Drain Size: [Not applicable] <Insert NPS (DN)>.
 - 8) Bag Support Basket Material: [Stainless steel] <Insert material>.

- c. [Bag] [Cartridge]:
 - 1) Number Required: <Insert number>.
 - 2) Nominal Diameter: <Insert inches (mm)>.
 - 3) Nominal Length: <Insert inches (mm)>.
 - 4) Media Material: [Cotton] [Polyester] [Polypropylene] <Insert material>.

D. Centrifugal Separators:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Culligan International Company.](#)
 - b. [Ecodyne Industrial.](#)
 - c. [Griswold Controls.](#)
 - d. [LAKOS; Claude Laval Corporation.](#)
 - e. [PEP Filters, Inc.](#)
 - f. [Puroflux Corporation.](#)
 - g. [Rosedale Products, Inc.](#)
 - h. [Siemens Water Technologies.](#)
 - i. <Insert manufacturer's name>.
 - j. or approved equal.

2. Description: Simplex separator housing with baffles and chambers for removing particles from water by centrifugal action and gravity.

3. Housing: With manufacturer's proprietary system of baffles and chambers.
 - a. Construction: Fabricate and label steel separator housing to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

- b. Inlet: Designed with tangential entry to produce centrifugal flow of feedwater.
 - c. Vortex Chamber: Designed for downward vortex flow and gravity separation of particles.
 - d. Collection Chamber: Designed to hold separated particles.
 - e. Outlet: Near top of unit.
 - f. Purge: At bottom of collection chamber.
 - g. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - h. Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606. Provide stainless-steel flanges if tank is stainless steel.
4. Motorized Purge Valve: Gate or plug pattern valve.
- a. Motorized Valves: Butterfly-type, flanged or grooved-end, ductile-iron body, with **[EPDM]** <Insert material> valve seat and stem seal; with ASTM B 148 aluminum bronze disc.
 - b. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
5. Strainer: Stainless-steel basket type mounted on pump suction.
6. Piping: ASTM A 53/A 53M, Type S, F, or E; Grade B, Schedule 40 black steel, with flanged, grooved, or threaded joints and malleable, steel welding, or ductile-iron fittings.
7. Piping: **ASTM B 88, Type L** (ASTM B 88M, Type B) copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
8. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.
- a. Casing: Radially split, cast iron.
 - b. Pressure Rating: **[125 psig (860 kPa)]** **[150 psig (1035 kPa)]** minimum.
 - c. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
 - d. Shaft and Shaft Sleeve: Steel shaft with copper-alloy shaft sleeve.
 - e. Seal: Mechanical.
 - f. Motor: ODP motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - g. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
9. Controls: Automatic control of circulating pump and separator purge; factory wired for single electrical connection.
- a. Panel: NEMA 250, **[Type 4]** <Insert type> enclosure.
 - b. Pump: Automatic and manual switching; manual switch position bypasses safeties and controls.

- c. Separator Purge: Automatic and manual.
 - d. TSS Controller Interlock: Open separator purge valve with bleed-off control.
10. Support: Skid mounting. [**Fabricate supports and base and attachment to separator housing with reinforcement strong enough to resist separator movement during a seismic event when separator base is anchored to building structure.**]
11. Capacities and Characteristics:
- a. Separator Design:
 - 1) Water Flow Rate: <Insert gpm (L/s)>.
 - 2) Pressure Loss: [5 psig (34.5 kPa)] <Insert value>.
 - 3) Separator Efficiency: [98] <Insert number> percent.
 - 4) Particle-Specific Gravity: [1.8] <Insert number>.
 - 5) Particle Size: [5] [10] [20] [45] <Insert number> microns.
 - b. Housing:
 - 1) Material: [Steel] [Stainless steel] [Plastic] [Fiberglass] <Insert material>.
 - 2) Pressure Rating: <Insert psig (kPa)>.
 - 3) Diameter: <Insert inches (mm)>.
 - 4) Height: <Insert inches (mm)>.
 - 5) Inlet and Outlet Size: <Insert NPS (DN)>.
 - 6) Purge Size: <Insert NPS (DN)>.
 - c. Circulating Pump:
 - 1) Capacity: <Insert gpm (L/s)>.
 - 2) Total Dynamic Head: <Insert feet (kPa)>.
 - 3) Motor Speed: <Insert number> rpm.
 - 4) Inlet Size: <Insert NPS (DN)>.
 - 5) Outlet Size: <Insert NPS (DN)>.
 - d. Pump Motor Size and Electrical Characteristics:
 - 1) Horsepower: <Insert value>.
 - 2) Volts: [120] [208] [240] [277] [480] <Insert number> V.
 - 3) Phase: [Single] [Three].
 - 4) Hertz: [60] <Insert number> Hz.
 - 5) Full-Load Amperes: <Insert value>.
 - 6) Minimum Circuit Ampacity: <Insert value>.
 - 7) Maximum Overcurrent Protection: <Insert amperage>.
 - 8) Interrupting Capacity: <Insert amperage>.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Systems shall be operational, filled, started, and vented prior to cleaning. Use water meter to record capacity in each system.
- B. Place terminal control valves in open position during cleaning.
- C. Verify that electric power is available and of the correct characteristics.

3.2 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.

3.3 INSTALLATION

- A. Install chemical application equipment on concrete bases level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Install water-testing equipment on wall near water-chemical-application equipment.
- D. Install interconnecting control wiring for chemical treatment controls and sensors.
- E. Mount sensors and injectors in piping circuits.
- F. Bypass Feeders: Install in closed hydronic systems, including [**hot-water heating**] [**chilled water**] [**dual-temperature water**] [**and**] [**glycol cooling**], and equipped with the following:
 - 1. Install bypass feeder in a bypass circuit around circulating pumps unless otherwise indicated on Drawings.
 - 2. Install water meter in makeup-water supply.
 - 3. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.
 - 4. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below feeder inlet.
 - 5. Install a swing check on inlet after the isolation valve.
- G. Install automatic chemical-feed equipment for steam boiler and steam condensate systems and include the following:

1. Install makeup-water softener.
 2. Install water meter in makeup-water supply.
 3. Install inhibitor injection pumps and solution tanks with injection timer sensing contacts in water meter.
 - a. Pumps shall operate for timed interval when contacts close at water meter in makeup-water supply connection.
 4. Install test equipment and furnish test-kit to Owner.
 5. Install RO unit for makeup water.
 6. Install TSS controller with sensor and bleed valves.
 - a. Bleed valves shall cycle to maintain maximum TSS concentration.
 7. Install inhibitor injection timer with injection pumps and solution tanks.
 - a. Pumps shall operate for timed interval on contact closure at water meter in makeup-water supply connection. Injection pump shall discharge into main steam supply header.
- H. Install automatic chemical-feed equipment for **[condenser] [fluid-cooler spray]** water and include the following:
1. Install makeup-water softener.
 2. Install water meter in makeup-water supply.
 3. Install inhibitor injection pumps and solution tanks with injection timer sensing contacts in water meter.
 - a. Pumps shall operate for timed interval on contact closure at water meter in makeup-water supply connection. Injection pump shall discharge into boiler feedwater tank or feedwater supply connection at boiler.
 4. Install test equipment and provide test-kit to Owner. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.
 5. Install TSS controller with sensor and bleed valves.
 - a. Bleed valves shall cycle to maintain maximum TSS concentration.
 6. Install pH sensor and controller with injection pumps and solution tanks.
 - a. Injector pumps shall operate to maintain required pH.
 7. Install biocide feeder alternating timer with two sets of injection pumps and solution tanks.
 - a. Injection pumps shall operate to feed biocide on an alternating basis.
 8. Install ozone generator with diffusers in condenser-water piping.
 - a. Ozone generator shall operate continuously with condenser-water flow.

9. Install UV-irradiation lamps in condenser-water piping.
 - a. UV lights shall operate continuously with condenser-water flow.

3.4 OZONE-GENERATOR INSTALLATION

- A. Install ozone generator and equipment on concrete bases level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Pipe ozone from ozone generator to condenser water with stainless-steel pipe and fittings with welded joints.
- D. Install **[two] [three]**-piece, stainless-steel ball valve in ozone supply to condenser water.
- E. Pipe cooling water to ozone generator and to air-gap drain fitting with stainless-steel pipe and fittings with welded joints where enclosed in ozone-generator room.
- F. Install **[two] [three]**-piece, stainless-steel ball valve in cooling water supply to ozone generator.
- G. Mounting supports for ozone generator shall be ASTM A 666, Type 316 stainless steel.
- H. Mount breathing apparatus outside ozone-generator room.
- I. Mount and install ozone detector, warning lights, and audible alarm inside ozone-generator room. Mount another set of warning lights and audible alarm just outside the main entrance to ozone-generator room.

3.5 UV-IRRADIATION UNIT INSTALLATION

- A. Install UV-irradiation units on concrete bases level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for UV-irradiation units and floor-mounting accessories and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.

3.6 WATER SOFTENER INSTALLATION

- A. Install water softener equipment on concrete bases level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for tanks and floor-mounting accessories and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Install brine lines and fittings furnished by equipment manufacturer but not factory installed.
- D. Prepare mineral-tank distribution system and underbed for minerals and place specified mineral into mineral tanks.
- E. Install water-testing sets on wall adjacent to water softeners.

3.7 RO UNIT INSTALLATION

- A. Install RO unit and storage tank on concrete bases level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor RO unit and storage tank with pumps to substrate.
- B. Install seismic restraints for tanks and floor-mounting accessories and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Install interconnecting piping and controls furnished by equipment manufacturer but not factory installed.
- D. Install water-testing sets on wall adjacent to RO unit.

3.8 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance.
- C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Section 232113 "Hydronic Piping."
- D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 230523.11 "Globe Valves for HVAC"

Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."

- E. See Section 221119 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.
- F. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.
- G. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- H. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.9 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
 - 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
 - 3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of HVAC system's startup procedures.
 - 4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
 - 5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 - 6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
 - 7. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
 - 8. Repair leaks and defects with new materials and retest piping until no leaks exist.
- C. Equipment will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

- E. Sample boiler water at one-week intervals after boiler startup for a period of five weeks, and prepare test report advising Owner of changes necessary to adhere to "Performance Requirements" Article for each required characteristic. Sample boiler water at [four] [six] [eight] <Insert number>-week intervals following the testing noted above to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section.
- F. At [four] [six] [eight] <Insert number>-week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis advising Owner of changes necessary to adhere to "Performance Requirements" Article.
- G. Comply with ASTM D 3370 and with the following standards:
 - 1. Silica: ASTM D 859.
 - 2. Steam System: ASTM D 1066.
 - 3. Acidity and Alkalinity: ASTM D 1067.
 - 4. Iron: ASTM D 1068.
 - 5. Water Hardness: ASTM D 1126.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232500

SECTION 232513 - WATER TREATMENT FOR CLOSED-LOOP HYDRONIC SYSTEMS

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes the following water treatment for closed-loop hydronic systems:
 - 1. **[Manual] [Automatic]** chemical-feed equipment.
 - 2. Chemicals.
- B. Related Requirements:
 - 1. Section 232533 "HVAC Makeup-Water Filtration Equipment" for water softeners, RO equipment, and filtration equipment.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote control, signaling power-limited circuits.
- B. RO: Reverse osmosis.
- C. TSS: Total suspended solids are solid materials, including organic and inorganic, that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.4 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, water-pressure drops, shipping, installed and operating weights, operating characteristics, connection requirements, and furnished specialties and accessories for the following products:
1. Bypass feeders.
 2. Water meters.
 3. Inhibitor injection timers.
 4. pH controllers.
 5. TSS controllers.
 6. Chemical solution tanks.
 7. Injection pumps.
 8. Chemical test equipment.
 9. Chemical material safety data sheets.
 10. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Pretreatment and chemical treatment equipment showing tanks, maintenance space required, and piping connections to hydronic systems.
1. Include plans, elevations, sections, and attachment details.
 2. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Water Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.
- C. Field quality-control reports. Indicate start-up of treatment systems when completed and operating properly. Indicate analysis of system water after cleaning and after treatment.
- D. Submit certificate of compliance from authority having jurisdiction indicating approval of chemicals and their proposed disposal.
- E. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project Site.
- F. Other Informational Submittals:

1. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in "Performance Requirements" Article.
2. Water Analysis: Illustrate water quality available at Project site.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sensors, injection pumps, and controllers to include in emergency, operation, and maintenance manuals.
 1. Include data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step-by-step instructions on test procedures including target concentrations.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 1. Record actual locations of equipment and piping, including sampling points and location of chemical injectors.

1.7 MAINTENANCE MATERIALS

- A. Provide sufficient chemicals for treatment and testing during warranty period.

1.8 QUALITY ASSURANCE

- A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.
- B. Installer Qualifications: An experienced installer who is an authorized representative of the chemical treatment manufacturer for both installation and maintenance of chemical treatment equipment required for this Project with minimum of three (3) years experience.
- C. Manufacturers: Companies specializing in manufacturing the products specified in this Section with minimum of five (5) years documented experience. Companies shall have local representatives with water analysis laboratories and full time service personnel.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Conform to applicable code for addition of non-potable chemicals to building mechanical systems, and for to public sewage systems.

- F. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.9 MAINTENANCE SERVICE

- A. Provide monthly technical service visits to perform field inspections and make water analysis on site. Detail findings in writing on proper practices, chemical treating requirements, and corrective actions needed. Submit two (2) copies of field service report after each visit.
- B. Provide laboratory and technical assistance services during this maintenance period.
- C. Provide onsite inspections of equipment during scheduled or emergency shutdown to properly evaluate success of water treatment program, and make recommendations in writing based upon these inspections.
- D. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above to inhibit corrosion and scale formation for hydronic piping and equipment. Services and chemicals shall be provided for a period of one (1) year from date of Substantial Completion and shall include the following:
 - 1. Initial water analysis and HVAC water-treatment recommendations.
 - 2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
 - 3. Periodic field service and consultation.
 - 4. Customer report charts and log sheets.
 - 5. Laboratory technical analysis.
 - 6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

1.10 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements" and Division 1.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Ampion Corp.](#)
 2. [Anderson Chemical Company.](#)
 3. [Aqua-Chem, Inc.](#)
 4. [Barclay Water Management, Inc.](#)
 5. [Boland.](#)
 6. [Cascade Water Services, Inc.](#)
 7. [Earthwise Environmental Inc.](#)
 8. [General Electric Company; GE Water & Process Technologies.](#)
 9. [H-O-H Water Technology, Inc.](#)
 10. [Metro Group, Inc. \(The\); Metropolitan Refining Div.](#)
 11. [Nalco; an Ecolab company.](#)
 12. [Watcon, Inc.](#)
 13. [Water Services Inc.](#)
 14. **<Insert manufacturer's name>.**
 15. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Water quality for hydronic systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of hydronic equipment without creating a hazard to operating personnel or the environment.
- B. Base HVAC water treatment on quality of water available at Project site, hydronic system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.
- C. Closed hydronic systems, including **[hot-water heating] [chilled water] [dual-temperature water] [and] [glycol cooling]**, shall have the following water qualities:
1. pH: Maintain a value within **[9.0 to 10.5] <Insert range>**.
 2. "P" Alkalinity: Maintain a value within **[100 to 500] <Insert range>** ppm.
 3. Boron: Maintain a value within **[100 to 200] <Insert range>** ppm.
 4. Chemical Oxygen Demand: Maintain a maximum value of **[100] <Insert number>** ppm.
 5. Soluble Copper: Maintain a maximum value of **[0.20] <Insert number>** ppm.
 6. TSS: Maintain a maximum value of **[10] <Insert number>** ppm.
 7. Ammonia: Maintain a maximum value of **[20] <Insert number>** ppm.
 8. Free Caustic Alkalinity: Maintain a maximum value of **[20] <Insert number>** ppm.

9. Microbiological Limits:
- a. Total Aerobic Plate Count: Maintain a maximum value of **[1000]** <Insert number> organisms/mL.
 - b. Total Anaerobic Plate Count: Maintain a maximum value of **[100]** <Insert number> organisms/mL.
 - c. Nitrate Reducers: Maintain a maximum value of **[100]** <Insert number> organisms/mL.
 - d. Sulfate Reducers: Maintain a maximum value of **[zero]** <Insert number> organisms/mL.
 - e. Iron Bacteria: Maintain a maximum value of **[zero]** <Insert number> organisms/mL.
10. <Insert other requirements if necessary>.

2.3 MANUAL CHEMICAL-FEED EQUIPMENT

- A. Bypass Feeders: Steel, with corrosion-resistant exterior coating, minimum **3-1/2-inch** (89-mm) fill opening in the top, and **NPS 3/4** (DN 20) bottom inlet and top side outlet. Quarter turn or threaded fill cap with gasket seal and diaphragm to lock the top on the feeder when exposed to system pressure in the vessel.
1. Capacity: **[2 gal. (7.6 L)] [5 gal. (19 L)]** <Insert value>.
 2. Minimum Working Pressure: **[125 psig (860 kPa)] [175 psig (1210 kPa)]** <Insert value>.

2.4 AUTOMATIC CHEMICAL-FEED EQUIPMENT

- A. Water Meter:
1. AWWA C700, oscillating-piston, magnetic-drive, totalization meter.
 2. Body: Bronze.
 3. Minimum Working-Pressure Rating: **150 psig** (1035 kPa).
 4. Maximum Pressure Loss at Design Flow: **3 psig** (20 kPa).
 5. Registration: **Gallons** (Liters) or **cubic feet** (cubic meters).
 6. End Connections: Threaded.
 7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac; and that will close at adjustable increments of total flow.
 8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Water Meter:
1. AWWA C701, turbine-type, totalization meter.
 2. Body: Bronze.
 3. Minimum Working-Pressure Rating: **100 psig** (690 kPa).
 4. Maximum Pressure Loss at Design Flow: **3 psig** (20 kPa).

5. Registration: **Gallons** (Liters) or **cubic feet** (cubic meters).
6. End Connections: Threaded.
7. Control: Low-voltage signal capable of transmitting **1000 feet** (305 m).
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Water Meter:

1. AWWA C701, turbine-type, totalization meter.
2. Body: **[Bronze] [Epoxy-coated cast iron]**.
3. Minimum Working-Pressure Rating: **150 psig** (1035 kPa).
4. Maximum Pressure Loss at Design Flow: **3 psig** (20 kPa).
5. Registration: **Gallons** (Liters) or **cubic feet** (cubic meters).
6. End Connections: Flanged.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac; and that will close at adjustable increments of total flow.
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Chemical Solution Tanks:

1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
2. Molded cover with recess for mounting pump.
3. Capacity: **[30 gal. (114 L)] [50 gal. (189 L)] [120 gal. (454 L)] <Insert value>**.

E. Chemical Solution Injection Pumps:

1. Self-priming, positive displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
2. Adjustable flow rate.
3. Metal and thermoplastic construction.
4. Built-in relief valve.
5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A 269, Type 304, stainless steel for steam boiler injection assemblies.

G. Injection Assembly:

1. Quill: Minimum **NPS 1/2** (DN 15) with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
2. Ball Valve: **[Three] [Two]**-piece, stainless steel; selected to fit quill.

3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
4. Assembly Pressure/Temperature Rating: Minimum 600 psig (4137 kPa) at 200 deg F (93 deg C).

2.5 CHEMICALS

- A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment and that can attain water quality specified in "Performance Requirements" Article.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Systems shall be operational, filled, started, and vented prior to cleaning. Use water meter to record capacity in each system.
- B. Place terminal control valves in open position during cleaning.
- C. Verify that electric power is available and of the correct characteristics.

3.2 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.

3.3 INSTALLATION

- A. Install chemical application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Install water testing equipment on wall near water chemical application equipment.
- D. Install interconnecting control wiring for chemical treatment controls and sensors.
- E. Mount sensors and injectors in piping circuits.

- F. Bypass Feeders: Install in closed hydronic systems, including [**hot-water heating**] [**chilled water**] [**dual-temperature water**] [**and**] [**glycol cooling**], and equipped with the following:
1. Install bypass feeder in a bypass circuit around circulating pumps unless otherwise indicated on Drawings.
 2. Install water meter in makeup-water supply.
 3. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.
 4. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below the feeder inlet.
 5. Install a swing check on the inlet after the isolation valve.

3.4 CONNECTIONS

- A. Where installing piping adjacent to equipment, allow space for service and maintenance.
- B. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Comply with requirements in Section 232116 "Hydronic Piping Specialties."
- C. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."
- D. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.
- E. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.
- F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
 3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of hydronic systems' startup procedures.
 4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
 5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
 7. Cap and subject piping to static water pressure of **50 psig** (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
 8. Repair leaks and defects with new materials and retest piping until no leaks exist.
- C. Equipment will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. At **[four] [six] [eight] <Insert number>**-week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis advising Owner of changes necessary to adhere to "Performance Requirements" Article.
- F. Comply with ASTM D 3370 and with the following standards:
1. Silica: ASTM D 859.
 2. Acidity and Alkalinity: ASTM D 1067.
 3. Iron: ASTM D 1068.
 4. Water Hardness: ASTM D 1126.
- 3.6 DEMONSTRATION
- A. Engage a factory-authorized service representative to assist Contractor to train Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- B. Training: Provide a "how-to-use" self-contained breathing apparatus video that details exact operating procedures of equipment.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232513

SECTION 232516 - WATER TREATMENT FOR OPEN-LOOP HYDRONIC SYSTEMS

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes the following HVAC water-treatment systems:
 - 1. Manual chemical-feed equipment.
 - 2. Automatic chemical-feed equipment.
 - 3. Ozone-generator biocide equipment.
 - 4. Stainless-steel pipes and fittings.
 - 5. UV biocide equipment.
 - 6. Chemical treatment test equipment.
 - 7. Chemicals.
- B. Related Requirements:
 - 1. Section 232533 "HVAC Makeup-Water Filtration Equipment" for water softeners, RO equipment, and filtration equipment.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. EEPROM: Electrically erasable, programmable read-only memory.
- B. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- C. RO: Reverse osmosis.

- D. TSS: Total suspended solids are solid materials, including organic and inorganic, that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.4 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, water-pressure drops, shipping, installed and operating weights, operating characteristics, connections, and furnished specialties and accessories for the following products:

1. Bypass feeders.
2. Water meters.
3. Inhibitor injection timers.
4. pH controllers.
5. TSS controllers.
6. Biocide feeder timers.
7. Chemical solution tanks.
8. Injection pumps.
9. Ozone generators.
10. UV-irradiation units.
11. Chemical test equipment.
12. Chemical material safety data sheets.
13. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: Pretreatment and chemical[, **and ozone-generator biocide**][, **and UV**] treatment equipment showing tanks, maintenance space required, and piping connections to HVAC systems.

1. Include plans, elevations, sections, and attachment details.
2. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- B. Water Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.

- C. Field quality-control reports. Indicate start-up of treatment systems when completed and operating properly. Indicate analysis of system water after cleaning and after treatment.

- D. Submit certificate of compliance from authority having jurisdiction indicating approval of chemicals and their proposed disposal.
- E. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project Site.
- F. Other Informational Submittals:
 - 1. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in "Performance Requirements" Article.
 - 2. Water Analysis: Illustrate water quality available at Project site.
 - 3. Passivation Confirmation Report: Verify passivation of galvanized-steel surfaces, and confirm this observation in a letter to DEN Project Manager.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sensors, injection pumps, and controllers to include in emergency, operation, and maintenance manuals.
 - 1. Include data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step-by-step instructions on test procedures including target concentrations.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of equipment and piping, including sampling points and location of chemical injectors.

1.7 MAINTENANCE MATERIALS

- A. Provide sufficient chemicals for treatment and testing during warranty period.

1.8 QUALITY ASSURANCE

- A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.
- B. Installer Qualifications: An experienced installer who is an authorized representative of the chemical treatment manufacturer for both installation and maintenance of chemical treatment equipment required for this Project with minimum of three (3) years experience.
- C. Manufacturers: Companies specializing in manufacturing the products specified in this

Section with minimum of five (5) years documented experience. Companies shall have local representatives with water analysis laboratories and full time service personnel.

- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Conform to applicable code for addition of non-potable chemicals to building mechanical systems, and for to public sewage systems.
- F. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.9 MAINTENANCE SERVICE

- A. Provide monthly technical service visits to perform field inspections and make water analysis on site. Detail findings in writing on proper practices, chemical treating requirements, and corrective actions needed. Submit two (2) copies of field service report after each visit.
- B. Provide laboratory and technical assistance services during this maintenance period.
- C. Provide onsite inspections of equipment during scheduled or emergency shutdown to properly evaluate success of water treatment program, and make recommendations in writing based upon these inspections.
- D. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above to inhibit corrosion and scale formation and biological growth for [**condenser-water piping**] and equipment. Services and chemicals shall be provided for a period of one (1) year from date of Substantial Completion and shall include the following:
 - 1. Initial water analysis and HVAC water-treatment recommendations.
 - 2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
 - 3. Periodic field service and consultation.
 - 4. Customer report charts and log sheets.
 - 5. Laboratory technical analysis.
 - 6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

1.10 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements" and Division 1.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Ampion Corp.](#)
2. [Anderson Chemical Company.](#)
3. [Aqua-Chem, Inc.](#)
4. [Barclay Water Management, Inc.](#)
5. [Boland.](#)
6. [Cascade Water Services, Inc.](#)
7. [Earthwise Environmental Inc.](#)
8. [General Electric Company; GE Water & Process Technologies.](#)
9. [H-O-H Water Technology, Inc.](#)
10. [Metro Group, Inc. \(The\); Metropolitan Refining Div.](#)
11. [Nalco; an Ecolab company.](#)
12. [Watcon, Inc.](#)
13. [Water Services Inc.](#)
14. **<Insert manufacturer's name>.**
15. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Water quality for HVAC systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of equipment without creating a hazard to operating personnel or the environment.
- B. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.
- C. Open HVAC systems, including [**condenser**] [**fluid-cooler spray**] water, shall have the following water qualities:
1. pH: Maintain a value within [**8.0 to 9.1**] **<Insert range>**.
 2. "P" Alkalinity: Maintain a maximum value of [**100**] **<Insert number>** ppm.
 3. Chemical Oxygen Demand: Maintain a maximum value of [**100**] **<Insert number>** ppm.

4. Soluble Copper: Maintain a maximum value of **[0.20] <Insert number>** ppm.
5. TSS: Maintain a maximum value of **[10] <Insert number>** ppm.
6. Ammonia: Maintain a maximum value of **[20] <Insert number>** ppm.
7. Free "OH" Alkalinity: Maintain a maximum value of **[zero] <Insert number>** ppm.
8. Microbiological Limits:
 - a. Total Aerobic Plate Count: Maintain a maximum value of **[10,000] <Insert number>** organisms/mL.
 - b. Total Anaerobic Plate Count: Maintain a maximum value of **[1000] <Insert number>** organisms/mL.
 - c. Nitrate Reducers: Maintain a maximum value of **[100] <Insert number>** organisms/mL.
 - d. Sulfate Reducers: Maintain a maximum value of **[zero] <Insert number>** organisms/mL.
 - e. Iron Bacteria: Maintain a maximum value of **[zero] <Insert number>** organisms/mL.
9. Polymer Testable: Maintain a minimum value within **[10 to 40] <Insert range>**.
10. **<Insert other requirements if necessary>**.

D. Passivation for Galvanized Steel: For the first 60 days of operation.

1. pH: Maintain a value within **[7 to 8] <Insert range>**.
2. Calcium Carbonate Hardness: Maintain a value within **[100 to 300] <Insert range>** ppm.
3. Calcium Carbonate Alkalinity: Maintain a value within **[100 to 300] <Insert range>** ppm.

2.3 MANUAL CHEMICAL-FEED EQUIPMENT

A. Bypass Feeders: Steel, with corrosion-resistant exterior coating, minimum **3-1/2-inch (89-mm)** fill opening in the top, and **NPS 3/4 (DN 20)** bottom inlet and top side outlet. Quarter turn or threaded fill cap with gasket seal and diaphragm to lock the top on the feeder when exposed to system pressure in the vessel.

1. Capacity: **[2 gal. (7.6 L)] [5 gal. (19 L)] <Insert value>**.
2. Minimum Working Pressure: **[125 psig (860 kPa)] [175 psig (1210 kPa)] <Insert value>**.

2.4 AUTOMATIC CHEMICAL-FEED EQUIPMENT

A. Water Meter:

1. AWWA C700, oscillating-piston, magnetic-drive, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: **150 psig (1035 kPa)**.
4. Maximum Pressure Loss at Design Flow: **3 psig (20 kPa)**.
5. Registration: **Gallons (Liters) or cubic feet (cubic meters)**.

6. End Connections: Threaded.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac, and that will close at adjustable increments of total flow.
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Water Meter:

1. AWWA C701, turbine-type, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: 100 psig (690 kPa).
4. Maximum Pressure Loss at Design Flow: 3 psig (20 kPa).
5. Registration: Gallons (Liters) or cubic feet (cubic meters).
6. End Connections: Threaded.
7. Control: Low-voltage signal capable of transmitting 1000 feet (305 m).
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Water Meter:

1. AWWA C701, turbine-type, totalization meter.
2. Body: [Bronze] [Epoxy-coated cast iron].
3. Minimum Working-Pressure Rating: 150 psig (1035 kPa).
4. Maximum Pressure Loss at Design Flow: 3 psig (20 kPa).
5. Registration: Gallons (Liters) or cubic feet (cubic meters).
6. End Connections: Flanged.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac, and that will close at adjustable increments of total flow.
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Inhibitor Injection Timers:

1. Microprocessor-based controller with digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
2. Programmable timers with infinite adjustment over full range, and mounted in cabinet with hand-off-auto switches and status lights.
3. Test switch.
4. Hand-off-auto switch for chemical pump.
5. Illuminated legend to indicate feed when pump is activated.
6. Programmable lockout timer with indicator light. Lockout timer to deactivate the pump and activate alarm circuits.
7. Digital display makeup totalizer to measure amount of makeup and bleed-off water from two water meter inputs.

8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. pH Controller:
1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 14 units. Incorporate solid-state integrated circuits and digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
 2. Digital display and touch pad for input.
 3. Sensor probe adaptable to sample stream manifold.
 4. High, low, and normal pH indication.
 5. High- or low-pH-alarm-light trip points, field adjustable; with silence switch.
 6. Hand-off-auto switch for acid pump.
 7. Internal adjustable hysteresis or deadband.
 8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. TSS Controller:
1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 5000 micromhos. Incorporate solid-state integrated circuits and digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
 2. Digital display and touch pad for input.
 3. Sensor probe adaptable to sample stream manifold.
 4. High, low, and normal conductance indication.
 5. High- or low-conductance-alarm-light trip points, field adjustable; with silence switch.
 6. Hand-off-auto switch for solenoid bleed-off valve.
 7. Bleed-off valve activated indication.
 8. Internal adjustable hysteresis or deadband.
 9. Bleed Valves:
 - a. Cooling Systems: Forged-brass body, globe pattern, general-purpose solenoid with continuous-duty coil, or motorized valve.
 - b. Steam Boilers: Motorized ball valve, steel body, and TFE seats and seals.
- G. Biocide Feeder Timer:
1. Microprocessor-based controller with digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
 2. 24-hour timer with 14-day skip feature to permit activation any hour of day.

3. Precision, solid-state, bleed-off lockout timer and clock-controlled biocide pump timer. Prebleed and bleed lockout timers.
4. Solid-state alternator to enable use of two different formulations.
5. 24-hour display of time of day.
6. 14-day display of day of week.
7. Battery backup so clock is not disturbed by power outages.
8. Hand-off-auto switches for biocide pumps.
9. Biocide A and Biocide B pump running indication.

H. Chemical Solution Tanks:

1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
2. Molded cover with recess for mounting pump.
3. Capacity: [30 gal. (114 L)] [50 gal. (189 L)] [120 gal. (454 L)] <Insert value>.

I. Chemical Solution Injection Pumps:

1. Self-priming, positive displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
2. Adjustable flow rate.
3. Metal and thermoplastic construction.
4. Built-in relief valve.
5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

J. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A 269, Type 304, stainless steel for steam boiler injection assemblies.

K. Injection Assembly:

1. Quill: Minimum NPS 1/2 (DN 15) with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
2. Ball Valve: [Three] [Two]-piece stainless steel as described in "Stainless-Steel Pipes and Fittings" Article; selected to fit quill.
3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
4. Assembly Pressure/Temperature Rating: Minimum 600 psig (4137 kPa) at 200 deg F (93 deg C).

2.5 OZONE-GENERATOR BIOCIDE EQUIPMENT

- A. Corona discharge generator with stainless-steel generating cells, and transformer housed in a NEMA 250, Type 4 enclosure. Assembly shall be suitable for continuous duty. Include factory-mounted site glasses to verify proper operation of generator.

- B. Generator vessels shall be constructed according to ASME Boiler and Pressure Vessel Code, bear an ASME label, and be equipped with pressure relief valve.
- C. External air compressor or induced airflow through a cleanable prefilter shall supply concentrated oxygen through a molecular sieve with **minus 62 deg F** (minus 52 deg C) dew point to avoid the formation of nitric acid.
- D. Controls: Microprocessor based with software in EEPROM, surge protection, high-temperature cutout, and operational status lights. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
- E. Ozone Contactors:
1. Bubble diffusers.
 2. Induction injection nozzle.
 3. Injectors with static mixers.
- F. Ozone Detector and Alarm Devices:
1. Detector:
 - a. Sensor: Metal dioxide semiconductor.
 - b. Concentration Range: **[0.01 to 0.14]** <Insert range> ppm.
 - c. Accuracy: Plus or minus 20 percent of range.
 - d. Sensitivity: 0.01 ppm.
 - e. Response Time: Maximum 10 seconds.
 - f. Operating Temperature: **50 to 100 deg F** (10 to 38 deg C).
 - g. Relative Humidity: 20 to 95 percent, noncondensing over the operating temperature range.
 2. Horns:
 - a. Electric-vibrating-polarized type.
 - b. 24-V dc, with provision for housing the operating mechanism behind a grille.
 - c. Horns shall produce a sound-pressure level of 90 dBA, measured **10 feet** (3 m) from the horn.
 - d. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 3. Visible Alarm Devices:
 - a. Xenon strobe lights listed in UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate.
 - b. Rated Light Output: **[75]** **[110]** <Insert number> candela.
 - c. Strobe Leads: Factory connected to screw terminals.

- d. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- G. Self-Contained Breathing Apparatus: Open-circuit, pressure-demand, compressed air includes completely assembled, portable, self-contained devices designed for hazardous breathing environment application.
1. Face Piece: EPDM or silicone rubber construction material, one-size-fits-all with double-sealing edge, stainless-steel speaking diaphragm and lens retainer, five adjustable straps to hold face piece to head (two straps on each side and one on top), exhalation valve in mask, close-fitting nose piece to ensure no CO₂ buildup, and perspiration drain to avoid skin irritation and to prevent eyepiece, spectacle, and lens fogging.
 2. Backplate: Orthopedically designed of **[chemical and impact-resistant, glass-fiber composite] [aluminum]**.
 3. Harness and Carrier Assembly: Large triangular back pad, backplate, and adjustable waist and shoulder straps. Modular in design, detachable components, and easy to clean and maintain. Shoulder straps padded with flame-resistant material, reinforced with stainless-steel cable, and attached with T-nuts, washers, and screws.
 4. Air Cylinder: **[30] [45] [60]**-minute, low-pressure, air-supply-loaded **[fiberglass] [aluminum] [steel]** cylinders fitted with quick-fill assembly for refilling and air transfer.
 5. Wall-Mounting Cabinet: Leakproof, corrosion-resistant, clear, plastic case.
 6. Tested and Certified: By the National Institute for Occupational Safety and Health and by the Mine Safety and Health Administration, according to 42 CFR 84, Subpart H.

2.6 STAINLESS-STEEL PIPES AND FITTINGS

- A. Stainless-Steel Tubing: Comply with ASTM A 269, Type 316.
- B. Stainless-Steel Fittings: Comply with ASTM A 815/A 815M, Type 316, Grade WP-S.
- C. Two-Piece, Full-Port, Stainless-Steel Ball Valves: ASTM A 351/A 351M, Type 316 stainless-steel body; ASTM A 276, Type 316 stainless-steel stem and vented ball, carbon-filled TFE seats, threaded body design with adjustable stem packing, threaded ends, and **250-psig (1725-kPa)** steam working-pressure rating and **600-psig (4140-kPa)** cold working-pressure rating.

2.7 UV BIOCIDAL EQUIPMENT

- A. Target Irradiation: Minimum 30,000 microwatts x s/sq. cm.
- B. Light Source Vessels:
 1. ASTM A 666, Type 304 stainless steel.

2. Construct for minimum [150 psig (1035 kPa)] <Insert value> at [150 deg F (65 deg C)] <Insert value> according to ASME Boiler and Pressure Vessel Code, and equipped with pressure relief valve.
3. Light Source Sleeve: Quartz, with EPDM O-ring seals.
4. Light Source: Replaceable UV lamp producing a minimum target irradiation of 254-nm wavelength light.

C. Controls: Interlock with pumps to operate when water is circulating.

2.8 CHEMICAL TREATMENT TEST EQUIPMENT

- A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounting cabinet for testing pH, TSS, inhibitor, chloride, alkalinity, and hardness; sulfite and testable polymer tests for high-pressure boilers, and oxidizing biocide test for open cooling systems.
- B. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.

1. [Four] <Insert number>-station rack for open systems.

2.9 CHEMICALS

- A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment and that can attain water quality specified in "Performance Requirements" Article.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Systems shall be operational, filled, started, and vented prior to cleaning. Use water meter to record capacity in each system.
- B. Place terminal control valves in open position during cleaning.
- C. Verify that electric power is available and of the correct characteristics.

3.2 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.

3.3 INSTALLATION

- A. Install chemical application equipment on concrete bases, level, and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Install water testing equipment on wall near water chemical application equipment.
- D. Install interconnecting control wiring for chemical treatment controls and sensors.
- E. Mount sensors and injectors in piping circuits.
- F. Install automatic chemical-feed equipment for [**condenser**] [**fluid-cooler spray**] water and include the following:
 - 1. Install makeup-water softener.
 - 2. Install water meter in makeup-water supply.
 - 3. Install inhibitor injection pumps and solution tanks with injection timer sensing contacts in water meter.
 - a. Pumps shall operate for timed interval on contact closure at water meter in makeup-water supply connection. Injection pump shall discharge into boiler feedwater tank or feedwater supply connection at boiler.
 - 4. Install test equipment and provide test-kit to Owner. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.
 - 5. Install TSS controller with sensor and bleed valves.
 - a. Bleed valves shall cycle to maintain maximum TSS concentration.
 - 6. Install pH sensor and controller with injection pumps and solution tanks.
 - a. Injector pumps shall operate to maintain required pH.
 - 7. Install biocide feeder alternating timer with two sets of injection pumps and solution tanks.
 - a. Injection pumps shall operate to feed biocide on an alternating basis.
 - 8. Install ozone generator with diffusers in condenser-water piping.
 - a. Ozone generator shall operate continuously with condenser-water flow.
 - 9. Install UV-irradiation lamps in condenser-water piping.

- a. UV lights shall operate continuously with condenser-water flow.

3.4 OZONE-GENERATOR INSTALLATION

- A. Install ozone generator and equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Pipe ozone from ozone generator to condenser water with stainless-steel pipe and fittings with welded joints.
- D. Install ~~[two]~~ **[three]**-piece, stainless-steel ball valve in ozone supply to condenser water.
- E. Pipe cooling water to ozone generator and to air-gap drain fitting with stainless-steel pipe and fittings with welded joints where enclosed in ozone-generator room.
- F. Install ~~[two]~~ **[three]**-piece, stainless-steel ball valve in cooling water supply to ozone generator.
- G. Mounting supports for ozone generator shall be ASTM A 666, Type 316 stainless steel.
- H. Mount breathing apparatus outside ozone-generator room.
- I. Mount and install ozone detector, warning lights, and audible alarm inside ozone-generator room. Mount another set of warning lights and audible alarm just outside the main entrance to ozone-generator room.

3.5 UV-IRRADIATION UNIT INSTALLATION

- A. Install UV-irradiation units on concrete bases, level, and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for UV-irradiation units and floor-mounting accessories and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.

3.6 CONNECTIONS

- A. Where installing piping adjacent to equipment, allow space for service and maintenance.
- B. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Comply with requirements in Section 232116 "Hydronic Piping Specialties" for dielectric fittings.
- C. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."
- D. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.
- E. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.
- F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.7 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
 - 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
 - 3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of HVAC systems' startup procedures.
 - 4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
 - 5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
 7. Cap and subject piping to static water pressure of **50 psig** (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
 8. Repair leaks and defects with new materials and retest piping until no leaks exist.
- C. Equipment will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. At **[four]** **[six]** **[eight]** **<Insert number>**-week intervals following Substantial Completion, perform separate water analyses on HVAC systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis advising Owner of changes necessary to adhere to "Performance Requirements" Article.
- F. Comply with ASTM D 3370 and with the following standards:
1. Silica: ASTM D 859.
 2. Acidity and Alkalinity: ASTM D 1067.
 3. Iron: ASTM D 1068.
 4. Water Hardness: ASTM D 1126.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232516

SECTION 232519 - WATER TREATMENT FOR STEAM SYSTEM FEEDWATER

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes the following HVAC water-treatment systems:
 - 1. Automatic chemical-feed equipment.
 - 2. Stainless-steel pipes and fittings.
 - 3. Chemical treatment test equipment.
 - 4. Chemicals.
- B. Related Requirements:
 - 1. Section 232533 "HVAC Makeup-Water Filtration Equipment" for requirements for water softeners, reverse-osmosis equipment, and filtration equipment.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. TDS: Total dissolved solids.
- B. TSS: Total suspended solids are solid materials, including organic and inorganic, that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.4 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, water-pressure drops, shipping, installed and operating weights, operating characteristics, connection requirements, and furnished specialties and accessories for the following products:
1. Water meters.
 2. Inhibitor injection timers.
 3. pH controllers.
 4. TDS controllers.
 5. Chemical solution tanks.
 6. Injection pumps.
 7. Chemical test equipment.
 8. Chemical material safety data sheets.
 9. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Pretreatment and chemical treatment equipment showing tanks, maintenance space required, and piping connections to steam systems.
1. Include plans, elevations, sections, and attachment details.
 2. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Water Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.
- C. Field quality-control reports. Indicate start-up of treatment systems when completed and operating properly. Indicate analysis of system water after cleaning and after treatment.
- D. Submit certificate of compliance from authority having jurisdiction indicating approval of chemicals and their proposed disposal.
- E. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project Site.
- F. Submit certificate of compliance from authority having jurisdiction indicating approval of chemicals and their proposed disposal.

- G. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project Site.
- H. Other Informational Submittals:
 - 1. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in "Performance Requirements" Article.
 - 2. Water Analysis: Illustrate water quality available at Project site.
 - 3. Passivation Confirmation Report: Verify passivation of galvanized-steel surfaces, and confirm this observation in a letter to Architect.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sensors, injection pumps, and controllers to include in emergency, operation, and maintenance manuals.
 - 1. Include data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step-by-step instructions on test procedures including target concentrations.

1.7 MAINTENANCE MATERIALS

- A. Provide sufficient chemicals for treatment and testing during warranty period.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of equipment and piping, including sampling points and location of chemical injectors.

1.8 QUALITY ASSURANCE

- A. Steam System Water-Treatment Service Provider Qualifications: An experienced steam systems water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.
- B. Installer Qualifications: An experienced installer who is an authorized representative of the chemical treatment manufacturer for both installation and maintenance of chemical treatment equipment required for this Project with minimum of three (3) years experience.
- C. Manufacturers: Companies specializing in manufacturing the products specified in this Section with minimum of five (5) years documented experience. Companies shall have local representatives with water analysis laboratories and full time service personnel.

- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Conform to applicable code for addition of non-potable chemicals to building mechanical systems, and for to public sewage systems.
- F. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.9 MAINTENANCE SERVICE

- A. Provide monthly technical service visits to perform field inspections and make water analysis on site. Detail findings in writing on proper practices, chemical treating requirements, and corrective actions needed. Submit two (2) copies of field service report after each visit.
- B. Provide laboratory and technical assistance services during this maintenance period.
- C. Provide onsite inspections of equipment during scheduled or emergency shutdown to properly evaluate success of water treatment program, and make recommendations in writing based upon these inspections.
- D. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above to inhibit corrosion, scale formation, and biological growth for **[heating, steam and condensate piping] [condenser-water piping]** and equipment. Services and chemicals shall be provided for a period of one (1) year from date of Substantial Completion, and shall include the following:
 - 1. Initial water analysis and steam systems water-treatment recommendations.
 - 2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
 - 3. Periodic field service and consultation.
 - 4. Customer report charts and log sheets.
 - 5. Laboratory technical analysis.
 - 6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

1.10 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements" and Division 1.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to

satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Anderson Chemical Company.](#)
2. [Aqua-Chem, Inc.](#)
3. [Barclay Water Management, Inc.](#)
4. [Boland.](#)
5. [Cascade Water Services, Inc.](#)
6. [Earthwise Environmental Inc.](#)
7. [General Electric Company; GE Water & Process Technologies.](#)
8. [H-O-H Water Technology, Inc.](#)
9. [Metro Group, Inc. \(The\); Metropolitan Refining Div.](#)
10. [Nalco; an Ecolab company.](#)
11. [Watcon, Inc.](#)
12. [Water Services Inc.](#)
13. **<Insert manufacturer's name>.**
14. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Water quality for steam systems shall minimize corrosion and scale buildup for optimum efficiency of steam and condensate equipment without creating a hazard to operating personnel or the environment.
- B. Base steam systems feedwater treatment on quality of water available at Project site, steam and condensate system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.
- C. Steam Condensate:
1. pH: Maintain a value within **[7.8 to 8.4] <Insert range>**.
 2. Total Alkalinity: Maintain a value within **[5 to 50] <Insert range>** ppm.
 3. Chemical Oxygen Demand: Maintain a maximum value of **[15] <Insert number>** ppm.
 4. Soluble Copper: Maintain a maximum value of **[0.20] <Insert number>** ppm.
 5. TSS: Maintain a maximum value of **[10] <Insert number>** ppm.
 6. Ammonia: Maintain a maximum value of **[20] <Insert number>** ppm.
 7. Total Hardness: Maintain a maximum value of **[2] <Insert number>** ppm.
 8. **<Insert other requirements if necessary>**.

- D. Steam boiler operating at **15 psig** (104 kPa) and less shall have the following water qualities:
1. "OH" Alkalinity: Maintain a value within **[200 to 400]** <Insert range> ppm.
 2. TSS: Maintain a value within **[600 to 3000]** <Insert range> ppm.
 3. <Insert other requirements if necessary>.
- E. Steam boiler operating at more than **15 psig** (104 kPa) shall have the following water qualities:
1. "OH" Alkalinity: Maintain a value within **[200 to 400]** <Insert range> ppm.
 2. TSS: Maintain a value within **[600 to 1200]** <Insert range> ppm to maximum 30 times TDS of water treated with reverse-osmosis equipment.
 3. <Insert other requirements if necessary>.

2.3 AUTOMATIC CHEMICAL-FEED EQUIPMENT

A. Water Meter:

1. AWWA C700, oscillating-piston, magnetic-drive, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: **150 psig** (1035 kPa).
4. Maximum Pressure Loss at Design Flow: **3 psig** (20 kPa).
5. Registration: **Gallons** (Liters) or **cubic feet** (cubic meters).
6. End Connections: Threaded.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac, and that will close at adjustable increments of total flow.
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Water Meter:

1. AWWA C701, turbine-type, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: **100 psig** (690 kPa).
4. Maximum Pressure Loss at Design Flow: **3 psig** (20 kPa).
5. Registration: **Gallons** (Liters) or **cubic feet** (cubic meters).
6. End Connections: Threaded.
7. Control: Low-voltage signal capable of transmitting **1000 feet** (305 m).
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Water Meter:

1. AWWA C701, turbine-type, totalization meter.
2. Body: **[Bronze] [Epoxy-coated cast iron]**.
3. Minimum Working-Pressure Rating: **150 psig** (1035 kPa).

4. Maximum Pressure Loss at Design Flow: **3 psig** (20 kPa).
5. Registration: **Gallons** (Liters) or **cubic feet** (cubic meters).
6. End Connections: Flanged.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac, and that will close at adjustable increments of total flow.
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. TSS Controller:

1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 5000 micromhos. Incorporate solid-state integrated circuits and digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. [**Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
2. Digital display and touch pad for input.
3. Sensor probe adaptable to sample stream manifold.
4. High, low, and normal conductance indication.
5. High- or low-conductance-alarm-light trip points, field adjustable; with silence switch.
6. Hand-off-auto switch for solenoid bleed-off valve.
7. Bleed-off valve activated indication.
8. Internal adjustable hysteresis or deadband.
9. Bleed Valves: Motorized ball valve, steel body, and TFE seats and seals.
10. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Chemical Solution Tanks:

1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
2. Molded cover with recess for mounting pump.
3. Capacity: [30 gal. (114 L)] [50 gal. (189 L)] [120 gal. (454 L)] <Insert value>.

F. Chemical Solution Injection Pumps:

1. Self-priming, positive displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
2. Adjustable flow rate.
3. Metal and thermoplastic construction.
4. Built-in relief valve.
5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A 269, Type 304, stainless steel for steam boiler injection assemblies.

H. Injection Assembly:

1. Quill: Minimum **NPS 1/2 (DN 15)** with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
2. Ball Valve: **[Three] [Two]**-piece stainless steel as described in "Stainless-Steel Pipes and Fittings" Article; selected to fit quill.
3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
4. Assembly Pressure/Temperature Rating: Minimum **600 psig (4137 kPa)** at **200 deg F (93 deg C)**.

2.4 STAINLESS-STEEL PIPES AND FITTINGS

A. Stainless-Steel Tubing: Comply with ASTM A 269, Type 316.

B. Stainless-Steel Fittings: Comply with ASTM A 815/A 815M, Type 316, Grade WP-S.

C. Two-Piece, Full-Port, Stainless-Steel Ball Valves: ASTM A 351/A 351M, Type 316 stainless-steel body; ASTM A 276, Type 316 stainless-steel stem and vented ball, carbon-filled TFE seats, threaded body design with adjustable stem packing, threaded ends, and **250-psig (1725-kPa)** steam working-pressure rating and **600-psig (4140-kPa)** cold working-pressure rating.

D. Three-Piece, Full-Port, Stainless-Steel Ball Valves: ASTM A 351/A 351M, Type 316 stainless-steel body; ASTM A 276, Type 316 stainless-steel stem and vented ball, threaded body design with adjustable stem packing, threaded ends, and **150-psig (1035-kPa)** steam working-pressure rating and **600-psig (4140-kPa)** cold working-pressure rating.

2.5 CHEMICAL TREATMENT TEST EQUIPMENT

A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounting cabinet for testing pH, TDS, inhibitor, chloride, alkalinity, and hardness; sulfite and testable polymer tests for high-pressure boilers, and oxidizing biocide test for open cooling systems.

B. Sample Cooler:

1. Tube: Sample.
 - a. Size: **NPS 1/4 (DN 8)** tubing.
 - b. Material: ASTM A 666, Type 316 stainless steel.
 - c. Pressure Rating: Minimum **2000 psig (13 790 kPa)**.
 - d. Temperature Rating: Minimum **850 deg F (454 deg C)**.
2. Shell: Cooling water.

- a. Material: ASTM A 666, Type 304 stainless steel.
 - b. Pressure Rating: Minimum 250 psig (1725 kPa).
 - c. Temperature Rating: Minimum 450 deg F (232 deg C).
3. Capacities and Characteristics:
- a. Tube: Sample.
 - 1) Flow Rate: [0.25 gpm (0.016 L/s)] <Insert value>.
 - 2) Entering Temperature: [400 deg F (204 deg C)] <Insert value>.
 - 3) Leaving Temperature: [88 deg F (31 deg C)] <Insert value>.
 - 4) Pressure Loss: [6.5 psig (44.8 kPa)] <Insert value>.
 - b. Shell: Cooling water.
 - 1) Flow Rate: [3 gpm (0.19 L/s)] <Insert value>.
 - 2) Entering Temperature: [70 deg F (21 deg C)] <Insert value>.
 - 3) Pressure Loss: [1.0 psig (6.89 kPa)] <Insert value>.
- C. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.
1. [Two] <Insert number>-station rack for closed-loop systems.
 2. [Four] <Insert number>-station rack for open-loop systems.

2.6 CHEMICALS

- A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment and that can attain water quality specified in "Performance Requirements" Article.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Systems shall be operational, filled, started, and vented prior to cleaning. Use water meter to record capacity in each system.
- B. Place terminal control valves in open position during cleaning.
- C. Verify that electric power is available and of the correct characteristics.

3.2 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.

3.3 INSTALLATION

- A. Install chemical application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Install water testing equipment on wall near water chemical application equipment.
- D. Install interconnecting control wiring for chemical treatment controls and sensors.
- E. Mount sensors and injectors in piping circuits.
- F. Install automatic chemical-feed equipment for steam boiler and steam condensate systems and include the following:
 - 1. Install water meter in makeup-water supply.
 - 2. Install inhibitor injection pumps and solution tanks with injection timer sensing contacts in water meter.
 - a. Pumps shall operate for timed interval when contacts close at water meter in makeup-water supply connection. Injection pump shall discharge into boiler feedwater tank or feedwater supply connection at boiler.
 - 3. Install test equipment and furnish test-kit to Owner.
 - 4. Install TSS controller with sensor and bleed valves.
 - a. Bleed valves shall cycle to maintain maximum TSS concentration.
 - 5. Install inhibitor injection timer with injection pumps and solution tanks.
 - a. Pumps shall operate for timed interval on contact closure at water meter in makeup-water supply connection. Injection pump shall discharge into main steam supply header.
- G. Install automatic chemical-feed equipment for **[condenser] [fluid-cooler spray]** water and include the following:
 - 1. Install water meter in makeup-water supply.
 - 2. Install inhibitor injection pumps and solution tanks with injection timer sensing contacts in water meter.
 - a. Pumps shall operate for timed interval on contact closure at water meter in makeup-water supply connection. Injection pump shall discharge into boiler feedwater tank or feedwater supply connection at boiler.

3. Install test equipment and provide test-kit to Owner. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.
4. Install TSS controller with sensor and bleed valves.
 - a. Bleed valves shall cycle to maintain maximum TSS concentration.
5. Install pH sensor and controller with injection pumps and solution tanks.
 - a. Injector pumps shall operate to maintain required pH.

3.4 CONNECTIONS

- A. Where installing piping adjacent to equipment, allow space for service and maintenance.
- B. Make piping connections between steam systems water-treatment equipment and dissimilar-metal piping with dielectric fittings. Comply with requirements in Section 232113 "Hydronic Piping" for dielectric fittings.
- C. Install shutoff valves on steam systems water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."
- D. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.
- E. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.
- F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 1. Inspect field-assembled components and equipment installation, including piping and electrical connections.

2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
 3. Place steam systems water-treatment system into operation and calibrate controls during the preliminary phase of steam systems' startup procedures.
 4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
 5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
 7. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
 8. Repair leaks and defects with new materials and retest piping until no leaks exist.
- C. Equipment will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. Sample boiler water at one-week intervals after boiler startup for a period of five weeks, and prepare test report advising Owner of changes necessary to adhere to "Performance Requirements" Article for each required characteristic. Sample boiler water at [four] [six] [eight] <Insert number>-week intervals following the testing noted above to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section.
- F. Comply with ASTM D 3370 and with the following standards:
1. Silica: ASTM D 859.
 2. Steam System: ASTM D 1066.
 3. Acidity and Alkalinity: ASTM D 1067.
 4. Iron: ASTM D 1068.
 5. Water Hardness: ASTM D 1126.
- 3.6 DEMONSTRATION
- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain steam systems water-treatment systems and equipment.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- B. Training: Provide a "how-to-use" self-contained breathing apparatus video that details exact operating procedures of equipment.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232519

SECTION 232523 - WATER TREATMENT FOR HUMIDIFICATION STEAM SYSTEM FEEDWATER

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes the following HVAC water-treatment systems:
 - 1. Automatic chemical-feed equipment.
 - 2. Stainless-steel pipes and fittings.
 - 3. Chemical treatment test equipment.
 - 4. Chemicals.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. RO: Reverse osmosis.
- B. TDS: Total dissolved solids.
- C. TSS: Total suspended solids are solid materials, including organic and inorganic, that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.4 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, water-pressure drops, shipping, installed and operating weights, operating characteristics, connection requirements, and furnished specialties and accessories for the following products:
1. Water meters.
 2. Inhibitor injection timers.
 3. pH controllers.
 4. TDS controllers.
 5. Chemical solution tanks.
 6. Injection pumps.
 7. Chemical test equipment.
 8. Chemical material safety data sheets.
 9. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Pretreatment and chemical[, **and ozone-generator biocide**][, **and UV-irradiation biocide**] treatment equipment showing tanks, maintenance space required, and piping connections to humidification steam feedwater systems.
1. Include plans, elevations, sections, and attachment details.
 2. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For equipment and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Water Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.
- C. Field quality-control reports. Indicate start-up of treatment systems when completed and operating properly. Indicate analysis of system water after cleaning and after treatment.
- D. Submit certificate of compliance from authority having jurisdiction indicating approval of chemicals and their proposed disposal.
- E. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project Site.
- F. Other Informational Submittals:

1. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in "Performance Requirements" Article.
2. Water Analysis: Illustrate water quality available at Project site.
3. Passivation Confirmation Report: Verify passivation of galvanized-steel surfaces, and confirm this observation in a letter to DEN Project Manager.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sensors, injection pumps, and controllers to include in emergency, operation, and maintenance manuals.
 1. Include data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step-by-step instructions on test procedures including target concentrations.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 1. Record actual locations of equipment and piping, including sampling points and location of chemical injectors.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MAINTENANCE MATERIALS

- A. Provide sufficient chemicals for treatment and testing during warranty period.

1.8 QUALITY ASSURANCE

- A. Water-Treatment Humidification Steam System Feedwater Service Provider Qualifications: An experienced HVAC water-treatment for humidification steam system feedwater service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.
- B. Installer Qualifications: An experienced installer who is an authorized representative of the chemical treatment manufacturer for both installation and maintenance of chemical treatment equipment required for this Project with minimum of three (3) years experience.
- C. Manufacturers: Companies specializing in manufacturing the products specified in this Section with minimum of five (5) years documented experience. Companies shall have local representatives with water analysis laboratories and full time service personnel.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction,

and marked for intended use.

- E. Conform to applicable code for addition of non-potable chemicals to building mechanical systems, and for to public sewage systems.
- F. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.9 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements" and Division 1.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Ampion Corp.](#)
 - 2. [Anderson Chemical Company.](#)
 - 3. [Aqua-Chem, Inc.](#)
 - 4. [Barclay Water Management, Inc.](#)
 - 5. [Boland.](#)
 - 6. [Cascade Water Services, Inc.](#)
 - 7. [Earthwise Environmental Inc.](#)
 - 8. [General Electric Company; GE Water & Process Technologies.](#)
 - 9. [H-O-H Water Technology, Inc.](#)
 - 10. [Metro Group, Inc. \(The\); Metropolitan Refining Div.](#)
 - 11. [Nalco; an Ecolab company.](#)
 - 12. [Watcon, Inc.](#)
 - 13. [Water Services Inc.](#)
 - 14. **<Insert manufacturer's name>.**
 - 15. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Water quality for humidification steam systems shall minimize corrosion and scale buildup for optimum efficiency of humidification steam equipment without creating a hazard to operating personnel or the environment.
- B. Base HVAC water treatment on quality of water available at Project site, humidification steam system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.
- C. Steam Condensate:
1. pH: Maintain a value within **[7.8 to 8.4]** <Insert range>.
 2. Total Alkalinity: Maintain a value within **[5 to 50]** <Insert range> ppm.
 3. Chemical Oxygen Demand: Maintain a maximum value of **[15]** <Insert number> ppm.
 4. Soluble Copper: Maintain a maximum value of **[0.20]** <Insert number> ppm.
 5. TDS: Maintain a maximum value of **[10]** <Insert number> ppm.
 6. Ammonia: Maintain a maximum value of **[20]** <Insert number> ppm.
 7. Total Hardness: Maintain a maximum value of **[2]** <Insert number> ppm.
 8. <Insert other requirements if necessary>.
- D. Steam boiler operating at **15 psig** (104 kPa) and less shall have the following water qualities:
1. "OH" Alkalinity: Maintain a value within **[200 to 400]** <Insert range> ppm.
 2. TDS: Maintain a value within **[600 to 3000]** <Insert range> ppm.
 3. <Insert other requirements if necessary>.
- E. Steam boiler operating at more than **15 psig** (104 kPa) shall have the following water qualities:
1. "OH" Alkalinity: Maintain a value within **[200 to 400]** <Insert range> ppm.
 2. TDS: Maintain a value within **[600 to 1200]** <Insert range> ppm to maximum 30 times RO water TDS.
 3. <Insert other requirements if necessary>.

2.3 AUTOMATIC CHEMICAL-FEED EQUIPMENT

- A. Water Meter:
1. AWWA C700, oscillating-piston, magnetic-drive, totalization meter.
 2. Body: Bronze.
 3. Minimum Working-Pressure Rating: **150 psig** (1035 kPa).
 4. Maximum Pressure Loss at Design Flow: **3 psig** (20 kPa).
 5. Registration: **Gallons** (Liters) or **cubic feet** (cubic meters).
 6. End Connections: Threaded.

7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac, and that will close at adjustable increments of total flow.
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Water Meter:

1. AWWA C701, turbine-type, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: 100 psig (690 kPa).
4. Maximum Pressure Loss at Design Flow: 3 psig (20 kPa).
5. Registration: Gallons (Liters) or cubic feet (cubic meters).
6. End Connections: Threaded.
7. Control: Low-voltage signal capable of transmitting 1000 feet (305 m).
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Water Meter:

1. AWWA C701, turbine-type, totalization meter.
2. Body: **[Bronze] [Epoxy-coated cast iron]**.
3. Minimum Working-Pressure Rating: 150 psig (1035 kPa).
4. Maximum Pressure Loss at Design Flow: 3 psig (20 kPa).
5. Registration: Gallons (Liters) or cubic feet (cubic meters).
6. End Connections: Flanged.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac, and that will close at adjustable increments of total flow.
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. TSS Controller:

1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 5000 micromhos. Incorporate solid-state integrated circuits and digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door. **[Interface for start/stop and status indication at central workstation as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."]**
2. Digital display and touch pad for input.
3. Sensor probe adaptable to sample stream manifold.
4. High, low, and normal conductance indication.
5. High- or low-conductance-alarm-light trip points, field adjustable; with silence switch.
6. Hand-off-auto switch for solenoid bleed-off valve.
7. Bleed-off valve activated indication.
8. Internal adjustable hysteresis or deadband.
9. Bleed Valves: Motorized ball valve, steel body, and TFE seats and seals.

E. Chemical Solution Tanks:

1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
2. Molded cover with recess for mounting pump.
3. Capacity: [30 gal. (114 L)] [50 gal. (189 L)] [120 gal. (454 L)] <Insert value>.

F. Chemical Solution Injection Pumps:

1. Self-priming, positive displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
2. Adjustable flow rate.
3. Metal and thermoplastic construction.
4. Built-in relief valve.
5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A 269, Type 304, stainless steel for steam boiler injection assemblies.

H. Injection Assembly:

1. Quill: Minimum NPS 1/2 (DN 15) with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
2. Ball Valve: [Three] [Two]-piece stainless steel as described in "Stainless-Steel Pipes and Fittings" Article; selected to fit quill.
3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
4. Assembly Pressure/Temperature Rating: Minimum 600 psig (4137 kPa) at 200 deg F (93 deg C).

2.4 STAINLESS-STEEL PIPES AND FITTINGS

- A. Stainless-Steel Tubing: Comply with ASTM A 269, Type 316.
- B. Stainless-Steel Fittings: Comply with ASTM A 815/A 815M, Type 316, Grade WP-S.
- C. Two-Piece, Full-Port, Stainless-Steel Ball Valves: ASTM A 351/A 351M, Type 316 stainless-steel body; ASTM A 276, Type 316 stainless-steel stem and vented ball, carbon-filled TFE seats, threaded body design with adjustable stem packing, threaded ends, and 250-psig (1725-kPa) steam working-pressure rating and 600-psig (4140-kPa) cold working-pressure rating.
- D. Three-Piece, Full-Port, Stainless-Steel Ball Valves: ASTM A 351/A 351M, Type 316 stainless-steel body; ASTM A 276, Type 316 stainless-steel stem and vented ball, threaded body design with adjustable stem packing, threaded ends, and 150-psig

(1035-kPa) steam working-pressure rating and 600-psig (4140-kPa) cold working-pressure rating.

2.5 CHEMICAL TREATMENT TEST EQUIPMENT

- A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounting cabinet for testing pH, TDS, inhibitor, chloride, alkalinity, and hardness; sulfite and testable polymer tests for high-pressure boilers, and oxidizing biocide test for open cooling systems.
- B. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.
 - 1. [Two] <Insert number>-station rack for closed-loop systems.
 - 2. [Four] <Insert number>-station rack for open-loop systems.

2.6 CHEMICALS

- A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment, and that can attain water quality specified in "Performance Requirements" Article.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Systems shall be operational, filled, started, and vented prior to cleaning. Use water meter to record capacity in each system.
- B. Place terminal control valves in open position during cleaning.
- C. Verify that electric power is available and of the correct characteristics.

3.2 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.

3.3 INSTALLATION

- A. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.

- B. Install water testing equipment on wall near water chemical application equipment.
- C. Install interconnecting control wiring for chemical treatment controls and sensors.
- D. Mount sensors and injectors in piping circuits.
- E. Install automatic chemical-feed equipment for water and include the following:
 - 1. Install water meter in makeup-water supply.
 - 2. Install inhibitor injection pumps and solution tanks with injection timer sensing contacts in water meter.
 - a. Pumps shall operate for timed interval on contact closure at water meter in makeup-water supply connection. Injection pump shall discharge into boiler feedwater tank or feedwater supply connection at boiler.
 - 3. Install test equipment and provide test-kit to Owner. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.
 - 4. Install TSS controller with sensor and bleed valves.
 - a. Bleed valves shall cycle to maintain maximum TSS concentration.
 - 5. Install pH sensor and controller with injection pumps and solution tanks.
 - a. Injector pumps shall operate to maintain required pH.

3.4 CONNECTIONS

- A. Where installing piping adjacent to equipment, to allow service and maintenance.
- B. Make piping connections between steam systems water-treatment equipment and dissimilar-metal piping with dielectric fittings. Comply with requirements in Section 232113 "Hydronic Piping" for dielectric fittings.
- C. Install shutoff valves on humidifier steam system water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."
- D. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for backflow preventers required in makeup water connections to potable-water systems.
- E. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.
- F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
 3. Place humidifier steam system water-treatment system into operation and calibrate controls during the preliminary phase of HVAC systems' startup procedures.
 4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
 5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
 7. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
 8. Repair leaks and defects with new materials and retest piping until no leaks exist.
- C. Equipment will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. Sample boiler water at one-week intervals after boiler startup for a period of five weeks, and prepare test report advising Owner of changes necessary to adhere to "Performance Requirements" Article for each required characteristic. Sample boiler water at [four] [six] [eight] <Insert number>-week intervals following the testing noted above to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section.
- F. Comply with ASTM D 3370 and with the following standards:
1. Silica: ASTM D 859.
 2. Steam System: ASTM D 1066.
 3. Acidity and Alkalinity: ASTM D 1067.

4. Iron: ASTM D 1068.
5. Water Hardness: ASTM D 1126.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232523

SECTION 232533 - HVAC MAKEUP-WATER FILTRATION EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes the following HVAC water filtration equipment:
 - 1. HVAC makeup-water softeners.
 - 2. RO equipment for HVAC makeup water.
 - 3. Multimedia filters.
 - 4. Self-cleaning strainers.
 - 5. Bag- or cartridge-type filters.
 - 6. Centrifugal separators.
 - 7. Water-softener chemicals.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. RO: Reverse osmosis.
- B. TSS: Total suspended solids are solid materials, including organic and inorganic, that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.4 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, and furnished specialties and accessories for the following products:
 - 1. Water softeners.
 - 2. RO units.
 - 3. Multimedia filters.
 - 4. Self-cleaning strainers.
 - 5. Bag- or cartridge-type filters.
 - 6. Centrifugal separators.
 - 7. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: Softeners and filtration equipment, maintenance space required, and piping connections to HVAC systems.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For **[water softeners]** **[RO equipment]** **[water filtration units]** and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Water Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.
- C. Field quality-control reports.
- D. Submit certificate of compliance from authority having jurisdiction indicating approval of chemicals and their proposed disposal.
- E. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project Site.
- F. Other Informational Submittals:
 - 1. Water Analysis: Illustrate water quality available at Project site.

1.6 CLOSEOUT SUBMITTALS

- 1. Operation and Maintenance Data: For sensors, injection pumps, **[water softeners,]** **[RO equipment,]** **[water filtration units,]** and controllers to include in emergency, operation, and maintenance manuals. Include data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step-by-step instructions on test procedures including target concentrations.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of equipment and piping, including sampling points and location of chemical injectors.

1.7 MAINTENANCE MATERIALS

- A. Provide sufficient chemicals for treatment and testing during warranty period.

1.8 QUALITY ASSURANCE

- A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-filtration service provider capable of analyzing water qualities, installing water-filtration equipment, and applying water filtration as specified in this Section.
- B. Installer Qualifications: An experienced installer who is an authorized representative of the chemical treatment manufacturer for both installation and maintenance of chemical treatment equipment required for this Project with minimum of three (3) years experience.
- C. Manufacturers: Companies specializing in manufacturing the products specified in this Section with minimum of five (5) years documented experience. Companies shall have local representatives with water analysis laboratories and full time service personnel.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Conform to applicable code for addition of non-potable chemicals to building mechanical systems, and for to public sewage systems.
- F. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.9 MAINTENANCE SERVICE

- A. Provide monthly technical service visits to perform field inspections and make water analysis on site. Detail findings in writing on proper practices, chemical treating requirements, and corrective actions needed. Submit two (2) copies of field service report after each visit.
- B. Provide laboratory and technical assistance services during this maintenance period.
- C. Provide onsite inspections of equipment during scheduled or emergency shutdown to properly evaluate success of water treatment program, and make recommendations in writing based upon these inspections.
- D. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above to inhibit corrosion, scale formation, and biological growth for equipment. Services and chemicals shall be provided for a period of one (1) year from date of Substantial Completion, and shall include the following:
 - 1. Periodic field service and consultation.

2. Customer report charts and log sheets.
3. Laboratory technical analysis.
4. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

1.10 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements" and Division 1.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 HVAC MAKEUP-WATER SOFTENER

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [CSI Water Treatment Systems.](#)
 2. [Culligan International Company.](#)
 3. [CUNO Incorporated.](#)
 4. [Diamond Water Conditioning; a Griesbach company.](#)
 5. [Diamond Water Systems, Inc.](#)
 6. [Ecodyne Industrial.](#)
 7. [Hungerford & Terry, Inc.](#)
 8. [Kinetico Incorporated.](#)
 9. [Marlo Incorporated.](#)
 10. [Parker Boiler.](#)
 11. [Pentair, Inc.](#)
 12. [RainSoft; a division of Aquion Water Treatment Products.](#)
 13. [Water King, Inc.](#)
 14. **<Insert manufacturer's name>.**
 15. or approved equal.
- B. Description: Twin mineral tanks and one brine tank, factory mounted on skid.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- D. Fabricate supports and attachments to tanks with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure as recommended in writing by manufacturer.
- E. Mineral Tanks:
1. Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 2. Fabricate and label fiber-reinforced plastic (FRP) filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section X, if indicated.
 3. Pressure Rating: [100 psig (690 kPa)] [125 psig (860 kPa)] [150 psig (1035 kPa)] **<Insert value>** minimum.
 4. Wetted Components: Suitable for water temperatures from [40 to at least 100 deg F (5 to at least 38 deg C)] **<Insert range>**.
 5. Freeboard: 50 percent, minimum, for backwash expansion above the normal resin bed level.
 6. Support Legs or Skirt: Constructed of structural steel, welded or bonded to tank before testing and labeling.
 7. Finish: Hot-dip galvanized on exterior and interior of tank after fabrication.
 8. Upper Distribution System: Single-point type, fabricated from galvanized-steel pipe and fittings.
 9. Lower Distribution System: Hub and radial-arm or header-lateral type; fabricated from PVC pipe and fittings with individual, fine-slotted, nonclogging polyethylene strainers; arranged for even-flow distribution through resin bed.
- F. Controls: Automatic; factory mounted on mineral tanks and factory wired.
1. Adjustable duration of regeneration steps.
 2. Push-button start and complete manual operation override.
 3. Pointer on pilot-control valve shall indicate cycle of operation.
 4. Means of manual operation of pilot-control valve if power fails.
 5. Main Operating Valves: Industrial, automatic, multiport, diaphragm type with the following features:
 - a. Slow opening and closing, nonslam operation.
 - b. Diaphragm guiding on full perimeter from fully open to fully closed.
 - c. Isolated dissimilar metals within valve.
 - d. Self-adjusting, internal, automatic brine injector that draws brine and rinses at constant rate independent of pressure.
 - e. Float-operated brine valve to automatically measure the correct amount of brine to the softener and refill with fresh water.
 - f. Sampling cocks for soft water.
 6. Flow Control: Automatic control of backwash and flush rates over variations in operating pressures that do not require field adjustments. Equip mineral tanks with automatic-reset-head water meter that electrically activates cycle controller to initiate regeneration at preset total in gallons (liters) and that automatically resets after regeneration to preset total in gallons (liters) for next service run. Include alternator to regenerate one mineral tank with the other in service.

- G. Brine Tank: Combination measuring and wet-salt storing system.
1. Tank and Cover Material: Fiberglass a minimum of **3/16 inch** (4.8 mm) thick; or molded polyethylene a minimum of **3/8 inch** (9.5 mm) thick.
 2. Brine Valve: Float operated and plastic fitted for automatic control of brine withdrawn and freshwater refill.
 3. Size: Large enough for at least four regenerations at full salting.
- H. Factory-Installed Accessories:
1. Piping, valves, tubing, and drains.
 2. Sampling cocks.
 3. Main-operating-valve position indicators.
 4. Water meters.
- I. Water Test Kit: Include in wall-mounting enclosure for water softener.
- J. Capacities and Characteristics:
1. Continuous Service Flow Rate: **<Insert gpm (L/s)>** at **15-psig** (104-kPa) pressure loss.
 2. Peak Service Flow Rate: **<Insert gpm (L/s)>** at **25-psig** (173-kPa) pressure loss.
 3. Water Consumption: **<Insert gal./day (cu. m/day)>**.
 4. Water Demand: **<Insert number>** hours/day.
 5. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
 - g. Interrupting Capacity: **<Insert amperage>**.

2.2 RO EQUIPMENT FOR HVAC MAKEUP WATER

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [CSI Water Treatment Systems.](#)
 2. [Culligan International Company.](#)
 3. [CUNO Incorporated.](#)
 4. [Diamond Water Conditioning; a Griesbach company.](#)
 5. [Ecodyne Industrial.](#)
 6. [Hungerford & Terry, Inc.](#)
 7. [Kinetico Incorporated.](#)
 8. [Marlo Incorporated.](#)
 9. [Pentair, Inc.](#)
 10. [RainSoft; a division of Aquion Water Treatment Products.](#)

11. [Water & Power Technologies, Inc.](#)
 12. [Water King, Inc.](#)
 13. **<Insert manufacturer's name>**.
 14. or approved equal.
- B. Description: Factory fabricated and tested with RO membrane elements in housings, high-pressure pumps and motors, controls, valves, and prefilter; mounted on skid.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Fabricate supports and attachments to tanks with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure as recommended in writing by manufacturer.
- E. Skid Assembly: Welded-steel frame coated with epoxy protective finish.
- F. RO Membrane and Housing:
1. Element: Thin-film composite with U-cup brine seal with minimum 98 percent salt rejection based on 2000-ppm water supplied at **225 psig (1551 kPa)** and **77 deg F (25 deg C)**.
 2. Housing: ASTM A 666, Type 304 stainless steel with PVC end caps held in place with stainless-steel straps.
- G. High-Pressure Pumps and Motors:
1. Pump:
 - a. Vertical, multistage centrifugal operating at 3500 rpm with ASTM A 666, Type 304 stainless-steel casing, shaft, impellers, and inlet and discharge casting.
 - b. Bearings shall be tungsten carbide and ceramic.
 - c. Cast-iron frame and flanged suction and discharge connections.
 2. Motor: NEMA-standard, C-faced, totally enclosed, fan-cooled motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- H. Controls:
1. Microprocessor-based controller with digital display.
 2. Interlock for remote start/stop control.
 3. Membrane flush sequence when pumps shut down.
 4. Run time indicator.
 5. Low-pressure safety cutoff.
 6. Panel-mounted gages as follows:
 - a. Product and concentrate.

- b. Inlet, cartridge filter outlet, RO feed, RO concentrate, and RO product pressures.
 - c. Product conductivity monitor.
- I. Valves:
 1. Stainless-steel pump, concentrate, and recycle throttling valves rated for minimum **300 psig** (2068 kPa).
 2. Automatic inlet shutoff valve, diaphragm type; solenoid actuated, normally closed, and constructed of glass-reinforced noryl thermoplastic.
 3. PVC valves with EPDM seats and seals for isolation at inlet, and check and sample valves at product and concentrate. Sample valves at cartridge filter outlet, concentrate, and product outlet.
- J. Prefilter:
 1. Housing: Polypropylene with built-in relief or vent valve.
 2. Element: Spun-wound polypropylene.
- K. Inlet Water Tempering Valve: Thermostatic water-tempering valve to maintain [**77 deg F** (25 deg C)] **<Insert value>** inlet water temperature to RO unit.
- L. Activated Carbon Filter:
 1. Media Tank: Fiberglass-reinforced polyester rated for minimum **150 psig** (1035 kPa) with internal backwash distributor and filtered water collector.
 2. Media: 12-by-40-mesh, bituminous coal-based activated carbon.
 3. Backwash Valve: Piston-operated control valve with drain-line, flow-control orifice.
 4. Backwash Control: Seven-day time clock.
- M. Atmospheric Storage Tank:
 1. Tank: Polyethylene single piece with closed top and flat bottom with manway in top, 0.2-micron filter vent, inlet, discharge, and drain piping connections, and bulkhead fittings for level controls.
 2. Control: Level switches start and stop RO unit. Low-level limit shall stop repressurization pumps, and signal an alarm.
- N. Repressurization Pumps:
 1. Pumps: Two close-coupled, single-stage centrifugal pumps, with mechanical seals. Wetted components ASTM A 666, Type 316 stainless steel.
 2. Controls: NEMA 250, Type 4X pump control panel constructed of fiberglass to control pumps, one operating and one standby, with automatic alternator and fail-over control.
 3. Motor: Open, drip-proof motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

- O. Water Test Kit: Include in wall-mounting cabinet for RO unit.
- P. Capacities and Characteristics:
1. RO Product Flow Rate: <Insert gpm (L/s)>.
 2. Total Water Flow Rate: <Insert gpm (L/s)>.
 3. Daily Water Consumption: <Insert gal./day (cu. m/day)>.
 4. Water Demand: <Insert number> hours/day.
 5. Storage Tank Size: <Insert gal. (L)>.
 6. RO Inlet Operating Temperature: [77 deg F (25 deg C)] <Insert value>.
 7. High-Pressure Pump:
 - a. Discharge Pressure: <Insert psig (kPa)>.
 - b. Flow Rate: <Insert gpm (L/s)>.
 - c. Horsepower: <Insert value>.
 - d. Motor Speed: [3500] <Insert number> rpm.
 8. Repressure Pumps:
 - a. Discharge Pressure: <Insert psig (kPa)>.
 - b. Flow Rate: <Insert gpm (L/s)>.
 - c. Horsepower: <Insert value>.
 - d. Motor Speed: [3500] <Insert number> rpm.
 9. Prefilter Design (at Total Water Flow Rate):
 - a. Filter Efficiency: [98] <Insert number> percent.
 - b. Particle Size: [5] <Insert number> microns and larger.
 - c. Clean Pressure Loss: [2 psig (14 kPa)] <Insert value>.
 - d. Replacement Pressure Loss: [6 psig (41 kPa)] <Insert value>.
 10. Electrical Characteristics (Single-Point Connection):
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
 - g. Interrupting Capacity: <Insert amperage>.

2.3 MULTIMEDIA FILTERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Diamond Water Systems, Inc.](#)
 2. [Everfilt.](#)
 3. [LAKOS; Claude Laval Corporation.](#)

4. [Miami Filter LLC.](#)
 5. [PEP Filters, Inc.](#)
 6. [Puroflux Corporation.](#)
 7. [United Industries, Inc.](#)
 8. **<Insert manufacturer's name>.**
 9. or approved equal.
- B. Description: Factory-fabricated and -tested, simplex, multimedia filter system of filter tank, media, strainer, circulating pump, piping, and controls for removing particles from water.
1. Filter Tank: Corrosion resistant with distribution system and media.
 - a. Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - b. Fabricate and label FRP filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section X, if indicated.
 - c. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - d. Steel Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
 - e. FRP Tank Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Type A, integral; [**Designation E, 125-psig (0.862-MPa)**] [**or**] [**Designation F, 150-psig (1.034-MPa)**] pressure category flanges of grade same as tank material according to ASTM D 5421.
 2. Motorized Valves: Flanged or grooved-end, ductile-iron butterfly type with **[EPDM]** **<Insert material>** valve seat and stem seal; with ASTM B 148 aluminum bronze disc.
 3. Strainer: Basket type mounted on pump suction.
 4. Piping: ASTM A 53/A 53M, Type S, F, or E; Grade B, Schedule 40 black steel, with flanged, grooved, or threaded joints and malleable, steel welding, or ductile-iron fittings.
 5. Piping: **ASTM B 88, Type L (ASTM B 88M, Type B)** copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
 6. Safety Valves: Automatic pressure relief.
 7. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.
 - a. Casing: Radially split, cast iron.
 - b. Pressure Rating: [**125 psig (860 kPa)**] [**150 psig (1035 kPa)**] minimum.
 - c. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
 - d. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
 - e. Seal: Mechanical.
 - f. Motor: Open, dripproof motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

8. Controls: Automatic control of circulating pump and tank backwash; factory wired for single electrical connection.
 - a. Panel: NEMA 250, [Type 4] <Insert type> enclosure with time clock and pressure gages.
 - b. Pump: Automatic and manual switching; manual switch position bypasses safeties and controls.
 - c. Backwash: Automatic; with time clock and differential pressure switch.
 - d. Backwash Valve: Tank mounted with valves interlocked to single actuator.
 9. Support: Skid mounting. [Fabricate supports and base and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.]
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Capacities and Characteristics:
1. Filter Design:
 - a. Water Flow: <Insert gpm (L/s)>.
 - b. Clean Pressure Loss: [5 psig (34.5 kPa)] <Insert value>.
 - c. Maximum Media Flow Rate: [15 gpm/sq. ft. (10.2 L/s per sq. m)] <Insert value>.
 - d. Filtration Efficiency: [98] <Insert number> percent.
 - e. Particle-Specific Gravity: [1.8] <Insert number>.
 - f. Particle Size: [5] [10] [20] [45] <Insert number> microns.
 2. Filter Tank: With internal distribution piping.
 - a. Pressure Rating: <Insert psig (kPa)>.
 - b. Diameter: <Insert inches (mm)>.
 - c. Inlet and Outlet Size: <Insert NPS (DN)>.
 - d. Blowdown Piping Outlet Size: <Insert NPS (DN)>.
 3. Filter Media: <Insert material>.
 4. Start Backwash Pressure Loss: [13 psig (90 kPa)] <Insert value>.
 5. Backwash Period: [10] <Insert number> minutes.
 6. Circulating Pump:
 - a. Capacity: <Insert gpm (L/s)>.
 - b. Total Dynamic Head: <Insert feet (kPa)>.
 - c. Motor Speed: <Insert number> rpm.
 - d. Inlet Size: <Insert NPS (DN)>.
 - e. Outlet Size: <Insert NPS (DN)>.
 7. Pump Motor Size and Electrical Characteristics:

- a. Horsepower: **<Insert value>**.
 - b. Volts: **[120] [208] [240] [277] [480] <Insert number> V**.
 - c. Phase: **[Single] [Three]**.
 - d. Hertz: **[60] <Insert number> Hz**.
8. Unit Electrical Characteristics:
- a. Full-Load Amperes: **<Insert value>**.
 - b. Minimum Circuit Ampacity: **<Insert value>**.
 - c. Maximum Overcurrent Protection: **<Insert amperage>**.
 - d. Interrupting Capacity: **<Insert amperage>**.

2.4 SELF-CLEANING STRAINERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Everfilt](#).
 2. [Hayward Flow Control Systems, Inc.](#)
 3. [Islip Flow Controls Inc.](#)
 4. [Orival, Inc.](#)
 5. [Sure Flow Equipment Inc.](#)
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Description: Factory-fabricated and -tested, ASTM A 126, Class B, cast-iron or steel, self-cleaning strainer system of tank, strainer, backwash arm or cleaning spiral, drive and motor, piping, and controls for removing particles from water.
1. Fabricate and label ASTM A 126, Class B, cast-iron or steel strainer tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 2. Pipe Connections:
 - a. **NPS 2 (DN 50) and Smaller:** Threaded according to ASME B1.20.1.
 - b. **NPS 2-1/2 (DN 65) and Larger:** Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Motorized Valves: Flanged or grooved-end, ductile-iron angle type with **[EPDM] <Insert material>** valve seat and stem seal; with ASTM B 148 aluminum bronze disc.
- E. Strainer: Stainless steel.
- F. Piping: ASTM A 53/A 53M, Type S, F, or E; Grade B, Schedule 40 black steel, with flanged, grooved, or threaded joints and malleable, steel welding, or ductile-iron fittings.

- G. Safety Valves: Automatic pressure relief.
- H. Hydraulic drive on some units makes motorized drive unnecessary.
- I. Backwash Arm Drive:
1. Drive Casing: Cast iron.
 2. Worm Gears: Immersed in oil.
 3. Motor: Open, dripproof motor supported on the strainer-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- J. Controls: Automatic control of backwash; factory wired for single electrical connection.
1. Panel: NEMA 250, **[Type 4]** <Insert type> enclosure with time clock and pressure gages.
 2. Backwash Arm Drive: Automatic and manual switching; manual switch position bypasses safeties and controls.
 3. Backwash: Automatic; with time clock and differential pressure switch.
 4. Backwash Valve: Electric actuator.
- K. Support: Skid mounting. **[Fabricate supports and base and attachment to tank with reinforcement strong enough to resist strainer movement during a seismic event when strainer base is anchored to building structure.]**
- L. Capacities and Characteristics:
1. Strainer Design:
 - a. Water Flow: <Insert gpm (L/s)>.
 - b. Clean Pressure Loss: **[5 psig (34.5 kPa)]** <Insert value>.
 - c. Strainer Mesh: **[40] [60] [80]** <Insert number>.
 2. Strainer Tank: With internal distribution piping.
 - a. Material: **[Cast iron] [Steel]** <Insert material>.
 - b. Pressure Rating: **[150 psig (1034 kPa)]** <Insert value>.
 - c. Inlet and Outlet Size: <Insert NPS (DN)>.
 - d. Backwash Piping Outlet Size: <Insert NPS (DN)>.
 3. Start Backwash: **[10 psig (69 kPa)]** <Insert value>.
 4. Backwash Period: **[5]** <Insert number> minutes.
 5. Drive Motor Size and Electrical Characteristics:
 - a. Horsepower: <Insert value>.
 - b. Volts: **[120] [208] [240] [277] [480]** <Insert number> V.
 - c. Phase: **[Single] [Three]**.
 - d. Hertz: **[60]** <Insert number> Hz.
 6. Unit Electrical Characteristics:

- a. Full-Load Amperes: **<Insert value>**.
- b. Minimum Circuit Ampacity: **<Insert value>**.
- c. Maximum Overcurrent Protection: **<Insert amperage>**.
- d. Interrupting Capacity: **<Insert amperage>**.

2.5 [BAG] [CARTRIDGE]-TYPE FILTERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Cycron Corporation](#).
2. [Eden Equipment Company](#).
3. [Filter Specialists, Inc.](#)
4. [Filtration Systems; a division of Mechanical Mfg. Corporation](#).
5. [Hayward Flow Control Systems, Inc.](#)
6. [Parker Hannifin Corp.; Process Filtration Div.](#)
7. [Pentair, Inc.](#)
8. [PEP Filters, Inc.](#)
9. [RainSoft; a division of Aquion Water Treatment Products](#).
10. [Rosedale Products, Inc.](#)
11. [RPA Process Technologies](#).
12. [Shelco Filters](#).
13. [Siemens Water Technologies](#).
14. **<Insert manufacturer's name>**.
15. or approved equal.

- B. Description: Floor-mounting housing with filter [**bags**] [**cartridges**] for removing particles from water.

1. Housing: Corrosion resistant; designed to separate inlet from outlet and to direct inlet through [**bag**] [**cartridge**]-type water filter; with [**bag support and**] base, feet, or skirt.
 - a. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 - b. Steel Housing Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
 - c. Plastic Housing Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: **150-psig (1035-kPa)** plastic flanges.

2. [**Bag**] [**Cartridge**]: Replaceable; of shape to fit housing.

- C. Capacities and Characteristics:

1. Filter Design:
 - a. Water Flow Rate: **<Insert gpm (L/s)>**.
 - b. Filtration Efficiency: [**98**] **<Insert number>** percent.

- c. Particle Size: **[10] [20]** <Insert number> microns and larger.
 - d. Clean Pressure Loss: **[2 psig (14 kPa)]** <Insert value>.
 - e. Pressure Loss at Replacement: **[6 psig (41 kPa)]** <Insert value>.
2. Housing:
- a. Material: **[Carbon steel] [Plastic]**.
 - b. Pressure Rating: <Insertpsig (kPa)>.
 - c. Seal Material: **[Nitrile rubber]** <Insert material>.
 - d. Diameter: <Insert inches (mm)>.
 - e. Height or Length: <Insert inches (mm)>.
 - f. Inlet and Outlet Size: <Insert NPS (DN)>.
 - g. Drain Size: **[Not applicable]** <Insert NPS (DN)>.
 - h. Bag Support Basket Material: **[Stainless steel]** <Insert material>.
3. **[Bag] [Cartridge]**:
- a. Number Required: <Insert number>.
 - b. Nominal Diameter: <Insert inches (mm)>.
 - c. Nominal Length: <Insert inches (mm)>.
 - d. Media Material: **[Cotton] [Polyester] [Polypropylene]** <Insert material>.

2.6 CENTRIFUGAL SEPARATORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Culligan International Company](#).
 2. [Ecodyne Industrial](#).
 3. [Griswold Controls](#).
 4. [LAKOS; Claude Laval Corporation](#).
 5. [PEP Filters, Inc.](#)
 6. [Puroflux Corporation](#).
 7. [Rosedale Products, Inc.](#)
 8. [Siemens Water Technologies](#).
 9. <Insert manufacturer's name>.
 10. or approved equal.
- B. Description: Simplex separator housing with baffles and chambers for removing particles from water by centrifugal action and gravity.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Housing: With manufacturer's proprietary system of baffles and chambers.
1. Construction: Fabricate and label steel separator housing to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

2. Inlet: Designed with tangential entry to produce centrifugal flow of feedwater.
 3. Vortex Chamber: Designed for downward vortex flow and gravity separation of particles.
 4. Collection Chamber: Designed to hold separated particles.
 5. Outlet: Near top of unit.
 6. Purge: At bottom of collection chamber.
 7. Pipe Connections **NPS 2 (DN 50)** and Smaller: Threaded according to ASME B1.20.1.
 8. Pipe Connections **NPS 2-1/2 (DN 65)** and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606. Provide stainless-steel flanges if tank is stainless steel.
- E. Motorized Purge Valve: Gate or plug pattern valve.
1. Motorized Valves: Butterfly-type, flanged or grooved-end, ductile-iron body, with **[EPDM] <Insert material>** valve seat and stem seal; with ASTM B 148 aluminum bronze disc.
- F. Strainer: Stainless-steel basket type mounted on pump suction.
- G. Piping: ASTM A 53/A 53M, Type S, F, or E; Grade B, Schedule 40 black steel, with flanged, grooved, or threaded joints and malleable, steel welding, or ductile-iron fittings.
- H. Piping: **ASTM B 88, Type L (ASTM B 88M, Type B)** copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
- I. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.
1. Casing: Radially split, cast iron.
 2. Pressure Rating: **[125 psig (860 kPa)] [150 psig (1035 kPa)]** minimum.
 3. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
 4. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
 5. Seal: Mechanical.
 6. Motor: Open, dripproof motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- J. Controls: Automatic control of circulating pump and separator purge; factory wired for single electrical connection.
1. Panel: NEMA 250, **[Type 4] <Insert type>** enclosure.
 2. Pump: Automatic and manual switching; manual switch position bypasses safeties and controls.
 3. Separator Purge: Automatic and manual.
 4. TSS Controller Interlock: Open separator purge valve with bleed-off control.

K. Support: Skid mounting.[**Fabricate supports and base and attachment to separator housing with reinforcement strong enough to resist separator movement during a seismic event when separator base is anchored to building structure.**]

L. Capacities and Characteristics:

1. Separator Design:

- a. Water Flow Rate: <Insert gpm (L/s)>.
- b. Pressure Loss: [5 psig (34.5 kPa)] <Insert value>.
- c. Separator Efficiency: [98] <Insert number> percent.
- d. Particle-Specific Gravity: [1.8] <Insert number>.
- e. Particle Size: [5] [10] [20] [45] <Insert number> microns.

2. Housing:

- a. Material: [Steel] [Stainless steel] [Plastic] [Fiberglass] <Insert material>.
- b. Pressure Rating: <Insert psig (kPa)>.
- c. Diameter: <Insert inches (mm)>.
- d. Height: <Insert inches (mm)>.
- e. Inlet and Outlet Size: <Insert NPS (DN)>.
- f. Purge Size: <Insert NPS (DN)>.

3. Circulating Pump:

- a. Capacity: <Insert gpm (L/s)>.
- b. Total Dynamic Head: <Insert feet (kPa)>.
- c. Motor Speed: <Insert number> rpm.
- d. Inlet Size: <Insert NPS (DN)>.
- e. Outlet Size: <Insert NPS (DN)>.

4. Pump Motor Size and Electrical Characteristics:

- a. Horsepower: <Insert value>.
- b. Volts: [120] [208] [240] [277] [480] <Insert number> V.
- c. Phase: [Single] [Three].
- d. Hertz: [60] <Insert number> Hz.
- e. Full-Load Amperes: <Insert value>.
- f. Minimum Circuit Ampacity: <Insert value>.
- g. Maximum Overcurrent Protection: <Insert amperage>.
- h. Interrupting Capacity: <Insert amperage>.

2.7 WATER-SOFTENER CHEMICALS

A. Mineral: High-capacity, sulfonated-polystyrene ion-exchange resin that is stable over entire pH range with good resistance to bead fracture from attrition or shock. Resin exchange capacity minimum 30,000 grains/cu. ft. (69 kg/cu. m) of calcium carbonate of resin when regenerated with 15 lb (6.8 kg) of salt.

- B. Salt for Brine Tanks: High-purity sodium chloride, free of dirt and foreign material. Rock and granulated forms are unacceptable.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Systems shall be operational, filled, started, and vented prior to cleaning. Use water meter to record capacity in each system.
- B. Place terminal control valves in open position during cleaning.
- C. Verify that electric power is available and of the correct characteristics.

3.2 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.

3.3 INSTALLATION

- A. Equipment Mounting:
 1. Install [**water-softener**] [**water filtration**] equipment on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

3.4 WATER-SOFTENER INSTALLATION

- A. Install water-softener equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.
- B. Install brine lines and fittings furnished by equipment manufacturer but not factory installed.
- C. Prepare mineral-tank distribution system and underbed for minerals and place specified mineral into mineral tanks.
- D. Install water-testing sets on wall adjacent to water softeners.

3.5 RO UNIT INSTALLATION

- A. Install RO unit and storage tank on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor RO unit and storage tank with pumps to substrate.
- B. Install interconnecting piping and controls furnished by equipment manufacturer but not factory installed.
- C. Install water-testing sets on wall adjacent to RO unit.

3.6 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance.
- C. Make piping connections between HVAC [**water-softener**] [**water filtration**] equipment and dissimilar-metal piping with dielectric fittings. Comply with requirements in Section 232113 "Hydronic Piping."
- D. Install shutoff valves on HVAC [**water-softener**] [**water filtration**] equipment inlet and outlet. Metal general-duty valves are specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."
- E. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.
- F. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.
- G. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

3.7 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing.
3. Place HVAC [**water-softener**] [**water filtration**] system into operation and calibrate controls during the preliminary phase of HVAC systems' startup procedures.
4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
7. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
8. Repair leaks and defects with new materials and retest piping until no leaks exist.

C. Equipment will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.8 DEMONSTRATION

A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 232533

SECTION 233113 - METAL DUCTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Single-wall rectangular ducts and fittings.
2. Double-wall rectangular ducts and fittings.
3. Single-wall round[**and flat-oval**] ducts and fittings.
4. Double-wall round[**and flat-oval**] ducts and fittings.
5. Sheet metal materials.
6. Duct liner.
7. Sealants and gaskets.
8. Hangers and supports.
9. Seismic-restraint devices.

B. Related Sections:

1. Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
2. Section 233116 "Nonmetal Ducts" for fibrous-glass ducts, thermoset fiber-reinforced plastic ducts, thermoplastic ducts, PVC ducts, and concrete ducts.
3. Section 233119 "HVAC Casings" for factory- and field-fabricated casings for mechanical equipment.
4. Section 233300 "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Duct Sizes: Inside clear dimensions. For lined ducts, maintain clear sizes inside lining.
- B. Low Pressure: 2 inch WG positive or negative static pressure and velocities less than 2,500 fpm.

- C. Medium Pressure: Three pressure classifications, as follows:
 - 1. 3 inch WG positive or negative static pressure and velocities less than 4,000 fpm.
 - 2. 4 inch WG positive static pressure and velocities greater than 2,000 fpm. 6 inch WG positive static pressure and velocities greater than 2,000 fpm.
- D. High Pressure: 10 inch WG positive static pressure and velocities greater than 2,000 fpm.

1.4 PERFORMANCE REQUIREMENTS

- A. No variation of duct configuration or sizes permitted except by written permission of the DEN Mechanical Engineer. Size round ducts installed in place of rectangular ducts in accordance with SMACNA **[and] [or]** ASHRAE table of equivalent rectangular and round ducts.
- B. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.
- C. Structural Performance: Duct hangers and supports **[and seismic restraints]** shall withstand the effects of gravity **[and seismic]** loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" **[and] [ASCE/SEI 7.] [SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems."]** <Insert document.>
 - 1. Seismic Hazard Level A: Seismic force to weight ratio, 0.48.
 - 2. Seismic Hazard Level B: Seismic force to weight ratio, 0.30.
 - 3. Seismic Hazard Level C: Seismic force to weight ratio, 0.15.
- D. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

1.5 ACTION SUBMITTALS

- A. Product Data: Indicate duct fittings, particulars such as gages, sizes, welds, and configuration for **[duct materials] [duct liner] [duct connectors]** <Insert product>. For each type of the following products:
 - 1. Liners and adhesives.
 - 2. Sealants and gaskets.
 - 3. Seismic-restraint devices.
 - 4. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that duct systems comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."

2. Product Data for Prerequisite EA 2: Documentation indicating that duct systems comply with ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
3. Leakage Test Report for Prerequisite EA 2: Documentation of work performed for compliance with ASHRAE/IESNA 90.1, Section 6.4.4.2.2 - "Duct Leakage Tests."
4. Duct-Cleaning Test Report for Prerequisite IEQ 1: Documentation of work performed for compliance with ASHRAE 62.1, Section 7.2.4 - "Ventilation System Start-up."
5. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
6. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Factory- and shop-fabricated ducts and fittings.
3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
4. Elevation of top of ducts.
5. Dimensions of main duct runs from building grid lines.
6. Fittings.
7. Reinforcement and spacing.
8. Seam and joint construction.
9. Penetrations through fire-rated and other partitions.
10. Equipment installation based on equipment being used on Project.
11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
12. Hangers and supports, including methods for duct and building attachment[, **seismic restraints,**] and vibration isolation.
13. **<Insert lists of areas or systems requiring Shop Drawings.>**

D. Delegated-Design Submittal:

1. Sheet metal thicknesses.
2. Joint and seam construction and sealing.
3. Reinforcement details and spacing.
4. Materials, fabrication, assembly, and spacing of hangers and supports.
5. Design Calculations: Calculations[, **including analysis data signed and sealed by the qualified professional engineer responsible for their preparation**] for selecting hangers and supports[**and seismic restraints**].

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
 2. Suspended ceiling components.
 3. Structural members to which duct will be attached.
 4. Size and location of initial access modules for acoustical tile.
 5. Other systems installed in same space as ducts.
 6. Ceiling- and wall-mounting access doors and panels required to provide access to dampers and other operating devices.
 7. Ceiling-mounting items, including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
 8. Penetrations of smoke barriers and fire-rated construction.
 9. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Perimeter moldings.
 - g. **<Insert item>**.
- B. Welding certificates.
- C. Field quality-control reports. Indicate pressure tests performed. Include date, section tested, test pressure, and leakage rate, following SMACNA HVAC Air Duct Leakage Test Manual.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
1. Record actual locations of ducts and duct fittings. Record changes in fitting location and type. Show additional fittings used.

1.8 QUALITY ASSURANCE

- A. Perform Work in accordance with SMACNA - HVAC Duct Construction Standards - Metal and Flexible.
- B. Maintain one copy of document on site for reference by Contractor's personnel.

- C. Welding Qualifications: Qualify procedures and personnel according to [AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.] [AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.] [AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.]
- D. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
 3. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.
- E. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up."
- F. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
- G. Construct ductwork to [NFPA 90A] [and] [NFPA 90B] [and] [NFPA 96] standards.
- H. Mockups:
1. Before installing duct systems, build mockups representing static-pressure classes in excess of [3-inch wg (750 Pa)] <Insert static-pressure class>. Build mockups to comply with the following requirements, using materials indicated for the completed Work:
 - a. [Five] <Insert number> transverse joints.
 - b. [One] <Insert number> access door(s).
 - c. [Two] <Insert number> typical branch connections, each with at least one elbow.
 - d. [Two] <Insert number> typical flexible duct or flexible-connector connections for each duct and apparatus.
 - e. [One] <Insert number> 90-degree turn(s) with turning vanes.
 - f. [One] <Insert number> fire damper(s).
 - g. Perform leakage tests specified in "Field Quality Control" Article. Revise mockup construction and perform additional tests as required to achieve specified minimum acceptable results.
 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- 1.9 DELIVERY, STORAGE, AND HANDLING
- A. Deliver, store and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1 requirements.
- B. Store all materials in location protected from water, wind, construction activities, and any other potential damage hazard.

- C. Protect <Insert item> from <Insert item> by <Insert requirement>.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. General: Comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods, unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.2 DUCTWORK FABRICATION

- A. Fabricate and support in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated. Provide duct material, gages, reinforcing, and sealing for operating pressures indicated, but not less than 1" WG positive and negative pressures.
- B. Construct T's, bends, and elbows with radius of not less than 1-1/2 times width of duct on centerline. Where not possible and where rectangular elbows are used, provide [air foil] turning vanes. Where acoustical lining is indicated, provide turning vanes of perforated metal with glass fiber insulation.
- C. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.
- D. Fabricate continuously welded round and oval duct fittings two gages heavier than duct gages indicated in SMACNA Duct Construction Standards. Joints shall be minimum 4 inch cemented slip joint, brazed or electric welded. Prime coat welded joints.
- E. Provide standard 45 degree lateral wye takeoffs.
- F. 90 degree conical tee connections (spin-in fittings) may only be used downstream of a VAV terminal.

2.3 MANUFACTURED DUCTWORK AND FITTINGS

- A. Manufacture in accordance with SMACNA HVAC Duct Construction Standards -Metal

and Flexible, and as indicated. Provide duct material, gages, reinforcing, and sealing for operating pressures indicated.

- B. SMANCA Type 1 offset transitions shall not be allowed without written approval from DEN Project Manager or DEN Mechanical Inspector.
- C. Flat Oval Ducts: Machine made from round spiral lockseam duct with light reinforcing corrugations; fittings manufactured of at least two gages heavier metal than duct.
- D. Double Wall Insulated Flat Oval Ducts: Machine made from round spiral lockseam duct with light reinforcing corrugations, galvanized steel outer wall, 1 inch thick fiberglass insulation, perforated galvanized steel inner wall; fittings manufactured with solid inner wall.
- E. PVC Coated Steel Ducts: UL 181, Class 1, galvanized steel duct coated with polyvinyl chloride plastic, 4 mil thick on **[outside and 2 mil thick on inside.] [both sides.]**
- F. Slab Duct Ventilation System: ASTM A 527 galvanized steel, corrugated, in standard sizes with support brackets, connecting couplings, elbows, end caps, spin-in-collar, wall discharge head, and soffit discharge head; designed for installation in cast-in-place concrete floor assemblies.
- G. Double Wall Insulated Round Ducts: Round spiral lockseam duct with galvanized steel outer wall, 1 inch thick fiberglass insulation, **[perforated]** galvanized steel inner wall; fitting with solid inner wall.
- H. Transverse Duct Connection System: **[SMACNA "E" rated] [SMACNA "F" rated] [or] [SMACNA "J" rated]** rigidly class connection, interlocking angle and duct edge connection system with sealant, gasket, cleats, and corner clips.

2.4 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction

Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.5 DOUBLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [McGill AirFlow LLC.](#)
 2. [Sheet Metal Connectors, Inc.](#)
 3. **<Insert manufacturer's name>.**
 4. or approved equal.
- B. Rectangular Ducts: Fabricate ducts with indicated dimensions for the inner duct.
- C. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- D. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- E. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- F. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
1. Maximum Thermal Conductivity: [0.27 Btu x in./h x sq. ft. x deg F (0.039 W/m x K)] **<Insert conductivity>** at 75 deg F (24 deg C) mean temperature.
 2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
 3. Coat insulation with antimicrobial coating.
 4. Cover insulation with polyester film complying with UL 181, Class 1.
- G. Interstitial Insulation: Flexible elastomeric duct liner complying with ASTM C 534, Type II for sheet materials, and with NFPA 90A or NFPA 90B.
1. Maximum Thermal Conductivity: [0.25 Btu x in./h x sq. ft. x deg F (0.034 W/m x K)] **<Insert conductivity>** at 75 deg F (24 deg C) mean temperature.

- H. Inner Duct: Minimum **0.028-inch (0.7-mm) [perforated galvanized sheet steel having 3/32-inch- (2.4-mm-) diameter perforations, with overall open area of 23 percent] [solid sheet steel]**.
- I. Formed-on Transverse Joints (Flanges): Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- J. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.6 SINGLE-WALL ROUND[**AND FLAT-OVAL**] DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
 - 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Lindab Inc.](#)
 - b. [McGill AirFlow LLC.](#)
 - c. [SEMCO Incorporated.](#)
 - d. [Sheet Metal Connectors, Inc.](#)
 - e. [Spiral Manufacturing Co., Inc.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
- B. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).
- C. Flexible Ducts:
 - 1. Medium- or High-Pressure Duct System Applications: UL Class 1, rated for 10 inches WG positive and negative pressure and 4000 fpm air velocity, constructed as interlocking spiral of galvanized steel or aluminum. **[Insulation to be 1-inch thick fiberglass, maximum K-value of 0.23 at 75 degrees F, covered with fire-retardant [polyethylene] [aluminized] vapor barrier jacket.]**
- D. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

1. Transverse Joints in Ducts Larger Than [60 Inches (1524 mm)] <Insert dimension> in Diameter: Flanged.
- E. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
1. Fabricate round ducts larger than 90 inches (2286 mm) in diameter with butt-welded longitudinal seams.
 2. Fabricate flat-oval ducts larger than 72 inches (1830 mm) in width (major dimension) with butt-welded longitudinal seams.
- F. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- 2.7 DOUBLE-WALL ROUND[AND FLAT-OVAL] DUCTS AND FITTINGS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Lindab Inc.
 2. McGill AirFlow LLC.
 3. SEMCO Incorporated.
 4. Sheet Metal Connectors, Inc.
 5. <Insert manufacturer's name>.
 6. or approved equal.
- B. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension) of the inner duct.
- C. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on static-pressure class unless otherwise indicated.
1. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - a. Transverse Joints in Ducts Larger Than [60 Inches (1524 mm)] <Insert dimension> in Diameter: Flanged.

2. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - a. Fabricate round ducts larger than **90 inches (2286 mm)** in diameter with butt-welded longitudinal seams.
 - b. Fabricate flat-oval ducts larger than **72 inches (1830 mm)** in width (major dimension) with butt-welded longitudinal seams.
 3. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- D. Inner Duct: Minimum **0.028-inch (0.7-mm)** [**perforated galvanized sheet steel having 3/32-inch- (2.4-mm-) diameter perforations, with overall open area of 23 percent**] [**solid sheet steel**].
- E. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
1. Maximum Thermal Conductivity: [**0.27 Btu x in./h x sq. ft. x deg F (0.039 W/m x K)**] **<Insert conductivity>** at **75 deg F (24 deg C)** mean temperature.
 2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
 3. Coat insulation with antimicrobial coating.
 4. Cover insulation with polyester film complying with UL 181, Class 1.
- F. Interstitial Insulation: Flexible elastomeric duct liner complying with ASTM C 534, Type II for sheet materials, and with NFPA 90A or NFPA 90B.
1. Maximum Thermal Conductivity: [**0.25 Btu x in./h x sq. ft. x deg F (0.034 W/m x K)**] **<Insert conductivity>** at **75 deg F (24 deg C)** mean temperature.
- ## 2.8 SHEET METAL MATERIALS
- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
1. Galvanized Coating Designation: [**G60 (Z180)**] [**G90 (Z275)**].

2. Finishes for Surfaces Exposed to View: Mill phosphatized.
- C. PVC-Coated, Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
1. Galvanized Coating Designation: [G60 (Z180)] [G90 (Z275)].
 2. Minimum Thickness for Factory-Applied PVC Coating: **4 mils (0.10 mm) thick[on sheet metal surface of ducts and fittings exposed to corrosive conditions, and minimum 1 mil (0.025 mm) thick on opposite surface].**
 3. Coating Materials: Acceptable to authorities having jurisdiction for use on ducts listed and labeled by an NRTL for compliance with UL 181, Class 1.
- D. Carbon-Steel Sheets: Comply with ASTM A 1008/A 1008M, with oiled, matte finish for exposed ducts.
- E. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304 or 316, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.
- F. Aluminum Sheets: Comply with **ASTM B 209 (ASTM B 209M)** Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.
- G. PVC-Coated Galvanized Steel: Acceptable by authorities having jurisdiction for use in fabricating ducts with UL 181, Class 1 listing. Lock-forming-quality, galvanized sheet steel complying with ASTM A653/A653M and having [G60] [G90] coating designation. Factory-applied PVC coatings shall be 4 mils thick on sheet metal surfaces of ducts and fittings exposed to corrosive conditions and 2 mils thick on opposite surfaces.
- H. Coating For Buried Ducts: Asphalt base or PVC coating.
- I. Factory- or Shop-Applied Antimicrobial Coating:
1. Apply to the surface of sheet metal that will form the interior surface of the duct. An untreated clear coating shall be applied to the exterior surface.
 2. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
 3. Coating containing the antimicrobial compound shall have a hardness of 2H, minimum, when tested according to ASTM D 3363.
 4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
 5. Shop-Applied Coating Color: **[Black] [White].**
 6. Antimicrobial coating on sheet metal is not required for duct containing liner treated with antimicrobial coating.
- J. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.

K. Tie Rods: Galvanized steel, **1/4-inch (6-mm)** minimum diameter for lengths **36 inches (900 mm)** or less; **3/8-inch (10-mm)** minimum diameter for lengths longer than **36 inches (900 mm)**.

2.9 DUCT LINER

A. Fibrous-Glass Duct Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [CertainTeed Corporation.](#)
- b. [Johns Manville; a Berkshire Hathaway company.](#)
- c. [Knauf Insulation.](#)
- d. [Owens Corning.](#)
- e. **<Insert manufacturer's name>**.
- f. or approved equal.
- g. Maximum Thermal Conductivity:

- 1) Type I, Flexible: [**0.27 Btu x in./h x sq. ft. x deg F (0.039 W/m x K)**] **<Insert conductivity>** at **75 deg F (24 deg C)** mean temperature.
- 2) Type II, Rigid: [**0.23 Btu x in./h x sq. ft. x deg F (0.033 W/m x K)**] **<Insert conductivity>** at **75 deg F (24 deg C)** mean temperature.

2. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.

3. **[Solvent] [Water]-Based Liner Adhesive:** Comply with NFPA 90A or NFPA 90B and with ASTM C 916.

- a. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- b. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. Flexible Elastomeric Duct Liner: Preformed, cellular, closed-cell, sheet materials complying with ASTM C 534, Type II, Grade 1; and with NFPA 90A or NFPA 90B.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Aeroflex USA Inc.](#)
 - b. [Armacell LLC.](#)
 - c. [Rubatex International, LLC](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
 3. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
 - a. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Insulation Pins and Washers:
1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, [0.106-inch- (2.6-mm-)] [0.135-inch- (3.5-mm-)] diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38-mm) galvanized carbon-steel washer.
 2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick [galvanized steel] [aluminum] [stainless steel]; with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
- D. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."
1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
 2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
 3. Butt transverse joints without gaps, and coat joint with adhesive.
 4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
 5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
 6. Apply adhesive coating on longitudinal seams in ducts with air velocity of 2500 fpm (12.7 m/s).
 7. Secure liner with mechanical fasteners 4 inches (100 mm) from corners and at intervals not exceeding 12 inches (300 mm) transversely; at 3 inches (75 mm) from transverse joints and at intervals not exceeding 18 inches (450 mm) longitudinally.

8. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
 - a. Fan discharges.
 - b. Intervals of lined duct preceding unlined duct.
 - c. Upstream edges of transverse joints in ducts where air velocities are higher than **2500 fpm** (12.7 m/s) or where indicated.
9. Secure insulation between perforated sheet metal inner duct of same thickness as specified for outer shell. Use mechanical fasteners that maintain inner duct at uniform distance from outer shell without compressing insulation.
 - a. Sheet Metal Inner Duct Perforations: **3/32-inch** (2.4-mm) diameter, with an overall open area of 23 percent.
10. Terminate inner ducts with buildouts attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated buildouts (metal hat sections) or other buildout means are optional; when used, secure buildouts to duct walls with bolts, screws, rivets, or welds.

2.10 BURIED UNDERGROUND METAL DUCTS

- A. Buried ducts may be [**concrete encased sheet metal**] [**PVC jacketed sheet metal**] as indicated. Reference Section 233116 "Nonmetal Ducts" for nonmetal duct types.
- B. Fabricate metal ductwork in accordance with SMACNA Low Pressure Duct Construction Standards, except as indicated. Fabricate using two gages heavier material than indicated for 2 inch WG pressure class.

2.11 KITCHEN HOOD EXHAUST DUCTWORK

- A. Fabricate in accordance with SMACNA Low Pressure Duct Construction Standards, High Pressure Duct Construction Standards, and NFPA 96.
- B. Construct of 0.055-inch-thick carbon steel or 0.044-inch-thick stainless steel (minimum), using continuous externally welded joints.
- C. Grease Duct Supports: Duct bracing and supports shall be of noncombustible material securely attached to the structure and designed to carry gravity and lateral loads within the stress limitations of governing codes. Bolts, screws, rivets and other mechanical fasteners shall not penetrate duct walls. Provide duct clean-out openings as required by NFPA 96.
- D. Reference Section 233813 "Commercial-Kitchen Hoods" for hoods.

2.12 DISHWASHER HOOD DUCTWORK

- A. Fabricate in accordance with SMACNA Low Pressure Duct Construction Standards for [2] [3] inches negative pressure.
- B. Construct ductwork of type 304 stainless steel, 18 gage, with continuous externally welded joints and perimeter reinforcing.
- C. Slope duct runs at 0.125 inches per foot to low points, provide 1-1/2 inch diameter drain discharging, through trap, to floor drain or service sink.

2.13 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
- B. Two-Part Tape Sealing System:
 - 1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
 - 2. Tape Width: [3 inches (76 mm)] [4 inches (102 mm)] [6 inches (152 mm)].
 - 3. Sealant: Modified styrene acrylic.
 - 4. Water resistant.
 - 5. Mold and mildew resistant.
 - 6. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive and negative.
 - 7. Service: Indoor and outdoor.
 - 8. Service Temperature: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).
 - 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
 - 10. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 11. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Water-Based Joint and Seam Sealant:
 - 1. Application Method: Brush on.
 - 2. Solids Content: Minimum 65 percent.
 - 3. Shore A Hardness: Minimum 20.
 - 4. Water resistant.
 - 5. Mold and mildew resistant.
 - 6. VOC: Maximum 75 g/L (less water).
 - 7. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive and negative.
 - 8. Service: Indoor or outdoor.

9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

D. Solvent-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Base: Synthetic rubber resin.
3. Solvent: Toluene and heptane.
4. Solids Content: Minimum 60 percent.
5. Shore A Hardness: Minimum 60.
6. Water resistant.
7. Mold and mildew resistant.
8. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
9. VOC: Maximum 395 g/L.
10. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
11. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive or negative.
12. Service: Indoor or outdoor.
13. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

E. Flanged Joint Sealant: Comply with ASTM C 920.

1. General: Single-component, acid-curing, silicone, elastomeric.
2. Type: S.
3. Grade: NS.
4. Class: 25.
5. Use: O.
6. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

F. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

G. Round Duct Joint O-Ring Seals:

1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg (0.14 L/s per sq. m at 250 Pa) and shall be rated for 10-inch wg (2500-Pa) static-pressure class, positive or negative.
2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

2.14 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," [Table 5-1 \(Table 5-1M\)](#), "Rectangular Duct Hangers Minimum Size," and [Table 5-2](#), "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.
- E. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.
- F. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- H. Trapeze and Riser Supports:
 - 1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
 - 2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
 - 3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

2.15 SEISMIC-RESTRAINT DEVICES

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Cooper B-Line, Inc.; a division of Cooper Industries.](#)
 - 2. [Ductmate Industries, Inc.](#)
 - 3. [Hilti Inc.](#)
 - 4. [Kinetics Noise Control, Inc.](#)
 - 5. [Loos & Co., Inc.](#)
 - 6. [Mason Industries, Inc.](#)
 - 7. [TOLCO.](#)
 - 8. [Unistrut; an Atkore International company.](#)
 - 9. **<Insert manufacturer's name>.**
 - 10. or approved equal.
- B. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by **[an evaluation service member of the ICC Evaluation Service] [the Office of Statewide Health Planning and**

Development for the State of California] [an agency acceptable to authorities having jurisdiction].

1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least **[four]** <Insert number> times the maximum seismic forces to which they will be subjected.
- C. Channel Support System: Shop- or field-fabricated support assembly made of slotted steel channels rated in tension, compression, and torsion forces and with accessories for attachment to braced component at one end and to building structure at the other end. Include matching components and corrosion-resistant coating.
- D. Restraint Cables: **[ASTM A 603, galvanized]** **[ASTM A 492, stainless]**-steel cables with end connections made of cadmium-plated steel assemblies with brackets, swivel, and bolts designed for restraining cable service; and with an automatic-locking and clamping device or double-cable clips.
- E. Hanger Rod Stiffener: **[Steel tube or steel slotted-support-system sleeve with internally bolted connections]** **[Reinforcing steel angle clamped]** to hanger rod.
- F. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.
- B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Provide openings in ductwork where required to accommodate thermometers and controllers. Provide pilot tube openings where required for testing of systems, complete with metal can with spring device or screw to ensure against air leakage. Where openings are provided in insulated ductwork, install insulation material inside a metal ring.
- D. Install in accordance with manufacturer's instructions.
- E. Install round[**and flat-oval**] ducts in lengths not less than 12 feet unless interrupted by fittings, and in maximum practical lengths.
- F. Install ducts with fewest possible joints.

- G. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- H. Install couplings tight to duct wall surface with a minimum of projections into duct. Secure couplings with sheet metal screws. Install screws at intervals of 12 inches, with a minimum of 3 screws in each coupling.
- I. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines. Avoid diagonal runs.
- J. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- K. Install ducts with a clearance of 1 inch (25 mm), plus allowance for insulation thickness.
- L. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- M. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.
- N. Use crimp joints with or without bead for joining round duct sizes 8 inch and smaller with crimp in direction of airflow.
- O. Use double nuts and lock washers on threaded rod supports.
- P. Cloth backed duct tape shall not be used.
- Q. Connect terminal units to supply ducts [directly or] with one foot maximum length of flexible duct. Do not use flexible duct to change direction.
- R. Connect diffusers or light troffer boots to low pressure ducts [**directly or**] with 5 feet maximum length of flexible duct held in place with strap or clamp.
- S. Connect flexible ducts to metal ducts with adhesive and draw bands plus sheet metal screws. Secure with not less than 3 sheet metal screws per joint.
- T. Set plenum doors 6 to 12 inches above floor. Arrange door swings so that fan static pressure holds door in closed position.
- U. Provide residue traps in kitchen hood exhaust ducts at base of vertical risers with provisions for clean out. Use stainless steel for ductwork exposed to view and stainless steel or carbon steel for ducts where concealed.
- V. During construction, provide temporary closures of metal or taped polyethylene on open ductwork to prevent construction dust from entering ductwork system at the end of each work shift. Protect duct interiors from the elements and foreign materials until building is enclosed. [**Follow SMACNA's "Duct Cleanliness for New Construction."**]

- W. Conceal ducts from view in finished spaces. Do not encase horizontal runs in solid partitions unless specifically indicated.
- X. Coordinate layout with suspended ceiling, fire- and smoke-control dampers, lighting layouts, and similar finished work.
- Y. Seal all joints and seams. Apply sealant to male end connectors before insertion, and afterward to cover entire joint and sheet metal screws.
- Z. Electrical Equipment Spaces: Route ducts to avoid passing through transformer vaults and electrical equipment spaces and enclosures.
- AA. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches (38 mm).
- BB. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers, sleeves, and firestopping sealant. Comply with requirements in Section 233300 "Air Duct Accessories" for fire and smoke dampers.
- CC. Protect duct interiors from moisture, construction debris and dust, and other foreign materials.[**Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."**]
- DD. Painting Interiors of Metal Ducts:
 - 1. Paint interiors of metal ducts that do not have duct liner, for 24 inches upstream of registers and grilles. Apply one coat of flat, black, latex finish coat over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Division 9.

3.2 INSTALLATION OF EXPOSED DUCTWORK

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
- D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

- 3.3 ADDITIONAL INSTALLATION REQUIREMENTS FOR COMMERCIAL KITCHEN HOOD EXHAUST DUCT
- A. Install commercial kitchen hood exhaust ducts without dips and traps that may hold grease, and sloped a minimum of 2 percent to drain grease back to the hood.
 - B. Install fire-rated access panel assemblies at each change in direction and at maximum intervals of [20 feet (6 m)] [12 feet (3.7 m)] <Insert dimension> in horizontal ducts, and at every floor for vertical ducts, or as indicated on Drawings.
 - C. Do not penetrate fire-rated assemblies except as allowed by applicable building codes and authorities having jurisdiction.
 - D. Install ducts to allow for thermal expansion through 2000 degree temperature range.
 - E. Install ducts without dips or traps that may collect residues unless traps have continuous or automatic residue removal.
 - F. Install access openings at each change in direction and at intervals defined by NFPA 96; locate on sides of duct a minimum of 1-1/2 inches from bottom; and fit with grease-tight covers of same material as duct.
- 3.4 UNDERSLAB DUCTS, SPECIAL INSTALLATION REQUIREMENTS
- A. Verify undamaged condition of ducts before enclosure with fill or encasement.
 - B. Protect ducts from damage by equipment used in placing fill materials and concrete on or around ducts.
 - C. Protect duct openings from damage and prevent entrance of foreign materials.
 - D. Slope underground ducts to plenums or low pump out points at 1:500. Provide access doors for inspection.
 - E. Paint buried metal ductwork without factory jacket with one coat [**and seams and joints with additional coat**] of asphalt base protective coating.
 - F. Encase buried metal ductwork in 3 inch minimum of concrete. Provide adequate tie-down points to prevent ducts from floating during concrete placement. Introduce no heat into ducts for 20 days following placement of concrete.
 - G. Insulate buried supply duct runs over 70 feet long with one inch thick insulation covered with plastic vapor barrier.
- 3.5 PVC-COATED DUCT, SPECIAL INSTALLATION REQUIREMENTS
- A. Repair damage to PVC coating with manufacturer's recommended materials.
 - B. Tape joints of PVC coated metal ductwork with PVC tape.

3.6 DUCT LINER INSTALLATION REQUIREMENTS

- A. Install duct liner according to manufacturer's written instructions; with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.
- B. Keep liner materials dry during application and finishing.
- C. Apply liner with black coated surface facing the airstream.
- D. Adhere liner to sheet metal with a minimum 90% coverage of adhesive; provide mechanical fasteners spaced per manufacturer's requirements.
- E. Install metal nosing on leading edge of duct liner where duct liner is preceded by unlined metal, and at all upstream edges where velocity exceeds 2000 fpm.
- F. Install liner with longitudinal seams at corner joints only.
- G. Provide edge coating for all transverse joints, all cut in connections and branch connections that are not lined.
- H. Install duct liner in the following locations, and as indicated on the Drawings:
 - 1. Return air ducts.
 - 2. Outside air ducts.
 - 3. Transfer air ducts.
 - 4. Supply air ducts downstream of VAV boxes.

3.7 DUCT SEALING

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 1. For pressure classes lower than 2-inch wg, seal transverse joints.
- B. Seal ducts before external insulation is applied.
- C. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
 - 1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 2. Outdoor, Supply-Air Ducts: Seal Class A.
 - 3. Outdoor, Exhaust Ducts: Seal Class C.
 - 4. Outdoor, Return-Air Ducts: Seal Class C.
 - 5. Unconditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg (500 Pa) and Lower: Seal Class B.
 - 6. Unconditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg (500 Pa): Seal Class A.
 - 7. Unconditioned Space, Exhaust Ducts: Seal Class C.

8. Unconditioned Space, Return-Air Ducts: Seal Class B.
9. Conditioned Space, Supply-Air Ducts in Pressure Classes **2-Inch wg (500 Pa)** and Lower: Seal Class C.
10. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than **2-Inch wg (500 Pa)**: Seal Class B.
11. Conditioned Space, Exhaust Ducts: Seal Class B.
12. Conditioned Space, Return-Air Ducts: Seal Class C.

3.8 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 1. Where practical, install concrete inserts before placing concrete.
 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than **4 inches (100 mm)** thick.
 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than **4 inches (100 mm)** thick.
 5. Do not use powder-actuated concrete fasteners for seismic restraints.
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," **Table 5-1 (Table 5-1M)**, "Rectangular Duct Hangers Minimum Size," and **Table 5-2**, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within **24 inches (610 mm)** of each elbow and within **48 inches (1200 mm)** of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of **16 feet (5 m)**.
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- G. Support horizontal ducts within 24 inches of each elbow and within 48 inches of each branch intersection.
- H. Provide a support with 12 inches of the end of a duct run, not including flexible duct.
- I. Support vertical ducts at maximum intervals of 16 feet and at each floor.

- J. Install upper attachments to structures with an allowable load not exceeding one-fourth of failure (proof-test) load.
- K. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
- L. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.

3.9 SEISMIC-RESTRAINT-DEVICE INSTALLATION

- A. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by applicable building codes. Comply with [**SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems."**] [**ASCE/SEI 7.**]
 - 1. Space lateral supports a maximum of [**40 feet (12 m)**] **<Insert dimension>** o.c., and longitudinal supports a maximum of [**80 feet (24 m)**] **<Insert dimension>** o.c.
 - 2. Brace a change of direction longer than **12 feet (3.7 m)**.
- B. Select seismic-restraint devices with capacities adequate to carry present and future static and seismic loads.
- C. Install cables so they do not bend across edges of adjacent equipment or building structure.
- D. Install cable restraints on ducts that are suspended with vibration isolators.
- E. Install seismic-restraint devices using methods approved by [**an evaluation service member of the ICC Evaluation Service**] [**the Office of Statewide Health Planning and Development for the State of California**] [**an agency acceptable to authorities having jurisdiction**].
- F. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.
- G. Drilling for and Setting Anchors:
 - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcement or embedded items during drilling. Notify the Architect if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 - 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 - 4. Set anchors to manufacturer's recommended torque, using a torque wrench.

5. Install zinc-coated steel anchors for interior applications and stainless-steel anchors for applications exposed to weather.

3.10 CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Section 233300 "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.11 PAINTING

- A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

3.12 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Leakage Tests:
 1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
 2. For high pressure ductwork, after system is completed, test for duct leakage in accordance with SMACNA "High Pressure Duct Standards - 3rd Edition, Chapter 10 - Testing for Leakage." Repair leaks and repeat tests until total leakage is less than 1% of system design air flow.
 3. Test the following systems:
 - a. Ducts with a Pressure Class Higher Than **3-Inch wg (750 Pa)**: Test representative duct sections[, **selected by Architect from sections installed,**] totaling no less than 25 percent of total installed duct area for each designated pressure class.
 - b. Supply Ducts with a Pressure Class of **[2-Inch wg (500 Pa)] [3-Inch wg (750 Pa)] [4-Inch wg (1000 Pa)] <Insert value>** or Higher: Test representative duct sections[, **selected by Architect from sections installed,**] totaling no less than **[50] [100] <Insert value>** percent of total installed duct area for each designated pressure class.
 - c. Return Ducts with a Pressure Class of **[2-Inch wg (500 Pa)] [3-Inch wg (750 Pa)] [4-Inch wg (1000 Pa)] <Insert value>** or Higher: Test representative duct sections[, **selected by Architect from sections installed,**] totaling no less than **[50] [100] <Insert value>** percent of total installed duct area for each designated pressure class.
 - d. Exhaust Ducts with a Pressure Class of **[2-Inch wg (500 Pa)] [3-Inch wg (750 Pa)] [4-Inch wg (1000 Pa)] <Insert value>** or Higher: Test representative

- duct sections[, **selected by Architect from sections installed,**] totaling no less than [50] [100] <Insert value> percent of total installed duct area for each designated pressure class.
- e. Outdoor Air Ducts with a Pressure Class of [2-Inch wg (500 Pa)] [3-Inch wg (750 Pa)] [4-Inch wg (1000 Pa)] <Insert value> or Higher: Test representative duct sections[, **selected by Architect from sections installed,**] totaling no less than [50] [100] <Insert value> percent of total installed duct area for each designated pressure class.
4. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
 5. Test for leaks before applying external insulation.
 6. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
 7. Give [seven] <Insert number> days' advance notice for testing.
- C. Duct System Cleanliness Tests:
1. Visually inspect duct system to ensure that no visible contaminants are present.
 2. Test sections of metal duct system, chosen randomly by Owner, for cleanliness according to "Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."
 - a. Acceptable Cleanliness Level: Net weight of debris collected on the filter media shall not exceed 0.75 mg/100 sq. cm.
- D. Duct system will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.
- 3.13 DUCT CLEANING
- A. Clean [new] [and] [existing] duct system(s) before testing, adjusting, and balancing.
 - B. Clean ductwork internally, unit-by-unit as it is installed, of dust and debris. Clean external surfaces of foreign substances, which might cause corrosive deterioration of metal or, where ductwork is to be painted, might interfere with painting or cause paint deterioration.
 - C. Strip protective paper from stainless ductwork surfaces, and repair finish wherever it has been damaged.
 - D. Temporary Closure: At ends of ducts, which are not connected to equipment or air distribution devices at time of ductwork installation, provide temporary closure of polyethylene film or other covering, which will prevent entrance of dust and debris until time connections are to be completed.
 - E. Mark position of dampers and air-directional mechanical devices before cleaning, and

perform cleaning before air balancing.

F. Use service openings for entry and inspection.

1. Create new openings and install access panels appropriate for duct static-pressure class if required for cleaning access. Provide insulated panels for insulated or lined duct. Patch insulation and liner as recommended by duct liner manufacturer. Comply with Section 233300 "Air Duct Accessories" for access panels and doors.
2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection.
3. Remove and reinstall ceiling to gain access during the cleaning process.

G. Particulate Collection and Odor Control:

1. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron-size (or larger) particles.
2. When venting vacuuming system to outdoors, use filter to collect debris removed from HVAC system, and locate exhaust downwind and away from air intakes and other points of entry into building.

H. Clean the following components by removing surface contaminants and deposits:

1. Air outlets and inlets (registers, grilles, and diffusers).
2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
4. Coils and related components.
5. Return-air ducts, dampers, actuators, and turning vanes except in ceiling plenums and mechanical equipment rooms.
6. Supply-air ducts, dampers, actuators, and turning vanes.
7. Dedicated exhaust and ventilation components and makeup air systems.

I. Mechanical Cleaning Methodology:

1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.

5. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
6. Provide drainage and cleanup for wash-down procedures.
7. Antimicrobial Agents and Coatings: Apply EPA-registered antimicrobial agents if fungus is present. Apply antimicrobial agents according to manufacturer's written instructions after removal of surface deposits and debris.
8. Cleanliness Verification:
 - a. Visually inspect metal ducts for contaminants.
 - b. Where contaminants are discovered, re-clean, and reinspect ducts.

3.14 CLEANING EXISTING SYSTEMS

- A. Use service openings, as required, for physical and mechanical entry and for inspection.
 1. Use existing service openings where possible.
 2. Create other openings to comply with duct standards.
 3. Disconnect flexible ducts as needed for cleaning and inspection.
 4. Reseal rigid fiberglass duct systems according to NAIMA recommended practices.
 5. Remove and reinstall ceiling sections to gain access during the cleaning process.
- B. Mark position of dampers and air-directional mechanical devices before cleaning, and restore to their marked position on completion.
- C. Particulate Collection and Odor Control:
 1. When venting vacuuming system inside the building, use HEPA filtration with 99.97% collection efficiency for 0.3-micron size (or larger) particles.
 2. When venting vacuuming system to the outside, use filtration to contain debris removed from HVAC system, and locate exhaust down wind and away from air intakes and other points of entry into building.
- D. Clean the following metal duct systems by removing surface contaminants and deposits:
 1. Air outlets and inlets (registers, grilles, and diffusers).
 2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
 3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
 4. Coils and related components.
 5. Return-air ducts, dampers, and actuators except in ceiling plenums and mechanical equipment rooms.

6. Supply-air ducts, dampers, actuators, and turning vanes.
7. Dedicated exhaust and ventilation components and makeup air systems.

E. Mechanical Cleaning Methodology:

1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
5. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
6. Provide operative drainage system for washdown procedures.
7. Biocidal Agents and Coatings: Apply biocidal agents if fungus is present. Apply biocidal agents according to manufacturer's written instructions after removal of surface deposits and debris.

F. Cleanliness Verification:

1. Verify cleanliness after mechanical cleaning and before application of treatment, including biocidal agents and protective coatings.
2. Visually inspect metal ducts for contaminants.
3. Where contaminants are discovered, re-clean and reinspect ducts.

G. Verification of Coil Cleaning: Cleaning must restore coil pressure drop to within 10% of pressure drop measured when coil was first installed. If original pressure drop is not known, coil will be considered clean only if it is free of foreign matter and chemical residue, based on thorough visual inspection.

3.15 FINAL CLEANING

- A. Clean duct system and force air at high velocity through duct to remove accumulated dust. To obtain sufficient air, clean half the system at a time. Protect equipment, which may be harmed by excessive dirt with temporary filters, or bypass during cleaning.
- B. Clean duct systems with high power vacuum machines. Protect equipment, which may be harmed by excessive dirt with filters, or bypass during cleaning. Provide adequate access into ductwork for cleaning purposes.

3.16 START UP

- A. Air Balance: Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC."

3.17 DUCTWORK APPLICATION SCHEDULE - GENERAL

- A. The following Table indicates general ductwork materials for specific air systems. Reference Section 233116 "Nonmetal Ducts" for nonmetal duct type applications.

Air System:	Ductwork Material:
Low Pressure Heating Supply	Galvanized Steel, Aluminum
Low Pressure Supply (System w/Cooling Coils)	Galvanized Steel, Aluminum
Buried Supply or Return	Galvanized Steel
Medium and High Pressure Supply	Galvanized Steel
Return and Relief	Galvanized Steel, Aluminum
General Exhaust	Galvanized Steel, Aluminum
Kitchen Hood Exhaust	Welded Steel, Stainless Steel
Dishwasher Exhaust	Welded Stainless Steel
Fume Hood Exhaust	Stainless Steel
Outside Air Intake	Galvanized Steel
Combustion Air	Galvanized Steel
Evaporative Condenser	Galvanized Steel Intake and Exhaust
Emergency Generator	Steel Ventilation

3.18 DUCT SCHEDULE

- A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:
- Underground Ducts: Concrete-encased, [galvanized sheet steel] [PVC-coated, galvanized sheet steel with thicker coating on duct exterior] [stainless steel].
 - <Insert requirements>.
- B. Supply Ducts:
- Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units <Insert equipment>:
 - Pressure Class: Positive [1-inch wg (250 Pa)] [2-inch wg (500 Pa)] <Insert value>.
 - Minimum SMACNA Seal Class: [A] [B] [C].
 - SMACNA Leakage Class for Rectangular: [12] [24] <Insert value>.
 - SMACNA Leakage Class for Round and Flat Oval: [12] [24] <Insert value>.
 - Ducts Connected to Constant-Volume Air-Handling Units <Insert equipment>:
 - Pressure Class: Positive [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] <Insert value>.
 - Minimum SMACNA Seal Class: [A] [B].
 - SMACNA Leakage Class for Rectangular: [6] [12] [24] <Insert value>.

- d. SMACNA Leakage Class for Round and Flat Oval: [6] [12] [24] <Insert value>.
3. Ducts Connected to Variable-Air-Volume Air-Handling Units <Insert equipment>:
 - a. Pressure Class: Positive [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B].
 - c. SMACNA Leakage Class for Rectangular: [3] [6] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [3] [6] <Insert value>.
 4. Ducts Connected to Equipment Not Listed Above:
 - a. Pressure Class: Positive [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B].
 - c. SMACNA Leakage Class for Rectangular: [3] [6] [12] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [3] [6] [12] <Insert value>.
- C. Return Ducts:
1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units <Insert equipment>:
 - a. Pressure Class: Positive or negative [1-inch wg (250 Pa)] [2-inch wg (500 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B] [C].
 - c. SMACNA Leakage Class for Rectangular: [12] [24] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [12] [24] <Insert value>.
 2. Ducts Connected to Air-Handling Units <Insert equipment>:
 - a. Pressure Class: Positive or negative [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B].
 - c. SMACNA Leakage Class for Rectangular: [6] [12] [24] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [6] [12] [24] <Insert value>.
 3. Ducts Connected to Equipment Not Listed Above:
 - a. Pressure Class: Positive or negative [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B].
 - c. SMACNA Leakage Class for Rectangular: [3] [6] [12] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [3] [6] [12] <Insert value>.

D. Exhaust Ducts:

1. Ducts Connected to Fans Exhausting (ASHRAE 62.1, Class 1 and 2) Air:
 - a. Pressure Class: Negative [1-inch wg (250 Pa)] [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B] [C] if negative pressure, and A if positive pressure.
 - c. SMACNA Leakage Class for Rectangular: [12] [24] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [6] [12] [24] <Insert value>.
2. Ducts Connected to Air-Handling Units <Insert equipment>:
 - a. Pressure Class: Positive or negative [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B] if negative pressure, and A if positive pressure.
 - c. SMACNA Leakage Class for Rectangular: [6] [12] [24] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [3] [6] [12] [24] <Insert value>.
3. Ducts Connected to Commercial Kitchen Hoods: Comply with NFPA 96.
 - a. Exposed to View: Type 304, stainless-steel sheet, [No. 4] [No. 3] <Insert finish> finish.
 - b. Concealed: [Type 304, stainless-steel sheet, No. 2D finish] [Carbon-steel sheet].
 - c. Welded seams and joints.
 - d. Pressure Class: Positive or negative [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] <Insert value>.
 - e. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
 - f. SMACNA Leakage Class: 3.
4. Ducts Connected to Dishwasher Hoods:
 - a. Type 304, stainless-steel sheet.
 - b. Exposed to View: [No. 4] [No. 3] <Insert finish> finish.
 - c. Concealed: [No. 2D] <Insert finish> finish.
 - d. Welded seams and flanged joints with watertight EPDM gaskets.
 - e. Pressure Class: Positive or negative [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] <Insert value>.
 - f. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
 - g. SMACNA Leakage Class: 3.
5. Ducts Connected to Fans Exhausting Laboratory and Process (ASHRAE 62.1, Class 3 and 4) Air:
 - a. [Type 316] [Type 304], stainless-steel sheet.

- 1) Exposed to View: [No. 4] [No. 3] <Insert finish> finish.
 - 2) Concealed: [No. 2B] [No. 2D] <Insert finish> finish.
 - b. PVC-coated, galvanized sheet steel with thicker coating on duct interior.
 - c. Pressure Class: Positive or negative [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] [6-inch wg (1500 Pa)] <Insert value>.
 - d. Minimum SMACNA Seal Class: [A] [Welded seams, joints, and penetrations].
 - e. SMACNA Leakage Class: 3.
6. Ducts Connected to Equipment Not Listed Above:
- a. Pressure Class: Positive or negative [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B] if negative pressure, and A if positive pressure.
 - c. SMACNA Leakage Class for Rectangular: [6] [12] [24] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [3] [6] [12] [24] <Insert value>.
- E. Outdoor-Air (Not Filtered, Heated, or Cooled) Ducts:
1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units <Insert equipment>:
 - a. Pressure Class: Positive or negative [1-inch wg (250 Pa)] [2-inch wg (500 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B] [C].
 - c. SMACNA Leakage Class for Rectangular: [12] [24] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [6] [12] [24] <Insert value>.
 2. Ducts Connected to Air-Handling Units <Insert equipment>:
 - a. Pressure Class: Positive or negative [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B].
 - c. SMACNA Leakage Class for Rectangular: [6] [12] [24] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [3] [6] [12] [24] <Insert value>.
 3. Ducts Connected to Equipment Not Listed Above:
 - a. Pressure Class: Positive or negative [2-inch wg (500 Pa)] [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] <Insert value>.
 - b. Minimum SMACNA Seal Class: [A] [B].
 - c. SMACNA Leakage Class for Rectangular: [3] [6] [12] <Insert value>.
 - d. SMACNA Leakage Class for Round and Flat Oval: [3] [6] [12] <Insert value>.

F. Intermediate Reinforcement:

1. Galvanized-Steel Ducts: **[Galvanized steel] [Carbon steel coated with zinc-chromate primer] [Galvanized steel or carbon steel coated with zinc-chromate primer]**.
2. PVC-Coated Ducts:
 - a. Exposed to Airstream: Match duct material.
 - b. Not Exposed to Airstream: **[Galvanized] [Match duct material]**.
3. Stainless-Steel Ducts:
 - a. Exposed to Airstream: Match duct material.
 - b. Not Exposed to Airstream: **[Galvanized] [Match duct material]**.
4. Aluminum Ducts: **[Aluminum][or galvanized sheet steel coated with zinc chromate]**.

G. Liner:

1. Supply Air Ducts: **[Fibrous glass, Type I] [Flexible elastomeric] [Natural fiber]**, [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] <Insert thickness> thick.
2. Return Air Ducts: **[Fibrous glass, Type I] [Flexible elastomeric] [Natural fiber]**, [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] <Insert thickness> thick.
3. Exhaust Air Ducts: **[Fibrous glass, Type I] [Flexible elastomeric] [Natural fiber]**, [1 inch (25 mm)] <Insert thickness> thick.
4. Supply Fan Plenums: **[Fibrous glass, Type II] [Flexible elastomeric] [Natural fiber]**, [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] <Insert thickness> thick.
5. Return- and Exhaust-Fan Plenums: **[Fibrous glass, Type II] [Flexible elastomeric] [Natural fiber]**, [2 inches (51 mm)] <Insert thickness> thick.
6. Transfer Ducts: **[Fibrous glass, Type I] [Flexible elastomeric] [Natural fiber]**, [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] <Insert thickness> thick.

H. Double-Wall Duct Interstitial Insulation:

1. Supply Air Ducts: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] <Insert thickness> thick.
2. Return Air Ducts: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] <Insert thickness> thick.
3. Exhaust Air Ducts: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] <Insert thickness> thick.

I. Elbow Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."

- a. Velocity 1000 fpm (5 m/s) or Lower:
 - 1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
 - 2) Mitered Type RE 4 without vanes.
 - b. Velocity 1000 to 1500 fpm (5 to 7.6 m/s):
 - 1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
 - 2) Radius Type RE 3 with minimum 0.5 radius-to-diameter ratio and two vanes.
 - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
 - c. Velocity 1500 fpm (7.6 m/s) or Higher:
 - 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - 2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
 - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
2. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
 - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
 - c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
 3. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
 - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
 - 1) Velocity 1000 fpm (5 m/s) or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
 - 2) Velocity 1000 to 1500 fpm (5 to 7.6 m/s): 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
 - 3) Velocity 1500 fpm (7.6 m/s) or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.
 - 4) Radius-to Diameter Ratio: 1.5.

- b. Round Elbows, [12 Inches (305 mm)] <Insert dimension> and Smaller in Diameter: Stamped or pleated.
- c. Round Elbows, [14 Inches (356 mm)] <Insert dimension> and Larger in Diameter: [Standing seam] [Welded].

J. Branch Configuration:

- 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
 - a. Rectangular Main to Rectangular Branch: 45-degree entry.
 - b. Rectangular Main to Round Branch: Spin in.
- 2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.
 - a. Velocity 1000 fpm (5 m/s) or Lower: 90-degree tap.
 - b. Velocity 1000 to 1500 fpm (5 to 7.6 m/s): Conical tap.
 - c. Velocity 1500 fpm (7.6 m/s) or Higher: 45-degree lateral.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233113

SECTION 233116 - NONMETAL DUCTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Fibrous-glass ducts and fittings.
2. Phenolic-foam ducts and fittings.
3. Thermoset FRP ducts and fittings.
4. PVC ducts and fittings.

- B. Related Sections:

1. Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for nonmetal ducts.
2. Section 233113 "Metal Ducts" for single- and double-wall, rectangular and round ducts.
3. Section 233119 "HVAC Casings" for factory- and field-fabricated casings for mechanical equipment.
4. Section 233300 "Air Duct Accessories" for dampers, duct-mounting access doors and panels, turning vanes, and flexible ducts.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Duct Sizes: Inside clear dimensions. For lined ducts, maintain clear sizes inside lining.

- B. Low Pressure: 2 inch WG positive or negative static pressure and velocities less than 2,500 fpm.

- C. Medium Pressure: Three pressure classifications, as follows:

1. 3 inch WG positive or negative static pressure and velocities less than 4,000 fpm.
2. 4 inch WG positive static pressure and velocities greater than 2,000 fpm. 6 inch WG positive static pressure and velocities greater than 2,000 fpm.

- D. High Pressure: 10 inch WG positive static pressure and velocities greater than 2,000 fpm.

1.4 PERFORMANCE REQUIREMENTS

- A. No variation of duct configuration or sizes permitted except by written permission of the DEN Mechanical Engineer. Size round ducts installed in place of rectangular ducts in accordance with SMACNA [and] [or] ASHRAE table of equivalent rectangular and round ducts.
- B. Delegated Duct Design: Duct construction, including duct closure, reinforcements, and hangers and supports, shall comply with SMACNA's "Fibrous Glass Duct Construction Standards" and performance requirements and design criteria indicated.

1. Static-Pressure Classes:

- a. Supply Ducts (except in Mechanical Rooms): [1-inch wg (250 Pa)] <Insert value>.
- b. Supply Ducts (Upstream from Air Terminal Units): [2-inch wg (500 Pa)] <Insert value>.
- c. Supply Ducts (Downstream from Air Terminal Units): [1-inch wg (250 Pa)] <Insert value>.
- d. Supply Ducts (in Mechanical Equipment Rooms): [2-inch wg (500 Pa)] <Insert value>.
- e. Return Ducts (Negative Pressure): [1-inch wg (250 Pa)] <Insert value>.
- f. Exhaust Ducts (Negative Pressure): [1-inch wg (250 Pa)] <Insert value>.
- g. <Insert duct systems and static-pressure class>.

- C. Structural Performance: Duct hangers and supports[and seismic restraints] shall withstand the effects of gravity[and seismic] loads and stresses within limits and under conditions to comply with [ASCE/SEI 7.] [SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems."] <Insert document.>

1. Seismic Hazard Level A: Seismic force to weight ratio, 0.48.
2. Seismic Hazard Level B: Seismic force to weight ratio, 0.30.
3. Seismic Hazard Level C: Seismic force to weight ratio, 0.15.

- D. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

1.5 ACTION SUBMITTALS

- A. Product Data: Indicate duct fittings, particulars such as gages, sizes, and configuration for [duct materials] [duct connectors] <Insert product> For each type of the following products:
1. Fibrous-glass duct materials.
 2. Phenolic-foam duct materials.
 3. Thermoset FRP duct materials.

4. PVC duct materials.
5. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Prerequisite IEQ 1: Documentation indicating that duct systems comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
2. Product Data for Prerequisite EA 2: Documentation indicating that duct systems comply with ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
3. Leakage Test Report for Prerequisite EA 2: Documentation of work performed for compliance with ASHRAE/IESNA 90.1, Section 6.4.4.2.2 - "Duct Leakage Tests."
4. Duct-Cleaning Test Report for Prerequisite IEQ 1: Documentation of work performed for compliance with ASHRAE 62.1, Section 7.2.4 - "Ventilation System Start-up."
5. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
6. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Duct layout indicating sizes and pressure classes.
3. Elevation of top of ducts.
4. Dimensions of main duct runs from building grid lines.
5. Fittings.
6. Reinforcement and spacing.
7. Seam and joint construction.
8. Penetrations through fire-rated and other partitions.
9. Equipment installation based on equipment being used on Project.
10. Hangers and supports, including methods for duct and building attachment[, **seismic restraints,**] and vibration isolation.

D. Delegated-Design Submittal:

1. Duct materials and thicknesses.
2. Joint and seam construction and sealing.
3. Reinforcement details and spacing.
4. Design Calculations: Calculations[, **including analysis data signed and sealed by the qualified professional engineer responsible for their preparation**] for selecting hangers and supports[**and seismic restraints**].

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
 2. Suspended ceiling components.
 3. Structural members to which duct will be attached.
 4. Size and location of initial access modules for acoustical tile.
 5. Other systems installed in same space as ducts.
 6. Ceiling- and wall-mounting access doors and panels required to provide access to dampers and other operating devices.
 7. Ceiling-mounting items, including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
 8. Penetrations of smoke barriers and fire-rated construction.
 9. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Perimeter moldings.
 - g. <Insert item>.
- B. Welding certificates.
- C. Field quality-control reports. Indicate pressure tests performed. Include date, section tested, test pressure, and leakage rate, following SMACNA HVAC Air Duct Leakage Test Manual.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
1. Record actual locations of ducts and duct fittings. Record changes in fitting location and type. Show additional fittings used.

1.8 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to [AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports] [AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports].
- B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up."
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
- E. NFPA Compliance:
1. NFPA 90A, "Installation of Air Conditioning and Ventilating Systems."
 2. NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
- F. Mockups:
1. Before installing duct systems, build mockups representing static-pressure classes [3-inch wg (750 Pa)] <Insert static-pressure class> and higher. Build mockups to comply with the following requirements, using materials indicated for the completed Work:
 - a. [Five] <Insert number> transverse joints.
 - b. [One] <Insert number> access door(s).
 - c. [Two] <Insert number> typical branch connections, each with at least one elbow.
 - d. [Two] <Insert number> typical flexible duct or flexible-connector connections for each duct and apparatus.
 - e. [One] <Insert number> 90-degree turn(s) with turning vanes.
 - f. [One] <Insert number> fire damper(s).
 - g. Perform leakage tests specified in "Field Quality Control" Article. Revise mockup construction and perform additional tests as required to achieve specified minimum acceptable results.
 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- 1.9 DELIVERY, STORAGE, AND HANDLING
- A. Deliver, store and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1 requirements.
 - B. Store all materials in location protected from water, wind, construction activities, and any other potential damage hazard.
 - C. Protect <Insert item> from <Insert item> by <Insert requirement>.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. General: Comply with SMACNA "Fibrous Glass Duct Construction Standards" for acceptable materials, material thicknesses, and duct construction methods, unless otherwise indicated.

2.2 DUCTWORK FABRICATION

- A. Provide duct material, gages, reinforcing, and sealing for operating pressures indicated, but not less than 1" WG positive and negative pressures.
- B. Construct T's, bends, and elbows with radius of not less than 1-1/2 times width of duct on centerline. Where not possible and where rectangular elbows are used, provide [air foil] turning vanes. Where acoustical lining is indicated, provide turning vanes of perforated metal with glass fiber insulation.
- C. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.
- D. Fabricate continuously welded round and oval duct fittings two gages heavier than duct gages indicated in SMACNA Duct Construction Standards. Joints shall be minimum 4 inch cemented slip joint, brazed or electric welded. Prime coat welded joints.
- E. Provide standard 45 degree lateral wye takeoffs.
- F. 90 degree conical tee connections (spin-in fittings) may only be used downstream of a VAV terminal.

2.3 MANUFACTURED DUCTWORK AND FITTINGS

- A. Manufacture in accordance with SMACNA "Fibrous Glass Duct Construction Standards," and as indicated. Provide duct material, gages, reinforcing, and sealing for operating pressures indicated.

2.4 FIBROUS-GLASS DUCTS AND FITTINGS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [CertainTeed Corporation; Insulation Group.](#)
 2. [Johns Manville.](#)
 3. [Knauf Insulation.](#)
 4. [Owens Corning.](#)
 5. **<Insert manufacturer's name>.**
 6. or approved equal.
- B. Fibrous-Glass Duct Materials: Resin-bonded fiberglass, faced on the outside surface with fire-resistive FSK vapor retarder and with a smooth fiberglass mat finish on the air-side surface.
1. Duct Board: Factory molded into rectangular boards.
 2. Round Duct: Factory molded into straight round duct and smooth fittings.
 3. Temperature Limits: **40 to 250 deg F** (5 to 121 deg C) inside ducts; **150 deg F** (66 deg C) ambient temperature surrounding ducts.
 4. Maximum Thermal Conductivity: [**0.24 Btu x in./h x sq. ft. x deg F** (0.035 W/m x K)] **<Insert conductivity>** at **75 deg F** (24 deg C) mean temperature.
 5. Moisture Absorption: Not exceeding 5 percent by weight at **120 deg F** (49 deg C) and 95 percent relative humidity for 96 hours when tested according to ASTM C 1104/C 1104M.
 6. Permeability: **0.02 perms** (1.15 ng/Pa x s x sq. m) maximum when tested according to ASTM E 96/E 96M, Procedure A.
 7. Antimicrobial Agent: Compound shall be tested for efficacy by an NRTL, and registered by the EPA for use in HVAC systems.
 8. Noise-Reduction Coefficient: 0.65 minimum when tested according to ASTM C 423, Mounting A.
 9. Required Markings: EI rating, UL label, and other markings required by UL 181 on each full sheet of duct board.
- C. Closure Materials:
1. Pressure-Sensitive Tape: Comply with UL 181A; imprinted by the manufacturer with the coding "181A-P," the manufacturer's name, and a date code.
 - a. Tape: Aluminum foil-scrim tape imprinted with listing information.
 - b. Minimum Tape Width: **2-1/2 inches** (64 mm); **3 inches** (76 mm) for duct board thicker than **1 inch** (25 mm).
 - c. Staples: **1/2-inch** (13-mm) outward clinching, **2 inches** (51 mm) o.c. in tabs, one tab per joint.
 - d. Water resistant.
 - e. Mold and mildew resistant.
 2. Heat-Activated Tape: Comply with UL 181A; imprinted by the manufacturer with the coding "181A-H," the manufacturer's name, and a date code.

- a. Tape: Aluminum foil-scrim tape imprinted with listing information.
 - b. Minimum Tape Width: **3 inches** (76 mm).
 - c. Heat-Sensitive Imprint: Printed indicator on tape to show proper heating during application has been achieved.
 - d. Water resistant.
 - e. Mold and mildew resistant.
3. Two-Part Tape Sealing System: Comply with UL 181A; imprinted by the manufacturer with the coding "181A-M," the manufacturer's name, and a date code.
- a. Tape: Woven glass fiber impregnated with mineral gypsum.
 - b. Minimum Tape Width: **3 inches** (76 mm).
 - c. Sealant: Modified styrene acrylic.
 - d. Water resistant.
 - e. Mold and mildew resistant.
 - f. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - g. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Fabrication:

1. Select joints, seams, transitions, elbows, and branch connections and fabricate according to [**SMACNA's "Fibrous Glass Duct Construction Standards," Chapter 2, "Specifications and Closure," and Chapter 4, "Fittings and Connections."**] [**NAIMA AH116, "Fibrous Glass Duct Construction Standards," Section II, "Fabrication of Straight Duct Modules," Section III, "Fabrication of Fittings from Modules or Flat Board," and Section IV, "Closure."**]
2. Fabricate 90-degree mitered elbows to include turning vanes.
3. Reinforcements: Comply with requirements in [**SMACNA's "Fibrous Glass Duct Construction Standards," Chapter 5, "Reinforcement"**] [**NAIMA AH116, "Fibrous Glass Duct Construction Standards," Section V, "Reinforcement"**] for channel- and tie-rod reinforcement materials, spacing, and fabrication.
4. Preformed Round Duct: Comply with NAIMA AH116, "Fibrous Glass Duct Construction Standards," Section VII, "Preformed Round Duct."

2.5 PHENOLIC-FOAM DUCTS AND FITTINGS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. **Knauf Insulation.**
 2. **<Insert manufacturer's name>.**
 3. or approved equal.

- B. Duct Panel: CFC-free phenolic-foam bonded on both sides with factory-applied 0.001-inch- (0.025-mm-) thick, aluminum foil reinforced with fiberglass scrim.
1. Maximum Temperature: 158 deg F (70 deg C) inside ducts or ambient temperature surrounding ducts.
 2. Maximum Thermal Conductivity: [0.13 Btu x in./h x sq. ft. x deg F (0.019 W/m x K)] <Insert conductivity> at 75 deg F (24 deg C) mean temperature.
 3. Permeability: 0.0002 perms (0.0115 ng/Pa x s x sq. m) maximum when tested according to ASTM E 96/E 96M, Procedure A.
 4. Antimicrobial Agent: Compound shall be tested for efficacy by an NRTL, and registered by the EPA for use in HVAC systems.
 5. Noise-Reduction Coefficient: 0.65 minimum when tested according to ASTM C 423, Mounting A.
 6. Required Markings: UL label and other markings required by UL 181 on each full sheet of duct panel; UL ratings for closure materials.
- C. Closure Materials:
1. V-Groove Adhesive: Silicone.
 - a. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 2. Pressure-Sensitive Tape: Comply with UL 181A; imprinted by the manufacturer with the coding "181A-P," the manufacturer's name, and a date code.
 - a. Tape: Aluminum foil tape imprinted with listing information.
 - b. Minimum Tape Width: 3 inches (76 mm).
 - c. Water resistant.
 - d. Mold and mildew resistant.
 3. Polymeric Sealing System:
 - a. Structural Membrane: Woven glass fiber.
 - b. Minimum Tape Width: 3 inches (76 mm).
 - c. Sealant: Water based.
 - d. Color: White.
 - e. Water resistant.
 - f. Mold and mildew resistant.
 - g. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - h. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Fabrication:

1. Fabricate joints, seams, transitions, reinforcement, elbows, branch connections, access doors and panels, and damage repairs according to Knauf Insulation's "Knauf KoolDuct System Design Guide," Section 4, "Duct Construction," and Section 5, "Ductwork System General."
2. Fabricate 90-degree mitered elbows to include turning vanes.

2.6 THERMOSET FRP DUCTS AND FITTINGS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [McGill AirFlow LLC.](#)
2. [Perry Fiberglass Products, Inc.](#)
3. [Spunstrand Inc.](#)
4. **<Insert manufacturer's name>.**
5. or approved equal.

B. Duct and Fittings:

1. Thermoset FRP Resin: Manufacture duct with resin that complies with UL 181, Class 1, maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested by an NRTL according to ASTM E 84.
2. Inner Liner: FSK liner rated by an NRTL to comply with UL 181, Class 1.
3. Round Duct: ASTM D 2996, Type I, Grade 2, Class E, filament-wound duct, minimum [0.125-inch (3.2-mm)] **<Insert thickness>** wall thickness, with tapered bell and spigot ends for adhesive joints, or plain ends with couplings.
4. Round Fittings: Compression or spray-up/contact, molded of same material, pressure class, and joining method as duct.
5. Rectangular Fittings: Minimum [0.125-inch- (3.2-mm-)] **<Insert thickness>** thick flat sheet with fiberglass roving and resin-reinforced joints and seams.
6. Double-Wall Insulated Duct: Inner and outer duct complying with requirements for "Round Duct" description above. Polyurethane foam or isocyanurate insulation with maximum thermal conductivity of [0.14 Btu x in./h x sq. ft. x deg F (0.020 W/m x K)] **<Insert conductivity>** at 75 deg F (24 deg C) mean temperature.

C. Joining Materials: Roving and polyester resin.

1. Fiberglass adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Fabrication:

1. Fabricate joints, seams, transitions, reinforcement, elbows, branch connections, and access doors and panels according to SMACNA's "Thermoset FRP Duct Construction Manual," Chapter 7, "Requirements."
 2. Fabricate 90-degree rectangular mitered elbows to include turning vanes, 90-degree round elbows with a minimum of three segments for **12 inches** (300 mm) and smaller and a minimum of five segments for **14 inches** (350 mm) and larger.
- E. Drains: Formed drain pockets with a minimum of **NPS 1 (DN 25)** threaded pipe connections.

2.7 PVC DUCTS AND FITTINGS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [General Plastics, Inc.](#)
 2. [GPK Products, Inc.](#)
 3. [Harvel Plastics, Inc.](#)
 4. [Kroy Industries, Inc.](#)
 5. [Northern Pipe Product Inc.; an Otter Tail company.](#)
 6. [Plastinetics Inc.](#)
 7. [Spears Manufacturing Company.](#)
 8. **<Insert manufacturer's name>**.
 9. or approved equal.
- B. Duct and Fittings:
1. Round Duct: Comply with cell Classification 12454-B in ASTM D 1784, with external loading properties of ASTM D 2412.
 2. Round Fittings: Socket end molded of same material, pressure class, and joining method as duct.
 3. Rectangular Fittings: Minimum [**0.125-inch- (3.2-mm-)**] **<Insert thickness>** thick flat sheet with heat-formed corners and continuous welded butt joints.
- C. Joining Materials: PVC solvent cement complying with ASTM D 2564.
1. PVC solvent cement shall have a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Fabrication:

1. Fabricate joints, seams, transitions, reinforcement, elbows, branch connections, and access doors and panels according to SMACNA's "Thermoplastic Duct (PVC) Construction Manual," Chapter 3, "Standards of Construction for PVC Duct Systems."
2. Fabricate 90-degree rectangular mitered elbows to include turning vanes, 90-degree round elbows with a minimum of three segments for **12 inches (300 mm)** and smaller and a minimum of five segments for **14 inches (350 mm)** and larger.

- E. Drains: PVC drain pockets with a minimum of **NPS 1 (DN 25)** threaded PVC pipe connections.

2.8 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," [Table 5-1 \(Table 5-1M\)](#), "Rectangular Duct Hangers Minimum Size," and [Table 5-2](#), "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables: [**ASTM A 603, galvanized**] [**ASTM A 492, stainless**] steel with end connections made of cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- E. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- F. Trapeze and Riser Supports: Steel shapes complying with ASTM A 36/A 36M.

2.9 SEISMIC-RESTRAINT DEVICES

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Cooper B-Line, Inc.; a division of Cooper Industries.](#)
 2. [Ductmate Industries, Inc.](#)
 3. [Hilti Corp.](#)
 4. [Kinetics Noise Control.](#)
 5. [Loos & Co.; Cableware Division.](#)
 6. [Mason Industries.](#)
 7. [TOLCO; a brand of NIBCO INC.](#)
 8. [Unistrut Corporation; Tyco International, Ltd.](#)
 9. **<Insert manufacturer's name>**.
 10. or approved equal.

- B. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by **[an evaluation service member of the ICC Evaluation Service] [the Office of Statewide Health Planning and Development for the State of California] [an agency acceptable to authorities having jurisdiction]**.
1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least **[four] <Insert number>** times the maximum seismic forces to which they will be subjected.
- C. Channel Support System: Shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end. Include matching components and corrosion-resistant coating.
- D. Restraint Cables: **[ASTM A 603, galvanized] [ASTM A 492, stainless]**-steel cables with end connections made of cadmium-plated steel assemblies with brackets, swivel, and bolts designed for restraining cable service; and with an automatic-locking and clamping device or double-cable clips.
- E. Hanger Rod Stiffener: **[Steel tube or steel slotted-support-system sleeve with internally bolted connections] [Reinforcing steel angle clamped]** to hanger rod.
- F. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Provide openings in ductwork where required to accommodate thermometers and controllers. Provide pilot tube openings where required for testing of systems, complete with metal can with spring device or screw to ensure against air leakage. Where openings are provided in insulated ductwork, install insulation material inside a metal ring.
- C. Install ducts with fewest possible joints.
- D. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines. Avoid diagonal runs.
- E. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- F. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.

- G. Cloth backed duct tape shall not be used.
 - H. Conceal ducts from view in finished spaces. Do not encase horizontal runs in solid partitions unless specifically indicated.
 - I. Coordinate layout with suspended ceiling, fire- and smoke-control dampers, lighting layouts, and similar finished work.
 - J. Electrical Equipment Spaces: Route ducts to avoid passing through transformer vaults and electrical equipment spaces and enclosures.
 - K. Install ducts with a clearance of **1 inch (25 mm)**, plus allowance for insulation thickness.
 - L. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges. Overlap openings on four sides by at least **1-1/2 inches (38 mm)**.
 - M. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Section 233300 "Air Duct Accessories" for fire and smoke dampers.
 - N. Protect duct interiors from the moisture, construction debris and dust, and other foreign materials. [**Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."**]
 - O. Install fibrous-glass ducts and fittings to comply with [**NAIMA AH116, "Fibrous Glass Duct Construction Standards"**] [**SMACNA's "Fibrous Glass Duct Construction Standards"**]."
 - P. Install foam ducts and fittings to comply with Knauf Insulation's "Knauf KoolDuct System Design Guide."
 - Q. Install thermoset FRP ducts and fittings to comply with SMACNA's "Thermoset FRP Duct Construction Manual."
 - R. Install PVC ducts and fittings to comply with SMACNA's "Thermoplastic Duct (PVC) Construction Manual."
- 3.2 HANGER AND SUPPORT INSTALLATION
- A. Install hangers and supports for fibrous-glass ducts and fittings to comply with [**SMACNA's "Fibrous Glass Duct Construction Standards," Chapter 6, "Hangers and Supports."**] [**NAIMA AH116, "Fibrous Glass Duct Construction Standards," Section VI, "Hangers and Supports."**]
 - B. Install hangers and supports for phenolic-foam ducts and fittings to comply with Knauf Insulation's "Knauf KoolDuct System Design Guide," Section 5, "Ductwork System General."

- C. Install hangers and supports for thermoset FRP ducts and fittings to comply with SMACNA's "Thermoset FRP Duct Construction Manual," Chapter 7, "Requirements."
- D. Install hangers and supports for PVC ducts and fittings to comply with SMACNA's "Thermoplastic Duct (PVC) Construction Manual," Chapter 3, "Standards of Construction for PVC Duct Systems."
- E. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 - 1. Install concrete inserts before placing concrete.
 - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 - 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches (100 mm) thick.
 - 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches (100 mm) thick.
 - 5. Do not use powder-actuated concrete fasteners for seismic restraints.
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- G. Support horizontal ducts within 24 inches of each elbow and within 48 inches of each branch intersection.
- H. Provide a support with 12 inches of the end of a duct run, not including flexible duct.
- I. Support vertical ducts at maximum intervals of 16 feet and at each floor.
- J. Install upper attachments to structures with an allowable load not exceeding one-fourth of failure (proof-test) load.
- K. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
- L. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.

3.3 SEISMIC-RESTRAINT-DEVICE INSTALLATION

- A. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by applicable building codes. Comply with [SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems."] [ASCE/SEI 7.]
 - 1. Space lateral supports a maximum of [40 feet (12 m)] <Insert dimension> o.c., and longitudinal supports a maximum of [80 feet (24 m)] <Insert dimension> o.c.
 - 2. Brace a change of direction longer than 12 feet (3.7 m).

- B. Select sizes of components so strength will be adequate to carry present and future static and seismic loads within restraint device capacity.
- C. Install cables so they do not bend across edges of adjacent equipment or building structure.
- D. Install cable restraints where ducts are suspended with vibration isolators.
- E. Install seismic-restraint devices using methods approved by **[an evaluation service member of the ICC Evaluation Service] [the Office of Statewide Health Planning and Development for the State of California] [an agency acceptable to authorities having jurisdiction]**.
- F. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure to flanges of beams, to upper truss chords of bar joists, or to concrete members.
- G. Drilling for and Setting Anchors:
 - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcement or embedded items during drilling. Notify the Architect if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 - 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 - 4. Set anchors to manufacturer's recommended torque, using a torque wrench.
 - 5. Install zinc-coated steel anchors for interior applications and stainless-steel anchors for applications exposed to weather.

3.4 PAINTING

- A. Paint interior of **[thermoset FRP] [and] [PVC]** ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Section 099123 "Interior Painting."

3.5 UNDERSLAB DUCTS, SPECIAL INSTALLATION REQUIREMENTS

- A. Verify undamaged condition of ducts before enclosure with fill or encasement.
- B. Protect ducts from damage by equipment used in placing fill materials and concrete on or around ducts.
- C. Protect duct openings from damage and prevent entrance of foreign materials.

- D. Slope underground ducts to plenums or low pump out points at 1:500. Provide access doors for inspection.
- E. Encase buried nonmetal ductwork in 3 inch minimum of concrete. Provide adequate tie-down points to prevent ducts from floating during concrete placement. Introduce no heat into ducts for 20 days following placement of concrete.
- F. Insulate buried supply duct runs over 70 feet long with one inch thick insulation covered with plastic vapor barrier.

3.6 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Leakage Tests:
 - 1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
 - 2. For high pressure ductwork, after system is completed, test for duct leakage in accordance with SMACNA "High Pressure Duct Standards - 3rd Edition, Chapter 10 - Testing for Leakage." Repair leaks and repeat tests until total leakage is less than 1% of system design airflow.
 - 3. Test the following systems:
 - a. Ducts with a Pressure Class Higher Than 3-Inch wg (750 Pa): Test representative duct sections[, **selected by Architect from sections installed,**] totaling no less than 25 percent of total installed duct area for each designated pressure class.
 - b. Supply Ducts with a Pressure Class of [2-Inch wg (500 Pa)] [3-Inch wg (750 Pa)] [4-Inch wg (1000 Pa)] <Insert value> or Higher: Test representative duct sections[, **selected by Architect from sections installed,**] totaling no less than [50] [100] <Insert value> percent of total installed duct area for each designated pressure class.
 - c. Return Ducts with a Pressure Class of [2-Inch wg (500 Pa)] [3-Inch wg (750 Pa)] [4-Inch wg (1000 Pa)] <Insert value> or Higher: Test representative duct sections[, **selected by Architect from sections installed,**] totaling no less than [50] [100] <Insert value> percent of total installed duct area for each designated pressure class.
 - d. Exhaust Ducts with a Pressure Class of [2-Inch wg (500 Pa)] [3-Inch wg (750 Pa)] [4-Inch wg (1000 Pa)] <Insert value> or Higher: Test representative duct sections[, **selected by Architect from sections installed,**] totaling no less than [50] [100] <Insert value> percent of total installed duct area for each designated pressure class.
 - e. Outdoor Air Ducts with a Pressure Class of [2-Inch wg (500 Pa)] [3-Inch wg (750 Pa)] [4-Inch wg (1000 Pa)] <Insert value> or Higher: Test representative duct sections[, **selected by Architect from sections installed,**] totaling no less than [50] [100] <Insert value> percent of total installed duct area for each designated pressure class.

4. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
5. Test for leaks before applying external insulation.
6. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test entire system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure. Give **[seven]** <Insert number> days' advance notice for testing.

C. Duct System Cleanliness Tests:

1. Visually inspect duct system to ensure that no visible contaminants are present.
2. Test sections of nonmetal duct system, chosen randomly by Owner, for cleanliness according to "Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."
 - a. Acceptable Cleanliness Level: Net weight of debris collected on the filter media shall not exceed 0.75 mg/100 sq. cm.

D. Duct system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.7 DUCT CLEANING

A. Clean **[new]** **[and]** **[existing]** duct system(s) before testing, adjusting, and balancing.

B. Clean ductwork internally, unit-by-unit as it is installed, of dust and debris. Clean external surfaces of foreign substances, which might cause corrosive deterioration of metal or, where ductwork is to be painted, might interfere with painting or cause paint deterioration.

C. Strip protective paper from stainless ductwork surfaces, and repair finish wherever it has been damaged.

D. Temporary Closure: At ends of ducts, which are not connected to equipment or air distribution devices at time of ductwork installation, provide temporary closure of polyethylene film or other covering, which will prevent entrance of dust and debris until time connections are to be completed.

E. Mark position of dampers and air-directional mechanical devices before cleaning, and perform cleaning before air balancing.

F. Use service openings for entry and inspection.

1. Create new openings and install access panels appropriate for duct static-pressure class if required for cleaning access. Provide insulated panels for insulated or lined duct. Patch duct as recommended by duct manufacturer. Comply with Section 233300 "Air Duct Accessories" for access panels and doors.
2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection.

3. Remove and reinstall ceiling to gain access during the cleaning process.

G. Particulate Collection and Odor Control:

1. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron-size (or larger) particles.
2. When venting vacuuming system to outdoors, use filter to collect debris removed from HVAC system, and locate exhaust downwind and away from air intakes and other points of entry into building.

H. Clean the following components by removing surface contaminants and deposits:

1. Air outlets and inlets (registers, grilles, and diffusers).
2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
4. Coils and related components.
5. Return-air ducts, dampers, actuators, and turning vanes except in ceiling plenums and mechanical equipment rooms.
6. Supply-air ducts, dampers, actuators, and turning vanes.
7. Dedicated exhaust and ventilation components and makeup air systems.

I. Mechanical Cleaning Methodology:

1. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
2. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of ducts or duct accessories.
3. Clean fibrous-glass duct with HEPA vacuuming equipment; do not permit duct to get wet. Replace fibrous-glass duct that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
4. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
5. Provide drainage and cleanup for wash-down procedures.
6. Antimicrobial Agents and Coatings: Apply EPA-registered antimicrobial agents if fungus is present. Apply antimicrobial agents according to manufacturer's written instructions after removal of surface deposits and debris.

J. Cleanliness Verification:

1. Visually inspect metal ducts for contaminants.
2. Where contaminants are discovered, re-clean and reinspect ducts.

3.8 CLEANING EXISTING SYSTEMS

- A. Use service openings, as required, for physical and mechanical entry and for inspection.
1. Use existing service openings where possible.
 2. Create other openings to comply with duct standards.
 3. Disconnect flexible ducts as needed for cleaning and inspection.
 4. Reseal rigid fiberglass duct systems according to NAIMA recommended practices.
 5. Remove and reinstall ceiling sections to gain access during the cleaning process.
- B. Mark position of dampers and air-directional mechanical devices before cleaning, and restore to their marked position on completion.
- C. Particulate Collection and Odor Control:
1. When venting vacuuming system inside the building, use HEPA filtration with 99.97% collection efficiency for 0.3-micron size (or larger) particles.
 2. When venting vacuuming system to the outside, use filtration to contain debris removed from HVAC system, and locate exhaust down wind and away from air intakes and other points of entry into building.
- D. Clean the following metal duct systems by removing surface contaminants and deposits:
1. Air outlets and inlets (registers, grilles, and diffusers).
 2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
 3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
 4. Coils and related components.
 5. Return-air ducts, dampers, and actuators except in ceiling plenums and mechanical equipment rooms.
 6. Supply-air ducts, dampers, actuators, and turning vanes.
 7. Dedicated exhaust and ventilation components and makeup air systems.
- E. Mechanical Cleaning Methodology:
1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
 2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
 3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
 4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit

- duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
5. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
 6. Provide operative drainage system for washdown procedures.
 7. Biocidal Agents and Coatings: Apply biocidal agents if fungus is present. Apply biocidal agents according to manufacturer's written instructions after removal of surface deposits and debris.

F. Cleanliness Verification:

1. Verify cleanliness after mechanical cleaning and before application of treatment, including biocidal agents and protective coatings.
2. Visually inspect metal ducts for contaminants.
3. Where contaminants are discovered, re-clean and reinspect ducts.

- G. Verification of Coil Cleaning: Cleaning must restore coil pressure drop to within 10% of pressure drop measured when coil was first installed. If original pressure drop is not known, coil will be considered clean only if it is free of foreign matter and chemical residue, based on thorough visual inspection.

3.9 FINAL CLEANING

- A. Clean duct system and force air at high velocity through duct to remove accumulated dust. To obtain sufficient air, clean half the system at a time. Protect equipment, which may be harmed by excessive dirt with temporary filters, or bypass during cleaning.
- B. Clean duct systems with high power vacuum machines. Protect equipment, which may be harmed by excessive dirt with filters, or bypass during cleaning. Provide adequate access into ductwork for cleaning purposes.

3.10 START UP

- A. Air Balance: Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC."

3.11 DUCT SCHEDULE

A. Indoor Ducts and Fittings:

1. Fibrous-Glass Rectangular Ducts and Fittings:
 - a. Minimum Flexural Rigidity: EI-[475] [800] [1400].
 - b. Minimum Board Thickness: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)].
2. Fibrous-Glass Round Ducts and Fittings:

- a. Minimum Thickness: [1 inch (25 mm)] <Insert thickness>.
3. Phenolic-Foam Rectangular Ducts and Fittings:
 - a. Minimum Panel Thickness: [7/8 inch (22 mm)] [1-3/32 inches (28 mm)].
 - b. Aluminum Cladding: Minimum 0.025 inch (0.635 mm) thick.
- B. Outdoor Ducts and Fittings:
 1. Phenolic-Foam Rectangular Ducts and Fittings:
 - a. Minimum Panel Thickness: [7/8 inch (22 mm)] [1-3/32 inches (28 mm)].
 - b. Aluminum Cladding: Minimum 0.032 inch (0.813 mm) thick.
 - c. Polymeric Sealing System: Coat ducts, including gang-nail couplings, grip flanges, and couplings.
 2. Thermoset FRP Round Ducts and Fittings:
 - a. Double-Wall Insulated Ducts: Minimum [5/8-inch (15.9-mm)] [7/8-inch (22.2-mm)] <Insert thickness> insulation thickness.
 3. PVC Round Ducts and Fittings:
- C. Underground Ducts:
 1. Thermoset FRP Round Ducts and Fittings:
 - a. Insulation Thickness: [1 inch (25 mm)] <Insert thickness>.
 - b. Drain: Minimum NPS 1 (DN 25) PVC pipe with P-trap to air-gap drain.
 2. PVC Round Ducts and Fittings:
 - a. Drain: Minimum NPS 1 (DN 25) PVC pipe with P-trap to air-gap drain.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233116

SECTION 233119 - HVAC CASINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
- [Factory] [Shop]-fabricated, field-assembled, [single] [double] [single- and double]-wall casings for HVAC equipment.**
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Static-Pressure Classes:
- Upstream from Fan(s): **[2-inch wg (500 Pa)] <Insert value>**.
 - Downstream from Fan(s): **[2-inch wg (500 Pa)] [3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] [6-inch wg (1500 Pa)] [10-inch wg (2500 Pa)] <Insert value>**.
- B. Acoustical Performance:
- NRC: **[1.09] [0.94] <Insert number>** according to ASTM C 423.
 - STC: **[40] [34] <Insert number>** according to ASTM E 90.
- C. Structural Performance:
- Casings shall be fabricated to withstand 133 percent of the indicated static pressure without structural failure. Wall and roof deflection at the indicated static pressure shall not exceed **1/8 inch per foot (0.97 mm per meter)** of width.
 - Fabricate outdoor casings to withstand wind load of **15 lbf/sq. ft. (720 N/sq. m)** and snow load of **30 lbf/sq. ft. (1440 N/sq. m)**.
- D. Seismic Performance: HVAC casings shall withstand the effects of earthquake motions determined according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" **[and] [ASCE/SEI 7] <Insert requirement>**.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of the following products:

1. Factory-fabricated casings.
2. Liners and adhesives.
3. Sealants and gaskets.
4. Seismic-restraint devices.
5. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Prerequisite IEQ 1: Documentation indicating that HVAC casings comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
2. Product Data for Prerequisite EA 2: Documentation indicating that HVAC casings comply with ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
3. Leakage Test Report for Prerequisite EA 2: Documentation of work performed for compliance with ASHRAE/IESNA 90.1, Section 6.4.4.2.2 - "Duct Leakage Tests."
4. Duct-Cleaning Test Report for Prerequisite IEQ 1: Documentation of work performed for compliance with ASHRAE 62.1, Section 7.2.4 - "Ventilation System Start-up."
5. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
6. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: For HVAC casings. Include plans, elevations, sections, components, and attachments to other work.

1. Detail HVAC casing assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Sheet metal thickness(es).
3. Reinforcement and spacing.
4. Seam and joint construction.
5. Access doors including frames, hinges, and latches.
6. Filter, coil, humidifier, and other apparatus being installed in and mounted on casing.
7. Locations for access to internal components.
8. Hangers and supports including methods for building attachment, vibration isolation,[**seismic restraints**,] and casing attachment.

9. Interior lighting, including switches.

1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Product Certificates: For acoustically critical casings, from manufacturer.
1. Show sound-absorption coefficients in each octave band lower than those scheduled when tested according to ASTM C 423.
 2. Show airborne sound transmission losses lower than those scheduled when tested according to ASTM E 90.
- C. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to [**AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports**] [**AWS D9.1M/D9.1, "Sheet Metal Welding Code," for casing joint and seam welding**].
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 2. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for casing joint and seam welding.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up."
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."

1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

- B. Coordinate sizes and locations of steel supports. Supports are specified in Section 055000 "Metal Fabrications."
- C. Coordinate installation of roof curbs, [**equipment supports**,]and roof penetrations. These items are specified in Section 077200 "Roof Accessories."

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1 requirements.
- B. Store all materials in location protected from water, wind, construction activities, and any other potential damage hazard.
- C. Protect <Insert item> from <Insert item> by <Insert requirement>.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL CASING FABRICATION REQUIREMENTS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 9, "Equipment and Casings," for acceptable materials, material thicknesses, and casing construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
 1. Fabricate casings with more than 3-inch wg (750-Pa) negative static pressure according to SMACNA's "Rectangular Industrial Duct Construction Standards."
 2. Casings with more than 2-inch wg (500-Pa) positive static pressure may be fabricated according to SMACNA's "Rectangular Industrial Duct Construction Standards."
 3. Fabricate with a minimum number of joints.
 4. Weld exterior and interior shells to perimeter; to interior, longitudinal, galvanized-steel channels; and to box-end internal closures. Paint welds.
 5. Exterior Shell Thickness: 0.040 inch minimum.
 6. Interior Shell Thickness: 0.034 inch minimum.
 7. Interior Shell Thickness: 0.034 inch minimum, with 3/32-inch perforations at 3/16-inch staggered spacing for 23% open area.
 8. Fabricate perimeter and interior, longitudinal channel members with galvanized-steel shapes.

9. Fill each panel assembly with insulating material that is noncombustible, inert, mildew resistant, and vermin proof, and that complies with NFPA 90A.
 10. Fabricate panels with tongue-and-groove, continuous self-locking joints effective inside and outside each panel.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
1. Exterior Surface Galvanized Coating Designation: [G60 (Z180)] [G90 (Z275)].
 2. Interior Surface Galvanized Coating Designation:
 - a. Sections Not Exposed to Moisture: [G60 (Z180)] [G90 (Z275)].
 - b. Sections Housing and Downstream from Cooling Coil and Humidifiers: [G90 (Z275)].
- C. Stainless Steel: ASTM A 480/A 480M, [Type 304] [Type 316], and having a [No. 2D] <Insert finish> finish.
- D. Factory- or Shop-Applied Antimicrobial Coating:
1. Apply to the interior sheet metal surfaces of casing in contact with the airstream. Apply untreated clear coating to the exterior surface.
 2. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
 3. Coating containing the antimicrobial compound shall have a hardness of 2H minimum when tested according to ASTM D 3363.
 4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 according to UL 723; certified by an NRTL.
 5. Applied Coating Color: [Standard] [Black] [White].
- E. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- F. Sealing Requirement: SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Seal Class A. Seal all seams, joints, connections, and abutments to building.
- G. Penetrations: Seal all penetrations airtight. Cover with escutcheons and gaskets, or fill with suitable compound so there is no exposed insulation. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping." Provide shaft seals where fan shafts penetrate casing.
- H. Access Doors: Fabricate access doors according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 9-15, "Casing Access Doors - 2-inch wg (500 Pa)," and Figure 9-16, "Casing Access Doors - 3-10-inch wg (750-2500 Pa)"; and according to pressure class of the plenum or casing section in which access doors are to be installed.
1. Size: [24 by 60 inches (580 by 1500 mm)] <Insert size>.
 2. Vision Panel: Double-glazed, wire-reinforced safety glass with an airspace between panes and sealed with interior and exterior rubber seals.

3. Hinges: Install a minimum of two ball-bearing butt hinges and latches, number and size according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 4. Latches: Minimum of two wedge-lever-type latches, operable from inside and outside.
 5. Neoprene gaskets around entire perimeters of door frames.
 6. Doors shall open against air pressure.
 7. Fabricate windows in doors consisting of double-glazed, wire-reinforced safety glass with an air space between panes and sealed with interior and exterior rubber seals.
- I. Condensate Drain Pans: Formed sections of **[Type 304, stainless-steel sheet]** **[G90 (Z275) coated, galvanized sheet steel]** complying with requirements in ASHRAE 62.1. Pans shall extend a minimum of **12 inches (300 mm)** past coil.
1. Double-wall construction shall have space between walls filled with foam insulation and sealed moisture tight.
 2. Intermediate drain pan or drain trough shall collect condensate from top coil for units with stacked coils or stacked eliminators.
 3. Insulation: Polystyrene or polyurethane.
 4. Slopes shall be in a minimum of two planes to collect condensate from cooling coils (including coil piping connections and return bends), eliminators, and humidifiers when units are operating at maximum catalogued face velocity across cooling coil.
 5. Each drain pan connection shall have a trap. **[Drain traps with depth and height differential between inlet and outlet equal or greater to the design static pressure plus 2-inch wg (500 Pa.)]** Include slab height in trap calculation.
- J. Structural Performance: Fabricate plenum to be self-supporting and capable of withstanding internal static pressures as scheduled, without any panel joint exceeding deflection of L/200 where "L" is the unsupported span length within completed casings.
1. Fabricate outdoor casings to withstand wind load of 15 lbf/sq. ft. and snow load of 30 lbf/sq. ft..
 2. Acoustic Performance: Certified by an independent acoustical testing agency listing sound-absorption and transmission-loss characteristics of panel assemblies.
 3. Thermal Conductivity (k-Value): 0.26 at 75oF mean temperature.
- K. Static-Pressure Classifications: Unless otherwise indicated, fabricate HVAC casings according to the following:
1. Before Fans: **[2-inch wg] [3-inch wg] <Insert pressure class>**.
 2. After Fans: **[2-inch wg] [3-inch wg] [4-inch wg] [6-inch wg] [10-inch wg] <Insert pressure class>**.

2.2 SHOP-FABRICATED CASINGS

- A. Single- and Double-Wall Casings: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for sheet metal thickness based on indicated static-pressure class unless otherwise indicated.
- B. Double-Wall Casing Inner Panel: Perforated, galvanized sheet steel having 3/32-inch- (2.4-mm-) diameter perforations, with overall open area of [23] <Insert number> percent. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for sheet metal thickness based on indicated static-pressure class unless otherwise indicated.
- C. Double-Wall Casing Inner Panel: Solid sheet steel. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for sheet metal thickness based on indicated static-pressure class unless otherwise indicated.
- D. Interstitial Insulation: Polyurethane foam complying with NFPA 90A or NFPA 90B.
- E. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
 - 1. Maximum Thermal Conductivity: [0.27 Btu x in./h x sq. ft. x deg F (0.039 W/m x K)] <Insert conductivity> at 75 deg F (24 deg C) mean temperature.
 - 2. Coat insulation with antimicrobial coating.
 - 3. Cover insulation with polyester film complying with UL 181, Class 1.
- F. Interstitial Insulation: Flexible-elastomeric duct liner complying with ASTM C 534, Type II for sheet materials and with NFPA 90A or NFPA 90B.
 - 1. Maximum Thermal Conductivity: [0.25 Btu x in./h x sq. ft. x deg F (0.034 W/m x K)] <Insert conductivity> at 75 deg F (24 deg C) mean temperature.
- G. Fabricate casings with standing seams and angle-iron reinforcements unless otherwise indicated.
- H. Fabricate close-off sheets from casing to dampers, filter frames, and coils and between stacked coils. Use galvanized sheet steel of same thickness as casing and with a galvanized coating designation of G90 (Z275).
- I. Bolt close-off sheets to frame flanges and housings. Support coils on stands fabricated from galvanized-steel angles or channels.
- J. Reinforce casings with galvanized-steel angles.

2.3 MANUFACTURED CASINGS

- A. Description: Double-wall, insulated, pressurized equipment casing.

- B. **Manufacturers:** Subject to compliance with requirements, **[provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
1. [Acoustical Surfaces, Inc.](#)
 2. [AeroSonics, Inc.; a division of TUTCO, Inc.](#)
 3. [Buffalo Air Handling.](#)
 4. [CertainTeed Corp.; Insulation Group.](#)
 5. [CLEANPAK International.](#)
 6. [D&D Sound Control.](#)
 7. [IACL.](#)
 8. [Industrial Noise Control, Inc.](#)
 9. [McGill AirSilence LLC.](#)
 10. [SEMCO Incorporated.](#)
 11. [Vibro-Acoustics.](#)
 12. **<Insert manufacturer's name>.**
- C. Double-Wall Panel Fabrication: Solid, galvanized sheet steel exterior wall and **[solid] [perforated]**, galvanized sheet steel interior wall; with space between wall filled with insulation.
1. Wall Thickness: **[2 inches (50 mm)] [4 inches (100 mm)]**.
 2. Fabricate with a minimum number of joints.
 3. Weld exterior and interior walls to perimeter; to interior, longitudinal, galvanized-steel channels; and to box-end internal closures. Paint welds.
 4. Sheet metal thickness shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for static-pressure class indicated for casing.
 5. Sheet Metal Thicknesses:
 - a. Exterior Wall Thickness: **[0.040 inch (1.0 mm)] <Insert dimension>** minimum.
 - b. Interior Wall Thickness: **[0.034 inch (0.85 mm)] <Insert dimension>** minimum.
 6. Double-Wall Casing Inner Panel: Perforated, galvanized sheet steel having **3/32-inch- (2.4-mm-)** diameter perforations, with overall open area of **[23] <Insert number>** percent.
 7. Double-Wall Casing Inner Panel: Solid sheet steel.
 8. Fill each panel assembly with insulating material that is noncombustible, inert, mildew resistant and vermin proof and that complies with NFPA 90A.
 9. Fabricate panels with continuous **[tongue-and-groove] [self-locking] [tongue-and-groove or self-locking]** joints effective inside and outside each panel.
- D. Trim Items: Fabricate from a minimum of **0.052-inch (1.3-mm)** galvanized sheet steel, furnished in standard lengths for field cutting.

2.4 CASING LINER

- A. Fibrous-Glass Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
1. **Manufacturers:** Subject to compliance with requirements, [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [CertainTeed Corp.: Insulation Group.](#)
 - b. [Johns Manville.](#)
 - c. [Knauf Insulation.](#)
 - d. [Owens Corning.](#)
 - e. <Insert manufacturer's name>.
 2. Maximum Thermal Conductivity:
 - a. Type I, Flexible: [0.27 Btu x in./h x sq. ft. x deg F (0.039 W/m x K)] <Insert conductivity> at 75 deg F (24 deg C) mean temperature.
 - b. Type II, Rigid: [0.23 Btu x in./h x sq. ft. x deg F (0.033 W/m x K)] <Insert conductivity> at 75 deg F (24 deg C) mean temperature.
 3. Antimicrobial Erosion-Resistant Coating: Apply to surface of the liner that will form the interior surface of casing to act as a moisture repellent and an erosion-resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
 4. **[Solvent] [Water]-Based Liner Adhesive:** Comply with NFPA 90A or NFPA 90B and with ASTM C 916.
 - a. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Flexible-Elastomeric Casing Liner: Preformed, cellular, closed-cell, sheet materials complying with ASTM C 534, Type II, Grade 1, and with NFPA 90A or NFPA 90B.
1. **Manufacturers:** Subject to compliance with requirements, [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Aeroflex USA Inc.](#)
 - b. [Armacell LLC.](#)
 - c. [Rubatex International, LLC.](#)
 - d. <Insert manufacturer's name>.

2. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
 3. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
 - a. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Natural-Fiber Casing Liner: 85 percent cotton, 10 percent borate, and 5 percent polybinding fibers, treated with a microbial growth inhibitor, and complying with NFPA 90A or NFPA 90B.
1. **Manufacturers:** Subject to compliance with requirements, **[provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Bonded Logic, Inc.](#)
 - b. [Reflectix Inc.](#)
 - c. **<Insert manufacturer's name>**.
 2. Maximum Thermal Conductivity: **[0.24 Btu x in./h x sq. ft. x deg F (0.034 W/m x K)] <Insert conductivity>** at **75 deg F (24 deg C)** mean temperature when tested according to ASTM C 518.
 3. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
 4. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
 - a. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Insulation Pins and Washers:
1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, **[0.106-inch- (2.6-mm-)] [0.135-inch- (3.5-mm-)]** diameter shank, length to suit depth of insulation indicated with integral **1-1/2-inch (38-mm)** galvanized carbon-steel washer.
 2. Insulation-Retaining Washers: Self-locking washers formed from **0.016-inch- (0.41-mm-)** thick, **[galvanized] [stainless]** steel, with beveled edge sized as

required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.

- E. Shop or Factory Application of Casing Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."
1. Adhere a single layer of indicated thickness of casing liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of casing liner is prohibited.
 2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
 3. Butt transverse joints without gaps, and coat joint with adhesive.
 4. Fold and compress liner in corners of casings or cut and fit to ensure butted-edge overlapping.
 5. Apply adhesive coating on longitudinal seams in casings with air velocity of 2500 fpm (12.7 m/s).
 6. Secure liner with mechanical fasteners 4 inches (100 mm) from corners and at intervals not exceeding 12 inches (300 mm) transversely; at 3 inches (75 mm) from transverse joints and at intervals not exceeding 18 inches (450 mm) longitudinally.
 7. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from casing wall. Fabricate edge facings at the following locations:
 - a. Fan discharges.
 - b. Intervals of lined casing preceding unlined duct.
 - c. Upstream edges of transverse joints in casings where air velocities are higher than 2500 fpm (12.7 m/s) or where indicated.
 8. Secure insulation between perforated sheet metal inner wall of same thickness as specified for outer wall. Use mechanical fasteners that maintain inner wall at uniform distance from outer wall without compressing insulation.

2.5 SEALANT MATERIALS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
- B. Water-Based Joint and Seam Sealant:
1. Application Method: Brush on.
 2. Solids Content: Minimum 65 percent.
 3. Shore A Hardness: Minimum 20.
 4. Water resistant.
 5. Mold and mildew resistant.
 6. VOC: Maximum 75 g/L (less water).
 7. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

8. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
9. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive or negative.
10. Service: Indoor or outdoor.
11. Substrate: Compatible with galvanized sheet steel or stainless steel.

C. Solvent-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Base: Synthetic rubber resin.
3. Solvent: Toluene and heptane.
4. Solids Content: Minimum 60 percent.
5. Shore A Hardness: Minimum 60.
6. Water resistant.
7. Mold and mildew resistant.
8. VOC: Maximum 395 g/L.
9. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
10. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
11. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive or negative.
12. Service: Indoor or outdoor.
13. Substrate: Compatible with galvanized sheet steel or stainless steel.

D. Flanged Joint Sealant: Comply with ASTM C 920.

1. General: Single component, acid curing, silicone, elastomeric.
2. Type: S.
3. Grade: NS.
4. Class: 25.
5. Use: O.
6. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

E. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine [**concrete bases**] [**roof curbs**] [**and**] [**steel supports**] for compliance with requirements for conditions affecting installation and performance of HVAC casings.
- B. Examine casing insulation materials and liners before installation. Reject casings that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install casings according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- B. Equipment Mounting:
 - 1. Install HVAC casings on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- C. Apply sealant to joints, connections, and mountings.
- D. Field-cut openings for pipe and conduit penetrations; insulate and seal according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- E. Support casings on floor or foundation system. Secure and seal to base.
- F. Support components rigidly with ties, braces, brackets, [**seismic restraints**], and anchors of types that will maintain housing shape and prevent buckling.
- G. Align casings accurately at connections, with **1/8-inch (3-mm)** misalignment tolerance and with smooth interior surfaces.

3.3 FIELD QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Perform field tests and inspections according to SMACNA's "HVAC Air Duct Leakage Test Manual."
 - 2. Test the following systems:

- a. Systems required by ASHRAE/IESNA 90.1.
 - b. Supply Air: **[100] [50] <Insert value>** percent of total installed duct area with a pressure class of **[3-inch wg (750 Pa)] [4-inch wg (1000 Pa)] <Insert value>** or higher.
 - c. **<Insert requirements of other systems>**.
3. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If pressure classes are not indicated, test entire system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure. Give seven days' advance notice for testing.
 4. Determine leakage from entire system or section of system by relating leakage to surface area of test section. Comply with requirements for leakage classification of ducts connected to casings.
 5. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
- B. HVAC casings will be considered defective if they do not pass tests and inspections.
 - C. Prepare test and inspection reports.

3.4 CLEANING

- A. Comply with requirements for cleaning in Section 233113 "Metal Ducts."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233119

SECTION 233300 - AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Backdraft and pressure relief dampers.
2. Barometric relief dampers.
3. Manual volume dampers.
4. Control dampers.
5. Fire dampers.
6. Ceiling radiation dampers.
7. Smoke dampers.
8. Combination fire and smoke dampers.
9. Corridor dampers.
10. Flange connectors.
11. Duct silencers.
12. Turning vanes.
13. Remote damper operators.
14. Duct-mounted access doors.
15. Flexible connectors.
16. Flexible ducts.
17. Duct security bars.
18. Duct accessory hardware.

- B. Related Requirements:

1. Section 233723 "HVAC Gravity Ventilators" for roof-mounted ventilator caps.
2. Section 283111 "Digital, Addressable Fire-Alarm System" for duct-mounted fire and smoke detectors.
3. Section 283112 "Zoned (DC-Loop) Fire-Alarm System" for duct-mounted fire and smoke detectors.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For duct silencers, include dimension data, materials, pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.
 - a. Design Data: Provide engineering calculations, referenced to specifications and **[AMCA 301] [AMCA 302] [AMCA 303] [ARI 270] [ASA 49 (ANSI S12.1)]** standards indicating that maximum room sound levels are not exceeded.
2. Provide for shop fabricated assemblies including **[volume control dampers] [duct access doors] [and] [hardware used]**. Include electrical characteristics and connection requirements.
3. Fire, Smoke, and Combination Fire Smoke Dampers: Submit manufacturer's product data.
 - a. Include UL ratings for leakage class (I, II, or III), velocity (2000, 3000, or 4000 fpm), differential pressure (4, 6, or 8 inches WG) and elevated temperature (250 or 350 degrees F).
 - b. Indicate materials, construction, and dimensions.
 - c. Verify conformance to NFPA, UL, and applicable building code.
 - d. Include pressure drop data for air flow in either direction for all damper sizes in accordance with AMCA 500-D test figures 5.2 (Ducted Inlet, Free Outlet), 5.3 (Ducted Inlet, Ducted Outlet) and 5.5 (Free Inlet, Free Outlet).
 - e. Include a copy of UL Installation Instructions.
 - f. Damper access and identification label product data a sample.
4. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
2. Product Data for Prerequisite EA 2: Documentation indicating that duct insulation R-values comply with tables in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air Conditioning."

C. Shop Drawings: For duct accessories. Include plans, elevations, sections, details, and attachments to other work.

1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
 - a. Special fittings.
 - b. Manual volume damper installations.

- c. Control-damper installations.
- d. Fire-damper, smoke-damper, combination fire- and smoke-damper, ceiling, and corridor damper installations, including sleeves; and duct-mounted access doors and remote damper operators.
- e. Duct security bars.
- f. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.
- B. Test Reports: Indicate **[dynamic insertion loss and noise generation values of silencers.] [acoustic housings meet or exceed specified sound transmission loss values.]**
- C. Source quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 1. Record actual locations of **[access doors] [test holes] <Insert item>**.
 2. Record actual locations of **[cross-talk silencers.] [acoustic housings.] [ductwork lagging.]**

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Fusible Links: Furnish quantity equal to **[ten (10)] <Insert number>** percent of amount installed.

1.7 QUALITY ASSURANCE

- A. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

- B. Perform sound attenuator Work in accordance with [**AMCA 300**] [**ANSI S1.13**] [**ARI 575**] [**ASA 16 (ANSI S1.36)**] standards and recommendations of [**ASHRAE 68.**] [**NEBB.**].
- C. Design application of [**duct silencers**] [**acoustic housings**] under direct supervision of a Professional Engineer experienced in design of this work and licensed at the place where the Project is located.
- D. Conform to City and County of Denver code for sound levels at property line.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Store all materials in location protected from water, construction activities, and any other potential damage hazard.
- C. Protect dampers from damage to operating linkages and blades.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

- A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.2 MATERIALS

- A. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
 - 1. Galvanized Coating Designation: [**G60 (Z180)**] [**G90 (Z275)**].
 - 2. Exposed-Surface Finish: Mill phosphatized.

- B. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304, and having a **[No. 2] <Insert finish designation>** finish for concealed ducts and **<Insert finish designation>** finish for exposed ducts.
- C. Aluminum Sheets: Comply with **ASTM B 209** (ASTM B 209M), Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.
- D. Extruded Aluminum: Comply with **ASTM B 221** (ASTM B 221M), Alloy 6063, Temper T6.
- E. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.
- F. Tie Rods: Galvanized steel, **1/4-inch** (6-mm) minimum diameter for lengths **36 inches** (900 mm) or less; **3/8-inch** (10-mm) minimum diameter for lengths longer than **36 inches** (900 mm).

2.3 BACKDRAFT AND PRESSURE RELIEF DAMPERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Air Balance Inc.; a division of Mestek, Inc.](#)
 - 2. [American Warming and Ventilating; a division of Mestek, Inc.](#)
 - 3. [Cesco Products; a division of Mestek, Inc.](#)
 - 4. [Greenheck Fan Corporation.](#)
 - 5. [Lloyd Industries, Inc.](#)
 - 6. [Nailor Industries Inc.](#)
 - 7. [NCA Manufacturing, Inc.](#)
 - 8. [Pottorff.](#)
 - 9. [Ruskin Company.](#)
 - 10. [Vent Products Company, Inc.](#)
 - 11. **<Insert manufacturer's name>**.
 - 12. or approved equal.
- B. Description: Gravity balanced.
- C. Maximum Air Velocity: [**1000 fpm** (5.1 m/s)] [**1250 fpm** (6.4 m/s)] [**2000 fpm** (10 m/s)] [**3000 fpm** (15 m/s)] **<Insert value>**.
- D. Maximum System Pressure: [**1-inch wg** (0.25 kPa)] [**2-inch wg** (0.5 kPa)] [**3-inch wg** (0.8 kPa)] [**6-inch wg** (1.5 kPa)] **<Insert value>**.
- E. Frame: Hat-shaped, [**0.05-inch-** (1.3-mm-) **thick, galvanized sheet steel**] [**0.094-inch-** (2.4-mm-) **thick, galvanized sheet steel**] [**0.063-inch-** (1.6-mm-) **thick extruded aluminum**] [**0.03-inch-** (0.8-mm-) **thick stainless steel**] [**0.05-inch-** (1.3-mm-) **thick stainless steel**], with welded corners or mechanically attached[**and mounting flange**].

- F. Blades: Multiple single-piece blades, [**center pivoted,**] [**off-center pivoted,**] [**end pivoted,**] maximum **6-inch** (150-mm) width, [**0.025-inch-** (0.6-mm-) **thick, roll-formed aluminum**] [**0.050-inch-** (1.2-mm-) **thick aluminum sheet**] [**noncombustible, tear-resistant, neoprene-coated fiberglass**] with sealed edges.
- G. Blade Action: Parallel.
- H. Blade Seals: [**Felt**] [**Vinyl foam**] [**Extruded vinyl, mechanically locked**] [**Neoprene, mechanically locked**].
- I. Blade Axles:
1. Material: [**Nonferrous metal**] [**Galvanized steel**] [**Plated steel**] [**Stainless steel**] [**Nonmetallic**] [**Aluminum**].
 2. Diameter: [**0.20 inch** (5 mm)] <Insert value>.
- J. Tie Bars and Brackets: [**Aluminum**] [**Galvanized steel**].
- K. Return Spring: Adjustable tension.
- L. Bearings: [**Steel ball**] [**or**] [**synthetic pivot bushings**].
- M. Accessories:
1. Adjustment device to permit setting for varying differential static pressure.
 2. Counterweights and spring-assist kits for vertical airflow installations.
 3. Electric actuators.
 4. Chain pulls.
 5. Screen Mounting: Front mounted in sleeve.
 - a. Sleeve Thickness: **20 gage** (1.0 mm) minimum.
 - b. Sleeve Length: **6 inches** (152 mm) minimum.
 6. Screen Mounting: Rear mounted.
 7. Screen Material: [**Galvanized steel**] [**Aluminum**].
 8. Screen Type: [**Bird**] [**Insect**].
 9. 90-degree stops.

2.4 BAROMETRIC RELIEF DAMPERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Air Balance Inc.; a division of Mestek, Inc.](#)
 2. [American Warming and Ventilating; a division of Mestek, Inc.](#)
 3. [Cesco Products; a division of Mestek, Inc.](#)
 4. [Greenheck Fan Corporation.](#)
 5. [Lloyd Industries, Inc.](#)
 6. [Nailor Industries Inc.](#)
 7. [NCA Manufacturing, Inc.](#)

8. [Pottorff](#).
 9. [Ruskin Company](#).
 10. [Vent Products Company, Inc.](#)
 11. **<Insert manufacturer's name>**.
 12. or approved equal.
- B. Suitable for horizontal or vertical mounting.
- C. Maximum Air Velocity: [1000 fpm (5.1 m/s)] [1250 fpm (6.4 m/s)] [2000 fpm (10 m/s)] [2500 fpm (13 m/s)] **<Insert value>**.
- D. Maximum System Pressure: [2-inch wg (0.5 kPa)] [3-inch wg (0.8 kPa)] [6-inch wg (1.5 kPa)] [10-inch wg (2.5 kPa)] **<Insert value>**.
- E. Frame: Hat-shaped, [0.05-inch- (1.3-mm-) **thick, galvanized sheet steel**] [0.094-inch- (2.4-mm-) **thick, galvanized sheet steel**] [0.063-inch- (1.6-mm-) **thick extruded aluminum**] [0.03-inch- (0.8-mm-) **thick stainless steel**] [0.05-inch- (1.3-mm-) **thick stainless steel**], with welded corners or mechanically attached[**and mounting flange**].
- F. Blades:
1. Multiple, [0.025-inch- (0.6-mm-) **thick, roll-formed aluminum**] [0.050-inch- (1.2-mm-) **thick aluminum sheet**].
 2. Maximum Width: **6 inches** (150 mm).
 3. Action: Parallel.
 4. Balance: Gravity.
 5. [**Eccentrically pivoted**] [**Off-center pivoted**] [**End pivoted**].
- G. Blade Seals: [Vinyl] [Neoprene].
- H. Blade Axles: [**Galvanized steel**] [**Nonferrous metal**] [**Plated steel**] [**Stainless steel**] [**Nonmetallic**].
- I. Tie Bars and Brackets:
1. Material: [**Aluminum**] [**Galvanized steel**].
 2. Rattle free with 90-degree stop.
- J. Return Spring: Adjustable tension.
- K. Bearings: [**Synthetic**] [**Stainless steel**] [**Bronze**].
- L. Accessories:
1. Flange on intake.
 2. Adjustment device to permit setting for varying differential static pressures.
 3. **<Insert accessories>**.

2.5 MANUAL VOLUME DAMPERS

A. Standard, Steel, Manual Volume Dampers:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Balance Inc.; a division of Mestek, Inc.](#)
 - b. [American Warming and Ventilating; a division of Mestek, Inc.](#)
 - c. [Flexmaster U.S.A., Inc.](#)
 - d. [McGill AirFlow LLC.](#)
 - e. [Nailor Industries Inc.](#)
 - f. [Pottorff.](#)
 - g. [Ruskin Company.](#)
 - h. [Trox USA Inc.](#)
 - i. [Vent Products Company, Inc.](#)
 - j. **<Insert manufacturer's name>.**
 - k. or approved equal.
2. Standard leakage rating[, **with linkage outside airstream**].
3. Suitable for horizontal or vertical applications.
4. Frames:
 - a. Frame: Hat-shaped, [**0.094-inch-** (2.4-mm-) **thick, galvanized sheet steel**] [**0.05-inch-** (1.3-mm-) **thick stainless steel**].
 - b. Mitered and welded corners.
 - c. Flanges for attaching to walls and flangeless frames for installing in ducts.
5. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. [**Galvanized**] [**Stainless**]-steel, **0.064 inch** (1.62 mm) thick.
6. Blade Axles: [**Galvanized steel**] [**Stainless steel**] [**Nonferrous metal**].
7. Bearings:
 - a. [**Oil-impregnated bronze**] [**Molded synthetic**] [**Oil-impregnated stainless-steel sleeve**] [**Stainless-steel sleeve**].
 - b. Dampers in ducts with pressure classes of **3-inch wg** (750 Pa) or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
8. Tie Bars and Brackets: Galvanized steel.

B. Standard, Aluminum, Manual Volume Dampers:

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Air Balance Inc.; a division of Mestek, Inc.](#)
 - b. [American Warming and Ventilating; a division of Mestek, Inc.](#)
 - c. [McGill AirFlow LLC.](#)
 - d. [Nailor Industries Inc.](#)
 - e. [Pottorff.](#)
 - f. [Ruskin Company.](#)
 - g. [Trox USA Inc.](#)
 - h. [Vent Products Company, Inc.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Standard leakage rating[, **with linkage outside airstream**].
 3. Suitable for horizontal or vertical applications.
 4. Frames: Hat-shaped, **0.10-inch-** (2.5-mm-) thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.
 5. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. Roll-Formed Aluminum Blades: **0.10-inch-** (2.5-mm-) thick aluminum sheet.
 - e. Extruded-Aluminum Blades: **0.050-inch-** (1.2-mm-) thick extruded aluminum.
 6. Blade Axles: [**Galvanized steel**] [**Stainless steel**] [**Nonferrous metal**].
 7. Bearings:
 - a. [**Oil-impregnated bronze**] [**Molded synthetic**] [**Stainless-steel sleeve**].
 - b. Dampers in ducts with pressure classes of **3-inch wg** (750 Pa) or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
 8. Tie Bars and Brackets: Aluminum.
- C. Low-Leakage, Steel, Manual Volume Dampers:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Air Balance Inc.; a division of Mestek, Inc.](#)
 - b. [American Warming and Ventilating; a division of Mestek, Inc.](#)
 - c. [McGill AirFlow LLC.](#)
 - d. [Nailor Industries Inc.](#)
 - e. [Pottorff.](#)
 - f. [Ruskin Company.](#)
 - g. [Trox USA Inc.](#)
 - h. [Vent Products Company, Inc.](#)
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.

2. Comply with AMCA 500-D testing for damper rating.
3. Low-leakage rating[, **with linkage outside airstream,**] and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
4. Suitable for horizontal or vertical applications.
5. Frames:
 - a. **[Hat] [U] [Angle]** shaped.
 - b. **[0.094-inch- (2.4-mm-) thick, galvanized sheet steel] [0.05-inch- (1.3-mm-) thick stainless steel]**.
 - c. Mitered and welded corners.
 - d. Flanges for attaching to walls and flangeless frames for installing in ducts.
6. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. **[Galvanized] [Stainless]**, roll-formed steel, **0.064 inch (1.62 mm)** thick.
7. Blade Axles: **[Galvanized steel] [Stainless steel] [Nonferrous metal]**.
8. Bearings:
 - a. **[Oil-impregnated bronze] [Molded synthetic] [Oil-impregnated stainless-steel sleeve] [Stainless-steel sleeve]**.
 - b. Dampers in ducts with pressure classes of **3-inch wg (750 Pa)** or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
9. Blade Seals: **[Felt] [Vinyl] [Neoprene]**.
10. Jamb Seals: Cambered **[stainless steel] [aluminum]**.
11. Tie Bars and Brackets: **[Galvanized steel] [Aluminum]**.
12. Accessories:
 - a. Include locking device to hold single-blade dampers in a fixed position without vibration.

D. Low-Leakage, Aluminum, Manual Volume Dampers:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. [Air Balance Inc.; a division of Mestek, Inc.](#)
 - b. [American Warming and Ventilating; a division of Mestek, Inc.](#)
 - c. [McGill AirFlow LLC.](#)
 - d. [Nailor Industries Inc.](#)
 - e. [Pottorff.](#)
 - f. [Ruskin Company.](#)
 - g. [Trox USA Inc.](#)
 - h. [Vent Products Company, Inc.](#)
 - i. **<Insert manufacturer's name>.**

- j. or approved equal.
 2. Comply with AMCA 500-D testing for damper rating.
 3. Low-leakage rating[, **with linkage outside airstream,**] and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
 4. Suitable for horizontal or vertical applications.
 5. Frames: [**Hat**] [**U**] [**Angle**]-shaped, **0.10-inch-** (2.5-mm-) thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.
 6. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Roll-Formed Aluminum Blades: **0.10-inch-** (2.5-mm-) thick aluminum sheet.
 - d. Extruded-Aluminum Blades: **0.050-inch-** (1.2-mm-) thick extruded aluminum.
 7. Blade Axles: [**Galvanized steel**] [**Stainless steel**] [**Nonferrous metal**].
 8. Bearings:
 - a. [**Oil-impregnated bronze**] [**Molded synthetic**] [**Oil-impregnated stainless-steel sleeve**] [**Stainless-steel sleeve**].
 - b. Dampers in ducts with pressure classes of **3-inch wg** (750 Pa) or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
 9. Blade Seals: [**Felt**] [**Vinyl**] [**Neoprene**].
 10. Jamb Seals: Cambered [**stainless steel**] [**aluminum**].
 11. Tie Bars and Brackets: [**Galvanized steel**] [**Aluminum**].
 12. Accessories:
 - a. Include locking device to hold single-blade dampers in a fixed position without vibration.
- E. Jackshaft:
1. Size: [**0.5-inch** (13-mm)] [**1-inch** (25-mm)] diameter.
 2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
 3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.
- F. Damper Hardware:
1. Zinc-plated, die-cast core with dial and handle made of **3/32-inch-** (2.4-mm-) thick zinc-plated steel, and a **3/4-inch** (19-mm) hexagon locking nut.
 2. Include center hole to suit damper operating-rod size.
 3. Include elevated platform for insulated duct mounting.

2.6 CONTROL DAMPERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [American Warming and Ventilating; a division of Mestek, Inc.](#)
 2. [Arrow United Industries; a division of Mestek, Inc.](#)
 3. [Cesco Products; a division of Mestek, Inc.](#)
 4. [Greenheck Fan Corporation.](#)
 5. [Lloyd Industries, Inc.](#)
 6. [McGill AirFlow LLC.](#)
 7. [Metal Form Manufacturing, Inc.](#)
 8. [Nailor Industries Inc.](#)
 9. [NCA Manufacturing, Inc.](#)
 10. [Pottorff.](#)
 11. [Ruskin Company.](#)
 12. [Vent Products Company, Inc.](#)
 13. [Young Regulator Company.](#)
 14. **<Insert manufacturer's name>.**
 15. or approved equal.
- B. Low-leakage rating[, **with linkage outside airstream,**] and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
- C. Frames:
1. **[Hat] [U] [Angle]** shaped.
 2. **[0.094-inch- (2.4-mm-) thick, galvanized sheet steel] [0.05-inch- (1.3-mm-) thick stainless steel].**
 3. **[Mitered and welded] [Interlocking, gusseted]** corners.
- D. Blades:
1. Multiple blade with maximum blade width of **[6 inches (152 mm)] [8 inches (200 mm)].**
 2. **[Parallel] [Parallel- and opposed] [Opposed]**-blade design.
 3. **[Galvanized-steel] [Stainless steel] [Aluminum].**
 4. **[0.064 inch (1.62 mm) thick single skin] [or] [0.0747-inch- (1.9-mm-) thick dual skin].**
 5. Blade Edging: **[Closed-cell neoprene] [PVC].**
 6. Blade Edging: Inflatable seal blade edging, or replaceable rubber seals.
- E. Blade Axles: **1/2-inch- (13-mm-) diameter; [galvanized steel] [stainless steel] [nonferrous metal];** blade-linkage hardware of zinc-plated steel and brass; ends sealed against blade bearings.
1. Operating Temperature Range: From **minus 40 to plus 200 deg F** (minus 40 to plus 93 deg C).
- F. Bearings:

1. **[Oil-impregnated bronze] [Molded synthetic] [Oil-impregnated stainless-steel sleeve] [Stainless-steel sleeve].**
2. Dampers in ducts with pressure classes of **3-inch wg (750 Pa)** or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
3. Thrust bearings at each end of every blade.

2.7 FIRE DAMPERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Air Balance Inc.; a division of Mestek, Inc.](#)
 2. [Arrow United Industries; a division of Mestek, Inc.](#)
 3. [Cesco Products; a division of Mestek, Inc.](#)
 4. [Greenheck Fan Corporation.](#)
 5. [Nailor Industries Inc.](#)
 6. [NCA Manufacturing, Inc.](#)
 7. [Pottorff.](#)
 8. [Prefco; Perfect Air Control, Inc.](#)
 9. [Ruskin Company.](#)
 10. [Vent Products Company, Inc.](#)
 11. [Ward Industries, Inc.; a division of Hart & Cooley, Inc.](#)
 12. **<Insert manufacturer's name>.**
 13. or approved equal.
- B. Type: **[Static] [Dynamic] [Static and dynamic]**; rated and labeled according to UL 555 by an NRTL, and requirements of NFPA 90A, 92A, 92B, and 101, as applicable.
- C. Closing rating in ducts up to **[4-inch wg (1-kPa)] <Insert value>** static pressure class and minimum **[2000-fpm (10-m/s)] <Insert value>** velocity.
- D. Fire Rating: **[1-1/2] [and] [3]** hours.
- E. Frame: **[Curtain type with blades inside airstream] [Curtain type with blades outside airstream] [Multiple-blade type] [Curtain type with blades outside airstream except when located behind grille where blades may be inside airstream]**; fabricated with roll-formed, **0.034-inch- (0.85-mm-)** thick galvanized steel; with mitered and interlocking corners.
- F. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.
1. Minimum Thickness: **[0.05 (1.3 mm)] [0.138 inch (3.5 mm)] [or] [0.39 inch (9.9 mm)]** thick, as indicated, and of length to suit application.
 2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.
- G. Mounting Orientation: Vertical or horizontal as indicated.

- H. Ceiling Dampers: Galvanized steel, 22 gage frame and 16 gage flap, two layers 0.125 inch ceramic fiber on top side [, **and one layer on bottom side for round flaps**], with locking clip. Configure with blades [**in**] [**out**] of air stream.
- I. Horizontal Dampers: Galvanized steel, 22 gage frame, stainless steel closure spring, and lightweight, heat retardant non asbestos fabric blanket.
- J. Curtain Type Dampers: Galvanized steel with interlocking blades. Provide stainless steel closure springs and latches for [horizontal installations] [closure under air flow conditions]. Configure with blades out of air stream except for [**1.0 inch**] <Insert **number**> pressure class ducts up to 12 inches in height.
- K. Multiple Blade Dampers: 16 gage galvanized steel frame and blades, oil impregnated bronze or stainless steel sleeve bearings and plated steel axles, 1/8 x 1/2 inch plated steel concealed linkage, stainless steel closure spring, blade stops, and lock.
- L. Blades: Roll-formed, interlocking, [**0.024-inch- (0.61-mm)**] [**0.034-inch- (0.85-mm-)**] thick, galvanized sheet steel. In place of interlocking blades, use full-length, **0.034-inch- (0.85-mm-)** thick, galvanized-steel blade connectors.
- M. Blade Stops: Each blade stop (at top and bottom of damper frame) shall occupy no more than 1/2" of the damper opening area to allow for maximum free area and to minimize pressure loss across the damper.
- N. Horizontal Dampers: Include blade lock and stainless-steel closure spring.
- O. Heat-Responsive Device: Replaceable, [**165 deg F (74 deg C)**] [**212 deg F (100 deg C)**] <Insert **temperature**> rated, fusible links.
- P. Heat-Responsive Device: [**Electric**] [**Pneumatic**], [**resettable**] [**replaceable**] link and switch package, factory installed, [**165 deg F (74 deg C)**] [**and**] [**212 deg F (100 deg C)**] <Insert **temperature**> rated.
- Q. Source Quality Control
 - 1. Factory Tests: Factory cycle damper and actuator assemblies to assure proper operation.

2.8 CEILING RADIATION DAMPERS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. [Air Balance Inc.; a division of Mestek, Inc.](#)
 - 2. [Cesco Products; a division of Mestek, Inc.](#)
 - 3. [Nailor Industries Inc.](#)
 - 4. [Pottorff.](#)
 - 5. [Prefco; Perfect Air Control, Inc.](#)
 - 6. [Ruskin Company.](#)
 - 7. [Ward Industries, Inc.; a division of Hart & Cooley, Inc.](#)

8. **<Insert manufacturer's name>**.
9. or approved equal.

B. General Requirements:

1. Labeled according to UL 555C by an NRTL.
2. Comply with construction details for tested floor- and roof-ceiling assemblies as indicated in UL's "Fire Resistance Directory."

C. Frame: Galvanized sheet steel, round or rectangular, style to suit ceiling construction.

D. Blades: Galvanized sheet steel with refractory insulation.

E. Heat-Responsive Device: Replaceable, [165 deg F (74 deg C)] [212 deg F (100 deg C)] **<Insert temperature>** rated, fusible links.

F. Fire Rating: [1] [2] [3] **<Insert number>** hours.

2.9 SMOKE DAMPERS

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Air Balance Inc.; a division of Mestek, Inc.](#)
2. [Cesco Products; a division of Mestek, Inc.](#)
3. [Greenheck Fan Corporation.](#)
4. [Nailor Industries Inc.](#)
5. [Pottorff.](#)
6. [Ruskin Company.](#)
7. **<Insert manufacturer's name>**.
8. or approved equal.

B. General Requirements: Label according to UL 555S by an NRTL. All automatically actuated smoke dampers shall be furnished and installed under this Section per the manufacturer's UL-conforming installation instructions.

C. Standards and Testing: Smoke dampers shall be tested, rated, and labeled in accordance with Underwriters' Laboratories Standard UL 555S, listing R13447 for:

1. Leakage Class I (4 cfm/SF at 1 inch W.G.) performance after 30 minute exposure at [250 degrees F] [+350 degrees F]; required for applications in which supply fans rated for more than 3 inches W.G. of external static pressure serve more than one smoke control zone.
2. Leakage Class II (10 cfm/SF at 1 inch W.G.) performance after 30 minute exposure at [250 degrees F] [+350 degrees F]; suitable for applications in which supply or return fans rated for 3 inches W.G. or less of external static pressure serve more than one smoke control zone.

D. Dampers shall bear the AMCA Certified Ratings Seal for Air Performance in accordance with AMCA 511.

- E. Dampers shall meet requirements for smoke dampers in accordance with:
1. NFPA 90A, 92A, 92B, and 101, as applicable.
 2. Applicable Building Codes.
- F. Damper frames shall be constructed of **[minimum #16 gauge galvanized steel channel] [or] [6063 T5 aluminum channel, 0.125 inch wall thickness,]** and shall have flanges for duct mounting. All blade-to-blade linkage on each section shall be concealed within the damper frame. In no case shall the section linkage be exposed to the air stream. The maximum size of single section dampers shall be 60 inches or less in width and 72 inches or less in height. Larger dampers shall be made up of multiple damper sections, with each section not larger than 48 inches or less in width and 72 inches or less in height. The blades of multiple section dampers shall be interconnected with appropriate jackshafts.
- G. Smoke Detector: Integral, factory wired for single-point connection.
- H. Frame: Hat-shaped, **0.094-inch- (2.4-mm-)** thick, galvanized sheet steel, with **[welded] [interlocking, gusseted] [or] [mechanically attached] corners[and mounting flange]**.
- I. Blades: Roll-formed, horizontal, **[interlocking] [overlapping]**, **[0.034-inch- (0.85-mm-)] [0.063-inch- (1.6-mm)]** thick, galvanized sheet steel **[or] [6063 T5 extruded aluminum]**.
- J. Damper blades shall not exceed 6 inches in width. Larger damper sections shall be of multiple blade type construction. Blade pins and linkage shall be zinc-plated steel. Bearings shall be stainless steel or oil-impregnated sintered bronze. Blade seals shall be silicone rubber, compression type flexible steel, or a combination of both.
- K. Blade Stops: Each blade stop (at top and bottom of damper frame) shall occupy no more than 1/2" of the damper opening area to allow for maximum free area and to minimize pressure loss across the damper.
- L. Operators shall be mounted by the damper manufacturer at the time of damper fabrication and shall be provided with the damper as a single unit. Operators shall be qualified and labeled under UL 555S, latest version. Operators shall be **[pneumatic, 20 psi, rated to 250 degrees F] [or] [electric, 120 VAC, rated to [250 degrees F] [350 degrees F]]**. The operators shall be of sufficient demonstrated power to open the dampers from a fully-closed position against a **[4] [6] [8]** inch W.G. static pressure differential and to close the dampers from a fully-open flow rate of **[2000] [3000] [4000]** fpm. Operators shall be mounted outside of the air stream and shall be for **[normally-open] [or] [normally-closed]** damper operation **[as shown on the drawings]**.
- M.
- N. Rated pressure and velocity to exceed design airflow conditions.

- O. Mounting Sleeve: Factory-installed, [0.039-inch- (1.0-mm-)] [0.05-inch- (1.3-mm-)] thick, galvanized sheet steel; length to suit wall or floor application[**with factory-furnished silicone caulking**].
- P. Damper Motors: [**Modulating**] [**or**] [**two-position**] action.
- Q. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
 4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of **150 in. x lbf** (17 N x m) and breakaway torque rating of **150 in. x lbf** (17 N x m).
 5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at **minus 40 deg F** (minus 40 deg C).
 6. Nonspring-Return Motors: For dampers larger than **25 sq. ft.** (2.3 sq. m), size motor for running torque rating of **150 in. x lbf** (17 N x m) and breakaway torque rating of **300 in. x lbf** (34 N x m).
 7. Electrical Connection: [**115 V, single phase, 60 Hz**] <Insert values>.
- R. Accessories:
1. Auxiliary switches for [**signaling**] [**fan control**] [**or**] [**position indication**].
 2. [**Momentary test switch**] [**Test and reset switches**], [**damper**] [**remote**] mounted.
- S. Source Quality Control
1. Factory Tests: Factory cycle damper and actuator assemblies to assure proper operation. Assemblies shall have passed a 20,000-cycle test.
- 2.10 COMBINATION FIRE AND SMOKE DAMPERS
- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Air Balance Inc.; a division of Mestek, Inc.](#)
 2. [Cesco Products; a division of Mestek, Inc.](#)
 3. [Greenheck Fan Corporation.](#)
 4. [Nailor Industries Inc.](#)

5. [Pottorff](#).
 6. [Ruskin Company](#).
 7. **<Insert manufacturer's name>**.
 8. or approved equal.
- B. Type: Dynamic; rated and labeled according to UL 555 and UL 555S by an NRTL.
1. Leakage Class II (10 cfm/SF at 1 inch W.G.) at [250 degrees F] [350 degrees F], required for applications in which supply or return fans serve more than one smoke control zone.
- C. Dampers shall bear the AMCA Certified Ratings Seal for Air Performance in accordance with AMCA 511.
- D. Dampers shall meet requirements for smoke dampers in accordance with:
1. NFPA 90A, 92A, 92B, and 101, as applicable.
 2. Applicable Building Codes.
- E. Dampers shall be of multi-blade type construction. Damper frames shall be constructed of minimum #16 gauge galvanized steel channel and shall have flanges for duct mounting. The maximum size of single section dampers shall not exceed 60 inches in width or 72 inches in height. Larger dampers shall be made up of multiple damper sections, with each section no larger than 48 inches in width and 72 inches in height. The blades of multiple section dampers shall be interconnected with appropriate jackshafts.
- F. Closing rating in ducts up to [4-inch wg (1-kPa)] **<Insert value>** static pressure class and minimum [2000-fpm (10-m/s)] **<Insert value>** velocity.
- G. Fire Rating: [1-1/2] [and] [3] hours.
- H. Frame: Hat-shaped, 0.094-inch- (2.4-mm-) thick, galvanized sheet steel, with [welded] [interlocking, gusseted] [or] [mechanically attached] corners[and mounting flange].
- I. Heat-Responsive Device: [Resettable] [Replaceable], [165 deg F (74 deg C)] [212 deg F (100 deg C)] rated, [fusible links] [fire-closure device], shall cause the damper to fully close by spring action and lock in a closed position. Spring shall have sufficient demonstrated power to fully close the damper against a fully-open flow rate of [2000] [3000] [4000] fpm. Fusible link and spring actuator shall be mounted by the damper manufacturer at the time of damper fabrication and shall be provided with the damper as a single unit.
- J. Heat-Responsive Device: [Electric] [Pneumatic] resettable [link] [device] and switch package, factory installed, rated, shall cause the damper to fully close by spring action and lock in a closed position. Spring shall have sufficient demonstrated power to fully close the damper against a fully-open flow rate of [2000] [3000] [4000] fpm. Fusible link and spring actuator shall be mounted by the damper manufacturer at the time of damper fabrication and shall be provided with the damper as a single unit.

- K. Smoke Detector: Integral, factory wired for single-point connection.
- L. Blades: Roll-formed, horizontal, [**interlocking**] [**overlapping**], [**0.063-inch- (1.6-mm-)**] [**0.034-inch- (0.85-mm-)**] thick, galvanized sheet steel.
- M. Damper blades shall not exceed 6 inches in width and shall be constructed of galvanized steel with minimum [**#14**] [**#16**] gauge equivalent thickness. Blade pins and linkage shall be zinc-plated steel. Bearings shall be stainless steel or oil-impregnated sintered bronze. Blade and jamb seals for smoke control shall be [**silicone rubber,**] [**compression type flexible steel,**] [**metal-to-metal incorporated into the blade shapes,**] [**or**] [**a combination of**] [**both**], **UL 555S rated to [250 degrees F] [350 degrees F]**. Flame seals shall be galvanized steel, rated to [**1900 degrees F**] <Insert number>.
- N. Blade Stops: Each blade stop (at top and bottom of damper frame) shall occupy no more than 1/2" of the damper opening area to allow for maximum free area and to minimize pressure loss across the damper.
- O. Operators for smoke control shall be mounted by the damper manufacturer at the time of damper fabrication and shall be provided with the damper as a single unit. Smoke control operators shall be qualified to and labeled under UL 555S, latest version. Operators shall be [**pneumatic, 20 psi, rated to 250 degrees F**] [**or**] [**electric, 120 VAC, rated to [250 degrees F] [350 degrees F]**]. The operators shall be of sufficient demonstrated power to open the dampers from a fully-closed position against a static pressure differential of 4 inches W.G. and to close the dampers against a fully-open flow rate of 3500 fpm. Operators shall be mounted [**outside**] [**inside**] of the air stream and shall be for [**normally-open**] [**or**] [**normally-closed**] damper operation [**as shown on the drawings**].
- P.
- Q. Rated pressure and velocity to exceed design airflow conditions.
- R. Mounting Sleeve: Factory-installed, [**0.039-inch- (1.0-mm-)**] [**0.05-inch- (1.3-mm-)**] thick, galvanized sheet steel; length to suit wall or floor application[**with factory-furnished silicone caulking**].
- S. Master control panel for use in dynamic smoke-management systems.
- T. Damper Motors: [**Modulating**] [**or**] [**two-position**] action.
- U. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of **150 in. x lbf** (17 N x m) and breakaway torque rating of **150 in. x lbf** (17 N x m).
5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at **minus 40 deg F** (minus 40 deg C).
6. Nonspring-Return Motors: For dampers larger than **25 sq. ft.** (2.3 sq. m), size motor for running torque rating of **150 in. x lbf** (17 N x m) and breakaway torque rating of **300 in. x lbf** (34 N x m).
7. Electrical Connection: 115 V, single phase, 60 Hz.

V. Accessories:

1. Auxiliary switches for [**signaling**] [**fan control**] [**or**] [**position indication**].
2. [**Momentary test switch**] [**Test and reset switches**], [**damper**] [**remote**] mounted.

2.11 CORRIDOR DAMPERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Air Balance Inc.; a division of Mestek, Inc.](#)
 2. [Cesco Products; a division of Mestek, Inc.](#)
 3. [Nailor Industries Inc.](#)
 4. [Pottorff.](#)
 5. [Ruskin Company.](#)
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. General Requirements: Label combination fire and smoke dampers according to UL 555 for 1-hour or 1-1/2-hour rating by an NRTL.
- C. Heat-Responsive Device: Replaceable, [**165 deg F** (74 deg C)] [**212 deg F** (100 deg C)] rated, fusible links.
- D. Heat-Responsive Device: [**Electric**] [**Pneumatic**] resettable [**link**] [**device**] and switch package, factory installed, rated.
- E. Frame: Hat-shaped, **0.094-inch-** (2.4-mm-) thick, galvanized sheet steel, with [**welded**] [**interlocking, gusseted**] [**or**] [**mechanically attached**] corners[**and mounting flange**].
- F. Blades: Roll-formed, horizontal, [**interlocking**] [**overlapping**], **0.034-inch-** (0.85-mm-) thick, galvanized sheet steel.

- G. Mounting Sleeve: Factory-installed, [0.039-inch- (1.0-mm-)] [0.05-inch- (1.3-mm-)] thick, galvanized sheet steel; length to suit wall or floor application.
- H. Damper Motors: **[Modulating]** [or] **[two-position]** action.
- I. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - 2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 - 3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
 - 4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 150 in. x lbf (17 N x m).
 - 5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F (minus 40 deg C).
 - 6. Nonspring-Return Motors: For dampers larger than 25 sq. ft. (2.3 sq. m), size motor for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 300 in. x lbf (34 N x m).
 - 7. Electrical Connection: 115 V, single phase, 60 Hz.

2.12 SPLITTER DAMPERS

- A. Material: Same gage as duct to 24 inches size in either direction, and two gages heavier for sizes over 24 inches.
- B. Blade: Fabricate of **[single]** **[double]** thickness sheet metal to streamline shape, secured with continuous hinge or rod.
- C. Operator: Minimum 1/4 inch diameter rod in self aligning, universal joint action, flanged bushing with set screw.
- D. Single Blade Dampers: Fabricate for duct sizes up to **[6 x 30 inch.]** **[12 x 48 inch.]**
- E. Multi-Blade Damper: Fabricate of opposed blade pattern with maximum blade sizes 8 x 72 inch. Assemble center and edge crimped blades in prime coated or galvanized channel frame with suitable hardware.
- F. End Bearings: Except in round ductwork 12 inches and smaller, provide end bearings. On multiple blade dampers, provide oil-impregnated nylon or sintered bronze bearings.
- G. Quadrants:

1. Provide locking, indicating quadrant regulators on single and multi-blade dampers.
2. On insulated ducts mount quadrant regulators on stand-off mounting brackets, bases, or adapters.
3. Where rod lengths exceed 30 inches provide regulator at both ends.

2.13 FLANGE CONNECTORS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Ductmate Industries, Inc.](#)
2. [Nexus PDQ; Division of Shilco Holdings Inc.](#)
3. [Ward Industries, Inc.; a division of Hart & Cooley, Inc.](#)
4. **<Insert manufacturer's name>**.
5. or approved equal.

B. Description: **[Add-on] [or] [roll-formed]**, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.

C. Material: Galvanized steel.

D. Gage and Shape: Match connecting ductwork.

2.14 DUCT SILENCERS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Dynasonics.](#)
2. [Industrial Noise Control, Inc.](#)
3. [McGill AirFlow LLC.](#)
4. [Ruskin Company.](#)
5. [Vibro-Acoustics.](#)
6. **<Insert manufacturer's name>**.
7. or approved equal.

B. General Requirements:

1. Factory fabricated.
2. Fire-Performance Characteristics: Adhesives, sealants, packing materials, and accessory materials shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E 84.
3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Shape:

1. Rectangular straight with splitters or baffles.

2. Round straight with center bodies or pods.
 3. Rectangular elbow with splitters or baffles.
 4. Round elbow with center bodies or pods.
 5. Rectangular transitional with splitters or baffles.
- D. Rectangular Silencer Outer Casing: ASTM A 653/A 653M, [G90 (Z275)] [G60 (Z180)], galvanized sheet steel, [0.034 inch (0.85 mm)] [0.040 inch (1.02 mm)] thick.
- E. Round Silencer Outer Casing: ASTM A 653/A 653M, [G90 (Z275)] [G60 (Z180)], galvanized sheet steel.
1. Sheet Metal Thickness for Units up to 24 Inches (600 mm) in Diameter: 0.034 inch (0.85 mm) thick.
 2. Sheet Metal Thickness for Units 26 through 40 Inches (660 through 1000 mm) in Diameter: 0.040 inch (1.02 mm) thick.
 3. Sheet Metal Thickness for Units 42 through 52 Inches (1060 through 1300 mm) in Diameter: 0.05 inch (1.3 mm) thick.
 4. Sheet Metal Thickness for Units 54 through 60 Inches (1370 through 1500 mm) in Diameter: 0.064 inch (1.62 mm) thick.
- F. Inner Casing and Baffles: ASTM A 653/A 653M, [G90 (Z275)] [G60 (Z180)] galvanized sheet metal, 0.034 inch (0.85 mm) thick, and with 1/8-inch- (3-mm-) diameter perforations.
- G. Special Construction:
1. Suitable for outdoor use.
 2. High transmission loss[**to achieve STC 45**].
- H. Connection Sizes: Match connecting ductwork unless otherwise indicated.
- I. Principal Sound-Absorbing Mechanism:
1. Controlled impedance membranes and broadly tuned resonators without absorptive media.
 2. **[Dissipative] [Film-lined]** type with fill material.
 - a. Fill Material: **[Inert and vermin-proof fibrous material, packed under not less than 5 percent compression] [Inert and vermin-proof fibrous material, packed under not less than 15 percent compression] [Moisture-proof nonfibrous material]**.
 - b. Erosion Barrier: Polymer bag enclosing fill, and heat sealed before assembly.
 3. Lining: **[None] [Mylar] [Tedlar] [Fiberglas cloth] <Insert material>**.
- J. Fabricate silencers to form rigid units that will not pulsate, vibrate, rattle, or otherwise react to system pressure variations. Do not use mechanical fasteners for unit assemblies.

1. Joints: **[Lock formed and sealed] [continuously welded] [or] [flanged connections]**.
 2. Suspended Units: Factory-installed suspension hooks or lugs attached to frame in quantities and spaced to prevent deflection or distortion.
 3. Reinforcement: Cross or trapeze angles for rigid suspension.
- K. Accessories:
1. Integral **[1-1/2] [3]-hour** fire damper with access door.**[Access door to be high transmission loss to match silencer.]**
 2. Factory-installed end caps to prevent contamination during shipping.
 3. Removable splitters.
 4. Airflow measuring devices.
- L. Source Quality Control: Test according to ASTM E 477.
1. Testing **[of mockups]**to be witnessed by **[DEN Project Manager] [Owner]**.
 2. Record acoustic ratings, including dynamic insertion loss and generated-noise power levels with an airflow of at least **2000-fpm (10-m/s)** face velocity.
 3. Leak Test: Test units for airtightness at 200 percent of associated fan static pressure or **6-inch wg (1500-Pa)** static pressure, whichever is greater.
- M. Capacities and Characteristics:
1. Configuration: **[Straight] [90-degree elbow] <Insert configuration>**.
 2. Shape: **[Rectangular] [Round]**.
 3. Attenuation Mechanism: **[Acoustical glass fiber] [Acoustical glass fiber with protective film liner] [Helmholtz resonator mechanism with no internal media]**.
 4. Maximum Pressure Drop: **[0.35-inch wg (0.09 kPa)] <Insert value>**.
 5. Casing:
 - a. Attenuation: **[Standard] [High transmission loss]**.
 - b. Outer Material: **[Galvanized steel] [Stainless steel] [Aluminum]**.
 - c. Inner Material: **[Galvanized steel] [Stainless steel] [Aluminum]**.
 6. Velocity Range: **<Insert fps (L/s)> to <Insert fps (L/s)>**.
 7. End Connection: **[1-inch (25-mm) slip joint] [Flange]**.
 8. Length: **<Insert inches (mm)>**.
 9. Face Dimension:
 - a. Width: **<Insert inches (mm)>**.
 - b. Height: **<Insert inches (mm)>**.
 10. Face Velocity: **<Insert fpm (m/s)>**.
 11. Dynamic Insertion Loss: **<Insert dBA>**.
 12. Generated Noise: **<Insert dBA>**.
 13. Accessories:
 - a. Access door.

b. Birdscreen.

2.15 CROSS-TALK SILENCERS

- A. Description: Duct sections with sheet metal outer casing, sound absorbing fill material [**and inner casing of perforated sheet metal**]; incorporating interior baffles of similar construction. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.
- B. Configuration: Rectangular, lined [**with inner casing**] with splitters with radiused nosed and contoured tails.
- C. Materials:
1. Outer Casing: Minimum 22 gage galvanized steel with mastic filled lock formed or welded seams, 3 inch long, 11 gage slip joint on both ends.
 2. Inner Casing and Splitters: Minimum 24 gage thick perforated galvanized steel.
 3. Fill: Glass fiber or mineral wool of minimum 3 lb/cu ft density.
 4. Fill Liner: Bonded glass fiber matting covered with 1 mil mylar film.
- D. Ratings: As shown in schedules on the drawings.

2.16 ACOUSTIC HOUSINGS

- A. Description: Modular panels, including access doors and windows, nominal 4 inches thick, with filled outer and inner casing. Fabricate and support in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.
- B. Materials:
1. Outer Casing: Minimum 18 gage galvanized steel stiffened as required, with mastic filled lock formed seams for [**internal flange butt**] [**covering strip butt**] [**overlapping lip**] [**tongue and groove**] joining.
 2. Inner Casing and Splitters: Minimum 22 gage thick perforated galvanized steel.
 3. Fill: Glass fiber or mineral wool of minimum 4 lb/cu ft density.
 4. Fill Liner: Bonded glass fiber matting covered with 1 mil mylar film.
 5. Window: **<Insert number>** x **<Insert number>** inch double glazed with 1/4 inch safety glass.
- C. Rating: As shown in equipment schedules on the drawings.

2.17 DUCTWORK LAGGING

- A. Acoustic Insulation: [**2 inches**] **<Insert number>** thick, 3 to 5 lb/cu ft density glass fiber or mineral wool insulation.
- B. Covering: [**Plaster**] [**or**] [**gypsum board**] with surface weight minimum 4 lb/sq ft.

2.18 ACOUSTICAL LOUVERS

- A. Configuration: [8] [12] <Insert number> inch [200] [300] <Insert number> mm deep louvers with blades on 45 degree slope; sound absorbing fill material, and inner surface of perforated sheet metal, heavy channel frame, birdscreen.
- B. Materials:
1. Louvers: [16 gage galvanized steel] [or] [12 gage extruded aluminum], welded assembly, with factory [prime coat] [baked enamel] [color anodized] finish.
 2. Inner Surface: Minimum 24 gage thick perforated galvanized steel.
 3. Fill: Glass fiber or mineral wool of minimum [4 lb/cu ft] [3 lb/cu ft] density.
 4. Fill Liner: [Bonded glass fiber matting.] [1 mil mylar film.]
 5. Birdscreen: [1] [1/2] [3/4] inch square wire mesh.
 6. Mounting: [Interior] [Exterior] [flat flange.] [angle flange.] [Screw holes in jambs.] [Masonry strap anchors.]
- C. Rating: As shown in equipment schedules on the drawings.

2.19 TURNING VANES

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Ductmate Industries, Inc.](#)
 2. [Duro Dyne Inc.](#)
 3. [Elgen Manufacturing.](#)
 4. [METALAIRE, Inc.](#)
 5. [SEMCO Incorporated.](#)
 6. [Ward Industries, Inc.; a division of Hart & Cooley, Inc.](#)
 7. <Insert manufacturer's name>.
 8. or approved equal.
- B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.
- C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
- D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 4-3, "Vanes and Vane Runners," and 4-4, "Vane Support in Elbows."
- E. Vane Construction: [Single] [Double] wall.

- F. Vane Construction: Single wall for ducts up to [48 inches (1200 mm)] <Insert dimension> wide and double wall for larger dimensions.

2.20 REMOTE DAMPER OPERATORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Pottorff.](#)
2. [Ventfabrics, Inc.](#)
3. [Young Regulator Company.](#)
4. <Insert manufacturer's name>.
5. or approved equal.

- B. Description: Cable system designed for remote manual damper adjustment.

- C. Tubing: [Brass] [Copper] [Aluminum].

- D. Cable: [Stainless steel] [Steel].

- E. Wall-Box Mounting: [Recessed] [Surface].

- F. Wall-Box Cover-Plate Material: [Steel] [Stainless steel].

2.21 DUCT-MOUNTED ACCESS DOORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [American Warming and Ventilating; a division of Mestek, Inc.](#)
2. [Cesco Products; a division of Mestek, Inc.](#)
3. [Ductmate Industries, Inc.](#)
4. [Elgen Manufacturing.](#)
5. [Flexmaster U.S.A., Inc.](#)
6. [Greenheck Fan Corporation.](#)
7. [McGill AirFlow LLC.](#)
8. [Nailor Industries Inc.](#)
9. [Pottorff.](#)
10. [Ventfabrics, Inc.](#)
11. [Ward Industries, Inc.; a division of Hart & Cooley, Inc.](#)
12. <Insert manufacturer's name>.
13. or approved equal.

- B. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 7-2 (7-2M), "Duct Access Doors and Panels," and 7-3, "Access Doors - Round Duct."

1. Door:

- a. Double wall, rectangular.
 - b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
 - c. Vision panel.
 - d. Hinges and Latches: **1-by-1-inch (25-by-25-mm)** butt or piano hinge and cam latches.
 - e. Fabricate doors airtight and suitable for duct pressure class.
2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
 3. Number of Hinges and Locks:
 - a. Access Doors Less Than **12 Inches (300 mm)** Square: No hinges and two sash locks.
 - b. Access Doors up to **[18 Inches (460 mm)]** Square: **[Two hinges]** **[Continuous]** and two sash locks.
 - c. Access Doors up to **24 by 48 Inches (600 by 1200 mm)**: **[Three hinges]** **[Continuous]** and two compression latches **[with outside and inside handles]**.
 - d. Access Doors Larger Than **24 by 48 Inches (600 by 1200 mm)**: **[Four hinges]** **[Continuous]** and two compression latches with outside and inside handles.

C. Pressure Relief Access Door:

1. Door and Frame Material: Galvanized sheet steel.
2. Door: **[Single wall]** **[Double wall with insulation fill]** with metal thickness applicable for duct pressure class.
3. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.
4. Factory set at **[3.0- to 8.0-inch wg (800 to 2000 Pa)]** **[10-inch wg (2500 Pa)]** **<Insert value>**.
5. Doors close when pressures are within set-point range.
6. Hinge: Continuous piano.
7. Latches: Cam.
8. Seal: Neoprene or foam rubber.
9. Insulation Fill: **1-inch- (25-mm-)** thick, fibrous-glass or polystyrene-foam board.

2.22 DUCT ACCESS PANEL ASSEMBLIES

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Ductmate Industries, Inc.](#)
2. [Flame Gard, Inc.](#)
3. [3M.](#)
4. **<Insert manufacturer's name>**.
5. or approved equal.

B. Labeled according to UL 1978 by an NRTL.

- C. Panel and Frame: Minimum thickness [0.0528-inch (1.3-mm) **carbon**] [0.0428-inch (1.1-mm) **stainless**] steel.
- D. Fasteners: [**Carbon**] [**Stainless**] steel. Panel fasteners shall not penetrate duct wall.
- E. Gasket: Comply with NFPA 96; grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F (1093 deg C).
- F. Minimum Pressure Rating: 10-inch wg (2500 Pa), positive or negative.

2.23 DUCT TEST HOLES

- A. Temporary Test Holes: Cut or drill holes in ducts as required. Cap with neat patches, neoprene plugs, threaded plugs, or threaded or twist-on metal caps.
- B. Permanent Test Holes: Factory fabricated, airtight flanged fittings with screw cap. Provide extended neck fittings to clear insulation.

2.24 FLEXIBLE CONNECTORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Ductmate Industries, Inc.](#)
 - 2. [Duro Dyne Inc.](#)
 - 3. [Elgen Manufacturing.](#)
 - 4. [Ventfabrics, Inc.](#)
 - 5. [Ward Industries, Inc.; a division of Hart & Cooley, Inc.](#)
 - 6. **<Insert manufacturer's name>**.
 - 7. or approved equal.
- B. Materials: Flame-retardant or noncombustible fabrics.
- C. Coatings and Adhesives: Comply with UL 181, Class 1.
- D. Metal-Edged Connectors: Factory fabricated with a fabric strip [3-1/2 inches (89 mm)] [5-3/4 inches (146 mm)] wide attached to two strips of 2-3/4-inch- (70-mm-) wide, 0.028-inch- (0.7-mm-) thick, galvanized sheet steel or 0.032-inch- (0.8-mm-) thick aluminum sheets. Provide metal compatible with connected ducts.
- E. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
 - 1. Minimum Weight: 26 oz./sq. yd. (880 g/sq. m).
 - 2. Tensile Strength: 480 lbf/inch (84 N/mm) in the warp and 360 lbf/inch (63 N/mm) in the filling.
 - 3. Service Temperature: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).
- F. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.

1. Minimum Weight: 24 oz./sq. yd. (810 g/sq. m).
 2. Tensile Strength: 530 lbf/inch (93 N/mm) in the warp and 440 lbf/inch (77 N/mm) in the filling.
 3. Service Temperature: Minus 50 to plus 250 deg F (Minus 45 to plus 121 deg C).
- G. High-Temperature System, Flexible Connectors: Glass fabric coated with silicone rubber.
1. Minimum Weight: 16 oz./sq. yd. (542 g/sq. m).
 2. Tensile Strength: 285 lbf/inch (50 N/mm) in the warp and 185 lbf/inch (32 N/mm) in the filling.
 3. Service Temperature: Minus 67 to plus 500 deg F (Minus 55 to plus 260 deg C).
- H. High-Corrosive-Environment System, Flexible Connectors: Glass fabric with chemical-resistant coating.
1. Minimum Weight: 14 oz./sq. yd. (474 g/sq. m).
 2. Tensile Strength: 450 lbf/inch (79 N/mm) in the warp and 340 lbf/inch (60 N/mm) in the filling.
 3. Service Temperature: Minus 67 to plus 500 deg F (Minus 55 to plus 260 deg C).
- I. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.
1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
 2. Outdoor Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
 7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch (6-mm) movement at start and stop.

2.25 FLEXIBLE DUCTS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Flexmaster U.S.A., Inc.](#)
 2. [McGill AirFlow LLC.](#)
 3. [Ward Industries, Inc.; a division of Hart & Cooley, Inc.](#)
 4. **<Insert manufacturer's name>.**
 5. or approved equal.

- B. Noninsulated, Flexible Duct: UL 181, Class 1, 2-ply vinyl film supported by helically wound, spring-steel wire.
1. Pressure Rating: 10-inch wg (2500 Pa) positive and 1.0-inch wg (250 Pa) negative.
 2. Maximum Air Velocity: 4000 fpm (20 m/s).
 3. Temperature Range: Minus 10 to plus 160 deg F (Minus 23 to plus 71 deg C).
- C. Noninsulated, Flexible Duct: UL 181, Class 1, black polymer film supported by helically wound, spring-steel wire.
1. Pressure Rating: 4-inch wg (1000 Pa) positive and 0.5-inch wg (125 Pa) negative.
 2. Maximum Air Velocity: 4000 fpm (20 m/s).
 3. Temperature Range: Minus 20 to plus 175 deg F (Minus 29 to plus 79 deg C).
- D. Noninsulated, Flexible Duct: UL 181, Class 1, multiple layers of aluminum laminate supported by helically wound, spring-steel wire.
1. Pressure Rating: 10-inch wg (2500 Pa) positive and 1.0-inch wg (250 Pa) negative.
 2. Maximum Air Velocity: 4000 fpm (20 m/s).
 3. Temperature Range: Minus 20 to plus 210 deg F (Minus 29 to plus 99 deg C).
- E. Noninsulated, Flexible Duct: UL 181, Class 1, aluminum laminate and polyester film with latex adhesive supported by helically wound, spring-steel wire.
1. Pressure Rating: 10-inch wg (2500 Pa) positive and 1.0-inch wg (250 Pa) negative.
 2. Maximum Air Velocity: 4000 fpm (20 m/s).
 3. Temperature Range: Minus 20 to plus 210 deg F (Minus 29 to plus 99 deg C).
- F. Noninsulated, Flexible Duct: UL 181, Class 0, interlocking spiral of aluminum foil.
1. Pressure Rating: 8-inch wg (2280 Pa) positive or negative.
 2. Maximum Air Velocity: 5000 fpm (25 m/s).
 3. Temperature Range: Minus 100 to plus 435 deg F (Minus 73 to plus 224 deg C).
- G. Insulated, Flexible Duct: UL 181, Class 1, 2-ply vinyl film supported by helically wound, spring-steel wire; fibrous-glass insulation; [polyethylene] [aluminized] vapor-barrier film.
1. Pressure Rating: 10-inch wg (2500 Pa) positive and 1.0-inch wg (250 Pa) negative.
 2. Maximum Air Velocity: 4000 fpm (20 m/s).
 3. Temperature Range: Minus 10 to plus 160 deg F (Minus 23 to plus 71 deg C).
 4. Insulation R-value: [Comply with ASHRAE/IESNA 90.1] <Insert value>.
- H. Insulated, Flexible Duct: UL 181, Class 1, black polymer film supported by helically wound, spring-steel wire; fibrous-glass insulation; [polyethylene] [aluminized] vapor-barrier film.

1. Pressure Rating: 4-inch wg (1000 Pa) positive and 0.5-inch wg (125 Pa) negative.
 2. Maximum Air Velocity: 4000 fpm (20 m/s).
 3. Temperature Range: Minus 20 to plus 175 deg F (Minus 29 to plus 79 deg C).
 4. Insulation R-Value: **[Comply with ASHRAE/IESNA 90.1] <Insert value>**.
- I. Insulated, Flexible Duct: UL 181, Class 1, multiple layers of aluminum laminate supported by helically wound, spring-steel wire; fibrous-glass insulation; **[polyethylene] [aluminized]** vapor-barrier film.
1. Pressure Rating: 10-inch wg (2500 Pa) positive and 1.0-inch wg (250 Pa) negative.
 2. Maximum Air Velocity: 4000 fpm (20 m/s).
 3. Temperature Range: Minus 20 to plus 210 deg F (Minus 29 to plus 99 deg C).
 4. Insulation R-value: **[Comply with ASHRAE/IESNA 90.1] <Insert value>**.
- J. Insulated, Flexible Duct: UL 181, Class 1, aluminum laminate and polyester film with latex adhesive supported by helically wound, spring-steel wire; fibrous-glass insulation; **[polyethylene] [aluminized]** vapor-barrier film.
1. Pressure Rating: 10-inch wg (2500 Pa) positive and 1.0-inch wg (250 Pa) negative.
 2. Maximum Air Velocity: 4000 fpm (20 m/s).
 3. Temperature Range: Minus 20 to plus 210 deg F (Minus 29 to plus 99 deg C).
 4. Insulation R-value: **[Comply with ASHRAE/IESNA 90.1] <Insert value>**.
- K. Insulated, Flexible Duct: UL 181, Class 0, interlocking spiral of aluminum foil; fibrous-glass insulation; **[polyethylene] [aluminized]** vapor-barrier film.
1. Pressure Rating: 8-inch wg (2280 Pa) positive or negative.
 2. Maximum Air Velocity: 5000 fpm (25 m/s).
 3. Temperature Range: Minus 20 to plus 250 deg F (Minus 29 to plus 121 deg C).
 4. Insulation R-value: **[Comply with ASHRAE/IESNA 90.1] <Insert value>**.
- L. Flexible Duct Connectors:
1. Clamps: **[Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action] [Nylon strap]** in sizes 3 through 18 inches (75 through 460 mm), to suit duct size.
 2. Non-Clamp Connectors: **[Adhesive] [Liquid adhesive plus tape] [Adhesive plus sheet metal screws]**.
- 2.26 DUCT SECURITY BARS
- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Carnes](#).
 2. [KEES, Inc.](#)
 3. [Lloyd Industries, Inc.](#)

4. [Metal Form Manufacturing, Inc.](#)
 5. [Price Industries.](#)
 6. **<Insert manufacturer's name>.**
 7. or approved equal.
- B. Description: **[Field-fabricated] [Factory-fabricated and field-installed] [Field- or factory-fabricated and field-installed]** duct security bars.
- C. Configuration:
1. Frame: **[2 by 1/4 inch (51 by 6 mm) flat frame] [2-1/2 by 2-1/2 by 1/4 inch (64 by 64 by 6 mm) angle] <Insert values>.**
 2. Sleeve: **[0.1345-inch (3.4-mm)] [3/16-inch (4.8-mm)] <Insert size>, [continuously welded] [bent] steel frames with [1-by-1-by-3/16-inch (25-by-25-by-4.8-mm)] [1-1/2-by-1-1/2-by-1/8-inch (38-by-38-by-3.2-mm)] <Insert size> angle frame [factory welded to 1 end] [furnished loose for field welding on other end].** To be poured in place or set with concrete block or welded or bolted to wall, one side only. Duct connections on both sides.
 3. Horizontal Bars: **[1/2 inch (13 mm)] [2 by 1/4 inch (50 by 6 mm)] <Insert values>.**
 4. Vertical Bars: **[1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)] [2 by 1/4 inch (51 by 6 mm)] <Insert value>.**
 5. Bar Spacing: **[6 inches (150 mm)] <Insert value>.**
 6. Mounting: **[Metal deck or roofing] [Bolted or welded] [Bolted or welded with masonry anchors] [Ductwork or other framing] [Poured in place or set with concrete block] [Welded or bolted to one wall (one side only)] [Bar extends 6 inches (150 mm) into wall].**

2.27 DUCT ACCESSORY HARDWARE

- A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.
- B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

2.28 END SWITCHES

- A. Coordinate requirements for end switches on modulating dampers (control, fire/smoke, etc) with the Division 26 contractors. End switches shall be provided by the Division 26 Contractor and installed by the Division 26 Contractor.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Verify that electric power is available and of the correct characteristics.

3.2 INSTALLATION

- A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.
- B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
- C. Install [**backdraft**] [**control**] dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- D. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
 - 1. Install steel volume dampers in steel ducts.
 - 2. Install aluminum volume dampers in aluminum ducts.
- E. Set dampers to fully open position before testing, adjusting, and balancing.
- F. Install test holes at fan inlets and outlets and elsewhere as indicated.
- G. Install fire[**and smoke**] dampers according to UL listing and as follows:
 - 1. Provide fire dampers [, **combination fire and smoke dampers**] [**and smoke dampers**] at locations indicated, where ducts and outlets pass through fire rated components [, **and where required by authorities having jurisdiction**]. Install with required perimeter mounting angles, sleeves, breakaway duct connections, corrosion resistant springs, bearings, bushings, and hinges.
 - 2. Install smoke dampers and combination smoke and fire dampers in accordance with NFPA 92A and 92B, as applicable.
 - 3. Demonstrate re-setting of fire dampers to DEN Project Manager's representative.
 - 4. Install dampers in accordance with manufacturer's UL Installation Instructions, labeling, and NFPA 90A at locations indicated on the drawings or required by Authority Having Jurisdiction. Any damper installation that is not in accordance with the manufacturer's UL Installation Instructions must be approved prior to installation.
 - a. Dampers must be accessible to allow inspection, adjustment, and replacement of components. The Contractor shall furnish any access doors in ductwork or plenums required to provide this access, and arrange for any access doors required in walls, ceilings, or other general building construction.
 - b. Install dampers square and free from racking.
 - c. The Contractor shall provide and install bracing for multiple section assemblies to support assembly weight and to hold against system pressure.

- d. Do not compress or stretch the damper frame into the duct or opening.
 - e. Attach multiple damper section assemblies together in accordance with manufacturer's instructions. Install support mullions as reinforcement between assemblies as required.
 - f. Handle dampers using the frame or sleeve. Do not lift or move dampers using blades, actuator, or jackshaft.
 - g. Install connections to actuators.
 - h. Attach multiple damper section assemblies together in accordance with manufacturer's instructions. Install support mullions as reinforcement between assemblies as required.
- H. Provide balancing dampers at points on supply, return, and exhaust systems where branches are taken from larger ducts as required for air balancing. Install minimum 2 duct widths from duct take-off.
- I. Use splitter dampers only where indicated.
- J. Provide balancing dampers on high velocity systems where indicated. Refer to Section 233600 "Air Terminal Units".
- K. Provide balancing dampers on duct take-off to diffusers, grilles, and registers, regardless of whether dampers are specified as part of the diffuser, grille, or register assembly.
- L. Install duct security bars. Construct duct security bars from 0.164-inch (4.18-mm) steel sleeve, continuously welded at all joints and 1/2-inch- (13-mm-) diameter steel bars, 6 inches (150 mm) o.c. in each direction in center of sleeve. Weld each bar to steel sleeve and each crossing bar. Weld 2-1/2-by-2-1/2-by-1/4-inch (63-by-63-by-6-mm) steel angle to 4 sides and both ends of sleeve. Connect duct security bars to ducts with flexible connections. Provide 12-by-12-inch (300-by-300-mm) hinged access panel with cam lock in duct in each side of sleeve.
- M. Install duct silencers in accordance with manufacturer's instructions.
- 1. Support duct silencers [**independent of**] [**rigidly to**] ductwork [.] [**with flexible duct connections, lagged with loaded vinyl sheet on inlet and outlet.**] Refer to Section 233113 "Metal Ductwork" and Section 233116 "Nonmetal Ductwork".
 - 2. Install cross-talk silencers in wall. Caulk wall penetrations; refer to Division 1 requirements.
 - 3. Lag ductwork, where indicated by wrapping with insulation and covering. Apply covering to be airtight. Do not attach covering rigidly to ductwork.
 - 4. Attach ductwork to acoustic louvers with flexible duct connections.
- N. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
- 1. On both sides of duct coils.
 - 2. Upstream[**and downstream**] from duct filters.
 - 3. At outdoor-air intakes and mixed-air plenums.
 - 4. At drain pans and seals.

5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
 6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
 7. At each change in direction and at maximum **50-foot (15-m)** spacing.
 8. Upstream[**and downstream**] from turning vanes.
 9. Upstream or downstream from duct silencers.
 10. Control devices requiring inspection.
 11. **[Provide for cleaning kitchen exhaust ductwork in accordance with NFPA 96.]**
 12. Elsewhere as indicated.
- O. Install access doors with swing against duct static pressure.
- P. Access Door Sizes:
1. One-Hand or Inspection Access: **8 by 8 inches** (200 by 200 mm).
 2. Two-Hand Access: **12 by 8 inches** (300 by 200 mm).
 3. Head and Hand Access: **18 by 10 inches** (460 by 250 mm).
 4. Head and Shoulders Access: **21 by 14 inches** (530 by 355 mm).
 5. Body Access: **25 by 14 inches** (635 by 355 mm).
 6. Body plus Ladder Access: **25 by 17 inches** (635 by 430 mm).
- Q. Label access doors according to Section 230553 "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.
- R. Install flexible connectors to connect ducts to equipment.
- S. For fans developing static pressures of **5-inch wg** (1250 Pa) and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.
- T. Connect terminal units to supply ducts[**directly or**] with maximum [**12-inch (300-mm)**] **<Insert value>** lengths of flexible duct. Do not use flexible ducts to change directions.
- U. Connect diffusers or light troffer boots to ducts[**directly or**] with maximum [**60-inch (1500-mm)**] **<Insert value>** lengths of flexible duct clamped or strapped in place.
- V. Connect flexible ducts to metal ducts with [**adhesive**] [**liquid adhesive plus tape**] [**draw bands**] [**adhesive plus sheet metal screws**].
- W. Install duct test holes where required for testing and balancing purposes.
- X. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of **1/4-inch (6-mm)** movement during start and stop of fans.

3.3 LABELING

- A. Provide identification and access labels for all fire dampers, smoke dampers and combination fire smoke dampers.
- B. Labels shall be plastic with pressure-sensitive, permanent-type, self-adhesive back. Font shall be Arial, with a minimum text height of half an inch. Font color shall be red and background color shall be white.
- C. Identification labels shall be located on the damper sleeve or frame on both side of the damper. The label shall indicate "FIRE DAMPER", "SMOKE DAMPER" and/or "COMBINATION FIRE/SMOKE DAMPER".
- D. Access labels shall be provided to indicate locations for access to reset and maintain the damper. The label shall indicate "FIRE DAMPER ACCESS", "SMOKE DAMPER ACCESS" and/or "COMBINATION FIRE/SMOKE DAMPER ACCESS".
 - 1. Access label location shall be as follows:
 - a. Damper in continuous duct with duct access with 12 inches of the damper:
 - 1) Locate label on duct access door.
 - 2) Locate label on suspended ceiling tile
 - 3) Locate label on access door in hard ceiling.
 - b. Damper with removable grille/register on one side:
 - 1) Locate label on face of grille/register.
 - c. Damper in wall with no duct connection:
 - 1) Locate label on suspended ceiling tile
 - 2) Locate label on access door in hard ceiling.

3.4 FIELD QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Operate dampers to verify full range of movement.
 - 2. Inspect locations of access doors and verify that purpose of access door can be performed.
 - 3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
 - 4. Inspect turning vanes for proper and secure installation.
 - 5. Operate remote damper operators to verify full range of movement of operator and damper.
- B. MANUFACTURER'S FIELD SERVICES FOR DUCT SILENCERS
- C. Prepare and place systems into service.

- D. Inspect installation periodically.
- E. Lag ductwork, where indicated by wrapping with insulation and covering. Apply covering to be air tight. Do not attach covering rigidly to ductwork.
- F. Attach ductwork to acoustic louvers with flexible duct connections. Refer to Section 15910 - Ductwork Accessories.
- G. Provide services of [AABC] [NEBB] testing agency to take noise measurement. Use meters meeting requirements of ASA 47 (ANSI S1.4).
- H. After start-up, final corrections and balancing of systems take octave band sound measurements over full audio frequency range in areas adjacent to mechanical equipment rooms, duct and pipe shafts, and other critical locations, as directed.
- I. Provide one-third octave band measurements of artificial sound sources in areas indicated as having critical requirements.
- J. Submit complete report of test results including sound curves.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233300

SECTION 233413 - AXIAL HVAC FANS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Tubeaxial fans.
 - 2. Vaneaxial fans.
 - 3. Mixed-flow fans.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, furnished specialties, and accessories for each fan.
 - 2. Certified fan performance curves with system operating conditions indicated.
 - 3. Certified fan sound-power ratings.
 - 4. Motor ratings and electrical characteristics, plus motor and electrical accessories.
 - 5. Material thickness and finishes, including color charts.
 - 6. Dampers, including housings, linkages, and operators.
 - 7. Fan speed controllers.
 - 8. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
 - a. Differentiate between manufacturer-installed and field-installed wiring.
 - 4. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

5. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Show fan room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
- B. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For axial fans to include in emergency, operation, and maintenance manuals.
 1. Include instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. AMCA Compliance: Products shall comply with performance requirements and shall be licensed to use the AMCA-Certified Ratings Seal.
- C. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations, with protective crating and covering.
- C. Disassemble and reassemble units, as required for moving to final locations, according to manufacturer's written instructions.

- D. Lift and support units with manufacturer's designated lifting or supporting points.
- E. Protect motors, shafts, and bearings from weather and construction dust.

1.8 COORDINATION

- A. Coordinate size and location of structural-steel support members.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 7.

1.9 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Belts: [**One (1)**] <Insert number> set(s) for each belt-driven unit.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. AMCA Compliance:
 - 1. Comply with AMCA performance and sound rating requirements and bear the AMCA-Certified Ratings Seal.
 - 2. Operating Limits: Classify according to AMCA 99.
- B. Unusual Service Conditions:
 - 1. Ambient Temperature: <Insert deg F>.
 - 2. Altitude: [**5,500 ft**]<Insert feet (m)> above sea level.
 - 3. High humidity.
 - 4. <Insert conditions>.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Capacities and Characteristics:
1. Airflow: **<Insert cfm (L/s)>**.
 2. External Static Pressure: **<Insert inches wg (Pa)>**.
 3. Fan Diameter: **<Insert inches (mm)>**.
 4. Brake Horsepower: **<Insert value>**.
 5. Drive Type: **[Direct] [Belt]**.
 6. Fan Rpm: **<Insert value>**.
 7. Motor:
 - a. Motor Enclosure: **[Open, dripproof] [Totally enclosed, fan cooled] [Totally enclosed, air over] [Open, externally ventilated] [Totally enclosed, nonventilated] [Severe duty] [Explosion proof] [Dust-ignition-proof machine]**.
 - b. Enclosure Materials: **[Cast iron] [Cast aluminum] [Rolled steel]**.
 - c. Motor Bearings: **<Insert requirements>**.
 - d. Efficiency: Premium efficient.
 - e. NEMA Design: **<Insert designation>**.
 - f. Service Factor: **<Insert value>**.
 - g. Electrical Characteristics:
 - 1) Motor Size: **<Insert horsepower>**.
 - 2) Motor Rpm: **<Insert value>**.
 - 3) Volts: **[120] [208] [230] [460] <Insert value>**.
 - 4) Phase: **[Single] [Poly]**.
 - 5) Hertz: 60.
 - 6) Full-Load Amperes: **<Insert value>**.
 - 7) Minimum Circuit Ampacity: **<Insert value>**.
 - 8) Maximum Overcurrent Protection: **<Insert amperage>**.
 8. Sound Power:
 - a. 1st Octave: **<Insert dB>**.
 - b. 2nd Octave: **<Insert dB>**.
 - c. 3rd Octave: **<Insert dB>**.
 - d. 4th Octave: **<Insert dB>**.
 - e. 5th Octave: **<Insert dB>**.
 - f. 6th Octave: **<Insert dB>**.
 - g. 7th Octave: **<Insert dB>**.
 - h. 8th Octave: **<Insert dB>**.
 9. Vibration Isolators: **[Spring] [Restrained spring] <Insert type>** isolators having a static deflection of **[1 inch (25 mm)] <Insert deflection>**.

2.2 TUBEAXIAL FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Acme Engineering & Mfg. Corp.](#)
 2. [Aerovent; a Twin City Fan company.](#)
 3. [Airmaster Fan Company.](#)
 4. [American Coolair Corporation.](#)
 5. [American Fan Company; part of Flakt Woods Americas.](#)
 6. [Breidert Air Products.](#)
 7. [Carnes Company.](#)
 8. [Chicago Blower Corporation.](#)
 9. [Cincinnati Fan.](#)
 10. [CML Northern Blower Inc.](#)
 11. [Greenheck Fan Corporation.](#)
 12. [Hartzell Fan Incorporated.](#)
 13. [Howden Buffalo Inc.](#)
 14. [Howden Buffalo Inc.; New Philadelphia Division.](#)
 15. [Lau Industries.](#)
 16. [Loren Cook Company.](#)
 17. [Madison Manufacturing.](#)
 18. [New York Blower Company \(The\).](#)
 19. [PennBarry.](#)
 20. [Strobic Air Corporation.](#)
 21. [Trane Inc.; a subsidiary of Ingersoll-Rand company.](#)
 22. **<Insert manufacturer's name>.**
 23. or approved equal.
- B. Description: Fan wheel and housing, factory-mounted motor with **[belt]** **[or]** **[direct]** drive, an inlet cone section, and accessories.
- C. Hub and Impeller:
1. Airfoil Impeller Blades: Adjustable die cast aluminum alloy **[or glass reinforced polyester resin]** **[or welded steel die formed blades with belt drive]**.
 2. Hub: Die cast aluminum alloy or cast iron hub **[or with belt drive of spun, welded steel]**, bored and keyed to shaft; to facilitate indexing of blade angle with **[manual]** **[automatic]** adjustment stops.
 3. Controllable Pitch Assemblies: Incorporate ball bearing counterbalanced blade and variable pitch assembly into hub with mechanical link to casing exterior mounted actuator, or pneumatic or electric actuator incorporated within hub.
 4. Cast Components: X-ray components after fabrication and statically and dynamically balance assembly before attachment to motor or shaft.
- D. Housings: **[Steel]** **[Galvanized steel]** with flanged inlet and outlet connections.
1. Fabricate casing of **[1/4]** **<Insert number>** inch steel for fans **[40]** **[50]** **<Insert number>** inch in diameter and smaller and **[3/8]** **<Insert number>** inch steel for larger fans.

2. Continuously weld, with inlet and outlet flange connections, and motor or shaft supports. Incorporate flow straightening guide vanes for fans specified for static pressures greater than **[one] [1.5] [2] <Insert number>** in wg.
- E. Bearings:
1. Bearings: ABMA 11 **[L-10 life at 120,000 hours] [L-50 life at 400,000 hours]** pillow block type, self-aligning, grease-lubricated roller bearings.
 2. Shafts: Hot rolled steel, ground and polished, with key- way; protectively coated with lubricating oil.
 3. Lubrication: Extend lubrication fittings to outside of casing.
- F. Wheel Assemblies: Cast or extruded aluminum with airfoil-shaped blades mounted on cast-iron wheel plate keyed to shaft with solid-steel key.
- G. Wheel Assemblies: Fiberglass-reinforced plastic cured under pressure with airfoil-shaped blades keyed to stainless-steel shaft.
- H. Wheel Assemblies: Cast aluminum, machined and fitted to shaft.
- I. Belt Drives:
1. Cast iron or steel sheaves, dynamically balanced, keyed. Variable and adjustable pitch sheaves for motors 15 hp and under selected so required rpm is obtained with sheaves set at mid-position; fixed sheave for 20 hp and over, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.
 2. Factory mounted, with adjustable alignment and belt tensioning.
 3. Service Factor Based on Fan Motor Size: **[1.2] [1.3] [1.4] [1.5]**.
 4. Fan Shaft: Turned, ground, and polished steel designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
 5. Fan Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
 6. Motor Pulleys: Adjustable pitch for use with motors through **[5] <Insert value>** hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 7. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 8. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet. Fabricate to SMACNA Standards; of 12 gage, 3/4 inch diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
 9. Motor Mount: Adjustable base.
 10. Shaft Bearings: Radial, self-aligning bearings.
 - a. Ball-Bearing Rating Life: ABMA 9, **[L10 of 50,000 hours] <Insert life>**.
 - b. Roller-Bearing Rating Life: ABMA 11, **[L10 of 50,000 hours] <Insert life>**.
 - c. Extend lubrication lines to outside of casing and terminate with grease fittings.

J. Accessories:

1. Companion Flanges: Rolled flanges of same material as housing.
2. Inspection Door: Bolted door allowing limited access to internal parts of fan, of same material as housing.
3. Propeller Access Section Door: Short duct section bolted to fan **[inlet] [and] [outlet]** allowing access to internal parts of fan for inspection and cleaning, of same material as housing, with quick opening latches and gaskets.
4. Swingout Construction: Assembly allowing entire fan section to swing out from duct for cleaning and servicing, of same material as housing.
5. Mounting Clips: **[Horizontal ceiling] [Vertical mounting]** clips welded to fan housing, of same material as housing.
6. Horizontal Support: Pair of supports bolted to fan housing, of same material as housing.
7. Vertical Support: Short duct section with welded brackets bolted to fan housing, of same material as housing.
8. Inlet Screen: Wire-mesh screen on fans not connected to ductwork, of same material as housing.
9. Outlet Screen: Wire-mesh screen on fans not connected to ductwork, of same material as housing.
10. Backdraft Dampers: Butterfly style, for bolting to the discharge of fan or outlet cone, of same material as housing.
11. Shaft Seal: Elastomeric seal and Teflon wear plate, suitable for up to **300 deg F (149 deg C)**.
12. Motor Cover: Cover with side vents to dissipate motor heat, of same material as housing.
13. Guide Vanes: Welded steel construction with airfoil vanes and casing flanges, finished to match casing.
14. Dampers: Welded steel construction, consisting of two semi-circular vanes pivoted on oil-retaining bearings in short casing section, finished **[with one coat enamel.] [by hot dip galvanizing.]** Provide **[airstream operation closing blades by reverse airflow and gravity.] [hand operation with handwheel control of screw and link mechanism.] [motor actuation.]**
15. Blade Pitch Actuator: Factory mounted and calibrated, **[electric actuator requiring single phase power and accepting electric input.] [electric actuator requiring single phase power and accepting pneumatic control input signal.] [pneumatic actuator requiring [25 psi] main supply pressure and accepting pneumatic control input signal.]**
16. Stall Alarm Probe: Factory installed sensing probe to detect fan operation in stall. Refer to other Division 23 sections for control equipment.
17. Inlet Vanes: Adjustable; with peripheral control linkage operated from outside of airstream, bronze sleeve bearings on each end of vane support, and provision for manual or automatic operation of same material as housing.
18. Inlet Bell: Curved inlet for when fan is not attached to duct, **[of same material as housing] [aluminum]**.
19. Inlet Cone: Round-to-round transition of same material as housing.
20. Outlet Cone: Round-to-round transition, of same material as housing. Fabricated of steel with flanges, outlet area/inlet area ratio of **[1.5/1.0] <Insert number>**, with center pod as recommended by manufacturer.
21. Inlet Screens: Galvanized steel welded grid to fit inlet bell.

22. Stack Cap: Vertical discharge assembly with backdraft dampers, of same material as housing.
23. Direct-Driven Units: Encase motor in housing outside of airstream[, **factory wired to disconnect switch located on outside of fan housing**]. Extend lubrication lines to outside of casing and terminate with grease fittings.
24. Vibration Detector: Factory installed vibration switch to stop fan [**with extra set of contacts**]. Refer to other Division 23 sections for control equipment.
25. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Discharge:	64	57	51	47	42	39	38	37
Inlet:	64	57	51	47	42	39	38	37

K. Factory Finishes:

1. Sheet Metal Parts: Prime coat before final assembly.
2. Exterior Surfaces: Baked-enamel finish coat after assembly.
3. Coatings: [**Thermoplastic vinyl**] [**Epoxy**] [**Zinc**] [**Synthetic resin**] [**Phenolic**] [**Color-match enamel**] [**Polytetrafluoroethylene**] [**Vinyl ester**] [**Hot-dip galvanized**] [**Powder-baked enamel**]; <Insert manufacturer's name and trade name>
 - a. Apply to finished housings.
 - b. Apply to fan wheels.

2.3 VANEAXIAL FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Mfg. Corp.](#)
2. [Aerovent; a Twin City Fan company.](#)
3. [Airmaster Fan Company.](#)
4. [American Coolair Corporation.](#)
5. [American Fan Company; part of Flakt Woods Americas.](#)
6. [Breidert Air Products.](#)
7. [Carnes Company.](#)
8. [Chicago Blower Corporation.](#)
9. [Cincinnati Fan.](#)
10. [CML Northern Blower Inc.](#)
11. [Greenheck Fan Corporation.](#)
12. [Hartzell Fan Incorporated.](#)
13. [Howden Buffalo Inc.](#)
14. [Howden Buffalo Inc.; New Philadelphia Division.](#)
15. [Lau Industries.](#)
16. [Loren Cook Company.](#)
17. [Madison Manufacturing.](#)

18. [New York Blower Company \(The\)](#).
 19. [PennBarry](#).
 20. [Strobic Air Corporation](#).
 21. [Trane Inc.: a subsidiary of Ingersoll-Rand company](#).
 22. **<Insert manufacturer's name>**.
 23. or approved equal.
- B. Description: Fan wheel and housing, straightening vane section, factory-mounted motor with belt drive or direct drive, an inlet cone section, and accessories.
1. Variable-Pitch Fans: Internally mounted [**pneumatic**] [**electric**] [**electronic**] actuator, externally-mounted positive positioner, and mechanical-blade-pitch indicator.
- C. Hub and Impeller:
1. Airfoil Impeller Blades: Adjustable die cast aluminum alloy [**or glass reinforced polyester resin**] [**or welded steel die formed blades with belt drive**].
 2. Hub: Die cast aluminum alloy or cast iron hub [**or with belt drive of spun, welded steel**], bored and keyed to shaft; to facilitate indexing of blade angle with [**manual**] [**automatic**] adjustment stops.
 3. Controllable Pitch Assemblies: Incorporate ball bearing counterbalanced blade and variable pitch assembly into hub with mechanical link to casing exterior mounted actuator, or pneumatic or electric actuator incorporated within hub.
 4. Cast Components: X-ray components after fabrication and statically and dynamically balance assembly before attachment to motor or shaft.
- D. Housings: [**Steel**] [**Galvanized steel**].
1. Inlet and Outlet Connections: Flanges.
 2. Guide Vane Section: Integral guide vanes downstream from fan wheel designed to straighten airflow.
 3. Sound-Trap Housing: Housing incorporating perforated steel inner liner, **2 inch (50 mm)** fiberglass duct liner sandwiched between the inner and outer shell, and steel bands sealing the insulated cavity.
 4. Fabricate casing of [**1/4**] **<Insert number>** inch steel for fans [**40**] [**50**] **<Insert number>** inch in diameter and smaller and [**3/8**] [**<Insert number>**] inch steel for larger fans.
 5. Continuously weld, with inlet and outlet flange connections, and motor or shaft supports. Incorporate flow straightening guide vanes for fans specified for static pressures greater than [**one**] [**1.5**] [**2**] **<Insert number>** in wg.
- E. Bearings:
1. Bearings: ABMA 11 [**L-10 life at 120,000 hours**] [**L-50 life at 400,000 hours**] pillow block type, self-aligning, grease-lubricated roller bearings.
 2. Shafts: Hot rolled steel, ground and polished, with key- way; protectively coated with lubricating oil.
 3. Lubrication: Extend lubrication fittings to outside of casing.

- F. Wheel Assemblies: Cast aluminum with airfoil-shaped blades mounted on cast-iron wheel plate keyed to shaft with solid-steel key.
- G. Wheel Assemblies: Fiberglass-reinforced plastic cured under pressure with airfoil-shaped blades keyed to stainless-steel shaft.
- H. Wheel Assemblies: Cast-aluminum hub assembly, machined and fitted with threaded bearing wells to receive blade-bearing assemblies with replaceable, cast-aluminum blades; factory mounted and balanced.
- I. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.
1. Cast iron or steel sheaves, dynamically balanced, keyed. Variable and adjustable pitch sheaves for motors 15 hp and under selected so required rpm is obtained with sheaves set at mid-position; fixed sheave for 20 hp and over, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.
 2. Service Factor Based on Fan Motor Size: **[1.2] [1.3] [1.4] [1.5]**.
 3. Fan Shaft: Turned, ground, and polished steel designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
 4. Fan Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
 5. Motor Pulleys: Adjustable pitch for use with motors through **[5] <Insert value>** hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 6. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 7. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet. Fabricate to SMACNA Standards; of 12 gage, 3/4 inch diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
 8. Motor Mount: Adjustable base.
 9. Shaft Bearings: Radial, self-aligning bearings.
 - a. Ball-Bearing Rating Life: ABMA 9, **[L10 of 100,000 hours] <Insert life>**.
 - b. Roller-Bearing Rating Life: ABMA 11, **[L10 of 100,000 hours] <Insert life>**.
 - c. Extend lubrication lines to outside of casing and terminate with grease fittings.
- J. Accessories:
1. Companion Flanges: Rolled flanges of same material as housing.
 2. Inspection Door: Bolted door allowing limited access to internal parts of fan, of same material as housing.
 3. Propeller Access Section Door: Short duct section bolted to fan **[inlet] [and] [outlet]** allowing access to internal parts of fan for inspection and cleaning, of same material as housing.

4. Swingout Construction: Assembly allowing entire fan section to swing out from duct for cleaning and servicing, of same material as housing.
5. Mounting Clips: [**Horizontal ceiling**] [**Vertical mounting**] clips welded to fan housing, of same material as housing.
6. Horizontal Support: Pair of supports bolted to fan housing, of same material as housing.
7. Vertical Support: Short duct section with welded brackets bolted to fan housing, of same material as housing.
8. Inlet Screen: Wire-mesh screen on fans not connected to ductwork, of same material as housing.
9. Outlet Screen: Wire-mesh screen on fans not connected to ductwork, of same material as housing.
10. Backdraft Dampers: Butterfly style, for mounting with flexible connection to the discharge of fan or direct mounted to the discharge diffuser section, of same material as housing.
11. Stall Alarm Probe: Sensing probe capable of detecting fan operation in stall and signaling control devices. Control devices and sequence of operation are specified in Section 230923.23 "Pressure Instruments" and Section 230993.11 "Sequence of Operations for HVAC DDC."
12. Flow Measurement Port: Pressure measurement taps installed in the inlet of fan to detect and signal airflow readings to temperature-control systems. Control devices and sequence of operation are specified in Section 230923.14 "Flow Instruments" and Section 230993.11 "Sequence of Operations for HVAC DDC."
13. Shaft Seal: Elastomeric seal and Teflon wear plate, suitable for up to 300 deg F (148 deg C).
14. Motor Cover: Cover with side vents to dissipate motor heat, of same material as housing.
15. Guide Vanes: Welded steel construction with airfoil vanes and casing flanges, finished to match casing.
16. Dampers: Welded steel construction, consisting of two semi-circular vanes pivoted on oil-retaining bearings in short casing section, finished [**with one coat enamel.**] [**by hot dip galvanizing.**] Provide [**airstream operation closing blades by reverse airflow and gravity.**] [**hand operation with handwheel control of screw and link mechanism.**] [**motor actuation.**]
17. Access Doors: Shaped to conform to casing with quick opening latches and gaskets.
18. Blade Pitch Actuator: Factory mounted and calibrated, [**electric actuator requiring single phase power and accepting electric input.**] [**electric actuator requiring single phase power and accepting pneumatic control input signal.**] [**pneumatic actuator requiring [25 psi] main supply pressure and accepting pneumatic control input signal.**]
19. Stall Alarm Probe: Factory installed sensing probe to detect fan operation in stall. Refer to other Division 23 sections for control equipment.
20. Inlet Vanes: Adjustable; with peripheral control linkage operated from outside of airstream, bronze sleeve bearings on each end of vane support, and provision for manual or automatic operation, of same material as housing.
21. Inlet Bell: Curved inlet for when fan is not attached to duct, of same material as housing.
22. Inlet Cone: Round-to-round transition, of same material as housing.

23. Outlet Cone: Round-to-round transition, of same material as housing. Fabricated of steel with flanges, outlet area/inlet area ratio of [1.5/1.0] <Insert number>, with center pod as recommended by manufacturer.
24. Inlet Screens: Galvanized steel welded grid to fit inlet bell.
25. Stack Cap: Vertical discharge assembly with backdraft dampers, of same material as housing.
26. Direct-Driven Units: Encase motor in housing outside of airstream[, **factory wired to disconnect switch located on outside of fan housing**]. Extend lubrication lines to outside of casing and terminate with grease fittings.
27. Vibration Detector: Factory installed vibration switch to stop fan [**with extra set of contacts**]. Refer to other Division 23 sections for control equipment.
28. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Discharge:	64	57	51	47	42	39	38	37
Inlet:	64	57	51	47	42	39	38	37

K. Factory Finishes:

1. Sheet Metal Parts: Prime coat before final assembly.
2. Exterior Surfaces: Baked-enamel finish coat after assembly.
3. Coatings: [Thermoplastic vinyl] [Epoxy] [Zinc] [Synthetic resin] [Phenolic] [Color-match enamel] [Polytetrafluoroethylene] [Vinyl ester] [Hot-dip galvanized] [Powder-baked enamel]; <Insert manufacturer's name and trade name>.ol style="list-style-type: none;">- a. Apply to finished housings.
- b. Apply to fan wheels.

2.4 MIXED-FLOW FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Greenheck Fan Corporation](#).
2. [Howden Buffalo Inc.](#)
3. [Howden Buffalo Inc.; New Philadelphia Division](#).
4. [Loren Cook Company](#).
5. <Insert manufacturer's name>.
6. or approved equal.

- B. Description: Fan wheel and housing, [**straightening vane section**,] factory-mounted motor with belt drive, and accessories.

C. Hub and Impeller:

1. Mixed Flow impeller blades: Fixed welded steel die formed blades with belt drive.

2. Hub: Welded steel, bored and keyed to shaft.

D. Housings: **[Steel]** **[Galvanized steel]**.

1. Inlet and Outlet Connections: Outer mounting frame and companion flanges.
2. Guide Vane Section: Integral guide vanes downstream from fan wheel designed to straighten airflow.
3. Mixed-Flow Outlet Connection: **[One]** **[Two]** flanged discharge(s) perpendicular to fan inlet.
4. Fabricate casing of **[14 ga]** **[1/4]** **<Insert number>** inch steel for fans **[40]** **[50]** **<Insert number>** inch in diameter and smaller and **[3/8]** **<Insert number inch>** steel for larger fans.
5. Continuously weld, with inlet and outlet flange connections, and motor or shaft supports. Incorporate flow straightening guide vanes for fans specified for static pressures greater than **[one]** **[1.5]** **[2]** **<Insert number>** in wg.

E. Bearings:

1. Bearings: ABMA 11 L-50 life at 400,000 hours pillow block type, self-aligning, grease-lubricated roller bearings.
2. Shafts: Hot rolled steel, ground and polished, with key- way; protectively coated with lubricating oil.
3. Lubrication: Extend lubrication fittings to outside of casing.

F. Wheel Assemblies: Cast aluminum with airfoil-shaped blades mounted on cast-iron wheel plate keyed to shaft with solid-steel key.

G. Belt Drives:

1. Cast iron or steel sheaves, dynamically balanced, keyed. Variable and adjustable pitch sheaves for motors 15 hp and under selected so required rpm is obtained with sheaves set at mid-position; fixed sheave for 20 hp and over, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.
2. Factory mounted, with final alignment and belt adjustment made after installation.
3. Service Factor Based on Fan Motor Size: **[1.2]** **[1.3]** **[1.4]** **[1.5]**.
4. Fan Shaft: Turned, ground, and polished steel designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
5. Fan Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
6. Motor Pulleys: Adjustable pitch for use with motors through **[5]** **<Insert value>** hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
7. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
8. Belt Guards: Fabricate to SMACNA Standards; of 12 gage, 3/4 inch diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

9. Motor Mount: Adjustable base.
10. Shaft Bearings: Radial, self-aligning bearings.
 - a. Ball-Bearing Rating Life: ABMA 9, [**L10 of 100,000 hours**] <Insert life>.
 - b. Roller-Bearing Rating Life: ABMA 11, [**L10 of 100,000 hours**] <Insert life>.
 - c. Extend lubrication lines to outside of casing and terminate with grease fittings.

H. Accessories:

1. Mounting Clips: [**Horizontal ceiling**] [**Vertical mounting**] clips welded to fan housing, of same material as housing.
2. Inlet and Outlet Screens: Wire-mesh screen on fans not connected to ductwork, of same material as housing.
3. Backdraft Dampers: Butterfly style, for mounting with flexible connection to the discharge of fan or direct mounted to the discharge diffuser section, of same material as housing.
4. Motor Cover: Cover with side vents to dissipate motor heat, of same material as housing.
5. Inlet Bell: Curved inlet for when fan is not attached to duct, of same material as housing.
6. Inlet Cones: Round-to-round transition, of same material as housing.
7. Outlet Cones: Round-to-round transition, of same material as housing.
8. Stack Cap: Vertical discharge assembly with backdraft dampers, of same material as housing.
9. Direct-Driven Units: Encase motor in housing outside of airstream[, **factory wired to disconnect switch located on outside of fan housing**].
10. Inlet Bell: Bell mouth inlet fabricated of [steel] [aluminum] with flange.
11. Outlet Cones: Fabricated of steel with flanges, outlet area/inlet area ratio of [**1.5/1.0**] <Insert number>, with center pod as recommended by manufacturer.
12. Inlet Screens: Galvanized steel welded grid to fit inlet bell.
13. Dampers: Welded steel construction, consisting of two semi-circular vanes pivoted on oil-retaining bearings in short casing section, finished [**with one coat enamel.**] [**by hot dip galvanizing.**] Provide [**airstream operation closing blades by reverse airflow and gravity.**] [**hand operation with handwheel control of screw and link mechanism.**] [**motor actuation**].
14. Access Doors: Shaped to conform to casing with quick opening latches and gaskets.
15. Vibration Detector: Factory installed vibration switch to stop fan [with extra set of contacts].
16. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Discharge:	64	57	51	47	42	39	38	37
Inlet:	64	57	51	47	42	39	38	37

I. Factory Finishes:

1. Sheet Metal Parts: Prime coat before final assembly.

2. Exterior Surfaces: Baked-enamel finish coat after assembly.
3. Coatings: [**Thermoplastic vinyl**] [**Epoxy**] [**Zinc**] [**Synthetic resin**] [**Phenolic**] [**Color-match enamel**] [**Polytetrafluoroethylene**] [**Vinyl ester**] [**Hot-dip galvanized**] [**Powder-baked enamel**]; <Insert manufacturer's name and trade name>.ol style="list-style-type: none;">- a. Apply to finished housings.
- b. Apply to fan wheels.

2.5 PROPELLER FANS

- A. Manufacturers: Subject to conformance with specified requirements, provide products by one of the following:
 1. Acme.
 2. Bayley.
 3. Greenheck.
 4. Loren Cook.
 5. Penn Ventilator.
 6. or approved equal.
- B. Impeller: Shaped steel or steel reinforced aluminum blade with heavy hubs, statically and dynamically balanced, [**keyed and**] locked to shaft, directly connected to motor [**or provided with V-belt drive.**]
- C. Electrical Characteristics and Components:
 1. Electrical Characteristics: As indicated on the Drawings.
 2. Motor: Self-aligning pre-lubricated ball or sleeve bearings affixed to mounting plate [**permitting belt tensioning**], neoprene vibration isolation between fan assembly and mounting plate.
 3. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70.
- D. Frame: One piece, square steel with die formed venturi orifice, mounting flanges and supports, with baked enamel finish.
- E. Backdraft Damper: Multiple blade with offset hinge pin, blades linked.
- F. Safety Screens: One inch galvanized wire over inlet, motor, and drive [**and backdraft damper for separate mounting on outlet**].

2.6 ROOF CURB

- A. Roof Curb: [**14**] [**16**] [**20**] [**24**] <Insert number> inch high (top of finish roof to top of curb) [**self flashing**] of [**galvanized steel**] [**aluminum**] with continuously welded

seams, **[built in cant strips] [one inch insulation and curb bottom] [interior baffle with acoustic insulation, curb bottom] [ventilated double wall] [hinged curb adapter]**, and factory installed nailer strip.

2.7 DUCT SILENCERS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Mfg. Corp.](#)
2. [Aerovent; a Twin City Fan company.](#)
3. [Airmaster Fan Company.](#)
4. [American Coolair Corporation.](#)
5. [American Fan Company; part of Flakt Woods Americas.](#)
6. [Carnes Company.](#)
7. [Chicago Blower Corporation.](#)
8. [Cincinnati Fan.](#)
9. [CML Northern Blower Inc.](#)
10. [Greenheck Fan Corporation.](#)
11. [Hartzell Fan Incorporated.](#)
12. [Howden Buffalo Inc.](#)
13. [Howden Buffalo Inc.; New Philadelphia Division.](#)
14. [Lau Industries.](#)
15. [Loren Cook Company.](#)
16. [Madison Manufacturing.](#)
17. [New York Blower Company \(The\).](#)
18. [PennBarry.](#)
19. [Strobic Air Corporation.](#)
20. [Trane Inc.; a subsidiary of Ingersoll-Rand company.](#)
21. **<Insert manufacturer's name>.**
22. or approved equal.

B. Description: Tubular **[with center cone]** silencers consisting of a shell with fill material.

C. Housings: **[Steel] [Galvanized steel] [Aluminum] [Fiberglass-reinforced plastic] [Stainless steel]** with flanged inlet and outlet connections matching fan or cone sizes.

1. Inner Shell: **[Steel] [Galvanized steel] [Aluminum] [Fiberglass-reinforced plastic] [Stainless steel]**.
2. Liner: Duct liner.

D. Factory Finishes:

1. Sheet Metal Parts: Prime coat before final assembly.
2. Exterior Surfaces: Baked-enamel finish coat after assembly.
3. Coatings: **[Thermoplastic vinyl] [Epoxy] [Zinc] [Synthetic resin] [Phenolic] [Color-match enamel] [Polytetrafluoroethylene] [Vinyl ester] [Hot-dip galvanized] [Powder-baked enamel]**; **<Insert manufacturer's name and trade name>** applied to finished housings.

E. Capacities and Characteristics:

1. Airflow: <Insert cfm (L/s)>.
2. Static Pressure Drop: <Insert inches wg (Pa)>.
3. Diameter: <Insert inches (mm)>.
4. Sound Attenuation (Insertion Loss):
 - a. 1st Octave: <Insert dB>.
 - b. 2nd Octave: <Insert dB>.
 - c. 3rd Octave: <Insert dB>.
 - d. 4th Octave: <Insert dB>.
 - e. 5th Octave: <Insert dB>.
 - f. 6th Octave: <Insert dB>.
 - g. 7th Octave: <Insert dB>.
 - h. 8th Octave: <Insert dB>.
5. Vibration Isolators: [Spring] [Restrained spring] <Insert type> isolators having a static deflection of [1 inch (25 mm)] <Insert deflection>.

2.8 SOURCE QUALITY CONTROL

- A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.
- B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210/ASHRAE 51, "Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating."

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install axial fans level and plumb.
- C. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.
- D. Lift and support units with manufacturer's designated lifting or supporting points.
- E. Equipment Mounting:
 1. Install fans on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in [Section 033000

"Cast-in-Place Concrete." [Section 033053 "Miscellaneous Cast-in-Place Concrete."]

- a. Support floor-mounting units using **[spring isolators] [restrained spring isolators]** <Insert item> having a static deflection of **[1 inch (25 mm)]** <Insert number>.
 - 1) Secure vibration controls to concrete bases using anchor bolts cast in concrete base.
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - a. Install floor-mounting units on concrete bases designed to withstand, without damage to equipment, the seismic force required by authorities having jurisdiction.
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- F. Support suspended units from structure using threaded steel rods and **[spring hangers]** <Insert item>.
- G. Do not operate fans for any purpose until ductwork is clean, filters in place, bearings lubricated, and fan has been test run under observation.
- H. Install flexible connections specified in Section 233300 "Air Duct Accessories" between axial fan inlet and discharge ductwork. Ensure metal bands of connectors are parallel with minimum one inch flex between ductwork and axial fan while running.
- I. Provide **[fixed]** sheaves required for final air balance.
- J. Provide safety screen where inlet or outlet is exposed.
- K. Provide backdraft dampers on discharge of exhaust fans and as indicated.
- L. Provide access to adjustable blade axial fan wheels for varying blade angle setting. Adjust blades for varying range of volume and pressure.
- M. Install units with clearances for service and maintenance.
- N. Label fans according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."
- 3.2 CONNECTIONS
- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."

- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Verify that shipping, blocking, and bracing are removed.
 - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 - 3. Verify that cleaning and adjusting are complete.
 - 4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 - 5. Adjust belt tension.
 - 6. Adjust damper linkages for proper damper operation.
 - 7. Verify lubrication for bearings and other moving parts.
 - 8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 - 9. Disable automatic temperature-control operators, energize motor, and confirm proper motor rotation and unit operation, adjust fan to indicated rpm, and measure and record motor voltage and amperage.
 - 10. Shut unit down and reconnect automatic temperature-control operators.
 - 11. Remove and replace malfunctioning units and retest as specified above.
- D. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.
- E. Test and adjust controls and safeties. Controls and equipment will be considered defective if they do not pass tests and inspections. Replace damaged and malfunctioning controls and equipment.

- F. Shut unit down and reconnect automatic temperature-control operators.
- G. Refer to Section 230593 "Testing, Adjusting and Balancing for HVAC", adjusting, and balancing procedures.
- H. Replace fan and motor pulleys as required to achieve design airflow.
- I. Repair or replace malfunctioning units. Retest as specified above after repairs or replacements are made.
- J. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Lubricate bearings.

3.5 CLEANING

- A. On completion of installation, internally clean fans according to manufacturer's written instructions. Remove foreign material and construction debris. Vacuum fan wheel and cabinet.
- B. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train DEN maintenance personnel to adjust, operate, and maintain axial fans.
- B. Train DEN maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining equipment and schedules.
- C. Review data in maintenance manuals. Refer to Section 230400 "Basic HVAC Requirements".
- D. Schedule training with DEN Project Manager, with at least seven (7) days' advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233413

SECTION 233423 - HVAC POWER VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Utility set fans.
 - 2. Centrifugal roof ventilators.
 - 3. Axial roof ventilators.
 - 4. Upblast propeller roof exhaust fans.
 - 5. Centrifugal wall ventilators.
 - 6. Ceiling-mounted ventilators.
 - 7. In-line centrifugal fans.
 - 8. Propeller fans.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Project Altitude: Base fan-performance ratings on 5,500 feet above sea level. .
- B. Operating Limits: Classify according to AMCA 99.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Also include the following:
 - 1. Certified fan performance curves with system operating conditions indicated.
 - 2. Certified fan sound-power ratings.
 - 3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
 - 4. Material thickness, gages and finishes, including color charts.
 - 5. Dampers, including housings, linkages, and operators.
 - 6. Roof curbs.
 - 7. Fan speed controllers.
 - 8. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
 - a. Differentiate between manufacturer-installed and field-installed wiring.
 3. **[Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.]**
- C. Delegated-Design Submittal: For unit hangars and supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
 2. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
1. Roof framing and support members relative to duct penetrations.
 2. Ceiling suspension assembly members.
 3. Size and location of initial access modules for acoustical tile.
 4. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
- B. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For power ventilators to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

- 1. Belts: [**One (1)**] <Insert number> set(s) for each belt-driven unit.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. AMCA Compliance: Fans shall have AMCA-Certified performance ratings and shall bear the AMCA-Certified Ratings Seal.
- C. UL Standards: Power ventilators shall comply with UL 705. Power ventilators for use for restaurant kitchen exhaust shall also comply with UL 762.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fans as factory-assembled unit, to the extent allowable by shipping limitations, with protective crating and covering.
- B. Disassemble and reassemble units, as required for moving to final location, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.

1.10 COORDINATION

- A. Coordinate size and location of structural-steel support members.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 UTILITY SET FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
 2. [American Coolair Corporation.](#)
 3. [Ammerman; Millennium Equipment.](#)
 4. [Braidert Air Products.](#)
 5. [Carnes Company.](#)
 6. [Delhi Industries Inc.](#)
 7. [Hartzell Fan Incorporated.](#)
 8. [JencoFan.](#)
 9. [Loren Cook Company.](#)
 10. [Madison Manufacturing.](#)
 11. [New York Blower Company \(The\).](#)
 12. [PennBarry.](#)
 13. [Quietaire Inc.](#)
 14. [Trane; a business of American Standard Companies.](#)
 15. **<Insert manufacturer's name>.**
 16. or approved equal.
- B. Housing: Fabricated of [**galvanized**] steel with side sheets fastened with a deep lock seam or welded to scroll sheets.
1. Housing Discharge Arrangement: Adjustable to eight standard positions.
- C. Fan Wheels: Single-width, single inlet; welded to cast-iron or cast-steel hub and spun-steel inlet cone, with hub keyed to shaft.
1. Blade Materials: [**Steel**] [**Aluminum**].
 2. Blade Type: [**Backward inclined**] [**Forward curved**] [**Airfoil**].
 3. Spark-Resistant Construction: AMCA 99, Type [**A**] [**B**] [**C**].
- D. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
- E. Shaft Bearings: Prelubricated and sealed, self-aligning, pillow-block-type ball bearings with ABMA 9, [**L₅₀ of 200,000 hours**] [**L₁₀ of 80,000 hours**] **<Insert life>**.
1. Extend grease fitting to accessible location outside of unit.
- F. Belt Drives:
1. Factory mounted, with final alignment and belt adjustment made after installation
 2. Service Factor Based on Fan Motor Size: [**1.5**] [**1.4**] [**1.3**] [**1.2**].
 3. Motor Pulleys: Adjustable pitch for use with motors through [**5**] **<Insert value>** hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.

4. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
5. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet.

G. Accessories:

1. Inlet and Outlet: Flanged.
2. Companion Flanges: Rolled flanges for duct connections of same material as housing.
3. Backdraft Dampers: Gravity actuated with counterweight and interlocking aluminum blades with felt edges in steel frame installed on fan discharge.
4. Access Door: Gasketed door in scroll with latch-type handles.
5. Scroll Dampers: Single-blade damper installed at fan scroll top with adjustable linkage.
6. Inlet Screens: Removable wire mesh.
7. Drain Connections: **NPS 3/4 (DN 20)** threaded coupling drain connection installed at lowest point of housing.
8. Weather Hoods: Weather resistant with stamped vents over motor and drive compartment.
9. Discharge Dampers: Assembly with [**parallel**] [**opposed**] blades constructed of two plates formed around and to shaft, channel frame, sealed ball bearings, with blades linked outside of airstream to single control lever of same material as housing.
10. Variable Inlet Vanes: With blades supported at both ends with two permanently lubricated bearings of same material as housing. Variable mechanism terminating in single control lever with control shaft for double-width fans.
11. Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.

H. Capacities and Characteristics:

1. Airflow: <Insert cfm (L/s)>.
2. External Static Pressure: <Insert inches wg (Pa)>.
3. Fan Diameter: <Insert inches (mm)>.
4. Wheel Type: [**Backward inclined**] [**Forward curved**] [**Airfoil**].
5. Class: [**I**] [**II**] [**III**].
6. Drive Arrangement: [**Direct**] [**Belt**].
7. Fan rpm: <Insert value>.
8. Outlet Velocity: <Insert fpm (m/s)>.
9. Brake Horsepower: <Insert value>.
10. Motor Size: <Insert value> hp.
11. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.
12. Vibration Isolators:
 - a. Type: [**Spring isolators**] [**Restrained spring isolators**] <Insert type>.

b. Static Deflection: <Insert inches (mm)>.

13. Spark Arrestance Class: [A] [B] [C].

2.2 CENTRIFUGAL ROOF VENTILATORS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Manufacturing Corporation.](#)
2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
3. [American Coolair Corporation.](#)
4. [Ammerman; Millennium Equipment.](#)
5. [Braidert Air Products.](#)
6. [Broan-NuTone LLC.](#)
7. [Broan-NuTone LLC; NuTone Inc.](#)
8. [Carnes Company.](#)
9. [Central Blower Company.](#)
10. [Delhi Industries Inc.](#)
11. [Greenheck Fan Corporation.](#)
12. [Hartzell Fan Incorporated.](#)
13. [JencoFan.](#)
14. [Loren Cook Company.](#)
15. [PennBarry.](#)
16. [Quietaire Inc.](#)
17. [W.W. Grainger, Inc.; Dayton Products.](#)
18. <Insert manufacturer's name>.
19. or approved equal.

B. Housing: Removable, [**spun-aluminum, dome top and outlet baffle**] [**extruded-aluminum, rectangular top**] [**galvanized steel, mushroom-domed top**]; square, one-piece, aluminum base with venturi inlet cone.

1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains[**and grease collector**].
2. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.

C. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.

D. Belt Drives:

1. Resiliently mounted to housing.
2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
4. Pulleys: Cast-iron, adjustable-pitch motor pulley.
5. Fan and motor isolated from exhaust airstream.

E. Accessories:

1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted **[inside]** **[outside]** fan housing, factory wired through an internal aluminum conduit.
3. Bird Screens: Removable, **1/2-inch** (13-mm) mesh, aluminum or brass wire.
4. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.
5. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.

F. Roof Curbs: Galvanized steel; mitered and welded corners; **1-1/2-inch-** (40-mm-) thick, rigid, fiberglass insulation adhered to inside walls; and **1-1/2-inch** (40-mm) wood nailer. Size as required to suit roof opening and fan base.

1. Configuration: **[Self-flashing without a cant strip, with mounting flange]** **[Built-in cant and mounting flange]** **[Built-in raised cant and mounting flange]**.
2. Overall Height: **[8 inches** (200 mm)] **[9-1/2 inches** (240 mm)] **[12 inches** (300 mm)] **[16 inches** (400 mm)] **[18 inches** (450 mm)].
3. Sound Curb: Curb with sound-absorbing insulation.
4. Pitch Mounting: Manufacture curb for roof slope.
5. Metal Liner: Galvanized steel.
6. Burglar Bars: **[1/2-inch-** (13-mm-)] **[5/8-inch-** (16-mm-)] **[3/4-inch-** (19-mm-)] thick steel bars welded in place to form **6-inch** (150-mm) squares.
7. Mounting Pedestal: Galvanized steel with removable access panel.
8. Vented Curb: Unlined with louvered vents in vertical sides.

G. Capacities and Characteristics:

1. Airflow: **<Insert cfm (L/s)>**.
2. External Static Pressure: **<Insert inches wg (Pa)>**.
3. Fan Diameter: **<Insert inches (mm)>**.
4. Drive Arrangement: **[Direct]** **[Belt drive]**.
5. Fan rpm: **<Insert value>**.
6. Tip Speed: **<Insert fpm (m/s)>**.
7. Sound: **<Insert sone>**.
8. Curb Size: **<Insert inches by inches (mm by mm)>**.
9. Curb Height: **<Insert inches (mm)>**.
10. Damper: **[Yes]** **[No]**.
11. Damper Size: **<Insert inches by inches (mm by mm)>**.
12. Brake Horsepower: **<Insert value>**.
13. Motor Size: **<Insert value>** hp.
14. Motor rpm: **<Insert value>**.
15. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.

c. Hertz: **<Insert value>**.

2.3 AXIAL ROOF VENTILATORS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Manufacturing Corporation.](#)
2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
3. [American Coolair Corporation.](#)
4. [Ammerman; Millennium Equipment.](#)
5. [Breidert Air Products.](#)
6. [Broan-NuTone LLC.](#)
7. [Carnes Company.](#)
8. [FloAire.](#)
9. [Greenheck Fan Corporation.](#)
10. [Hartzell Fan Incorporated.](#)
11. [JencoFan.](#)
12. [Loren Cook Company.](#)
13. [New York Blower Company \(The\).](#)
14. [PennBarry.](#)
15. [Stanley Fans.](#)
16. **<Insert manufacturer's name>**.
17. or approved equal.

B. Housing: Heavy-gage, removable, spun-aluminum, dome top and outlet baffle; square, one-piece, hinged, aluminum base.

1. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.

C. Fan Wheel: [**Aluminum**] [**Steel**] hub and blades.

D. Belt Drives:

1. Resiliently mounted to housing.
2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
4. Pulleys: Cast-iron, adjustable-pitch motor pulley.

E. Accessories:

1. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted [**inside**] [**outside**] fan housing, factory wired through an internal aluminum conduit.
2. Bird Screens: Removable, **1/2-inch** (13-mm) mesh, aluminum or brass wire.
3. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.

4. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
- F. Roof Curbs: Galvanized steel; mitered and welded corners; 1-1/2-inch- (40-mm-) thick, rigid, fiberglass insulation adhered to inside walls; and 1-1/2-inch (40-mm) wood nailer. Size as required to suit roof opening and fan base.
1. Configuration: [Self-flashing without a cant strip, with mounting flange] [Built-in cant and mounting flange] [Built-in raised cant and mounting flange].
 2. Overall Height: [8 inches (200 mm)] [9-1/2 inches (240 mm)] [12 inches (300 mm)] [16 inches (400 mm)] [18 inches (450 mm)].
 3. Sound Curb: Curb with sound-absorbing insulation.
 4. Pitch Mounting: Manufacture curb for roof slope.
 5. Metal Liner: Galvanized steel.
 6. Burglar Bars: [1/2-inch- (13-mm-)] [5/8-inch- (16-mm-)] [3/4-inch- (19-mm-)] thick steel bars welded in place to form 6-inch (150-mm) squares.
 7. Mounting Pedestal: Galvanized steel with removable access panel.
- G. Capacities and Characteristics:
1. Airflow: <Insert cfm (L/s)>.
 2. External Static Pressure: <Insert inches wg (Pa)>.
 3. Fan Diameter: <Insert inches (mm)>.
 4. Drive Arrangement: [Direct] [Belt drive].
 5. Fan rpm: <Insert value>.
 6. Tip Speed: <Insert fpm (m/s)>.
 7. Sound: <Insert sone>.
 8. Curb Size: <Insert inches by inches (mm by mm)>.
 9. Curb Height: <Insert inches (mm)>.
 10. Damper: [Yes] [No].
 11. Damper Size: <Insert inches by inches (mm by mm)>.
 12. Brake Horsepower: <Insert value>.
 13. Motor Size: <Insert value> hp.
 14. Motor rpm: <Insert value>.
 15. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.

2.4 UPBLAST PROPELLER ROOF EXHAUST FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Acme Engineering & Manufacturing Corporation.](#)
 2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
 3. [American Coolair Corporation.](#)

4. [Ammerman; Millennium Equipment.](#)
 5. [Breidert Air Products.](#)
 6. [Carnes Company.](#)
 7. [Cincinnati Fan.](#)
 8. [Greenheck Fan Corporation.](#)
 9. [Hartzell Fan Incorporated.](#)
 10. [JencoFan.](#)
 11. [Loren Cook Company.](#)
 12. [Madison Manufacturing.](#)
 13. [New York Blower Company \(The\).](#)
 14. [PennBarry.](#)
 15. [Quietaire Inc.](#)
 16. [Stanley Fans.](#)
 17. **<Insert manufacturer's name>.**
 18. or approved equal.
- B. Wind Band, Fan Housing, and Base: Reinforced and braced [**galvanized steel**] [**aluminum**], containing [**galvanized-steel**] [**aluminum**] butterfly dampers and rain trough, motor and drive assembly, and fan wheel.
1. Damper Rods: Steel with [**bronze**] [**nylon**] bearings.
 2. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.
- C. Fan Wheel: Replaceable, [**cast**] [**extruded**]-aluminum, airfoil blades fastened to cast-aluminum hub; factory set pitch angle of blades.
- D. Belt Drives:
1. Resiliently mounted to housing.
 2. Weatherproof housing of same material as fan housing.
 3. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
 4. Shaft Bearings: Prelubricated and sealed, self-aligning, pillow-block-type ball bearings.
 5. Pulleys: Cast-iron, adjustable-pitch motor pulley.
 6. Motor Mount: On outside of fan cabinet, adjustable base for belt tensioning.
- E. Roof Curbs: Galvanized steel; mitered and welded corners; **1-1/2-inch-** (40-mm-) thick, rigid, fiberglass insulation adhered to inside walls; and **1-1/2-inch** (40-mm) wood nailer. Size as required to suit roof opening and fan base.
1. Configuration: [**Self-flashing without a cant strip, with mounting flange**] [**Built-in cant and mounting flange**] [**Built-in raised cant and mounting flange**].
 2. Overall Height: [**8 inches** (200 mm)] [**9-1/2 inches** (240 mm)] [**12 inches** (300 mm)] [**16 inches** (400 mm)] [**18 inches** (450 mm)].
 3. Sound Curb: Curb with sound-absorbing insulation.
 4. Pitch Mounting: Manufacture curb for roof slope.
 5. Metal Liner: Galvanized steel.

6. Burglar Bars: [1/2-inch- (13-mm-)] [5/8-inch- (16-mm-)] [3/4-inch- (19-mm-)] thick steel bars welded in place to form 6-inch (150-mm) squares.
7. Mounting Pedestal: Galvanized steel with removable access panel.

F. Capacities and Characteristics:

1. Airflow: <Insert cfm (L/s)>.
2. External Static Pressure: <Insert inches wg (Pa)>.
3. Fan Diameter: <Insert inches (mm)>.
4. Drive Arrangement: [Direct] [Belt drive].
5. Fan rpm: <Insert value>.
6. Tip Speed: <Insert fpm (m/s)>.
7. Sound: <Insert sone>.
8. Curb Size: <Insert inches by inches (mm by mm)>.
9. Curb Height: <Insert inches (mm)>.
10. Damper: [Yes] [No].
11. Damper Size: <Insert inches by inches (mm by mm)>.
12. Brake Horsepower: <Insert value>.
13. Motor Size: <Insert value> hp.
14. Motor rpm: <Insert value>.
15. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.

2.5 CENTRIFUGAL WALL VENTILATORS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Manufacturing Corporation.](#)
2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
3. [American Coolair Corporation.](#)
4. [Ammerman; Millennium Equipment.](#)
5. [Braidert Air Products.](#)
6. [Broan-NuTone LLC.](#)
7. [Broan-NuTone LLC; NuTone Inc.](#)
8. [Carnes Company.](#)
9. [Greenheck Fan Corporation.](#)
10. [Hartzell Fan Incorporated.](#)
11. [JencoFan.](#)
12. [Loren Cook Company.](#)
13. [PennBarry.](#)
14. [W.W. Grainger, Inc.; Dayton Products.](#)
15. <Insert manufacturer's name>.
16. or approved equal.

- B. Housing: Heavy-gage, removable, spun-aluminum, dome top and outlet baffle; venturi inlet cone.
- C. Fan Wheel: Aluminum hub and wheel with backward-inclined blades.
- D. Belt Drives:
1. Resiliently mounted to housing.
 2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
 3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
 4. Pulleys: Cast-iron, adjustable-pitch motor pulley.
 5. Fan and motor isolated from exhaust airstream.
- E. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through internal aluminum conduit.
 3. Bird Screens: Removable, 1/2-inch (13-mm) mesh, aluminum or brass wire.
 4. Wall Grille: Ring type for flush mounting.
 5. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in wall sleeve; factory set to close when fan stops.
 6. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
- F. Capacities and Characteristics:
1. Airflow: <Insert cfm (L/s)>.
 2. External Static Pressure: <Insert inches wg (Pa)>.
 3. Fan Diameter: <Insert inches (mm)>.
 4. Drive Arrangement: [Direct] [Belt drive].
 5. Fan rpm: <Insert value>.
 6. Tip Speed: <Insert fpm (m/s)>.
 7. Sound: <Insert sone>.
 8. Damper: [Yes] [No].
 9. Damper Size: <Insert inches by inches (mm by mm)>.
 10. Brake Horsepower: <Insert value>.
 11. Motor Size: <Insert value> hp.
 12. Motor rpm: <Insert value>.
 13. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.

2.6 CEILING-MOUNTED VENTILATORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [American Coolair Corporation](#).
 2. [Ammerman; Millennium Equipment](#).
 3. [Breidert Air Products](#).
 4. [Broan-NuTone LLC](#).
 5. [Broan-NuTone LLC; NuTone Inc](#).
 6. [Carnes Company](#).
 7. [FloAire](#).
 8. [Greenheck Fan Corporation](#).
 9. [JencoFan](#).
 10. [Loren Cook Company](#).
 11. [PennBarry](#).
 12. [W.W. Grainger, Inc.; Dayton Products](#).
 13. **<Insert manufacturer's name>**.
 14. or approved equal.
- B. Housing: Steel, lined with acoustical insulation.
- C. Fan Wheel: Centrifugal wheels directly mounted on motor shaft. Fan shrouds, motor, and fan wheel shall be removable for service.
- D. Grille: **[Plastic] [Stainless steel] [Aluminum] [Painted aluminum]**, louvered grille with flange on intake and thumbscrew attachment to fan housing.
- E. Electrical Requirements: Junction box for electrical connection on housing and receptacle for motor plug-in.
- F. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Manual Starter Switch: Single-pole rocker switch assembly with cover and pilot light.
 3. Time-Delay Switch: Assembly with single-pole rocker switch, timer, and cover plate.
 4. Motion Sensor: Motion detector with adjustable shutoff timer.
 5. Ceiling Radiation Damper: Fire-rated assembly with ceramic blanket, stainless-steel springs, and fusible link.
 6. Filter: Washable aluminum to fit between fan and grille.
 7. Isolation: Rubber-in-shear vibration isolators.
 8. Manufacturer's standard roof jack or wall cap, and transition fittings.
- G. Capacities and Characteristics:
1. Airflow: **<Insert cfm (L/s)>**.
 2. External Static Pressure: **<Insert inches wg (Pa)>**.

3. Sound: **<Insert sone>**.
4. Motor Size: **<Insert value>** hp.
5. Motor rpm: **<Insert value>**.
6. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.

2.7 IN-LINE CENTRIFUGAL FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Acme Engineering & Manufacturing Corporation](#).
 2. [American Coolair Corporation](#).
 3. [Ammerman; Millennium Equipment](#).
 4. [Breidert Air Products](#).
 5. [Carnes Company](#).
 6. [FloAire](#).
 7. [Greenheck Fan Corporation](#).
 8. [Hartzell Fan Incorporated](#).
 9. [JencoFan](#).
 10. [Loren Cook Company](#).
 11. [Madison Manufacturing](#).
 12. [PennBarry](#).
 13. [Quietaire Inc.](#)
 14. **<Insert manufacturer's name>**.
 15. or approved equal.
- B. Housing: Split, spun aluminum with aluminum straightening vanes, inlet and outlet flanges, and support bracket adaptable to floor, sidewall, or ceiling mounting.
- C. Direct-Drive Units: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing[; **with wheel, inlet cone, and motor on swing-out service door**].
- D. Belt-Driven Units: Motor mounted on adjustable base, with adjustable sheaves, enclosure around belts within fan housing, and lubricating tubes from fan bearings extended to outside of fan housing.
- E. Fan Wheels: Aluminum, airfoil blades welded to aluminum hub.
- F. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Volume-Control Damper: Manually operated with quadrant lock, located in fan outlet.

3. Companion Flanges: For inlet and outlet duct connections.
4. Fan Guards: **1/2- by 1-inch** (13- by 25-mm) mesh of galvanized steel in removable frame. Provide guard for inlet or outlet for units not connected to ductwork.
5. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.

G. Capacities and Characteristics:

1. Airflow: **<Insert cfm (L/s)>**.
2. External Static Pressure: **<Insert inches wg (Pa)>**.
3. Fan Diameter: **<Insert inches (mm)>**.
4. Wheel Type: **[Backward inclined] [Forward curved] [Airfoil]**.
5. Class: **[I] [II] [III]**.
6. Drive Arrangement: **<Insert AMCA number>**.
7. Fan rpm: **<Insert value>**.
8. Outlet Velocity: **<Insert fpm (m/s)>**.
9. Brake Horsepower: **<Insert value>**.
10. Motor Size: **<Insert value>** hp.
11. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
12. Vibration Isolators:
 - a. Type: **[Elastomeric hangers] <Insert type>**.
 - b. Static Deflection: **[1 inch (25 mm)] <Insert value>**.
13. Spark Arrestance Class: **[A] [B] [C]**.

2.8 PROPELLER FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Manufacturing Corporation.](#)
2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
3. [Airmaster Fan Company.](#)
4. [American Coolair Corporation.](#)
5. [Ammerman; Millennium Equipment.](#)
6. [Breidert Air Products.](#)
7. [Broan-NuTone LLC; NuTone Inc.](#)
8. [Carnes Company.](#)
9. [Chicago Blower Corporation.](#)
10. [Cincinnati Fan.](#)
11. [Hartzell Fan Incorporated.](#)
12. [Howden Buffalo Inc.](#)
13. [JencoFan.](#)
14. [King Company; part of Mestek, Inc.](#)

15. [Loren Cook Company](#).
 16. [Madison Manufacturing](#).
 17. [Moffitt Corporation Inc.](#)
 18. [New York Blower Company \(The\)](#).
 19. [PennBarry](#).
 20. [Quietaire Inc.](#)
 21. [Stanley Fans](#).
 22. [W.W. Grainger, Inc.; Dayton Products](#).
 23. **<Insert manufacturer's name>**.
 24. or approved equal.
- B. Housing: Galvanized-steel sheet with flanged edges and integral orifice ring with baked-enamel finish coat applied after assembly.
- C. Steel Fan Wheels: Formed-steel blades riveted to heavy-gage steel spider bolted to cast-iron hub.
- D. Fan Wheel: Replaceable, **[cast]** **[extruded]**-aluminum, airfoil blades fastened to cast-aluminum hub; factory set pitch angle of blades.
- E. Fan Drive: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing.
- F. Fan Drive:
1. Resiliently mounted to housing.
 2. Statically and dynamically balanced.
 3. Selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
 4. Extend grease fitting to accessible location outside of unit.
 5. Service Factor Based on Fan Motor Size: 1.4.
 6. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
 7. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
 - a. Ball-Bearing Rating Life: ABMA 9, **[L₁₀ of 100,000 hours]** **<Insert life>**.
 8. Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
 9. Motor Pulleys: Adjustable pitch for use with motors through **[5]** **<insert value>** hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 10. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 11. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet.
- G. Accessories:
1. Gravity Shutters: Aluminum blades in aluminum frame; interlocked blades with nylon bearings.

2. Motor-Side Back Guard: Galvanized steel, complying with OSHA specifications, removable for maintenance.
3. Wall Sleeve: Galvanized steel to match fan and accessory size.
4. Weathershield Hood: Galvanized steel to match fan and accessory size.
5. Weathershield Front Guard: Galvanized steel with expanded metal screen.
6. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
7. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.

H. Capacities and Characteristics:

1. Airflow: <Insert cfm (L/s)>.
2. Fan Diameter: <Insert inches (mm)>.
3. Fan rpm: <Insert value>.
4. Brake Horsepower: <Insert value>.
5. Motor Size: <Insert value> hp.
6. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.
7. Vibration Isolators:
 - a. Type: [Elastomeric hangers] [Spring isolators] [Restrained spring isolators] <Insert type>.
 - b. Static Deflection: [1 inch (25 mm)] <Insert value>.
8. Spark Arrestance Class: [A] [B] [C].

2.9 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- B. Enclosure Type: Totally enclosed, fan cooled.

2.10 SOURCE QUALITY CONTROL

- A. Certify sound-power level ratings according to AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.

- B. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Discharge:	64	57	51	47	42	39	38	37
Inlet:	64	57	51	47	42	39	38	37

- C. Certify fan performance ratings, including flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating." Label fans with the AMCA-Certified Ratings Seal.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install power ventilators level and plumb.
- C. Equipment Mounting:
1. Install power ventilators on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - a. Support units using [**spring isolators**] [**restrained spring isolators**] <Insert item> having a static deflection of [**1 inch (25 mm)**] <Insert number>.
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Secure roof-mounted fans to roof curbs with cadmium-plated hardware. See Section 077200 "Roof Accessories" for installation of roof curbs.
- E. Ceiling Units: Suspend units from structure; use steel wire or metal straps.
- F. Support suspended units from structure using threaded steel rods and [**elastomeric hangers**] [**spring hangers**] [**spring hangers with vertical-limit stops**] <Insert device> having a static deflection of [**1 inch (25 mm)**] <Insert deflection>. Vibration-control devices are specified in [**Section 230548 "Vibration and Seismic Controls for HVAC."**] [**Section 230548.13 "Vibration Controls for HVAC."**]
- G. Install units with clearances for service and maintenance.

- H. Extend ducts to **[roof] [wall]** exhausters into **[roof curb] [structure]**. Counterflash duct to **[roof] [wall]** opening.
- I. Provide sheaves required for final air balance.
- J. Install flexible connections specified in Section 233300 "Air Duct Accessories" between fan inlet and ductwork. Ensure metal bands of connectors are parallel with minimum one inch flex between ductwork and fan while running.
- K. Do not operate fans for any purpose until ductwork is clean, filters in place, bearings lubricated, and fan has been test run under observation.
- L. Label units according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.2 CONNECTIONS

- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."
- B. Install ducts adjacent to power ventilators to allow service and maintenance.
- C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- E. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Verify that shipping, blocking, and bracing are removed.
 - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 - 3. Verify that cleaning and adjusting are complete.

4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 5. Adjust belt tension.
 6. Adjust damper linkages for proper damper operation.
 7. Verify lubrication for bearings and other moving parts.
 8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 9. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
 10. Shut unit down and reconnect automatic temperature-control operators.
 11. Remove and replace malfunctioning units and retest as specified above.
- C. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.
- D. Test and adjust controls and safeties. Controls and equipment will be considered defective if they do not pass tests and inspections. Replace damaged and malfunctioning controls and equipment.
- E. Shut unit down and reconnect automatic temperature-control operators.
- F. Refer to Section 230593 "Testing, Adjusting and Balancing for HVAC", adjusting, and balancing procedures.
- G. Replace fan and motor pulleys as required to achieve design airflow.
- H. Repair or replace malfunctioning units. Retest as specified above after repairs or replacements are made.
- I. Prepare test and inspection reports.
- 3.4 ADJUSTING
- A. Adjust damper linkages for proper damper operation.
 - B. Adjust belt tension.
 - C. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.
 - D. Replace fan and motor pulleys as required to achieve design airflow.
 - E. Lubricate bearings.

3.5 CLEANING

- A. On completion of installation, internally clean fans according to manufacturer's written instructions. Remove foreign material and construction debris. Vacuum fan wheel and cabinet.
- B. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train DEN maintenance personnel to adjust, operate, and maintain power ventilators.
- B. Train DEN maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining equipment and schedules.
- C. Review data in maintenance manuals. Refer to Section 230400 "Basic HVAC Requirements".
- D. Schedule training with DEN Project Manager, with at least seven (7) days' advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233423

SECTION 233423 - HVAC POWER VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Utility set fans.
 - 2. Centrifugal roof ventilators.
 - 3. Axial roof ventilators.
 - 4. Upblast propeller roof exhaust fans.
 - 5. Centrifugal wall ventilators.
 - 6. Ceiling-mounted ventilators.
 - 7. In-line centrifugal fans.
 - 8. Propeller fans.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Project Altitude: Base fan-performance ratings on 5,500 feet above sea level. .
- B. Operating Limits: Classify according to AMCA 99.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Also include the following:
 - 1. Certified fan performance curves with system operating conditions indicated.
 - 2. Certified fan sound-power ratings.
 - 3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
 - 4. Material thickness, gages and finishes, including color charts.
 - 5. Dampers, including housings, linkages, and operators.
 - 6. Roof curbs.
 - 7. Fan speed controllers.
 - 8. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
 - a. Differentiate between manufacturer-installed and field-installed wiring.
 3. **[Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.]**
- C. Delegated-Design Submittal: For unit hangars and supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
 2. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
1. Roof framing and support members relative to duct penetrations.
 2. Ceiling suspension assembly members.
 3. Size and location of initial access modules for acoustical tile.
 4. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
- B. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For power ventilators to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

- 1. Belts: [**One (1)**] <Insert number> set(s) for each belt-driven unit.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. AMCA Compliance: Fans shall have AMCA-Certified performance ratings and shall bear the AMCA-Certified Ratings Seal.
- C. UL Standards: Power ventilators shall comply with UL 705. Power ventilators for use for restaurant kitchen exhaust shall also comply with UL 762.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fans as factory-assembled unit, to the extent allowable by shipping limitations, with protective crating and covering.
- B. Disassemble and reassemble units, as required for moving to final location, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.

1.10 COORDINATION

- A. Coordinate size and location of structural-steel support members.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 UTILITY SET FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
 2. [American Coolair Corporation.](#)
 3. [Ammerman; Millennium Equipment.](#)
 4. [Braidert Air Products.](#)
 5. [Carnes Company.](#)
 6. [Delhi Industries Inc.](#)
 7. [Hartzell Fan Incorporated.](#)
 8. [JencoFan.](#)
 9. [Loren Cook Company.](#)
 10. [Madison Manufacturing.](#)
 11. [New York Blower Company \(The\).](#)
 12. [PennBarry.](#)
 13. [Quietaire Inc.](#)
 14. [Trane; a business of American Standard Companies.](#)
 15. **<Insert manufacturer's name>.**
 16. or approved equal.
- B. Housing: Fabricated of [**galvanized**] steel with side sheets fastened with a deep lock seam or welded to scroll sheets.
1. Housing Discharge Arrangement: Adjustable to eight standard positions.
- C. Fan Wheels: Single-width, single inlet; welded to cast-iron or cast-steel hub and spun-steel inlet cone, with hub keyed to shaft.
1. Blade Materials: [**Steel**] [**Aluminum**].
 2. Blade Type: [**Backward inclined**] [**Forward curved**] [**Airfoil**].
 3. Spark-Resistant Construction: AMCA 99, Type [**A**] [**B**] [**C**].
- D. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
- E. Shaft Bearings: Prelubricated and sealed, self-aligning, pillow-block-type ball bearings with ABMA 9, [**L₅₀ of 200,000 hours**] [**L₁₀ of 80,000 hours**] **<Insert life>**.
1. Extend grease fitting to accessible location outside of unit.
- F. Belt Drives:
1. Factory mounted, with final alignment and belt adjustment made after installation
 2. Service Factor Based on Fan Motor Size: [**1.5**] [**1.4**] [**1.3**] [**1.2**].
 3. Motor Pulleys: Adjustable pitch for use with motors through [**5**] **<Insert value>** hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.

4. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
5. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet.

G. Accessories:

1. Inlet and Outlet: Flanged.
2. Companion Flanges: Rolled flanges for duct connections of same material as housing.
3. Backdraft Dampers: Gravity actuated with counterweight and interlocking aluminum blades with felt edges in steel frame installed on fan discharge.
4. Access Door: Gasketed door in scroll with latch-type handles.
5. Scroll Dampers: Single-blade damper installed at fan scroll top with adjustable linkage.
6. Inlet Screens: Removable wire mesh.
7. Drain Connections: **NPS 3/4 (DN 20)** threaded coupling drain connection installed at lowest point of housing.
8. Weather Hoods: Weather resistant with stamped vents over motor and drive compartment.
9. Discharge Dampers: Assembly with [**parallel**] [**opposed**] blades constructed of two plates formed around and to shaft, channel frame, sealed ball bearings, with blades linked outside of airstream to single control lever of same material as housing.
10. Variable Inlet Vanes: With blades supported at both ends with two permanently lubricated bearings of same material as housing. Variable mechanism terminating in single control lever with control shaft for double-width fans.
11. Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.

H. Capacities and Characteristics:

1. Airflow: <Insert cfm (L/s)>.
2. External Static Pressure: <Insert inches wg (Pa)>.
3. Fan Diameter: <Insert inches (mm)>.
4. Wheel Type: [**Backward inclined**] [**Forward curved**] [**Airfoil**].
5. Class: [**I**] [**II**] [**III**].
6. Drive Arrangement: [**Direct**] [**Belt**].
7. Fan rpm: <Insert value>.
8. Outlet Velocity: <Insert fpm (m/s)>.
9. Brake Horsepower: <Insert value>.
10. Motor Size: <Insert value> hp.
11. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.
12. Vibration Isolators:
 - a. Type: [**Spring isolators**] [**Restrained spring isolators**] <Insert type>.

b. Static Deflection: <Insert inches (mm)>.

13. Spark Arrestance Class: [A] [B] [C].

2.2 CENTRIFUGAL ROOF VENTILATORS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Manufacturing Corporation.](#)
2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
3. [American Coolair Corporation.](#)
4. [Ammerman; Millennium Equipment.](#)
5. [Braidert Air Products.](#)
6. [Broan-NuTone LLC.](#)
7. [Broan-NuTone LLC; NuTone Inc.](#)
8. [Carnes Company.](#)
9. [Central Blower Company.](#)
10. [Delhi Industries Inc.](#)
11. [Greenheck Fan Corporation.](#)
12. [Hartzell Fan Incorporated.](#)
13. [JencoFan.](#)
14. [Loren Cook Company.](#)
15. [PennBarry.](#)
16. [Quietaire Inc.](#)
17. [W.W. Grainger, Inc.; Dayton Products.](#)
18. <Insert manufacturer's name>.
19. or approved equal.

B. Housing: Removable, [**spun-aluminum, dome top and outlet baffle**] [**extruded-aluminum, rectangular top**] [**galvanized steel, mushroom-domed top**]; square, one-piece, aluminum base with venturi inlet cone.

1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains[**and grease collector**].
2. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.

C. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.

D. Belt Drives:

1. Resiliently mounted to housing.
2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
4. Pulleys: Cast-iron, adjustable-pitch motor pulley.
5. Fan and motor isolated from exhaust airstream.

E. Accessories:

1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted **[inside]** **[outside]** fan housing, factory wired through an internal aluminum conduit.
3. Bird Screens: Removable, **1/2-inch** (13-mm) mesh, aluminum or brass wire.
4. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.
5. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.

F. Roof Curbs: Galvanized steel; mitered and welded corners; **1-1/2-inch-** (40-mm-) thick, rigid, fiberglass insulation adhered to inside walls; and **1-1/2-inch** (40-mm) wood nailer. Size as required to suit roof opening and fan base.

1. Configuration: **[Self-flashing without a cant strip, with mounting flange]** **[Built-in cant and mounting flange]** **[Built-in raised cant and mounting flange]**.
2. Overall Height: **[8 inches** (200 mm)] **[9-1/2 inches** (240 mm)] **[12 inches** (300 mm)] **[16 inches** (400 mm)] **[18 inches** (450 mm)].
3. Sound Curb: Curb with sound-absorbing insulation.
4. Pitch Mounting: Manufacture curb for roof slope.
5. Metal Liner: Galvanized steel.
6. Burglar Bars: **[1/2-inch-** (13-mm-)] **[5/8-inch-** (16-mm-)] **[3/4-inch-** (19-mm-)] thick steel bars welded in place to form **6-inch** (150-mm) squares.
7. Mounting Pedestal: Galvanized steel with removable access panel.
8. Vented Curb: Unlined with louvered vents in vertical sides.

G. Capacities and Characteristics:

1. Airflow: **<Insert cfm (L/s)>**.
2. External Static Pressure: **<Insert inches wg (Pa)>**.
3. Fan Diameter: **<Insert inches (mm)>**.
4. Drive Arrangement: **[Direct]** **[Belt drive]**.
5. Fan rpm: **<Insert value>**.
6. Tip Speed: **<Insert fpm (m/s)>**.
7. Sound: **<Insert sone>**.
8. Curb Size: **<Insert inches by inches (mm by mm)>**.
9. Curb Height: **<Insert inches (mm)>**.
10. Damper: **[Yes]** **[No]**.
11. Damper Size: **<Insert inches by inches (mm by mm)>**.
12. Brake Horsepower: **<Insert value>**.
13. Motor Size: **<Insert value>** hp.
14. Motor rpm: **<Insert value>**.
15. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.

c. Hertz: <Insert value>.

2.3 AXIAL ROOF VENTILATORS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Manufacturing Corporation.](#)
2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
3. [American Coolair Corporation.](#)
4. [Ammerman; Millennium Equipment.](#)
5. [Breidert Air Products.](#)
6. [Broan-NuTone LLC.](#)
7. [Carnes Company.](#)
8. [FloAire.](#)
9. [Greenheck Fan Corporation.](#)
10. [Hartzell Fan Incorporated.](#)
11. [JencoFan.](#)
12. [Loren Cook Company.](#)
13. [New York Blower Company \(The\).](#)
14. [PennBarry.](#)
15. [Stanley Fans.](#)
16. <Insert manufacturer's name>.
17. or approved equal.

B. **Housing:** Heavy-gage, removable, spun-aluminum, dome top and outlet baffle; square, one-piece, hinged, aluminum base.

1. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.

C. **Fan Wheel:** [**Aluminum**] [**Steel**] hub and blades.

D. **Belt Drives:**

1. Resiliently mounted to housing.
2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
4. Pulleys: Cast-iron, adjustable-pitch motor pulley.

E. **Accessories:**

1. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted [**inside**] [**outside**] fan housing, factory wired through an internal aluminum conduit.
2. Bird Screens: Removable, 1/2-inch (13-mm) mesh, aluminum or brass wire.
3. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.

4. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
- F. Roof Curbs: Galvanized steel; mitered and welded corners; 1-1/2-inch- (40-mm-) thick, rigid, fiberglass insulation adhered to inside walls; and 1-1/2-inch (40-mm) wood nailer. Size as required to suit roof opening and fan base.
1. Configuration: [Self-flashing without a cant strip, with mounting flange] [Built-in cant and mounting flange] [Built-in raised cant and mounting flange].
 2. Overall Height: [8 inches (200 mm)] [9-1/2 inches (240 mm)] [12 inches (300 mm)] [16 inches (400 mm)] [18 inches (450 mm)].
 3. Sound Curb: Curb with sound-absorbing insulation.
 4. Pitch Mounting: Manufacture curb for roof slope.
 5. Metal Liner: Galvanized steel.
 6. Burglar Bars: [1/2-inch- (13-mm-)] [5/8-inch- (16-mm-)] [3/4-inch- (19-mm-)] thick steel bars welded in place to form 6-inch (150-mm) squares.
 7. Mounting Pedestal: Galvanized steel with removable access panel.
- G. Capacities and Characteristics:
1. Airflow: <Insert cfm (L/s)>.
 2. External Static Pressure: <Insert inches wg (Pa)>.
 3. Fan Diameter: <Insert inches (mm)>.
 4. Drive Arrangement: [Direct] [Belt drive].
 5. Fan rpm: <Insert value>.
 6. Tip Speed: <Insert fpm (m/s)>.
 7. Sound: <Insert sone>.
 8. Curb Size: <Insert inches by inches (mm by mm)>.
 9. Curb Height: <Insert inches (mm)>.
 10. Damper: [Yes] [No].
 11. Damper Size: <Insert inches by inches (mm by mm)>.
 12. Brake Horsepower: <Insert value>.
 13. Motor Size: <Insert value> hp.
 14. Motor rpm: <Insert value>.
 15. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.

2.4 UPBLAST PROPELLER ROOF EXHAUST FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Acme Engineering & Manufacturing Corporation.](#)
 2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
 3. [American Coolair Corporation.](#)

4. [Ammerman; Millennium Equipment.](#)
 5. [Breidert Air Products.](#)
 6. [Carnes Company.](#)
 7. [Cincinnati Fan.](#)
 8. [Greenheck Fan Corporation.](#)
 9. [Hartzell Fan Incorporated.](#)
 10. [JencoFan.](#)
 11. [Loren Cook Company.](#)
 12. [Madison Manufacturing.](#)
 13. [New York Blower Company \(The\).](#)
 14. [PennBarry.](#)
 15. [Quietaire Inc.](#)
 16. [Stanley Fans.](#)
 17. **<Insert manufacturer's name>.**
 18. or approved equal.
- B. Wind Band, Fan Housing, and Base: Reinforced and braced [**galvanized steel**] [**aluminum**], containing [**galvanized-steel**] [**aluminum**] butterfly dampers and rain trough, motor and drive assembly, and fan wheel.
1. Damper Rods: Steel with [**bronze**] [**nylon**] bearings.
 2. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.
- C. Fan Wheel: Replaceable, [**cast**] [**extruded**]-aluminum, airfoil blades fastened to cast-aluminum hub; factory set pitch angle of blades.
- D. Belt Drives:
1. Resiliently mounted to housing.
 2. Weatherproof housing of same material as fan housing.
 3. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
 4. Shaft Bearings: Prelubricated and sealed, self-aligning, pillow-block-type ball bearings.
 5. Pulleys: Cast-iron, adjustable-pitch motor pulley.
 6. Motor Mount: On outside of fan cabinet, adjustable base for belt tensioning.
- E. Roof Curbs: Galvanized steel; mitered and welded corners; **1-1/2-inch-** (40-mm-) thick, rigid, fiberglass insulation adhered to inside walls; and **1-1/2-inch** (40-mm) wood nailer. Size as required to suit roof opening and fan base.
1. Configuration: [**Self-flashing without a cant strip, with mounting flange**] [**Built-in cant and mounting flange**] [**Built-in raised cant and mounting flange**].
 2. Overall Height: [**8 inches** (200 mm)] [**9-1/2 inches** (240 mm)] [**12 inches** (300 mm)] [**16 inches** (400 mm)] [**18 inches** (450 mm)].
 3. Sound Curb: Curb with sound-absorbing insulation.
 4. Pitch Mounting: Manufacture curb for roof slope.
 5. Metal Liner: Galvanized steel.

6. Burglar Bars: [1/2-inch- (13-mm-)] [5/8-inch- (16-mm-)] [3/4-inch- (19-mm-)] thick steel bars welded in place to form 6-inch (150-mm) squares.
7. Mounting Pedestal: Galvanized steel with removable access panel.

F. Capacities and Characteristics:

1. Airflow: <Insert cfm (L/s)>.
2. External Static Pressure: <Insert inches wg (Pa)>.
3. Fan Diameter: <Insert inches (mm)>.
4. Drive Arrangement: [Direct] [Belt drive].
5. Fan rpm: <Insert value>.
6. Tip Speed: <Insert fpm (m/s)>.
7. Sound: <Insert sone>.
8. Curb Size: <Insert inches by inches (mm by mm)>.
9. Curb Height: <Insert inches (mm)>.
10. Damper: [Yes] [No].
11. Damper Size: <Insert inches by inches (mm by mm)>.
12. Brake Horsepower: <Insert value>.
13. Motor Size: <Insert value> hp.
14. Motor rpm: <Insert value>.
15. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.

2.5 CENTRIFUGAL WALL VENTILATORS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Manufacturing Corporation.](#)
2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
3. [American Coolair Corporation.](#)
4. [Ammerman; Millennium Equipment.](#)
5. [Braidert Air Products.](#)
6. [Broan-NuTone LLC.](#)
7. [Broan-NuTone LLC; NuTone Inc.](#)
8. [Carnes Company.](#)
9. [Greenheck Fan Corporation.](#)
10. [Hartzell Fan Incorporated.](#)
11. [JencoFan.](#)
12. [Loren Cook Company.](#)
13. [PennBarry.](#)
14. [W.W. Grainger, Inc.; Dayton Products.](#)
15. <Insert manufacturer's name>.
16. or approved equal.

- B. Housing: Heavy-gage, removable, spun-aluminum, dome top and outlet baffle; venturi inlet cone.
- C. Fan Wheel: Aluminum hub and wheel with backward-inclined blades.
- D. Belt Drives:
1. Resiliently mounted to housing.
 2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
 3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
 4. Pulleys: Cast-iron, adjustable-pitch motor pulley.
 5. Fan and motor isolated from exhaust airstream.
- E. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through internal aluminum conduit.
 3. Bird Screens: Removable, 1/2-inch (13-mm) mesh, aluminum or brass wire.
 4. Wall Grille: Ring type for flush mounting.
 5. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in wall sleeve; factory set to close when fan stops.
 6. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
- F. Capacities and Characteristics:
1. Airflow: <Insert cfm (L/s)>.
 2. External Static Pressure: <Insert inches wg (Pa)>.
 3. Fan Diameter: <Insert inches (mm)>.
 4. Drive Arrangement: [Direct] [Belt drive].
 5. Fan rpm: <Insert value>.
 6. Tip Speed: <Insert fpm (m/s)>.
 7. Sound: <Insert sone>.
 8. Damper: [Yes] [No].
 9. Damper Size: <Insert inches by inches (mm by mm)>.
 10. Brake Horsepower: <Insert value>.
 11. Motor Size: <Insert value> hp.
 12. Motor rpm: <Insert value>.
 13. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.

2.6 CEILING-MOUNTED VENTILATORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [American Coolair Corporation](#).
 2. [Ammerman; Millennium Equipment](#).
 3. [Breidert Air Products](#).
 4. [Broan-NuTone LLC](#).
 5. [Broan-NuTone LLC; NuTone Inc](#).
 6. [Carnes Company](#).
 7. [FloAire](#).
 8. [Greenheck Fan Corporation](#).
 9. [JencoFan](#).
 10. [Loren Cook Company](#).
 11. [PennBarry](#).
 12. [W.W. Grainger, Inc.; Dayton Products](#).
 13. **<Insert manufacturer's name>**.
 14. or approved equal.
- B. Housing: Steel, lined with acoustical insulation.
- C. Fan Wheel: Centrifugal wheels directly mounted on motor shaft. Fan shrouds, motor, and fan wheel shall be removable for service.
- D. Grille: **[Plastic] [Stainless steel] [Aluminum] [Painted aluminum]**, louvered grille with flange on intake and thumbscrew attachment to fan housing.
- E. Electrical Requirements: Junction box for electrical connection on housing and receptacle for motor plug-in.
- F. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Manual Starter Switch: Single-pole rocker switch assembly with cover and pilot light.
 3. Time-Delay Switch: Assembly with single-pole rocker switch, timer, and cover plate.
 4. Motion Sensor: Motion detector with adjustable shutoff timer.
 5. Ceiling Radiation Damper: Fire-rated assembly with ceramic blanket, stainless-steel springs, and fusible link.
 6. Filter: Washable aluminum to fit between fan and grille.
 7. Isolation: Rubber-in-shear vibration isolators.
 8. Manufacturer's standard roof jack or wall cap, and transition fittings.
- G. Capacities and Characteristics:
1. Airflow: **<Insert cfm (L/s)>**.
 2. External Static Pressure: **<Insert inches wg (Pa)>**.

3. Sound: **<Insert sone>**.
4. Motor Size: **<Insert value>** hp.
5. Motor rpm: **<Insert value>**.
6. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.

2.7 IN-LINE CENTRIFUGAL FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Acme Engineering & Manufacturing Corporation.](#)
 2. [American Coolair Corporation.](#)
 3. [Ammerman; Millennium Equipment.](#)
 4. [Breidert Air Products.](#)
 5. [Carnes Company.](#)
 6. [FloAire.](#)
 7. [Greenheck Fan Corporation.](#)
 8. [Hartzell Fan Incorporated.](#)
 9. [JencoFan.](#)
 10. [Loren Cook Company.](#)
 11. [Madison Manufacturing.](#)
 12. [PennBarry.](#)
 13. [Quietaire Inc.](#)
 14. **<Insert manufacturer's name>**.
 15. or approved equal.
- B. Housing: Split, spun aluminum with aluminum straightening vanes, inlet and outlet flanges, and support bracket adaptable to floor, sidewall, or ceiling mounting.
- C. Direct-Drive Units: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing[; **with wheel, inlet cone, and motor on swing-out service door**].
- D. Belt-Driven Units: Motor mounted on adjustable base, with adjustable sheaves, enclosure around belts within fan housing, and lubricating tubes from fan bearings extended to outside of fan housing.
- E. Fan Wheels: Aluminum, airfoil blades welded to aluminum hub.
- F. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Volume-Control Damper: Manually operated with quadrant lock, located in fan outlet.

3. Companion Flanges: For inlet and outlet duct connections.
4. Fan Guards: **1/2- by 1-inch** (13- by 25-mm) mesh of galvanized steel in removable frame. Provide guard for inlet or outlet for units not connected to ductwork.
5. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.

G. Capacities and Characteristics:

1. Airflow: **<Insert cfm (L/s)>**.
2. External Static Pressure: **<Insert inches wg (Pa)>**.
3. Fan Diameter: **<Insert inches (mm)>**.
4. Wheel Type: **[Backward inclined] [Forward curved] [Airfoil]**.
5. Class: **[I] [II] [III]**.
6. Drive Arrangement: **<Insert AMCA number>**.
7. Fan rpm: **<Insert value>**.
8. Outlet Velocity: **<Insert fpm (m/s)>**.
9. Brake Horsepower: **<Insert value>**.
10. Motor Size: **<Insert value>** hp.
11. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
12. Vibration Isolators:
 - a. Type: **[Elastomeric hangers] <Insert type>**.
 - b. Static Deflection: **[1 inch (25 mm)] <Insert value>**.
13. Spark Arrestance Class: **[A] [B] [C]**.

2.8 PROPELLER FANS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Manufacturing Corporation.](#)
2. [Aerovent; a division of Twin City Fan Companies, Ltd.](#)
3. [Airmaster Fan Company.](#)
4. [American Coolair Corporation.](#)
5. [Ammerman; Millennium Equipment.](#)
6. [Breidert Air Products.](#)
7. [Broan-NuTone LLC; NuTone Inc.](#)
8. [Carnes Company.](#)
9. [Chicago Blower Corporation.](#)
10. [Cincinnati Fan.](#)
11. [Hartzell Fan Incorporated.](#)
12. [Howden Buffalo Inc.](#)
13. [JencoFan.](#)
14. [King Company; part of Mestek, Inc.](#)

15. [Loren Cook Company](#).
 16. [Madison Manufacturing](#).
 17. [Moffitt Corporation Inc.](#)
 18. [New York Blower Company \(The\)](#).
 19. [PennBarry](#).
 20. [Quietaire Inc.](#)
 21. [Stanley Fans](#).
 22. [W.W. Grainger, Inc.; Dayton Products](#).
 23. **<Insert manufacturer's name>**.
 24. or approved equal.
- B. Housing: Galvanized-steel sheet with flanged edges and integral orifice ring with baked-enamel finish coat applied after assembly.
- C. Steel Fan Wheels: Formed-steel blades riveted to heavy-gage steel spider bolted to cast-iron hub.
- D. Fan Wheel: Replaceable, [**cast**] [**extruded**]-aluminum, airfoil blades fastened to cast-aluminum hub; factory set pitch angle of blades.
- E. Fan Drive: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing.
- F. Fan Drive:
1. Resiliently mounted to housing.
 2. Statically and dynamically balanced.
 3. Selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
 4. Extend grease fitting to accessible location outside of unit.
 5. Service Factor Based on Fan Motor Size: 1.4.
 6. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
 7. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
 - a. Ball-Bearing Rating Life: ABMA 9, [**L₁₀ of 100,000 hours**] **<Insert life>**.
 8. Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
 9. Motor Pulleys: Adjustable pitch for use with motors through [**5**] **<insert value>** hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 10. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 11. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet.
- G. Accessories:
1. Gravity Shutters: Aluminum blades in aluminum frame; interlocked blades with nylon bearings.

2. Motor-Side Back Guard: Galvanized steel, complying with OSHA specifications, removable for maintenance.
3. Wall Sleeve: Galvanized steel to match fan and accessory size.
4. Weathershield Hood: Galvanized steel to match fan and accessory size.
5. Weathershield Front Guard: Galvanized steel with expanded metal screen.
6. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
7. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.

H. Capacities and Characteristics:

1. Airflow: <Insert cfm (L/s)>.
2. Fan Diameter: <Insert inches (mm)>.
3. Fan rpm: <Insert value>.
4. Brake Horsepower: <Insert value>.
5. Motor Size: <Insert value> hp.
6. Electrical Characteristics:
 - a. Volts: <Insert value>.
 - b. Phase: <Insert value>.
 - c. Hertz: <Insert value>.
7. Vibration Isolators:
 - a. Type: [Elastomeric hangers] [Spring isolators] [Restrained spring isolators] <Insert type>.
 - b. Static Deflection: [1 inch (25 mm)] <Insert value>.
8. Spark Arrestance Class: [A] [B] [C].

2.9 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- B. Enclosure Type: Totally enclosed, fan cooled.

2.10 SOURCE QUALITY CONTROL

- A. Certify sound-power level ratings according to AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.

- B. Sound Ratings: ARI 260. Sound power levels from discharge and inlet openings of the unit shall not exceed the following:

	63 Hz	125 Hz	250 Hz	500 Hz	1000 Hz	2000 Hz	4000 Hz	8000 Hz
Discharge:	64	57	51	47	42	39	38	37
Inlet:	64	57	51	47	42	39	38	37

- C. Certify fan performance ratings, including flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating." Label fans with the AMCA-Certified Ratings Seal.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install power ventilators level and plumb.
- C. Equipment Mounting:
1. Install power ventilators on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - a. Support units using [**spring isolators**] [**restrained spring isolators**] <Insert item> having a static deflection of [**1 inch (25 mm)**] <Insert number>.
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- D. Secure roof-mounted fans to roof curbs with cadmium-plated hardware. See Section 077200 "Roof Accessories" for installation of roof curbs.
- E. Ceiling Units: Suspend units from structure; use steel wire or metal straps.
- F. Support suspended units from structure using threaded steel rods and [**elastomeric hangers**] [**spring hangers**] [**spring hangers with vertical-limit stops**] <Insert device> having a static deflection of [**1 inch (25 mm)**] <Insert deflection>. Vibration-control devices are specified in [**Section 230548 "Vibration and Seismic Controls for HVAC."**] [**Section 230548.13 "Vibration Controls for HVAC."**]
- G. Install units with clearances for service and maintenance.

- H. Extend ducts to **[roof] [wall]** exhausters into **[roof curb] [structure]**. Counterflash duct to **[roof] [wall]** opening.
- I. Provide sheaves required for final air balance.
- J. Install flexible connections specified in Section Section 233300 "Air Duct Accessories" between fan inlet and ductwork. Ensure metal bands of connectors are parallel with minimum one inch flex between ductwork and fan while running.
- K. Do not operate fans for any purpose until ductwork is clean, filters in place, bearings lubricated, and fan has been test run under observation.
- L. Label units according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.2 CONNECTIONS

- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."
- B. Install ducts adjacent to power ventilators to allow service and maintenance.
- C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- E. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Verify that shipping, blocking, and bracing are removed.
 - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 - 3. Verify that cleaning and adjusting are complete.

4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 5. Adjust belt tension.
 6. Adjust damper linkages for proper damper operation.
 7. Verify lubrication for bearings and other moving parts.
 8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 9. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
 10. Shut unit down and reconnect automatic temperature-control operators.
 11. Remove and replace malfunctioning units and retest as specified above.
- C. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.
- D. Test and adjust controls and safeties. Controls and equipment will be considered defective if they do not pass tests and inspections. Replace damaged and malfunctioning controls and equipment.
- E. Shut unit down and reconnect automatic temperature-control operators.
- F. Refer to Section 230593 "Testing, Adjusting and Balancing for HVAC", adjusting, and balancing procedures.
- G. Replace fan and motor pulleys as required to achieve design airflow.
- H. Repair or replace malfunctioning units. Retest as specified above after repairs or replacements are made.
- I. Prepare test and inspection reports.
- 3.4 ADJUSTING
- A. Adjust damper linkages for proper damper operation.
 - B. Adjust belt tension.
 - C. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.
 - D. Replace fan and motor pulleys as required to achieve design airflow.
 - E. Lubricate bearings.

3.5 CLEANING

- A. On completion of installation, internally clean fans according to manufacturer's written instructions. Remove foreign material and construction debris. Vacuum fan wheel and cabinet.
- B. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train DEN maintenance personnel to adjust, operate, and maintain power ventilators.
- B. Train DEN maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining equipment and schedules.
- C. Review data in maintenance manuals. Refer to Section 230400 "Basic HVAC Requirements".
- D. Schedule training with DEN Project Manager, with at least seven (7) days' advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233423

SECTION 233433 - AIR CURTAINS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes air curtains [**with**] [**hot-water heat**] [**steam heat**] [**electric heat**] [**gas-fired heater**].
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties, and accessories.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For air curtains. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Wiring Diagrams: For power, signal, and control wiring.
- C. Delegated-Design Submittal: For air curtains indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Detail fabrication and assembly of air-curtain mounting assemblies.
 - 2. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**].
- D. Coordination Drawings: Plans and details drawn to scale and coordinating penetrations of exterior walls.
- E. Samples for Initial Selection: For units with factory-applied color finishes.

1.4 INFORMATIONAL SUBMITTALS

- A. Warranties: Sample of special warranties.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air curtains to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Furnish one (1) set of filters for each unit.
 2. Furnish one (1) set of fan belts for each unit.

1.7 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of air curtains and are based on the specific product indicated. Refer to Division 1.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
- C. Comply with AMCA 220, "Laboratory Methods of Testing Air Curtains for Aerodynamic Performance Ratings," for airflow, outlet velocity, and power consumption.
- D. Comply with ARI 410, "Forced-Circulation Air-Cooling and Air-Heating Coils," for components, construction, and rating.
1. Certify coils according to ARI 410.
- E. Comply with NSF 37, "Air Curtains for Entranceways in Food and Food Service Establishments."

1.8 COORDINATION

- A. Coordinate layout and installation of air curtains and suspension system components with other construction, including light fixtures, fire-suppression-system components, and partition assemblies.
- B. Coordinate installation of wall penetrations and louvers.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of air curtains that fail in materials or workmanship within specified warranty period.
1. Warranty Period (Nonheating Units): Minimum [**Five years**] [**Two years**] [**One year**] <Insert period>
 2. Warranty Period (Water or Steam Heating Units): Minimum [**Five years**] [**Two years**] [**One year**] <Insert period>
 3. Warranty Period (Gas Heating Units): Minimum [**Five years**] [**Two years**] [**One year**] <Insert period> months.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 AIR-CURTAIN UNIT<Insert drawing designation>

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Air Economy Corporation](#).
 2. [Berner International](#).
 3. [Biddle Air Systems Limited](#).
 4. [Cambridge Engineering, Inc.](#)
 5. [Disco Engineering, Inc.](#)
 6. [Fantech](#).
 7. [King Company; a company of Mestek, Inc.](#)
 8. [Loren Cook Company](#).
 9. [Marley Engineered Products](#).
 10. [Mars Air Doors; Mars Air System](#).
 11. [Mestek, Inc.; L. J. Wing Division](#).
 12. [Miniveil Air Systems](#).
 13. [Powered Aire, Inc.](#)
 14. [TMI, LLC; Curtron Products Division](#).
 15. <Insert manufacturer's name>.
 16. or approved equal.
- B. Housing:
1. Materials: Galvanized steel with electrostatically-applied epoxy-enamel finish over powdered mirror.
 2. Materials: One-piece, molded, high-impact, white polymer material.

3. Materials: Heavy-gage, electroplated-zinc steel with welded construction and polyester-coated finish.
 4. Materials: Heavy-gage, aluminum construction.
 - a. Anodized Finish: Match finish and color of adjacent architectural metals. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - b. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
 - 1) Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: Nonspecular as fabricated; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.
 - 2) Class II, Color Anodic Finish: AA-M12C22A32/A34 (Mechanical Finish: Nonspecular as fabricated; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class II, integrally colored or electrolytically deposited color coating 0.010 mm or thicker).
 5. Materials: Stainless steel.
 6. Discharge Nozzle: Integral part of the housing, containing fixed air-directional vanes.
 7. Discharge Nozzle: Integral part of the housing, containing adjustable air-directional vanes with **[40] [20] [15] <Insert number>**-degree sweep front to back.
 8. Discharge Nozzle: Integral part of the housing, containing air-directional vanes adjustable in 5-degree increments through a 45-degree sweep front to back.
- C. Mounting Brackets: Steel, for **[wall] [ceiling]** mounting.
- D. Air-Intake Louvers: Comply with requirements in Section 089000 "Louvers and Vents."
- E. Air-Intake **[Louvers] [Grille]**:
1. Louvers: Integral part of and same material as the housing, mechanically field adjustable and capable of reducing air-outlet velocity by **[60] <Insert number>** percent with louver in totally closed position.
 2. Grille: Integral part of and same material as the housing.
 3. Insect Screen: **[Aluminum] [Stainless steel]**, removable.
- F. Fans:
1. **[Centrifugal, forward curved, double width, double inlet] [Vane axial]**.
 2. **[Galvanized steel] [Painted steel] [Aluminum]**.
 3. Statically and dynamically balanced.
 4. **[Direct drive] [Belt drive and equipped with belt guards and adjustable sheaves and pulleys]**.

- G. Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 2. **[Single speed] [Two speed] [Multispeed]**.
 3. Resiliently mounted.
 4. Continuous duty.
 5. **[Totally enclosed, air over] [Totally enclosed, fan cooled] [Open, dripproof] [Explosion proof]**.
 6. Integral thermal-overload protection.
 7. Bearings: Permanently sealed, lifetime, prelubricated, ball bearings.
 8. Disconnect: Internal power cord with plug and receptacle.
- H. Water Coils:
1. Type: **[Continuous-circuit] [Self-draining] [Cleanable]**.
 2. Piping Connections: Threaded on **[same end] [opposite ends]**.
 3. Tube Material: Copper, complying with **ASTM B 75** (ASTM B 75M).
 - a. Tube Diameter: **0.625 inch** (15.9 mm).
 4. Fins: **[Aluminum] [Copper]** with fin spacing **[0.167 inch (4.23 mm)] [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.80 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.42 mm)] [0.0075 inch (0.19 mm)]**.
 5. Fin and Tube Joint: **[Mechanical bond] [Silver brazed]**.
 6. Headers: **[Cast iron with drain and air vent tappings] [Cast iron with cleaning plugs, and drain and air vent tappings] [Seamless copper tube with brazed joints, prime coated] [Fabricated steel with brazed joints, prime coated]**.
 7. Frames: Galvanized-steel channel frame, **[0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] [0.079 inch (2.0 mm)] [0.0625 inch (1.59 mm)]**.
 8. Ratings: According to ASHRAE 33.
 9. Working-Pressure Ratings: **200 psig** (1380 kPa), **325 deg F** (163 deg C).
- I. Steam Coils: **[Distribution-header] [Single-tube]** coil, with threaded steam supply and condensate connections.
1. Piping Connections: **[Same end] [Opposite ends] [Steam supply on both ends; condensate on one end]**.
 2. Tube Material: Copper, complying with **ASTM B 75** (ASTM B 75M).
 3. Tube Diameter: **0.625 inch** (15.9 mm).
 4. Fins: **[Aluminum] [Copper]** with fin spacing **[0.167 inch (4.23 mm)] [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.80 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.42 mm)] [0.0075 inch (0.19 mm)]**.
 5. Fin and Tube Joint: **[Mechanical bond] [Silver brazed]**.
 6. Headers: **[Cast iron with drain and air vent tappings] [Cast iron with cleaning plugs, and drain and air vent tappings] [Seamless copper tube]**

with brazed joints, prime coated] [Fabricated steel with brazed joints, prime coated].

7. Frames: Galvanized-steel channel frame, [0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] [0.079 inch (2.0 mm)] [0.0625 inch (1.59 mm)].
8. Pressure and Temperature Ratings: 100 psig (690 kPa), 400 deg F (205 deg C) according to ASHRAE 33.

J. Electric-Resistance Coils:

1. Coil Assembly: Comply with UL 1995.
2. Frame: Galvanized-steel frame.
3. Heating Elements: Coiled resistance wire of 80 percent nickel and 20 percent chromium; surrounded by compacted magnesium-oxide powder in tubular-steel sheath; with spiral-wound, copper-plated, steel fins continuously brazed to sheath.
4. Heating Elements: Open-coil resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
5. Overtemperature Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box without removing heater from duct or unit.
 - a. Secondary Protection: Load-carrying, manually reset or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
6. Control Panel: [Unit] [Remote] mounted with disconnecting means and overcurrent protection. Include the following controls:
 - a. Magnetic contactor.
 - b. Mercury contactor.
 - c. Solid-state stepless pulse controller.
 - d. Toggle switches; one per step.
 - e. Step controller.
 - f. Time-delay relay.
 - g. Pilot lights; one per step.
 - h. Airflow-proving switch.

K. Gas-Fired Heaters:

1. Comply with ANSI Z83.8/CSA 2.6, "Gas Unit Heaters and Gas-Fired Duct Furnaces."
 - a. CSA Approval: Bear CSA label.
 - b. Type of Gas: [Natural] [LP].
2. Assembly and Wiring: Heaters factory assembled, piped, wired, and tested for 120-V ac.
3. Housing: Steel, with integral draft hood and inserts for suspension-mounted rods.

4. External Casings and Cabinets: Baked enamel over corrosion-resistant-treated surface.
5. Heat Exchanger: **[Aluminized]** **[Stainless]** steel.
6. Burners: Cast iron or aluminized steel with stainless-steel inserts.
7. Gravity vent.
8. Power Venter: 120-V ac, with stainless-steel shaft.
9. Automatic Gas Control: **[Single]** **[Two]**-stage, 24-V ac valve.
10. Ignition: **[Standing pilot]** **[Electronically controlled spark with flame sensor]**.

L. Filters:

1. Disposable Panel Filters: Factory-fabricated, viscous-coated, flat-panel-type, disposable air filters with glass-fiber media sprayed with nonflammable adhesive in **[cardboard]** **[galvanized-steel]** frame.
2. Washable Panel Filters: Removable, stainless-steel, baffle-type filters with spring-loaded fastening; with minimum **0.0781-inch-** (1.984-mm-) thick, stainless-steel filter frame.
3. Mounting Frames: Welded, galvanized steel with gaskets and fasteners and suitable for bolting together into built-up filter banks.

M. Controls:

1. **[Built-in]** **[Field-Installed]** Thermostat: Line voltage, factory installed and wired to the **[junction box on air curtain]** **[motor-control panel]**.
2. Automatic Door Switch: **[Roller type]** **[Combination roller-plunger type]** **[Plunger type]** installed in door area to activate air curtain when door opens and to deactivate air curtain when door closes.
3. Start-Stop, Push-Button Switch: Manually activates and deactivates air curtain.
4. Three-Speed Switch: Manually activates, deactivates, and controls air-curtain fan speed.
5. Time-Delay Relay: Factory installed and adjustable to allow air curtain to operate from 0.5 seconds to 10 hours.
6. Motor-Control Panel: Complete with motor starter, 115-V ac transformer with primary and secondary fuses, terminal strip, and NEMA 250, **[Type 1]** **[Type 12]** enclosure**[with door-mounted hands-off-auto switch]**.

N. Accessories:

1. Mounting Brackets: Adjustable mounting brackets for drum-type roll-up doors.
2. Discharge Extension Neck: For ceiling-recessed installation.

O. Capacities and Characteristics:

1. Application: **[Thermal barrier]** **[Wind resistance]** **[Interior separation]** **[Fly and insect control]**.
2. Mounting Type: **[Suspension]** **[Wall brackets]** **[Keyhole wall mount]**.
3. Discharge Direction: **[Horizontal]** **[Vertical]**.
4. Door Type: **[Exterior]** **[Interior]**.
5. Door Height: <Insert inches (mm)>.
6. Door Width: <Insert inches (mm)>.

7. Unit Length: <Insert inches (mm)>.
8. Net Weight: <Insert lb (kg)>.
9. Nozzle Velocity: [1000 fpm (5 m/s)] <Insert fpm (m/s)>.
10. Airflow: <Insert cfm (L/s)>.
11. Intake: [Internal] [External].
12. Number of Fan(s): [1] [2] [3] <Insert number>.
13. Fan Motor:
 - a. Electrical Characteristics:
 - 1) Horsepower: [0.5] [1] [2] [3] <Insert value>.
 - 2) Volts: [120] [208] [230] [460] <Insert value>.
 - 3) Phase: [Single] [Poly].
 - 4) Hertz: 60.
 - 5) Speed: [1750] <Insert number> rpm.
 - 6) Full-Load Amperes: <Insert value>.
 - 7) Minimum Circuit Ampacity: <Insert value>.
 - 8) Maximum Overcurrent Protection: <Insert amperage>.
14. Sound Level Measured 10 feet (3 m) from Nozzle: <Insert number> dBA.
15. Hot-Water Coil:
 - a. Entering-Water Temperature: <Insert deg F (deg C)>.
 - b. Leaving-Water Temperature: <Insert deg F (deg C)>.
 - c. Water Flow: <Insert gpm (L/s)>.
 - d. Water Pressure Drop: <Insert feet of head (kPa)>.
 - e. Air-Temperature Rise: <Insert deg F (deg C)>.
 - f. Number of Coil Row(s): [1] [2] <Insert number>.
16. Steam Coil:
 - a. Capacity: <Insert MBh (kW)>.
 - b. Air-Temperature Rise: <Insert deg F (deg C)>.
 - c. Number of Coil Row(s): [1] [2] <Insert number>.
 - d. Inlet Pressure: <Insert psig (kPa)>.
 - e. Condensing Capacity: <Insert lb/h (g/s)>.
17. Electric Heater:
 - a. Capacity: <Insert kW>.
 - b. Air-Temperature Rise: <Insert deg F (deg C)>.
 - c. Volts: [120] [208] [230] [460] <Insert value>.
 - d. Phase: [Single] [Poly].
 - e. Hertz: 60.
 - f. Minimum Circuit Ampacity: <Insert value>.
 - g. Maximum Overcurrent Protection: <Insert amperage>.
 - h. Control Step(s): [One] [Two] [Three] <Insert value>.
18. Gas-Fired Heaters:

- a. Capacity: <Insert Btu/h (W)> at <Insert wg (Pa)> gas pressure.
- b. Air-Temperature Rise: <Insert deg F (deg C)>.

2.2 SOURCE QUALITY CONTROL

- A. Source Quality Control: Test to **300 psig** (2070 kPa) and to **200 psig** (1380 kPa) underwater.
- B. Testing: Test and inspect steam coils according to ASHRAE 33.
- C. Steam coils will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for [**hot-water**] [**steam**] [**gas**] piping systems to verify actual locations of piping connections before air-curtain installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install air curtains with clearance for equipment service and maintenance.
- B. Equipment Installation: Install air curtains[**with seismic-restraint devices**]. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- C. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

3.3 CONNECTIONS

- A. Comply with requirements for heating hot water piping specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements for steam piping specified in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

- C. Comply with requirements for natural gas piping specified in Section 231123 "Facility Natural-Gas Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- D. Comply with requirements for LP gas piping specified in Section 231126 "Facility Liquefied-Petroleum Gas Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- E. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.
- F. Breeching: Comply with applicable requirements in Section 235116 "Fabricated Breechings and Accessories." Connect breeching to full size at flue outlet.
- G. Ground equipment according to Division 26.
- H. Connect wiring according to Division 26.

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. After installing air curtains completely, perform visual and mechanical check of individual components.
 - 2. After electrical circuitry has been energized, start unit to confirm motor rotation and unit operation. Certify compliance with test parameters.
 - 3. Inspect for water leaks.
 - 4. Test gas train and verify that there are no gas leaks.
 - 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Air-curtain unit will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Adjust belt tension.
- B. Adjust motor and fan speed to achieve specified airflow.
- C. Adjust discharge louver and dampers to regulate airflow.

- D. Adjust air-directional vanes.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain air curtains.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233433

SECTION 233600 - AIR TERMINAL UNITS

IT INCLUDES DUAL DUCT UNITS INCORPORATING DIFFUSERS, AND UNITS SUPPLIED FOR FIELD INSTALLATION OF CONTROLS BY A CONTROLS CONTRACTOR. AIR OUTLETS AND INLETS ARE NOT INCLUDED IN THIS SECTION.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Bypass, single-duct air terminal units.
 - 2. Dual-duct air terminal units.
 - 3. Fan-powered air terminal units.
 - 4. Induction air terminal units.
 - 5. Shutoff, single-duct air terminal units.
 - 6. Diffuser-type air terminal units.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of the following products, including configuration, general assembly, materials used in fabrication. Include catalog performance ratings that indicate airflow, static pressure, and NC designation. Include rated capacities, electrical characteristics and connection requirements, furnished specialties, sound-power ratings, and accessories.
 - 1. Air terminal units.
 - 2. Liners and adhesives.
 - 3. Sealants and gaskets.

4. Seismic-restraint devices.
5. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."

C. Shop Drawings: For air terminal units. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.
3. Hangers and supports, including methods for duct and building attachment[, **seismic restraints,**] and vibration isolation.

D. Delegated-Design Submittal:

1. Materials, fabrication, assembly, and spacing of hangers and supports.
2. Design Calculations: Calculations[, **including analysis data signed and sealed by the qualified professional engineer responsible for their preparation**] for selecting hangers and supports[**and seismic restraints**].

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Ceiling suspension assembly members.
2. Size and location of initial access modules for acoustic tile.
3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

B. Copies of required warranties.

C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts lists. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

1. Instructions for resetting minimum and maximum air volumes.

2. Instructions for adjusting software set points.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1. Record actual locations of [units] [, controls components] <Insert item>.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fan-Powered-Unit Filters: Furnish [one (1)] <Insert number> spare filter(s) for each filter installed.

2. Provide [two (2)] <Insert number> additional electric motors of each size on Project.

1.7 QUALITY ASSURANCE

A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."

B. Base performance on tests conducted in accordance with ADC 1062.

C. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. NFPA Compliance: Install air terminal units according to NFPA 90A.

1.8 WARRANTY

A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements".

B. Provide [five (5)] <Insert number> year warranty for [system powered control systems.] [operating controls.] [electric motors.]

1.9 CONSTRUCTION WASTE MANAGEMENT

A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to

satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Hangers and supports[**and seismic restraints**] shall withstand the effects of gravity[**and seismic**] loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" [and] [ASCE/SEI 7] [SMACNA's "**Seismic Restraint Manual: Guidelines for Mechanical Systems**"] <Insert document>.
1. Seismic Hazard Level A: Seismic force to weight ratio, 0.48.
 2. Seismic Hazard Level B: Seismic force to weight ratio, 0.30.
 3. Seismic Hazard Level C: Seismic force to weight ratio, 0.15.

2.2 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 BYPASS, SINGLE-DUCT AIR TERMINAL UNITS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Carnes](#).
 2. [Carrier Corporation](#).
 3. [Titus](#).
 4. <Insert manufacturer's name>.
 5. or approved equal.
- B. Configuration: Diverting-damper assembly inside unit casing with control components inside a protective metal shroud.
- C. Casing: [0.034-inch (0.85-mm) **steel**] [0.032-inch (0.8-mm) **aluminum**], [**single**] [**double**] wall.
1. Casing Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.

2. Casing Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 3. Air Inlet: Round stub connection for duct attachment.
 4. Air Outlet: S-slip and drive connections.
 5. Access: Removable panels for access to diverting damper and other parts requiring service, adjustment, or maintenance; with airtight gasket.
 6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Diverter Assembly: [**Galvanized-steel gate, with polyethylene linear bearings**] [**Aluminum blade, with nylon-fitted pivot points**].
- E. Multioutlet Attenuator Section: With [**two**] [**three**] [**four**] <Insert number> [6-inch- (150-mm-)] [8-inch- (200-mm-)] [10-inch- (250-mm-)] diameter collars, each with locking butterfly balancing damper.
- F. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), and rated for a minimum working pressure of 200 psig (1380 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.
- G. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.
1. Access door interlocked disconnect switch.
 2. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
 3. Nickel chrome 80/20 heating elements.
 4. Airflow switch for proof of airflow.
 5. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
 6. Mercury contactors.
 7. Pneumatic-electric switches and relays.
 8. Magnetic contactor for each step of control (for three-phase coils).
- H. Electric Controls: Damper actuator and thermostat.
1. Damper Actuator: 24 V, powered closed, powered open[**with microswitch to energize heating control circuit**].
 2. Thermostat: Wall-mounted electric type with temperature display in Fahrenheit and Celsius, and space temperature set point.
 3. Changeover Thermostat: Duct-mounted, field-adjustable, electric type reverses action of zone thermostat when air temperature reaches 70 deg F (21 deg C).

- I. Electronic Controls: Bidirectional damper operator and microprocessor-based thermostat. Control devices shall be compatible with temperature controls and shall have the following features:
 1. Damper Actuator: 24 V, powered closed, powered open.
 2. Thermostat: Wall-mounted electronic type with the following features:
 - a. Temperature set-point display in Fahrenheit and Celsius.
 - b. Auxiliary switch to energize heating control circuit.
 - c. Changeover thermistor to reverse action.

2.4 DUAL-DUCT AIR TERMINAL UNITS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Anemostat Products; a Mestek Company.](#)
 2. [Carnes.](#)
 3. [Krueger.](#)
 4. [METALAIRE, Inc.](#)
 5. [Nailor Industries Inc.](#)
 6. [Price Industries.](#)
 7. [Titus.](#)
 8. [Trane; a business of American Standard Companies.](#)
 9. [Tuttle & Bailey.](#)
 10. **<Insert manufacturer's name>.**
 11. or approved equal.
- B. Configuration: Two volume dampers inside unit casing with mixing attenuator section and control components inside a protective metal shroud [**with a third primary air inlet with volume damper**].
- C. Casing: [**0.034-inch (0.85-mm) steel**] [**0.032-inch (0.8-mm) aluminum**], [**single**] [**double**] wall.
 1. Casing Lining: Adhesive attached, [**1/2-inch- (13-mm-)**] [**3/4-inch- (19-mm-)**] [**1-inch- (25-mm-)**] thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.
 2. Casing Lining: Adhesive attached, [**1/2-inch- (13-mm-)**] [**3/4-inch- (19-mm-)**] [**1-inch- (25-mm-)**] thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.

3. Air Inlets: Round stub connections or S-slip and drive connections for duct attachment.
 4. Air Outlet: S-slip and drive connections.
 5. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
 6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
1. Maximum Damper Leakage: ARI 880 rated, 3 percent of nominal airflow at [3-inch wg (750-Pa)] [6-inch wg (1500-Pa)] inlet static pressure.
- E. Velocity Sensors: Multipoint array with velocity sensors in cold- and hot-deck air inlets and air outlets.
- F. Attenuator Section: [0.034-inch (0.85-mm) steel] [0.032-inch (0.8-mm) aluminum] sheet.
1. Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.
 2. Lining: Adhesive attached, 3/4-inch- (19-mm-) thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- G. Multioutlet Attenuator Section: With [two] [three] [four] <Insert number> [6-inch- (150-mm-)] [8-inch- (200-mm-)] [10-inch- (250-mm-)] [12-inch- (300-mm-)] diameter collars, each with locking butterfly balancing damper.
- H. Pneumatic Controls: Damper operator, velocity controllers, and thermostat. Control devices shall be compatible with temperature controls and shall have the following features:
1. Pneumatic Damper Operator: [0- to 13-psig (0- to 90-kPa)] <Insert range> spring range.
 2. Velocity Controllers: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain constant airflow dictated by thermostat within 5 percent of set point while compensating for inlet static-pressure variations up to 4-inch wg (1000 Pa); and shall have a multipoint velocity sensor.

- Locate velocity sensors in [**cold- and hot-deck**] [**cold-, hot-, and ventilation-deck**] [**cold-deck**] air inlets and supply air outlets.
3. Thermostat: Wall-mounted pneumatic type with appropriate mounting hardware.
- I. Electronic Controls: Bidirectional damper operator and microprocessor-based thermostat with integral airflow transducer and room sensor. Control devices shall be compatible with temperature controls and shall have the following features:
 1. Damper Actuator: 24 V, powered closed, [**spring return open**] [**powered open**].
 2. Velocity Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain constant airflow dictated by thermostat within 5 percent of set point while compensating for inlet static-pressure variations up to **4-inch wg** (1000 Pa); and shall have a multipoint velocity sensor. Locate velocity sensors in cold-deck air inlets and air outlets.
 3. Thermostat: Wall-mounted electronic type with temperature set-point display in Fahrenheit[**and Celsius**].
 - J. Direct Digital Controls: Single-package unitary controller and actuator specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 - K. Direct Digital Controls: Bidirectional damper operators and microprocessor-based controller and room sensor. Control devices shall be compatible with controls specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and shall have the following features:
 1. Damper Actuators: 24 V, powered closed, [**spring return open**] [**powered open**].
 2. Terminal Unit Controller: Pressure-independent, [**variable-air**] [**constant**]-volume controller with electronic airflow transducers factory calibrated to minimum and maximum air volumes, and having the following features:
 - a. Occupied and unoccupied operating mode.
 - b. Remote reset of airflow or temperature set points.
 - c. Adjusting and monitoring with portable terminal.
 - d. Communication with temperature-control system specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 3. Room Sensor: Wall mounted with temperature set-point adjustment and access for connection of portable operator terminal.
 - L. Control Sequence:
 1. Modulate cold-air damper to maintain room temperature.
 2. Modulate warm-air damper to maintain constant airflow.
- 2.5 PARALLEL FAN-POWERED AIR TERMINAL UNITS
- A. **Manufacturers**: Subject to compliance with requirements, provide products by one of the following:

1. [Anemostat Products; a Mestek Company.](#)
 2. [Carnes.](#)
 3. [Environmental Technologies, Inc.](#)
 4. [Krueger.](#)
 5. [METALAIRE, Inc.](#)
 6. [Nailor Industries Inc.](#)
 7. [Price Industries.](#)
 8. [Titus.](#)
 9. [Trane; a business of American Standard Companies.](#)
 10. [Tuttle & Bailey.](#)
 11. **<Insert manufacturer's name>.**
 12. or approved equal.
- B. Configuration: Volume-damper assembly and fan in parallel arrangement inside unit casing with control components inside a protective metal shroud.
- C. Casing: [0.034-inch (0.85-mm) **steel**] [0.032-inch (0.8-mm) **aluminum**], [**single**] [**double**] wall.
1. Casing Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.
 2. Casing Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 3. Air Inlets: Round stub connections or S-slip and drive connections for duct attachment.
 4. Air Outlet: S-slip and drive connections.
 5. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket and quarter-turn latches.
 6. Fan: Forward-curved centrifugal, located at plenum air inlet.
 7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Volume Damper: Galvanized steel with flow-sensing ring and peripheral gasket and self-lubricating bearings.
1. Maximum Damper Leakage: ARI 880 rated, [2] [3] percent of nominal airflow at [3-inch wg (750-Pa)] [6-inch wg (1500-Pa)] inlet static pressure.
 2. Damper Position: Normally [**open**] [**closed**].

- E. Velocity Sensors: Multipoint array with velocity sensors in cold- and hot-deck air inlets and air outlets.
- F. Motor:
1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Type: [**Permanent-split capacitor with SCR for speed adjustment**] [**Electronically commutated motor**].
 3. Fan-Motor Assembly Isolation: Rubber isolators.
 4. Enclosure: [**Open dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 5. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 6. Motor Bearings: <Insert special requirements>.
 7. Unusual Service Conditions:
 - a. Ambient Temperature: <Insert deg F (deg C)>.
 - b. Altitude: <Insert feet (m)> above sea level.
 - c. High humidity.
 - d. <Insert conditions>.
 8. Efficiency: Premium efficient.
 9. NEMA Design: <Insert designation>.
 10. Service Factor: <Insert value>.
 11. Motor Speed: [**Single speed**] [**Multispeed**].
 - a. Speed Control: Infinitely adjustable with pneumatic-electric and electronic controls.
 12. Electrical Characteristics:
 - a. Horsepower: <Insert value>.
 - b. Volts: [**120**] [**208**] [**230**] [**460**] <Insert value>.
 - c. Phase: [**Single**] [**Poly**].
 - d. Hz: 60.
 - e. Full-Load Amperes: <Insert value>.
 - f. Minimum Circuit Ampacity: <Insert value>.
 - g. Maximum Overcurrent Protection: <Insert amperage>.
- G. Filters: Minimum arrestance according to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
1. Material: Polyurethane foam having 70 percent arrestance and 3 MERV.
 2. Material: Glass fiber treated with adhesive; having 80 percent arrestance and 5 MERV.
 3. Material: Pleated cotton-polyester media having 90 percent arrestance and 7 MERV.
 4. Thickness: [**2 inches (50 mm)**] [**1 inch (25 mm)**].

- H. Attenuator Section: [0.034-inch (0.85-mm) steel] [0.032-inch (0.8-mm) aluminum] sheet.
1. Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.
 2. Lining: Adhesive attached, 3/4-inch- (19-mm-) thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- I. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), and rated for a minimum working pressure of 200 psig (1380 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.
1. Location: Plenum air inlet.
- J. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.
1. Location: Plenum air inlet.
 2. Stage(s): [1] [2] [3].
 3. Access door interlocked disconnect switch.
 4. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
 5. Nickel chrome 80/20 heating elements.
 6. Airflow switch for proof of airflow.
 7. Fan interlock contacts.
 8. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
 9. Mercury contactors.
 10. Pneumatic-electric switches and relays.
 11. Magnetic contactor for each step of control (for three-phase coils).
- K. Factory-Mounted and -Wired Controls: Electrical components mounted in control box with removable cover. Incorporate single-point electrical connection to power source.

1. Control Transformer: Factory mounted for control voltage on electric and electronic control units with terminal strip in control box for field wiring of thermostat and power source.
 2. Wiring Terminations: Fan and controls to terminal strip. Terminal lugs to match quantities, sizes, and materials of branch-circuit conductors. Enclose terminal lugs in terminal box that is sized according to NFPA 70.
 3. Disconnect Switch: Factory-mounted, fuse type.
- L. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.
- M. Electric Controls: 24-V damper actuator with wall-mounted electric thermostat and appropriate mounting hardware.
- N. Pneumatic Controls: Damper operator, velocity controller, and thermostat. Control devices shall be compatible with temperature controls and shall have the following features:
1. Pneumatic Damper Operator: [0- to 13-psig (0- to 90-kPa)] **<Insert range>** spring range.
 2. Velocity Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain constant airflow dictated by thermostat within 5 percent of set point while pressure independent up to 4-inch wg (1000 Pa); and shall have a multipoint velocity sensor at air inlet.
 3. Thermostat: Wall-mounted pneumatic type with appropriate mounting hardware.
- O. Electronic Controls: Bidirectional damper operator and microprocessor-based controller with integral airflow transducer and room sensor. Control devices shall be compatible with temperature controls and shall have the following features:
1. Occupied and unoccupied operating mode.
 2. Remote reset of airflow or temperature set points.
 3. Adjusting and monitoring with portable terminal.
 4. Communication with temperature-control system.
- P. Control Sequence:
1. Occupied (Primary Airflow On):
 - a. Operate as throttling control for cooling.
 - b. As cooling requirement decreases, control valve throttles toward minimum airflow.
 - c. As heating requirement increases, fan energizes to draw in warm plenum air[**and electric heat is energized in steps**].
 2. Unoccupied (Primary Airflow Off):
 - a. When pressure at primary inlet is zero or less, fan is de-energized.
 - b. As heating requirement increases, fan energizes to draw in warm plenum air[**and electric heat is energized in steps**].

Q. Acoustical Performance - Fan Powered Parallel VAV Units

1. All sound data shall be compiled in an independent ADC certified laboratory and in accordance with the latest version of ARI 880. All units shall be ARI certified and bear the ARI certification label.
2. Unit maximum radiated and discharge sound power levels with fan only and 0.25 in. w.g. (63 Pa) discharge static pressure shall not exceed the values in Tables 1 and 2 at the specified airflow. No credit shall in any way be considered for room, plenum, ceiling, and/or similar item effects.
3. VAV units provided for this Project shall perform so as not to exceed sound power levels shown in Tables 1 and 2.

**Table 1 - Maximum Radiated Sound Power Levels (dB)
 (Heating Cycle - Fan Only)**

Unit Size	Airflow CFM	L/sec	Sound Power Octave Band and Center Frequency					
			2 125	3 250	4 500	5 1000	6 2000	7 4000
2	450	189	71	63	61	56	51	47
3	600	284	70	62	62	57	51	46
4	750	355	71	63	63	58	52	47
5	950	449	73	65	62	58	54	49
6	1450	685	73	69	64	59	58	52

**Table 1 - Maximum Discharge Sound Power Levels (dB)
 (Heating Cycle - Fan Only)**

Unit Size	Airflow CFM	L/sec	Sound Power Octave Band and Center Frequency					
			2 125	3 250	4 500	5 1000	6 2000	7 4000

2.6 SERIES FAN-POWERED AIR TERMINAL UNITS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Anemostat Products: a Mestek Company.](#)
2. [Carnes.](#)
3. [Environmental Technologies, Inc.](#)
4. [Krueger.](#)
5. [METALAIRE, Inc.](#)
6. [Nailor Industries Inc.](#)
7. [Price Industries.](#)
8. [Titus.](#)
9. [Trane: a business of American Standard Companies.](#)
10. [Tuttle & Bailey.](#)
11. **<Insert manufacturer's name>.**
12. or approved equal.

B. Configuration: Volume-damper assembly and fan in series arrangement inside unit casing with control components inside a protective metal shroud **[for installation above a ceiling] [and] [within a raised access floor].**

C. Casing: **[0.034-inch (0.85-mm) steel] [0.032-inch (0.8-mm) aluminum], [single] [double] wall.**

1. Casing Lining: Adhesive attached, **[1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)]** thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.
2. Casing Lining: Adhesive attached, **[1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)]** thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
3. Air Inlets: Round stub connections or S-slip and drive connections for duct attachment.
4. Air Outlet: S-slip and drive connections.
5. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket and quarter-turn latches.
6. Fan: Forward-curved centrifugal.

7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Volume Damper: Galvanized steel with flow-sensing ring and peripheral gasket and self-lubricating bearings.
 1. Maximum Damper Leakage: ARI 880 rated, [2] [3] percent of nominal airflow at [3-inch wg (750-Pa)] [6-inch wg (1500-Pa)] inlet static pressure.
 2. Damper Position: Normally [open] [closed].
- E. Velocity Sensors: Multipoint array with velocity sensors in cold- and hot-deck air inlets and air outlets.
- F. Motor:
 1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Type: [Permanent-split capacitor with SCR for speed adjustment] [Electronically commutated motor].
 3. Fan-Motor Assembly Isolation: Rubber isolators.
 4. Enclosure: [Open dripproof] [Totally enclosed, fan cooled] [Totally enclosed, air over] [Open, externally ventilated] [Totally enclosed, nonventilated] [Severe duty] [Explosion proof] [Dust-ignition-proof machine].
 5. Enclosure Materials: [Cast iron] [Cast aluminum] [Rolled steel].
 6. Motor Bearings: <Insert special requirements>.
 7. Unusual Service Conditions:
 - a. Ambient Temperature: <Insert deg F (deg C)>.
 - b. Altitude: <Insert feet (m)> above sea level.
 - c. High humidity.
 - d. <Insert conditions>.
 8. Efficiency: Premium efficient.
 9. NEMA Design: <Insert designation>.
 10. Service Factor: <Insert value>.
 11. Motor Speed: [Single speed] [Multispeed].
 - a. Speed Control: Infinitely adjustable with pneumatic-electric and electronic controls.
 12. Electrical Characteristics:
 - a. Horsepower: <Insert value>.
 - b. Volts: [120] [208] [230] [460] <Insert value>.
 - c. Phase: [Single] [Poly].
 - d. Hz: 60.
 - e. Full-Load Amperes: <Insert value>.
 - f. Minimum Circuit Ampacity: <Insert value>.
 - g. Maximum Overcurrent Protection: <Insert amperage>.

- G. Filters: Minimum arrestance according to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
1. Material: Polyurethane foam having 70 percent arrestance and 3 MERV.
 2. Material: Glass fiber treated with adhesive; having 80 percent arrestance and 5 MERV.
 3. Material: Pleated cotton-polyester media having 90 percent arrestance and 7 MERV.
 4. Thickness: [2 inches (50 mm)] [1 inch (25 mm)].
- H. Attenuator Section: [0.034-inch (0.85-mm) steel] [0.032-inch (0.8-mm) aluminum] sheet.
1. Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.
 2. Lining: Adhesive attached, 3/4-inch- (19-mm-) thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- I. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), and rated for a minimum working pressure of 200 psig (1380 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.
- J. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.
1. Stage(s): [1] [2] [3].
 2. Access door interlocked disconnect switch.
 3. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
 4. Nickel chrome 80/20 heating elements.
 5. Airflow switch for proof of airflow.
 6. Fan interlock contacts.
 7. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
 8. Mercury contactors.
 9. Pneumatic-electric switches and relays.

10. Magnetic contactor for each step of control (for three-phase coils).
- K. Factory-Mounted and -Wired Controls: Electrical components mounted in control box with removable cover. Incorporate single-point electrical connection to power source.
 1. Control Transformer: Factory mounted for control voltage on electric and electronic control units with terminal strip in control box for field wiring of thermostat and power source.
 2. Wiring Terminations: Fan and controls to terminal strip. Terminal lugs to match quantities, sizes, and materials of branch-circuit conductors. Enclose terminal lugs in terminal box that is sized according to NFPA 70.
 3. Disconnect Switch: Factory-mounted, fuse type.
- L. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.
- M. Electric Controls: 24-V damper actuator with wall-mounted electric thermostat and appropriate mounting hardware.
- N. Pneumatic Controls: Damper operator, velocity controller, and thermostat. Control devices shall be compatible with temperature controls and shall have the following features:
 1. Pneumatic Damper Operator: [0- to 13-psig (0- to 90-kPa)] <Insert range> spring range.
 2. Velocity Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain constant airflow dictated by thermostat within 5 percent of set point while pressure independent up to 4-inch wg (1000 Pa); and shall have a multipoint velocity sensor at air inlet.
 3. Thermostat: Wall-mounted pneumatic type with appropriate mounting hardware.
- O. Electronic Controls: Bidirectional damper operator and microprocessor-based controller with integral airflow transducer and room sensor. Control devices shall be compatible with temperature controls and shall have the following features:
 1. Occupied and unoccupied operating mode.
 2. Remote reset of airflow or temperature set points.
 3. Adjusting and monitoring with portable terminal.
 4. Communication with temperature-control system.
- P. Control Sequence:
 1. Occupied (Primary Airflow On):
 - a. When pressure at inlet is at least 1.2-inch wg (300 Pa).
 - b. As cooling requirement decreases, control valve throttles toward minimum airflow.
 2. Unoccupied (Primary Airflow Off):
 - a. When pressure at primary inlet is zero or less, fan is de-energized.

Q. Acoustical Performance - Fan powered Series VAV Units

1. All sound data shall be compiled in an independent ADC certified laboratory and in accordance with the latest version of ARI 880. All units shall be ARI certified and bear the ARI certification label.
2. Unit maximum radiated sound power levels at 1.0 in. w.g. (250 Pa) inlet pressure and 0.25 in. w.g. (63 Pa) discharge static pressure shall not exceed the values in Tables 1 and 2 at the specified airflow. No credit shall in any way be considered for room, plenum, ceiling, and/or similar item effects.

**Table 2 - Maximum Radiated Sound Power Levels (dB)
 (Full Heating - Fan Only)**

Unit Size	Airflow		Sound Power Octave Band and Center Frequency						
	CFM	L/sec	2	3	4	5	6	7	
			125	250	500	1000	2000	4000	
2	450	212	62	58	53	46	40	35	
3	900	425	64	61	61	60	51	39	
4	1300	614	68	64	60	55	48	42	
5	1700	802	70	65	61	59	53	48	
6	2000	944	70	67	61	58	52	47	

3. Unit maximum discharge sound power levels at 1.0 in. w.g. (250 Pa) inlet pressure and 0.25 in. w.g. (63 Pa) discharge static pressure shall not exceed, by more than 2 dB, the values in Table 3 at the specified airflow. No credit shall in any way be considered for room, plenum, ceiling, and/or similar item effects.

**Table 3 - Maximum Discharge Sound Power Levels (dB)
 (Full Cooling - Fan On and 100% Primary Air)**

Unit Size	Airflow		Sound Power Octave Band and Center Frequency						
	CFM	L/sec	2	3	4	5	6	7	
			125	250	500	1000	2000	4000	
2	450	212	72	67	63	61	61	50	
3	900	425	69	63	61	57	57	55	
4	1300	614	73	74	65	62	65	61	
5	1700	802	77	70	71	68	68	65	
6	2000	944	77	68	69	67	65	64	

2.7 INDUCTION AIR TERMINAL UNITS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Price Industries.
 2. Tuttle & Bailey.
 3. **<Insert manufacturer's name>.**
 4. or approved equal.

- B. Configuration: Volume-damper assembly inside unit casing with mechanical induction damper mounted on casing and control components inside a protective metal shroud.
- C. Casing: [0.034-inch (0.85-mm) steel] [0.032-inch (0.8-mm) aluminum], [single] [double] wall.
1. Casing Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.
 2. Casing Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 3. Air Inlet: Round stub connection for duct attachment.
 4. Air Outlet: S-slip and drive connections[, **size matching inlet size**].
 5. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
 6. Fan: Forward-curved centrifugal.
 7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
1. Maximum Damper Leakage: ARI 880 rated, [2] [3] percent of nominal airflow at [3-inch wg (750-Pa)] [6-inch wg (1500-Pa)] inlet static pressure.
 2. Damper Position: Normally [**open**] [**closed**].
- E. Induction Damper: Galvanized-steel, multiblade assembly with self-lubricating bearings.
- F. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), and rated for a minimum working pressure of 200 psig (1380 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.
- G. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.
1. Access door interlocked disconnect switch.

2. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
 3. Nickel chrome 80/20 heating elements.
 4. Airflow switch for proof of airflow.
 5. Fan interlock contacts.
 6. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
 7. Mercury contactors.
 8. Pneumatic-electric switches and relays.
 9. Magnetic contactor for each step of control (for three-phase coils).
- H. Pneumatic Controls: Damper operator, velocity controller, and induction damper operator. Control devices shall be compatible with temperature controls and shall have the following features:
1. Damper Operator: Pneumatic, [0- to 13-psig (0- to 90-kPa)] <Insert range> spring range.
 2. Velocity Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain constant airflow dictated by thermostat within 5 percent of set point while compensating for inlet static-pressure variations up to 4-inch wg (1000 Pa); and shall have a multipoint velocity sensor at air inlet.
 3. Induction Damper Operator: Pneumatic, spring range matching reset range of controller.
 4. Thermostat: Wall-mounted pneumatic type with appropriate mounting hardware.
- I. Electronic Controls: Pneumatic damper operators, electronic controller integral airflow transducer, and electronic thermostat. Control devices shall be compatible with temperature controls and shall have the following features:
1. Damper Actuator: Pneumatic, [0- to 13-psig (0- to 90-kPa)] <Insert range> spring range.
 2. Velocity Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain constant airflow dictated by thermostat within 5 percent of set point while compensating for inlet static-pressure variations up to 4-inch wg (1000 Pa); and shall have a multipoint velocity sensor at air inlet.
 3. Induction Damper Operator: Pneumatic, spring range matching reset range of controller.
 4. Thermostat: Wall-mounted electronic type with the following features:
 - a. Proportional, plus integral control of room temperature.
 - b. Time-proportional reheat-coil control.
 - c. Temperature set-point display in Fahrenheit and Celsius.

2.8 SHUTOFF, SINGLE-DUCT AIR TERMINAL UNITS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Anemostat Products; a Mestek Company.](#)
 2. [Carnes.](#)
 3. [Environmental Technologies, Inc.](#)
 4. [Krueger.](#)
 5. [METALAIRE, Inc.](#)
 6. [Nailor Industries Inc.](#)
 7. [Phoenix Controls Corporation.](#)
 8. [Price Industries.](#)
 9. [Titus.](#)
 10. [Trane; a business of American Standard Companies.](#)
 11. [Trox USA Inc.; a subsidiary of the TROX GROUP.](#)
 12. [Tuttle & Bailey.](#)
 13. [Warren Technology.](#)
 14. **<Insert manufacturer's name>.**
 15. or approved equal.
- B. Configuration: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.
- C. Casing: [0.034-inch (0.85-mm) **steel**] [0.032-inch (0.8-mm) **aluminum**], [**single**] [**double**] wall.
1. Casing Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.
 2. Casing Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 3. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
 4. Air Outlet: S-slip and drive connections[, **size matching inlet size**].
 5. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
 6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Regulator Assembly: System-air-powered bellows section incorporating polypropylene bellows for volume regulation and thermostatic control. Bellows shall operate at temperatures from 0 to 140 deg F (minus 18 to plus 60 deg C), shall be impervious to moisture and fungus, shall be suitable for 10-inch wg (2500-Pa) static pressure, and shall be factory tested for leaks.

- E. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
1. Maximum Damper Leakage: ARI 880 rated, [2] [3] percent of nominal airflow at [3-inch wg (750-Pa)] [6-inch wg (1500-Pa)] inlet static pressure.
 2. Damper Position: Normally [open] [closed].
- F. Attenuator Section: [0.034-inch (0.85-mm) steel] [0.032-inch (0.8-mm) aluminum] sheet.
1. Lining: Adhesive attached, [1/2-inch- (13-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil.
 - b. Cover liner with nonporous foil and perforated metal.
 2. Lining: Adhesive attached, 3/4-inch- (19-mm-) thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- G. Multioutlet Attenuator Section: With [two] [three] [four] <Insert number> [6-inch- (150-mm-)] [8-inch- (200-mm-)] [10-inch- (250-mm-)] diameter collars, each with locking butterfly balancing damper.
- H. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), and rated for a minimum working pressure of 200 psig (1380 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.
- I. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.
1. Access door interlocked disconnect switch.
 2. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
 3. Nickel chrome 80/20 heating elements.
 4. Airflow switch for proof of airflow.
 5. Fan interlock contacts.
 6. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
 7. Mercury contactors.
 8. Pneumatic-electric switches and relays.
 9. Magnetic contactor for each step of control (for three-phase coils).

- J. Electric Controls: Damper actuator and thermostat.
1. Damper Actuator: 24 V, powered closed, [**spring return open**] [**powered open**].
 2. Thermostat: Wall-mounted electronic type with clock display, temperature display in Fahrenheit and Celsius, and space temperature set point.
- K. Pneumatic Controls: Damper operator and velocity controller. Control devices shall be compatible with temperature controls and shall have the following features:
1. Pneumatic Damper Operator: [0- to 13-psig (0- to 90-kPa)] <Insert range> spring range.
 2. Velocity Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain constant airflow dictated by thermostat within 5 percent of set point while compensating for inlet static-pressure variations up to 4-inch wg (1000 Pa); and shall have a multipoint velocity sensor at air inlet.
 3. Thermostat: Wall-mounted pneumatic type with appropriate mounting hardware.
- L. Electronic Controls: Bidirectional damper operator and microprocessor-based thermostat with integral airflow transducer and room sensor. Control devices shall be compatible with temperature controls and shall have the following features:
1. Damper Actuator: 24 V, powered closed, [**spring return open**] [**powered open**].
 2. Velocity Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain constant airflow dictated by thermostat within 5 percent of set point while compensating for inlet static-pressure variations up to 4-inch wg (1000 Pa); and shall have a multipoint velocity sensor at air inlet.
 3. Thermostat: Wall-mounted electronic type with temperature set-point display in Fahrenheit and Celsius.
- M. Direct Digital Controls: Single-package unitary controller and actuator specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
- N. Direct Digital Controls: Bidirectional damper operators and microprocessor-based controller and room sensor. Control devices shall be compatible with temperature controls specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and shall have the following features:
1. Damper Actuator: 24 V, powered closed, [**spring return open**] [**powered open**].
 2. Terminal Unit Controller: Pressure-independent, variable-air-volume controller with electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes, and having the following features:
 - a. Occupied and unoccupied operating mode.
 - b. Remote reset of airflow or temperature set points.
 - c. Adjusting and monitoring with portable terminal.
 - d. Communication with temperature-control system specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

3. Room Sensor: Wall mounted with temperature set-point adjustment and access for connection of portable operator terminal.

O. Control Sequence:

1. Suitable for operation with duct pressures between 0.25- and 3.0-inch wg (60- and 750-Pa) inlet static pressure.
2. System-powered, wall-mounted thermostat.

2.9 DIFFUSER-TYPE AIR TERMINAL UNITS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acutherm](#).
2. [Rickard Air Diffusion](#).
3. [Warren Technology](#).
4. **<Insert manufacturer's name>**.
5. or approved equal.

B. Configuration: Volume-damper, diffuser, controller assembly[**and electric heater**] and wall-mounted thermostat[**with master-slave capability**].

C. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.

1. Damper Position: Normally [**open**] [**closed**].

D. Diffuser: Galvanized steel with white baked-enamel finish.

E. Electronic Controls: Bidirectional damper operator and microprocessor-based thermostat with integral airflow transducer and room sensor. Control devices shall be compatible with temperature controls and shall have the following features:

1. Damper Actuator: 24 V, powered closed, [**spring return open**] [**powered open**].
2. Velocity Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain constant airflow dictated by thermostat within 5 percent of set point while compensating for inlet static-pressure variations up to 4-inch wg (1000 Pa); and shall have a multipoint velocity sensor at air inlet.
3. Thermostat: Wall-mounted electronic type with the following features:
 - a. Proportional, plus integral control of room temperature.
 - b. Temperature set-point display in Fahrenheit and Celsius.

F. Integral thermally powered actuators control diffusion dampers based on duct and room temperature.

2.10 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Steel Cables: [**Galvanized steel complying with ASTM A 603**] [**Stainless steel complying with ASTM A 492**].
- D. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- E. Air Terminal Unit Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- F. Trapeze and Riser Supports: Steel shapes and plates for units with steel casings; aluminum for units with aluminum casings.

2.11 SEISMIC-RESTRAINT DEVICES

- A. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by [**an evaluation service member of the ICC Evaluation Service**] [**the Office of Statewide Health Planning and Development for the State of California**] [**an agency acceptable to authorities having jurisdiction**].
 - 1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least [**four**] <**Insert number**> times the maximum seismic forces to which they will be subjected.
- B. Channel Support System: Shop- or field-fabricated support assembly made of slotted steel channels rated in tension, compression, and torsion forces and with accessories for attachment to braced component at one end and to building structure at the other end. Include matching components and corrosion-resistant coating.
- C. Restraint Cables: [**ASTM A 603, galvanized**] [**ASTM A 492, stainless**]-steel cables with end connections made of cadmium-plated steel assemblies with brackets, swivel, and bolts designed for restraining cable service; with an automatic-locking and clamping device or double-cable clips.
- D. Hanger Rod Stiffener: [**Steel tube or steel slotted-support-system sleeve with internally bolted connections**] [**Reinforcing steel angle clamped**] to hanger rod.
- E. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

2.12 SOURCE QUALITY CONTROL

- A. Factory Tests: Test assembled air terminal units according to ARI 880.
 - 1. Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, **[coil type,]** and ARI certification seal.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."
- B. Install in accordance with manufacturer's instructions.
- C. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.
- D. Provide ceiling access doors or locate units above easily removable ceiling components.
- E. Support units individually from structure. Do not support from adjacent ductwork.
- F. Connect to ductwork in accordance with Sections 233113 "Metal Ducts" and 233116 "Nonmetal Ducts".
- G. Provide minimum of **[5] <Insert number>** ft of **[one (1)] [two (2)]** inch thick lined ductwork downstream of units.
- H. Install heating coils in accordance with Section 238216 "Air Coils".
- I. Verify that electric power is available and of the correct characteristics. Coordinate with requirements of Division 26 Sections.
- J. Install wall-mounted thermostats.

3.2 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 - 1. Where practical, install concrete inserts before placing concrete.
 - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.

3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes and for slabs more than 4 inches (100 mm) thick.
 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes and for slabs less than 4 inches (100 mm) thick.
 5. Do not use powder-actuated concrete fasteners for seismic restraints.
- C. Hangers Exposed to View: Threaded rod and angle or channel supports.
- D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.3 SEISMIC-RESTRAINT-DEVICE INSTALLATION

- A. Install hangers and braces designed to support the air terminal units and to restrain against seismic forces required by applicable building codes. Comply with **[SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems."]** **[ASCE/SEI 7.]**
- B. Select seismic-restraint devices with capacities adequate to carry present and future static and seismic loads.
- C. Install cables so they do not bend across edges of adjacent equipment or building structure.
- D. Install cable restraints on air terminal units that are suspended with vibration isolators.
- E. Install seismic-restraint devices using methods approved by **[an evaluation service member of the ICC Evaluation Service]** **[the Office of Statewide Health Planning and Development for the State of California]** **[an agency acceptable to authorities having jurisdiction]**.
- F. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.
- G. Drilling for and Setting Anchors:
1. Identify position of reinforcing steel and other embedded items before drilling holes for anchors. Do not damage existing reinforcement or embedded items during drilling. Notify the DEN Project Manager if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 3. Wedge Anchors: Protect threads from damage during anchor installation. Install heavy-duty sleeve anchors with sleeve fully engaged in the structural element to which anchor is to be fastened.
 4. Set anchors to manufacturer's recommended torque, using a torque wrench.

5. Install zinc-coated steel anchors for interior applications and stainless-steel anchors for applications exposed to weather.

3.4 CONNECTIONS

- A. Install piping adjacent to air terminal unit to allow service and maintenance.
- B. Hot-Water Piping: In addition to requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties," connect heating coils to supply with shutoff valve, strainer, control valve, and union or flange; and to return with balancing valve and union or flange.
- C. Connect ducts to air terminal units according to **[Section 233113 "Metal Ducts."]**
[Section 233116 "Nonmetal Ducts."]
- D. Connect terminal units (except integral-diffuser air terminal units) to supply ducts using sheet metal ducts. Do not use flexible ducts.
- E. Ground units with electric heating coils according to Division 26.
- F. Connect wiring according to Division 26.
- G. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.5 ADJUSTING

- A. Adjust work to produce specified operation.
- B. Reset volume with damper operator attached to assembly allowing flow range modulation from 100 percent of design flow to **[0] [50] <Insert number>** percent full flow. **[Set units with heating coils for minimum 50 percent full flow.]**

3.6 IDENTIFICATION

- A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
 - 2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Air terminal unit will be considered defective if it does not pass tests and inspections.
- F. Remove and replace malfunctioning units and retest as specified above.
- G. Prepare test and inspection reports.

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
 - 3. Verify that controls and control enclosure are accessible.
 - 4. Verify that control connections are complete.
 - 5. Verify that nameplate and identification tag are visible.
 - 6. Verify that controls respond to inputs as specified.
 - 7. **<Insert startup steps if any>**.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain air terminal units.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233600

SECTION 233713 - DIFFUSERS, REGISTERS, AND GRILLES

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Round ceiling diffusers.
2. Rectangular and square ceiling diffusers.
3. Louver face diffusers.
4. Linear bar diffusers.
5. Linear slot diffusers.
6. Ceiling-integral continuous diffusers.
7. Light troffer diffusers.
8. Round induction diffusers.
9. Linear floor diffuser plenums.
10. Drum louvers.
11. Modular core supply grilles.
12. Continuous tubular diffusers.
13. Adjustable bar [**registers**] [**grilles**] [**registers and grilles**].
14. Security [**registers**] [**grilles**] [**registers and grilles**].
15. Fixed face [**registers**] [**grilles**] [**registers and grilles**].
16. Linear bar grilles.

B. Related Sections:

1. Section 089116 "Operable Wall Louvers" and Section 089119 "Fixed Louvers" for fixed and adjustable louvers and wall vents, whether or not they are connected to ducts.
2. Section 233300 "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated, include the following:
 - 1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
 - 2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
 - 3. Include data substantiating that materials comply with requirements.
- B. Samples for Initial Selection: For diffusers, registers, and grilles with factory-applied color finishes.
- C. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
 - 1. Ceiling suspension assembly members.
 - 2. Method of attaching hangers to building structure.
 - 3. Size and location of initial access modules for acoustical tile.
 - 4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
 - 5. Duct access panels.
- B. Source quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of air outlets and inlets.

1.6 QUALITY ASSURANCE

- A. Test and rate air outlet and inlet performance in accordance with ADC Equipment Test Code 1062 and ASHRAE 70.
- B. Test and rate louver performance in accordance with AMCA 500.

1.7 MOCKUPS

- A. Provide mockup of typical **[exterior]** **[interior]** ceiling module with supply and return air outlets.
- B. Mockup may **[not]** remain as part of the Work.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CEILING DIFFUSERS

- A. Round Ceiling Diffuser **<Insert drawing designation>**:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anemostat Products; a Mestek company.
 - b. Carnes.
 - c. Hart & Cooley Inc.
 - d. METALAIRE, Inc.
 - e. Nailor Industries Inc.
 - f. Price Industries.
 - g. Titus.
 - h. Tuttle & Bailey.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 - 2. Devices shall be specifically designed for variable-air-volume flows.
 - 3. Material: **[Steel]** **[Aluminum]**.
 - 4. Finish: **[Baked enamel, white]** **[Baked enamel, color selected by DEN Project Manager]** **[Anodized aluminum]** **<Insert finish>**.
 - 5. Face Style: **[Four]** **[Three]** **[Two]** cone.
 - 6. Mounting: Duct connection.
 - 7. Pattern: **[Fully adjustable]** **[Two-position horizontal]**.
 - 8. Dampers: **[Radial opposed blade]** **[Butterfly]** **[Combination damper and grid]**.
 - 9. Accessories:
 - a. Equalizing grid.
 - b. Plaster ring.
 - c. Safety chain.
 - d. Wire guard.
 - e. Sectorizing baffles.

f. Operating rod extension.

B. Rectangular and Square Ceiling Diffusers <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [A-J Manufacturing Co., Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Hart & Cooley Inc.](#)
 - e. [Krueger.](#)
 - f. [METALAIRE, Inc.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. [Tuttle & Bailey.](#)
 - k. <Insert manufacturer's name>.
 - l. or approved equal.
2. Devices shall be specifically designed for variable-air-volume flows.
3. Material: [**Steel**] [**Aluminum**].
4. Finish: [**Baked enamel, white**] [**Baked enamel, color selected by DEN Project Manager**] [**Anodized aluminum**] <Insert finish>.
5. Face Size: [**24 by 24 inches** (600 by 600 mm)] [**20 by 20 inches** (500 by 500 mm)] [**12 by 12 inches** (300 by 300 mm)] <Insert dimensions>.
6. Face Style: [**Three cone**] [**Four cone**] [**Plaque**].
7. Mounting: [**Surface**] [**T-bar**] [**Snap in**] [**Spline**] [**Mounting panel**].
8. Pattern: [**Fixed**] [**Two position**] [**Adjustable**].
9. Dampers: [**Radial opposed blade**] [**Butterfly**] [**Combination damper and grid**].
10. Accessories:
 - a. Equalizing grid.
 - b. Plaster ring.
 - c. Safety chain.
 - d. Wire guard.
 - e. Sectorizing baffles.
 - f. Operating rod extension.

C. Louver Face Diffuser <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [A-J Manufacturing Co., Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [METALAIRE, Inc.](#)
 - e. [Nailor Industries Inc.](#)
 - f. [Price Industries.](#)

- g. [Titus](#).
 - h. [Tuttle & Bailey](#).
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Devices shall be specifically designed for variable-air-volume flows.
 3. Material: **[Steel]** **[Aluminum]**.
 4. Finish: **[Baked enamel, white]** **[Baked enamel, color selected by DEN Project Manager]** **[Anodized aluminum]** **<Insert finish>**.
 5. Face Size: **<Insert inches (mm)>**.
 6. Mounting: **[Surface]** **[Surface with beveled frame]** **[T-bar]** **[Snap in]** **[Spline]** **[Mounting panel]**.
 7. Pattern: **[One-way]** **[Two-way]** **[Two-way corner]** **[Three-way]** **[Four-way]** **[Adjustable]** **<Insert pattern>** core style.
 8. Dampers: **[Radial opposed blade]** **[Butterfly]** **[Combination damper and grid]**.
 9. Accessories:
 - a. Square to round neck adaptor.
 - b. Adjustable pattern vanes.
 - c. Throw reducing vanes.
 - d. Equalizing grid.
 - e. Plaster ring.
 - f. Safety chain.
 - g. Wire guard.
 - h. Sectorizing baffles.
 - i. Operating rod extension.

2.2 CEILING LINEAR SLOT OUTLETS

A. Linear Bar Diffuser **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Research Diffuser Products, Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Dayus Register & Grille Inc.](#)
 - e. [Hart & Cooley Inc.](#)
 - f. [Krueger.](#)
 - g. [METALAIRE, Inc.](#)
 - h. [Nailor Industries Inc.](#)
 - i. [Price Industries.](#)
 - j. [Titus.](#)
 - k. [Tuttle & Bailey.](#)
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
2. Devices shall be specifically designed for variable-air-volume flows.

3. Material: **[Steel]** **[Aluminum]** **[Stainless steel]**.
4. Finish: **[Baked enamel, white]** **[Baked enamel, color selected by DEN Project Manager]** **<Insert finish>**.
5. Narrow Core Spacing Arrangement: **1/8-inch-** (3-mm-) thick blades spaced **1/4 inch** (6 mm) apart, **[zero]** **[15]**-degree deflection.
6. Wide Core Spacing Arrangement: **1/8-inch-** (3-mm-) thick blades spaced **1/2 inch** (13 mm) apart, **[zero]** **[15]**-degree deflection.
7. Wide Core Spacing Arrangement: **3/16-inch-** (5-mm-) thick blades spaced **1/2 inch** (13 mm) apart, **[zero]** **[15]** **[30]**-degree deflection.
8. Pencil-Proof Core Spacing Arrangement: **3/16-inch-** (5-mm-) thick blades spaced **7/16 inch** (11 mm) apart, **[zero]** **[15]** **[30]**-degree deflection.
9. **[One]** **[Two]**-Way Deflection Vanes: Extruded construction fixed louvers with removable core.
10. Frame: **[1-1/4 inches** (32 mm)] **[1 inch** (25 mm)] **[3/4 inch** (19 mm)] **[1/2 inch** (13 mm)] **[3/16 inch** (5 mm)] wide.
11. Mounting Frame: **[Filter]** **<Insert frame size and style>**.
12. Mounting: **[Countersunk screw]** **[Concealed bracket]** **[Spring clip]**.
13. Damper Type: **[Adjustable opposed-blade assembly]** **[Hinged single blade]**.
14. Accessories: **[Plaster frame]** **[Directional vanes]** **[Alignment pins]** **[Core clips]** **[Blank-off strips]**.

B. Linear Slot Diffuser **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Research Diffuser Products, Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Hart & Cooley Inc.](#)
 - e. [Krueger.](#)
 - f. [METALAIRE, Inc.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. [Tuttle & Bailey.](#)
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
2. Devices shall be specifically designed for variable-air-volume flows.
3. Material - Shell: **[Steel]** **[Aluminum]**, **[insulated]** **[noninsulated]**.
4. Material - Pattern Controller and Tees: Aluminum.
5. Finish - Face and Shell: **[Baked enamel, black]** **<Insert finish>**.
6. Finish - Pattern Controller: **[Baked enamel, black]** **<Insert finish>**.
7. Finish - Tees: **[Baked enamel, white]** **[Baked enamel, color selected by DEN Project Manager]** **<Insert finish>**.
8. Slot Width: **[1/2 inch** (13 mm)] **[3/4 inch** (19 mm)] **[1 inch** (25 mm)] **[1-1/2 inches** (38 mm)].
9. Number of Slots: **[One]** **[Two]** **[Three]** **[Four]** **<Insert number>**.

10. Length: [24 inches (600 mm)] [30 inches (750 mm)] [36 inches (900 mm)] [48 inches (1200 mm)] [60 inches (1500 mm)].
11. Accessories: [Plaster frame] [T-bar slot] [Center notch] [T-bar on inlet side] [T-bar on both sides] [T-bar clip on one side] [T-bar clips on both sides].

C. Ceiling-Integral Continuous Diffuser <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Research Diffuser Products, Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Hart & Cooley Inc.](#)
 - e. [Krueger.](#)
 - f. [METALAIRE, Inc.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. [Tuttle & Bailey.](#)
 - k. <Insert manufacturer's name>.
 - l. or approved equal.
2. Slot Width: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (50 mm)] [2-1/2 inches (63 mm)] [3 inches (76 mm)].
3. Section Length: [12 feet (3.7 m)] <Insert dimension>.
4. Straight and curved sections as required to accommodate layout.
5. Mitered tees and corners.
6. Pattern Controllers: [24 inches (600 mm)] <Insert dimension> o.c.
7. Material: Aluminum, extruded, heavy wall.
8. Finishes:
 - a. Exterior: Standard white.
 - b. Interior: Standard black.
9. Throw: [Standard] [High].
10. Mounting: [Ceiling] [Sidewall].
11. Plenum: [Noninsulated] [Insulated].
12. Other Features:
 - a. Painted interior.
 - b. Blank-offs.

D. Light Troffer Diffuser <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Anemostat Products; a Mestek company.](#)
 - b. [Carnes.](#)

- c. [Hart & Cooley Inc.](#)
 - d. [Krueger.](#)
 - e. [METALAIRE, Inc.](#)
 - f. [Nailor Industries Inc.](#)
 - g. [Price Industries.](#)
 - h. [Titus.](#)
 - i. [Tuttle & Bailey.](#)
 - j. **<Insert manufacturer's name>.**
 - k. or approved equal.
2. Devices shall be specifically designed for variable-air-volume flows.
 3. Material: Steel[**with external insulation**].
 4. Finish: **[None] [Black enamel on visible surfaces] <Insert finish>.**
 5. Slot Width: **[1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)] [1-1/2 inches (38 mm)]**].
 6. Number of Sides: **[One] [Two]**.
 7. Length: **[24 inches (600 mm)] [36 inches (900 mm)] [48 inches (1200 mm)]**.
 8. Pattern: **[Fixed] [Adjustable]**.
 9. Inlet: **[Top] [Side]**.
 10. Inlet Size: **[5 inches (125 mm)] [6 inches (150 mm)] [8 inches (200 mm)]**.

2.3 UNDERFLOOR AIR DISTRIBUTION DIFFUSERS

A. Round Induction Diffusers **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Research Diffuser Products, Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Hart & Cooley Inc.](#)
 - e. [Krueger.](#)
 - f. [METALAIRE, Inc.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. **<Insert manufacturer's name>.**
 - k. or approved equal.
2. Airflow Principle: Swirl-pattern induction.
3. Material: Plastic, high impact, and resistant to cart and foot traffic.
4. Color: **[Gray] [Black]**.
5. Components:
 - a. Diffuser core.
 - b. Flow regulator.
 - c. Dirt and liquid catch pan.
 - d. Spacer flange.

- e. Gasketed, underfloor compression ring.

B. Linear Floor Diffuser Plenums **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Research Diffuser Products, Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Hart & Cooley Inc.](#)
 - e. [Krueger.](#)
 - f. [METALAIRE, Inc.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.
2. Material: Steel.
3. Finish: White baked acrylic.
4. Deflection: **[Zero] [15]** degrees.
5. Components:
 - a. Aluminum diffuser core.
 - b. Diffuser frame.
 - c. Plenum, **0.034-inch** (0.85-mm) steel.

2.4 HIGH-CAPACITY DIFFUSERS

A. Drum Louver **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Research Diffuser Products, Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Hart & Cooley Inc.](#)
 - e. [Krueger.](#)
 - f. [METALAIRE, Inc.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. [Tuttle & Bailey.](#)
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
2. Airflow Principle: Extended distance for high airflow rates.

3. Material: Aluminum, heavy gage extruded.
4. Finish: White baked acrylic.
5. Border: **1-1/4-inch** (32-mm) width with countersunk screw holes.
6. Gasket between drum and border.
7. Body: Drum shaped; adjustable vertically.
8. Blades: Individually adjustable horizontally.
9. Mounting: Surface to [**duct**] [**wall**].
10. Inlet Width: [**6 inches** (150 mm)] [**10 inches** (250 mm)] [**12 inches** (300 mm)] [**15 inches** (380 mm)] **<Insert dimension>**.
11. Inlet Length: [**12 inches** (300 mm)] [**24 inches** (600 mm)] [**36 inches** (900 mm)] [**60 inches** (1500 mm)] **<Insert dimension>**.
12. Accessories:
 - a. Opposed-blade steel damper.
 - b. Duct-mounting collars with countersunk screw holes.

B. Modular Core Supply Grilles **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Research Diffuser Products, Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Hart & Cooley Inc.](#)
 - e. [Krueger.](#)
 - f. [METALAIRE, Inc.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. [Tuttle & Bailey.](#)
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
2. Throw: Extended distance for airflow rates.
3. Material: Steel.
4. Grilles per Unit: [**One**] [**Two**] [**Three**] [**Four**].
5. Finish: White baked acrylic.
6. Border: **1-1/2-inch** (38-mm) width with countersunk screw holes.
7. Blades:
 - a. Airfoil, individually adjustable horizontally.
 - b. Double deflection.
 - c. Set in modules.
8. Modules: Removable; rotatable.
9. Mounting: Surface.
10. Accessory: Opposed-blade steel damper.

2.5 FLEXIBLE DIFFUSION OUTLETS

A. Continuous Tubular Diffuser <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Distribution Concepts](#).
 - b. [Airmax International](#).
 - c. [DuctSox Corp.](#)
 - d. [Fabric Duct Systems](#).
 - e. [FabricAir Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
2. Material: [**Flame-retardant, woven polyethylene fabric**] [**Flame-retardant, coated polyester and fiberglass fabric**] [**Flame-retardant, permeable polyester and fiberglass fabric**] [**Polyethylene**].
3. Duct Connection: Round.
4. Duct Connection Size: <Insert inches (mm)>.
5. Diffusion Hole Size: <Insert inches (mm)>.
6. Diffusion Hole Frequency - Number per 100 Feet (30 m): <Insert number>.
7. Accessories:
 - a. Quick-connect joint.
 - b. Snap hooks.
 - c. Cleanout zipper.
 - d. Condensate drain.

2.6 REGISTERS AND GRILLES

A. Adjustable Bar Register <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [A-J Manufacturing Co., Inc.](#)
 - b. [Anemostat Products; a Mestek company](#).
 - c. [Carnes](#).
 - d. [Dayus Register & Grille Inc.](#)
 - e. [Hart & Cooley Inc.](#)
 - f. [Krueger](#).
 - g. [METALAIRE, Inc.](#)
 - h. [Nailor Industries Inc.](#)
 - i. [Price Industries](#).
 - j. [Titus](#).
 - k. [Tuttle & Bailey](#).
 - l. <Insert manufacturer's name>.
 - m. or approved equal.

2. Material: **[Steel]** **[Aluminum]** **[Stainless steel]**.
3. Finish: **[Baked enamel, white]** **[Baked enamel, color selected by DEN Project Manager]** **<Insert finish>**.
4. Face Blade Arrangement: **[Horizontal]** **[Vertical]** spaced **[3 inches (76 mm)]** **[1-1/2 inches (38 mm)]** **[3/4 inch (19 mm)]** **[1/2 inch (13 mm)]** apart.
5. Core Construction: **[Integral]** **[Removable]**.
6. Rear-Blade Arrangement: **[Horizontal]** **[Vertical]** spaced **[3/4 inch (19 mm)]** **[1/2 inch (13 mm)]** apart.
7. Frame: **[1-1/4 inches (32 mm)]** **[1 inch (25 mm)]** wide.
8. Mounting Frame: **[Filter]** **<Insert frame size and style>**.
9. Mounting: **[Countersunk screw]** **[Concealed]** **[Lay in]**.
10. Damper Type: **[Adjustable opposed blade]** **[NRTL listed, opposed blade, spring closing, and with fusible link for 160 deg F (71 deg C)]**.
11. Accessories:
 - a. **[Front]** **[Rear]**-blade gang operator.
 - b. Filter.

B. Adjustable Bar Grille **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [A-J Manufacturing Co., Inc.](#)
 - b. [Anemostat Products: a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Dayus Register & Grille Inc.](#)
 - e. [Hart & Cooley Inc.](#)
 - f. [Krueger.](#)
 - g. [METALAIRE, Inc.](#)
 - h. [Nailor Industries Inc.](#)
 - i. [Price Industries.](#)
 - j. [Titus.](#)
 - k. [Tuttle & Bailey.](#)
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
2. Material: **[Steel]** **[Aluminum]** **[Stainless steel]**.
3. Finish: **[Baked enamel, white]** **[Baked enamel, color selected by DEN Project Manager]** **<Insert finish>**.
4. Face Blade Arrangement: **[Horizontal]** **[Vertical]** spaced **[3 inches (76 mm)]** **[1-1/2 inches (38 mm)]** **[3/4 inch (19 mm)]** **[1/2 inch (13 mm)]** apart.
5. Core Construction: **[Integral]** **[Removable]**.
6. Rear-Blade Arrangement: **[Horizontal]** **[Vertical]** spaced **[3/4 inch (19 mm)]** **[1/2 inch (13 mm)]** apart.
7. Frame: **[1-1/4 inches (32 mm)]** **[1 inch (25 mm)]** wide.
8. Mounting Frame: **[Filter]** **<Insert frame size and style>**.
9. Mounting: **[Countersunk screw]** **[Concealed]** **[Lay in]**.

C. Security Register **<Insert drawing designation>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [A-J Manufacturing Co., Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Hart & Cooley Inc.](#)
 - e. [Krueger.](#)
 - f. [Nailor Industries Inc.](#)
 - g. [Price Industries.](#)
 - h. [Titus.](#)
 - i. [Tuttle & Bailey.](#)
 - j. <Insert manufacturer's name>.
 - k. or approved equal.
2. Security Level: [Maximum] [Medium] [Minimum] [and suicide deterrent].
3. Application: [Ducted return] [Air transfer] [Barrier].
4. Material: [Steel] [Aluminum].
5. Material Thickness: [0.19 inch (4.8 mm)] <Insert dimension>.
6. Finish: [Baked enamel, white] [Baked enamel, color selected by DEN Project Manager] <Insert finish>.
7. Face Arrangement:
 - a. Shape: [Square] [Rectangular] [Round].
 - b. Design: [Fixed bar] [Perforated] [Lattice].
 - c. Frame: [Yes] [No].
 - d. Deflection: [Zero] [38] degrees.
 - e. Core: [None] [Louvered].
 - f. 3/16-inch- (5-mm-) thick, front lattice plate with 2-by-2-inch- (50-by-50-mm-) square holes and 1-inch (25-mm) frets, 0.135-inch (3.43-mm) wire mesh, and 1/4-inch- (6-mm-) thick backer plate.
 - g. 3/16-inch- (5-mm-) thick, perforated faceplate with 5/16-inch- (8-mm-) diameter holes spaced 7/16 inch (11 mm) o.c., staggered at 60 degrees.
 - h. 1-1/2-inch (38-mm) bars and mandrel tubes and rods with [zero] [15]-degree deflection in 1-1/4-by-1-1/4-by-3/16-inch (32-by-32-by-5-mm) angle border.
 - i. 1-3/8-inch (35-mm) bars and double mandrel tubes with [zero] [15]-degree deflection in 1-3/4-inch (45-mm) angle border.
8. Damper Operation: [None] [Face operated] [Rear operated].
9. Damper Type: [Adjustable opposed blade] [NRTL listed, opposed blade, spring closing, and with fusible link for 160 deg F (71 deg C)].
10. Wall Sleeve: [3/16 inch (5 mm) welded to face] [1/8 inch (3 mm) welded to face] [Mechanically fastened to border].
11. Mounting: [1-by-1-by-3/16-inch (25-by-25-by-5-mm) retaining angle frame] [1-1/4-by-1-1/4-by-3/16-inch (32-by-32-by-5-mm) retaining angle frame] [1-1/4-by-1-1/4-by-3/16-inch (32-by-32-by-5-mm) cast-in-place frame and tamperproof machine screws].

D. Security Grille <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [A-J Manufacturing Co., Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Hart & Cooley Inc.](#)
 - e. [Krueger.](#)
 - f. [Nailor Industries Inc.](#)
 - g. [Price Industries.](#)
 - h. [Titus.](#)
 - i. [Tuttle & Bailey.](#)
 - j. <Insert manufacturer's name>.
 - k. or approved equal.
 2. Security Level: **[Maximum] [Medium] [Minimum] [and suicide deterrent]**.
 3. Application: **[Ducted return] [Air transfer] [Barrier]**.
 4. Material: **[Steel] [Aluminum]**.
 5. Material Thickness: **[0.19 inch (4.8 mm)] <Insert dimension>**.
 6. Finish: **[Baked enamel, white] [Baked enamel, color selected by DEN Project Manager] <Insert finish>**.
 7. Face Arrangement:
 - a. Shape: **[Square] [Rectangular] [Round]**.
 - b. Design: **[Fixed bar] [Perforated] [Lattice]**.
 - c. Frame: **[Yes] [No]**.
 - d. Deflection: **[Zero] [38] degrees**.
 - e. Core: **[None] [Louvered]**.
 - f. **3/16-inch- (5-mm-) thick, front lattice plate with 2-by-2-inch- (50-by-50-mm-) square holes and 1-inch (25-mm) frets, 0.135-inch (3.43-mm) wire mesh, and 1/4-inch- (6-mm-) thick backer plate.**
 - g. **3/16-inch- (5-mm-) thick perforated faceplate with 5/16-inch- (8-mm-) diameter holes spaced 7/16 inch (11 mm) o.c., staggered at 60 degrees.**
 - h. **1-1/2-inch (38-mm) bars and mandrel tubes and rods with [zero] [15]-degree deflection in 1-1/4-by-1-1/4-by-3/16-inch (32-by-32-by-5-mm) angle border.**
 - i. **1-3/8-inch (35-mm) bars and double mandrel tubes with [zero] [15]-degree deflection in 1-3/4-inch (45-mm) angle border.**
 8. Wall Sleeve: **[3/16 inch (5 mm) welded to face] [1/8 inch (3 mm) welded to face] [Mechanically fastened to border]**.
 9. Mounting: **[1-by-1-by-3/16-inch (25-by-25-by-5-mm) retaining angle frame] [1-1/4-by-1-1/4-by-3/16-inch (32-by-32-by-5-mm) retaining angle frame] [1-1/4-by-1-1/4-by-3/16-inch (32-by-32-by-5-mm) cast-in-place frame and tamperproof machine screws]**.
- E. Fixed Face Register <Insert drawing designation>:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [A-J Manufacturing Co., Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Dayus Register & Grille Inc.](#)
 - e. [Hart & Cooley Inc.](#)
 - f. [Krueger.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. [Tuttle & Bailey.](#)
 - k. **<Insert manufacturer's name>.**
 - l. or approved equal.
2. Material: **[Steel]** **[Aluminum]**.
 3. Finish: **[Baked enamel, white]** **[Baked enamel, color selected by DEN Project Manager]** **<Insert finish>.**
 4. Face Arrangement: **[1/2-by-1/2-by-1/2-inch (13-by-13-by-13-mm) grid]** **[Perforated]** core.
 5. Core Construction: **[Integral]** **[Removable]**.
 6. Frame: **[1-1/4 inches (32 mm)]** **[1 inch (25 mm)]** wide.
 7. Mounting Frame: **[Filter]** **<Insert frame size and style>.**
 8. Mounting: **[Countersunk screw]** **[Concealed]** **[Lay in]**.
 9. Damper Type: **[Adjustable opposed blade]** **[NRTL listed, opposed blade, spring closing, and with fusible link for 160 deg F (71 deg C)].**
 10. Accessory: Filter.
- F. Fixed Face Grille **<Insert drawing designation>:**
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [A-J Manufacturing Co., Inc.](#)
 - b. [Anemostat Products; a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Dayus Register & Grille Inc.](#)
 - e. [Hart & Cooley Inc.](#)
 - f. [Krueger.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. [Tuttle & Bailey.](#)
 - k. **<Insert manufacturer's name>.**
 - l. or approved equal.
 2. Material: **[Steel]** **[Aluminum]**.
 3. Finish: **[Baked enamel, white]** **[Baked enamel, color selected by DEN Project Manager]** **<Insert finish>.**
 4. Face Arrangement: **[1/2-by-1/2-by-1/2-inch (13-by-13-by-13-mm) grid]** **[Perforated]** core.
 5. Core Construction: **[Integral]** **[Removable]**.

6. Frame: [1-1/4 inches (32 mm)] [1 inch (25 mm)] wide.
7. Mounting Frame: [Filter] <Insert frame size and style>.
8. Mounting: [Countersunk screw] [Concealed] [Lay in].
9. Accessory: Filter.

G. Linear Bar Grille <Insert drawing designation>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [A-J Manufacturing Co., Inc.](#)
 - b. [Anemostat Products: a Mestek company.](#)
 - c. [Carnes.](#)
 - d. [Dayus Register & Grille Inc.](#)
 - e. [Hart & Cooley Inc.](#)
 - f. [Krueger.](#)
 - g. [Nailor Industries Inc.](#)
 - h. [Price Industries.](#)
 - i. [Titus.](#)
 - j. [Tuttle & Bailey.](#)
 - k. <Insert manufacturer's name>.
 - l. or approved equal.
2. Material: [Steel] [Aluminum].
3. Finish: [Baked enamel, white] [Baked enamel, color selected by DEN Project Manager] <Insert finish>.
4. Face Arrangement: [1/2-by-1/2-by-1/2-inch (13-by-13-by-13-mm) grid] [Perforated] core.
5. Distribution plenum.
 - a. Internal insulation.
 - b. Inlet damper.
6. Frame: [1-1/4 inches (32 mm)] [1 inch (25 mm)] wide.
7. Mounting Frame: [Filter] <Insert frame size and style>.
8. Mounting: [Countersunk screw] [Concealed] [Lay in].
9. Damper Type: [Adjustable opposed blade] [NRTL listed, opposed blade, spring closing, and with fusible link for 160 deg F (71 deg C)].

2.7 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install diffusers, registers, and grilles level and plumb.
- C. Check location of outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.
- D. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify DEN Project Manager for a determination of final location.
- E. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.
- F. Install diffusers to ductwork with airtight connection.
- G. Provide balancing dampers on duct take-off to diffusers, and grilles and registers, despite whether dampers are specified as part of the diffuser, or grille and register assembly.
- H. Paint ductwork visible behind air outlets and inlets matte black. Refer to Division 9.

3.3 ADJUSTING

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233713

SECTION 233723 - HVAC GRAVITY VENTILATORS

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Louvered-penthouse ventilators.
 - 2. Roof hoods.
 - 3. Goosenecks.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design ventilators, including comprehensive engineering analysis by a qualified professional engineer, using structural[**and seismic**] performance requirements and design criteria indicated.
- B. Structural Performance: Ventilators shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of ventilator components, noise, or metal fatigue caused by ventilator blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.
 - 1. Wind Loads: Determine loads based on pressures as indicated on Drawings.
 - 2. Wind Loads: Determine loads based on a uniform pressure of [20 lbf/sq. ft. (960 Pa)] [30 lbf/sq. ft. (1440 Pa)] <Insert design wind pressure>, acting inward or outward.
 - 3. Wind Loads: Determine loads based on pressures indicated below:
 - a. Corner Zone: Within <Insert distance> of building corners, uniform pressure of <Insert design wind pressure>, acting inward, and <Insert design wind pressure>, acting outward.

- b. Other Than Corner Zone: Uniform pressure of **<Insert design wind pressure>**, acting inward, and **<Insert design wind pressure>**, acting outward.
 - C. Seismic Performance: Ventilators, including attachments to other construction, shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] **<Insert requirement>**.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
 - D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes, without buckling, opening of joints, overstressing of components, failure of connections, or other detrimental effects.
 - 1. Temperature Change (Range): [120 deg F (67 deg C), **ambient**; 180 deg F (100 deg C)] **<Insert temperature range>**, material surfaces.
 - E. Water Entrainment: Limit water penetration through unit to comply with ASHRAE 62.1.
- 1.4 ACTION SUBMITTALS
- A. Product Data: For each type of product indicated.[**For louvered-penthouse ventilators specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.**]
 - 1. Include data substantiating that materials comply with requirements.
 - B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
 - C. Shop Drawings: For gravity ventilators. Include plans, elevations, sections, details, ventilator attachments to curbs, and curb attachments to roof structure.
 - 1. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion.
 - D. Samples: For each exposed product and for each color and texture specified.
 - E. Samples for Initial Selection: For units with factory-applied color finishes.
 - F. Samples for Verification: For each type of louvered-penthouse ventilator indicated, in manufacturer's standard size.
 - G. Delegated-Design Submittal: For shop-fabricated ventilators indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of shop-fabricated ventilators.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Roof framing plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 1. Structural members to which roof curbs and ventilators will be attached.
 2. Sizes and locations of roof openings.
- B. Seismic Qualification Certificates: For ventilators, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Welding certificates.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 1. Record actual locations of air outlets and inlets.

1.7 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 2. AWS D1.3, "Structural Welding Code - Sheet Steel."
- B. Test and rate louver performance in accordance with AMCA 500.

1.8 COORDINATION

- A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Aluminum Extrusions: [ASTM B 221](#) (ASTM B 221M), Alloy 6063-T5 or T-52.
- B. Aluminum Sheet: [ASTM B 209](#) (ASTM B 209M), Alloy 3003 or 5005 with temper as required for forming or as otherwise recommended by metal producer for required finish.
- C. Galvanized-Steel Sheet: ASTM A 653/A 653M, [G90](#) (Z275) zinc coating, mill phosphatized.
- D. Stainless-Steel Sheet: ASTM A 666, Type 304, with No. [4] [6] finish.
- E. Fasteners: Same basic metal and alloy as fastened metal or 300 Series stainless steel unless otherwise indicated. Do not use metals that are incompatible with joined materials.
 - 1. Use types and sizes to suit unit installation conditions.
 - 2. Use [**Phillips flat**] [**hex-head or Phillips pan**]-head screws for exposed fasteners unless otherwise indicated.
- F. Post-Installed Fasteners for Concrete and Masonry: Torque-controlled expansion anchors made from stainless-steel components, with capability to sustain without failure a load equal to 4 times the loads imposed for concrete, or 6 times the load imposed for masonry, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.2 FABRICATION, GENERAL

- A. Factory or shop fabricate gravity ventilators to minimize field splicing and assembly. Disassemble units to the minimum extent as necessary for shipping and handling. Clearly mark units for reassembly and coordinated installation.
- B. Fabricate frames, including integral bases, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

- C. Fabricate units with closely fitted joints and exposed connections accurately located and secured.
- D. Fabricate supports, anchorages, and accessories required for complete assembly.
- E. Perform shop welding by AWS-certified procedures and personnel.

2.3 LOUVERED-PENTHOUSE VENTILATORS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- 1. [Acme Engineering & Mfg. Corporation.](#)
- 2. [Aerovent.](#)
- 3. [Carnes.](#)
- 4. [Greenheck Fan Corporation.](#)
- 5. [JencoFan.](#)
- 6. [Loren Cook Company.](#)
- 7. [PennBarry.](#)
- 8. **<Insert manufacturer's name>.**
- 9. or approved equal.

- B. Construction: All-welded assembly with [4-inch (100-mm)] [6-inch (150-mm)]-deep louvers, mitered corners, and [aluminum] [galvanized-steel] [stainless-steel] sheet roof [with mineral-fiber insulation and vapor barrier].

- C. Frame and Blade Material and Nominal Thickness: Extruded aluminum, of thickness required to comply with structural performance requirements, but not less than 0.080 inch (2.0 mm) for frames and [0.080 inch (2.0 mm)] [0.060 inch (1.5 mm)] for blades [with condensate deflectors].

- 1. Blade Spacing: **<Insert inches (mm)>.**
- 2. Blade Angle: **<Insert number>** degrees.
- 3. AMCA Seal: Mark units with the AMCA Certified Ratings Seal.
- 4. Exterior Corners: Prefabricated corner units with [mitered and welded blades] [mitered blades with concealed close-fitting splices] and with [fully recessed] [semirecessed] mullions at corners.

- D. Frame and Blade Material and Nominal Thickness: Galvanized-steel sheet, of thickness required to comply with structural performance requirements, but not less than 0.052 inch (1.3 mm) for frames and [0.040 inch (1.0 mm)] [0.052 inch (1.3 mm)] [0.064 inch (1.6 mm)] for blades [with condensate deflectors].

- 1. Blade Spacing: **<Insert inches (mm)>.**
- 2. Blade Angle: **<Insert number>** degrees.
- 3. AMCA Seal: Mark units with the AMCA Certified Ratings Seal.
- 4. Exterior Corners: Prefabricated corner units with [mitered and welded blades] [mitered blades with concealed close-fitting splices] and with [fully recessed] [semirecessed] mullions at corners.

- E. Frame and Blade Material and Nominal Thickness: Stainless-steel sheet, of thickness required to comply with structural performance requirements, but not less than [0.050 inch (1.27 mm)] [0.062 inch (1.57 mm)], with grain running [parallel] [perpendicular] to length of blades and frame members[**with condensate deflectors**].
1. Blade Spacing: <Insert inches (mm)>.
 2. Blade Angle: <Insert number> degrees.
 3. AMCA Seal: Mark units with the AMCA Certified Ratings Seal.
 4. Exterior Corners: Prefabricated corner units with [mitered and welded blades] [mitered blades with concealed close-fitting splices] and with [fully recessed] [semirecessed] mullions at corners.
- F. Roof Curbs: Galvanized-steel sheet; with mitered and welded corners; 1-1/2-inch- (40-mm-) thick, rigid fiberglass insulation adhered to inside walls; and 1-1/2-inch (40-mm) wood nailer. Size as required to fit roof opening and ventilator base.
1. Configuration: [Self-flashing without a cant strip, with] [Built-in cant and] [Built-in raised cant and] mounting flange.
 2. Overall Height: [8 inches (200 mm)] [9-1/2 inches (240 mm)] [12 inches (300 mm)] [16 inches (400 mm)] [18 inches (450 mm)].
- G. Bird Screening: [Galvanized-steel, 1/2-inch- (12.7-mm-) square mesh, 0.041-inch (1.04-mm) wire] [Aluminum, 1/2-inch- (12.7-mm-) square mesh, 0.063-inch (1.6-mm) wire] [Flattened, expanded aluminum, 3/4 by 0.050 inch (19 by 1.27 mm) thick] [Stainless-steel, 1/2-inch- (12.7-mm-) square mesh, 0.047-inch (1.19-mm) wire].
- H. Insect Screening: [Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm)] [Stainless-steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm)] wire.
- I. Galvanized-Steel Sheet Finish:
1. Surface Preparation: Clean surfaces of dirt, grease, and other contaminants. Clean welds, mechanical connections, and abraded areas and repair galvanizing according to ASTM A 780. Apply a conversion coating suited to the organic coating to be applied over it.
 2. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply an air-dried primer immediately after cleaning and pretreating.
 3. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of 1 mil (0.025 mm) for topcoat and an overall minimum dry film thickness of 2 mils (0.05 mm).
 - a. Color and Gloss: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].
- J. Accessories:
1. Dampers:

- a. Location: **[Penthouse neck] [Inside louver face]**.
- b. Control: **[Manual] [Motorized]**.

K. Capacities and Characteristics:

1. Height: **<Insert inches (mm)>**.
2. Width and Depth: **<Insert inches (mm)>** by **<Insert inches (mm)>**.
3. Free Area: Not less than **[5.0 sq. ft. (0.46 sq. m)] [6.0 sq. ft. (0.56 sq. m)] [7.0 sq. ft. (0.65 sq. m)] <Insert free area>** for **48-inch- (1220-mm-)** wide by **48-inch- (1220-mm-)** high louver.
4. Air Performance: Not more than **[0.10-inch wg (25-Pa)] <Insert pressure>** static pressure drop at **[600-fpm (3.0-m/s)] [700-fpm (3.6-m/s)] [800-fpm (4.1-m/s)] <Insert velocity>** free-area **[exhaust] [intake]** velocity.
5. Wind-Driven Rain Performance: Not less than **[99] [95] [80] <Insert number>** percent effectiveness when subjected to a rainfall rate of **[3 inches (75 mm) per hour and a wind speed of 29 mph (13 m/s)] [8 inches (200 mm) per hour and a wind speed of 50 mph (22.4 m/s)]** at a core-area intake velocity of **[300 fpm (1.5 m/s)] [400 fpm (2.0 m/s)] [500 fpm (2.5 m/s)] <Insert velocity>**.

2.4 ROOF HOODS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering & Mfg. Corporation](#).
2. [Aerovent](#).
3. [Carnes](#).
4. [Greenheck Fan Corporation](#).
5. [JencoFan](#).
6. [Loren Cook Company](#).
7. [PennBarry](#).
8. **<Insert manufacturer's name>**.
9. or approved equal.

B. Factory or shop fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figures 6-6 and 6-7.

C. Materials: **[Galvanized-steel sheet, minimum 0.064-inch- (1.62-mm-) thick base and 0.040-inch- (1.0-mm-) thick hood] [Aluminum sheet, minimum 0.063-inch- (1.6-mm-) thick base and 0.050-inch- (1.27-mm-) thick hood]**; suitably reinforced.

D. Roof Curbs: Galvanized-steel sheet; with mitered and welded corners; **1-1/2-inch- (40-mm-)** thick, rigid fiberglass insulation adhered to inside walls; and **1-1/2-inch (40-mm)** wood nailer. Size as required to fit roof opening and ventilator base.

1. Configuration: **[Self-flashing without a cant strip, with] [Built-in cant and] [Built-in raised cant and]** mounting flange.
2. Overall Height: **[8 inches (200 mm)] [9-1/2 inches (240 mm)] [12 inches (300 mm)] [16 inches (400 mm)] [18 inches (450 mm)]**.

- E. Bird Screening: **[Galvanized-steel, 1/2-inch- (12.7-mm-) square mesh, 0.041-inch (1.04-mm) wire]** **[Aluminum, 1/2-inch- (12.7-mm-) square mesh, 0.063-inch (1.6-mm) wire]** **[Flattened, expanded aluminum, 3/4 by 0.050 inch (19 by 1.27 mm) thick]** **[Stainless-steel, 1/2-inch- (12.7-mm-) square mesh, 0.047-inch (1.19-mm) wire]**.
- F. Insect Screening: **[Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm)]** **[Stainless-steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm)]** wire.
- G. Galvanized-Steel Sheet Finish:
1. Surface Preparation: Clean surfaces of dirt, grease, and other contaminants. Clean welds, mechanical connections, and abraded areas and repair galvanizing according to ASTM A 780. Apply a conversion coating suited to the organic coating to be applied over it.
 2. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply an air-dried primer immediately after cleaning and pretreating.
 3. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of **1 mil (0.025 mm)** for topcoat and an overall minimum dry film thickness of **2 mils (0.05 mm)**.
 - a. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]**.
- H. Capacities and Characteristics:
1. Height: **<Insert inches (mm)>**.
 2. Width and Depth: **<Insert inches (mm)>** by **<Insert inches (mm)>**.
 3. Free Area: Not less than **[5.0 sq. ft. (0.46 sq. m)]** **[6.0 sq. ft. (0.56 sq. m)]** **[7.0 sq. ft. (0.65 sq. m)]** **<Insert free area>** for **48-inch- (1220-mm-) wide** by **48-inch- (1220-mm-) high** louver.
 4. Air Performance: Not more than **[0.10-inch wg (25-Pa)]** **<Insert pressure>** static pressure drop at **[600-fpm (3.0-m/s)]** **[700-fpm (3.6-m/s)]** **[800-fpm (4.1-m/s)]** **<Insert velocity>** free-area **[exhaust]** **[intake]** velocity.

2.5 GOOSENECKS

- A. Factory or shop fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 6-5; with a minimum of **0.052-inch- (1.3-mm-)** thick, galvanized-steel sheet.
- B. Roof Curbs: Galvanized-steel sheet; with mitered and welded corners; **1-1/2-inch- (40-mm-)** thick, rigid fiberglass insulation adhered to inside walls; and **1-1/2-inch (40-mm)** wood nailer. Size as required to fit roof opening and ventilator base.
1. Configuration: **[Self-flashing without a cant strip, with]** **[Built-in cant and]** **[Built-in raised cant and]** mounting flange.

2. Overall Height: [8 inches (200 mm)] [9-1/2 inches (240 mm)] [12 inches (300 mm)] [16 inches (400 mm)] [18 inches (450 mm)].
- C. Bird Screening: [**Galvanized-steel, 1/2-inch- (12.7-mm-) square mesh, 0.041-inch (1.04-mm) wire**] [**Aluminum, 1/2-inch- (12.7-mm-) square mesh, 0.063-inch (1.6-mm) wire**] [**Flattened, expanded aluminum, 3/4 by 0.050 inch (19 by 1.27 mm) thick**] [**Stainless-steel, 1/2-inch- (12.7-mm-) square mesh, 0.047-inch (1.19-mm) wire**].
- D. Insect Screening: [**Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm)**] [**Stainless-steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm)**] wire.
- E. Galvanized-Steel Sheet Finish:
1. Surface Preparation: Clean surfaces of dirt, grease, and other contaminants. Clean welds, mechanical connections, and abraded areas and repair galvanizing according to ASTM A 780. Apply a conversion coating suited to the organic coating to be applied over it.
 2. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply an air-dried primer immediately after cleaning and pretreating.
 3. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of **1 mil (0.025 mm)** for topcoat and an overall minimum dry film thickness of **2 mils (0.05 mm)**.
 - a. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**].
- F. Capacities and Characteristics:
1. Height: <Insert inches (mm)>.
 2. Width and Depth: <Insert inches (mm)> by <Insert inches (mm)>.
 3. Free Area: Not less than [5.0 sq. ft. (0.46 sq. m)] [6.0 sq. ft. (0.56 sq. m)] [7.0 sq. ft. (0.65 sq. m)] <Insert free area> for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 4. Air Performance: Not more than [0.10-inch wg (25-Pa)] <Insert pressure> static pressure drop at [600-fpm (3.0-m/s)] [700-fpm (3.6-m/s)] [800-fpm (4.1-m/s)] <Insert velocity> free-area [exhaust] [intake] velocity.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas where louvered-penthouse ventilators, roof hoods and goosnecks are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

3.2 Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install gravity ventilators level, plumb, and at indicated alignment with adjacent work.
- C. Install goosenecks on curb base where throat size exceeds [9 by 9 inches (230 by 230 mm)] <Insert measurement>.
- D. Install gravity ventilators with clearances for service and maintenance.
- E. Install perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- F. Install concealed gaskets, flashings, joint fillers, and insulation as installation progresses. Comply with Section 079200 "Joint Sealants" for sealants applied during installation.
- G. Label gravity ventilators according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."
- H. Protect galvanized and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.
- I. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.

3.4 CONNECTIONS

- A. Duct installation and connection requirements are specified in Section 233113 "Metal Ducts" and Section 233116 "Nonmetal Ducts." Drawings indicate general arrangement of ducts and duct accessories.

3.5 ADJUSTING

- A. Adjust damper linkages for proper damper operation.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233723

SECTION 233813 - COMMERCIAL-KITCHEN HOODS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes [**Type I**] [**Type II**] [**Type I and Type II**] commercial kitchen hoods.
- B. Allowances: Furnish commercial kitchen hoods under the allowances indicated as specified in Section 012100 "Allowances."
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Listed Hood: A hood, factory fabricated and tested for compliance with UL 710 by a testing agency acceptable to authorities having jurisdiction.
- B. Standard Hood: A hood, usually field fabricated that complies with design, construction, and performance criteria of applicable national and local codes.
- C. Type I Hood: A hood designed for grease exhaust applications.
- D. Type II Hood: A hood designed for heat and steam removal and for other nongrease applications.
- E. Terminology Standard: Refer to NSF 2, "Food Equipment" or other applicable NSF standards for definitions of equipment and installation terms not otherwise defined in this Section or in other referenced standards.

1.4 ACTION SUBMITTALS

- A. Product Data: Include manufacturer's model number and accessories and requirements for access and maintenance clearances, power, and service-connections including roughing-in dimensions, for the following:
 - 1. Standard hoods.

2. Filters/baffles.
3. Fire-suppression systems.
4. Lighting fixtures.
5. Include data substantiating that materials comply with requirements.

B. Shop Drawings: Signed and sealed by a qualified professional engineer.

1. Shop Drawing Scale: [1/4 inch = 1 foot (1:50)] <Insert scale>.
2. Show plan view, elevation view, sections, roughing-in dimensions, fabrication details, service requirements, duct connection sizes, and attachments to other work.
3. Show cooking equipment plan and elevation to confirm minimum code-required overhang.
4. Indicate performance, exhaust and makeup air airflow, and pressure loss at actual Project-site elevation.
5. Show water-supply and drain piping connections.
6. Show control cabinets.
7. Show fire-protection cylinders, piping, actuation devices, and manual control devices.
8. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
9. Design Calculations: Calculate requirements for selecting seismic restraints.
10. Wiring Diagrams: Power, signal, and control wiring.
 - a. Differentiate between manufacturer-installed and field-installed wiring.
11. Piping Diagrams: Detail fire-suppression piping and components and differentiate between manufacturer-installed and field-installed piping. Include roughing-in requirements for drain connections. Show cooking equipment plan and elevation to illustrate fire-suppression nozzle locations.
 - a. Piping Diagram Scale: [1/4 inch = 1 foot (1:50)] <Insert scale>.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Coordination Drawing Scale: [1/4 inch = 1 foot (1:50)] <Insert scale>.
2. Suspended ceiling assembly components.
3. Structural members to which equipment will be attached.
4. Roof framing and support members for duct penetrations.
5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.

- d. Sprinklers.
 - e. Access panels.
 - f. Moldings on hoods and accessory equipment.
 - g. <Insert item.>
- B. Welding certificates.
- C. Manufacturer Seismic Qualification Certification: Submit certification that commercial kitchen hoods, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
- 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means, "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Operation, maintenance, and parts data for food service equipment to include in the maintenance manuals specified in Division 1.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer to perform work of this Section who has specialized in installing kitchen hood equipment, who has completed installations similar in design and extent to that indicated for this Project, and who has a record of successful in-service performance.
- B. Manufacturer Qualifications: Engage a firm experienced in manufacturing kitchen hood equipment similar to that indicated for this Project and with a record of successful in-service performance.

- C. Source Limitations: Obtain each type of equipment through one source from a single manufacturer.
- D. Product Options: Drawings indicate food service equipment based on the specific products indicated. Other manufacturers' equipment with equal size and performance characteristics may be considered. Refer to Division 1 Section "Substitutions."
- E. Engineering Responsibility: Preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
- F. Welding: Qualify procedures and personnel according to AWS D1.1/D 1.1M, "Structural Welding Code - Steel," for hangers and supports; and AWS D9.1/D9.1M, "Sheet Metal Welding Code," for joint and seam welding.
- G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- H. Regulatory Requirements: Comply with the following National Fire Protection Association (NFPA) codes:
 - 1. NFPA 17, "Dry Chemical Extinguishing Systems."
 - 2. NFPA 17A, "Wet Chemical Extinguishing Systems."
 - 3. NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."
- I. Listing and Labeling: Provide electrically operated equipment or components specified in this Section that are listed and labeled.
 - 1. The Terms "Listed" and "Labeled": As defined in the National Electrical Code, Article 100.
 - 2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.
- J. NSF Standards: Comply with applicable NSF International (NSF) standards and criteria and provide NSF Certification Mark on each equipment item, unless otherwise indicated.
- K. SMACNA Standard: Where applicable, fabricate equipment to comply with the Sheet Metal and Air Conditioning Contractors National Association's (SMACNA) "Kitchen Equipment Fabrication Guidelines," unless otherwise indicated.
- L. Seismic Restraints: Provide seismic restraints for food service equipment according to the Sheet Metal and Air Conditioning Contractors National Association's (SMACNA) "Kitchen Equipment Fabrication Guidelines," appendix 1, "Guidelines for Seismic Restraints of Kitchen Equipment," unless otherwise indicated.
- M. Preinstallation Conference: Conduct conference at Project site [**location and time as determined by DEN Project Manager**] to comply with requirements in Section 013100 "Project Management and Coordination."

1. Review access requirements for equipment delivery.
2. Review equipment storage and security requirements.
3. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
4. Review structural loading limitations.
5. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

1.8 PROJECT CONDITIONS

- A. Field Measurements: Verify dimensions of food service equipment installation areas by field measurements before equipment fabrication and indicate measurements on Shop Drawings and Coordination Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish required dimensions and proceed with fabricating equipment without field measurements. Coordinate construction to ensure actual dimensions correspond to established dimensions.

1.9 COORDINATION

- A. Coordinate equipment layout and installation with adjacent Work, including lighting fixtures, HVAC equipment, plumbing, and fire-suppression system components.

1.10 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Furnish **[one (1)]** <Insert number> complete set(s) of grease filters/baffles.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 HOOD MATERIALS

- A. Stainless-Steel Sheet: ASTM A 666, Type 304.
1. Minimum Thickness: [0.037 inch (0.94 mm)] [0.050 inch (1.3 mm)] <Insert thickness>.
 2. Finish: Comply with SSINA's "Finishes for Stainless Steel" for recommendations for applying and designating finishes.
 - a. Finish shall be free from tool and die marks and stretch lines and shall have uniform, directionally textured, polished finish indicated, free of cross scratches. Grain shall run with long dimension of each piece.
 3. Concealed Stainless-Steel Surfaces: ASTM A 480/A 480M, No. 2B finish (bright, cold-rolled, unpolished finish).
 4. Exposed Surfaces: ASTM A 480/A 480M, No. 2B finish (bright, cold-rolled, unpolished).
 5. Exposed Surfaces: ASTM A 480/A 480M, No. 3 finish (intermediate polished surface).
 6. Exposed Surfaces: ASTM A 480/A 480M, No. 4 finish (directional satin).
 7. Exposed Surfaces: ASTM A 480/A 480M, No. 6 finish (dull satin).
 8. Exposed Surfaces: ASTM A 480/A 480M, No. 7 finish (reflective, directional polish).
 9. Exposed Surfaces: ASTM A 480/A 480M, No. 8 finish (mirrorlike reflective, nondirectional polish).
 10. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- B. Carbon-Steel Sheets: ASTM A 1008/A 1008M, cold-rolled sheets; commercial quality; with oiled, exposed matte finish.
1. Minimum Thickness: [0.043 inch (1.09 mm)] [0.0478 inch (1.2 mm)] <Insert thickness>.
- C. Galvanized-Steel Sheet: Lock-forming quality; ASTM A 653/A 653M, G90 (Z275) coating designation.
1. Minimum Thickness: [0.052 inch (1.32 mm)] <Insert thickness>.
- D. Zinc-Coated Steel Shapes: ASTM A 36/A 36M, zinc coated according to ASTM A 123/A 123M requirements.
- E. Sealant: ASTM C 920; Type S, Grade NS, Class 25, Use NT. Elastomeric sealant shall be NSF certified for commercial kitchen hood application. Sealants, when cured and washed, shall comply with requirements in 21 CFR, Section 177.2600, for use in areas that come in contact with food.
1. Color: As selected by DEN Project Manager from manufacturer's full range.

2. Backer Rod: Closed-cell polyethylene, in diameter larger than joint width.
- F. Sound Dampening: NSF-certified, nonabsorbent, hard-drying, sound-deadening compound for permanent adhesion to metal in minimum **1/8-inch (3-mm)** thickness that does not chip, flake, or blister.
- G. Gaskets: NSF certified for end-use application indicated; of resilient rubber, neoprene, or PVC that is nontoxic, stable, odorless, nonabsorbent, and unaffected by exposure to foods and cleaning compounds, and that passes testing according to UL 710.

2.2 GENERAL HOOD FABRICATION REQUIREMENTS

- A. Welding: Use welding rod of same composition as metal being welded. Use methods that minimize distortion and develop strength and corrosion resistance of base metal. Make ductile welds free of mechanical imperfections such as gas holes, pits, or cracks.
1. Welded Butt Joints: Full-penetration welds for full-joint length. Make joints flat, continuous, and homogenous with sheet metal without relying on straps under seams, filling in with solder, or spot welding.
 2. Grind exposed welded joints flush with adjoining material and polish to match adjoining surfaces.
 3. Where fasteners are welded to underside of equipment, finish reverse side of weld smooth and flush.
 4. Coat concealed stainless-steel welded joints with metallic-based paint to prevent corrosion.
 5. After zinc-coated steel is welded, clean welds and abraded areas and apply SSPC-Paint 20, high-zinc-dust-content, galvanizing repair paint to comply with ASTM A 780/A 780M.
- B. For metal butt joints, comply with SMACNA's "Kitchen Ventilation Systems & Food Service Equipment Guidelines."
- C. Where stainless steel is joined to a dissimilar metal, use stainless-steel welding material or fastening devices.
- D. Form metal with break bends that are not flaky, scaly, or cracked in appearance; where breaks mar uniform surface appearance of material, remove marks by grinding, polishing, and finishing.
- E. Sheared Metal Edges: Finish free of burrs, fins, and irregular projections.
- F. In food zones, as defined in NSF, fabricate surfaces free from exposed fasteners.
- G. Cap exposed fastener threads, including those inside cabinets, with stainless-steel lock washers and stainless-steel cap (acorn) nuts.
- H. Fabricate pipe slots on equipment with turned-up edges sized to accommodate service and utility lines and mechanical connections.

- I. Fabricate enclosures, including panels, housings, and skirts, to conceal service lines, operating components, and mechanical and electrical devices including those inside cabinets, unless otherwise indicated.
- J. Fabricate seismic restraints according to SMACNA's "Kitchen Ventilation Systems & Food Service Equipment Guidelines," Appendix A, "Seismic Restraint Details."
- K. Fabricate equipment edges and backsplashes according to SMACNA's "Kitchen Ventilation Systems & Food Service Equipment Guidelines."
- L. Fabricate enclosure panels to ceiling and wall as follows:
 1. Fabricate panels on [**one**] [**two**] [**three**] [**four**] [**all exposed**] side(s) with same material as hood, and extend from ceiling to top of hood canopy and from canopy to wall.
 2. Wall Offset Spacer: Minimum of 3 inches (75 mm).
 3. Wall Shelves and Overshelves: Fabricate according to SMACNA's "Kitchen Ventilation Systems & Food Service Equipment Guidelines," with minimum 0.0625-inch- (1.58-mm-) thick, stainless-steel shelf tops.

2.3 TYPE I EXHAUST HOOD FABRICATION

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Aerolator Systems, Inc.](#)
 2. [AHR Metals, Inc.; Air Saver Systems.](#)
 3. [Air Tech; Delfield Company \(The\).](#)
 4. [AyrKing Corporation.](#)
 5. [Captive-Aire Systems.](#)
 6. [Carroll Manufacturing International.](#)
 7. [Duke Manufacturing Company.](#)
 8. [Gaylord Industries, Inc.](#)
 9. [Giles Enterprises, Inc.](#)
 10. [Grease Master; a division of Custom Industries, Inc.](#)
 11. [Greenheck.](#)
 12. [Halton Company.](#)
 13. [LCSystems, Inc.](#)
 14. [Sturdi-Bilt Restaurant Equipment.](#)
 15. [Vent Master; Div. of Garland Commercial Ranges, Ltd.](#)
 16. <Insert manufacturer's name.>
 17. or approved equal.
- B. Weld all joints exposed to grease with continuous welds, and make filters/baffles or grease extractors and makeup air diffusers easily accessible for cleaning.
 1. Fabricate hoods according to NSF 2, "Food Equipment."
 2. Hoods shall be listed and labeled, according to UL 710, by a testing agency acceptable to authorities having jurisdiction.

3. Hoods shall be designed, fabricated, and installed according to NFPA 96.
 4. Include access panels as required for access to fire dampers and fusible links.
 5. Duct Collars: Minimum **0.0598-inch- (1.5-mm-)** thick steel at least **3 inches (75 mm)** long, continuously welded to top of hood and at corners. [**Fabricate a collar with a 0.5-inch- (13-mm-) wide duct flange.**]
 6. Duct-Collar Fire Dampers: Collar and damper shall comply with UL 710 testing and listing required for the entire hood.
 - a. Collar: Minimum **0.0598-inch- (1.5-mm-)** thick stainless steel, at least **3 inches (75 mm)** long, continuously welded to top of hood and at corners. [**Fabricate a collar with a minimum 0.5-inch- (13-mm-) wide duct flange.**]
 - b. Blades: Minimum **0.1046-inch- (2.7-mm-)** thick stainless steel, counterbalanced to remain closed after actuation.
 - c. Blade Pivot and Spring: Stainless steel.
 - d. Fusible Link: Replaceable, **212 deg F (100 deg C)** rated.
 7. Makeup Air Fire Dampers: Labeled, according to UL 555, by a testing agency acceptable to authorities having jurisdiction.
 - a. Fire Rating: 1-1/2 hours.
 - b. Frame: SMACNA [**Type A**] [**Type B**], with blades in airstream; fabricated with roll-formed, [**galvanized**] [**stainless**] steel; with mitered and interlocking corners.
 - c. Blades: Roll-formed, interlocking or folded, minimum **0.034-inch- (0.86-mm-)** thick, galvanized-steel sheet.
 - d. Horizontal Dampers: Include a blade lock and stainless-steel closure spring.
 - e. Fusible Link: Replaceable, [**165 deg F (74 deg C)**] [**212 deg F (100 deg C)**] rated.
- C. Hood Configuration: Exhaust [**only**] [**and makeup air**].
1. Makeup air shall be introduced by [**induction**] [**combination of induction and diffusion**] inside canopy. If makeup air is not heated, insulate interior of makeup air plenum with high-density insulation having maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
 2. Makeup air shall be introduced through [**front**] [**front and bottom**] [**bottom**] of canopy through [**perforated diffusers**] [**supply-air registers with adjustable guide vanes**].
 3. Makeup air shall be introduced through laminar-flow-type, perforated metal panels on front of hood canopy.
 4. Makeup air shall be introduced through laminar-flow-type, perforated metal diffusers mounted in the ceiling in front of hood canopy. Furnish laminar-flow-type diffusers with baked [**white**] **<Insert color>** enamel finish and volume-control dampers.
 5. Makeup air shall be introduced through plenum at rear of hood, extending down below appliance cooking surfaces.
- D. Hood Style: [**Wall-mounted canopy**] [**Single-island canopy**] [**Double-island canopy**] [**Back shelf**] [**Eyebrow**] [**Pass over**].

- E. Filters/Baffles: Removable, **[stainless-steel] [aluminum]**, **with spring-loaded fastening**. Fabricate stainless steel for filter frame and removable collection cup and pitched trough. Exposed surfaces shall be pitched to drain to collection cup. Filters/baffles shall be tested according to UL 1046, "Grease Filters for Exhaust Ducts," by an NRTL acceptable to authorities having jurisdiction.
- F. Removable Water-Wash Grease Extractor: Stainless steel, tested with hood according to UL 710.
- G. Stationary Water-Wash Grease Extractor: Integral, automatically self-cleaning, spraying hot water and detergent over the entire length of exhaust plenum. Fabricate to supply **140 deg F (60 deg C)** water at **1.25 gpm/ft. (0.26 L/s per m)** of hood length, at **40- to 60-psig (276- to 414-kPa)** inlet pressure.
1. Water Piping: ASTM A 270, Type 304 stainless steel.
 2. Fabricate to drain water and detergent to a collection trough having stainless-steel drain fittings.
 3. Single, **[hood] [wall]**-mounting control panel with a solid-state, programmable controller shall control all hoods on Project. Wash cycle shall be factory set to operate for 10 minutes after fans stop.
 4. Detergent shall be supplied by an adjustable-flow, 120-V ac injection pump from a reservoir with a minimum capacity of **2.5 gal. (9.5 L)**.
- H. Water-mist option shall supply a maximum of **0.1 gpm/ft. (0.02 L/s per m)** of hood length through stainless-steel piping and nozzles.
1. Water Piping: ASTM A 270, Type 304 stainless steel.
- I. Lighting Fixtures: **[Recessed] [Surface-mounted]**, **[fluorescent] [incandescent]** fixtures and lamps with lenses sealed vaportight. Wiring shall be installed in conduit on hood exterior. Number and location of fixtures shall provide a minimum of **70 fc (753 lx)** at **30 inches (762 mm)** above finished floor.
1. Light switches shall be mounted **[on front panel of hood canopy] [on wall adjacent to hood] [in hood control panel]**.
 2. Lighting Fixtures: **[Fluorescent] [Incandescent]** complying with UL 1598.
- J. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC" for hood controls.
- K. Hood Controls: **[Hood] [Wall]**-mounting control cabinet, **[factory wired to control groups of adjacent hoods, and]**fabricated of stainless steel.
1. Exhaust Fan: On-off switches shall start and stop the exhaust fan. **[Interlock exhaust fan with makeup air supply fan to operate simultaneously.]** Interlock exhaust fan with fire-suppression system to operate fan(s) during fire-suppression-agent release and to remain in operation until manually stopped. Include red pilot light to indicate fan operation. Motor starters shall comply with Section 262913 "Enclosed Controllers."

2. Exhaust Fan Interlock: Factory wire the exhaust fan starters in a single control cabinet for adjacent hoods to operate together.
3. Photocell and Temperature Control: Cycle makeup air and exhaust-air fans on and off, based on temperature at hood discharge and opacity of smoke in hood. Interlock fan control with fire-suppression system to operate during fire-suppression-agent release and to remain in operation until manually stopped. Provide air-purge fan and conduit to photocell and reflector to avoid grease accumulation that will negatively affect performance of system.
4. Photocell and Temperature Control: Change speed (off, low, and high) of makeup air and exhaust-air fans with speed switch, based on temperature at hood discharge and opacity of smoke in hood. Interlock fan control with fire-suppression system to operate at high speed during fire-suppression-agent release and to remain in high-speed operation until manually stopped. Provide air-purge fan and conduit to photocell and reflector to avoid grease accumulation that will negatively affect performance of system. Controller shall limit exhaust-duct velocity between **<Insert minimum velocity>** and **<Insert maximum velocity>**. Controller shall limit supply quantity to **<Insert minimum quantity>** for proper operation of makeup air unit.
5. Photocell and Temperature Control: Vary speed of makeup air and exhaust-air fans with variable-frequency controllers, based on temperature at hood discharge and opacity of smoke in hood. Interlock fan control with fire-suppression system to operate at high speed during fire-suppression-agent release and to remain in high-speed operation until manually stopped. Provide air-purge fan and conduit to photocell and reflector to avoid grease accumulation that will negatively affect performance of system. Controller shall limit exhaust-duct velocity between **<Insert minimum velocity>** and **<Insert maximum velocity>**. Controller shall limit supply quantity to **<Insert minimum quantity>** for proper operation of makeup air unit.
6. High-Temperature Control: Alarm shall sound and cooking equipment shall shut down before hood discharge temperature rises to actuation temperature of fire-suppression system.
7. Water-Wash Timer: **[24-hour clock] [365-day, programmable timer]** shall control sequential wash of multiple hood sections.
8. Water Mist: Solenoid valve interlocked with exhaust fan to open with hood operation.

L. Capacities and Characteristics:

1. Nominal Hood Length: **<Insert inches (mm).>**
2. Nominal Hood Width: **<Insert inches (mm).>**
3. Canopy Height: **<Insert inches (mm).>**
4. Exhaust Airflow: **<Insert cfm (L/s).>**
5. Exhaust-Air Pressure Loss: **<Insert inches wg (kPa).>**
6. Makeup Air Airflow: **<Insert cfm (L/s).>**
7. Makeup Air Pressure Loss: **<Insert inches wg (kPa).>**
8. Water-Supply Connection: **<Insert NPS (DN).>**
9. Washdown Water Flow: **<Insert gpm (L/s).>**
10. Minimum Water Pressure: **<Insert psig (kPa).>**
11. Mist Water Flow: **<Insert gpm (L/s).>**
12. Sanitary Drain Connection: **<Insert NPS DN.>**

2.4 TYPE II EXHAUST HOOD FABRICATION

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Aerolator Systems, Inc.](#)
2. [AHR Metals, Inc.; Air Saver Systems.](#)
3. [Air Tech; Delfield Company \(The\).](#)
4. [AyrKing Corporation.](#)
5. [Captive-Aire Systems.](#)
6. [Carroll Manufacturing International.](#)
7. [Duke Manufacturing Company](#)
8. [Gaylord Industries, Inc.](#)
9. [Giles Enterprises, Inc.](#)
10. [Grease Master; a division of Custom Industries, Inc.](#)
11. [Greenheck.](#)
12. [Halton Company.](#)
13. [LCSystems, Inc.](#)
14. [Sturdi-Bilt Restaurant Equipment.](#)
15. [Vent Master; Div. of Garland Commercial Ranges, Ltd.](#)
16. **<Insert manufacturer's name.>**
17. or approved equal.

B. Fabricate hoods according to NSF 2, "Food Equipment."

C. Fabricate hoods to comply with SMACNA's "HVAC Duct Construction Standards: Metal and Flexible."

D. Hood Configuration: Exhaust [**only**] [**and makeup air**].

1. Makeup air shall be introduced by [**induction**] [**combination of induction and diffusion**] inside canopy. If makeup air is not heated, insulate interior of makeup air plenum with high-density insulation having maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Makeup air shall be introduced through [**front**] [**front and bottom**] [**bottom**] of canopy through supply-air registers.
3. Makeup air shall be introduced through laminar-flow-type, perforated metal panels on front of hood canopy.
4. Makeup air shall be introduced through plenum at rear of hood, extending down below appliance cooking surfaces.

E. Hood Type: [**Heat and vapor**] [**Condensate**] removal.

F. Hood Style: [**Wall-mounted canopy**] [**Single-island canopy**] [**Double-island canopy**] [**Back shelf**] [**Eyebrow**] [**Pass over**].

G. Condensate Hood Baffles: Removable, stainless-steel baffles to drain into a hood drain trough, and stainless-steel drain piping.

- H. Lighting Fixtures: **[Recessed]** **[Surface-mounted]**, **[fluorescent]** **[incandescent]** fixtures and lamps with lenses sealed vaportight. Wiring shall be installed in stainless-steel conduit on hood exterior. Number and location of fixtures shall provide a minimum of **70 fc (753 lx)** at **30 inches (762 mm)** above finished floor.
1. Light switches shall be mounted **[on front panel of hood canopy]** **[on wall adjacent to hood]** **[in hood control panel]**.
 2. Lighting Fixtures: **[Fluorescent]** **[Incandescent]** complying with UL 1598.
- I. Capacities and Characteristics:
1. Nominal Hood Length: **<Insert inches (mm).>**
 2. Nominal Hood Width: **<Insert inches (mm).>**
 3. Canopy Height: **<Insert inches (mm).>**
 4. Exhaust Airflow: **<Insert cfm (L/s).>**
 5. Exhaust-Air Pressure Loss: **<Insert inches wg (kPa).>**
 6. Makeup Air Airflow: **<Insert cfm (L/s).>**
 7. Makeup Air Pressure Loss: **<Insert inches wg (kPa).>**

2.5 WET-CHEMICAL FIRE-SUPPRESSION SYSTEM

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
1. [Ansul Incorporated; a Tyco International Ltd. Company.](#)
 2. [Badger Fire Protection.](#)
 3. [Kidde Fire Systems.](#)
 4. [Pyro Chem.](#)
 5. **<Insert manufacturer's name.>**
 6. or approved equal.
- B. Description: Engineered distribution piping designed for automatic detection and release or manual release of fire-suppression agent by hood operator. Fire-suppression system shall be listed and labeled for complying with NFPA 17A, "Wet Chemical Extinguishing Systems," by a qualified testing agency acceptable to authorities having jurisdiction.
1. Steel Pipe, **NPS 2 (DN 50)** and Smaller: ASTM A 53/A 53M, Type S, Grade A, Schedule 40, plain ends.
 2. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300.
 3. Piping, fusible links and release mechanism, tank containing the suppression agent, and controls shall be factory installed. Controls shall be in stainless-steel control cabinet mounted on **[hood]** **[or]** **[wall]**. Furnish manual pull station for wall mounting. Exposed piping shall be covered with chrome-plated aluminum tubing. Exposed fittings shall be chrome plated.
 4. Liquid Extinguishing Agent: Noncorrosive, low-pH liquid.
 5. Furnish electric-operated gas shutoff valve; refer to **[Section 231123 "Facility Natural-Gas Piping.]"** **[Section 231126 "Facility Liquefied-Petroleum Gas Piping.]"**

6. Furnish electric-operated gas shutoff valve with clearly marked open and closed indicator for field installation.
7. Fire-suppression system controls shall be integrated with controls for fans, lights, and fuel supply and located in a single cabinet for each group of hoods immediately adjacent.
8. Wiring shall have color-coded, numbered terminal blocks and grounding bar. Spare terminals for fire alarm, optional wiring to start fan with fire alarm, red pilot light to indicate fan operation, and control switches shall all be factory wired in control cabinet with relays or starters. Include spare terminals for fire alarm, and wiring to start fan with fire alarm.

2.6 KITCHEN HOOD EXHAUST DUCTWORK

- A. Fabricate in accordance with SMACNA Low Pressure Duct Construction Standards, High Pressure Duct Construction Standards, and NFPA 96. Reference Section 233113 "Metal Ducts" for metal duct requirements.
- B. Construct of 0.055-inch-thick carbon steel or 0.044-inch-thick stainless steel (minimum), using continuous externally welded joints.
- C. Grease Duct Supports: Duct bracing and supports shall be of noncombustible material securely attached to the structure and designed to carry gravity and lateral loads within the stress limitations of governing codes. Bolts, screws, rivets and other mechanical fasteners shall not penetrate duct walls. Provide duct clean-out openings as required by NFPA 96.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before equipment installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Complete field assembly of hoods where required.
 1. Make closed butt and contact joints that do not require filler.
 2. Grind field welds on stainless-steel equipment smooth, and polish to match adjacent finish. Comply with welding requirements in Part 2 "General Hood Fabrication Requirements" Article.

- B. Install hoods and associated services with clearances and access for maintaining, cleaning, and servicing hoods, filters/baffles, grease extractor, and fire-suppression systems according to manufacturer's written instructions and requirements of authorities having jurisdiction.
- C. Make cutouts in hoods where required to run service lines and to make final connections, and seal openings according to UL 1978.
- D. Securely anchor and attach items and accessories to walls, floors, or bases with stainless-steel fasteners, unless otherwise indicated.
- E. Install hoods to operate free from vibration.
- F. Install seismic restraints according to SMACNA's "Kitchen Ventilation Systems & Food Service Equipment Guidelines," Appendix A, "Seismic Restraint Details."
- G. Install trim strips and similar items requiring fasteners in a bed of sealant. Fasten with stainless-steel fasteners at **48 inches** (1200 mm) o.c. maximum.
- H. Install sealant in joints between equipment and abutting surfaces with continuous joint backing, unless otherwise indicated. Provide airtight, watertight, vermin-proof, sanitary joints.
- I. Install lamps, with maximum recommended wattage, in equipment with integral lighting.
- J. Set initial temperatures, and calibrate sensors.
- K. Set field-adjustable switches.

3.3 CONNECTIONS

- A. Install piping with clearance to allow service and maintenance.
- B. Install reduced-pressure backflow preventer on washer-water supply. Backflow preventer is specified in Section 221119 "Domestic Water Piping Specialties."
- C. Install washer-water drain piping full size of hood connection to an adjacent floor drain or floor sink.
- D. Makeup Water Connection: Comply with applicable requirements in Section 221119 "Domestic Water Piping Specialties" for valves and accessories on piping connections to water-cooled units.
- E. Connect ducts according to requirements in Section 233300 "Air Duct Accessories." Install flexible connectors on makeup air supply duct. Weld exhaust-duct connections with continuous liquidtight joint.
- F. Install fire-suppression piping for remote-mounted suppression systems according to NFPA 17A, "Wet Chemical Extinguishing Systems."

3.4 PROTECTING

- A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure equipment is without damage or deterioration at the time of Substantial Completion.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections and prepare test reports.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. Test each equipment item for proper operation. Repair or replace equipment that is defective, including units that operate below required capacity or that operate with excessive noise or vibration.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Test water, drain, gas, and liquid-carrying components for leaks. Repair or replace leaking components.
 - 4. Perform hood performance tests required by authorities having jurisdiction.
 - 5. Perform fire-suppression system performance tests required by authorities having jurisdiction.
- E. Prepare test and inspection reports.

3.6 COMMISSIONING

- A. Startup Services: Engage factory-authorized service representatives to assist Contractor and perform startup services and to demonstrate and train Owner's maintenance personnel as specified below.
 - 1. Coordinate equipment startup with service-utility testing, balancing, and adjustments.
 - 2. Remove protective coverings and clean and sanitize equipment, both inside and out, and relamp equipment with integral lighting. Where applicable, comply with manufacturer's written cleaning instructions.
 - 3. Test each equipment item for proper operation. Repair or replace equipment that is defective in operation, including units that operate below required capacity or

- that operate with excessive noise or vibration.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 5. Test motors and rotating equipment for proper rotation and lubricate moving parts according to manufacturer's written instructions.
 6. Test liquid-carrying components for leaks. Repair or replace leaking components.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain commercial kitchen hoods. Review data in the operation and maintenance manuals. Refer to Section 017900 "Demonstration and Training."
 1. Schedule demonstration with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 233813

SECTION 234100 - PARTICULATE AIR FILTRATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Metal panel filters.
 - 2. Flat panel filters.
 - 3. Pleated panel filters.
 - 4. Ring panel filters.
 - 5. Nonsupported bag filters.
 - 6. Supported bag filters.
 - 7. Rigid cell box filters.
 - 8. V-bank cell filters.
 - 9. Self-supported pocket filters.
 - 10. Automatic roll filters.
 - 11. Bulk media.
 - 12. Front- and rear-access filter frames.
 - 13. Side-service housings.
 - 14. Filter gages.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."

2. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
 3. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For air filters. Include plans, elevations, sections, details, and attachments to other work.
1. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
 2. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.
 3. Wiring Diagrams: For power, signal, and control wiring.
- 1.4 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.
 - B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.5 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Provide **[one (1)] <Insert number>** complete set(s) of filters for each filter bank. If system includes prefilters, provide only prefilters.
 2. Provide **[one (1)] <Insert number>** container(s) of red oil for inclined manometer filter gage.
- 1.6 QUALITY ASSURANCE
- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of air filters and are based on the specific system indicated. Refer to Division 1.
 - B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - C. ASHRAE Compliance:

1. Comply with applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality"; Section 5 - "Systems and Equipment"; and Section 7 - "Construction and Startup."
2. Comply with ASHRAE 52.1 for arrestance and ASHRAE 52.2 for MERV for methods of testing and rating air-filter units.

D. Comply with NFPA 90A and NFPA 90B.

1.7 PERFORMANCE TOLERANCES

- A. Conform to ARI 850 Section 7.4.
- B. Dust Spot Efficiency: Plus or minus [5] <Insert number> percent.

1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 METAL PANEL FILTERS

- A. Description: Factory-fabricated, self-supported, cleanable, all-metal, impingement-type, panel-type, permanent air filters with holding frames.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Filtration Group.
 - e. Flanders-Precisionaire.
 - f. Koch Filter Corporation.
 - g. Purafil, Inc.
 - h. Research Products Corp.
 - i. <Insert manufacturer's name>.
 - j. or approved equal.

- B. Media: **[Four]** **[Six]** alternate layers of **[galvanized-steel]** **[aluminum]** **[stainless-steel]** flat and herringbone-crimp screen.
1. Nonoiled for grease removal application.
 2. Adhesive coating.
 - a. Adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Filter-Media Frame: **[Galvanized steel]** **[Hot-dip galvanized steel]** **[Aluminum]** **[Stainless steel]**, hinged, and with pull and retaining handles fastened to the media.
1. Drain holes.
- D. Capacities and Characteristics:
1. Face Area: **<Insert sq. in. (sq. mm)>**.
 2. Face Dimensions: **<Insert inches (mm)>**.
 3. Thickness or Depth: **<Insert inches (mm)>**.
 4. Surface Area: **<Insert sq. ft. (sq. m)>**.
 5. Holding Frame Size: **<Insert inches (mm)>**.
 6. Number of Filters: **<Insert number>**.
 7. System Airflow: **<Insert cfm (L/s)>**.
 8. Maximum or Rated Face Velocity: **<Insert fpm (m/s)>**.
 9. Efficiency: 90 percent on particles 20 micrometers and larger at **500 fpm (2.5 m/s)**.
 10. Arrestance: **<Insert percentage>**.
 11. Initial Resistance: **<Insert inches wg (Pa)>**.
 12. Recommended Final Resistance: **<Insert inches wg (Pa)>**.

2.2 FLAT PANEL FILTERS

- A. Description: Factory-fabricated, self-supported, flat, nonpleated, panel-type, disposable air filters with holding frames.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Division.
 - f. D-Mark.
 - g. Filtration Group.

- h. Flanders-Precisionaire.
 - i. Koch Filter Corporation.
 - j. Purafil, Inc.
 - k. Research Products Corp.
 - l. Tri-Dim Filter Corporation.
 - m. <Insert manufacturer's name>.
 - n. or approved equal.
 - B. Filter Unit Class: UL 900, [Class 1] [Class 2].
 - C. Media: [Interlaced glass or synthetic fibers] [Cotton and synthetic fibers] coated with nonflammable adhesive.
 - 1. Adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - 3. Media shall be coated with an antimicrobial agent.
 - 4. Metal Retainer: Upstream side and downstream side.
 - D. Filter-Media Frame: [Cardboard with perforated metal retainer] [Galvanized steel with metal grid on outlet side and steel rod grid on inlet side, hinged, with pull and retaining handles] sealed or bonded to the media.
 - E. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
 - F. Capacities and Characteristics:
 - 1. Face Area: <Insert sq. in. (sq. mm)>.
 - 2. Face Dimensions: <Insert inches (mm)>.
 - 3. Depth: <Insert inches (mm)>.
 - 4. System Airflow: <Insert cfm (L/s)>.
 - 5. Maximum or Rated Face Velocity: <Insert fpm (m/s)>.
 - 6. Arrestance: [85] <Insert number> percent when tested according to ASHRAE 52.1.
 - 7. MERV Rating: [6] [13] <Insert number> when tested according to ASHRAE 52.2.
- ### 2.3 PLEATED PANEL FILTERS
- A. Description: Factory-fabricated, self-supported, extended-surface, pleated, panel-type, disposable air filters with holding frames.
 - 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Division.
 - f. D-Mark.
 - g. Filtration Group.
 - h. Flanders-Precisionaire.
 - i. Koch Filter Corporation.
 - j. Purafil, Inc.
 - k. Research Products Corp.
 - l. Tri-Dim Filter Corporation.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
- B. Filter Unit Class: UL 900, **[Class 1]** **[Class 2]**.
- C. Media: **[Interlaced glass or synthetic fibers]** **[Cotton and synthetic fibers]** coated with nonflammable adhesive.
1. Adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Media shall be coated with an antimicrobial agent.
 4. Separators shall be bonded to the media to maintain pleat configuration.
 5. Welded wire grid shall be on downstream side to maintain pleat.
 6. Media shall be bonded to frame to prevent air bypass.
 7. Support members on upstream and downstream sides to maintain pleat spacing.
- D. Filter-Media Frame: **[Cardboard frame with perforated metal retainer]** **[Galvanized steel]** **[Aluminized steel]** **[with metal grid on outlet side and steel rod grid on inlet side, hinged, with pull and retaining handles]** sealed or bonded to the media.
- E. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
- F. Capacities and Characteristics:
1. Face Area: **<Insert sq. in. (sq. mm)>**.
 2. Face Dimensions: **<Insert inches (mm)>**.
 3. Thickness or Depth: **[1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)]**.
 4. Surface Area: **<Insert sq. ft. (sq. m)>**.
 5. Holding Frame Size: **<Insert inches (mm)>**.
 6. Number of Filters: **<Insert number>**.
 7. System Airflow: **<Insert cfm (L/s)>**.
 8. Maximum or Rated Face Velocity: **<Insert fpm (m/s)>**.

9. Efficiency: 90 percent on particles 20 micrometers and larger at 500 fpm (2.5 m/s).
10. Arrestance: [85] <Insert number> percent when tested according to ASHRAE 52.1.
11. Initial Resistance: [0.25-inch wg (62 Pa)] [0.35-inch wg (87.2 Pa)] [0.45-inch wg (112 Pa)] [0.60-inch wg (150 Pa)] <Insert value> at [350 fpm (1.8 m/s)] [500 fpm (2.5 m/s)].
12. Recommended Final Resistance: <Insert inches wg (Pa)>.
13. MERV Rating: [7] [11] [13] [14] <Insert number> when tested according to ASHRAE 52.2.

2.4 RING PANEL FILTERS

- A. Description: Internally supported, flat panel filters for installation in a filter track.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Division.
 - f. D-Mark.
 - g. Filtration Group.
 - h. Flanders-Precisionaire.
 - i. Koch Filter Corporation.
 - j. Purafil, Inc.
 - k. Research Products Corp.
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
- B. Filter Unit Class: UL 900, [Class 1] [Class 2].
- C. Media: [Two] [Three] [Four]-ply polyester with sealed edges.
1. Panel Construction: [Single] [with one edge unsealed for support removal] [Linked].
 2. Media shall be coated with an antimicrobial agent.
- D. Internal Support: 9-gage steel wire frame.
- E. Capacities and Characteristics:
1. Face Dimensions: <Insert inches (mm)>.
 2. Thickness or Depth: [1-1/2 inches (38 mm)] [1-3/4 inches (44 mm)] [2 inches (50 mm)] <Insert value>.
 3. Surface Area: <Insert sq. ft. (sq. m)>.
 4. Holding Frame Size: <Insert inches (mm)>.

5. Number of Filters: **<Insert number>**.
6. System Airflow: **<Insert cfm (L/s)>**.
7. Maximum or Rated Face Velocity: **<Insert fpm (m/s)>**.
8. Efficiency: 90 percent on particles 20 micrometers and larger at **500 fpm (2.5 m/s)**.
9. Arrestance: **[85] <Insert number>** percent when tested according to ASHRAE 52.1.
10. Initial Resistance: **<Insert inches wg (Pa)>**.
11. Recommended Final Resistance: **<Insert inches wg (Pa)>**.

2.5 NONSUPPORTED BAG FILTERS

- A. Description: Factory-fabricated, dry, extended-surface, nonsupported filters with header frames.
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Flanders-Precisionaire.
 - e. Koch Filter Corporation.
 - f. Purafil, Inc.
 - g. Research Products Corp.
 - h. Tri-Dim Filter Corporation.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
- B. Filter Unit Class: UL 900, **[Class 1] [Class 2]**.
- C. Media: **[Glass-fiber] [Synthetic]** material constructed so individual pockets are maintained in tapered form under rated-airflow conditions by flexible internal supports.
1. Media shall be coated with an antimicrobial agent.
- D. Filter-Media Frame: **[Galvanized steel] [Hard polyurethane foam]**.
- E. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
- F. Capacities and Characteristics:
1. Face Area: **<Insert sq. in. (sq. mm)>**.
 2. Face Dimensions: **<Insert inches (mm)>**.
 3. Thickness or Depth: **<Insert inches (mm)>**.
 4. Surface Area: **<Insert sq. ft. (sq. m)>**.
 5. Holding Frame Size: **<Insert inches (mm)>**.
 6. Number of Filters: **<Insert number>**.

7. System Airflow: <Insert cfm (L/s)>.
8. Maximum or Rated Face Velocity: <Insert fpm (m/s)>.
9. Efficiency: 90 percent on particles 20 micrometers and larger at 500 fpm (2.5 m/s).
10. Arrestance: [55] [65] [85] [95] <Insert number> percent when tested according to ASHRAE 52.1.
11. Initial Resistance: <Insert inches wg (Pa)>.
12. Recommended Final Resistance: <Insert inches wg (Pa)>.
13. MERV Rating: [8] [10] [12] [15] <Insert number> when tested according to ASHRAE 52.2.

2.6 SUPPORTED BAG FILTERS

- A. Description: Factory-fabricated, dry, extended-surface, self-supported filters with holding frames in steel, basket-type retainers.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Division.
 - f. D-Mark.
 - g. Filtration Group.
 - h. Flanders-Precisionaire.
 - i. Koch Filter Corporation.
 - j. Purafil, Inc.
 - k. Research Products Corp.
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
- B. Filter Unit Class: UL 900, [Class 1] [Class 2].
- C. Media: Fibrous material constructed so individual pleats are maintained in tapered form under rated-airflow conditions by flexible internal supports.
 1. Media shall be coated with an antimicrobial agent.
- D. Filter-Media Frame: [Galvanized steel] [Hard polyurethane foam].
- E. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
- F. Capacities and Characteristics:
 1. Face Area: <Insert sq. in. (sq. mm)>.
 2. Face Dimensions: <Insert inches (mm)>.

3. Thickness or Depth: <Insert inches (mm)>.
4. Surface Area: <Insert sq. ft. (sq. m)>.
5. System Airflow: <Insert cfm (L/s)>.
6. Maximum or Rated Face Velocity: <Insert fpm (m/s)>.
7. Arrestance: [85] <Insert number> percent when tested according to ASHRAE 52.1.
8. Initial Resistance: <Insert inches wg (Pa)>.
9. Recommended Final Resistance: <Insert inches wg (Pa)>.
10. MERV Rating: [6] [8] [13] <Insert number> when tested according to ASHRAE 52.2.

2.7 RIGID CELL BOX FILTERS

- A. Description: Factory-fabricated, [**adhesive-coated**,]disposable, packaged air filters with media perpendicular to airflow, and with holding frames.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Division.
 - f. D-Mark.
 - g. Filtration Group.
 - h. Flanders-Precisionaire.
 - i. Koch Filter Corporation.
 - j. Purafil, Inc.
 - k. Research Products Corp.
 - l. Tri-Dim Filter Corporation.
 - m. <Insert manufacturer's name>.
 - n. or approved equal.
- B. Filter Unit Class: UL 900, [**Class 1**] [**Class 2**].
- C. Media: Fibrous material constructed so individual pleats are maintained in tapered form under rated-airflow conditions by flexible internal supports.
1. Adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Media shall be coated with an antimicrobial agent.
- D. Filter-Media Frames: [**Galvanized steel**] [**Hard polyurethane foam**].

- E. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
- F. Capacities and Characteristics:
 - 1. Face Area: <Insert sq. in. (sq. mm)>.
 - 2. Face Dimensions: <Insert inches (mm)>.
 - 3. Thickness or Depth: <Insert inches (mm)>.
 - 4. Surface Area: <Insert sq. ft. (sq. m)>.
 - 5. System Airflow: <Insert cfm (L/s)>.
 - 6. Maximum or Rated Face Velocity: <Insert fpm (m/s)>.
 - 7. Arrestance: [85] <Insert number> percent when tested according to ASHRAE 52.1.
 - 8. Initial Resistance: <Insert inches wg (Pa)>.
 - 9. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - 10. MERV Rating: [6] [8] [13] <Insert number> when tested according to ASHRAE 52.2.

2.8 V-BANK CELL FILTERS

- A. Description: Factory-fabricated, [**adhesive-coated**,]disposable, packaged air filters with media angled to airflow, and with holding frames.
 - 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Division.
 - f. D-Mark.
 - g. Filtration Group.
 - h. Flanders-Precisionaire.
 - i. Koch Filter Corporation.
 - j. Purafil, Inc.
 - k. Research Products Corp.
 - l. Tri-Dim Filter Corporation.
 - m. <Insert manufacturer's name>.
 - n. or approved equal.
- B. Filter Unit Class: UL 900, [**Class 1**] [**Class 2**].
- C. Media: Fibrous material constructed so individual pleats are maintained in tapered form under rated-airflow conditions by flexible internal supports.
 - 1. Adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Media shall be coated with an antimicrobial agent.
- D. Filter-Media Frames: **[Galvanized steel] [Hard polyurethane foam]**.
- E. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
- F. Capacities and Characteristics:
1. Face Area: **<Insert sq. in. (sq. mm)>**.
 2. Face Dimensions: **<Insert inches (mm)>**.
 3. Thickness or Depth: **<Insert inches (mm)>**.
 4. Surface Area: **<Insert sq. ft. (sq. m)>**.
 5. System Airflow: **<Insert cfm (L/s)>**.
 6. Maximum or Rated Face Velocity: **<Insert fpm (m/s)>**.
 7. Arrestance: **[85] <Insert number>** percent when tested according to ASHRAE 52.1.
 8. Initial Resistance: **<Insert inches wg (Pa)>**.
 9. Recommended Final Resistance: **<Insert inches wg (Pa)>**.
 10. MERV Rating: **[6] [8] [13] <Insert number>** when tested according to ASHRAE 52.2.

2.9 SELF-SUPPORTED POCKET FILTERS

- A. Description: Factory-fabricated, panel-type, disposable air filters with contoured media for extended surface.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Columbus Industries, Inc.
 - d. Filtration Group.
 - e. Flanders-Precisionaire.
 - f. Koch Filter Corporation.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
- B. Filter Unit Class: UL 900, **[Class 1] [Class 2]**.
- C. Media: Fibrous material constructed so individual pleats are maintained in tapered form under rated-airflow conditions by flexible internal supports.
1. Media shall be coated with an antimicrobial agent.

- D. Configuration: [**Single-pocket cube**] [**Multipocket**].
- E. Filter-Media Frame: [**Galvanized steel**] [**Hard polyurethane foam**].
- F. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
- G. Capacities and Characteristics:
 - 1. Face Dimensions: <Insert inches (mm)>.
 - 2. Thickness or Depth: <Insert inches (mm)>.
 - 3. Surface Area: <Insert sq. ft. (sq. m)>.
 - 4. System Airflow: <Insert cfm (L/s)>.
 - 5. Maximum or Rated Face Velocity: <Insert fpm (m/s)>.
 - 6. Arrestance: [**85**] <Insert number> percent when tested according to ASHRAE 52.1.
 - 7. Initial Resistance: <Insert inches wg (Pa)>.
 - 8. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - 9. MERV Rating: [**6**] [**8**] [**13**] <Insert number> when tested according to ASHRAE 52.2.

2.10 AUTOMATIC ROLL FILTERS

- A. Description: Factory-fabricated, automatic, motor-driven, roll-type filters with holding casing.
 - 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Division.
 - f. D-Mark.
 - g. Filtration Group.
 - h. Flanders-Precisionaire.
 - i. Koch Filter Corporation.
 - j. Purafil, Inc.
 - k. Research Products Corp.
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
- B. Arrangement: [**Horizontal**] [**Vertical**].
- C. Filter Unit Class: UL 900, [**Class 1**] [**Class 2**].
- D. Media: Compressed and rolled, fibrous-glass material; viscous coated.
 - 1. Media shall be coated with an antimicrobial agent.

- E. Holding Frame: Galvanized steel with enclosed, clean media roll arranged to allow upstream replacement of filter media.
1. Auxiliary Frame: Locate on downstream side of unit with **[downstream]** **[side]** access.
 2. Final Filter: Extended-surface, **[retained]** **[nonsupported]** media.
- F. Control and Drive: Electric, gear-reducer, motor-driven, feed-control mechanism equipped with manual media advance and runout switches for stopping media movement of filter bank and operating remote warning signal lights.
1. Manual Control: Manual switch to advance media, and wired to override automatic controls.
 2. Automatic Control: Prewired control package to advance media **[when filter resistance exceeds preselected high limit]** **[after preselected operating time]**.
- G. Capacities and Characteristics:
1. Face Area: **<Insert sq. in. (sq. mm)>**.
 2. Face Dimensions: **<Insert inches (mm)>**.
 3. Thickness or Depth: **<Insert inches (mm)>**.
 4. Surface Area: **<Insert sq. ft. (sq. m)>**.
 5. System Airflow: **<Insert cfm (L/s)>**.
 6. Maximum or Rated Face Velocity: **<Insert fpm (m/s)>**.
 7. Arrestance: **[85]** **<Insert number>** percent when tested according to ASHRAE 52.1.
 8. Initial Resistance: **<Insert inches wg (Pa)>**.
 9. Recommended Final Resistance: **<Insert inches wg (Pa)>**.
 10. MERV Rating: **[6]** **[8]** **[13]** **<Insert number>** when tested according to ASHRAE 52.2.
 11. Electrical Characteristics:
 - a. Volts: **<Insert value>**.
 - b. Phase: **[Single]** **[Three]**.
 - c. Hertz: 60.

2.11 BULK MEDIA

- A. Description: Air-filter media, factory custom cut or rolled.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Division.

- f. D-Mark.
- g. Filtration Group.
- h. Flanders-Precisionaire.
- i. Koch Filter Corporation.
- j. Purafil, Inc.
- k. Research Products Corp.
- l. **<Insert manufacturer's name>**.
- m. or approved equal.

B. Filter Unit Class: UL 900, **[Class 1]** **[Class 2]**.

C. Media: **[Spun glass]** **[Synthetic]** **[Polyester]**, **[in a roll]** **[cut into pads]**.

1. Pad Dimensions: **<Insert inches (mm)>** by **<Insert inches (mm)>**.

D. Capacities and Characteristics:

1. Thickness or Depth: **<Insert inches (mm)>**.
2. System Airflow: **<Insert cfm (L/s)>**.
3. Maximum or Rated Face Velocity: **<Insert fpm (m/s)>**.
4. Arrestance: **[85]** **<Insert number>** percent when tested according to ASHRAE 52.1.
5. Initial Resistance: **<Insert inches wg (Pa)>**.
6. Recommended Final Resistance: **<Insert inches wg (Pa)>**.
7. MERV Rating: **[6]** **[8]** **[13]** **<Insert number>** when tested according to ASHRAE 52.2.

2.12 FRONT- AND REAR-ACCESS FILTER FRAMES

A. Framing System: **[Galvanized-steel]** **[Aluminum]** framing members with access for either upstream (front) or downstream (rear) filter servicing, cut to size and prepunched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. AAF International.
- b. Airguard.
- c. Camfil Farr.
- d. Columbus Industries, Inc.
- e. CRS Industries, Inc.; CosaTron Division.
- f. D-Mark.
- g. Filtration Group.
- h. Flanders-Precisionaire.
- i. Koch Filter Corporation.
- j. Purafil, Inc.
- k. Research Products Corp.
- l. **<Insert manufacturer's name>**.

m. or approved equal.

- B. Prefilters: Incorporate a separate track[**with spring clips**], removable from front[**or back**].
- C. Sealing: Factory-installed, positive-sealing device for each row of filters, to ensure seal between gasketed filter elements and to prevent bypass of unfiltered air.

2.13 SIDE-SERVICE HOUSINGS

A. Description: Factory-assembled, side-service housings, constructed of [**galvanized steel**] [**aluminum**] with flanges to connect to duct or casing system.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. AAF International.
- b. Airguard.
- c. Camfil Farr.
- d. Columbus Industries, Inc.
- e. CRS Industries, Inc.; CosaTron Division.
- f. D-Mark.
- g. Filtration Group.
- h. Flanders-Precisionaire.
- i. Koch Filter Corporation.
- j. Purafil, Inc.
- k. Research Products Corp.
- l. **<Insert manufacturer's name>**.
- m. or approved equal.

- B. Prefilters: Integral tracks to accommodate **2-inch-** (50-mm-) deep, disposable [**or washable**] filters.
- C. Access Doors: [**Hinged, with continuous**] [**Continuous**] gaskets on perimeter and positive-locking devices, and arranged so filter cartridges can be loaded from either access door.
- D. Sealing: Incorporate positive-sealing gasket material on channels to seal top and bottom of filter cartridge frames and to prevent bypass of unfiltered air.

2.14 FILTER GAGES

A. Diaphragm-type gage with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. Airguard.

- b. Dwyer Instruments, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Diameter: [4-1/2 inches (115 mm)] [2 inches (50 mm)].
 3. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5-Inch wg (125 Pa) or Less: 0- to 0.5-inch wg (0 to 125 Pa).
 4. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5- to 1.0-Inch wg (125 to 250 Pa) or Less: 0- to 1.0-inch wg (0 to 250 Pa).
 5. Scale Range for Filter Media Having a Recommended Final Resistance of 1.0- to 2.0-Inch wg (250 to 500 Pa) or Less: 0- to 2.0-inch wg (0 to 500 Pa).
 6. Scale Range for Filter Media Having a Recommended Final Resistance of 2.0- to 3.0-Inch wg (500 to 750 Pa) or Less: 0- to 3.0-inch wg (0 to 750 Pa).
 7. Scale Range for Filter Media Having a Recommended Final Resistance of 3.0- to 4.0-Inch wg (750 to 1000 Pa) or Less: 0- to 4.0-inch wg (0 to 1000 Pa).
- B. Manometer-Type Filter Gage: Molded plastic, with epoxy-coated aluminum scale and logarithmic-curve tube gage with integral leveling gage, graduated to read from 0- to 3.0-inch wg (0 to 750 Pa), and accurate within 3 percent of the full scale range.
- C. Accessories: Static-pressure tips, tubing, gage connections, and mounting bracket.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install air cleaning devices in accordance with manufacturer's instructions.
- B. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.
- C. Install filters in position to prevent passage of unfiltered air with felt, rubber, or neoprene gaskets.
- D. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.
- E. Install filter gage for each filter bank.
- F. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.
- G. Provide filter gages on filter banks, installed with separate static pressure tips upstream and downstream of filters.
- H. Install filter-gage, static-pressure taps upstream and downstream from filters. Install filter gages on filter banks with separate static-pressure taps upstream and downstream from filters. Mount filter gages on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gages.

- I. Coordinate filter installations with duct and air-handling-unit installations.

3.2 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
 1. Operate automatic roll filters to demonstrate compliance with requirements.
 2. Test for leakage of unfiltered air while system is operating.
- D. Air filter will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.3 CLEANING

- A. After completing system installation and testing, adjusting, and balancing of air-handling and air-distribution systems, clean filter housings and install new filter media.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 234100

SECTION 234133 - HIGH-EFFICIENCY PARTICULATE FILTRATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. HEPA rigid-cell box filters.
 - 2. HEPA V-bank cell filters.
 - 3. HEPA filter diffusers.
 - 4. HEPA filter fan modules.
 - 5. ULPA filters.
 - 6. 95 percent DOP filters.
 - 7. Front- and rear-access filter frames.
 - 8. Side-service housings.
 - 9. Filter gages.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For air filters. Include plans, elevations, sections, details, and attachments to other work.

1. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
2. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.
3. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Provide **[one (1)] <Insert number>** complete set(s) of filters for each filter bank. If system includes prefilters, provide only prefilters.
 2. Provide **[one (1)] <Insert number>** container(s) of red oil for inclined manometer filter gage.

1.7 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of air filters and are based on the specific system indicated. Refer to Division 1.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended use.
- C. ASHRAE Compliance:
 1. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Comply with IEST-RP-CC001.3.
- E. Comply with UL 586.
- F. Comply with IEST-RP-CC007.1.

- G. Comply with NFPA 90A and NFPA 90B.

1.8 PERFORMANCE TOLERANCES

- A. Conform to ARI 850 Section 7.4.
- B. Dust Spot Efficiency: Plus or minus [5] <Insert number> percent.

1.9 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 HEPA RIGID-CELL BOX FILTERS

- A. Description: Factory-fabricated, disposable, packaged air filters with media perpendicular to airflow and with holding frames.
 - 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. AAF International.
 - b. Camfil Farr Co.
 - c. Flanders-Precisionaire.
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
- B. Filter Unit Class: UL 900, [Class 1] [Class 2].
- C. Media: Fibrous material, constructed so individual pleats are maintained under rated-airflow conditions.
 - 1. Internal Separators: [None] [Aluminum in media folds].
 - 2. Gasket Material: [None] [Neoprene] [Blue gel].
 - 3. Gasket Location: [None] [Upstream] [and] [Downstream].
 - 4. Faceguard Material: [Aluminum] [Stainless steel].
 - 5. Faceguard Location: [None] [Upstream] [and] [Downstream].

D. Filter-Media Frames:

1. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
2. Materials: [**Stainless steel**] [**Fire-retardant plywood**] [**Fabricated aluminum**] [**Fire-retardant particleboard**] [**Galvanized sheet**] [**Non-fire-retardant particleboard**].
3. Style: [**Box**] [**Double-turned flange**] [**Deep channel**] [**Double-turned flange, one side**].

E. Mounting Frames: Welded galvanized steel with gaskets and fasteners; suitable for bolting together into built-up filter banks.

2.2 HEPA V-BANK CELL FILTERS

A. Description: Factory-fabricated, disposable, packaged air filters with media at an angle to airflow and with holding frames.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. AAF International.
 - b. Camfil Farr Co.
 - c. Flanders-Precisionaire.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.

B. Filter Unit Class: UL 900, [**Class 1**] [**Class 2**].

C. Media: Fibrous material, constructed so individual pleats are maintained under rated-airflow conditions.

1. Internal Separators: [**None**] [**Aluminum in media folds**].
2. Gasket Material: [**None**] [**Neoprene**] [**Blue gel**].
3. Gasket Location: [**None**] [**Upstream**] [**and**] [**Downstream**].
4. Faceguard Material: [**Aluminum**] [**Stainless steel**].
5. Faceguard Location: [**None**] [**Upstream**] [**and**] [**Downstream**].

D. Filter-Media Frames:

1. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
2. Materials: [**Stainless steel**] [**Fire-retardant plywood**] [**Fabricated aluminum**] [**Fire-retardant particleboard**] [**Galvanized sheet**] [**Non-fire-retardant particleboard**].
3. Style: [**Box**] [**Double-turned flange**] [**Deep channel**] [**Double-turned flange, one side**].

E. Mounting Frames: Welded galvanized steel with gaskets and fasteners; suitable for bolting together into built-up filter banks.

2.3 HEPA FILTER DIFFUSERS

- A. Description: Factory-fabricated, individually ducted, HEPA filter-holding ceiling modules.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Camfil Farr Co.
 - c. Flanders-Precisionaire.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
- B. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with glass filament separators.
1. Media to Module Side Bond: Urethane sealant.
 2. Media to Frame Side Bond: **[Polyurethane foam] [Silicone] [Neoprene adhesive] [Fiberglass-mat packing] [Thermosetting sealant] [Knife edge in fluid-filled channel]**.
 3. Application: **[Class 100] [Class 10] [Class 1] <Insert class>** clean room.
- C. Casing:
1. Configuration: **[Ducted inlet] [Plenum inlet] [Plenum inlet with prefilter]**.
 2. Module Material: Extruded aluminum, 16 gage with mill finish.
 3. Suspension: Ceiling grid.
- D. Accessories:
1. Diffusion damper.
 2. Diffusion-damper adjustment port.
 3. Filter test port.

2.4 HEPA FILTER FAN MODULES

- A. Description: Factory-fabricated, HEPA filter ceiling module with fan.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
- B. Casing:
1. Configuration: **[Ducted inlet] [Plenum inlet] [Plenum inlet with prefilter]**.
 2. Module Material: Extruded aluminum, 16 gage with mill finish.

3. Suspension: [**Ceiling grid**] [**Independent**].
- C. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with [**aluminum separators**] [**vinyl-coated aluminum separators**] [**separators of ribbons of filter media**].
 1. Frame Material: [**3/4-inch- (19-mm-) thick, fire-retardant plywood**] [**3/4-inch- (19-mm-) thick, fire-retardant particleboard**] [**3/4-inch- (19-mm-) thick plywood**] [**3/4-inch- (19-mm-) thick particleboard**] [**Galvanized steel**] [**Aluminized steel**] [**Cadmium-plated steel**] [**Stainless steel**] [**Aluminum**].
 2. Media to Frame Side Bond: [**Polyurethane foam**] [**Silicone**] [**Neoprene adhesive**] [**Fiberglass-mat packing**] [**Thermosetting sealant**] [**Knife edge in fluid-filled channel**].
 3. Face Gasket: [**Neoprene expanded rubber**] [**Ceramic fiber**] [**Silicone**].
 4. Faceguard: [**Plastic**] [**Stainless steel**].
- D. Accessories: Filter test port.
- E. Control: Variable speed.
- F. Motor:
 1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Type: [**Permanent-split capacitor with SCR for speed adjustment**] [**Electronically commutated motor**].
 3. Fan-Motor Assembly Isolation: Rubber isolators.
 4. Enclosure: [**Open dripproof**] [**Totally enclosed, fan cooled**] [**Totally enclosed, air over**] [**Open, externally ventilated**] [**Totally enclosed, nonventilated**] [**Severe duty**] [**Explosion proof**] [**Dust-ignition-proof machine**].
 5. Enclosure Materials: [**Cast iron**] [**Cast aluminum**] [**Rolled steel**].
 6. Motor Bearings: <Insert special requirements>.
 7. Unusual Service Conditions:
 - a. Ambient Temperature: <Insert deg F (deg C)>.
 - b. Altitude: <Insert feet (m)> above sea level.
 - c. High humidity.
 - d. <Insert conditions>.
 8. Efficiency: Premium efficient.
 9. NEMA Design: <Insert designation>.
 10. Service Factor: <Insert value>.
 11. Motor Speed: [**Single speed**] [**Multispeed**].
 - a. Speed Control: Infinitely adjustable with pneumatic-electric and electronic controls.
 12. Electrical Characteristics:

- a. Horsepower: <Insert value>.
- b. Volts: [120] [208] [230] [460] <Insert value> V.
- c. Phase: [Single] [Poly].
- d. Hz: 60.
- e. Full-Load Amperes: <Insert value>.
- f. Minimum Circuit Ampacity: <Insert value>.
- g. Maximum Overcurrent Protection: <Insert amperage>.

2.5 ULPA FILTERS

A. Description: Factory-fabricated, ULPA filters with holding casing.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. AAF International.
- b. Airguard.
- c. Camfil Farr Co.
- d. Flanders-Precisionaire.
- e. <Insert manufacturer's name>.
- f. or approved equal.

B. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with [aluminum separators] [vinyl-coated aluminum separators] [separators of ribbons of filter media].

C. Frame Material: [3/4-inch- (19-mm-) thick, fire-retardant plywood] [3/4-inch- (19-mm-) thick, fire-retardant particleboard] [3/4-inch- (19-mm-) thick plywood] [3/4-inch- (19-mm-) thick particleboard] [Galvanized steel] [Aluminized steel] [Cadmium-plated steel] [Stainless steel] [Aluminum].

D. Media to Frame Side Bond: [Polyurethane foam] [Silicone] [Neoprene adhesive] [Fiberglass-mat packing] [Thermosetting sealant] [Knife-edge in fluid-filled channel].

E. Face Gasket: [Neoprene expanded rubber] [Ceramic fiber] [Silicone].

F. Mounting Frames: Construct downstream corners of holding device with cushion pads to protect media. Provide bolted filter-sealing mechanism to mount and continuously seal each individual filter.

2.6 95 PERCENT DOP FILTERS

A. Description: Factory-fabricated, 95 percent DOP filters with holding casing.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. AAF International.

- b. Airguard.
 - c. Camfil Farr Co.
 - d. Flanders-Precisionaire.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
- B. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with **[aluminum separators] [vinyl-coated aluminum separators] [separators of ribbons of filter media]**.
- C. Frame Material: **[3/4-inch- (19-mm-) thick, fire-retardant plywood] [3/4-inch- (19-mm-) thick, fire-retardant particleboard] [3/4-inch- (19-mm-) thick plywood] [3/4-inch- (19-mm-) thick particleboard] [Galvanized steel] [Aluminized steel] [Cadmium-plated steel] [Stainless steel] [Aluminum]**.
- D. Frame Style: **[Box single header] [Double header] [Double turned flange] [3/4-inch- (19-mm-) deep channel]**.
- E. Media to Frame Side Bond: **[Polyurethane foam] [Silicone] [Neoprene adhesive] [Fiberglass-mat packing] [Thermosetting sealant] [Knife edge in fluid-filled channel]**.
- F. Face Guard Material: **[Galvanized] [Aluminum]** mesh.
- G. Face Guard Location: **[Upstream] [and] [Downstream]**.
- H. Gasket Material: **[Neoprene expanded rubber] [Ceramic fiber] [Silicone]**.
- I. Gasket Location: **[Upstream] [and] [Downstream]**.
- J. Mounting Frames: Construct downstream corners of holding device with cushion pads to protect media. Provide bolted filter-sealing mechanism to mount and continuously seal each individual filter.

2.7 FRONT- AND REAR-ACCESS FILTER FRAMES

- A. Framing System: Aluminum framing members with access for either upstream (front) or downstream (rear) filter servicing, cut to size and prepunched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr Co.
 - d. Flanders-Precisionaire.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.

- B. Prefilters: Incorporate a separate track, removable from front or back.
- C. Sealing: Factory-installed, positive-sealing device for each row of filters to ensure seal between gasketed filter elements to prevent bypass of unfiltered air.
- D. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

2.8 SIDE-SERVICE HOUSINGS

- A. Description: Factory-assembled, side-service housings, constructed of **0.064-inch- (1.6-mm-)** thick, **[galvanized steel] [stainless steel] [double-wall casing with 1-inch (25-mm) insulation]** to hold filters. Side servicing is through gasketed access doors on one side, and housings are capable of connection to other housings. Equip housings with metal slide channel tracks with clamping mechanisms to hold filters, and the following:
 - 1. Pressure tap and fitting.
 - 2. DOP/freon test ports.
 - 3. Decontamination ports.
 - 4. Isolation dampers.
 - 5. Lifting lugs.
 - 6. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr Co.
 - d. Flanders-Precisionaire.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
- B. Prefilters: Integral tracks to accommodate **2-, 4-, and 6-inch-** (50-, 100-, and 150-mm-thick,) disposable filters.
- C. Access Doors: Continuous gaskets on perimeter and positive-locking **[swivel] devices. [Provide ribbed bagging rim behind access door and PVC bags for bag-in, bag-out arrangement.]** Arrange so filter cartridges can be loaded from an access door for each tier and section of the following:
 - 1. Combination prefilter and HEPA filter.
 - 2. Prefilter.
 - 3. HEPA filter.
 - 4. Upstream and downstream test section.
- D. Sealing: Incorporate positive-sealing gasket material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.
- E. Accessories:

1. Filter change-out trays.
2. Document-storage pocket.
3. Filter removal rod.

F. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

2.9 FILTER GAGES

A. Diaphragm type with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. Airguard.
- b. Dwyer Instruments, Inc.
- c. **<Insert manufacturer's name>**.
- d. or approved equal.

2. Diameter: [4-1/2 inches (115 mm)] [2 inches (50 mm)].

3. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5-Inch wg (125 Pa) or Less: 0- to 0.5-inch wg (0 to 125 Pa).

4. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5- to 1.0-Inch wg (125 to 250 Pa) or Less: 0- to 1.0-inch wg (0 to 250 Pa).

5. Scale Range for Filter Media Having a Recommended Final Resistance of 1.0- to 2.0-Inch wg (250 to 500 Pa) or Less: 0- to 2.0-inch wg (0 to 500 Pa).

6. Scale Range for Filter Media Having a Recommended Final Resistance of 2.0- to 3.0-Inch wg (500 to 750 Pa) or Less: 0- to 3.0-inch wg (0 to 750 Pa).

7. Scale Range for Filter Media Having a Recommended Final Resistance of 3.0- to 4.0-Inch wg (750 to 1000 Pa) or Less: 0- to 4.0-inch wg (0 to 1000 Pa).

B. Manometer-Type Filter Gage: Molded plastic, with epoxy-coated aluminum scale, logarithmic-curve tube gage with integral leveling gage; graduated to read from 0- to 3.0-inch wg (0 to 750 Pa) and accurate within 3 percent of full-scale range.

C. Accessories: Static-pressure tips, tubing, gage connections, and mounting bracket.

2.10 CAPACITIES AND CHARACTERISTICS

A. Face Area: **<Insert sq. ft. (sq. m)>**.

B. Depth: **<Insert inches (mm)>**.

C. Surface Area: **<Insert sq. ft. (sq. m)>**.

D. Module Size: **<Insert size>**.

E. Number of Filters/Modules: **<Insert number>**.

- F. Frame Access Location: <Insert location>.
- G. System Airflow: <Insert cfm (L/s)>.
- H. Maximum or Rated Face Velocity: <Insert fpm (m/s)>.
- I. Initial Resistance: <Insert inches wg (Pa)>.
- J. Recommended Final Resistance: <Insert inches wg (Pa)>.
- K. Performance Level: [HEPA] [ULPA] [95 percent as tested according to MIL-STD 282] <Insert value>.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install air cleaning devices in accordance with manufacturer's instructions.
- B. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.
- C. Install filters in position to prevent passage of unfiltered air with felt, rubber, or neoprene gaskets.
- D. Install filter gage for each filter bank.
- E. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters that were used during construction and testing with new, clean filters.
- F. Provide filter gages on filter banks, installed with separate static pressure tips upstream and downstream of filters.
- G. Install filter-gage static-pressure tips upstream and downstream from filters. Install filter gages on filter banks with separate static-pressure taps upstream and downstream from filters. Mount filter gages on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gages.
- H. Coordinate filter installations with duct and air-handling unit installations.

3.2 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect, test, and adjust components, assemblies, and equipment installation, including connections.
- B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:

1. Operate automatic roll filters to demonstrate compliance with requirements.
2. Test for leakage of unfiltered air while system is operating.
3. HEPA Filters: Pressurize housing to a minimum of 3.0-inch wg (750 Pa) or to designed operating pressure, whichever is higher; test housing joints, door seals, and sealing edges of filter with soapy water to check for air leaks.
4. HEPA Filters: Pressurize housing to a minimum of 3.0-inch wg (750 Pa) or to designed operating pressure, whichever is higher; and test housing joints, door seals, and sealing edges of filter for air leaks according to pressure-decay method in ASME N510.

D. Air filter will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.3 CLEANING

- A. After completing system installation and testing, adjusting, and balancing air-handling and air-distribution systems, clean filter housings and install new filter media.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 234133

SECTION 234200 - GAS-PHASE AIR FILTRATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Activated-carbon panel filters.
2. Activated-carbon, deep-V filters.
3. Activated carbon, V-cell filters.
4. Cylindrical-canister filters.
5. Permanganate filters.
6. Supported adsorber bag filters.
7. Front-access filter housings.
8. Side-service housings.
9. Filter gages.

- B. Related Sections:

1. Section 233119 "HVAC Casings" for customized housings used for gas-phase filters.
2. Section 233416 "Centrifugal HVAC Fans" for customized fan and filter units.
3. Section 234133 "High-Efficiency Particulate Filtration" for HEPA filters used in combination with gas-phase filters.
4. Section 234300 "Electronic Air Cleaners" for electronic units combined with gas-phase filters as part of a system.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.

1. Include data substantiating that materials comply with requirements.

B. LEED Submittal:

1. Product Data for Prerequisite EQ 1: Documentation indicating that units comply with applicable requirements in ASHRAE 62.1-2004, Section 5, "Systems and Equipment."

C. Shop Drawings: For air filters. Include plans, elevations, sections, details, and attachments to other work.

1. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
2. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Provide **[one (1)] <Insert number>** complete set(s) of filters for each filter or filter bank.
 2. Provide **[one (1)] <Insert number>** complete 100 percent refill supply for each filter requiring loose-fill media.
 3. Provide **[one (1)] <Insert number>** container(s) of red oil for inclined manometer filter gage.

1.7 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of air filters and are based on the specific system indicated. Refer to Division 1.
- B. ASHRAE Compliance:

1. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.
- C. Comply with NFPA 90A and NFPA 90B.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ACTIVATED-CARBON PANEL FILTERS

- A. Description: Factory-fabricated unit with activated-carbon media.
- B. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. AAF International.
 2. Airguard.
 3. Camfil Farr Co.
 4. Filtration Group.
 5. Flanders/CSC Corp.; a wholly owned subsidiary of Flanders Corporation.
 6. Flanders-Precisionaire.
 7. International Air Filtration Corporation.
 8. Koch Filter Corporation.
 9. Purafil, Inc.
 10. Research Products Corp.; Aprilaire Division.
 11. Tri-Dim Filter Corporation.
 12. **<Insert manufacturer's name>**.
 13. or approved equal.
- C. Media: Flat-panel, disposable multilayer filter with an inlet layer of polyester fibers, a layer of activated-carbon granules bonded to fibers, and a layer of polyurethane foam; housed in a cardboard frame.
- D. Media: Flat-panel, disposable honeycombed cellulose with cells filled with activated-carbon granules and a perforated mesh grid; housed in a cardboard frame.
- E. Media: Pleated, multilayer filter with an inlet layer of cotton and synthetic fibers and a layer of activated-carbon granules bonded to synthetic fibers; media formed into deep-V-shaped pleats, held by self-wire grid, and housed in a cardboard frame.
- F. Mounting Frames: Welded, galvanized, sheet-steel frame and galvanized-steel fasteners with [**polyurethane**]gaskets; capable of bolting together into built-up filter banks.

G. Capacities and Characteristics:

1. Face Size: [24 by 24 inches (600 by 600 mm)] [20 by 24 inches (500 by 600 mm)] [24 by 12 inches (600 by 300 mm)] <Insert dimensions> nominal.
2. Depth: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)] <Insert dimension> nominal.
3. System Airflow: <Insert cfm (L/s)>.
4. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] <Insert value>.
5. Initial Resistance: [0.50-inch wg (125 Pa)] <Insert value>.

2.2 ACTIVATED-CARBON, DEEP-V FILTERS

A. Description: Factory-fabricated unit with activated-carbon trays in deep-V arrangement with disposable [panel prefilter] [and] [final filter].

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. AAF International.
- b. Airguard.
- c. Camfil Farr Co.
- d. Filtration Group.
- e. Flanders/CSC Corp.; a wholly owned subsidiary of Flanders Corporation.
- f. Flanders-Precisionaire.
- g. International Air Filtration Corporation.
- h. Koch Filter Corporation.
- i. Purafil, Inc.
- j. Research Products Corp.; Aprilaire Division.
- k. <Insert manufacturer's name>.
- l. or approved equal.

B. Module Housing: 0.064-inch- (1.6-mm-) thick, [galvanized steel] [stainless steel] [double-wall casing with 1-inch- (25-mm-) thick insulation] to hold media-filled panels; with side servicing through gasketed access doors on both sides and able to connect to other housings. Equip housings with metal slide channel tracks to hold activated-carbon trays [and particulate prefilter] [and final filter].

1. Finish: Factory [primed] [primed and painted], [outside] [inside and outside] [inside].
2. Pressure tap and fitting.

C. Media-Holding Panels: 1-inch- (25-mm-) thick, perforated polystyrene to allow airflow through contained loose-fill media; with removable service cap for recharging.

D. Media-Holding Panels: [1 inch (25 mm)] [2 inches (50 mm)] [3 inches (75 mm)] deep and containing granular carbon bonded into a briquette form with a [galvanized] [stainless]-steel frame.

- E. Media: [45 lb (20.3 kg)] <Insert value> per 1000 cfm (470 L/s) of [loose-fill] [loose-fill or bonded-briquette] [bonded-briquette] coconut-shell activated carbon.
1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)], 90 percent minimum.
 5. Hardness Factor: [95] <Insert value> when tested according to ASTM D 3802.
- F. Media: <Insert lb (kg)> per 1000 cfm (470 L/s) of [loose-fill] [loose-fill or bonded-briquette] [bonded-briquette] activated alumina impregnated with potassium permanganate.
1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)], 90 percent minimum.
 5. Hardness Factor: [95] <Insert value> when tested according to ASTM D 3802.
- G. Media: <Insert lb (kg)> per 1000 cfm (470 L/s) of [loose-fill] [loose-fill or bonded-briquette] [bonded-briquette] impregnated carbon.
1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)], 90 percent minimum.
 5. Hardness Factor: [95] <Insert value> when tested according to ASTM D 3802.
- H. Media: <Insert lb (kg)> per 1000 cfm (470 L/s) of [loose-fill] [loose-fill or bonded-briquette] [bonded-briquette] blended carbon and alumina impregnated with potassium permanganate.
1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)], 90 percent minimum.
 5. Hardness Factor: [95] <Insert value> when tested according to ASTM D 3802.
- I. Capacities and Characteristics:
1. Face Size: [24 by 24 inches (600 by 600 mm)] [20 by 24 inches (500 by 600 mm)] [24 by 12 inches (600 by 300 mm)] <Insert dimensions> nominal.
 2. Depth: [12 inches (300 mm)] <Insert dimension> nominal.
 3. System Airflow: <Insert cfm (L/s)>.
 4. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] <Insert value>.
 5. Initial Resistance: [0.50-inch wg (125 Pa)] <Insert value>.

6. Recommended Final Resistance: **<Insert inches wg (Pa)>**.
7. Prefilter: Comply with requirements in Section 234100 "Particulate Air Filtration" for **[flat] [pleated] [ring]** panel. Size and airflow capacity shall match those of gas-phase filters.
 - a. Depth: **[1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)] <Insert dimension>**.
 - b. Maximum or Rated Face Velocity: **[500 fpm (2.5 m/s)] <Insert value>**.
 - c. Initial Resistance: **[0.25-inch wg (62.3 Pa)] [0.35-inch wg (87.2 Pa)] [0.45-inch wg (112.1 Pa)] [0.60-inch wg (150 Pa)] <Insert value>** at **[350 fpm (1.8 m/s)] [500 fpm (2.5 m/s)] <Insert value>**.
 - d. Recommended Final Resistance: **<Insert inches wg (Pa)>**.
 - e. Filter Unit Class: UL 900, **[Class 1] [Class 2]**.
 - f. Arrestance: **[85] <Insert number>** percent when tested according to ASHRAE 52.1.
 - g. MERV: **[8] <Insert value>** when tested according to ASHRAE 52.2.
8. Final Filter: Comply with requirements in Section 234100 "Particulate Air Filtration" for **[supported bag] [unsupported bag] [rigid-cell box] [V-bank cell] [self-supported pocket]**. Size and airflow capacity shall match those of gas-phase filters.
 - a. Depth: **[12 inches (300 mm)] [18 inches (450 mm)] [24 inches (600 mm)] <Insert dimension>**.
 - b. Maximum or Rated Face Velocity: **[500 fpm (2.5 m/s)] <Insert value>**.
 - c. Initial Resistance: **[1-inch wg (250 Pa)] [2-inch wg (500 Pa)] <Insert value>** at **500 fpm (2.5 m/s)**.
 - d. Recommended Final Resistance: **<Insert inches wg (Pa)>**.
 - e. Arrestance: **[85] <Insert number>** percent when tested according to ASHRAE 52.1.

2.3 ACTIVATED-CARBON, V-CELL FILTERS

- A. Description: Factory-fabricated, dry, V-shaped cartridges containing loose-fill media with holding frames.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Camfil Farr Co.
 - b. Flanders/CSC Corp.; a wholly owned subsidiary of Flanders Corporation.
 - c. Flanders-Precisionaire.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
- B. Cartridges: V-cell configuration, plastic enclosure caps, galvanized-steel frame with vertical galvanized-steel channel supports. Integral, **1-inch- (25-mm-)** deep panels constructed of honeycombed paper and nylon mesh.

- C. Fill Media: Coconut-shell activated carbon; [45 lb (20.3 kg)] <Insert value> of activated carbon per 1000 cfm (470 L/s) of airflow.
1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)], 90 percent minimum.
 5. Hardness Factor: [95] <Insert value> when tested according to ASTM D 3802.
- D. Fill Media: Activated alumina impregnated with potassium permanganate; [10.5 lb (4.8 kg)] <Insert value> of adsorbent per 500 cfm (236 L/s) of airflow.
1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)], 90 percent minimum.
 5. Hardness Factor: [95] <Insert value> when tested according to ASTM D 3802.
- E. Fill Media: Impregnated carbon; [8.0 lb (3.6 kg)] <Insert value> of adsorbent per 500 cfm (236 L/s) of airflow.
1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)], 90 percent minimum.
 5. Hardness Factor: [95] <Insert value> when tested according to ASTM D 3802.
- F. Fill Media: Blended carbon and alumina impregnated with potassium permanganate; [7.0 lb (3.1 kg)] <Insert value> of adsorbent per 500 cfm (236 L/s) of airflow.
1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)], 90 percent minimum.
 5. Hardness Factor: [95] <Insert value> when tested according to ASTM D 3802.
- G. Mounting Frames: Welded, galvanized, sheet-steel frame and galvanized-steel fasteners with gaskets; capable of bolting together into built-up filter banks.
- H. Capacities and Characteristics:
1. Face Size: [24 by 24 inches (600 by 600 mm)] [20 by 24 inches (500 by 600 mm)] [24 by 12 inches (600 by 300 mm)] <Insert dimensions> nominal.
 2. Depth: [12 inches (300 mm)] <Insert dimension> nominal.
 3. System Airflow: <Insert cfm (L/s)>.
 4. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] <Insert value>.

5. Initial Resistance: [0.50-inch wg (125 Pa)] <Insert value>.
6. Recommended Final Resistance: <Insert inches wg (Pa)>.
7. Prefilter: Comply with requirements in Section 234100 "Particulate Air Filtration" for [flat] [pleated] [ring] panel. Size and airflow capacity shall match those of gas-phase filters.
 - a. Depth: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)] <Insert dimension>.
 - b. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] <Insert value>.
 - c. Initial Resistance: [0.25-inch wg (62.3 Pa)] [0.35-inch wg (87.2 Pa)] [0.45-inch wg (112.1 Pa)] [0.60-inch wg (150 Pa)] <Insert value> at [350 fpm (1.8 m/s)] [500 fpm (2.5 m/s)] <Insert value>.
 - d. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - e. Filter Unit Class: UL 900, [Class 1] [Class 2].
 - f. Arrestance: [85] <Insert value> percent when tested according to ASHRAE 52.1.
 - g. MERV: [8] <Insert value> when tested according to ASHRAE 52.2.
8. Final Filter: Comply with requirements in Section 234100 "Particulate Air Filtration" for [supported bag] [unsupported bag] [rigid-cell box] [V-bank cell] [self-supported pocket]. Size and airflow capacity shall match those of gas-phase filters.
 - a. Depth: [12 inches (300 mm)] [18 inches (450 mm)] [24 inches (600 mm)] <Insert dimension>.
 - b. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] <Insert value>.
 - c. Initial Resistance: [1-inch wg (250 Pa)] [2-inch wg (500 Pa)] <Insert value> at 500 fpm (2.5 m/s).
 - d. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - e. Filter Unit Class: UL 900, [Class 1] [Class 2].
 - f. Arrestance: [85] <Insert value> percent when tested according to ASHRAE 52.1.
 - g. MERV: [13] <Insert value> when tested according to ASHRAE 52.2.

2.4 CYLINDRICAL-CANISTER FILTERS

- A. Description: Factory-fabricated, dry, cylindrical canisters containing loose-fill adsorbent with holding frames.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Camfil Farr Co.
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
- B. Cylinders: 0.0455-inch- (1.2-mm-) thick, perforated, [electroplated] [stainless] steel, with end plate.

- C. Fill Media: [5.0 lb (2.3 kg)] [6.7 lb (3.0 kg)] <Insert value> of [coconut-shell activated carbon] [activated alumina impregnated with potassium permanganate] [impregnated carbon] [blended carbon and alumina impregnated with potassium permanganate] per canister.
1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)] <Insert value>, 90 percent minimum.
 5. Hardness Factor: [95] <Insert value> when tested according to ASTM D 3802.
- D. Mounting Frames: Welded [galvanized, sheet steel with galvanized-steel fasteners] [stainless steel with stainless-steel fasteners] with gaskets; designed for bolting together into built-up filter banks.
- E. Capacities and Characteristics:
1. Face Size: [24 by 24 inches (600 by 600 mm)] [24 by 12 inches (600 by 300 mm)] <Insert dimensions>nominal.
 2. Cylinder Length: [18 inches (450 mm)] [24 inches (600 mm)] <Insert dimension> nominal.
 3. Housing Depth: [34 inches (860 mm)] <Insert dimension> nominal.
 4. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] <Insert value>.
 5. Initial Resistance: [0.50-inch wg (125 Pa)] <Insert value>.
 6. Recommended Final Resistance: <Insert inches wg (Pa)>.
 7. Prefilter: Comply with requirements in Section 234100 "Particulate Air Filtration" for [flat] [pleated] [ring] panel. Size and airflow capacity shall match those of gas-phase filters.
 - a. Depth: [1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)] <Insert dimension>.
 - b. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] <Insert value>.
 - c. Initial Resistance: [0.25-inch wg (62.3 Pa)] [0.35-inch wg (87.2 Pa)] [0.45-inch wg (112.1 Pa)] [0.60-inch wg (150 Pa)] <Insert value> at [350 fpm (1.8 m/s)] [500 fpm (2.5 m/s)] <Insert value>.
 - d. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - e. Filter Unit Class: UL 900, [Class 1] [Class 2].
 - f. Arrestance: [85] <Insert value> percent when tested according to ASHRAE 52.1.
 - g. MERV: [8] <Insert value> when tested according to ASHRAE 52.2.
 8. Final Filter: Comply with requirements in Section 234100 "Particulate Air Filtration" for [supported bag] [unsupported bag] [rigid-cell box] [V-bank cell] [self-supported pocket]. Size and airflow capacity shall match those of gas-phase filters.
 - a. Depth: [12 inches (300 mm)] [18 inches (450 mm)] [24 inches (600 mm)] <Insert dimension>.
 - b. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] <Insert value>.

- c. Initial Resistance: [1-inch wg (250 Pa)] [2-inch wg (500 Pa)] <Insert value> at 500 fpm (2.5 m/s).
- d. Recommended Final Resistance: <Insert inches wg (Pa)>.
- e. Filter Unit Class: UL 900, [Class 1] [Class 2].
- f. Arrestance: [85] <Insert value> percent when tested according to ASHRAE 52.1.
- g. MERV: [13] <Insert value> when tested according to ASHRAE 52.2.

2.5 PERMANGANATE FILTERS

- A. Description: Factory-fabricated modules containing loose-fill adsorbent with holding frames.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Air Quality Engineering, Inc.
 - b. Air Technology Solutions, Inc.
 - c. BPA Air Quality Solutions, LLC.
 - d. Flanders-Precisionaire.
 - e. <Insert manufacturer's name>.
 - f. or approved equal.
- B. Modules: Permanent type, 24 inches wide by 24 inches high by 24 inches deep (600 mm wide by 600 mm high by 600 mm deep); shall hold both potassium permanganate and activated carbon. Manufactured in two pieces, each 12 inches (300 mm) wide for ease of installation.
- C. Media: Porous spherical pellets formed from a combination of powdered, activated carbon and other binders, impregnated with potassium permanganate.
 1. Leach Test: [180] <Insert number> minutes.
 2. Potassium Permanganate Content: [4] <Insert number> percent minimum.
 3. Moisture Content: [20] <Insert number> percent maximum.
 4. Bulk Density: [34 lb/cu. ft. (0.54 g/mL)] [50 lb/cu. ft. (0.8 g/mL)] <Insert value>.
 5. Crush Strength: [40] [50] [60] percent maximum.
 6. Abrasion: [4] <Insert number> percent maximum.
 7. Nominal Pellet Diameter: [0.125 inch (3.175 mm)] <Insert dimension>.
 8. Percent of Pellet Sizes: [80 to 85] <Insert number range> percent after screening.
- D. Media: High-grade carbon, manufactured from coconut shells, bituminous coal, or a combination of both.
 1. Ash Content: [2 to 3] <Insert number range> percent.
 2. Percent Carbon Tetrachloride Activity: [35 to 70] <Insert number range> percent when tested according to ASTM D 3467.
 3. Bulk Density: [32 lb/cu. ft. (510 kg/cu. m)] <Insert value>.
 4. Mesh Size: [4 by 6 inches (100 by 150 mm)], 90 percent minimum.

5. Hardness Factor: **[95]** <Insert value> when tested according to ASTM D 3802.
- E. Frame: **[Galvanized steel]** **[Hot-dip galvanized steel]** **[Aluminum]** **[Stainless steel]**, hinged, and with pull and retaining handles fastened to the media.
- F. Capacities and Characteristics:
 1. Face Size: <Insert inches (mm)>.
 2. Thickness or Depth: <Insert inches (mm)>.
 3. Surface Area: <Insert sq. ft. (sq. m)>.
 4. Holding Frame Size: <Insert inches (mm)>.
 5. Number of Filters: <Insert number>.
 6. System Airflow: <Insert cfm (L/s)>.
 7. Maximum or Rated Face Velocity: <Insert fpm (m/s)>.
 8. Efficiency: 90 percent on particles 20 micrometers and larger at **500 fpm (2.5 m/s)**.
 9. Initial Resistance: <Insert inches wg (Pa)>.
 10. Prefilter: Comply with requirements in Section 234100 "Particulate Air Filtration" for **[flat]** **[pleated]** **[ring]** panel. Size and airflow capacity shall match those of gas-phase filters.
 - a. Depth: **[1 inch (25 mm)]** **[2 inches (50 mm)]** **[4 inches (100 mm)]** <Insert dimension>.
 - b. Maximum or Rated Face Velocity: **[500 fpm (2.5 m/s)]** <Insert value>.
 - c. Initial Resistance: **[0.25-inch wg (62.3 Pa)]** **[0.35-inch (87.2 Pa)]** **[0.45-inch wg (112.1 Pa)]** **[0.60-inch wg (150 Pa)]** <Insert value> at **[350 fpm (1.8 m/s)]** **[500 fpm (2.5 m/s)]** <Insert value>.
 - d. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - e. Filter Unit Class: UL 900, **[Class 1]** **[Class 2]**.
 - f. Arrestance: **[85]** <Insert number> percent when tested according to ASHRAE 52.1.
 - g. MERV: **[8]** <Insert value> when tested according to ASHRAE 52.2.
 11. Final Filter: Comply with requirements in Section 234100 "Particulate Air Filtration" for **[supported bag]** **[unsupported bag]** **[rigid-cell box]** **[V-bank cell]** **[self-supported pocket]**. Size and airflow capacity shall match those of the gas-phase filters.
 - a. Depth: **[12 inches (300 mm)]** **[18 inches (450 mm)]** **[24 inches (600 mm)]** <Insert dimension>.
 - b. Maximum or Rated Face Velocity: **[500 fpm (2.5 m/s)]** <Insert value>.
 - c. Initial Resistance: **[1-inch wg (250 Pa)]** **[2-inch wg (500 Pa)]** <Insert value> at **500 fpm (2.5 m/s)**.
 - d. Recommended Final Resistance: <Insert inches wg (Pa)>.
 - e. Filter Unit Class: UL 900, **[Class 1]** **[Class 2]**.
 - f. Arrestance: **[85]** <Insert number> percent when tested according to ASHRAE 52.1.
 - g. MERV: **[13]** <Insert value> when tested according to ASHRAE 52.2.

2.6 SUPPORTED ADSORBER BAG FILTERS

- A. Description: Factory-fabricated, dry, extended-surface, self-supporting filters with holding frames.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Camfil Farr Co.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
- B. Media: Carbon-filled fibrous material constructed so individual pleats are maintained under rated-airflow conditions in tapered form by flexible internal supports.
- C. Filter-Media Frame: Galvanized steel.
- D. Mounting Frames: Welded, galvanized, sheet-steel frame and galvanized-steel fasteners with gaskets; capable of bolting together into built-up filter banks.
- E. Capacities and Characteristics:
1. Face Size: [24 by 24 inches (600 by 600 mm)] [24 by 12 inches (600 by 300 mm)] **<Insert dimensions>**nominal.
 2. Depth: [21 inches (530 mm)] **<Insert dimension>** nominal.
 3. System Airflow: **<Insert cfm (L/s)>**.
 4. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] **<Insert value>**.
 5. Initial Resistance: [0.56-inch wg (140 Pa)] **<Insert value>**.
 6. Recommended Final Resistance: **<Insert inches wg (Pa)>**.
 7. Minimum Toluene Removal Efficiency: 90 percent.
 8. Filter Unit Class: UL 900, [Class 1] [Class 2].
 9. Arrestance: [85] **<Insert number>** percent when tested according to ASHRAE 52.1.
 10. MERV: [13] **<Insert value>** when tested according to ASHRAE 52.2.

2.7 FRONT-ACCESS FILTER FRAMES

- A. Framing System: [Galvanized-steel] [Aluminum] framing members with access for upstream (front) filter servicing, cut to size and prepunched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr Co.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Div.

- f. D-Mark.
 - g. Filtration Group.
 - h. Flanders/CSC Corp.; a wholly owned subsidiary of Flanders Corporation.
 - i. Flanders-Precisionaire.
 - j. International Air Filtration Corporation.
 - k. Koch Filter Corporation.
 - l. Purafil, Inc.
 - m. Research Products Corp.; Aprilaire Division.
 - n. **<Insert manufacturer's name.>**.
 - o. or approved equal.
- B. Prefilters: Incorporate a separate track[**with spring clips**], removable from front[**or back**].
- C. Sealing: Factory-installed, positive-sealing device for each row of filters to ensure seal between gasketed filter elements to prevent bypass of unfiltered air.

2.8 SIDE-SERVICE HOUSINGS

- A. Description: Factory-assembled, side-service housings constructed of [**galvanized steel**] [**aluminum**] with flanges to connect to duct or casing system.
- 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Airguard.
 - c. Camfil Farr Co.
 - d. Columbus Industries, Inc.
 - e. CRS Industries, Inc.; CosaTron Div.
 - f. D-Mark.
 - g. Filtration Group.
 - h. Flanders/CSC Corp.; a wholly owned subsidiary of Flanders Corporation.
 - i. Flanders-Precisionaire.
 - j. International Air Filtration Corporation.
 - k. Koch Filter Corporation.
 - l. Purafil, Inc.
 - m. Research Products Corp.; Aprilaire Division.
 - n. **<Insert manufacturer's name.>**.
 - o. or approved equal.
- B. Prefilters: Integral tracks to accommodate **2-inch-** (50-mm-) thick, disposable[**or washable**] filters.
- C. Access Doors: [**Hinged with continuous**] [**Continuous**] gaskets on perimeter and with positive-locking devices. Arrange so filter cartridges can be loaded from either access door.

- D. Sealing: Incorporate positive-sealing gasket material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.

2.9 FILTER GAGES

- A. Diaphragm type, with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Airguard.
 - b. Dwyer Instruments, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Diameter: [4-1/2 inches (115 mm)] [2 inches (50 mm)].
 3. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5-Inch wg (125 Pa) or Less: 0- to 0.5-inch wg (0 to 125 Pa).
 4. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5- to 1.0-Inch wg (125 to 250 Pa) or Less: 0- to 1.0-inch wg (0 to 250 Pa.)
 5. Scale Range for Filter Media Having a Recommended Final Resistance of 1.0- to 2.0-Inch wg (250 to 500 Pa) or Less: 0- to 2.0-inch wg (0 to 500 Pa.)
 6. Scale Range for Filter Media Having a Recommended Final Resistance of 2.0- to 3.0-Inch wg (500 to 750 Pa) or Less: 0- to 3.0-inch wg (0 to 750 Pa.)
 7. Scale Range for Filter Media Having a Recommended Final Resistance of 3.0- to 4.0-Inch wg (750 to 1000 Pa) or Less: 0- to 4.0-inch wg (0 to 1000 Pa.)
- B. Manometer-Type Filter Gage: Molded plastic, with epoxy-coated aluminum scale, logarithmic-curve tube gage with integral leveling gage; graduated to read from 0- to 3.0-inch wg (0 to 750 Pa) and accurate within 3 percent of full-scale range.
- C. Accessories: Static-pressure tips, tubing, gage connections, and mounting bracket.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install air cleaning devices in accordance with manufacturer's instructions.
- B. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.
- C. Install filters in position to prevent passage of unfiltered air with felt, rubber, or neoprene gaskets.
- D. Install filter gage for each filter bank.

- E. Do not operate fan system until particulate filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.
- F. Do not install gas-phase filters until fan system is clean and there is no risk of construction debris loading the filter.
- G. Install filter-gage, static-pressure taps upstream and downstream from filters. Install filter gages on filter banks with separate static-pressure taps upstream and downstream of filters. Mount filter gages on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gages.
- H. Coordinate filter installations with duct and air-handling unit installations.

3.2 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect, test, and adjust components, assemblies, and equipment installation, including connections.
- B. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations including connections, and to assist in testing.
- C. Tests and Inspections:
 - 1. Test for leakage of unfiltered air while system is operating.
- D. Air filter will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.3 CLEANING

- A. After completing system installation and testing, adjusting, and balancing air-handling and air-distribution systems, clean filter housings and install new particulate filter media.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 234200

SECTION 234300 - ELECTRONIC AIR CLEANERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Electronic air cleaners.
 - 2. Side-service housings.
 - 3. Front- and rear-access filter frames.
 - 4. Filter gages.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings: For each electronic air cleaner. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Show filter assembly, dimensions, materials, and methods of assembly of components.
 - 2. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.
 - 3. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of filter and housing to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Provide **[one (1)] <Insert number>** complete set(s) of prefilters for each filter bank.
 2. Provide detergent for **[one (1)] [two (2)] <Insert number>** refill(s).
 3. Provide **[one (1)] <Insert number>** container(s) of red oil for inclined manometer filter gage.

1.7 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of air filters and are based on the specific system indicated. Refer to Division 1.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. ASHRAE Compliance:
1. Comply with applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality"; Section 5 - "Systems and Equipment"; and Section 7 - "Construction and Startup."
 2. Comply with ASHRAE 52.1 for arrestance and with ASHRAE 52.2 for MERV for methods of testing and rating air-filter units.
- D. Comply with NFPA 90A and NFPA 90B.
- E. Comply with ARI 850.
- F. Comply with UL 867.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ELECTRONIC AIR CLEANERS

- A. Description: Factory-fabricated electronic air cleaner operating by electrostatic precipitation principles.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Air Quality Engineering, Inc.
 - b. CRS Industries, Inc.; CosaTron Div.
 - c. Flanders-Precisionaire.
 - d. Trion, Inc.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
- B. Prefilter Media: **[Four] [Six]** alternate layers of **[galvanized-steel] [aluminum] [stainless-steel]**, flat and herringbone-crimp screen.
- C. Prefilter: Comply with requirements in Section 234100 "Particulate Air Filtration" for **[flat] [pleated] [ring]** panel. Size and airflow capacity shall match those of electronic air cleaners.
1. Depth: **[1 inch (25 mm)] [2 inches (50 mm)] [4 inches (100 mm)] <Insert dimension>**.
 2. Filter Unit Class: UL 900, **[Class 1] [Class 2]**.
 3. Arrestance: **[85] <Insert number>** percent when tested according to ASHRAE 52.1.
 4. MERV: **[8] <Insert value>** when tested according to ASHRAE 52.2.
- D. Final Filter: Comply with requirements in Section 234100 "Particulate Air Filtration" for **[supported bag] [unsupported bag] [rigid-cell box] [V-bank cell] [self-supported pocket]**. Size and airflow capacity shall match those of gas-phase filters.
1. Depth: **[12 inches (300 mm)] [18 inches (450 mm)] [24 inches (600 mm)] <Insert dimension>**.
 2. Filter Unit Class: UL 900, **[Class 1] [Class 2]**.
 3. Arrestance: **[85] <Insert number>** percent when tested according to ASHRAE 52.1.
 4. MERV: **[13] <Insert value>** when tested according to ASHRAE 52.2.
- E. Collection Cells: Aluminum, independently supported and nested.

1. Ionizing Section: Alternately spaced grounded struts and charged ionizing wires.
 2. Collecting Section: Alternately grounded and charged plates, with insulators located out of airstream.
- F. Power Pack: Self-contained, prewired rectifying unit to convert **[120] [208/240] [480]**-V ac, single-phase, 60-Hz power to approximately 12,000-V dc for ionizer and 6000-V dc for collector; include overload protection, on-off switch, pilot light showing operating status, and access door interlock.
- G. Safety Accessories: Manual-reset safety switches and warning lights for filter plenum access doors, signal lights and safety switching upstream and downstream from unit within duct, and enameled high-voltage warning signs.
- H. Collection Section Cleaning System:
1. Detergent Reservoir Tank: **[30 gal. (110 L)] [55 gal. (200 L)]** with pump, motor, solenoid valve, level sensor, backflow preventer, wye-strainer, and ball valve.
 2. Detergent.
 3. Dispensing System: Motor-driven oscillating copper manifolds with brass spray nozzles on each side of the collector.
- I. Mist Eliminators: **[Upstream][and downstream] [Downstream]**.
- J. Controls: Programmable logic controller in remotely mounted NEMA 250, Type 12 enclosure; with integral time clock and manual override.
1. Contacts for enable-disable control by building automation system.
- K. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- 2.2 FAN SECTION
- A. Fan: Forward curved, belt driven.
- B. Motor:
1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 2. Type: **[Permanent-split capacitor with SCR for speed adjustment] [Electronically commutated motor]**.
 3. Fan-Motor Assembly Isolation: Rubber isolators.
 4. Enclosure: Totally enclosed, fan cooled, and **[explosion proof] [dust-ignition proof]**.
 5. Enclosure Materials: **[Cast iron] [Cast aluminum] [Rolled steel]**.
 6. Motor Bearings: Sealed ball, **<Insert special requirements>**.
 7. Unusual Service Conditions:
 - a. Ambient Temperature: **<Insert deg F (deg C)>**.

- b. Altitude: <Insert feet (m)> above sea level.
 - c. High humidity.
 - d. <Insert conditions>.
8. Efficiency: Premium efficient.
9. NEMA Design: <Insert designation>.
10. Service Factor: <Insert value>.
11. Motor Speed: [**Single speed**] [**Multispeed**].
- a. Speed Control: Infinitely adjustable with pneumatic-electric and electronic controls.

2.3 CABINET

- A. Description: 16-gage galvanized steel with epoxy powder finish for suspended, wall, frame, or duct mounting.

2.4 SIDE-SERVICE HOUSINGS

- A. Description: Factory-assembled, side-service housings, [**with bottom drain**,]constructed of [**galvanized steel**] [**aluminum**] and configured for stacking, with flanges to connect to duct or casing system.
- B. Access Doors: [**Hinged with continuous**] [**Continuous**] gaskets on perimeter and positive-locking devices.
- C. Sealing: Incorporate positive-sealing gasket material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.
- D. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

2.5 FRONT- AND REAR-ACCESS FILTER FRAMES

- A. Framing System: [**Galvanized-steel**] [**Aluminum**] framing members with access for either upstream (front) or downstream (rear) filter servicing, cut to size and prepunched for assembly into modules[**with bottom drain**], and configured for stacking. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.
- B. Prefilters: Incorporate a separate track[**with spring clips**], removable from front[**or back**].
- C. Final Filters: Integral tracks to accommodate [**particulate**] [**gas-phase**] disposable filters.
- D. Sealing: Factory-installed, positive-sealing device for each row of filters to ensure seal between gasketed filter elements to prevent bypass of unfiltered air.

- E. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

2.6 FILTER GAGES

- A. Diaphragm type, with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Airguard.
 - b. Dwyer Instruments, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Diameter: [4-1/2 inches (115 mm)] [2 inches (50 mm)].
 3. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5-Inch wg (125 Pa) or Less: 0- to 0.5-inch wg (0 to 125 Pa).
 4. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5- to 1-Inch wg (125 to 250 Pa) or Less: 0- to 1.0-inch wg (0 to 250 Pa).
 5. Scale Range for Filter Media Having a Recommended Final Resistance of 1.0- to 2.0-Inch wg (250 to 500 Pa) or Less: 0- to 2.0-inch wg (0 to 500 Pa).
 6. Scale Range for Filter Media Having a Recommended Final Resistance of 2.0- to 3.0-Inch wg (500 to 750 Pa) or Less: 0- to 3.0-inch wg (0 to 750 Pa).
 7. Scale Range for Filter Media Having a Recommended Final Resistance of 3.0- to 4.0-Inch wg (750 to 1000 Pa) or Less: 0- to 4.0-inch wg (0 to 1000 Pa).
- B. Manometer-Type Filter Gage: Molded plastic, with epoxy-coated aluminum scale, logarithmic-curve tube gage, with integral leveling indicator, graduated to read from 0- to 3.0-inch wg (0 to 750 Pa), and accurate within 3 percent of full-scale range.
- C. Accessories: Static-pressure tips, tubing, gage connections, and mounting bracket.

2.7 CAPACITIES AND CHARACTERISTICS

- A. Unit Face Dimensions: [72 by 72 inches (1828 by 1828 mm)] **<Insert dimensions>** nominal.
- B. Number of Cleaner Units: **<Insert number>**.
- C. Unit Depth: [33 inches (825 mm)] [45 inches (1125 mm)] **<Insert dimension>** nominal.
- D. Holding Frame Size: **<Insert inches (mm)>**.
- E. Frame Access Location: [**Front**] [**back**] [**or**] [**side**].
- F. System Airflow: **<Insert cfm (L/s)>**.

- G. Maximum or Rated Face Velocity: [500 fpm (2.5 m/s)] <Insert value>.
- H. Power Pack:
1. Volts: [120] [208] [230] [460] <Insert value> V.
 2. Phase: [Single] [Three].
 3. Hertz: 60.
 4. Full-Load Amperes: <Insert value>.
 5. Minimum Circuit Ampacity: <Insert value>.
 6. Maximum Overcurrent Protection Device: <Insert amperage>.
- I. Efficiency: 90 percent on particles 20 micrometers and larger at 500 fpm (2.5 m/s).
- J. Efficiency: [85] [90] [95] percent as tested according to ASHRAE 52.1.
- K. Initial Resistance: [0.25-inch wg (63 Pa)] <Insert value>.
- L. Prefilter Type: Integral tracks to accommodate 2-inch- (50-mm-) thick disposable[or washable] filters.
- M. Final Filter Type: Integral tracks to accommodate [particulate] [gas-phase] disposable filters.
- N. Fan Motor Electrical Characteristics:
1. Horsepower: <Insert value>.
 2. Volts: [120] [208] [230] [460] <Insert value> V.
 3. Phase: [Single] [3].
 4. Hertz: 60.
 5. Full-Load Amperes: <Insert value>.
 6. Minimum Circuit Ampacity: <Insert value>.
 7. Maximum Overcurrent Protection Device: <Insert amperage>.
- O. Cleaning System: [Manual] [or] [automatic].
- P. Reservoir Tank: [30 gal. (114 L)] [50 gal. (190 L)].
- Q. Connections:
1. Water Supply: <Insert NPS (DN)>.
 2. Drain: <Insert NPS (DN)>.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install air cleaning devices in accordance with manufacturer's instructions.

- B. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.
- C. Install filters in position to prevent passage of unfiltered air with felt, rubber, or neoprene gaskets.
- D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.
- E. Operate electronic air cleaners for 24 hours as part of startup before filters are put into operation.
- F. Install filter-gage, static-pressure taps upstream and downstream from filters. Install filter gages on filter banks with separate static-pressure taps upstream and downstream from filters. Mount filter gages on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gages.
- G. Install and connect water-supply and drainage piping.
- H. Coordinate filter installations with duct and air-handling-unit installations.

3.2 FIELD QUALITY CONTROL

- A. **Manufacturer's Field Service:** Engage a factory-authorized service representative to assist Contractor and inspect, test, and adjust components, assemblies, and equipment installation, including connections.
- B. Perform tests and inspections.
 - 1. **Manufacturer's Field Service:** Engage a factory-authorized service representative to assist Contractor and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. **Tests and Inspections:** Test for leakage of unfiltered air while system is operating.
- D. Air filter will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.3 CLEANING

- A. After completing system installation and testing, adjusting, and balancing air-handling and air-distribution systems, clean filter housings and install new prefilter and final-filter media.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 234300

SECTION 235113.11 - DRAFT CONTROL FANS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Draft inducer fans.
2. Venturi-draft inducer fans.
3. Mechanical-draft vent fans.
4. Vent exhaust fans.
5. Combustion-air fans.

- B. Related Requirements:

1. Section 235113.16 "Vent Dampers" for barometric dampers and vent dampers.
2. Section 235116 "Fabricated Breechings and Accessories" for listed, refractory-lined metal breechings and field-fabricated metal breechings.
3. Section 235123 "Gas Vents" for Type B and BW vents, Type L vents, and listed special gas vents.
4. Section 235133 "Insulated Sectional Chimneys" for listed chimney liners; listed building-heating-appliance chimneys; listed, refractory-lined metal chimneys; and field-fabricated chimneys.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Breeching: Vent Connector.
- B. Chimney: Primarily vertical shaft enclosing at least one vent for conducting flue gases outdoors.
- C. Smoke Pipe: Round, single wall vent connector.
- D. Vent: That portion of a venting system designed to convey flue gases directly outdoors from a vent connector or from an appliance when a vent connector is not used.

- E. Vent Connector: That part of a venting system that conducts the flue gases from the flue collar of an appliance to a chimney or vent, and may include a draft control device.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each type of product.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Detail fabrication and assembly of hangers and seismic restraints.
 - 4. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For draft control fans to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this Section with minimum of three (3) years experience.
- B. Conform to **[applicable code] [NFPA 54 (ANSI Z223.1)]** code for installation of **[natural gas] [propane]** burning equipment.
- C. Conform to **[applicable code] [NFPA 31 (ANSI Z95.1)]** for installation of oil burning equipment.
- D. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. **[or other testing agency acceptable to the authority having jurisdiction]** as suitable for the purpose specified and indicated.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of **[draft inducer fans] [venturi-draft inducer fans] [mechanical-draft vent fans] [vent exhaust fans] [combustion-air fans]** that fail in materials or workmanship within specified warranty period.
1. Failure includes failure of the fan due to corrosion.
 2. Warranty Period: Minimum **[Two (2)] [Ten (10)] <Insert number>** years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 DRAFT INDUCER FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Effikal International Inc.](#)
 2. [ENERVEX Inc.](#)
 3. [Field Controls L.L.C.](#)
 4. [Quickdraft.](#)
 5. [Tec-Air Inc.](#)
 6. [Tjernlund Products, Inc.](#)
 7. [Wing Draft Inducers.](#)
 8. **<Insert manufacturer's name>**.
 9. or approved equal.
- B. Fan Construction: **[Galvanized] [Aluminized]**-steel housing and radial-blade centrifugal fan.
1. Fan Motor: Permanent-split-capacitor type.
- C. Controls:
1. Draft-proving switch.
 2. Control kit to cycle fan with gas flow to a single burner.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 VENTURI-DRAFT INDUCER FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Quickdraft](#).
 2. **<Insert manufacturer's name>**.
 3. or approved equal.
- B. Fan Construction: Enameled-steel venturi tube for vents **20 inches** (508 mm) in diameter and smaller and ASTM A 666, Type 304, stainless-steel venturi tube for vents **22 to 48 inches** (559 to 1219 mm) in diameter. [**Galvanized**] [**Enameled**]-steel fan housing with radial-blade centrifugal wheel.
1. Fan Motor: Permanent-split-capacitor type.
- C. Controls:
1. Draft-proving switch.
 2. Control kit to cycle fan with gas flow to a single burner.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 MECHANICAL-DRAFT VENT FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Bradford White Corporation](#).
 2. [Effikal International Inc.](#)
 3. [ENERVEX Inc.](#)
 4. [Field Controls L.L.C.](#)
 5. [Quickdraft](#).
 6. [Tec-Air Inc.](#)
 7. [Tjernlund Products, Inc.](#)
 8. [Wing Draft Inducers](#).
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Fan Construction: Forward-curved centrifugal fan and scroll fabricated of [**aluminized**] [**galvanized**] steel; direct-drive, ball-bearing motor lubricated with synthetic oil; internal cooling fan; stainless-steel shaft; and integral pressure-sensing switch.
1. Fan Motor: Permanent-split-capacitor type.
- C. Controls:
1. Draft-proving switch.

2. Control kit to cycle fan with gas flow to **[single]** **[multiple]** burner(s).

D. Accessories:

1. **[Aluminized]** **[Stainless]**-steel, wall-vent hood.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.4 VENT EXHAUST FANS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [ENERVEX Inc.](#)
2. [Field Controls L.L.C.](#)
3. [Tjernlund Products, Inc.](#)
4. **<Insert manufacturer's name>**.
5. or approved equal.

B. General: Centrifugal fan with **[variable]** **[constant]**-speed control mounted at end of **[sidewall]** **[vertical]** vent.

C. Test Standard: UL 378.

D. Fan Construction:

1. **[Cast-aluminum]** **[Galvanized-steel]** **[Stainless-steel]** housing **[painted manufacturer's standard color of baked enamel]**.
2. **[Galvanized]** **[Stainless]**-steel vent.
3. **[Cast-aluminum]** **[Stainless-steel]** wheel.
4. Backward-inclined centrifugal or axial fan wheel statically and dynamically balanced.
5. Access panel at the discharge area.
6. Concentric makeup air-inlet duct surrounding the vent to allow zero clearance to combustibles.

E. Motor: Fully enclosed, **[variable-speed duty,]** permanent-split capacitor, out of the airstream, with prelubricated and sealed ball bearings.

F. Constant-Speed Controls: Boiler interlock relay starts fan when burner control cycles on. Pressure switch permits burner operation via interlock with boiler. Fan-proving switch is adjustable between **minus 0.07- and minus 0.15-inch wg** (minus 17 and minus 37 Pa).

G. Variable-Speed Controls: Boiler interlock relay starts fan when burner control cycles on. Pressure controller, control transformer, and miscellaneous controls for automatic modulation of fan speed to maintain preset negative pressure between **zero- and minus 1.0-inch wg** (zero and minus 249 Pa). Include controller with indicator lights,

pressure-differential transmitter, chimney pressure-sensor probe, and fan-proving switch adjustable between **minus 0.07- and minus 0.15-inch wg** (minus 17 and minus 37 Pa). Include tubing.

- H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.5 COMBUSTION-AIR FANS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [ENERVEX Inc.](#)
2. [Field Controls L.L.C.](#)
3. [Tjernlund Products, Inc.](#)
4. **<Insert manufacturer's name>**.
5. or approved equal.

- B. Fan Construction: **[Galvanized]** **[Aluminized]**-steel housing; steel forward-curved fan and scroll; direct-drive, totally enclosed, fan-cooled motor with ball bearings; stainless-steel shaft; and integral pressure-sensing switch.

1. Internal bypass to temper supply-air temperature to room.

- C. Controls:

1. Fan-proving switch to permit burner operation when combustion-air fan is operating.
2. Multiple-appliance control starts fan with operation of any one of **[three]** **[four]** appliances.
3. Modulating combustion-air fan speed to control pressure differential in room with respect to outdoors.
4. Manual-reset, high-limit switch stops operation with **160 deg F** (71 deg C) room temperature.
5. Optional Controls:
 - a. Alarm circuit.
 - b. Excessive negative pressure limit.
 - c. Interface relay for vent exhaust fan, draft inducer fan, or mechanical-draft vent fan.
 - d. **[Galvanized-steel]** **[Aluminum]** intake hood.

- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.6 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.7 CAPACITIES AND CHARACTERISTICS

- A. Fan:
 - 1. Manufacturer: **<Insert manufacturer>**.
 - 2. Model No.: **<Insert number>**.
 - 3. Rated Appliance Input: **<Insert Btu/h (kW)>**.
 - 4. Airflow: **<Insert cfm (L/s)>**.
 - 5. Speed: **<Insert value>** rpm.
 - 6. Static Pressure: **<Insert inches wg (Pa)>**.
 - 7. Electrical Characteristics:
 - a. Motor Horsepower: **<Insert value>**.
 - b. Volts: **[115] [208] [230] [460] <Insert value>**.
 - c. Phase: **[Single] [Three]**.
 - d. Hertz: 60.
 - e. Full-Load Amperes: **<Insert value>**.
 - f. Minimum Circuit Ampacity: **<Insert value>**.
 - g. Maximum Overcurrent Protection: **<Insert amperage>**.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install listed components in a manner complying with the listing.
- C. Install draft inducer fans in single-wall vent section that is designed to couple with other vent materials.
- D. Secure draft inducer fans to appliances, breechings, or stacks with hardware compatible with connected materials.
- E. Install draft inducer fans with clearances for service and maintenance.
- F. Install **[PVC]** intake duct that is sized according to manufacturer's written instructions.

3.2 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235113.11

SECTION 235113.16 - VENT DAMPERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Barometric dampers.
- 2. Vent dampers.

- B. Related Requirements:

- 1. Section 235113.11 "Draft Control Fans" for draft inducer fans, venturi-draft inducer fans, mechanical-draft vent fans, vent exhaust fans, and combustion-air fans.
- 2. Section 235116 "Fabricated Breechings and Accessories" for listed, refractory-lined metal breechings and field-fabricated metal breechings.
- 3. Section 235123 "Gas Vents" for Type B and BW vents, Type L vents, and listed special gas vents.
- 4. Section 235133 "Insulated Sectional Chimneys" for listed chimney liners; listed building-heating-appliance chimneys; listed, refractory-lined metal chimneys; and field-fabricated chimneys.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Breeching: Vent Connector.
- B. Chimney: Primarily vertical shaft enclosing at least one vent for conducting flue gases outdoors.
- C. Smoke Pipe: Round, single wall vent connector.
- D. Vent: That portion of a venting system designed to convey flue gases directly outdoors from a vent connector or from an appliance when a vent connector is not used.
- E. Vent Connector: That part of a venting system that conducts the flue gases from the

flue collar of an appliance to a chimney or vent, and may include a draft control device.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each type of product.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Detail fabrication and assembly of hangers and seismic restraints.
 - 4. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For draft control devices to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this Section with minimum of three (3) years experience.
- B. Conform to **[applicable code] [NFPA 54 (ANSI Z223.1)]** code for installation of **[natural gas] [propane]** burning equipment.
- C. Conform to **[applicable code] [NFPA 31 (ANSI Z95.1)]** for installation of oil burning equipment.
- D. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. **[or other testing agency acceptable to the authority having jurisdiction]** as suitable for the purpose specified and indicated.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of **[barometric dampers] [vent dampers]** that fail in materials or workmanship within specified warranty period.
1. Failure includes failure due to corrosion.
 2. Warranty Period: Minimum **[Two (2)] [Ten (10)] <Insert number>** years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 BAROMETRIC DAMPERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Effikal International Inc.](#)
 2. [ENERVEX Inc.](#)
 3. [FAMCO.](#)
 4. [Field Controls L.L.C.](#)
 5. [Quickdraft.](#)
 6. [Snappy Air Distribution Products.](#)
 7. [Tec-Air Inc.](#)
 8. [Tjernlund Products, Inc.](#)
 9. **<Insert manufacturer's name>.**
 10. or approved equal.
- B. Damper Construction: High-temperature-enamel-painted steel damper and housing with galvanized-steel breeching connection. Adjustable counterweight with lock. Include knife-edge bearings that do not require lubrication.

2.2 VENT DAMPERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Effikal International Inc.](#)
 2. [Field Controls L.L.C.](#)
 3. [Johnson Controls, Inc.](#)
 4. **<Insert manufacturer's name>.**

5. or approved equal.

B. Damper Construction: Stainless-steel damper blade, shaft, and vent pipe with metal, prelubricated bearings.

1. Electric motor sized to power damper open and closed in approximately 15 seconds in each direction. Power is off when damper is at rest.
2. Comply with ANSI Z21.66.

C. Controls:

1. Control transformer.
2. Keyed wiring harness.
3. Damper end switch to prove damper is open.
4. Interlock with boiler to permit burner operation when damper is open.
5. Hold-open switch for troubleshooting boiler controls.

2.3 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.4 CAPACITIES AND CHARACTERISTICS

A. Damper:

1. Manufacturer: **<Insert manufacturer>**.
2. Model No.: **<Insert number>**.
3. Rated Appliance Input: **<Insert Btu/h (kW)>**.
4. Vent Size: **<Insert inches (mm)>**.
5. Electrical Characteristics:
 - a. Motor Horsepower: **<Insert value>**.
 - b. Volts: **[115] <Insert value>**.
 - c. Phase: Single.
 - d. Hertz: 60.
 - e. Full-Load Amperes: **<Insert value>**.
 - f. Minimum Circuit Ampacity: **<Insert value>**.
 - g. Maximum Overcurrent Protection: **<Insert amperage>**.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

- B. Install listed components in a manner complying with the listing.
- C. Secure barometric dampers to breechings with hardware compatible with connected materials.
- D. Locate barometric and motorized vent dampers as close to draft hood collar as possible.
- E. Secure barometric and motorized vent dampers to appliances, breechings, or chimneys with hardware compatible with connected materials.

3.2 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235113.16

SECTION 235116 - FABRICATED BREECHINGS AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Listed, refractory-lined breechings.
- 2. Field-fabricated metal breechings.
- 3. Guying and bracing materials.

- B. Related Requirements:

- 1. Section 235113.11 "Draft Control Fans" for draft inducer fans, venturi-draft inducer fans, mechanical-draft vent fans, vent exhaust fans, and combustion-air fans.
- 2. Section 235113.16 "Vent Dampers" for motorized and barometric dampers.
- 3. Section 235123 "Gas Vents" for Type B and BW vents, Type L vents, and listed special gas vents.
- 4. Section 235133 "Insulated Sectional Chimneys" for listed chimney liners; listed building-heating-appliance chimneys; listed, refractory-lined metal chimneys; and field-fabricated chimneys.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Breeching: Vent Connector.
- B. Chimney: Primarily vertical shaft enclosing at least one vent for conducting flue gases outdoors.
- C. Smoke Pipe: Round, single wall vent connector.
- D. Vent: That portion of a venting system designed to convey flue gases directly outdoors from a vent connector or from an appliance when a vent connector is not used.
- E. Vent Connector: That part of a venting system that conducts the flue gases from the

flue collar of an appliance to a chimney or vent, and may include a draft control device.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for product.
2. Include data substantiating that materials comply with requirements.

B. Shop Drawings: For breechings.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Detail fabrication and assembly of hangers and seismic restraints.
4. Submit calculations, which verify the adequacy of the proposed breeching and stack system to handle the connected flue gas load.

1.5 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Seismic Qualification Certificates: For factory-fabricated breeching, accessories, and components from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity, and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.

2. AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in breechings.
- B. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations.
- C. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this Section with minimum of three (3) years experience.
- D. Conform to [applicable code] [NFPA 54 (ANSI Z223.1)] code for installation of [natural gas] [propane] burning equipment.
- E. Conform to [applicable code] [NFPA 31 (ANSI Z95.1)] for installation of oil burning equipment.
- F. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. [or other testing agency acceptable to the authority having jurisdiction] as suitable for the purpose specified and indicated.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of venting system that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, structural failures caused by expansion and contraction.
 2. Warranty Period: Minimum [ten (10)] [fifteen (15)] [twenty-five (25)] <Insert number> years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 BREECHINGS - GENERAL

- A. Provide adjustable self-actuating barometric draft dampers, where indicated, full size of breeching.
- B. Weld longitudinal seams. Fabricate joints by welding, lapping, and bolting, or with companion flanges. For breechings less than 24 inches diameter provide groove seam (pipe lock or flat lock) with end joints beaded and crimped.
- C. Reinforce rectangular breeching with angle frames and round breeching with flanged

girth joints or angle frames. Refer to SMACNA HVAC Duct Construction Standards - Metal and Flexible:

1. Sizes up to 30 inches: No reinforcing required.
2. Sizes 31 to 36 inches: 1-1/2 x 1-1/2 x 3/16 inches, at 60 inch centers.
3. Sizes 37 to 60 inches: 2 x 2 x 1/4 inch, at 60 inch centers.
4. Sizes over 60 inches: 3 x 3 x 1/2 inch, at 60 inch centers.

- D. Fabricate breeching fittings to match adjoining breechings. Fabricate elbows with centerline radius equal to breeching [**width.**] [**diameter.**] Limit angular tapers to 20 degrees maximum.

2.2 LISTED, REFRACTORY-LINED METAL BREECHINGS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Van-Packer Company, Inc.](#)
2. [Warren Environment, Inc.](#)
3. **<Insert manufacturer's name>.**
4. or approved equal.

- B. Comply with ASME STS-1.

- C. Design Wind Loads: [150 mph (241 km/h)] **<Insert wind speed>.**

- D. Design for seismic conditions at Project site.

- E. Refractory Lining: Tested according to UL 959 for temperature and acid resistance and bearing the testing laboratory label.

1. Temperature Rating: 1800 deg F (982 deg C) continuously and 2000 deg F (1093 deg C) intermittently.
2. Acid Extraction: Maximum of 0.2 percent.
3. Cold Crushing Strength: Minimum of 3200 psig (22 MPa).
4. Thickness: Minimum of 2 inches (50 mm).

- F. Finish: Factory-applied, high-heat-resistant paint; color as selected by DEN Project Manager.

2.3 FIELD-FABRICATED METAL BREECHINGS

- A. Fabricate breechings from ASTM A 1011/A 1011M hot-rolled steel with continuously welded joints, complying with NFPA 211 for minimum metal thickness.

1. Equal to or Less Than 1.069 Sq. Ft. (0.099 Sq. m.) or 14 Inches (356 mm) in Diameter: 0.053 inch (1.35 mm).
2. Up to 1.396 Sq. Ft. (0.129 Sq. m) or 16 Inches (406 mm) in Diameter: 0.067 inch (1.7 mm).

3. Up to 1.764 Sq. Ft. (0.164 Sq. m.) or 18 Inches (457 mm) in Diameter: 0.093 inch (2.36 mm).
4. Larger Than 1.764 Sq. Ft. (0.164 Sq. m.) or 18 Inches (457 mm) in Diameter: 0.123 inch (3.12 mm).

B. Fabricate cleanout doors from compatible material, same thickness as breeching, bolted and gasketed.

C. Fabricate engine exhaust from ASTM A 53/A 53M, Type E (electric-resistance welded), Grade B; or ASTM A 106/A 106M, Type S, Grade B, **[Schedule 40]** **[Schedule 80]** pipe; with welded joints and carbon-steel fittings and flanges.

1. Wrought-Steel Fittings: ASME B16.9, wall thickness to match adjoining pipe.
2. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, Class 150, including bolts, nuts, and gaskets.

2.4 GUYING AND BRACING MATERIALS

A. Cable: **[Three]** **[Four]** <Insert number> galvanized, stranded wires of the following thickness:

1. Minimum Size: 1/4 inch (6 mm) in diameter.
2. For ID Sizes 4 to 15 Inches (100 to 381 mm): 5/16 inch (8 mm).
3. For ID Sizes 18 to 24 Inches (457 to 610 mm): 3/8 inch (9.5 mm).
4. For ID Sizes 27 to 30 Inches (685 to 762 mm): 7/16 inch (11 mm).
5. For ID Sizes 33 to 36 Inches (838 to 915 mm): 1/2 inch (13 mm).
6. For ID Sizes 39 to 48 Inches (990 to 1220 mm): 9/16 inch (14.3 mm).
7. For ID Sizes 51 to 60 Inches (1295 to 1524 mm): 5/8 inch (16 mm).

B. Pipe: **[Two]** **[Three]** <Insert number> galvanized steel, NPS 1-1/4 (DN 32).

C. Angle Iron: **[Two]** **[Three]** <Insert number> galvanized steel, 2 by 2 by 0.25 inch (50 by 50 by 6 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATION

- A. Listed, Refractory-Lined Metal Breechings: Freestanding dual-fuel boiler vents, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.
- B. Field-Fabricated Metal Breechings: Dual-fuel boilers, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.

3.3 INSTALLATION OF UNLISTED, FIELD-FABRICATED BREECHINGS

- A. Suspend breechings independent of their appliance connections.
- B. Install seismic restrains according to manufacturer's written instructions. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC."
- C. Align breechings at connections, with smooth internal surface and a maximum 1/8-inch (3-mm) misalignment tolerance.
- D. Install breechings with minimum of joints. Align accurately at connections, with internal surfaces smooth.
- E. Slope breechings down in direction of appliance, with condensate drain connection at lowest point piped to nearest drain.
- F. Lap joints in direction of flow.
- G. Support breechings from building structure with bolts, concrete inserts, steel expansion anchors, welded studs, C clamps, or beam clamps according to manufacturer's written instructions.
- H. Insulate breechings in accordance with Section 230716 "HVAC Equipment Insulation".
- I. At appliances, provide slip joints permitting removal of appliances without removal or dismantling of breechings, breeching insulation, chimneys, or stacks.
- J. Provide [minimum length] [maximum 2 feet] of breeching to connect appliance to chimney. **[Provide Type B chimney continuously from appliances.]**

3.4 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes.
- B. Clean breechings internally, during and after installation, to remove dust and debris. Clean external surfaces to remove welding slag and mill film. Grind welds smooth and apply touchup finish to match factory or shop finish.

- C. Provide temporary closures at ends of breechings that are not completed or connected to equipment.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235116

SECTION 235123 - GAS VENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Listed double-wall vents.

- B. Related Requirements:

- 1. Section 235113.11 "Draft Control Fans" for draft inducer fans, venturi-draft inducer fans, mechanical-draft vent fans, vent exhaust fans, and combustion-air fans.
- 2. Section 235113.16 "Vent Dampers" for motorized and barometric dampers.
- 3. Section 235116 "Fabricated Breechings and Accessories" for listed, refractory-lined metal breechings and field-fabricated metal breechings.
- 4. Section 235133 "Insulated Sectional Chimneys" for listed chimney liners; listed building-heating-appliance chimneys; listed, refractory-lined metal chimneys; and field-fabricated chimneys.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Breeching: Vent Connector.
- B. Chimney: Primarily vertical shaft enclosing at least one vent for conducting flue gases outdoors.
- C. Smoke Pipe: Round, single wall vent connector.
- D. Vent: That portion of a venting system designed to convey flue gases directly outdoors from a vent connector or from an appliance when a vent connector is not used.
- E. Vent Connector: That part of a venting system that conducts the flue gases from the flue collar of an appliance to a chimney or vent, and may include a draft control device.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for product.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For vents.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Detail fabrication and assembly of hangers and seismic restraints.

1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 - 2. AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in vents.
- B. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations.
- C. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this Section with minimum of three (3) years experience.
- D. Conform to **[applicable code]** **[NFPA 54 (ANSI Z223.1)]** code for installation of **[natural gas]** **[propane]** burning equipment.
- E. Conform to **[applicable code]** **[NFPA 31 (ANSI Z95.1)]** for installation of oil burning equipment.

- F. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 LISTED TYPE B AND BW VENTS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [American Metal Products.](#)
 2. [Cleaver-Brooks.](#)
 3. [FAMCO.](#)
 4. [Hart & Cooley Inc.](#)
 5. [Heat-Fab, Inc.](#)
 6. [Industrial Chimney Company.](#)
 7. [LSP Products Group, Inc.](#)
 8. [M&G DuraVent, Inc.: a member of the M&G Group](#); Duravent GV Type B Gas Vent.
 9. [Metal-Fab, Inc.](#)
 10. [Schebler Co. \(The\).](#)
 11. [Security Chimneys International.](#)
 12. [Selkirk Corporation](#); Selkirk Metalbestos and Air Mate.
 13. [Tru-Flex Metal Hose Corp.](#)
 14. [Van-Packer Company, Inc.](#)
 15. **<Insert manufacturer's name>.**
 16. or approved equal.
- B. Description: Double-wall metal vents tested according to UL 441 and rated for **480 deg F** (248 deg C) continuously for Type B or **550 deg F** (288 deg C) continuously for Type BW; with neutral or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least a **1/4-inch** (6-mm) airspace.
- D. Inner Shell: [**ASTM B 209** (ASTM B 209M), **Type 1100 aluminum**] [**ASTM B 209** (ASTM B 209M), **Type 3003 aluminum**] [**ASTM B 209** (ASTM B 209M), **Type 3105 aluminum**] [**ASTM A 666, Type 430 stainless steel**].
- E. Outer Jacket: [**Galvanized**] [**Aluminized**] steel.

- F. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
1. Termination: Stack cap designed to exclude minimum 90 percent of rainfall.
 2. Termination: Round chimney top designed to exclude minimum 98 percent of rainfall.
 3. Termination: Exit cone with drain section incorporated into riser.
 4. Termination: Antibackdraft.
 5. Termination: **<Insert termination>**.

2.2 LISTED TYPE L VENTS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [American Metal Products](#).
 2. [FAMCO](#).
 3. [Heat-Fab, Inc.](#)
 4. [Industrial Chimney Company](#).
 5. [LSP Products Group, Inc.](#)
 6. [M&G DuraVent, Inc.; a member of the M&G Group](#); Pellet Vent Pro.
 7. [Metal-Fab, Inc.](#)
 8. [Schebler Co. \(The\)](#).
 9. [Security Chimneys International](#).
 10. [Selkirk Corporation](#); Selkirk Metalbestos and Air Mate.
 11. [Simpson Dura-Vent Co., Inc.; Subsidiary of Simpson Manufacturing Co.](#)
 12. [Tru-Flex Metal Hose Corp.](#)
 13. [Van-Packer Company, Inc.](#)
 14. **<Insert manufacturer's name>**.
 15. or approved equal.
- B. Description: Double-wall metal vents tested according to UL 641 and rated for **570 deg F** (300 deg C) continuously or **1700 deg F** (926 deg C) for 10 minutes; with neutral or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least a [**1/4-inch** (6-mm)] [**1-inch** (25-mm)] [**2-inch** (50-mm)] [**4-inch** (100-mm)] airspace filled with high-temperature, [**ceramic-fiber**] [**mineral-wool**] insulation.
- D. Inner Shell: ASTM A 666, [**Type 304**] [**Type 316**] stainless steel.
- E. Outer Jacket: [**Galvanized**] [**Aluminized**] [**Stainless**] steel.
- F. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.

1. Termination: Stack cap designed to exclude 90 percent of rainfall.
2. Termination: Round chimney top designed to exclude 98 percent of rainfall.
3. Termination: Exit cone with drain section incorporated into riser.
4. Termination: **<Insert termination>**.

2.3 LISTED SPECIAL GAS VENTS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Heat-Fab, Inc.](#)
 2. [Metal-Fab, Inc.](#)
 3. [Security Chimneys International.](#)
 4. [Selkirk Corporation](#); Selkirk Metalbestos and Air Mate.
 5. [Z-Flex; a division of the Novaflex Group; Flexmaster Canada Limited.](#)
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Description: Double-wall metal vents tested according to UL 1738 and rated for **480 deg F** (248 deg C) continuously, with positive or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least a **1/2-inch** (13-mm) airspace.
- D. Inner Shell: ASTM A 959, Type 29-4C stainless steel.
- E. Outer Jacket: **[Aluminized]** **[Stainless]** steel.
- F. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
1. Termination: Stack cap designed to exclude minimum 90 percent of rainfall.
 2. Termination: Round chimney top designed to exclude minimum 98 percent of rainfall.
 3. Termination: Exit cone with drain section incorporated into riser.
 4. Termination: **<Insert termination>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATION

- A. Listed Type B and BW Vents: Vents for certified gas appliances.
- B. Listed Type L Vent: Vents for low-heat appliances.
- C. Listed Special Gas Vent: Condensing gas appliances.

3.3 INSTALLATION OF LISTED VENTS

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077200 "Roof Accessories."
- C. Comply with minimum clearances from combustibles and minimum termination heights according to product listing or NFPA 211, whichever is most stringent.
- D. Seal between sections of positive-pressure vents according to manufacturer's written installation instructions, using sealants recommended by manufacturer.
- E. Support vents at intervals recommended by manufacturer to support weight of vents and all accessories, without exceeding appliance loading.
- F. Lap joints in direction of flow.
- G. For Type B double wall gas vents, maintain UL listed minimum clearances from combustibles. Assemble pipe and accessories as required for complete installation.
- H. Install vent dampers, locating close to draft hood collar, and secured to breeching.

3.4 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235123

SECTION 235133 - INSULATED SECTIONAL CHIMNEYS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Listed chimney liners.
2. Listed building-heating-appliance chimneys.
3. Listed, refractory-lined stacks.
4. Field-fabricated metal chimneys.
5. Guying and bracing materials.

- B. Related Requirements:

1. Section 235113.11 "Draft Control Fans" for draft inducer fans, venturi-draft inducer fans, mechanical-draft vent fans, vent exhaust fans, and combustion-air fans.
2. Section 235113.16 "Vent Dampers" for motorized and barometric dampers.
3. Section 235116 "Fabricated Breechings and Accessories" for listed, refractory-lined metal breechings and field-fabricated metal breechings.
4. Section 235123 "Gas Vents" for Type B and BW vents, Type L vents, and listed special gas vents.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Breeching: Vent Connector.
- B. Chimney: Primarily vertical shaft enclosing at least one vent for conducting flue gases outdoors.
- C. Smoke Pipe: Round, single wall vent connector.
- D. Vent: That portion of a venting system designed to convey flue gases directly outdoors from a vent connector or from an appliance when a vent connector is not used.

- E. Vent Connector: That part of a venting system that conducts the flue gases from the flue collar of an appliance to a chimney or vent, and may include a draft control device.
- F. Factory built vents and chimneys used for venting natural draft appliances shall comply with NFPA 211 and be UL listed and labeled.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, electrical characteristics and connection requirements, and finishes for product.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For chimneys and stacks.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Detail fabrication and assembly of hangers and seismic restraints.

1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Seismic Qualification Certificates: For factory-fabricated chimneys and stacks, accessories, and components from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity, and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 - 2. AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in stacks.
- B. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations.
- C. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this Section with minimum of three (3) years experience.
- D. Conform to [applicable code] [NFPA 54 (ANSI Z223.1)] code for installation of [natural gas] [propane] burning equipment.
- E. Conform to [applicable code] [NFPA 31 (ANSI Z95.1)] for installation of oil burning equipment.
- F. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of venting system that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, structural failures caused by expansion and contraction.
 - 2. Warranty Period: Minimum [ten (10)] [fifteen (15)] [twenty-five (25)] <Insert number> years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 LISTED CHIMNEY LINERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [American Metal Products.](#)
2. [Bernard Dalsin Manufacturing Company.](#)
3. [Deflect-O Corp.](#)
4. [Heat-Fab, Inc.](#)
5. [Industrial Chimney Company.](#)
6. [M&G DuraVent, Inc.; a member of the M&G Group.](#)
7. [Metal-Fab, Inc.](#)
8. [Selkirk Corporation.](#)
9. [Shook Manufactured Products, Inc.](#)
10. [Tru-Flex Metal Hose Corp.](#)
11. **<Insert manufacturer's name>.**
12. or approved equal.

- B. Description: [**Straight**] [**Corrugated**], single-wall chimney liner tested according to UL 1777 and rated for **1000 deg F** (538 deg C) continuously or **2100 deg F** (1150 deg C) for 10 minutes; with negative or positive flue pressure complying with NFPA 211.
- C. Straight Liner Materials: ASTM A 666, [**Type 304**] [**Type 316**] stainless steel.
- D. Corrugated Liner Materials: [**ASTM A 240/A 240M, Type 321**] [**ASTM A 240/A 240M, Type 430**] [**ASTM A 959, Type 29-4C**] stainless steel.
- E. Accessories:
1. Fittings: Tees, elbows, increasers, draft-hood connectors, metal caps with bird barriers, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar or compatible materials and designs.
 2. Sealant: Manufacturer's standard high-temperature sealant.
 3. Insulating Fill: Manufacturer's standard high-temperature insulation fill material in annular space surrounding chimney liner, including high-temperature, ceramic-fiber insulation required to seal chimney at top and bottom.

2.2 LISTED BUILDING-HEATING-APPLIANCE CHIMNEYS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [American Metal Products; MASCO Corporation.](#)
 2. [Cleaver-Brooks.](#)
 3. [FAMCO.](#)
 4. [Hart & Cooley Inc.](#)
 5. [Heat-Fab, Inc.](#)
 6. [Industrial Chimney Company.](#)
 7. [LSP Products Group, Inc.](#)
 8. [M&G DuraVent, Inc.; a member of the M&G Group;](#) Dura-Tech.
 9. [Metal-Fab, Inc.](#)
 10. [Schebler Co. \(The\).](#)
 11. [Security Chimneys International.](#)

12. [Selkirk Corporation](#); Selkirk Metalbestos and Air Mate.
 13. [Tru-Flex Metal Hose Corp.](#)
 14. <Insert manufacturer's name>.
 15. or approved equal.
- B. Description: Double-wall metal vents tested according to UL 103 and rated for **1000 deg F (538 deg C)** continuously or **1700 deg F (926 deg C)** for 10 minutes; with neutral or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least a [**1/2-inch (25-mm)**] [**1-inch (50-mm)**] [**2-inch (50-mm)**] [**3-inch (75-mm)**] [**4-inch (100-mm)**] annular space[**filled with high-temperature, ceramic-fiber insulation**].
- D. Inner Shell: ASTM A 666, [**Type 304**] [**Type 316**] stainless steel.
- E. Description: Double-wall metal vents tested according to UL 103 and UL 959 and rated for **1400 deg F (760 deg C)** continuously or **1800 deg F (982 deg C)** for 10 minutes; with positive or negative flue pressure complying with NFPA 211.
- F. Construction: Inner shell and outer jacket separated by at least a [**1-inch (25-mm)**] [**2-inch (50-mm)**] [**3-inch (75-mm)**] [**4-inch (100-mm)**] annular space filled with high-temperature, ceramic-fiber insulation.
- G. Inner Shell: ASTM A 666, [**Type 304**] [**Type 316**] stainless steel.
- H. Description: Double-wall metal vents tested according to UL 103 and rated for **1000 deg F (538 deg C)** continuously or **2100 deg F (1150 deg C)** for 10 minutes; with neutral or negative flue pressure complying with NFPA 211.
- I. Construction: Inner shell and outer jacket separated by at least a [**1-inch (25-mm)**] [**1-1/2-inch (38-mm)**] [**2-inch (50-mm)**] [**4-inch (100-mm)**] annular space filled with high-temperature, ceramic-fiber insulation.
- J. Inner Shell: [**ASTM A 666, Type 304**] [**ASTM A 666, Type 316**] [**ASTM A 240/A 240M, Type 430**] stainless steel.
- K. Outer Jacket: [**Galvanized**] [**Aluminized**] [**Stainless**] steel.
- L. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
1. Termination: Stack cap designed to exclude minimum 90 percent of rainfall.
 2. Termination: Round chimney top designed to exclude minimum 98 percent of rainfall.
 3. Termination: Exit cone with drain section incorporated into riser.
 4. Termination: <Insert termination>.

2.3 LISTED, REFRACTORY-LINED METAL CHIMNEYS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Van-Packer Company, Inc.](#)
 2. [Warren Environment, Inc.](#)
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. Comply with ASME STS-1.
- C. Design Wind Loads: [150 mph (241 km/h)] **<Insert wind speed>**.
- D. Design for seismic conditions at Project site.
- E. Chimney Outer Jacket: [**Aluminized**] [**Galvanized**] steel with [**riveted**] [**welded**] seams.
- F. Refractory Lining: Tested according to UL 959 for temperature and acid resistance and bearing the testing laboratory label.
1. Temperature Rating: 1800 deg F (982 deg C) continuously and 2000 deg F (1093 deg C) intermittently.
 2. Acid Extraction: Maximum of 0.2 percent.
 3. Cold Crushing Strength: Minimum of 3200 psig (22 MPa).
 4. Thickness: Minimum of 2 inches (50 mm).
- G. Finish: Factory-applied, high-heat-resistant paint; color as selected by Architect.
- H. Base Section: Acid-resistant-coated, cast-iron anchor lugs for securing stack to foundation[**with anchorage designed by manufacturer**].
- I. Reinforced Cleanout Section: Smoke-tight connection, with gasketed and bolt-tightened inspection plate; neck shall be welded to stack section.
- J. T or Y Sections: Smoke-tight connection, with welded joints and refractory lining; finished with smooth transition and with no exposed metal on inside.
- K. Spark Screen: ASTM A 666, Type 316 stainless steel; 0.0625 inch (1.6 mm) thick; maximum 1/2-by-1/2-inch (13-by-13-mm) mesh; with ASTM A 666, Type 304 stainless-steel rolled angle and drawband.
- L. Guy Bands: 8-inch- (200-mm-) wide bands of same material as jacket, with bolted fasteners.
- M. Roof Penetration: Factory-fabricated thimbles, flashings, and counterflashings.
- N. Fabricate sections, fittings, and accessories as individual pieces or in combination lengths for field handling.

- O. Fabricate components with centrifugally cast refractory lining in lengths suitable for connection with drawbands.
- P. Bond refractory to steel jacket with calcium aluminate cement to prevent separation in finished product during shipping, handling, and installation.
- Q. Fabricate stacks with anchor lugs; cleanout; T sections; flashings and counterflashings; and provisions for support, expansion, and contraction.

2.4 FIELD-FABRICATED METAL CHIMNEYS

- A. Fabricate freestanding chimneys according to SMACNA's "Guide for Free Standing Steel Stack Construction." Design for minimum **<Insert feet (meters)>** high and **<Insert inches (mm)>** in diameter.
- B. Fabricate chimneys from ASTM A 1011/A 1011M hot-rolled steel with continuously welded joints, complying with NFPA 211 for minimum metal thickness.
 - 1. Equal to or Less Than **1.069 Sq. Ft.** (0.099 Sq. m.) or **14 Inches** (356 mm) in Diameter: **0.053 inch** (1.35 mm).
 - 2. Up to **1.396 Sq. Ft.** (0.129 Sq. m) or **16 Inches** (406 mm) in Diameter: **0.067 inch** (1.7 mm).
 - 3. Up to **1.764 Sq. Ft.** (0.164 Sq. m.) or **18 Inches** (457 mm) in Diameter: **0.093 inch** (2.36 mm).
 - 4. Larger Than: **0.123 inch** (3.12 mm).
- C. Fabricate chimneys and vent connectors from galvanized steel, complying with NFPA 211 for minimum metal thickness.
 - 1. Equal to or Less Than **6 Inches** (152 mm) in Diameter: **0.019 inch** (0.48 mm).
 - 2. Up to **10 Inches** (254 mm) in Diameter: **0.024 inch** (0.61 mm).
 - 3. Up to **16 Inches** (406 mm) in Diameter: **0.029 inch** (0.74 mm).
 - 4. Larger Than: **0.056 inch** (1.42 mm).
- D. Fabricate chimneys and vent connectors from ASTM B 209 (B 209M), Type 1100 or 3003, aluminum or stainless steel, complying with NFPA 211 for the following minimum metal thicknesses:
 - 1. Aluminum: **0.027 inch** (0.69 mm).
 - 2. Stainless Steel: **0.012 inch** (0.31 mm).
- E. Fabricate cleanout doors from compatible material, same thickness as breeching, bolted and gasketed.
- F. Fabricate engine exhaust from ASTM A 53/A 53M, Type E (electric-resistance welded), Grade B; or ASTM A 106/A 106M, Type S, Grade B, [**Schedule 40**] [**Schedule 80**] pipe; with welded joints and carbon-steel fittings and flanges.
 - 1. Wrought-Steel Fittings: ASME B16.9, wall thickness to match adjoining pipe.

2. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, Class 150, including bolts, nuts, and gaskets.

2.5 GUYING AND BRACING MATERIALS

- A. Cable: [Three] [Four] <Insert number> galvanized, stranded wires of the following thickness:
 1. Minimum Size: 1/4 inch (6 mm) in diameter.
 2. For ID Sizes 4 to 15 Inches (100 to 381 mm): 5/16 inch (8 mm).
 3. For ID Sizes 18 to 24 Inches (457 to 610 mm): 3/8 inch (9.5 mm).
 4. For ID Sizes 27 to 30 Inches (685 to 762 mm): 7/16 inch (11 mm).
 5. For ID Sizes 33 to 36 Inches (838 to 915 mm): 1/2 inch (13 mm).
 6. For ID Sizes 39 to 48 Inches (990 to 1220 mm): 9/16 inch (14.3 mm).
 7. For ID Sizes 51 to 60 Inches (1295 to 1524 mm): 5/8 inch (16 mm).
- B. Pipe: [Two] [Three] <Insert number> galvanized steel, NPS 1-1/4 (DN 32).
- C. Angle Iron: [Two] [Three] <Insert number> galvanized steel, 2 by 2 by 0.25 inch (50 by 50 by 6 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATION

- A. Listed Chimney Liners: High-efficiency boiler or furnace vents in masonry chimney.
- B. Listed Building-Heating-Appliance Chimneys: Dual-fuel boilers, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.
- C. Listed, Refractory-Lined Metal Chimneys: Freestanding dual-fuel boiler vents, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.
- D. Field-Fabricated Metal Chimneys: Dual-fuel boilers, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.

3.3 INSTALLATION OF LISTED CHIMNEYS

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Comply with requirements in [**Section 033000 "Cast-in-Place Concrete"**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete"**] for concrete, reinforcement, and formwork.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077200 "Roof Accessories."
- D. Comply with minimum clearances from combustibles and minimum termination heights according to product listing or NFPA 211, whichever is most stringent.
- E. Support vertical chimneys and stacks at 12 foot spacing, to adjacent structural surfaces, or at floor penetrations. Refer to SMACNA HVAC Duct Construction Standards - Metal and Flexible for equivalent duct support configuration and size.
- F. Install concrete inserts for support of chimneys and stacks in coordination with formwork.
- G. Seal between sections of positive-pressure vents according to manufacturer's written installation instructions, using sealants recommended by manufacturer.
- H. Lap joints in direction of flow.
- I. Connect base section to foundation using anchor lugs of size and number recommended by manufacturer.
- J. Join sections with acid-resistant joint cement to provide continuous joint and smooth interior finish.
- K. Erect stacks plumb to finished tolerance of no more than **1 inch (25 mm)** out of plumb from top to bottom.

3.4 INSTALLATION OF UNLISTED, FIELD-FABRICATED CHIMNEYS

- A. Suspend chimneys independent of their appliance connections.
- B. Install seismic restrains according to manufacturer's written instructions. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC."
- C. Lap joints in direction of flow.
- D. Support chimneys from building structure with bolts, concrete inserts, steel expansion anchors, welded studs, C clamps, or beam clamps according to manufacturer's written instructions.

3.5 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes.
- B. Provide temporary closures at ends of chimneys and stacks that are not completed or connected to equipment.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235133

SECTION 235213 - ELECTRIC BOILERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes electric boilers, trim, and accessories for generating [**hot water**] [**and**] [**steam**].
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for boilers.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, wiring diagrams and connection requirements, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For boilers, boiler trim, and accessories.
 - 1. Include plans, elevations, sections, and [**mounting**] [**attachment**] details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
- C. Delegated-Design Submittal: For each boiler.
 - 1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
 - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

- b. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

1.4 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For boilers, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Source quality-control reports.
- C. Field quality-control reports. Indicate conditions observed after start-up, including control settings.
- D. Sample Warranty: For special warranty.
- E. Other Informational Submittals:
 - 1. ASME Stamp Certification and Report: Submit "A," "S," or "PP" stamp certificate of authorization, as required by authorities having jurisdiction, and document hydrostatic testing of piping external to boiler.
 - 2. CSA B51 pressure vessel Canadian Registration Number (CRN).
 - 3. Startup service reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boilers, components, and accessories to include in emergency, operation, and maintenance manuals.
 - 1. Include manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver, store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.

- B. Protect units before, during, and after installation from damage to casing by leaving factory shipping packaging in place until immediately prior to final acceptance.

1.7 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace boiler package and pressure vessels of boilers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Minimum **[Five (5)]** <Insert number> years from date of Substantial Completion.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Acme Engineering Prod. Inc.](#)
2. [Argo Technology, Inc.](#)
3. [Benjamin Heating Products.](#)
4. [Bryan Boilers; Bryan Steam LLC.](#)
5. [Cleaver-Brooks.](#)
6. [Lion Boilers/Division of Concept Manufacturing, Inc.](#)
7. [Fulton Boiler Works, Inc.](#)
8. [Lattner Boiler Company.](#)
9. [Lochinvar, LLC.](#)
10. [Precision Boilers, LLC.](#)
11. [PVI Industries, LLC.](#)
12. [Reimers Electra Steam, Inc.](#)
13. [Sussman Electric Boilers.](#)
14. **<Insert manufacturer's name>.**
15. or approved equal.

2.2 MANUFACTURED UNITS

- A. Description: Factory-fabricated, -assembled, and -tested electric boilers with trim and controls necessary to generate **[hot water]** **[steam]**.

- B. Pressure Vessel: **[Carbon-steel]** **[Cast-iron]** pressure vessel mounted on structural-steel base.
 - C. Nozzles: Flanges for **[water inlet and]** **[steam]** outlet and heating element inserts; threaded connections for trim and controls.
 - D. Insulation: **[One layer]** **[Two layers]** of minimum **[1-inch- (25-mm-)]** **[2-inch- (50-mm-)]** **<Insert thickness>** thick, glass-fiber insulation.
 - E. Jacket: **[Galvanized]** sheet metal casing with **[baked-enamel]** **[powder-coated]** protective finish and removable panels with snap-in or interlocking closures for access to pressure vessel.
 - F. Lifting Lugs: Welded to pressure vessel, extending above jacket.
 - G. Heating Elements: **[Copper]** **[Incoloy]**-sheathed, replaceable electric-resistance element, rated 20-kW maximum, with maximum **[50 W/sq. in. (7.7 W/sq. cm)]** **[75 W/sq. in. (11.5 W/sq. cm)]** **<Insert value>** over heat-transfer length.
 - H. Mounting Base: For securing boiler to concrete base.
 - 1. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.
 - I. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - J. ASME Compliance: Fabricate and label boilers to comply with 2013 ASME Boiler and Pressure Vessel Code.
 - K. NFPA Compliance: Design and fabricate boilers to comply with NFPA 70, Article 424, Paragraphs G and H.
 - L. UL Compliance: Test boilers for compliance with UL 834. Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.
 - M. CSA Compliance: Test boilers for compliance with CSA B51.
- 2.3 TRIM FOR HOT-WATER BOILERS
- A. Include devices sized to comply with **[ASME B31.1]** **[ASME B31.9]** **[CSA B51]**.
 - B. Aquastat Controllers: Operating auto-reset high limit.
 - C. Safety Relief Valve: ASME rated.

- D. Pressure and Temperature Gage: Minimum 3-1/2-inch- (89-mm-) diameter, combination water-pressure and -temperature gage. Gages shall have operating-pressure and -temperature ranges, so normal operating range is about 50 percent of full range.
- E. Boiler Air Vent: **[Automatic] [Manual]**.
- F. Dip-tube in water outlet.
- G. Drain Valve: Minimum NPS 3/4 (DN 20) hose-end ball valve sized according to requirements of authorities having jurisdiction.
- H. Tankless Heater: Carbon-steel header with copper-tube heat exchanger mounted in an upper port of pressure vessel and sealed with fiber gasket.
 - 1. Tappings NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.
 - 2. Tappings NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

2.4 TRIM FOR STEAM BOILERS

- A. Include devices sized to comply with **[ASME B31.1] [ASME B31.9] [CSA B51]**.
- B. Pressure Controllers: Operating auto-reset high limit.
- C. Safety Relief Valve:
 - 1. Size and Capacity: As required for equipment according to 2013 ASME Boiler and Pressure Vessel Code.
 - 2. Description: Fully enclosed steel spring with adjustable pressure range and positive shutoff; factory set and sealed.
 - a. Drip-Pan Elbow: Cast iron and having threaded inlet and outlet, with threads complying with ASME B1.20.1.
- D. Pressure Gage: Minimum 3-1/2-inch (89-mm) diameter. Gage shall have normal operating pressure about 50 percent of full range.
- E. Water Column: Minimum 12-inch (300-mm) glass gage with shutoff cocks.
- F. Drain Valves: Minimum NPS 3/4 (DN 20) or nozzle size with hose-end connection.
- G. Blowdown Valves: Factory-installed bottom and surface, slow-acting blowdown valves same size as boiler nozzle.**[Blowdown valves shall be combination of slow and quick acting, as required by ASME B31.1.]**
- H. Stop Valves: Boiler inlets and outlets, except safety relief valves or preheater inlet and outlet, shall be equipped with stop valve in an accessible location as near as practical

to boiler nozzle and same size or larger than nozzle. Valves larger than **NPS 2 (DN 50)** shall have rising stem.

- I. Stop-Check Valves: Factory-installed, stop-check valve and stop valve at boiler outlet, with free-blow drain valve factory installed between the two valves and visible when operating stop-check valve.
- J. Tankless Heater: Carbon-steel header with copper-tube heat exchanger, mounted in an upper port of pressure vessel and sealed with fiber gasket.
 - 1. Tappings **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.
 - 2. Tappings **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

2.5 CONTROLS

- A. Refer to Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- B. Boiler operating controls shall include the following devices and features:
 - 1. Control transformer.
 - 2. Step controller.
 - 3. Recycling relay returns controller to off position after power failure.
 - 4. Multistage thermostat.
 - 5. Control-circuit switch.
 - 6. Visual indication for each step.
 - 7. Supply-voltage indicator.
 - 8. Set-Point Adjust: Set points shall be adjustable.
 - 9. Operating Level Control: Factory wired and mounted to cycle feedwater pump(s) for makeup water control.
 - 10. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control element sequence controller to maintain space temperature in response to thermostat with heat anticipator located in heated space.
 - a. Include automatic, alternating-operation sequence for multiple boilers to provide equal runtime for boilers.
 - 11. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control element sequence controller to reset supply-water temperature inversely with outside-air temperature. At **[0 deg F (minus 17 deg C)] <Insert temperature>** outside-air temperature, set supply-water temperature at **[200 deg F (93 deg C)] <Insert temperature>**; at **[60 deg F (15 deg C)] <Insert temperature>** outside-air temperature, set supply-water temperature at **[140 deg F (60 deg C)] <Insert temperature>**.

- a. Include automatic, alternating-operation sequence for multiple boilers to provide equal runtime for boilers.
12. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control element sequence controller to maintain a constant steam pressure. Maintain pressure set point plus or minus 10 percent.
- a. Include automatic, alternating-operation sequence for multiple boilers to provide equal runtime for boilers.
- C. Safety Controls: To maintain safe operating conditions, safety controls limit boiler operation.
1. High Cutoff: **[Manual] [Automatic]** reset stops boiler if operating conditions rise above set point or maximum boiler design **[temperature] [pressure]**.
 2. Low-Water Cutoff Switch: **[Electronic] [Float and electronic]** probe shall prevent boiler operation on low water. Cutoff switch shall be **[manual] [automatic]**-reset type.
 3. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.
- D. Building Management System Interface: Factory install hardware and software to enable building management system to monitor, control, and display boiler status and alarms.
1. Hardwired Points:
 - a. Monitoring: On/off status, **[common trouble alarm] [low-water-level alarm] <Insert monitoring>**.
 - b. Control: On/off operation, **[hot water supply temperature set-point adjustment] [steam pressure adjustment] <Insert control>**.
 2. A communication interface with building management system shall enable building management system operator to remotely control and monitor the boiler from an operator workstation. Control features available and monitoring points displayed locally at boiler control panel shall be available through building management system.
- 2.6 ELECTRICAL POWER
- A. Single-Point Field Power Connection: Factory-installed and -wired switches, transformers, and electrical devices necessary shall provide a single-point field power connection to boiler.
1. Field power interface shall be to **[fused disconnect switch] [nonfused disconnect switch] [circuit breaker]**.
 2. Interlock with door to de-energize power with door open.
- B. Electrical Enclosures: NEMA 250, Type **[1] <Insert type>** enclosure with hinged door and key-locking handle.

- C. Install factory wiring outside of an enclosure in a **[metal]**raceway.
- D. Comply with NFPA 70.
 - 1. Electrical Circuits: 48 A, maximum.
- E. Connectors: Mechanical lugs bolted to copper bus bars or distribution blocks with pressure connectors.
- F. Fuses: NEMA FU 1, Class J or K5; 60 A, maximum.
- G. Contactors: Three-pole magnetic contactors, listed for 500,000 cycles at full load.
- H. Factory-wired internal control devices and heating elements.
 - 1. Wiring shall be numbered and color coded to match wiring diagram.

2.7 CAPACITIES AND CHARACTERISTICS

- A. Hot-Water Heating:
 - 1. Design Water-Pressure Rating: **[160 psig (1100 kPa)] <Insert pressure rating>**.
 - 2. Safety Relief Valve Setting: **<Insert psig (kPa)>**.
 - 3. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 - 4. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
 - 5. Design Water Flow Rate: **<Insert gpm (L/s)>**.
 - 6. Design Pressure Drop: **<Insert psig (kPa)>**.
- B. Steam Heating:
 - 1. Design Steam-Pressure Rating: **[15 psig (104 kPa)] [60 psig (420 kPa)] [125 psig (860 kPa)] <Insert pressure rating>**.
 - 2. Safety Relief Valve Setting: **<Insert psig (kPa)>**.
 - 3. Steam Operating Pressure: **<Insert psig (kPa)>**.
 - 4. Steam Flow Rate: **<Insert lb/h (kg/s)>**.
- C. Output Capacity: **<Insert MBh (kW)>**.
- D. Equivalent Direct Radiation: **<Insert EDR (W)>**.
- E. Tankless Water Heater:
 - 1. Design Water Flow: **<Insert gpm (L/s)>**.
 - 2. Design Pressure Drop: **<Insert psig (kPa)>**.
 - 3. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 - 4. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
- F. Electrical Characteristics:
 - 1. Kilowatts: **<Insert number> kW**.

2. Volts: **[208] [480] <Insert number> V.**
3. Phase: Three.
4. Hertz: **[50] [60] <Insert number> Hz.**
5. Full-Load Amperes: **<Insert number> A.**
6. Minimum Circuit Ampacity: **<Insert number> A.**
7. Maximum Overcurrent Protection: **<Insert number> A.**

2.8 SOURCE QUALITY CONTROL

- A. Test and inspect factory-assembled boilers, before shipping, according to **[2013 ASME Boiler and Pressure Vessel Code] [CSA B51]**.
- B. Hydrostatic Test: Factory test assembled boiler, including hydrostatic test.
- C. Allow Owner access to source quality-control testing of boilers. Notify Architect 14 days in advance of testing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting performance of the Work.
 1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces, including required space for element removal, for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BOILER INSTALLATION

- A. Equipment Mounting:
 1. Install boilers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in **[Section 033000 "Cast-in-Place Concrete."]** **[Section 033053 "Miscellaneous Cast-in-Place Concrete."]**
 2. Comply with requirements for vibration isolation and seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- B. Install electrical devices furnished with boiler but not specified to be factory mounted.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in [**Section 232113 "Hydronic Piping"**] [**and**] [**Section 232213 "Steam and Condensate Heating Piping."**]. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Connect hot-water piping to supply- and return-boiler tappings, with shutoff valve and union or flange at each connection.
- D. Connect steam and condensate piping to supply-, return-, and blowdown-boiler tappings, with shutoff valve and union or flange at each connection.
- E. Install piping from safety relief valves to nearest floor drain.
- F. Install piping from safety relief valves to drip-pan elbow and to nearest floor drain.
- G. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Check and adjust initial operating set points and high- and low-limit safety set points of water level and [**water temperature**] [**steam pressure**].
 - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Performance Tests:
 - 1. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.

2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment in order to comply.
3. Perform field performance tests to determine the capacity of boilers.
4. Repeat tests until results comply with requirements indicated.
5. Provide analysis equipment required to determine performance.
6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are inadequate.
7. Notify Architect in advance of test dates.
8. Document test results in a report and submit to Architect.

F. Boiler will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Occupancy Adjustments: When requested within [**twelve (12) months**] <Insert time period> of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain boilers. Refer to Section 017900 "Demonstration and Training."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235213

SECTION 235216 - CONDENSING BOILERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes gas-fired, [**pulse-combustion**] [**fire-tube**] [**water-tube**] [**water-jacketed**] condensing boilers, trim, and accessories for generating [**hot water**] [**and**] [**steam**].
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Provide data indicating general assembly, components, controls, safety controls, and wiring diagrams with electrical characteristics and connection requirements, and service connections.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for boilers.
 - 2. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For boilers, boiler trim, and accessories.
 - 1. Include plans, elevations, sections, and [**mounting**] [**attachment**] details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
 - 4. Include diagrams for power, signal, and control wiring.

- C. Delegated-Design Submittal: For each boiler.
 - 1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
 - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 - b. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

1.4 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For boiler, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Source quality-control reports.
- C. Manufacturer's Certificate: Certify that units meet or exceed specified requirements.
- D. Field quality-control reports. Indicate condition of equipment after start-up including control settings and performance chart of control system.
- E. Test Reports: Indicate specified performance and efficiency is met or exceeded. Provide factory combustion test data for substantially identical unit that includes boiler firing rate, overfire draft, gas flow rate, heat input, burner manifold gas pressure, percent carbon monoxide (CO), percent oxygen (O), percent excess air, flue gas temperature at outlet, ambient temperature, net stack temperature, percent stack loss, percent combustion efficiency, and heat output.
- F. Sample Warranty: For special warranty.
- G. Other Informational Submittals:
 - 1. ASME Stamp Certification and Report: Submit "A," "S," or "PP" stamp certificate of authorization, as required by authorities having jurisdiction, and document hydrostatic testing of piping external to boiler.
 - 2. CSA B51 pressure vessel Canadian Registration Number (CRN).

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boilers to include in emergency, operation, and maintenance manuals.
 - 1. Include manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- C. MAINTENANCE MATERIALS
- D. Provide wire brush and **[one-piece] [hinged]** handle for tube cleaning.

1.6 MAINTENANCE SERVICE

- A. Provide service and maintenance of boilers for **[one (1)] <Insert number>** year from Date of Substantial Completion.

1.7 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum of five (5) years documented experience.
- B. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.8 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver, store, protect and handle products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1
- B. Protect boilers from damage by leaving factory inspection openings and shipping packaging in place until final installation.

1.9 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Pulse-Combustion Boilers:
 - a. Heat Exchanger Damaged by Thermal Shock: Minimum **[ten (10)] <Insert number>** years from date of Substantial Completion.

- b. Heat-Exchanger Corrosion: [**Prorated**] [**Nonprorated**] for [**five (5)**] <Insert number> years from date of Substantial Completion.
 2. Warranty Period for Fire-Tube Condensing Boilers:
 - a. Leakage and Materials: Minimum [**ten (10)**] <Insert number> years from date of Substantial Completion.
 - b. Heat Exchanger Damaged by Thermal Stress and Corrosion: [**Prorated**] [**Nonprorated**] for [**five (5)**] <Insert number> years from date of Substantial Completion.
 3. Warranty Period for Water-Tube Condensing Boilers: Minimum [**twenty (20)**] <Insert number> years from date of Substantial Completion.
 4. Warranty Period for Water-Jacketed Condensing Boilers:
 - a. Leakage and Materials: Minimum[**eight (8)**] <Insert number> years from date of Substantial Completion.
 - b. Heat Exchanger Damaged by Thermal Stress and Corrosion: [**Prorated**] [**Nonprorated**] for [**five (5)**] <Insert number> years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label boilers to comply with 2010 ASME Boiler and Pressure Vessel Code.
- C. ASHRAE/IES 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- D. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N.
- E. UL Compliance: Test boilers for compliance with UL 795. Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.
- F. CSA Compliance: Test boilers for compliance with CSA B51.

- G. Mounting Base: For securing boiler to concrete base.
1. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler pressure vessel, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

2.2 PULSE-COMBUSTION, FIRE-TUBE CONDENSING BOILERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Fulton Boiler Works, Inc.](#)
 2. [Gasmaster Industries Incorporated.](#)
 3. [Hydrotherm, Inc./Mestek, Inc.](#)
 4. **<Insert manufacturer's name>.**
 5. or approved equal.
- B. Description: Factory-fabricated, -assembled, and -tested, pulse-combustion condensing boiler with heat exchanger sealed pressure tight, built on a steel base, including insulated jacket; flue-gas vent; combustion-air intake connections; water supply, return, and condensate drain connections; and controls.
- C. Heat Exchanger: **[Type 316L, stainless-steel]** **[Carbon-steel]** primary and secondary combustion chamber.
- D. Pressure Vessel: Carbon steel with welded heads and tube connections.
- E. Exhaust Decoupler: Fiberglass composite material in a corrosion-resistant steel box.
- F. Burner: **[Natural]** **[Propane]** gas, self-aspirating and self-venting after initial start.
- G. Blower: Centrifugal fan to operate only during start of each burner sequence.
1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- H. Gas Train: Combination gas valve with manual shutoff and pressure regulator.
- I. Ignition: Spark ignition with 100 percent main-valve shutoff with electronic flame supervision.
- J. Casing:

1. Jacket: Sheet metal, with snap-in or interlocking closures.
 2. Control Compartment Enclosure: NEMA 250, Type 1A.
 3. Finish: **[Baked-enamel]** **[Powder-coated]** protective finish.
 4. Insulation: Minimum **2-inch-** (50-mm-) thick, mineral-fiber insulation surrounding heat exchanger.
 5. Draft Hood: **[Integral]** **[External]**.
 6. Combustion-Air Connection: Inlet duct collar and sheet metal closure over burner compartment.
- K. Mufflers: Carbon-steel intake muffler and stainless-steel exhaust.
- L. Condensate Trap: Cast-iron body with stainless-steel internal parts.
- M. Capacities and Characteristics:
- N. Hot-Water Heating:
1. Design Water-Pressure Rating: **[15 psig (104 kPa)] [150 psig (1035 kPa)] <Insert pressure rating>**.
 2. Safety Relief Valve Setting: **<Insert psig (kPa)>**.
 3. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 4. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
 5. Design Water Flow Rate: **<Insert gpm (L/s)>**.
 6. Design Pressure Drop: **<Insert psig (kPa)>**.
- O. Steam Heating:
1. Design Steam-Pressure Rating: **[Steam, 60 psig (415 kPa)] [100 psig (690 kPa)] [160 psig (1100 kPa)] <Insert pressure rating>**.
 2. Safety Relief Valve Setting: **<Insert psig (kPa)>**.
 3. Steam Operating Pressure: **<Insert psig (kPa)>**.
 4. Steam Flow Rate: **<Insert lb/h (kg/s)>**.
 5. Minimum Efficiency AFUE: **<Insert number>** percent.
 6. Minimum Thermal Efficiency: **<Insert number>** percent.
 7. Minimum Combustion Efficiency: **<Insert number>** percent.
 8. AGA Input: **<Insert MBh (kW)>**.
 9. Gas Input: **<Insert cfh (mL/s)>**.
 10. AGA Output Capacity: **<Insert MBh (kW)>**.
 11. DOE Output Capacity: **<Insert MBh (kW)>**.
 12. Equivalent Direct Radiation: **<Insert EDR (W)>**.
 13. Blower:
 - a. Motor Horsepower: **<Insert number>** hp.
 - b. RPM: **<Insert number>**.
 14. Electrical Characteristics:
 - a. Volts: **[115] [208] [230] [460] <Insert number>** V.
 - b. Phase: **[Single] [Three]**.
 - c. Hertz: **[50] [60] <Insert number>** Hz.

- d. Full-Load Amperes: <Insert value> A.
- e. Minimum Circuit Ampacity: <Insert number> A.
- f. Maximum Overcurrent Protection: <Insert number> A.

2.3 FORCED-DRAFT, FIRE-TUBE CONDENSING BOILERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [AERCO International, Inc.](#)
 2. [Bosch Thermotechnology Corp.](#)
 3. [Heat Transfer Products, Inc.](#)
 4. [Triangle Tube.](#)
 5. <Insert manufacturer's name>.
 6. or approved equal.
- B. Description: Factory-fabricated, -assembled, and -tested, fire-tube condensing boiler with heat exchanger sealed pressure tight, built on a steel base, including insulated jacket; flue-gas vent; combustion-air intake connections; water supply, return, and condensate drain connections; and controls. Water-heating service only.
- C. Heat Exchanger: Nonferrous, corrosion-resistant combustion chamber.
- D. Pressure Vessel: Carbon steel with welded heads and tube connections.
- E. Burner: **[Natural]** **[Propane]** gas, forced draft.
- F. Blower: Centrifugal fan to operate during each burner firing sequence and to prepurge and postpurge the combustion chamber.
1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- G. Gas Train: Combination gas valve with manual shutoff and pressure regulator.
- H. Ignition: Spark ignition with 100 percent main-valve shutoff with electronic flame supervision.
- I. Casing:
1. Jacket: **[Sheet metal]** **[Plastic]**, with snap-in or interlocking closures.
 2. Control Compartment Enclosures: NEMA 250, Type 1A.
 3. Finish: **[Baked-enamel]** **[Powder-coated]** protective finish.
 4. Insulation: Minimum **2-inch-** (50-mm-) thick, **[mineral-fiber]** **[polyurethane-foam]** insulation surrounding the heat exchanger.

5. Combustion-Air Connections: Inlet and vent duct collars.

J. Capacities and Characteristics:

1. Heating Medium: Hot water.
2. Design Water-Pressure Rating: [160 psig (1100 kPa)] <Insert value>.
3. Safety Relief Valve Setting: <Insert psig (kPa)>.
4. Entering-Water Temperature: <Insert deg F (deg C)>.
5. Leaving-Water Temperature: <Insert deg F (deg C)>.
6. Design Water Flow Rate: <Insert gpm (L/s)>.
7. Minimum Water Flow Rate: <Insert gpm (L/s)>.
8. Design Pressure Drop: <Insert psig (kPa)>.
9. Minimum Efficiency AFUE: <Insert number> percent.
10. Minimum Thermal Efficiency: <Insert number> percent.
11. Minimum Combustion Efficiency: <Insert number> percent.
12. AGA Input: <Insert MBh (kW)>.
13. Gas Input: <Insert cfh (mL/s)>.
14. AGA Output Capacity: <Insert MBh (kW)>.
15. DOE Output Capacity: <Insert MBh (kW)>.
16. Equivalent Direct Radiation: <Insert EDR (W)>.
17. Blower:

- a. Motor Horsepower: <Insert number> hp.
- b. RPM: <Insert number>.

18. Electrical Characteristics:

- a. Volts: [115] [208] [230] [460] <Insert number> V.
- b. Phase: [Single] [Three].
- c. Hertz: [50] [60] <Insert number> Hz.
- d. Full-Load Amperes: <Insert number> A.
- e. Minimum Circuit Ampacity: <Insert number> A.
- f. Maximum Overcurrent Protection: <Insert number> A.

2.4 WATER-TUBE CONDENSING BOILERS

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [LAARS Heating Systems Company](#).
2. [Lochinvar, LLC](#).
3. [Triangle Tube](#).
4. <Insert manufacturer's name>.
5. or approved equal.

B. Description: Factory-fabricated, -assembled, and -tested, copper-finned, water-tube condensing boiler with heat exchanger sealed pressure tight, built on a steel base, including insulated jacket; flue-gas vent; combustion-air intake connections; water

- supply, return, and condensate drain connections; and controls. Water-heating service only.
- C. Heat Exchanger: Finned-copper primary and stainless-steel secondary heat exchangers.
- D. Combustion Chamber: Stainless steel, sealed.
- E. Burner: **[Natural]** **[Propane]** gas, forced draft drawing from gas premixing valve.
- F. Blower: Centrifugal fan to operate during each burner firing sequence and to prepurge and postpurge the combustion chamber.
1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- G. Gas Train: Combination gas valve with manual shutoff and pressure regulator.
- H. Ignition: Silicone carbide hot-surface ignition that includes flame safety supervision and 100 percent main-valve shutoff.
- I. Integral Circulator: Cast-iron body and stainless-steel impeller sized for minimum flow required in heat exchanger.
- J. Casing:
 1. Jacket: Sheet metal, with snap-in or interlocking closures.
 2. Control Compartment Enclosures: NEMA 250, Type 1A.
 3. Finish: Textured epoxy.
 4. Insulation: Minimum **[1-inch- (25-mm-)]** **[2-inch- (50-mm-)]** thick, mineral-fiber insulation surrounding the heat exchanger.
 5. Combustion-Air Connections: Inlet and vent duct collars.
- K. Capacities and Characteristics:
 1. Heating Medium: Hot water.
 2. Design Water-Pressure Rating: **[160 psig (1100 kPa)]** **<Insert value>**.
 3. Safety Relief Valve Setting: **<Insert psig (kPa)>**.
 4. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 5. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
 6. Design Water Flow Rate: **<Insert gpm (L/s)>**.
 7. Minimum Water Flow Rate: **<Insert gpm (L/s)>**.
 8. Design Pressure Drop: **<Insert psig (kPa)>**.
 9. Minimum Efficiency AFUE: **<Insert number>** percent.
 10. Minimum Thermal Efficiency: **<Insert number>** percent.

11. Minimum Combustion Efficiency: <Insert number> percent.
12. AGA Input: <Insert MBh (kW)>.
13. Gas Input: <Insert cfh (mL/s)>.
14. AGA Output Capacity: <Insert MBh (kW)>.
15. DOE Output Capacity: <Insert MBh (kW)>.
16. Blower:
 - a. Motor Horsepower: <Insert number> hp.
 - b. RPM: <Insert number>.
17. Electrical Characteristics:
 - a. Volts: [115] [208] [230] [460] <Insert number> V.
 - b. Phase: [Single] [Three].
 - c. Hertz: [50] [60] <Insert number> Hz.
 - d. Full-Load Amperes: <Insert number> A.
 - e. Minimum Circuit Ampacity: <Insert number> A.
 - f. Maximum Overcurrent Protection: <Insert number> A.

2.5 WATER-JACKETED CONDENSING BOILERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Viessmann Manufacturing Co. \(US\) Inc.](#)
 2. <Insert manufacturer's name>.
 3. or approved equal.
- B. Description: Factory-fabricated, -assembled, and -tested, water-jacketed condensing boiler with heat exchanger sealed pressure tight, built on a steel base, including insulated jacket; flue-gas vent; water supply, return, and condensate drain connections; and controls. Water-heating service only.
- C. Heat Exchanger: Stainless-steel primary and secondary combustion chamber.
- D. Pressure Vessel: Carbon steel with welded heads and tube connections where not in contact with combustion or flue gases.
- E. Burner: [Natural] [Propane] gas, forced draft; swing-open front and burner observation port.
- F. Blower: Centrifugal fan, forced draft. Include prepurge and postpurge of the combustion chamber.
 1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

- a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- G. Gas Train: Combination gas valve with manual shutoff and pressure regulator. Include 100 percent safety shutoff with electronic flame supervision.
- H. Ignition: Electric-spark ignition with 100 percent main-valve shutoff with electronic flame supervision.
- I. Casing:
1. Jacket: Sheet metal, with snap-in or interlocking closures.
 2. Control Compartment Enclosures: NEMA 250, Type 1A.
 3. Finish: Powder-coated protective finish.
 4. Insulation: Minimum 4-inch- (100-mm-) thick, mineral-fiber insulation surrounding the heat exchanger.
 5. Combustion-Air Connections: Inlet and vent duct collars.
- J. Capacities and Characteristics:
1. Heating Medium: Hot water.
 2. Design Water-Pressure Rating: [30 psig (207 kPa)] **<Insert value>**.
 3. Safety Relief Valve Setting: **<Insert psig (kPa)>**.
 4. Maximum Design Temperature: 210 deg F (99 deg C).
 5. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 6. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
 7. Design Water Flow Rate: **<Insert gpm (L/s)>**.
 8. Design Pressure Drop: **<Insert psig (kPa)>**.
 9. Minimum Efficiency AFUE: **<Insert number>** percent.
 10. Minimum Thermal Efficiency: **<Insert number>** percent.
 11. Minimum Combustion Efficiency: **<Insert number>** percent.
 12. AGA Input: **<Insert MBh (kW)>**.
 13. Gas Input: **<Insert cfh (mL/s)>**.
 14. AGA Output Capacity: **<Insert MBh (kW)>**.
 15. DOE Output Capacity: **<Insert MBh (kW)>**.
 16. Equivalent Direct Radiation: **<Insert EDR (W)>**.
 17. Blower:
 - a. Motor Horsepower: **<Insert number>** hp.
 - b. RPM: **<Insert number>**.
 18. Electrical Characteristics:
 - a. Volts: [115] [208] [230] [460] **<Insert number>** V.
 - b. Phase: [Single] [Three].
 - c. Hertz: [50] [60] **<Insert number>** Hz.
 - d. Full-Load Amperes: **<Insert number>** A.
 - e. Minimum Circuit Ampacity: **<Insert number>** A.
 - f. Maximum Overcurrent Protection: **<Insert number>** A.

2.6 TRIM

- A. Include devices sized to comply with [ASME B31.1] [ASME B31.9].
- B. Aquastat Controllers: Operating[, **firing rate**,] and high limit.
- C. Safety Relief Valve: ASME rated.
- D. Pressure and Temperature Gage: Minimum 3-1/2-inch- (89-mm-) diameter, combination water-pressure and -temperature gage. Gages shall have operating-pressure and -temperature ranges, so normal operating range is about 50 percent of full range.
- E. Boiler Air Vent: [Automatic] [Manual].
- F. Drain Valve: Minimum NPS 3/4 (DN 20) hose-end gate valve.
- G. Circulation Pump: Nonoverloading, in-line pump with split-capacitor motor having thermal-overload protection and lubricated bearings; designed to operate at specified boiler pressures and temperatures.

2.7 TRIM

- A. Include devices sized to comply with [ASME B31.1] [ASME B31.9].
- B. Pressure Controllers: Operating[, **firing rate**,] and high limit.
- C. Safety Relief Valve:
 - 1. Size and Capacity: As required for equipment according to 2010 ASME Boiler and Pressure Vessel Code.
 - 2. Description: Fully enclosed steel spring with adjustable pressure range and positive shutoff; factory set and sealed.
 - a. Drip-Pan Elbow: Cast iron and having threaded inlet and outlet with threads complying with ASME B1.20.1.
- D. Pressure Gage: Minimum 3-1/2-inch (89-mm) diameter. Gage shall have normal operating pressure about 50 percent of full range.
- E. Water Column: Minimum 12-inch (300-mm) glass gage with shutoff cocks.
- F. Drain Valves: Minimum NPS 3/4 (DN 20) or nozzle size with hose-end connection.
- G. Blowdown Valves: Factory-installed bottom and surface, slow-acting blowdown valves same size as boiler nozzle. [**Blowdown valves shall be combination of slow and quick acting as required by ASME B31.1.**]
- H. Stop Valves: Boiler inlets and outlets, except safety relief valves or preheater inlet and outlet, shall be equipped with stop valve in an accessible location as near as practical

to boiler nozzle and same size or larger than nozzle. Valves larger than **NPS 2 (DN 50)** shall have rising stem.

- I. Stop-Check Valves: Factory-installed, stop-check valve and stop valve at boiler outlet with free-blow drain valve factory installed between the two valves and visible when operating stop-check valve.

2.8 CONTROLS

- A. Refer to Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

- B. Boiler operating controls shall include the following devices and features:

1. Control transformer.
2. Set-Point Adjust: Set points shall be adjustable.
3. Operating Pressure Control: Factory wired and mounted to cycle burner.
4. Low-Water Cutoff and Pump Control: Cycle feedwater pump(s) for makeup water control.
5. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain space temperature in response to thermostat with heat anticipator located in heated space.
 - a. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
6. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to reset supply-water temperature inversely with outside-air temperature. At [0 deg F (minus 17 deg C)] **<Insert temperature>** outside-air temperature, set supply-water temperature at [200 deg F (93 deg C)] **<Insert temperature>**; at [60 deg F (15 deg C)] **<Insert temperature>** outside-air temperature, set supply-water temperature at [140 deg F (60 deg C)] **<Insert temperature>**.
 - a. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
7. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain a constant steam pressure. Maintain pressure set point plus or minus 10 percent.
 - a. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.

- C. Burner Operating Controls: To maintain safe operating conditions, burner safety controls limit burner operation.

1. High Cutoff: **[Manual] [Automatic]** reset stops burner if operating conditions rise above maximum boiler design **[temperature] [pressure]**.
 2. Low-Water Cutoff Switch: **[Electronic] [Float and electronic]** probe shall prevent burner operation on low water. Cutoff switch shall be **[manual] [automatic]**-reset type.
 3. Blocked Inlet Safety Switch: Manual-reset pressure switch field mounted on boiler combustion-air inlet.
 4. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.
- D. Building Automation System Interface: Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.
1. Hardwired Points:
 - a. Monitoring: On/off status, **[common trouble alarm] [low-water-level alarm] <Insert monitoring>**.
 - b. Control: On/off operation, **[hot-water-supply temperature set-point adjustment] [steam pressure adjustment] <Insert control>**.
 2. A communication interface with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed, locally at boiler control panel shall be available through building automation system.

2.9 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.
- B. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.
1. House in NEMA 250, Type **[1] <Insert type>** enclosure.
 2. Wiring shall be numbered and color coded to match wiring diagram.
 3. Install factory wiring outside of an enclosure in a **[metal]** raceway.
 4. Field power interface shall be to **[wire lugs] [fused disconnect switch] [nonfused disconnect switch] [circuit breaker]**.
 5. Provide branch power circuit to each motor and to controls **[with a disconnect switch or circuit breaker]**.
 6. Provide each motor with overcurrent protection.

2.10 VENTING KITS

- A. Kit: Complete system, ASTM A 959, Type 29-4C stainless steel, pipe, vent terminal, thimble, indoor plate, vent adapter, condensate trap and dilution tank, and sealant.

- B. Combustion-Air Intake: Complete system, stainless steel, pipe, vent terminal with screen, inlet air coupling, and sealant.

2.11 SOURCE QUALITY CONTROL

- A. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.
- B. Test and inspect factory-assembled boilers, before shipping, according to 2010 ASME Boiler and Pressure Vessel Code.
- C. Allow Owner access to source quality-control testing of boilers. Notify DEN Project Manager 14 days in advance of testing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting performance of the Work.
 - 1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BOILER INSTALLATION

- A. Equipment Mounting:
 - 1. Install boilers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 2. Comply with requirements for vibration isolation and seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- B. Install gas-fired boilers according to NFPA 54.
- C. Install in accordance with manufacturer's instructions.

- D. Assemble and install boiler trim.
- E. Install electrical devices furnished with boiler but not specified to be factory mounted.
- F. Install control wiring to field-mounted electrical devices.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.
- D. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service. Flexible connectors and their installation are specified in Section 232116 "Hydronic Piping Specialties."
- E. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas-train connection. Provide a reducer if required.
- F. Connect hot-water piping to supply- and return-boiler tappings with shutoff valve and union or flange at each connection.
- G. Connect steam and condensate piping to supply-, return-, and blowdown-boiler tappings with shutoff valve and union or flange at each connection.
- H. Install piping from safety relief valves to nearest floor drain.
- I. Install piping from safety valves to drip-pan elbow and to nearest floor drain.
- J. Boiler Venting:
 - 1. Install flue venting kit and combustion-air intake.
 - 2. Connect full size to boiler connections.[**Comply with requirements in Section 235123 "Gas Vents."**]
- K. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- L. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Perform installation and startup checks according to manufacturer's written instructions.
 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level, and [**water temperature**] [**steam pressure**].
 - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- D. Boiler will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.
- F. Occupancy Adjustments: When requested within [**12 months of date of Substantial Completion**] <Insert time period>, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.
- G. Performance Tests:
1. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.
 2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment to comply.
 3. Perform field performance tests to determine capacity and efficiency of boilers.
 - a. Test for full capacity.
 - b. Test for boiler efficiency at [**low fire 20, 40, 60, 80, 100, 80, 60, 40, and 20**] <Insert range> percent of full capacity. Determine efficiency at each test point.
 4. Repeat tests until results comply with requirements indicated.
 5. Provide analysis equipment required to determine performance.
 6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are inadequate.
 7. Notify DEN Project Manager [**24**] <Insert number> hours minimum in advance of test dates.
 8. Document test results in a report and submit to DEN Project Manager.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain boilers. Refer to Section 017900 "Demonstration and Training."
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235216

SECTION 235223 - CAST-IRON BOILERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes cast-iron boilers, trim, and accessories for generating **[hot water]** **[and]** **[steam]**.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Provide data indicating general assembly, components, controls, safety controls, and wiring diagrams with electrical characteristics and connection requirements, and service connections.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for boilers.
 - 2. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For boilers, boiler trim, and accessories.
 - 1. Include plans, elevations, sections, and **[mounting]** **[attachment]** details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
 - 4. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.
- C. Delegated-Design Submittal: For each boiler.

1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
 - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 - b. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

1.4 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For boiler, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Source quality-control reports.
- C. Manufacturer's Certificate: Certify that units meet or exceed specified requirements.
- D. Field quality-control reports. Indicate condition of equipment after start-up including control settings and performance chart of control system.
- E. Test Reports: Indicate specified performance and efficiency is met or exceeded. Provide factory combustion test data for substantially identical unit that includes boiler firing rate, overfire draft, gas flow rate, heat input, burner manifold gas pressure, percent carbon monoxide (CO), percent oxygen (O), percent excess air, flue gas temperature at outlet, ambient temperature, net stack temperature, percent stack loss, percent combustion efficiency, and heat output.
- F. Sample Warranty: For special warranty.
- G. Other Informational Submittals:
 1. CSA B51 pressure vessel Canadian Registration Number (CRN).
 2. Startup service reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boilers, components, and accessories to include in emergency, operation, and maintenance manuals.
 1. Include manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE SERVICE

- A. Provide service and maintenance of boilers for [**one (1)**] <Insert number> year from Date of Substantial Completion.

1.7 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum of five (5) years documented experience.
- B. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.

1.8 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver, store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Protect units before, during, and after installation from damage to casing by leaving factory shipping packaging in place until immediately prior to final acceptance.

1.9 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace controls and heat exchangers of boilers that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Controls: Minimum [**two (2)**] <Insert number> years from date of Substantial Completion.
 - 2. Warranty Period for Heat Exchangers: Minimum [**five (5)**] [**ten (10)**] [**twenty (20)**] <Insert number> years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label boilers to comply with 2010 ASME Boiler and Pressure Vessel Code.
- C. ASHRAE/IES 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- D. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N.
- E. I=B=R Compliance: Boilers shall be tested and rated according to AHRI's "Rating Procedure for Heating Boilers" and "Testing Standard for Commercial Boilers," with I=B=R emblem on a nameplate affixed to boiler.
- F. UL Compliance: Test boilers for compliance with [UL 726] [UL 726 and UL 795] [UL 795]. Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.
- G. CSA Compliance: Test boilers for compliance with CSA B51.
- H. Mounting Frame: Steel rails used to mount assembled boiler package on concrete base.
 - 1. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

2.2 MANUFACTURERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [Burnham Hydronics.](#)
 - 2. [Crown Boiler Co.](#)
 - 3. [Hydrotherm, Inc./ Mestek Inc.](#)
 - 4. [Lennox Industries, Inc.; Lennox International.](#)
 - 5. [Peerless Boilers; PB Heat, LLC.](#)
 - 6. [Slant/Fin Corp.](#)
 - 7. [Smith Cast Iron Boilers: a Mestek company.](#)
 - 8. [Viessmann Manufacturing Co. \(US\) Inc.](#)
 - 9. [Weil-McLain.](#)

10. **<Insert manufacturer's name>**.
11. or approved equal.

2.3 MANUFACTURED UNITS

- A. Description: Factory fabricated and **[field]** assembled.
1. Cast-iron sections shall be sealed pressure tight and held together with tie rods **[set on an insulated steel base]**, including insulated jacket and flue-gas vent connection.
 2. Ship cast-iron sections disassembled with all materials and equipment, including seals, tie rods, and insulated jacket and flue-gas vent connection for field assembly.
- B. Cast-Iron Section Design:
1. Configuration: Wet **[base]** **[back]** **[leg]**.
 2. Number of Passes: **[Single]** **[Multiple]**.
 3. Sectional Joints: High-temperature sealant to seal flue-gas passages not in contact with heating medium, **[tapered cast-iron push nipples,]** **[O-ring gaskets,]** **[fiber roping,]** and held together with tie rods.
 4. Drain and blowdown tappings.
 5. Return injection tube to equalize water flow to all sections.
 6. Crown inspection tappings with brass plugs.
 7. Built-in air separator.
- C. Combustion Chamber: Equipped with **[ceramic-fiber target wall]** **[refractory]** **[insulation]** **[and]** flame observation ports, front and back.
- D. Casing:
1. Jacket: **[Galvanized sheet]** **[Sheet]** metal, with snap-in or interlocking closures and **[baked-enamel]** **[powder-coated]** protective finish.
 2. Insulation: Minimum **[1-inch- (25-mm-)]** **[2-inch- (50-mm-)]** thick, mineral-fiber insulation surrounding the heat exchanger.
 3. Combustion Chamber Access: Refractory lined, hinged, front.
 4. Access: For cleaning between cast-iron sections.
 5. Draft Hood: Flue canopy and **[top]** **[rear]** flue connection shall be constructed of **[aluminized]** **[stainless]** steel containing adjustable outlet damper assembly.
 6. Insulated base constructed of aluminized steel to permit boiler to be installed on combustible floor.
 7. Control Cabinet: Sheet metal casing shall cover all controls, gas train, and burner.
- E. Draft Diverter: **[Steel assembly integral with boiler casing]** **[Separate galvanized-steel assembly]**.

2.4 ATMOSPHERIC-GAS BURNER

- A. Burner Tubes and Orifices: **[Stainless steel]** **[Cast iron]**, for **[natural]** **[propane]** gas.
- B. Gas Train: Control devices and **[full-modulation]** **[on-off]** **[low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1]** **[FM Global]** **[IRI]** **[UL]**.
- C. Gas Train: Combination-gas valve with manual shutoff, pressure regulator, and pilot adjustment.
- D. Pilot: **[Standing]** **[Intermittent-electric-spark]** pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.

2.5 SEALED-COMBUSTION BURNER

- A. Burner Tubes and Orifices: **[Stainless steel]** **[Cast iron]**, for **[natural]** **[propane]** gas.
- B. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor, with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
 - 1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- C. Gas Train: Combination gas valve with manual shutoff, pressure regulator, and pilot adjustment.
- D. Pilot: **[Standing]** **[Intermittent-electric-spark]** pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.

2.6 FORCED-DRAFT BURNER

- A. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser for **[natural]** **[propane]** gas.
- B. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor, with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
 - 1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

- C. Gas Train: Control devices and **[modulating]** **[on-off]** **[low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1]** **[FM Global]** **[IRI]** **[UL]**.
- D. Pilot: **[Intermittent]** **[Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.
- E. Flue-Gas Recirculation: Burner connections shall be equipped for recirculating flue gas.
 - 1. Maximum Oxides of Nitrogen Emissions: **[20]** **[30]** **<Insert number>** ppm.

2.7 OIL BURNER

- A. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser for fuel oil.
- B. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor, with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
 - 1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- C. Oil Supply: Control devices and **[modulating]** **[on-off]** **[low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1]** **[FM Global]** **[IRI]** **[UL]**.
 - 1. Oil Pump: Two-stage, gear-type oil pump[**integral to and directly driven by blower**] shall be capable of producing **300-psig (2070-kPa)** discharge pressure and **15-inch Hg (50.7-kPa)** vacuum.
 - 2. Oil Piping Specialties:
 - a. Suction-line, manual gate valve.
 - b. Removable-mesh oil strainer.
 - c. **0- to 30-inch Hg (0- to 101.3-kPa)** vacuum; **0- to 30-psig (0- to 207-kPa)** vacuum-pressure gage.
 - d. **0- to 300-psig (0- to 2070-kPa)** oil-nozzle pressure gage.
 - e. Nozzle-line, solenoid-safety-shutoff oil valve.
- D. Pilot: **[Intermittent]** **[Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff solenoid using **[cadmium sulfide]** **[UV scanner]** flame-safety control.
- E. Flue-Gas Recirculation: Burner connections shall be equipped for recirculating flue gas.
 - 1. Maximum Oxides of Nitrogen Emissions: **[20]** **[30]** **<Insert number>** ppm.

2.8 COMBINATION GAS AND OIL BURNER

- A. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser for fuel oil and **[natural] [propane]** gas.
- B. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor, with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- C. Oil Supply: Control devices and **[modulating] [on-off] [low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1] [FM Global] [IRI] [UL]**.
1. Oil Pump: Two-stage, gear-type oil pump **[integral to and directly driven by blower]** shall be capable of producing **300-psig (2070-kPa)** discharge pressure and **15-inch Hg (50.7-kPa)** vacuum.
2. Oil Piping Specialties:
- a. Suction-line, manual, gate valve.
- b. Removable-mesh oil strainer.
- c. **0- to 30-inch Hg (0- to 101.3-kPa)** vacuum; **0- to 30-psig (0- to 207-kPa)** vacuum-pressure gage.
- d. **0- to 300-psig (0- to 2070-kPa)** oil-nozzle pressure gage.
- e. Nozzle-line, solenoid-safety-shutoff oil valve.
- D. Gas Train: Control devices and **[modulating] [on-off] [low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1] [FM Global] [IRI] [UL]**.
- E. Gas Pilot: **[Intermittent] [Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.
- F. Oil Pilot: **[Intermittent] [Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff solenoid with **[cadmium sulfide] [UV scanner]** flame-safety control.
- G. Flue-Gas Recirculation: Burner connections shall be equipped for recirculating flue gas.
1. Maximum Oxides of Nitrogen Emissions: **[20] [30] <Insert number>** ppm.

2.9 TRIM FOR HOT-WATER BOILERS

- A. Include devices sized to comply with ASME B31.9.

- B. Aquastat Controllers: Operating[, **firing rate,**] and high limit.
- C. Safety Relief Valve: ASME rated.
- D. Pressure and Temperature Gage: Minimum **3-1/2-inch- (89-mm-)** diameter, combination water-pressure and -temperature gage. Gages shall have operating-pressure and -temperature ranges, so normal operating range is about 50 percent of full range.
- E. Boiler Air Vent: [**Automatic**] [**Manual**].
- F. Drain Valve: Minimum **NPS 3/4 (DN 20)** hose-end gate valve.
- G. Tankless Heater: Carbon-steel header with copper-tube heat exchanger, mounted in an upper port of cast-iron sections and sealed with fiber gasket.
 - 1. Tappings **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.
 - 2. Tappings **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

2.10 TRIM FOR STEAM BOILERS

- A. Include devices sized to comply with ASME B31.9.
- B. Pressure Controllers: Operating[, **firing rate,**] and high limit.
- C. Safety Relief Valve:
 - 1. Size and Capacity: As required for equipment according to 2010 ASME Boiler and Pressure Vessel Code.
 - 2. Description: Fully enclosed steel spring with adjustable pressure range and positive shutoff; factory set and sealed.
 - a. Drip-Pan Elbow: Cast iron and having threaded inlet and outlet with threads complying with ASME B1.20.1.
- D. Pressure Gage: Minimum **3-1/2-inch (89-mm)** diameter. Gage shall have normal operating pressure about 50 percent of full range.
- E. Water Column: Minimum **12-inch (300-mm)** glass gage with shutoff cocks.
- F. Drain Valves: Minimum **NPS 3/4 (DN 20)** or nozzle size with hose-end connection.
- G. Blowdown Valves: Factory-installed bottom and surface, slow-acting blowdown valves same size as boiler nozzle.
- H. Stop Valves: Boiler inlets and outlets, except safety relief valves or preheater inlet and outlet, shall be equipped with stop valve in an accessible location as near as practical

to boiler nozzle and same size as or larger than nozzle. Valves larger than NPS 2 (DN 50) shall have rising stem.

- I. Stop-Check Valves: Factory-installed, stop-check valve and stop valve at boiler outlet with free-blow drain valve factory installed between the two valves and visible when operating stop-check valve.
- J. Tankless Heater: Carbon-steel header with copper-tube heat exchanger, mounted in an upper port of cast-iron sections and sealed with fiber gasket.
 - 1. Tappings NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.
 - 2. Tappings NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

2.11 CONTROLS

- A. Refer to Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- B. Boiler operating controls shall include the following devices and features:
 - 1. Control transformer.
 - 2. Set-Point Adjust: Set points shall be adjustable.
 - 3. Operating Pressure Control: Factory wired and mounted to cycle burner.
 - 4. Low-Water Cutoff and Pump Control: Cycle feedwater pump(s) for makeup water control.
 - 5. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain space temperature in response to thermostat with heat anticipator located in heated space.
 - a. Include automatic, alternating-firing sequence for multiple boilers to provide equal runtime for boilers.
 - 6. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to reset supply-water temperature inversely with outside-air temperature. At [0 deg F (minus 17 deg C)] <Insert temperature> outside-air temperature, set supply-water temperature at [200 deg F (93 deg C)] <Insert temperature>; at [60 deg F (15 deg C)] <Insert temperature> outside-air temperature, set supply-water temperature at [140 deg F (60 deg C)] <Insert temperature>.
 - a. Include automatic, alternating-firing sequence for multiple boilers to provide equal runtime for boilers.
 - 7. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain a constant steam pressure. Maintain pressure set point plus or minus 10 percent.

- a. Include automatic, alternating-firing sequence for multiple boilers to provide equal runtime for boilers.
- C. Safety Controls: To maintain safe operating conditions, burner safety controls limit burner operation.
1. High Cutoff: **[Manual] [Automatic]** reset stops burner if operating conditions rise above maximum boiler design **[temperature] [pressure]**.
 2. Low-Water Cutoff Switch: **[Electronic] [Float and electronic]** probe shall prevent burner operation on low water. Cutoff switch shall be **[manual] [automatic]**-reset type.
 3. Blocked Vent Safety Switch: Manual-reset switch factory mounted on draft diverter.
 4. Rollout Safety Switch: Factory mounted on boiler combustion chamber.
 5. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.
- D. Building Management System Interface: Factory install hardware and software to enable building management system to monitor, control, and display boiler status and alarms.
1. Hardwired Points:
 - a. Monitoring: On/off status, **[common trouble alarm] [low-water-level alarm] <Insert monitoring>**.
 - b. Control: On/off operation, **[hot-water-supply temperature set-point adjustment] [steam pressure adjustment] <Insert control>**.
 2. A communication interface with building management system shall enable building management system operator to remotely control and monitor the boiler from an operator workstation. Control features available and monitoring points displayed, locally at boiler control panel shall be available through building management system.

2.12 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.
- B. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.
1. House in NEMA 250, Type **[1] <Insert type>** enclosure.
 2. Wiring shall be numbered and color coded to match wiring diagram.
 3. Install factory wiring outside of an enclosure in a **[metal]** raceway.
 4. Field power interface shall be to **[wire lugs] [fused disconnect switch] [nonfused disconnect switch] [circuit breaker]**.

5. Provide branch power circuit to each motor and to controls[**with disconnect switch or circuit breaker**].
6. Provide each motor with overcurrent protection.

2.13 CAPACITIES AND CHARACTERISTICS

A. Hot-Water Heating:

1. Design Water-Pressure Rating: [30 psig (207 kPa)] [50 psig (345 kPa)] [80 psig (550 kPa)] **<Insert pressure rating>**.
2. Safety Relief Valve Setting: **<Insert psig (kPa)>**.
3. Entering-Water Temperature: **<Insert deg F (deg C)>**.
4. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
5. Design Water Flow Rate: **<Insert gpm (L/s)>**.
6. Design Pressure Drop: **<Insert psig (kPa)>**.

B. Steam Heating:

1. Design Steam-Pressure Rating: [**Steam, 15 psig** (104 kPa)] **<Insert pressure rating>**.
2. Safety Relief Valve Setting: **<Insert psig (kPa)>**.
3. Steam Operating Pressure: **<Insert psig (kPa)>**.
4. Steam Flow Rate: **<Insert lb/h (kg/s)>**.

C. Minimum Efficiency AFUE: **<Insert number>** percent.

D. Minimum Thermal Efficiency: **<Insert number>** percent.

E. Minimum Combustion Efficiency: **<Insert number>** percent.

F. Number of Passes: [**One**] [**Two**] **<Insert number>**.

G. Input Rating Method:

1. AGA Input: **<Insert MBh (kW)>**.
2. I=B=R Input: **<Insert MBh (kW)>**.
3. Gas Input: **<Insert cfh (mL/s)>**.
4. Oil Input: **<Insert gph (mL/s)>**.

H. Output Capacity

1. AGA Output Capacity: **<Insert MBh (kW)>**.
2. DOE Output Capacity: **<Insert MBh (kW)>**.
3. Net I=B=R Output Capacity: **<Insert MBh (kW)>**.
4. Gross I=B=R Output Capacity: **<Insert MBh (kW)>**.
5. Equivalent Direct Radiation: **<Insert EDR (W)>**.

I. Tankless Water Heater:

1. Design Water Flow: **<Insert gpm (L/s)>**.

2. Design Pressure Drop: <Insert psig (kPa)>.
3. Entering-Water Temperature: <Insert deg F (deg C)>.
4. Leaving-Water Temperature: <Insert deg F (deg C)>.

J. Blower:

1. Motor Horsepower: <Insert number> hp.
2. RPM: <Insert number>.

K. Electrical Characteristics:

1. Volts: [115] [208] [230] [460] <Insert number> V.
2. Phase: [Single] [Three].
3. Hertz: [50] [60] <Insert number> Hz.
4. Full-Load Amperes: <Insert number> A.
5. Minimum Circuit Ampacity: <Insert number> A.
6. Maximum Overcurrent Protection: <Insert number> A.

2.14 SOURCE QUALITY CONTROL

- A. Test and inspect factory-assembled boilers, before shipping, according to [2010 ASME Boiler and Pressure Vessel Code] [CSA B51].
- B. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.
- C. Allow Owner access to source quality-control testing of boilers. Notify DEN Projexct Manager 14 days in advance of testing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting performance of the Work.
 1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BOILER INSTALLATION

A. Equipment Mounting:

1. Install boilers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
2. Comply with requirements for vibration isolation and seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Install gas-fired boilers according to NFPA 54.

C. Install oil-fired boilers according to NFPA 31.

D. Install in accordance with manufacturer's instructions.

E. Install circulator and diaphragm expansion tank on piping to the boiler.

F. Assemble boiler sections in sequence and seal between each section.

G. Assemble and install boiler trim.

H. Install electrical devices furnished with boiler but not specified to be factory mounted.

I. Install control wiring to field-mounted electrical devices.

3.3 CONNECTIONS

A. Piping installation requirements are specified in [**Section 232113 "Hydronic Piping"**] [**and**] [**Section 232213 "Steam and Condensate Heating Piping."**]. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to boiler to allow service and maintenance.

C. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas-train connection. Provide a reducer if required.

D. Connect oil piping full size to burner inlet with shutoff valve and union.

E. Connect hot-water piping to supply- and return-boiler tapplings with shutoff valve and union or flange at each connection.

F. Connect steam and condensate piping to supply-, return-, and blowdown-boiler tapplings with shutoff valve and union or flange at each connection.

G. Install piping from safety relief valves to nearest floor drain.

- H. Install piping from safety valves to drip-pan elbow and to nearest floor drain.
- I. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.
- J. Connect breeching full size to boiler outlet. Comply with requirements in Section 235116 "Fabricated Breechings and Accessories" for venting materials.
- K. Install flue-gas recirculation duct from vent to burner. Comply with requirements in Section 235123 "Gas Vents" for recirculation duct materials.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections **[with the assistance of a factory-authorized service representative]**:
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Burner Test: Adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency.
 - b. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level, and **[water temperature] [steam pressure]**.
 - c. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Performance Tests:
 - 1. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.
 - 2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment to comply.
 - 3. Perform field performance tests to determine capacity and efficiency of boilers.

- a. For dual-fuel boilers, perform tests for each fuel.
 - b. Test for full capacity.
 - c. Test for boiler efficiency at [**low fire 20, 40, 60, 80, 100, 80, 60, 40, and 20**] **<Insert range>** percent of full capacity. Determine efficiency at each test point.
4. Repeat tests until results comply with requirements indicated.
 5. Provide analysis equipment required to determine performance.
 6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are inadequate.
 7. Notify DEN Project Manager in advance of test dates.
 8. Document test results in a report and submit to DEN Project Manager.
- F. Boiler will be considered defective if it does not pass tests and inspections.
- G. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Occupancy Adjustments: When requested within [**12 months**] **<Insert time period>** of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] **<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain boilers. Refer to Section 017900 "Demonstration and Training."
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 235223

SECTION 235233 - WATER-TUBE BOILERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes packaged, factory-fabricated and -assembled, gas-fired, finned water-tube boilers, trim, and accessories for generating hot water.
- B. This Section includes packaged, water-tube boilers, trim, and accessories for generating **[hot water]** **[steam]** with the following configurations, burners, and outputs:
 - 1. **[Factory]** **[Field]** assembled.
 - 2. **[Atmospheric gas]** **[Forced-draft gas]** **[Oil]** **[Combination gas and oil]** burner.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: Provide data indicating general assembly, components, controls, safety controls, and wiring diagrams with electrical characteristics and connection requirements, and service connections.
 - 1. Include performance data, operating characteristics, furnished specialties, and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For boilers, boiler trim, and accessories. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
 - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 - b. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails and equipment mounting frames.

2. Wiring Diagrams: Power, signal, and control wiring.
3. Show proposed physical layout of equipment relative to the space in which it is to be installed, to demonstrate:
 - a. Coordination of piping, duct, venting and electrical connections (as applicable) in relationship to adjacent work and building elements.
 - b. Acceptable clearances for servicing and maintaining equipment to be installed, including adjacent equipment not specified by this Section.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer Seismic Qualification Certification: Submit certification that boiler, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means, "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Source quality-control test reports.
- C. Manufacturer's Certificate: Certify that units meet or exceed specified requirements.
- D. Field quality-control test reports. Indicate condition of equipment after start-up including control settings and performance chart of control system.
- E. Test Reports: Indicate specified performance and efficiency is met or exceeded. Provide factory combustion test data for substantially identical unit that includes boiler firing rate, overfire draft, gas flow rate, heat input, burner manifold gas pressure, percent carbon monoxide (CO), percent oxygen (O), percent excess air, flue gas temperature at outlet, ambient temperature, net stack temperature, percent stack loss, percent combustion efficiency, and heat output.
- F. Warranty: Special warranty specified in this Section.
- G. Other Informational Submittals:

1. ASME "A" Stamp Certification and Report: Submit "A" stamp certificate of authorization as required by authorities having jurisdiction, and document hydrostatic testing of piping external to boiler.
2. Startup service reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boilers, components, and accessories to include in emergency, operation, and maintenance manuals.
 1. Include manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE SERVICE

- A. Provide service and maintenance of boilers for [**one (1)**] <Insert number> year from Date of Substantial Completion.

1.7 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum of five (5) years documented experience.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.
- D. ASHRAE/IESNA 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- E. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N, "Uniform Test Method for Measuring the Energy Consumption of Furnaces and Boilers."
- F. I=B=R Compliance: Boilers shall be tested and rated according to HI's "Rating Procedure for Heating Boilers" and "Testing Standard for Commercial Boilers," with I=B=R emblem on a nameplate affixed to boiler.
- G. UL Compliance: Test boilers for compliance with [**UL 726, "Oil-Fired Boiler Assemblies."**] [**UL 726, "Oil-Fired Boiler Assemblies"** and **UL 795, "Commercial-Industrial Gas Heating Equipment."**] [**UL 795,**

"Commercial-Industrial Gas Heating Equipment."] Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.

1.8 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.9 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver, store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Protect units before, during, and after installation from damage to casing by leaving factory shipping packaging in place until immediately prior to final acceptance.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace heat exchangers damaged by thermal shock and vent dampers of boilers that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Heat Exchangers: Minimum [**twenty (20)**] <Insert number> years from date of Substantial Completion.
 - 2. Warranty Period for Vent Dampers: Minimum [**Five (5)**] <Insert number> years from date of Substantial Completion.
- B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace drums, tubes, headers, cabinets, atmospheric gas burners, and pressure vessels of boilers that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Drums, Tubes, Headers, Cabinets, and Atmospheric Gas Burner: Minimum [**five (5)**] <Insert number> years from date of Substantial Completion, pro rata.
 - 2. Warranty Period for Pressure Vessel: Minimum [**twenty (20)**] <Insert number> years from date of Substantial Completion, for thermal shock.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FINNED WATER-TUBE BOILERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [A. O. Smith Corporation.](#)
 2. [Ajax Boiler Inc.](#)
 3. [Allied Engineering Co.](#)
 4. [Laars Heating Systems Company.](#)
 5. [Lochinvar LLC.](#)
 6. [Patterson-Kelley.](#)
 7. [PRECISION Boilers, LLC.](#)
 8. [Raypak.](#)
 9. [RBI Water Heaters.](#)
 10. [RECO USA.](#)
 11. [Weben-Jarco, Inc.](#)
 12. **<Insert manufacturer's name.>**
 13. or approved equal.
- B. Description: Factory-fabricated, -assembled, and -tested boiler with tubes sealed into headers pressure tight, and set on a steel base; including insulated jacket, flue-gas vent, combustion-air intake connections, water supply and return connections, and controls.
- C. Heat Exchanger:
1. Finned **[copper]** **[steel]** **[copper-nickel]** tubing with stainless-steel baffles.
 2. **[Bronze]** **[Cast-iron]** **[Steel]** headers.
 3. **[Single]** **[Two]**-pass, **[horizontal]** **[vertical]** **[coil]** configuration.
 4. Tubes shall be sealed in header **[with silicone O-ring gaskets]** **[by welding]** **[by mechanically rolling tubes in header]**.
- D. Combustion Chamber Internal Insulation: Interlocking panels of refractory insulation, high-temperature cements, mineral fiber, and ceramic refractory tile for service temperatures to **2000 deg F (1100 deg C)**.
- E. Casing:
1. Jacket: **[Sheet metal]** **[Stainless steel]**, with snap-in or interlocking closures.
 2. Control Compartment Enclosure: NEMA 250, Type 1A.
 3. Finish: **[Baked enamel over primer]** **[Baked enamel over galvanizing]** **[Powder coated]**.
 4. Insulation: Minimum **[1-inch- (25-mm-)]** **[2-inch- (50-mm-)]** thick, mineral-fiber insulation surrounding the heat exchanger.
 5. Draft Hood: **[Integral]** **[External]**.
 6. Combustion-Air Connection: Inlet duct collar and sheet metal closure over burner compartment.

7. Mounting base to secure boiler[**with accessory for mounting on combustible surface**].
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler pressure vessel, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

F. Burner:

1. Burner Tubes and Orifices: Stainless steel, for **[natural] [propane] gas.[Mount burner tubes in a slide-out burner drawer for ease of inspection.]**
 - a. Sealed Combustion: Factory-mounted centrifugal fan to draw outside air into boiler and discharge into burner compartment.
 - b. Direct Vent: Factory-mounted centrifugal fan to draw flue gas out of boiler and discharge into boiler vent.
2. Vertical Burner:
 - a. **[High-temperature stainless steel] [Ceramic]** to fire in a 360-degree pattern.
 - b. Burner shall have a viewing port for observation of burner operation and a factory-mounted centrifugal fan to supply **[room] [outside] air[through a replaceable 99 percent efficient (1-micrometer particles) filter]** to boiler burner.
 - c. Fan shall be controlled to prepurge and postpurge the combustion chamber before firing.
3. Gas Train: Control devices and **[full-modulation] [on-off] [low-high-low] [proportional]** control sequence shall comply with requirements in **[AGA] [ASME CSD-1] [FMG] [IRI] [UL]**. In addition to these requirements, include shutoff cock, pressure regulator, and control valve.
4. Gas Train: Combination gas valve with manual shutoff, pressure regulator, and pilot adjustment.
5. Pilot: **[Standing] [Intermittent-electric-spark] [Hot-surface]** pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.
6. Flue-Gas Recirculation Fans: Centrifugal fans on burner assembly to recirculate flue gas to decrease oxides of nitrogen emissions to less than **[30] <Insert value>** ppm.
 - a. Motors: Comply with requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

G. Trim:

1. Aquastat Controllers: Operating[, **firing rate,**] and high limit.
2. Safety Relief Valve: ASME rated.

3. Pressure and Temperature Gage: Minimum **3-1/2-inch-** (89-mm-) diameter, combination water-pressure and -temperature gage. Gages shall have operating-pressure and -temperature ranges so normal operating range is about 50 percent of full range.
4. Boiler Air Vent: **[Automatic] [Manual]**.
5. Drain Valve: Minimum **NPS 3/4 (DN 20)** hose-end gate valve.
6. Circulation Pump: Non-overloading, in-line pump with split-capacitor motor having thermal-overload protection and lubricated bearings; designed to operate at specified boiler pressures and temperatures.

H. Controls:

1. Refer to Section 230900 "Instrumentation and Control for HVAC."
2. Boiler operating controls shall include the following devices and features:
 - a. Control transformer.
 - b. Motorized Vent Damper: Interlocked with burner to open before burner starts. If damper fails to open, stop burner operation.
 - c. Set-Point Adjust: Set points shall be adjustable.
 - d. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain space temperature in response to thermostat with heat anticipator located in heated space.
 - e. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to reset supply-water temperature inversely with outside-air temperature. At **[0 deg F (minus 17 deg C)] <Insert temperature>** outside-air temperature, set supply-water temperature at **[200 deg F (93 deg C)] <Insert temperature>**; at **[60 deg F (15 deg C)] <Insert temperature>** outside-air temperature, set supply-water temperature at **[140 deg F (60 deg C)] <Insert temperature>**.
 - f. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
3. Burner Operating Controls: To maintain safe operating conditions, burner safety controls limit burner operation.
 - a. High Cutoff: **[Manual] [Automatic]** reset stops burner if operating conditions rise above maximum boiler design temperature.
 - b. Water Flow Switch: Automatic-reset paddle-switch shall prevent burner operation on low water flow.
 - c. Blocked Vent Safety Switch: Manual-reset switch factory mounted on draft diverter.
 - d. Rollout Safety Switch: Factory mounted on boiler combustion chamber.
 - e. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.
4. Building Automation System Interface: Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.

- a. Monitoring: On/off status, [**common trouble alarm**] [**low water level alarm**] <Insert monitoring>.
- b. Control: On/off operation, [**hot water supply temperature set-point adjustment**] <Insert control>.
- c. A communication interface with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed, locally at boiler control panel shall be available through building automation system.

2.2 [STEEL] [FLEXIBLE] WATER-TUBE BOILERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [AESYS Technologies, LLC.](#)
 2. [Ajax Boiler Inc.](#)
 3. [Bryan Boilers: Bryan Steam LLC.](#)
 4. [Cleaver-Brooks.](#)
 5. [Parker Boiler Co.](#)
 6. [Rite Engineering & Mfg. Corp.](#)
 7. <Insert manufacturer's name.>
 8. or approved equal.
- B. Description: Factory-fabricated and [**field**]-assembled, water-tube boiler with heat exchanger sealed pressure tight, built on a steel base; including insulated jacket, flue-gas vent, supply and return connections, and controls.
- C. Heat-Exchanger Design: Straight steel tubes rolled into steel headers.
1. Accessible head plates at both ends.
 2. Handholes[**or couplings**] in headers for water-side inspections.
 3. Accessible drain and blowdown tappings, both high and low, for surface and mud removal.
 4. Lifting lugs on top of boiler.
 5. Built-in air separator.
- D. Heat-Exchanger Design: Bent steel tubes [**swaged**] [**welded**] into steel headers[**with membrane waterwall design**].
1. Limit tube configurations to [**two**] [**four**] <Insert number>.
 2. Accessible drain and blowdown tappings, both high and low, for surface and mud removal.
 3. Accessible inspection ports in drum, mud legs, and tube manifolds.
 4. Lifting lugs on top of boiler.
 5. Built-in air separator.
- E. Combustion Chamber: Equipped with minimum [2-1/2-inch (64-mm)] [3-inch (75-mm)] [4-inch (100-mm)], 2700 deg F (1482 deg C) poured refractory on floor and minimum

[2-inch (50-mm)] [3-1/2-inch (89-mm)] lap-jointed cast refractory with fiber-blanket joint seals on side walls. Combustion chamber shall have flame observation ports in front [and] [or] back.

F. Casing:

1. Insulation: Minimum [2-inch (50-mm) **thick, lightweight refractory; 1-inch (25-mm) thick insulating board; galvanized-steel membrane, and**] 2-inch (50-mm) thick, mineral-fiber insulation surrounding the heat exchanger and combustion chamber.
2. Top Flue Connection: Constructed of [aluminized] [stainless] steel.
3. Jacket: Mirror-finish stainless steel, with screw-fastened closures.
4. Jacket: [Galvanized] sheet metal, with screw-fastened closures and [baked-enamel] [powder-coated] protective finish.
5. Mounting base to secure boiler to concrete base.
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.
6. Control Compartment Enclosure: NEMA 250, Type 1A.

G. [Draft Diverter] [Barometric Damper]: Galvanized-steel assembly with flue-gas thermometer.

H. Burner:

1. Burner and Orifices: [Stainless steel] [Cast iron], for [natural] [propane] gas.
2. Gas Train: Control devices and [full-modulation] [on-off] [low-high-low] control sequence shall comply with requirements in [AGA] [ASME CSD-1] [FMG] [IRI] [UL].
3. Gas Train: Combination gas valve with manual shutoff, pressure regulator, and pilot adjustment.
4. Pilot: [Standing] [Intermittent-electric-spark] pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.

I. Burner:

1. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser for [natural] [propane] gas. [Mount burner on hinged access door to permit access to combustion chamber.]
2. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor; with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
 - a. Motors: Comply with requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

- 1) Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 3. Gas Train: Control devices and **[modulating]** **[on-off]** **[low-high-low]** control sequence shall comply with requirements in **[AGA]** **[ASME CSD-1]** **[FMG]** **[IRI]** **[UL]**.
 4. Pilot: **[Intermittent]** **[Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.
 5. Flue-Gas Recirculation: Burner connections shall be equipped for recirculating flue gas.
 - a. Maximum Oxides of Nitrogen Emissions: **[20]** **[30]** **<Insert value>** ppm.
- J. Burner:
1. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser for fuel oil.**[Mount burner on hinged access door to permit access to combustion chamber.]**
 2. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor; with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
 - a. Motors: Comply with requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - 1) Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 3. Oil Supply: Control devices and **[modulating]** **[on-off]** **[low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1]** **[FMG]** **[IRI]** **[UL]**.
 - a. Oil Pump: Two-stage, gear-type oil pump **[integral to and directly driven by blower]** shall be capable of producing **300-psig** (2070-kPa) discharge pressure and **15-inch Hg** (50.7-kPa) vacuum.
 - b. Oil Piping Specialties:
 - 1) Suction-line, manual, gate valve.
 - 2) Removable-mesh oil strainer.
 - 3) **0- to 30-inch Hg** (0- to 101.3-kPa) vacuum; **0- to 30-psig** (0- to 207-kPa) vacuum-pressure gage.
 - 4) **0- to 300-psig** (0- to 2070-kPa) oil-nozzle pressure gage.
 - 5) Nozzle-line, solenoid-safety-shutoff oil valve.
 4. Pilot: **[Intermittent]** **[Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff solenoid using **[cadmium sulfide]** **[UV scanner]** flame-safety control.
 5. Flue-Gas Recirculation: Burner connections shall be equipped for recirculating flue gas.

- a. Maximum Oxides of Nitrogen Emissions: **[30]** <Insert value> ppm.

K. Burner:

1. Burner: Welded construction with multivane, stainless-steel, flame-retention diffuser for fuel oil and **[natural]** **[propane]** gas.**[Mount burner on hinged access door to permit access to combustion chamber.]**
2. Blower: Forward-curved centrifugal fan integral to burner, directly driven by motor; with adjustable, dual-blade damper assembly and locking quadrant to set air-fuel ratio.
 - a. Motors: Comply with requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - 1) Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
3. Oil Supply: Control devices and **[modulating]** **[on-off]** **[low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1]** **[FMG]** **[IRI]**.
 - a. Oil Pump: Two-stage, gear-type oil pump **[integral to and directly driven by blower]** shall be capable of producing **300-psig** (2070-kPa) discharge pressure and **15-inch Hg** (50.7-kPa) vacuum.
 - b. Oil Piping Specialties:
 - 1) Suction-line, manual, gate valve.
 - 2) Removable-mesh oil strainer.
 - 3) **0- to 30-inch Hg** (0- to 101.3-kPa) vacuum; **0- to 30-psig** (0- to 207-kPa) vacuum-pressure gage.
 - 4) **0- to 300-psig** (0- to 2070-kPa) oil-nozzle pressure gage.
 - 5) Nozzle-line, solenoid-safety-shutoff oil valve.
4. Gas Train: Control devices and **[modulating]** **[on-off]** **[low-high-low]** control sequence shall comply with requirements in **[ASME CSD-1]** **[FMG]** **[IRI]** **[UL]**.
5. Gas Pilot: **[Intermittent]** **[Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.
6. Oil Pilot: **[Intermittent]** **[Interrupted]**-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff solenoid with **[cadmium sulfide]** **[UV scanner]** flame-safety control.
7. Flue-Gas Recirculation: Burner connections shall be equipped for recirculating flue gas.
 - a. Maximum Oxides of Nitrogen Emissions: **[20]** **[30]** <Insert value> ppm.

L. Trim:

1. Include devices sized to comply with **[ANSI B31.1, "Power Piping]** **[ANSI B31.9, "Building Services Piping]."**

2. Aquastat Controllers: Operating[, **firing rate**,] and high limit.
3. Safety Relief Valve: ASME rated.
4. Pressure and Temperature Gage: Minimum **3-1/2-inch-** (89-mm-) diameter, combination water-pressure and -temperature gage. Gages shall have operating-pressure and -temperature ranges so normal operating range is about 50 percent of full range.
5. Boiler Air Vent: [**Automatic**] [**Manual**].
6. Drain Valve: Minimum **NPS 3/4** (DN 20) hose-end gate valve.
7. Tankless Heater: [**Carbon-steel**] [**Bronze**] header with copper-tube heat exchanger, mounted in a port of upper drum and sealed with fiber gasket.
 - a. Tappings **NPS 2** (DN 50) and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.
 - b. Tappings **NPS 2-1/2** (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

M. Trim:

1. Include devices sized to comply with [**ANSI B31.1, "Power Piping**] [**ANSI B31.9, "Building Services Piping**]."
2. Pressure Controllers: Operating[, **firing rate**,] and high limit.
3. Safety Relief Valve:
 - a. Size and Capacity: As required for equipment according to ASME Boiler and Pressure Vessel Code.
 - b. Description: Fully enclosed steel spring with adjustable pressure range and positive shutoff; factory set and sealed.
 - 1) Drip-Pan Elbow: Cast iron and having threaded inlet and outlet with threads complying with ASME B1.20.1.
4. Pressure Gage: Minimum **3-1/2-inch** (89-mm) diameter. Gage shall have normal operating pressure about 50 percent of full range.
5. Water Column: Minimum **12-inch** (300-mm) glass gage with shutoff cocks.
6. Drain Valves: Minimum **NPS 3/4** (DN 20) or nozzle size with hose-end connection.
7. Blowdown Valves: Factory-installed bottom and surface, slow-acting blowdown valves same size as boiler nozzle.**[Blowdown valves shall be combination of slow and quick acting as required by ANSI B31.1.]**
8. Stop Valves: Boiler inlets and outlets, except safety relief valves or preheater inlet and outlet, shall be equipped with stop valve in an accessible location as near as practical to boiler nozzle and same size or larger than nozzle. Valves larger than **NPS 2** (DN 50) shall have rising stem.
9. Stop-Check Valves: Factory-installed, stop-check valve and stop valve at boiler outlet with free-blow drain valve factory installed between the two valves and visible when operating stop-check valve.
10. Tankless Heater: Carbon-steel header with copper-tube heat exchanger, mounted in a port of upper manifold and sealed with fiber gasket.

- a. Tappings **NPS 2 (DN 50)** and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.
- b. Tappings **NPS 2-1/2 (DN 65)** and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

N. Controls:

1. Refer to Section 230900 "Instrumentation and Control for HVAC."
2. Boiler operating controls shall include the following devices and features:
 - a. Control transformer.
 - b. Set-Point Adjust: Set points shall be adjustable.
 - c. Operating Pressure Control: Factory wired and mounted to cycle burner.
 - d. Low-Water Cutoff and Pump Control: Cycle feedwater pump(s) for makeup water control.
 - e. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain space temperature in response to thermostat with heat anticipator located in heated space.
 - f. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to reset supply-water temperature inversely with outside-air temperature. At **[0 deg F (minus 17 deg C)]** **<Insert temperature>** outside-air temperature, set supply-water temperature at **[200 deg F (93 deg C)]** **<Insert temperature>**; at **[60 deg F (15 deg C)]** **<Insert temperature>** outside-air temperature, set supply-water temperature at **[140 deg F (60 deg C)]** **<Insert temperature>**.
 - g. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain a constant steam pressure. Maintain pressure set point plus or minus 10 percent.
 - h. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
3. Burner Operating Controls: To maintain safe operating conditions, burner safety controls limit burner operation.
 - a. High Cutoff: **[Manual] [Automatic]** reset stops burner if operating conditions rise above maximum boiler design **[temperature] [pressure]**.
 - b. Low-Water Cutoff Switch: **[Electronic] [Float and electronic]** probe shall prevent burner operation on low water. Cutoff switch shall be **[manual] [automatic]**-reset type.
 - c. Blocked Vent Safety Switch: Manual-reset switch factory mounted on draft diverter.
 - d. Rollout Safety Switch: Factory mounted on boiler combustion chamber.
 - e. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.
4. Building Automation System Interface: Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.

- a. Monitoring: On/off status, [**common trouble alarm**] [**low water level alarm**] <Insert monitoring>.
- b. Control: On/off operation, [**hot water supply temperature set-point adjustment**] [**steam pressure adjustment**] <Insert control>.
- c. A communication interface with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed, locally at boiler control panel shall be available through building automation system.

2.3 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.
- B. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.
 1. House in NEMA 250, Type [1] <Insert type> enclosure.
 2. Wiring shall be numbered and color-coded to match wiring diagram.
 3. Install factory wiring outside of an enclosure in a [**metal**] raceway.
 4. Field power interface shall be to [**wire lugs**] [**fused disconnect switch**] [**nonfused disconnect switch**] [**circuit breaker**].
 5. Provide branch power circuit to each motor and to controls[**with disconnect switch or circuit breaker**].
 6. Provide each motor with overcurrent protection.

2.4 VENTING KITS

- A. Vent Damper: Motorized, UL listed for use on atmospheric burner boiler equipped with draft hood; motor to open and close damper; stainless-steel vent coupling and damper blade; keyed wiring harness connector plug; and dual-position switches to permit burner operation.
