SECTION 238239.16 - PROPELLER UNIT HEATERS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify, with manufacturers, that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system designs that do not include propeller unit heaters may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes propeller unit heaters with [hot-water] [steam] [electric-resistance heating] coils.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. CWP: Cold working pressure.
- B. PTFE: Polytetrafluoroethylene plastic.
- C. TFE: Tetrafluoroethylene plastic.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include location and size of each field connection.
 - 4. Include details of anchorages and attachments to structure and to supported equipment.
 - 5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.

Retain first subparagraph below for hot-water and steam propeller unit heaters.

- 6. Indicate location and arrangement of piping valves and specialties.

Retain first subparagraph below for propeller unit heaters with integral controls; delete if control devices are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

- 7. Indicate location and arrangement of integral controls.
- 8. Wiring Diagrams: Power, signal, and control wiring.

- D. Mock-up:

Use this paragraph for assessing full sized erected assemblies for review of construction, coordination of the Work of several sections, testing, or observation of operation.

Verify mockup requirements with DEN Project Manager.

1. Provide <Insert number> mockup, <Insert number> feet long by <Insert number> feet wide, of <typical exterior wall module> <one typical bay, under window enclosure assembly complete with induction units>.
2. Locate <where directed by DEN Project Manager> <Insert location>.
3. Mockup may <not> remain as part of the Work

1.5 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Suspended ceiling components.
 2. Structural members to which propeller unit heaters will be attached.
 3. Method of attaching hangers to building structure.
 4. Size and location of initial access modules for acoustical tile.
 5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. <Insert item>.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC." See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: Submit certification that propeller unit heaters, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Include detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- C. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For propeller unit heaters to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Radiated noise shall not exceed:
 1. NC 35 – In Office.
 2. NC 40 – Terminal/Concourse.
 3. NC 45 – Maintenance Facilities.

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.2 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Airtherm; a Mestek company.
 2. Engineered Air.
 3. McQuay International.
 4. Rosemex Products.

5. [Ruffneck Heaters; a division of Lexa Corporation.](#)
6. [Trane Inc.](#)
7. **<Insert manufacturer's name>.**
8. or approved equal.

2.3 DESCRIPTION

- A. Assembly including casing, coil, fan, and motor in **[vertical] [and] [horizontal]** discharge configuration with adjustable discharge louvers.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Retain first paragraph below for electric propeller unit heaters.

- C. Comply with UL 2021.

Retain paragraph below for explosion-proof electric propeller unit heaters.

- D. Comply with UL 823.

2.4 PERFORMANCE REQUIREMENTS

"ASHRAE Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, coil selection and cleaning, and equipment access. Verify, with manufacturers, availability of units with components and features that comply with these requirements.

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

"ASHRAE/IESNA 90.1 Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires compliance with requirements in ASHRAE/IESNA 90.1.

- B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

Retain "Seismic Performance" Paragraph below with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Delete paragraph if performance requirements are indicated on Drawings. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Coordinate requirements with structural engineer.

- C. Seismic Performance: Propeller unit heaters shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

2.5 HOUSINGS

- A. Finish: Manufacturer's **[standard]** **[custom]** baked enamel applied to factory-assembled and -tested propeller unit heaters before shipping.

"Airstream Surfaces" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain paragraph to comply with LEED Prerequisite IEQ 1.

- B. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- C. Discharge Louver: Adjustable fin diffuser for horizontal units and conical diffuser for vertical units.

2.6 COILS

- A. General Coil Requirements: Test and rate **[hot-water]** **[steam]** propeller unit-heater coils according to ASHRAE 33.

Retain one of eight coil paragraphs below. First "Hot-Water Coil" Paragraph is standard coil construction for hot-water heating systems. Remaining "Hot-Water Coil" paragraphs are for situations where higher pressure ratings are required or corrosion resistance is required for some fluids inside the coils.

- B. Hot-Water Coil: Copper tube, minimum **0.025-inch** (0.635-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than **0.1 inch** (2.5 mm) and rated for a minimum working pressure of **200 psig** (1380 kPa) and a maximum entering-water temperature of **325 deg F** (163 deg C), with manual air vent. Test for leaks to **350 psig** (2413 kPa) underwater.
- C. Hot-Water Coil: Cupronickel tube, minimum **0.031-inch** (0.78-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than **0.1 inch** (2.5 mm) and rated for a minimum working pressure of **400 psig** (2760 kPa) and a maximum entering-water temperature of **450 deg F** (232 deg C), with manual air vent. Test for leaks to **600 psig** (4137 kPa) underwater.
- D. Hot-Water Coil: Red-brass tube, minimum **0.049-inch** (1.24-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than **0.1 inch** (2.5 mm) and rated for a minimum working pressure of **260 psig** (1793 kPa) and a maximum entering-water temperature of **390 deg F** (199 deg C), with manual air vent. Test for leaks to **390 psig** (2689 kPa) underwater.

- E. Hot-Water Coil: Steel tube, minimum 0.049-inch (1.24-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of 400 psig (2760 kPa) and a maximum entering-water temperature of 450 deg F (232 deg C), with manual air vent. Test for leaks to 600 psig (4137 kPa) underwater.

"Hot-Water Coil" Paragraph below is industrial-quality construction available from a limited number of manufacturers.

- F. Hot-Water Coil: Vertical steel tube, minimum 0.065-inch (1.65-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of 400 psig (2760 kPa) and a maximum entering-water temperature of 450 deg F (232 deg C), with steel headers at top and bottom. Test for leaks to 600 psig (4137 kPa) underwater.

First "Steam Coil" Paragraph below is standard coil construction for steam heating systems. Second and third "Steam Coil" paragraphs are for situations where higher pressure ratings are required or corrosion resistance is required for some fluids inside the coils.

- G. Steam Coil: Copper tube, minimum 0.025-inch (0.635-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of 75 psig (520 kPa).
- H. Steam Coil: Red-brass tube, minimum 0.049-inch (1.24-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of 75 psig (520 kPa).

"Steam Coil" Paragraph below is industrial-quality construction available from a limited number of manufacturers.

- I. Steam Coil: Vertical steel tube, minimum 0.065-inch (1.65-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of [100 psig (690 kPa)] [200 psig (1380 kPa)], with steel headers at top and bottom.
- J. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and 60-Hz hum, embedded in magnesium oxide refractory and sealed in steel or corrosion-resistant metallic sheath with fins no closer than 0.16 inch (4 mm). Element ends shall be enclosed in terminal box. Fin surface temperature shall not exceed 550 deg F (288 deg C) at any point during normal operation.

1. Circuit Protection: One-time fuses in terminal box for overcurrent protection and limit controls for high-temperature protection of heaters.
2. Wiring Terminations: Stainless-steel or corrosion-resistant material.

2.7 FAN AND MOTOR

- A. Fan: Propeller type with aluminum wheel directly mounted on motor shaft in the fan venturi.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, insert paragraphs below to suit Project.

- B. Motor: Permanently lubricated, [**explosion proof**] [**multispeed**] [**variable speed**]. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.8 CONTROLS

Delete this article if controls are part of control system specified in Section 230923 "Direct Digital Control (DDC) System for HVAC." See Evaluations for discussion on control schemes and energy efficiency.

- A. Control Devices:
1. [**Unit**] [**Wall**]-mounted, [**variable**] fan-speed switch.
 2. [**Unit**] [**Wall**]-mounted thermostat.

2.9 CAPACITIES AND CHARACTERISTICS

If Project has more than one type or configuration of heater, delete this article and schedule propeller unit heaters on Drawings.

- A. Heating Capacity:
1. Heat Output: <Insert Btu/h (kW)>.
 2. Length of Throw: <Insert feet (m)>.
 3. Mounting Height: <Insert feet (m)>.
- B. Water Coil:
1. Entering-Water Temperature: <Insert deg F (deg C)>.
 2. Temperature Difference: <Insert deg F (deg C)>.
 3. Water Flow: <Insert gpm (L/s)>.
 4. Water-Side Pressure Drop: <Insert feet (kPa)>.
- C. Steam Coil:
1. Inlet Pressure: <Insert psig (kPa)>.
 2. Condensing Capacity: <Insert lb/h (g/s)>.
- D. Electric Coil:
1. Heating Capacity: <Insert kilowatts>.
 2. Number of Steps: <Insert number>.
- E. Supply Air:
1. Airflow: <Insert cfm (L/s)>.

2. Leaving-Air Temperature: <Insert deg F (deg C)>.
3. Entering-Air Temperature: <Insert deg F (deg C)>.

F. Fan Motor:

1. High Speed: <Insert rpm>.
2. Motor Size: <Insert horsepower>.

G. Electrical Characteristics for Single-Point Connection:

1. Volts: <Insert value>.
2. Phase: <Insert value>.
3. Hertz: <Insert value>.
4. Full-Load Amperes: <Insert value>.
5. Minimum Circuit Amperes: <Insert value>.
6. Maximum Overcurrent Protection: <Insert amperage>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive propeller unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for [**pipng and**] electrical connections to verify actual locations before unit-heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate to assure correct recess size for recessed units.
- C. Install propeller unit heaters to comply with NFPA 90A.
- D. Install equipment exposed to finished areas after walls and ceiling are finished and painted. Avoid damage to other materials.
- E. Protection: Provide finished cabinet units with protective covers during balance of construction.
- F. Install propeller unit heaters level and plumb.
- G. Suspend propeller unit heaters from structure with all-thread hanger rods and [**elastomeric hangers**] [**spring hangers**] [**spring hangers with vertical-limit stop**]. Hanger rods and attachments to structure are specified in Section 230529 "Hangers

and Supports for HVAC Piping and Equipment." Vibration hangers are specified in [Section 230548 "Vibration and Seismic Controls for HVAC."] [Section 230548.13 "Vibration Controls for HVAC."]

Retain paragraph below if controls are provided by propeller unit-heater manufacturer. To comply with requirements of the Americans with Disabilities Act, verify mounting height with authorities having jurisdiction.

- H. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in Section 232113 "Hydronic Piping," Section 232116 Hydronic Piping Specialties," Section 232213 "Steam and Condensate Heating Piping," and Section 232216 Steam and Condensate Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to propeller unit heater's factory, hot-water piping package. Install the piping package if shipped loose.

Retain first paragraph below for propeller unit heaters with either hot-water or steam coils.

- D. Comply with safety requirements in UL 1995.

Retain first paragraph below for hot-water propeller unit heaters if factory piping package is not required.

- E. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of propeller unit heater. Hydronic specialties are specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties."

Retain first paragraph below for steam propeller unit heaters.

- F. Unless otherwise indicated, install union and gate or ball valve on steam-supply connection and union, strainer, steam trap, and gate or ball valve on condensate-return connection of propeller unit heater. Steam specialties are specified in Section 232216 Steam and Condensate Piping Specialties."
- G. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

- H. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- I. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Coordinate inspection and testing requirements with DEN Project Manager.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

Retain first subparagraph below for units that have electric-resistance heating coils.

- 2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
- 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- C. Units will be considered defective if they do not pass tests and inspections.
- D. Retest as specified above after repairs or replacements are made.
- E. Prepare test and inspection reports.

3.5 ADJUSTING

Retain this article if control devices are specified in this Section; delete if they are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

- A. Adjust initial temperature set points.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two]** <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.6 CLEANING

- A. After construction is completed, including painting, clean exposed surfaces of units. Vacuum clean inside of cabinets.
- B. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.
- C. Install new filters.

3.7 DEMONSTRATION

Delete this article if factory-authorized service representative is not required.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain propeller unit heaters.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238239.16

Copyright 2010 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238239.19 - WALL AND CEILING UNIT HEATERS

This Section includes requirements for the LEED Rating System. However, equipment specified in this Section may not qualify for LEED Rating System prerequisites and credits. Verify, with manufacturers, that the requirements for prerequisites and credits can be met. To achieve prerequisites and obtain credits, HVAC system designs that do not include wall and ceiling unit heaters may be required.

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes wall and ceiling heaters with propeller fans and electric-resistance heating coils.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include details of anchorages and attachments to structure and to supported equipment.
 - 4. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
 - 5. Wiring Diagrams: Power, signal, and control wiring.

Retain "Samples" Paragraph below for single-stage Samples, with a subordinate list if applicable.

Coordinate sample requirements with DEN Project Manager.

- D. Samples: For each exposed product and for each color and texture specified.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For wall and ceiling unit heaters to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Comply with NFPA 70. Listed and labeled by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.6 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws. Coordinate with Section 016000 "Product Requirements."

When warranties are required, verify with Owner's counsel that special warranties stated in this Article are not less than remedies available to Owner under prevailing local laws. Coordinate with Section 016000 "Product Requirements".

- A. Special Warranty: Manufacturer agrees to repair or replace components of condensing units that fail in materials or workmanship within specified warranty period.
1. Warranty Period: Minimum **[four (4)] [five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Radiated noise shall not exceed:
1. NC 35 – In Office.
 2. NC 40 – Terminal/Concourse.
 3. NC 45 – Maintenance Facilities.

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.2 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Berko; Marley Engineered Products.](#)
 2. [Chromalox, Inc.](#)
 3. [Indeeco.](#)
 4. [Markel Products Company; TPI Corporation.](#)
 5. [Marley Engineered Products.](#)
 6. [Ouellet Canada Inc.](#)
 7. [QMark; Marley Engineered Products.](#)
 8. [Trane Inc.](#)
 9. **<Insert manufacturer's name>.**
 10. or approved equal.

2.3 DESCRIPTION

- A. Assembly including chassis, electric heating coil, fan, motor, and controls. Comply with UL 2021.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.4 CABINET

- A. Front Panel: **[Stamped-steel louver] [Extruded-aluminum bar grille]**, with removable panels fastened with tamperproof fasteners.
- B. Finish: Baked enamel over baked-on primer with manufacturer's **[standard] [custom]** color selected by DEN Project Manager, applied to factory-assembled and -tested wall and ceiling heaters before shipping.

"Airstream Surfaces" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain paragraph to comply with LEED Prerequisite IEQ 1.

- C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Surface-Mounted Cabinet Enclosure: Steel with finish to match cabinet.

2.5 COIL

- A. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and 60-Hz hum, embedded in magnesium oxide refractory and sealed in corrosion-resistant metallic sheath. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware, and limit controls for high-temperature protection.**[Provide integral circuit breaker for overcurrent protection.]**

2.6 FAN AND MOTOR

- A. Fan: Aluminum propeller directly connected to motor.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, insert paragraphs below to suit Project.

- B. Motor: Permanently lubricated[, **multispeed**]. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.7 CONTROLS

- A. Controls: Unit-mounted thermostat.[**Low-voltage relay with transformer kit.**]
- B. Electrical Connection: Factory wire motors and controls for a single field connection[**with disconnect switch**].

2.8 CAPACITIES AND CHARACTERISTICS

If Project has more than one type or configuration of heater, delete this article and schedule wall and ceiling heaters on Drawings.

- A. Airflow: <Insert cfm (L/s)>.
- B. Fan Speed: <Insert rpm>.
- C. Heating Coil: <Insert kilowatts>.
- D. Electrical Characteristics for Single-Point Connection:
1. Volts: <Insert value>.
 2. Phase: <Insert value>.
 3. Hertz: <Insert value>.
 4. Full-Load Amperes: <Insert value>.
 5. Minimum Circuit Ampacity: <Insert value>.
 6. Maximum Overcurrent Protection: <Insert amperage>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive wall and ceiling unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

- B. Examine roughing-in for electrical connections to verify actual locations before unit-heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate to assure correct recess size for recessed units.
- C. Install wall and ceiling unit heaters to comply with NFPA 90A.
- D. Install wall and ceiling unit heaters level and plumb.
- E. Install equipment exposed to finished areas after walls and ceiling are finished and painted. Avoid damage to other materials.
- F. Protection: Provide finished cabinet units with protective covers during balance of construction.

Retain first paragraph below if controls are provided by unit-heater manufacturer. To comply with requirements of the Americans with Disabilities Act, verify mounting height with authorities having jurisdiction.

- G. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.
- H. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- I. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- J. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238239.19

SECTION 238245 - CHILLED BEAMS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes passive and active chilled beams.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for chilled beams.
 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories for chilled beams.
 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For chilled beams.
1. Include plans, elevations, sections, and **[mounting] [attachment]** details.
 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.

Retain "Samples for Initial Selection" and "Samples for Verification" paragraphs below for two-stage Samples.

Coordinate sample requirements with DEN Project Manager.

- C. Samples for Initial Selection: For units with factory-applied finishes.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
1. Chilled-Beam Finishes: **[12 inches (300 mm) long by unit width] <Insert size>**.
- E. Product Schedule: For chilled beams. **[Use same designations indicated on Drawings.]**

Retain "Delegated-Design Submittal" Paragraph below if design services have been delegated to Contractor.

- F. Delegated-Design Submittal: For chilled beams.
1. Include design calculations for selecting vibration isolators **[and seismic restraints]** and for designing vibration isolation bases.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Suspended ceiling components.
 2. Structural members to which chilled beams will be attached.
 3. Size and location of initial access modules for acoustical tile.
 4. Location of chilled beams including other building components integrated into chilled-beam configuration including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. **<Insert item>**.

Coordinate first subparagraph below with last subparagraph above.

5. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. **<Insert item>**.
6. Perimeter moldings.
7. Chilled-beam frames.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC." See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: Submit certification that chilled beams, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain first subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.
- D. Sample Warranty: For manufacturer's warranty.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 PASSIVE CHILLED BEAMS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Halton Company.](#)
 2. [Semco Incorporated; a Flakt-Wood company.](#)
 3. [Swegon Inc.](#)
 4. [Trox USA Inc.](#)
 5. <Insert manufacturer's name>.
 6. or approved equal.
- B. Standards:
1. Comply with ASHRAE 55.

- C. Description: Sheet metal with primary air plenum, secondary chilled-water coil assembly, and mounting-bracket supports suitable for **[surface mounting] [exposed hangers] [recessed mounting] [lay-in installation flush with T-bar ceiling grid]**.
- D. Components:

Coordinate first subparagraph below with "Coordination Drawings" Paragraph in "Informational Submittals" Article.

1. Other building components integrated into chilled-beam configuration including the following:
 - a. Lighting fixtures.
 - b. Air inlets and outlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. **<Insert item>**.
2. Panel: Minimum **[0.0375-inch- (0.95-mm-)] <Insert dimension>** thick, galvanized-steel sheet.
3. Factory Piping: **[ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 88, Type M (ASTM B 88M, Type C)]** copper tube with ASME B16.22 wrought-copper fittings and brazed joints.
4. Hydronic Cooling Coils: Copper tube, with mechanically bonded **[0.006-inch- (0.15-mm)]** thick, aluminum fins spaced no closer than **0.1 inch (2.5 mm)**, rated for a minimum working pressure of **200 psig (1378 kPa)** and a maximum entering-water temperature of **220 deg F (104 deg C)**. Include manual air vent and drain valve.

Retain "Electrical Connections" Subparagraph below only when electrical components are included in chilled-beam configuration for insertion into ceiling systems.

5. Electrical Connections: Nonheating, high-temperature, insulated-copper leads.

Retain "Exposed Metal Finish" Paragraph below for exposed hanger-supported chilled-beam units.

- E. Exposed Metal Finish: **[Sheet metal with baked enamel] [Silk-screened finish to match appearance of acoustical ceiling tiles as selected by DEN Project Manager] [Factory prime coated, ready for field painting]**.

Retain "Color" Subparagraph below if retaining baked-enamel finish in "Exposed Metal Finish" Paragraph above; revise to suit Project.

1. Color: Manufacturer's **[standard] [custom]** paint color as selected by DEN Project Manager.

Retain "Surface-Mounted Trim" Subparagraph below for surface-mounted chilled-beam units.

2. Surface-Mounted Trim: Sheet metal with baked-enamel finish in manufacturer's **[standard] [custom]** paint color as selected by DEN Project Manager.

If Project has more than one type or size of passive chilled beam, delete "Capacities and Characteristics" Paragraph below and schedule chilled beams on Drawings.

F. Capacities and Characteristics:

1. Nominal Panel Size: [12 by 48 inches (300 by 1200 mm)] [24 by 48 inches (600 by 1200 mm)] [12 by 96 inches (300 by 2400 mm)] [12 by 118 inches (300 by 3000 mm)] **<Insert dimensions>**.
2. Nominal Depth: [4 inches (100 mm)] [7 inches (180 mm)] **<Insert dimension>**.
3. Room Temperature: [75 deg F (24 deg C)] **<Insert temperature>**.

Cooling capacity is determined by length of unit and water temperature. Coordinate selection with nominal panel size.

4. Cooling Capacity: **<Insert Btu/h (W)>**.
5. Chilled-Water Inlet Temperature: **<Insert deg F (deg C)>**.
6. Average Chilled-Water Temperature: **<Insert deg F (deg C)>**.
7. Chilled-Water Flow: **<Insert gpm (L/s)>**.

2.3 ACTIVE CHILLED BEAMS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Dadanco USA.](#)
2. [Halton Company.](#)
3. [Semco Incorporated; a Flakt-Wood company.](#)
4. [Swegon Inc.](#)
5. [Trox USA Inc.](#)
6. [TWA Panel Systems Inc.](#)
7. **<Insert manufacturer's name>**.
8. or approved equal.

B. Standards:

1. Comply with ASHRAE 55.

In "Description" Paragraph below, retain "and heating-water coil" option for active chilled beams that include heating. Active chilled beams may include heating coils as well as the standard chilled-water coils.

C. Description: Sheet metal with primary air plenum, secondary chilled-water coil[**and heating-water coil**] assembly, and mounting-bracket supports suitable for [surface mounting] [exposed hangers] [recessed mounting] [lay-in installation flush with T-bar ceiling grid].

D. Components:

Coordinate first subparagraph below with "Coordination Drawings" Paragraph in "Informational Submittals" Article.

1. Other building components integrated into chilled-beam configuration including the following:
 - a. Lighting fixtures.
 - b. Air inlets and outlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. <Insert item>.
2. Panel: Minimum [0.0375-inch- (0.95-mm-)] <Insert dimension> thick, galvanized-steel sheet.
3. Factory Piping: [ASTM B 88, Type L (ASTM B 88M, Type B)] [ASTM B 88, Type M (ASTM B 88M, Type C)] copper tube with ASME B16.22 wrought-copper fittings and brazed joints.
4. Hydronic Coils: Copper tube, with mechanically bonded [0.006-inch- (0.15-mm-)] thick, aluminum fins spaced no closer than 0.1 inch (2.5 mm), rated for a minimum working pressure of 200 psig (1378 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.
 - a. Cooling Coil: [NPS 1/2 (DN 15)] <Insert pipe size>.
 - b. Heating Coil: [NPS 1/2 (DN 15)] <Insert pipe size>.

Active chilled beams have nozzles that direct the airflow over the coils.

5. Number of Nozzles: [Four] <Insert number>.

Retain "Electrical Connections" Subparagraph below only when electrical components are included in chilled-beam configuration for insertion into ceiling systems.

6. Electrical Connections: Nonheating, high-temperature, insulated-copper leads.

Retain "Exposed Metal Finish" Paragraph below for exposed hanger-supported chilled-beam units.

- E. Exposed Metal Finish: [Sheet metal with baked enamel] [Silk-screened finish to match appearance of acoustical ceiling tiles as selected by DEN Project Manager] [Factory prime coated, ready for field painting].

Retain "Color" Subparagraph below if retaining baked-enamel finish in "Exposed Metal Finish" Paragraph above; revise to suit Project.

1. Color: Manufacturer's [standard] [custom] paint color as selected by DEN Project Manager.

Retain "Surface-Mounted Trim" Subparagraph below for surface-mounted chilled-beam units.

2. Surface-Mounted Trim: Sheet metal with baked-enamel finish in manufacturer's [standard] [custom] paint color as selected by DEN Project Manager.

If Project has more than one type or size of active chilled beam, delete "Capacities and Characteristics" Paragraph below and schedule chilled beams on Drawings.

F. Capacities and Characteristics:

1. Nominal Panel Size: [12 by 48 inches (300 by 1200 mm)] [24 by 48 inches (600 by 1200 mm)] [12 by 96 inches (300 by 2400 mm)] [12 by 118 inches (300 by 3000 mm)] <Insert dimensions>.
2. Nominal Depth: [4 inches (100 mm)] [7 inches (180 mm)] <Insert dimension>.
3. Room Temperature for Cooling: [75 deg F (24 deg C)] <Insert temperature>.

Cooling capacity is determined by length of unit and water temperature. Coordinate selection with nominal panel size.

4. Cooling Capacity: <Insert Btu/h (W)>.
5. Chilled-Water Inlet Temperature: <Insert deg F (deg C)>.
6. Average Chilled-Water Temperature: <Insert deg F (deg C)>.
7. Chilled-Water Flow: <Insert gpm (L/s)>.
8. Room Temperature for Heating: [72 deg F (21 deg C)] <Insert temperature>.

Heating capacity is determined by length of unit and water temperature. Coordinate selection with nominal panel size.

9. Heating Capacity: <Insert Btu/h (W)>.
10. Heating-Water Inlet Temperature: <Insert deg F (deg C)>.
11. Heating-Water Flow: <Insert gpm (L/s)>.
12. Average Heating-Water Temperature: <Insert deg F (deg C)>.

2.4 CONTROLS AND SAFETIES

- A. Wall Thermostat: Bimetal sensing elements calibrated from 55 to 90 deg F (13 to 32 deg C); with contacts suitable for [low] [control]-voltage circuit, and manually operated on-off switch with contactors, relays, and control transformers.

Retain "Humidistat" Paragraph below only if active chilled beams are used in conjunction with central air-conditioning system and humidity control is included in Project.

- B. Humidistat: [Wall mounted] [Unit mounted] with [concealed] [exposed] set point and contacts suitable for [low] [control]-voltage circuit, and manually operated on-off switch with contactors, relays, and control transformers.

2.5 ACCESSORIES

- A. Purging Nipple: Copper, with threaded end connection.

Retain "clear anodized finish" option in "Chilled-Beam Unit Frame" Paragraph below only when using aluminum frames and when chilled beams are left exposed and are not part of an integrated ceiling system.

- B. Chilled-Beam Unit Frame: [Aluminum] [Steel], [clear anodized finish] [silk-screened finish to match appearance of acoustical ceiling panels selected by DEN Project Manager] [factory prime coated, ready for field painting] [baked-enamel finish].

Retain "Color" Subparagraph below if retaining baked-enamel finish in "Chilled-Beam Unit Frame" Paragraph above; revise to suit Project.

1. Color: Manufacturer's **[standard]** **[custom]** paint color, selected by DEN Project Manager.
- C. Flexible Water-Connector Hose: **[20 inches (500 mm)]** **[30 inches (750 mm)]** **[39 inches (1000 mm)]** long.
- D. Access Door: Hinged with **[four]** **<Insert number>** spring-loaded cabinet roller latches.

2.6 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

Retain first paragraph below only for chilled beams that will be finished to match adjacent materials.

- B. Finish chilled beams after assembly.
- C. Appearance of Finished Work: Variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive chilled beams for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for **[hot- and]**chilled-water piping to verify actual locations of piping connections before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install **[surface-mounted]** **[exposed hanger-mounted]** **[recessed-mounted]** **[lay-in ceiling-mounted]** chilled-beam units level and plumb.

Revise first paragraph below to delete or insert types of construction that penetrate or are supported by ceilings.

- B. Coordinate layout and installation of chilled beams and suspension-system components with other construction that penetrates ceilings or is supported by them,

including light fixtures, HVAC equipment, fire-suppression system, communications system, security system, and partition assemblies.

Retain "Seismic Restraints" Paragraph below for installation of equipment with seismic restraints.

- C. Seismic Restraints: Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- D. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- E. Comply with requirements for general-duty valves specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," Section 230523.14 "Check Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."
- F. Install continuous-thread hanger rods of size required to support chilled-beam weight.

Retain first paragraph below only when electrical components are field installed in chilled-beam configuration for insertion into ceiling systems.

- G. Comply with NECA 1.

Retain one of two "Wiring Method" paragraphs below and coordinate with Drawings. Delete both if wiring methods for system are indicated on Drawings or if chilled-beam configuration does not include electrical components.

- H. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters[**and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used**]. Conceal raceways and cables except in unfinished spaces.

Retain first subparagraph below if retaining unenclosed wiring method in "Wiring Method" Paragraph above.

- 1. Install plenum cable in environmental air spaces, including plenum ceilings.
 - 2. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
 - 3. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."
- I. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- J. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

Retain "Sprinklers" Paragraph below if sprinklers are integrated into chilled-beam configuration. Coordinate locations with wet-pipe sprinkler-system Drawings and reflected ceiling plan.

- K. Sprinklers: Comply with requirements for sprinkler-head installation in Section 211313 "Wet-Pipe Sprinkler Systems."

Retain "Lighting Fixtures" Paragraph below if lighting fixtures are integrated into chilled-beam configuration. Coordinate locations with interior-lighting Drawings and reflected ceiling plan.

- L. Lighting Fixtures: Comply with requirements for lighting-fixture installation in Section 265100 "Interior Lighting."

Retain "Speakers" Paragraph below when voice address-system speakers are integrated into chilled-beam configuration. Coordinate locations with public-address and notification-system Drawings and reflected ceiling plan.

- M. Speakers: Comply with requirements for speaker installation in Section 275116 "Public Address and Mass Notification Systems."

Retain "Intrusion-Detection Components" Paragraph below when intrusion-detection-system components are integrated into chilled-beam configuration. Coordinate locations with intrusion-detection system Drawings and reflected ceiling plan.

- N. Intrusion-Detection Components: Comply with the requirements for detection sensor installation in Section 281600 "Intrusion Detection."

Retain "Security Components" Paragraph below when video surveillance cameras are integrated into chilled-beam configuration.

- O. Security Components: Comply with requirements for video-camera installation in Section 282300 "Video Surveillance."

3.3 CONNECTIONS

Coordinate piping and ductwork installations with Drawings and with requirements specified in piping and ductwork systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to chilled beams, allow space for service and maintenance.
- C. Comply with requirements for ductwork specified in [**Section 233113 "Metal Ducts."**] [**Section 233116 "Nonmetal Ducts."**] [**Section 233113 "Metal Ducts" and Section 233116 "Nonmetal Ducts."**] Drawings indicate general arrangement of ductwork.

Coordinate first paragraph below with Drawings.

- D. Make piping and ductwork connections through [**right side**] [**left side**] [**top**] [**end**] of chilled-beam unit.

- E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 IDENTIFICATION

Retain first paragraph below when chilled-beam configuration includes electrical components.

- A. Identify electrical-system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Identify hydronic piping and valves. Comply with requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.5 FIELD QUALITY CONTROL

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Test and adjust thermostatic controls and equipment. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- C. Chilled beam will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.6 ADJUSTING

Humidity can only be controlled if active chilled beams are used with a central air-conditioning system. Retain "and humidity " option in first paragraph below if a central air-conditioning system is included in Project.

- A. Adjust initial temperature [**and humidity**] set points.
- B. Occupancy Adjustments: When requested within [12] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238245

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238313 - RADIANT-HEATING ELECTRIC CABLES

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes electric heating cables for ceiling or floor radiant heating, snow and ice melting on pavement, and freezer-floor frost-heave prevention with the following electric heating cables:
 - 1. Mineral insulated, series resistance.
 - 2. Plastic insulated, series resistance.
 - 3. Self-regulating, parallel resistance.
- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 210533 "Heat Tracing for Fire-Suppression Piping."
- 2. Section 220533 "Heat Tracing for Plumbing Piping."

3. Section 230533 "Heat Tracing for HVAC Piping."
4. Section 238213 "Valance Heating and Cooling Units" for factory-fabricated electric heating panels for ceiling and wall applications.
5. Section 238323 "Radiant-Heating Electric Panels."

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PRE-INSTALLATION CONFERENCE

Select one below. First number is minimum required.

- A. Convene **<one (1)>** **<Insert number>** week prior to commencing work of this Section at **[specify location]** **[location and time as determined by DEN Project Manager]**.
- B. Require attendance of parties directly affecting the work of this Section.
- C. Review sequencing of installation, protection from damage of finished installation, location and characteristics of electrical supply provisions to be provided as Division 26 work, and methods used for covering installations with insulation.

1.4 PERFORMANCE REQUIREMENTS

- A. Pipe Trace Heating: Freeze protection with outside temperature at **<Insert number>** degrees F.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 2. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For electric **<heating cable>** **<and>** **<mat>**, layout, locations of terminations, thermostats, and branch circuit connections..
 1. Include plans, sections, details, and attachments to other work.
 2. Include diagrams for power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

Revise subparagraphs below to suit Project.

1. Ceiling suspension assembly members.
2. Method of attaching hangers to building structure.
3. Items installed in finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Perimeter moldings.
 - g. <Insert item>.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Edit below to suit Project.

1. Accurately record actual locations of [heating cable,] [mat,] [temperature sensors,] [thermostats,] and branch circuit connections.

1.8 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for electric heating cable.

1. Warranty Period: Minimum [ten (10)] [fifteen (15)] <Insert number> years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 GENERAL REQUIREMENTS FOR ELECTRIC HEATING CABLES

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. General: Furnish and install a complete UL-listed system of heating cables, components, and controls to prevent pipelines from freezing.
- C. Products: The self-regulating heating cable shall consist of two (2) 16 AWG tinned-copper bus wires embedded in parallel in a self-regulating polymer core that varies its power output to respond to temperature all along its length, allowing the heating cable to be cut to length in the field. The heating cable shall be covered by a radiation-crosslinked, modified polyolefin dielectric jacket. To provide a ground path and to enhance the heating cable's ruggedness, the heating cable shall have a braid of tinned-copper and an outer jacket of [modified polyolefin (-CR)] [or] [fluoropolymer (-CT)], as required per section 427-23 of the NEC-1999.
- D. In order to conserve energy and to prevent overheating, the heating cable shall have a self-regulating factor of at least 90 percent. The self-regulation factor is defined as the

percentage reduction, without thermostatic control, of the heating cable output going from 40 degrees F pipe temperature operation to 150 degrees F pipe temperature operation.

- E. Heating cable shall be selected and applied according to the table below. The required heating cable output rating is in watts per foot at 50 degrees F. The indicated heating cable selection based on installation under 1" fiberglass insulation on metal piping.

Pipe Size (inches):	Minimum Ambient Temperatures:	
	-10 degrees F	-20 degrees F
3 or smaller	5 watts	5 watts
4	5 watts	8 watts
6	8 watts	8 watts
8	2 strips - 5 watts	2 strips- 8 watts
12 to 14	2 strips - 8 watts	2 strips - 8 watts

- F. Power connection, end seal, splice, and tee kit components shall be applied in the field.
- G. Heating cable circuit shall be protected by a ground fault device for equipment protection, in accordance with section 427-22 of the NEC-1999.

2.2 MINERAL-INSULATED, SERIES-RESISTANCE HEATING CABLES

Retain this article for snow melting on pavement.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Chromalox](#).
 2. [Delta-Therm Corporation](#).
 3. [Easy Heat; a division of EGS Electrical Group LLC](#).
 4. [Nelson Heat Trace; a division of EGS Electrical Group LLC](#).
 5. [Pyrotenax; a brand of Tyco Thermal Controls LLC](#).
 6. [Raychem; a brand of Tyco Thermal Controls LLC](#).
 7. [Trasor Corp](#).
 8. [Watts Radiant, Inc.; a subsidiary of Watts Water Technologies, Inc](#).
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Comply with UL 1673.
- C. Heating Element: Single- or dual-conductor resistor wire. Terminate with waterproof, factory-assembled, nonheating leads with connectors at both ends.
- D. Electrical Insulating Mineral: Magnesium oxide.

Outer jacket in "Cable Cover" Paragraph below is optional feature and is required for waterproof applications; verify availability with manufacturer.

- E. Cable Cover: Copper-nickel alloy[**and high-density polyethylene outer jacket**].
- F. Maximum Operating Temperature: [300 deg F (150 deg C)] **<Insert temperature>**.

If Project has more than one type or configuration of electric heating cable, delete "Capacities and Characteristics" Paragraph below and schedule on Drawings. See Evaluations for sample schedule.

- G. Capacities and Characteristics:
 - 1. Maximum Heat Output: [6 W/ft. (19.7 W/m)] [7.5 W/ft. (24.6 W/m)] **<Insert value>**.
 - 2. Spacing: **<Insert inches (mm)>**.
 - 3. Electrical Characteristics for Single-Circuit Connection:

Verify available voltages, phase, and heat-output ratings with manufacturer. Most manufacturers supply this product in single phase only.

- a. Volts: [120] [208] [240] [277] [480] **<Insert value>**.
- b. Phase: **<Insert value>**.
- c. Hertz: **<Insert value>**.
- d. Full-Load Amperes: **<Insert value>**.
- e. Minimum Circuit Ampacity: **<Insert value>**.
- f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.3 PLASTIC-INSULATED, SERIES-RESISTANCE HEATING CABLES

Retain this article for ceiling and floor radiant heating, freezer-floor frost-heave prevention, and snow and ice melting on pavement. Some manufacturers limit use of this product to stone, ceramic tile, or concrete floors.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Delta-Therm Corporation.
 - 2. Easy Heat; a division of EGS Electrical Group LLC.
 - 3. Nuheat Industries Ltd.
 - 4. Orbit Manufacturing.
 - 5. Pyrotenax; a brand of Tyco Thermal Controls LLC.
 - 6. Raychem; a brand of Tyco Thermal Controls LLC.
 - 7. WarmlyYours Inc.
 - 8. Watts Radiant, Inc.; a subsidiary of Watts Water Technologies, Inc.
 - 9. **<Insert manufacturer's name>**.
 - 10. or approved equal.
- B. Comply with UL 1673.

- C. Heating Element: Single resistor wire. Terminate with waterproof, factory-assembled, nonheating leads with connectors at both ends.
- D. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone or Tefzel.

Outer jacket in "Cable Cover" Paragraph below is optional feature and is required for waterproof applications; verify availability with manufacturer.

- E. Cable Cover: [Aluminum] [Stainless-steel] [Nickel] braid[with silicone or Hylar outer jacket].
- F. Maximum Operating Temperature: [300 deg F (150 deg C)] <Insert temperature>.

Retain "Cable-Heated Mats" Paragraph below for heating cables in factory-fabricated mats. Indicate length and spacing of cables on Drawings.

- G. Cable-Heated Mats: Factory-fabricated cable and fiberglass or plastic mesh with uniform [1-1/2-inch (38-mm)] [3-inch (76-mm)] <Insert dimension> cable spacing, in [18-inch (457-mm)] [36-inch (914-mm)] <Insert dimension> widths.

If Project has more than one type or configuration of electric heating cable, delete "Capacities and Characteristics" Paragraph below and schedule on Drawings. See Evaluations for sample schedule.

- H. Capacities and Characteristics:

Retain "Maximum Heat Output (Cable)" Subparagraph below for loose-laid heating cables.

- 1. Maximum Heat Output (Cable): [6 W/ft. (19.7 W/m)] [7.5 W/ft. (24.6 W/m)] <Insert value>.

Retain "Maximum Heat Output (Mat)" Subparagraph below for heating cables in factory-fabricated mats. Heat output depends on spacing of the heating cables within the mat. Verify output capacities with manufacturers.

- 2. Maximum Heat Output (Mat): [12 W/sq. ft. (129 W/sq. m)] [16 W/sq. ft. (172 W/sq. m)] <Insert value>.

Retain "Spacing" Subparagraph below for cable-heated mats.

- 3. Spacing: <Insert inches (mm)>.
- 4. Electrical Characteristics for Single-Circuit Connection:

Verify available voltages, phase, and heat-output ratings with manufacturer. Most manufacturers supply this product in single phase only.

- a. Volts: [120] [208] [240] [277] [480] <Insert value>.
- b. Phase: <Insert value>.
- c. Hertz: <Insert value>.
- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

2.4 SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES

Retain this article for ceiling and floor radiant heating, freezer-floor frost-heave prevention, and snow and ice melting on pavement.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [BriskHeat](#).
 2. [Chromalox](#).
 3. [Delta-Therm Corporation](#).
 4. [Easy Heat; a division of EGS Electrical Group LLC](#).
 5. [Nelson Heat Trace; a division of EGS Electrical Group LLC](#).
 6. [Pyrotenax; a brand of Tyco Thermal Controls LLC](#).
 7. [Raychem; a brand of Tyco Thermal Controls LLC](#).
 8. [Thermon Americas Inc.](#)
 9. [Trasor Corp.](#)
 10. **<Insert manufacturer's name>**.
 11. or approved equal.
- B. Comply with UL 1673.
- C. Heating Element: Pair of parallel **[No. 16] [No. 18]** AWG, **[tinned] [nickel-coated]**, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled, nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
- D. Electrical Insulating Jacket: Flame-retardant polyolefin.

Outer jacket in "Cable Cover" Paragraph below is optional feature and is required for waterproof applications; verify availability with manufacturer.

- E. Cable Cover: **[Tinned-copper] [Stainless-steel]** braid **[with polyolefin outer jacket with ultraviolet inhibitor]**.
- F. Maximum Operating Temperature: **[300 deg F (150 deg C)] <Insert temperature>**.

Retain "Cable-Heated Mats" Paragraph below for heating cables in factory-fabricated mats. Indicate length and spacing of cables on Drawings.

- G. Cable-Heated Mats: Factory-fabricated cable and fiberglass or plastic mesh with uniform **[1-1/2-inch (38-mm)] [3-inch (76-mm)] <Insert dimension>** cable spacing, in **[18-inch (457-mm)] [36-inch (914-mm)] <Insert dimension>** widths.

If Project has more than one type or configuration of electric heating cable, delete "Capacities and Characteristics" Paragraph below and schedule on Drawings. See Evaluations for sample schedule.

H. Capacities and Characteristics:

Retain "Maximum Heat Output (Cable)" Subparagraph below for loose-laid heating cables.

1. Maximum Heat Output (Cable): [3 W/ft. (9.8 W/m)] [5 W/ft. (16.4 W/m)] [8 W/ft. (26 W/m)] [10 W/ft. (32.8 W/m)] [12 W/ft. (39.4 W/m)] <Insert value>.

Retain "Maximum Heat Output (Mat)" Subparagraph below for heating cables in factory-fabricated mats. Heat output depends on spacing of the heating cables within the mat. Verify output capacities with manufacturers.

2. Maximum Heat Output (Mat): [6 W/sq. ft. (65 W/sq. m)] [12 W/sq. ft. (129 W/sq. m)] [16 W/sq. ft. (172 W/sq. m)] [24 W/sq. ft. (260 W/sq. m)] <Insert value>.

Retain "Spacing" Subparagraph below for cable-heated mats.

3. Spacing: <Insert inches (mm)>.
4. Electrical Characteristics for Single-Circuit Connection:

Verify available voltages, phase, and heat-output ratings with manufacturer. Most manufacturers supply this product in single phase only.

- a. Volts: [120] [208] [240] [277] [480] <Insert value>.
- b. Phase: <Insert value>.
- c. Hertz: <Insert value>.
- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

2.5 CONTROLS

Retain first paragraph below and delete remainder of this article to specify temperature controls in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC." Delete first paragraph and retain remaining paragraphs to require controls integral to the radiant-heating electric cables to be provided by cable manufacturer.

- A. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC" for control devices and sequence of operations for radiant-heating electric cables.

Retain "Wall-Mounted Thermostats for Ceiling and Floor Heating Cables" Paragraph below for room-temperature control of electric cables in ceilings and floors.

- B. Wall-Mounted Thermostats for Ceiling and Floor Heating Cables:
 1. Minimum temperature range from [50 to 90 deg F (10 to 32 deg C)] <Insert temperature range>.
 2. Manually operated with on-off switch.

Retain "Precipitation and Temperature Sensor for Snow Melting on Pavement" Paragraph below to operate electric heating cable for snow melting on pavement.

- C. Precipitation and Temperature Sensor for Snow Melting on Pavement:

1. **[Microprocessor-based] [Automatic]** control with manual on, automatic, and standby/reset switch.
2. Precipitation and temperature sensors shall sense the surface conditions of pavement and shall be programmed to energize the cable as follows:

Retain and revise features in "Temperature Span," "Adjustable Delay-Off Span," "Energize Cables," and "De-Energize Cables" subparagraphs below to suit Project. Verify available features with manufacturer.

- a. Temperature Span: [34 to 44 deg F (1 to 7 deg C)] **<Insert temperature range>**.
 - b. Adjustable Delay-Off Span: [30 to 90] **<Insert time>** minutes.
 - c. Energize Cables: Following [two] **<Insert time>**-minute delay if ambient temperature is below set point and precipitation is detected.
 - d. De-Energize Cables: On detection of a dry surface plus time delay.
3. Corrosion-proof and waterproof enclosure suitable for outdoor mounting, for controls and precipitation and temperature sensors.
 4. Minimum 30-A contactor to energize cable or close other contactors.
 5. Provide relay with contacts to indicate operational status, on or off, for interface with central HVAC control-system workstation.

2.6 ACCESSORIES

- A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
- B. Embedded Heating-Cable Identification:

Retain one of three subparagraphs below.

1. Flush-mounted cast-iron boxes with identification on lid according to NFPA 70.
2. Mechanically fastened [metal] [plastic] signage with identification according to NFPA 70 and complying with requirements in [Section 101416 "Plaques."] [Section 101419 "Dimensional Letter Signage."] [Section 101423 "Panel Signage."]
3. Mechanically fastened [metal] [plastic] [concrete] post-mounted signage with identification according to NFPA 70 and complying with requirements in [Section 101416 "Plaques."] [Section 101419 "Dimensional Letter Signage."] [Section 101423 "Panel Signage."]

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and substrates to receive electric heating cables or cable-heated mats for compliance with requirements for installation tolerances and other conditions affecting performance.

1. Ensure surfaces in contact with electric heating cables or cable-heated mats are free of burrs and sharp protrusions.
 2. Ensure surfaces and substrates are level and plumb.
- B. Verify field measurements are as shown on **[shop drawings] [Drawings]**.
- C. Verify that required utilities are available, in proper location, and ready for use.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.
- E. Beginning of installation means installer accepts conditions.

3.2 APPLICATIONS

Applications in this article are typical uses for each type of electric heating cable. Consult manufacturers for other applications.

- A. Install the following types of electric heating cable for the applications described:
1. Ceiling Radiant Heating: **[Plastic-insulated, series-resistance] [Self-regulating, parallel-resistance]** heating cable.
 2. Floor Radiant Heating: **[Plastic-insulated, series-resistance] [Self-regulating, parallel-resistance]** heating cable.
 3. Snow and Ice Melting on Pavement: **[Mineral-insulated, series-resistance] [Plastic-insulated, series-resistance] [Self-regulating, parallel-resistance]** heating cable.
 4. Freezer-Floor Frost-Heave Prevention: **[Plastic-insulated, series-resistance] [Self-regulating, parallel-resistance]** heating cable.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Bending Radius: Six times cable diameter, minimum.
- C. Avoid pinching and making sharp bends in cable. Prevent damage by sharp rocks, metal, or other objects during installation.
- D. Do not install heating cable across piping expansion joints.
- E. Do not cross heating cable over itself.
- F. A tinned copper braid shall be used to provide an effective ground path on painted, stainless, or plastic pipes or tanks.
- G. Cable ends, splices and junction boxes shall be properly sealed to prevent moisture entry.

Indicate location of controls on Drawings.

- H. Install electric heating cable or cable-heated mats across expansion, construction, and control joints according to manufacturer's written instructions; use cable-protection conduit and slack cable to allow movement without damage to cable.
- I. Do not energize cables embedded in concrete or plaster until those assemblies are cured.

Coordinate "Electric Heating-Cable Installation for Ceiling Radiant Heating" Paragraph below with Drawings. Indicate details of how cable-heating array is installed in ceiling.

- J. Electric Heating-Cable Installation for Ceiling Radiant Heating: Install heating cable or cable-heated mat with heat-conductive fill materials such as plaster to ensure direct contact with finished radiant surfaces.

Coordinate "Electric Heating-Cable Installation for Floor Radiant Heating" Paragraph below with Drawings. Indicate details of how cable-heating array is installed in floor.

- K. Electric Heating-Cable Installation for Floor Radiant Heating: Install heating cable or cable-heated mat with heat-conductive fill materials such as concrete to ensure direct contact with finished radiant surfaces.

- L. Electric Heating-Cable or Cable-Heated-Mat Installation for Snow and Ice Melting in Pavement:

- 1. Install heating cable or cable-heated mat with heat-conductive fill materials such as asphalt or concrete to ensure direct contact with finished radiant surfaces.

Retain first subparagraph below for asphalt paving.

- 2. Install cables or cable-heated mats after applying bituminous binder course to lower base; ensure that second bituminous binder course is applied to cables or mats before pouring finish topping.

Retain first subparagraph below to require a flush-mounted box to identify embedded heating array. Coordinate with paving Sections.

- 3. Install embedded electric heating-cable or cable-heated-mat identification box where indicated in pavement before pavement work is completed.

Retain first subparagraph below for cast-in-place concrete paving and to require embedded heating array to be identified by stamping.

- 4. Stamp concrete with embedded electric heating-cable or cable-heated-mat identification according to NFPA 70 and complying with requirements in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]

Consider pavement-mounted sensor for snow melting on pavement.

- 5. Mount precipitation sensor in pavement.

- M. Electric Heating-Cable Installation for Freezer-Floor Frost-Heave Prevention: Install electric heating cable or cable-heated mat below insulation in subsoil.

Retain first subparagraph below to require a flush-mounted box to identify embedded heating array. Coordinate with finished floor work.

1. Install embedded electric heating-cable or cable-heated-mat identification box where indicated.

embedded electric heating-cable or cable-heated-mat identification

2. Install embedded electric heating-cable or cable-heated-mat identification according to NFPA 70 on adjacent structure and complying with requirements in **[Section 101416 "Plaques.]" [Section 101419 "Dimensional Letter Signage.]" [Section 101423 "Panel Signage.]**
3. Install embedded electric heating-cable or cable-heated-mat identification according to NFPA 70 on **[metal] [wood] [concrete]** post and complying with requirements in **[Section 101416 "Plaques.]" [Section 101419 "Dimensional Letter Signage.]" [Section 101423 "Panel Signage.]**

Retain subparagraph below to require embedded heating array to be identified by stamping.

4. Stamp concrete with embedded electric heating-cable or cable-heated-mat identification according to NFPA 70 and complying with requirements in **[Section 033000 "Cast-in-Place Concrete.]" [Section 033053 "Miscellaneous Cast-in-Place Concrete.]**

- N. Set field-adjustable switches and circuit-breaker trip ranges.

3.4 INSTALLATION - ELECTRICAL HEAT TRACING FOR PIPELINES

- A. Apply the heating cable linearly on the pipe after piping has been successfully pressure-tested. Secure the heating cable to piping with cable ties or fiberglass tape.
- B. Apply "Electrically Heat Traced" legend to the outside of the thermal insulation; refer to Section 260553 "Identification for Electrical Systems".
- C. Tests: After installation and before and after installing the thermal insulation, subject heating cable to testing using a 2500 VDC Megger. Minimum insulation resistance shall be 20 to 1000 megohms regardless of length.

3.5 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.6 FIELD QUALITY CONTROL

Retain "Testing Agency," "Manufacturer's Field Service," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph or if retaining "Manufacturer's Field Service" or "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
 2. Test cables for electrical continuity and insulation integrity before energizing.
 3. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
 4. Measure insulation resistance to manufacturer's recommended values. Use test instruments in accordance with manufacturer's instructions.
 5. Perform continuity and insulation resistance test on completed cable installation.
 6. Measure voltage and current at each unit.
- D. Repeat tests for continuity, insulation resistance, and input power after applying finished surface on heating cables.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- E. Radiant-heating electric cables will be considered defective if they do not pass tests and inspections.
- F. Make required corrections and re-test system.
- G. Prepare test and inspection reports.

3.7 PROTECTION

- A. Protect installed heating cables, including nonheating leads, from damage during construction.
- B. Remove and replace damaged radiant-heating electric cables and cable-heated mats.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238313

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238316 - RADIANT-HEATING HYDRONIC PIPING

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes radiant-heating piping, including pipes, fittings, and piping specialties.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. CWP: Cold working pressure.
- B. PEX: Crosslinked polyethylene.
- C. PEX/AL/PEX: Crosslinked polyethylene/aluminum/crosslinked polyethylene.
- D. PTFE: Polytetrafluoroethylene plastic.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data for piping, fittings, valves, manifolds, specialties, and controls; include pressure and temperature ratings, oxygen-barrier performance, fire-performance characteristics, and water-flow and pressure-drop characteristics.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Show piping layout and details drawn to scale, including valves, manifolds, controls, and support assemblies, and their attachments to building structure.
 - 1. Shop Drawing Scale: [1/4 inch = 1 foot (1:50)] **<Insert scale>**.

1.5 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Suspended ceiling components.
 - 2. Structural members to which radiant-heating piping will be attached.
 - 3. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.

- e. Access panels.
- f. **<Insert item>**.

4. Perimeter moldings.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For radiant-heating piping valves and equipment to include in operation and maintenance manuals. Include installation instructions, spare parts lists, exploded assembly views.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

- 1. Record actual locations of [**valves, valve pits and manifolds.**] **<Insert other.>**

1.7 QUALITY ASSURANCE

- A. Conform to ASME B31.9 code for installation of piping system.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect, and handle products under provisions of Section 230400 "Basic HVAC Requirements" and Division 1.
- B. Accept materials on site in shipping containers with labeling in place. Inspect for damage.
- C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
- D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

1.9 WARRANTY

Coordinate warranty requirements with DEN Project Manager.

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements".
- B. Tubing shall carry a twenty-five (25) year non-prorated warranty against failure due to defect in material and workmanship. Manifolds and other ancillary components shall be warranted for eighteen (18) months from date of shipment.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

Piping, fittings, and materials described herein are generally restricted to 150 psig working steam pressure (WSP). For other pressure and temperature ratings, additional specifications and restrictions may be required

2.1 PEX PIPE AND FITTINGS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [FloorHeat Company \(The\).](#)
 2. [Heat Innovations Inc.](#)
 3. [HeatLink Group Inc.](#)

 5. [IPEX Inc.](#)
 6. [Mr Pex Systems Inc.](#)
 7. [REHAU Incorporated.](#)
 8. [Slant/Fin Corporation.](#)
 9. [Uponor.](#)
 10. [Viega LLC.](#)
 11. [Warmboard Inc.](#)
 12. [Watts Radiant, inc.; a Watts Water Technologies company.](#)
 13. [Zurn Industries, LLC; Zurn Pex, Inc.](#)
 14. **<Insert manufacturer's name>.**
 15. or approved equal.
- B. Pipe Material: PEX plastic according to ASTM F 876.

See discussion in the Evaluations about oxygen barrier in "Oxygen Barrier" Paragraph below. The referenced standard is the only standard used by plastic-tubing manufacturers that describes how to test and measure oxygen diffusion in plastic tube. It is a German national standard and is available in English; see the Evaluations for information about where it can be obtained.

- C. Oxygen Barrier: Limit oxygen diffusion through the tube to maximum 0.10 mg per cu. m/day at **104 deg F** (40 deg C) according to DIN 4726.
- D. Fittings: ASTM F 1807, metal insert and copper crimp rings.
- E. Pressure/Temperature Rating: Minimum **100 psig** (690 kPa) and **180 deg F** (82 deg C).

2.2 PEX/AL/PEX PIPE AND FITTINGS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Heat Innovations Inc.](#)
 - 2. [IPEX Inc.](#)
 - 3. [Uponor.](#)
 - 4. [Viega LLC.](#)
 - 5. **<Insert manufacturer's name>**.
 - 6. or approved equal.
- B. Pipe Material: PEX plastic bonded to the inside and outside of a welded aluminum tube according to ASTM F 1281.

See discussion in the Evaluations about oxygen barrier in "Oxygen Barrier" Paragraph below. The referenced standard is the only standard used by plastic-tubing manufacturers that describes how to test and measure oxygen diffusion in plastic tube. It is a German national standard and is available in English; see the Evaluations for information about where it can be obtained.

- C. Oxygen Barrier: Limit oxygen diffusion through the pipe to maximum 0.10 mg per cu. m/day at **104 deg F** (40 deg C) according to DIN 4726.
- D. Fittings: ASTM F 1974, metal insert fittings with split ring and compression nut (compression joint) or metal insert fittings with copper crimp rings (crimp joint).
- E. Flame-Spread and Smoke-Developed Indices: 25 and 50 or less, respectively, tested according to ASTM E 84.
- F. Pressure/Temperature Rating: Minimum **100 psig** (690 kPa) and **210 deg F** (99 deg C).

2.3 EPDM PIPE AND FITTINGS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Watts Radiant, inc.; a Watts Water Technologies company.](#)

2. **<Insert manufacturer's name>**.
 3. or approved equal.
- B. Pipe Material: Crosslinked EPDM inner and outer tubes.
- C. Wall Thickness: Minimum **0.125 inch** (3.2 mm).

See discussion in the Evaluations about oxygen barrier in "Oxygen Barrier" Paragraph below. The referenced standard is the only standard used by plastic-tubing manufacturers that describes how to test and measure oxygen diffusion in plastic tube. It is a German national standard and is available in English; see the Evaluations for information about where it can be obtained.

- D. Oxygen Barrier: Ductile aluminum foil layer applied to the inner tube to limit oxygen diffusion through the pipe to maximum 0.10 mg per cu. m/day at **104 deg F** (40 deg C) according to DIN 4726.
- E. Reinforcing Braid: Braided-aluminum wire between the inner and outer tube.
- F. Fittings: ASTM F 1807, copper with stainless-steel crimps or clamps.
- G. Pressure/Temperature Rating: Minimum **100 psig** (690 kPa) and **210 deg F** (99 deg C).

2.4 DISTRIBUTION MANIFOLDS

- A. Manifold: Minimum **NPS 1** (DN 25), **[brass] [copper] [modular plastic] [or] [stainless steel]**.

Some plastic modular manifolds do not have main shutoff valves. Each piping loop on manifold has its own supply and return shutoff.

- B. Main Shutoff Valves:
1. Factory installed on supply and return connections.
 2. **[Two] [Three]**-piece body.
 3. Body: Brass or bronze.
 4. Ball: Chrome-plated bronze.
 5. Seals: PTFE.
 6. CWP Rating: **150 psig** (1035 kPa).
 7. Maximum Operating Temperature: **225 deg F** (107 deg C).
- C. Manual Air Vents:
1. Body: Bronze.
 2. Internal Parts: Nonferrous.
 3. Operator: Key furnished with valve, or screwdriver bit.
 4. Inlet Connection: **NPS 1/2** (DN 15).
 5. Discharge Connection: **NPS 1/8** (DN 6).
 6. CWP Rating: **150 psig** (1035 kPa).
 7. Maximum Operating Temperature: **225 deg F** (107 deg C).

D. Balancing Valves:

1. Body: Plastic or bronze, ball or plug, or globe cartridge type.
2. Ball or Plug: Brass or stainless steel.
3. Globe Cartridge and Washer: Brass with EPDM composition washer.
4. Seat: PTFE.

Retain "Visual Flow Indicator" or "Differential Pressure Gage Connections" Subparagraph below.

5. Visual Flow Indicator: Flowmeter with visible indication in a clear plastic cap at top of valve.
6. Differential Pressure Gage Connections: Integral seals for portable meter to measure loss across calibrated orifice.
7. Handle Style: Lever or knob, with memory stop to retain set position if used for shutoff.
8. CWP Rating: Minimum 125 psig (860 kPa).
9. Maximum Operating Temperature: 250 deg F (121 deg C).

E. Zone Control Valves:

1. Body: Plastic or bronze, ball or plug, or globe cartridge type.
2. Ball or Plug: Brass or stainless steel.
3. Globe Cartridge and Washer: Brass with EPDM composition washer.
4. Seat: PTFE.
5. Actuator: Replaceable electric motor.
6. CWP Rating: Minimum 125 psig (860 kPa).
7. Maximum Operating Temperature: 250 deg F (121 deg C).

F. Thermometers:

1. Mount on supply and return connections.
2. Case: Dry type, metal or plastic, [2-inch (50-mm)] <Insert dimension> diameter.
3. Element: Bourdon tube or other type of pressure element.
4. Movement: Mechanical, connecting element and pointer.
5. Dial: Satin-faced, nonreflective aluminum with permanently etched scale markings.
6. Pointer: Black metal.
7. Window: Plastic.
8. Connector: Rigid, back type.
9. Thermal System: Liquid- or mercury-filled bulb in copper-plated steel, aluminum, or brass stem.
10. Accuracy: Plus or minus 1 percent of range or plus or minus 1 scale division to maximum of 1.5 percent of range.

G. Mounting Brackets: Copper, or plastic- or copper-clad steel, where in contact with manifold.

2.5 PIPING SPECIALTIES

Cable ties are used to tie piping to reinforcing wire or bars in concrete floors.

A. Cable Ties:

1. Fungus-inert, self-extinguishing, one-piece, self-locking, Type 6/6 nylon cable ties.
2. Minimum Width: **1/8 inch** (3 mm).
3. Tensile Strength: **20 lb** (9 kg), minimum.
4. Temperature Range: **Minus 40 to plus 185 deg F** (Minus 40 to plus 85 deg C).

Floor mounting staples are used to attach piping to floor, wall, or ceiling substrate.

B. Floor Mounting Staples:

1. Steel, with corrosion-resistant coating and smooth finish without sharp edges.
2. Minimum Thickness: **3/32 inch** (2.4 mm).
3. Width: Minimum, wider than tubing.

Floor mounting clamps are used to attach piping to floor, wall, or ceiling substrate.

C. Floor Mounting Clamps:

1. Two bolts, steel, with corrosion-resistant coating and smooth finish without sharp edges.
2. Minimum Thickness: **3/32 inch** (2.4 mm).
3. Width: Minimum, wider than tubing.

Floor mounting tracks are used to control spacing and attach piping to floor, wall, or ceiling substrate.

D. Floor Mounting Tracks:

1. Aluminum or plastic channel track with smooth finish and no sharp edges.
2. Minimum Thickness: **1/16 inch** (1.6 mm).
3. Slot Width: Snap fit to hold tubing.
4. Slot Spacing: [**2-inch** (50-mm)] [**3-inch** (75-mm)] **<Insert dimension>** intervals.

Grooved panels are used to control pipe spacing and to attach and maintain pipe contact with subfloor. Subfloor in "Channeled Subfloor" Paragraph below is a proprietary product of Warmboard.

E. Channeled Subfloor:

1. Plywood, APA-rated subfloor panel, composed of premium, tongue-and-groove, seven-layer, Douglas fir structural subfloor panels.
2. Particleboard manufactured to comply with Federal Housing Authority standards of less than 0.3-ppm formaldehyde.
3. Clad panel with minimum **0.025-inch-** (0.635-mm-) thick aluminum recessed in the grooves sized to maintain contact with radiant piping.

Modular interlocking blocks are used to control pipe spacing and to maintain pipe contact with subfloor.

F. Modular Interlocking Blocks:

1. Polypropylene snap-together blocks with grooves to support piping.

2. Galvanized sheet metal or aluminum emission plates.
3. Natural mineralboard cover panel.

Heat-emission plates are required for joist-space piping installation below the occupied space.

G. Heat-Emission Plates:

1. Formed aluminum suitable for radiant-heating piping.
2. Minimum Thickness: **1/16 inch** (1.6 mm).
3. Slot Width: Snap fit to maintain pressure fit on tubing.

2.6 CONTROLS

Retain first paragraph below and delete remainder of this article if controls are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

- A. Temperature-control devices and sequence of operations are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."
- B. Provide system to accomplish the Sequence of Operation described [**in Section 230993.11 "Sequence of Operation for HVAC DDC"**] [**or as indicated on the drawings**].

Edit paragraph below to suit requirements.

- C. Provide control system packaged in a NEMA1 enclosure. System shall have LED display of actual and set point temperatures, [**inputs for "snow" sensor,**] [**supply**] [**and**] [**return water temperatures,**] [**boiler return sensor**] [**adjustable idle and melt set points,**] [**adjustable minimum system run time,**] [**adjustable minimum boiler return temperature set point,**] [**adjustable maximum system supply temperature set point,**] [**adjustable cold weather cut off**] [**adjustable system temperature difference,**] [**outputs for [motorized valve,**] [**burner,**] [**pumps],,**] [**alarm output**] [**remote communication option**].
- D. Control system shall be UL and CSA approved.

Retain and revise remainder of this article to specify controls in this Section.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- E. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. [Danfoss Inc.](#)
 2. [HeatLink Group Inc.](#)
 3. [Honeywell International Inc.](#)
 4. [Infloor Radiant Floor Heating.](#)

5. [IPEX Inc.](#)
6. [REHAU Incorporated.](#)
7. [Slant/Fin Corporation.](#)
8. [tekmar Control Systems, Ltd.](#)
9. [Uponor.](#)
10. [Viega LLC.](#)
11. [Watts Radiant, inc.: a Watts Water Technologies company.](#)
12. [Zurn Industries, LLC; Zurn Pex, Inc.](#)
13. **<Insert manufacturer's name>.**
14. or approved equal.

Retain "Wall-Mounted Thermostat" Paragraph below for room temperature control of radiant panels in ceilings and floors.

F. Wall-Mounted Thermostat:

1. Minimum temperature range from [50 to 90 deg F (10 to 32 deg C)] **<Insert temperature range>.**
2. Manually operated with on-off switch.
3. Day and night setback and clock program with minimum four periods per day.
4. Operate pumps or open zone control valves if room temperature falls below the thermostat setting, and stop pumps or close zone control valves when room temperature rises above the thermostat setting.

Retain "Heated-Panel Thermostat" Paragraph below to limit temperature a heated panel will achieve to satisfy room thermostat.

G. Heated-Panel Thermostat:

1. Remote bulb unit with adjustable temperature range from [50 to 90 deg F (10 to 32 deg C)] **<Insert temperature range>.**
2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected pump or zone control valve.
3. Remote bulb on capillary tube, resistance temperature device, or thermistor for directly sensing radiant-panel temperature.
4. Stop pump or close zone control valves if heated-panel thermostat setting is exceeded.
5. Corrosion-resistant, waterproof control enclosure.

Retain "Heated-Panel Thermostat with Outdoor Temperature Reset" Paragraph below to limit temperature a heated panel will achieve to satisfy room thermostat and limit supply-water temperatures within outdoor temperature ranges.

H. Heated-Panel Thermostat with Outdoor Temperature Reset:

1. Remote bulb unit with adjustable temperature range from [50 to 90 deg F (10 to 32 deg C)] **<Insert temperature range>.**
2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected pump or zone control valve.
3. Remote bulb on capillary tube, resistance temperature device, or thermistor for directly sensing radiant-panel and outdoor-air temperature.

4. Operate zone control valves to reset supply-water temperature inversely with outdoor-air temperature as follows:
 - a. Low outdoor-air temperature, [zero deg F (minus 18 deg C)] **<Insert temperature>** with high supply-water temperature [110 deg F (43 deg C)] **<Insert temperature>**.
 - b. High outdoor-air temperature, [60 deg F (16 deg C)] **<Insert temperature>** with low supply-water temperature [70 deg F (21 deg C)] **<Insert temperature>**.
5. Corrosion-resistant, waterproof control enclosure.

Retain "Precipitation and Temperature Sensor" Paragraph below to operate radiant-heating panel for snow melting on pavement.

- I. Precipitation and Temperature Sensor:
 1. **[Microprocessor-based] [Automatic]** control with manual on, automatic, and standby/reset switch.
 2. Precipitation and temperature sensors shall sense the surface conditions of pavement and shall be programmed to operate pump and zone control valves as follows:

Retain and revise required features in first four subparagraphs below. Verify availability with manufacturer.

- a. Temperature Span: [34 to 44 deg F (1 to 7 deg C)] **<Insert temperature range>**.
 - b. Adjustable Delay Off Span: [30 to 90] **<Insert numbers>** minutes.
 - c. Start Pump or Open Zone Control Valves: Following [two] **<Insert number>**-minute delay if ambient temperature is below set point and precipitation is detected.
 - d. Stop Pump or Close Zone Control Valves: On detection of a dry surface plus time delay.
3. Corrosion-proof and waterproof enclosure suitable for outdoor mounting, for controls and precipitation and temperature sensors.
 4. Minimum 30-A contactor to start pump and open valves.
 5. Precipitation sensor shall be mounted in pavement.
 6. Provide relay with contacts to indicate operational status, on or off, for interface with central HVAC control-system workstation.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and substrates to receive radiant-heating piping for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Ensure that surfaces and pipes in contact with radiant-heating piping are free of burrs and sharp protrusions.
 2. Ensure that surfaces and substrates are level and plumb.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

Retain this article if pipe materials vary among several locations; delete to require piping materials to be the same in all applications. Consult manufacturers for specific piping recommendations. Piping sizes must be shown on Drawings.

- A. Install the following types of radiant-heating piping for the applications described:
1. Piping in Exterior Pavement: [EPDM] [PEX] [PEX/AL/PEX].
 2. Piping in Interior Reinforced-Concrete Floors: [EPDM] [PEX] [PEX/AL/PEX].
 3. Piping in Level Fill Concrete Floors (Not Reinforced): [EPDM] [PEX] [PEX/AL/PEX].
 4. Piping in Ceilings: [EPDM] [PEX] [PEX/AL/PEX].
 5. Piping in Subfloors: [EPDM] [PEX] [PEX/AL/PEX].
 6. Piping below Wood Floors: [EPDM] [PEX] [PEX/AL/PEX].

3.3 INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings or coordination drawings.
- B. Hydronic radiant heat tubing loops shall be installed in accordance with the manufacturer's recommendations and as indicated on the drawings.
- C. All fittings shall follow the shop drawings for tubing layout, tube spacing, manifold configuration, manifold location, and controls.
- D. All fittings should be accessible for maintenance. Tubing loops shall be installed without splices, as a minimum, from the point at which the tubing enters the panel to the point at which it exits the panel.
- E. Provide pipe hangers and supports in accordance with ASTM B31.9 unless indicated otherwise.
- F. Install isolation ball valves on all pipe branches from the mains to the manifolds.
- G. Do not install underground piping when bedding is wet or frozen.
- H. Install radiant-heating piping continuous from the manifold through the heated panel and back to the manifold without piping joints in heated panels.

- I. Connect radiant piping to manifold in a reverse-return arrangement.
- J. Do not bend pipes in radii smaller than manufacturer's minimum bend radius dimensions. The minimum bend radius for cold bending of the tube shall not be less than six (6) times the outside diameter. Bends with a radius less than stated shall require the use of a bend support as supplied by the tube manufacturer.
- K. Install manifolds in accessible locations, or install access panels to provide maintenance access as required in Section 083113 "Access Doors and Frames."
- L. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties" for pipes and connections to hydronic systems and for glycol-solution fill requirements.
- M. Fire- and Smoke-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials according to Section 078413 "Penetration Firestopping."
- N. Piping in Exterior Pavement:

Consult manufacturer for minimum dimensions required in subparagraphs below.

- 1. Secure piping in concrete floors by attaching pipes to reinforcement using cable ties.
- 2. Space cable ties a maximum of [18 inches (457 mm)] <Insert dimension> o.c. and at center of turns or bends.
- 3. Maintain [3-inch (75-mm)] <Insert dimension> minimum cover.
- 4. Install a sleeve of 3/8-inch- (9.5-mm-) thick, foam-type insulation or PE pipe around tubing and extending for a minimum of [10 inches (250 mm)] <Insert dimension> on each side of slab joints to protect the tubing passing through expansion or control joints. Anchor sleeve to slab form at control joints to provide maximum clearance for saw cut.
- 5. Maintain minimum 40-psig (275-kPa) pressure in piping during concrete placement and continue for 24 hours after placement.

- O. Piping in Interior Reinforced-Concrete Floors:

Consult manufacturer for minimum dimensions required in subparagraphs below.

- 1. Secure piping in concrete floors by attaching pipes to reinforcement using cable ties.
- 2. Space cable ties a maximum of [18 inches (457 mm)] <Insert dimension> o.c. and at center of turns or bends.
- 3. Maintain [2-inch (50-mm)] <Insert dimension> minimum cover.
- 4. Install a sleeve of 3/8-inch- (9.5-mm-) thick, foam-type insulation or PE pipe around tubing and extending for a minimum of [10 inches (250 mm)] <Insert dimension> on each side of slab joints to protect the tubing passing through expansion or control joints. Anchor sleeve to slab form at control joints to provide maximum clearance for saw cut.
- 5. Maintain minimum 40-psig (275-kPa) pressure in piping during concrete placement and continue for 24 hours after placement.

P. Piping in Level Fill Concrete Floors (Not Reinforced):

Consult manufacturer for minimum dimensions required in subparagraphs below.

1. Secure piping in concrete floors by attaching pipes to subfloor using tracks, clamps, or staples.
2. Space tracks, clamps, or staples a maximum of [18 inches (457 mm)] <Insert dimension> o.c. and at center of turns or bends.
3. Maintain [3/4-inch (19-mm)] <Insert dimension> minimum cover.
4. Install a sleeve of 3/8-inch- (9.5-mm-) thick, foam-type insulation or PE pipe around tubing and extending for a minimum of [10 inches (250 mm)] <Insert dimension> on each side of slab joints to protect the tubing passing through expansion or control joints. Anchor sleeve to slab form at control joints to provide maximum clearance for saw cut.
5. Maintain minimum 40-psig (275-kPa) pressure in piping during the concrete pour and continue for 24 hours during curing.

Q. Piping in Ceiling:

Consult manufacturer for minimum dimensions required in subparagraphs below.

1. Secure piping by attaching pipes to ceiling substrate using clamps or staples.
2. Space clamps or staples a maximum of [18 inches (457 mm)] <Insert dimension> o.c. and at center of turns or bends.
3. Maintain [1-1/2-inch (38-mm)] <Insert dimension> minimum plaster cover.
4. Maintain minimum 40-psig (275-kPa) pressure in piping during the plaster application and continue for 24 hours during curing.

R. Piping in Subfloor:

1. Secure piping by laying in subfloor channels or modular interlocking blocks.
2. Use straight channel panels or blocks in the center and curved channel panels or blocks at the ends.
3. Finish floor with mineralboard panel cover or finished floor surface.

S. Piping below Wood Floor:

Consult manufacturer for minimum dimensions required in subparagraphs below.

1. Secure piping by attaching pipes to subfloor using heat-emission plates, clamps, or staples.
2. Space heat-emission plates, clamps, or staples a maximum of [4 inches (100 mm)] <Insert dimension> o.c. and at center of turns or bends.
3. Install heat-emission plates on underside of wood subfloor with maximum space between plates, as noted above, to maintain pipe contact with floor.

T. Revise locations and elevations from those indicated as required to suit field conditions and ensure integrity of piping and as approved by DEN Project Manager.

U. After system balancing has been completed, mark balancing valves to permanently indicate final position.

- V. Perform the following adjustments before operating the system:
1. Open valves to fully open position.
 2. Check operation of automatic valves.
 3. Set temperature controls so all zones call for full flow.
 4. Purge air from piping.
- W. After concrete or plaster heating panel has cured as recommended by concrete or plaster supplier, operate radiant-heating system as follows:
1. Start system heating at a maximum of **10 deg F (6 deg C)** above the ambient radiant-panel temperature and increase **10 deg F (6 deg C)** each following day until design temperature is achieved.
 2. For freeze protection, operate at a minimum of **60 deg F (16 deg C)** supply-water temperature.

3.4 CLEANING, FLUSHING, AND INSPECTING

- A. Clean and flush system, with clear water, of all dirt, metal chips, sand, and foreign matter. After flushing, remove, clean, and replace all strainer baskets or screens. Inspect each run of each system for completion of joints, supports, accessory items, and obvious leaks.
- B. Examine and inspect piping in accordance with ANSI B31.1, Chapter VI.

3.5 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Prepare radiant-heating piping for testing as follows:
1. Open all isolation valves and close bypass valves.
 2. Open and verify operation of zone control valves.
 3. Flush with clean water and clean strainers.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]. Notify DEN Project Manager at least 24 hours before performing leak test:
1. Leak Test: After installation, charge system and test for leaks. Subject piping to hydrostatic test pressure that is not less than 1.5 times the design pressure but not more than [100 psig (690 kPa)] **<Insert value>**. Test fails if leakage is observed, or pressure drop exceeds 5% of test pressure.
 2. Repair piping systems which fail required piping test, by disassembly and reinstallation, using new materials to extent required to overcome leakage. Do not use chemicals, stop-leak compounds, mastics, or other temporary repair methods.
 3. Repair leaks and retest until no leaks exist.

4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- C. Radiant-heating piping will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. Drain test water from piping systems after testing and repair work that has been completed.
- F. After completion, fill, clean, and treat systems. Refer to Section 232500 "HVAC Water Treatment".
- G. Protect hydronic piping system from damage during construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238316

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238323 - RADIANT-HEATING ELECTRIC PANELS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes prefabricated radiant-heating electric panels.
- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 238213 "Valance Heating and Cooling Units" for factory-fabricated electric heating panels for ceiling and wall applications.
2. Section 238313 "Radiant-Heating Electric Cables."

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PRE-INSTALLATION CONFERENCE

Select one below. First number is minimum required.

- A. Convene **<one (1)>** **<Insert number>** week prior to commencing work of this Section at **[specify location] [location and time as determined by DEN Project Manager]**.
- B. Require attendance of parties directly affecting the work of this Section.
- C. Review sequencing of installation, protection from damage of finished installation, location and characteristics of electrical supply provisions to be provided as Division 26 work, and methods used for covering installations with insulation.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For electric heating panels.
1. Include plans, sections, details, and attachments to other work.
 2. Include diagrams for power, signal, and control wiring.

Retain "Samples for Initial Selection" and "Samples for Verification for Radiant-Panel Finishes" paragraphs below for two-stage Samples. Delete first paragraph if colors are preselected and specified or scheduled. Retain second paragraph with or without first paragraph.

Coordinate sample requirements with DEN Project Manager.

- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Samples for Verification for Radiant-Panel Finishes: **[12 by 12 inches (300 by 300 mm)] <Insert size>**.

1.5 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Coordinate paragraph with other Sections

specifying products listed below. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

Revise subparagraphs below to suit Project.

1. Ceiling suspension assembly members.
2. Method of attaching hangers to building structure.
3. Structural members to which heating panels and suspension systems will be attached.
4. Size and location of initial access modules for acoustical tile.
5. Items installed in finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Perimeter moldings.
 - g. <Insert item>.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electric heating panels to include in operation and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
1. Accurately record actual locations of **[heating panels]** **[temperature sensors,]** **[thermostats,]** and branch circuit connections.

1.7 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer agrees to repair or replace electric heating panels that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for radiant-heating electric panels.

1. Warranty Period: Minimum [three (3)] [five (5)] <Insert number> years from date of Substantial Completion.]

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 GENERAL REQUIREMENTS FOR RADIANT-HEATING ELECTRIC PANELS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. General: Furnish and install a complete UL-listed system of heating panels, components, and controls.

2.2 PREFABRICATED RADIANT-HEATING ELECTRIC PANELS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Berko; c/o Marley Engineered Products.
 2. QMark; c/o Marley Engineered Products.

3. [SSHC, Inc.](#)
4. **<Insert manufacturer's name>**.
5. or approved equal.

B. Description: Sheet-metal-enclosed panel with heating element suitable for **[lay-in installation flush with T-bar ceiling grid] [surface mounting] [recessed mounting]**. Comply with UL 2021.

1. Panel: Minimum **0.0276-inch- (0.7-mm-)** thick, galvanized sheet steel back panel riveted to minimum **0.0396-inch- (1.0-mm-)** thick, galvanized sheet steel front panel with fused-on crystalline surface.

Retain one of two "Heating Element" subparagraphs below.

2. Heating Element: Powdered graphite sandwiched between sheets of electric insulation.
3. Heating Element: Insulated resistive wires.
4. Electrical Connections: Nonheating, high-temperature, insulated-copper leads, factory connected to heating element.

Retain one of three "Exposed-Side Panel Finish" subparagraphs or "Surface-Mounted Trim" Subparagraph below. If more than one type of finish is required, indicate each type in a schedule on Drawings.

5. Exposed-Side Panel Finish: Apply silk-screened finish to match appearance of DEN Project Manager-selected acoustical ceiling tiles.
6. Exposed-Side Panel Finish: Factory prime coated, ready for field painting.
7. Exposed-Side Panel Finish: Baked-enamel finish in manufacturer's **[standard] [custom]** paint color as selected by DEN Project Manager.

Retain "Surface-Mounted Trim" Subparagraph below for surface-mounted panels.

8. Surface-Mounted Trim: Sheet metal with baked-enamel finish in manufacturer's **[standard] [custom]** paint color as selected by DEN Project Manager.

C. Wall Thermostat: Bimetal, sensing elements calibrated from **55 to 90 deg F (13 to 32 deg C)**; with contacts suitable for **[low] [line]**-voltage circuit, and manually operated on-off switch with contactors, relays, and control transformers.

If Project has more than one type or configuration of prefabricated radiant-heating electric panel, delete "Capacities and Characteristics" Paragraph below and schedule on Drawings. See Evaluations for sample schedule.

D. Capacities and Characteristics:

1. Nominal Panel Size: **[24 by 24 inches (600 by 600 mm)] [24 by 36 inches (600 by 900 mm)] [24 by 48 inches (600 by 1200 mm)] [24 by 60 inches (600 by 1500 mm)] <Insert custom size>**.
2. Heating Capacity: **[250] [375] [500] [570] [625] [750] [950] <Insert value> W**.
3. Electrical Characteristics for Single-Point Connection:
 - a. Volts: **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.

- d. Full-Load Amperes: <Insert value>.
- e. Minimum Circuit Ampacity: <Insert value>.
- f. Maximum Overcurrent Protection: <Insert amperage>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and substrates to receive electric heating panels for compliance with requirements for installation tolerances and other conditions affecting performance.
 - 1. Ensure surfaces in contact with electric heating panels are free of burrs and sharp protrusions.
 - 2. Ensure surfaces and substrates are level and plumb.
- B. Verify field measurements are as shown on [shop drawings] [Drawings].
- C. Verify that required utilities are available, in proper location, and ready for use.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.
- E. Beginning of installation means installer accepts conditions.

3.2 INSTALLATION

Indicate location of controls on Drawings.

- A. Install in accordance with manufacturer's instructions.
- B. Install radiant-heating panels level and plumb.
- C. Support for Radiant-Heating Panels in or on Grid-Type Suspended Ceilings: Use grid as a support element.
 - 1. Install a minimum of four ceiling-support-system rods or wires for each panel. Locate not more than 6 inches (150 mm) from panel corners.
 - 2. Support Clips: Fasten to panel and to ceiling grid members at or near each panel corner with clips designed for the application.
 - 3. Panels of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support panels independently with at least two 3/4-inch (19-mm) metal channels spanning and secured to ceiling tees.

Retain subparagraph below if Project is in a seismic area.

- 4. Install at least one independent support rod or wire from structure to a tab on panel. Wire or rod shall have breaking strength of the weight of the panel at a safety factor of 3.

To comply with requirements of the Americans with Disabilities Act, verify mounting height in paragraph below with authorities having jurisdiction.

- D. Verify locations of thermostats with Drawings and room details before installation. Install devices [48 inches (1220 mm)] [60 inches (1525 mm)] <Insert dimension> above finished floor.

3.3 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

Retain "Testing Agency," "Manufacturer's Field Service," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph or if retaining "Manufacturer's Field Service" or "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: [Owner will engage] [Engage] a qualified testing agency to perform tests and inspections.

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- C. Perform the following tests and inspections[with the assistance of a factory-authorized service representative]:
 1. Operate electric-heating elements through each stage to verify proper operation and electrical connections.
 2. Measure insulation resistance to manufacturer's recommended values. Use test instruments in accordance with manufacturer's instructions.
 3. Measure voltage and current at each unit.
 4. Test and adjust controls and safeties.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- D. Radiant-heating electric panels will be considered defective if they do not pass tests and inspections.
- E. Make required corrections and re-test system.
- F. Prepare test and inspection reports.

3.5 PROTECTION

- A. Protect installed radiant-heating electric panels from damage during construction.
- B. Remove and replace damaged radiant-heating electric panels.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238323

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238413 - HUMIDIFIERS

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Section includes the following humidifiers:
 - 1. Atomizing.
 - 2. Steam injection.
 - 3. Self-contained.
 - 4. Heated pan.
 - 5. Heat exchanger.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITION

Retain definition that remains after this Section has been edited.

- A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: Provide catalog sheets indicating general assembly, dimensions, weights, materials, and certified performance ratings. Include rated capacities, operating characteristics, furnished specialties, and accessories.
1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, plans, elevations, sections, details of components, manifolds, and attachments to other work.
1. Wiring Diagrams: Power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

Retain paragraph and subparagraphs below if Drawings do not include detailed plans or if Project involves unusual coordination requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Structural members to which humidifiers will be attached.
 2. Size and location of initial access modules for acoustical tile.

Retain first paragraph below if Contractor is responsible for field quality-control testing.

- B. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For humidifiers to include in operation and maintenance manuals.
1. Operation data: Include assembly instructions, float adjustment, bleed rates, and electrical requirements.
 2. Maintenance Data: Include instructions for lubrication, filter replacement, cleaning, and spare parts lists.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

Retain this Article for self-contained humidifiers with electrode cylinders.

Extra materials may not be allowed for publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

Edit below to suit Project.

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Supply [one (1)] <Insert number> replacement electrode cylinder with each self-contained humidifier.
 2. Supply [one (1)] <Insert number> set of belts for each type of unit.
 3. Supply [one (1)] <Insert number> of filter media.
 4. Supply chemical treatment materials suitable for [6] <Insert number> months of operation.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use. Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.
- B. Comply with ARI 640, "Commercial and Industrial Humidifiers."

1.9 COORDINATION

- A. Coordinate location and installation of humidifiers with manifolds in ducts and air-handling units or occupied space. Revise locations and elevations to suit field conditions and to ensure proper humidifier operation.

1.10 WARRANTY

- A. Warranty of all equipment described in this Section shall meet warranty requirements of Section 230400 "Basic HVAC Requirements".

Edit paragraph below. Five year warranty is minimum required.

1. Provide **[five (5)]** <Insert number> year manufacturer warranty for **[units]** **[pumps]**.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Performance: As indicated on the drawings.
- B. Radiated noise for termsil air units shall not exceed:
 1. NC 35 – In Office.
 2. NC 40 – Terminal/Concourse.
 3. NC 45 – Maintenance Facilities.

2.2 WATER-PRESSURE ATOMIZING HUMIDIFIERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Carel USA, LLC](#).
 2. [Herrmidifier](#).
 3. [Mee Industries Inc.](#)
 4. <Insert manufacturer's name.>
 5. or approved equal.
- B. Nozzles: ASTM A 666, Type **[304]** **[316]** stainless steel.
- C. Manifold: ASTM A 269, Type **[304]** **[316]** stainless-steel piping.

Retain paragraph below if manifold discharges into air in a duct.

- D. Droplet Filter: Biocide-treated polyethylene with maximum **0.30-inch wg** (75-Pa) resistance.

Retain one of first two paragraphs below. Stainless-steel piping is typically used with demineralized water.

- E. Piping and Fittings: ASTM A 269, Type [304] [316] stainless-steel pipe and fittings.
- F. Piping and Fittings: ASTM B 88 (ASTM B 88M), Type L copper pipe and wrought-copper fittings with brazed joints.
- G. Water Pump: Enclosed belt-drive ceramic plunger pump with [stainless-steel] [bronze] heads, and [single] [variable]-speed, totally enclosed, fan-cooled motor.
- H. Final Water-Filter Efficiency: Minimum [98] <Insert number> percent retention of suspended particles [10] [20] <Insert size> microns and larger from makeup water.
- I. Final Water-Filter Pressure Drop: Maximum [2 psig (14 kPa)] <Insert value> at design flow when clean[, and <Insert value> when dirty].
- J. Pump Controls:
 - 1. [Cycle] [Vary speed of] motor to satisfy humidistat.
 - 2. High-pressure solenoid valve for each control zone shown on Drawings.
 - 3. Building automation system interface for each control zone for start/stop and status indication and control at central workstation.

Retain first paragraph and subparagraphs below if humidifier discharges directly into occupied space.

- K. Dispersion Fan:
 - 1. Aluminum blade propeller fan with finger guard and single-speed motor interlocked to operate with humidifier.
 - 2. Fan Mounting: Above and behind manifold on bracket integral to wall-mounting manifold.
- L. Accessories:
 - 1. Humidistat: [Wall] [Return-duct]-mounting, solid-state, electronic-sensor controller capable of full-modulation or cycling control.
 - 2. Duct-mounting, high-limit humidistat.
 - 3. Airflow switch for preventing humidifier operation without airflow.

If Project has more than one type or size of humidifier, delete paragraph and subparagraphs below and schedule humidifiers on Drawings.

- M. Capacities and Characteristics:
 - 1. Humidification Rate: <Insert lb/h (g/s).>
 - 2. Dry-Bulb Air Temperature at Discharge: <Insert deg F (deg C).>
 - 3. Wet-Bulb Air Temperature at Discharge: <Insert deg F (deg C).>
 - 4. Number of Nozzles: <Insert number.>
 - 5. Nozzle Spacing: <Insert inches (mm).>
 - 6. Maximum Absorption Distance: <Insert inches (mm).>
 - 7. Minimum Makeup Water Supply Pressure: <Insert psig (kPa).>

8. Water Pump:
 - a. Discharge Pressure: [1000 psig (6894 kPa)] [2000 psig (13 790 kPa)] **<Insert pressure>**.
 - b. Motor Horsepower: **<Insert horsepower.>**

Retain first subparagraph and associated subparagraphs below if humidifier discharges directly into occupied space.

9. Dispersion Fan:
 - a. Airflow: **<Insert cfm (L/s).>**
 - b. Motor Horsepower: **<Insert horsepower.>**
10. Electrical Characteristics: Single point of connection.
 - a. Volts: **<Insert value.>**
 - b. Phase: **<Insert value.>**
 - c. Hertz: **<Insert value.>**
 - d. Full-Load Amperes: **<Insert value.>**
 - e. Minimum Circuit Ampacity: **<Insert value.>**
 - f. Maximum Overcurrent Protection: **<Insert amperage.>**

2.3 COMPRESSED-AIR ATOMIZING HUMIDIFIERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Carel USA, LLC.](#)
 2. [Herrmidifier.](#)
 3. [Mee Industries Inc.](#)
 4. **<Insert manufacturer's name.>**
 5. or approved equal.
- B. Nozzles: ASTM A 666, Type [304] [316] stainless steel.
- C. Manifold: ASTM A 269, Type [304] [316] stainless-steel piping.

Retain first paragraph below if manifold discharges into air in a duct.

- D. Droplet Filter: Biocide-treated polyethylene with maximum 0.30-inch wg (75-Pa) resistance.
- E. Piping and Fittings: ASTM A 269, Type [304] [316] stainless-steel pipe and fittings.

Retain paragraph above with demineralized makeup water, and delete option in first paragraph below.

- F. Compressed-Air[**and Water**] Piping and Fittings: **ASTM B 88** (ASTM B 88M), Type L copper pipe and wrought-copper fittings with soldered joints.
- G. Final Water-Filter Efficiency: Minimum **[98]** **<Insert number>** percent retention of suspended particles **[10]** **[20]** **<Insert size>** microns and larger from makeup water.
- H. Final Water-Filter Pressure Drop: Maximum **[2 psig (14 kPa)]** **<Insert value>** at design flow when clean[, **and <Insert value> when dirty**].
- I. Air and Water Solenoid Controls:
 - 1. Cycle valves to satisfy humidistat.
 - 2. Solenoid valves for each control zone shown on Drawings.
 - 3. Building automation system interface for each control zone for start/stop and status indication and control at central workstation.

Retain first paragraph and subparagraphs below if humidifier discharges directly into occupied space.

- J. Dispersion Fan:
 - 1. Aluminum blade propeller fan with finger guard and single-speed motor interlocked to operate with humidifier.
 - 2. Fan Mounting: Above and behind manifold on bracket integral to wall-mounting manifold.
- K. Accessories:
 - 1. Humidistat: **[Wall]** **[Return-duct]**-mounting, solid-state, electronic-sensor controller capable of full-modulation or cycling control.
 - 2. Duct-mounting, high-limit humidistat.
 - 3. Airflow switch for preventing humidifier operation without airflow.

If Project has more than one type or size of humidifier, delete paragraph and subparagraphs below and schedule humidifiers on Drawings.

- L. Capacities and Characteristics:
 - 1. Humidification Rate: **<Insert lb/h (g/s).>**
 - 2. Dry-Bulb Air Temperature at Discharge: **<Insert deg F (deg C).>**
 - 3. Wet-Bulb Air Temperature at Discharge: **<Insert deg F (deg C).>**
 - 4. Number of Nozzles: **<Insert number.>**
 - 5. Nozzle Spacing: **<Insert inches (mm).>**
 - 6. Maximum Absorption Distance: **<Insert inches (mm).>**
 - 7. Minimum Makeup Water Supply Pressure: **<Insert psig (kPa).>**
 - 8. Compressed Air:
 - a. Airflow: **<Insert cfm (L/s).>**
 - b. Pressure: **<Insert psig (kPa).>**

Retain first subparagraph and associated subparagraphs below if humidifier discharges directly into occupied space.

9. Dispersion Fan:
 - a. Airflow: <Insert cfm (L/s).>
 - b. Motor Horsepower: <Insert horsepower.>
10. Electrical Characteristics: Single point of connection.
 - a. Volts: <Insert value.>
 - b. Phase: <Insert value.>
 - c. Hertz: <Insert value.>
 - d. Full-Load Amperes: <Insert value.>
 - e. Minimum Circuit Ampacity: <Insert value.>
 - f. Maximum Overcurrent Protection: <Insert amperage.>

2.4 STEAM-INJECTION HUMIDIFIERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Armstrong International, Inc.](#)
 2. [Carel USA, LLC.](#)
 3. [DRI-STEEM Humidifier Company.](#)
 4. [Herrmidifier.](#)
 5. [Hygromatik; Spirax Sarco.](#)
 6. [Nortec Industries Inc.](#)
 7. [Pure Humidifier Company.](#)
 8. <Insert manufacturer's name.>
 9. or approved equal.

Retain one of first two paragraphs and associated subparagraphs below. Retain first for duct-mounting or plenum-mounting humidifier, second if humidifier discharges directly into occupied space.

- B. Manifold: ASTM A 666, Type 304 stainless steel[, **steam jacketed;**] [**insulated with 1/2-inch (13-mm) fiberglass and stainless-steel jacket; and**] extending the full width of duct or plenum with mounting brackets at ends.
- C. Discharge Nozzle and Dispersion Fan:
 1. Steam-jacketed discharge nozzle, aluminum blade propeller fan with finger guard, and single-speed motor interlocked to operate with humidifier.
 2. Fan Mounting: Above and behind discharge outlet on bracket integral to discharge outlet.
- D. Steam Separator: [**Cast iron**] [**ASTM A 666, Type 304 stainless steel**] with [**separate**] humidifier control valve.
- E. Humidifier Control Valve:

Retain one of two subparagraphs below.

1. Actuator: **[Pneumatic] [Electric]** modulating with spring return.
 2. Actuator: As specified in Section 230923.11 "Control Valves."
- F. Steam Trap: Inverted-bucket type, sized for a minimum of 3 times the maximum rated condensate flow of humidifier at **1/2-psig (3.4-kPa)** inlet pressure.
- G. Accessories:

Delete first two subparagraphs below if humidistats and aquastat are specified in Section 230923.19 "Moisture Instruments."

1. **[Wall] [Return-duct]**-mounting humidistat.
2. Duct-mounting, high-limit humidistat.
3. Aquastat mounted on steam condensate return piping to prevent cold operation of humidifier.
4. In-line strainer.
5. Airflow switch for preventing humidifier operation without airflow.

If Project has more than one type or size of humidifier, delete paragraph and subparagraphs below and schedule humidifiers on Drawings.

- H. Capacities and Characteristics:
1. Humidification Rate: **<Insert lb/h (g/s).>**
 2. Steam Supply Pressure: **<Insert psig (kPa).>**
 3. Dry-Bulb Air Temperature at Discharge: **<Insert deg F (deg C).>**
 4. Wet-Bulb Air Temperature at Discharge: **<Insert deg F (deg C).>**
 5. Maximum Absorption Distance: **<Insert inches (mm).>**

Delete subparagraph below if humidifier discharges directly into occupied space.

6. Number of Manifolds: **<Insert number.>**

Retain first subparagraph and associated subparagraphs below if humidifier discharges directly into occupied space.

7. Dispersion Fan:
 - a. Airflow: **<Insert cfm (L/s).>**
 - b. Motor Horsepower: **<Insert horsepower.>**
8. Electrical Characteristics: Single point of connection.
 - a. Volts: **<Insert value.>**
 - b. Phase: **<Insert value.>**
 - c. Hertz: **<Insert value.>**
 - d. Full-Load Amperes: **<Insert value.>**
 - e. Minimum Circuit Ampacity: **<Insert value.>**
 - f. Maximum Overcurrent Protection: **<Insert amperage.>**

2.5 SELF-CONTAINED HUMIDIFIERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Armstrong International, Inc.](#)
2. [Carel USA, LLC.](#)
3. [Carnes Company.](#)
4. [Herrmidifier.](#)
5. [Hygromatik; Spirax Sarco.](#)
6. [Nortec Industries Inc.](#)
7. **<Insert manufacturer's name.>**
8. or approved equal.

Retain one of first three paragraphs and associated subparagraphs below. Verify heater type and features with humidifier manufacturer. Some heater features are proprietary.

B. Electric-Resistance Heater Container: Cleanable, ASTM A 666, Type [304] [316] stainless steel. Comply with UL 499.

Ionic bed inserts are a proprietary product of Armstrong.

C. Electrode Cylinder: Replaceable plastic assembly[**with disposable ionic bed inserts**]. Comply with UL 499.

Gas-fired, self-contained humidifiers are available from a limited number of manufacturers.

D. Gas-Fired Steam Generator: Factory assembled and tested.

1. Standard: Fabricate and label steam generator to comply with CSA.
2. Maximum Steam Pressure: 10 inches wg (2488 Pa).
3. Burner Type: [Natural-gas] [Propane] fired with modulating, low NOx infrared burner, minimum [82] **<Insert number>** percent efficient.
4. Gas Train: Safety shutoff valves, gas cock, strainer, pressure-regulating valve.
5. Ignition: Hot-surface ignition with flame safety system.
6. Combustion Chamber: Sealed with outdoor-air and flue-vent connections.
7. Heat-Exchanger Tank: Cleanable, ASTM A 666, Type [304] [316] stainless steel with corrosion-resistant coating[**and disposable ionic bed inserts**].

Retain one of first two paragraphs below. Retain first if humidifier discharges directly into occupied space.

E. Manifold: Stainless-steel tube with integral fan to discharge vapor directly into occupied space.

F. Manifold: ASTM A 666, Type [304] [316] stainless-steel tube extending across entire width of duct or plenum and equipped with mounting brackets on ends.

- G. Cabinet: Sheet metal enclosure for housing heater cylinder, electrical wiring, components, controls, and control panel. Enclosure shall include baked-enamel finish, hinged or removable access door, and threaded outlet in bottom of cabinet for drain piping.

Ionic bed inserts are a proprietary product of Armstrong.

H. Control Panel:

1. Factory-wired disconnect switch.
2. Liquid-crystal display.
3. Programmable keyboard.
4. Set-point adjustment.
5. Warning signal indicating end of replaceable cylinder[or ionic bed insert] life.
6. Low-voltage, control circuit.
7. Diagnostic, maintenance, alarm, and status features.
8. High-water [sensor] [float] to prevent overfilling.

I. Controls:

1. Microprocessor-based control system for modulating or cycling control, and start/stop and status monitoring for interface to central HVAC instrumentation and controls.
2. Solenoid-fill and automatic drain valves to maintain water level and temper hot drain water.
3. Field-adjustable timer to control drain cycle for flush duration and interval.
4. Controls shall drain tanks if no demand for humidification for more than 72 hours.
5. [Conductivity] [Float]-type level controls.

J. Accessories:

Delete first two subparagraphs below if humidistats are specified in Section 230923.19 "Moisture Instruments."

1. Humidistat: [Wall] [Return-duct]-mounting, solid-state, electronic-sensor controller capable of full modulation or cycling control.
2. Duct-mounting, high-limit humidistat.
3. Airflow switch for preventing humidifier operation without airflow.

If Project has more than one type or size of humidifier, delete paragraph and subparagraphs below and schedule humidifiers on Drawings.

K. Capacities and Characteristics:

1. Humidification Rate: <Insert lb/h (g/s).>
2. Dry-Bulb Air Temperature at Discharge: <Insert deg F (deg C).>
3. Wet-Bulb Air Temperature at Discharge: <Insert deg F (deg C).>
4. Number of Manifolds: <Insert number.>
5. Maximum Absorption Distance: <Insert inches (mm).>
6. Minimum Makeup Water Supply Pressure: <Insert psig (kPa).>

Retain subparagraph and associated subparagraphs below for electric-resistance or electrode-type heater.

7. Electric-Resistance Heater Container or Electrode Cylinder:
 - a. Power Input per Container or Cylinder: **<Insert kilowatts.>**
 - b. Number of Containers or Cylinders: **<Insert number.>**

Retain subparagraph and associated subparagraphs below for gas-fired generator.

8. Gas-Fired Generator:
 - a. Fuel Input: **<Insert Btu/h (kW).>**
 - b. Fuel Pressure: **<Insert inches wg (kPa).>**

Retain first subparagraph and associated subparagraphs below if humidifier discharges directly into occupied space.

9. Dispersion Fan:
 - a. Airflow: **<Insert cfm (L/s).>**
 - b. Motor Horsepower: **<Insert horsepower.>**
10. Electrical Characteristics: Single point of connection.
 - a. Volts: **<Insert value.>**
 - b. Phase: **<Insert value.>**
 - c. Hertz: **<Insert value.>**
 - d. Full-Load Amperes: **<Insert value.>**
 - e. Minimum Circuit Ampacity: **<Insert value.>**
 - f. Maximum Overcurrent Protection: **<Insert amperage.>**

2.6 HEATED-PAN HUMIDIFIERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Armstrong International, Inc.](#)
 2. [DRI-STEEM Humidifier Company.](#)
 3. [Nortec Industries Inc.](#)
 4. [Pure Humidifier Company.](#)
 5. **<Insert manufacturer's name.>**
 6. or approved equal.
- B. Heat Source: **[Hot water] [Steam] [Electric resistance].**

Retain paragraph below for electric-resistance heat source.

- C. Comply with UL 499.

Ionic bed inserts are a proprietary product of Armstrong.

- D. Pan and Heat-Exchange Piping: ASTM A 666, Type **[304] [316]** stainless steel with corrosion-resistant coating, overflow, and drain fittings. **[Include disposable ionic bed inserts.]**

Retain one of first three paragraphs below for manifold in duct or plenum or for wall or ceiling mounting in occupied space. If manifold is not required, delete all three paragraphs.

- E. Manifold: ASTM A 666, Type **[304] [316]** stainless-steel, duct-mounting, single- or manifold-grid connected to heated-pan housing with flexible hose and extending across width of duct or plenum. Manifold shall have mounting brackets at both ends.
- F. Manifold: Inverted, ASTM A 666, Type **[304] [316]** stainless-steel U-tube with humidifier mounted directly under the duct.
- G. Manifold: ASTM A 666, Type **[304] [316]** stainless-steel tube with flexible hose to connect to humidifier, integral fan to discharge vapor directly into occupied space, and wall- or ceiling-mounting brackets.
- H. Controls:
1. Solenoid-fill and automatic drain valves to maintain water level and temper hot drain water.
 2. Field-adjustable timer to control drain cycle for flush duration and interval.
 3. **[Conductivity] [Float]**-type level controls.

Retain paragraph below for steam heated-pan humidifier.

- I. Piping Specialties: Inlet strainer, control valve, and steam trap.

Retain first paragraph below for hot-water, heated-pan humidifier.

- J. Piping Specialties: Inlet strainer and control valve.

- K. Accessories:

Delete first two subparagraphs below if humidistats are specified in Section 230923.19 "Moisture Instruments."

1. Humidistat: **[Wall] [Return-duct]**-mounting, solid-state, electronic-sensor controller capable of full modulation or cycling control.
2. Duct-mounting, high-limit humidistat.
3. Airflow switch for preventing humidifier operation without airflow.

If Project has more than one type or size of humidifier, delete paragraph and subparagraphs below and schedule humidifiers on Drawings.

- L. Capacities and Characteristics:

1. Humidification Rate: <Insert lb/h (g/s).>
2. Dry-Bulb Air Temperature at Pan or Discharge: <Insert deg F (deg C).>
3. Wet-Bulb Air Temperature at Pan or Discharge: <Insert deg F (deg C).>
4. Pan Length: <Insert inches (mm).>
5. Pan Width: <Insert inches (mm).>
6. Number of Manifolds: <Insert number.>
7. Maximum Absorption Distance: <Insert inches (mm).>
8. Minimum Makeup Water Supply Pressure: <Insert psig (kPa).>
9. Hot Water:
 - a. Water Flow: <Insert gpm (L/s).>
 - b. Pressure Loss Including Control Valve: <Insert feet (kPa).>
 - c. Entering Temperature: <Insert deg F (deg C).>
 - d. Leaving Temperature: <Insert deg F (deg C).>
10. Steam:
 - a. Supply Pressure at Control Valve Inlet: <Insert psig (kPa).>
 - b. Condensing Rate: <Insert lb/h (g/s).>

Retain subparagraph and associated subparagraphs below for electric-resistance or electrode-type heater.

11. Electric-Resistance Heater Container or Electrode Cylinder:
 - a. Power Input: <Insert kilowatts.>
 - b. Number of Steps: <Insert number.>

Retain first subparagraph and associated subparagraphs below if humidifier discharges directly into occupied space.

12. Dispersion Fan:
 - a. Airflow: <Insert cfm (L/s).>
 - b. Motor Horsepower: <Insert horsepower.>
13. Electrical Characteristics: Single point of connection.
 - a. Volts: <Insert value.>
 - b. Phase: <Insert value.>
 - c. Hertz: <Insert value.>
 - d. Full-Load Amperes: <Insert value.>
 - e. Minimum Circuit Ampacity: <Insert value.>
 - f. Maximum Overcurrent Protection: <Insert amperage.>

2.7 HEAT-EXCHANGER HUMIDIFIERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Armstrong International, Inc.](#)
2. [Nortec Industries Inc.](#)
3. [Pure Humidifier Company.](#)
4. **<Insert manufacturer's name.>**
5. or approved equal.

B. Fabricate and label steam generator to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

Ionic bed inserts are a proprietary product of Armstrong.

C. Heat Exchanger: ASTM A 666, Type [304] [316] stainless steel with corrosion-resistant coating, overflow, and drain fittings. [**Include disposable ionic bed inserts.**]

Retain one of first two paragraphs below.

D. Manifold: ASTM A 666, Type [304] [316] stainless-steel[, **steam-jacketed**], duct-mounting, single- or manifold-grid connected to steam generator with flexible hose and extending across width of duct or plenum. Manifold shall have mounting brackets for both ends. [**Insulate with 1/2-inch (13-mm) fiberglass and stainless-steel jacket extending full width of duct or plenum with mounting brackets at ends.**]

E. Manifold: ASTM A 666, Type [304] [316] stainless-steel tube with flexible hose to connect to humidifier and integral fan to discharge vapor directly into occupied space. Manifold shall have wall- or ceiling-mounting brackets.

F. Controls:

1. Solenoid-fill and automatic drain valves to maintain water level and temper hot drain water.
2. Field-adjustable timer to control drain cycle for flush duration and interval.
3. [**Conductivity**] [**Float**]-type level controls.

G. Accessories:

Delete first two subparagraphs below if humidistats are specified in Section 230923.19 "Moisture Instruments."

1. Humidistat: [**Wall**] [**Return-duct**]-mounting, solid-state, electronic-sensor controller capable of full modulation.
2. Duct-mounting, high-limit humidistat.
3. Airflow switch for preventing humidifier operation without airflow.

If Project has more than one type or size of humidifier, delete paragraph and subparagraphs below and schedule humidifiers on Drawings.

H. Capacities and Characteristics:

1. Humidification Rate: <Insert lb/h (g/s).>
2. Dry-Bulb Air Temperature at Discharge: <Insert deg F (deg C).>
3. Wet-Bulb Air Temperature at Discharge: <Insert deg F (deg C).>
4. Manifold Steam Supply Pressure: <Insert psig (kPa).>
5. Number of Manifolds: <Insert number.>
6. Maximum Absorption Distance: <Insert inches (mm).>
7. Minimum Makeup Water Supply Pressure: <Insert psig (kPa).>
8. Steam:
 - a. Supply Pressure at Control Valve Inlet: <Insert psig (kPa).>
 - b. Condensing Rate: <Insert lb/h (g/s).>

Retain first subparagraph and associated subparagraphs below if humidifier discharges directly into occupied space.

9. Dispersion Fan:
 - a. Airflow: <Insert cfm (L/s).>
 - b. Motor Horsepower: <Insert horsepower.>
10. Electrical Characteristics: Single point of connection.
 - a. Volts: <Insert value.>
 - b. Phase: <Insert value.>
 - c. Hertz: <Insert value.>
 - d. Full-Load Amperes: <Insert value.>
 - e. Minimum Circuit Ampacity: <Insert value.>
 - f. Maximum Overcurrent Protection: <Insert amperage.>

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine ducts, air-handling units, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Insulate exterior of unit same as specified for ductwork. Refer to Section 230713 "Duct Insulation".

- C. Place unit on 2 inch thick rigid closed-cell insulation board same size as unit tank, where applicable. Flash and counterflash with 0.036 inch galvanized steel entering and leaving sides. Refer to Section 230713 "Duct Insulation".
- D. Connect unit to water supply. Provide ball or gate valve on water supply and drain line. Provide 3/4 inch hose bibb accessible from interior.
- E. Pipe drain and overflow to nearest floor drain.
- F. Bolt spray pump directly to tank fitting. Insulate external spray piping. Refer to Section 220719 "Plumbing Piping Insulation".
- G. Provide globe valve and solenoid valve in 1/2 inch bleed line from drain. Refer to Section 232500 "Chemical Water Treatment".
- H. Provide low water cut-off in drain pan to stop spray pump.

LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1. ASHRAE 62.1, Section 5.13 - "Humidifiers and Water-Spray Systems," sets requirements for water quality feeding humidifiers and limits obstructions downstream from humidifiers.

- I. Install humidifiers with required clearance for service and maintenance. [**Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1.**]
- J. Seal humidifier manifold duct or plenum penetrations with flange.
- K. Install humidifier manifolds in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."
- L. Install [**galvanized**] [**stainless**]-steel drain pan under each manifold mounted in duct.

Retain option in first subparagraph below to comply with LEED Prerequisite IEQ 1 or if required by Project requirements or authorities having jurisdiction.

1. Construct drain pans with connection for drain; insulated [**and complying with ASHRAE 62.1.**]
2. Connect to condensate trap and drainage piping.
3. Extend drain pan upstream and downstream from manifold a minimum distance recommended by manufacturer but not less than required by ASHRAE 62.1.

Retain paragraph below for self-contained, heated-pan, and heat-exchanger humidifiers.

- M. Install manifold supply piping pitched to drain condensate back to humidifier.

Retain paragraph below for steam-injection and heat-exchanger humidifiers.

- N. Install drip leg upstream from steam trap a minimum of [**12 inches (300 mm)**] <Insert height> tall for proper operation of trap.
- O. Equipment Mounting:

Retain first subparagraph below to require equipment to be installed on cast-in-place concrete equipment bases.

1. Install steam generators on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

Retain one of two subparagraphs below. Retain first for projects in seismic areas; retain second for projects not in seismic areas. Indicate vibration isolation and seismic-control device type and minimum deflection in supported equipment schedule on Drawings.

2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

Retain paragraph below for gas-fired, self-contained humidifiers.

- P. Install gas-fired steam generators according to NFPA 54.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
1. Install piping adjacent to humidifiers to allow service and maintenance.

Retain subparagraph below for all humidifier types except steam injection.

2. Install shutoff valve, strainer, backflow preventer, and union in humidifier makeup line.
- B. Install electrical devices and piping specialties furnished by manufacturer but not factory mounted.

Retain first four paragraphs below for gas-fired, self-contained humidifiers.

- C. Install piping from safety relief valves to nearest floor drain.
- D. Connect gas piping full size to steam-generator, gas-train inlet with union. Gas piping materials and specialties are specified in [**Section 231123 "Facility Natural-Gas Piping."**] [**Section 231126 "Facility Liquefied-Petroleum Gas Piping."**]
- E. Connect breeching full size to steam-generator outlet. Venting materials are specified in Section 235123 "Gas Vents."

- F. Connect combustion-air inlet to intake terminal using PVC piping with solvent-cemented joints. Run from boiler connection to outside and terminate adjacent to flue termination.
- G. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- H. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

Retain one of first two paragraphs below. Retain first paragraph to require a factory-authorized service representative to perform inspections, tests, and adjustments.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

Retain paragraph and subparagraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections and prepare test reports.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph and subparagraphs below to describe tests and inspections to be performed by either of the entities in two paragraphs above.

- C. Tests and Inspections:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Remove and replace malfunctioning units and retest as specified above.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain humidifiers. Refer to Section 017900 "Demonstration and Training."
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238413

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 238416 - MECHANICAL DEHUMIDIFICATION UNITS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THE ENGINEER SHALL SUBMIT A WRITTEN REQUEST FOR ANY MAJOR DEVIATION FROM THE STANDARD SPECIFICATIONS TO THE DEN PROJECT MANAGER PRIOR TO EDITING THIS SECTION. MAJOR DEVIATIONS INCLUDE (BUT ARE NOT LIMITED TO) THE ADDITION OF NEW EQUIPMENT, MATERIALS OR INSTALLATION PRACTICES THAT ARE NOT CURRENTLY PART OF THIS SPECIFICATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.2 SUMMARY

Edit to suit Project

- A. Section includes packaged, factory-assembled and -tested, refrigerant-type, mechanical dehumidification units designed for [outdoor] [and] [indoor] installation.

1.3 PERFORMANCE REQUIREMENTS

Retain paragraph below with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction.

- A. Seismic Performance: Dehumidification units shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each dehumidification unit indicated. Provide catalog data indicating general assembly, dimensions, weights, materials, and certified performance ratings. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

Coordinate "Product Data for Credit EA 4" Subparagraph below with requirements for refrigerants.

1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5, "Systems and Equipment."

- C. Shop Drawings: For each dehumidification unit indicated. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.

Paragraph below is defined in Section 013300 "Submittal Procedures" as a "Delegated-Design Submittal." Retain if Work of this Section is required to withstand specific design loads and design responsibilities have been delegated to Contractor or if structural data are required as another way to verify compliance with performance requirements. Professional engineer qualifications are specified in Section 014000 "Quality Requirements"

- D. Delegated-Design Submittal: For dehumidification units indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
2. Design Calculations: Calculate requirements for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.5 INFORMATIONAL SUBMITTALS

Retain first paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC."

- A. Seismic Qualification Certificates: For **<Insert equipment,>** accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Source quality-control reports.
- C. Field quality-control reports.
- D. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For dehumidification units to include in emergency, operation, and maintenance manuals.
 1. Operation Data: Include assembly instructions, float adjustment, bleed rates, and electrical requirements.
 2. Maintenance Data: Instructions for lubrication filter replacement, cleaning and spare parts lists.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Filters: **[One (1)] <Insert number>** set(s) of each type of filter specified.
 2. Fan Belts: **[One (1)] <Insert number>** set(s) for each belt-drive fan.

Edit paragraph below. Two is minimum required. Delete if no sprayed coil dehumidifiers in Project.

3. Provide **[two (2)] <Insert number> [spray nozzles] <Insert component>**.

1.8 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application. Listed and classified by Underwriters' Laboratories, Inc. (or other testing agency acceptable to the authority having jurisdiction) as suitable for the purpose specified and indicated.
- B. ASHRAE Compliance:

First subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite IEQ 1 requires compliance with requirements in ASHRAE 62.1, including requirements for controls, surfaces in contact with the airstream, particulate and gaseous filtration, humidification and dehumidification, drain pan construction and connection, finned-tube coil selection and cleaning, and equipment access. Verify, with manufacturers, the availability of units having components and features that comply with these requirements.

1. Applicable requirements in ASHRAE 62.1, Section 5, "Systems and Equipment" and Section 7, "Construction and Startup."
2. Applicable requirements in ASHRAE 15, "Safety Standard for Refrigeration Systems."

"ASHRAE/IESNA 90.1 Compliance" Paragraph below may be required to comply with Project requirements or authorities having jurisdiction. LEED Prerequisite EA 2 requires compliance with requirements in ASHRAE/IESNA 90.1.

- C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6, "Heating, Ventilating, and Air-Conditioning."

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

1.10 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of dehumidification units that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for units and components with manufacturers listed in Part 2.

1. Warranty Period for Compressors: Manufacturer's standard, but not less than **[two (2)] [five (5)] <Insert number>** years from date of Substantial Completion.
2. Warranty Period for Refrigerant Coils: Manufacturer's standard, but not less than **[five (5)] <Insert number>** years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers in this article. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Comitale National Inc.](#)
 2. [Dectron Internationale.](#)
 3. [Dehumidifier Corporation of America.](#)
 4. [Desert Aire.](#)
 5. [DryAire Systems.](#)
 6. [Nautica Dehumidifiers, Inc.](#)
 7. [PoolPak Technologies Corporation.](#)
 8. [Thermoplus Air Inc.](#)
 9. **<Insert manufacturer's name>**.
 10. or approved equal.

2.2 CASINGS

In first paragraph below, retain single-wall construction, removable panels, and 1/2-inch- (13-mm-) thick thermal insulation for indoor units. Retain other options for outdoor units.

- A. Casing: **[Single] [Double]**-wall construction with corrosion-protective coating and exterior **[baked-enamel] [powder-coated]** finish, stainless-steel fasteners, knockouts for electrical and piping connections, condensate drain connection, and lifting lugs.
1. Access: **[Removable panels] [Hinged access doors]** with neoprene gaskets.
 2. Insulation: Minimum **[1/2-inch- (13-mm-) thick thermal insulation] [2-inch- (50-mm-) thick, glass-fiber-insulation fill with no metal structure through the insulation]**.

"Airstream Surfaces" Subparagraph below may be required to comply with Project requirements or authorities having jurisdiction. Retain subparagraph below to comply with LEED Prerequisite IEQ 1.

3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

Retain last option in paragraph below to comply with LEED Prerequisite IEQ 1 or if required by project requirements or authorities having jurisdiction.

- B. Drain Pan and Connection: **[Plastic] [Stainless steel]**; insulated **[and complying with ASHRAE 62.1]**.

2.3 FANS

- A. Supply Fans: **[Forward curved] [Backward inclined]**, centrifugal; galvanized steel with **[baked-enamel] [powder-coated]** finish; belt driven with adjustable sheaves and self-aligning, grease-lubricated ball bearings with extended grease fittings easily accessible inside the casing of dehumidification unit.
- B. **[Exhaust] [Return]** Fans: **[Forward curved] [Backward inclined]**, centrifugal; galvanized steel with **[baked-enamel] [powder-coated]** finish; belt driven with adjustable sheaves and self-aligning, grease-lubricated ball bearings with extended grease fittings easily accessible inside the casing of dehumidification unit.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, insert subparagraphs below to suit Project.

- C. Fan Motor: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

Retain subparagraph below if enclosure is not open-drip-proof type.

1. Enclosure Type: Totally enclosed, fan cooled.

2.4 FILTERS

Retain one or both paragraphs below. If retaining both, indicate filter type in a schedule.

- A. Glass Fiber: Minimum **[80] <Insert number>** percent arrestance according to ASHRAE 52.1, and **[MERV 5] <Insert value>** according to ASHRAE 52.2.

Retain "MERV 7" option in paragraph below if applying for LEED certification. LEED Prerequisite IEQ 1 requires compliance with ASHRAE 62.1, which requires a MERV rating of 6 or higher.

- B. Pleated: Minimum [90] <Insert number> percent arrestance according to ASHRAE 52.1, and [MERV 7] <Insert value> according to ASHRAE 52.2.

2.5 REFRIGERATION SYSTEM

LEED Prerequisite EA 2 requires minimum efficiency equal to requirements in ASHRAE/IESNA 90.1.

- A. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IESNA 90.1.
- B. Refrigerant Coils: Copper tubes with mechanically bonded aluminum fins; factory fabricated and tested to comply with ASHRAE 33 and ARI 410; with multiple refrigerant circuits, seamless-copper headers with brazed connections, and [galvanized] [stainless]-steel frame. Coil and fins shall have a polyester coating. Coils shall have a minimum 300-psig (2070-kPa) working-pressure rating and be factory tested to 450 psig (3105 kPa) and to 300 psig (2070 kPa) while underwater.
- C. Compressors: Hermetic, scroll compressors with integral vibration isolators and crankcase heaters that de-energize during compressor operation; with thermal-expansion valves, filter-dryers, sight glasses, compressor service valves, and liquid- and suction-line service valves.
 - 1. Number of Refrigerant Circuits: Two for compressor capacities more than 7-1/2 tons (26.4 kW).

Retain one of first two subparagraphs below to require a specific refrigerant type; delete both if any refrigerant type is acceptable. LEED-NC, LEED-CS, and LEED for Schools Credit EA 4 award a single point if all HVAC&R equipment meets requirements for enhanced refrigerant management. Retain second, third, or fourth option in first subparagraph or retain second subparagraph to comply with Credit EA 4.

- 2. Refrigerant: [R-22] [R-134a] [R-407C] [R-410A].
- 3. Refrigerant: R-134a, R-407C, or R-410A.
- 4. Capacity Control:

Retain applicable control features in first two subparagraphs below. First subparagraph is for multiple compressors and for pool dehumidifiers.

- a. Hot-gas bypass valve and piping on one compressor.
- b. Cycle compressor.

Retain applicable control features in first four subparagraphs below.

- 5. Low-Pressure Cutout: Manual reset after three automatic-reset failures.
- 6. High-Pressure Cutout: Manual reset.
- 7. Compressor Motor Overload Protection: Manual reset.
- 8. Antirecycling Timing Device: Prevent compressor restart for five minutes after shutdown.

Retain subparagraph below for ice rinks.

9. Defrost Cycle: Adjustable timer shuts off supply fan. Compressor cycles until suction line temperature confirms thawed evaporator coil. [**Timer limits defrost time to 10 minutes.**]

Heat exchanger in paragraph below is a feature used only for pool dehumidification units.

- D. Energy Recovery Heat Exchanger (Pool Heater): Cupronickel, coaxial, vented, double-wall construction for potable-water service.

2.6 REMOTE-MOUNTED, AIR-COOLED CONDENSER UNIT

- A. Casing: Steel, finished with baked enamel; with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
- B. Refrigerant Coil: ARI 206/110, copper tube with mechanically bonded aluminum fins; with liquid subcooler.
- C. Fan: Aluminum-propeller type, directly connected to permanently lubricated motor with integral thermal-overload protection.

Both paragraphs below include optional equipment that may not be available from all manufacturers.

- D. Adjustable, Low Ambient Head-Pressure Control: Designed to operate at temperatures as low as 0 deg F (minus 18 deg C) by cycling condenser fans and controlling speed of last fan of each circuit.
- E. Mounting Base: Polyethylene.

2.7 HEATING COILS

Retain one of three paragraphs below for heating coils, which are optional features.

- A. Hot-Water Coil: Continuous circuit coil fabricated according to ARI 410.
 1. Tubes: Copper.

Retain fin spacing in first subparagraph below if not in a schedule.

2. Fins: [**Aluminum**] [**Copper**] with fin spacing [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.80 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.42 mm)] [0.0075 inch (0.19 mm)].
3. Fin and Tube Joints: Mechanical bond.
4. Headers: Cast iron with drain and air vent tapings.
5. Frames: Galvanized-steel channel, 0.052 inch (1.3 mm).
6. Ratings: Design tested and rated according to ASHRAE 33 and ARI 410.

Pressure and temperature ratings in first subparagraph below are standard for most copper tube coils. Other materials have different ratings; revise to suit Project.

- a. Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).
7. Source Quality Control: Test to 300 psig (2070 kPa).
- B. Steam Coil: Distribution header coil fabricated according to ARI 410, with threaded steam supply and condensate connections.
 1. Tubes: Copper.

Retain fin spacing in first subparagraph below if not in a schedule.

2. Fins: [Aluminum] [Copper] with fin spacing [0.125 inch (3.18 mm)] [0.091 inch (2.31 mm)] [0.071 inch (1.80 mm)] [0.067 inch (1.70 mm)] [0.056 inch (1.42 mm)] [0.0075 inch (0.19 mm)].
3. Fin and Tube Joints: Mechanical bond.
4. Headers: Cast iron with drain and air vent tapings.
5. Frames: Galvanized-steel channel, 0.052 inch (1.3 mm).
6. Ratings: Design tested and rated according to ASHRAE 33 and ARI 410.

Pressure and temperature ratings in first subparagraph below are standard for most copper tube coils. Other materials have different ratings; revise to suit Project.

- a. Working-Pressure Ratings: 100 psig (690 kPa), 400 deg F (205 deg C).
7. Source Quality Control: Test to 200 psig (1380 kPa).
- C. Electric-Resistance Heating Coil: Comply with UL 1995.

Retain one of first two subparagraphs below.

1. Heating Element: Coiled resistance wire of 80 percent nickel and 20 percent chromium; surrounded by compacted magnesium oxide powder in tubular-steel sheath; with spiral-wound, copper-plated steel fins continuously brazed to sheath.
2. Heating Element: Open-coil resistance wire of 80 percent nickel and 20 percent chromium; supported and insulated by floating ceramic bushings recessed into casing openings; fastened to supporting brackets and mounted in galvanized-steel frame.
3. Overtemperature Protection: Disk-type, automatic-reset, thermal-cutout safety device; serviceable through terminal box without removing heater from unit.
4. Thermal Cutouts: Load carrying, manual reset or replaceable, and factory wired in series with each heater stage.
5. Control: Disconnecting means, overcurrent protection, and airflow proving switch.

2.8 DAMPERS

If only a single unit is required for Project and the unit will have a damper option, retain one of first four paragraphs below. If Project includes multiple units with different damper arrangements, retain applicable paragraphs in this article and indicate in a schedule which unit gets each component.

- A. Outdoor-Air Dampers: Opposed-blade, **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** dampers with **[cadmium-plated]** steel operating rod rotating in sintered bronze or nylon bearings. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod. Size for 0 to 25 percent outdoor air, with **[manual]** **[motorized]** operator and filter.
- B. Face-and-Bypass Dampers: Opposed-blade, **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** dampers with **[cadmium-plated]** steel operating rods rotating in sintered bronze or nylon bearings with operating rods connected with a common linkage. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod.

Dampers in first paragraph below are standard quality. Low-leakage dampers are available from some manufacturers and from manufacturers of temperature-control equipment.

- C. **[Outdoor- and Return-Air]** **[Outdoor-, Return-, and Exhaust-Air]** Dampers: Parallel-blade, **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** dampers mechanically fastened to **[cadmium-plated]** steel operating rod in reinforced cabinet. Connect operating rods with common linkage and interconnect linkages so dampers operate simultaneously.
- D. **[Outdoor- and Return-Air]** **[Outdoor-, Return-, and Exhaust-Air]** Dampers: Low-leakage, double-skin, airfoil-blade, **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** dampers with compressible jamb seals and extruded-vinyl blade edge seals in **[opposed]** **[parallel]**-blade arrangement with **[cadmium-plated]** steel operating rods rotating in **[stainless-steel sleeve]** **[sintered bronze or nylon]** bearings mounted in a single **[galvanized-steel]** **[aluminum]** **[extruded-aluminum]** frame, and with operating rods connected with a common linkage. Leakage rate shall not exceed **5 cfm/sq. ft.** (0.22 L/s per sq. m) at **1-inch wg** (250 Pa) and **9 cfm/sq. ft.** (0.4 L/s per sq. m) at **4-inch wg** (1.0 MPa).
- E. Damper Operator: **[115]** **[24]**-V ac, close coupled, with gear train sealed in oil and with spring return.

2.9 CONTROLS

Retain first paragraph below to specify temperature controls in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC." Delete first paragraph and retain second paragraph to require controls integral to the dehumidification unit to be provided by manufacturer of dehumidification unit.

- A. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" for control equipment and in Section 230993.11 "Sequence of Operations for HVAC DDC."
- B. Control Panel: Integral service compartment containing fan-motor thermal and overload cutouts, compressor thermal and overload cutouts, 115-V control transformer if required, magnetic contactors for fan and compressor motors, and a nonfused factory-mounted and -wired disconnect switch for single external electrical power connection.

Retain first paragraph below to require controls of dehumidification unit to interface with the DDC system for HVAC. Coordinate with Section 230923 "Direct Digital Control (DDC) System for HVAC."

- C. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display status and alarms.

Retain one of three paragraphs below. Retain first paragraph for ice-rink units.

- D. Operating Control: Space humidistat cycles the compressor. Humidistat shall incorporate fan on-off-auto switch.

Retain first paragraph below for indoor pool units with typical manufacturer's control panel. Revise for installed and optional features.

- E. Operating Controls: Factory-installed microprocessor controller, capable of being remotely mounted.

- 1. Display the following on the face of controller:

- a. System on.
- b. System dehumidifying mode.
- c. System air-conditioning mode.
- d. System outdoor-air (economizer) mode.
- e. System heating pool water.
- f. Auxiliary space heat is operating.
- g. Unit requires service.
- h. Return-air (space) temperature.
- i. Return-air (space) humidity.

First two subparagraphs below are optional displays requiring additional hardware.

- j. Pool-water temperature.
- k. Outdoor-air temperature.

- 2. Indicate the following sensor failures on panel:

- a. Airflow: Dirty air filter, blocked airflow, and fan failure.
- b. Refrigerant high and low pressure.
- c. High water temperature.
- d. High and low evaporator temperature.
- e. Low water flow.
- f. Communication fault.
- g. System off.
- h. Antishort cycle delay.
- i. Power failure.

- 3. Provide access to the following set points on panel:

- a. Space temperature.
- b. Space relative humidity.
- c. Outdoor ventilation/air-conditioning changeover temperature.
- d. Airflow alarm.

4. Provide the following displays on panel:
 - a. Space temperature.
 - b. Space relative humidity.
 - c. Outdoor-air temperature.
 - d. Supply-air temperature.
 - e. Return-air temperature.
 - f. Airflow rating.
 - g. Air-off evaporator temperature.
 - h. Return-air relative humidity.
 - i. Service codes.

5. Provide the following controls on panel:
 - a. System on-off, fan continues to run.
 - b. Fan on-off.
 - c. Service code access.
 - d. System dehumidifying mode.
 - e. System air-conditioning mode.
 - f. System outdoor-air (economizer) mode.
 - g. Auxiliary space heat is operating.
 - h. Outdoor-air-temperature, conditioned-space-temperature, and control set-point-temperature digital display.
 - i. Outdoor enthalpy digital display.
 - j. Filter pressure drop digital display.
 - k. Status: Airflow, fans, system, unit operation, and operating mode.
 - l. Alarm digital display.

Retain paragraph below for manufacturer's typical microprocessor controller capable of being monitored, programmed, and linked on a local area network. Revise for installed and optional features.

- F. Operating Controls: Factory-installed microprocessor controller.
1. Factory-installed operator panel with backlit display, capable of being remotely mounted, allows menu-driven display for navigation and control of unit.
 2. Integral clock.
 3. Personal computer interface.
 4. Integral local area network for direct connection to **[BACnet]** **[LonWorks]** **[MODBUS]** <Insert other>.
 5. Factory programmed.
 6. Unit-Mounted Sensors:
 - a. Airflow switch.
 - b. Compressor-discharge temperature.
 - c. Evaporator-air temperature.
 - d. Pool-water-out temperature.
 - e. Pool-water-in temperature.
 - f. Relative humidity.
 - g. Return-air temperature.
 - h. Supply-air temperature.

7. Integral diagnostics.
8. Nonvolatile memory.
9. IP or SI display.
10. Provide the following status and alarm functions:
 - a. System: On-off.
 - b. Power failure.
 - c. Fan: Off, overload.
 - d. Compressor: On, turned off, overload, high pressure, low pressure, overheat, oil failure, and pumpdown.
 - e. Evaporator damper closed.
 - f. Pool: Low water flow, heating on.
 - g. Dehumidification: Call for, on.
 - h. Air Conditioning: Call for, on.
 - i. System outdoor-air (economizer) mode.
 - j. Auxiliary space heat on.
 - k. Alarms: Firestat, freezestat, and filters.
11. Provide the following controls via operator panel:
 - a. Compressor auto-off.
 - b. Fan auto-off.
 - c. Set-Point Adjustments: Relative humidity, temperatures, deadbands, and differentials.
 - d. Sensor calibration.

LEED-NC and LEED for Schools Credit EA 5, LEED-CI Credit EA 3, and LEED-CS Credit EA 5.1 require continuous metering equipment for monitoring building energy-consumption performance over time. Retain four subparagraphs below if required to comply with requirements for this credit. Verify availability of control features with manufacturers.

12. Monitor constant and variable motor loads.
13. Monitor cooling load.
14. Monitor economizer cycles.
15. Monitor ventilation air volumes.

2.10 ACCESSORIES

Accessories listed in this article are optional features available from most manufacturers.

Heat exchanger in first paragraph below may be provided in place of optional, remote-mounted, air-cooled condenser unit.

- A. Water-Cooling Heat Exchanger: Coaxial, vented, double-wall construction; with three-way refrigerant control valve.

Coordinate connections for smoke detectors in first paragraph below with Section 283111 "Digital, Addressable Fire-Alarm System" or Section 283112 "Zoned (DC Loop) Fire-Alarm System."

- B. Smoke Detectors: Photoelectric detector located in return-air plenum, to de-energize unit.
1. Operating Voltage: 24-V dc, nominal.
 2. Self-Restoring: Detectors do not require resetting or readjusting after actuation to restore them to normal operation.
 3. Plug-in Arrangement: Detector and associated electronic components mounted in module with tamper-resistant connection to fixed base with twist-locking plug. Terminals in fixed base accept building wiring.
 4. Integral Visual-Indicating Light: Digital-display type indicating detector operation.
 5. Sensitivity: Can be tested and adjusted in-place after installation.

Retain first subparagraph below for addressable systems.

6. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to the fire-alarm control panel.
7. Sensor: Digital display or infrared light source with matching silicon-cell receiver.
8. Detector Sensitivity: Between 2.5 and 3.5 percent/foot (0.008 and 0.011 percent/mm) of smoke obscuration when tested according to UL 268A.

Retain subparagraph below if using combination smoke/thermal detectors.

9. Integral Thermal Detector: Fixed-temperature type with 135 deg F (57 deg C) setting.

See Evaluations in Section 262726 "Wiring Devices" for wiring device grades.

- C. Electrical Convenience Outlet: 115-V ac fused, duplex, straight-blade receptacles, separately fused and located inside casing of dehumidification unit or in roof-curb perimeter.

2.11 ROOF CURBS

Retain this article for outdoor units. Retain one of first two paragraphs below. Retain first for curbs with vibration isolation and seismic or wind restraints; retain second for curbs provided by manufacturer of dehumidification unit without vibration isolation and seismic or wind restraints.

- A. Roof curbs with vibration isolators and wind or seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
- C. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
1. Materials: ASTM C 1071, Type I or II.
 2. Thickness: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension>.
 3. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
 4. Liner Adhesive: Comply with ASTM C 916, Type I.

5. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 6. Liner materials applied in this location shall have airstream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric, depending on service-air velocity.
- D. Curb Height: [14 inches (355 mm)] [24 inches (610 mm)] [36 inches (910 mm)] <Insert dimension>.
- E. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match dehumidification unit; used to anchor unit to the curb and designed for loads at Project site. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for wind-load requirements.

2.12 CAPACITIES AND CHARACTERISTICS

If Project has more than one type or configuration of dehumidification unit, delete this article and schedule dehumidification units on Drawings.

- A. Airflow through Unit:
1. Supply Air: <Insert cfm (L/s)>.
 2. Outside Air: <Insert cfm (L/s)>.
 3. Exhaust/Return Air: <Insert cfm (L/s)>.
- B. Supply Fan:
1. Speed: <Insert rpm>.
 2. External Static Pressure: <Insert inches wg (kPa)>.
 3. Motor Size: <Insert horsepower>.
- C. [Exhaust] [Return] Fan:
1. External Static Pressure: <Insert inches wg (kPa)>.
 2. Speed: <Insert rpm>.
 3. Motor Size: <Insert horsepower>.
- D. Refrigeration System:
1. Sensible Heat-Transfer Rate: <Insert Btu/h (kW)>.
 2. Total Heat-Transfer Rate: <Insert Btu/h (kW)>.
 3. Energy-Efficiency Ratio: <Insert number>.
 4. Dehumidification Capacity: <Insert lb of water/h (kg/h)>.
 5. Evaporator Coil Conditions:
 - a. Entering-Air, Dry-Bulb Temperature: <Insert deg F (deg C)>.
 - b. Entering-Air, Wet-Bulb Temperature: <Insert deg F (deg C)>.
 - c. Entering-Air, Dew-Point Temperature: <Insert deg F (deg C)>.

- d. Leaving-Air, Dry-Bulb Temperature: **<Insert deg F (deg C)>**.
 - e. Leaving-Air, Wet-Bulb Temperature: **<Insert deg F (deg C)>**.
 - f. Leaving-Air, Dew-Point Temperature: **<Insert deg F (deg C)>**.
6. Energy Recovery Heat Exchanger (Pool Heater):
- a. Water Flow Rate: **<Insert gpm (L/s)>**.
 - b. Water Pressure Loss: **<Insert feet of head (kPa)>**.
 - c. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 - d. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
- E. Filters:
1. Thickness or Depth: **<Insert inches (mm)>**.
- F. Hydronic Heating Coil:
1. Heat-Transfer Rate: **<Insert Btu/h (kW)>**.
 2. Entering-Air Temperature: **<Insert deg F (deg C)>**.
 3. Leaving-Air Temperature: **<Insert deg F (deg C)>**.
 4. Water:
 - a. Water Flow: **<Insert gpm (L/s)>**.
 - b. Maximum Water Pressure Drop: **<Insert feet of head (kPa)>**.
 - c. Entering-Water Temperature: **<Insert deg F (deg C)>**.
 - d. Leaving-Water Temperature: **<Insert deg F (deg C)>**.
- G. Steam Heating Coil:
1. Steam Flow: **<Insert lb/h (g/s)>**.
 2. Inlet Steam Pressure: **<Insert psig (kPa)>**.
- H. Electric Heating Coil:
1. Heat-Transfer Rate: **<Insert kilowatts>**.
 2. Input: **<Insert kilowatts>**.
 3. Volts: **[120] [208] [230] <Insert value>**.
 4. Phase: **[Single] [Three]**.
 5. Hertz: 60.
 6. Full-Load Amperes: **<Insert value>**.
 7. Number of Steps: **<Insert number>**.
- I. Electrical Characteristics:
1. Volts: **[120] [208] [230] <Insert value>**.
 2. Phase: **[Single] [Three]**.
 3. Hertz: 60.
 4. Full-Load Amperes: **<Insert value>**.
 5. Minimum Circuit Ampacity: **<Insert value>**.
 6. Maximum Overcurrent Protection: **<Insert amperage>**.

2.13 SOURCE QUALITY CONTROL

- A. Verification of Performance: Factory test and rate dehumidification units according to ARI 910.
- B. Sound-Power-Level Ratings: Factory test and rate dehumidification units according to ARI 575.

2.14 SPRAYED COIL DEHUMIDIFIERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers in this article. See Section 016000 "Product Requirements."

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. **American Air Filter Co.**
 - 2. **Buffalo Forge Co.**
 - 3. **Trane Co.**
 - 4. or approved equal.
- B. **Manufactured units:**
 - 1. Units: Factory assembled consisting of casing, tank, spray headers, nozzles, **[spray pumps,]** water and drain connections, and cooling coils.
 - 2. Evaporation Performance: As indicated on the drawings.

Select one below.

- 3. Operating Static Pressure: **[3 inch wg negative] [3 inch wg positive] [6 inch wg positive]**.
- C. **Casing:**
 - 1. Assembly: Galvanized steel, minimum 0.0635 inch, reinforced and braced with galvanized steel angles with cadmium plated cap screws.
 - 2. Connection: 1-1/2 inch flanges on inlet and outlet with 1/4 x 1 inch adhesive backed neoprene gasket.

Select one below.

- 3. Doors: **[20 x 36 inch] [14 x 19 inch]** quick opening access door on one side with 1/4 inch thick plexiglass inspection window.

Edit paragraph below as needed.

- 4. Finish: Two (2) coats of **[zinc chromate, iron oxide, phenolic resin]** <Insert type> paint applied after assembly.
- 5. Removable Inlet Screen: Galvanized expanded metal on inlet side of dehumidifier.
- 6. Gasket and flange pipe penetrations, inspection panels, access doors, and other openings in casing.

D. Drain tank:

Edit paragraph below.

1. Tank: Welded stainless steel, 12 inches deep, **[0.1345 inch] [3/16 inch]**, **[finished inside and out with zinc chromate, iron oxide, phenolic resin paint] [prime coated]** and coated inside with **[1/8 inch asphalt mastic] [3/32 inch epoxy] [glass fiber reinforced plastic]** coating.

Edit paragraph below.

2. Connections: **[3/4 inch] [1 inch]** adjustable float valve assembly with brass rod and brass or polystyrene float; 2 inch drain and overflow with removable copper suction screen.
3. Fabricate: Lap and weld corners watertight. Weld fittings and piping supports to tank.

Select one below.

4. External Spray Piping: **[1-1/4 inch galvanized steel] [1-1/2 inch PVC]** piping.
5. Spray Nozzles: Bronze, self-cleaning.

E. Cooling coils:

1. Coil: **[ARI 410;]** copper tube, copper fin construction individually mounted on steel angle rails. Refer to Section 238216.11 "Hydronic Air Coils" and coil schedule for size and cooling capacity of unit.

Select one below.

2. Eliminators: **[Type 304 stainless steel,] [PVC]** mounted over drain pan.
3. Water Cooling Coil: As indicated on the drawings.

Engineer shall select either c or d

4. Refrigerant Cooling Coil: As indicated on the drawings.

F. Spray pumps:

Select one below.

1. Type: **[Vertical] [Horizontal]** shaft, single stage, close coupled, radially split casing, for 125 psi maximum working pressure.
2. Casing: Cast iron, with gage ports, drain plug, flanged suction and discharge.
3. Impeller: Bronze, fully enclosed, keyed to motor shaft extension.
4. Shaft: Stainless steel.
5. Seal: Carbon rotating against a stationary ceramic seat.
6. Performance: As indicated on the drawings.
7. Electrical Characteristics: As indicated on the drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for [**hot-water**] [**steam**] [**refrigerant**] piping systems to verify actual locations of piping connections before equipment installation.
- C. Examine walls, floors, and roofs for suitable conditions where dehumidification units will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Equipment Mounting:

Retain first subparagraph below to require equipment to be installed on cast-in-place concrete equipment bases.

- 1. Install dehumidification units on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

Retain one of two subparagraphs below. Retain first for projects in seismic areas; retain second for projects not in seismic areas. Indicate vibration isolation and seismic-control device type and minimum deflection in supported equipment schedule on Drawings.

- 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- 3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

3.3 INSTALLATION OF SPRAYED COIL DEHUMIDIFIERS

- A. Install in accordance with manufacturer's instructions.
- B. Install in ducts or casings in accordance with SMACNA HVAC Duct Construction Standards, Metal and Flexible.
- C. Insulate exterior of unit same as specified for ductwork. Refer to Section 230713 Duct Insulation.
- D. Place unit on 2 inch thick closed-cell rigid insulation board same size as unit tank. Flash and counter-flash with 0.0396 inch galvanized steel on entering and leaving sides.

- E. Connect unit to water supply. Provide gate valve on water supply line. Provide 3/4 inch hose bibb accessible from interior.
- F. Provide shut-off valves for individual spray header isolation and balancing. [**Arrange to permit step control of sprays.**]
- G. Pipe drain and overflow to nearest floor drain.
- H. Bolt spray pump directly to tank fitting. Insulate piping located on exterior of unit. Refer to Section 230719 "HVAC Piping Insulation".
- I. Provide globe valve and solenoid valve in 1/2 inch bleed line from drain. Refer to Section 232500 "Chemical Water Treatment".

Engineer shall select either I or J.

- J. Provide 1/2 inch bleed line from spray pump discharge to nearest floor drain complete with globe valve set to pass 1/2 gph of spray water per 1000 cfm of air flow. Locate bleed line above flood level of drain tank.
- K. Provide low water cut-off in drain pan to stop spray pump.
- L. Connect unit coil to chilled water cooling system. Refer to Section 232113 "Hydronic Piping".
- M. Connect unit coil to refrigerant system. Refer to Section 232200 "Refrigerant Piping".

Engineer shall select either M or N.

- N. Connect unit to electrical supply. Refer to Section 260583 "Electrical Connections for Equipment".

3.4 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Where piping is installed adjacent to dehumidification units, allow space for service and maintenance of dehumidification units.

Flexible connectors in first paragraph below may be unnecessary. Coordinate requirements with Project conditions.

- B. Connect piping to dehumidification units mounted on vibration isolators with flexible connectors.
- C. Connect condensate drain pans using minimum **NPS 1-1/4 (DN 32)** copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan, and install cleanout at changes in direction.

Retain first paragraph below for units with remote-mounted air-cooled condensers.

- D. Refrigerant Piping: Comply with requirements in Section 232300 "Refrigerant Piping." Connect to supply and return coil tapplings with shutoff valve and union or flange at each connection.

Retain first paragraph below for units with hot-water coils.

- E. Hot-Water Piping: Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Connect to supply coil tapplings with shutoff valve, return coil tapplings with balancing valve, and union or flange at each connection.

Retain first paragraph below for units with steam coils.

- F. Steam and Condensate Piping: Comply with requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 Steam and Condensate Piping Specialties." Connect with shutoff valve and union or flange.

Coordinate duct installation requirements with Drawings and with requirements specified in duct systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- G. Duct installation requirements are specified in Section 233113 "Metal Ducts" and Section 233116 "Nonmetal Ducts." Drawings indicate the general arrangement of ducts. The following are specific connection requirements:
 - 1. Install ducts to termination in roof-mounted frames. Where indicated, terminate return-air duct through roof structure and insulate the space between roof and bottom of dehumidification unit.

3.5 FIELD QUALITY CONTROL

Retain first paragraph below to require a factory-authorized service representative to perform inspections, tests, and adjustments.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with tests and inspections.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

C. Tests and Inspections:

1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks. Repair leaks and retest until no leaks exist.
2. Charge refrigerant coils with refrigerant and test for leaks. Repair leaks and retest until no leaks exist.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

D. Dehumidification unit will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. **[Engage a factory-authorized service representative to perform] [Perform]** startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

B. Perform the following final checks before startup:

1. Verify that shipping, blocking, and bracing are removed.
2. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Perform cleaning and adjusting specified in this Section.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify free fan wheel rotation and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
5. Check lubrication of bearings, pulleys, belts, and other moving parts.
6. Set outside- and return-air mixing dampers to minimum outside-air setting.
7. Install clean filters.
8. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.

C. Starting procedures for dehumidification units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace malfunctioning motors, bearings, and fan wheels.
2. Measure and record motor's electrical values for voltage and amperage.

3. Manually operate dampers from fully closed to fully open position and record fan performance.
 - D. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing of dehumidification unit.
 - E. Startup Report: Report findings during startup. Identify startup steps, corrective measures taken, and final results.
- 3.7 ADJUSTING
- A. Adjust damper linkages for proper damper operation.
 - B. Adjust initial temperature and humidity set points.
- 3.8 CLEANING
- A. Clean dehumidification units internally, on completion of installation, according to manufacturer's written instructions. Clean fan interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheels, cabinets, and coils' entering-air face.
 - B. After completing system installation, testing, and startup service of dehumidification units, clean filter housings and install new filters.
- 3.9 DEMONSTRATION
- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain dehumidification units.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 238416

Copyright 2012 by The American Institute of Architects (AIA)

Updated: August 26, 2015

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260400 - BASIC ELECTRICAL REQUIREMENTS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Certain labor, materials, and equipment may be furnished under other Sections of these specifications, by utility Companies or by the Owner. When this is the case, the extent, source and description of these items will be as indicated on the drawings or as described in the specifications.
- B. Where a panel is installed, at least 25% of panel capacity, accounting for serving panel capacity, shall remain as spare capacity after project completion.
- C. Where existing panels are used for additional work, when six (6) or less spaces remain a new panel shall be installed.
- D. All electrical/electronic circuits, including audio, video, and fire alarm systems, shall be in an approved raceway system. No "wild circuits" will be accepted.
- E. The Designer of Record shall not design or specify and the Contractor shall not install rigid metal conduit, electrical metallic tubing, flexible steel conduit, liquid-tight flexible

steel conduit, non-metallic rigid conduit or innerduct in any horizontal or vertical concrete wall or slab structures or portions thereof, e.g., cast-in-place concrete floor slab on steel decking; cast-in-place concrete slabs integral with concrete structural support systems; prestressed concrete slabs; post-tensioned concrete slabs; precast concrete construction with or without field applied or plant fabricated concrete topping slabs, slabs on grade, foundation walls or in concrete cast-in-place walls, etc.

F. Related Sections:

Retain subparagraph below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Basic Electrical Requirements specifically applicable to all Division 26 Sections, in addition to Division 1 General Requirements, and Divisions 11, 14, 21, 22, 23, 27 and 28.
2. All electrical/electronic circuits and equipment from any other Division shall meet the requirements of Division 26.
3. Description: Work shall consist of furnishing all labor, equipment, supplies, and materials, unless otherwise specified, necessary for the installation of complete electrical systems as required by the specifications and as shown on the drawings, subject to the terms and conditions of the Contract. The Work shall also include the completion of those details of electrical work not mentioned or shown which are necessary for the successful operation of all electrical systems.
4. Temporary Power: See Division 1 for construction power constraints.

G. REFERENCE STANDARDS

Edit to delete, retain, or add any general standards that should be included

H. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents.

I. Latest editions of the following:

1. ANSI/NFPA 70 - National Electrical Code (as adopted and amended by the Denver Building Department).
2. International Fire Code (as amended by the Denver Fire Department).
3. International Building Code (as adopted and amended by the Denver Building Department).
4. International Energy Conservation Code (as adopted and amended by the Denver Building Department).
5. ANSI/IEEE C2 - National Electrical Safety Code.
6. OSHA - Occupational Safety and Health Administration, as Amended
7. Underwriter's Laboratory (UL).
8. National Fire Protection Association (NFPA).
9. Other references as listed elsewhere in these specifications.
10. IEEE Standard 519- Recommended Practices and Requirement for Harmonic

Control in Electrical Power Systems.

1.3 DEFINITIONS

- A. "Furnish" or "Provide": To supply, install and connect complete and ready for safe and regular operation of particular work unless specifically otherwise noted.
- B. "Install": To erect, mount and connect complete with related accessories.
- C. "Supply": To purchase, procure, acquire and deliver complete with related accessories.
- D. "Work": Labor, materials, equipment, apparatus, controls, accessories, and other items required for proper and complete installation.
- E. "Wiring": Raceway, fittings, wire, boxes and related items.
- F. "Concealed": Embedded in masonry, concrete, or other construction, installed in furred spaces, within double partitions or hung ceilings, in trenches, in crawl spaces, or in enclosures.
- G. "Or Equal. Or Approved Equal": Refers to products that, in the opinion of the DEN Project Manager, are similar in all respect to products specified by proprietary brand name. (Refer to Section 01630 for procedures for submittal of proposed substitutions.)
- H. "Exposed": Not installed underground or "concealed" as defined above.
- I. "Indicated," "Shown" or "Noted": As indicated, shown or noted on drawings or specifications.
- J. "Similar" or "Equal": Same in materials, weight, size, design, construction, capacity, performance, and efficiency of specified product.
- K. "Reviewed," "Satisfactory," "Accepted," or "Directed": As reviewed, satisfactory, accepted, or directed by or to DEN Project Manager.
- L. "Related Work" includes all "Work" required for a complete working system.
- M. "Equipment": A general term including material, fittings, devices, appliances, fixtures, apparatus, and the like used as a part of, or in connection with, an electrical installation.
- N. "Busbar": A rigid metallic conductor, lug or bar used to make a common connection between more than one circuit. (Includes all termination assemblies.)
- O. "Shall": Mandatory requirements of this specification are characterized by the use of the word "shall".
- P. Refer to Article 100 of the currently adopted National Electrical Code for other definitions as applicable to this Project.

1.4 WORK SEQUENCE

- A. Construct Work in sequence under provisions of Division 1 where applicable.

1.5 DRAWINGS AND SPECIFICATIONS

- A. The Drawings indicate the general arrangement of circuits, outlets, panelboards and other work. Information shown on the Drawings is schematic; however, re-circuiting will not be permitted without specific acceptance. In cases of conflict between specifications and drawings, the specification shall have precedence. Data presented on the drawings is as accurate as planning can determine, but accuracy is not guaranteed and field verification of all dimensions, locations, levels, etc., to suit field conditions is required. Review all of the Contract Documents and adjust all work to conform to all conditions shown therein.
- B. Prior to submitting a bid, a site visit is required to ascertain all conditions affecting the proposed installation and to adjust all work accordingly. Costs for providing for these adjustments, including response to site constraints, shall be itemized and listed in the bid proposal.
- C. Discrepancies between different plans, between plans and specifications, between specifications, or regulations and codes governing this installation shall be brought to the attention of the DEN Project Manager in writing 72 hours before the date of bid opening. In the event such discrepancies exist, and the DEN Project Manager is not so notified, the adjudication of responsibility shall be solely at the discretion of the DEN Project Manager.

1.6 COORDINATION

- A. Prior to fabrication or installation of any electrical work, participate in detailed coordination planning meetings with all other building utilities system trades, under the direction of the General Contractor, so as to completely establish routings, elevations, space requirements, and coordination of access, layout, and suspension requirements in relationship to the building structure and the work of all other trades.
- B. Any electrical work penetrating concrete walls or floors shall require saw cutting and/or core drilling and shall require approval by the DEN Project Manager. The Contractor shall perform all necessary imaging (x-rays, etc.) as specified, and submit shop drawings of any saw cutting or core drilling to the DEN Project Manager prior to performing the Work. Refer to Section 017330 "Cutting and Patching" for additional requirements.
- C. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.

1.7 COORDINATION DRAWINGS

- A. Where the Contractor modifies the design, through selection of equipment differing from that shown, coordination drawings shall be provided by the Contractor in accordance with Division 1 to a scale of 1/4"=1'0" or larger for equipment rooms, details, congested areas and sections; other plans at a scale of 1/8"=1'0". These drawings are to detail major elements, components, and systems of electrical equipment and materials in relationship with other systems, installations, and building components.
- B. Coordination drawings shall be in accordance with current DEN standards for format, and as outlined in Division 1.
- C. The Contractor shall indicate locations where space is limited for installation and access and where sequencing and coordination of installations are of importance to the efficient flow of the Work, including (but not necessarily limited to) the following:
 - 1. Indicate the proposed locations of raceway systems, equipment, and materials. Include the following:
 - a. Clearances for servicing equipment, including space for equipment disassembly required for periodic maintenance.
 - b. Exterior wall and foundation penetrations.
 - c. Fire-rated wall and floor penetrations.
 - d. Equipment connections and support details.
 - e. Sizes and location of required concrete pads and bases.
 - f. Support details.
 - 2. Indicate scheduling, sequencing, movement, and positioning of large equipment into the building during construction.
 - 3. Floor plans, elevations, and appropriate details are required to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.

1.8 SUBMITTALS

- A. Refer to Section 013300 "Submittal Procedures".
- B. Submit shop drawings, coordination drawings and product data in accordance with provisions of Division 1. Submit all required information under a given specification section together. Do not split out submittals under the same specification section.
- C. Prior to submission, shop drawings, material lists and catalog cut sheets or manufacturer's printed data shall be thoroughly checked for compliance with Contract requirements, compatibility with equipment being furnished by the Contractor or Owner, accuracy of dimensions, coordination with work of other trades, and conformance with sound and safe practice as to erection of installation. Each submittal shall bear Contractor's signed statement evidencing such checking.

- D. Clearly mark each shop drawing as follows for purposes of identification:
1. Shop Drawing.
 2. Equipment Identification Used on Contract Drawings.
 3. Date.
 4. Name of Project.
 5. Branch of Work.
 6. Project Manager's Name.
 7. Contractor's Name.
- E. Clearly mark printed material, catalog cut sheets, pamphlets or specification sheets, and shop drawings with the same designation shown on the Contract document schedules. Contractor agrees that submittals processed by the DEN Project Manager are not change orders; that the purpose of submittals is to demonstrate to the DEN Project Manager that the Contractor understands the design concept; and that the Contractor demonstrates this understanding by indicating which equipment and material the Contractor intends to furnish and install and by detailing the installation methods the Contractor intends to use.
- F. Contractor shall be responsible for dimensions (which the Contractor shall confirm and correlate at the job site), fabrication processes and techniques of construction, and coordination of the Contractor's Work with that of other trades. The Contractor shall check and verify all measurements and review shop drawings before submitting them. If any deviations from the specified requirements for any item of material or equipment exist, such deviation shall be expressly stated in writing and incorporated with the submittal.
- G. Maintain one copy of accepted shop drawings at the Project field office until completion of the Project, and make this copy available, upon request, to representatives of the DEN Project Manager and Owner.
- H. No equipment or materials shall be installed or stored at the jobsite until submittals for such equipment or materials have been given review action by the DEN Project Manager accepting their use.
- I. Shop drawings and manufacturer's published data shall be submitted for all equipment required for this Project.
- 1.9 RECORD DOCUMENTS
- A. Maintain a Contract set of electrical drawings and specifications at the site. Neatly mark all changes, discoveries and deviations from the original drawings. Use a reproducible color that contrasts with the prints. This shall be a separate set of drawings, not used for construction purposes, and shall be updated daily as the job progresses and shall be made available for inspection by the DEN Project Manager at all times. Upon completion of the Contract, this set of record drawings shall be delivered to the DEN Project Manager. Follow current DEN BIM standards, to be furnished to the successful bidder as well as the project-specific BIM execution plan. Record documents to be provided by the Contractor shall clearly and accurately show

the following:

1. Provide horizontal and vertical dimensions for all raceway systems, size and location, for both exterior and interior; locations of control devices; distribution and branch electrical circuitry; and fuse and circuit breaker size and arrangements.
2. Equipment locations (exposed and concealed), dimensioned from prominent building lines.
3. Approved substitutions, Contract Modifications, and actual equipment and materials installed.

1.10 REGULATORY REQUIREMENTS

- A. Obtain all permits, plan review, and inspections from authority having jurisdiction.
- B. The drawings and specifications take precedence when they are more stringent than codes, statutes, or ordinances in effect. Applicable codes, ordinances, standards and statutes take precedence when they are more stringent than the drawings and specifications.

1.11 ENVIRONMENTAL CONDITIONS

- A. The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 1. Location: Indoors/Outdoors.
 2. Altitude: 5,500 feet above sea level.
 3. Temperature range: -30°F to 120°F.

1.12 WARRANTY

- A. The entire electrical system installed under this Contract shall be left in proper working order. Replace, at no additional cost to the Owner, any work, materials, or equipment that evidences defects in design, construction, or workmanship within two (2) years, or any longer period specifically noted elsewhere in these specifications, from date of final acceptance.

PART 2 - PRODUCTS

2.1 MATERIALS AND EQUIPMENT

- A. Materials and Equipment: Acceptable to the authority having jurisdiction as suitable for the use intended, except where more stringent requirements are indicated by the Contract Documents.
- B. All equipment and materials installed shall be new, unless otherwise specified.

- C. Defective or damaged materials shall be replaced or repaired, prior to final acceptance, in a manner acceptable to the DEN Project Manager or Owner and at no additional cost to the Owner.
- D. All electrical "equipment" and assemblies shall be acceptable for installation only if labeled and listed by a nationally recognized testing laboratory, such as UL or an equivalent.
- E. All major equipment components shall have the manufacturer's name, address, model number, and serial number permanently attached in a conspicuous location.

2.2 STORAGE AND PROTECTION

- A. Store products in accordance with manufacturer's instructions, with seals and labels intact and legible. Store sensitive products in weather-tight enclosures; maintain within temperature and humidity ranges required by manufacturer's instructions.
- B. For exterior storage of fabricated products, place on sloped supports above ground. Cover products subject to deterioration with impervious sheet covering and provide ventilation to avoid condensation.
- C. Arrange storage to provide access for inspection. Periodically inspect to assure products are undamaged and are maintained under required conditions.

2.3 PRODUCT OPTIONS

- A. Products Specified by Reference Standards or by Description Only:
 - 1. Any product meeting those standards.
- B. Products Specified by Naming One or More Manufacturers with a Provision for Substitutions:
 - 1. Submit a request for substitution for any manufacturer not specifically named with supporting documentation for approval by DEN Project Manager.

2.4 PRODUCTS LIST

- A. Within fifteen (15) days after date of Notice to Proceed, submit complete list of major products required for submittal under these specifications, with name of manufacturer, trade name, and model number of each product.

2.5 SUBSTITUTIONS

- A. Refer to Division 1 General Requirements, Section 012510 "Substitutions".

PART 3 - EXECUTION

3.1 WORKMANSHIP

- A. Only quality workmanship will be accepted. Poor workmanship, improper layout of work and lack of coordination of Work, as determined by the DEN Project Manager, are not acceptable and shall be corrected at the contractors cost.
- B. Contractor shall include no more than one apprentice per Journeyman Electrician. Apprentices shall be under the direct supervision of a licensed electrician at all times.
- C. Any changes or deviations from the drawings and specifications must be accepted in writing by the DEN Project Manager. All errors in installation shall be corrected at the expense of the Contractor. All specialties shall be installed as detailed on the drawings. Where details or specific installation requirements are not provided, manufacturer's recommendations shall be followed.
- D. Upon completion of Work, all equipment and materials shall be installed complete, thoroughly tested, checked, correctly adjusted, and left ready for intended use or operation. All Work shall be thoroughly cleaned and all residues shall be removed from surfaces. Exterior surfaces of all material and equipment shall be left in a perfect, unblemished condition.
- E. Contractor shall provide a complete installation, including all required labor, material, cartage, testing, insurance, permits, and taxes.

3.2 CHASES, OPENINGS, CUTTING AND PATCHING

- A. Carefully lay out all work in advance so as to eliminate where possible, cutting, channeling, chasing, or drilling of floors, walls, partitions, ceilings and roofs. Any damage to the building, structure, piping, ducts, equipment or any defaced finish shall be repaired by skilled mechanics of the trades involved at no additional cost to the Owner and to the satisfaction of the DEN Project Manager. Any necessary cutting, channeling, drilling or welding as required for the proper support, concealment, installation or anchoring of raceways, outlets, or other electrical equipment shall be performed in a careful manner, and shall be pre-approved by the DEN Project Manager.
- B. All openings made in fire-rated walls, floors, or ceilings shall be sealed and made tight in a manner to conform to the fire rating for the barrier penetrated. Reference specification Section 078413 "Penetration Firestopping" for additional information.
- C. All penetrations required through completed concrete construction shall be core drilled at minimum size required. All penetrations in concrete require an x-ray or ground penetrating radar to determine if the location is clear of reinforcing steel and embedded systems. Precautions shall be taken when drilling to prevent damage to structural concrete.

3.3 ELECTRICAL INSTALLATIONS

- A. Coordinate electrical systems, equipment, and material installation with other building components. If the Contractor furnishes equipment of a different size, the Contractor shall furnish and install the proper fuses, circuit breaker, disconnect switch, wire and conduit required for the equipment furnished, at no additional cost to the Owner, and as deemed acceptable by the DEN Project Manager.

3.4 PROGRESS OF WORK

- A. Coordinate the progress of electrical work to conform to the progress of the Work of the other trades. Complete the entire installation as soon as the condition of the sites will permit. Any cost resulting from defective or ill-timed work performed under Division 26 shall be borne by the Contractor.

3.5 ELECTRICAL COMPLETION

- A. Training of Operating and Maintenance Personnel: Furnish the services of a qualified representative of the supplier of each item or system itemized below who shall instruct specific personnel, as designated by the Owner, in the operation and maintenance of that item or system.
 - 1. Instruction shall be given when the particular system is complete, shall be of the number of hours indicated, and at the time requested by the Owner. A representative of the Contractor shall be present for all demonstrations.

Add systems to list as appropriate for Project.

Systems:

Hours of Instruction:

- B. Operating and Maintenance Manuals and Parts Lists: Deliver three (3) complete operating & maintenance manuals and parts lists in three-ring binders to the Owner at the time of the above required training. The information shall be provided on the manufacturer's original data sheets. Fully explain the contents of the manuals as part of required training and instruct the Owner's personnel in the correct procedure in obtaining service, both during and after the guarantee period.
 - 1. The operating and maintenance manuals and parts lists shall give complete information as to whom the Owner shall contact for service and parts. Include address and phone number. Furnish evidence that an authorized service organization regularly carries a complete stock of repair parts for these items (or systems), and that the organization is available for service. Service shall be furnished within 24 hours after requested.
- C. Operating and Acceptance Tests: Provide all labor, instruments, and equipment for the

performance of tests as specified below and elsewhere in these specifications for all applicable equipment furnished and installed as part of this Contract. Submit three (3) copies of test reports to the DEN Project Manager for the DEN Project Manager's approval.

- D. Clean Up: Remove all materials, scrap, etc., relative to the electrical installation, and leave the premises and all equipment, lamps, fixtures, etc. in a clean, orderly condition. Clean all electrical equipment, such as switchboards, panel boards, luminaries etc. of construction dirt, dust, etc. and touch-up or repaint all scratches, blemishes, rust spots etc. to its original condition. Any costs to the Owner for cleanup of the site will be charged against the Contractor.
- E. Acceptance Demonstration: Upon completion of the Work, at a time to be designated by the DEN Project Manager, the Contractor shall demonstrate for the Owner the operation of the entire installation, including all systems provided or modified under this Contract.
- F. Final Acceptance by the Owner will not occur until all operating instructions are received and Owner's personnel have been thoroughly indoctrinated in the maintenance and operation of all equipment, as approved by DEN Project Manager.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260400

SECTION 260510 - TESTING, ACCEPTANCES AND CERTIFICATION

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

THIS SECTION INCLUDES GENERAL REQUIREMENTS FOR THE NECESSARY FIELD-TESTING, STARTUP SERVICES AND CERTIFICATION FOR ALL ELECTRICAL AND MECHANICAL EQUIPMENT.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY OF REQUIREMENTS

Edit to suit Project.

- A. The Contractor shall provide the necessary field-testing and startup services for all electrical and mechanical equipment except as noted otherwise. The field-testing and startup services shall be in accordance with each equipment manufacturer's written recommendations for field-testing proving they meet Contract standards.
- B. The Contractor shall be responsible for furnishing all equipment, power source when needed, coordinating and performing electrical/electronic testing required by the Contract Documents. Testing requirements may be located on the Contract Drawings or other sections of the specifications.
- C. The Contractor shall provide all necessary assistance and cooperation with any Independent Testing Organization furnishing by the City. The Contractor shall correct, repair, or replace all equipment found to be defective by the Independent Testing Organization.

1.3 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

Edit to delete, retain, or add any general standards that should be included for Project.

- A. Without limiting the generality of other requirements of these Specifications, all Work specified herein shall conform to or exceed the applicable requirements of the referenced Standards; provided, that wherever the provisions of said publications are in conflict with the requirements specified herein, the more stringent requirements shall apply unless in conflict with the equipment manufacturer's written recommendations:
1. Building Code and DEN Standards.
 2. ANSI/IEEE C2 - National Electrical Safety Code.
 3. OSHA - Occupational Safety and Health Administration, as Amended
 4. NETA - National Electric Testing Association
 5. NEMA ICS 1 - General Standards for Industrial Control and Systems.
 6. NEMA ICS 2 - Standards for Industrial Control Devices, Controllers, and Assemblies.
 7. NEMA ICS 6 - Enclosures for Industrial Controls and Systems.
 8. UL 1008 - Standard for Automatic Transfer Switches.
 9. NFPA 70 - National Electrical Code, including but not limited to use in emergency and standby systems in accordance with Articles 517, 700, 701 and 702.
 10. NFPA 72 - National Fire Alarm Code (as adopted and amended by the Denver Building Code and DEN Standards).
 11. NFPA 101 - National Electrical Safety Code (as adopted and amended by the Denver Building Code and DEN Standards).
 12. NFPA 110 - Standard for Emergency and Standby Power Systems (as adopted and amended by the Denver Building Code and DEN Standards).
 13. IEEE Standard 446 - IEEE Recommended Practice for Emergency and Standby Power Systems (Orange Book)
 14. NEMA Standard ICS-2-447 - AC Automatic Transfer Switches.
 15. IEC - Standard for Automatic Transfer Switches.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 SUBMITTALS

- A. Comply with Division 1 submittal requirements.
- B. Five (5) copies of complete certified test reports shall be submitted to the DEN Project Manager by the contractor. Electronic copy of test reports in pdf format to also be submitted to the DEN Project Manager. The test reports shall include the following as a minimum:
1. Power cable high potential test reports:
 - a. Insulation resistance tests.
 - b. Continuity tests.
 2. Transformer test reports to include where applicable:

- a. Transformer turns ratio.
 - b. Winding resistance.
 - c. Insulation power factor.
 - d. K Factor.
3. All electrical/electronic equipment and systems functional test report.
 4. All other reports required by individual specification sections.
 5. Generator load bank test report.
 6. Transfer Switch test report.
 7. Load balance report for each switch board, panel board and switch gear.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. The electrical and mechanical equipment shall be completely tested in the field in the presence of DEN Inspectors in accordance with good and accepted industry engineering practices to assure that:
 1. The equipment has not been damaged during manufacturing, shipping, or installation.
 2. The equipment has been installed according to the requirements Contract Documents.
 3. The equipment meets the requirements of the Contract Documents.
- B. If the Contractor finds during the testing that any piece of equipment failed to satisfactorily pass the required field test, the DEN Project Manager shall be promptly notified and the Contractor shall take the necessary actions for the prompt repair or replacement.
- C. A retest to demonstrate the equipment will meet the requirements of the Contract Documents shall be scheduled with the DEN Project Manager.

2.2 ENGINE GENERATOR SYSTEM (WHEN FURNISHED AND INSTALLED AS PART OF THIS CONTRACT).

- A. Test generator operation per tests as specified in Section 263213 "Engine Generators".

2.3 BYPASS ISOLATION TRANSFER SWITCH (WHEN FURNISHED AND INSTALLED AS PART OF THIS CONTRACT).

- A. Test transfer switch operation per tests as specified in Section 263600 "Transfer Switches"

2.4 HVAC

- A. Test the operation of all heaters and air conditioners.
- B. Test the Lead Lag Control circuits.

2.5 GROUND RESISTANCE TEST

- A. Before connecting a ground rod to the system test the resistance to earth. Where test show resistance to ground over 5 OHMS, an additional ground rod shall be added.
- B. Upon completion of installation of electrical grounding system, test ground resistance to earth in accordance with ANSI/IEEE81. Submit test results to the DEN Project Manager

2.6 CONDUCTOR INSULATION TEST

- A. Prior to energizing, all building service cables feeders to and/or from transformers, switchboards, panel boards are to be tested with a 1000-volt insulation megohm meter to determine insulation resistance levels. Test cables rated for three hundred volt with a 500-volt megohm meter or as recommended by the manufacturer. All field test data is to be recorded, corrected to a baseline temperature and furnished to the DEN Project Manager. A test is to include meggering between conductors and between each conductor and ground. Cables are to be meggered after installation with cables disconnected at both ends. Insulation test values shall meet or exceed the values given below:

Conductor Size: (AWG or KCMIL)	Resistance: (Megaohms - 1,000 ft.)
12-8	200
6-2/0	100
3/0-750	100

PART 3 - EXECUTION

3.1 FIELD QUALITY CONTROL

- A. TESTING
 - 1. The Contractor shall allow only certified personnel to perform the testing.
 - 2. The Contractor shall perform the testing using all necessary safety precautions and proper test equipment.
 - 3. The Contractor shall notify the DEN Project Manager three (3) days in advance of the proposed testing dates.
 - 4. Witness of testing by DEN Inspector, Electrical Maintenance and Electrical Inspector.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 260513 - MEDIUM-VOLTAGE CABLES

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes cables and related cable splices, terminations, and accessories for medium-voltage (2001 to 35,000 V) electrical distribution systems.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. Jacket: A continuous nonmetallic outer covering for conductors or cables.
- B. NETA ATS: Acceptance Testing Specification.
- C. Sheath: A continuous metallic covering for conductors or cables.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of cable. Include splices and terminations for cables and cable accessories.

Retain "Samples" Paragraph below for single-stage Samples, with a subordinate list if applicable.

- B. Samples: 16-inch (400-mm) lengths for each type of cable specified.

1.5 INFORMATIONAL SUBMITTALS

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- A. Qualification Data: For installer.

Retain "Material Certificates" Paragraph below to require submittal of material certificates from manufacturers.

- B. Material Certificates: For each type of cable and accessory, signed by manufacturers.

Retain reports below if required.

- C. Source quality-control reports.

Delete test reports below if not required. Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- D. Field quality-control reports.
- E. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

1.6 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

Revise "Installer" Paragraph below to include certification that may be specific to Project location.

- A. Installer: Engage a cable splicer, trained and certified by splice material manufacturer, to install, splice, and terminate medium-voltage cable.

If an independent testing agency is required, see Section 014000 "Quality Requirements" for general testing and inspecting agency qualification requirements. If additional control is needed, use first

paragraph below to specify 29 CFR 1910.7 or other more specific criteria (e.g., NETA). 29 CFR 1910.7 defines a nationally recognized testing laboratory as it applies to testing and inspecting for safety, and lists, labels, or accepts equipment and materials that meet certain OSHA criteria.

Retain paragraph and subparagraph below if Contractor or manufacturer selects testing agency.

- B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
- C. Source Limitations: Obtain cables and accessories through one source from a single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

Edit paragraph below to suit Project. See Editing Instruction No. 2 in the Evaluations.

- E. Comply with IEEE C2 and NFPA 70.

1.8 PROJECT CONDITIONS

Delete this article if no interruption of existing electric service is required.

- A. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated.
- B. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown. Do not proceed with interruption of electric service without Owner's written permission.
- C. Any electrical work penetrating concrete walls or floors shall require saw cutting and/or core drilling and shall require approval by the DEN Project Manager. The contractor shall submit shop drawings of any saw cutting or core drilling to the DEN Project Manager prior to performing the work. Refer to Section 033000 "Cast-In-Place Concrete" for cutting and patching work.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

- D. CONSTRUCTION WASTE MANAGEMENT
 - 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall

be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products.

Refer to Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

Retain lists below with either paragraph above.

1. Cables:
 - a. American Insulated Wire Corp.; a Leviton Company.
 - b. General Cable Technologies Corporation.
 - c. Kerite Co. (The); Hubbell Incorporated.
 - d. Okonite Company (The).
 - e. Pirelli Cables & Systems NA.
 - f. Rome Cable Corporation.
 - g. Southwire Company.
 - h. <Insert manufacturer>
 - i. or approved equal.

2. Cable Splicing and Terminating Products and Accessories:
 - a. Engineered Products Company.
 - b. G&W Electric Company.
 - c. MPHusky.
 - d. Raychem Corp.; Telephone Energy and Industrial Division; Tyco International Ltd.
 - e. RTE Components; Cooper Power Systems, Inc.
 - f. Scott Fetzer Co. (The); Adalet.
 - g. Thomas & Betts Corporation.
 - h. Thomas & Betts Corporation/Elastimold.
 - i. 3M; Electrical Products Division.
 - j. <Insert manufacturer>
 - k. or approved equal.

2.2 CABLES

Retain first option in paragraph below for crosslinked polyethylene insulation, second for ethylene-propylene insulation.

- A. Cable Type: [**MV90**] [MV105.]

Retain first option in first paragraph below for tape shielded cables, second for concentric neutral designs.

- B. Comply with UL 1072, AEIC CS 8, ICEA S-93-639, and ICEA S-97-682 , ICEA S-94-649.
- C. Conductor: Copper.
- D. Conductor Stranding: [**Compact round, concentric lay, Class B**] [Concentric lay, **Class B**].

Delete paragraph below if strand filling is not required for Project.

- E. Strand Filling: Conductor interstices are filled with impermeable compound.

See Editing Instruction No. 3 in the Evaluations for a discussion about insulation options in first two paragraphs and associated subparagraphs below.

- F. Conductor Insulation: Crosslinked polyethylene.

Retain paragraph above or below.

- G. Conductor Insulation: Ethylene-propylene rubber.

Retain two subparagraphs below with either paragraph above. These options are cable voltage ratings, not system voltages.

1. Voltage Rating: [5] [8] [15] [25] [35] kV.
2. Insulation Thickness: [100] [133] percent insulation level.

Delete two paragraphs below for unshielded cable. For shielded cable, select and edit first paragraph or select second. See Editing Instruction No. 4 in the Evaluations.

- H. Shielding: [**Copper tape**] [**Solid copper wires**], helically applied over semiconducting insulation shield.
- I. Shielding and Jacket: Corrugated copper drain wires embedded in extruded, chlorinated, polyethylene jacket.

Edit subparagraph below for multiconductor cable.

1. Circuit Identification: Color-coded tape (black, red, blue) under the metallic shielding.

2.3 SPLICE KITS

- A. Connectors and Splice Kits: Comply with IEEE 404; type as recommended by cable or splicing kit manufacturer for the application.
- B. Splicing Products: As recommended, in writing, by splicing kit manufacturer for specific sizes, ratings, and configurations of cable conductors. Include all components required for complete splice, with detailed instructions.

Delete subparagraphs below not required.

- 1. Combination tape and cold-shrink-rubber sleeve kit with re-jacketing by cast-epoxy-resin encasement or other waterproof, abrasion-resistant material.
- 2. Heat-shrink splicing kit of uniform, cross-section, polymeric construction with outer heat-shrink jacket.
- 3. Premolded, cold-shrink-rubber, in-line splicing kit.
- 4. Premolded EPDM splicing body kit with cable joint sealed by interference fit of mating parts and cable.

2.4 SOLID TERMINATIONS

Retain one of or both "Multiconductor Cable Sheath Seals" and "Shielded-Cable Terminations" paragraphs below.

- 1. Multiconductor Cable Sheath Seals: Type recommended by seal manufacturer for type of cable and installation conditions, including orientation.

Retain one of three subparagraphs below.

- 2. Cold-shrink sheath seal kit with preformed sleeve openings sized for cable and insulated conductors.
- 3. Heat-shrink sheath seal kit with phase- and ground-conductor re-jacketing tubes, cable-end sealing boot, and sealing plugs for unused ground-wire openings in boot.
- 4. Cast-epoxy-resin sheath seal kit with wraparound mold and packaged, two-part, epoxy-resin casting material.

- B. Shielded-Cable Terminations: Comply with the following classes of IEEE 48. Insulation class shall be equivalent to that of cable. Include shield ground strap for shielded cable terminations.

Retain one or more of six subparagraphs below.

- 1. Class 1 Terminations: Modular type, furnished as a kit, with stress-relief tube; multiple, molded-silicone-rubber, insulator modules; shield ground strap; and compression-type connector.
- 2. Class 1 Terminations: Heat-shrink type with heat-shrink inner stress control and outer nontracking tubes; multiple, molded, nontracking skirt modules; and compression-type connector.

3. Class 1 Terminations: Modular type, furnished as a kit, with stress-relief shield terminator; multiple-wet-process, porcelain, insulator modules; shield ground strap; and compression-type connector.
 4. Class 1 Terminations, Indoors: Kit with stress-relief tube, nontracking insulator tube, shield ground strap, compression-type connector, and end seal.
 5. Class 2 Terminations, Indoors: Kit with stress-relief tube, nontracking insulator tube, shield ground strap, and compression-type connector. Include silicone-rubber tape; cold-shrink-rubber sleeve; or heat-shrink, plastic-sleeve moisture seal for end of insulation whether or not supplied with kits.
 6. Class 3 Terminations: Kit with stress cone and compression-type connector.
- C. Nonshielded-Cable Terminations: Kit with compression-type connector. Include silicone-rubber tape, cold-shrink-rubber sleeve, or heat-shrink plastic-sleeve moisture seal for end of insulation whether or not supplied with kits.

2.5 SEPARABLE INSULATED CONNECTORS

Retain "Description" Paragraph below to ensure that elbow-type terminators at equipment such as substations, transformers, and switchgear mate with bushing terminals in equipment.

- A. Description: Modular system, complying with IEEE 386, with disconnecting, single-pole, cable terminators and with matching, stationary, plug-in, dead-front terminals designed for cable voltage and for sealing against moisture.

Delete paragraph below unless terminations take the place of splices at cable junctions, such as in manholes and cable vaults.

- B. Terminations at Distribution Points: Modular type, consisting of terminators installed on cables and modular, dead-front, terminal junctions for interconnecting cables.

Delete three paragraphs below if not required. Delete test-point feature for load-break unit if not required.

- C. Load-Break Cable Terminators: Elbow-type units with 200-A-load make/break and continuous-current rating; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.
- D. Dead-Break Cable Terminators: Elbow-type unit with 600-A continuous-current rating; designed for de-energized disconnecting and connecting; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.
- E. Dead-Front Terminal Junctions: Modular bracket-mounted groups of dead-front stationary terminals that mate and match with above cable terminators. Two-, three-, or four-terminal units as indicated, with fully rated, insulated, watertight conductor connection between terminals and complete with grounding lug, manufacturer's standard accessory stands, stainless-steel mounting brackets, and attaching hardware.

Delete drain wire below if not required.

1. Protective Cap: Insulating, electrostatic-shielding, water-sealing cap with drain wire.
2. Portable Feed-Through Accessory: Two-terminal, dead-front junction arranged for removable mounting on accessory stand of stationary terminal junction.
3. Grounding Kit: Jumpered elbows, portable feed-through accessory units, protective caps, test rods suitable for concurrently grounding three phases of feeders, and carrying case.
4. Standoff Insulator: Portable, single dead-front terminal for removable mounting on accessory stand of stationary terminal junction. Insulators suitable for fully insulated isolation of energized cable-elbow terminator.

Delete first paragraph below if fault indicators are not required.

- F. Test-Point Fault Indicators: Applicable current-trip ratings and arranged for installation in test points of load-break separable connectors, and complete with self-resetting indicators capable of being installed with shotgun hot stick and tested with test tool.
- G. Tool Set: Shotgun hot stick with energized terminal indicator, fault-indicator test tool, and carrying case.

2.6 ARC-PROOFING MATERIALS

Retain this article to require arc-proof cables.

- A. Tape for First Course on Metal Objects: **10-mil-** (250-micrometer-) thick, corrosion-protective, moisture-resistant, PVC pipe-wrapping tape.
- B. Arc-Proofing Tape: Fireproof tape, flexible, conformable, intumescent to **0.3 inch** (8 mm) thick, and compatible with cable jacket.
- C. Glass-Cloth Tape: Pressure-sensitive adhesive type, **1 inch** (25 mm) wide.

2.7 FAULT INDICATORS

Coordinate "Indicators" Paragraph below with Drawings by indicating current-trip ratings and quantities.

- A. Indicators: [**Automatically**] [**Manually**] reset fault indicator[**with inrush restraint feature**], arranged to clamp to cable sheath and provide a display after a fault has occurred in cable. Instrument shall not be affected by heat, moisture, and corrosive conditions and shall be recommended by manufacturer for installation conditions.

Retain "Resetting Tool" Paragraph below if retaining manually reset option in "Indicators" Paragraph above.

- B. Resetting Tool: Designed for use with fault indicators, with moisture-resistant storage and carrying case.

2.8 SOURCE QUALITY CONTROL

Revise first paragraph below for cable type specified. First option below refers to shielded cable, second option to concentric neutral cable designs.

- A. Test and inspect cables according to [ICEA S-97-682] [ICEA S-94-649] before shipping.

Retain paragraph below if sealed or strand-filled conductors are specified.

- B. Test strand-filled cables for water-penetration resistance according to ICEA T-31-610, using a test pressure of 5 psig (35 kPa).

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install cables according to IEEE 576.
- B. Determine required separation between wiring and other work.
- C. Determine routing to avoid interference with other work.
- D. Minimum wire size shall be based on the over current protection device and as governed by the NEC.
- E. Place an equal number of conductors for each phase in the same raceway.
- F. Pull Conductors: Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
 - 1. Where necessary, use manufacturer-approved pulling compound or lubricant that will not deteriorate conductor or insulation.
 - 2. Use pulling means, including fish tape, cable, rope, and basket-weave cable grips that will not damage cables and raceways. Do not use rope hitches for pulling attachment to cable. Use pull-in guides, cable feeders, and draw-in protectors as required to protect cables during installation.
 - 3. Pulling winches and other necessary pulling equipment shall be of adequate capacity to ensure a continuous pull on the cable. Strain gages shall be used to monitor the cable pulling tension.
 - 4. Do not pull cables with ends unsealed. Seal cable ends with rubber tape.
 - 5. Pull all conductors into a raceway at the same time.
 - 6. Install wire in raceway after interior of building has been physically protected from the weather and all mechanical work likely to injure conductors has been completed.
- G. Neatly train and lace wiring inside boxes, equipment, and panel boards. Make temporary connections to panel board devices with sufficient slack conductor to facilitate reconnections required for balancing loads between phases.

- H. Support cables according to Section 260529 "Hangers and Supports for Electrical Systems."
- I. All building wire and cable shall be installed in an approved raceway.
- J. All buried conduits containing medium-voltage cabling shall be installed in concrete encased duct banks.
- K. Install "Caution- Medium-Voltage" warning tape at least **12 inches** (305 mm) above concrete encased duct banks.
- L. Conductors shall not be pulled in concrete encased conduits before concrete is placed.
- M. In manholes, handholes, pull boxes, junction boxes, and cable vaults, train cables around walls by the longest route from entry to exit and support cables at intervals adequate to prevent sag.

Revise first paragraph below if separable insulated connectors are used.

- N. Install cable splices at pull points and elsewhere as indicated; use standard kits.
- O. Install terminations at ends of conductors and seal multiconductor cable ends with standard kits.

Coordinate paragraph and subparagraphs below with Drawings by indicating locations of separable insulated connectors.

- P. Install separable insulated-connector components as follows:
 - 1. Protective Cap: At each terminal junction, with one on each terminal to which no feeder is indicated to be connected.
 - 2. Portable Feed-Through Accessory: Three.
 - 3. Standoff Insulator: Three.

Delete first paragraph and subparagraphs below if cables are not arc proofed.

- Q. Arc Proofing: Unless otherwise indicated, arc proof medium-voltage cable at locations not protected by conduit, cable tray, direct burial, or termination materials. In addition to arc-proofing tape manufacturer's written instructions, apply arc proofing as follows:
 - 1. Clean cable sheath.
 - 2. Wrap metallic cable components with **10-mil** (250-micrometer) pipe-wrapping tape.
 - 3. Smooth surface contours with electrical insulation putty.
 - 4. Apply arc-proofing tape in one half-lapped layer with coated side toward cable.
 - 5. Band arc-proofing tape with **1-inch-** (25-mm-) wide bands of half-lapped, adhesive, glass-cloth tape **2 inches** (50 mm) o.c.
- R. Where harmonic currents exist on circuits that supply electric discharge lighting, data processing or similar equipment, a full size neutral conductor shall be provided for each single-phase circuit.

- S. Seal around cables passing through fire-rated elements according to Section 078413 "Penetration Firestopping."

Coordinate first paragraph below with Drawings by indicating locations of fault indicators or edit paragraph to describe locations.

- T. Install fault indicators on each phase where indicated.
- U. Ground shields of shielded cable at terminations, splices, and separable insulated connectors. Ground metal bodies of terminators, splices, cable and separable insulated-connector fittings, and hardware.
- V. Identify cables according to Section 260553 "Identification for Electrical Systems."

3.2 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:

Edit to suit Project. Delete subparagraphs if testing will be performed by Owner-engaged testing and inspecting agency.

See Editing Instruction No. 5 in the Evaluations for discussion about NETA testing.

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
2. Field inspection and testing will be performed under provisions of Division 01.
3. Inspect wire and cable for physical damage and proper connection.
4. Torque conductor connections and terminations to manufacturer's recommended values. Submit torque values for all connections with a torque schedule and witness signature.
5. After installing medium-voltage cables and before electrical circuitry has been energized, test for compliance with requirements.
6. Perform continuity test on all feeder and branch circuit conductors. Verify proper phasing connections.
7. Verify cables are colored coded and labeled according to contract documents.

Retain one or more of three subparagraphs below, or delete all. Each of the three tests performs different functions, and the tests are not mutually exclusive. See Evaluations for comparative discussion of the three test methods.

8. Perform direct-current High Potential test of each new conductor according to NETA ATS, Ch. 7.3.3. Do not exceed cable manufacturer's recommended maximum test voltage.
9. Perform Partial Discharge test of each new conductor according to NETA ATS, Ch. 7.3.3 and to test equipment manufacturer's recommendations.
10. Perform Dissipation Factor test of each new conductor according to NETA ATS, Ch. 7.3.3 and to test equipment manufacturer's recommendations.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

11. Medium-voltage cables will be considered defective if they do not pass tests and

- inspections.
12. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260513

Copyright 2009 by The American Institute of Architects (AIA)

Updated: August 26, 2015

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260519 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

Adjust list below to suit Project.

1. Building wires and cables rated 600 V and less.
2. Connectors, splices, and terminations rated 600 V and less.

- B. Related Sections include the following:

List below only products and equipment that the reader might expect to find in this Section but are specified elsewhere.

1. Division 26 Section "Medium-Voltage Cables" for single-conductor and multiconductor cables, cable splices, and terminations for electrical distribution systems with 2001 to 35,000 V.
2. Division 26 Section "Undercarpet Electrical Power Cables" for flat cables for undercarpet installations.
3. Division 27 Section "Communications Horizontal Cabling" for cabling used for voice and data circuits.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in

this Section affected by Alternates.

1.3 DEFINITIONS

Retain abbreviations that remain after this Section has been edited.

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.
- B. NBR: Acrylonitrile-butadiene rubber.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN ELECTRICAL ENGINEER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.

1.5 INFORMATIONAL SUBMITTALS

Coordinate paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For testing agency.

Retain paragraph below if Contractor is responsible for field quality control testing.

- B. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CONDUCTORS AND CABLES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain one of first two paragraphs and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Insulated Wire Corp.; a Leviton Company.
 2. General Cable Corporation.
 3. Southwire Company.
 4. Encore Wire Corp.
 5. Cerro Wire and Cable Company.
 6. CME Wire.
 7. Coleman Cable Inc.
 8. <Insert manufacturer>
 9. or approved equal.
- B. All conductors shall be copper.
- C. AC cable and Modular wiring are not permitted.
- D. MC Cable: Comply with NEMA WC 70. Provide internal equipment grounding conductor throughout.
- E. Copper Conductors: Comply with NEMA WC 70.
- F. Conductor Insulation: Comply with NEMA WC 70 for Types [THW] [THHN-THWN] [XHHW].
- G. Remote Control and Signal Cable
1. Control Cable for Class 1 Remote Control and Signal Circuits: Copper conductor, 600 volt insulation, rated at 60 deg C, individual conductors twisted together, shielded, and covered with a PVC jacket.
 2. Control Cable for Class 2 or Class 3 Remote Control and Signal Circuits: Copper

conductor, individual conductors twisted together, shielded, and covered with a PVC jacket; UL listed.

2.2 CONNECTORS AND SPLICES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraphs and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AFC Cable Systems, Inc.
 2. Hubbell Power Systems, Inc.
 3. O-Z/Gedney; EGS Electrical Group LLC.
 4. 3M; Electrical Products Division.
 5. Tyco Electronics Corp.
 6. Ideal.
 7. <Insert manufacturer>
 8. or approved equal.
- B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

PART 3 - EXECUTION

3.1 CONDUCTOR MATERIAL APPLICATIONS

- A. Feeders: Copper. Solid for No. 12 AWG and smaller; stranded for No. 10 AWG and larger.
- B. Branch Circuits: Copper. Solid for No. 12 AWG and smaller; stranded for No. 10 AWG and larger, except for connection to vibrating equipment then stranded shall be used.
- C. Prohibited Cable Types: UF, NM, SE, AC.

3.2 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

This Article provides examples of application requirements for conductors and cables. Edit to select wiring methods for various environments in Project. Add other methods if required. Revise conductor insulation and cable type designations to suit Project conditions, authorities having jurisdiction, and practice. Refer to NFPA 70 and to UL's "Electrical Construction Equipment Directory" for additional application information about conductor sizes, insulation temperature ratings in cables, and product-use classifications and restrictions.

See Editing Instruction No. 2 in the Evaluations for use of Type MI cable as service entrance conductor inside a building.

- A. Minimum wire size shall be based on the over current protection device and as governed by the NEC.
- B. Service Entrance: **[Type THHN-THWN, single conductors in raceway] [Type XHHW, single conductors in raceway].**
- C. Exposed Feeders: **[Type THHN-THWN, single conductors in raceway], [Type XHHW, single conductors in raceway].**
- D. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspace: **[Type THHN-THWN, single conductors in raceway], [Type XHHW, single conductors in raceway].**

Coordinate first paragraph below with Division 26 Section "Underground Ducts and Raceways for Electrical Systems."

- E. Feeders below Slabs-on-Grade, and Underground: **[Type THHN-THWN, single conductors in raceway], [Type XHHW, single conductors in raceway].**
- F. Feeders Installed below Raised Flooring: **[Type THHN-THWN, single conductors in raceway], [Type XHHW, single conductors in raceway].**
- G. Feeders in Cable Tray: **[Type THHN-THWN, single conductors in raceway], [Type XHHW, single conductors in raceway].**
- H. Exposed Branch Circuits, Including in Crawlspace: **[Type THHN-THWN, single conductors in raceway].**
- I. Branch Circuits Concealed in Ceilings, Walls, and Partitions: **[Type THHN-THWN, single conductors in raceway].**

Coordinate first paragraph below with Division 26 Section "Underground Ducts and Raceways for Electrical Systems."

- J. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: **[Type THHN-THWN, single conductors in raceway].**
- K. Branch Circuits Installed below Raised Flooring: **[Type THHN-THWN, single conductors in raceway].**
- L. Branch Circuits in Cable Tray: **[Type THHN-THWN, single conductors in raceway].**
- M. Class 1 Remote Control and Signal Circuits: Type THHN-THWN, in raceway or cable tray as applicable, or Copper conductor, 600 volt insulation, individual conductors twisted together, shielded, and covered with a PVC jacket.
- N. Class 2 Remote Control and Signal Circuits: Type THHN-THWN, in raceway or cable tray as applicable, or Copper conductor, individual conductors twisted together, shielded, and covered with a PVC jacket; UL listed.

- O. All power, control, data, communication and signal wire or cable shall be installed in an approved raceway.

The following paragraph and subparagraphs shall be deleted except for concession projects or where specifically allowed by the DEN project manger.

- P. MC Cable allowed for use in 20-Ampere branch circuits, with the following conditions:
 1. Cable shall be run concealed in all locations. Where circuiting must be exposed, provide single conductor building wire in approved raceway.
 2. Home run from first device to panel board shall be single conductor building wire in approved raceway.
 3. MC cable shall be supported using approved methods throughout. Do not run cables unsupported in any area, including above accessible ceilings, in unfinished areas, etc.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

- A. All power, control, data, communication and signal wire or cable shall be installed in an approved raceway (raceway shall be defined as conduit or cable tray as applicable).
- B. Verify raceways are open, continuous and clear of debris before installing cables.
- C. Pull all conductors into a raceway at the same time. Use a listed wire pulling lubricant for pulling No. 4 AWG and larger wires.
- D. Completely and thoroughly swab raceway system before installing conductors for conduit in floors, concrete, or below grade.
- E. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- F. Install wire in raceway after interior of building has been physically protected from the weather and all mechanical work likely to injure conductors has been completed.
- G. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.
- H. Pulling winches and other necessary pulling equipment shall be of adequate capacity to ensure a continuous pull on the cable. Strain gages shall be used to monitor the cable pulling tension.
- I. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
- J. Neatly train wiring inside boxes, equipment, and panel boards. Make temporary connections to panel board devices with sufficient slack conductor to facilitate reconnections required for balancing loads between phases.

- K. Support cables according to Division 26 Section "Hangers and Supports for Electrical Systems."
- L. Complete cable tray systems installation according to Section 260536 "Cable Trays for Electrical Systems" prior to installing conductors and cables.
- M. Conductors shall not be pulled in concrete encased conduits before concrete is placed.
- N. For connection to vibrating equipment, stranded wire shall be used.
- O. All wiring shall be installed in a new approved raceway system. Existing conduits shall not be used unless approved by the DEN Project Manager.
- P. Where harmonic currents exist on feeders that supply panelboards that serve electronic equipment of 40 percent or more of the panelboards total ampacity, two (2) full size neutral conductors or a neutral conductor rated at 200 percent shall be provided to the panelboard being served. A neutral bus bar rated at 200 percent shall also be provided in the panelboard.
- Q. Shared Neutrals: Prohibited. A full-size neutral conductor shall be provided for each single-phase circuit.

3.4 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- B. Splice only in accessible junction and outlet boxes.
- C. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
- D. Wiring at Outlets: Install conductor at each outlet, with at least [**6 inches (150 mm)**] [**12 inches (300 mm)**] of slack.

3.5 IDENTIFICATION

- A. Identify and color-code conductors and cables according to Section 260553 "Identification for Electrical Systems."
- B. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

3.6 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Division 26 Section "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.7 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Division 07 Section "Penetration Firestopping."

3.8 FIELD QUALITY CONTROL

Retain paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections and prepare test reports.

Retain first paragraph and subparagraphs below to describe tests and inspections to be performed by either of the entities in two paragraphs above.

Performing NETA tests on all conductors and cables can be expensive. Consider limiting testing to a certain group of conductors, such as service entrance and feeder conductors, or to those conductors feeding critical equipment and services. To require all conductors and cables to be tested, delete option in first subparagraph below and delete associated subparagraph.

1. Field inspection and testing will be performed under provisions of Division 01.
2. After installing conductors and cables and before electrical circuitry has been energized, test[**service entrance and feeder conductors, and conductors feeding the following critical equipment and services**] for compliance with requirements.
 - a. Prior to energizing, all building service cables, feeders to and/or from transformers, switchboards and panel boards are to be tested with a 500-volt insulation megohm meter to determine insulation resistance levels. All field test data is to be recorded, corrected to a baseline temperature and furnished to the DEN Project Manager. A test is to include meggering for one minute between conductors and between each conductor and ground. Cables are to be meggered after installation with cables disconnected at both ends. Insulation test values shall meet or exceed the values given below.

Conductor Size (AWG or KCMIL):	Resistance (Megohms-1,000ft):
12-8	200
6-2/0	100
3/0-750	100

Consider the cost and benefit of infrared scanning of cable and conductor splices before retaining subparagraph and associated subparagraphs below.

3. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each splice in cables and conductors No. 3 AWG and larger. Remove box and equipment covers so splices are accessible to portable scanner.
 - a. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each splice eleven (11) months after date of Substantial Completion.
 - b. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - c. Record of Infrared Scanning: Prepare a certified report that identifies splices checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
 4. Inspect wire and cable for physical damage and proper connection.
- B. Test and Inspection Reports: Prepare a written report to record the following:
1. Test procedures used.
 2. Test results that comply with requirements.
 3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Cables will be considered defective if they do not pass tests and inspections.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260519

Copyright 2009 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260523 - CONTROL-VOLTAGE ELECTRICAL POWER CABLES

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. UTP cabling.
 - 2. 50/125 62.5/125-micrometer, multimode optical fiber cabling.
 - 3. RS-232 cabling.
 - 4. RS-485 cabling.
 - 5. Low-voltage control cabling.
 - 6. Control-circuit conductors.
 - 7. Identification products.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. Basket Cable Tray: A fabricated structure consisting of wire mesh bottom and side rails.
- B. Channel Cable Tray: A fabricated structure consisting of a one-piece, ventilated-bottom or solid-bottom channel section.
- C. EMI: Electromagnetic interference.
- D. IDC: Insulation displacement connector.
- E. Ladder Cable Tray: A fabricated structure consisting of two longitudinal side rails connected by individual transverse members (rungs).
- F. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.
- G. Open Cabling: Passing telecommunications cabling through open space (e.g., between the studs of a wall cavity).
- H. RCDD: Registered Communications Distribution Designer.
- I. Solid-Bottom or Nonventilated Cable Tray: A fabricated structure consisting of integral or separate longitudinal side rails, and a bottom without ventilation openings.
- J. Trough or Ventilated Cable Tray: A fabricated structure consisting of integral or separate longitudinal rails and a bottom having openings sufficient for the passage of air and using 75 percent or less of the plan area of the surface to support cables.
- K. UTP: Unshielded twisted pair.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN ELECTRICAL ENGINEER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:
 - 1. Vertical and horizontal offsets and transitions.
 - 2. Clearances for access above and to side of cable trays.
 - 3. Vertical elevation of cable trays above the floor or bottom of ceiling structure.
 - 4. Load calculations to show dead and live loads as not exceeding manufacturer's rating for tray and its support elements.

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified layout technician, installation supervisor, and field inspector.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For wire and cable to include in maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

Retain first paragraph below if Contractor or manufacturer selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Division 01 Section "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of an NRTL.

Retain subparagraph below for UTP and optical fiber cabling. See Editing Instruction No. 2 in the Evaluations for discussion of qualifications of the RCDD designation.

- 1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.
- B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: [25] <Insert value> or less.
 - 2. Smoke-Developed Index: [50] [450] <Insert value> or less.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.8 DELIVERY, STORAGE, AND HANDLING

According to BICSI ITSIM, telecommunications cables should be tested upon receipt. Low-voltage wires

and cables do not normally require testing before installation.

- A. Test cables upon receipt at Project site.

Retain one or both of first two subparagraphs below.

1. Test optical fiber cable to determine the continuity of the strand end to end. Use **[optical fiber flashlight] [optical loss test set] [optical fiber flashlight or optical loss test set]** <Insert test>.
2. Test optical fiber cable on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector; include the loss value of each. Retain test data and include the record in maintenance data.
3. Test each pair of UTP cable for open and short circuits.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install UTP and optical fiber cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PATHWAYS

Retain first paragraph below if the use of open cabling is permitted.

- A. Support of Open Cabling: NRTL labeled for support of **[Category 5e] [Category 6]** <Insert other cabling types> cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.
 1. Support brackets with cable tie slots for fastening cable ties to brackets.
 2. Lacing bars, spools, J-hooks, and D-rings.
 3. Straps and other devices.
- B. Cable Trays:

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first

subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cable Management Solutions, Inc.
 - b. Cablofil Inc.
 - c. Cooper B-Line, Inc.
 - d. Cope - Tyco/Allied Tube & Conduit.
 - e. GS Metals Corp.
 - f. <Insert manufacturer>
 - g. or approved equal.

Besides both corrosion-protection options in subparagraph below, alternative methods include trays fabricated from Types 304 and 316 stainless steel, steel with electrogalvanized zinc plating then coated with yellow dichromate, steel coated with PVC, and steel with powder coating,

2. Cable Tray Materials: Metal, suitable for indoors and protected against corrosion by [electroplated zinc galvanizing, complying with ASTM B 633, Type 1, not less than 0.000472 inch (0.012 mm) thick] [hot-dip galvanizing, complying with ASTM A 123/A 123M, Grade 0.55, not less than 0.002165 inch (0.055 mm) thick].

Retain one or more of five subparagraphs below. If multiple types or various dimensions of cable trays are required, delete subparagraphs and indicate location and dimensions on Drawings. Trays in first subparagraph are generally available in widths of between 2 and 24 inches (50 and 600 mm) and in depths of between 1 and 4 inches (25 and 100 mm).

- a. Basket Cable Trays: [6 inches (150 mm) wide and 2 inches (50 mm) deep] <Insert dimensions>. Wire mesh spacing shall not exceed 2 by 4 inches (50 by 100 mm).

Trays in first subparagraph below are generally available in widths of between 6 and 36 inches (150 and 915 mm).

- b. Trough or Ventilated Cable Trays: [Nominally 6 inches (150 mm)] <Insert dimension> wide.

Trays in first subparagraph below are generally available in widths of between 6 and 36 inches (150 and 915 mm) and in rung spacings of between 6 and 18 inches (150 and 455 mm).

- c. Ladder Cable Trays: [Nominally 18 inches (455 mm)] <Insert dimension> wide, and a rung spacing of [12 inches (305 mm)] <Insert dimension>.

Trays in first subparagraph below are generally available in widths of 3, 4, and 6 inches (75, 100, and 150 mm).

- d. Channel Cable Trays: One-piece construction, [nominally 4 inches (100 mm)] <Insert dimension> wide. Slot spacing shall not exceed 4-1/2 inches (115 mm) o.c.

Trays in subparagraph below are generally available in widths of between 6 and 36 inches (150 and 915 mm).

- e. Solid-Bottom or Nonventilated Cable Trays: One-piece construction, [nominally 12 inches (305 mm)] <Insert dimension> wide. Provide [with]

[**without**] solid covers.

- C. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems." [**Flexible metal conduit shall not be used.**]

1. Outlet boxes shall be no smaller than **2 inches** (50 mm) wide, **3 inches** (75 mm) high, and **2-1/2 inches** (64 mm) deep.

2.2 BACKBOARDS

- A. Description: Plywood, [**fire-retardant treated,**] **3/4 by 48 by 96 inches** (19 by 1220 by 2440 mm). Comply with requirements for plywood backing panels in Division 06 Section "Rough Carpentry."

2.3 UTP CABLE

Copy this article and re-edit for each product if cable products with multiple four-pair binder groups are specified.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Belden CDT Inc.; Electronics Division.
2. Berk-Tek; a Nexans company.
3. CommScope, Inc.
4. Draka USA.
5. Genesis Cable Products; Honeywell International, Inc.
6. KRONE Incorporated.
7. Mohawk; a division of Belden CDT.
8. Nordex/CDT; a subsidiary of Cable Design Technologies.
9. Superior Essex Inc.
10. SYSTIMAX Solutions; a CommScope, Inc. brand.
11. 3M.
12. Tyco Electronics/AMP Netconnect; Tyco International Ltd.
13. **<Insert manufacturer>**
14. or approved equal.

Revise option in paragraph below to specify cables of other than 25-pair binder groups.

- B. Description: 100-ohm, four-pair UTP[, **formed into 25-pair binder groups covered with a blue thermoplastic jacket**].

1. Comply with ICEA S-90-661 for mechanical properties.
2. Comply with TIA/EIA-568-B.1 for performance specifications.
3. Comply with TIA/EIA-568-B.2, [**Category 5e**] [**Category 6**].
4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as

complying with UL 444 and NFPA 70 for the following types:

Type requirements in subparagraphs below are minimum requirements and may be revised to suit Project. Retain options if "permitted substitutions," as defined in NFPA 70, are appropriate for this Project.

- a. Communications, General Purpose: Type CM or Type CMG[; or Type **MPP, Type CMP, Type MPR, Type CMR, Type MP, or Type MPG**].
- b. Communications, Plenum Rated: Type CMP[or Type **MPP**], complying with NFPA 262.
- c. Communications, Riser Rated: Type CMR[; or Type **MPP, Type CMP, or Type MPR**]; complying with UL 1666.
- d. Communications, Limited Purpose: Type CMX[; or Type **MPP, Type CMP, Type MPR, Type CMR, Type MP, Type MPG, Type CM, or Type CMG**].
- e. Multipurpose: Type MP or Type MPG[; or Type **MPP or Type MPR**].
- f. Multipurpose, Plenum Rated: Type MPP, complying with NFPA 262.
- g. Multipurpose, Riser Rated: Type MPR[or Type **MPP**], complying with UL 1666.

2.4 UTP CABLE HARDWARE

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. American Technology Systems Industries, Inc.
 2. Dynacom Corporation.
 3. Hubbell Premise Wiring.
 4. KRONE Incorporated.
 5. Leviton Voice & Data Division.
 6. Molex Premise Networks; a division of Molex, Inc.
 7. Nordex/CDT; a subsidiary of Cable Design Technologies.
 8. Panduit Corp.
 9. Siemon Co. (The).
 10. Tyco Electronics/AMP Netconnect; Tyco International Ltd.
 11. <Insert manufacturer>
 12. or approved equal.

Type of connecting hardware depends on the equipment to which cable is connected. Retain first paragraph below if UTP cable terminations are not specified with connected equipment. Specifying connecting hardware permits testing of cables before they are connected to the equipment.

- B. UTP Cable Connecting Hardware: IDC type, using modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of the same category or higher.

Revise paragraph below to match equipment requirements; delete if connecting blocks are specified with the equipment.

- C. Connecting Blocks: 110 style for Category 5e 110 style for Category 6 66 style for Category 5e. Provide blocks for the number of cables terminated on the block, plus percent spare; integral with connector bodies, including plugs and jacks where indicated.

2.5 OPTICAL FIBER CABLE

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Berk-Tek; a Nexans company.
 2. CommScope, Inc.
 3. Corning Cable Systems.
 4. General Cable Technologies Corporation.
 5. Mohawk; a division of Belden CDT.
 6. Nordex/CDT; a subsidiary of Cable Design Technologies.
 7. Optical Connectivity Solutions Division; Emerson Network Power.
 8. Superior Essex Inc.
 9. SYSTIMAX Solutions; a CommScope, Inc. brand.
 10. 3M.
 11. Tyco Electronics/AMP Netconnect; Tyco International Ltd.
 12. <Insert manufacturer>
 13. or approved equal.
- B. Description: Multimode, 50/125 62.5/125-micrometer, -fiber, tight buffer, optical fiber cable.
1. Comply with ICEA S-83-596 for mechanical properties.
 2. Comply with TIA/EIA-568-B.3 for performance specifications.

Retain first option in first subparagraph below for 50/125-micrometer cable; retain second option for 62.5/125-micrometer cable.

3. Comply with [TIA/EIA-492AAAA-B] [TIA/EIA-492AAAA-A] for detailed specifications.
4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:

Type requirements in first six subparagraphs below are minimum requirements and may need to be revised to suit Project. Types OFC, OFCR, OFCG, and OFCP are conductive optical fiber cables that might have application in industrial settings. Retain options if "permitted substitutions," as defined in NFPA 70, are appropriate for this Project.

- a. General Purpose, Nonconductive: Type OFN or OFNG[, or Type OFNR or Type OFNP].
- b. Plenum Rated, Nonconductive: Type OFNP, complying with NFPA 262.
- c. Riser Rated, Nonconductive: Type OFNR[or Type OFNP], complying with UL 1666.

- d. General Purpose, Conductive: Type OFC or Type OFCG[; **or Type OFNG, Type OFN, Type OFCR, Type OFNR, Type OFCP, or Type OFNP**].
- e. Plenum Rated, Conductive: Type OFCP[**or Type OFNP**], complying with NFPA 262.
- f. Riser Rated, Conductive: Type OFCR[; **or Type OFNR, Type OFCP, or Type OFNP**]; complying with UL 1666.

Retain first subparagraph below even if nonconductive cable is specified in subparagraphs above. If both conductive and nonconductive cables are specified, indicate locations of each on Drawings.

5. Conductive cable shall be [**steel**] [**aluminum**]-armored type.
6. Maximum Attenuation: [**3.5**] **<Insert number>** dB/km at 850 nm; [**1.5**] **<Insert number>** dB/km at 1300 nm.
7. Minimum Modal Bandwidth: 160 MHz-km at 850 nm; 500 MHz-km at 1300 nm.

C. Jacket:

1. Jacket Color: [**Aqua for 50/125**] [**Orange for 62.5/125**]-micrometer cable.
2. Cable cordage jacket, fiber, unit, and group color shall be according to TIA/EIA-598-B.
3. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed **40 inches** (1000 mm).

2.6 OPTICAL FIBER CABLE HARDWARE

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. ADC.
 2. American Technology Systems Industries, Inc.
 3. Berk-Tek; a Nexans company.
 4. Corning Cable Systems.
 5. Dynacom Corporation.
 6. Hubbell Premise Wiring.
 7. Molex Premise Networks; a division of Molex, Inc.
 8. Nordex/CDT; a subsidiary of Cable Design Technologies.
 9. Optical Connectivity Solutions Division; Emerson Network Power.
 10. Siemon Co. (The).
 11. **<Insert manufacturer>**
 12. or approved equal.

Type of connecting hardware depends on the equipment to which cable is connected. Retain paragraph below if optical fiber cable terminations are not specified with connected equipment. Specifying connecting hardware permits testing of cables before they are connected to the equipment.

- B. Cable Connecting Hardware: Comply with the Fiber Optic Connector Intermateability Standards (FOCIS) specifications of TIA/EIA-604-2, TIA/EIA-604-3-A, and

TIA/EIA-604-12. Comply with TIA/EIA-568-B.3.

Type SC is a subscriber connector; Type ST is a straight-tip, single-fiber connector; both are commonly used. Recently developed connectors are Type LC, which is an upgraded version of either Type SC or ST connector with a lower insertion loss, and Type MT-RJ, which is a no-epoxy, no-polish connector.

1. Quick-connect, simplex and duplex, [**Type SC**] [**Type ST**] [**Type LC**] [**Type MT-RJ**] connectors. Insertion loss not more than 0.75 dB.
2. Type SFF connectors may be used in termination racks, panels, and equipment packages.

2.7 RS-232 CABLE

RS-232 communications require three conductors with an overall shield. Circuit is limited to a distance of not more than 50 feet (15 m).

A. Standard Cable: NFPA 70, Type CM.

1. Paired, two pairs, No. 22 AWG, stranded (7x30) tinned-copper conductors.
2. Polypropylene insulation.
3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
4. PVC jacket.
5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned-copper drain wire.
6. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, two pairs, No. 22 AWG, stranded (7x30) tinned-copper conductors.
2. Plastic insulation.
3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
4. Plastic jacket.
5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned-copper drain wire.
6. Flame Resistance: Comply with NFPA 262.

2.8 RS-485 CABLE

RS-485 communications require two twisted pairs. Circuit is limited to a distance of not more than 4000 feet (1220 m).

A. Standard Cable: NFPA 70, Type CM[**or Type CMG**].

1. Paired, two pairs, twisted, No. 22 AWG, stranded (7x30) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.

4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, two pairs, No. 22 AWG, stranded (7x30) tinned-copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Fluorinated ethylene propylene jacket.
5. Flame Resistance: NFPA 262, Flame Test.

2.9 LOW-VOLTAGE CONTROL CABLE

Retain one or more of four paragraphs below; difference in paragraphs is the conductor size and insulation type. Other conductor sizes and insulation types are available.

A. Paired Cable: NFPA 70, Type CMG.

1. One pair, twisted, No. 16 AWG, stranded (19x29) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

1. One pair, twisted, No. 16 AWG, stranded (19x29) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with NFPA 262.

C. Paired Cable: NFPA 70, Type CMG.

1. One pair, twisted, No. 18 AWG, stranded (19x30) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

D. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

1. One pair, twisted, No. 18 AWG, stranded (19x30) tinned-copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Plastic jacket.
5. Flame Resistance: NFPA 262, Flame Test.

2.10 CONTROL-CIRCUIT CONDUCTORS

Retain option for UL 44 in first two paragraphs below if retaining option for Type XHHN.

- A. Class 1 Control Circuits: Stranded copper, [Type THHN-THWN] [Type XHHN], in raceway, complying with [UL 83] [UL 44].
- B. Class 2 Control Circuits: Stranded copper, [Type THHN-THWN, in raceway] [Type XHHN, in raceway] [power-limited cable, concealed in building finishes] [power-limited tray cable, in cable tray], complying with [UL 83] [UL 44].
- C. Class 3 Remote-Control and Signal Circuits: Stranded copper, Type TW or Type TF, complying with UL 83.

2.11 IDENTIFICATION PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brady Corporation.
 - 2. HellermannTyton.
 - 3. Kroy LLC.
 - 4. Panduit Corp.
 - 5. <Insert manufacturer>
 - 6. or approved equal.
- B. Comply with UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- C. Comply with requirements in Section 260553 "Identification for Electrical Systems."

2.12 SOURCE QUALITY CONTROL

Retain first paragraph below if required. Independent certification may be acceptable to authorities having jurisdiction without further monitoring of plant's quality-control and testing program by Owner.

- A. Testing Agency: Engage a qualified testing agency to evaluate cables.
- B. Factory test UTP and optical fiber cables on reels according to TIA/EIA-568-B.1.
- C. Factory test UTP cables according to TIA/EIA-568-B.2.
- D. Factory test multimode optical fiber cables according to TIA/EIA-526-14-A and TIA/EIA-568-B.3.

See Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division

01 Section "Execution" for requirements for correcting the Work.

- E. Cable will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 INSTALLATION OF PATHWAYS

- A. Cable Trays: Comply with NEMA VE 2 and TIA/EIA-569-A-7.
- B. Comply with TIA/EIA-569-A for pull-box sizing and length of conduit and number of bends between pull points.
- C. Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.
- D. Install manufactured conduit sweeps and long-radius elbows if possible.
- E. Pathway Installation in Equipment Rooms:
 - 1. Position conduit ends adjacent to a corner on backboard if a single piece of plywood is installed or in the corner of room if multiple sheets of plywood are installed around perimeter walls of room.
 - 2. Install cable trays to route cables if conduits cannot be located in these positions.
 - 3. Secure conduits to backboard if entering room from overhead.
 - 4. Extend conduits [3 inches (75 mm)] <Insert dimension> above finished floor.
 - 5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.
- F. Backboards: Install backboards with 96-inch (2440-mm) dimension vertical. Butt adjacent sheets tightly and form smooth gap-free corners and joints.

3.2 INSTALLATION OF CONDUCTORS AND CABLES

- A. Comply with NECA 1.
- B. General Requirements for Cabling:

Retain one of first two subparagraphs below for UTP and optical fiber cabling.

- 1. Comply with TIA/EIA-568-B.1.
- 2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
- 3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
- 4. Cables may not be spliced. Secure and support cables at intervals not exceeding

- 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
5. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
 6. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
 7. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
 8. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
- C. UTP Cable Installation:
1. Comply with TIA/EIA-568-B.2.
 2. Install 110-style IDC termination hardware unless otherwise indicated.
 3. Do not untwist UTP cables more than 1/2 inch (12 mm) from the point of termination to maintain cable geometry.
- D. Installation of Control-Circuit Conductors:
1. Install wiring in raceways. Comply with requirements specified in Section 260553 "Raceway and Boxes for Electrical Systems."
- E. Optical Fiber Cable Installation:
1. Comply with TIA/EIA-568-B.3.
 2. Cable shall be terminated on connecting hardware that is rack or cabinet mounted.
- F. Open-Cable Installation:
1. Open-Cable installation is prohibited. All cables shall be installed in an approved raceway.
- G. Installation of Cable Routed Exposed under Raised Floors:
1. Install plenum-rated cable only.
 2. Install cabling after the flooring system has been installed in raised floor areas.
 3. Coil cable [72 inches (1830 mm)] <Insert size> long shall be neatly coiled not less than [12 inches (305 mm)] <Insert size> in diameter below each feed point.
- See Editing Instruction No. 3 in the Evaluations for discussion of EMI.
- H. Separation from EMI Sources:
1. Comply with BICSI TDMM and TIA/EIA-569-A recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.

2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **5 inches** (127 mm).
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **12 inches** (305 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of **24 inches** (600 mm).
3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **2-1/2 inches** (64 mm).
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **6 inches** (150 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of **12 inches** (305 mm).
4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **3 inches** (75 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of **6 inches** (150 mm).
5. Separation between Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of **48 inches** (1200 mm).
6. Separation between Cables and Fluorescent Fixtures: A minimum of **5 inches** (127 mm).

3.3 REMOVAL OF CONDUCTORS AND CABLES

- A. Remove all abandoned conductors and cables.

3.4 CONTROL-CIRCUIT CONDUCTORS

- A. Minimum Conductor Sizes:
 1. Class 1 remote-control and signal circuits, **[No 14]** <Insert wire size> AWG.
 2. Class 2 low-energy, remote-control, and signal circuits, **[No. 16]** <Insert wire size> AWG.
 3. Class 3 low-energy, remote-control, alarm, and signal circuits, **[No 12]** <Insert

wire size> AWG.

3.5 FIRESTOPPING

- A. Comply with requirements in Section 078413 "Penetration Firestopping."
- B. Comply with TIA/EIA-569-A, Annex A, "Firestopping."
- C. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.6 GROUNDING

Retain one or both paragraphs below.

- A. For data communication wiring, comply with ANSI-J-STD-607-A and with BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. For low-voltage wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.7 IDENTIFICATION

- A. Identify system components, wiring, and cabling according to TIA/EIA-606-A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.8 FIELD QUALITY CONTROL

Retain first paragraph below to require Contractor to perform tests and inspections.

- A. Perform tests and inspections.

Retain first paragraph below to describe tests and inspections to be performed.

Coordinate inspection and testing requirements with DEN Project Manager.

- B. Tests and Inspections:
 - 1. Visually inspect UTP and optical fiber cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA/EIA-568-B.1.
 - 2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.

Retain first subparagraph below if verification of quality is to be performed before completion of the cabling. Delete if not retaining cable connecting hardware in "UTP Cable Hardware" Article.

- 3. Test UTP cabling for DC loop resistance, shorts, opens, intermittent faults, and

polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not after cross connection.

- a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

Retain subparagraph below if verification of quality is to be performed before completion of the cabling. Delete if not retaining cable connecting hardware in "Optical Fiber Cable Hardware" Article.

4. Optical Fiber Cable Tests:

- a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
- b. Link End-to-End Attenuation Tests:
 - 1) Multimode Link Measurements: Test at 850 or 1300 nm in one direction according to TIA/EIA-526-14-A, Method B, One Reference Jumper.
 - 2) Attenuation test results for links shall be less than 2.0 dB. Attenuation test results shall be less than that calculated according to equation in TIA/EIA-568-B.1.

- C. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

See Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.

- D. End-to-end cabling will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260523

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

NFPA 70 and IEEE C2 include basic grounding requirements for electrical safety. This Section supplements those requirements with additional grounding requirements and with optional grounding methods and materials for both power and electronic systems that go beyond basic minimum safety requirements.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Retain one of two paragraphs below.

- A. Section Includes: Grounding systems and equipment.
- B. Section includes grounding systems and equipment, plus the following special applications:

Retain one or more subparagraphs below for special grounding applications.

- 1. Overhead-line grounding.
- 2. Underground distribution grounding.
- 3. Ground bonding common with lightning protection system.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in

this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 SYSTEM DESCRIPTION

- A. Ground the electrical service system neutral at service entrance equipment to the metallic water pipe service on building side only and to supplementary grounding electrodes, as required by the contract documents and as required by the NEC.
- B. External (underground) metal pipes, water, gas, fuel, drain/sewer etc., are not available for electrical grounding. This is due to extensive cathodic protection and isolation joints of all underground metal pipes at DEN. These systems shall be bonded to the grounding system on the building side only.
- C. Ground each separately derived system neutral to nearest building steel or referenced ground plate in the electrical room.
- D. Provide a 2/0 minimum building perimeter-grounding conductor buried thirty inches (30") below finished grade thirty-six inches (36") from foundation.
- E. Provide a minimum of three inch by twelve inch by one-quarter inch (3" x 12" x ¼") copper ground bar in the electrical room for connecting the grounding systems.
- F. An insulated equipment ground conductor shall be installed continuous from the main switchgear or service entrance to all branch panelboards, motor control centers, transformers and all motors. This conductor shall be bonded to the conduit and metal enclosures that it passes through utilizing bonding bushings and terminal devices.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN ELECTRICAL ENGINEER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
- C. Submit shop drawings, coordination drawings and product data in accordance with provisions of Division 1. Submit all required information under a given specification section together. Do not split out submittals under the same specification section.
 - 1. Clearly mark each shop drawing as follows for purposes of identification:
 - a. Shop Drawing
 - b. Equipment Identification Used on Contract Drawings

- c. Date
 - d. Name of Project
 - e. Branch of Work
 - f. Project Manager's Name
 - g. Contractor's Name
2. Indicate layout of ground ring, location of system grounding electrode connections, and routing of grounding electrode conductors.
- D. Prior to submission, shop drawings, material lists and catalog cut sheets or manufacturer's printed data shall be thoroughly checked for compliance with contract requirements, compatibility with equipment being furnished by the Contractor or Owner, accuracy of dimensions, coordination with work of other trades, and conformance with sound and safe practice as to erection of installation. Each submittal shall bear Contractor's signed statement evidencing such checking.
- E. Clearly mark printed material, catalog cut sheets, pamphlets or specification sheets, and shop drawings with the same designation shown on the Contract Document schedules.

1.5 INFORMATIONAL SUBMITTALS

Retain first paragraph below to require Contractor to provide Drawings that locate significant grounding features. Division 01 Sections "Project Record Documents" and "Operation and Maintenance Data" require submittals to be included in those documents for use by maintenance forces throughout the life of the Project.

- A. Informational Submittals: Plans showing dimensioned as-built locations of grounding features specified in "Field Quality Control" Article, including the following:
1. Test wells.
 2. Ground rods.
 3. Ground rings.
 4. Grounding arrangements and connections for separately derived systems.
 5. Grounding for sensitive electronic equipment.
 6. **<Insert items>**.

Coordinate first paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- B. Qualification Data: For qualified testing agency and testing agency's field supervisor.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

Retain paragraph below if specifying test wells, separately derived systems, or ground ring or other

grounding for sensitive electronic equipment.

- A. Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

Retain subparagraph below for projects requiring a high reliability for electrical systems. NETA MTS provides more easily interpreted recommendations for frequency of tests and inspections than NFPA 70B.

1. Instructions for periodic testing and inspection of grounding features at [**test wells**] [**ground rings**] [**grounding connections for separately derived systems**] <Insert locations> based on [**NETA MTS**] [**NFPA 70B**] <Insert reference>.
2. Tests shall determine if ground-resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if values do not.
3. Include recommended testing intervals.

B. Record Documents

1. Maintain a contract set of electrical drawings and specifications at the site. Neatly mark all changes, discoveries and deviations from the original drawings. Use a reproducible color that contrasts with the prints. This shall be a separate set of drawings, not used for construction purposes, and shall be updated daily as the job progresses and shall be made available for inspection by the DEN Project Manager at all times. Upon completion of the contract, this set of record drawings shall be delivered to the DEN Project Manager. Follow DEN CADD standards, to be furnished to the successful bidder. Record documents to be provided by the Contractor shall clearly and accurately show the following:
 - a. Provide horizontal and vertical dimensions for all raceway systems, size and location, for both exterior and interior; locations of control devices; distribution and branch electrical circuitry; and fuse and circuit breaker size and arrangements.
 - b. Equipment locations (exposed and concealed), dimensioned from prominent building lines.
 - c. Approved substitutions, Contract Modifications, and actual equipment and materials installed.

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with UL 467 for grounding and bonding materials and equipment.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CONDUCTORS

Retain first paragraph below to require one of the two preferred conductor materials permitted by NFPA 70; delete to allow Contractor to retain any material that complies with Code. See "Grounding Products" Article in the Evaluations for discussion on alternative materials.

- A. Insulated Conductors: Copper or tinned-copper wire or cable insulated for 600 V unless otherwise required by applicable Codes.
- B. All ground wires shall be copper, sized according to the NEC or as shown on the drawings which ever is larger.
- C. Bare Copper Conductors:
1. Solid Conductors: ASTM B 3.
 2. Stranded Conductors: ASTM B 8.
 3. Tinned Conductors: ASTM B 33.

Sizes and types of conductors in four subparagraphs below are typical examples. 28-kcmil bonding cable in first subparagraph is slightly larger than No. 6 AWG.

4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch (6 mm) in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
6. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.
7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.

Retain first paragraph below if Project includes overhead-line work.

- D. Bare Grounding Conductor and Conductor Protector for Wood Poles:
1. No. 4 AWG minimum, soft-drawn copper.
 2. Conductor Protector: Half-round PVC or wood molding; if wood, use pressure-treated fir, cypress, or cedar.

Retain paragraph below if size of grounding bus and mounting details are not indicated on Drawings. The default dimension is recommended by BICSI for telecommunications bus bar.

- E. Grounding Bus: Predrilled rectangular bars of annealed copper, [1/4 by 4 inches (6.3 by 100 mm)] <Insert dimensions> in cross section, with 9/32-inch (7.14-mm) holes spaced

1-1/8 inches (28 mm) apart. Stand-off insulators for mounting shall comply with UL 891 for use in switchboards, 600 V. Lexan or PVC, impulse tested at 5000 V.

2.2 CONNECTORS

- A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.
- B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, pressure type with at least two bolts.
 - 1. Pipe Connectors: Clamp type, sized for pipe.
- C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions. Exothermic welded connections are required where grounding conductors connect to underground grounding conductors and to underground grounding electrodes, and for bonding to steel. All underground connections shall be exothermic welded.
- D. Bus-bar Connectors: Mechanical type, cast silicon bronze, solderless compression exothermic-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.
- E. Grounding Connection Accessories:
 - 1. Electrical insulating tape, heat-shrinkable insulating tubing, welding materials, bonding straps, as recommended by accessories manufacturers for type of service required.

2.3 GROUNDING ELECTRODES

NFPA 70 allows alternative types of grounding electrodes including ground rods, ground rings, metal underground water pipes, metal building frames, Ufer grounds, and pipe and plate electrodes. Retain "Applications" and "Installation" articles to specify where these items are required; coordinate with Drawings.

Copper-clad steel ground rods are the most common grounding electrode. See Evaluations for discussion on alternative materials. Sectional rods are used when electrodes longer than 10 feet (3 m) are required.

- A. Ground Rods: [**Copper-clad**] [**Zinc-coated**] [**Stainless steel**]; [**sectional type**]; 3/4 inch by 10 feet (19 mm by 3 m) in diameter.
- B. Ground Rods in manholes ground rods shall be stainless steel 3/4-inch diameter and a minimum length of 10 feet.

Retain paragraph below if allowed by authorities having jurisdiction to enhance grounding performance. See Evaluations.

- C. Chemical-Enhanced Grounding Electrodes: Copper tube, straight or L-shaped,

charged with [nonhazardous electrolytic chemical salts] <Insert enhancement material>.

1. Termination: Factory-attached No. 4/0 AWG bare conductor at least 48 inches (1200 mm) long.
2. Backfill Material: Electrode manufacturer's recommended material.

PART 3 - EXECUTION

3.1 APPLICATIONS

- A. Conductors: Install solid conductor for No. [12] <Insert size> AWG and smaller, and stranded conductors for No. [10] <Insert size> AWG and larger unless otherwise indicated.

Coordinate first paragraph below with Drawings and with Division 26 Section "Underground Ducts and Raceways for Electrical Systems."

- B. Underground Grounding Conductors: Install bare [tinned-]copper conductor, No. [2/0] <Insert size> AWG minimum.

1. Bury at least 30 inches (750 mm) below grade.

Retain subparagraph below to require duct-bank grounding conductor to be installed with, but external to, duct bank.

2. Duct-Bank Grounding Conductor: Bury 12 inches (300 mm) above duct bank when indicated as part of duct-bank installation.

- C. Isolated Grounding Conductors: Green-colored insulation with continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow.

Retain first paragraph below if grounding bus is required. Coordinate with Drawings.

- D. Grounding Bus: Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated.

1. Install bus on insulated spacers 2 inches (50 mm) minimum from wall, 6 inches (150 mm) above finished floor unless otherwise indicated.
2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down to specified height above floor; connect to horizontal bus.

- E. Conductor Terminations and Connections:

1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.

3. Connections to Ground Rods at Test Wells: Bolted connectors.
4. Connections to Structural Steel: Welded connectors.

3.2 GROUNDING OVERHEAD LINES

- A. Comply with IEEE C2 grounding requirements.

Grounding practices of the local utility company may differ from requirements in six paragraphs below. Although overhead-line grounding specified in this article is not for the utility company's use and does not have to comply with its standards, it is possible the utility company may be requested to repair or maintain the line in the future. For this reason, it may be desirable to design some grounding features according to the utility company's standards. Utility companies, for economic reasons, often design to a standard lower than what is appropriate for Project requirements. Alternatively, because of their experience with wind, ice, and lightning conditions in their service area, utility companies may design to a higher standard than is required by Code. In addition to Project requirements, evaluate the local utility company's practice and revise paragraphs accordingly. This evaluation is particularly important if Project's overhead lines connect with utility lines. Coordinate with Drawings and with Division 33 Section "Overhead Medium-Voltage Wiring."

- B. Install [**two (2)**] <Insert number> parallel ground rods if resistance to ground by a single, ground-rod electrode exceeds 25 ohms.
- C. Drive ground rods until tops are 12 inches (300 mm) below finished grade in undisturbed earth.
- D. Ground-Rod Connections: Install bolted connectors for underground connections and connections to rods.
- E. Lightning Arrester Grounding Conductors: Separate from other grounding conductors.
- F. Secondary Neutral and Transformer Enclosure: Interconnect and connect to grounding conductor.
- G. Protect grounding conductors running on surface of wood poles with molding extended from grade level up to and through communication service and transformer spaces.

3.3 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

- A. Comply with IEEE C2 grounding requirements.

Grounding practices of the local utility company may differ from requirements in three paragraphs below. Although grounding specified in this article is not for the utility company's use and does not have to comply with its standards, it is possible the utility company may be requested to repair or maintain the line in the future. For this reason, it may be desirable to design some grounding features according to the utility company's standards. Utility companies, for economic reasons, often design to a standard lower than what is appropriate for Project requirements. Alternatively, because of their experience with conditions in their service area, utility companies may design to a higher standard than is required by Code. In addition to Project requirements, evaluate the local utility company's practices and revise paragraphs accordingly. This evaluation is particularly important if Project's underground lines connect with utility lines. Coordinate with Drawings and with Division 26 Section "Underground Ducts and Raceways for Electrical Systems."

- B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches (100 mm) will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches (50 mm) above to 6 inches (150 mm) below concrete. Seal floor opening with waterproof, nonshrink grout.
- C. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields according to written instructions by manufacturer of splicing and termination kits.

Retain and revise paragraph below to exceed NFPA 70 requirements. If concrete pad is for equipment to be supplied by utility company, revise paragraph to comply with utility company's grounding standards or delete and detail on Drawings.

- D. Pad-Mounted Transformers and Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2 AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 6 inches (150 mm) from the foundation.

3.4 EQUIPMENT GROUNDING

NFPA 70 permits two types of equipment grounding conductors: metallic raceway or cable sheath that encloses supply conductors, and a separate grounding conductor of insulated wire or cable installed with supply conductors. Installation of a separate insulated equipment grounding conductor provides an additional degree of safe operation when compared to relying on raceway or cable sheath for ground continuity. NFPA 70 requires separate insulated equipment grounding conductors in some situations and not in others. Retain and revise one of first two paragraphs below to require insulated equipment grounding conductors that exceed NFPA 70 requirements. Coordinate with Drawings.

- A. Install insulated equipment grounding conductors with all feeders and branch circuits.
- B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:

Retain applicable subparagraphs below.

1. Feeders and branch circuits.
2. Lighting circuits.
3. Receptacle circuits.
4. Single-phase motor and appliance branch circuits.
5. Three-phase motor and appliance branch circuits.

6. Flexible raceway runs.
 7. Armored and metal-clad cable runs.
 8. Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in the switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.
 9. Computer and Rack-Mounted Electronic Equipment Circuits: Install insulated equipment grounding conductor in branch-circuit runs from equipment-area power panels and power-distribution units.
 10. X-Ray Equipment Circuits: Install insulated equipment grounding conductor in circuits supplying x-ray equipment.
- C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment.
- D. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
- E. Isolated Grounding Receptacle Circuits: Install an insulated equipment grounding conductor connected to the receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service unless otherwise indicated.
- F. Isolated Equipment Enclosure Circuits: For designated equipment supplied by a branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with a nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install a separate insulated equipment grounding conductor. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service unless otherwise indicated.

Coordinate first paragraph below with Drawings and with Sections for signal and communication equipment. Revise to suit Project.

- G. Signal and Communication Equipment: In addition to grounding and bonding required by NFPA 70, provide a separate grounding system complying with requirements in TIA/ATIS J-STD-607-A.
1. For telephone, alarm, voice and data, and other communication equipment, provide No. 4 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.
 2. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-4-by-12-inch (6.3-by-100-by-300-mm) grounding bus.
 3. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.

Paragraph below may supplement equipment grounding conductor and may be in excess of NFPA 70

requirements. Retain if necessary and coordinate with Drawings.

- H. Metal and Wood Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.

3.5 INSTALLATION

- A. Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
- B. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.
- C. Ground Rods: Drive rods until tops are 2 inches (50 mm) below finished floor or final grade unless otherwise indicated.
 - 1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.

Retain subparagraph below if grounding installation requirements are not detailed on Drawings. Subparagraph exceeds NFPA 70 requirements.

- 2. For grounding electrode system, install at least [three (3)] <Insert number> rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.

Retain first paragraph below to require test wells; delete if detailed on Drawings.

- D. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Section 260543 "Underground Ducts and Raceways for Electrical Systems," and shall be at least 12 inches (300 mm) deep, with cover.
 - 1. Test Wells: Install at least one (1) test well for each service unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.
- E. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
 - 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
 - 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
 - 3. Use exothermic-welded connectors for outdoor locations; if a disconnect-type

connection is required, use a bolted clamp.

If connections specified in first paragraph below circumvent dielectric fittings intended to isolate interior piping systems from ground, other action may be necessary to prevent electrolytic corrosion.

F. Grounding and Bonding for Piping:

1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use a bolted clamp connector or bolt a lug-type connector to a pipe flange by using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

G. Retain and revise first paragraph below to exceed NFPA 70 requirements, and comply with NFPA 70 recommendations for a higher standard of safety or electromagnetic interference suppression if needed.

H. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install [tinned] bonding jumper to bond across flexible duct connections to achieve continuity.

I. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet (18 m) apart.

See Evaluations for discussion on ground rings.

J. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each [steel column] [indicated item], extending around the perimeter of [building] [area or item indicated].

1. Install tinned-copper conductor not less than No. [2/0] <Insert size> AWG for ground ring and for taps to building steel.
2. Bury ground ring not less than [24 inches (600 mm)] <Insert dimension> from building's foundation.

Retain paragraph below to require Ufer ground (concrete-encased grounding electrode). 20 feet (6 m) is minimum length of conductor for this item. Coordinate with Drawings. See Evaluations.

K. Ufer Ground (Concrete-Encased Grounding Electrode): Fabricate according to NFPA 70; use a minimum of [20 feet (6 m)] <Insert length> of bare copper conductor not smaller than No. [4] <Insert size> AWG.

1. If concrete foundation is less than [20 feet (6 m)] <Insert dimension> long, coil excess conductor within base of foundation.

2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building's grounding grid or to grounding electrode external to concrete.

3.6 LABELING

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems" Article for instruction signs.
- B. Install labels at the telecommunications bonding conductor and grounding equalizer [**and at the grounding electrode conductor where exposed**].
 1. Label Text: "If this connector or cable is loose or if it must be removed for any reason, notify the facility manager."

3.7 FIELD QUALITY CONTROL

Retain first paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

- B. Tests and Inspections:
 1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
 2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
 3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal[, **at ground test wells**] [, **and at individual ground rods**]. Make tests at ground rods before any conductors are connected.
 4. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
 5. Perform tests by fall-of-potential method according to IEEE 81.

Coordinate subparagraph below with "Informational Submittals" Article; revise to suit Project.

6. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

See Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.

- C. Grounding system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. Report measured ground resistances that exceed the following values:

See Evaluations for discussion on appropriate ground-resistance values. Typical maximum permitted values are listed below for different grounding applications; retain applicable subparagraphs and revise to suit Project. Coordinate with requirements in Sections specifying equipment to be grounded.

1. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: **[10] <Insert value>** ohms.
 2. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: **[5] <Insert value>** ohms.
 3. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: **[3] <Insert value>** ohms.
 4. Power Distribution Units or Panelboards Serving Electronic Equipment: **[1] [3] <Insert value>** ohm(s).
 5. Substations and Pad-Mounted Equipment: **[5] <Insert value>** ohms.
 6. Manhole Grounds: **[10] <Insert value>** ohms.
 7. **<Insert application and maximum ground-resistance value>** ohms.
 8. Ground resistance to earth of each ground rod: > 5 ohms.
- F. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify DEN Electrical Engineer promptly and include recommendations to reduce ground resistance.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 260529 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

Adjust list below to suit Project.

- 1. Hangers and supports for electrical equipment and systems.
- 2. Construction requirements for concrete bases.

- B. Related Sections include the following:

List below only products and construction that the reader might expect to find in this Section but are specified elsewhere.

- 1. Division 26 Section "Vibration and Seismic Controls for Electrical Systems" for products and installation requirements necessary for compliance with seismic criteria.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain abbreviations that remain after this Section has been edited.

- A. EMT: Electrical metallic tubing.
- B. RMC: Rigid metal conduit.

1.4 PERFORMANCE REQUIREMENTS

Retain first paragraph below if Contractor is required to assume responsibility for design.

- A. Delegated Design: Design supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.
- C. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

Consult structural engineer on safety factor to be specified in paragraph below, or delete and let applicable code determine strength. Retain below if strength that exceeds code requirements is desired.

- D. Rated Strength: Adequate in tension, shear, and pullout force.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN ELECTRICAL ENGINEER

1.5 ACTION SUBMITTALS

Retain this Article for large or complex projects.

- A. Product Data: For the following:
 - 1. Steel slotted support systems.
 - 2. Nonmetallic slotted support systems.
 - 3. Include data substantiating that materials comply with requirements.

Retain paragraph and subparagraphs below if supporting systems are required to withstand specific design loads and DEN Project Manager either has delegated design responsibility to Contractor or wants to review structural data as another way to verify supporting system's compliance with performance requirements. Professional engineer qualifications are specified in Division 01 Section "Quality Requirements."

- B. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following:

Adjust list below to suit Project.

1. Trapeze hangers. Include Product Data for components.
2. Steel slotted channel systems. Include Product Data for components.
3. Nonmetallic slotted channel systems. Include Product Data for components.
4. Equipment supports.

1.6 INFORMATIONAL SUBMITTALS

Retain paragraph below if procedures for welder certification are retained in "Quality Assurance" Article.

- A. Welding certificates.

1.7 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

Delete first paragraph below if no welding. Retain "Welding certificates" Paragraph in "Informational Submittals" Article if retaining below. AWS states that welding qualifications remain in effect indefinitely unless welding personnel have not welded for more than six months or there is a specific reason to question their ability.

- A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Comply with NFPA 70.

1.9 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

Retain this Article to specify default product requirements for basic supporting devices. Items to be supported include raceways, cables, wireways, cable trays, busways, boxes, cabinets, equipment, and other electrical products. Where support materials or workmanship is unique to a particular product, specify unique features that are the exception to these default requirements in the Section that specifies the product. Coordinate specifications for supporting devices with structural engineer and with Drawings.

- A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allied Tube & Conduit.
 - b. Cooper B-Line, Inc.; a division of Cooper Industries.
 - c. ERICO International Corporation.
 - d. GS Metals Corp.
 - e. Thomas & Betts Corporation.
 - f. Unistrut; Tyco International, Ltd.
 - g. Wesanco, Inc.
 - h. <Insert manufacturer>
 - i. or approved equal.

Retain one or more coating systems in first three subparagraphs below. If retaining more than one, specify in Part 3 where each coating system is required.

2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
4. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4. For use in dry locations only.
5. Channel Dimensions: Selected for applicable load criteria.

If retaining first paragraph and subparagraphs below, coordinate with Part 3 and with Drawings to indicate where nonmetallic channel is to be used.

- B. Nonmetallic Slotted Support Systems: Structural-grade, factory-formed, glass-fiber-resin channels and angles with **9/16-inch** (14-mm) diameter holes at a maximum of **8 inches** (200 mm) o.c., in at least 1 surface.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain first subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allied Tube & Conduit.
 - b. Cooper B-Line, Inc.; a division of Cooper Industries.
 - c. Fabco Plastics Wholesale Limited.
 - d. Seasafe, Inc.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
 2. Fittings and Accessories: Products of channel and angle manufacturer and designed for use with those items.
 3. Fitting and Accessory Materials: Same as channels and angles[, **except metal items may be stainless steel**].
 4. Rated Strength: Selected to suit applicable load criteria.
- C. Hardware for hangers and supports shall be corrosion-resistant.
- D. Raceway and Cable Supports: As described in NECA 1 and NECA 101.
- E. Conduit and Cable Support Devices: [**Steel**] [**Steel and malleable-iron**] hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
- F. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.
- G. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

Coordinate paragraph and subparagraphs below with installation requirements in Part 3.

- H. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:

Verify suitability of fasteners in subparagraph below for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain one of first two subparagraphs and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Mechanical-Expansion Anchors: Insert-wedge-type, [**zinc-coated**] [**stainless**] steel, for use in hardened Portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products.

Retain first subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Cooper B-Line, Inc.; a division of Cooper Industries.
 - 2) Empire Tool and Manufacturing Co., Inc.
 - 3) Hilti Inc.
 - 4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
 - 5) MKT Fastening, LLC.
 - 6) **<Insert manufacturer>**
 - 7) or approved equal.
2. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
3. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
4. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
5. Toggle Bolts: All-steel springhead type.
6. Hanger Rods: Threaded steel.
7. Pneumatic-Actuated Fasteners: For use in ceilings only and by approval of DEN Project Manager. Powder-actuated tools are prohibited. Threaded-steel stud, for use in pan deck cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain first subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Hilti Inc.
 - 2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
 - 3) MKT Fastening, LLC.
 - 4) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.
 - 5) **<Insert manufacturer>**
 - 6) or approved equal.

2.2 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

Equipment supports in this Article require calculation of load and strength for each component and detailing of each assembly. Coordinate specifications for each equipment support with structural engineer and with Drawings.

- A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.
- B. Materials: Comply with requirements in Division 05 Section "Metal Fabrications" for

steel shapes and plates.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.

In first paragraph below, support spacings in NECA 1, Table 1, are more detailed and specific and generally stricter than those permitted by NFPA 70 for EMT, IMC, and RMC. Revise to suit Project, and consider retaining reference to NECA table for critical projects.

- B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as **[required by] [scheduled in NECA 1, where its Table 1 lists maximum spacings less than stated in]** NFPA 70. Minimum rod size shall be **1/4 inch** (6 mm) in diameter.
- C. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted **[or other]** support system, sized so capacity can be increased by at least **[25] <Insert number>** percent in future without exceeding specified design load limits.
1. Secure raceways and cables to these supports with **[two-bolt conduit clamps] [single-bolt conduit clamps] [single-bolt conduit clamps using spring friction action for retention in support channel]**.

Retain paragraph below for projects where seismic design requirements do not apply. Consider retaining for light-commercial projects only.

- D. Spring-steel clamps designed for supporting single conduits without bolts may be used for **1-1/2-inch** (38-mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

3.2 SUPPORT INSTALLATION

Consult structural engineer for requirements in this Article.

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.

Retain first paragraph below to permit raceways running perpendicular to bar joists and trusses to be supported by letting them rest within the joist or truss openings. NECA 1 does not mention this method. If seismic design requirements apply, consult structural engineer or authorities having jurisdiction before permitting this support method and specify seismic requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

- B. Raceway Support Methods: In addition to methods described in NECA 1, EMT and RMC may be supported by openings through structure members, as permitted in

NFPA 70.

- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).
- D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
1. To Wood: Fasten with lag screws or through bolts.
 2. To New Concrete: Bolt to concrete inserts.
 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
 4. To Existing Concrete: Expansion anchor fasteners.
- Retain first subparagraph below if powder-actuated devices are allowed. Consider deleting if Project contains both lightweight and standard-weight concrete or more than one thickness of concrete slab.
5. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69 or Spring-tension clamps, as appropriate and with sufficient weight rating for the application.
 6. To Light Steel: Sheet metal screws.
 7. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate **[by means that meet seismic-restraint strength and anchorage requirements for a seismic zone 1.]**
- E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.
- F. Do not fasten supports to piping, ductwork, mechanical equipment, cable tray or conduit.
- G. The use of pneumatic-actuated anchors is not allowed except at ceilings. Obtain DEN Project Manager approval prior to ordering materials or performing work.
- H. Do not drill structural steel members.
- I. Install surface-mounted cabinets and panelboards with minimum of four anchors
- J. Suspended conduit or box supports shall not be less than 1/4" diameter steel rod. Rod used as pedestal support is not acceptable. The contractor shall not use tie wire or wire of any type to support conduits, junction boxes or pull boxes.
- K. No more than five (5) 1/2" conduits, three (3) 3/4" conduits or two (2) 1" conduits shall be supported on a single 1/4" diameter steel rod.
- L. All conduits shall be supported by approved hangers. Supports installed and used by other trades such as duct hangers, pipe hangers, ceiling hangers, etc. shall not be

used for conduit support.

- M. All light fixtures shall be independently supported at opposite corners from structure, or from trapeze supported from structure by the electrical contractor.
- N. Wall-mounted fixtures shall be supported from building structure with backing support as approved by the DEN Project Manager to prevent any damage to the wall.
- O. Use vibration isolation pads for vibrating equipment such as transformers.
- P. Plastic or fiber anchors are prohibited.
- Q. Anchoring in overhead cast in place, pre-tensioned or post-tensioned concrete is prohibited unless x-ray or ground penetrating radar study are performed and approved by the DEN Project Manager.
- R. Route conduit through roof openings provided for piping and ductwork where possible; otherwise, route through roof jack with sealant approved by the roofing manufacturer.

3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

Coordinate installation requirements in this Article with structural engineer.

- A. Comply with installation requirements in Section 055000 "Metal Fabrications" for site-fabricated metal supports.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.

3.4 CONCRETE BASES

Coordinate this Article with Division 03 Section "Cast-in-Place Concrete" or "Miscellaneous Cast-in-Place Concrete."

Coordinate paragraphs and subparagraphs below with Sections specifying supported equipment.

- A. Install all freestanding electrical equipment on a 4" concrete housekeeping pad.
- B. Construct concrete bases of dimensions indicated but not less than 4 inches (100 mm) larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- C. Use [3000-psi (20.7-MPa)] <Insert value>, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Section[s] "[033000 Cast-in-Place Concrete] [033053 Miscellaneous Cast-in-Place Concrete]."

- D. Anchor equipment to concrete base.
1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 2. Install anchor bolts to elevations required for proper attachment to supported equipment.
 3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.5 PAINTING

Retain paragraph and subparagraph below if a Division 09 painting Section is not in Project Manual.

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
1. Apply paint by brush or spray to provide minimum dry film thickness of **2.0 mils** (0.05 mm).

Retain first paragraph below if a Division 09 painting Section is in Project Manual.

- B. Touchup: Comply with requirements in Division 09 [**painting Sections**] [**Section 099600 "High-Performance Coatings"**] for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260529

Updated: August 26, 2015

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260533 - RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Metal conduits, tubing, and fittings.
 - 2. Nonmetal conduits, tubing, and fittings.
 - 3. Innerduct
 - 4. Metal wireways and auxiliary gutters.
 - 5. Nonmetal wireways and auxiliary gutters.
 - 6. Surface raceways.
 - 7. Boxes, enclosures, and cabinets.
 - 8. Handholes and boxes for exterior underground cabling.
 - 9. Buried conduits in concrete encased duct banks.

- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

Retain first subparagraph below for underground conduits, handholes, and boxes; delete if incidental exterior underground raceways, handholes, and boxes are specified in this Section.

1. Division 26 Section 260543 "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.
2. Division 27 Section 270528 "Pathways for Communications Systems" for conduits, wireways, surface pathways, innerduct, boxes, faceplate adapters, enclosures, cabinets, and handholes serving communications systems.
3. Division 28 Section 280528 "Pathways for Electronic Safety and Security" for conduits, surface pathways, innerduct, boxes, and faceplate adapters serving electronic safety and security.
4. Division 26 Section 260526 "Grounding and Bonding for Electrical Systems" for additional grounding and bonding requirements.

C. Prohibited Materials

1. Intermediate conduits.
2. Aluminum conduit.
3. Multi-conductor assemblies, unless written authorization is obtained from DEN Project Manager, or specifically allowed within specification.

D. Project Conditions

1. Verify locations of outlets and small pull-boxes prior to rough in.
2. Electrical and pull boxes are shown on Drawings in approximate locations unless dimensioned. Install at location required for box to serve intended purpose.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- E. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. GRC: Galvanized rigid steel conduit.
- B. RMC: Rigid Metallic Conduit.
- C. RNC: Rigid Nonmetallic Conduit.
- D. EMT: Electrical Metallic Conduit.
- E. FMC: Flexible Metallic Conduit.
- F. LFMC: Liquidtight Flexible Metallic Conduit.
- G. HDPE: High Density Polyethelene.

- H. FNC: Flexible Nonmetallic Conduit.
- I. ENT: Electrical non-metallic conduit.
- J. MC: Metal-clad cable.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN ELECTRICAL ENGINEER

1.4 ACTION SUBMITTALS

- A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
 - 1. Include data substantiating that materials comply with requirements.

Retain subparagraphs below only if project is pursuing LEED certification

- B. LEED Submittals (if required):

"Product Data for Credit IEQ 4.1" Subparagraph below applies to LEED-NC, LEED-CI, and LEED-CS; coordinate with requirements for solvent cements and adhesive primers.

- 1. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.

"Laboratory Test Reports for Credit IEQ 4" Subparagraph below applies to LEED for Schools.

- 2. Laboratory Test Reports for Credit IEQ 4: For solvent cements and adhesive primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

Retain "Shop Drawings" Paragraph below for custom enclosures only.

- C. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

Coordinate sample requirements with DEN Project Manager.

- D. Samples: Per request.

1.5 INFORMATIONAL SUBMITTALS

The Designer shall model conduit routing per BIM requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items

involved:

1. Structural members in paths of conduit groups with common supports.
2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

Retain "Qualification Data" Paragraph below if source quality-control tests are required to be certified by a professional engineer. Coordinate with qualification requirements in Division 01 Section "Quality Requirements."

- B. Qualification Data: For professional engineer.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Division 26 Section "Vibration and Seismic Controls for Electrical Systems." See ASCE/SEI 7 for certification requirements for equipment and components.

- C. Seismic Qualification Certificates: For enclosures, cabinets, and conduit racks and their mounting provisions, including those for internal components, from manufacturer.
- D. Source quality-control reports.

1.6 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Division 01 Section "Product Requirements."

2.1 METAL CONDUITS, TUBING, AND FITTINGS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AFC Cable Systems, Inc.
 2. Allied Tube & Conduit; a Tyco International Ltd. Co.
 3. Anamet Electrical, Inc.
 4. Electri-Flex Company.
 5. O-Z/Gedney; a brand of EGS Electrical Group.
 6. Picoma Industries, a subsidiary of Mueller Water Products, Inc.
 7. Republic Conduit.
 8. Robroy Industries.
 9. Southwire Company.
 10. Thomas & Betts Corporation.
 11. Western Tube and Conduit Corporation.
 12. Wheatland Tube Company; a division of John Maneely Company.
 13. or approved equal.
- B. Listing and Labeling: Metal conduits, tubing, and fittings shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. GRC: Comply with ANSI C80.1 and UL 6.
- D. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit.
1. Comply with NEMA RN 1.
 2. Coating Thickness: 0.040 inch (1 mm), minimum.
- E. EMT: Galvanized tubing. Comply with ANSI C80.3 and UL 797.
- F. FMC: Comply with UL 1; zinc-coated steel.
- G. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.
- H. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.

In "FMC" Paragraph below, zinc-coated steel is most common type and provides some additional protection from physical damage. .

Coordinate "Conduit Fittings for Hazardous (Classified) Locations" Subparagraph below with Drawings.

1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886 and NFPA 70.
2. Fittings for EMT:
 - a. Material: Steel.
 - b. Type: Set screw or compression.
 - c. Provide throated connectors where entering junction boxes.
3. Expansion Fittings: PVC or steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external

- bonding jumper.
4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.

I. Innerduct:

1. Inner duct, meeting or exceeding the following requirements, shall be used to partition conduit.
 - a. Melting point: 260 degrees F., minimum.
 - b. Tensile yield strength: 3600 psi/sq. in., minimum
 - c. Brittleness temperature, maximum: -140 degrees F.
 - d. Heat distortion temperature: 170 degrees F minimum.

Retain "Joint Compound for GRC" Paragraph below to require some threaded joints of GRC, or ARC, or their fittings, to be treated with joint compound for improved conductivity, resistance to oxidation, or ease of assembly and disassembly.

- J. Joint Compound for GRC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.2 NONMETALLIC CONDUITS AND FITTINGS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. AFC Cable Systems, Inc.
 2. Anamet Electrical, Inc.
 3. Arnco Corporation.
 4. CANTEX Inc.
 5. CertainTeed Corp.
 6. Condux International, Inc.
 7. Electri-Flex Company.
 8. Kraloy.
 9. Lamson & Sessions; Carlon Electrical Products.
 10. Niedax-Kleinhuis USA, Inc.
 11. RACO; a Hubbell company.
 12. Thomas & Betts Corporation.
 13. or approved equal.
- B. Listing and Labeling: Nonmetallic conduits, tubing, and fittings shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

See Evaluations for descriptions of nonmetallic conduit types.

- C. RNC: Type EPC-40-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.

Retain one or more of three HDPE paragraphs below. See Evaluations for a discussion of the three types.

- D. Rigid HDPE: Comply with UL 651A.
- E. Continuous HDPE: Comply with UL 651B.
- F. Coilable HDPE: Preassembled with conductors or cables, and complying with ASTM D 3485.
- G. RTRC: Comply with UL 1684A and NEMA TC 14.
- H. Fittings for RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.

Retain first paragraph below if required for LEED-NC, LEED-CI, or LEED-CS Credit IEQ 4.1. VOC limit is that for PVC welding compounds and adhesive primers for plastic.

- I. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Retain paragraph below if required for LEED for Schools Credit IEQ 4.

- J. Solvent cements and adhesive primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 METAL WIREWAYS AND AUXILIARY GUTTERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper B-Line, Inc.
 2. Hoffman; a Pentair company.
 3. Mono-Systems, Inc.
 4. Square D; a brand of Schneider Electric.
 5. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 6. or approved equal.
- B. Description: Sheet metal, complying with UL 870 and NEMA 250, Type 1, Type 3R or Type 4x, and sized according to NFPA 70.

1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

Retain one or more options in "Wireway Covers" Paragraph below. If retaining more than one type, indicate locations of each type on Drawings.

- D. Wireway Covers: Hinged type or screw cover.
- E. Finish: Manufacturer's standard enamel finish.

2.4 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Allied Moulded Products, Inc.
 2. Hoffman; a Pentair company.
 3. Lamson & Sessions; Carlon Electrical Products.
 4. Niedax-Kleinhuis USA, Inc.
 5. or approved equal.
- B. Listing and Labeling: Nonmetallic wireways and auxiliary gutters shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Retain one of two "Description" paragraphs below.

- C. Description: Fiberglass polyester, extruded and fabricated to required size and shape, without holes or knockouts. Cover shall be gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections shall be flanged and have stainless-steel screws and oil-resistant gaskets.
- D. Description: Schedule 40 PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.
- E. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.

Retain first paragraph below if required for LEED-NC, LEED-CI, or LEED-CS Credit IEQ 4.1. VOC limit is that for PVC welding compounds and adhesive primers for plastic.

- F. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Retain paragraph below if required for LEED for Schools Credit IEQ 4.

- G. Solvent cements and adhesive primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.5 SURFACE RACEWAYS

Insert requirements for finish-coat paint color, if applicable, in "Surface Metal Raceways" Paragraph below. See Division 09 for optional field-finish coats.

- A. Listing and Labeling: Surface raceways shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Surface Metal Raceways: Galvanized steel with snap-on covers complying with UL 5. **Manufacturer's standard enamel finish in color selected by the DEN Project Manager.**

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. Mono-Systems, Inc.
 - b. Panduit Corp.
 - c. Wiremold / Legrand.
 - d. or approved equal.
- C. Surface Nonmetallic Raceways: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC with texture and color selected by DEN Project Manager from **manufacturer's standard** colors. Product shall comply with UL 94 V-0 requirements for self-extinguishing characteristics.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. Hubbell Incorporated; Wiring Device-Kellems Division.
 - b. Mono-Systems, Inc.
 - c. Panduit Corp.
 - d. Wiremold / Legrand.
 - e. **<Insert manufacturer>**

f. or approved equal.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

2.6 BOXES, ENCLOSURES, AND CABINETS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Adalet.
 2. Cooper Technologies Company; Cooper Crouse-Hinds.
 3. EGS/Appleton Electric.
 4. Erickson Electrical Equipment Company.
 5. FSR Inc.
 6. Hoffman; a Pentair company.
 7. Hubbell Incorporated; Killark Division.
 8. Kraloy.
 9. Milbank Manufacturing Co.
 10. Mono-Systems, Inc.
 11. O-Z/Gedney; a brand of EGS Electrical Group.
 12. RACO; a Hubbell Company.
 13. Robroy Industries.
 14. Spring City Electrical Manufacturing Company.
 15. Stahlin Non-Metallic Enclosures; a division of Robroy Industries.
 16. Thomas & Betts Corporation.
 17. Wiremold / Legrand.
 18. <Insert manufacturer>
 19. or approved equal.
- B. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.
- C. Sheet Metal Outlet and Device Boxes: Galvanized steel. Comply with NEMA OS 1 and UL 514A.
- In "Cast-Metal Outlet and Device Boxes" Paragraph below, type FD is a device box with extra depth. Many other configurations are available.
- D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, **ferrous alloy**, Type FD, with gasketed cover. Provide threaded hubs.
- E. Nonmetallic Outlet and Device Boxes: Prohibited, unless specifically allowed in writing by the DEN Project Manager.

See Editing Instruction No. 2 in the Evaluations for a discussion of floor boxes.

- F. Metal Floor Boxes:
1. Material: **Cast metal**.
 2. Type: Fully adjustable.
 3. Shape: [Rectangular] [round] <Insert shape>.
 4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- G. Nonmetallic Floor Boxes: Prohibited, unless specifically allowed by the DEN Project Manager.
1. Listing and Labeling: Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- H. Luminaire Outlet Boxes: Nonadjustable, designed for attachment of luminaire weighing **50 lb (23 kg)**. Outlet boxes designed for attachment of luminaires weighing more than **50 lb (23 kg)** shall be listed and marked for the maximum allowable weight.
- I. Paddle Fan Outlet Boxes: Nonadjustable, designed for attachment of paddle fan weighing **70 lb (32 kg)**.
1. Listing and Labeling: Paddle fan outlet boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- J. Small Sheet Metal Pull and Junction Boxes: Galvanized steel. NEMA OS 1.
- K. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, **galvanized, cast iron** with gasketed cover.
- L. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
- M. Device Box Dimensions: **4 inches square by 2-1/8 inches deep** (100 mm square by 60 mm deep) or as approved by DEN Project Manager.
- N. Gangable boxes are allowed.
- Coordinate "Hinged-Cover Enclosures" Paragraph below with Drawings if hinged-cover enclosures other than NEMA 250, Type 1 are required, such as for very dusty areas; or if consideration should be given to use of NEMA 250, Type 3R or Type 12 enclosures.
- O. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1, Type 3R or Type 4x as appropriate, with continuous-hinge cover with flush latch unless otherwise indicated. Screw cover enclosures: VL50 & NEMA 1.
1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
 2. Nonmetallic Enclosures: Plastic or Fiberglass.

3. Interior Panels: Steel; 14 gage steel, 12 gage if floor mounted, all sides finished with manufacturer's standard enamel, white.
4. Large Pull Boxes: Boxes larger than 100 cubic inches in volume or 12 inches in any dimension.
 - a. Interior Dry Locations: Use hinged or screw covered enclosure.
 - b. Interior damp or wet locations: Use nema 3R hinged cover boxes.

P. Cabinets:

1. NEMA 250, **[Type 1]** **[Type 3R]** **[Type 12]** <Insert type> galvanized-steel box with removable interior panel and removable **[front][end walls]**, finished inside and out with manufacturer's standard enamel, gray.
2. Cabinet Fronts: Steel, flush or surface type as indicated, with concealed trim clamps, concealed hinge and flush lock keyed to match branch circuit panelboard; finish in gray baked enamel.
3. Provide 3/4-inch thick fire retardant plywood backboard or galvanized steel back plate painted matte white, for mounting terminal blocks.
4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.
6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
7. Fabrication:
 - a. Shop assemble enclosures and cabinets housing terminal blocks or electrical components in accordance with ANSI/NEMA ICS 6.
 - b. Provide knockouts on enclosures.
 - c. Provide protective pocket inside front cover with schematic diagram, connection diagram, and layout drawing of control wiring and components within enclosure.

Q. Terminal blocks and accessories:

1. All terminal Blocks: ANSI/NEMA ICS 4; UL listed.
2. Power Terminals: Unit construction type, closed-back type, with tubular pressure screw terminals, rated 600 volts.
3. Signal and Control Terminals: Modular construction type, channel mounted; tubular pressure screw terminals, rated 300 volts.
4. Power and signal/control wiring will use separate terminal blocks.

2.7 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

See Editing Instruction No. 3 in the Evaluations. Verify with manufacturers that units of types specified are available in sizes required. Indicate the size of each enclosure on Drawings, and use a symbol or other notation to differentiate between handholes and pull boxes.

A. General Requirements for Handholes and Boxes:

1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.

2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Retain one or more of three paragraphs below to select enclosure type(s) for areas not subject to traffic by vehicles. Indicate location of each type in "Raceway Application" Article. For enclosures with cover options, verify that selected cover is available with load rating specified in "Raceway Application" Article. If retaining more than one type of box and cover combination, indicate location of each type on Drawings.

- B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete or stainless steel Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel, fiberglass, or a combination of the two.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armorcast Products Company.
 - b. Carson Industries LLC.
 - c. CDR Systems Corporation; Hubbell Power Systems.
 - d. NewBasis.
 - e. Oldcastle Precast, Inc.; Christy Concrete Products.
 - f. Synertech Moulded Products; a division of Oldcastle Precast, Inc.
 - g. or approved equal.
2. Standard: Comply with SCTE 77.

First option in "Configuration" Subparagraph below facilitates bottom conduit entry. Second option may be provided by a separate slab placed in the excavation under an open-bottom enclosure; third option is obtained by molding or fabricating the bottom integrally with the body of unit.

3. Configuration: Designed for flush burial with **[open] [closed] [integral closed]** bottom unless otherwise indicated.
4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
6. Cover Legend: Molded lettering, **["ELECTRIC."] <Insert legend>**.

Retain "Conduit Entrance Provisions" Subparagraph below if conduit enters enclosure through the side. Otherwise, entry is made through an open bottom or through side openings cut in the field, as specified in "Installation of Underground Handholes and Boxes" Article. Coordinate with Drawings.

7. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
8. Handholes **[12 Inches Wide by 24 Inches Long (300 mm Wide by 600 mm Long)] <Insert dimensions>** and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

- C. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with frame and covers of polymer concrete or stainless steel.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armorcast Products Company.
 - b. Carson Industries LLC.
 - c. CDR Systems Corporation; Hubbell Power Systems.
 - d. NewBasis.
 - e. Nordic Fiberglass, Inc.
 - f. Oldcastle Precast, Inc.; Christy Concrete Products.
 - g. Synertech Moulded Products; a division of Oldcastle Precast, Inc.
 - h. or approved equal.
2. Standard: Comply with SCTE 77.

Retain "Color of Frame and Cover" Subparagraph below if choosing a metal frame and cover; otherwise, delete.

3. Color of Frame and Cover: **[Gray] [Green]**.

First option in "Configuration" Subparagraph below facilitates bottom conduit entry. Second option may be provided by a separate slab placed in the excavation under an open-bottom enclosure; third option is obtained by molding or fabricating the bottom integrally with the body of unit.

4. Configuration: Designed for flush burial with **[open] [closed] [integral closed]** bottom unless otherwise indicated.
5. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
6. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
7. Cover Legend: Molded lettering, **["ELECTRIC."] <Insert legend>**.

Retain "Conduit Entrance Provisions" Subparagraph below if conduit enters enclosure through the side. Otherwise, entry is made through an open bottom or through side openings cut in the field, as specified in "Installation of Underground Handholes and Boxes" Article. Coordinate with Drawings.

8. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
9. Handholes **[12 Inches Wide by 24 Inches Long (300 mm Wide by 600 mm Long)] <Insert dimensions>** and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.8 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

Retain this article for underground handholes and pull boxes. Delete if handholes and pull boxes are specified only in Division 26 Section "Underground Ducts and Raceways for Electrical Systems." See Evaluations.

- A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

Retain one of first two subparagraphs below; retain first subparagraph to require an independent testing agency to test for compliance with SCTE requirements; retain second subparagraph to require testing by manufacturers' laboratories. See Evaluations for a discussion of testing.

1. Tests of materials shall be performed by an independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012 and traceable to NIST standards.

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

Retain this article to specify type of raceway to be installed. Coordinate with conductor and cable wiring methods specified in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables" and in other Sections in Divisions 26, 27, and 28. See "Writing Guide" Article in the Evaluations for instructions on editing this article.

- A. Raceways shall not be installed in stairways or on the exterior of any building, unless specifically allowed by DEN Project Manager.
- B. Outdoors: Apply raceway products as specified below unless otherwise indicated:
 1. Exposed Conduit: RMC.
 2. Concealed Conduit, Aboveground: RMC.
 3. Underground Conduit: Encased in concrete per Section 260543, "Underground Ducts and Raceways for Electrical Systems."
 - a. Direct buried conduits are not allowed unless specifically allowed by the DEN Project Manager.
 4. Exposed Conduit in Parking Garages or other covered structures open to environment:
 - a. Below 8'-0" AFF or within 10'-0" of extent of covered area: Galvanized RMC.
 - b. Above 8'-0" AFF and more than 10'-0" from extent of covered area: EMT with compression-type weatherproof/rain-tight connectors.

Retain first option in first subparagraph below if raceway may be exposed to physical damage.

5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
 6. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R Type 4.
- C. Indoors: Apply raceway products as specified below unless otherwise indicated:
 1. Exposed, Not Subject to Physical Damage: EMT.
 2. Exposed, Not Subject to Severe Physical Damage: EMT.
 3. Exposed and Subject to Severe Physical Damage: GRC . Raceway locations include the following:

- a. Loading dock.
 - b. Baggage tunnels
 - c. **<Insert designations of applicable spaces or locations>**
4. Concealed in Ceilings and Interior Walls and Partitions: EMT.
 5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
 6. Wet Locations: GRC.
 7. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel in institutional and commercial kitchens and damp or wet locations.

D. CONDUIT INSTALLATION SCHEDULE

1. Underground Installations More Than Five Feet From Foundation Wall: Polyvinyl Chloride (PVC) conduit Schedule 40. All bends greater than 45 degrees in non-metallic conduit shall be galvanized rigid steel conduit with a factory coating of polyvinyl chloride (PVC).
2. Installation In Concrete Slab: Not allowed.
 - a. All buried conduits containing cabling shall be installed in concrete encased duct banks.
3. In Slab Above Grade: Not allowed.
4. Wet Interior Locations: Rigid steel.
5. Concealed Dry Interior Locations: Electrical metallic tubing.
6. In Existing Walls of Existing Structure: Electrical metallic tubing or MC Cable.

Select minimum raceway size. 3/4-inch shall be the minimum raceway size for all projects unless 1/2-inch is specifically approved in writing by the DEN Project Manager.

E. Minimum Raceway Size: [1/2-inch (16-mm)] [3/4-inch (19-mm)] trade size.

F. Raceway Fittings: Compatible with raceways and suitable for use and location.

1. Rigid Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
3. EMT: Use setscrew, or compression, steel fittings. Comply with NEMA FB 2.10.
 - a. Setscrew fittings to be used for indoor applications in dry locations only.
 - b. Compression fittings may be used in indoor or outdoor locations for damp or wet locations.
4. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.

Retain first paragraph below for high-frequency installation.

Install nonferrous conduit for circuits operating above 60 Hz. Coordinate first paragraph below with Drawings.

- G. Install surface raceways only where indicated on Drawings.
- H. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F (49 deg C).
- I. Unless otherwise indicated and where not otherwise restricted, use the conduit type indicated for the specified applications. Where more than one listed application applies, comply with the most restrictive requirements. Where conduit type for a particular application is not specified, use Galvanized Rigid Conduit.

3.2 INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.
- B. Maintain a minimum of 6 inches (150 mm) between conduit and other piping. Maintain twelve inches (12") clearance between conduit and a heat source such as heating pipes, exhaust flues and heating appliances. Install horizontal raceway runs above water and steam piping.
- C. Complete raceway installation before starting conductor installation.
- D. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.
- E. Arrange stub-ups so curved portions of bends are not visible above finished slab.

First paragraph below is more restrictive than NFPA 70, which permits up to four quarter bends in a conduit run. Retain paragraph for more conservative design, with less stress being placed on conductors being pulled in.

- F. Install no more than the equivalent of three 90-degree bends in any conduit run except for control wiring conduits, for which fewer bends are allowed. Support within 24 inches (610 mm) of changes in direction.
- G. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines. Use conduit bodies to make changes in direction around beams or columns.
- H. Support conduit within 24 inches (610 mm) of enclosures to which attached. Support conduit at a maximum of 8 feet on center, within two (2) feet of a box or fitting.

Some authorities having jurisdiction may not permit nonmetallic tubing in fire-rated slabs in subparagraph below.

- I. Use only factory cast hubs for fastening conduit to cast boxes, and use steel or malleable iron hubs for fastening conduit to sheet metal boxes or equipment in damp or wet locations.
- J. Avoid moisture traps where possible; where unavoidable, provide junction box with drain fitting at conduit low point.
- K. Use suitable conduit caps to protect installed conduit against entrance of dirt and moisture during construction.
- L. Use PVC-coated rigid steel factory elbows for bends greater than 45 degrees in plastic conduit runs.
- M. Exposed conduits subject to physical damage to be rigid steel to 6'-0" above floor, deck or grating except in electrical, communications and mechanical rooms.
- N. Conduit stubbed up shall be two inches above slab or housekeeping pad and the empty conduits shall be capped. Under freestanding equipment conduits with conductors shall be sealed with duct seal.
- O. Flexible steel conduit runs shall not exceed 6' in length when connecting equipment, 6' in length when connecting light fixtures or when fished in hollow spaces with written approval by DEN Project Manager and shall contain a grounding conductor.
- P. Stub-ups to Above Recessed Ceilings:
 - 1. Use EMT or RMC for raceways.
 - 2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

Retain "Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions" Paragraph below to require application of protective joint compound to threads of rigid steel conduit and to their fittings where these raceways are installed outdoors or in wet, damp, or corrosive conditions. This optional requirement exceeds NFPA 70 rules. If retaining, coordinate with Drawings indicating wet, damp, or corrosive indoor locations.

- Q. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.
- R. Coat field-cut threads on PVC-coated raceway with a corrosion-preventing conductive compound prior to assembly.

Retain one of first two paragraphs below to exceed NFPA 70 requirements. NFPA 70 requires insulated bushings or other smooth, rounded entry provisions for conduit terminations at all locations where conductors are No. 4 AWG and larger, regardless of the environment. NFPA 70 requires bonding of all service conductors, but does not require bonding to be accomplished with grounding bushings. See Evaluations for further discussion.

- S. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors including conductors smaller than No. 4 AWG.

- T. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to **1-1/4-inch (35mm)** trade size and insulated throat metal bushings on **1-1/2-inch (41-mm)** trade size and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.
- U. Install raceways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.
- V. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.
- W. Cut conduit perpendicular to the length. For conduits **2-inch (53-mm)** trade size and larger, use roll cutter or a guide to make cut straight and perpendicular to the length.
- X. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than **160-lb (72-kg)** tensile strength. Leave at least **12 inches (300 mm)** of slack at each end of pull wire. Cap underground raceways designated as spare above grade alongside raceways in use.

Retain "Surface Raceways" Paragraph below if applicable.

- Y. Surface Raceways:
 - 1. Install surface raceway with a minimum **2-inch (50-mm)** radius control at bend points.
 - 2. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding **48 inches (1200 mm)** and with no less than two supports per straight raceway section. Support surface raceway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.
- Z. Install raceway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings according to NFPA 70.

See Evaluations for discussion of types of and locations for raceway seals.

- AA. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all raceways at the following points:
 - 1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
 - 2. Where an underground service raceway enters a building or structure.
 - 3. Where otherwise required by NFPA 70.
- BB. Comply with manufacturer's written instructions for solvent welding RNC and fittings.

Retain "Expansion-Joint Fittings" Paragraph below unless locations for expansion fittings for RNC are

indicated on Drawings. See Evaluations.

CC. Expansion-Joint Fittings:

1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed **30 deg F (17 deg C)** and that has straight-run length that exceeds **25 feet (7.6 m)**. Install in each run of aboveground RMC **and EMT** conduit that is located where environmental temperature change may exceed **100 deg F (55 deg C)** and that has straight-run length that exceeds **100 feet (30 m)**.
2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:

Revise list below to include all locations in Project with environmental conditions that require considering expansion-joint fittings in conduit runs. For each Project, consider only locations with PVC conduit with straight-run length exceeding 25 feet (7.6 m) or metal conduit in lengths over 100 feet (30 m). Also revise temperature change for each location so it safely represents conditions anticipated. Temperature-change figures below are examples of maximum total swings from the lowest to the highest environmental temperatures at the indicated types of locations and must be revised to represent temperature swings or changes that may occur at Project locations.

- a. Outdoor Locations Not Exposed to Direct Sunlight: **125 deg F (70 deg C)** temperature change.
- b. Outdoor Locations Exposed to Direct Sunlight: **155 deg F (86 deg C)** temperature change.
- c. Indoor Spaces Connected with Outdoors without Physical Separation: **125 deg F (70 deg C)** temperature change.

Formula in first subparagraph below provides about 15 percent safety factor (extra expansion-contraction capability).

3. Install fitting(s) that provide expansion and contraction for at least **0.00041 inch per foot of length of straight run per deg F (0.06 mm per meter of length of straight run per deg C)** of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least **0.000078 inch per foot of length of straight run per deg F (0.0115 mm per meter of length of straight run per deg C)** of temperature change for metal conduits.
4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.
6. Provide external bonding jumper for all expansion fittings..

Retain option in "Flexible Conduit Connections" Paragraph below if flexible connections are required for recessed and semirecessed luminaires.

- DD. Flexible Conduit Connections: Comply with NEMA RV 3. Use a maximum of **72 inches (1830 mm)** of flexible conduit for **recessed and semirecessed luminaires**, equipment subject to vibration, noise transmission, or movement; and for transformers and

motors. All vibrating equipment such as motors, transformers, and generators shall be connected with flexible steel conduit, not to exceed six feet in length.

1. Use LFMC in damp or wet locations subject to severe physical damage.
2. Use LFMC or LFNC in damp or wet locations not subject to severe physical damage.

- EE. Size conduit for conductor type installed or for Type THHN conductors, whichever is larger.
- FF. Arrange conduit to maintain headroom and present a neat appearance. Certain existing conditions may allow a waiver to this item.
- GG. Arrange conduit supports to prevent distortion of alignment by wire pulling operations. Fasten conduit using galvanized straps, lay-in adjustable hangers, clevis hangers, or bolted split stamped galvanized hangers.
- HH. Group conduit in parallel runs where practical and use conduit rack constructed of steel channel with conduit straps or clamps. Provide space for 25 percent additional conduit.
- II. Do not support conduit from cable tray or cable tray supports.
- JJ. Flexible conduit shall not be less than one-half (1/2) inch except when supplied with lighting fixtures. MC Cable shall be allowed in lieu of flexible conduit for light fixtures in lengths of 6 feet or less.
- KK. When anchoring to a dual sheet metal pan deck and concrete, anchors of any type when placed from below the deck shall be placed only in the lower pan form. No anchors shall be installed in the upper (high) pan.

X-ray is the preferred option. GPR is only allowed if specifically approved by the DEN Project Manager.

- LL. X-ray [or ground penetrating radar] studies shall be made of concrete floors, walls or CMU walls.
- MM. Mount boxes at heights indicated on Drawings. Install boxes with height measured to **center** of box unless otherwise indicated. Coordinate mounting heights and locations of boxes or outlets so as not to be interfered with by grounding systems, electrical panels, or any other building accessory.
- NN. Coordinate installation of outlet or equipment boxes for systems or products furnished under other sections.
- OO. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
- PP. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel. Provide minimum 8 inch separation.

- QQ. Locate boxes so that cover or plate will not span different building finishes.
- RR. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
- SS. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
- TT. Set metal floor boxes level and flush with finished floor surface.
- UU. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.
- VV. Install electrical boxes as shown on Drawings, and as required for equipment, terminal strips, splices, taps, wire pulling, equipment connections and compliance with regulatory requirements.
- WW. Inaccessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches from ceiling access panel or from removable recessed light fixture.
- XX. Align adjacent wall-mounted outlet boxes for switches, thermostats, and similar devices with each other.
- YY. Use adjustable steel channel fasteners or all thread for hanging ceiling outlet box, support box from structure.
- ZZ. Support boxes in the ceiling with ¼" threaded rod as a minimum.
- AAA. Use appropriate gang box where more than one device is mounted together.
- BBB. Use 4 inch square box with plaster ring for single device outlets.
- CCC. Use malleable iron outlet box when surface mounted: on exterior of building, in wet location or damp location.
- DDD. Minimum junction and pull box size 4-11/16" x 4-11/16" x 2-1/8" .
- EEE. Minimum outlet box size 4" x 4" x 2-1/8" including feed through outlet boxes.
- FFF. Minimum junction box size for fire alarm pull stations, control module, monitor module, 4" x 4" x 2-1/8". Provide plaster ring at all pull station locations.
- GGG. Use flush mounting outlet boxes in finished areas.
- HHH. Install knockout closure in unused box openings.
- III. Install cabinets and enclosures plumb; anchor securely to wall and structural supports at each corner, minimum.
- JJJ. All floor-mounted equipment shall be on a 4" nominal concrete housekeeping pad.

KKK. No cabinet shall be supported on slab or grade.

3.3 INSTALLATION OF UNDERGROUND CONDUIT

- A. Refer to Division 26 Section "Underground Ducts and Raceways for Electrical Systems" for underground conduit installation requirements.

3.4 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

- A. Refer to Division 26 Section "Underground Ducts and Raceways for Electrical Systems" for underground handhole and box installation requirements

3.5 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.6 FIRESTOPPING

- A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.7 PROTECTION

- A. Protect coatings, finishes, and cabinets from damage and deterioration.
 - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 - 2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260533

SECTION 260536 - CABLE TRAYS FOR ELECTRICAL SYSTEMS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Ladder cable trays.
 - 2. Trough cable trays.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN ELECTRICAL ENGINEER

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data indicating dimensions and finishes for each type of cable tray indicated.

2. Include data indicating dimensions and finishes for each type of cable tray indicated.
- B. Shop Drawings: For each type of cable tray.
1. Show fabrication and installation details of cable trays, including plans, elevations, and sections of components and attachments to other construction elements. Designate components and accessories, including clamps, brackets, hanger rods, splice-plate connectors, expansion-joint assemblies, straight lengths, and fittings.

Retain "Delegated-Design Submittal" Paragraph below if design services have been delegated to Contractor.

- C. Delegated-Design Submittal: For seismic restraints.
1. Seismic-Restraint Details: Signed and sealed by a qualified professional engineer, licensed in the state where Project is located, who is responsible for their preparation.
 2. Design Calculations: Calculate requirements for selecting seismic restraints.
 3. Detail fabrication, including anchorages and attachments to structure and to supported cable trays.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans and sections, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Include scaled cable tray layout and relationships between components and adjacent structural, electrical, and mechanical elements.
 2. Vertical and horizontal offsets and transitions.
 3. Clearances for access above and to side of cable trays.
 4. Vertical elevation of cable trays above the floor or below bottom of ceiling structure.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Division 26 Section "Vibration and Seismic Controls for Electrical Systems." See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: For cable trays, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.5 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.6 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Division 01 Section "Product Requirements."

2.1 PERFORMANCE REQUIREMENTS

Retain "Delegated Design" Paragraph below if Contractor is required to assume responsibility for design.

- A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 Section "Quality Requirements," to design cable tray supports and seismic bracing.

Retain "Seismic Performance" Paragraph below with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Delete paragraph if performance requirements are indicated on Drawings. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Coordinate requirements with structural engineer.

- B. Seismic Performance: Cable trays and supports shall withstand the effects of earthquake motions determined according to **ASCE/SEI 7**.

Retain first subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification.

1. The term "withstand" means, "Cable trays will remain in place without separation

of any parts when subjected to the seismic forces specified."

For life-safety components required to function after an earthquake (such as fire-sprinkler systems, components that contain hazardous content, and storage racks in structures open to the public), the Component Importance Factor is 1.5. For other components, the Component Importance Factor is 1.0 unless the structure is in Seismic Use Group III and component is necessary for continued operation of facility or failure of component could impair continued operation of facility, in which case the Component Importance Factor is 1.5.

2. Component Importance Factor: **1.0**.

See ASCE/SEI 7, Coefficients for Architectural Component Table and Seismic Coefficients for Mechanical and Electrical Components Table for requirements to be inserted in subparagraph below.

3. **<Insert requirements for Component Amplification Factor and Component Response Modification Factor>**.

- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes in cable tray installed outdoors.

Differential values in "Temperature Change" Subparagraph below (for aluminum in particular) are suitable for most of the U.S.

1. Temperature Change: **120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.**

2.2 GENERAL REQUIREMENTS FOR CABLE TRAYS

If cable trays are identified for use via listing, then follow listing requirements. This may require that all interconnected cable trays be from single manufacturer. Some tray types may not be capable of being interconnected.

- A. Cable Trays and Accessories: Identified as defined in NFPA 70 and marked for intended location, application, and grounding.
 1. Source Limitations: Obtain cable trays and components from single manufacturer.

If using multiple types, sizes, or ratings of cable trays on a project, consider adding a table to Drawings.

- B. Sizes and Configurations: See the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.
- C. Structural Performance: See articles on individual cable tray types for specific values for the following parameters:

See "Load/Span Classification System" Article in the Evaluations.

1. Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
2. Concentrated Load: A load applied at midpoint of span and centerline of tray.
3. Load and Safety Factors: Applicable to both side rails and rung capacities.

- D. Circuit requirements: Electrical circuits of less than 50 volts can be installed in approved cable tray systems. Electrical circuits of less than 50 volts shall not be installed in cable tray systems.

2.3 LADDER CABLE TRAYS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Allied Tube & Conduit; a Tyco International Ltd. Co.
2. Chalfant Manufacturing Company.
3. Cope.
4. Cooper B-Line, Inc.
5. Mono-Systems, Inc.
6. MP Husky.
7. Niedax-Kleinhuis USA, Inc.
8. or approved equal.

- B. Description:

1. Configuration: Two I-beam side rails with transverse rungs welded to side rails.
2. Rung Spacing: 6 inches (150 mm) o.c.
3. Radius-Fitting Rung Spacing: 12 inches (300 mm) at center of tray's width.
4. Minimum Cable-Bearing Surface for Rungs: 7/8-inch (22-mm) width with radius edges.
5. No portion of the rungs shall protrude below the bottom plane of side rails.
6. Structural Performance of Each Rung: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb (90-kg) concentrated load, when tested according to NEMA VE 1.
7. Minimum Usable Load Depth: 4 inches (100 mm).
8. Straight Section Lengths: 10 feet (3 m), except where shorter lengths are required to facilitate tray assembly.

Select required cable tray width.

9. Width: [6 inches (150 mm)] [9 inches (225 mm)] [12 inches (300 mm)] [18 inches (450 mm)] [24 inches (600 mm)] [30 inches (750 mm)] [36 inches (900 mm)] unless otherwise indicated on Drawings.
10. Fitting Minimum Radius: 12 inches (300 mm).

The maximum uniform load and the support span are indicated by the cable tray class.

11. Class Designation: Comply with NEMA VE 1, Class 12C.
12. Splicing Assemblies: Bolted type using serrated flange locknuts.
13. Hardware and Fasteners: ASTM F 593 and ASTM F 594 stainless steel, Type 316 Steel, zinc plated according to ASTM B 633.
14. Splice Plate Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.

2.4 TROUGH CABLE TRAYS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following]:
1. Allied Tube & Conduit; a Tyco International Ltd. Co.
 2. Chalfant Manufacturing Company.
 3. Cope.
 4. Cooper B-Line, Inc.
 5. Mono-Systems, Inc.
 6. MP Husky.
 7. Niedax-Kleinhuis USA, Inc.
 8. or approved equal.
- B. Description:
1. Configuration: Two (2) longitudinal members (side rails) with a solid sheet over rungs exposed on the interior of the trough, or corrugated sheet with both edges welded to the side rails.
 2. Rung Spacing: Rungs or corrugations shall be spaced a maximum of **6 inches (150 mm)** o.c. and have a minimum flat bearing surface of **2 inches (50 mm)**.
 3. Radius-Fitting Rung Spacing: **12 inches (300 mm)** at center of tray's width.
 4. Structural Performance: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a **200-lb (90-kg)** concentrated load, when tested according to NEMA VE 1.
 5. Minimum Usable Load Depth: **4 inches (100 mm)**.
 6. Straight Section Lengths: [**10 feet (3 m)**] except where shorter lengths are required to facilitate tray assembly.

Select required width.

7. Width: [**6 inches (150 mm)**] [**9 inches (225 mm)**] [**12 inches (300 mm)**] [**18 inches (450 mm)**] [**24 inches (600 mm)**] [**30 inches (750 mm)**] [**36 inches (900 mm)**] unless otherwise indicated on Drawings.
8. Fitting Minimum Radius: **12 inches (300 mm)**.

The maximum uniform load and the support span are indicated by the cable tray class.

9. Class Designation: Comply with NEMA VE 1, Class 12C.
10. Splicing Assemblies: Bolted type using serrated flange locknuts.
11. Splicing Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
12. Hardware and Fasteners: ASTM F 593 and ASTM F 594 stainless steel, Type 316 Steel, zinc plated according to ASTM B 633.

2.5 VERTICAL (BACKBONE) COMMUNICATIONS PATHWAYS - CABLE TRAY

- A. Cable trays shall utilize dual side rails with 6-inch maximum rung spacing or solid bottom construction. When rung construction is utilized, the top of each rung shall be flat (required for fiber-optic cable). Cable tray covers are generally not required (or desired), however, when the use of covers is mandated, covers shall be hinged. Cable tray systems should be installed with a minimum number of horizontal bends and vertical transitions. Where such transitions are required, provide transition pieces manufactured for the purpose by the cable tray manufacturer. Field fabricated transitions or sections of tray abutting without transition pieces shall not be acceptable. The radius of all transitions for vertical communications pathways shall be a minimum of nine (9) feet measured to the inside rail of the tray.
- B. Cable tray size and supporting system shall be designed for the initial cabling requirements with spare capacity to support 100 percent future growth.
- C. Cable tray shall be installed with as much clearance as possible from other building facilities. A minimum clearance of 8-inches shall be maintained above any cable tray. Maintain 12-inches clearance on both sides of tray.
- D. Cable tray should generally not be installed above inaccessible hard ceiling locations. Where such conditions are unavoidable, person sized access panels shall be provided at 20 foot intervals and at any change of direction greater than 15 degrees. A complete cable tray rope and pulley system shall be installed in tray segments above inaccessible ceiling systems. Where used in plenum areas, pulley cord shall be constructed of plenum rated material.
- E. Cable tray shall terminate at the outside wall of communications room. The communications room penetration shall be made with a group of 4-inch metallic conduits equivalent in cross sectional area to the tray. Conduits shall be secured to both sides of the equipment room wall with unistrut and 4-inch unistrut clamps. Bonding bushings shall be provided on both sides of penetrating sleeves and bonded to tray / cable ladder on both sides. Firesafe between conduits and wall.
- F. When complete, tray shall be free and clear of all obstructions and free of burrs, sharp edges and protrusions. Label tray "DEN Telecommunications at 6'-0" intervals.

2.6 MATERIALS AND FINISHES

Retain one or more of "Steel," "Aluminum," and "Stainless Steel" paragraphs below. If using more than one type of cable tray material for Project, consider using a schedule to detail the specific requirements in each area. See "Cable Tray Materials" Article in the Evaluations.

A. Steel:

ASTM A 1011/A 1011M is for 14 gage and thicker; ASTM A 1008/A 1008M is for 16 gage and thinner. Both have structural-steel (SS) and high-strength, low-alloy-steel (HSLAS) designations.

1. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of [**ASTM A 1011/A 1011M, SS, Grade 33**]

[ASTM A 1008/A 1008M, Grade 33, Type 2].

2. Steel Tray Splice Plates: ASTM A 1011/A 1011M, HSLAS, Grade 50, Class 1.
3. Fasteners: Steel complies with the minimum mechanical properties of ASTM A 510/A 510M, Grade 1008.

Retain one of six "Finish" subparagraphs below or insert a different finish.

4. Finish: Mill galvanized before fabrication.
 - a. Standard: Comply with ASTM A 653/A 653M, **G90 (Z275)**.

Retain one option in "Hardware" Subparagraph below.

- b. Hardware: [**Galvanized, ASTM B 633**] [**Chromium-zinc plated, ASTM F 1136**].
5. Finish: Electrogalvanized before fabrication.
 - a. Standard: Comply with ASTM B 633.
 - b. Hardware: Galvanized, ASTM B 633.
6. Finish: Hot-dip galvanized after fabrication.
 - a. Standard: Comply with ASTM A123/A123 M, Class B2.

Retain one option in "Hardware" Subparagraph below.

- b. Hardware: [**Chromium-zinc plated, ASTM F 1136**] [**Stainless steel, Type 316**].
7. Finish: Epoxy-resin Powder-coat enamel paint.
 - a. Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
 - b. Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
 - c. Epoxy-Resin Topcoat: Epoxy, cold-cured, gloss, MPI# 77.

Retain one option in "Hardware" Subparagraph below.

- d. Hardware: [**Chromium-zinc plated, ASTM F 1136**] [**Stainless steel, Type 316, ASTM F 593 and ASTM F 594**].
8. Finish: Factory-standard primer, ready for field painting, with chromium-zinc-plated hardware according to ASTM F 1136.
9. Finish: Black oxide finish for support accessories and miscellaneous hardware according to ASTM D 769.
10. **<Insert finish>**.

B. Aluminum:

1. Materials: Alloy 6063-T6 according to ANSI H35.1/H 35.1M for extruded components, and [**Alloy 5052-H32**] [**or**] [**Alloy 6061-T6**] according to ANSI H35.1/H 35.1M for fabricated parts.
2. Hardware: Chromium-zinc-plated steel, ASTM F 1136 Stainless steel, Type 316, ASTM F 593 and ASTM F 594.

3. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F 593 and ASTM F 594.

C. Stainless Steel:

1. Materials: Low-carbon, passivated, stainless steel, [Type 304L] [or] [Type 316L], ASTM F 593 and ASTM F 594.
2. Hardware for Stainless-Steel Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F 593 and ASTM F 594.

2.7 CABLE TRAY ACCESSORIES

- A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.

If more than one cable tray cover type is required, delete "Covers" Paragraph below and indicate type on Drawings or in a schedule. Retain paragraph if cable tray covers are required. See "Cable Tray Covers" Article in the Evaluations.

- B. Covers: [Solid] [Louvered] [Ventilated-hat] [2-in-3 pitch] type made of same materials and with same finishes as cable tray.

Indicate required locations for barrier strips on Drawings.

- C. Barrier Strips: Same materials and finishes as for cable tray.
- D. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.8 WARNING SIGNS

Insert different lettering size in "Lettering" Paragraph below to suit 25-foot (7.6-m) viewing distance.

- A. Lettering: 1-1/2-inch- (40-mm) high, black letters on yellow background with legend "Warning! Not To Be Used as Walkway, Ladder, or Support for Ladders or Personnel."
- B. Comply with requirements for fasteners in Section 260553 "Identification for Electrical Systems."

2.9 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect cable trays according to NEMA VE 1.

PART 3 - EXECUTION

3.1 CABLE TRAY INSTALLATION

NEMA FG 1 applies to fiberglass cable trays only. NEMA VE 2 applies to all metallic cable trays.

- A. Install cable trays according to NEMA VE 1.
- B. Install cable trays as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.
- C. Install cable trays so that the tray is accessible for cable installation and all splices are accessible for inspection and adjustment.
- D. Cut standard straight sections to length in field.
- E. Remove burrs and sharp edges from cable trays.
- F. Join aluminum cable tray with splice plates; use four square-neck carriage bolts and locknuts.
- G. Fasten cable tray supports to building structure and install seismic restraints.

Retain first paragraph below if deleting "Delegated Design" Paragraph in "Performance Requirements" Article. Delete below if retaining "Delegated Design" Paragraph.

- H. Design fasteners and supports to carry cable tray, the cables, and a concentrated load of 200 lb (90 kg). Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems." Comply with seismic-restraint details according to Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- I. Support cable tray at each connection point, at the end of each run, and at other points to maintain maximum spacing between supports of 10 feet (3 m) for ladder cable tray.
- J. Place supports so that spans do not exceed maximum spans on schedules and provide clearances shown on Drawings. Install intermediate supports when cable weight exceeds the load-carrying capacity of the tray rungs.
- K. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.
- L. Support bus assembly to prevent twisting from eccentric loading.
- M. Install center-hung supports for single-rail trays designed for 60 versus 40 percent eccentric loading condition, with a safety factor of 3.
- N. Do not install more than one cable tray splice between supports.

Retain first paragraph below if cable trays connect to equipment.

- O. Make connections to equipment with flanged fittings fastened to cable trays and to equipment. Support cable trays independent of fittings. Do not carry weight of cable trays on equipment enclosure.

Retain first paragraph below if expansion fittings are required.

- P. Install expansion connectors where cable trays cross building expansion joints.
- Q. Make changes in direction and elevation using manufacturer's recommended fittings.
- R. Make cable tray connections using manufacturer's recommended fittings.
- S. Seal penetrations through fire and smoke barriers. Comply with requirements in Division 07 Section "Penetration Firestopping."

If cable trays are sized for future cables, specify provisions for penetrations with sleeves through fire-rated partitions or use "repairable" firestop-sealing material. Include this Section's specific firestopping requirements in a schedule developed in Division 07 Section "Penetration Firestopping."

- T. Install capped metal sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.
- U. Install cable trays with enough workspace to permit access for installing cables.

Retain first paragraph below if systems are mixed in a single cable tray.

- V. Install barriers to separate cables of different systems, such as power, communications, and data processing; or of different insulation levels, such as 600, 5000, and 15 000 V.

See "Cable Tray Covers" Article in the Evaluations.

- W. Install permanent covers, if used, after installing cable. Install cover clamps according to NEMA VE 2.
- X. Covers with hold down clamps shall be installed on all cable trays installed under open metal grates.
- Y. Clamp covers on cable trays installed outdoors with heavy-duty clamps.
- Z. Install warning signs in visible locations on or near cable trays after cable tray installation.
- AA. X-ray or ground penetrating radar studies shall be made of concrete floors, walls or CMU walls and an interpretation of the findings shall be provided to the DEN Project Manager prior to any core drilling or saw cutting.
- BB. When anchoring to a dual sheet metal pan deck and concrete, anchors of any type when placed below the deck shall be placed only in the lower pan form. No anchors

shall be installed in the upper (high) pan. All concrete type anchors shall be installed in drilled holes.

3.2 CABLE TRAY GROUNDING

- A. Ground cable trays according to NFPA 70 unless additional grounding is specified. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems.
- B. Cable trays with electrical power conductors shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.
- C. Install equipment ground bond between conduit and cable tray.

Verify that cable tray system is specified for grounding and bonding the largest power conductor in the tray. If system is not specified, retain first paragraph below and revise to suit Project.

- D. Cable trays with single-conductor power conductors shall be bonded together with a grounding conductor run in the tray along with the power conductors and bonded to the tray at 72-inch (1800-mm) intervals. The grounding conductor shall be sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors," and Article 392, "Cable Trays."
- E. When using epoxy- or powder-coat painted cable trays as a grounding conductor, completely remove coating at all splice contact points or ground connector attachment. After completing splice-to-grounding-bolt attachment, repair the coated surfaces with coating materials recommended by cable tray manufacturer.
- F. Bond cable trays to power source for cables contained within with bonding conductors sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors."

3.3 CABLE INSTALLATION

- A. Install cables only when each cable tray run has been completed and inspected.

Fastening cables on horizontal runs is beyond the requirements of NFPA 70 in most cases. See Evaluations.

- B. Fasten cables on horizontal runs with cable clamps or cable ties according to NEMA VE 2. Tighten clamps only enough to secure the cable, without indenting the cable jacket. Install cable ties with a tool that includes an automatic pressure-limiting device.
- C. Fasten cables on vertical runs to cable trays every 18 inches (450 mm).

Length of unsupported cable is dependent on the cable diameter. See "Cable Installations" Article in Evaluations.

- D. Fasten and support cables that pass from one cable tray to another or drop from cable

trays to equipment enclosures. Fasten cables to the cable tray at the point of exit and support cables independent of the enclosure. The cable length between cable trays or between cable tray and enclosure shall be no more than **72 inches** (1800 mm).

- E. Tie MI cables down every **36 inches** (900 mm) where required to provide a 2-hour fire rating and every **72 inches** (1800 mm) elsewhere.
- F. In existing construction, remove inactive or dead cables from cable trays.

3.4 CONNECTIONS

- A. Remove paint from all connection points before making connections. Repair paint after the connections are completed.
- B. Connect raceways to cable trays according to requirements in NEMA VE 2.
- C. All conduits to be attached and bonded to cable tray with approved fittings.

3.5 FIELD QUALITY CONTROL

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform the following tests and inspections **with the assistance of a factory-authorized service representative**:
 1. After installing cable trays and after electrical circuitry has been energized, survey for compliance with requirements.
 2. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in cable trays, vibrations, and thermal expansion and contraction conditions, which may cause or have caused damage.
 3. Verify that the number, size, and voltage of cables in cable trays do not exceed that permitted by NFPA 70. Verify that communications or data-processing circuits are separated from power circuits by barriers or are installed in separate cable trays.
 4. Verify that there are no intruding items such as pipes, hangers, or other equipment in the cable tray.
 5. Remove dust deposits, industrial process materials, trash of any description, and any blockage of tray ventilation.
 6. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorque in suspect areas.
 7. Check for improperly sized or installed bonding jumpers.
 8. Check for missing, incorrect, or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
 9. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable trays. Test entire cable tray

system for continuity. Maximum allowable resistance is 1 ohm.

- B. Prepare test and inspection reports.

3.6 PROTECTION

- A. Protect installed cable trays and cables.
 1. Install temporary protection for cables in open trays to safeguard exposed cables against falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials and shall remain in place until the risk of damage is over.
 2. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
 3. Repair damage to paint finishes with matching touchup coating recommended by cable tray manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260536

Copyright 2009 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260539 - UNDERFLOOR RACEWAYS FOR ELECTRICAL SYSTEMS

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Section includes the following:
 - 1. Flat-top, single-channel, underfloor raceways.
 - 2. Flat-top, multichannel, underfloor raceways.
 - 3. Flush, flat-top underfloor raceways.
 - 4. Cellular metal underfloor raceways.
 - 5. Trench-type underfloor raceways.

Coordinate first two subparagraphs below with structural deck Drawings and Specifications. Cellular concrete floor decks are specified in Division 03 Section "Precast Structural Concrete," and cellular steel floor decks are specified in Division 05 Section "Steel Decking."

- 6. Electrical connection components for precast concrete, hollow-core, floor decks.
- 7. Electrical connection components for electrified cellular steel floor decks.
- 8. Service fittings.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

The following definitions are for terms used in this Section. Retain terms that remain after this Section has

been edited.

- A. Flush Outlet: Underfloor raceway outlet installed so the top of the fixed portions of the receptacles, jacks, and connector assemblies is located approximately at the surface of the floor or floor covering, and with the bodies of connected plugs exposed above the surface of the floor.
- B. Flush Underfloor Raceway: Rectangular cross-section, flat-top raceway installed with the top of the raceway flush with the surface of the concrete in which it is embedded.
- C. Header Raceway: Rectangular cross-section, single-channel or multichannel, underfloor raceway arranged as feeder raceway to bring wires and cables to service raceways from panelboards and communication terminal components.
- D. Recessed Outlet: Underfloor raceway outlet installed with the top of the fixed portion of the connector assemblies located below the surface of the floor or floor covering and arranged to receive plug connectors with the bodies of the plugs concealed below the floor level.
- E. Service Raceway: Underfloor distribution raceway providing direct connection to service fittings using preset or afterset inserts.
- F. Trench Header: Trench-type raceway arranged as feeder raceway to bring wires and cables to service raceways from panelboards and communication terminal equipment.
- G. Underfloor Raceway: A conduit, duct, or cell assembly, or trench located within the floor material or with its top at the floor surface.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For underfloor raceway components, fittings, and accessories.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For underfloor raceways. Include floor plans, assembly drawings, sections, and details.
 - 1. Identify components and accessories such as expansion-joint assemblies, straight raceway lengths, preset and afterset inserts, and service fittings.
 - 2. Provide dimensions locating raceway header and distribution elements. Include spacing between preset inserts and between preset inserts and ends of duct runs, walls, columns, junction boxes, and header duct connections.
 - 3. Show connections between raceway elements and relationships between components and adjacent structural and architectural elements including slab reinforcement, floor finish work, permanent partitions[, **architectural module lines**] [, and **pretensioning or post-tensioning components**].
 - 4. Indicate height of preset inserts, junction boxes, and raceways coordinated with

- depth of concrete slab and floor fill.
5. Indicate thickening of slabs where required for adequate encasement of raceway components.
 6. Document coordination of exposed components with floor-covering materials to ensure that fittings and trim are suitable for indicated floor-covering material.
 7. Revise locations from those indicated in the Contract Documents, as required to suit field conditions and to ensure a functioning layout. Identify proposed deviations from the Contract Documents.
 8. Show details of connections and terminations of underfloor raceways at panelboards and communication terminal equipment in equipment rooms, wire closets, and similar spaces.

Retain subparagraph and associated subparagraphs below if Project includes electrified cellular floor deck.

9. Identify those cells of cellular floor deck that are to be connected and fitted for the following underfloor distribution:

Retain one or more of six subparagraphs below.

- a. Power.
- b. Voice.
- c. Data.
- d. Signal.
- e. Communications.
- f. <Insert system>.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: For typical underfloor raceway products, in specified finish, including the following:

Retain subparagraphs below required for approval of exposed finishes or other critical features.

1. Service fittings and flush and recessed outlet and junction-box covers.
2. A section of each service raceway configuration with specified preset insert and service fitting installed.
3. A junction box of each size and type for use with underfloor raceway.
4. A section of each header raceway configuration, complete with provisions for connection with service raceway.
5. A section of trench-type raceway, complete with cover and required trim.
6. A junction box of each size and type, complete with cover and trim.

1.5 INFORMATIONAL SUBMITTALS

Retain first paragraph below if Contractor is responsible for field quality-control testing.

- A. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For underfloor raceways, to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
1. Manufacturer's written instructions for locating preset inserts and for installing afterset inserts.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MAINTENANCE MATERIAL SUBMITTALS

Extra materials may not be allowed for publicly funded projects.

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Retain one of first two subparagraphs below. Retain first subparagraph for cellular concrete floor installations; retain second for steel underfloor raceway or cellular steel floor installations.

1. Afterset Inserts: Furnish quantity equal to **[10] <Insert number>** percent of service fittings installed.
2. Afterset Inserts: Furnish quantity equal to **[5] <Insert number>** percent of each type of preset insert installed.
3. Service Fittings: Furnish **[3] <Insert number>** of each type of service fitting indicated for each **100 feet (30 m)** of distribution raceway or active-floor-cell length.
4. Outlet Blanking Covers: Furnish quantity equal to **[10] <Insert number>** percent of each type of floor opening installed for outlets.
5. **<Insert item and quantity>**.

Retain two paragraphs and associated subparagraphs below to provide tools for Owner's maintenance staff.

- B. Furnish **[one (1)] <Insert number>** electronic instrument(s) as recommended by underfloor raceway manufacturer for detecting and locating preset inserts in metal raceway under floor covering and up to **3/8 inch (10 mm)** of concrete fill.
- C. Furnish **[one (1)] <Insert number>** set(s) of tools needed for installing afterset inserts in underfloor service raceway, including the following:

1. Electric Drill: Variable speed, 1/2-inch (13-mm) capacity.

Afterset inserts for multiple-system service fittings in multichannel or multicell raceways may require hole saw larger than 2 inches (50-mm). Coordinate with underfloor raceways specified.

2. Hole Saw: Diamond bit, [2-inch (50-mm)] <Insert dimension> size.
3. Insert installation tool.
4. <Insert name of tool>.

1.8 QUALITY ASSURANCE

Retain paragraph and subparagraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Division 01 Section "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

Retain one of first two paragraphs below. Retain first paragraph for electrified cellular steel floor-deck applications; retain second for all other underfloor raceway installations.

- A. Source Limitations for Electrified Cellular Steel Floor-Deck Components: Obtain electrical components such as preset inserts, afterset inserts, service fittings, header ducts, and trench header ducts from the cellular steel floor-deck manufacturer.
- B. Source Limitations: Obtain underfloor raceway components for each system through one source from single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

Retain one of first five articles below to specify underfloor raceways. Delete all five articles and retain either the sixth or seventh article to specify electrical fittings, accessories, and connection products used to electrify hollow cells of structural precast concrete or steel cellular floor decks that are specified in Divisions 03 and 05, respectively.

2.1 FLAT-TOP, SINGLE-CHANNEL, UNDERFLOOR RACEWAYS

Retain this Article to specify steel, rectangular, flat-top, single-channel raceways, sometimes called "conventional underfloor raceways" or "single-compartment underfloor ducts." Use service raceways with rectangular preset inserts for flush duplex receptacle and dual telecommunications service fittings. Use round preset inserts for projects with flush service fittings limited to either single-power or single-communication connections, and surface-mounted service fittings limited to single-system, pedestal type.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain one of three paragraphs and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Square D; Schneider Electric.
 2. Thomas & Betts Corporation; Steel City Division.
 3. Walker Systems, Inc.; a Wiremold company.
 4. **<Insert manufacturer>**
 5. or approved equal.

Indicate quantity and arrangement of underfloor raceways on Drawings.

- B. Description:
1. Material: Steel.
 2. Cross-Section Shape: Rectangular.

Two-level arrangement in subparagraph below may not be available from all listed manufacturers.

3. Number of Levels: [**One (1)**] [**Two (2)**].

Retain subparagraph below if fiber-optic or Category 5, 5e, or 6 cables may be installed in communication raceways. Verify capability of achieving minimum bending radius with manufacturers.

4. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks shall provide a **2-inch-** (50-mm-) minimum bending radius for communication cables.

- C. Service Raceways: Fitted with preset inserts.

1. Nominal Raceway Dimensions:
 - a. Depth: **1-1/2 inches** (38 mm).
 - b. Power Service Raceway Width: **3-1/2 inches** (90 mm).
 - c. Communication Service Raceway Width: [**3-1/2 inches** (90 mm)] [**6-1/2 inches** (165 mm)].

Retain first subparagraph below to establish default arrangement of service raceway runs and to establish default configuration of junction boxes. Delete if number of single-channel raceways per run is indicated on Drawings.

2. Number of Single-Channel Raceways per Run: **[One]** **[Two]** **[Three]** **[Four]** **[Five]** unless otherwise indicated.
3. Preset Inserts: **[Rectangular]** **[Round]**.
 - a. Spacing: **[24 inches (600 mm)]** **[12 inches (300 mm)]** o.c.

Retain one of first two subparagraphs below. Retain first subparagraph for rectangular inserts; retain second for round inserts.

- b. Size: Rectangular dimensions as required to accommodate mounting and connection of flush-mounted, duplex receptacle or dual communication-jack or connector service fitting.
- c. Size: **[2 inches (50 mm)]** **<Insert dimension>** in diameter.
- d. Equip each insert with a disposable cover and select insert height so cover is **1/8 inch (3 mm)** below surface of concrete.
- e. Arrange insert for optional attachment of flush-, surface-, or wiring-extension service fitting to replace disposable cover.

Retain paragraph and subparagraphs below if flat-top, single-channel raceway is used as header raceway for either single- or two-level arrangement of raceway. 3-1/2-inch- (90-mm-) wide raceways may be adequate for some power and communication header applications. Indicate header location and arrangements on Drawings.

D. Header Raceways: Single channel, without preset inserts (blank raceway).

1. Nominal Raceway Dimensions:
 - a. Depth: **1-1/2 inches (38 mm)**.

See Evaluations for selecting dimensions of raceways for underfloor raceway layouts. Retain two subparagraphs below if nominal width of raceways is not indicated on Drawings. If widths of header raceways vary, delete two subparagraphs below and indicate widths on Drawings.

- b. Power Header Raceway Width: **3-1/2 inches (90 mm)**.
- c. Communication Header Raceway Width: **[3-1/2 inches (90 mm)]** **[6-1/2 inches (165 mm)]**.

Retain first option in first subparagraph below for single-level arrangement.

2. Arrangement: **[In same plane as]** **[Below]** service raceways.
3. Connections: Arranged to connect with service raceways at **[single]** **[two]**-level junction boxes.

2.2 FLAT-TOP, MULTICHANNEL, UNDERFLOOR RACEWAYS

Retain this Article for underfloor raceway systems capable of providing a grid of multigang, multiple-system outlets that are flush with the floor throughout the area served. Raceways in this Article can also serve single- or multiple-system, surface-mounted outlets and can be connected to raceways that feed wall-mounted outlets. See Evaluations for discussion.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain one of three paragraphs and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Square D; Schneider Electric.
 2. Thomas & Betts Corporation; Steel City Division.
 3. **<Insert manufacturer>**
 4. or approved equal.

If the number of channels varies among service raceways, revise first paragraph and subparagraphs below and indicate the number of channels in each service raceway on Drawings.

Verify with manufacturers the number of channels available.

- B. Description:
1. Material: Steel.
 2. Cross-Section Shape: Rectangular.
 3. Number of Longitudinal Channels: **[Two] [Three] [Four]**, separated by steel wall(s).

Verify with manufacturers the number of levels available.

4. Number of Levels: **[One] [Two]**.

Retain subparagraph below if fiber-optic or Category 5, 5e, or 6 cables may be installed in communication raceways. Verify capability of achieving minimum bending radius with manufacturers.

5. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks shall provide a **2-inch-** (50-mm-) minimum bending radius for communication cables.

- C. Service Raceways: Fitted with preset inserts.

1. Nominal Raceway Dimensions:
 - a. Depth: **1-3/8 inches** (35 mm).

See Evaluations for selecting dimensions of raceways for underfloor raceway layouts. Retain first two subparagraphs below if nominal width of raceways is not indicated on Drawings.

- b. Power Service Channel Width: **[3-1/2 inches** (90 mm)] **[4-3/8-inches** (111 mm)] **<Insert dimension>**.
- c. Communication Service Channel Width: **[3-1/2 inches** (90 mm)] **[4 inches** (102 mm)] **[6-1/2 inches** (165 mm)] **<Insert dimension>**.

2. Preset Inserts:
 - a. Spacing: **[24 inches** (600 mm)] **[12 inches** (300 mm)] o.c.
 - b. Size: Dimensions as required to accommodate mounting and connection of flush- and surface-mounted, single- and multiple-system service fittings or to connect to wiring extensions for feeding wall outlets for **[power] [communications] [power and communications] <Insert system>**.
 - c. Equip each insert with a disposable cover arranged for installation with top

- 1/8 inch (3 mm)** below surface of concrete.
- d. Arrange inserts for optional attachment of flush-, surface-, or wiring-extension service fitting to replace disposable cover. Arrange brackets, mountings, barriers, and floor access covers to support, isolate, and provide access to **[flush] [or] [surface]** outlet-mounting connector, jack, and receptacle devices.

Retain paragraph and subparagraphs below if flat-top, multichannel raceway is used as header raceway for either single- or two-level arrangements of distribution raceway.

D. Header Raceways: Multichannel, without preset inserts (blank raceway).

1. Nominal Raceway Dimensions:

See Evaluations for selecting dimensions of raceways. Retain subparagraph below only if extra header raceway capacity is required beyond that provided by nominal 1-3/8-inch (35-mm) depth. Selection of nominal depth more than 1-3/8 inches (35 mm) may result in a proprietary specification because only one manufacturer catalogs extra-deep header raceway of this type. Consult manufacturers.

- a. Header Raceway Depth: [Same as service raceways] **[2-1/2 inches (64 mm)] [2-3/4 inches (70 mm)] [3 inches (76 mm)] [3-1/2 inches (90 mm)]**.

Retain first two subparagraphs below if nominal width of channels is not indicated on Drawings.

- b. Power Header Channel Width: **[3-1/2 inches (90 mm)] [4-3/8-inches (111 mm)] <Insert dimension>**.
- c. Communication Header Channel Width: **[3-1/2 inches (90 mm)] [4 inches (102 mm)] [6-1/2 inches (165 mm)] <Insert dimension>**.

2. Arrangement: **[In same plane as] [Below]** service raceways.
3. Connections: Arranged to connect with service raceways at **[single] [two]**-level junction boxes.

2.3 FLUSH, FLAT-TOP UNDERFLOOR RACEWAYS

Retain this Article for single-channel or multichannel underfloor raceways to be installed on floor slab with top of raceway flush with concrete topping added thereafter, and then covered with finish material. See Evaluations for additional application considerations.

Only one manufacturer now catalogs these products, so they may be proprietary.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain one of first three paragraphs and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Walker Systems, Inc.; a Wiremold company.
 2. **<Insert manufacturer>**
 3. or approved equal.

- B. Description:
1. Material: Steel.
 2. Cross-Section Shape: Rectangular, [**single channel**] [**and**] [**multichannel, separated by steel wall(s)**].
 3. Listed and labeled for installation with top flush with concrete floor.
 4. Number of Levels: One.
- C. Service Raceways: Fitted with preset inserts.

Retain subparagraph below for flush, multichannel raceway installations.

1. Number of Longitudinal Channels per Multichannel Raceway: [**Two**] [**Three**].

Retain first subparagraph below for flush, single-channel raceway installations.

2. Number of Single-Channel Raceways per Run: [**One**] [**Two**] [**Three**] unless otherwise indicated.
 3. Nominal Channel Dimensions: **3 inches** (76 mm) wide by **1-1/4 inches** (32 mm) deep.
 4. Preset Inserts: Threaded opening with removable steel plug that is flush with top of raceway when screwed in place.
 - a. Spacing: [**24 inches** (600 mm)] [**12 inches** (300 mm)] o.c., full length of each service raceway.
 - b. Arrangement: Stagger insert locations on parallel raceways or channels to accommodate placement of adjacent service fittings.
 - c. Size: **1-5/8-inch** (41-mm) diameter.
- D. Header Raceways: Raceways same as service raceways except without preset inserts (blank raceway).
1. Nominal Channel Dimensions: Same as service raceways.
 2. Arrangement: In same plane as service raceways.
 3. Connections: Arranged to connect with service raceways at junction boxes.

2.4 CELLULAR METAL UNDERFLOOR RACEWAYS

Retain this Article for longitudinal runs of multichannel underfloor service raceways that have the appearance of three-cell sections cut from sheets of cellular floor decking, and to specify raceway layouts similar to those for flat-top, rectangular, multichannel raceways specified above. Also retain this Article for other products required for header and feeder raceways. See Evaluations for application considerations.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain one of first three paragraphs and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. HH Robertson; Division of CENTRIA.

2. Walker Systems, Inc.; a Wiremold company.
3. <Insert manufacturer>
4. or approved equal.

B. Service Raceways: Fitted with preset inserts.

1. Material: Steel.
2. Number of Longitudinal Cells: Three, separated by steel walls.
3. Nominal Dimensions of Cells:
 - a. Overall Depth: 1-1/4 inches (32 mm) unless otherwise indicated.
 - b. Cross-Sectional Area of Cells: Power cells: 5-1/2 sq. in. (35.5 sq. cm); communication system cells: 16 sq. in. (103 sq. cm).

Retain subparagraph below if fiber-optic or Category 5, 5e, or 6 cables are to be installed in communication raceways. Verify capability of achieving minimum bending radius with manufacturers.

4. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks shall provide a 2-inch- (50-mm-) minimum bending radius for communication cables.

Indicate types and locations of service fittings on Drawings.

5. Preset Inserts: Rectangular-shaped metal housing assemblies arranged to provide electrical outlet access to each cell of each raceway designated for service raceway use. Inserts shall be provided throughout the entire length of each such raceway.
 - a. Spacing: [30 inches (762 mm)] [24 inches (600 mm)] [12 inches (300 mm)] o.c.
 - b. Include housing and connecting provisions for a flush or recessed, single-, double-, or triple-system service fitting.
 - c. Include mounting and connecting provisions for a surface, single- or multiple-system service fitting.
 - d. Include connecting provisions for a wiring-extension service fitting to feed wall outlets.
 - e. Equip each insert with a disposable cover plate arranged for installation with top 1/8 inch (3 mm) below surface of concrete. Arrange insert to receive a flush-, recessed-, or wiring-extension service fitting to replace disposable top.

Retain paragraph and applicable subparagraphs below if trench-type raceway is not used or is not the sole product to be employed as header raceway to feed the cellular service raceways. See Evaluations. Indicate arrangement of header raceways on Drawings.

C. Header Assembly: A junction box and raceway arrangement arranged to feed wires and cables to service raceways.

Retain one of two subparagraphs and associated subparagraphs below.

1. Three-compartment junction box connecting blank, multicell cellular header

raceway (no inserts) with cellular service raceways.

Indicate location of junction boxes on Drawings.

- a. Arrange junction box in the center of a [60-inch (152-cm)] <Insert dimension> length of header raceway.
 - b. Cellular header raceway shall have same dimensions as service raceways.
 - c. Provide capability for service raceways to be run in both directions from intersection with header raceway.
2. Three-compartment junction box preassembled with blank, flat-top, multichannel header raceway (no inserts) and fitted to connect with cellular service raceway at right angles to header raceway.

Indicate location of junction boxes on Drawings.

- a. Arrange junction box in the center of a [60-inch (152-cm)] <Insert dimension> length of header raceway.
- b. Provide capability for service raceways to be run in both directions from intersection with header raceway.

2.5 TRENCH-TYPE UNDERFLOOR RACEWAYS

Retain this Article for trench-type raceway, sometimes called "trench duct," used as header or feeder raceway to serve service raceways. See Evaluations for application discussion and comparison with alternative types of header raceway.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. HH Robertson; Division of CENTRIA.
 2. Square D; Schneider Electric.
 3. Thomas & Betts Corporation; Steel City Division.
 4. Walker Systems, Inc.; a Wiremold company.
 5. <Insert manufacturer>
 6. or approved equal.

Indicate sizes and locations of trench raceways on Drawings.

- B. Trench: Steel, shop or factory welded and fabricated to indicated sizes. Include the following features:
1. Slab Depth Adjustment: Minimum of minus 1/8 inch (3 mm) to plus 5/8 inch (16 mm) before and during concrete placement.
 2. Cover Supports: Height adjustable, with leveling screws to rigidly support cover assembly.
 3. Screed Strip: Extruded aluminum along both edges at proper elevation without

- requiring shim material.
- 4. Trim Strip: Select to accommodate floor finish material.
- 5. Partitions: Arranged to separate channels and isolate wiring of different systems.

When used with cellular concrete or cellular steel deck, designate active service raceway cells on Drawings to facilitate provision of grommets openings required in first subparagraph below.

- 6. Grommets openings in active floor cells or service raceways.
 - 7. Manufacturer's standard corrosion-resistant finish, applied after fabrication.
- C. Cover Plates: Removable, steel plates, 1/4 inch (6 mm) thick, each weighing 60 lb (27 kg) or less with full gasket attached to side units. Fabricate intermediate supports to limit unsupported spans to [15 inches (380 mm)] <Insert dimension> or less. Fabricate covers with appropriate depth recess to receive indicated floor finish.

2.6 ELECTRICAL CONNECTION COMPONENTS FOR CELLULAR STEEL FLOOR DECK

Retain this Article with articles for header and feeder raceways for use with electrified structural cellular steel floor deck specified in Division 05 Section "Steel Decking." Coordinate with Structural and Electrical Drawings.

- A. Preset Inserts: Rectangular metal-housing assemblies.
- 1. Spacing: [30 inches (762 mm)] [24 inches (600 mm)] [12 inches (300 mm)] o.c.
 - 2. Size: As required to provide electrical outlet access to each cell of each group of three cells that is designated for electrical service raceway use.
 - 3. Equip each insert with a disposable cover arranged for installation with top 1/8 inch (3 mm) below surface of concrete. Arrange insert to receive a flush-, recessed-, or wiring-extension service fitting to replace disposable cover.

Retain one of first two subparagraphs below.

- 4. Include housing and connecting provisions for a flush or recessed, single-, double-, or triple-system service fitting.
- 5. Include mounting and connecting provisions for a surface, single-, double-, or triple-system service fitting.
- 6. Include connecting provisions for a wiring-extension service fitting to feed wall outlets.

2.7 ELECTRICAL CONNECTION COMPONENTS FOR CELLULAR CONCRETE FLOOR DECK

Retain this Article with articles for header and feeder raceways for use with electrified structural cellular concrete floor deck specified in Division 03 Section "Precast Structural Concrete." Coordinate with Structural and Electrical Drawings.

- A. Afterset Inserts: Round metal-nipple assembly with internal and external threading, arranged to screw into plug driven into 1-7/8-inch (48-mm) hole drilled through floor fill, where present, and deck-cell wall into floor raceway cell.

Indicate location and type of afterset inserts on Drawings.

1. Inserts shall be compatible with floor-mounting service fittings.
2. Inserts shall provide wiring path from cell to [power] [communication] [power and communication] <Insert system> [wall] [and] [ceiling] outlets.
3. Inserts shall provide wiring path from cell to header raceway.

2.8 SUPPORTS, FITTINGS, AND HARDWARE

- A. Supports, fittings, and hardware shall be compatible with raceway and outlet system and shall be listed for use with raceway systems and components specified.
- B. Supports: Adjustable for height and arranged to maintain alignment and spacing of raceways during concrete placement. Include hold-down straps.
- C. Raceway Fittings: Couplings, expansion-joint sleeves, cross-under offsets, vertical and horizontal elbows, grounding screws, adapters, end caps, and other fittings suitable for use with basic components to form a complete installation.

2.9 JUNCTION BOXES

Retain this Article for all types of underfloor raceways that include junction boxes.

- A. Description: Manufacturer's standard enclosure for indicated type, quantity, arrangement, and configuration of raceways at each raceway junction, intersection, and access location. Include the following accessories and features:
 1. Mounting brackets.
 2. Escutcheons and holders to accommodate surrounding floor covering.
 3. Means for leveling and height adjustment more than 3/8 inch (10 mm) before and after concrete is placed.
 4. Raceway Openings: For underfloor raceways and conduits arranged to accommodate raceway layout.

Coordinate first subparagraph below with indicated floor finish material.

5. Covers shall have appropriate depth recess to receive specific floor finish material.
6. Partitions to separate wiring of different systems.

2.10 SERVICE FITTINGS

- A. Exposed Parts Finish: [Brass] [Brushed Aluminum] <Insert finish>.

Retain paragraph and subparagraphs below for flush service fittings in flat-top, single-channel, underfloor raceway with round inserts. Indicate type and location on Drawings.

- B. Flush, Single-System Service Fitting for Round Inserts: Include mounting and cover to support and provide access to single connector, jack, or receptacle device; mounted

flush with floor within body of insert.

1. Connector, Jack, and Receptacle Devices: Single modular type; complying with Section 262726 "Wiring Devices" and Section 271500 "Communications Horizontal Cabling."
2. Power Receptacle Outlet: Suitable for 20-A device.

Retain paragraph and subparagraphs below for flush service fittings in underfloor raceways with rectangular preset inserts, including flat-top, single-channel and multichannel, two- and three-cell, cellular underfloor raceway and cellular steel deck.

- C. Flush, [**Single-**] [**or**] [**Multiple-**] System Service Fitting for Rectangular Inserts: Include mounting, hinged cover, and trim to support and provide access to connector, jack, or receptacle devices mounted flush with floor within insert.
1. Connector, Jack, and Receptacle Devices: Modular type; complying with Division 26 Section "Wiring Devices" and Section 271500 "Communications Horizontal Cabling."
 2. Power Receptacle Rating: 20 A, 120 V unless otherwise indicated.

Retain first paragraph and subparagraphs below for recessed service fittings in three-cell, cellular underfloor raceway and cellular steel deck.

- D. Recess-Mounted Service Fitting: Modular fittings compatible with preset inserts and shall include covers; provisions for receptacles, jacks, and connectors; and associated device plates for indicated systems. Include hinged flush handhole covers with recessed depth to match thickness of floor finish material. Provide for internally mounted receptacle- and communication-jack and connector assemblies complying with requirements in Section 262726 "Wiring Devices" and Section 271500 "Communications Horizontal Cabling."

Indicate types and locations of devices on Drawings.

1. Duplex receptacle.
 2. Duplex telephone-data jacks.
 3. Double duplex receptacles.
 4. Duplex receptacle and duplex telephone-data jacks.
 5. Double duplex telephone-data jacks, [**Category 5**] [**Category 5e**] [**Category 6**].
 6. Fiber-optic cable connector.
- E. Surface-Mounted Service Fitting: Modular pedestal type, with locking attachment matched to insert floor opening.

Indicate types and locations of fittings on Drawings.

1. Power-outlet, double-faced, surface-mounted unit for duplex receptacle on both sides.
2. Power-outlet, single-faced, surface-mounted unit for duplex receptacle on one side.
3. Communication-outlet, double-faced, surface-mounted unit.

Retain one of first three subparagraphs below to describe provisions for terminating cable from communication equipment at surface-mounted outlets.

- a. Include bushed openings on both sides; 1-inch (25-mm) minimum diameter; insulated with nonconducting material.
 - b. Include provisions for modular dual fiber-optic connector assembly on both sides.
 - c. Include provisions for modular dual jack-connector assembly, rated for **[Category 5] [Category 5e] [Category 6]** on both sides.
4. Communication-outlet, single-faced, surface-mounted unit with bushed opening on one side; 1-inch (25-mm) minimum diameter; insulated with nonconducting material.
 5. Combination surface-mounted unit for duplex receptacle on one side and with communication cable connection provision on opposite side.

Retain one of three subparagraphs below to describe provisions for terminating cable from communication equipment at these outlets.

- a. Communication Side: Include bushed opening; 1-inch (25-mm) minimum diameter; insulated with nonconducting material.
- b. Communication Side: Include provisions for modular dual fiber-optic connector assembly.
- c. Communication Side: Include provisions for modular dual jack-connector assembly, rated for **[Category 5] [Category 5e] [Category 6]**.

Flush service-fitting types described in paragraph and subparagraphs below are used with flat-top, multichannel, underfloor raceway and three-cell, cellular underfloor raceway and cellular steel deck.

- F. Flush-Mounted Service Fittings: Modular fittings compatible with preset inserts and shall include covers, provisions for receptacles jacks and connector assemblies and wiring extensions to wall-mounted outlets, and associated device plates for indicated systems. Include flush handhole covers, recessed to suit floor finish material. Internally mounted, modular, receptacle, jack and connector assemblies shall comply with requirements in Section 262726 "Wiring Devices" and Section 271500 "Communications Horizontal Cabling."

Coordinate with Division 26 Section "Wiring Devices" and Division 27 Section "Communications Horizontal Cabling," and indicate types and locations of devices on Drawings.

1. Duplex convenience receptacle.
2. Duplex telephone-data outlets.
3. Double duplex convenience receptacles.
4. Duplex convenience receptacle and duplex telephone-data outlets.
5. Double duplex telephone-data outlets.
6. Duplex communication jack, rated for **[Category 5] [Category 5e] [Category 6]**.
7. Duplex fiber-optic communication connector.

Indicate locations for wiring-extension service fittings on Drawings.

8. Wiring-Extension Service Fittings: Arrangement of brackets and mountings to support, and provide access to wiring or cabling of a cell, and to connect the

cable or raceway that extends the system to an individual wall outlet. Provide for connection of [FMC] [ENT] [Type MC cable] for power extensions, and [FMC] [ENT] [optical fiber/communication cable raceway] for communication system extensions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install raceways aligned and leveled and, unless otherwise indicated, parallel or perpendicular to building walls.

Retain first paragraph below if cellular metal raceway is specified but is not to be installed directly on compacted fill or on an existing slab. See Evaluations.

- B. Provide a concrete base for support of cellular metal raceway.
- C. Arrange supports to attain proper elevation, alignment, and spacing of raceways. Install supports securely at ends and at intervals not to exceed 60 inches (1500 mm), to prevent movement during concrete pour.
- D. Level raceway components with finished slab and make adjustments for floor finishes.

Retain first paragraph below except for flush underfloor raceway assemblies.

- E. Adjust supports to maintain a 1/16- to 3/8-inch (1.6- to 10-mm) finished concrete cover over preset inserts.
- F. Remove burrs, sharp edges, dents, and mechanical defects.
- G. Cap or plug boxes, insert- and service-fitting openings, and open ends of raceways.
- H. Seal raceways, cells, junction boxes, and inserts to prevent water, concrete, or foreign matter from entering raceways before and during pouring slab or placing fill. Tape joints, or seal with compound, as recommended in writing by underfloor raceway manufacturer.

Retain paragraph below if junction boxes are indicated for specified underfloor raceways.

- I. Junction Boxes: Install tops level and flush with finished floor. Install blank closure plates or plugs to close unused junction-box openings. Grout boxes in place to prevent

movement during construction. Place top covers in inverted position during construction to prevent damage to surface of cover. Reinstall covers in proper position prior to final acceptance of Work.

Retain first paragraph below for cellular concrete deck installations and other projects requiring afterset inserts.

- J. Afterset Inserts: Cut, hole saw, and drill slab and raceways to allow for installation.
- K. Ground underfloor raceway components.

Retain first paragraph and subparagraphs below to define how NFPA 70 requirement to install a suitable marker "at or near the end of each straight run of raceway to locate the last insert" is to be accomplished. Paragraph also expands the Code requirement to enhance location and identification.

- L. Install a marker at the center of the last insert of each cell and channel of each straight run of metal underfloor service raceway to locate the insert and identify the system.
 - 1. Install markers at last inserts on both sides of permanent walls and at first inserts adjacent to each junction box.
 - 2. Install markers flush at screed line before pouring slab or placing fill. Extend marker with grommited screw when floor covering is placed. Do not extend through carpet.
 - 3. Use slotted-head screw to identify electrical power; use Phillips-head screw to identify conventional communications.
 - 4. Use another distinctive screw head to identify third system such as special-purpose wiring.
- M. Level raceway components with finished slab and make adjustments in raceway component elevation to accommodate indicated floor finishes.

3.3 FIELD QUALITY CONTROL

Retain paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Perform visual inspection of interior of each junction box section of trench raceway to verify absence of dirt, dust, construction debris, and moisture.

- Replace damaged and malfunctioning components.
2. Perform point-to-point tests of ground continuity and resistance of ground path between the most remote accessible fitting on each branch of each underfloor raceway system and the main electrical distribution grounding system.
 - a. Determine cause and perform correction of any point-to-point resistance value that exceeds 0.05 ohms.
 - b. Comply with NETA Acceptance Testing Specifications about safety, suitability of test equipment, test instrument calibration, and test report and records.

3.4 CLEANING

- A. Clean and swab out underfloor raceways, inserts, and junction boxes after finish has been applied to floor slab, and remove foreign material, dirt, and moisture. Leave interiors clean and dry.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260539

Copyright 2009 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260543 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

List below includes the most common products and applications for underground site distribution for electrical power and communications.

Edit to suit Project.

- 1. Conduit, ducts, and duct accessories for **[direct-buried] [and] [concrete-encased]** duct banks[, and in single duct runs].
- 2. Handholes and boxes.
- 3. Manholes.

- B. Related Sections:

- 1. Section "033350 "Flowable Backfill Low-Strength Concrete" for flowable backfill concrete.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. RNC: Rigid nonmetallic conduit.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For the following:

1. Duct-bank materials, including separators and miscellaneous components.
2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
3. Accessories for manholes, handholes, boxes[, **and other utility structures**].
4. Warning tape.
5. Warning planks.
6. Include data substantiating that materials comply with requirements.

Retain paragraph and subparagraphs below for precast utility structures.

- B. Shop Drawings for Precast or Factory-Fabricated Underground Utility Structures: Include plans, elevations, sections, details, attachments to other work, and accessories, including the following:

Coordinate subparagraphs below with manhole and handhole features and components specified in Part 2.

1. Duct entry provisions, including locations and duct sizes.
2. Reinforcement details.
3. Frame and cover design and manhole frame support rings.
4. Ladder details.
5. Grounding details.
6. Dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
7. Joint details.

Retain paragraph and subparagraphs below for handholes or boxes other than precast concrete.

- C. Shop Drawings for Factory-Fabricated Handholes and Boxes Other Than Precast Concrete: Include dimensioned plans, sections, and elevations, and fabrication and installation details, including the following:

1. Duct entry provisions, including locations and duct sizes.
2. Cover design.
3. Grounding details.
4. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

1.5 INFORMATIONAL SUBMITTALS

Retain first paragraph and subparagraphs below if Drawings do not include detailed plans or if Project involves unusual coordination requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.
 - 1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.
 - 2. Drawings shall be signed and sealed by a qualified professional engineer.
- B. Product Certificates: For concrete and steel used in precast concrete [**manholes**] [**and**] [**handholes**], as required by ASTM C 858.

Retain first paragraph below if nonconcrete handholes or boxes are specified and testing is specified in Part 2 "Source Quality Control" Article.

- C. Qualification Data: For professional engineer and testing agency.
- D. Source quality-control test reports.
- E. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

Retain first paragraph below if manufacturer is required to provide services of an independent testing agency in Part 2 "Source Quality Control" Article. Qualification requirements supplement those specified in Division 01 Section "Quality Requirements," which also includes the definition for NRTL (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
- B. Comply with ANSI C2.
- C. Comply with NFPA 70.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver ducts to Project site with ends capped. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.
- B. Store [**precast concrete**] [**and**] [**other factory-fabricated**] underground utility structures at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.
- C. Lift and support precast concrete units only at designated lifting or supporting points.

1.9 PROJECT CONDITIONS

Delete this Article if no interruption of existing electrical service is required.

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 - 2. Do not proceed with interruption of electrical service without Owner's written permission.

1.10 COORDINATION

- A. Coordinate layout and installation of ducts, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field.
- B. Coordinate elevations of ducts and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by DEN Project Manager.

1.11 EXTRA MATERIALS

Extra materials may not be allowed for publicly funded projects.

Coordinate extra stock requirements with DEN Project Manager.

- A. Furnish extra materials described below that match products installed and that are

packaged with protective covering for storage and identified with labels describing contents.

Delete first option in paragraph below if nonmetallic cable arms are specified for manholes or handholes. See Editing Instruction No. 2 in the Evaluations.

- B. Furnish cable-support stanchions, arms, [insulators,] <Insert other accessories and specialties> and associated fasteners in quantities equal to [10] <Insert number> percent of quantity of each item installed.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CONDUIT

Rigid steel conduit is often used with underground ducts at bends and stub-ups. Coordinate with Part 3 "Underground Duct Application" Article.

- A. Rigid Steel Conduit: Galvanized Rigid Conduit (GRC) with factory bonded 40 mil. PVC coating. Comply with ANSI C80.1.
- B. Rigid metallic conduit used for elbows and sweeps shall be PVC coated, schedule 40 galvanized rigid conduit bent to shape at the factory. All connections to Non-Metallic rigid conduits shall be made with threaded couplings.

Paragraph below specifies Schedule 40 and Schedule 80 weights, respectively, of same RNC specified in Division 26 Section "Raceway and Boxes for Electrical Systems." Coordinate with Part 3 "Underground Duct Application" Article. See Evaluations.

- C. RNC: NEMA TC 2, [Type EPC-40-PVC] [and] [Type EPC-80-PVC], UL 651, with matching fittings by same manufacturer as the conduit, complying with NEMA TC 3 and UL 514B.

2.2 NONMETALLIC DUCTS AND DUCT ACCESSORIES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following::

1. ARNCO Corp.
2. Beck Manufacturing.
3. Cantex, Inc.
4. CertainTeed Corp.; Pipe & Plastics Group.
5. Condux International, Inc.
6. ElecSys, Inc.
7. Electri-Flex Company.
8. IPEX Inc.
9. Lamson & Sessions; Carlon Electrical Products.
10. Manhattan/CDT; a division of Cable Design Technologies.
11. Spiraduct/AFC Cable Systems, Inc.
12. <Insert manufacturer>
13. or approved equal.

Retain one or more of three paragraphs and associated subparagraphs below to match duct types specified in Part 3 "Underground Duct Application" Article. See the Underground Raceway Application Chart and associated discussion in "Product Selection and Application Considerations" Article in the Evaluations.

- B. Underground Plastic Utilities Duct: NEMA TC 6 & 8, Type EB-20-PVC, ASTM F 512, UL 651A, with matching fittings by the same manufacturer as the duct, complying with NEMA TC 9.
- C. Underground Plastic Utilities Duct: NEMA TC 6 & 8, [Type DB-60-PVC] [and] [Type DB-120-PVC], ASTM F 512, with matching fittings by the same manufacturer as the duct, complying with NEMA TC 9.
- D. Duct Accessories:
 1. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.
 2. Inner-ducts shall be nominal 1-inch internal diameter with longitudinally fluted (finned) construction to reduce cable pulling friction. Inner-ducts shall be manufactured of high density polyethylene and provided in blue, orange and black. Inner-duct shall be installed in unbroken (no couplings) lengths between Underground Concrete Vaults and pull boxes.
 3. Pull Tape shall be $\frac{3}{4}$ " wide woven Aramid fiber with no more than 4% elongation at yield. Tape shall provide a tensile strength of 2500 lbs. Tape shall be provided with accurate sequential footage marks at one foot intervals.
 4. Flow able backfill shall be 60 to 100 psi, Designed in accordance with ASTM C 94 and ASTM D 4832. Reference Section 033350 "Flowable Backfill Low-Strength Concrete".
 5. Red concrete for encasement shall be 3,000 psi minimum, 28-day compressive strength and 3/8-inch maximum aggregate size. The color shall be Davis Color "Baja Red." Use Davis Color # 160 at a ratio of [two (2) pounds powder dose] for each sack of cement in the mix or equal as determined by the manufacturer and DEN Project Manager to achieve desired color.
 6. Warning Tape: Underground-line warning tape specified in Section 260553 "Identification for Electrical Systems."

7. Concrete Warning Planks: Nominal 12 by 24 by 3 inches (300 by 600 by 76 mm) in size, manufactured from 6000-psi (41-MPa) concrete.
 - a. Color: a specified for encasement concrete above..
 - b. Mark each plank with "ELECTRIC" in 2-inch (50-mm) high, 3/8-inch (10-mm) deep letters.
8. Mortar shall comply with ASTM C 270, Type M, except for quantities less than 2.0 cubic feet where packaged mix complying with ASTM C 387, Type M, may be used.
9. Steel bore casings shall be ASTM A/252 Grade 2
10. Counterpoise conductor shall be #6 bare hard drawn or soft drawn copper. Exothermic welds shall be utilized at all connections.

2.3 PRECAST CONCRETE HANDHOLES AND BOXES

Retain this Article for handholes and pull boxes subject to deliberate vehicular traffic. Also retain if precast concrete handholes and boxes are preferred where not subject to deliberate vehicular traffic. See discussion of handhole and box application in the Evaluations. Structural load ratings for precast concrete and alternative underground enclosures are specified in Part 3 "Underground Enclosure Application" Article.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain one of first two paragraphs and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Design guidelines for Precast Pull Boxes: Precast pull boxes shall be provided as round units with 4'-0" nominal interior diameter. Boxes shall be of two-piece construction with side walls and base cast as one unit and precast lid as a separate piece. Waffle-board knockout panels shall be provided at a minimum of four (4) equally spaced positions around the perimeter of the pull box to facilitate conduit entry. Pullboxes shall be provided with the following accessories:
 1. Bolt-on UCV step, stainless steel
 2. Embedded eyebolts, stainless steel
 3. Collar ring, cast steel, 30-inch inside diameter
 4. Cover, cast steel, 30-inch diameter (Marked DEN Communications)
 5. Provide plugs on all conduit entering pull boxes. Plugs shall provide a tight seal between conduit and pull tapes and shall withstand a minimum of 15 psi of hydrostatic pressure.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Carder Concrete Products.
 2. Christy Concrete Products.
 3. Elmhurst-Chicago Stone Co.
 4. Oldcastle Precast Group.
 5. Riverton Concrete Products; a division of Cretex Companies, Inc.

6. Utility Concrete Products, LLC.
7. Utility Vault Co.
8. Wausau Tile, Inc.
9. <Insert manufacturer>
10. or approved equal.

C. Comply with ASTM C 858 for design and manufacturing processes.

If Project requires more than one type of precast handhole or box, give each type a separate designation and copy and edit paragraph and applicable subparagraphs below for each type.

D. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.

Retain one of four subparagraphs and associated subparagraphs below, and edit to specify features of frame and cover assembly. Consult manufacturers for additional frame and cover designs.

1. Manhole and hand hole covers and hinges shall be cast iron or stainless steel unless indicated otherwise.
2. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.

Coordinate remaining subparagraphs and associated subparagraphs below with Drawings.

3. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
4. Cover Legend: Molded lettering, ["ELECTRIC."] ["TELEPHONE."] [As indicated for each service.] <Insert legend.>
5. Configuration: Units shall be designed for flush burial and have [open] [closed] [integral closed] bottom, unless otherwise indicated.
6. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.
 - a. Extension shall provide increased depth of [12 inches (300 mm)] <Insert dimension>.
 - b. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.

Retain one or both of first two subparagraphs and associated subparagraphs below to specify provisions to be made in the factory to accommodate connections of ducts to handholes in the field. Coordinate with Drawings.

Subparagraph and associated subparagraphs below specify window openings in handhole walls, arranged so duct banks and their terminating fittings can be cast in place in the field after handholes are installed. This method can minimize problems of aligning duct banks with handhole openings in the field.

7. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches (300 mm) vertically and horizontally to accommodate alignment variations.
 - a. Windows shall be located no less than 6 inches (150 mm) from interior surfaces of walls, floors, or frames and covers of handholes, but close

- enough to corners to facilitate racking of cables on walls.
- b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
 - c. Window openings shall be framed with at least two additional No. 4 steel reinforcing bars in concrete around each opening.

First subparagraph and associated subparagraphs below specify end-bell or duct-terminating fittings to be factory installed, ready for connection to approaching ducts in the field. This method reduces installation costs but may increase risk of potential alignment problems.

8. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
 - a. Type and size shall match fittings to duct or conduit to be terminated.
 - b. Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.
9. Handholes [12 inches wide by 24 inches long (300 mm wide by 600 mm long)] <Insert dimensions> and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.4 HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

Retain this Article for installations at locations not subject to deliberate traffic paths of vehicles where enclosures lighter and less costly than those of concrete are desired. Enclosures specified in this Article range from those suitable only for pedestrian areas to units able to withstand incidental, nondeliberate heavy-vehicle loading. Coordinate with Part 1 "Action Submittals" and "Quality Assurance" articles and Part 3 "Underground Enclosure Application" Article. Coordinate with Drawings for sizes. See discussion of nonconcrete handhole application in the Evaluations.

A. Description: Comply with SCTE 77.

1. Color: [Gray] [Green].

First option in first subparagraph below facilitates bottom duct entry. Second option may be provided by a separate slab placed in the excavation under an open-bottom enclosure; third option is obtained by molding or fabricating the bottom integrally with the body of the unit.

2. Configuration: Units shall be designed for flush burial and have [open] [closed] [integral closed] bottom, unless otherwise indicated.
3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
5. Cover Legend: Molded lettering, ["ELECTRIC."] ["TELEPHONE."] [As indicated for each service.] <Insert legend.>

Consider retaining subparagraph below if wires or cables are direct buried and will enter enclosure through the side. Otherwise, entry will be made through an open bottom or through side openings cut in the field as specified in Part 3. Coordinate with Drawings.

6. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring

indicated, and arranged for secure, fixed installation in enclosure wall.

Retain first subparagraph below if ducts will enter enclosure through the side. Otherwise, entry will be made through an open bottom or through side openings cut in the field as specified in Part 3. Coordinate with Drawings.

7. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
8. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) <Insert dimensions> and larger shall have factory-installed inserts for cable racks and pulling-in irons.

Retain one or more of four paragraphs and associated subparagraphs below to select enclosure type(s) for areas not subject to deliberate traffic by vehicles. Coordinate selection with Part 3 "Underground Enclosure Application" Article. For enclosures with cover options, verify that selected cover is available with the load rating specified in Part 3 "Underground Enclosure Application" Article.

- B. Polymer Concrete Handholes and Boxes with Polymer Concrete Cover: Molded of sand and aggregate, bound together with a polymer resin, and reinforced with steel or fiberglass or a combination of the two.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armorcast Products Company.
 - b. Carson Industries LLC.
 - c. CDR Systems Corporation.
 - d. NewBasis.
 - e. <Insert manufacturer>
 - f. or approved equal.

- C. Fiberglass Handholes and Boxes with Polymer Concrete Frame and Cover: Sheet-molded, fiberglass-reinforced, polyester resin enclosure joined to polymer concrete top ring or frame.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armorcast Products Company.
 - b. Carson Industries LLC.
 - c. Christy Concrete Products.
 - d. Synertech Moulded Products, Inc.; a division of Oldcastle Precast.
 - e. <Insert manufacturer>
 - f. or approved equal.

- D. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with

covers of **[polymer concrete] [reinforced concrete] [cast iron] [hot-dip galvanized-steel diamond plate] [fiberglass]**.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Carson Industries LLC.
 - b. Christy Concrete Products.
 - c. Nordic Fiberglass, Inc.
 - d. **<Insert manufacturer>**
 - e. or approved equal.

- E. High-Density Plastic Boxes: Injection molded of high-density polyethylene or copolymer-polypropylene. Cover shall be **[polymer concrete] [hot-dip galvanized-steel diamond plate] [plastic]**.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Carson Industries LLC.
 - b. Nordic Fiberglass, Inc.
 - c. PenCell Plastics.
 - d. **<Insert manufacturer>**
 - e. or approved equal.

2.5 PRECAST MANHOLES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Carder Concrete Products.
 2. Christy Concrete Products.
 3. Elmhurst-Chicago Stone Co.
 4. Oldcastle Precast Group.
 5. Riverton Concrete Products; a division of Cretex Companies, Inc.
 6. Utility Concrete Products, LLC.
 7. Utility Vault Co.
 8. Wausau Tile, Inc.
 9. **<Insert manufacturer>**
 10. or approved equal.

Coordinate first paragraph below with Drawings.

- B. Comply with ASTM C 858[, **with structural design loading as specified in Part 3 "Underground Enclosure Application" Article**] and with interlocking mating sections, complete with accessories, hardware, and features.

Retain one or both subparagraphs and associated subparagraphs below to specify provisions to be made in the factory to accommodate connections of ducts to manholes in the field. Coordinate with Drawings.

Subparagraph and associated subparagraphs below specify window openings in manhole walls, arranged so duct banks and their terminating fittings can be cast in place in the field after manholes are installed. This method can minimize problems of aligning duct banks with manhole openings in the field.

1. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional **12 inches** (300 mm) vertically and horizontally to accommodate alignment variations.
 - a. Windows shall be located no less than **6 inches** (150 mm) from interior surfaces of walls, floors, or roofs of manholes, but close enough to corners to facilitate racking of cables on walls.
 - b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
 - c. Window openings shall be framed with at least two additional No. 4 steel reinforcing bars in concrete around each opening.

Subparagraph and associated subparagraphs below specify end-bell or duct-terminating fittings to be factory installed, ready for connection to approaching ducts in the field. This method reduces installation costs but may increase risk of potential alignment problems.

2. Duct Entrances in Manhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
 - a. Type and size shall match fittings to duct or conduit to be terminated.
 - b. Fittings shall align with elevations of approaching ducts and be located near interior corners of manholes to facilitate racking of cable.
- C. Concrete Knockout Panels: **1-1/2 to 2 inches** (38 to 50 mm) thick, for future conduit entrance and sleeve for ground rod.
- D. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

2.6 CAST-IN-PLACE MANHOLES

Coordinate this Article with Drawings for manhole designs, indicating locations, dimensions, features, accessories, and installation conditions. See Evaluations.

- A. Description: Underground utility structures, constructed in place, complete with accessories, hardware, and features. Include concrete knockout panels for conduit

entrance and sleeve for ground rod.

- B. Materials: Comply with ASTM C 858 and with Section 033000 "Cast-in-Place Concrete."
- C. Structural Design Loading: As specified in Part 3 "Underground Enclosure Application" Article of this Section.

2.7 PRECAST UNDERGROUND COMMUNICATIONS VAULTS (UCV'S)

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - 1. Amcor Precast (Oldcastle).
 - 2. **<Insert manufacturer>**
 - 3. or approved equal.
- B. Precast underground communications vaults shall be provided in the following sizes:
 - 1. 12'-0"L x 6'-0"W x 7'-0"H nominal interior dimension
 - 2. 6'-0"L x 4'-0"W x 7'-0"H nominal interior dimension
- C. Vaults shall be of two part construction consisting of separate top and bottom sections. Bottom section shall be equipped with four internal lifting points. Top section shall be equipped with four external lifting points. Top section of vault shall contain a 30-inch round opening to receive precast grade rings and UCV collar. Bottom section of vault shall be provided with 12" diameter x 3.5" deep passive sump with removable stainless steel grating.
- D. 12'-0" x 6'-0" vaults shall be provided with forty (40) embedded PVC belled ends to accept standard schedule 40 PVC conduit. 6'-0" x 4'-0" vaults shall be provided with twelve (12) embedded PVC belled ends. All embedded adapters shall be constructed with a break-out PVC diaphragm which shall remain in place on unused openings. Duct conduits shall be attached to adapters using solvent cement.
- E. 12'-0" x 6'-0" vaults shall be equipped with eight (8) stainless steel pulling irons embedded in the precast base section. 6'-0" x 4'-0" vaults shall be provided with four (4) embedded pulling irons.
- F. 12'-0" x 6'-0" vaults shall be provided with the following accessory equipment:
 - 1. Sixteen (16) 47-hole cable support racks, stainless steel.
 - 2. Forty (40) L-Bracket for cable support racks, stainless steel.
 - 3. Four (4) 7'-0" vertical copper bonding ribbon (two per long side)
 - 4. Bolt-on ladder bracket, hot-dip galvanized
 - 5. Hook ladder, stainless steel
 - 6. Grade ring(s), precast, 30-inch inside diameter
 - 7. Collar ring, cast steel, 30-inch inside diameter
 - 8. Cover, cast steel, 30-inch diameter (Marked "DEN Communications")

- G. 6'-0" x 4'-0" vaults shall be provided with the following accessory equipment:
1. Nine (9) 47-hole cable support racks, stainless steel.
 2. Eight (8) L-Bracket for cable support racks, stainless steel.
 3. Two (2) 7'-0" vertical copper bonding ribbon (duct entry side only)
 4. Bolt-on ladder bracket, hot-dip galvanized
 5. Hook ladder, stainless steel
 6. Grade ring(s), precast, 30-inch inside diameter
 7. Collar ring, cast steel, 30-inch inside diameter
 8. Cover, cast steel, 30-inch diameter (Marked "DEN Communications").
- H. Vaults shall be designed for AASHTO HS-20 Loading and according to ASTM C857-87 and ASTM C858-83.
- I. The specified UCV's are manufactured with factory embedded PVC belled ends for all port positions. These fittings contain a break-out plastic diaphragm which must be removed during conduit installation. Diaphragm shall remain in place on all unused ports. Provide rubber expansion plugs on all ports with installed. Plugs shall provide a tight seal between conduit and pull tapes and shall withstand a minimum of 15 psi of hydrostatic pressure.

2.8 AIRCRAFT RATED UCVS

- A. UCVs located in apron or taxiway areas may be either precast or cast in place. All aircraft rated UCVs shall be engineered for aircraft loading. Contact DEN Engineering for required loading values for each location where aircraft rated UCVs will be required.

2.9 UTILITY STRUCTURE ACCESSORIES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bilco Company (The).
 2. Campbell Foundry Company.
 3. Carder Concrete Products.
 4. Christy Concrete Products.
 5. East Jordan Iron Works, Inc.
 6. Elmhurst-Chicago Stone Co.
 7. McKinley Iron Works, Inc.
 8. Neenah Foundry Company.
 9. NewBasis.
 10. Oldcastle Precast Group.
 11. Osburn Associates, Inc.
 12. Pennsylvania Insert Corporation.

13. Riverton Concrete Products; a division of Cretex Companies, Inc..
14. Strongwell Corporation; Lenoir City Division.
15. Underground Devices, Inc.
16. Utility Concrete Products, LLC.
17. Utility Vault Co.
18. Wausau Tile, Inc.
19. <Insert manufacturer>
20. or approved equal.

Indicate in details on Drawings where accessories specified in this Article are to be installed.

- B. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.
1. Frame and Cover: Weatherproof, [**gray cast iron complying with ASTM A 48/A 48M, Class 30B**] [**stainless steel**] with milled cover-to-frame bearing surfaces; diameter, [**26 inches** (660 mm)] [**29 inches** (737 mm)].
 - a. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 - b. Special Covers: Recess in face of cover designed to accept finish material in paved areas.
 2. Cover Legend: Cast in. Selected to suit system.
 - a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables for systems operating at 600 V and less.
 - b. Legend: "ELECTRIC-HV" for duct systems with medium-voltage cables.
 - c. Legend: "SIGNAL" for communications, data, and telephone duct systems.
 3. Manhole Chimney Components: Precast concrete rings with dimensions matched to those of roof opening.
 - a. Mortar for Chimney Ring and Frame and Cover Joints: Comply with ASTM C 270, Type M, except for quantities less than **2.0 cu. ft. (60 L)** where packaged mix complying with ASTM C 387, Type M, may be used.

Most manufacturers' standard precast units have sump consisting of depression in floor only and no frame or grate. 12-1/2-inch- (318-mm-) diameter, 4-inch- (100-mm-) deep thermoplastic sump is also available for casting into the manhole floor.

- C. Manhole Sump Frame and Grate: ASTM A 48/A 48M, Class 30B, gray cast iron.
- D. Pulling Eyes in Concrete Walls: Eyebolt with reinforcing-bar fastening insert, **2-inch** (50-mm) diameter eye, and **1-by-4-inch** (25-by-100-mm) bolt. Stainless steel only.
1. Working Load Embedded in **6-Inch** (150-mm), **4000-psi** (27.6-MPa) Concrete: **13,000-lbf** (58-kN) minimum tension.
- E. Pulling Eyes in Nonconcrete Walls: Eyebolt with reinforced fastening, **1-1/4-inch**

(32-mm) diameter eye, rated [2500-lbf (11-kN)] <Insert rating> minimum tension. Stainless steel only.

F. Pulling-In and Lifting Irons in Concrete Floors: 7/8-inch (22-mm) diameter, hot-dip galvanized, bent steel rod; stress relieved after forming; and fastened to reinforcing rod. Exposed triangular opening.

1. Ultimate Yield Strength: 40,000-lbf (180-kN) shear and 60,000-lbf (270-kN) tension.

G. Bolting Inserts for Concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of noncorrosive, chemical-resistant, nonconductive thermoplastic material; 1/2-inch (13-mm) ID by 2-3/4 inches (69 mm) deep, flared to 1-1/4 inches (32 mm) minimum at base.

1. Tested Ultimate Pullout Strength: 12,000 lbf (53 kN) minimum.

H. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip with 1/2-inch (13-mm) bolt, 5300-lbf (24-kN) rated pullout strength, and minimum 6800-lbf (30-kN) rated shear strength.

Retain one of two "Cable Rack Assembly" paragraphs and associated subparagraphs below to select type of cable support for use in manholes. Coordinate with Drawings.

I. Cable Rack Assembly: Steel, [hot-rolled] [hot-dip] galvanized, except insulators.

1. Stanchions: T-section or channel; 2-1/4-inch (57-mm) nominal size; punched with 14 holes on 1-1/2-inch (38-mm) centers for cable-arm attachment.
2. Arms: 1-1/2 inches (38 mm) wide, lengths ranging from 3 inches (75 mm) with 450-lb (204-kg) minimum capacity to 18 inches (460 mm) with 250-lb (114-kg) minimum capacity. Arms shall have slots along full length for cable ties and be arranged for secure mounting in horizontal position at any vertical location on stanchions.
3. Insulators: High-glaze, wet-process porcelain arranged for mounting on cable arms.

Nonmetallic alternative in first paragraph below requires no insulators and no grounding.

J. Cable Rack Assembly: Nonmetallic. Components fabricated from nonconductive, fiberglass-reinforced polymer.

1. Stanchions: Nominal 36 inches (900 mm) high by 4 inches (100 mm) wide, with minimum of 9 holes for arm attachment.
2. Arms: Arranged for secure, drop-in attachment in horizontal position at any location on cable stanchions, and capable of being locked in position. Arms shall be available in lengths ranging from 3 inches (75 mm) with 450-lb (204-kg) minimum capacity to 20 inches (508 mm) with 250-lb (114-kg) minimum capacity. Top of arm shall be nominally 4 inches (100 mm) wide, and arm shall have slots along full length for cable ties.

- K. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as **35 deg F (2 deg C)**. Capable of withstanding temperature of **300 deg F (150 deg C)** without slump and adhering to clean surfaces of plastic ducts, metallic conduits, conduit coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.

Retain one or both of first two paragraphs below. Coordinate fixed ladder arrangement with manhole details on Drawings.

- L. Fixed Manhole Ladders: Arranged for attachment to **[roof] [or] [wall] [and floor]** of manhole. Ladder and mounting brackets and braces shall be fabricated from **[nonconductive, structural-grade, fiberglass-reinforced resin] [hot-dip galvanized steel]**.
- M. Portable Manhole Ladders: UL-listed, heavy-duty **[wood] [fiberglass]** specifically designed for portable use for access to electrical manholes. Minimum length equal to distance from deepest manhole floor to grade plus **36 inches (900 mm)**. **[One (1)]** <Insert quantity> required.
- N. Cover Hooks: **[Heavy duty, designed for lifts 60 lbf (270 N) and greater] [Light duty, designed for lifts less than 60 lbf (270 N)]**. **[Two (2)]** <Insert quantity> required.
- O. All manhole hardware shall be stainless steel including pulling eyes, inserts.
- P. The ground busbar shall be stainless steel and the ground rod shall be stainless steel. Seal ground rod penetration in the manholes with epoxy.

2.10 SOURCE QUALITY CONTROL

Retain paragraph below for precast concrete utility structures.

- A. Test and inspect precast concrete utility structures according to ASTM C 1037.

Retain paragraph below if underground enclosures of polymer concrete, fiberglass-reinforced polyester resin, high-density plastic, or composites of fiberglass and polymer concrete are specified. See Evaluations.

- B. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of manholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

Retain one of first two subparagraphs below. Retain first to require an independent testing agency to test for compliance with SCTE requirements. Retain second to require testing by manufacturers' laboratories. See Evaluations for a discussion about testing.

1. Tests of materials shall be performed by a independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.

3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1 UNDERGROUND DUCT APPLICATION

Products and installation options in this Article are examples only. Coordinate with Drawings and edit to suit Project. See the Underground Raceway Application Chart and "Product Selection and Application Considerations" Article in the Evaluations. Coordinate with products listed in Part 2 "Nonmetallic Ducts and Duct Accessories" Article.

- A. Underground conduits shall be Poly-vinyl Chloride (PVC) schedule 40 or greater, or Galvanized Rigid Conduit (GRC) with factory bonded 40 mil. PVC coating.
- B. All underground duct banks inside and outside of the building shall be encased in red concrete, supported on listed conduit spacers every five (5) feet, with a minimum of three (3) inches of cover on all sides and two (2) inches between conduits at a minimum depth of 36 - inches from top of concrete encasement to finished grade. A 3" wide red metallized foil core detectable warning tape shall be placed over the duct bank at a depth not exceeding the manufacturer's recommendations.
- C. Concrete encased duct banks shall be utilized for all primary duct banks at DEN. Primary duct banks are considered those duct banks that form the main arteries of the DEN duct bank system and those serving any DEN owned facility or structure. Concrete encasement shall also be used on segments of direct buried duct bank that cross under paved roadways or other locations subject to vehicular traffic.
- D. Include a bare #2 copper ground conductor above conduits in all concrete encased duct banks.
- E. A 1-inch minimum size shall be used for underground conduit.
- F. The minimum size of any underground high voltage (above 1,000 volt) conduit shall be 4".
- G. A separate insulated ground wire shall be installed in each conduit. The ground wire shall be sized on the drawings or in accordance with NEC article 250.

Verify application in paragraph below with utility if ducts are for service conductors provided by utility.

- H. Ducts for Electrical Cables Over 600 V: RNC, NEMA Type [EPC-80] [EPC-40] [EB-20]-PVC, in concrete-encased duct bank, unless otherwise indicated.

Retain one of first two paragraphs below for underground feeders rated 600 V and less. First paragraph is for concrete-encased ducts; second is for direct-buried ducts. Verify application with utility if ducts are for service conductors provided by utility. See Evaluations.

- I. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type [EPC-80] [EPC-40]

[EB-20]-PVC, in concrete-encased duct bank, unless otherwise indicated.

- J. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type [EPC-80] [EPC-40]-PVC, in direct-buried duct bank, unless otherwise indicated.
- K. Ducts for Electrical Branch Circuits: RNC, NEMA Type [EPC-80] [EPC-40]-PVC, in direct-buried duct bank, unless otherwise indicated.

Retain one of two paragraphs below for underground telecommunications service. Edit to suit Project. Verify application with utility if ducts are for utility use for service cables. See Evaluations.

Both options in paragraph below represent listed products in wiring methods that are permitted by NFPA 70 for electrical power work. NFPA 70 has no clear requirements for outside underground raceways for telephone, communications, or data wiring. Verify validity of these applications with authorities having jurisdiction.

- L. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: RNC, NEMA Type [EPC-40] [EB-20]-PVC, in concrete-encased duct bank, unless otherwise indicated.

First option in paragraph below represents a listed product in a wiring method that is permitted by NFPA 70 for electrical power work. Duct types in other options are not listed but are often used for applications like this. Verify validity of these applications with authorities having jurisdiction.

- M. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: [RNC, NEMA Type EPC-40-PVC,] [Underground plastic utilities duct, NEMA Type DB-60-PVC,] [Underground plastic utilities duct, NEMA Type DB-120-PVC,] installed in concrete-encased duct bank, unless otherwise indicated.

Retain one of two paragraphs below for on-site underground telecommunications distribution. Edit to suit Project. See Evaluations.

First option in paragraph below represents a listed product in a wiring method that is permitted by NFPA70 for electrical power work. Duct types in other options are not listed but are often used for applications like this. Verify validity of these applications with authorities having jurisdiction.

- N. Underground Ducts for Telephone, Communications, or Data Circuits: RNC, NEMA Type [EPC-40] [DB-60] [DB-120]-PVC, in direct-buried duct bank, unless otherwise indicated.

Paragraph below represents a listed product in a wiring method that is permitted by NFPA 70 for electrical power conductors and cables. NFPA 70 has no clear requirements for outside underground raceways for telephone, communications, or data wiring. Verify validity of these applications with authorities having jurisdiction.

- O. Underground Ducts for Telephone, Communications, or Data Circuits: RNC, NEMA Type EB-20-PVC, in concrete-encased duct bank, unless otherwise indicated.

Trenchless technology involving horizontal jacking or boring or directional boring is often used for crossing obstructions such as described in paragraph below. Trenchless techniques are not specified in this Section but are described in the Evaluations.

Coordinate paragraph below with Drawings, and consider showing duct-bank reinforcement and backfill and pavement patching requirements on them.

- P. Underground Ducts Crossing [**Paved Paths**] [**Walks**] [**and**] [**Driveways**] [**Roadways**] [**and Railroads**]: RNC, NEMA Type EPC-40-PVC, encased in reinforced concrete.
1. Steel reinforced, concrete encased duct banks shall be utilized for all duct bank segments running under aprons, taxiways and other aircraft movement areas.

3.2 UNDERGROUND ENCLOSURE APPLICATION

- A. The underground concrete vaults (UCV's) and pull boxes used throughout non-aircraft movement areas at DEN are pre-cast units which conform to <Insert telephone provider> regulated telephone company specifications. These units are described more completely in part two of this section.
- B. Mid-sized UCV's (12'-0" L x 6'-0" W x 7'-0" H interior dimension) shall be utilized for all main duct banks at DEN. Main duct banks shall be considered those duct banks serving more than one facility or containing more than four (4) 4-inch conduits. Mid-sized UCV's may contain fiber-optic cabling, copper cabling or both. Many of the mid-sized UCV's will contain splice cases, repeaters and other outside plant devices.
- C. Small UCV's (6'-0" L x 4'-0" W x 7'-0" H interior dimension) may be utilized for branch connections which serve only a single facility and contain four (4) or fewer ducts. These UCV's may contain fiber-optic cabling, copper cabling or a combination of both. These UCV's are not suitable for housing splice cases, repeaters, etc. Small UCV's should be reserved for straight through pulls of copper or fiber cabling.
- D. The standard DEN pull box is a round unit approximately 48-inches in internal diameter and approximately 48-inches deep. This pull box is to be used on duct bank runs containing no more than two conduits and supporting fiber-optic cable only. These boxes do not provide sufficient space for copper splice cases.
- E. UCV's shall be placed within 100-feet of any 90-degree turn in the duct bank and at intervals of approximately 500-feet. Pull boxes on fiber-optic only duct banks may be placed at intervals of approximately 750-feet. Adjust spacing to avoid paved areas and traveled roadways.
- F. The standard DEN UCV contains break out ports for 4-inch schedule 40 PVC on two opposing ends. UCV's should not be placed directly at the corner point for a 90-degree duct bank turn. Do not modify UCV's with sidewall openings where no conduit ports exist as to do so complicates cable racking and splice case placement on larger cable sizes.
- G. The standard DEN pull box contains break-out waffle panels at intervals around the pull box circumference. Arrange ducts to enter and exit the pull box on directly opposite break-out panels to allow for straight-through cable pulls.
- H. When arranging ducts in UCV's and pull boxes, utilize the lower ports first, starting with

the bottom most port and working upward. Ensure that the pattern of ducts (ie:1, 2, 3, 4 etc.) remains the same on both ends of a duct run. For example, on a north-south duct run the lowest duct on the east side leaving one UCV would also be the lowest duct on the east side at the next UCV.

Delete this Article if Drawings indicate type and structural load rating of enclosure to be used for each application. Retain this Article to specify types and structural load ratings of manholes, handholes, and pull boxes for various applications in Project. Options are examples only. Coordinate with Drawings. See the "Product Selection and Application Considerations" Article in the Evaluations. Coordinate with product specifications in Part 2 articles that specify underground enclosures.

Verify with manufacturers that units of types specified are available in sizes required. Indicate on Drawings the size of each enclosure, and use a symbol or other notation to differentiate between manholes and handholes or boxes.

- I. Handholes and Boxes for 600 V and Less[, **Including Telephone, Communications, and Data Wiring**]:
 1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete. AASHTO HB 17, [**H-10**] [**H-20**] structural load rating.
 2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: [**Precast concrete, AASHTO HB 17, H-20**] [**Polymer concrete, SCTE 77, Tier 15**] [**Fiberglass enclosures with polymer concrete frame and cover, SCTE 77, Tier 15**] [**Fiberglass-reinforced polyester resin, SCTE 77, Tier 15**] [**High-density plastic, SCTE 77, Tier 15**] structural load rating.
 3. Units in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: [**Precast concrete, AASHTO HB 17, H-10**] [**Polymer concrete units, SCTE 77, Tier 8**] [**Heavy-duty fiberglass units with polymer concrete frame and cover, SCTE 77, Tier 8**] [**High-density plastic, SCTE 77, Tier 8**] structural load rating.
 4. Units Subject to Light-Duty Pedestrian Traffic Only: [**Fiberglass-reinforced polyester resin**] [**High-density plastic**], structurally tested according to SCTE 77 with 3000-lbf (13 345-N) vertical loading.
- J. Manholes: [**Precast**] [**or**] [**cast-in-place**] concrete.

Retain one or both subparagraphs below, according to load rating or ratings required for Project manholes. If retaining both, use notations on Drawings to indicate the traffic level in each roadway where a manhole is located.

1. Units Located in Roadways and Other Deliberate Traffic Paths by Heavy or Medium Vehicles: H-20 structural load rating according to AASHTO HB 17.
2. Units Not Located in Deliberate Traffic Paths by Heavy or Medium Vehicles: H-10 load rating according to AASHTO HB 17.

3.3 EARTHWORK

Coordinate this Article with Drawings.

- A. Excavation and Backfill: Comply with Section 312000 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.
- B. After installation of electrical work, backfill with flowable backfill to insure against the possibility of differential settling, then use flowable backfill to within 8 inches of final grade.

Retain three paragraphs below if Project requires restoration of disturbed features and areas.

- C. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling is completed.
- D. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 329200 "Turf and Grasses" and Section 329300 "Plants."
- E. Cut and patch existing pavement in the path of underground ducts and utility structures according to Division 32 Sections.

3.4 DUCT INSTALLATION

For electrical-power duct banks, note that ampacity of cables may be reduced in duct banks of more than two tiers of two ducts each.

- A. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.

Manufactured sweep bends in first paragraph below are available in various radii up to 25 feet (7.5 m) for 4- and 5-inch (100- and 125-mm) ducts, although a 48-inch (1220-mm) radius is the largest regularly stocked. To minimize pulling tensions, specify the largest radius possible, consistent with other Project requirements. See Editing Instruction No. 3 in the Evaluations. Coordinate with Drawings.

Stub-ups are specified separately in this Article in paragraphs for concrete-encased and direct-buried ducts and duct banks.

- B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of [48 inches (1220 mm)] [12.5 feet (4 m)] [25 feet (7.5 m)], vertically, and [9 feet (2.75 m)] [12.5 feet (4 m)] horizontally, unless otherwise indicated.
- C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.
- D. Duct Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches (250 mm) o.c. for 5-inch (125-mm) ducts, and vary proportionately for other duct sizes.

1. Begin change from regular spacing to end-bell spacing **10 feet (3 m)** from the end bell without reducing duct line slope and without forming a trap in the line.

Retain first subparagraph below if differential settlement is anticipated where duct banks approach manholes or handholes. Expansion and deflection fittings were available in 2-, 3-, and 4-inch (50-, 75-, and 100-mm) sizes when this Section was updated. Consult manufacturers for availability of larger sizes and for installation instructions.

2. Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole.
3. Grout end bells into structure walls from both sides to provide watertight entrances.

Coordinate design of concrete-encased duct banks approaching building wall penetrations with building structural design to support ducts at wall, without reducing structural or watertight integrity of building. Do not use steel conduit in highly corrosive soils. Coordinate with Drawings.

Sleeves and sleeve seals for conduits penetrating building walls below grade are specified in Division 26 Section "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

- E. Building Wall Penetrations: Make a transition from underground duct to rigid PVC coated steel conduit at least **10 feet (3 m)** outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."
- F. Waterproofed Wall and Floor Penetrations: Install a watertight entrance-sealing device with sealing gland assembly on the inside. Anchor device into masonry construction with one or more integral flanges. Secure membrane waterproofing to the device to make permanently watertight.
- G. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least **15-psig (1.03-MPa)** hydrostatic pressure.
- H. Pulling Cord: install pulling cord in ducts, including spares.
- I. When concrete encased duct bank or conduit penetrates a foundation wall of a manhole, hand hole, or large pull box, the encasement is required to be structurally attached to the wall. Furnish for approval a shop drawing showing the conduit terminations and how the concrete encasement will be tied into the structure.
- J. No conduits shall be encased in sidewalks, roadways, footings, grade beams and foundations except under special cases approved by the DEN Project Manager.
- K. Conduit penetrating a foundation wall or wall of a handhole or manhole shall be sleeved and continuous (without fittings) from the interior for a minimum of five (5') on the exterior. Conduit penetrating a footer or grade beam shall be sleeved and continuous for five feet (5') on either side of a footer or grade beam using a single ten foot piece of PVC coated GRC. Conduit penetrating a wall, footer or grade beam

below grade shall be plastic coated rigid steel conduit. Conduit penetration of an exterior wall or wall of a handhole or manhole shall be made watertight.

- L. All G.R.C. entering or leaving manholes, hand holes or switch gear shall have a grounding bushing attached to the conduit and the ground wire attached to the bushing.
- M. Bell fittings shall be installed on all PVC conduits entering or leaving manholes or hand holes.
- N. All conduits in manholes and hand holes that contain conductors shall be sealed by duct seal and all empty conduits shall be sealed with an approved fitting.
- O. All cable shall be racked and supported in manholes.
- P. Manholes and hand holes shall be water tight; joints in precast hand holes and manholes shall be filled with non-shrink mortar and finished flush with the adjoining surfaces after being made watertight.
- Q. Concrete-Encased Ducts: Support ducts on duct separators.

To comply with first subparagraph below, Contractor may have to provide additional separators to prevent sagging when temperature is high during construction. Additional separators also reduce chance of floating or other movement during concreting.

1. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than [4] [5] spacers per 20 feet (6 m) of duct. Secure separators to earth and to ducts to prevent floating during concreting. Stagger separators approximately 6 inches (150 mm) between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
2. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
 - a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations, or use other specific measures to prevent expansion-contraction damage.
 - b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch (19-mm) reinforcing rod dowels extending 18 inches (450 mm) into concrete on both sides of joint near corners of envelope.
3. Pouring Concrete: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.

Coordinate first subparagraph below with Drawings, and consider showing duct-bank reinforcement requirements on them.

4. Reinforcement: Reinforce concrete-encased duct banks where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
5. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.

Delete subparagraph below if dimensioned duct sections are shown on Drawings.

6. Minimum Space between Ducts: 3 inches (75 mm) between ducts and exterior envelope wall, 2 inches (50 mm) between ducts for like services, and 4 inches (100 mm) between power and signal ducts.

Requirements in subparagraph below exceed NFPA 70 and may be considered conservative. If desired, depth (cover) requirements below can be deleted and NFPA 70 requirements will apply.

7. Depth: Install top of duct bank at least 36 inches below finished grade, unless otherwise indicated.

Manufactured PVC duct elbows in first subparagraph below are vulnerable to damage by pulling lines when cable pulling tensions are high. However, concrete encasement, together with reduced pulling tensions, can prevent serious damage. Reduce potential pulling tensions by making duct runs from the closest manhole or handhole as short as possible and arranging stub-up elbows to have the largest possible radius. 5-inch (125-mm) duct is available in standard radii of 24, 36, 48, and 60 inches (300, 900, 1200, and 1500 mm) and greater. If necessary, specify that stub-ups be made with rigid steel conduit elbows as provided in second subparagraph below. Coordinate with Drawings and see Editing Instruction No. 3 in the Evaluations.

Retain one of first two subparagraphs and associated subparagraphs below to specify type of stub-ups for direct-buried ducts in Project.

8. Stub-Ups: Use manufactured duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Extend concrete encasement throughout the length of the elbow.
9. Stub-Ups: Use manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
 - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete.
 - b. Stub-Ups to Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of base. Install insulated grounding bushings on terminations at equipment.
10. Warning Tape: Bury warning tape approximately 12 inches (300 mm) above all concrete-encased ducts and duct banks. Align tape parallel to and within 3 inches (75 mm) of the centerline of duct bank. Provide an additional warning tape for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional tapes 12 inches (300 mm) apart, horizontally.

R. Special Duct Bank Construction at Corners

1. The duct bank system at DEN supports copper cabling in sizes up to 1800 pairs. The pulling tension required to install these cable requires the use of winches and steel cables. Special provisions are required at corners to prevent these cables from sawing through the sidewall of the ducts.
2. Corners in the duct bank system are required to be made with 4-inch galvanized rigid PVC coated conduit with a radius of at least nine (9) feet. Concrete encasement is required at corners to control stresses and movement in the duct system during cable installation.

S. Duct Bank Provisions for Fiber Optic Cabling

1. Ducts designated for fiber-optic cabling shall be provided with three 1-inch inner-ducts. The three inner-ducts installed in each fiber duct shall be colored blue, orange and black.

T. Direct-Buried Duct Banks:

1. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
2. Space separators close enough to prevent sagging and deforming of ducts, with not less than [4] [5] spacers per 20 feet (6 m) of duct. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6 inches (150 mm) between tiers.
3. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 Section "Earth Moving" for pipes less than 6 inches (150 mm) in nominal diameter.
4. Install backfill as specified in Division 31 Section "Earth Moving."
5. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand-place backfill to 4 inches (100 mm) over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction as specified in Division 31 Section "Earth Moving."

Delete subparagraph below if dimensioned duct sections are shown on Drawings.

6. Install ducts with a minimum of 3 inches (75 mm) between ducts for like services and 6 inches (150 mm) between power and signal ducts.

Requirements in first subparagraph below exceed NFPA 70. Retain for conservative design.

7. Depth: Install top of duct bank at least 36 inches (900 mm) below finished grade, unless otherwise indicated.
8. Set elevation of bottom of duct bank below the frost line.

Direct-buried, PVC duct elbows in first subparagraph below are particularly vulnerable to damage by pulling lines when cable pulling tensions are high. Rigid steel conduit elbows are sometimes specified for these stub-ups to prevent such damage. However, concrete encasement of PVC duct elbows, together

with reduced pulling tensions, is also used in these situations. Pulling tensions can be reduced by making duct runs from the closest manhole or handhole as short as possible and arranging duct banks so stub-up elbows have the longest possible radius. 5-inch (125-mm) duct elbows are available in standard radii of 24, 36, 48, and 60 inches (300, 900, 1200, and 1500 mm) and greater. Coordinate with Drawings and see Editing Instruction No. 3 in the Evaluations.

Retain one of first two subparagraphs and associated subparagraphs below to specify type of stub-ups for direct-buried ducts in Project.

9. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of the elbow.
10. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
 - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete.
 - b. For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.
11. Warning Planks: Bury warning planks approximately 12 inches (300 mm) above direct-buried ducts and duct banks, placing them 24 inches (600 mm) o.c. Align planks along the width and along the centerline of duct bank. Provide an additional plank for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional planks 12 inches (300 mm) apart, horizontally.

3.5 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

Retain this Article for both cast-in-place and precast manholes and for precast handholes.

A. Cast-in-Place Manhole Installation:

1. Finish interior surfaces with a smooth-troweled finish.

Coordinate first subparagraph below with Drawings.

2. Windows for Future Duct Connections: Form and pour concrete knockout panels 1-1/2 to 2 inches (38 to 50 mm) thick, arranged as indicated.
3. Cast-in-place concrete, formwork, and reinforcement are specified in Division 03 Section "Cast-in-Place Concrete."

B. Precast Concrete Handhole and Manhole Installation:

1. Comply with ASTM C 891, unless otherwise indicated.
2. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.
3. Unless otherwise indicated, support units on a level bed of crushed stone or

gravel, graded from 1-inch (25-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

Coordinate paragraph and subparagraphs below with Drawings. See Editing Instruction No. 4 in the Evaluations.

C. Elevations:

1. Manhole Roof: Install with rooftop at least 24 inches (610 mm) below finished grade.
2. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch (25 mm) above finished grade.
3. Install handholes with bottom below the frost line, <Insert depth of frost line below grade at Project site> below grade.
4. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
5. Where indicated, cast handhole cover frame integrally with handhole structure.

Retain paragraph below if drain lines for underground structures are provided. Coordinate with site drainage design and Drawings. See Editing Instruction No. 5 in the Evaluations.

- D. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.

Revise paragraph and subparagraphs below if other-than-round, cast-iron frame and cover are used for access to manholes.

E. Manhole Access: Circular opening in manhole roof; sized to match cover size.

1. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
2. Install chimney, constructed of precast concrete collars and rings to support frame and cover and to connect cover with manhole roof opening. Provide moisture-tight masonry joints and waterproof grouting for cast-iron frame to chimney.

- F. Frame and Cover: Install grade rings centered on UCV top opening to elevate frame and cover to correct elevation. Provide moisture-tight masonry joints and waterproof grouting for cast-iron frame to grade rings. Provide additional steps in UCV throat at any location where the height of the grade rings exceeds 18-inches.

Retain one or both paragraphs below if concrete utility structures are to be waterproofed or dampproofed. See Editing Instruction No. 6 in the Evaluations.

- G. Waterproofing: Apply waterproofing to exterior surfaces of manholes[**and handholes**] after concrete has cured at least three days. Waterproofing materials and installation are specified in Section "[071326 **"Self-Adhering Sheet Waterproofing"**] [071353 **"Elastomeric Sheet Waterproofing"**] [071354 **"Thermoplastic Sheet Waterproofing"**]." After ducts have been connected and grouted, and before backfilling, waterproof joints and connections and touch up abrasions and scars.

Waterproof exterior of manhole chimneys after mortar has cured at least three days.

- H. Dampproofing: Apply dampproofing to exterior surfaces of manholes[**and handholes**] after concrete has cured at least three days. Dampproofing materials and installation are specified in Division 07 Section "Bituminous Dampproofing." After ducts have been connected and grouted, and before backfilling, dampproof joints and connections and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.

Coordinate paragraph below with Drawings. Delete second option if nonmetallic cable racks are specified.

- I. Hardware: Install removable hardware, including pulling eyes, cable stanchions, [**and**] cable arms, [**and insulators,**] as required for installation and support of cables and conductors and as indicated.

Delete first paragraph below if manhole ladder locations are detailed on Drawings.

- J. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.
- K. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than **3-7/8 inches** (98 mm) for manholes and **2 inches** (50 mm) for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.
- L. Warning Sign: Install "Confined Space Hazard" warning sign on the inside surface of each manhole cover.

3.6 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by the manufacturer.
- B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from **1/2-inch** (12.7-mm) sieve to **No. 4** (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevation: In paved areas and trafficways, set so cover surface will be flush with finished grade. Set covers of other handholes **1 inch** (25 mm) above finished grade.
- D. Install handholes and boxes with bottom below the frost line, **<Insert depth of frost line below grade at Project site>** below grade.

First paragraph below requires Contractor to select hardware to install and support cable. If desired, edit paragraph to refer Contractor to Drawings, and show on them specific requirements for each enclosure.

- E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.
- F. Field-cut openings for ducts and conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

Some manufacturers recommend structural protection similar to that described below for enclosures other than precast concrete, if they will be exposed to occasional nondeliberate loading by heavy-vehicle traffic, and particularly if they are to be installed in asphalt concrete paving. Consult manufacturers and edit paragraph and subparagraphs below to suit Project.

- G. For enclosures installed in [**asphalt paving**] [**and**] <Insert material> and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on [**compacted earth**] <Insert material>.
 - 1. Concrete: 3000 psi (20 kPa), 28-day strength, complying with Division 03 Section "Cast-in-Place Concrete," with a troweled finish.
 - 2. Dimensions: 10 inches wide by 12 inches deep (250 mm wide by 300 mm deep) <Insert dimensions>.

3.7 GROUNDING

- A. Ground underground ducts and utility structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."

3.8 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform the following tests and inspections and prepare test reports:
 - 1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.
 - 2. Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.
 - 3. Test manhole [**and handhole**] grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Correct deficiencies and retest as specified above to demonstrate compliance.

3.9 CLEANING

- A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.
- B. Clean internal surfaces of manholes, including sump. Remove foreign material.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 260544 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Sleeves for raceway and cable penetration of non-fire-rated construction walls and floors.
 - 2. Sleeve-seal systems.
 - 3. Sleeve-seal fittings.
 - 4. Grout.
 - 5. Silicone sealants.

- B. Related Requirements:

Retain subparagraph below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 078413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in

this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.

Retain the paragraph and sub paragraphs below only if project is pursuing LEED certification.

- B. LEED Submittals:

"Product Data for Credit EQ 4.1" Subparagraph below applies to LEED-NC, LEED-CI, and LEED-CS; coordinate with requirements for sealants.

- 1. Product Data for Credit EQ 4.1: For sealants, documentation including printed statement of VOC content.

"Laboratory Test Reports for Credit EQ 4" Subparagraph below applies to LEED for Schools.

- 2. Laboratory Test Reports for Credit EQ 4: For sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.4 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Division 01 Section "Product Requirements."

2.1 SLEEVES

A. Wall Sleeves:

Retain "Steel Pipe Sleeves" or "Cast-Iron Pipe Sleeves" Subparagraph below for penetrations through exterior walls above and below grade.

1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.
2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

Retain "Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies" Paragraph below when required by authorities having jurisdiction. NFPA 70 does not contain requirements for sleeves. The requirement below is from International Building Code, Section 712, "Penetrations."

- ### B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:
- Galvanized-steel sheet; 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

PVC sleeves in "PVC-Pipe Sleeves" and "Molded-PVC Sleeves" paragraphs below may be prohibited by authorities having jurisdiction.

- ### C. PVC-Pipe Sleeves:
- ASTM D 1785, Schedule 40.
- ### D. Molded-PVC Sleeves:
- With nailing flange for attaching to wooden forms.
- ### E. Molded-PE or -PP Sleeves:
- Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
- ### F. Sleeves for Rectangular Openings:
1. Material: Galvanized sheet steel.
 2. Minimum Metal Thickness:
 - a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and with no side larger than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
 - b. For sleeve cross-section rectangle perimeter 50 inches (1270 mm) or more and one or more sides larger than 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

2.2 SLEEVE-SEAL SYSTEMS

Sleeve-seal systems in this article are used for conduit penetrations in slabs-on-grade and in below-grade exterior walls.

- ### A. Description:
- Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. CALPICO, Inc.
 - c. Metraflex Company (The).
 - d. Pipeline Seal and Insulator, Inc.
 - e. Proco Products, Inc.
 - f. Link-Seal.
 - g. <Insert manufacturer>
 - h. or approved equal.

Retain first option in "Sealing Elements" Subparagraph below unless Nitrile (Buna N) rubber gasket material is required because hydrocarbons are present in the soil.

2. Sealing Elements: [EPDM] [Nitrile (Buna N)] rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: [Carbon steel] or [Stainless steel].
4. Connecting Bolts and Nuts: [Carbon steel, with corrosion-resistant coating,] [Stainless steel] of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

Sleeve-seal fittings in this article are used for conduit penetrations in slabs-on-grade and in exterior walls. These fittings are made to match conduit OD, so they must be selected to match the penetrating piping size. They are available for NPS 1/2 to 6 (DN 15 to 150) piping.

- A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Presealed Systems.
 - b. <Insert manufacturer>
 - c. or approved equal.

2.4 GROUT

- A. Description: Nonshrink; recommended for interior and exterior sealing openings in

non-fire-rated walls or floors.

- B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

Retain "Silicone Sealants" Article below when use of silicone sealants and silicone foams is permitted as an alternative to grout in sealing of conduit or cable penetrations in gypsum wallboard walls.

2.5 SILICONE SEALANTS

- A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.
 - 1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.

Retain first subparagraph below if required for LEED-NC, LEED-CI, or LEED-CS Credit EQ 4.1.

- 2. Sealant shall have VOC content of <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Retain subparagraph below if required for LEED for Schools.

- 3. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

- A. Comply with NECA 1.
- B. Comply with NEMA VE 2 for cable tray and cable penetrations.
- C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:
 - 1. Interior Penetrations of Non-Fire-Rated Walls and Floors:
 - a. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with

- requirements in Division 07 Section "Joint Sealants."
- b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.
2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
 3. Size pipe sleeves to provide [1/4-inch (6.4-mm)] <Insert dimension> annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed [or unless seismic criteria require different clearance].
 4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.

Retain subparagraph below when unsleeved core-drilled openings in concrete floors are not allowed.

5. Install sleeves for floor penetrations. Extend sleeves installed in floors [2 inches (50 mm)] <Insert dimension> above finished floor level. Install sleeves during erection of floors.
- D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:
1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
 2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.
- E. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- F. Aboveground, Exterior-Wall Penetrations: Seal penetrations using [steel] [cast-iron] pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- G. Underground, Exterior-Wall and Floor Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between raceway or cable and sleeve for installing sleeve-seal system.

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

Sleeve-seal systems in this article are used in slabs-on-grade and in below-grade exterior concrete walls for a watertight seal around service-piping entries into the building. These systems require installation in a sleeve for proper operation.

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.
- B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve.

Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

Sleeve-seal fittings in this article are used above and below grade in concrete slabs and in concrete walls for a watertight seal around piping. These fittings do not require a sleeve.

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260544

Copyright 2009 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260548 - VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Section includes the following:
 - 1. Isolation pads.
 - 2. Spring isolators.
 - 3. Restrained spring isolators.
 - 4. Channel support systems.
 - 5. Restraint cables.
 - 6. Hanger rod stiffeners.
 - 7. Anchorage bushings and washers.

- B. Related Sections include the following:

List below only products that the reader might expect to find in this Section but are specified elsewhere.

- 1. Section 260529 "Hangers and Supports for Electrical Systems" for commonly used electrical supports and installation requirements.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain abbreviations that remain after this Section has been edited.

- A. The IBC: International Building Code.
- B. ICC-ES: ICC-Evaluation Service.
- C. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic-Restraint Loading:

Obtain values for items in subparagraphs and associated subparagraphs below from Project structural engineer or from SEI/ASCE 7. If the code at Project site is other than IBC or NFPA 5000, revise parameters to comply with applicable code.

Specify design spectral response acceleration at short periods (0.2 second) and at 1.0 second based on site class in subparagraphs below. Typical values range from 2 to 200 percent. Design spectral response acceleration is required for seismic force calculations to size seismic restraints. For each seismic restraint, include component importance factor, component response modification factor, and component amplification factor in the Electrical Vibration-Control and Seismic-Restraint Device Schedule.

1. Site Class as Defined in the IBC: **[A] [B] [C] [D] [E] [F]**.

In subparagraph below, retain Seismic Use Group or Building Category for Project structure from three classifications defined in the IBC.

2. Assigned Seismic Use Group or Building Category as Defined in the IBC: **[I] [II] [III]**.

Retain first three subparagraphs below if these values are not included in the Electrical Vibration-Control and Seismic-Restraint Device Schedule on Drawings. Factors below often vary among supported equipment. However, it is possible to specify maximum values for these factors for various classes of equipment or for all equipment instead of scheduling each piece of equipment.

- a. Component Importance Factor: **[1.0] [1.5] <Insert value>**.
- b. Component Response Modification Factor: **[1.5] [2.5] [3.5] [5.0] <Insert value>**.
- c. Component Amplification Factor: **[1.0] [2.5] <Insert value>**.
3. Design Spectral Response Acceleration at Short Periods (0.2 Second): **<Insert percent>**.
4. Design Spectral Response Acceleration at 1.0-Second Period: **<Insert percent>**.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

A. Product Data: For the following:

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.

See Evaluations for a discussion on seismic-restraint capacities and rating services.

- a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by **[an evaluation service member of ICC-ES] [OSHPD] [an agency acceptable to authorities having jurisdiction]**.
- b. Annotate to indicate application of each product submitted and compliance with requirements.

Retain subparagraph below if vibration isolation devices are required for Project.

3. Restrained-Isolation Devices: Include ratings for horizontal, vertical, and combined loads.
4. Include data substantiating that materials comply with requirements.

Paragraph below is defined in Division 01 Section "Submittal Procedures" as a "Delegated-Design Submittal." Retain if Work of this Section is required to withstand specific design loads and design responsibilities have been delegated to Contractor or if structural data are required as another way to verify compliance with performance requirements. Professional engineer qualifications are specified in Division 01 Section "Quality Requirements."

B. Delegated-Design Submittal: For **[vibration isolation and]**seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic forces required to select vibration isolators and seismic restraints.
 - a. Coordinate design calculations with wind-load calculations required for equipment mounted outdoors. Comply with requirements in other Division 26 Sections for equipment mounted outdoors.
2. Indicate materials and dimensions and identify hardware, including attachment and anchorage devices.
3. Field-fabricated supports.

Retain subparagraph and associated subparagraphs below only if seismic design requirements apply but calculations have not been made and details or schedules on Drawings do not describe seismic restraints in detail. Retaining subparagraph will require Contractor to submit seismic-restraint Shop Drawings prepared by a professional engineer. Revise to suit local requirements.

4. Seismic-Restraint Details:

- a. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
- b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. [**Indicate association with vibration isolation devices.**]
- c. Preapproval and Evaluation Documentation: By [**an evaluation service member of ICC-ES**] [**OSHPD**] [**an agency acceptable to authorities having jurisdiction**], showing maximum ratings of restraint items and the basis for approval (tests or calculations).

1.6 INFORMATIONAL SUBMITTALS

Retain paragraph below if seismic bracing of conduit racks, cable trays, and other electrical system components will be installed in congested areas.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Show coordination of seismic bracing for electrical components with other systems and equipment in the vicinity, including other supports and seismic restraints.

Coordinate paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- B. Qualification Data: For professional engineer.

Retain paragraph below if procedures for welder certification are retained in "Quality Assurance" Article.

- C. Welding certificates.

Retain paragraph below if Contractor is responsible for field quality-control testing.

- D. Field quality-control test reports.

1.7 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

If an independent testing agency is required, see Division 01 Section "Quality Requirements" for general testing and inspecting agency qualification requirements.

- A. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.

Delete first paragraph below if no welding. Retain "Welding certificates" Paragraph in "Informational Submittals" Article if retaining below. AWS states that welding qualifications remain in effect indefinitely unless welding personnel have not welded for more than six months or there is a specific reason to question their ability.

- B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproval by ICC-ES, or preapproval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.
- D. Comply with NFPA 70.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ace Mountings Co., Inc.
 2. Amber/Booth Company, Inc.
 3. California Dynamics Corporation.
 4. Isolation Technology, Inc.
 5. Kinetics Noise Control.
 6. Mason Industries.
 7. Vibration Eliminator Co., Inc.
 8. Vibration Isolation.
 9. Vibration Mountings & Controls, Inc.
 10. **<Insert manufacturer>**
 11. or approved equal.

Copy paragraph and subparagraph below for each type of pad configuration required for Project. Use drawing designation and coordinate with the Electrical Vibration-Control and Seismic-Restraint Device Schedule on Drawings.

- B. Pads **<Insert drawing designation>**: Arrange in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.

Verify availability of various pad materials with manufacturers.

1. Resilient Material: Oil- and water-resistant [**neoprene**] [**rubber**] [**hermetically sealed compressed fiberglass**].

Copy paragraph and subparagraphs below for each type of spring isolator configuration required for Project. Use drawing designation and coordinate with the Electrical Vibration-Control and Seismic-Restraint Device Schedule on Drawings.

- C. Spring Isolators **<Insert drawing designation>**: Freestanding, laterally stable, open-spring isolators.
1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 2. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 3. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 5. Baseplates: Factory drilled for bolting to structure and bonded to **1/4-inch- (6-mm)** thick, rubber isolator pad attached to baseplate underside. Baseplates shall limit floor load to **500 psig (3447 kPa)**.
 6. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

Copy paragraph and subparagraphs below for each type of restrained spring isolator configuration required for Project. Use drawing designation and coordinate with the Electrical Vibration-Control and

Seismic-Restraint Device Schedule on Drawings.

- D. Restrained Spring Isolators **<Insert drawing designation>**: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.
1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to **1/4-inch-** (6-mm) thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
 2. Restraint: Seismic or limit-stop as required for equipment and authorities having jurisdiction.
 3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.2 SEISMIC-RESTRAINT DEVICES

Coordinate specifications for seismic-restraint components in this Article with structural engineer and with Drawings.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Amber/Booth Company, Inc.
 2. California Dynamics Corporation.
 3. Cooper B-Line, Inc.; a division of Cooper Industries.
 4. Hilti Inc.
 5. Loos & Co.; Seismic Earthquake Division.
 6. Mason Industries.
 7. TOLCO Incorporated; a brand of NIBCO INC.
 8. Unistrut; Tyco International, Ltd.
 9. **<Insert manufacturer>**
 10. or approved equal.

See Evaluations for a discussion on seismic-restraint capacities and rating services.

- B. General Requirements for Restraint Components: Rated strengths, features, and application requirements shall be as defined in reports by **[an evaluation service member of ICC-ES] [OSHPD] [an agency acceptable to authorities having jurisdiction]**.
1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least **[four] <Insert number>** times the maximum

seismic forces to which they will be subjected.

Two paragraphs below specify alternative types of seismic restraints for bracing suspended conduit and cable runs, wireways, cable trays, and busways. Retain one or both paragraphs and coordinate with Part 3, with electrical Sections specifying restrained items, and with Drawings. See Evaluations.

- C. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.
- D. Restraint Cables: **[ASTM A 603 galvanized]** **[ASTM A 492 stainless]**-steel cables with end connections made of steel assemblies with thimbles, brackets, swivels, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.

Retain first paragraph below for strengthening resistance of hanger rods against seismic forces that may cause buckling of rods; delete if detailed on Drawings. Use with either channel- or cable-type bracing assemblies when required to counter seismic forces. Detail fabrication and indicate locations on Drawings.

- E. Hanger Rod Stiffener: **[Steel tube or steel slotted-support-system sleeve with internally bolted connections]** **[Reinforcing steel angle clamped]** to hanger rod. Do not weld stiffeners to rods.
- F. Bushings for Floor-Mounted Equipment Anchor: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchors and studs.
- G. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices.
- H. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

Expansion-type anchor bolts are not permitted by SEI/ASCE 7 for non-isolated equipment in excess of 10 hp (7.46 kW).

- I. Mechanical Anchor: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchors with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.
- J. Adhesive Anchor: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

2.3 FACTORY FINISHES

Specify field-painting requirements in Division 09 Sections. Verify compatibility of factory finishes with field-applied coats. Indicate which groups of equipment are to receive various types of finish.

- A. Finish: Manufacturer's standard prime-coat finish ready for field painting.

Edit paragraph and subparagraphs below to include custom colors. Coordinate custom-color requirements with sample submittal requirements.

- B. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.
1. Powder coating on springs and housings.
 2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
 3. Baked enamel or powder coat for metal components on isolators for interior use.
 4. Color-code or otherwise mark vibration isolation and seismic-control devices to indicate capacity range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive [**vibration isolation and**] seismic-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by [**an evaluation service member of ICC-ES**] [**OSHPD**] [**an agency acceptable to authorities having jurisdiction**].

Indicate on Drawings, by details, schedules, or a combination of both, the locations where hanger rods for individual raceways, bus duct, cable trays, and hanger rods for trapeze hangers require hanger rod stiffeners.

- B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select

sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.3 SEISMIC-RESTRAINT DEVICE INSTALLATION

A. Equipment and Hanger Restraints:

Indicate type and quantity of restrained isolators described in first subparagraph below on Drawings or in the Electrical Vibration-Control and Seismic-Restraint Device Schedule on Drawings.

1. Install restrained isolators on electrical equipment.
 2. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
 3. Install seismic-restraint devices using methods approved by **[an evaluation service member of ICC-ES] [OSHPD] [an agency acceptable to authorities having jurisdiction]** providing required submittals for component.
- B. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- C. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- D. Drilled-in Anchors:
1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 2. Anchoring deeper than 1-1/2" in overhead cast in place, pre-tensioned or post-tensioned concrete is prohibited unless x-ray or ground penetrating radar study are performed and approved by the DEN Project Manager.
 3. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 4. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 5. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
 6. Set anchors to manufacturer's recommended torque, using a torque wrench.
 7. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.
 8. Plastic or fiber anchors are prohibited.

3.4 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

Coordinate this Article with Drawings.

- A. Install flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where they terminate with connection to equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

3.5 FIELD QUALITY CONTROL

Retain this Article if testing of anchors and supports is required.

Retain paragraph below to require Contractor to perform tests and inspections.

- A. Perform tests and inspections.

Retain paragraph and subparagraphs below to describe tests and inspections to be performed.

- B. Tests and Inspections:
 - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
 - 2. Schedule test with Owner, through DEN Project Manager, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven (7) days' advance notice.
 - 3. Obtain DEN Project Manager's approval before transmitting test loads to structure. Provide temporary load-spreading members.
 - 4. Test at least **[four (4)] <Insert number>** of each type and size of installed anchors and fasteners selected by DEN Project Manager.
 - 5. Test to 90 percent of rated proof load of device.

Retain first three subparagraphs below if vibration isolators are required for Project.

- 6. Measure isolator restraint clearance.
 - 7. Measure isolator deflection.
 - 8. Verify snubber minimum clearances.
 - 9. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Adjust isolators after isolated equipment is at operating weight.

- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust active height of spring isolators.
- D. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.7 ELECTRICAL VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE SCHEDULE

Revise schedule below to suit Project. Do not duplicate requirements in Part 2. Refer to a completed example in the Evaluations for an explanation on how to use schedules. If a schedule is not included on Drawings, retain below to indicate location and type of required vibration isolators and seismic restraints.

Copy and re-edit paragraph and associated subparagraphs below for each piece of supported or suspended equipment required.

- A. Supported or Suspended Equipment: **<Insert name and drawing designation>**.
 - 1. Equipment Location: **<Insert room number>**.
 - 2. Pads:
 - a. Material: **[Neoprene] [Rubber] [Hermetically sealed compressed fiberglass]**.
 - b. Thickness: **<Insert inches (mm)>**.
 - c. Durometer: **<Insert number>**.
 - d. Number of Pads: **<Insert number>** thick.
 - 3. Isolator Type: **<Insert generic name or designation used in Part 2>**.
 - 4. Component Importance Factor: **[1.0] [1.5]**.
 - 5. Component Response Modification Factor: **[1.5] [2.5] [3.5] [5.0]**.
 - 6. Component Amplification Factor: **[1.0] [2.5]**.

PART 4 - METHOD OF MEASUREMENT

- 4.1 No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **260548**

Copyright 2009 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES ARE TO BE DELETED FROM FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Identification for raceways.
 - 2. Identification of power and control cables.
 - 3. Identification for conductors.
 - 4. Underground-line warning tape.
 - 5. Warning labels and signs.
 - 6. Instruction signs.
 - 7. Equipment identification labels.
 - 8. Miscellaneous identification products.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each electrical identification product indicated.
 - 1. Include data substantiating that materials comply with requirements.

Retain both paragraphs below if Project requirements are complex.

Delete sample requirement in paragraph below if project is of very limited scope, and deletion is approved by DEN Project Manager.

Coordinate sample requirements with DEN Project Manager.

- B. Samples: For each type of label and sign to illustrate size, colors, lettering style, mounting provisions, and graphic features of identification products.
- C. Identification Schedule: An index of nomenclature of electrical equipment and system components used in identification signs and labels.

1.4 QUALITY ASSURANCE

Retain IEEE C2 in first paragraph below for projects with electrical utility work, including underground and overhead distribution and medium-voltage cabling. By reference, IEEE C2 requires compliance with ANSI Z531.1 through ANSI Z531.5. See Evaluations for additional description of the scope of these standards.

- A. Comply with ANSI A13.1[and IEEE C2].
- B. Comply with NFPA 70.
- C. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.
- D. Comply with ANSI Z535.4 for safety signs and labels.

Retain paragraph below if retaining self-adhesive products in Part 2. See Editing Instruction No. 1 in the Evaluations.

- E. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

1.5 COORDINATION

- A. Coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual; and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.
- B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

- C. Coordinate installation of identifying devices with location of access panels and doors.
- D. Install identifying devices before installing acoustical ceilings and similar concealment.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.6 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

Retain products in articles below that are retained in "Identification Schedule" Article. Consider alternatives before specifying self-adhesive identification products. See Editing Instruction No. 1 and "Writing Guide" Article in the Evaluations.

2.1 POWER RACEWAY IDENTIFICATION MATERIALS

Retain this article to require identification exceeding requirements in NFPA 70. See "NFPA Requirements" Article in the Evaluations.

- A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway size.
- B. Colors for Raceways Carrying Circuits at More Than 600 V:
 - 1. Black letters on an orange field.
 - 2. Legend: "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch (75-mm) high letters on 20-inch (500-mm) centers.

Retain one or more of six paragraphs below. Coordinate with "Identification Schedule" Article. See Editing Instruction No. 1 in the Evaluations for a discussion on self-adhesive products.

- C. Tape and Stencil for Raceways Carrying Circuits More Than 600 V: 4-inch (100-mm-) wide black stripes on 10-inch (250-mm) centers diagonally over orange background that extends full length of raceway or duct and is 12 inches (300 mm) wide. Stop stripes at legends.
- D. Pre-Printed Tags: Polyester tag, [0.010 inch (0.25 mm)] [0.015 inch (0.38 mm)] <Insert dimension> thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.
 - 1. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.2 POWER AND CONTROL CABLE IDENTIFICATION MATERIALS

- A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.

Retain one or more of five paragraphs below. Coordinate with "Identification Schedule" Article. See Editing Instruction No. 1 in the Evaluations for a discussion on self-adhesive products.

Specify thicker tags in first paragraph below where exposed to damage or to rough service.

- B. Pre-Printed Tags: Polyester tag, [0.010 inch (0.25 mm)] [0.015 inch (0.38 mm)] **<Insert dimension>** thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.
1. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.
- C. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeve, with diameter sized to suit diameter of cable it identifies and to stay in place by gripping action.
- D. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeve, 2 inches (50 mm) long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

2.3 CONDUCTOR IDENTIFICATION MATERIALS

Retain this article to require identification exceeding requirements in NFPA 70. See "NFPA Requirements" Article in the Evaluations.

Retain first paragraph below for colored tape used to identify phase or voltage of circuits.

- A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils (0.08 mm) thick by 1 to 2 inches (25 to 50 mm) wide.
- B. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.
- C. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeve, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.
- D. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeve, 2 inches (50 mm) long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.
- E. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

Specify thicker tags in first paragraph below where exposed to damage or to rough service.

- F. Pre-Printed Tags: Polyester tag, [0.010 inch (0.25 mm)] [0.015 inch (0.38 mm)] <Insert dimension> thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.
 - 1. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.4 FLOOR MARKING TAPE

- A. 2-inch (50-mm) wide, 5-mil (0.125-mm) pressure-sensitive vinyl tape, with black and white stripes and clear vinyl overlay.

2.5 UNDERGROUND-LINE WARNING TAPE

Common trenching and tape laying methods are hand, static plow, and vibratory plow. Revise options in this article if only specific trenching methods are allowed.

- A. Tape:
 - 1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical [**and communications**] utility lines.
 - 2. Printing on tape shall be permanent and shall not be damaged by burial operations.
 - 3. Tape material and ink shall be chemically inert, and not subject to degrading when exposed to acids, alkalis, and other destructive substances commonly found in soils.
- B. Color and Printing:
 - 1. Comply with ANSI Z535.1 through ANSI Z535.5.
 - 2. Inscriptions for Red-Colored Tapes: ELECTRIC LINE, HIGH VOLTAGE, <Insert inscription>.
 - 3. Inscriptions for Orange-Colored Tapes: TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE, <Insert inscription>.

Use drawing designation in remaining paragraphs below on Drawings. First two paragraphs are generally standard- and extra-strength nonconducting protective tapes. Third and fourth paragraphs are conductive tapes suitable for conductive or inductive tracing to locate and identify the underground utility; the sequence is for standard- and extra-strength tapes. Listed weight, thickness, and strength of tapes is typical for generally available stock.

- C. Tag: [**Type ID**] <Insert drawing designation>:
 - 1. Detectable three-layer laminate, consisting of a printed pigmented polyolefin film, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core, bright-colored, [**continuous-printed on one side with the inscription of the utility**,]compounded for direct-burial service.

2. Overall Thickness: **5 mils** (0.125 mm).
3. Foil Core Thickness: **0.35 mil** (0.00889 mm).
4. Weight: **28 lb/1000 sq. ft.** (13.7 kg/100 sq. m).
5. **3-Inch** (75-mm) Tensile According to ASTM D 882: **70 lbf** (311.3 N), and **4600 psi** (31.7 MPa).

D. Tag: **[Type IID] <Insert drawing designation>**:

1. Reinforced, detectable three-layer laminate, consisting of a printed pigmented woven scrim, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core, bright-colored, **[continuous-printed on one side with the inscription of the utility,**]compounded for direct-burial service.
2. Overall Thickness: **8 mils** (0.2 mm).
3. Foil Core Thickness: **0.35 mil** (0.00889 mm).
4. Weight: **34 lb/1000 sq. ft.** (16.6 kg/100 sq. m).
5. **3-Inch** (75-mm) Tensile According to ASTM D 882: **300 lbf** (1334 N), and **12,500 psi** (86.1 MPa).

2.6 WARNING LABELS AND SIGNS

- A. Comply with NFPA 70 and 29 CFR 1910.145.

Retain one or more of four paragraphs below. Coordinate with "Identification Schedule" Article. See Editing Instruction No. 1 in the Evaluations for a discussion on self-adhesive products.

- B. Self-Adhesive Warning Labels: Factory-printed, multicolor, pressure-sensitive adhesive labels, configured for display on front cover, door, or other access to equipment unless otherwise indicated.
- C. Baked-Enamel Warning Signs:
1. Preprinted 20 gauge steel signs, punched or drilled for fasteners, with colors, legend, and size required for application.
 2. **1/4-inch** (6.4-mm) grommets in corners for mounting.
 3. Nominal size, **14 by 10 inches** (360 mm by 250 mm) unless **7 by 10 inches** (180 by 250 mm) is the largest size that can be applied where needed.
- D. Metal-Backed, Butyrate Warning Signs:
1. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with **0.0396-inch** (1-mm) galvanized-steel backing; and with colors, legend, and size required for application.
 2. **1/4-inch** (6.4-mm) grommets in corners for mounting.
- E. Nominal size, **14 by 10 inches** (360 mm by 250 mm) unless **7 by 10 inches** (180 by 250 mm) is the largest size that can be applied where needed.
- F. Warning label and sign shall include, but are not limited to, the following legends:

1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."

First subparagraph below applies to OSHA requirements for building operations and does not reflect the clear working space required by NFPA 70.

2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES (915 MM)."
3. "XXXX VOLTS"
4. "KEEP AWAY"
5. "BURIED CABLE"
6. "DO NOT TOUCH SWITCH"
7. <Insert names and wording of warning signs or labels; e.g., arc-flash, multiple services and voltages, and others>.

G. Plasticized Tags:

1. Manufacturer's standard preprinted or partially preprinted accident-prevention and operational tags, on plasticized card stock with matte finish suitable for writing, approximately 3-1/4-inch x 5-5/8-inch, with brass grommets and wire fasteners, and with appropriate preprinted wording including large-size primary wording, including but not limited to the following legends: "DANGER", "CAUTION", "DO NOT OPERATE".

2.7 INSTRUCTION SIGNS

Coordinate this article with Drawings.

- A. Engraved, laminated acrylic or melamine plastic, minimum 1/16 inch (1.6 mm) thick for signs up to 20 sq. inches (129 sq. cm) and 1/8 inch (3.2 mm) thick for larger sizes.
 1. Engraved legend with [black letters on white face] <Insert colors>.
 2. Punched or drilled for mechanical fasteners.
 3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.
- B. Adhesive Film Label: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch (10 mm).
- C. Adhesive Film Label with Clear Protective Overlay: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch (10 mm). Overlay shall provide a weatherproof and UV-resistant seal for label.

2.8 EQUIPMENT IDENTIFICATION LABELS

- A. Adhesive Film Label: Machine printed, in black letters on white background, by thermal transfer or equivalent process. Minimum letter height shall be 1/4 inch (7 mm).
- B. Adhesive Film Label with Clear Protective Overlay: Machine printed, in black letters on

white background, by thermal transfer or equivalent process. Minimum letter height shall be **1/4 inch (7 mm)**. Overlay shall provide a weatherproof and UV-resistant seal for label.

- C. Self-Adhesive, Engraved, Laminated Acrylic, or Melamine Label: Adhesive backed, with black letters on white background. Minimum letter height shall be **1/4 inch (7 mm)**.
- D. Engraved, Laminated Acrylic or Melamine Label: Punched or drilled for screw mounting. Black letters on a white background. Minimum letter height shall be **1/4 inch (7 mm)**.

Retain paragraph below to specify type of label for identifying outdoor equipment if specified in "Identification Schedule" Article.

- E. Stenciled Legend: In nonfading, waterproof, [**black**] <Insert color> ink or paint. Minimum letter height shall be [**1 inch (25 mm)**] <Insert dimension>.
- F. Emergency Equipment labels shall be white letters on red background..
- G. Provide nameplates with a minimum letter height as indicated below. Examples are given below for the size of letters to use for a given application and this not a list of the equipment to be identified. All equipment is required to be identified.
 - 1. For equipment designation: switchboards and motor control centers: 1/2 inch, panel boards: 1/4 inch. For voltage, bus ampacity, feeder source, and circuit number: 1/8 inch.
 - 2. Individual circuit breakers and or motor starters in motor control centers: For equipment designation and section number: 1/4 inch, for load served and location of load: 1/8 inch. Inside the door, a typed label shall provide complete motor data including nameplate horsepower, full load amperes, code letter, service factor, and voltage/phase rating.
 - 3. Individual breakers in switchgears and switchboards: for breaker number (address number) and equipment designation; 1/4 inch, for breaker frame size and trip setting; 1/8 inch
 - 4. Individual circuit breaker and spaces in panel boards: for numbers (section number) 1/4 inch.
 - 5. Individual circuit breakers in distribution panel boards: 1/4 inch for panel being fed and 1/8 inch for its location.
 - 6. Transformers: 1/4 inch for equipment designation and size; 1/8 inch for primary and secondary voltages, primary source and circuit number, secondary load and its location.
 - 7. Individual remote indicating lights, meters, instruments, and control switches: 1/8 inch, indicate unit, equipment, or fire detector being monitored and condition indicated by illumination.
 - 8. Individual switches and pilots: 1/8 inch, identify mechanical unit being served.
 - 9. Disconnects, relay panels, lighting contactors: 1/4 inch for voltage and source circuit number.

2.9 CABLE TIES

- A. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, Type 6/6 nylon.
1. Minimum Width: **1/8 inch (3 mm)**.
 2. Tensile Strength at **73 deg F (23 deg C)**, According to ASTM D 638: **12,000 psi (82.7 MPa)**.
 3. Temperature Range: **Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C)**.
- B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, Type 6/6 nylon.
1. Minimum Width: **3/16 inch (5 mm)**.
 2. Tensile Strength at **73 deg F (23 deg C)**, According to ASTM D 638: **12,000 psi (82.7 MPa)**.
 3. Temperature Range: **Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C)**.
- C. Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, self-locking.
1. Minimum Width: **3/16 inch (5 mm)**.
 2. Tensile Strength at **73 deg F (23 deg C)**, According to ASTM D 638: **7000 psi (48.2 MPa)**.
 3. UL 94 Flame Rating: 94V-0.
 4. Temperature Range: **Minus 50 to plus 284 deg F (Minus 46 to plus 140 deg C)**.

2.10 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Paint: Comply with requirements in Division 09 painting Sections for paint materials and application requirements. Select paint system applicable for surface material and location (exterior or interior).
- B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Verify identity of each item before installing identification products.

Coordinate first paragraph below with Drawings.

- B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.
- C. Apply identification devices to surfaces that require finish after completing finish work.

Retain first paragraph below if self-adhesive identification products are specified. See Editing Instruction No. 1 in the Evaluations.

- D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.

Retain first paragraph below for nonadhesive signs or labels.

- E. Attach signs and plastic labels that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.

Retain first paragraph below if color-coding bands are specified to identify different systems and distinguish one from another.

- F. System Identification Color-Coding Bands for Raceways and Cables: Each color-coding band shall completely encircle cable or conduit. Place adjacent bands of two-color markings in contact, side by side. Locate bands at changes in direction, at penetrations of walls and floors, at **50-foot (15-m)** maximum intervals in straight runs, and at **25-foot (7.6-m)** maximum intervals in congested areas.
- G. Cable Ties: For attaching tags. Use general-purpose type, except as listed below:
 - 1. Outdoors: UV-stabilized nylon.
 - 2. In Spaces Handling Environmental Air: Plenum rated.
- H. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at **6 to 8 inches (150 to 200 mm)** below finished grade. Use multiple tapes where width of multiple lines installed in a common trench [**or concrete envelope**] exceeds **16 inches (400 mm)** overall.
- I. Painted Identification: Comply with requirements in Division 09 painting Sections for surface preparation and paint application.

3.2 IDENTIFICATION SCHEDULE

Retain first paragraph below if Project contains concealed wiring more than 600 V that is adjacent to accessible building surfaces; for example, wiring below floors or wiring in vertical shafts behind gypsum board or masonry partitions.

- A. Wire and Cable Marker:
 - 1. For wire/cables smaller than No. 2/0 use manufacturer's standard cable/conductor markers of wrap-around, pre-numbered plastic coated type are to be used and numbered to show circuit identification.
 - 2. For cables No. 4 AWG and larger heat shrink sleeving is to be used for phase color-coding.
- B. Cable/Conductor Identification:
 - 1. The application of cable/conductor identification, with circuit number, on each

wire / cable in each box/enclosure/cabinet is required. The identification shall match the marking system used in panel boards, shop drawings, and contract documents.

C. System Color Coding Schedule:

1. Where electrical emergency power is exposed, conduit shall have "RED" stripes on each section every 5 feet of electrical conduit (visible from the floor or above a suspended ceiling) and within 3 feet of all equipment.) All junction or pull boxes shall have the cover painted red.
2. Paging system conduits shall have "GREEN" bands, 5' on centers for the entire length of conduit run. All junction or pull boxes shall have the cover painted green with the associated zone number written neatly on the box cover with permanent marker.
3. Security system conduits shall have "BLUE" bands, 5' on centers for the entire length. All junction or pull boxes shall have the cover painted blue.
4. Temperature control conduits shall have "BROWN" bands, 5' on centers for the entire length. All junction or pull boxes shall have the cover painted brown.
5. Closed circuit television (CCTV) conduits shall have YELLOW bands, 5' on center for the entire length. All junction or pull boxes shall have the cover painted yellow.
6. Fire Alarm conduit shall be a continuous red factory finish.

D. Concealed Raceways, Duct Banks, More Than 600 V, within Buildings: Tape and stencil 4-inch (100-mm) wide black stripes on 10-inch (250-mm) centers over orange background that extends full length of raceway or duct and is 12 inches (300 mm) wide. Stencil legend "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch (75-mm) high black letters on 20-inch (500-mm) centers. Stop stripes at legends. Apply to the following finished surfaces:

1. Floor surface directly above conduits running beneath and within 12 inches (300 mm) of a floor that is in contact with earth or is framed above unexcavated space.
2. Wall surfaces directly external to raceways concealed within wall.
3. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in the building, or concealed above suspended ceilings.

Retain first paragraph below for circuits operating more than 600 V; paragraph contains requirements exceeding those in NFPA 70.

E. Accessible Raceways, More Than 600 V: Self-adhesive vinyl Snap-around labels. Install labels at maximum intervals.

Retain one or both of first two paragraphs below. Delete both for existing systems and replace with the existing identification scheme.

F. Accessible Raceways, 600 V or Less, for Service, Feeder, and Branch Circuits More Than A, and V to ground: Identify with self-adhesive vinyl label self-adhesive vinyl tape applied in bands. Install labels at maximum intervals.

G. Junction and Pull Box ID: Identify the covers of each junction and pull box of the following systems with self-adhesive vinyl labels with the wiring system legend and

system voltage. System legends shall be as follows:

1. Emergency Work: EM.
2. Power.
3. Uninterruptible Power Supply: UPS.
4. Fiber Optics: FO.
5. Closed Circuit Television: CCTV.
6. Paging System: PA.
7. Radio Frequency: RF.
8. Fire Alarm: FA.
9. Temperature Control: TC.

Retain first paragraph below if color-coding of power and lighting conductors for phase or voltage level identification is required to suit authorities having jurisdiction or special Project requirements. If retaining, coordinate with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables" and revise to indicate extent of color-coding required. For existing buildings, indicate whether requirements apply to both old and new wiring or to new wiring only. Below applies only to phase conductors. Color-coding of grounded and grounding conductors is dictated by NFPA 70. Verify that Owner does not require another color-code.

Specify that colors for factory-assembled cable, such as MC and AC, must match colors listed in first paragraph below.

H. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use color-coding conductor tape to identify the phase.

1. Color-Coding for Phase Identification, 600 V or Less: Use colors listed below for branch-circuit conductors.
 - a. Color shall be factory applied [or field applied for sizes larger than No. 8 AWG, if authorities having jurisdiction permit].
 - b. Colors for 208/120-V Circuits:
 - 1) Phase A: Black.
 - 2) Phase B: Red.
 - 3) Phase C: Blue.
 - 4) Neutral: White
 - 5) Ground: Green
 - 6) Isolated Ground: Green with a yellow tracer
 - c. Colors for 480/277-V Circuits:

Colors specified in first three subparagraphs below are those generally used for phase conductors at this voltage.

- 1) Phase A: Brown.
- 2) Phase B: Orange.
- 3) Phase C: Yellow.
- 4) Neutral: Gray
- 5) Ground: Green

6) Isolated Ground: Green with a yellow tracer

If field-applied color-coding is permitted, retain subparagraph below.

- d. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches (150 mm) from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Locate bands to avoid obscuring factory cable markings.
- I. Power-Circuit Conductor Identification, More than 600 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use write-on tags nonmetallic plastic tag holder with adhesive-backed phase tags, and a separate tag with the circuit designation.
- J. Install instructional sign including the color-code for conductors using adhesive-film-type labels.

Retain first paragraph below for future expansion of circuits or if required for circuits for other purposes. Coordinate with Drawings.

- K. Conductors to Be Extended in the Future: Attach write-on tags marker tape to conductors and list source.
- L. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.
 - 1. Identify conductors, cables, and terminals in enclosures and at junctions and terminals. Identify by system and circuit designation.
 - 2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
 - 3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual.
- M. Locations of Underground Lines: Identify with underground-line detectable warning tape for power, lighting, communication, and control wiring and optical fiber cable.
 - 1. Install underground-line detectable line marker for encased duct bank, direct-buried cables, and cables in raceway.
- N. Workspace Indication: Install floor marking tape to show working clearances in the direction of access to live parts. Workspace shall be as required by NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.
- O. Danger Signs:
 - 1. Critical Switches/Controls: Danger signs shall be provided on switches and similar controls, regardless of whether concealed or locked up, where untimely or inadvertent operation could result in danger to persons, or damage to equipment, or damage to or loss of property.

- P. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Self-adhesive warning labels Baked-enamel warning signs Metal-backed, butyrate warning signs.
1. Comply with 29 CFR 1910.145.
 2. Identify system voltage with black letters on an orange background.
 3. Apply to exterior of door, cover, or other access.
 4. For equipment with multiple power or control sources, apply to door or cover of equipment including, but not limited to, the following:
 - a. Power transfer switches.
 - b. Controls with external control power connections.
 - c. **<Insert items>**.
- Q. Caution Signs:
1. The following red caution sign is to be provided for all circuit breakers and switchboards where turning off a circuit will automatically start an emergency operation:
 - a. "Caution Turning Off this Circuit will Automatically Start Emergency Operation"
 2. The following red caution sign is to be provided for all automatic transfer switches, switches, circuit breakers, equipment, and emergency panels that are energized by the emergency power system:
 - a. "Caution Automatically Energized by Emergency Power Supply System".
- R. Operating Instruction Signs: Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation. Where detailed instructions or explanations are needed, provide plasticized tags with clearly written messages adequate for intended purposes.
- S. Emergency Operating Instruction Signs: Install instruction signs with white legend on a red background with minimum **3/8-inch (10-mm)** high letters for emergency instructions at equipment used for **[power transfer] [load shedding] <Insert emergency operations>**.

Coordinate paragraph below with electrical Sections in Divisions 26, 27, and 28. Delete items not in Project.

- T. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and the Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.
1. Labeling Instructions:

- a. Indoor Equipment: Mechanically fastened, engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch (13-mm) high letters on 1-1/2-inch (38-mm) high label; where two lines of text are required, use labels 2 inches (50 mm) high. Use black lettering on white field for normal and white letters on a red field for emergency. Provide text matching terminology and numbering of the contract documents and shop drawings. The sign shall include unit designation, source circuit number, circuit voltage, and other data specifically indicated. Also, the sign shall indicate normal source circuit number ("Fed from . . .") and emergency source circuit number when the equipment is a transfer switch or fed directly from a transfer switch.
- b. Outdoor Equipment: Engraved, laminated acrylic or melamine label
Stenciled legend 4 inches (100 mm) high.
- c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.
- d. Fasten labels with appropriate mechanical fasteners that do not change the NEMA or NRTL rating of the enclosure.

2. Equipment to Be Labeled:

Identification labeling of some items listed below may be required by individual Sections or by NFPA 70.

- a. Panelboards: include main bus ampacity on sign. Typewritten directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be **[self-adhesive, engraved] [engraved]**, laminated acrylic or melamine label.
- b. Enclosures and electrical cabinets.
- c. Access doors and panels for concealed electrical items.
- d. Switchgear.
- e. Switchboards.
- f. Disconnect switch.
- g. Transformers: Label that includes tag designation shown on Drawings for the transformer, feeder, and panelboards or equipment supplied by the secondary.
- h. Substations.
- i. Emergency system boxes and enclosures.
- j. Motor-control centers.
- k. Enclosed switches.
- l. Selector switches, indicating lights. (Circuit number and voltage not required on sign).
- m. Enclosed circuit breakers.
- n. Enclosed controllers.
- o. Variable-speed controllers.
- p. Push-button stations.
- q. Power transfer equipment.
- r. Contactors.
- s. Remote-controlled switches, dimmer modules, and control devices.
- t. Battery-inverter units.
- u. Battery racks.
- v. Power-generating units.

- w. Monitoring and control equipment.
 - x. UPS equipment.
 - y. Telephone cabinets and switching equipment. (Circuit number and voltage not required on sign.)
 - z. Fire alarm panels.
 - aa. Security monitoring master station.
 - bb. Relays
 - cc. Lighting contactors
 - dd. Individual distribution circuit breakers
 - ee. **<Insert equipment>**.
3. All panel boards shall have a typed panel schedule indicating the date, contractor, type of equipment served, and its location.

3.3 ELECTRICAL PANEL NAMING CONVENTIONS

A. Naming Electrical Panels for Grounds & Outlying Buildings

- 1. Use DEN utility map for main and secondary grids
- 2. Example: **L-13F4TDEH1-A**
 - a. **L-13** indicates Utility map book page location. Choices: A through FF (West to East) and 1 through 31 (South to North).
 - b. **F4** indicates Location grid on above page. Choices: A through J (West to East) and 1 through 10 (North to South).
 - c. **T** Indicates Airline Tenant, **R** for Retail / Food and Beverage tenant or panel if appropriate, or blank [no space] if DEN.
 - d. **D** Indicates Distribution panel if appropriate, or blank (no space) if Not Distribution.
 - e. **E** Indicates panel feeder function. Choices: E (Emergency), ES (Essential Power) or U (UPS Origin).
 - f. **H** indicates Panel voltage. Choices: H = 600 or 480Y/277 or L = 208Y/120 or 240/120.
 - g. **1** indicates Sequence number of this panel supplied from this source. Choices: 1...N.
 - h. **-A** indicates Sub-fed panel suffix, if appropriate. Choices: -A ...as required.

B. Naming Electrical Panels for Concourse Buildings and Tunnel System

- 1. Example: **B-AW1TDEL1-A**
 - a. **B-** indicates Concourse letter. Choices: A through C (South to North).
 - b. **A** indicates Floor level. Choices: T (Tunnel) or B (Basement) or A (Apron) or C (Concourse) or M Mezzanine) or 4 (Fourth Floor) or 5 (Fifth Floor) or R (Roof).
 - c. **W1** indicates Core area. Choices: CE (Center Core East Side) or CW (Center Core West Side) or E1 ... E3 (Sub-Core Number East of Center Core) or W1 ... W3 (Sub-Core Number West of Center Core).
 - d. **T** Indicates Airline Tenant, **R** for Retail / Food and Beverage tenant or panel

- if appropriate, or blank [no space] if DEN.
- e. **D** indicates distribution panel if appropriate or blank (No Space) if Not Distribution.
 - f. **E** Indicates panel feeder function. Choices: E (Emergency), ES (Essential Power) or U (UPS Origin)
 - g. **L** indicates Panel voltage. Choices: H = 600 or 480Y/277 or L = 208Y/120 or 240/120
 - h. **1** indicates Sequence number of this panel supplied from this source. Choices: 1...N
 - i. **-A** indicates Sub-fed panel suffix, if appropriate. Choices: -A ...as required.

C. Naming Electrical Panels for Terminal, AOB & Parking Structures

1. Example: **6-11CTDEL2-A**

- a. **6-** indicates Floor level. Choices: T (Tunnel) or 1 through 11, depending on building.
- b. **11C** indicates Module designation (see Architectural designation). Choices: 01 through 15 and A through D.
- c. **T** Indicates AIRLINE TENANT, **R** for Retail / Food and Beverage tenant or panel if appropriate, or blank (No Space) if DEN.
- d. **D** Indicates distribution panel if appropriate, or blank (No Space) if Not Distribution.
- e. **E** Indicates panel feeder function. Choices: E (Emergency), ES (Essential Power) or U (UPS Origin).
- f. **L** indicates Panel voltage. Choices: H = 600 or 480Y/277 or L = 208Y/120 or 240/120.
- g. **2** indicates Sequence number of this panel supplied from this source. Choices: 1...N.
- h. **-A** indicates Sub-fed panel suffix, if appropriate. Choices: -A ...as required.

D. Naming Disconnects and Transformers

- 1. Disconnects shall have the same as the equipment they serve.
- 2. Transformers shall have the same name as the low-voltage panel they supply power to with the extension of -X

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260553

SECTION 260573 - OVERCURRENT PROTECTIVE DEVICE COORDINATION STUDY

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Section includes computer-based, fault-current and overcurrent protective device coordination studies. Protective devices shall be set based on results of the protective device coordination study.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For computer software program to be used for studies.
 - 1. Include data substantiating that materials comply with requirements.
- B. Other Action Submittals: The following submittals shall be made after the approval process for system protective devices has been completed. Submittals [**shall**] [**may**] be in digital form.

1. Coordination-study input data, including completed computer program input data sheets.
2. Study and Equipment Evaluation Reports.
3. Coordination-Study Report.

1.4 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements retained in "Quality Assurance" Article.

- A. Qualification Data: For coordination-study specialist.
- B. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399.

1.5 QUALITY ASSURANCE

- A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.
- B. Coordination-Study Specialist Qualifications: An entity experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.

Retain subparagraph below if electrical engineer responsible for design of this Project will not be responsible for results of study and set points of system protective devices.

1. Professional engineer, licensed in the state where Project is located, shall be responsible for the study. All elements of the study shall be performed under the direct supervision and control of engineer.
- C. Comply with IEEE 242 for short-circuit currents and coordination time intervals.
- D. Comply with IEEE 399 for general study procedures.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming computer software developers and products. Retain paragraph and list of computer software developers in this Article. See Section 016000 "Product Requirements."

- A. Computer Software Developers: Subject to compliance with requirements, provide products by one of the following:
 1. CGI CYME.

2. EDSA Micro Corporation.
3. ESA Inc.
4. Operation Technology, Inc.
5. SKM Systems Analysis, Inc.
6. ETAP Inc.
7. <Insert manufacturer>
8. or approved equal.

2.2 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

- A. Comply with IEEE 399.
- B. Analytical features of fault-current-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.
- C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.

See Editing Instruction No. 2 in the Evaluations for discussion of optional features.

1. Optional Features:
 - a. Arcing faults.
 - b. Simultaneous faults.
 - c. Explicit negative sequence.
 - d. Mutual coupling in zero sequence.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.
 1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.2 POWER SYSTEM DATA

Verify that power system data is indicated on Drawings, allowing Contractor to complete the data gathering specified in this Article. Drawing Coordination Checklist may be useful in verification.

- A. Gather and tabulate the following input data to support coordination study:
1. Product Data for overcurrent protective devices specified in other electrical Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
 2. Impedance of utility service entrance.
 3. Electrical Distribution System Diagram: In hard-copy and electronic-copy formats, showing the following:
 - a. Circuit-breaker and fuse-current ratings and types.
 - b. Relays and associated power and current transformer ratings and ratios.
 - c. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
 - d. Generator kilovolt amperes, size, voltage, and source impedance.
 - e. Cables: Indicate conduit material, sizes of conductors, conductor material, insulation, and length.
 - f. Busway ampacity and impedance.
 - g. Motor horsepower and code letter designation according to NEMA MG 1.
 4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:
 - a. Special load considerations, including starting inrush currents and frequent starting and stopping.
 - b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
 - c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
 - d. Generator thermal-damage curve.
 - e. Ratings, types, and settings of utility company's overcurrent protective devices.
 - f. Special overcurrent protective device settings or types stipulated by utility company.
 - g. Time-current-characteristic curves of devices indicated to be coordinated.
 - h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
 - i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
 - j. Panelboards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

3.3 FAULT-CURRENT STUDY

- A. Calculate the maximum available short-circuit current in amperes rms symmetrical at

circuit-breaker positions of the electrical power distribution system. The calculation shall be for a current immediately after initiation and for a three-phase bolted short circuit at each of the following:

1. Switchgear and switchboard bus.
 2. Medium-voltage controller.
 3. Motor-control center.
 4. Distribution panelboard.
 5. Branch circuit panelboard.
 6. **<Insert significant locations in system.>**
- B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Include studies of system-switching configurations and alternate operations that could result in maximum fault conditions.
- C. Calculate momentary and interrupting duties on the basis of maximum available fault current.

See Editing Instruction No. 4 in the Evaluations for discussion of standards listed in first paragraph below.

- D. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with [IEEE 141] [IEEE 241] and IEEE 242.

See "Referenced Standards" Article in the Evaluations for scope of transformer standards referenced in four subparagraphs and associated subparagraphs below. Delete standards for transformers not used in this Project.

1. Transformers:
 - a. ANSI C57.12.10.
 - b. ANSI C57.12.22.
 - c. ANSI C57.12.40.
 - d. IEEE C57.12.00.
 - e. IEEE C57.96.
 2. Medium-Voltage Circuit Breakers: IEEE C37.010.
 3. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.20.1.
 4. Low-Voltage Fuses: IEEE C37.46.
- E. Study Report:
1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram.

Retain subparagraph below only for medium- and high-voltage circuit breakers under certain circumstances described in IEEE 399.

2. Show interrupting (5-cycle) and time-delayed currents (6 cycles and above) on medium- **[and high-]**voltage breakers as needed to set relays and assess the sensitivity of overcurrent relays.

F. Equipment Evaluation Report:

1. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
2. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
3. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

3.4 COORDINATION STUDY

A. Perform coordination study using approved computer software program. Prepare a written report using results of fault-current study. Comply with IEEE 399.

1. Calculate the maximum and minimum 1/2-cycle short-circuit currents.

Retain first subparagraph below for medium-voltage equipment.

2. Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short-circuit currents.
3. Calculate the maximum and minimum ground-fault currents.

See Editing Instruction No. 4 in the Evaluations for discussion of standards listed in first paragraph below.

B. Comply with [IEEE 141] [IEEE 241] [IEEE 242] recommendations for fault currents and time intervals.

C. Transformer Primary Overcurrent Protective Devices:

1. Device shall not operate in response to the following:
 - a. Inrush current when first energized.
 - b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
 - c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.

D. Motors served by voltages more than 600 V shall be protected according to IEEE 620.

E. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242.

Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable

manufacturers or from listed standards indicating conductor size and short-circuit current.

F. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:

1. Tabular Format of Settings Selected for Overcurrent Protective Devices:

- a. Device tag.
- b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
- c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
- d. Fuse-current rating and type.
- e. Ground-fault relay-pickup and time-delay settings.

2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:

- a. Device tag.
- b. Voltage and current ratio for curves.
- c. Three-phase and single-phase damage points for each transformer.
- d. No damage, melting, and clearing curves for fuses.
- e. Cable damage curves.
- f. Transformer inrush points.
- g. Maximum fault-current cutoff point.

G. Completed data sheets for setting of overcurrent protective devices.

PART 4 - METHOD OF MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 260583 - ELECTRICAL CONNECTIONS FOR EQUIPMENT

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Electrical connections to equipment specified under other Sections or furnished by the Owner.
- B. Applications of electrical power, control and monitoring connections specified in this section include the following:
 - 1. From electrical source to motor starters.
 - 2. From motor starters to motors.
 - 3. To lighting fixtures and wiring devices.
 - 4. To converters, rectifiers, transformers, inverters, switchgear, switchboards, panel boards, generators and similar equipment.
 - 5. To grounds including ground electrode connections.
 - 6. Equipment furnished in other Divisions (unless indicated otherwise).
 - 7. Electrical connections for equipment, that are not furnished as integral part of equipment, are specified in [Division 11] [Division 14] [Division 21] [Division 22] [Division 23] [Division 27] [Division 28] and other Division 26 sections, and are criteria of this Section.
 - 8. Refer to [Division 14] [Division 21] [Division 22] [Division 23] [Division 27]

- [Division 28] sections for motor starters and controllers furnished integrally with equipment; not criteria of this Section.
9. Refer to [Division 14] [Division 21] [Division 22] [Division 23] [Division 27] [Division 28] sections for control system wiring, not criteria of this section.
 10. Junction boxes and disconnect switches required for connecting motors and other electrical units of equipment are specified in applicable Division 26 sections, and are criteria of this Section.
- C. Related requirements:
1. Section 260519 "Low-Voltage Electrical Power Conductors and Cables".

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. The following data shall be submitted in accordance with Sections 013300 "Submittal Procedures" required prior to starting installation:
1. Product Data: Manufacturer's data on electrical connections for equipment products and materials.
 - a. Include data substantiating that materials comply with requirements.
 2. Complete wiring diagrams and/or shop drawings for installation purposes shall be furnished under the Mechanical or other Divisions, as required by DEN Project Manager, prior to installation.

1.4 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Products, materials, equipment and systems shall comply with the following Codes and Standards:

1. NFPA Compliance: NFPA 70, "National Electrical Code (NEC)" as adopted and amended by the Denver Building Code and as applicable to products used and the installation of electrical power connections (terminals and splices), junction boxes, motor starters and disconnect switches.
2. IEEE Compliance: Std. 241, "IEEE Recommended Practice for Electric Power Systems in Commercial Buildings" pertaining to connections and terminations.
3. ANSI Compliance: Applicable requirements of ANSI/NEMA and ANSI/EIA standards pertaining to products and installation of electrical connections for equipment.
4. UL Compliance: UL Std. 486A, "Wire Connectors and Soldering Lugs for Use with Copper Conductors" including, but not limited to, tightening of electrical connectors to torque values indicated. Electrical connection products and materials are to be UL-listed and labeled.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.6 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS AND COMPONENTS

- A. Products shall be as specified in other Sections of this Division.
- B. General: Each electrical connection shall be a complete assembly of materials, including but not necessarily limited to, pressure connectors, terminals (lugs), electrical insulating tape, heat-shrinkable insulating tubing, cable ties, stress cones, splice kits, termination kits, solder less wire nuts, and other items and accessories as needed to complete splices and terminations as required.
 1. Connectors and Terminals: Electrical connectors and terminals shall mate and match, including sizes and ratings, with equipment terminals that are recommended by equipment manufacturer for intended applications.
 2. Electrical Connection Accessories: Electrical insulating tape, heat-shrinkable insulating tubing and boots, stress cones, splice kits, termination kits, wirenuts and cable ties as recommended for use by accessories manufacturers for type of services required.

2.2 MECHANICAL AND ELECTRICAL COORDINATION

Verify if EXHIBIT A will be included in this Section, or delete and reference Section 019990.

- A. Responsibility: It is the contractor's responsibility to complete the EXHIBIT A

SCHEDULE included at the end of this Section. Reference Section 019990 "Standard Forms". The Contractor shall include all costs and work associated with these items in his bid.

- B. Verify location, size, and characteristics of all mechanical equipment before installation of electric service. In all cases of the installation of heating, ventilating, air conditioning, plumbing, and other mechanical equipment, the Contractor is responsible for all revisions, changes, and modifications necessary to properly supply electric services to the equipment.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify that equipment is ready for electrical connection, wiring, and energization.

3.2 PREPARATION

- A. Review equipment submittals prior to installation and electrical rough-in. Verify location, size, and type of connections. Coordinate details of equipment connections with supplier and installer.

3.3 INSTALLATION

- A. Use wire and cable with insulation suitable for temperatures encountered in heat-producing equipment.
- B. Make conduit connections to equipment using flexible conduit. Use liquid-tight flexible conduit in damp or wet locations. Length shall be six feet (6') maximum.
- C. Install pre-finished cord set where connection with attachment plug is indicated or specified, use attachment plug with suitable strain-relief clamps.
- D. Provide suitable strain-relief clamps for cord connections to outlet boxes and equipment connection boxes.
- E. Make wiring connections in control panel or in wiring compartment of pre-wired equipment in accordance with manufacturer's instructions. Provide interconnecting wiring as required for a complete operating system.
- F. Install disconnect switches, controllers, control stations, and control devices such as limit switches and temperature switches as required for a complete operating system. Connect with conduit and wiring as required for a complete operating system.

3.4 EQUIPMENT CONNECTION SCHEDULE

- A. Furnish, set in place, and wire, except as may be otherwise indicated, all heating, ventilating, air conditioning, plumbing, fire protection, and other motors and controls in accordance with the electrical/mechanical coordination schedule. The contractor shall carefully coordinate with work performed under the Mechanical and other Divisions if these specifications.
- B. All line and low voltage wiring shall be installed utilizing materials and methods as specified in the Division 26 of the technical specifications.
- C. Provide NEMA-rated motors and equipment suitable for operation on the voltage systems as designated below, with tolerances for the allowable voltage variations above and below the nominal:

1. Rated Motor Voltage:

Service Voltage and Phase:	1/3 HP and smaller 1-Phase:	1/2 HP and Larger 3-Phase:
120/208V, 3-Phase	115V	208V (only when 480V is not available)
277/480V, 3-Phase		460V

3.5 INSTALLATION OF ELECTRICAL CONNECTIONS

- A. Electrical connections shall be installed in accordance with equipment manufacturer's written instructions and with recognized industry practices, and complying with applicable requirements of UL, NEC and NECA's "Standard of Installation" to ensure that products fulfill requirements.
 - 1. As a minimum: Each feeder circuit to panelboards, switchboards, motor control centers, transformers, and 480-volt (and higher) motor circuits shall have an insulated equipment ground conductor.
 - 2. All medium voltage splices and terminations are to be made by a certified cable splicer/terminator.
 - 3. Electrical service and feeders are to be maintained to occupied areas and operational facilities when temporary service is required during interruptions to existing facilities. Momentary outages for replacing existing wiring systems with new wiring systems shall be scheduled. When the "cutting-over" has been successfully accomplished, temporary wiring is to be removed.
 - 4. Splices shall be covered with electrical insulating material equivalent to, or of greater insulation rating, than electrical insulation rating of those conductors being spliced.
 - 5. Cables and wires shall be trimmed as long as practicable and routing shall be arranged to facilitate inspection, testing, and maintenance.
 - 6. Connectors and terminals, including screws and bolts, shall be tightened in accordance with equipment manufacturer's published torque tightening values for equipment connectors. Proper torquing tools, including torque screwdriver, beam-type torque wrench, and ratchet wrench with adjustable torque settings

shall be used to comply with torquing values contained in UL 496A or the manufacturer's literature.

7. Identification markers are to be fastened to each electrical power supply wire/cable conductor in accordance with Section 260553 "Identification for Electrical Systems".
 - a. Markers are to be affixed on each terminal conductor, as close as possible to the point of connection.

3.6 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. The correct direction of rotation of each motor is to be verified.
- B. Provide measured torquing value checklist with witness signature to DEN Project Manager.
- C. Perform infrared scanning of all splices and terminations as required in Section 260519 "Low-Voltage Electric Power Conductors and Cables".

PART 4 - MEASUREMENT

4.1 MEASUREMENT

- A. No separate measurement will be made for the work specified in this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work specified in this Section, but shall be included in the Contract Lump Sum Bid Price for Division 16 - Electrical, which price shall include all necessary and incidental material and work thereto.

SECTION 260913 - ELECTRICAL POWER MONITORING AND CONTROL

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes the following for monitoring[**and control**] of electrical power system:

Retain one or both subparagraphs below. Retain first if work includes only local metering and monitoring, without connections to data transmission network. Retain both if monitoring and control are connected to a LAN.

1. PC-based workstation(s) and software.

In subparagraph below, retain first option for serial connection of hand-held computer and other close-connected I/O-enabled devices; retain second option for daisy-chaining addressable devices including relays, meters, actuators, and power monitors to a network server; or retain third option for network server, workstation, networked PCs, and connection to existing LANs and WAN.

If applying for LEED certification, a power monitoring and control system to measure energy usage of different systems and equipment can be used to satisfy some of the requirements of LEED-NC and LEED for Schools Credit EA 5, LEED-CI Credit EA 3, and LEED-CS Credit EA 5.1. A Measurement & Verification (M&V) Plan, developed by the design team, is required to achieve this credit. The M&V period extends for at least one year of postconstruction occupancy. Refer to the International Performance Measurement & Verification Protocol (IPMVP), Volume III: "Concepts and Options for Determining Energy Savings in New Construction," for additional information.

2. Communication network and interface modules for [**RS-232**] [**RS-485, Modbus TCP/IP**] [**IEEE 802.3**] data transmission protocols.

B. Related Sections:

Retain Section in subparagraph below that contains requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 262713 "Electricity Metering" for equipment to meter electricity consumption and demand for incoming service feeders and tenant submetering.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. Ethernet: Local area network based on IEEE 802.3 standards.
- B. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.
- C. HTML: Hypertext markup language.
- D. I/O: Input/output.
- E. KY Pulse: A term used by the metering industry to describe a method of measuring consumption of electricity that is based on a relay changing status in response to the rotation of the disk in the meter.
- F. LAN: Local area network; sometimes plural as "LANs."
- G. LCD: Liquid crystal display.
- H. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or remote-control, signaling and power-limited circuits.
- I. Modbus TCP/IP: An open protocol for exchange of process data.
- J. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- K. PC: Personal computer; sometimes plural as "PCs."
- L. rms: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.
- M. RS-232: A TIA standard for asynchronous serial data communications between terminal devices.
- N. RS-485: A TIA standard for multipoint communications using two twisted-pairs.

- O. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.
- P. THD: Total harmonic distortion.
- Q. UPS: Uninterruptible power supply; used both in singular and plural context.
- R. WAN: Wide area network.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Attach copies of approved Product Data submittals for products (such as switchboards and switchgear) that describe power monitoring and control features to illustrate coordination among related equipment and power monitoring and control.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For power monitoring and control equipment. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Outline Drawings: Indicate arrangement of components and clearance and access requirements.
 - 2. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
 - 3. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 4. Wiring Diagrams: For power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.
 - 5. UPS sizing calculations for workstation.
 - 6. Surge Suppressors: Data for each device used and where applied.

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified [**Installer**] [**manufacturer**].

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.
- C. Other Informational Submittals:
 - 1. Manufacturer's system installation and setup guides, with data forms to plan and record options and setup decisions.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For power monitoring and control units, to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - 1. Operating and applications software documentation.
 - 2. Software licenses.
 - 3. Software service agreement.
 - 4. PC installation and operating documentation, manuals, and software for the PC and all installed peripherals. Software shall include system restore, emergency boot diskettes, and drivers for all installed hardware. Provide separately for each PC.
 - 5. Hard copies of manufacturer's specification sheets, operating specifications, design guides, user's guides for software and hardware, and PDF files on CD-ROM of the hard-copy submittal.
- B. Software and Firmware Operational Documentation:

Retain first subparagraph below for PC-based control system.

- 1. Self-study guide describing the process for setting equipment's network address; setting Owner's options; procedures to ensure data access from any PC on the network, using a standard Web browser; and recommended firewall setup.
 - 2. Software operating and upgrade manuals.
 - 3. Software Backup: On a magnetic media or compact disc, complete with Owner-selected options.
 - 4. Device address list and the set point of each device and operator option, as set in applications software.
 - 5. Graphic file and printout of graphic screens and related icons, with legend.
- C. Software Upgrade Kit: For Owner to use in modifying software to suit future power system revisions or power monitoring and control revisions.

Retain first paragraph below for PC-based control system.

- D. Software licenses and upgrades required by and installed for operating and programming digital and analog devices.

1.7 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Retain applicable subparagraphs below. Quantities indicated are examples only.

1. Addressable Relays: One for every [10] <Insert number> installed. Furnish at least one of each type.
2. Data Line Surge Suppressors: One for every [10] <Insert number> of each type installed. Furnish at least one of each type.
3. <Insert material>.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Manufacturer Qualifications: A firm experienced in manufacturing power monitoring and control equipment similar to that indicated for this Project and with a record of successful in-service performance.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.10 COORDINATION

- A. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.
 1. Match components and interconnections for optimum performance of specified functions.
- B. Coordinate Work of this Section with those in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

- C. Power monitoring on the Concourses, in the Main Terminal, the Airport Office Building and other buildings as needed: Equipment shall be compatible with POWER-NET, from Cutler Hammer.

1.11 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning with Substantial Completion, provide software support for **[two (2)] <Insert number>** years.
- B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within **[two (2)] <Insert number>** years from date of Substantial Completion. Upgrading software shall include the operating systems. Upgrade shall include new or revised licenses for use of software.
 - 1. Provide thirty (30) days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Eaton Corporation; Cutler-Hammer products.
 - 2. General Electric Company; GE Consumer & Industrial.
 - 3. Landis+Gyr Inc.
 - 4. Rockwell Automation, Inc.; Allen-Bradley brand.
 - 5. Schneider Electric USA, Inc.
 - 6. **<Insert manufacturer's name>**.
 - 7. or approved equal.

2.2 FUNCTIONAL DESCRIPTION

Coordinate descriptions in this article with power measuring and monitoring work of this Section and with control devices specified in other Sections. Use sample schedule in the Evaluations and the Specification Coordination Checklist to assist in coordination.

A. Instrumentation and Recording Devices: Monitor and record load profiles and chart energy consumption patterns.

1. Calculate and Record the Following:

- a. Load factor.
- b. Peak demand periods.

The Section Text specifies electricity meters only. Add other meter types with Modbus TCP/IP output.

LEED-NC and LEED for Schools Credit EA 5, LEED-CI Credit EA 3, and LEED-CS Credit EA 5.1 require meters that comply with requirements of the International Performance Measurement & Verification Protocol (IPMVP), Volume III, Chapter 4, "M&V Methods for Energy Conservation Measure Isolation" (Option B) or "Whole Building Calibrated Simulation" (Option D). As a minimum, require metering at the main service and at the major feeders and systems. Indicate location of meters on Drawings.

2. Measure and Record Metering Data for the Following:

- a. Electricity.
- b. Domestic water.
- c. Natural gas.
- d. **<Insert utility>**.

B. Software: Calculate allocation of utility costs.

1. Automatically Import Energy Usage Records to Allocate Energy Costs for the Following:

- a. At least [**15**] **<Insert number>** departments.
- b. At least [**30**] **<Insert number>** tenants.
- c. At least [**five**] **<Insert number>** processes.
- d. At least [**five**] **<Insert number>** buildings.
- e. **<Insert entity>**.

C. Power Quality Monitoring: Identify power system anomalies and measure, display, and record trends and alarms of the following power quality parameters:

1. Voltage regulation and unbalance.
2. Continuous three-phase rms voltage.
3. Periodic max./min./avg. voltage samples.
4. Harmonics.
5. Voltage excursions.
6. **<Insert parameter>**.

- D. Emergency Load Shedding. Preserve critical loads or avoid total shutdown due to unforeseen loss of power sources according to the following logic:
1. Determine system topology.
 2. Evaluate remaining loads and sources.
 3. Shed loads in less than 100 ms.
 4. **<Insert activity related to load shedding>**.
- E. Demand Management:
1. Peaking or co-generator control.
 2. Load interlocking.
 3. Load shedding.
 4. Load trimming.
 5. **<Insert management strategy>**.
- F. System: Report equipment status and power system control.

2.3 SYSTEM REQUIREMENTS

- A. Monitoring and Control System: Include PC-based workstation with its operating system and application software, connected to data transmission network.
- B. Surge Protection: For external wiring of each conductor entry connection to components to protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads.
1. Minimum Protection for Power Lines 120 V and More: Auxiliary panel suppressors complying with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
 2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Comply with requirements as recommended by manufacturer for type of line being protected.
- C. Addressable Devices: All transmitters and receivers shall communicate unique device identification and status reports to monitoring and control clients.

Retain paragraph below for interface with the BAS. Coordinate with Division 23 Section "Instrumentation and Control for HVAC."

- D. BAS Interface: Provide factory-installed hardware and software to enable the BAS to monitor, display, and record data for use in processing reports.

Retain one of two subparagraphs below. Retain first subparagraph if interface with the BAS is through hardwired points and minimal interface is required. Retain second subparagraph if extensive interface with the BAS is required and is beyond what hardwired points can provide. Requirement may exclude some manufacturers.

1. Hardwired Monitoring Points: Electrical power demand (kilowatts), electrical power consumption (kilowatt-hours)[, **power factor**] <Insert monitoring point>.
2. ASHRAE 135 (BACnet) LonTalk Modbus Industry-accepted, open-protocol Insert type of interface communication interface with the BAS shall enable the BAS operator to remotely monitor meter information from a BAS operator workstation. Control features and monitoring points displayed locally at metering panel shall be available through the BAS.

2.4 OPERATING SYSTEM

Retain one of first four paragraphs below. Revise remaining paragraphs to match software capability. Retain first paragraph for a single PC connected to monitor a single power meter, circuit monitor, energy meter, or utility monitor. Monitored device can be one in this Section or can be specified in Sections that are listed in the Specification Coordination Checklist. Graphics and Web connections are not included.

- A. Software: Configured to run on a portable laptop computer, a single PC, or a palm computer, with capability for accessing a single meter at a time. System is not connected to a LAN. Modbus TCP/IP, RS-232, and RS-485 digital communications.

Retain first paragraph below for a single PC connected to monitor multiple devices: power meters, circuit monitors, energy meters, or utility monitors. Remote operation of addressable devices specified in other Sections is enabled. Graphics and Web connections are not included.

- B. Software: Configured to run on a single PC, with capability for accessing multiple devices simultaneously. Modbus TCP/IP, RS-232, and RS-485 digital communications.

Retain first paragraph below for multiple PCs connected to monitor multiple devices: power meters, circuit monitors, energy meters, or utility monitors. Remote operation of addressable devices specified in other Sections is enabled. Graphics and Web connections are not included.

- C. Software: Configured for a server and multiple client PCs, each with capability for accessing multiple devices simultaneously. Ethernet, Modbus TCP/IP, RS-232, and RS-485 digital communications.

Retain first paragraph below for multiple PCs connected to monitor multiple devices: power meters, circuit monitors, energy meters, or utility monitors. Remote operation of addressable devices specified in other Sections is enabled. Graphics, Web access, and fully specified functionality are included.

- D. Software: Configured for a server and multiple client PCs, each with capability for accessing multiple devices simultaneously. Software shall include interactive graphics client and shall be Web enabled. Workstations and portable computers shall not require any software except for an Internet browser to provide connectivity and full functionality. Include a firewall recommended by manufacturer. 100 Base-T Ethernet, Modbus TCP/IP RS-232, and RS-485 digital communications.
- E. Operating System Software: Based on [32] <Insert number>-bit, Microsoft Windows workstation operating system. Software shall have the following features:
 1. Multiuser and multitasking to allow independent activities and monitoring to occur simultaneously at different workstations.
 2. Graphical user interface to show pull-down menus and a menu tree format.

3. Capability for future additions within the indicated system size limits.

Retain paragraph below if a single point failure in workstation and server is unacceptable.

- F. Peer Computer Control Software: Shall detect a failure of workstation[**and associated server,**] and shall cause other workstation[**and associated server**] to assume control of all system functions without interruption of operation. Drivers shall be provided in both central computers to support this mode of operation.

2.5 APPLICATIONS SOFTWARE

A. Basic Requirements:

1. Fully compatible with and based on the approved operating system.
2. Password-protected operator login and access; three levels, minimum.
3. Password-protected setup functions.
4. Context-sensitive online help.
5. Capability of creating, deleting, and copying files; and automatically maintaining a directory of all files, including size and location of each sequential and random-ordered record.
6. Capability for importing custom icons into graphic views to represent alarms and I/O devices.
7. Automatic and encrypted backups for database and history; automatically stored at [**central control PC**] [**selected workstation**] and encrypted with a nine-character alphanumeric password, which must be used to restore or read data contained in backup.
8. Operator audit trail for recording and reporting all changes made to user-defined system options.

B. Workstation Server Functions:

1. Support other client PCs on the LAN[**and WAN**].
2. Maintain recorded data in databases accessible from other PCs on the LAN[**and WAN**].

C. Data Formats:

1. User-programmable export and import of data to and from commonly used [**Microsoft Windows**] <Insert system> spreadsheet, database, billing, and other applications; using dynamic data exchange technology.
2. Option to convert reports and graphics to HTML format.
3. Interactive graphics.
4. Option to send preprogrammed or operator designed e-mail reports.

D. Metered Data: Display metered values in real time.

E. Remote Control:

1. Display circuit-breaker status and allow breaker control.

Retain subparagraph below when the remote computer includes the automatic load shedding and restoration of these loads.

2. User defined with load-shedding automatically initiated and executed schemes responding to programmed time schedules, set points of metered demands, utility contracted load shedding, or combinations of these.
- F. Equipment Documentation: Database for recording of equipment ratings and characteristics; with capability for graphic display on monitors.
- G. Graphics: Interactive color-graphics platform with pull-down menus and mouse-driven generation of power system graphics, in formats widely used for such drafting; to include the following:
1. Site plan.
 2. Floor plans.
 3. Equipment elevations.
 4. Single-line diagrams.
- H. User-Defined Monitoring and Control Events: Display and record with date and time stamps accurate to 0.1 second, and including the following:
1. Operator log on/off.
 2. Attempted operator log on/off.
 3. All alarms.
 4. Equipment operation counters.
 5. Out-of-limit, pickup, trip, and no-response events.
- I. Trending Reports: Display data acquired in real-time from different meters or devices, in historical format over user-defined time; unlimited as to interval, duration, or quantity of trends.
1. Spreadsheet functions of sum, delta, percent, average, mean, standard deviation, and related functions applied to recorded data.
 2. Charting, statistical, and display functions of standard Windows-based spreadsheet.
- J. Alarms: Display and record alarm messages from discrete input and controls outputs, according to user programmable protocol.
1. Functions requiring user acknowledgment shall run in background during computer use for other applications and override other presentations when they occur.

Coordinate requirements in first paragraph below with field-mounted instrument specifications to ensure that measured data are of the quality to produce specified waveform displays.

- K. Waveform Data: Display and record waveforms on demand or automatically on an alarm or programmed event. Include the graphic displays of the following, based on user-specified criteria:
1. Phase voltages, phase currents, and residual current.

2. Overlay of three-phase currents, and overlay each phase voltage and current.
 3. Waveforms ranging in length from [2] **<Insert number>** cycles to [5] **<Insert number>** minutes.
 4. Disturbance and steady-state waveforms up to 512 points per cycle.
 5. Transient waveforms up to 83,333 points per cycle on 60-Hz base.
 6. Calculated waveform, based on recorded data, on a minimum of four cycles of data of the following:
 - a. THD.
 - b. rms magnitudes.
 - c. Peak values.
 - d. Crest factors.
 - e. Magnitude of individual harmonics.
- L. Data Sharing: Allow export of [**recorded displays and**] tabular data to third-party applications software.
1. Tabular data shall be in the comma-separated values.
 2. **<Insert data sharing protocol>**.
- M. Activity Billing Software:
1. Automatically compute and prepare activity demand and energy-use statements based on metering of energy use and peak demand integrated over user-defined interval.
 2. Intervals shall be same as used by electric utilities, including current vendor.
 3. Import metered data from saved records that were generated by metering and monitoring software.
 4. Maintain separate directory for each activity's historical billing information.
 5. Prepare summary reports in user-defined formats and time intervals.
- N. Reporting: User commands initiate the reporting of a list of current alarm, supervisory, and trouble conditions in system or a log of past events.
1. Print a record of user-defined alarm, supervisory, and trouble events on workstation printer.
 2. Sort and report by device name and by function.
 3. Report type of signal (alarm, supervisory, or trouble), description, date, and time of occurrence.
 4. Differentiate alarm signals from other indications.
 5. When system is reset, report reset event with same information concerning device, location, date, and time.

Retain paragraph below for local display if needed in addition to data transmitted to a workstation. The display monitor described can be replaced by a workstation or a permanently connected laptop if installed at the main office of system manager. Otherwise, the display monitor is co-located with the power monitor, but this location is normally unattended and the display monitor provides data display in case network is down. Adjust monitor specifications, considering that limited computing power will exist locally.

- O. Display Monitor:

1. Backlighted LCD to display metered data with [**touch-screen**] [**touch-pad**] **<Insert interface>** selecting device.
2. Touch-screen display shall be a minimum 12-inch diagonal, resolution of 800 by 600 RGB pixels, 256 colors; NEMA 250, Type 1 display enclosure.
3. Display [**four (4)**] **<Insert number>** values on one screen at same time.

2.6 COMMUNICATION COMPONENTS AND NETWORKS

- A. Network Configuration: High-speed, multi-access, open nonproprietary, industry standard communication protocol; LANs complying with EIA 485, 100 Base-T Ethernet, and Modbus TCP/IP.

2.7 POWER MONITORS

See the "Writing Guide" Article in the Evaluations for discussion on whether this article should be retained. Note that the specified device is a monitor and a controller and does not include accessories such as instrument transformers and field-mounted sensors. See the Specification Coordination Checklist for additional details.

UL 1244 applies to electrical and electronic measuring or testing equipment, with voltage not to exceed 480 V between phases for three-phase supply circuits and 250 V for single-phase supply circuits.

- A. Separately mounted, permanently installed instrument for power monitoring and control, complying with UL 1244.
 1. Enclosure: NEMA 250, Type [**1**] [**12**] **<Insert number>**.
- B. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
 1. Indoor installation in [**non-air-conditioned**] [**nontemperature-controlled**] spaces that have environmental controls to maintain ambient conditions of [**0 to 122 deg F** (minus 18 to plus 50 deg C)] **<Insert temperature range>** dry bulb and 20 to 90 percent relative humidity, noncondensing.
- C. rms Real-Time Measurements:
 1. Current: Each phase, neutral, average of three phases, percent unbalance.
 2. Voltage: Line-to-line each phase, line-to-line average of three phases, line-to-neutral each phase, line-to-neutral average of three phases, line-to-neutral percent unbalance.
 3. Power: Per phase and three-phase total.
 4. Reactive Power: Per phase and three-phase total.
 5. Apparent Power: Per phase and three-phase total.
 6. Power Factor: Per phase and three-phase total.
 7. Displacement Power Factor: Per phase and three-phase total.
 8. Frequency.
 9. THD: Current and voltage.

10. Accumulated Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
 11. Incremental Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
 12. Conditional Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
- D. Demand Current Calculations, per Phase, Three-Phase Average and Neutral:
1. Present.
 2. Running average.
 3. Last completed interval.
 4. Peak.
- E. Demand Real Power Calculations, Three-Phase Total:
1. Present.
 2. Running average.
 3. Last completed interval.
 4. Predicted.
 5. Peak.
 6. Coincident with peak kVA demand.
 7. Coincident with kVAR demand.
- F. Demand Reactive Power Calculations, Three-Phase Total:
1. Present.
 2. Running average.
 3. Last completed interval.
 4. Predicted.
 5. Peak.
 6. Coincident with peak kVA demand.
 7. Coincident with kVAR demand.
- G. Demand Apparent Power Calculations, Three-Phase Total:
1. Present.
 2. Running average.
 3. Last completed interval.
 4. Predicted.
 5. Peak.
 6. Coincident with peak kVA demand.
 7. Coincident with kVAR demand.
- H. Average Power Factor Calculations, Demand Coincident, Three-Phase Total:
1. Last completed interval.
 2. Coincident with kW peak.
 3. Coincident with kVAR peak.
 4. Coincident with kVA peak.

- I. Power Analysis Values:
1. THD, Voltage and Current: Per phase, three phase, and neutral.
 2. Displacement Power Factor: Per phase, three phase.
 3. Fundamental Voltage, Magnitude and Angle: Per phase.
 4. Fundamental Currents, Magnitude and Angle: Per phase.
 5. Fundamental Real Power: Per phase, three phase.
 6. Fundamental Reactive Power: Per phase.
 7. Harmonic Power: Per phase, three phase.
 8. Phase rotation.
 9. Unbalance: Current and voltage.
 10. Harmonic Magnitudes and Angles for Current and Voltages: Per phase, up to [31st] [63rd] <Insert number> harmonic.
- J. Power Demand Calculations: According to one of the following calculation methods, selectable by the user:
1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
 2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:
 - a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
 - b. Fixed block that calculates demand at end of the interval.
 - c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.
 3. Demand Calculation Initiated by a Synchronization Signal:

Retain one or both of first two subparagraphs below.

 - a. Signal is a pulse from an external source. Demand period begins with every pulse. Calculation shall be configurable as either a block or rolling block calculation.
 - b. Signal is a communication signal. Calculation shall be configurable as either a block or rolling block calculation.
 - c. Demand can be synchronized with clock in the power meter.
- K. Sampling:
1. Current and voltage shall be digitally sampled at a rate high enough to provide accuracy to 63rd harmonic of 60-Hz fundamental.
 2. Power monitor shall provide continuous sampling at a rate of [128] <Insert number> samples per cycle on all voltage and current channels in the meter.

- L. Minimum and Maximum Values: Record monthly minimum and maximum values, including date and time of record. For three-phase measurements, identify phase of recorded value. Record the following parameters:
1. Line-to-line voltage.
 2. Line-to-neutral voltage.
 3. Current per phase.
 4. Line-to-line voltage unbalance.
 5. Line-to-neutral voltage unbalance.
 6. Power factor.
 7. Displacement power factor.
 8. Total power.
 9. Total reactive power.
 10. Total apparent power.
 11. THD voltage L-L.
 12. THD voltage L-N.
 13. THD current.
 14. Frequency.
- M. Harmonic Calculation: Display and record the following:
1. Harmonic magnitudes and angles for each phase voltage and current through **[31st] [63rd] <Insert number>** harmonic. Calculate for all three phases, current and voltage, and residual current. Current and voltage information for all phases shall be obtained simultaneously from same cycle.
 2. Harmonic magnitude reported as a percentage of the fundamental or as a percentage of rms values, as selected by user.
- N. Current and Voltage Ratings:
1. Designed for use with current inputs from standard instrument current transformers with 5-A secondary and shall have a metering range of 0-10 A.
 2. Withstand ratings shall not be less than 15 A, continuous; 50 A, lasting over 10 seconds, no more frequently than once per hour; 500 A, lasting 1 second, no more frequently than once per hour.
 3. Designed for use with voltage inputs from standard instrument potential transformers with a 120-V secondary.
- O. Accuracy:
- Retain first subparagraph below when revenue meter accuracy is required. See Evaluations for discussion of the listed standards.
1. Comply with ANSI C12.20, Class 0.5; and IEC 60687, Class 0.5 for revenue meters. Accuracy from Light to Full Rating shall meet the following criteria:
 - a. Power: Accurate to 0.25 percent of reading, plus 0.025 percent of full scale.
 - b. Voltage and Current: Accurate to 0.075 percent of reading, plus 0.025 percent of full scale.
 - c. Power Factor: Plus or minus 0.002, from 0.5 leading to 0.5 lagging.
 - d. Frequency: Plus or minus 0.01 Hz at 45 to 67 Hz.

Retain subparagraph below for equipment monitoring accuracy when the metering is a factory-installed breaker accessory. Generally, accuracy standards are not applicable. The values listed below are typical and need to be verified.

2. For meters that are circuit-breaker accessories, metering accuracy at full-scale shall not be less than the following:
 - a. Current: Plus or minus 2.5 percent.
 - b. Voltage: Plus or minus 1.5 percent.
 - c. Energy, Demand, and Power: Plus or minus 4.0 percent.
 - d. Frequency: Plus or minus 1 Hz.

P. Waveform Capture:

1. Capture and store steady-state waveforms of voltage and current channels; initiated manually. Each capture shall be for **[3] <Insert number>** cycles, **[128] <Insert number>** data points for each cycle, allowing resolution of harmonics to **[31st] <Insert number>** harmonic of basic 60 Hz.
2. Store captured waveforms in internal nonvolatile memory; available for PC display, archiving, and analysis.

Q. Input: **[One] <Insert number>** digital input signal(s).

1. Normal mode for on/off signal.
2. Demand interval synchronization pulse, accepting a demand synchronization pulse from a utility demand meter.
3. Conditional energy signal to control conditional energy accumulation.

R. Outputs:

1. Operated either by user command sent via communication link, or set to operate in response to user-defined alarm or event.
2. Closed in either a momentary or latched mode as defined by user.
3. Each output relay used in a momentary contact mode shall have an independent timer that can be set by user.
4. One digital KY pulse to a user-definable increment of energy measurement. Output ratings shall be up to 120-V ac, 300-V dc, 50 mA, and provide 3500-V rms isolation.
5. **[One (1)] <Insert number>** relay output module(s), providing a load voltage range from 20- to 240-V ac or from 20- to 30-V dc, supporting a load current of 2 A.
6. Output Relay Control:
 - a. Relay outputs shall operate either by user command sent via communication link or in response to user-defined alarm or event.
 - b. Normally open and normally closed contacts, field configured to operate as follows:
 - 1) Normal contact closure where contacts change state for as long as signal exists.

- 2) Latched mode when contacts change state on receipts of a pickup signal; changed state is held until a dropout signal is received.
- 3) Timed mode when contacts change state on receipt of a pickup signal; changed state is held for a preprogrammed duration.
- 4) End of power demand interval when relay operates as synchronization pulse for other devices.
- 5) Energy Pulse Output: Relay pulses quantities used for absolute kWh, absolute kVARh, kVAh, kWh In, kVARh In, kWh Out, and kVARh Out.
- 6) Output controlled by multiple alarms using Boolean-type logic.

S. Onboard Data Logging:

1. Store logged data, alarms, events, and waveforms in [80] [800] <Insert number> KB of onboard nonvolatile memory.
2. Stored Data:

Retain first subparagraph below when metered data is used for internal cost allocation. For customer billing use equipment specified in Section 262713 "Electricity Metering."

- a. Billing Log: User configurable; data shall be recorded every 15 minutes, identified by month, day, and 15-minute interval. Accumulate 24 months of monthly data, 32 days of daily data, and between 2 and 52 days of 15-minute interval data, depending on number of quantities selected.
 - b. Custom Data Logs: [**One (1)**] [**Three (3)**] user-defined log(s) holding up to 96 parameters. Date and time stamp each entry to the second and include the following user definitions:
 - 1) Schedule interval.
 - 2) Event definition.
 - 3) Configured as "fill-and-hold" or "circular, first-in first-out."
 - c. Alarm Log: Include time, date, event information, and coincident information for each defined alarm or event.
 - d. Waveform Log: Store captured waveforms configured as "fill-and-hold" or "circular, first-in first-out."
3. Default values for all logs shall be initially set at factory, with logging to begin on device power up.

T. Alarms.

1. User Options:
 - a. Define pickup, dropout, and delay.
 - b. Assign one of [**four (4)**] <Insert number> severity levels to make it easier for user to respond to the most important events first.
 - c. Allow for combining up to [**four (4)**] <Insert value> alarms using Boolean-type logic statements for outputting a single alarm.
2. Alarm Events:

- a. Over/undercurrent.
- b. Over/undervoltage.
- c. Current imbalance.
- d. Phase loss, current.
- e. Phase loss, voltage.
- f. Voltage imbalance.
- g. Over kW demand.
- h. Phase reversal.
- i. Digital input off/on.
- j. End of incremental energy interval.
- k. End of demand interval.

U. Control Power: 90- to 457-V ac or 100- to 300-V dc.

V. Communications:

Retain one of two options in first subparagraph below to coordinate with "Operating System" Article.

1. Power monitor shall be permanently connected to communicate via [**Modbus TCP via a 100 Base-T Ethernet**] [**RS-485 Modbus TCP/IP**].
2. Local plug-in connections shall be for RS-232 and 100 Base-T Ethernet.

The display monitor described in paragraph below can be replaced by a workstation or a permanently connected laptop if installed at the main office of system manager. Otherwise, the display monitor would be co-located with the power monitor, but this location is normally unattended and the display monitor will provide data display in case network is down.

W. Display Monitor:

1. Backlighted LCD to display metered data with [**touch-screen**] [**touch-pad**] **<Insert interface>** selecting device.
2. Touch-screen display shall be a minimum 12-inch diagonal, resolution of 800 by 600 RGB pixels, 256 colors; NEMA 250, Type 1 display enclosure.
3. Display [**four (4)**] **<Insert number>** values on one screen at same time.

Coordinate list below with meter capabilities specified in subparagraphs above.

- a. Current, per phase rms, three-phase average[**and neutral**].
- b. Voltage, phase to phase, phase to neutral, and three-phase averages of phase to phase and phase to neutral.
- c. Real power, per phase and three-phase total.
- d. Reactive power, per phase and three-phase total.
- e. Apparent power, per phase and three-phase total.
- f. Power factor, per phase and three-phase total.
- g. Frequency.
- h. Demand current, per phase and three-phase average.
- i. Demand real power, three-phase total.
- j. Demand apparent power, three-phase total.
- k. Accumulated energy (MWh and MVARh).
- l. THD, current and voltage, per phase.

4. Reset: Allow reset of the following parameters at the display:
 - a. Peak demand current.
 - b. Peak demand power (kW) and peak demand apparent power (kVA).
 - c. Energy (MWh) and reactive energy (MVARh).

2.8 STANDALONE, WEB-ENABLED MONITORING AND CONTROL INSTRUMENT

See the "Writing Guide" Article in the Evaluations for discussion on whether this article should be retained. Note that the specified device is a monitor and a controller and does not include accessories such as instrument transformers and field-mounted sensors. See the Specification Coordination Checklist for additional details.

- A. Separately mounted, permanently installed instrument for power monitoring and control.
 1. Enclosure: NEMA 250, Type [1] [12] <Insert number>.
- B. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability.
 1. Indoor installation in [**non-air-conditioned**] [**nontemperature-controlled**] spaces that have environmental controls to maintain ambient conditions of [0 to 122 deg F (minus 18 to plus 50 deg C)] <Insert temperature range> dry bulb and 20 to 90 percent relative humidity, noncondensing.
- C. Power-Distribution Equipment Monitor: Web enabled, with integral network port and embedded Web server with factory-configured firmware and HTML-formatted Web pages for viewing of power monitoring and equipment status information from connected devices equipped with digital communication ports.

Default LAN in this Section is 100 Base-T.

- D. LAN Connectivity: Multipoint, RS-485 Modbus serial communication network, interconnecting all breaker trip units, protective relays, drives, and metering devices equipped with communications. Serial communication network connected to Ethernet server that functions as a gateway and server, providing data access via [**10 Base-T**] [**100 Base-T**] [**100 Base-FX**] LAN.
- E. Communication Devices within the Equipment: Addressed at factory and tested to verify reliable communication with network server.
- F. Server Configuration:
 1. Initial network parameters set using a standard Web browser. Connect via a local operator interface, or an RJ-45 port accessible from front of equipment.
 2. Network server shall be factory programmed with embedded HTML-formatted Web pages that are user configurable and that provide detailed communication diagnostic information for serial and Ethernet ports as status of RS-485 network;

- with internal memory management information pages for viewing using a standard Web browser.
3. Login: Password protected; password administration accessible from the LAN using a standard Web browser.
 4. Operating Software: Suitable for local access; firewall protected.
- G. Data Access:
1. Network server shall include embedded HTML pages providing real-time information from devices connected to RS-485 network ports via a standard Web browser.
- H. Equipment Monitoring Options: Login shall be followed by a main menu for selecting summary Web pages that follow.
- I. Summary Web pages shall be factory configured to display the following information for each communicating device within the power equipment lineup:

Revise subparagraphs below to match monitoring devices specified in schedules. Optional text adds features that may be desirable add-ons to the basic.

1. **[User-Configured Custom Home Page: Provide for the lineup, showing status-at-a-glance of key operating values].**
2. Circuit Summary Page: Circuit name, three-phase average rms current, power (kW), power factor, and breaker status.
3. Load Current Summary Page: Circuit name, Phase A, B, and C rms current values.
4. Demand Current Summary Page: Circuit name, Phase A, B, and C average demand current values.
5. Power Summary Page: Circuit name, present demand power (kW), peak demand power (kW), and recorded time and date.
6. Energy Summary Page: Circuit name, energy (kWh), reactive energy (kVARh), and time/date of last reset.

Retain first subparagraph below if monitoring includes dry-type transformers in unit substations.

7. Transformer Status Page: Transformer tag, coil temperatures, and cooling fan status.

Retain first subparagraph below if monitoring includes motor-control center. Adjust status descriptions as appropriate for device type.

8. Motor-Control Center Status Page: Circuit name, three-phase average rms current, thermal capacity (percentage), and drive output frequency (Hz) contactor status.
9. Specific Device Pages: Each individual communicating device shall display detailed, real-time information, as appropriate for device type.
 - a. Display historical energy data that shall be logged automatically for each device, as appropriate for device type.
 - b. Display historical data logged from each device in graphical time-trend plots. Value to be displayed on time-trend plot shall be user selectable. Time interval to be displayed on scale shall be for previous day or week.

10. Export historical energy data to a PC or workstation through network using FTP (File Transfer Protocol). Format exported data in a CSV (Comma Separated Variable) file format for importing into spreadsheet applications.

J. Communications:

Retain first subparagraph below if this standalone power monitoring instrument is connected to the World Wide Web. Activation requires a service provider.

1. Power monitor: Permanently connected to communicate via **[RS-485 Modbus TCP/IP] [Modbus TCP via a 100 Base-T Ethernet]**.
2. Local Plug-in Connections: RS-232 and 100 Base-T Ethernet.
3. Monitor Display: Backlighted LCD to display metered data with **[touch-screen] [touch-pad] <Insert interface>** selecting device.

2.9 WORKSTATION HARDWARE

A. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Indoor installation in spaces that have environmental controls to maintain ambient conditions of **[36 to 122 deg F (2 to 50 deg C)] <Insert temperature range>** dry bulb and 20 to 90 percent relative humidity, noncondensing.

B. Computer: Standard unmodified PC of modular design, designed for the latest version of Windows operating system.

1. Memory: **<Insert capacity>** of usable installed memory.
2. Real-Time Clock. Automatic time correction once every 24 hours by synchronizing clock with **[the Time Service Department of the U.S. Naval Observatory] <Insert service>**.
3. Ports: Two RS-232-F serial ports for general use; one parallel port; four USB ports
4. Replaceable graphics board.
5. LAN Adapter Card.
6. Sound Card: For playback and recording of digital WAV sound files associated with audible warning and alarm functions.
7. Color Monitor: WXGA TFT, not less than **[18 inches (455 mm)] <Insert measurement>**, LCD type.
8. Keyboard: US English.
9. Mouse: Standard.
10. Minimum Disk Storage: **<Insert capacity>**, 7200 rpm hard drive.
11. CD-RW/DVD-ROM Drive.
12. Report Printer: Minimum resolution **[600] <Insert number>** dpi laser printer.
 - a. Connected to central station and designated workstations.
 - b. RAM: **[2] <Insert number>** MB, minimum.
 - c. Printing Speed: Minimum **[12] <Insert number>** pages per minute.

- d. Paper Handling: Automatic sheet feeder with [250] <Insert number>-sheet paper cassette and with automatic feed.

Redundant computers and associated hardware and software should be used if a single point failure would be unacceptable.

- C. Redundant Central Computer: Connected in a hot standby, peer configuration; automatically maintains copies of system software, application software, and data files. System transactions and other activities that alter system data files shall be updated to system files of redundant computer in near real-time. If central computer fails, redundant computer shall assume control immediately and automatically.
- D. UPS: Self-contained; complying with requirements in Section 263353 "Static Uninterruptible Power Supply."
 1. Size: Provide a minimum of [6] <Insert number> hours of operation of workstation station equipment[, **including 2 hours of alarm printer operation**].

Retain remainder of this article if Section 263353 "Static Uninterruptible Power Supply" is used for other UPS units. Coordinate UPS requirements with that Section.

2. Batteries: Sealed, valve regulated, recombinant, lead calcium.
3. Accessories:
 - a. Transient voltage suppression.
 - b. Input-harmonics reduction.
 - c. Rectifier/charger.
 - d. Battery disconnect device.
 - e. Static bypass transfer switch.

Subparagraphs below are optional accessories.

- f. Internal maintenance bypass/isolation switch.
- g. External maintenance bypass/isolation switch.
- h. Output isolation transformer.
- i. Remote UPS monitoring.
- j. Battery monitoring.
- k. Remote battery monitoring.
- l. <Insert accessories>.

2.10 RS-232 ASCII INTERFACE

Retain this article if selected monitoring or control devices require field-installed remotely located RS-232 ports, or if required for digital paging, local event recording, and similar systems. RS-232 communication connections are not recommended for distances of more than 50 feet (15 m), although transmission over distances of 300 feet (90 m) is possible with specialized equipment.

- A. ASCII interface shall allow RS-232 connections to be made between a meter or circuit monitor operating as the host PC and any equipment that will accept RS-232 ASCII command strings, such as [**local display panels**] [**dial-up modems**][**and alarm transmitters**] <Insert device>.

- B. Pager System Interface: Alarms shall be able to activate a pager system with customized message for each input alarm.
1. RS-232 output shall be capable of connection to a pager interface that can be used to call a paging system or service and send a signal to a portable pager. System shall allow an individual alphanumeric message per alarm input to be sent to paging system. This interface shall support both numeric and alphanumeric pagers.
- C. Alarm System Interface:
1. RS-232 output shall be capable of transmitting alarms from other monitoring and alarm systems to workstation software.
- D. Cables:
1. PVC-Jacketed, RS-232 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, polypropylene insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; PVC jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 - a. NFPA 70, Type CM.
 - b. Flame Resistance: UL 1581, Vertical Tray.
 2. Plenum-Type, RS-232 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, plastic insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; plastic jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 - a. NFPA 70, Type CMP.
 - b. Flame Resistance: NFPA 262, Flame Test.

2.11 LAN CABLES

- A. Comply with Section 271500 "Communications Horizontal Cabling."

Retain one or both paragraphs below only if Project includes field-wired, RS-485 communication links. RS-485 communications require 2 twisted pairs with a distance limitation of 4000 feet (1220 m).

- B. RS-485 Cable:
1. PVC-Jacketed, RS-485 Cable: Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors, PVC insulation, unshielded, PVC jacket, and NFPA 70, Type CMG.
 2. Plenum-Type, RS-485 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, fluorinated-ethylene-propylene insulation, unshielded, and fluorinated-ethylene-propylene jacket, and NFPA 70, Type CMP.

Category 5e and Category 6 are listed in current standards; however, lesser-category cabling is generally available and is suitable for 10 Base-T transmission. See the "Product Characteristics" Article in the Evaluations in Section 271500 "Communications Horizontal Cabling" for discussion of options in paragraph below.

- C. Unshielded Twisted Pair Cables: Category [5e] [6] as specified for horizontal cable for data service in Section 271500 "Communications Horizontal Cabling."

2.12 LOW-VOLTAGE WIRING

- A. Comply with Section 260523 "Control-Voltage Electrical Power Cables."
- B. Low-Voltage Control Cable: Multiple conductor, color-coded, No. 20 AWG copper, minimum.
 - 1. Sheath: PVC; except in plenum-type spaces, use sheath listed for plenums.
 - 2. Ordinary Switching Circuits: Three conductors unless otherwise indicated.
 - 3. Switching Circuits with Pilot Lights or Locator Feature: Five conductors unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting installation.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CABLING

- A. Comply with NECA 1.
- B. Install cables and wiring according to requirements in Section 271500 "Communications Horizontal Cabling."

Retain one of first two paragraphs below.

- C. Wiring Method: Install wiring in raceway and cable tray except within consoles, cabinets, desks, and counters. Conceal raceway and wiring except in unfinished spaces.
- D. Wiring Method: Install wiring in raceway and cable tray except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Use NRTL-listed

plenum cable in environmental air spaces, including plenum ceilings. Conceal raceway and cables except in unfinished spaces.

- E. Install LAN cables using techniques, practices, and methods that are consistent with specified category rating of components and that ensure specified category performance of completed and linked signal paths, end to end.
- F. Install cables without damaging conductors, shield, or jacket.

3.3 IDENTIFICATION

- A. Identify components and power and control wiring according to Section 260553 "Identification for Electrical Systems."
- B. Label each power monitoring and control module with a unique designation.

3.4 GROUNDING

- A. Comply with IEEE 1100, "Recommended Practice for Powering and Grounding Electronic Equipment."

3.5 FIELD QUALITY CONTROL

Retain paragraph below, to identify who shall perform tests and inspections. Retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Retain first paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

- B. Tests and Inspections:

1. Electrical Tests: Use caution when testing devices containing solid-state components.
2. Continuity tests of circuits.
3. Operational Tests: Set and operate controls at workstation and at monitored and controlled devices to demonstrate their functions and capabilities. Use a methodical sequence that cues and reproduces actual operating functions as

recommended by manufacturer. Submit sequences for approval. Note response to each test command and operation. Note time intervals between initiation of alarm conditions and registration of alarms at central-processing workstation.

- a. Coordinate testing required by this Section with that required by Sections specifying equipment being monitored and controlled.
- b. Test LANs according to requirements in Section 271500 "Communications Horizontal Cabling."
- c. System components with battery backup shall be operated on battery power for a period of not less than 10 percent of calculated battery operating time.
- d. Verify accuracy of graphic screens and icons.
- e. Metering Test: Load feeders, measure loads on feeder conductor with an rms reading clamp-on ammeter, and simultaneously read indicated current on the same phase at central-processing workstation. Record and compare values measured at the two locations. Resolve discrepancies greater than 5 percent and record resolution method and results.
- f. Record metered values, control settings, operations, cues, time intervals, and functional observations and submit test reports printed by workstation printer.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- C. Power monitoring and control equipment will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. Correct deficiencies, make necessary adjustments, and retest. Verify that specified requirements are met.
- F. Test Labeling: After satisfactory completion of tests and inspections, apply a label to tested components indicating test results, date, and responsible agency and representative.
- G. Reports: Written reports of tests and observations. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.
- H. Remove and replace malfunctioning devices and circuits and retest as specified above.

3.6 DEMONSTRATION

Services specified in this article are optional; retain if Project warrants.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain systems. See Section 017900 "Demonstration and Training."

Revise hours in first subparagraph below to suit Project. Three or more sessions, four hours each, on different days may be required for complex installations. Coordinate with requirements in Section 017900 "Demonstration and Training."

1. Train Owner's management and maintenance personnel in interpreting and using monitoring displays and in configuring and using software and reports. Include troubleshooting, servicing, adjusting, and maintaining equipment. Provide a minimum of **[twelve (12)] <Insert number>** hours' training.
2. Training Aid: Use approved final versions of software and maintenance manuals as training aids.

3.7 ON-SITE ASSISTANCE

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[three (3)] <Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **260913**

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260923 - LIGHTING CONTROL DEVICES

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

If applying for LEED certification, LEED Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1. ASHRAE/IESNA 90.1, Section 9, "Lighting," sets minimum interior and exterior lighting power densities and minimum requirements for lighting controls.

Local switches, occupancy sensors, and daylight-harvesting controls can be used to comply with the requirements of LEED-NC, LEED-CI, and LEED for Schools Credit EQ 6.1. However, use of task lighting may also be required, depending on the type of lighting system used on Project.

Occupancy sensors and daylight-harvesting controls can be combined with other energy-conserving measures to comply with the requirements of LEED-NC, LEED-CS, and LEED for Schools Credit EA 1 or with LEED-CI Credit EA 1.2.

Time switches and occupancy sensors can be combined to comply with the requirements of LEED-NC, LEED-CS, and LEED for Schools Credit SS 8 or with LEED-CI Credit SS 1, Option 1F.

ALL ENGINEER NOTES TO BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Time switches.
 - 2. Photoelectric switches.
 - 3. Standalone daylight-harvesting switching controls.
 - 4. Indoor occupancy sensors.
 - 5. Outdoor motion sensors.

6. Lighting contactors.
7. Emergency shunt relays.

B. Related Requirements:

Retain subparagraph below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 262726 "Wiring Devices" for wall-box dimmers, wall-switch occupancy sensors, and manual light switches.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include data substantiating that materials comply with requirements.

B. Shop Drawings: Show installation details for occupancy and light-level sensors.

Retain first subparagraph below unless control connections are indicated on Drawings.

1. Interconnection diagrams showing field-installed wiring.
2. Include diagrams for power, signal, and control wiring.

Coordinate requirements for coordination drawings with DEN Project Manager.

- C. Coordination Drawings: Include drawings to show lighting control equipment layouts and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.

1.4 INFORMATIONAL SUBMITTALS

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

A. Field quality-control reports.

B. Qualification Data: For firms and persons specified in "Quality Assurance" Article.

- C. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of lighting control device to include in emergency, operation, and maintenance manuals.
- B. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Testing agency as defined by OSHA 29 CFR 1910.7, or a member company of the International Electrical Testing Association that is acceptable to authorities having jurisdiction.
- B. Source Limitations: Obtain lighting control equipment components through one source from a single manufacturer.
- C. Firms responding to this specification shall provide proof that they have been regularly engaged in the design, manufacturing and testing of lighting control equipment for not less than five (5) years.

1.7 WARRANTY

Coordinate warranty requirements with DEN Project Manager.

- A. Manufacturer shall provide a product warranty for a period of not less than two (2) years from date of installation. Warranty shall cover unlimited replacement of lighting control equipment modules during the warranty period.

1.8 SEQUENCING AND SCHEDULING

- A. The lighting control equipment installation is to be sequenced and scheduled with other work to reduce possibility of damage to equipment during the remainder of construction period.

- B. Power Outages: Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.

1.9 EXTRA MATERIALS

Extra stock materials may not be allowed on publicly funded projects.

Coordinate extra stock requirements with DEN Project Manager.

- A. Furnish extra materials including ten (10) percent of installed units, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver materials as directed by DEN Project Manager.

1.10 ENVIRONMENTAL CONDITIONS

- A. The lighting control equipment unit shall be capable of continuous operation under the following temperature conditions:
1. Relative humidity: 95% non-condensing.
 2. Altitude: 5500 feet (1667 meters) without any de-rating.
 3. Functioning: -30°F (-34°C) (Outdoor) to 120°F (49°C) (Indoor & Outdoor).
 4. The neutral shall not be combined for lighting circuits with electronic or dimming ballasts, and should be bonded according to local codes and National Electrical Code (NEC).

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 TIME SWITCHES

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

1. [Cooper Industries, Inc.](#)
2. [Intermatic, Inc.](#)
3. [Invensys Controls.](#)
4. [Leviton Manufacturing Co., Inc.](#)
5. [NSi Industries LLC; TORK Products.](#)
6. [Tyco Electronics; ALR Brand.](#)
7. **<Insert manufacturer's name>.**
8. or approved equal.

Retain "Electronic Time Switches" or "Electromechanical-Dial Time Switches" Paragraph below.

B. **Electronic Time Switches: Solid state, programmable, with alphanumeric display; complying with UL 917.**

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Retain "Contact Configuration" Subparagraph below if configuration is not indicated on Drawings.

2. Contact Configuration: [SPST] [DPST] [DPDT] **<Insert configuration>.**
3. Contact Rating: [30-A inductive or resistive, 240-V ac] [20-A ballast load, 120-/240-V ac] **<Insert rating>.**

Retain one of eight "Programs" subparagraphs below.

4. Programs: Eight on-off set points on a 24-hour schedule[**and an annual holiday schedule that overrides the weekly operation on holidays**].
5. Programs: Two on-off set points on a 24-hour schedule, allowing different set points for each day of the week[**and an annual holiday schedule that overrides the weekly operation on holidays**].
6. Programs: **<Insert number>** channels; each channel is individually programmable with eight on-off set points on a 24-hour schedule.
7. Programs: **<Insert number>** channels; each channel is individually programmable with two on-off set points on a 24-hour schedule with a skip-a-day weekly schedule.
8. Programs: **<Insert number>** channels; each channel is individually programmable with two on-off set points on a 24-hour schedule, allowing different set points for each day of the week.
9. Programs: **<Insert number>** channels; each channel is individually programmable with 40 on-off operations per week and an annual holiday schedule that overrides the weekly operation on holidays.
10. Programs: **<Insert number>** channels; each channel is individually programmable with 40 on-off operations per week, plus four seasonal schedules that modify the basic program, and an annual holiday schedule that overrides the weekly operation on holidays.
11. Programs: **<Insert configuration>**[**and an annual holiday schedule that overrides the weekly operation on holidays**].
12. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program[**on selected channels**].

13. Astronomic Time: **[All] [Selected]** channels.

If retaining first subparagraph below, the timer will change the time at 2:00 a.m. on the second Sunday in March and on the first Sunday in November.

14. Automatic daylight savings time changeover.
15. Battery Backup: Not less than seven days reserve, to maintain schedules and time clock.

- C. Electromechanical-Dial Time Switches: Comply with UL 917.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Retain "Contact Configuration" Subparagraph below if configuration is indicated on Drawings.

2. Contact Configuration: **[SPST] [DPST] [SPDT] [DPDT] <Insert configuration>**.
3. Contact Rating: **[30-A inductive or resistive, 240-V ac] [20-A ballast load, 120-/240-V ac] <Insert rating>**.

Five subparagraphs below describe optional features.

4. Circuitry: Allows connection of a photoelectric relay as a substitute for the on-off function of a program.

Retain first subparagraph below to make time switches self-adjust for seasonal changes and automatically adjust on-off times as days grow shorter or longer.

5. Astronomic time dial.
6. Eight-Day Program: Uniquely programmable for each weekday and holidays.
7. Skip-a-day mode.
8. Wound-spring reserve carryover mechanism to keep time during power failures, minimum of **[16] <Insert number>** hours.

2.2 OUTDOOR PHOTOELECTRIC SWITCHES

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper Industries, Inc.
2. Intermatic, Inc.
3. NSi Industries LLC; TORK Products.
4. Tyco Electronics; ALR Brand.
5. **<Insert manufacturer's name>**.
6. or approved equal.

Retain one of two "Description" paragraphs below. Light-level range is typical for dusk-to-dawn lighting applications. An inductive rating for a switch means it is UL tested at a 50 percent power factor.

First "Description" Paragraph describes a device with built-in, metal-oxide-varistor surge protection, a selection of contact ratings, and a range of adjustments to orient the photocell. These features allow flexibility in making the device suitable for a range of mounting and control situations.

Second "Description" Paragraph describes a device with less-effective surge protection, having a fixed load-breaking contact capacity. Its main application is control of a single lighting fixture. It is designed for mounting on a fixture.

- B. Description: Solid state, with [SPST] [DPST] <Insert configuration> dry contacts rated for [1800-VA tungsten or 1000-VA inductive] <Insert value>, to operate connected relay, contactor coils, or microprocessor input; complying with UL 773A.
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lux), with an adjustment for turn-on and turn-off levels within that range[, and a directional lens in front of the photocell to prevent fixed light sources from causing turn-off].
 3. Time Delay: Fifteen second minimum, to prevent false operation.
 4. Surge Protection: Metal-oxide varistor.
 5. Mounting: Twist lock complies with NEMA C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure.
- C. Description: Solid state, with [SPST] [DPST] dry contacts rated for 1800 VA, to operate connected load, complying with UL 773.
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lux), with an adjustment for turn-on and turn-off levels within that range.
 3. Time Delay: Thirty-second minimum, to prevent false operation.
 4. Lightning Arrester: Air-gap type.
 5. Mounting: Twist lock complying with NEMA C136.10, with base.

2.3 PHOTOELECTRIC CONTROL

- A. Description: Completely self-contained, adjustable type, in NEMA 1 enclosure with adjustable 0 to 15 minute minimum time delay to provide a dead band zone for temporary changes in daylighting.
- B. Automatic Operation:
1. Daylight Only Lighting Level 50 Footcandles or More: No fixtures on.
 2. Daylight Only Lighting Level less than 50 Footcandles: Photocell No. 1 (PC 1) activates SW 1 lamps in Daylighting fixtures.
 3. Daylight Only Lighting Level Less than 25 Footcandles: Photocell No. 2 (PC 2) activates SW 2 lamps in Daylighting fixtures with SW 1 lamps previously activated. All fixture lamps activated.
- C. Footcandle Lighting Level Readings: Measured at the "Workplane" at 3 feet above finish floor.

2.4 DAYLIGHT-HARVESTING SWITCHING CONTROLS

Daylight-harvesting switching controls are suitable for standalone, general indoor daylight-harvesting applications. Photoelectric switching controls in this article are for turning lighting on and off, depending on the amount of daylight reaching the coverage area. Daylight-harvesting switching controls are for interior space lighting. Switching range should correspond to typical interior lighting levels for the space in which lighting is mounted. The power pack in this article contains circuit-switching relay(s) and powers the sensor.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Cooper Industries, Inc.](#)
 2. [Eaton Corporation.](#)
 3. [Hubbell Building Automation, Inc.](#)
 4. [Leviton Manufacturing Co., Inc.](#)
 5. [Lithonia Lighting; Acuity Brands Lighting, Inc.](#)
 6. [NSi Industries LLC; TORK Products.](#)
 7. [Sensor Switch, Inc.](#)
 8. [Tyco Electronics; ALR Brand.](#)
 9. [Watt Stopper.](#)
 10. **<Insert manufacturer's name>.**
 11. or approved equal.
- B. Ceiling-Mounted Switching Controls: Solid-state, light-level sensor unit, with separate power pack[**mounted on luminaire**], to detect changes in indoor lighting levels that are perceived by the eye.
- C. Electrical Components, Devices, and Accessories:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (0 to 49 deg C).
 3. Sensor Output: Contacts rated to operate the associated power pack, complying with UL 773A. Sensor is powered by the power pack.

Retain "Power Pack" Subparagraph below if unit is suitable for controlling a single lighting circuit, provided the circuit load does not exceed the listed aggregate load. Multi-circuit power packs are also available.

4. Power Pack: Dry contacts rated for [20] **<Insert value>**-A ballast load at 120- and 277-V ac, for [13] **<Insert value>**-A tungsten at 120-V ac, and for [1] **<Insert value>** hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
5. General Space Sensors Light-Level Monitoring Range: 10 to 200 fc (108 to 2152 lux), with an adjustment for turn-on and turn-off levels within that range.
6. Atrium Space Sensors Light-Level Monitoring Range: 100 to 1000 fc (1080 to 10800 lux), with an adjustment for turn-on and turn-off levels within that range.

7. Skylight Sensors Light-Level Monitoring Range: 1000 to 10,000 fc (10 800 to 108 000 lux), with an adjustment for turn-on and turn-off levels within that range.
8. Time Delay: Adjustable from 5 to 300 seconds to prevent cycling.
9. Set-Point Adjustment: Equip with deadband adjustment of 25, 50, and 75 percent above the "on" set point, or provide with separate adjustable "on" and "off" set points.
10. Test Mode: User selectable, overriding programmed time delay to allow settings check.
11. Control Load Status: User selectable to confirm that load wiring is correct.
12. Indicator: Two digital displays to indicate the beginning of on-off cycles.

2.5 DAYLIGHT-HARVESTING DIMMING CONTROLS

Daylight-harvesting dimming controls are suitable for standalone, general indoor daylight-harvesting applications. Photoelectric switching controls in this article are for dimming electrical lighting as the amount of daylight reaching the coverage area increases. Daylight-harvesting dimming controls are for lighting in a single interior space. Switching range corresponds to typical interior lighting levels for the space in which lighting is mounted. Controller unit is suitable for several standard 0- to 10-V dc electronic dimming ballasts. The limit for the basis-of-design product is 50 ballasts. The power pack in this article contains circuit-switching relay(s) and powers the sensor.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Cooper Industries, Inc.](#)
 2. [Hubbell Building Automation, Inc.](#)
 3. [Leviton Mfg. Company Inc.](#)
 4. [Lithonia Lighting; Acuity Lighting Group, Inc.](#)
 5. [Watt Stopper.](#)
 6. **<Insert manufacturer's name>.**
 7. or approved equal.
- B. System Description: Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, the lights are dimmed.
 1. Lighting control set point is based on two lighting conditions:
 - a. When no daylight is present (target level).
 - b. When significant daylight is present.
 2. System programming is done with two hand-held, remote-control tools.
 - a. Initial setup tool.
 - b. Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.

- C. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with separate controller unit, to detect changes in lighting levels that are perceived by the eye.
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Sensor Output: 0- to 10-V dc to operate electronic dimming ballasts. Sensor is powered by controller unit.
 3. Power Pack: Sensor has 24-V dc, Class 2 power source, as defined by NFPA 70.
 4. Light-Level Sensor Set-Point Adjustment Range: 20 to 60 fc (120 to 640 lux).

2.6 INDOOR OCCUPANCY SENSORS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Bryant Electric](#).
 2. [Cooper Industries, Inc.](#)
 3. [Hubbell Building Automation, Inc.](#)
 4. [Leviton Manufacturing Co., Inc.](#)
 5. [Lightolier Controls](#).
 6. [Lithonia Lighting; Acuity Brands Lighting, Inc.](#)
 7. [Lutron Electronics Co., Inc.](#)
 8. [NSi Industries LLC; TORK Products](#).
 9. [RAB Lighting](#).
 10. [Sensor Switch, Inc.](#)
 11. [Square D](#).
 12. [Watt Stopper](#).
 13. <Insert manufacturer's name>.
 14. or approved equal.
- B. General Requirements for Sensors: Wall- or ceiling-mounted, solid-state indoor occupancy sensors with a separate power pack.

Retain subparagraphs below to specify various types of units required for Project.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Operation: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
3. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor is powered from the power pack.
4. Power Pack: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
5. Mounting:

- a. Sensor: Suitable for mounting in any position on a standard outlet box.
 - b. Relay: Externally mounted through a 1/2-inch (13-mm) knockout in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
6. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
 7. Bypass Switch: Override the "on" function in case of sensor failure.
 8. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc (21.5 to 2152 lux); turn lights off when selected lighting level is present.

Retain one or more of "PIR Type," "Ultrasonic Type," and "Dual-Technology Type" paragraphs below. Revise coverage area of detectors and add detectors with different coverage patterns and features to suit Project.

- C. PIR Type: Ceiling mounted; detect occupants in coverage area by their heat and movement.
 1. Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm).
 2. Detection Coverage (Room): Detect occupancy anywhere in a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 3. Detection Coverage (Corridor): Detect occupancy within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling.
- D. Ultrasonic Type: Ceiling mounted; detect occupants in coverage area through pattern changes of reflected ultrasonic energy.
 1. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).

Areas listed in detection coverage subparagraphs below are typical.

2. Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft. (56 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 4. Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of 2000 sq. ft. (186 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
 5. Detection Coverage (Corridor): Detect occupancy anywhere within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling in a corridor not wider than 14 feet (4.3 m).
- E. Dual-Technology Type: Ceiling mounted; detect occupants in coverage area using PIR and ultrasonic detection methods. The particular technology or combination of technologies that control on-off functions is selectable in the field by operating controls on unit.

1. Sensitivity Adjustment: Separate for each sensing technology.
2. Detector Sensitivity: Detect occurrences of **6-inch-** (150-mm-) minimum movement of any portion of a human body that presents a target of not less than **36 sq. in.** (232 sq. cm), and detect a person of average size and weight moving not less than **12 inches** (305 mm) in either a horizontal or a vertical manner at an approximate speed of **12 inches/s** (305 mm/s).
3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of **1000 sq. ft.** (93 sq. m) when mounted on a **96-inch-** (2440-mm-) high ceiling.

2.7 SWITCHBOX-MOUNTED OCCUPANCY SENSORS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Bryant Electric.](#)
 2. [Cooper Industries, Inc.](#)
 3. [Hubbell Building Automation, Inc.](#)
 4. [Leviton Manufacturing Co., Inc.](#)
 5. [Lightolier Controls.](#)
 6. [Lithonia Lighting; Acuity Brands Lighting, Inc.](#)
 7. [Lutron Electronics Co., Inc.](#)
 8. [NSi Industries LLC; TORK Products.](#)
 9. [RAB Lighting.](#)
 10. [Sensor Switch, Inc.](#)
 11. [Square D.](#)
 12. [Watt Stopper.](#)
 13. **<Insert manufacturer's name>.**
 14. or approved equal.

Each manufacturer's switch rating is different; however, rated design values are generally not less than those stated in "General Requirements for Sensors" Paragraph below.

- B. General Requirements for Sensors: Automatic-wall-switch occupancy sensor, suitable for mounting in a single gang switchbox.
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Operating Ambient Conditions: Dry interior conditions, **32 to 120 deg F** (0 to 49 deg C).
 3. Switch Rating: Not less than 800-VA fluorescent at 120 V, 1200-VA fluorescent at 277 V, and 800-W incandescent.

"WS1" and "WS2" in "Wall-Switch Sensor Tag WS1" and "Wall-Switch Sensor Tag WS2" paragraphs below are a suggested marking system on Drawings when detectors with different sensor characteristics are required.

C. Wall-Switch Sensor Tag WS1:

1. Standard Range: 180-degree field of view, field adjustable from 180 to 40 degrees; with a minimum coverage area of [900 sq. ft. (84 sq. m)] [2100 sq. ft (196 sq. m)].
2. Sensing Technology: [PIR] [Dual technology - PIR and ultrasonic].
3. Switch Type: [SP.] [SP, dual circuit.] [SP, manual "on," automatic "off."] [SP, field selectable automatic "on," or manual "on" automatic "off."]
4. Voltage: [Match the circuit voltage] [120 V] [277 V] [Dual voltage, 120 and 277 V]; [passive-infrared] [dual-technology] type.
5. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc (108 to 1600 lux). The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.

Retain one of two "off" time-delay subparagraphs below.

6. Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
7. Concealed "off" time-delay selector at 30 seconds, and 5, 10, and 20 minutes.
8. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.

"Wall-Switch Sensor Tag WS2" Paragraph below is typical for square and near-square rectangular rooms.

D. Wall-Switch Sensor Tag WS2:

1. Standard Range: 210-degree field of view, with a minimum coverage area of 900 sq. ft. (84 sq. m).
2. Sensing Technology: PIR.
3. Switch Type: [SP.] [SP, dual circuit.] [SP, manual "on," automatic "off."] [SP, field selectable automatic "on," or manual "on" automatic "off."]
4. Voltage: [Match the circuit voltage] [120 V] [277 V] [Dual voltage, 120 and 277 V]; [passive-infrared] [dual-technology] type.
5. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc (108 to 1600 lux). The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.

Retain one of two "off" time-delay subparagraphs below.

6. Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
7. Concealed "off" time-delay selector at 30 seconds, and 5, 10, and 20 minutes.
8. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.

2.8 HIGH-BAY OCCUPANCY SENSORS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Hubbell Building Automation, Inc.](#)

2. <Insert manufacturer's name>.
3. or approved equal.

High-bay occupancy sensors are for lighting control of high-bay interior spaces illuminated with high-intensity-discharge lamped luminaires. Lamp and ballast combinations are available for metal halide and high-pressure sodium lamps with CVA and pulse-start ballasts.

B. General Description: Solid-state unit. The unit is designed to operate with the lamp and ballasts indicated.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Retain subparagraphs below to specify various types of units required for Project.

2. Operation: Turn lights on when coverage area is occupied, and to half-power when unoccupied; with a time delay for turning lights to half-power that is adjustable over a minimum range of 1 to 16 minutes.
3. Continuous Lamp Monitoring: When lamps are dimmed continuously for 24 hours, automatically turn lamps on to full power for 15 minutes for every 24 hours of continuous dimming.

Certain lamp and ballast combinations have a 131 deg F (55 deg C) maximum ambient rating. If used, reduce the high value of the range to 131 deg F (55 deg C).

4. Operating Ambient Conditions: 32 to 149 deg F (0 to 65 deg C).
5. Mounting: Threaded pipe.
6. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
7. Detector Technology: PIR.

MyzerPORT in subparagraph below is available from most fixture manufacturers.

8. Power and dimming control from the lighting fixture ballast that has been modified to include the dimming capacitor and MyzerPORT option.

Hubbell provides the following selection of lens coverage in mounting height to horizontal coverage distance ratios: 1.5 x 0.23 for mounting heights from 12 to 28 feet (3.7 to 8.5 m); 1.0 x 0.23 for mounting heights from 22 to 36 feet (6.7 to 11 m); 0.7 x 0.16 for mounting heights from 44 to 50 feet (13.4 to 15.2 m); and 0.80 x 0.60 for mounting heights from 12 to 36 feet (93.7 to 11 m).

- C. Detector Coverage: User selectable by interchangeable PIR lenses, suitable for mounting heights from 12 to 50 feet (3.7 to 15.2 m).
- D. Accessories: Obtain manufacturer's installation and maintenance kit with laser alignment tool for sensor positioning and power port connectors.

2.9 EXTREME-TEMPERATURE OCCUPANCY SENSORS

Extreme-temperature occupancy sensors are used to turn electrical lighting on or off when the coverage area is occupied or unoccupied. These sensors are for lighting control of open structures, cold storage, freezers, and similar applications.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Cooper Industries, Inc.](#)
 2. [Sensor Switch, Inc.](#)
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. **Description:** Ceiling-mounted, solid-state, extreme-temperature occupancy sensors with a separate power pack.
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended application in damp locations.

Retain subparagraphs below to specify various types of units required for Project.

2. **Operation:** Turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 30 minutes.
 3. **Operating Ambient Conditions:** From **minus 40 to plus 125 deg F** (minus 40 to plus 52 deg C).
 4. **Sensor Output:** Contacts rated to operate the connected relay, complying with UL 773A. Sensor is powered from the power pack.
 5. **Power Pack:** Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
 6. **Mounting:**
 - a. **Sensor:** Suitable for mounting in any position on a standard outlet box.
 - b. **Relay:** Externally mounted through a **1/2-inch (13-mm)** knockout in a standard electrical enclosure.
 - c. **Time-Delay and Sensitivity Adjustments:** Recessed and concealed behind cover.
 7. **Bypass Switch:** Override the "on" function in case of sensor failure.
 8. **Automatic Light-Level Sensor:** Adjustable from **2 to 10 fc** (21.5 to 108 lux); keep lighting off when selected lighting level is present.
- C. **Detector Technology:** PIR. Ceiling mounted; detect occupants in coverage area by their heat and movement.
1. **Detector Sensitivity:** Detect occurrences of **6-inch- (150-mm-)** minimum movement of any portion of a human body that presents a target of not less than **36 sq. in. (232 sq. cm)**.
 2. **Detection Coverage (Room):** Detect occupancy anywhere in a circular area of **1500 sq. ft. (139 sq. m)** when mounted on a **96-inch- (2440-mm-)** high ceiling.
 3. **Detection Coverage (High Bay):** Detect occupancy within **25 feet (7.6 m)** when mounted on a **25-foot- (7.6-m-)** high ceiling.

2.10 OUTDOOR MOTION SENSORS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Bryant Electric.](#)
 2. [Cooper Industries, Inc.](#)
 3. [Hubbell Building Automation, Inc.](#)
 4. [Leviton Manufacturing Co., Inc.](#)
 5. [Lithonia Lighting; Acuity Brands Lighting, Inc.](#)
 6. [NSi Industries LLC; TORK Products.](#)
 7. [RAB Lighting.](#)
 8. [Sensor Switch, Inc.](#)
 9. [Watt Stopper.](#)
 10. **<Insert manufacturer's name>.**
 11. or approved equal.
- B. General Requirements for Sensors: Solid-state outdoor motion sensors.

Retain features in subparagraphs below applicable to motion sensors for Project.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. **[PIR] [Dual-technology (PIR and infrared)]** type, weatherproof. Detect occurrences of **6-inch-** (150-mm-) minimum movement of any portion of a human body that presents a target of not less than **36 sq. in.** (232 sq. cm). Comply with UL 773A.
3. Switch Rating:
 - a. Lighting-Fixture-Mounted Sensor: **[1000-W incandescent, 500-VA fluorescent] <Insert rating>.**
 - b. Separately Mounted Sensor: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
4. Switch Type: **[SP.] [SP, dual circuit.] [SP, manual "on," automatic "off. "] [SP, field selectable automatic "on," or manual "on" automatic "off. "] [With bypass switch to override the "on" function in case of sensor failure.]**
5. Voltage: **[Match the circuit voltage] [120-V] [277-V] [Dual voltage, 120- and 277-V]** type.
6. Detector Coverage:
 - a. Standard Range: 210-degree field of view, with a minimum coverage area of **900 sq. ft.** (84 sq. m).
 - b. Long Range: 180-degree field of view and **110-foot** (34-m) detection range.
 - c. **<Insert coverage area>.**

7. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc (108 to 1600 lux). The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.

Retain one of two "off" time-delay subparagraphs below.

8. Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
9. Concealed "off" time-delay selector at 30 seconds, and 5, 10, and 20 minutes.
10. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and help eliminate false "off" switching.
11. Operating Ambient Conditions: Suitable for operation in ambient temperatures ranging from minus 40 to plus 130 deg F (minus 40 to plus 54 deg C), rated as "raintight" according to UL 773A.

2.11 LIGHTING CONTACTORS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Allen-Bradley/Rockwell Automation.
 2. ASCO Power Technologies, LP.
 3. Eaton Corporation.
 4. General Electric Company; GE Consumer & Industrial - Electrical Distribution; Total Lighting Control.
 5. Square D.
 6. **<Insert manufacturer's name>.**
 7. or approved equal.
- B. Description: Electrically operated and [**mechanically**] [**electrically**] held, combination-type lighting contactors with [**fusible switch**] [**nonfused disconnect**], complying with NEMA ICS 2 and UL 508.

Revise subparagraphs below, if required, for specific ratings; or indicate on Drawings. Coordinate control voltage with lighting control system if used. See Evaluations for suggested options to be indicated on Drawings.

1. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush ballast (ballast with 15 percent or less total harmonic distortion of normal load current).
2. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.
3. Enclosure: Comply with NEMA 250.
4. Provide with control and pilot devices as [**indicated on Drawings**] [**scheduled**], matching the NEMA type specified for the enclosure.

Retain "Interface with DDC System for HVAC" Paragraph below for interface with the DDC system for HVAC. Coordinate with Section 230923 "Direct Digital Control (DDC) System for HVAC."

- C. Interface with DDC System for HVAC: Provide hardware interface to enable the DDC system for HVAC to monitor and control lighting contactors.
1. Monitoring: On-off status, **<Insert monitoring point>**.
 2. Control: On-off operation, **<Insert control point>**.

2.12 EMERGENCY SHUNT RELAY

Retain this article for emergency lighting switched on and off by manual, photoelectric, or other automatic switching devices. An emergency shunt relay will bypass or shunt the manual switch or other control device and turn connected lights on during a power outage.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Lighting Control and Design](#).
 2. [Watt Stopper](#).
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. Description: Normally closed, electrically held relay, arranged for wiring in parallel with manual **[or automatic]** switching contacts; complying with UL 924.
1. Coil Rating: **[120] [277]** V.

2.13 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than **[No. 18] [No. 22] [No. 24]** AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than **[No. 14] [No. 16] [No. 18]** AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 SENSOR INSTALLATION

- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.
- B. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.2 CONTACTOR INSTALLATION

Retain this article when specifying electrically held units in Part 2.

- A. Mount electrically held lighting contactors with elastomeric isolator pads to eliminate structure-borne vibration, unless contactors are installed in an enclosure with factory-installed vibration isolators.

3.3 WIRING INSTALLATION

Coordinate this article with Drawings.

- A. Wiring Method: Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size is 1/2 inch (13 mm).
- B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
- C. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.
- D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.
- E. Tighten lighting control equipment assembly joints with torque wrench or similar tool recommended by bus assembly manufacturer. Tighten joints again after lighting systems have been energized for 30 days.
- F. Connect lighting control equipment assemblies and components to wiring system and to ground as indicated and instructed by manufacturer.
- G. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

- H. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

3.4 IDENTIFICATION

- A. Identify components and power and control wiring according to Section 260553 "Identification for Electrical Systems."
 - 1. Identify controlled circuits in lighting contactors.
 - 2. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
- B. Label time switches and contactors with a unique designation.

3.5 FIELD QUALITY CONTROL

Retain "Testing Agency," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph or if retaining "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to evaluate lighting control devices and perform tests and inspections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Manufacturer's representative shall visit site, verify installation, start up and test, and submit to DEN Project Manager, a letter stating equipment and installation meets intent of Contract Documents and manufacturer's warranties and guarantees are in effect

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- C. Lighting control devices will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Occupancy Adjustments: When requested within [**twelve (12)**] <Insert number> months from date of Substantial Completion, provide on-site assistance in adjusting sensors to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.
1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.
 2. For daylighting controls, adjust set points and deadband controls to suit Owner's operations.
 3. Align high-bay occupancy sensors using manufacturer's laser aiming tool.

3.7 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris. Repair damaged finish to match original finish.

3.8 PROTECTION

- A. Provide final protection to ensure that moisture does not enter lighting control equipment assembly.

3.9 DEMONSTRATION

This article covers optional services; retain if Project warrants. Coordinate with requirements in Section 017900 "Demonstration and Training." If Project includes programmable lighting controls, coordinate with system testing.

- A. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control systems specified in Section 260943.13 "Addressable-Fixture Lighting Controls" and Section 260943.23 "Relay-Based Lighting Controls."
- B. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain lighting control devices.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260923

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260926 - LIGHTING CONTROL PANELBOARDS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

If applying for LEED certification, LEED-NC Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1-2004. ASHRAE/IESNA 90.1-2004, Section 9, "Lighting," sets minimum interior and exterior lighting power densities and minimum requirements for lighting controls.

Additional lighting controls can be used to meet the requirements of LEED-NC Credit IEQ 6.1 if individual lighting controls are provided for a minimum of 90 percent of the building occupants and lighting system controls are provided for all shared multi-occupant spaces to enable adjustment to meet group needs. Indicate locations of lighting controls on Drawings.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes: Lighting controls using electrically operated circuit breakers.
- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 260923 "Lighting Control Devices" for field-mounted photoelectric switches, occupancy sensors, and motion sensors.
2. Section 260933 "Central Dimming Controls" for daylight harvesting control components.

3. Section 260936.19 "Standalone Multipreset Modular Dimming Controls" for daylight harvesting control components.
4. Section 262416 "Panelboards".

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. DDC: Direct digital control.
- B. IP: Internet protocol.
- C. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- D. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- E. PC: Personal computer; sometimes plural as "PCs."
- F. RS-485: A serial network protocol, similar to RS-232, complying with TIA-485-A.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, manual switches and plates, and conductors and cables.
 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each lighting control panelboard and related equipment.
 1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
 2. Detail enclosure types and details for types other than NEMA 250, Type 1.
 3. Detail bus configuration, current, and voltage ratings.

4. Short-circuit current rating of panelboards and overcurrent protective devices.
5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

Retain first subparagraph below if final system short-circuit and coordination studies is performed by designer or assigned to independent consultant. These curves are also beneficial to Owner for future additions or reevaluations of overcurrent protective device settings.

6. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graph paper; include selectable ranges for each type of overcurrent protective device.
7. Include diagrams for power, signal, and control wiring.

Retain "Block Diagram" Subparagraph below when control is digital, PC based, or IP based.

8. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.

1.5 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below if lighting controls are connected to devices or systems specified in other Sections.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 1. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
 2. For networked controls, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the network protocol.

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- B. Qualification Data: For testing agency.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 260548.16 "Seismic Controls for Electrical Systems." See ASCE/SEI 7 for certification requirements for equipment and components.

- C. Seismic Qualification Certificates: For panelboards, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- D. Field quality-control reports.

Retain first paragraph below for PC- and IP-based control systems.

- E. Software licenses and upgrades required by and installed for operation and programming of digital and analog devices.
- F. Sample Warranty: For manufacturer's special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lighting controls to include in emergency, operation, and maintenance manuals.

Retain "Software and Firmware Operational Documentation" Paragraph below for PC- and IP-based control systems.

- B. Software and Firmware Operational Documentation:
 1. Software operating and upgrade manuals.
 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
 3. Printout of software application and graphic screens.
 4. Device address list.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Electrically Operated, Molded-Case Circuit Breakers: Equal to **<Insert number>** percent of amount installed[**for each size indicated**], but no fewer than **<Insert number>**.

1.8 QUALITY ASSURANCE

Retain "Testing Agency Qualifications" Paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also defines "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Handle and prepare panelboards for installation according to [NECA 407] [NEMA PB 1.1].

1.10 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for units and components.

- 1. Warranty Period: Minimum [five (5)] <Insert number> years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Products" Paragraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

A. Products: Subject to compliance with requirements, provide one of the following:

1. Acuity Brands, Inc., Lighting Control & Design, Inc.; SmartBreaker Panels.
2. Eaton Corporation; Cutler-Hammer Business Unit; Pow-R-Command Lighting Control Panelboards.
3. General Electric Company; GE Energy Management - Electrical Distribution; A-Series Lighting Control Panels.
4. Siemens Energy; i-3 Lighting Controls.
5. Square D; by Schneider Electric; PowerLink G3 Lighting Control Panelboards.
6. **<Insert manufacturer's name; product name or designation>**.
7. or approved equal.

B. Source Limitations: Obtain lighting controls and power distribution components from single manufacturer.

2.2 SYSTEM DESCRIPTION

A. Input signal from field-mounted or on-board signal source shall open or close one or more electrically operated circuit breakers in the lighting control panelboards. Any combination of inputs shall be programmable to any combination outputs.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with 47 CFR, Subpart A and Subpart B, for Class A digital devices.

2.3 PERFORMANCE REQUIREMENTS

Retain "Seismic Performance" Paragraph below with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Delete below if performance requirements are indicated on Drawings. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Coordinate requirements with structural engineer.

A. Seismic Performance: Panelboards shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] **<Insert requirement>**.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

For life-safety components required to function after an earthquake (such as fire-sprinkler systems, components that contain hazardous content, and storage racks in structures open to the public), the Component Importance Factor is 1.5. For other components, the Component Importance Factor is 1.0 unless the structure is in Seismic Use Group III and component is necessary for continued operation of facility or failure of component could impair continued operation of facility, in which case the Component Importance Factor is 1.5.

2. Component Importance Factor: [1.5] [1.0].

See ASCE/SEI 7, Coefficients for Architectural Component Table and Seismic Coefficients for Mechanical and Electrical Components Table for requirements to be inserted in subparagraph below.

3. **<Insert requirements for Component Amplification Factor and Component Response Modification Factor>.**

- B. Expansion Requirements: Capacity for future expansion of number of control functions by 25 percent of current capacity; to include equipment ratings, housing capacities, spare spaces for circuit breakers, terminals, number of conductors in control cables, and control software.

Retain "Interface with DDC System for HVAC" Paragraph below for interface with the DDC system for HVAC. Coordinate with Section 230923 "Direct Digital Control (DDC) System for HVAC."

- C. Interface with DDC System for HVAC: Provide hardware and software to enable the DDC system for HVAC to monitor, control, display, and record data for use in processing reports.

Retain "Hardwired Points" or "Communication Interface" Subparagraphs below. Retain first if interface with the DDC system for HVAC is through hardwired points and minimal interface is required. Retain second if extensive interface with the DDC system for HVAC is required and is beyond what hardwired points can provide. Requirement may exclude some manufacturers.

1. Hardwired Points:
 - a. Monitoring: On-off status, **<Insert monitoring point>.**
 - b. Control: On-off operation, **<Insert control point>.**
2. Communication Interface: Comply with **[ASHRAE 135] <Insert type of interface>**. The communication interface shall enable the DDC system for HVAC operator to remotely control and monitor lighting from a DDC system for HVAC operator workstation. Control features and monitoring points displayed locally at lighting panel shall be available through the DDC system for HVAC.

2.4 PANELBOARDS

- A. Refer to Section 262416 "Panelboards" for general requirements.
- B. The lighting panelboards may contain remotely operated circuit breakers and standard branch circuit breakers specified in Section 262416 "Panelboards."
- C. Assemblies: Comply with UL 67 and NEMA PB 1.

Retain one of two "Surge Protective Device" paragraphs below.

- D. Surge Protective Device: Field mounted, complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
- E. Surge Protective Device: Integrally mounted, complying with UL 1449 Type 1.
 - 1. Comply with IEEE C62.41, Category C, 200-kA short-circuit current rating.
 - 2. Non-modular type with the following features and accessories:
 - a. Digital-display indicator lights for power and protection status.
 - b. **<Insert features and accessories>**.
- F. Enclosures: Comply with UL 50 and NEMA 250.

Retain "Future Devices" Paragraph below if future provisions are required.

- G. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

Retain one or both "Panelboard Short-Circuit Current Rating" paragraphs below for series-rated system or system that has panelboards and circuit breakers rated for full value of short-circuit current available at location of equipment. Typical short-circuit current rating of electrically operated circuit breakers is 10 kA. If higher values and series ratings are required, verify availability with manufacturers.

- H. Panelboard Short-Circuit Current Rating: Rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by an NRTL. Include size and type of allowable upstream and branch devices, listed and labeled for series-connected, short-circuit rating by an NRTL.
- I. Panelboard Short-Circuit Current Rating: Fully rated to interrupt [**10-kA**] symmetrical short-circuit current available at terminals.
- J. Panelboards shall have a UL-listed interrupting rating[**of 10 kA**], sufficient for the application, or a UL-listed, series-connected rating for the maximum available fault current at that point in the system.

2.5 CIRCUIT BREAKERS

- A. Remotely operated branch circuit breakers used for lighting control shall provide branch-circuit overcurrent protection.

In "Labeled with SWD and HID Ratings" Paragraph below, SWD rating is only available for 15- and 20-A, single-pole circuit breakers. Retain option if specifying other breaker sizes.

See Editing Instruction No. 2 in the Evaluations for discussion on short-circuit current ratings for equipment complying with UL 489.

- B. Labeled with SWD and HID Ratings: Comply with UL 489 for 15- and 20-A, single-pole branch devices.[**15- and 20-A circuit breakers, if scheduled, shall be a product of the same manufacturer and be of the same class as the rated circuit breakers.**]

Retain "Switching Endurance Rating" Paragraph below if endurance in excess of UL 489 SWD test is required. Verify test method and available ratings with manufacturers.

- C. Switching Endurance Rating: Not less than [50,000] [200,000] <Insert number> full-load open/close/open remote operations.
- D. Remotely Operated Circuit Breakers: Manual override switch or handle position shall enable or disable the remote operation of the device and allow breaker handle to manually control the breaker's on-off status.

Retain "Main" option in article title below if retaining "Slave Panel Controllers" Article.

2.6 [MAIN]CONTROLLERS

- A. Description: Controllers shall contain the power supply and electronic control for operating and monitoring remotely operated branch circuit breakers.

See Editing Instruction No. 2 in the Evaluations for discussion on short-circuit current ratings for equipment complying with UL 916.

1. Comply with UL 916; with a microprocessor-based, solid-state, 365-day timing and control unit.
2. Power Supply: Powered from the panelboard, sized to provide control power for the operation of the remotely operated circuit breakers, controller, bus system, low-voltage inputs, field-installed occupancy sensors, and low-voltage photo sensors.
3. Integral keypad and digital-display front panel for local setup, including the following:
 - a. Blink notice, time adjustable from software.
 - b. Ability to log and display remotely operated breaker on-time.
 - c. Capability for accepting downloadable firmware so that the latest production features may be added in the future without replacing the module.
4. Nonvolatile memory shall retain all setup configurations. After a power failure, the controller shall automatically reboot and return to normal system operation.

Retain "Ethernet Communications" Paragraph below if networking lighting control panelboards. Coordinate with "Control Network" Article.

5. Ethernet Communications: Comply with [ASHRAE 135] <Insert network protocol> protocols.
 - a. Each input connected to the controller shall control any remotely operated breaker in any other networked lighting control panel.
 - b. A schedule programmed at one controller shall be able to control any remotely operated breaker in any other networked lighting control panel.

In "Time Synchronization" Subparagraph below, the typical value ranges from one hour to 24 hours.

6. Time Synchronization: The timing unit shall be updated not less than every **<Insert number>** hour(s) with the network time server.
 7. Web Server: Display information listed below over a standard Web-enabled server for displaying information over a standard Web browser.
 - a. A secure, password-protected login screen for modifying operational parameters, accessible to authorized users via Web page interface.
 - b. Separate Web page, showing status of each main and slave lighting control panel with the arrangement of breakers on the page matching the physical appearance of the panel. Status shall include breaker nametags, pole configuration, location in panel, actual contact state (on-off/tripped/manual), and breaker on-time and blink information in real time.
 - c. Panel summary showing the master and slave panels connected to the controller.
 - d. Controller diagnostic information.
 - e. Show front panel mimic screens for setting up controller parameters, input types, zones, and operating schedules. These mimic screens shall also allow direct breaker control and zone overrides.
 8. Alarm and E-mail Notification: Automatically initiate alarms based on preconfigured conditions listed below and routing alarm alerts as set at the control panel.
 - a. General Alarms: Power loss, non-responding breakers, loss and restoration of sub-net communications, loss and restoration of serial port communications, loss and restoration of DDC system for HVAC commands.
 - b. Specific Alarms: Input status, zone status, breaker status on-time (0 to 99999 hours).
 - c. E-mail Notification: Automatically route e-mail messages to five individual e-mail addresses. Within the body text of the e-mail, include a link that automatically redirects the user to the associated panels' status Web page.
- B. Timing Unit:
1. **[365-day calendar]** **[seven day calendar]**, astronomical clock, and automatic adjustments for daylight savings and leap year.
 2. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
 3. **[16]** **<Insert number>** independent schedules, each having **[24]** **<Insert number>** time periods.
 4. Schedule periods settable to the minute.
 5. Day-of-week, day-of-month, day-of-year with one-time or repeating capability.
 6. **[32]** **<Insert number>** special date periods.
- C. With **[8]** **[16]** **<Insert number>** inputs, each configurable to the following parameters:
1. Normally open, normally closed, two-wire maintained toggle, two-wire momentary toggle, two-wire momentary on, two-wire momentary off, or three-wire momentary operation.

2. On and off-delay timers for local override operation, adjustable from five minutes to 12 hours. Local override shall be by field-installed, two-wire momentary toggle switch.

2.7 SLAVE PANEL CONTROLLERS

Retain this article if more than one lighting control panelboard is under unified control of the main controller.

- A. Slave panels shall contain the necessary busses and network hardware to allow connection of the sub-net wiring between panels, with programming at the main panel controller. Programmable timing unit, Web server, alarm and e-mail notification, and Ethernet connection to the control network is not required provided all of these functions are available for the slave panel from the main lighting panel controller.
- B. Sub-net wiring connections shall allow connection of wiring to a terminal that can be removed from the panel without interrupting communications to other panels.
- C. Slave panels shall contain a nameplate label attached to the deadfront trim indicating the panel designation, panel network address, and panel designation of the associated master panel.

2.8 CONTROL NETWORK

Retain first option in "Panel Controllers" Paragraph below if networking more than one main controller. Retain second option if the network connects controllers associated with relay-based lighting control system controllers or addressable fixture lighting control system controllers.

- A. Panel Controllers: Networked with other [**lighting control panel controllers**] [**lighting control system controllers**] in a peer-to-peer configuration using Ethernet [**10Base-T**] [**100Base-T**] network.

Retain "Compliance with ASHRAE 135" Paragraph below for DDC system for HVAC control network. Revise as required for other network protocols.

See "Communication Networks for Lighting Controls" Article in the Evaluations for discussion of communication network options.

- B. Compliance with ASHRAE 135: Controllers shall support serial MS/TP and Ethernet IP communications, and shall be able to communicate directly via DDC system for HVAC RS-485 serial networks and Ethernet 10Base-T networks as a native device.

2.9 MANUAL SWITCHES AND PLATES

Coordinate use of manual switches in this article with override functions, with switch and wall-plate finish specified in Section 262726 "Wiring Devices," and with dimmer control wall-plate finish specified in Section 260933 "Central Dimming Controls" or Section 260936.19 "Standalone Multipreset Modular Dimming Controls."

- A. Keypads: Programmable, designed to control lighting applications and functions associated with the equipment of this Section. The units shall be able to control any system output device, including remotely operated circuit breakers, relays, dimmers, and analog outputs.
- B. Push-Button Switches: Modular, momentary-contact, low-voltage type.
 - 1. Match color specified in Section 262726 "Wiring Devices."

Two subparagraphs below are optional features.

- 2. Integral green **[LED]** pilot light to indicate when circuit is on.
 - 3. Internal white **[LED]** locator light to illuminate when circuit is off.
- C. Manual, Maintained Contact, Full- or Low-Voltage Switch: Comply with Section 262726 "Wiring Devices."
- D. Wall Plates: Single and multigang plates as specified in Section 262726 "Wiring Devices."
- E. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.10 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Class 2 and Class 3 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 18] [No. 22] [No. 24]** AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 14] [No. 16] [No. 18]** AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Digital and Multiplexed Signal Cables: Unshielded, twisted-pair cable with copper conductors, complying with TIA/EIA-568-B.2, **[Category 5e] [Category 6]** for horizontal copper cable. Comply with requirements in Section 271500 "Communications Horizontal Cabling."

PART 3 - EXECUTION

3.1 EXAMINATION

NECA and NEMA standards in first paragraph below include similar requirements. See "Testing and Inspecting" Article in the Evaluations.

- A. Receive, inspect, handle, and store panelboards according to **[NECA 407] [NEMA PB 1.1]**.
- B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.
- C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WIRING INSTALLATION

- A. Comply with NECA 1.

Retain one of two "Wiring Method" paragraphs below and coordinate with Drawings. Delete both if wiring methods for system are indicated on Drawings.

- B. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.
 - 1. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
 - 2. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."
- C. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.3 PANELBOARD INSTALLATION

- A. Comply with NECA 1.

NECA and NEMA standards in first paragraph below include similar requirements. See "Testing and Inspecting" Article in the Evaluations.

- B. Install panelboards and accessories according to **[NECA 407] [NEMA PB 1.1]**.

Retain first paragraph below if seismic controls are required for Project. Coordinate with Drawings.

- C. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

In "Mounting Height" Paragraph below, verify that operating handle of top-most switch or circuit breaker,

in on position, is not higher than 79 inches (2000 mm) above finished floor or grade.

- D. Mounting Height: [90 inches (2286 mm)] <Insert dimension> to top of trim above finished floor unless otherwise indicated.
- E. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
- F. Install filler plates in unused spaces.

3.4 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section 260553 "Identification for Electrical Systems."
- C. Create a directory to indicate loads served by each circuit; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are unacceptable.
- D. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

Retain "Testing Agency" and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate testing requirements with Section 262416 "Panelboards."

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Perform the following infrared scan tests and inspections and prepare reports:

- a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
- b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
- c. Instruments and Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

C. Acceptance Testing Preparation:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

D. Panelboard will be considered defective if it does not pass tests and inspections.

Retain paragraph below if tests and inspections are performed by Contractor or manufacturer's field-service representative engaged by Contractor.

- E. Prepare test and inspection reports, including a certified report that identifies panelboards included and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Confirm correct communication wiring, initiate communications between panels, and program the lighting control system according to approved zone configuration schedules, time-of-day schedules, and input override assignments.
 3. **<Insert startup steps if any>**.

3.7 ADJUSTING

- A. Occupancy Adjustments: When requested within [**twelve (12)**] **<Insert number>** months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] **<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.8 SOFTWARE SERVICE AGREEMENT

Services in this article may not be allowed for publicly funded projects.

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for **[two] <Insert number>** years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within **[two (2)] <Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
 - 1. Upgrade Notice: At least **[thirty (30)] <Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain control modules.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260926

Copyright 2009 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260933 - CENTRAL DIMMING CONTROLS

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Section includes microprocessor-based central dimming controls with the following components:
 - 1. Control network.
 - 2. Master-control stations.
 - 3. Partitioned-space master-control stations.
 - 4. Wall stations.
 - 5. Dimmer cabinets.
 - 6. Manual switches and plates for controlling dimmers.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain abbreviation and terms that remain after this Section has been edited.

- A. Fade Override: The ability to temporarily set fade times to zero for all lighting scenes.
- B. Fade Rate: The time it takes each zone to arrive at the next scene, dependent on the degree of change in lighting level.

- C. Fade Time: The time it takes all zones to fade from one lighting scene to another, with all zones arriving at the next scene at the same time.
- D. Low Voltage: As defined in NFPA 70, term for circuits and equipment operating at less than 50 V or for remote-control, signaling, and power-limited circuits.
- E. Scene: The lighting effect created by adjusting several zones of lighting to the desired intensity.
- F. SCR: Silicon-controlled rectifier.
- G. Zone: A fixture or group of fixtures controlled simultaneously as a single entity. Also known as a "channel."

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. For central dimming controls; include elevation, features, characteristics, and labels.
 - 2. For dimmer panels; include dimensions, features, dimmer characteristics, ratings, and directories.
 - 3. Device plates, plate color, and material.
 - 4. Ballasts and lamp combinations compatible with dimmer controls.
 - 5. Sound data including results of operational tests of central dimming controls.
 - 6. Operational documentation for software and firmware.
 - 7. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Detail assemblies of standard components, custom assembled for specific application on Project. Indicate dimensions, weights, arrangement of components, and clearance and access requirements.
 - 1. Include elevation views of front panels of control and indicating devices and control stations.
 - 2. Wiring Diagrams: Power, signal, and control wiring.

Retain paragraph below if products have critical features needing hands-on appraisal.

Delete sample requirement in paragraph below if project is of very limited scope, and deletion is approved by DEN Project Manager.

Coordinate sample requirements with DEN Project Manager.

- C. Samples for Initial Selection: For master-control stations, partitioned-space master-control stations, wall stations, dimmer cabinets, and faceplates with factory-applied color finishes and technical features.

Delete paragraph above if colors and other characteristics are preselected or scheduled. Retain first paragraph below with or without above.

- D. Samples for Verification: For master-control stations, partitioned-space master-control stations, wall stations, dimmer cabinets, and faceplates with factory-applied color finishes and technical features.

1.5 INFORMATIONAL SUBMITTALS

- A. Warranty: Special warranty specified in this Section.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For central dimming controls with remote-mounting dimmers to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 1. Software manuals.
 2. Adjustments of scene preset controls, adjustable fade rates, and fade overrides.
 3. Operation of adjustable zone controls.
 4. Testing and adjusting of panic and emergency power features.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MATERIALS MAINTENANCE SUBMITTALS

Extra materials may not be allowed for publicly funded projects.

- A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Dimmers: Full-size units equal to <Insert number> percent of amount installed for each size indicated, but no fewer than <Insert number> units.
 2. Fuses: Equal to <Insert number> percent of amount installed for each size installed, but no fewer than [three (3)] <Insert number>.

1.8 QUALITY ASSURANCE

Retain first paragraph below if devices specified in this Section are to function with low-voltage lighting controls.

- A. Source Limitations: Obtain central dimming controls from a single source with total responsibility for compatibility of lighting control system components specified in this Section and in Section 260923 "Lighting Control Devices."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with 47 CFR 15, Subparts A and B, for Class A digital devices.
- D. Comply with NFPA 70.
- E. Those firms responding to this specification shall provide proof that they have been regularly engaged in the design, manufacturing and testing of lighting control equipment for not less than five (5) years.

1.9 COORDINATION

Retain this Article if devices specified in this Section are to be interconnected with systems specified in other Sections. Revise to reference relevant Sections.

- A. Coordinate features of devices specified in this Section with systems and components specified in other Sections to form an integrated system of compatible components. Match components and interconnections for optimum performance of specified functions. Include coordination with the following:
 - 1. Section 260923 "Lighting Control Devices."

1.10 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this Article are not less than remedies available to Owner under prevailing local laws. Coordinate with Division 01 Section "Product Requirements."

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of central dimming controls that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Damage from transient voltage surges.
 - b. <Insert type of failure>.

Verify available warranties for units and components and insert numbers in subparagraphs below.

2. Warranty Period: Cost to repair or replace any parts for **[two (2)] <Insert number>** years from date of Substantial Completion.
3. Extended Warranty Period: Cost of replacement parts (materials only, f.o.b. the nearest shipping point to Project site), for **[eight (8)] <Insert number>** years, that failed in service due to transient voltage surges.

1.11 SOFTWARE SERVICE AGREEMENT

Services in this Article may not be allowed for publicly funded projects.

- A. Technical Support: Beginning with Substantial Completion, provide software support for **[two (2)] <Insert number>** years.
- B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within **[two (2)] <Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.
 1. Provide **[30] <Insert number>** days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

1.12 ENVIRONMENTAL CONDITIONS

- A. The lighting control equipment unit shall be capable of continuous operation under the following temperature conditions:
 1. Relative humidity: 95% non-condensing.
 2. Altitude: 5500 feet (1667 meters) without any de-rating.
 3. Functioning: -30°F (-34°C) (Outdoor) to 120°F (49°C) (Indoor & Outdoor).
 4. The neutral shall not be combined for lighting circuits with electronic or dimming ballasts, and should be bonded according to local codes and National Electrical Code (NEC).

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers in this Article. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Douglas Lighting Controls.
 2. Electrol Engineering.
 3. Electronic Theatre Controls.
 4. Leviton Mfg. Company Inc.
 5. Leviton NSI Division.
 6. Lightolier; a Genlyte Group.
 7. Lithonia Lighting; Acuity Lighting Group, Inc.
 8. Lutron Electronics, Inc.
 9. Strand Lighting, Inc.
 10. **<Insert manufacturer's name>**.
 11. or approved equal.

For remaining articles in Part 2, see Editing Instruction No. 2 in the Evaluations for discussion of compatibility.

2.2 GENERAL SYSTEM REQUIREMENTS

- A. Compatibility:
1. Dimming control components shall be compatible with other elements of lighting fixtures, ballasts, transformers, and lighting controls.

Retain subparagraph below if devices specified in this Section are required to function with low-voltage lighting controls.

2. Dimming control devices shall be compatible with lighting control system components specified in Section 260943.13 "Addressable-Fixture Lighting Controls" and Section 260943.23 "Relay-Based Lighting Controls," and in Section 260923 "Lighting Control Devices."

Factory-installed surge protection is not available from all manufacturers. See Evaluations for more information about surge protection.

- B. Line-Voltage Surge Suppression: Factory installed as an integral part of 120- and 277-V ac, solid-state dimmers and control panels.

Retain subparagraph below to allow Contractor the option of providing field-mounted surge protection.

1. Alternative Line-Voltage Surge Suppression: Comply with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits" for

Category [A] [B] locations.

- C. Dimmers and Dimmer Modules: Comply with UL 508.
1. Audible Noise and Radio-Frequency Interference Suppression: Solid-state dimmers shall operate smoothly over their operating ranges without audible lamp or dimmer noise or radio-frequency interference. Modules shall include integral or external filters to suppress audible noise and radio-frequency interference.

Indicate ratings for dimmers and dimmer modules on Drawings.

2. Dimmer or Dimmer-Module Rating: Not less than 125 percent of connected load unless otherwise indicated.

2.3 SYSTEM DESCRIPTION

- A. Description: Microprocessor-based, solid-state controls consisting of control stations and a separately mounted dimmer cabinet.
1. Operation: Change variable dimmer settings of indicated number of zones simultaneously from one preset scene to another when a [rocker switch] [pushbutton] [slider] is operated.
 2. System control shall include master station(s), wall stations, and dimmer panels.

Retain first subparagraph and appropriate associated subparagraphs below if dimming is other than 120-V ac incandescent lighting. Dimmers for fluorescent lamps with magnetic ballasts may not be available from all manufacturers. Add special lighting equipment after verifying that dimmers are available for this equipment.

3. Each zone shall be configurable to control the following light sources:
 - a. Fluorescent lamps with electronic ballasts.
 - b. Line-voltage incandescent lamps.
 - c. Low-voltage incandescent lamps.
 - d. Cold cathode lamps.
 - e. Non-dimmed loads.
 - f. LED lamps.
 - g. <Insert special lighting equipment>.
4. Control of each zone shall interface with controls for the following accessory functions:

Retain three subparagraphs below for lecture rooms. Indicate location of wall station convenient to speaker's podium on Drawings or include a wall station operated by hand-held remote control.

- a. Curtains and drapes.
- b. Blackout curtains.
- c. Projector screens.

Retain first two subparagraphs below for partitioned-space wall stations.

- d. Motorized partitions.
- e. Manually positioned partitions.

5. Memory: Retain preset scenes and fade settings through power failures for at least **[90] <Insert duration>** days by retaining physical settings of controls or by an on-board, automatically recharged battery.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with 47 CFR 15, Subparts A and B, for Class A digital devices.
- D. Comply with NFPA 70.

2.4 CONTROL NETWORK

- A. Dimmers shall receive signals from control stations that are linked to dimmer cabinet with a common network data cable.
- B. Functions of network control stations shall be set up at master station that include the number and arrangement of scene presets, zones, and fade times at wall stations.

Retain one of two subparagraphs below. See Editing Instruction No. 4 in the Evaluations for discussion of control protocols.

1. Control Voltage: 24- or 10-V dc.

First option in subparagraph below is for analog multiplex; second option is for digital.

2. Comply with USITT AMX 192 USITT DMX 512 for data transmission.

2.5 MASTER-CONTROL STATIONS

- A. Functions and Features:
 1. Control adjustment of the lighting level for each scene of each zone, and adjustment of fade-time setting for each scene change from one preset scene to another. Controls shall use **[analog manual sliders] [digital rocker switches with LCD graphic display of light level] <Insert control option>**.
 2. Master channel shall raise and lower lighting level of all zones.
 3. Fade rate for each scene shall be adjustable from zero to **[60] <Insert number>** seconds.
 4. Fade override control for each scene.
 5. Recall each preset scene and allow adjustment of zone controls associated with that scene.
 6. Lockout switch to prevent changes when set.
 7. On and off scene controls for non-dim channel contactors.
 8. Emergency-control pushbutton to bypass all controls, turning all dimmers to full bright and turning on non-dim channel contactors.
 9. Master on and off switch; off position enables housekeeping controls.
 10. Housekeeping controls to turn on selected lighting fixtures for housekeeping functions.

Retain first subparagraph below only when needed at master station. Otherwise, locate control of accessory functions at wall stations.

11. Pushbuttons for accessory functions.
12. Enable and disable wall stations.
13. Communications link to other master stations.

Retain first subparagraph below if retaining "Portable Computer" Article.

14. Provide for connecting a portable computer to program the master station.
 15. Rear-illuminate all scene-select buttons.
 16. Show lighting-level setting and fade-rate setting graphically using LEDs or backlighted bar-graph indicator.
- B. Custom Graphics. Include a graphical display of room configurations and the names for each. Indicate the current spaces configuration with LCD graphic or LED-illuminated indicators, and show which wall stations are active. Inactive wall stations shall be automatically deactivated.
- C. Mounting: Single, flush wall box with manufacturer's standard faceplate[**with hinged transparent locking cover**].

2.6 PARTITIONED-SPACE MASTER-CONTROL STATION

Specialized control station in this Article is specified as a standalone master station with wall stations located in each partitioned space. This Article may be revised to make this station a specialized wall station.

- A. Functions and Features:
1. Automatically combine and separate lighting and accessory function controls as spaces are configured with movable partitions; with controls for adjustment of the lighting level for each scene of each dimmer, and adjustment of fade-rate setting for each scene change from one preset scene to another.

Typical manufacturer's package is for dividing the space covered by master station into partitioned spaces, ranging in number from one to six, allowing to preset up to six scenes for each space so configured.

2. Master controls shall accommodate partitioning the space into [**six (6)**] <Insert number> adjacent rooms.
3. Manual controls to set up [**six (6)**] <Insert number> scenes for each room. Include wall stations in each room to control scenes.
4. Master channel to raise and lower the lighting level of all zones.
5. Adjustable fade rate for each scene from zero to [**60**] <Insert number> seconds.
6. Fade override control for each scene.
7. On and off scene controls for non-dim channel contactors.
8. Emergency-control pushbutton to bypass all controls, turning all dimmers to full bright and turning on non-dim channel contactors.
9. Master on and off switch; off position enables housekeeping controls.
10. Housekeeping controls to turn on selected lighting fixtures for housekeeping functions.

Retain subparagraph below only when needed at master station. Otherwise, locate control of accessory functions at wall stations.

11. Pushbuttons for accessory functions.

Retain first subparagraph below if retaining "Portable Computer" Article.

12. Provide for connecting a portable computer to program the master station.
13. Rear-illuminate all scene-select buttons.
14. Show lighting-level setting and fade-rate setting graphically using LEDs or backlighted bar-graph indicator.

- B. Custom Graphics. Include a graphical display of room configurations and the names for each. Indicate the current spaces configuration with LCD graphic or LED-illuminated indicators, and show which wall stations are active. Inactive wall stations shall be automatically deactivated.

- C. Mounting: Single, flush wall box with manufacturer's standard faceplate[**with hinged transparent locking cover**].

2.7 WALL STATIONS

- A. Functions and Features:

1. Wall stations shall function as a submaster to a master station, containing limited control of selected scenes of the master station.

Retain five subparagraphs below if wall stations are all alike. Otherwise, delete subparagraphs and indicate this information on Drawings. Pushbutton numbering scheme should be set up at associated master station.

2. Controls **<Insert scene description>** to adjust the lighting level of each dimmer for each scene, and the fade time setting for each scene change from one preset scene to another.
3. Numbered pushbuttons to select scenes.
4. Off switch to turn master station off.[**Operating the off switch at any remote station shall automatically turn on selected housekeeping lighting.**]
5. On switch turns all scenes of master station to full bright.

Retain subparagraph below for accessory functions not included in scene controls.

6. Pushbutton controls for accessory functions.

- B. Mounting: Flush, wall box with manufacturer's [**standard faceplate**] **<Insert special material and color for faceplate>**.

- C. Hand-held Cordless Control: Scene-select and accessory function pushbuttons using [**infrared**] [**or radio-frequency**] transmission.

2.8 DIMMER CABINETS

- A. Factory wired[, **convection cooled without fans**] [, **with barriers to accommodate 120- and 277-V feeders**] and suitable to control designated lighting equipment or

accessory functions.

B. Ambient Conditions:

Revise temperature and relative humidity in first two subparagraphs below to design conditions of air-conditioning system. Coordinate with HVAC engineer.

1. Temperature: [60 to 95 deg F (15 to 35 deg C)] <Insert temperature range>.
2. Relative Humidity: [10 to 90] <Insert values> percent, noncondensing.
3. Filtered air supply.

C. Dimmer Cabinet Assembly: NRTL listed and labeled.

D. Cabinet Type: Plug in, modular, and accepting dimmers of each specified type in any plug-in position.

Industry standard for interrupting rating is 10 kA at 120 V. Consult manufacturer or NRTL listing for higher ratings.

1. Integrated Fault-Current Rating: [10,000] <Insert amperes>-A RMS symmetrical.

See Editing Instruction No. 3 in the Evaluations for discussion of solid-state SCR dimmers and alternative technologies.

E. Lighting Dimmers: Solid-state SCR dimmers.

1. Primary Protection: Magnetic or thermal-magnetic circuit breaker, also serving as the disconnecting means.
2. Dimmer response to control signal shall follow the "Square Law Dimming Curve" specified in IESNA's "IESNA Lighting Handbook."
3. Dimming Range: 0 to 100 percent, full output voltage not less than [98] <Insert number> percent of line voltage.
4. Dimmed circuits shall be filtered to provide a minimum 350-mic.sec. current-rise time at a 90-degree conduction angle and 50 percent of rated dimmer capacity. Rate of current rise shall not exceed 30 mA/mic.sec., measured from 10 to 90 percent of load-current waveform.
5. Protect controls of each dimmer with a fuse[and transient voltage surge suppression].

F. Non-dim modules shall include relays with contacts rated to switch 20-A tungsten-filament load at 120-V ac and 20-A electronic ballast load at 277-V ac.

G. Accessory function control modules shall be compatible with requirement of the accessory being controlled.

Paragraph and subparagraphs below are examples of digitally controlled dimming. Revise if control choice for Project is analog (dc voltage) or multiplex (converting multiplex to analog at each dimmer).

H. Digital Control Network:

1. Dimmers shall receive digital signals from digital network control stations that are

- linked to the dimmer cabinet with a common network data cable.
2. Functions of digital network control stations shall be set up at the dimmer cabinet's electronic controls that include indicated number and arrangement of scene presets, channels, and fade times.

Dimmer-controlled lighting circuits that are part of emergency lighting must be transferred by an automatic-transfer switch that complies with UL 1008.

- I. Emergency Power Transfer Switch: Comply with UL 1008; factory prewired and pretested to automatically transfer load circuits from normal to emergency power supply when normal supply fails.
 1. Transfer from normal to emergency supply when normal-supply voltage drops to 55 percent or less.
 2. Retransfer immediately to normal on failure of emergency supply and after an adjustable time-delay of 10 to 90 seconds on restoration of normal supply while emergency supply is available.
 3. Integrated Fault-Current Rating: Same value as listed for the panel.
 4. Test Switch: Simulate failure of normal supply to test controls associated with transfer scheme.

Retain subparagraph below for projects in seismic areas.

5. Fabricate and test dimmer boards to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

2.9 PORTABLE COMPUTER

- A. Description: As recommended by master-control station manufacturer, to program master station and associated wall stations[, **and all interconnected master stations**]. Portable computer shall be laptop style with a battery runtime of at least two hours. Display shall be an 11-inch (280-mm) interactive-matrix LCD and shall have required hardware, firmware, and software to program specified control functions of master-control stations.
- B. Software shall be configured and customized by master-station manufacturer.

2.10 MANUAL SWITCHES AND PLATES

Coordinate use of manual switches in this Article with required control and override functions, occupancy sensor applications where used, switch and wall-plate finish Specifications in Division 26 Section "Wiring Devices," and dimmer-control wall-plate finish Specifications in Division 26 Section "Modular Dimming Controls."

- A. Switches: Modular, momentary pushbutton, low-voltage type.
 1. Color: Gray unless otherwise indicated.

Delete first two subparagraphs below if not applicable.

2. Integral Pilot Light: Indicate when circuit is on. Use where indicated.

3. Locator Light: Internal illumination.
4. Wall Plates: Comply with requirements in Section 262726 "Wiring Devices" for materials, finish, and color. Use multigang plates if more than one switch is indicated at a location.
5. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.11 CONDUCTORS AND CABLES

- A. Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. [18] [22] [24] AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. [14] [16] [18] AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Unshielded, Twisted-Pair Data Cable: Category [5e] [6]. Comply with requirements in Section 271500 "Communications Horizontal Cabling."

PART 3 - EXECUTION

3.1 WIRING INSTALLATION

- A. Comply with NECA 1.

Indicate wiring method on Drawings. Delete first paragraph and subparagraphs below if wiring method for lighting control devices is specified in Section 260533 "Raceways and Boxes for Electrical Systems."

- B. Wiring Method:
 1. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 2. Install unshielded, twisted-pair cable for control and signal transmission conductors, complying with Section 271500 "Communications Horizontal Cabling."
 3. Minimum conduit size shall be 1/2 inch (13 mm).
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
- D. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.

- E. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.
- F. Install dimmer cabinets for each zone.

3.2 IDENTIFICATION

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for identifying components and power and control wiring.
- B. Label each dimmer module with a unique designation.
- C. Label each scene control button with approved scene description.

3.3 ADJUSTING

- A. Set field-adjustments to match loads.

3.4 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris. Repair damaged finish to match original finish.

3.5 PROTECTION

- A. Provide final protection to ensure that moisture does not enter lighting control equipment assembly.

3.6 FIELD QUALITY CONTROL

Retain first paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections and prepare test reports.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:

1. Continuity tests of circuits.
 2. Operational Test: Set and operate controls to demonstrate their functions and capabilities in a methodical sequence that cues and reproduces actual operating functions.
 - a. Include testing of dimming control equipment under conditions that simulate actual operational conditions. Record control settings, operations, cues, and functional observations.
 3. Emergency Power Transfer: Test listed functions.
- C. Remove and replace malfunctioning dimming control components and retest as specified above.
- D. Test Labeling: After satisfactory completion of tests and inspections, apply a label to tested components indicating test results, date, and responsible agency and representative.
- E. Reports: Written reports of tests and observations. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.

3.7 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning with Substantial Completion, service agreement shall include software support for **[two (2)] <Insert number>** years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within **[two (2)] <Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
1. Upgrade Notice: At least **[30] <Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.8 DEMONSTRATION

This Article specifies optional services; retain if Project warrants. Coordinate with Division 01 training requirements. If Project includes programmable lighting controls, coordinate with testing of that system.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain central dimming controls. Laptop portable computer shall be used in training.
- B. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control system specified in Section 260943.13 "Addressable-Fixture Lighting Controls" and Section 260943.23 "Relay-Based Lighting Controls."
- C. Schedule training with Owner, through DEN Project Manager, with at least seven (7)

days' advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260933

Copyright 2010 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260936.19 - STANDALONE MULTIPRESET MODULAR DIMMING CONTROLS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

If applying for LEED certification, LEED Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1. ASHRAE/IESNA 90.1, Section 9, "Lighting," sets minimum interior and exterior lighting power densities and minimum requirements for lighting controls.

Occupancy sensors and daylight-harvesting controls can be combined with dimming controls and other energy-conserving measures to comply with the requirements in LEED-NC, LEED-CS, and LEED for Schools Credit EA 1 or with LEED-CI Credit EA 1.2.

Time switches and occupancy sensors can be combined with dimming controls to comply with the requirements in LEED-NC, LEED-CS, and LEED for Schools Credit SS 8 or with LEED-CI Credit SS 1, Option 1F.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Wall-box multiscene dimming controls.
 - 2. Multipreset modular dimming controls.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. Fade Rate: The time it takes each zone to arrive at the next scene, dependent on the degree of change in lighting level.
- B. Low Voltage: As defined in NFPA 70, the term for circuits and equipment operating at less than 50 V or for remote-control, signaling, and power-limited circuits.
- C. Scene: The lighting effect created by adjusting several zones of lighting to the desired intensity.
- D. SCR: Silicon-controlled rectifier.
- E. Zone: A fixture or group of fixtures controlled simultaneously as a single entity. Also known as a "channel."

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. For modular dimming controls; include elevation, dimensions, features, characteristics, ratings, and labels.
 - 2. Device plates and plate color and material.
 - 3. Ballasts and lamp combinations compatible with dimmers.
 - 4. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Include diagrams for power, signal, and control wiring.

Retain "Samples for Initial Selection" Paragraph below if products have critical features needing hands-on appraisal.

Delete sample requirement in paragraphs below if project is of very limited scope, and deletion is approved by DEN Project Manager.

Coordinate sample requirements with DEN Project Manager.

- C. Samples for Initial Selection: For master- and remote-control stations, and faceplates with factory-applied color finishes and technical features.

Delete "Samples for Initial Selection" Paragraph above if colors and other characteristics are preselected and specified or scheduled. Retain "Samples for Verification" Paragraph below with or without above.

- D. Samples for Verification: For master- and remote-control stations, and faceplates with factory-applied color finishes and technical features.

1.5 INFORMATIONAL SUBMITTALS

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- A. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Those firms responding to this specification shall provide proof that they have been regularly engaged in the design, manufacturing and testing of lighting control equipment for not less than five (5) years.

1.8 ENVIRONMENTAL CONDITIONS

- A. The lighting control equipment unit shall be capable of continuous operation under the following temperature conditions:
 1. Relative humidity: 95% non-condensing.
 2. Altitude: 5500 feet (1667 meters) without any de-rating.
 3. Functioning: -30°F (-34°C) (Outdoor) to 120°F (49°C) (Indoor & Outdoor).
 4. The neutral shall not be combined for lighting circuits with electronic or dimming ballasts, and should be bonded according to local codes and National Electrical Code (NEC).

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Douglas Lighting Controls](#).
 2. [Leviton Mfg. Company Inc.](#)
 3. [Lightolier Controls](#); a Philips Group brand.
 4. [Lutron Electronics Co., Inc.](#)
 5. <Insert manufacturer's name>.
 6. or approved equal.

2.2 GENERAL DIMMING DEVICE REQUIREMENTS

See Editing Instruction No. 2 in the Evaluations for discussion of compatibility.

- A. Compatibility:
1. Dimming control components shall be compatible with lighting fixtures, ballasts, and transformers.

Retain subparagraph below if devices specified in this Section are required to function with low-voltage lighting controls.

2. Dimming control devices shall be compatible with lighting control system components specified in Section 260943.13 "Addressable-Fixture Lighting Controls" and Section 260943.23 "Relay-Based Lighting Controls," and in Section 260923 "Lighting Control Devices."
- B. Dimmers and Dimmer Modules: Comply with UL 508.
1. Audible Noise and Radio-Frequency Interference Suppression: Solid-state dimmers shall operate smoothly over their operating ranges without audible lamp or dimmer noise or radio-frequency interference. Modules shall include integral or external filters to suppress audible noise and radio-frequency interference.

Indicate ratings for dimmers and dimmer modules on Drawings.

2. Dimmer or Dimmer-Module Rating: Not less than 125 percent of connected load unless otherwise indicated.
- C. Surge Protection: Withstand supply power surges without impairment to performance.

1. Panels: 6000 V, 3000 A, complying with IEEE C62.41.1 and IEEE C62.41.2.
2. Other System Devices: 6000 V, 3000 A, complying with IEEE C62.41.1 and IEEE C62.41.2.

- D. Off Control Position: User-selected off position of any control point shall disconnect the load from line supply.

"System Description" Article below describes a wall-box-mounted control station with dimmers, generally applicable to control a small number of circuits.

2.3 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NFPA 70.

2.4 WALL-BOX MULTISCENE DIMMING CONTROLS

Number of available scenes and zones varies with manufacturer. Typically, four scenes and six zones are available for one master controller. Indicate number of scenes and zones on Drawings. The number of zones and scenes can be increased with optional expansion modules.

- A. Description: Factory-fabricated equipment providing manual dimming consisting of a wall-box-mounted master controller[**and indicated number of wall-box zone stations**]. Controls and dimmers shall be integrated for mounting in multigang wall box under a single wall plate. Each zone shall be adjustable to indicated number of scenes, which shall reside in the memory of zone controller.

Retain first paragraph below if dimming is other than 120-V ac incandescent lighting. Dimmers for fluorescent lamps with magnetic ballasts may not be available from all manufacturers. Insert special lighting equipment after verifying that dimmers are available for this equipment.

- B. Each zone shall be configurable to control the following loads:
1. Fluorescent lamps with electronic ballasts.
 2. Incandescent lamps.
 3. Low-voltage incandescent lamps, derived with electronic transformers.
 4. Non-dim, on-off switching only.
 5. **<Insert special lighting equipment>**.
- C. Dimmers: Regulate voltages to maintain a constant light level, with no visible flicker, when the source voltage varies plus or minus 2 percent rms.
- D. Memory:
1. Retain preset scenes and fade rates through momentary (up to 3-second) power interruptions.

2. Retain preset scenes through power failures for at least [**seven (7)**] <Insert number> days.
- E. Device Plates: Style, material, and color [**shall comply with Section 262726 "Wiring Devices."**] <Insert description.> Master-control cover plate shall be one piece.
- F. Master controller shall include the following:
 1. Cover-mounted switches, including master off, all bright, and selectors for each scene.
 2. Cover-mounted LED indicator lights, one associated with each scene switch, and one for the master off switch.
 3. Concealed switches and indicators for specified function.
 4. A raise/lower switch for each zone for temporary adjustments of the zone, without altering scene values stored in memory.
 5. Fade time indicated by digital display for current scene while fading.
 6. Cover-mounted infrared receiver.
- G. Infrared Transmitters: Wireless remote control for recalling [**each**] [**four (4)**] <Insert number> of the presets. Operate up to **50 feet (15 m)** within line of sight of the master controller.

2.5 MULTIPRESET MODULAR DIMMING CONTROLS

This article is for a four-preset system, which is typical with listed manufacturers.

Number of available scenes and zones varies with manufacturer. Typically, four scenes and 24 zones are available for one master controller. Indicate number of scenes and zones on Drawings. The number of zones and scenes can be increased with optional expansion modules.

- A. Description: Factory-fabricated equipment providing manual dimming consisting of. the following:
 1. Master controller.
 2. Dimmer panels[, and indicated number of zone stations].
 3. Controls and dimmers shall be integrated for mounting in a multigang wall box under a single wall plate.
 4. Each zone shall be adjustable to indicated number of scenes, which shall reside in the memory of zone controller.

Retain first paragraph below if dimming is other than 120-V ac incandescent lighting. Dimmers for fluorescent lamps with magnetic ballasts may not be available from all manufacturers. Insert special lighting equipment after verifying that dimmers are available for this equipment.

- B. Each zone shall be configurable to control the following loads:
 1. Fluorescent lamps with electronic ballasts.
 2. Incandescent lamps.
 3. Low-voltage incandescent lamps, derived with electronic transformers.

4. Non-dim, on-off switching only.
 5. Neon and cold-cathode lighting.
 6. **<Insert special lighting equipment>**.
- C. Dimmers: Regulate voltages to maintain a constant light level, with no visible flicker, when the source voltage varies plus or minus 2 percent rms.
- D. Memory: Retain preset scenes and fade settings through power failures by retaining physical settings of controls.
- E. Device Plates: Style, material, and color [**shall comply with Section 262726 "Wiring Devices."**] **<Insert description.>** Master-control cover plate shall be one piece.
- F. Master controller shall include the following:
1. Wall-box style, single coverplate supplied by manufacturer.

Indicate number of control and dimmer modules for each master station on Drawings.

2. Cover-mounted switches, including master off, all bright, and selectors for each scene.
 3. Cover-mounted LED indicator lights, one associated with each scene switch, and one for the master off switch.
 4. Concealed switches and indicators for specified function.
 5. A raise/lower switch for each zone for temporary adjustments of the zone, without altering scene values stored in memory.
 6. Fade time indicated by digital display for current scene while fading.
 7. Cover-mounted infrared receiver.
- G. Remote-Control Stations:
1. Numbered push buttons to select scenes.
 2. Off switch to turn master station off. [**Operating the off switch at any remote station shall automatically turn on selected housekeeping lighting.**]
 3. On switch turns all scenes of master station to full bright.
 4. Control Wiring: NFPA 70, Class 2.
 5. Mounting: Single flush wall box with manufacturer's [**standard faceplate**] **<Insert special material and color for faceplate>**.
- H. Infrared Remote-Control Station: Same functions as for standard remote-control station except that functions are input by a hand-held infrared transmitter. Operate up to **50 feet (15 m)** within line of sight of the master controller.
- I. Dimmer Panels: Modular, plug-in type, complying with UL 508.

Industry-standard interrupting rating is 10 kA at 120 V. Consult factory for higher ratings.

1. Integrated Short-Circuit Rating: [**10 kA for 120 V**][, **14 kA for 277 V**].

See Editing Instruction No. 3 in the Evaluations for discussion about use of SCR dimmers and alternative technologies.

2. Dimmers:

- a. Dimming Circuit: Two SCR dimmers, in inverse parallel configuration.
- b. Dimming Curve: Modified "square law" as specified in IESNA's "IESNA Lighting Handbook"; control voltage is 0- to 10-V dc.
- c. Dimming Range: 0 to 100 percent, full output voltage not less than 98 percent of line voltage.
- d. Voltage Regulation: Dimmer shall maintain a constant light level, with no visible flicker, when the source voltage varies plus or minus 2 percent in rms voltage.

J. Circuit Breakers: Complying with UL 489 and classified as switch duty (SWD).

2.6 CONDUCTORS AND CABLES

- A. Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Class 2 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than **[No. 18] [No. 22] [No. 24]** AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 WIRING INSTALLATION

- A. Comply with NECA 1.

Indicate wiring method on Drawings. Delete "Wiring Method" Paragraph below if wiring method for lighting control devices is specified in Section 260533 "Raceways and Boxes for Electrical Systems."

- B. Wiring Method: Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be **1/2 inch (13 mm)**.
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
- D. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.
- E. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.2 IDENTIFICATION

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for identifying components and power and control wiring.
- B. Label each dimmer module with a unique designation.
- C. Label each scene control button with approved scene description.

3.3 ADJUSTING

- A. Set field-adjustments to match loads.

3.4 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris. Repair damaged finish to match original finish.

3.5 PROTECTION

- A. Provide final protection to ensure that moisture does not enter lighting control equipment assembly.

3.6 FIELD QUALITY CONTROL

Retain "Testing Agency" and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph or if retaining "Manufacturer's Field Service" or "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Continuity tests of circuits.
 - 2. Operational Test: Set and operate controls to demonstrate their functions and capabilities in a methodical sequence that cues and reproduces actual operating functions.

- a. Include testing of modular dimming control equipment under conditions that simulate actual operational conditions. Record control settings, operations, cues, and functional observations.
- C. Remove and replace malfunctioning modular dimming control components and retest as specified above.
- D. Test Labeling: After satisfactory completion of tests and inspections, apply a label to tested components indicating test results, date, and responsible agency and representative.
- E. Reports: Written reports of tests and observations. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.

3.7 DEMONSTRATION

This article specifies optional services; retain if Project warrants. Coordinate with Section 017900 "Demonstration and Training" requirements. If Project includes programmable lighting controls, coordinate with testing of that system.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain modular dimming controls. **[Laptop portable computer shall be used in training.]**
- B. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control system specified in Section 260943.13 "Addressable-Fixture Lighting Controls" and Section 260943.23 "Relay-Based Lighting Controls."
- C. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days' advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260936.19

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260943.16 - ADDRESSABLE-FIXTURE LIGHTING CONTROLS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

If applying for LEED certification, LEED-NC Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1. ASHRAE/IESNA 90.1, Section 9, "Lighting," sets minimum interior and exterior lighting power densities and minimum requirements for lighting controls.

Additional lighting controls can be used to comply with the requirements of LEED-NC Credit IEQ 6.1 if individual lighting controls are provided for a minimum of 90 percent of the building occupants and if lighting system controls are provided for all shared multi-occupant spaces to enable adjustment to meet group needs. Indicate locations of lighting controls on Drawings.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes addressable-fixture lighting controls based on DALI digital controls.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. BAS: Building automation system.
- B. BIM: Building information modeling.
- C. DALI: Digital addressable lighting interface; complies with IEC 60929, Annexes E and G.
- D. Data Bus: Two wires used to communicate with bus connected devices.
- E. DDC: Direct digital control.
- F. Device: A collective term for DALI-compliant bus connected devices, including fluorescent ballasts, incandescent fixtures, manual switches, switching relays, and similar. Sometimes also known as "slave unit."
- G. Group: A set of devices that respond at the same time to messages on the data bus.
- H. HID: High-intensity discharge.
- I. HPS: High-pressure sodium.
- J. IP: Internet protocol.
- K. IR: Infrared.
- L. LAN: Local area network.
- M. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- N. PC: Personal computer.
- O. Scene: Digital light level associated with a preset; stored in the lighting fixture ballast.
- P. TCP/IP: Transmission control protocol/Internet protocol.
- Q. VPN: Virtual private network.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, relays, manual switches and plates, and conductors and cables.

2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Include data substantiating that materials comply with requirements.

B. Shop Drawings:

1. Floor Plans: Location, orientation, and coverage area of each sensor; group designations; and other specific design symbols and designations as required to define the installation, location, and configuration of all control devices.
2. Address Drawing: Reflected ceiling plan and floor plans, showing data-bus-connected devices, address for each device, and device groups. The plans shall be based on construction plans, using the same legend, symbols, and schedules.
3. Point List and Data Bus Load: Summary list of all control devices, sensors, ballasts, and other loads connected to each data bus and total connected load for each data bus. Include percentage of rated connected load and device addresses.
4. Wire Termination Diagrams and Schedules: Coordinate nomenclature and presentation with Drawings and block diagram. Differentiate between manufacturer-installed and field-installed wiring.

Retain "Block Diagram" Subparagraph below if this Section includes PC-based local area data bus or link to BIM.

5. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices used. Describe characteristics of network and other data communication lines.

1.5 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below if lighting controls are connected to devices or systems specified in other Sections.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 1. Show interconnecting signal and control wiring, and interface devices that prove compatibility of inputs and outputs.
 2. For control interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the LAN or DALI protocol.
- B. Field quality-control reports.
- C. Sample Warranty: For manufacturer's special warranty.

Retain paragraph below for PC- and IP-based control systems.

- D. Software licenses and upgrades required by and installed for operation and programming of digital and analog devices.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lighting controls to include in emergency, operation, and maintenance manuals.

Retain "Software and Firmware Operational Documentation" Paragraph below for PC- and IP-based control systems.

- B. Software and Firmware Operational Documentation:
 1. Software operating and upgrade manuals.
 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
 3. Device address list.
 4. Printout of software application and graphic screens.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Bus Power Supplies: Equal to **[two (2)] <Insert number>** percent of amount installed, but no fewer than **[two (2)] <Insert number>**.
 2. Controller/Gateways: Equal to **[two (2)] <Insert number>** percent of amount installed, but no fewer than **[two (2)] <Insert number>**.
 3. Incandescent Switching and Dimming Modules: Equal to **[two (2)] <Insert number>** percent of amount installed, but no fewer than **[two (2)] <Insert number>**.
 4. Fluorescent Ballasts: Equal to **[two (2)] <Insert number>** percent of amount installed, but no fewer than **[two (2)] <Insert number>**.
 5. Lighting Control Relays: Equal to **[two (2)] <Insert number>** percent of amount installed, but no fewer than **[two (2)] <Insert number>**.

1.8 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of lighting controls that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Software: Failure of input and output to execute switching or dimming commands.
- b. Failure of modular relays to operate under manual or software commands.
- c. Ballast failure.
- d. Damage of electronic components due to transient voltage surges.

Verify available warranties and warranty periods for units and components.

2. Warranty Periods:

- a. For DALI Ballasts: Minimum [**three (3)**] <Insert number> years from date of Substantial Completion.
- b. For Control Components That Are Not Part of Ballasts: Minimum [**three (3)**] <Insert number> years from date of Substantial Completion.

1.9 QUALITY ASSURANCE

A. Those firms responding to this specification shall provide proof that they have been regularly engaged in the design, manufacturing and testing of lighting control equipment for not less than five (5) years.

1.10 ENVIRONMENTAL CONDITIONS

A. The lighting control equipment unit shall be capable of continuous operation under the following temperature conditions:

1. Relative humidity: 95% non-condensing.
2. Altitude: 5500 feet (1667 meters) without any de-rating.
3. Functioning: -30°F (-34°C) (Outdoor) to 120°F (49°C) (Indoor & Outdoor).
4. The neutral shall not be combined for lighting circuits with electronic or dimming ballasts, and should be bonded according to local codes and National Electrical Code (NEC).

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 SYSTEM DESCRIPTION

- A. Operation: Input signal from digital signal sources switches or dims DALI devices associated with ballasts or lighting fixtures, or switches field-deployed, DALI-compliant, control relays.
1. Each device and relay is connected to a digital data bus.
 2. Each DALI device and relay has a digital address and can be operated by a digital signal.
 3. Each device or relay can be assigned to any or all of 16 available groups connected to a single data bus.
 4. Each dimming ballast may have as many as 16 preset lighting levels or scenes. Scenes can be programmed to ballasts and may be applied to groups.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with 47 CFR, Subparts A and B, for Class A digital devices.
- D. Comply with protocol described in IEC 60929, Annexes E and G, for DALI lighting control devices, wiring, and computer hardware and software.
- E. Comply with UL 916.

2.2 PERFORMANCE REQUIREMENTS

- A. Surge Suppression: Factory installed as an integral part of control components or field-mounted surge suppressors complying with UL 1449, SPD Type 2.
- B. DALI Requirements:
1. Components: Individually addressable devices (such as ballasts, relays, dimmers, and switches) that are operated from digital signals received through a DALI-compliant bus, from data-entry and -retrieval devices (such as PCs, personal digital assistants, hand-held infrared programming devices, wired

- Ethernet hubs, wireless IEEE 802.11 hubs[, and] **<Insert digital communications device>**). Devices also report status to data-entry and -retrieval devices through the bus.
2. Digital Control: Use peer-to-peer communication and distributed logic, where the failure of any single component shall be automatically isolated and not affect global system functions.

Retain "Ethernet LAN" Paragraph below if the controller/gateways are not connected to DDC system for HVAC.

- C. Ethernet LAN:
 1. Provide an Ethernet LAN to connect controller/gateways to a PC running a Microsoft Windows operating system. Comply with requirements in Section 271500 "Communications Horizontal Cabling."
 2. Ethernet Protocols: Comply with and be compatible with 10/100 BaseT TCP/IP routers and networks.
 3. TCP/IP Modem: Capable of maintaining a secure Internet connection using VPN or equivalent protocol.
- D. BAS Interface: Hardware and software shall interface with BAS to monitor, control, display, and record data for use in processing reports.

Retain "Hardwired Points" or "Communication Interface" Subparagraph below. Retain first subparagraph if interface with BAS is through hardwired points and minimal interface is required. Retain second if extensive interface with BAS is required and is beyond what hardwired points can provide. Requirement may exclude some manufacturers.

1. Hardwired Points:
 - a. Monitoring: On-off status, **<Insert monitoring point>**.
 - b. Control: On-off operation, **<Insert control point>**.
2. Communication Interface: Comply with **[ASHRAE 135]** **<Insert type of interface>**. Communication shall interface with BAS to remotely control and monitor lighting from BAS operator workstation. Control features and monitoring points displayed locally at lighting panel shall be available through BAS.

2.3 BUS POWER SUPPLY

The power supply powers the Class 2 low-voltage communications bus to which DALI devices are connected. The controller supports the DALI commands, device settings, and device monitoring.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Leviton Manufacturing Co. Inc.

2. [Lightolier Controls; a Philips Group brand.](#)
3. [Starfield Controls, Inc.](#)
4. [Tridonic.](#)
5. **<Insert manufacturer's name>.**
6. or approved equal.

B. Description: Supply power to data bus for 64 addressable devices, suitable for use with NFPA 70, Class 2 control circuit.

1. Primary Power: Field selectable, 120 and 277 V.
2. Power Supply: Regulated to maintain the operating voltage above 15-V dc under full load, and rated for full charging load of 250 mA and a minimum maintained connected load of 190 mA.
3. Pilot Lights: Indicate data bus ground fault and data bus traffic.

2.4 CONTROLLER/GATEWAYS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [Leviton Manufacturing Co. Inc.](#)
2. [Lightolier Controls; a Philips Group brand.](#)
3. [Starfield Controls, Inc.](#)
4. [Tridonic.](#)
5. **<Insert manufacturer's name>.**
6. or approved equal.

B. Description: The DALI controller/gateways link the distributed data buses with an Ethernet network to provide computer configuration, control, analysis, and maintenance. The controller/gateways operate independently and continue to process local inputs and schedules when disconnected from the LAN. The controller/gateways shall provide local intelligence and features including the following:

1. Integrated real-time clock with automatic daylight savings adjustment and leap-year correction.
2. Integrated sunrise/sunset support based on the site location (latitude and longitude).
3. Automatic time schedules, to control groups for scheduled occupancy with support for holiday exceptions.
4. Two digital outputs for additional control and interlocking with external equipment such as fans, valves, and security panels.
5. Support **[one]** **[two]** data bus(es).
6. Computer Monitoring and Configuration: The controller/gateway shall allow configuration, monitoring, and analysis from PCs on the Ethernet LAN.

C. Each data bus shall have the capacity to control 64 addressable devices, using NFPA 70, Class 2 control circuit.

1. Each data bus shall have the capacity to control up to 16 groups and scenes.
2. 10 BaseT Ethernet port for BAS connection.
3. LED indicator lights for Ethernet status (link, send, and receive), power-on, and LAN failure.
4. Linking of switch and sensor inputs to relay and ballast outputs.
5. Viewing relay and ballast output status.
6. Controlling relay and ballast outputs.
7. Setting device addresses.
8. Assigning switch and sensor inputs and relay and ballast output modes.

Retain applicable DALI-compliant addressable devices in first paragraph below. Verify that listed devices are available from manufacturers listed in subsequent articles.

- D. Allow connection of the following DALI-compliant addressable devices:
1. Fluorescent fixture switching and dimming, for linear and compact lamps.
 2. Incandescent fixture switching and dimming.
 3. HID and HPS fixture switching and dimming.
 4. LED fixture switching and dimming.
 5. Occupancy and photoelectric sensors.
 6. Emergency lighting interface complying with UL 924.
- E. Stores system programming in nonvolatile memory.
1. Switch to enable or disable software programming.

If the controller/gateways are not connected to DDC system for HVAC, retain "User Interface" and "Lighting Control System Management Software" articles below as alternatives. Delete both articles if Owner will program controller/gateways with a laptop PC running Microsoft Windows.

2.5 USER INTERFACE

- A. Workstation:
1. A laptop PC, with Microsoft Windows operating system and lighting control system management software installed. With two hard drives and automatic backup software to periodically copy the primary disk image to the second disk.
 2. Include licenses, documentation, and storage media and licensing for a minimum of five concurrent users.
- B. Personal Digital Assistant: Handheld, with custom graphical user-interface software, supplied by the controller/gateway supplier. The software shall provide for all DALI-protocol programming commands to be applied to the controller/gateway via a tethered connection.
- C. Infrared Programming Assistant: Handheld, with custom graphical user-interface software, supplied by the controller/gateway supplier to program the manual switches.

2.6 LIGHTING CONTROL SYSTEM MANAGEMENT SOFTWARE

- A. The software shall provide for programming, configuring, and monitoring all devices connected to all data buses of the lighting control system, using application-specific software with Microsoft Windows-based, user-friendly software with graphical user-interface designed screens.
1. The software shall be object oriented with pop-up menus and built-in help screens. All specified features of the data-bus-connected devices and those associated with controller/gateways shall be included in the software.

2.7 INCANDESCENT FIXTURE SWITCHING AND DIMMING MODULES.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Leviton Manufacturing Co. Inc.](#)
 2. [Lightolier Controls; a Philips Group brand.](#)
 3. [Starfield Controls, Inc.](#)
 4. **<Insert manufacturer's name>.**
 5. or approved equal.
- B. Description: Comply with DALI exponential dimming curve calibrated for the connected lamp type, group, and scene settings, and with DALI light-level and configuration commands. Dimmer rise time shall be not less than 15 mic.sec.

2.8 FLUORESCENT FIXTURE SWITCHING AND DIMMING

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Lutron Electronics Co., Inc.](#)
 2. [Osram Sylvania.](#)
 3. [Philips Lighting Electronics.](#)
 4. [Tridonic.](#)
 5. **<Insert manufacturer's name>.**
 6. or approved equal.
- B. Each ballast or group shall be addressable and shall include on-off, fade, dimming, scene settings, and other standard DALI control functions and as required to meet the sequence of operation.

- C. Ballasts: Comply with requirements in Section 265100 "Interior Lighting" for ballasts for linear fluorescent lamps, electronic programmed-start, and the following:
1. Starting Method: Programmed rapid start with antiflash (turns on at previously set light level).

Dimming ranges down to 1 and 3 percent of rated lumens are available for some fluorescent lamps.

2. Dimming Range: 100 to 10 percent of rated lumens unless otherwise indicated.
3. Ballast Factor: 1.0 at full output; 0.01 at full dim.
4. Input Voltage Range: 108 to 305 V.

2.9 SENSORS

- A. Comply with requirements in Section 260923 "Lighting Control Devices." All sensors shall be DALI-protocol compliant.
- B. Daylight Harvesting Switching and Dimming Controls:
1. Adjustments and Set Points: All adjustments with exception of sensor range shall be made via the communication network.
 2. Remote Monitoring and Reporting: Sensor value shall be displayed when queried by lighting management software or shall automatically report based on a change of value or change of time period setting.
- C. Indoor Occupancy Sensors: Sensors may be powered directly from the lighting control network or with a standalone power supply. Units powered with a standalone power supply shall interface with the lighting control system through an electrically isolated digital input.

Retain "Relays" Article below to require addressable switches for loads where DALI compliance is not built-in.

2.10 RELAYS

- A. Relays: Electrically operated, mechanically held single-pole switch, rated at 20 A at 277 V. Short-circuit current rating shall be not less than 5 kA. With pilot light indicating when relay is closed and latched. Control shall be by DALI digital data bus. Relay status shall be displayed when queried by lighting management software.
- B. Relay Panel: A single enclosure with incoming lighting branch circuits, relays, and connection to the DALI digital control network.
1. Enclosure: NEMA 250, Type 1, unless otherwise indicated.
 2. Barriers to separate low-voltage and line-voltage components.
 3. Directory: Cover mounted, identifying each relay with its device address and naming the load controlled.
- C. Individually Mounted Relays:

1. Enclosure: Standard outlet box or NEMA 250, Type 1, unless otherwise indicated.
2. Directory: Cover mounted, identifying each relay with its device address.

2.11 MANUAL SWITCHES AND PLATES

Coordinate use of manual switches in this article with required control and override functions, with sensor applications where used, and with switch and wall-plate finish specified in Section 262726 "Wiring Devices."

"Connection Type" Paragraph below is NFPA 70, Class 2, connected to the DALI data bus. Other cabling methods are available, depending on manufacturer.

- A. Connection Type: RS-485 protocol, [**Category 5**] [**Category 5e**] UTP cable, using RJ-45 connectors. Power shall be from the control unit.
- B. Push-Button Switches: Modular, operating over the DALI digital data bus.
 1. Each switch shall control the following functions, in coordination with programmed sequence of operation and related sensors:
 - a. On.
 - b. Off.
 - c. Dimming, increase light level.
 - d. Dimming, decrease light level.
 - e. Return to preset light level.
 2. LED Pilot Lights: On to indicate that the control is active, or when the manual control is operated.
 3. Match color and style specified in Section 262726 "Wiring Devices."
 4. Integral IR receiver for programming.
- C. Wall Plates: Single and multigang plates as specified in Section 262726 "Wiring Devices."
- D. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.12 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

For Class 2 conductors in "Class 2 Control Cables" Paragraph below, retain wire size based on voltage drop, or use No. 18 AWG.

- B. Class 2 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 18] [No. 22] [No. 24]** AWG, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 14] [No. 16] [No. 18]** AWG, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Digital and Multiplexed Signal Cables: Unshielded, twisted-pair cable with copper conductors, complying with TIA/EIA-568-B.2, **[Category 5e] [Category 6]** for horizontal copper cable and with Section 271500 "Communications Horizontal Cabling."

PART 3 - EXECUTION

3.1 WIRING INSTALLATION

- A. Comply with NECA 1.

Retain one of two "Wiring Method" paragraphs below and coordinate with Drawings. Delete both if wiring methods for system are indicated on Drawings.

- B. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters **[and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used]**. Conceal raceway and cables except in unfinished spaces.

Retain first subparagraph below if retaining option in "Wiring Method" Paragraph above.

- 1. Install plenum cable in environmental air spaces, including plenum ceilings.
- 2. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
- 3. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."
- C. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.2 IDENTIFICATION

- A. Identify system components, wiring, cabling, boxes, cabinets, and terminals. Comply with identification requirements specified in Section 260553 "Identification for Electrical Systems."

- B. Identify field-installed conductors, interconnecting wiring, and components; install warning signs complying with Section 260553 "Identification for Electrical Systems."
- C. Identify all ceiling-mounted controls with data bus number and device address.
- D. Label each device cable within 6 inches (152 mm) of connection to bus power supply or termination block.

3.3 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Acceptance Testing Preparation:
 - 1. Test continuity of each circuit.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Test each bus controller using a portable PC.
 - 2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 3. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
- C. Field Test Reports:
 - 1. Printed list of all points created from actual queries of all addressed control points to include ballasts, manual controls, and sensors.
 - 2. Event log verifying the performance of all devices generating event messages to include occupancy sensors, control buttons, alarm messages, and any other change of value messages.
 - 3. Trend data for all daylight zones covering a period of not less than one week and demonstrating performance consistent with the submitted computer models for those spaces.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- D. Lighting controls will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports, including a certified report that identifies bus controllers included and describes query results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Activate light fixtures and verify that all lamps are operating at 100 percent.
 3. Burn-in fluorescent lamps at 100 percent for 100 hours.
 4. Confirm correct communications wiring, initiate communications between DALI devices and controller/gateways, and program the lighting control system according to approved configuration schedules, time-of-day schedules, and input override assignments.
 5. **<Insert startup steps if any>**.

3.5 ADJUSTING

- A. Occupancy Adjustments: When requested within [**twelve (12)**] **<Insert number>** months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] **<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.6 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris. Repair damaged finish to match original finish.

3.7 PROTECTION

- A. Provide final protection to ensure that moisture does not enter lighting control equipment assembly.

3.8 SOFTWARE SERVICE AGREEMENT

Services in this article may not be allowed for publicly funded projects.

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for [**two (2)**] **<Insert number>** years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within [**two (2)**] **<Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
1. Upgrade Notice: At least [**thirty (30)**] **<Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain the control unit and operator interface.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260943.16

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 260943.23 - RELAY-BASED LIGHTING CONTROLS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

If applying for LEED certification, LEED-NC Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1. ASHRAE/IESNA 90.1, Section 9, "Lighting," sets minimum interior and exterior lighting power densities and minimum requirements for lighting controls.

Additional lighting controls can be used to meet the requirements of LEED-NC Credit EQ 6.1 if individual lighting controls are provided for a minimum of 90 percent of the building occupants and lighting system controls are provided for all shared multi-occupant spaces to enable adjustment to meet group needs. Indicate locations of lighting controls on Drawings.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Retain one of two "Section Includes" paragraphs below.

Edit to suit Project.

- A. Section Includes: Lighting control panels using mechanically held relays for switching.
- B. Section Includes: Networked lighting control panels using control-voltage relays for switching and that are interoperable with BAS.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. BAS: Building automation system.
- B. IP: Internet protocol.
- C. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- D. PC: Personal computer; sometimes plural as "PCs."
- E. RS-485: A serial network protocol, similar to RS-232, complying with TIA-485-A.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, relays, manual switches and plates, and conductors and cables.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each relay panel and related equipment.
 - 1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
 - 2. Detail enclosure types and details for types other than NEMA 250, Type 1.
 - 3. Detail wiring partition configuration, current, and voltage ratings.
 - 4. Short-circuit current rating of relays.
 - 5. Include diagrams for power, signal, and control wiring.

Retain "Block Diagram" Subparagraph below when control is digital, PC or IP based.

- 6. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.

1.5 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below if lighting controls are connected to devices or systems specified in other Sections.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 - 1. Show interconnecting signal and control wiring, and interface devices that prove compatibility of inputs and outputs.
 - 2. For networked controls, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the network protocol.

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- B. Qualification Data: For testing agency.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.

Retain first paragraph below for PC- and IP-based control systems.

- D. Software licenses and upgrades required by and installed for operation and programming of digital and analog devices.
- E. Sample Warranty: For manufacturer's special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lighting controls to include in emergency, operation, and maintenance manuals.

Retain "Software and Firmware Operational Documentation" Paragraph below for PC- and IP-based control systems.

- B. Software and Firmware Operational Documentation:
 - 1. Software operating and upgrade manuals.
 - 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
 - 3. Device address list.
 - 4. Printout of software application and graphic screens.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Lighting Control Relays: Equal to **<Insert number>** percent of amount installed[**for each size indicated**], but no fewer than **<Insert number>**.

1.8 QUALITY ASSURANCE

Retain "Testing Agency Qualifications" Paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also defines "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.9 ENVIRONMENTAL CONDITIONS

- A. The lighting control equipment unit shall be capable of continuous operation under the following temperature conditions:
1. Relative humidity: 95% non-condensing.
 2. Altitude: 5500 feet (1667 meters) without any de-rating.
 3. Functioning: -30°F (-34°C) (Outdoor) to 120°F (49°C) (Indoor & Outdoor).
 4. The neutral shall not be combined for lighting circuits with electronic or dimming ballasts, and should be bonded according to local codes and National Electrical Code (NEC).

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Handle and prepare panels for installation according to NECA 407.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 SYSTEM DESCRIPTION

- A. Input signal from field-mounted manual switches, or digital signal sources, shall open or close one or more lighting control relays in the lighting control panels. Any combination of inputs shall be programmable to any number of control relays.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with 47 CFR, Subparts A and B, for Class A digital devices.
- D. Comply with UL 916.

2.2 PERFORMANCE REQUIREMENTS

Delete "Seismic Performance" Paragraph below if performance requirements are indicated on Drawings. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Coordinate requirements with structural engineer.

- A. Seismic Performance: Lighting control panels shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain first subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified [**and the unit will be fully operational after the seismic event**]."

For life-safety components required to function after an earthquake (such as fire-sprinkler systems, components that contain hazardous content, and storage racks in structures open to the public), the Component Importance Factor is 1.5. For other components, the Component Importance Factor is 1.0 unless the structure is in Seismic Use Group III and component is necessary for continued operation of facility or failure of component could impair continued operation of facility, in which case the Component Importance Factor is 1.5.

2. Component Importance Factor: **[1.5] [1.0]**.

See ASCE/SEI 7, Coefficients for Architectural Component Table and Seismic Coefficients for Mechanical and Electrical Components Table for requirements to be inserted in subparagraph below.

3. **<Insert requirements for Component Amplification Factor and Component Response Modification Factor>**.

Retain "Interface with DDC System for HVAC" Paragraph below for interface with the DDC system for HVAC. Coordinate with Section 230923 "Direct Digital Control (DDC) System for HVAC."

- B. BAS Interface: Provide hardware and software to enable the BAS to monitor, control, display, and record data for use in processing reports.

Retain "Hardwired Points" or "Communication Interface" Subparagraph below. Retain first subparagraph if interface with the DDC system for HVAC is through hardwired points and minimal interface is required. Retain second if extensive interface with the DDC system for HVAC is required and is beyond what hardwired points can provide. Requirement may exclude some manufacturers.

1. Hardwired Points:
 - a. Monitoring: On-off status, **<Insert monitoring point>**.
 - b. Control: On-off operation, **<Insert control point>**.
2. Communication Interface: Comply with **[ASHRAE 135] <Insert type of interface>**. The communication interface shall enable the BAS operator to remotely control and monitor lighting from a BAS operator workstation. Control features and monitoring points displayed locally at lighting panel shall be available through the BAS.

Retain one of first two articles below. "Lighting Control Relay Panels" Article is for a single lighting control relay panel, typically not more than 42 relays. Retain "Networked Lighting Control Panels" Article for multiple panels networked under unified control and with an optional connection to the BAS.

2.3 LIGHTING CONTROL RELAY PANELS

Retain "Products" Paragraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

- A. **Products: Subject to compliance with requirements, provide one of the following:**

1. Acuity Brands, Inc., Lighting Control & Design, Inc.; GR2400.
2. General Electric Company, GE Consumer & Industrial - Electrical Distribution; LVRC.
3. Leviton Mfg. Company Inc.; Z-Max Plus.
4. Lightolier Controls, a Philips Group brand; Lyteswitch.
5. Siemens Energy & Automation, Inc.; LCP3000EZ.
6. Touch-Plate Technologies; Zone Z.
7. WattStopper, a Legrand Group brand; Lighting Integrator.
8. **<Insert manufacturer's name; product name or designation>**.
9. or approved equal.

- B. Description: Standalone lighting control panel using mechanically latched relays to control lighting and appliances.
- C. Lighting Control Panel:
1. A single enclosure with incoming lighting branch circuits, control circuits, switching relays, and on-board timing and control unit.
 2. A vertical barrier separating branch circuits from control wiring.
- D. Control Unit: Contain the power supply and electronic control for operating and monitoring individual relays.
1. Timing Unit:
 - a. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
 - b. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
 - c. **[Four] <Insert number>** independent schedules, each having **[24] <Insert number>** time periods.
 - d. Schedule periods settable to the minute.
 - e. Day-of-week, day-of-month, day-of-year with one-time or repeating capability.
 - f. **[10] <Insert number>** special date periods.

In "Sequencing Control with Override" Subparagraph below, two control units are available from some manufacturers.

2. Sequencing Control with Override:
 - a. Automatic sequenced on and off switching of selected relays at times set at the timing unit, allowing timed overrides from external switches.
 - b. Sequencing control shall operate relays one at a time, completing the operation of all connected relays in not more than 10 seconds.
 - c. Override control shall allow any relay connected to it to be switched on or off by a field-deployed manual switch or by an automatic switch, such as an occupancy sensor.
 - d. Override control "blink warning" shall warn occupants approximately **[five minutes] <Insert time>** before actuating the off sequence.
3. Nonvolatile memory shall retain all setup configurations. After a power failure, the controller shall automatically reboot and return to normal system operation, including accurate time of day and date.

Retain one of two "Relays" paragraphs below. Not all listed manufacturers can comply with requirements when retaining second paragraph. Two-pole relays are available from some manufacturers.

- E. Relays: Electrically operated, mechanically held single-pole switch, rated at 20 A at 277 V. Short-circuit current rating shall be not less than 5 kA. Control shall be three-wire, 24-V ac.

- F. Relays: Electrically operated, mechanically held single-pole switch, rated at 20 A at 120-V tungsten, 30 A at 277-V ballast, 1.5 hp at 120 V, and 3 hp at 277 V. Short-circuit current rating shall be not less than 14 kA. Control shall be three-wire, 24-V ac.
- G. Power Supply: NFPA 70, Class 2, sized for connected equipment, plus 20 percent spare capacity. Powered from a dedicated branch circuit of the panelboard that supplies power to the line side of the relays, sized to provide control power for the local panel-mounted relays, bus system, low-voltage inputs, field-installed occupancy sensors, and photo sensors.

Alternatives to "Operator Interface" Paragraph below are available from some manufacturers. Alternatives include hand-held portable PCs, personal digital assistants, and mobile telephones.

H. Operator Interface:

- 1. Integral alphanumeric keypad and digital display, and intuitive drop-down menus to assist in programming.
- 2. Log and display relay on-time.
- 3. Connect relays to one or more time and sequencing schemes.

2.4 NETWORKED LIGHTING CONTROL PANELS

Revise this article for selected electric control protocol based on the need for flexibility, interoperability, and the most appropriate user interface.

Retain "Products" Paragraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

A. Products: Subject to compliance with requirements, provide one of the following:

- 1. Acuity Brands, Inc., Lighting Control & Design, Inc.; GR2400.
- 2. General Electric Company, GE Consumer & Industrial - Electrical Distribution; LVRC.
- 3. Touch-Plate Technologies; Control Plus.
- 4. WattStopper, a Legrand Group brand; Lighting Integrator.
- 5. **<Insert manufacturer's name; product name or designation>**.
- 6. or approved equal.

B. Description: Lighting control panels using mechanically latched relays to control lighting and appliances. The panels shall be capable of being interconnected with digital communications to appear to the operator as a single lighting control system.

C. Lighting Control Panels:

- 1. A single enclosure with incoming lighting branch circuits, control circuits, switching relays, and on-board timing and control unit.
- 2. A vertical barrier separating branch circuits from control wiring.

Not all manufacturers place all features, listed in "Main Control Unit" Paragraph below, into the main network panel. Instead, some features may be repeated in each slave panel. Revise paragraph below as necessary, depending on manufacturers.

- D. Main Control Unit: Installed in the main lighting control panel only; powered from the branch circuit of the standard control unit.
1. Ethernet Communications: Comply with **[MS Windows TCP/IP] <Insert network protocol>** protocol. The main control unit shall provide for programming of all control functions of the main and all networked slave lighting control panels including timing, sequencing, and overriding.

Retain "Compliance with ASHRAE 135" Subparagraph below for DDC system for HVAC control network. Revise as required for other network protocols.

See "Communication Networks for Lighting Controls" Article in the Evaluations for discussion of communication network options.

2. Compliance with ASHRAE 135: Controllers shall support serial MS/TP and Ethernet IP communications, and shall be able to communicate directly via BAS RS-485 serial networks and Ethernet 10Base-T networks as a native device.
3. Web Server: Display information listed below over a standard Web-enabled server for displaying information over a standard browser.
 - a. A secure, password-protected login screen for modifying operational parameters, accessible to authorized users via Web page interface.
 - b. Panel summary showing the master and slave panels connected to the controller.
 - c. Controller diagnostic information.
 - d. Show front panel mimic screens for setting up controller parameters, input types, zones, and operating schedules. These mimic screens shall also allow direct breaker control and zone overrides.
4. Timing Unit:
 - a. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
 - b. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
 - c. **[Four] <Insert number>** independent schedules, each having **[24] <Insert number>** time periods.
 - d. Schedule periods settable to the minute.
 - e. Day-of-week, day-of-month, day-of-year with one-time or repeating capability.
 - f. **[16] <Insert number>** special date periods.

In "Time Synchronization" Subparagraph below, the typical value ranges from one hour to 24 hours.

5. Time Synchronization: The timing unit shall be updated not less than every **<Insert number>** hour(s) with the network time server.
6. Sequencing Control with Override:

- a. Automatic sequenced on and off switching of selected relays at times set at the timing unit, allowing timed overrides from external switches.
 - b. Sequencing control shall operate relays one at a time, completing the operation of all connected relays in not more than 10 seconds.
 - c. Override control shall allow any relay connected to it to be switched on or off by a field-deployed manual switch or by an automatic switch, such as an occupancy sensor.
 - d. Override control "blinking warning" shall warn occupants approximately [**five minutes**] <Insert time> before actuating the off sequence.
 - e. Activity log, storing previous relay operation, including the time and cause of the change of status.
 - f. Download firmware to the latest version offered by manufacturer.
- E. Standard Control Unit, Installed in All Lighting Control Panels: Contain electronic controls for programming the operation of the relays in the control panel, contain the status of relays, and contain communications link to enable the digital functions of the main control unit. Comply with UL 916.
1. Electronic control for operating and monitoring individual relays, and display relay on-time.
 2. Nonvolatile memory shall retain all setup configurations. After a power failure, the controller shall automatically reboot and return to normal system operation.
 3. Integral keypad and digital-display front panel for local setup, including the following:
 - a. Blink notice, time adjustable from software.
 - b. Ability to log and display relay on-time.
 - c. Capability for accepting downloadable firmware so that the latest production features may be added in the future without replacing the module.

Retain "Relays" paragraph below. Not all listed manufacturers can comply with requirements when retaining second paragraph. Two-pole relays are available from some manufacturers. See Evaluations for discussion of additional relay features.

- F. Relays: Electrically operated, mechanically held single-pole switch, rated at 20 A at 120-V tungsten, 30 A at 277-V ballast, 1.5 hp at 120 V, and 3 hp at 277 V. Short-circuit current rating shall be not less than 14 kA. Control shall be [**three-wire, 24-V ac**] [**digital control network**].
- G. Power Supply: NFPA 70, Class 2, UL listed, sized for connected equipment, plus not less than 20 percent spare capacity. Powered from a dedicated branch circuit of the panelboard that supplies power to the line side of the relays, sized to provide control power for the local panel-mounted relays, bus system, low-voltage inputs, field-installed occupancy sensors, and low-voltage photo sensors.
- H. Operator Interface: At the main control unit, provide interface for a tethered connection of [**a portable PC running MS Windows**] <Insert digital device and operating system> for configuring all networked lighting control panels using setup software designed for the specified operating system. Include one portable device for initial

programming of the system and training of Owner's personnel. That device shall remain the property of Owner.

I. Software:

1. Menu-driven data entry.
2. Online and offline programming and editing.
3. Provide for entry of the room or space designation for the load side of each relay.
4. Monitor and control all relays, showing actual relay state and the name of the automatic actuating control, if any.
5. Size the software appropriate to the system.

2.5 MANUAL SWITCHES AND PLATES

Coordinate use of manual switches in this article with required control and override functions, with occupancy sensor applications where used, and with switch and wall-plate finish specified in Section 262726 "Wiring Devices."

A. Push-Button Switches: Modular, momentary contact, three wire, for operating one or more relays and to override automatic controls.

1. Match color and style specified in Section 262726 "Wiring Devices."

Retain both subparagraphs below if required.

2. Integral green [LED] [neon] pilot light to indicate when circuit is on.
3. Internal white [LED] [neon] locator light to illuminate when circuit is off.

B. Wall Plates: Single and multigang plates as specified in Section 262726 "Wiring Devices."

C. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.6 FIELD-MOUNTED SIGNAL SOURCES

A. Daylight Harvesting Switching Controls: Comply with Section 260923 "Lighting Control Devices." Control power may be taken from the lighting control panel, and signal shall be compatible with the relays.

B. Indoor Occupancy Sensors[**and Extreme-Temperature Occupancy Sensors**]: Comply with Section 260923 "Lighting Control Devices." Control power may be taken from the lighting control panel, and signal shall be compatible with the relays.

2.7 CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

- B. Classes 2 and 3 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 18] [No. 22] [No. 24]** AWG, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 14] [No. 16] [No. 18]** AWG, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Digital and Multiplexed Signal Cables: Unshielded, twisted-pair cable with copper conductors, complying with TIA/EIA-568-B.2, **[Category 5e] [Category 6]** for horizontal copper cable and with Section 271500 "Communications Horizontal Cabling."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Receive, inspect, handle, and store panels according to NECA 407.
- B. Examine panels before installation. Reject panels that are damaged or rusted or have been subjected to water saturation.
- C. Examine elements and surfaces to receive panels for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WIRING INSTALLATION

- A. Comply with NECA 1.

Retain one of two "Wiring Method" paragraphs below and coordinate with Drawings. Delete both if wiring methods for system are indicated on Drawings.

- B. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters[**and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used**]. Conceal raceway and cables except in unfinished spaces.

Retain first subparagraph below if retaining option in "Wiring Method" Paragraph above.

1. Install plenum cable in environmental air spaces, including plenum ceilings.
2. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
3. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."

- C. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.3 PANEL INSTALLATION

- A. Comply with NECA 1.
- B. Install panels and accessories according to NECA 407.

Retain first paragraph below if seismic controls are required for Project. Coordinate with Drawings.

- C. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

Ensure that, whatever height is retained for top of trim in first paragraph below, the operating handle of topmost switch or circuit breaker, in on position, is not higher than 79 inches (2000 mm) above finished floor or grade.

- D. Mount top of trim [90 inches (2286 mm)] <Insert dimension> above finished floor unless otherwise indicated.
- E. Mount panel cabinet plumb and rigid without distortion of box.
- F. Install filler plates in unused spaces.

3.4 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section 260553 "Identification for Electrical Systems."
- C. Create a directory to indicate loads served by each relay; incorporate Owner's final room designations. Obtain approval before installing. Use a PC or typewriter to create directory; handwritten directories are unacceptable.
- D. Lighting Control Panel Nameplates: Label each panel with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris. Repair damaged finish to match original finish.

3.6 PROTECTION

- A. Provide final protection to ensure that moisture does not enter lighting control equipment assembly.

3.7 FIELD QUALITY CONTROL

Retain "Testing Agency," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate testing requirements with Section 262416 "Panelboards."

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
- D. Acceptance Testing Preparation:
 - 1. Test continuity of each circuit.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- E. Lighting control panel will be considered defective if it does not pass tests and inspections.

Retain paragraph below if tests and inspections are performed by Contractor or manufacturer's field-service representative engaged by Contractor.

- F. Prepare test and inspection reports, including a certified report that identifies lighting control panels and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Confirm correct communications wiring, initiate communications between panels, and program the lighting control system according to approved configuration schedules, time-of-day schedules, and input override assignments.
 - 3. **<Insert startup steps if any>**.

3.9 ADJUSTING

- A. Occupancy Adjustments: When requested within [**twelve (12)**] **<Insert number>** months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] **<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.10 SOFTWARE SERVICE AGREEMENT

Services in this article may not be allowed for publicly funded projects.

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for [**two (2)**] **<Insert number>** years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within [**two (2)**] **<Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
 - 1. Upgrade Notice: At least [**thirty (30)**] **<Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.11 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain the control unit and operator interface.

1. Schedule training with Owner, through DEN Product Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 260943.23

Copyright 2009 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 261116 - SECONDARY UNIT SUBSTATIONS

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes indoor and outdoor secondary unit substations, each consisting of the following:

Edit to suit Project.

1. Primary incoming section.
2. Transformer.
3. Secondary distribution section.

- B. Related Sections include the following:

List below only products and equipment that the reader might expect to find in this Section but are specified elsewhere.

1. Section 260513 "Medium-Voltage Cables" for requirements of terminating cables in incoming section of substation.
2. Section 260573 "Overcurrent Protective Device Coordination Study" for short-circuit rating of devices and for setting of overcurrent protective devices.
3. Section 260913 "Electrical Power Monitoring and Control" for communication features of power distribution system devices.
4. Section 261300 "Medium-Voltage Switchgear" for metering and instrument transformers.
5. Section 262500 "Enclosed Bus Assemblies" for busway connections between transformers and secondary distribution equipment.

6. Section 263533 "Power Factor Correction Equipment" for capacitors to be located in secondary section.
7. Section 263600 "Transfer Switches" for transfer switches that may be located in secondary distribution section.
8. Section 264313 "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits" for transient voltage surge suppressors for low-voltage power, control, and communication equipment that may be located in secondary section.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. NETA ATS: Acceptance Testing Specification.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, furnished specialties, and accessories.
 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 1. Wiring Diagrams: Power, signal, and control wiring.
 2. Dimensioned plans and elevations showing major components and features.
 3. One-line diagram.
 4. List of materials.
 5. Nameplate legends.
 6. Size and number of bus bars and current rating for each bus, including mains and branches of phase, neutral, and ground buses.
 7. Short-time and short-circuit current ratings of secondary unit substations and components.
 8. Ratings of individual protective devices.

Curves below are required to coordinate devices upstream and downstream from secondary unit substation.

- C. Time-Current Characteristic Curves: For overcurrent protective devices.
- D. Primary Fuses: Submit recommendations and size calculations.

1.5 INFORMATIONAL SUBMITTALS

Retain paragraph below if Drawings do not include detailed plans or if Project involves unusual coordination requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

Edit subparagraphs below to suit Project.

1. Dimensioned concrete base, outline of secondary unit substation, conduit entries, and ground rod locations.
2. Location of structural supports for structure-supported raceways[, **busways,**] **[and seismic bracing]**.
3. Location of lighting fixtures, sprinkler piping and heads, ducts, and diffusers.

Coordinate paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- B. Qualification Data: For testing agency.

Retain first paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

Coordinate seismic requirements with DEN Project Manager.

- C. Manufacturer Seismic Qualification Certification: Submit certification that transformer assembly and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain one of first two subparagraphs below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Second definition is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- D. Product Certificates: For secondary unit substations, signed by product manufacturer.

Delete test reports below if not required.

- E. Material Test Reports: For secondary unit substations.

Retain paragraph above or below.

- F. Factory test reports.

Retain first paragraph below if Contractor is responsible for field quality-control testing.

- G. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For secondary unit substations and accessories to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Revise first subparagraph below to suit Project. Spare medium-voltage fuses are contained within primary switch.

1. Spare fuses: **[Six (6)] <Insert number>** of each type and rating of fuse and fusible device used, except for medium-voltage fuses **[and fuses associated with network protector]**. Include spares for the following:
 - a. Primary disconnect fuses.
 - b. Potential transformer fuses.
 - c. Control power fuses.
 - d. Fuses and fusible devices for fused circuit breakers.
 - e. Fuses for secondary fusible devices.
2. Spare Indicating Lights: Six of each type installed.
3. Touchup Paint: **[Three (3)] <Insert number>** half-pint containers of paint

- matching enclosure's exterior finish.
4. Primary Switch Contact Lubricant: **[One (1)] <Insert number>** container(s).
 5. **[One (1)] <Insert number>** set(s) of spare mounting gaskets for bushings, handholes, and the gasket between relief cover and flange of pressure relief device.

1.8 QUALITY ASSURANCE

If an independent testing agency is required, see Division 01 Section "Quality Requirements" for general testing and inspecting agency qualification requirements. If additional control is needed, use first paragraph below to specify 29 CFR 1910.7 or other more specific criteria (e.g., NETA). 29 CFR 1910.7 defines a nationally recognized testing laboratory as it applies to testing and inspecting for safety, and lists, labels, or accepts equipment and materials that meet certain OSHA criteria.

Retain paragraph and subparagraph below if Contractor or manufacturer selects testing agency.

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
- B. Source Limitations: Obtain secondary unit substation through one source from a single manufacturer.

Retain first paragraph below to allow drawing details based on one manufacturer's product to establish requirements and still allow competition. Correlate with Division 01 requirements.

- C. Product Options: Drawings indicate size, profiles, and dimensional requirements of secondary unit substations and are based on the specific system indicated. Refer to Section 016000 "Product Requirements."
- D. Electrical Components, Devices and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with IEEE C2.
- F. Comply with IEEE C37.121.
- G. Comply with NFPA 70.

1.9 DELIVERY, STORAGE, AND HANDLING

Delete first paragraph below if no known obstacles to movement of normal shipping, lengths of secondary unit substations, and substation sections. Coordinate with Drawings.

- A. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
- B. Coordinate delivery of secondary unit substations to allow movement into designated

space.

- C. Store secondary unit substation components [**protected from weather and**] so condensation will not form on or in units. Provide temporary heating according to manufacturer's written instructions.
- D. Handle secondary unit substation components according to manufacturer's written instructions. Use factory-installed lifting provisions.

1.10 PROJECT CONDITIONS

- A. Field Measurements: Indicate measurements on Shop Drawings.

Delete first paragraph and subparagraphs below if no interruption of existing electric service is required.

- B. Interruption of Existing electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
 - 1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 - 2. Do not proceed with interruption of electric service without DEN Project Manager's written permission.
- C. Any electrical work penetrating concrete walls or floors shall require saw cutting and/or core drilling and shall require approval by the DEN Project Manager. The contractor shall submit shop drawings of any saw cutting or core drilling to the DEN Project Manager prior to performing the work. Refer to Section 017300 "Execution."
- D. Service Conditions: IEEE C37.121, usual service conditions, except for the following:

Select and modify conditions below and specify features required to provide satisfactory service.

- 1. Exposure to significant solar radiation.
- 2. Altitudes above 5500 feet (1677 m).
- 3. Exposure to fumes, vapors, or dust.
- 4. Exposure to explosive environments.
- 5. Exposure to hot and humid climate or to excessive moisture, including steam, salt spray, and dripping water.
- 6. Exposure to seismic shock or to abnormal vibration, shock, or tilting.
- 7. Exposure to excessively high or low temperatures: -30° F to 120° F
- 8. Unusual transportation or storage conditions.
- 9. Unusual grounding resistance conditions.
- 10. Unusual space limitations.

1.11 COORDINATION

Edit first paragraph below to delete or add types of construction that should be submitted as part of Contractor's layout.

- A. Coordinate layout and installation of secondary unit substations with other construction that penetrates floors and ceilings, or is supported by them, including light fixtures, HVAC equipment, and fire-suppression-system components.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - GENERAL

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products.

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. ABB Control, Inc.
 - 2. Cooper Industries, Inc.; Cooper Power Systems Division.
 - 3. Cutler-Hammer.
 - 4. GE Electrical Distribution & Control.
 - 5. Siemens Energy & Automation, Inc.
 - 6. Square D; Schneider Electric.
 - 7. <Insert manufacturer>
 - 8. or approved equal.

2.2 MANUFACTURED UNITS

- A. Indoor Unit Arrangement: Single assembly.

Retain paragraph above or first paragraph below for indoor units.

- B. Indoor Unit Arrangement: Separate secondary distribution equipment connected with busway.

- C. Outdoor Unit Arrangement: Single assembly Separate secondary distribution equipment connected with busway.
 - 1. Weatherproof, listed for installation outdoors, complying with IEEE C37.20.1.
 - 2. Aisleless Construction: Full-height doors in front of basic weatherproof equipment.
- D. Enclosure Finish: Factory-applied finish in manufacturer's standard color, including under surfaces treated with corrosion-resistant undercoating.

Select paragraph above for outdoor units or below for indoor units.

- E. Enclosure Finish: Factory-applied finish in manufacturer's standard gray over a rust-inhibiting primer on treated metal surface.

2.3 INCOMING SECTION

Retain one of three "Primary Incoming Section" paragraphs and associated subparagraphs below. Additional primary incoming section equipment includes metal-clad, circuit-breaker switchgear with vacuum or SF6 circuit breakers. This equipment can be adapted from Division 26 Section "Medium-Voltage Switchgear" for use in this Section.

- A. Primary Incoming Section: Terminal assembly with adequate space for incoming-cable terminations and surge arresters.
- B. Primary Incoming Section: Transformer cover-mounted bushings.
- C. Primary Incoming Section: Enclosed, air-interrupter, dual primary primary switch.
 - 1. Three pole, single throw, dead front, metal enclosed, with manual stored energy operator, **[with fuses mounted on a single frame] [without fuses]**, complying with IEEE C37.20.3.
 - 2. Key interlocking system to prevent fuse access door from being opened unless switch is open. **[Additionally, interlock air-interrupter switch with transformer secondary main circuit breaker, preventing switch from being opened or closed unless secondary main circuit breaker is open.]**
 - 3. Phase Barriers: Located between blades **[and fuses]** of each phase, designed for easy removal, allows visual inspection of switch components when barrier is in place.
 - 4. Window: Permits viewing switch-blade positions when door is closed.
 - 5. Accessory Set: Tools and miscellaneous items required for interrupter switchgear test, inspection, maintenance, and operation. Include fuse-handling tool as recommended by switchgear manufacturer.

Continuous-current and short-circuit ratings listed below are for commonly available switches; adjust if required to suit Project conditions.

- 6. Continuous-Current Rating: 600 A.
- 7. Short-Circuit Rating:
 - a. Short-time momentary asymmetrical fault rating of 40 kA.

- b. 3-second symmetrical rating of 25-kA RMS.
 - c. Fault close asymmetrical rating of 40 kA.
8. Fuses: Sizes recommended by secondary unit substation manufacturer, considering fan cooling, temperature-rise specification, and cycle loading. Comply with the following:
- a. Current-limiting type, rated for not less than 50-kA RMS symmetrical current-interrupting capacity.
 - b. Indicator integral with each fuse to show when it has blown.
 - c. Spares: Include three fuses in use and three spare fuses in storage clips in each switch.

Revise paragraph below to specify station or intermediate-class arresters if Project conditions require.

- D. Surge Arresters: Comply with IEEE C62.11, Distribution class; metal-oxide-varistor type, with ratings as indicated, connected in each phase of incoming circuit and ahead of any disconnecting device.

2.4 LIQUID-FILLED TRANSFORMER SECTION

Retain this Article for liquid-filled transformers or delete and retain "Dry-Type Transformer Section" Article.

See the Evaluations in Division 26 Section "Medium-Voltage Transformers" for guidance on editing this Article.

- A. Description: IEEE C57.12.00 and UL 1062, liquid-filled, 2-winding, secondary unit substation transformer.
- B. Insulating Liquid: Mineral oil complying with ASTM D 3487, Type II, and tested according to ASTM D 117.

Delete paragraph above if less-flammable insulating liquid is required. Select one of three insulating liquids below; verify availability with selected manufacturers. Transformer primary voltage must be 35 kV or less for less-flammable liquids. See the Evaluations in Division 26 Section "Medium-Voltage Transformers" for discussion of transformer liquids.

- C. Insulating Liquid: Less flammable, edible-seed-oil based, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 92. Liquid shall be biodegradable and nontoxic.
- D. Insulating Liquid: Less flammable, dielectric, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 92. Liquid shall be biodegradable and nontoxic.
- E. Insulating Liquid: Less flammable, silicone-based dielectric, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 92. Liquid shall have low toxicity and be nonhazardous.

Retain one of first two paragraphs below if appropriate temperature rise for Project is other-than-standard 55 deg C.

- F. Basic Impulse Level: Comply with UL 1062.

Retain paragraph above or below. See Evaluations for standard Basic Impulse Level values.

Retain one of first two paragraphs below. First is NEMA standard.

- G. Full-Capacity Voltage Taps: 4 nominal 2.5 percent taps, 2 above and 2 below rated primary voltage; with externally operable tap changer for de-energized use and with position indicator and padlock hasp.
- H. Cooling System: Class **[OA, liquid cooled] [OA/FA, liquid cooled, and with forced-air rating] [OA/FFA, liquid cooled, and with provisions for future forced-air rating]**. Cooling systems shall include auxiliary cooling equipment, automatic controls, and status indicating lights.

Delete paragraph below if transformer noise is not important. If retaining, adjust allowable level.

- I. Sound level may not exceed 58 dB, without fans.

Delete first paragraph below if manufacturer's standard impedance is adequate according to system analysis. See Evaluations for typical impedance values. Revise to suit Project and verify availability with manufacturers.

- J. Impedance: **<Insert value>** percent.
- K. Accessories: Grounding pads, lifting lugs, and provisions for jacking under base. Transformers shall have a steel base and frame allowing use of pipe rollers in any direction, and an insulated, low-voltage, neutral bushing with removable ground strap. Include the following additional accessories:
1. Liquid-level gage.
 2. Pressure-vacuum gage.
 3. Liquid temperature indicator.
 4. Drain and filter valves.
 5. Pressure relief device.

2.5 DRY-TYPE TRANSFORMER SECTION

See the Evaluations in Division 26 Section "Medium-Voltage Transformers" for guidance on editing this Article. Retain IEEE C57.12.50 for dry-type transformers rated up to 500 kVA, IEEE C57.12.51 for dry-type transformers rated 501 kVA and larger, or IEEE C57.12.52 for sealed dry-type transformers rated 501 kVA and larger.

- A. Description: IEEE C57.12.01, **[IEEE C57.12.50] [IEEE C57.12.51] [IEEE C57.12.52]**, NEMA ST 20, and dry-type, 2-winding, secondary unit substation transformer.
- B. Enclosure: **[Indoor, ventilated] [Outdoor, ventilated] [Totally enclosed, nonventilated]**, cast coil/encapsulated coil, with primary and secondary windings individually cast in epoxy; with insulation system rated at 185 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of 40 deg C.

Select paragraph above or first paragraph below. See Evaluations for discussion of cast-coil/encapsulated-coil and vacuum-pressure impregnated options.

- C. Enclosure: [**Indoor, ventilated**] [**Outdoor, ventilated**] [**Totally enclosed, nonventilated**], vacuum-pressure, impregnated type and with insulation system rated at 220 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of 40 deg C.
- D. Cooling System: Class AA, air cooled , complying with IEEE C57.12.01.

If retaining first option in paragraph above, delete both subparagraphs below.

- 1. Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm silencing relay.

If retaining second option in paragraph above, delete subparagraph below.

- 2. Include mounting provision for fans.

- E. Insulation Materials: IEEE C57.12.01, rated 220 deg C.
- F. Insulation Temperature Rise: [**80**] [**115**] [**150**] deg C, maximum rise above 40 deg C.

See Evaluations for standard Basic Impulse Level values.

- G. Basic Impulse Level: [**60**] [**75**] [**95**] [**110**] kV.

Retain one of two paragraphs below. First is NEMA standard.

- H. Full-Capacity Voltage Taps: 4 nominal 2.5 percent taps, 2 above and 2 below rated primary voltage.

Delete paragraph below if transformer noise is not important. If retaining, consider listing acceptable level. See Editing Instruction No. 2 in the Evaluations for discussion of sound levels.

- I. Sound level may not exceed <Insert maximum dBA level>, without fans operating.

Delete paragraph below if manufacturer's standard impedance is adequate according to system analysis. See Evaluations for typical impedance values.

- J. Impedance: <Insert value> percent.

If retaining paragraph below, coordinate with Drawings and provide external power and signal connections.

- K. High-Temperature Alarm: Sensor at transformer with local audible and visual alarm and contacts for remote alarm.

2.6 SECONDARY DISTRIBUTION SECTION

Retain one of first five paragraphs below.

- A. Secondary Terminal Compartment: Bus **[bars mounted on standoff insulators] [duct flange for close coupling with busway]**.
- B. Distribution Panelboard: Panelboards as specified in Section 262416 "Panelboards."
- C. Network Protectors:
 - 1. Rated for continuous service in an ambient temperature of up to 40 deg C, applied to 3-phase, 4-wire, solidly grounded wye secondary networks. Comply with IEEE C57.12.44.
 - 2. Dead-front, drawout design with externally mounted fuses, using hand-cranked rail system. Relay and control panel located on a separate drawout module.
 - 3. Protector Operator: **[Spring-close] [and] [or] [stored-energy]** mechanism, rated to close on a **[25,000] [40,000]** RMS symmetrical load.
 - 4. Control Voltage: Not more than 125 V.

Adjust relay requirements below to suit Project conditions.

- 5. Control microprocessor-based, three-phase, tripping relay with features and functions as follows:
 - a. Close protector if positive sequence power flows into the network. Adjustable closing range shall be from 0.5 to 3.5 V in phase difference between network and transformer voltages.
 - b. Trip protector if there is a net, three-phase, reverse power flow through protector. Trip protectors shall be adjustable from 0.05 to 5 percent of continuous-current rating of current transformers within protector.
 - c. Trip protector if there is a flow of reverse magnetizing current of its associated transformer.
 - d. Field-adjustable relay parameters and watt or watt-var trip values.
- 6. Protector shall not open under any fault on network side of protector.
- 7. Current-limiting fuses shall have interrupting capacity of 150,000 A on network side of protector for protection against switchboard bus faults.
- 8. Mechanical interlocks shall prevent racking in and racking out when protector is closed.
- 9. Auxiliary contacts shall be remotely tripped and locked out by four-wire remote pilot devices.
- 10. Network protectors shall have not less than two spare auxiliary dry contacts.
- 11. Network Switchgear-Mounted Disconnect Switch: Supply each network-protector circuit with a switchgear-mounted fuse truck, with Class L fuses rated for 200-kA interrupting capacity, and key interlocked with each associated protector.

Select subparagraph above or below.

2.7 IDENTIFICATION DEVICES

Coordinate this Article with Drawings.

- A. Compartment Nameplates: Engraved, laminated-plastic or metal nameplate for each compartment, mounted with corrosion-resistant screws. Nameplates and label

products are specified in Section 260553 "Identification for Electrical Systems."

2.8 SOURCE QUALITY CONTROL

- A. Factory Tests: Perform design and routine tests according to standards specified for components. Conduct transformer tests according to IEEE C57.12.90. Conduct switchgear and switchboard tests according to ANSI C37.51.
- B. Factory Tests: Perform the following factory-certified tests on each secondary unit substation:
 - 1. Resistance measurements of all windings on the rated voltage connection and on tap extreme connections.
 - 2. Ratios on the rated voltage connection and on tap extreme connections.
 - 3. Polarity and phase relation on the rated voltage connection.
 - 4. No-load loss at rated voltage on the rated voltage connection.
 - 5. Exciting current at rated voltage on the rated voltage connection.
 - 6. Impedance and load loss at rated current on the rated voltage connection and on tap extreme connections.
 - 7. Applied potential.
 - 8. Induced potential.

Tests below are optional; select to suit Project conditions. If Project covers more than one unit of a given kilovolt-ampere rating, consider testing one unit only.

- 9. Temperature Test: If a transformer is supplied with auxiliary cooling equipment to provide more than one rating, test at lowest kilovolt-ampere Class OA or Class AA rating and highest kilovolt-ampere Class FA rating.
 - a. Temperature test is not required if a record of a temperature test on an essentially duplicate unit is available.

Delete subparagraph below if Owner does not want tests to be witnessed.

- 10. Owner will witness all required factory tests. Notify DEN Project Manager at least fourteen (14) days before date of tests and indicate their approximate duration.

PART 3 - PRODUCTS

3.1 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of work.
- B. Examine roughing-in of conduits and grounding systems to verify the following:
 - 1. Wiring entries comply with layout requirements.
 - 2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.

- C. Examine walls, floors, roofs, and concrete bases for suitable conditions for secondary unit substation installation.

Adjust 5-ohm value in first paragraph below to suit Project conditions.

- D. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at secondary unit substation location.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install secondary unit substations on concrete bases.

If appropriate, retain subparagraph below for projects in areas of seismic activity.

1. Anchor secondary unit substations to concrete bases according to manufacturer's written instructions, seismic codes at Project, and requirements in Section 260529 "Hangers and Supports for Electrical Systems" and Section 260548 "Vibration and Seismic Controls for Electrical Systems."

Edit subparagraphs below to suit Project. Consider indoor and outdoor transformer locations and seismic requirements, if any.

2. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit and 4 inches (100 mm) high.
 3. Use [3000-psi (20.7-MPa)] <Insert other>, 28-day compressive-strength concrete and reinforcement as specified in Section "[033000 Cast-in-Place Concrete] [033053 Miscellaneous Cast-in-Place Concrete]."
 4. Install dowel rods to connect concrete bases to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
 5. Install epoxy-coated anchor bolts for anchoring equipment to the concrete base.
 6. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 7. Bolt transformers to channel-iron sills embedded in concrete bases. Install sills level and grout flush with floor or base.
- B. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.

3.3 IDENTIFICATION

- A. Identify field-installed wiring and components and provide warning signs as specified in Section 260553 "Identification for Electrical Systems."
- B. Operating Instructions: Frame printed operating instructions for secondary unit

substations, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of secondary unit substation.

3.4 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 CLEANING

- A. After completing equipment installation and before energizing, inspect unit components. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish. Vacuum interiors of secondary unit substation sections.

3.6 FIELD QUALITY CONTROL

Retain paragraph below to require a factory-authorized service representative to perform, or assist Contractor with, field inspections, tests, and adjustments.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to assist Contractor and inspect [, **test, and adjust**] field-assembled components and equipment installation, including connections[, **and to assist in field testing**]. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:

Retain subparagraphs below with either of last two paragraphs above. Edit to suit Project.

1. Perform each visual and mechanical inspection and electrical test according to NETA ATS. Certify compliance with test parameters.
2. After installing secondary unit substation but before primary is energized, verify that grounding system at the substation tested at the specified value or less.
3. After installing secondary unit substation and after electrical circuitry has been energized, test for compliance with requirements.
4. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
5. Remove and replace malfunctioning units and retest as specified above.

3.7 FOLLOW-UP SERVICE

- A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six (6) months after Final Acceptance, perform the following voltage monitoring:
1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at the outgoing section of each secondary unit substation. Use voltmeters with calibration traceable to the National Institute of Science and Technology standards and with a chart speed of not less than 1 inch (25 mm) per hour. Voltage unbalance greater than 1 percent between phases, or deviation of any phase voltage from the nominal value by more than plus or minus 5 percent during the test period, is unacceptable.
 2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
 - a. Adjust transformer taps.
 - b. Rebalance loads.
 - c. Prepare written request for voltage adjustment by electric utility.
 3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained.
 4. Report: Prepare a written report covering monitoring performed and corrective action taken.
- B. Infrared Scanning: Perform as specified in Section 261300 "Medium-Voltage Switchgear."

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain systems. Refer to Section 017900 "Demonstration and Training."
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Seco.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 261116

Copyright 2009 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 261200 – MEDIUM-VOLTAGE TRANSFORMERS

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following types of transformers with medium-voltage primaries:

Edit to suit Project.

1. Liquid-filled distribution and power transformers.
2. Dry-type distribution and power transformers.
3. Pad-mounted, liquid-filled transformers.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. NETA ATS: Acceptance Testing Specification.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, location of each field connection, and performance for each type and size of transformer indicated.
1. Include data substantiating that materials comply with requirements.
- B. Include outline and support point dimensions of enclosures and accessories, unit weight, voltage, KVA, K-FACTOR and impedance ratings and characteristics, loss data, efficiency at 25, 50, 75 and 100 percent rated load, sound level, tap configurations, insulation system type, and rated temperature rise.

Edit paragraph below to suit Project. Power, signal, and control wiring are applicable to forced-cooling systems of liquid-filled and dry-type transformers and to high-temperature alarm of dry-type transformers.

- C. Shop Drawings: Diagram power **[signal]** **[and]** **[control]** wiring.

1.5 INFORMATIONAL SUBMITTALS

Retain paragraph and subparagraphs below if Drawings do not include detailed plans or if Project involves unusual coordination requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

Edit subparagraphs below to suit Project.

1. Underground **[primary]** **[secondary]** **[primary and secondary]** conduit stub-up location.
2. Dimensioned concrete base, outline of transformer, and required clearances.
3. Ground rod and grounding cable locations.
4. **<Insert details.>**

Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

Coordinate seismic requirements with DEN Project Manager.

- B. Manufacturer Seismic Qualification Certification: Submit certification that transformer assembly and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain one of first two subparagraphs below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Second definition

is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Coordinate first paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- C. Qualification Data: For testing agency.
- D. Source quality-control test reports.

Retain first paragraph below if Contractor is responsible for field quality-control testing.

- E. Field quality-control test reports.
- F. Follow-up service reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For transformer and accessories to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

If an independent testing agency is required, see Division 01 Section "Quality Requirements" for general testing and inspecting agency qualification requirements. If additional control is needed, use paragraph below to specify 29 CFR 1910.7 or other more specific criteria (e.g., NETA). 29 CFR 1910.7 defines a nationally recognized testing laboratory as it applies to testing and inspecting for safety, and lists, labels, or accepts equipment and materials that meet certain OSHA criteria.

Retain paragraph and subparagraph below if Contractor or manufacturer selects testing agency.

- A. Testing Agency Qualifications: An independent testing agency, with the experience

and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

Retain first paragraph below to allow drawing details based on one manufacturer's product to establish requirements and still allow competition. Coordinate with Division 01 requirements.

- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of transformers and are based on the specific system indicated. Refer to Section 016000 "Product Requirements."
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with IEEE C2.
- E. Comply with ANSI C57.12.10, ANSI C57.12.28, IEEE C57.12.70, and IEEE C57.12.80.
- F. Comply with NFPA 70.

1.8 DELIVERY, STORAGE, AND HANDLING

Delete this Article unless indoor-type units are specified. Verify that heating may be deleted if this Section includes dry-type transformers.

- A. Store transformers [**protected from weather and**] so condensation will not form on or in units. Provide temporary heating according to manufacturer's written instructions.
- B. Handle transformers using only lifting eyes and brackets provided for that purpose. Protect units against entrance of rain, sleet, or snow if handled in inclement weather

1.9 PROJECT CONDITIONS

- A. Service Conditions: IEEE C37.121, usual service conditions except for the following:

Select and revise conditions below to suit Project; specify features required to provide satisfactory service. See Editing Instruction No. 3 in the Evaluations for discussion of service conditions.

1. Exposure to significant solar radiation.
2. Altitude: **5,500 feet** (1677 m)
3. Ambient temperature range **-30 deg F** (-35 deg C) to **120 deg F** (49 deg C)
4. Exposure to fumes, vapors, or dust.
5. Exposure to explosive environments.

6. Exposure to hot and humid climate or to excessive moisture, including steam, salt spray, and dripping water.
7. Exposure to seismic shock or to abnormal vibration, shock, or tilting.
8. Exposure to excessively high or low temperatures.
9. Unusual transportation or storage conditions.
10. Unusual grounding-resistance conditions.
11. Unusual space limitations.

B. Power Outages:

1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.

1.10 COORDINATION

Delete first paragraph below if no transformers are floor mounted.

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate installation of louvers, doors, spill retention areas, and sumps. Coordinate installation so no piping or conduits are installed in space allocated for medium-voltage transformers except those directly associated with transformers.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products.

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 1. Acme Electric Corporation; Power Distribution Products Division.
 2. Cooper Industries; Cooper Power Systems Division.
 3. Cutler-Hammer.
 4. Federal Pacific Transformer Company; Division of Electro-Mechanical Corp.

5. GE Electrical Distribution & Control.
6. Hammond Manufacturing; Transformer Group.
7. Kuhlman Electric Corporation.
8. Pauwels Transformers.
9. Pioneer Transformers.
10. Siemens Energy & Automation, Inc.
11. Square D; Schneider Electric.
12. Uptegraff, R. E. Mfg. Co.
13. Virginia Transformer Corp.
14. Sorgel.
15. Sola/Hevi-Duty.
16. **<Insert manufacturer>**
17. or approved equal.

2.2 LIQUID-FILLED DISTRIBUTION AND POWER TRANSFORMERS

- A. Description: IEEE C57.12.00 and UL 1062, liquid-filled, 2-winding transformers.
- B. Insulating Liquid: Mineral oil, complying with ASTM D 3487, Type II, and tested according to ASTM D 117.

Delete paragraph above if less-flammable insulating liquid is required. Select one of three insulating liquids below; verify availability with selected manufacturers. Transformer primary voltage must be 35 kV or less for less-flammable liquids. See Editing Instruction No. 6 in the Evaluations for discussion of transformer liquids.

- C. Insulating Liquid: Less flammable, edible-seed-oil based, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 92. Liquid shall be biodegradable and nontoxic.
- D. Insulating Liquid: Less flammable, dielectric, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 92. Liquid shall be biodegradable and nontoxic.
- E. Insulating Liquid: Less flammable, silicone-based dielectric, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 92. Liquid shall have low toxicity and be nonhazardous.

Retain one of first two paragraphs below if appropriate temperature rise for Project is other-than-standard 55 deg C.

- F. Insulation Temperature Rise: 65/55 deg C, based on an average ambient temperature of 30 deg C over 24 hours with a maximum ambient temperature of 40 deg C. Insulation system shall be rated to continuously allow an additional 12 percent kilovolt-ampere output, at 65 deg C temperature rise, without decreasing rated transformer life.
- G. Insulation Temperature Rise: 65 deg C, based on an average ambient temperature of 30 deg C over 24 hours with a maximum ambient temperature of 40 deg C.

- H. Basic Impulse Level: Comply with UL 1062.

Retain paragraph above or first paragraph below. See Editing Instruction No. 5 in the Evaluations.

- I. Basic Impulse Level: **[60] [75] [95] [110]** kV.
- J. Full-Capacity Voltage Taps: Four nominal 2.5 percent taps, 2 above and 2 below rated primary voltage; with externally operable tap changer for de-energized use and with position indicator and padlock hasp.

Retain paragraph above or below. Above is NEMA standard.

- K. Full-Capacity Voltage Taps: Four nominal 2.5 percent taps below rated primary voltage, with externally operable tap changer for de-energized use and with position indicator and padlock hasp.

Select class from options in paragraph below. See Editing Instruction No. 4 in the Evaluations for discussion of cooling classes.

- L. Cooling System: Class **[OA, self-cooled] [OA/FA, self-cooled, and with forced-air-cooled rating] [OA/FFA, self-cooled, and with provisions for future forced-air-cooled rating]**. Cooling systems shall include auxiliary cooling equipment, automatic controls, and status indicating lights.

Delete paragraph below if transformer noise is not important. If retaining, consider listing acceptable level. See Editing Instruction No. 2 in the Evaluations for discussion of sound levels.

- M. Sound level may not exceed **[sound levels listed in NEMA TR 1] <Insert acceptable dBA level>**, without fans operating.

1. Maximum guaranteed sound levels are as follows:

KVA Rating:	Sound Level:
1-5	30dB
6-25	40 dB
26-150	42 dB
151-225	43 dB
226-300	47dB
301-500	51dB

Delete first paragraph below if manufacturer's standard impedance is adequate according to system analysis. See Evaluations for typical impedance values.

- N. Impedance: **<Insert value>** percent.
- O. Accessories: Grounding pads, lifting lugs, and provisions for jacking under base. Transformers shall have a steel base and frame allowing use of pipe rollers in any direction, and an insulated, low-voltage, neutral bushing with removable ground strap. Include the following additional accessories:

1. Liquid-level gage.

2. Pressure-vacuum gage.
3. Liquid temperature indicator.
4. Drain and filter valves.
5. Pressure relief device.

2.3 DRY-TYPE DISTRIBUTION AND POWER TRANSFORMERS

In first paragraph below, retain ANSI C57.12.50 for dry-type transformers rated up to 500 kVA, ANSI C57.12.51 for dry-type transformers rated 501 kVA and larger, or ANSI C57.12.52 for sealed dry-type transformers rated 501 kVA and larger. UL 1562 listing covers the range of 1 to 5000 kVA.

- A. Description: NEMA ST 20, IEEE C57.12.01, [**ANSI C57.12.50**] [**ANSI C57.12.51**] [**ANSI C57.12.52**], [**UL 1562 listed and labeled**], dry-type, 2-winding transformers.
1. [**Indoor, ventilated**] [**Outdoor, ventilated**] [**Totally enclosed, nonventilated**], cast coil/encapsulated coil, with primary and secondary windings individually cast in epoxy; with insulation system rated at 185 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of 40 deg C.

Retain subparagraph above or below. See Editing Instruction No. 8 in the Evaluations for discussion of cast coil/encapsulated coil and vacuum-pressure-impregnated transformer styles.

2. [**Indoor, ventilated**] [**Outdoor, ventilated**] [**Totally enclosed, nonventilated**], vacuum-pressure impregnated and with insulation system rated at 220 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of 40 deg C.
 3. All transformer windings shall be copper.
- B. Enclosure top temperature shall not exceed 35 deg C rise above 40 deg C ambient at its warmest point.
- C. Primary Connection: Air terminal compartment with [**removable**] [**hinged**] door. Tin-plated copper bar for incoming line termination, predrilled to accept terminals for indicated conductors.

Retain paragraph above or first paragraph below to suit Project.

- D. Primary Connection: Transition terminal compartment with connection pattern to match switchgear.
- E. Secondary Connection: Air terminal compartment with [**removable**] [**hinged**] door. Tin-plated copper bar for incoming line termination, predrilled to accept terminals for indicated conductors.

Retain paragraph above or first paragraph below to suit Project.

- F. Secondary Connection: Transition terminal compartment with connection pattern to match [**switchgear**] [**bus duct**] <**Insert connection pattern**>.
- G. Insulation Materials: IEEE C57.12.01, rated at 220 deg C.

- H. Insulation Temperature Rise: **[80] [115] [150]** deg C, maximum rise above 40 deg C.

See Editing Instruction No. 5 in the Evaluations for discussion of basic impulse levels.

- I. Basic Impulse Level: **[10] [60] [75] [95] [110]** kV.
- J. Full-Capacity Voltage Taps: Four nominal 2.5 percent taps, 2 above and 2 below rated primary voltage.

Select class from options in paragraph below. See Editing Instruction No. 4 in the Evaluations for discussion of cooling classes.

- K. Cooling System: Class **[AA, self-cooled] [AA/FA, self-cooled, and with forced-air-cooled rating] [AA/FFA, self-cooled, and with provisions for future forced-air-cooled rating]**, complying with IEEE C57.12.01.

If retaining first option in paragraph above, delete both subparagraphs below.

1. Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm silencing relay.

If retaining second option in paragraph above, delete subparagraph below.

2. Include mounting provision for fans.
3. Transformer cooling fans, when required shall be of the sealed bearing type.

Delete paragraph below if transformer noise is not important. If retaining, consider listing acceptable level. See Editing Instruction No. 2 in the Evaluations for discussion of sound levels.

- L. Sound level may not exceed **<Insert acceptable dBA level> [sound levels listed in NEMA TR 1]**, without fans operating.

1. Maximum guaranteed sound levels are as follows:

KVA Rating:	Sound Level:
1-5	30dB
6-25	40 dB
26-150	42 dB
151-225	43 dB
226-300	47dB
301-500	51dB

Delete paragraph below if manufacturer's standard impedance is adequate according to system analysis. See Evaluations for typical impedance values.

- M. Impedance: **<Insert value>** percent.

If retaining paragraph below, coordinate with Drawings and provide external power and signal connections.

- N. High-Temperature Alarm: Sensor at transformer with local audible and visual alarm and contacts for remote alarm.

- O. Ground core and coil assembly to enclosure by means of a visible flexible copper-grounding strap.
- P. Mounting: Transformers 30 KVA and larger shall be, floor mounted; Transformers less than 30 KVA shall be designed for either floor or wall mount.
- Q. Isolate transformer-winding assemblies from enclosure using vibration-absorbing mounts.

2.4 DRY TYPE TRANSFORMERS FOR NON-LINEAR LOAD

- A. In addition to the requirements of paragraph 2.02, transformers for non-linear loads shall be three phase, 60 Hertz, with delta connected primary and wye connected secondary windings.
- B. Copper electrostatic shielding shall be inserted between the primary and secondary windings.
- C. The primary winding conductors shall be of sufficient size to limit the temperature rise to its rated value even with the circulating third harmonic current.
- D. The secondary neutral shall be twice the ampacity of the secondary phase conductors.

2.5 PAD-MOUNTED, LIQUID-FILLED TRANSFORMERS

In first paragraph below, retain ANSI C57.12.26 for pad-mounted transformers with dead-front, separable, insulated, high-voltage, load-break cable connectors or IEEE C57.12.22 for pad-mounted transformers with live-front high-voltage bushings.

- A. Description: ANSI C57.12.13, [**ANSI C57.12.26,**]IEEE C57.12.00,[**IEEE C57.12.22,**] pad-mounted, 2-winding transformers. Stainless-steel tank base [**and cabinet**] [, **cabinet, and sills**].
- B. Insulating Liquid: Mineral oil, complying with ASTM D 3487, Type II, and tested according to ASTM D 117.

Delete paragraph above if less-flammable insulating liquid is required. Select one of three insulating liquids below; verify availability with selected manufacturers. Transformer primary voltage must be 35 kV or less for less-flammable liquids. See Editing Instruction No. 6 in the Evaluations for discussion of transformer liquids.

- C. Insulating Liquid: Less flammable, edible-seed-oil based, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 92. Liquid shall be biodegradable and nontoxic.
- D. Insulating Liquid: Less flammable, dielectric, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 92. Liquid shall be biodegradable and nontoxic.

- E. Insulating Liquid: Less flammable, silicone-based dielectric, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 92. Liquid shall have low toxicity and be nonhazardous.

Retain paragraph below if appropriate temperature rise for Project is other-than-standard 55 deg C.

- F. Insulation Temperature Rise: [55] [65] deg C when operated at rated kVA output in a 40 deg C ambient temperature. Transformer shall be rated to operate at rated kilovolt ampere in an average ambient temperature of 30 deg C over 24 hours with a maximum ambient temperature of 40 deg C without loss of service life expectancy.

If transformers have standard basic impulse level, retain paragraph below. If basic impulse level is other than standard, revise below or delete and note basic impulse level in schedule. See Editing Instruction No. 5 in the Evaluations.

- G. Basic Impulse Level: [30] [60] [95] kV.

Revise paragraph below if other-than-NEMA-standard taps are required. Coordinate with schedule.

- H. Full-Capacity Voltage Taps: Four 2.5 percent taps, 2 above and 2 below rated high voltage; with externally operable tap changer for de-energized use and with position indicator and padlock hasp.

Select one of first two paragraphs below to suit transformer's high-voltage terminal arrangement. Coordinate switch rating with transformer rating, system fault currents, and basic impulse level for associated equipment.

- I. High-Voltage Switch: [200] [300] [400] A, make-and-latch rating of 10-kA RMS, symmetrical, arranged for radial feed with 3-phase, 2-position, gang-operated, load-break switch that is oil immersed in transformer tank with hook-stick operating handle in primary compartment.

Loop-feed arrangement below may be used for radial feed to provide an extra set of terminals for dead-front, insulated, load-break, connector-type surge arresters.

- J. High-Voltage Switch: [200] [300] [400] A, make-and-latch rating of 10-kA RMS, symmetrical, arranged for loop feed with 3-phase, 4-position, gang-operated, load-break switch that is oil immersed in transformer tank with hook-stick operating handle in primary compartment.

Delete paragraph and subparagraphs below if primary fuse is specified in Division 26 Section "Low-Voltage Overhead Electrical Power Systems." Select a primary fusing arrangement acceptable to organization that changes blown fuses and maintains the system. Coordinate fuse rating with transformer rating, system fault currents, and other protective devices; show characteristics on Drawings.

- K. Primary Fuses: 150-kV fuse assembly with fuses complying with IEEE C37.47. [**Rating of current-limiting fuses shall be 50-kA RMS at specified system voltage.**]
1. Current-limiting type in dry-fuse holder wells, mechanically interlocked with liquid-immersed switch in transformer tank to prevent disconnect under load.
 2. Internal liquid-immersed cartridge fuses.
 3. Bay-O-Net liquid-immersed fuses that are externally replaceable without opening

- transformer tank.
4. Bay-O-Net liquid-immersed fuses in series with liquid-immersed current-limiting fuses. Bay-O-Net fuses shall be externally replaceable without opening transformer tank.
 5. Bay-O-Net liquid-immersed current-limiting fuses that are externally replaceable without opening transformer tank.

Delete paragraph below if dead-front arrangement is selected. Select and specify arrester rating to suit primary system parameters. See Editing Instruction No. 7 in the Evaluations for discussion on applying surge arresters.

- L. Surge Arresters: Distribution class, one for each primary phase; complying with IEEE C62.11 and NEMA LA 1; support from tank wall within high-voltage compartment. Transformers shall have **[three arresters for radial-feed] [three arresters for loop-feed] [six arresters for loop-feed]** circuits.

Select from first two paragraphs below.

- M. High-Voltage Terminations and Equipment: Live front with externally clamped porcelain bushings and cable connectors suitable for terminating primary cable.

For dead-front arrangement in paragraph below, specify insulated, high-voltage, load-break cable connectors in Division 26 Section "Medium-Voltage Cables."

- N. High-Voltage Terminations and Equipment: Dead front with universal-type bushing wells for dead-front bushing-well inserts, complying with IEEE 386 and including the following:
1. Bushing-Well Inserts: One for each high-voltage bushing well.

Delete items below if not applicable.

2. Surge Arresters: Dead-front, elbow-type, metal-oxide-varistor units.
3. Parking Stands: One for each high-voltage bushing well.
4. Portable Insulated Bushings: Arranged for parking insulated, high-voltage, load-break cable terminators; one for each primary feeder conductor terminating at transformer.

- O. Accessories:

Delete items below if not required. Coordinate with Drawings.

1. Drain Valve: 1 inch (25 mm), with sampling device.
2. Dial-type thermometer.
3. Liquid-level gage.
4. Pressure-vacuum gage.
5. Pressure Relief Device: Self-sealing with an indicator.
6. Mounting provisions for low-voltage current transformers.
7. Mounting provisions for low-voltage potential transformers.

If retaining either item below, provide detailed requirements here or on Drawings.

8. Busway terminal connection at low-voltage compartment.

9. Alarm contacts for gages and thermometer listed above.

2.6 IDENTIFICATION DEVICES

Coordinate this Article with Drawings.

- A. Nameplates: Engraved, laminated-plastic or metal nameplate for each transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 260553 "Identification for Electrical Systems."
 1. Include transformer connection data and overload capacity based on rated allowable temperature rise.

2.7 SOURCE QUALITY CONTROL

In first paragraph below, ANSI C57.12.50 applies to ventilated dry-type distribution transformers 1 to 500 kVA, single phase, and 15 to 500 kVA, 3 phase, with high voltage 601 to 34,500 V and low voltage 208Y/120 to 4160 V. ANSI C57.12.51 applies to ventilated dry-type power transformers 501 kVA and larger, 3 phase, with high voltage 601 to 34,500 V and low voltage 208Y/120 to 4160 V. IEEE C57.12.90 applies to liquid-filled transformers. IEEE C57.12.91 applies to dry-type distribution and power transformers.

- A. Factory Tests: Perform design and routine tests according to standards specified for components. Conduct transformer tests according to **[ANSI C57.12.50] [ANSI C57.12.51] [IEEE C57.12.90] [IEEE C57.12.91]**.
- B. Factory Tests: Perform the following factory-certified tests on each transformer:
 1. Resistance measurements of all windings on rated-voltage connection and on tap extreme connections.
 2. Ratios on rated-voltage connection and on tap extreme connections.
 3. Polarity and phase relation on rated-voltage connection.
 4. No-load loss at rated voltage on rated-voltage connection.
 5. Excitation current at rated voltage on rated-voltage connection.
 6. Impedance and load loss at rated current on rated-voltage connection and on tap extreme connections.
 7. Applied potential.
 8. Induced potential.

Temperature test below is optional; revise to suit Project. If Project includes more than one transformer of a given kilovolt-ampere rating, consider testing one unit only.

9. Temperature Test: If transformer is supplied with auxiliary cooling equipment to provide more than one rating, test at lowest kilovolt-ampere Class OA or Class AA rating and highest kilovolt-ampere Class OA/FA or Class AA/FA rating.
 - a. Temperature test is not required if record of temperature test on an essentially duplicate unit is available.

Delete subparagraph below if Owner does not want to witness tests.

10. Owner will witness all required factory tests. Notify DEN Project Manager at least fourteen (14) days before date of tests and indicate their approximate duration.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for medium-voltage transformers.
- B. Examine roughing-in of conduits and grounding systems to verify the following:
 1. Wiring entries comply with layout requirements.
 2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

Adjust 5-ohm value in first paragraph below to suit Project.

- D. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Transformers 30 KVA and larger shall be floor mounted. Transformers less than 30KVA shall be floor or wall mounted.
- B. Install transformers on concrete bases.

If appropriate, retain subparagraph below for projects in areas of seismic activity.

1. Anchor transformers to concrete bases according to manufacturer's written instructions, seismic codes at Project, and requirements in Section 260529 "Hangers and Supports for Electrical Systems."
2. Set transformer plumb and level.

Edit subparagraphs below to suit Project. Consider indoor and outdoor transformer locations and seismic requirements, if any.

3. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit and 4 inches (100 mm) high.
4. Use [3000-psi (20.7-MPa)] <Insert other>, 28-day compressive-strength concrete and reinforcement as specified in Section[s] [033000 "Cast-in-Place Concrete"]

[033053 "Miscellaneous Cast-in-Place Concrete"].

5. Install dowel rods to connect concrete bases to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
 6. Install epoxy-coated anchor bolts, for supported equipment, that extend through concrete base and anchor into structural concrete floor.
 7. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 8. Tack-weld or bolt transformers to channel-iron sills embedded in concrete bases. Install sills level and grout flush with floor or base.
- C. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.
- D. Use flexible conduit, 3 feet maximum length, for connections to transformer case. Make conduit connections to side panel of enclosure.
- E. Mount transformers on vibration isolating pads suitable for isolating the transformer noise from the building structure.
- F. Use a copper busbar bolted to the transformer case to bond XO, Primary feeder grounding conductor, secondary grounding conductor, and grounding electrode conductor with copper conductor sized according to table 250-66 in the NEC.

3.3 IDENTIFICATION

- A. Identify field-installed wiring and components and provide warning signs as specified in Section 260553 "Identification for Electrical Systems."

3.4 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

Retain paragraph below to require a factory-authorized service representative to perform, or assist Contractor with, field inspections, tests, and adjustments. Retain one of two options to suit Project; delete both to require only an inspection before field testing.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect[, **test, and adjust**] field-assembled components and equipment installation,

including connections[, **and to assist in field testing**]. Report results in writing.

B. Perform the following field tests and inspections and prepare test reports:

Edit to suit Project. Delete subparagraphs if testing will be performed by Owner-engaged testing and inspecting agency.

1. After installing transformers but before primary is energized, verify that grounding system at substation is tested at specified value or less.
2. Check for damage and tighten connections prior to energizing transformer. Submit torque values and check list to the DEN Project Manager. .
3. After installing transformers and after electrical circuitry has been energized, test for compliance with requirements.
4. Perform visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
6. Remove and replace malfunctioning units and retest as specified above.

C. Test Reports: Prepare written reports to record the following:

1. Test procedures used.
2. Test results that comply with requirements.
3. Test results that do not comply with requirements and corrective actions taken to achieve compliance with requirements.

3.6 FOLLOW-UP SERVICE

A. Voltage Monitoring and Adjusting: If requested by Owner, perform the following voltage monitoring after Substantial Completion but not more than six (6) months after Final Acceptance:

1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at secondary terminals of each transformer. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with a chart speed of not less than 1 inch (25 mm) per hour. Voltage unbalance greater than 1 percent between phases, or deviation of any phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Actions: If test results are unacceptable, perform the following corrective actions, as appropriate:
 - a. Adjust transformer taps.
 - b. Prepare written request for voltage adjustment by electric utility.
3. Retests: After corrective actions have been performed, repeat monitoring until satisfactory results are obtained.
4. Report: Prepare written report covering monitoring and corrective actions performed.

- B. Infrared Scanning: Perform as specified in Section 261300 "Medium-Voltage Switchgear."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 261200

Copyright 2010 by The American Institute of Architects (AIA)

SECTION 261300 - MEDIUM-VOLTAGE SWITCHGEAR

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES ARE TO BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes metal-clad, circuit-breaker switchgear with the following optional components, features, and accessories:

Edit to suit Project.

1. **[Copper, silver-plated main bus at connection points] [Copper, tin-plated main bus].**
2. Communication modules.
3. Provisions for future devices.
4. Control battery system.
5. Mimic bus.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain abbreviations that remain after this Section has been edited.

- A. ATS: Acceptance Testing Specifications.

B. GFCI: Ground-Fault Circuit Interrupter.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

A. Product Data: For each type of switchgear and related equipment, include the following:

1. Rated capacities, operating characteristics, furnished specialties, and accessories for individual circuit breakers.
2. Time-current characteristic curves for overcurrent protective devices, including circuit-breaker relay trip devices.
3. Include data substantiating that materials comply with requirements.

B. Shop Drawings: For each type of switchgear and related equipment, include the following:

1. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show method of field assembly and location and size of each field connection. Include the following:
 - a. Tabulation of installed devices with features and ratings.
 - b. Outline and general arrangement drawing showing dimensions, shipping sections, and weights of each assembled section.
 - c. Drawing of cable termination compartments showing preferred locations for conduits and indicating space available for cable terminations.
 - d. Floor plan drawing showing locations for anchor bolts [**and leveling channels**].
 - e. Current ratings of buses.
 - f. Short-time and short-circuit ratings of switchgear assembly.
 - g. Nameplate legends.
 - h. Mimic-bus diagram.

Retain subparagraph below if required.

- i. Utility company's metering provisions with indication of approval by utility company.

Retain first subparagraph below if products are required to withstand specific design loads and DEN Project Manager either has delegated design responsibility to Contractor or wants to review structural data as another way to verify products' compliance with performance requirements. Professional engineer qualifications are specified in Section 014000 "Quality Requirements."

2. Design Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting seismic restraints.
3. Wiring Diagrams: For each type of switchgear and related equipment, include the following:
 - a. Power, signal, and control wiring.

- b. Three-line diagrams of current and future secondary circuits showing device terminal numbers and internal diagrams.
- c. Schematic control diagrams.
- d. Diagrams showing connections of component devices and equipment.
- e. Schematic diagrams showing connections to remote devices[including SCADA remote terminal unit].

Retain first paragraph below if Drawings do not include detailed plans or if Project involves unusual coordination requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- C. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around switchgear where piping and ducts are prohibited. Show switchgear layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Identify field measurements.

Delete sample requirement in paragraph below if project is of very limited scope, and deletion is approved by DEN Project Manager.

Coordinate sample requirements with DEN Project Manager.

- D. Samples: Representative portion of mimic bus with specified finish. Manufacturer's color charts showing colors available for mimic bus.

Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems."

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For installer and product manufacturers.
- B. Source quality-control test reports.

Retain first paragraph below if Contractor is responsible for field quality-control testing.

- C. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For switchgear and switchgear components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - 1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.

2. Time-current curves, including selectable ranges for each type of overcurrent protective device.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

A. Factory Testing and Witness Testing:

1. Furnish all test equipment and personnel, and perform all tests as may be required and as specified herein.
2. The manufacturer shall perform all tests normally conducted in accordance with the manufacturer's standard test procedures for all substations. In addition, the manufacturer shall perform all supplementary testing as defined throughout this specification for all substations. All normal and supplemental testing, which is not witnessed by the DEN Project Manager, shall be documented in certified test reports and shall be submitted to the DEN Project Manager for review within two weeks of the performance of the testing.
3. The following tests shall be performed at the factory and shall be witnessed by the Engineer of Record and DEN Project Manager, or their duly authorized representative:
 - a. A complete visual inspection of the equipment, both internally and externally.
 - b. A complete test of all automatic transfer schemes including all operation and failure modes.
 - c. A complete test of all control panels and controls including dry contact outputs.
 - d. Verification of proper operation of all metering.
 - e. Verify mechanical operation; interlocks and interchangeability of selected breakers.
4. The testing outlined in item "A" above shall be performed only on one main switchgear. In order to perform such testing, all breakers shall be shipped to the switchboard factory and installed in their respective cubicles in a completely assembled Distribution Section
5. Test 208 volt and /or 480 volt, 3-phase power sources shall be connected to the incoming side of each secondary main such that the sources may be individually applied and removed to completely simulate and test all features of the distribution sections.
6. Submit to the DEN Project Manager ninety (90) calendar days prior to scheduled testing all test procedures for approval, and notify the DEN Project Manager four (4) weeks prior to scheduled testing what the expected duration of the tests will be.
7. Provide four (4) copies of the factory test report within two (2) weeks of the

completion of such witness tests.

If an independent testing agency is required, see Section 014000 "Quality Requirements" for general testing and inspecting agency qualification requirements. If additional control is needed, use one of first two paragraphs below to specify 29 CFR 1910.7 or other more specific criteria (e.g., NETA). 29 CFR 1910.7 defines a nationally recognized testing laboratory as it applies to testing and inspecting for safety, and lists, labels, or accepts equipment and materials that meet certain OSHA criteria.

Retain first paragraph and subparagraph below if Contractor selects testing agency.

- B. Source Limitations: Obtain each type of switchgear and associated components through one source from a single manufacturer.

Retain first paragraph below to allow drawing details based on one manufacturer's product to establish requirements and still allow competition. Coordinate with Section 016000 "Product Requirements."

- C. Product Options: Drawings indicate size, profiles, and dimensional requirements of switchgear and are based on the specific system indicated. Refer to Section 016000 "Product Requirements."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with IEEE C2.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver in sections of lengths that can be moved past obstructions in delivery path as indicated.

Retain one of two paragraphs below and edit to suit Project.

- B. Store switchgear indoors in clean dry space with uniform temperature to prevent condensation. Protect switchgear from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- C. If stored in areas subjected to weather, cover switchgear to provide protection from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside switchgear; install electric heating (250 W per section) to prevent condensation.
- D. Handle in accordance with manufacturer's written instructions. Lift only with lugs provided for the purpose. Handle carefully to avoid damage to switchgear internal components, enclosure, and finish.

1.9 PROJECT CONDITIONS

Medium-voltage switchgear assemblies are designed for application at rated continuous load current where altitude above sea level does not exceed 3300 feet (1005 m), ambient air temperature does not

exceed 40 deg C, and effects of solar radiation can be neglected. Edit paragraph and subparagraphs below for Project conditions exceeding these parameters.

- A. Environmental Limitations: Rate equipment for continuous operation at indicated ampere ratings for the following conditions:
1. Ambient temperature range: -30 deg F (-35 deg C) to 120 deg F (49 deg C)
 2. Altitude: 5500 feet (1677 m) above sea level.
 3. Excessive solar radiation.
 4. **<Insert unusual service conditions.>**

Revise paragraph below to describe specific requirements for moving switchgear into place. Where appropriate, indicate alterations to existing facilities that may be required to accommodate an indicated delivery path. Coordinate with Drawings.

- B. Installation Pathway: Remove and replace building components and structures to provide pathway for moving switchgear into place.

Retain paragraph below if installation space for switchgear is limited; show maximum dimensions on Drawings.

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchgear, including clearances between switchgear and adjacent surfaces and other items. Comply with indicated maximum dimensions.

Retain paragraph and subparagraphs below if interruption of existing utility service is required.

- D. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 2. Do not proceed with interruption of electrical service without DEN Project Manager's written permission.

1.10 COORDINATION

Edit first paragraph below to delete or add types of construction that penetrate or are supported by ceilings.

- A. Coordinate layout and installation of switchgear and components with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels.
- B. Coordinate size and location of concrete bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.11 EXTRA MATERIALS

Extra materials may not be allowed for publicly funded projects.

Coordinate extra stock requirements with DEN Project Manager.

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fuses: **[Six (6)]** <Insert number> of each type and rating used. Include spares for future transformers, control power circuits, and fusible devices.
 - 2. Indicating Lights: **[Six (6)]** <Insert number> of each type installed.
 - 3. Touchup Paint: **[Three (3)]** <Insert number> containers of paint matching enclosure finish, each **0.5 pint** (250 mL).
- B. Maintenance Tools: Furnish tools and miscellaneous items required for interrupter switchgear test, inspection, maintenance, and operation. Include the following:
 - 1. Fuse-handling tool.
 - 2. Extension rails, lifting device, transport or dockable dolly or mobile lift, and all other items necessary to remove circuit breaker from housing and transport to remote location.
 - 3. Racking handle to move circuit breaker manually between connected and disconnected positions, and a secondary test coupler to permit testing of circuit breaker without removal from switchgear.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products.

Edit this Article with other Part 2 articles in which manufacturers are named. See Section 016000 "Product Requirements" for an explanation of the terms "Available Manufacturers" and "Manufacturers" and the effect these terms have on "Comparable Product" and "Product Substitution" requirements.

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
 - a. **<Insert manufacturer>**
 - b. or approved equal.

2.2 MANUFACTURED UNITS

- A. Description: Factory assembled and tested, and complying with IEEE C37.20.1.

Revise first paragraph below to suit system in which switchgear will be installed.

- B. Ratings: Suitable for application in 3-phase, 60-Hz, solidly grounded-neutral system.
- C. System Voltage: **[4.16 kV nominal; 4.76 kV maximum] [7.2 kV nominal; 15 kV maximum] [13.8 kV nominal; 15 kV maximum] [34.5 kV nominal; 38 kV maximum] <Insert other voltage>**.

Coordinate paragraph and list below with Part 2 "Manufacturers" Article. Retain "Available" for nonproprietary and delete for semiproprietary specifications.

Retain first paragraph below for conventional switchgear; retain first two paragraphs for arc-resistant switchgear. See Evaluations for description of each switchgear type. Verify availability with manufacturers.

Delete subparagraph below if ampere rating is shown on Drawings.

Specify fuses in paragraph below and indicate both available-source fault current and required fuse interrupting ratings on Drawings.

Retain one of two subparagraphs below.

2.3 METAL-CLAD, CIRCUIT-BREAKER SWITCHGEAR

Coordinate paragraph and list below with Part 2 "Manufacturers" Article. Retain "Available" for nonproprietary and delete for semiproprietary specifications.

- A. Subject to compliance with requirements, provide products by one of the following:
 1. ABB Control, Inc.
 2. Eaton Corporation; Cutler-Hammer Products.
 3. General Electric Distribution & Control.
 4. Siemens Energy & Automation, Inc.
 5. Square D; Schneider Electric.
 6. **<Insert manufacturer>**
 7. or approved equal.

Retain first paragraph below for conventional switchgear; retain first two paragraphs for arc-resistant switchgear. See Evaluations for description of each switchgear type. Verify availability with manufacturers.

- B. Comply with IEEE C37.20.3.
- C. Comply with IEEE C37.20.7. Provide arc-resistant switchgear, Type [1] [2] [1C] [2C].
- D. Nominal Interrupting-Capacity Class: [250] [350] [500] [750] [1000] MVA.
- E. Ratings: Comply with IEEE C37.04.

Delete subparagraph below if ampere rating is shown on Drawings.

- F. Circuit Breakers: Three-pole, single-throw, electrically operated, drawout-mounting units using three individual, [vacuum-sealed] [sulfur hexafluoride insulated and sealed] interrupter modules and including the following features:

Retain subparagraph below if sulfur hexafluoride circuit breakers are used.

Retain and revise first three subparagraphs below to suit Project.

- 1. Operating Mechanism: Electrically charged, mechanically and electrically trip-free, stored-energy operated.
 - a. Design mechanism to permit manual charging and slow closing of contacts for inspection or adjustment.

Retain one of first two subparagraphs below and select from control power options. See Evaluations for discussion.

- 1) Control Power: [48] [125] <Insert voltage>-V dc for closing and tripping.

Retain remaining paragraphs and subparagraphs if required to suit Project.

- G. Test Accessories: Relay and meter test plugs.

Coordinate paragraph below with Drawings.

- H. Low-DC-Voltage Alarm: Switchgear shall have a monitor for dc control power voltage with a remote alarm located where indicated. Alarm shall sound if voltage falls to an adjustable value to indicate an impending battery failure. Factory set alarm value at 80 percent of full-charge voltage.

Retain paragraph and subparagraphs below if required by serving utility company or by medium-voltage maintenance and testing agency serving Project facility. Utility requirements below are examples only; revise to suit Project.

- I. Grounding and Testing Device: Suitable for phasing out, testing, and grounding switchgear bus or feeder if device is installed in place of circuit breaker. Include the following:
 - 1. Portable Grounding and Testing Device: Interchangeable with drawout-mounting, medium-voltage circuit breakers to provide interlocked electrical access to either bus or feeder; electrically operated.

2. System control cabinet permanently mounted near switchgear.
3. Portable Remote-Control Station: For grounding and testing device.
4. Control-Cabinet Coupler Cable: Of adequate length to connect device inserted in any switchgear cubicle and control cabinet.
5. Remote-Control Coupler Cable: **50 feet** (15 m) long to connect control cabinet and portable remote-control station.
6. Permanent Control Power Wiring: From control cabinet to power source.
7. Protective Cover: Fabricated of heavy-duty plastic and fitted to device.
8. Approval of Grounding and Testing Device System: Obtain approval of final system design from utility company and agency designated by Owner to handle future maintenance of medium-voltage switchgear.

Coordinate first paragraph below with Drawings.

- J. Circuit-Breaker Test Cabinet: Separately mounted and containing push buttons for circuit-breaker closing and tripping, control relay, fuses, and secondary coupler with cable approximately **108 inches** (2740 mm) long. Include a set of secondary devices for operating circuit breaker if removed from switchgear and moved near test cabinet. Include provision for storage of test and maintenance accessories in cabinet.
- K. Remote-Tripping Device: Wall-mounting emergency control station to open circuit breakers; located in red cast-metal box with break-glass operation.

2.4 FABRICATION

- A. Indoor Enclosure: Steel.

Retain paragraph above or first paragraph and subparagraphs below, or both; edit to suit Project. Consider local experience and practice, especially for outdoor switchgear.

- B. Outdoor Enclosure: Galvanized steel, weatherproof construction; integral structural-steel base frame with factory-applied asphaltic undercoating.
 1. Each compartment shall have the following features:
 - a. Structural design and anchorage adequate to resist loads imposed by **[125-mph (200-km/h)] <Insert wind speed>** wind.
 - b. Space heater operating at one-half or less of rated voltage, sized to prevent condensation.
 - c. Louvers equipped with insect and rodent screen and filter, and arranged to permit air circulation while excluding rodents and exterior dust.

Delete first three subparagraphs below if weatherproof internal aisle construction is retained.

- d. Power for heaters, lights, and receptacles to be provided **[by control power transformer] [as indicated]**.

Retain subparagraph and associated subparagraphs below for weatherproof internal aisle construction.

2. Weatherproof internal aisle construction shall have the following features:

- a. Common internal aisle of sufficient width to permit protective-device withdrawal, disassembly, and servicing in aisle.
- b. Aisle access doors at each end with exterior locking provisions and interior panic latches.
- c. Aisle space heaters operating at one-half or less of rated voltage, thermostatically controlled.
- d. Vaporproof fluorescent aisle lights with low-temperature ballasts, controlled by wall switch at each entrance.
- e. GFCI duplex receptacles, a minimum of two, located in aisle.

Revise subparagraph below if forced rather than natural ventilation is required.

- f. Aisle ventilation louvers equipped with insect and rodent screen and filter, and arranged to permit air circulation while excluding rodents and exterior dust.

- C. Finish: Manufacturer's standard gray finish over rust-inhibiting primer on phosphatizing-treated metal surfaces.
- D. Bus Transition Unit: Arranged to suit bus and adjacent units.
- E. Incoming-Line Unit: Arranged to suit incoming line.
- F. Outgoing Feeder Units: Arranged to suit distribution feeders.
- G. Auxiliary Compartments: Arranged to suit house meters, relays, controls, and auxiliary equipment; isolated from medium-voltage components.
- H. Key Interlocks: Arranged to effect interlocking schemes indicated.
- I. Provisions for Future Key Interlocks: Mountings and hardware required for future installation of locks, where indicated.

2.5 COMPONENTS

- A. Main Bus: **[Copper, silver plated at connection points] [Copper, tin plated]**; full length of switchgear.
- B. Ground Bus: Copper, silver plated or copper, tin plated; minimum size **1/4 by 2 inches** (6 by 50 mm); full length of switchgear.
- C. Bus Insulation: Covered with flame-retardant insulation.
- D. Instrument Transformers: Comply with IEEE C57.13.
 1. Potential Transformers: Secondary voltage rating of 120 V and NEMA accuracy class of 0.3 with burdens of W, X, and Y.

Coordinate subparagraph below with Drawings.

2. Current Transformers: Burden and accuracy class suitable for connected relays, meters, and instruments.

Delete paragraph and subparagraphs below if conventional analog-meter installation is required.

- E. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems, listed and labeled by an NRTL, and with the following features:
1. Inputs from sensors or 5-A current-transformer secondaries, and potential terminals rated to 600 V.
 2. Switch-selectable digital display with the following features:
 - a. Phase Currents, Each Phase: Plus or minus 1 percent.
 - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d. Three-Phase Real Power: Plus or minus 2 percent.
 - e. Three-Phase Reactive Power: Plus or minus 2 percent.
 - f. Power Factor: Plus or minus 2 percent.
 - g. Frequency: Plus or minus 0.5 percent.
 - h. Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.

Retain subparagraph below if required.

- i. Accumulated energy, in megawatt hours (joules), plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

Coordinate first subparagraph below with Section 260913 "Electrical Power Monitoring and Control" or with other remote monitoring system.

3. Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering requirements according to Section 260913 "Electrical Power Monitoring and Control."
4. Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.

Delete paragraph and subparagraphs below if multifunction digital-metering monitor above is specified.

Delete option in first subparagraph below for three-wire systems.

Revise demand interval and other characteristics in two subparagraphs and associated subparagraphs below to suit Project.

Delete paragraph below unless relays that are not integral with circuit breakers or circuit-breaker trip units are required. Specify relay functions and characteristics below or indicate on Drawings.

Retain paragraph and subparagraphs below if system analysis shows arresters are required at switchgear. Show ratings of arresters on Drawings.

Retain paragraph below if required. Coordinate with Drawings.

- F. Provision for Future Devices: Equip compartments with rails, mounting brackets, supports, necessary appurtenances, and bus connections.

Retain first paragraph below for installation in tropical environments.

G. Control Power Supply: DC battery system.

Retain paragraph above or first paragraph and subparagraphs below. If retaining above, retain "Control Battery System" Article.

Retain subparagraph below for electrically interlocked main and tie circuit breakers.

Retain one of first two subparagraphs below.

H. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:

1. Flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.
2. Conductors sized according to NFPA 70 for duty required.

2.6 CONTROL BATTERY SYSTEM

Retain this Article if dc control power source is required. Revise if battery other than lead-calcium type below is specified.

Coordinate first paragraph below with Drawings or, preferably, revise to specify number of cells and required minimum ampere-hour capacity of battery.

- A. System Requirements: Battery shall have number of cells and ampere-hour capacity based on an initial specific gravity of 1.210 at 25 deg C with electrolyte at normal level and minimum ambient temperature of 13 deg C. Cycle battery before shipment to guarantee rated capacity on installation. Arrange battery to operate ungrounded.
- B. Battery: Lead-calcium type in sealed, clear plastic or glass containers, complete with electrolyte, fully charged and arranged for shipment with electrolyte in cells. Limit weight of each container to not more than **70 lb** (32 kg) and cells per container to not more than 3. System batteries shall be suitable for service at an ambient temperature ranging from minus 18 to 25 deg C. Limit variation of current output to 0.8 percent for each degree below 25 deg C down to minus 8 deg C.

Coordinate first two paragraphs and associated subparagraphs below with Drawings.

- C. Rack: Two-step rack with electrical connections between battery cells and between rows of cells; include two flexible connectors with bolted-type terminals for output leads. Rate battery rack, cell supports, and anchorage for seismic requirements.
- D. Accessories:
1. Thermometers with specific-gravity correction scales.
 2. Hydrometer syringes.
 3. Set of socket wrenches and other tools required for battery maintenance.
 4. Wall-mounting, nonmetallic storage rack fitted to store above items.
 5. Set of cell numerals.

- E. Charger: Static-type silicon rectifier equipped with automatic regulation and provision for manual and automatic adjustment of charging rate. Unit shall automatically maintain output voltage within 0.5 percent from no load to rated charger output current, with ac input-voltage variation of plus or minus 10 percent and input-frequency variation of plus or minus 3 Hz. Other features of charger include the following:
1. DC ammeter.
 2. DC Voltmeter: Maximum error of 5 percent at full-charge voltage; operates with toggle switch to select between battery and charger voltages.
 3. Ground Indication: Two appropriately labeled lights to indicate circuit ground, connected in series between negative and positive terminals, with midpoint junction connected to ground by normally open push-button contact.
 4. Capacity: Sufficient to supply steady load, float-charge battery between 2.20 and 2.25 V per cell and equalizing charge at 2.33 V per cell.
 5. Charging-Rate Switch: Manually operated switch provides for transferring to higher charging rate. Charger operates automatically after switch operation until manually reset.
 6. AC power supply is 120 V, 60 Hz, subject to plus or minus 10 percent variation in voltage and plus or minus 3-Hz variation in frequency. After loss of ac power supply for any interval, charger automatically resumes charging battery. Charger regulates rate of charge to prevent damage due to overload and to prevent fuses or circuit breakers from opening.
 7. Protective Feature: Current-limiting device or circuit, which limits output current to rating of charger but does not disconnect charger from either battery or ac supply; to protect charger from damage due to overload, including short circuit on output terminals.
 8. Electrical Filtering: Reduces charger's audible noise to less than 26 dB.

2.7 IDENTIFICATION

- A. Materials: Refer to Section 260553 "Identification for Electrical Systems." Identify units, devices, controls, and wiring.
- B. Nameplates shall give item designation and circuit number as well as frame ampere size and appropriate trip rating. Furnish Master nameplate giving switchgear designation, voltage ampere rating, short circuit rating, manufacturer's name, general order number and item number.

Retain paragraph and subparagraphs below if required.

- C. Mimic Bus: Continuous mimic bus applied to front of switchgear, arranged in single-line diagram format, using symbols and lettered designations consistent with approved final mimic-bus diagram.
1. Mimic-bus segments coordinated with devices in switchgear sections to which applied, to produce a concise visual presentation of principal switchgear components and connections.
 2. Medium: Painted graphics, as approved.

3. Color: Contrasting with factory-finish background; selected by DEN Project Manager.

2.8 SOURCE QUALITY CONTROL

Add a paragraph to this Article if factory testing is to be witnessed by Owner's representative or others. Indicate which portions of testing are to be witnessed.

- A. Before shipment of equipment, perform the following tests and prepare test reports:
 1. Production tests on circuit breakers according to ANSI C37.09.
 2. Production tests on completed switchgear assembly according to IEEE C37.20.2.
- B. Assemble switchgear and equipment in manufacturer's plant and perform the following:
 1. Functional tests of all relays, instruments, meters, and control devices by application of secondary three-phase voltage to voltage circuits and injection of current in current transformer secondary circuits.
 2. Functional test of all control and trip circuits. Connect test devices into circuits to simulate operation of controlled remote equipment such as circuit-breaker trip coils, close coils, and auxiliary contacts. Test proper operation of relay targets.
- C. Prepare equipment for shipment.
 1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.

2.9 FACTORY FINISHES

- A. Finish: Manufacturer's standard color finish applied to equipment before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces to receive switchgear for compliance with requirements for installation tolerances, required clearances, and other conditions affecting performance.
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 AUTOMATIC THROWOVER CONTROL SCHEME

A. Sequence of Operation:

1. If Service #1 is selected as the preferred service, Breaker 52M1 will be closed and Breaker 52M2 will be open. Switchboard will be supported by Service #1.
2. If Service #2 is selected as the preferred service, Breaker 52M2 will be closed and Breaker 52M1 will be open. Switchboard will be supported by Service #2.
3. If Service #1 is selected as the preferred service, and Service #1 fails with Service #2 available and Breaker 52M1 not tripped due to a fault (bell alarm lockout) proceed as follows:
 - a. After an adjustable time delay (1.5 - 15 seconds) trip Breaker 52M1.
 - b. Once Breaker 52M1 is open, close Breaker 52M2. Note that this is an open transition transfer with no paralleling.
 - c. Continue to operate entire switchboard on Service #2.
4. If Service #1 is selected as the preferred service, Step "3" has occurred, and Service #1 returns to service, proceed as follows:
 - a. Initiate an adjustable time delay (6 - 60 minutes).
 - b. Upon expiration of the time delay trip Breaker 52M2.
 - c. After an adjustable time delay (.2-60 seconds) close Breaker 52M1.
 - d. System is restored to normal.
5. Service #2 is selected as the preferred service, and Service #2 fails with Service #1 available and Breaker 52M2 not tripped due to a fault (bell alarm lockout), proceed as follows:
 - a. After an adjustable time delay (1.5 - 15 seconds) trip Breaker 52M2.
 - b. Once Breaker 52M2 is open, close Breaker 52M1. Note that this is an open transition transfer with no paralleling.
 - c. Continue to operate entire Switchboard on Service #1.
6. If Service #2 is selected as the preferred service, step "5" has occurred and Service #2 returns to service, proceed as follows:
 - a. Initiate an adjustable time delay (6 - 60 minutes).
 - b. Upon expiration of the time delay trip Breaker 52M1.
 - c. After an adjustable time delay (.2 - 60 seconds) close Breaker 52M2.
 - d. System is restored to normal.
7. Remote service equipment shutdown. (86 relay)
 - a. In case of an emergency, the service equipment main circuit breakers 52 M1 and 52 M2, to be remotely disconnected and to remain in open position until manually reset locally by a trained electrician. Remote indicator lights shall be located at outside entrance to switchgear room to indicate when the (86 relay) is engaged.

B. Additional Features:

1. Provide bell alarm lockouts such that upon a fault in the distribution bus, both main breakers shall be given trip signals and locked out from closing until reset.
2. Provide electrical interlocks to ensure that only one of the two main breakers can be closed at the same time.
3. A manual/auto selector switch to completely disable the automatic throwover scheme.
4. A time delay bypass switch on retransfer to normal to allow immediate return to normal configuration upon restoration of the failed transformer (momentary contact).
5. A selector switch to advise the automatic throwover scheme as to which transformer is preferred.
6. Provide a control power transfer scheme. Control power transformers shall be connected on the line side of each secondary main breaker and the scheme shall automatically transfer to the source that is available to supply control power to the switchboard.
7. Provide control switches for Breakers 52M1 and 52M2.
8. Provide pilot lights for the following conditions:
 - a. Automatic mode.
 - b. Manual mode (flashing).
 - c. Breaker 52M1 open.
 - d. Breaker 52M1 closed.
 - e. Breaker 52M1 trip.
 - f. Breaker 52M2 open.
 - g. Breaker 52M2 closed.
 - h. Breaker 52M2 trip.
 - i. Service #1 preferred.
 - j. Service #2 preferred.
 - k. Service #1 available.
 - l. Service #2 available.
 - m. Switchboard on alternate transformer (flashing).
 - n. Remote indicators outside of main switchgear electrical room.
 - 1) Remote disconnect engaged.
 - 2) M1 open.
 - 3) M2 open.
9. Push to test feature on all pilot lights.
10. Dry contact relay outputs for the following conditions:
 - a. Manual-auto switch-auto.
 - b. Manual-auto switch-manual.
 - c. Switchboard on alternate service.
 - d. Alternate service unavailable.
 - e. Preferred service failed.
 - f. Breaker 52M1 tripped (bell alarm).
 - g. Breaker 52M2 tripped (bell alarm).
 - h. Outage on switchboard.

- i. Control power failed.
 11. All necessary relays, selector switches, pilot lights (except for potential transformers and control transformers) and other components for the automatic throwover and emergency remote service equipment shutdown scheme shall be located in a cubicle shown on the drawings.
 12. Mount all control switches and pilot lights on the cubicle door such that they are accessible from outside. Provide suitable nameplates for all devices.
 13. Provide a complete relay schedule listing all relays and controls as well as a complete circuit operation description. Indicate in detail the operation of all relays and contacts for all contingencies.
 14. All device numbering should conform to ANSI/IEEE Standards.
- C. Breakers 52M1 and 52M2:
1. Provide the following features and accessories on Breakers 52M1 and 52M2 to interface with the automatic throwover control scheme:
 - a. All auxiliary contacts required for the operation of the automatic throwover and emergency remote service equipment shutdown control scheme.
 - b. Four spare sets of Form "C" (normally open/normally closed auxiliary contacts)
 - c. 120 volt electric operators. Note that these breakers will be operated by relay logic. Do not provide local (at breaker) push buttons or controls. In addition, make provisions to block local manual closing to prevent override of interlocking scheme.

3.3 INSTALLATION

- A. Anchor switchgear assembly to 4-inch (100-mm), channel-iron sill embedded in concrete base and attach by bolting.
1. Sills: Select to suit switchgear; level and grout flush into concrete base.

Retain subparagraph below if Project is in seismic area.

2. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. See Section 260548 "Vibration and Seismic Controls for Electrical Systems" for seismic-restraint requirements.

Retain subparagraph below if concrete bases are used. Coordinate with Drawings.

3. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no less than 3 inches (75 mm) in all directions beyond the maximum dimensions of switchgear, unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Section 260529 "Hangers and Supports for Electrical Systems."
- B. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchgear units and components.

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Section 260553 "Identification for Electrical Systems."
- B. Diagram and Instructions:
 - 1. Frame under clear acrylic plastic on front of switchgear.
 - a. Operating Instructions: Printed basic instructions for switchgear, including control and key-interlock sequences and emergency procedures.
 - b. System Power Riser Diagrams: Depict power sources, feeders, distribution components, and major loads.
 - 2. Storage for Maintenance: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

3.5 CONNECTIONS

- A. Cable terminations at switchgear are specified in Section 260513 "Medium-Voltage Cables."
- B. Tighten bus joints, electrical connectors, and terminals according to manufacturer's published torque-tightening values.
- C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables" and Section 260513 "Medium-Voltage Cables."

3.6 FIELD QUALITY CONTROL

Retain paragraph and subparagraphs below to require Contractor to prepare switchgear and related components for manufacturer's field service technician and for acceptance testing.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each switchgear bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.

Retain paragraph and subparagraphs below to require a factory-authorized service representative to perform, or assist Contractor with, field inspections, tests, and adjustments. For switchgear and related components, supervision by personnel familiar with equipment may be important.

- B. Perform the following field tests and inspections and prepare test reports:

Retain subparagraphs below with either of last two paragraphs above. Edit to suit Project. Delete subparagraphs if testing will be performed by Owner-engaged testing and inspecting agency.

1. Perform each electrical test and visual and mechanical inspection stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for each of the following NETA categories:
 - a. Switchgear.
 - b. Circuit breakers.
 - c. Instrument transformers.
 - d. Metering and instrumentation.
 - e. Ground-fault systems.
 - f. Battery systems.
 - g. Capacitors.

C. Remove and replace malfunctioning units and retest as specified above.

Edit paragraph and subparagraphs below to suit types of switchgear specified.

D. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared scan of each switchgear. Remove front and rear panels so joints and connections are accessible to portable scanner.

1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchgear 11 months after date of Substantial Completion.
2. Instrument: Use an infrared-scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare a certified report that identifies switchgear checked and that describes infrared-scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.7 ADJUSTING

Delete this Article if only load interrupter switchgear is specified. Select option in paragraph below if coordination study is responsibility of Contractor and is included in Section 260573 "Overcurrent Protective Device Coordination Study."

- A. Set field-adjustable, protective-relay trip characteristics [**according to results in Section 260573 "Overcurrent Protective Device Coordination Study."**][.]

3.8 CLEANING

- A. On completion of installation, inspect interior and exterior of switchgear. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Repair damaged finishes.

3.9 PROTECTION

- A. Temporary Heating: Apply temporary heat to switchgear, according to manufacturer's written instructions, throughout periods when switchgear environment is not controlled for temperature and humidity within manufacturer's stipulated service conditions.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain switchgear. Refer to Section 017900 "Demonstration and Training."
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 261300

SECTION 262200 - LOW-VOLTAGE TRANSFORMERS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1000 kVA:
 - 1. Distribution transformers.
 - 2. Buck-boost transformers.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.3 ACTION SUBMITTALS

- A. Product Data: Include rated nameplate data, capacities, weights, dimensions,

minimum clearances, installed devices and features, and performance for each type and size of transformer indicated.

1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Wiring Diagrams: Power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems."

Coordinate seismic requirements with DEN Project Manager.

- A. Manufacturer Seismic Qualification Certification: Submit certification that transformers, accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- B. Qualification Data: For testing agency.
- C. Source quality-control test reports.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7.
- B. Source Limitations: Obtain each transformer type through one source from a single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.
- B. Handle using only lift eyes and provided brackets. Protect equipment in inclement weather.

1.8 COORDINATION

- A. For floor-mounted transformers, coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
- B. For wall-mounted and structure-mounted transformers, coordinate installation of wall-mounting and structure-hanging supports with actual transformer provided.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products.
See Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. **Manufacturers: Match existing equipment in the vicinity, if applicable. Subject to compliance with requirements, provide products by one of the following:**
1. Eaton Electrical Inc.; Cutler-Hammer Products.
 2. General Electric Company.
 3. Square D; Schneider Electric.
 4. or approved equal.

2.2 GENERAL TRANSFORMER REQUIREMENTS

- A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.
- B. Cores: Grain-oriented, non-aging silicon steel.
- C. Coils: Continuous windings without splices except for taps.
1. Internal Coil Connections: Brazed or pressure type.

Usually retain aluminum option in subparagraph below. See Evaluations for discussion of copper vs. aluminum winding material.

2. Coil Material:
3. Transformers rated up to 45kVA: **Copper or Aluminum.**
 - a. Transformers rated above 45kVA: Copper windings are required."

2.3 DISTRIBUTION TRANSFORMERS

- A. Comply with NFPA 70, and list and label as complying with UL 1561.

Retain first paragraph below if seismic bracing is required. Coordinate with Parts 1 and 3.

- B. Provide transformers that are constructed to withstand seismic forces specified in Section 260548.16 "Seismic Controls for Electrical Systems."

- C. Cores: One leg per phase.

If all transformers have same enclosure, retain one of two "Enclosure" paragraphs below. Retain first paragraph for indoor transformers; second, for outdoor transformers. If several types of enclosures are required for Project, delete paragraphs and indicate enclosure type on Drawings.

- D. Enclosure: [**Ventilated**] [**Totally enclosed, nonventilated**], NEMA 250, Type 2.
1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.
- E. Enclosure: [**Ventilated**] [**Totally enclosed, nonventilated**], . NEMA 250, [**Type 3R**] [**Type 4X, stainless steel**].
1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.

Retain Paragraph and subparagraph below for custom finish.

- F. Transformer Enclosure Finish: Comply with NEMA 250.
1. Finish Color: Gray.
- G. Taps for Transformers Smaller than 3 kVA: **None**.
- H. Taps for Transformers 7.5 to 24 kVA: **"One 5 percent tap above and one 5 percent tap below normal full capacity.**
- I. Taps for Transformers 25 kVA and Larger: **Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity.**

See Editing Instruction No. 2 in the Evaluations for discussion of insulation classes. See "Energy Considerations" Article in the Evaluations for discussion of relative efficiencies. If 115 or 80 deg C rating is retained in paragraph below and all transformers are 15 kVA or larger, delete "Energy Efficiency for Transformers Rated 15 kVA and Larger" Paragraph.

- J. Insulation Class: 220 deg C, UL-component-recognized insulation system with a maximum of [**115**] [**80**] deg C rise above 40 deg C ambient temperature.

Retain features in seven paragraphs below to suit Project. Coordinate with Drawings.

Retain paragraph and subparagraphs below for energy-efficient transformers complying with NEMA TP 1. See Evaluations for discussion of energy efficiency. NEMA TP 1 excludes dry-type transformers rated below 15 kVA.

- K. Energy Efficiency for Transformers Rated 15 kVA and Larger:
1. Complying with NEMA TP 1, Class 1 efficiency levels.
 2. Tested according to NEMA TP 2.

Retain paragraph and subparagraphs below for transformers that will supply significant nonsinusoidal load current. Show transformer K-factor on Drawings or in schedule. See Evaluations for discussion of

K-factors.

- L. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor.
1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.
 2. Indicate value of K-factor on transformer nameplate.

Shielding in paragraph below reduces conducted, common-mode, high-frequency transient noise to sensitive loads. See Evaluations for discussion of shielding.

- M. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.
1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
 2. Include special terminal for grounding the shield.
 3. Shield Effectiveness:
 - a. Capacitance between Primary and Secondary Windings: Not to exceed 33 picofarads over a frequency range of 20 Hz to 1 MHz.
 - b. Common-Mode Noise Attenuation: Minimum of minus 120 dBA at 0.5 to 1.5 kHz; minimum of minus 65 dBA at 1.5 to 100 kHz.
 - c. Normal-Mode Noise Attenuation: Minimum of minus 52 dBA at 1.5 to 10 kHz.

Indicate wall-mounting transformers on Drawings. Generally, factory-made wall-mounting brackets are available for transformers up to 75 kVA. High-efficiency, shielding, and K-factor construction increase transformer weight. Verify that wall brackets are available from specified manufacturers for specified sizes. Verify compliance with seismic requirements.

- N. Wall Brackets: Manufacturer's standard brackets.

Retain one of two paragraphs below. Retain first if equipment sound-level ratings are required to be lower than those in NEMA ST 20. NEMA ST 20 sound levels are as follows: Up to 9 kVA: 40 dBA; 30 to 50 kVA: 45 dBA; 51 to 150 kVA: 50 dBA; 151 to 300 kVA: 55 dBA; 301 to 500 kVA: 60 dBA; 501 to 700 kVA: 62 dBA; 701 to 1000 kVA: 64 dBA. See Editing Instruction No. 3 in the Evaluations for discussion of sound generated by transformers.

- O. Low-Sound-Level Requirements: Minimum of 3 dBA less than NEMA ST 20 standard sound levels when factory tested according to IEEE C57.12.91. Maximum sound levels shall be as follows:
1. 1 to 5 kVA: 37dB.
 2. 6 to 25 kVA: 42dB.
 3. 26 to 150 kVA: 47dB.
 4. 151 to 225 kVA: 52dB.
 5. 226 to 300 kVA: 52dB.
 6. 301 to 500 kVA: 57dB.

2.4 BUCK-BOOST TRANSFORMERS

- A. Description: Self-cooled, two-winding dry type, rated for continuous duty and with wiring terminals suitable for connection as autotransformer. Transformers shall comply with NEMA ST 1 and shall be listed and labeled as complying with UL 506 or UL 1561.
- B. Enclosure: Ventilated, NEMA 250, Type 2.
 - 1. Finish Color: **Gray**] [**ANSI 49 gray**] [**ANSI 61 gray**].

2.5 IDENTIFICATION DEVICES

Retain this article to specify nameplates. Coordinate names of transformers with Drawings and schedules.

- A. Nameplates: Engraved, laminated-plastic or metal nameplate for each **distribution** and **buck-boost** transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 260553 "Identification for Electrical Systems."
 - 1. Include transformer connection data and overload capacity based on rated allowable temperature rise.

2.6 SOURCE QUALITY CONTROL

- A. Test and inspect transformers according to IEEE C57.12.91.
- B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.
- B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

Revise 5-ohm value in first paragraph below to suit Project.

- D. Verify that ground connections are in place and requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.

- E. Environment: Enclosures shall be rated for the environment in which they are located. Covers for NEMA 250, Type 4X enclosures shall not cause accessibility problems.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

Verify seismic-bracing requirements with authorities having jurisdiction. Wall-mounted transformers may not be appropriate in areas of seismic activity.

- A. Install wall-mounted transformers level and plumb with wall brackets fabricated by transformer manufacturer.
 - 1. Brace wall-mounted transformers as specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- B. Install transformers level and plumb on a concrete base with vibration-dampening supports. Locate transformers away from corners and not parallel to adjacent wall surface.
- C. Construct concrete bases and anchor floor-mounting transformers according to manufacturer's written instructions, **seismic codes applicable to Project**, and requirements in Section 260529 "Hangers and Supports for Electrical Systems."

3.3 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

Retain one of first two paragraphs below that identify who shall perform tests and inspections. Retain requirements for field quality-control test reports in "Informational Submittals" article.

Coordinate inspection and testing requirements with DEN Project Manager.

Retain first paragraph below to require Contractor to perform tests and inspections.

- A. Perform tests and inspections and prepare test reports.

Retain "Manufacturer's Field Service" Subparagraph below, if required by the DEN Project Manager, to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including

connections, and to assist in testing.

Retain "Tests and Inspections" Paragraph below to describe tests and inspections to be performed by any of the entities in three paragraphs above.

B. Tests and Inspections:

Tests referenced in subparagraph below are from NETA Acceptance Testing Specification and include inspection procedures to verify proper installation. They also include tests and measurements of insulation resistance and turns ratios. Cost of extensive testing may not be warranted for some projects. Revise subparagraph to suit Project.

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS for dry-type, air-cooled, low-voltage transformers. Certify compliance with test parameters.

C. Remove and replace units that do not pass tests or inspections and retest as specified above.

D. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of transformer connections.

1. Use an infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
2. Perform two (2) follow-up infrared scans of transformers, one at four months and the other at 11 months after Substantial Completion.
3. Prepare a certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.

E. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.5 ADJUSTING

A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Connect buck-boost transformers to provide nameplate voltage of equipment being served, plus or minus 5 percent, at secondary terminals.

C. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.6 CLEANING

- A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262200

Copyright 2012 by The American Institute of Architects (AIA)

Updated: August 31, 2015

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262300 - LOW-VOLTAGE SWITCHGEAR

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Section includes metal-enclosed, low-voltage power circuit-breaker switchgear rated 1000 V and less for use in ac systems.
- B. Related Sections include the following:

List below only products, construction, and equipment that the reader might expect to find in this Section but are specified elsewhere.

Retain subparagraph below if Project includes requirements for electrical power monitoring and control.

- 1. Section 260913 "Electrical Power Monitoring and Control" for interfacing communication and metering requirements.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain abbreviations that remain after this Section has been edited.

- A. ATS: Acceptance Testing Service.
- B. GFCI: Ground-fault circuit interrupter.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of switchgear, circuit breaker, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
 - 1. Include data substantiating that materials comply with requirements.
 - B. Shop Drawings: For each type of switchgear and related equipment.
 - 1. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Include the following:
 - a. Tabulation of installed devices with features and ratings.
 - b. Enclosure types and details.
 - c. Outline and general arrangement drawing showing dimensions, shipping sections, and weights of each assembled section.
 - d. Bus configuration with size and number of conductors in each bus run, including phase, neutral, and ground conductors of main and branch buses.
 - e. Current rating of buses.
 - f. Short-time and short-circuit current rating of switchgear assembly.
 - g. Nameplate legends.
 - h. Mimic-bus diagram.
 - i. Utility company's metering provisions with indication of approval by utility company.
 - 2. Wiring Diagrams: Power, signal, and control wiring.
- Retain first subparagraph below if series rating of overcurrent protective devices is used.
- j. UL listing for series rating of installed devices.
 - k. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: Representative portion of mimic bus with specified finish. Manufacturer's color charts showing colors available for mimic bus.

1.5 INFORMATIONAL SUBMITTALS

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around switchgear where pipe and ducts are prohibited. Show switchgear layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Section 260548.16 "Seismic Controls for Electrical Systems."

- B. Manufacturer Seismic Qualification Certification: Submit certification that switchgear, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems." Include the following:
1. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain one of first two subparagraphs below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Second definition is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Coordinate paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- C. Qualification Data: For testing agency.

Retain first paragraph below if Contractor is responsible for field quality-control testing.

- D. Field quality-control test reports.
- E. Updated mimic-bus diagram reflecting field changes after final switchgear load connections have been made, for record.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For switchgear and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
 2. Time-current curves, including selectable ranges for each type of overcurrent protective device.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

Extra materials may not be allowed for publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

Revise this Article to suit Project. Spare-fuse cabinets are specified in Section 262813 "Fuses."

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Fuses: **[Six (6)]** <Insert number> of each type and rating used. Include spares for potential transformer fuses, control power fuses, and fuses and fusible devices for fused circuit breakers.
 2. Indicating Lights: **[Six (6)]** <Insert number> of each type installed.
 3. Touchup Paint: **[Three (3)]** <Insert number> containers of paint matching enclosure finish, each **0.5 pint** (250 mL).

1.8 QUALITY ASSURANCE

- A. Factory Testing and Witness Testing:
1. Furnish all test equipment and personnel, and perform all tests as may be required and as specified herein.
 2. The manufacturer shall perform all tests normally conducted in accordance with the manufacturer's standard test procedures for all substations. In addition, the manufacturer shall perform all supplementary testing as defined throughout this specification for all substations. All normal and supplemental testing, which is not witnessed by the DEN Project Manager, shall be documented in certified test reports and shall be submitted to the DEN Project Manager for review within two (2) weeks of the performance of the testing.

3. The following tests shall be performed at the factory and shall be witnessed by the DEN Project Manager, or their duly authorized representative:
 - a. A complete visual inspection of the equipment, both internally and externally.
 - b. A complete test of all automatic transfer schemes including all operation and failure modes.
 - c. A complete test of all control panels and controls including dry contact outputs.
 - d. Verification of proper operation of all metering.
 - e. Verify mechanical operation; interlocks and interchangeability of selected breakers.
4. The testing outlined in paragraph "3" above shall be performed only on one main switchgear. In order to perform such testing, all breakers shall be shipped to the switchboard factory and installed in their respective cubicles in a completely assembled Distribution Section
5. Test 208 volt and /or 480 volt, 3-phase power sources shall be connected to the incoming side of each secondary main such that the sources may be individually applied and removed to completely simulate and test all features of the distribution sections.
6. Submit to the DEN Project Manager ninety (90) calendar days prior to scheduled testing all test procedures for approval, and notify the DEN Project Manager four (4) weeks prior to scheduled testing what the duration of the tests will be.
7. Provide four (4) copies of the factory test report within two (2) weeks of the completion of such witness tests.

If an independent testing agency is required, see Section 014000 "Quality Requirements" for general testing and inspecting agency qualification requirements. If additional control is needed, use first paragraph below to specify 29 CFR 1910.7 or other more specific criteria (e.g., NETA). 29 CFR 1910.7 defines a nationally recognized testing laboratory as it applies to testing and inspecting for safety, and lists, labels, or accepts equipment and materials that meet certain OSHA criteria.

- B. Source Limitations: Obtain switchgear through one source from a single manufacturer.

Retain paragraph below to allow drawing details based on one manufacturer's product to establish requirements and still allow competition. Coordinate with Section 016000 "Product Requirements" requirements.

- C. Product Options: Drawings indicate size, profiles, and dimensional requirements of switchgear and are based on the specific system indicated. Refer to Section 016000 "Product Requirements."

Retain first paragraph below if labeling of switchgear is required. See Editing Instruction No. 2 in the Evaluations.

- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with NFPA 70.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver switchgear in sections of lengths that can be moved past obstructions in delivery path.

Retain one of two paragraphs below.

- B. Store switchgear indoors in clean dry space with uniform temperature to prevent condensation. Protect switchgear from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- C. If stored in areas subjected to weather, cover switchgear to provide protection from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside switchgear; install electric heating (250 W per section) to prevent condensation.
- D. Handle in accordance with manufacturer's written instructions. Lift only with lugs provided for the purpose. Handle carefully to avoid damage to switchgear internal components, enclosure, and finish.

1.10 PROJECT CONDITIONS

Revise paragraph below to describe specific requirements for moving switchgear into place. Where appropriate, indicate alterations to existing facilities that may be required to accommodate an indicated delivery path. Coordinate with Drawings.

- A. Installation Pathway: Remove and replace building components and structures to provide pathway for moving switchgear into place.

Retain paragraph and subparagraphs below if interruption of existing electrical service is required.

- B. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
 - 1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 - 2. Do not proceed with interruption of electric service without DEN Project Manager's written permission.

Retain paragraph below if installation space for switchgear is limited; show maximum dimensions on Drawings.

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchgear, including clearances between switchgear, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

Specify unusual environmental or service conditions here. See Editing Instruction No. 3 in the Evaluations. Otherwise, indicate typical environmental conditions as follows: For switchgear installed outdoors, indicate minimum ambient temperature and expected humidity range and specify compliance with IEEE C37.24.

- D. Environmental Limitations: Rate equipment for continuous operation under the following conditions, unless otherwise indicated:
1. Ambient temperature range: 30 deg F (-35 deg C) to 120 deg F (49 deg C).
 2. Altitude: 5500 feet (1677 m).
 3. Excessive solar radiation.

1.11 COORDINATION

Edit first paragraph below to delete or add types of construction that penetrate or are supported by ceilings.

- A. Coordinate layout and installation of switchgear and components with other construction that penetrates ceilings or is supported by them, including conduit, piping, equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels.
- B. Coordinate size and location of concrete bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products.

Retain below for semiproprietary specification. Refer to Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cutler-Hammer, Inc.; Eaton Corporation.
 2. General Electric Company.
 3. Square D; Schneider Electric.
 4. or approved equal.

2.2 RATINGS

Delete this Article if ratings are indicated on Drawings. Drawings are generally the preferred location for this data.

- A. Nominal System Voltage: **[480V, 3-Phase, 3-Wire] [480/277V, 3-Phase, 4-Wire] [208/120V, 3-Phase, 4-Wire] [240/120V, 1-Phase, 3-Wire]** 60 Hz.

IEEE C37.20.1 lists main-bus ratings only through 4000 A, but some manufacturers will provide bus ratings through 5000 A. However, circuit breakers are available only through 4000 A.

- B. Main-Bus Continuous: **[4000] [3200] [2000] [1600]** <Insert other> A.
- C. Short-Time and Short-Circuit Current: Match rating of highest-rated circuit breaker in switchgear assembly.

2.3 FABRICATION

- A. Factory assembled and tested and complying with IEEE C37.20.1.
- B. Indoor Enclosure Material: Steel.

Retain paragraph above or first paragraph below or both, and revise to suit Project. See Editing Instruction No. 4 in the Evaluations.

- C. Outdoor Enclosure Material: Galvanized steel.
- D. Outdoor Enclosure Fabrication Requirements: Weatherproof; integral structural-steel base frame with factory-applied asphaltic undercoating; and each compartment equipped with the following features:
1. Structural design and anchorage adequate to resist loads imposed by **[125-mph (200-km/h)] <Insert wind speed>** wind.
 2. Space heater operating at one-half or less of rated voltage, sized to prevent condensation.
 3. Louvers equipped with insect and rodent screen and filter; arranged to permit air circulation while excluding insects, rodents, and exterior dust.

Delete first three subparagraphs below if weatherproof internal aisle construction is specified.

4. Hinged front door with padlocking provisions.
5. Interior light with switch.
6. Weatherproof duplex receptacle.
7. Common internal aisle of sufficient width to permit protective-device withdrawal, disassembly, and servicing in aisle.
8. Aisle access doors with outside padlocking provisions and interior panic latches.
9. Aisle space heaters operating at one-half or less of rated voltage, thermostatically controlled.
10. Vaporproof fluorescent aisle lights with low-temperature ballasts, controlled by wall switch at each entrance.
11. GFCI duplex receptacles, a minimum of two, located in aisle.

Revise subparagraph below if forced ventilation rather than convection ventilation is required.

12. Aisle ventilation louvers equipped with insect and rodent screen and filter and arranged to permit air circulation while excluding insects, rodents, and exterior dust.
- E. Finish: IEEE C37.20.1, manufacturer's standard gray finish over a rust-inhibiting primer on phosphatizing-treated metal surfaces.
 - F. Section barriers between main and tie circuit-breaker compartments shall be extended to rear of section.
 - G. Bus isolation barriers shall be arranged to isolate line bus from load bus at each main and tie circuit breaker.
 - H. Circuit-breaker compartments shall be equipped to house drawout-type circuit breakers and shall be fitted with hinged outer doors.
 - I. Fabricate enclosure with removable, hinged, rear cover panels to allow access to rear interior of switchgear.
 - J. Auxiliary Compartments: Match and align with basic switchgear assembly. Include the following:
 1. Utility metering compartment that complies with utility company requirements.

Coordinate first subparagraph below with Drawings. Pull section is not usually required in low-voltage power switchgear. Metering provisions and main circuit-breaker connections may influence space available for incoming lines. Edit to suit Project.

2. Bus transition sections.
3. Incoming-line pull sections.
4. Hinged front panels for access to metering, accessory, and blank compartments.
5. Pull box on top of switchgear for extra room for pulling cable, with removable top, front, and side covers and ventilation provisions adequate to maintain air temperature in pull box within same limits as switchgear.

Retain first subparagraph below if top-mounted, circuit-breaker removal mechanism is used.

- a. Set pull box back from front to clear circuit-breaker lifting mechanism.
- b. Bottom: Insulating, fire-resistant material with separate holes for cable drops into switchgear.
- c. Cable Supports: Arranged to ease cabling and adequate to support cables indicated, including those for future installation.

Coordinate paragraph and subparagraphs below with Drawings.

- K. Bus bars connect between vertical sections and between compartments. Cable connections are not permitted.
 1. Main Phase Bus: Uniform capacity the entire length of assembly.

See Editing Instruction No. 7 in the Evaluations.

2. Neutral Bus: **[50] [100]** percent of phase-bus ampacity, except as indicated. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors. Include braces for neutral-bus extensions for busway feeders.

Retain subparagraph below if switchgear assembly includes spare circuit breakers and spaces for future circuit breakers. See Editing Instruction No. 6 in the Evaluations.

3. Vertical Section Bus Size: Comply with IEEE C37.20.1, including allowance for spare circuit breakers and spaces for future circuit breakers.

Retain one of first three subparagraphs below for main-bus material, or delete all and make selection Contractor's option.

4. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
5. Use silver-plated copper or tin-plated aluminum for connecting circuit-breaker line to aluminum bus.

Retain subparagraph above or first subparagraph below as required by bus-material specification.

6. Use copper for connecting circuit-breaker line to copper bus.
7. Contact Surfaces of Buses: Silver plated.
8. Feeder Circuit-Breaker Load Terminals: Silver-plated copper bus extensions equipped with pressure connectors for outgoing circuit conductors.
9. Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for feeder and branch-circuit ground conductors, minimum size **1/4 by 2 inches** (6 by 50 mm).
10. Supports and Bracing for Buses: Adequate strength for indicated short-circuit currents.
11. Neutral bus equipped with pressure-connector terminations for outgoing circuit neutral conductors. Neutral-bus extensions for busway feeders are braced.

Retain first subparagraph below for switchgear with main service disconnect switches. Edit to suit Project. Coordinate with Drawings.

12. Neutral Disconnect Link: Bolted, uninsulated, **1/4-by-2-inch** (6-by-50-mm) copper bus, arranged to connect neutral bus to ground bus.
13. Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.

IEEE and UL standards may require air insulation only. Retain subparagraph and associated subparagraphs below if insulated bus is required.

14. Bus-Bar Insulation: Individual bus bars wrapped with factory-applied, flame-retardant tape or spray-applied, flame-retardant insulation.
 - a. Sprayed Insulation Thickness: **3 mils** (0.08 mm), minimum.
 - b. Bolted Bus Joints: Insulate with secure joint covers that can easily be removed and reinstalled.

2.4 COMPONENTS

- A. Instrument Transformers: Comply with IEEE C57.13.

1. Potential Transformers: Secondary-voltage rating of 120 V and NEMA accuracy class of 0.3 with burdens of W, X, and Y.

Coordinate subparagraph below with Drawings.

2. Current Transformers: Ratios as indicated; burden and accuracy class suitable for connected relays, meters, and instruments.

Delete paragraph and subparagraphs below if conventional analog-meter installation is required. See Editing Instruction No. 5 in the Evaluations.

- B. Multifunction Digital-Metering Monitor: UL-listed or -recognized, microprocessor-based unit suitable for three- or four-wire systems and with the following features:
1. Inputs from sensors or 5-A current-transformer secondaries, and potential terminals rated to 600 V.
 2. Switch-selectable digital display of the following:
 - a. Phase Currents, Each Phase: Plus or minus 1 percent.
 - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d. Three-Phase Real Power: Plus or minus 2 percent.
 - e. Three-Phase Reactive Power: Plus or minus 2 percent.
 - f. Power Factor: Plus or minus 2 percent.
 - g. Frequency: Plus or minus 0.5 percent.
 - h. Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
 - i. Accumulated energy, in megawatt hours (joules), plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.
 3. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.

Delete paragraph below unless relays not integral with circuit breakers or circuit-breaker trip units are required. Specify relay functions and characteristics below or indicate on Drawings.

- C. Relays: Comply with IEEE C37.90, types and settings as indicated; with test blocks and plugs.

Retain paragraph and subparagraphs below if system analysis shows arresters are required at switchgear. Show ratings of arresters on Drawings.

- D. Surge Arresters: Distribution class, metal-oxide-varistor type. Comply with IEEE C62.11 and NEMA LA 1.
1. Install in cable termination compartments and connect in each phase of circuit.
 2. Coordinate rating with circuit voltage.

Delete paragraph below if not required. If retaining, coordinate with Drawings.

- E. Provision for Future Devices: Equip compartments with rails, mounting brackets, supports, necessary appurtenances, and bus connections.

Edit first paragraph and subparagraphs below to accommodate special needs such as dc control, battery, or uninterruptible power supply for control.

- F. Control Power Supply: Control power transformer supplying 120-V control circuits through secondary disconnect devices. Include the following features:
1. Dry-type transformers, in separate compartments for units larger than 3 kVA, including primary and secondary fuses.

Retain subparagraph below for electrically interlocked main and tie circuit breakers.

2. Two control power transformers in separate compartments with necessary interlocking relays; each transformer connected to line side of associated main circuit breaker.

Retain one of first two subparagraphs below.

- a. Secondary windings connected through a relay or relays to control bus to effect an automatic transfer scheme.
 - b. Secondary windings connected through an internal automatic transfer switch to switchgear control power bus.
3. Control Power Fuses: Primary and secondary fuses with current-limiting and overload protection.
 4. Fuses are specified in Section 262813 "Fuses."
- G. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:
1. Flexible conductors for No. 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
 2. Conductors sized according to NFPA 70 for duty required.

2.5 CIRCUIT BREAKERS

- A. Description: Comply with IEEE C37.13.

Coordinate first paragraph below with Drawings.

- B. Ratings: As indicated for continuous, interrupting, and short-time current ratings for each circuit breaker; voltage and frequency ratings same as switchgear.
- C. Operating Mechanism: Mechanically and electrically trip-free, stored-energy operating mechanism with the following features:
1. Normal Closing Speed: Independent of both control and operator.
 2. Slow Closing Speed: Optional with operator for inspection and adjustment.
 3. Stored-Energy Mechanism: **[Manually charged] [Electrically charged, with optional manual charging].**
 4. Operation counter.

- D. Trip Devices: Solid-state, overcurrent trip-device system consisting of one or two current transformers or sensors per phase, a release mechanism, and the following features:

Delete subparagraphs below not required.

1. Functions: Long-time-delay, short-time-delay, and instantaneous-trip functions, independent of each other in both action and adjustment.
2. Temperature Compensation: Ensures accuracy and calibration stability from minus 5 to plus 40 deg C.
3. Field-adjustable, time-current characteristics.
4. Current Adjustability: Dial settings and rating plugs on trip units or sensors on circuit breakers, or a combination of these methods.
5. Three bands, minimum, for long-time- and short-time-delay functions; marked "minimum," "intermediate," and "maximum."
6. Pickup Points: Five minimum, for long-time- and short-time-trip functions. Equip short-time-trip function for switchable I2t operation.
7. Pickup Points: Five minimum, for instantaneous-trip functions.

Coordinate first subparagraph and associated subparagraphs below with Drawings. Indicate circuits with ground-fault protection. Show type of protection for each circuit where switchgear has more than one type.

8. Ground-fault protection with at least three short-time-delay settings and three trip-time-delay bands; adjustable current pickup. Arrange to provide protection for the following:
 - a. Three-wire circuit or system.
 - b. Four-wire circuit or system.
 - c. Four-wire, double-ended substation.
9. Trip Indication: Labeled, battery-powered lights or mechanical targets on trip device to indicate type of fault.

Delete first paragraph below if not required. If retaining, coordinate with Drawings.

- E. Auxiliary Contacts: For interlocking or remote indication of circuit-breaker position, with spare auxiliary switches and other auxiliary switches required for normal circuit-breaker operation, quantity as indicated. Each consists of two Type "a" and two Type "b" stages (contacts) wired through secondary disconnect devices to a terminal block in stationary housing.
- F. Drawout Features: Circuit-breaker mounting assembly equipped with a racking mechanism to position circuit breaker and hold it rigidly in connected, test, and disconnected positions. Include the following features:
1. Interlocks: Prevent movement of circuit breaker to or from connected position when it is closed, and prevent closure of circuit breaker unless it is in connected, test, or disconnected position.
 2. Circuit-Breaker Positioning: An open circuit breaker may be racked to or from connected, test, and disconnected positions only with the associated compartment door closed unless live parts are covered by a full dead-front

shield. An open circuit breaker may be manually withdrawn to a position for removal from the structure with the door open. Status for connection devices for different positions includes the following:

- a. Test Position: Primary disconnect devices disengaged, and secondary disconnect devices and ground contact engaged.
 - b. Disconnected Position: Primary and secondary devices and ground contact disengaged.
- G. Arc Chutes: Readily removable from associated circuit breaker when it is in disconnected position, and arranged to permit inspection of contacts without removing circuit breaker from switchgear.
- H. Padlocking Provisions: For installing at least three padlocks on each circuit breaker to secure its enclosure and prevent movement of drawout mechanism.

Delete first paragraph below if not required.

- I. Operating Handle: One for each circuit breaker capable of manual operation.
- J. Electric Close Button: One for each electrically operated circuit breaker.

First paragraph below limits competition because some manufacturers will not provide mechanical interlocks. Edit to suit Project. See Editing Instruction No. 8 in the Evaluations.

- K. Mechanical Interlocking of Circuit Breakers: Uses a mechanical tripping lever or equivalent design and electrical interlocks.
- L. Key Interlocks: Arranged so keys are attached at devices indicated. Mountings and hardware are included where future installation of key-interlock devices is indicated.
- M. Undervoltage Trip Devices: Instantaneous, with adjustable pickup voltage.

Retain paragraph above or first paragraph below.

- N. Undervoltage Trip Devices: Adjustable time-delay and pickup voltage.
- O. Shunt-Trip Devices: Where indicated.

Retain first paragraph and subparagraphs below for fused circuit breakers.

- P. Fused Circuit Breakers: Circuit breaker and fuse combinations complying with requirements for circuit breakers and trip devices and with the following:
 1. Fuses: NEMA FU 1, Class L current limiting, sized to coordinate with and protect associated circuit breaker.

Delete nonapplicable items in first two subparagraphs below.

2. Circuit Breakers with Frame Size 1600 A and Smaller: Fuses on line side of associated circuit breaker, on a common drawout mounting, arranged so fuses are accessible only when circuit breaker is in disconnected position.

3. Circuit Breakers with Frame Sizes More Than 1600 A: Fuses and circuit breakers may be installed in separate compartments on separate drawout mountings. Fuse drawout element is interlocked with associated power circuit breaker to prevent drawing out fuse element unless circuit breaker is in open position.
 4. Open-Fuse Trip Device: Positive means of tripping and holding circuit breaker in open position when a fuse opens. Open-fuse status is indicated at front of circuit breaker or fuse drawout element.
- Q. Indicating Lights: To indicate circuit breaker is open or closed, for main and bus tie circuit breakers interlocked either with each other or with external devices.

2.6 ACCESSORIES

Retain paragraph and subparagraphs below if required.

- A. Accessory Set: Furnish tools and miscellaneous items required for circuit-breaker and switchgear test, inspection, maintenance, and operation.
1. Racking handle to manually move circuit breaker between connected and disconnected positions.
 2. Portable test set for testing all functions of circuit-breaker, solid-state trip devices without removal from switchgear.
 3. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.

Retain one of two, or both, apparatus paragraphs below. Coordinate apparatus space requirements with Drawings.

- B. Circuit-Breaker Removal Apparatus: Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.

If paragraph below is used for outdoor switchgear, it must be walk-in aisle type. Coordinate apparatus space requirements with Drawings.

- C. Circuit-Breaker Removal Apparatus: Overhead-circuit-breaker lifting device, track mounted at top front of switchgear and complete with hoist and lifting yokes matching each size of drawout circuit breaker installed.

Coordinate first paragraph below with Drawings.

- D. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
- E. Storage for Manual: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.
- F. Fire Alarm Signal Sender: Include a set of dry contacts in the control section equipped to send a supervisory signal to the fire alarm system

2.7 IDENTIFICATION

Delete this Article if not required.

- A. Mimic Bus: Continuous mimic bus, arranged in single-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.
 - 1. Mimic-bus segments coordinated with devices in switchgear sections to which applied, to produce a concise visual presentation of principal switchgear components and connections.
 - 2. Medium: Painted graphics, as selected by DEN Project Manager.
 - 3. Color: Contrasting with factory-finish background; as selected by DEN Project Manager from manufacturer's full range.
- B. System Power Riser Diagrams: Depict power sources, feeders, distribution components, and major loads. Include as-built data for low-voltage power switchgear and connections as follows:
 - 1. Frame size of each circuit breaker.
 - 2. Trip rating for each circuit breaker.
 - 3. Conduit and wire size for each feeder.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces where switchgear will be installed for compliance with installation tolerances, required clearances, and other conditions affecting performance.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 AUTOMATIC THROWOVER CONTROL SCHEME

- A. Sequence of Operation:
 - 1. If Service #1 is selected as the preferred service, Breaker 52M1 will be closed and Breaker 52M2 will be open. Switchboard will be supported by Service #1.
 - 2. If Service #2 is selected as the preferred service, Breaker 52M2 will be closed and Breaker 52M1 will be open. Switchboard will be supported by Service #2.
 - 3. If Service #1 is selected as the preferred service, and Service #1 fails with Service #2 available and Breaker 52M1 not tripped due to a fault (bell alarm lockout) proceed as follows:
 - a. After an adjustable time delay (1.5 - 15 seconds) trip Breaker 52M1.
 - b. Once Breaker 52M1 is open, close Breaker 52M2. Note that this is an open transition transfer with no paralleling.

- c. Continue to operate entire switchboard on Service #2.
4. If Service #1 is selected as the preferred service, Step "3" has occurred, and Service #1 returns to service, proceed as follows:
 - a. Initiate an adjustable time delay (6 - 60 minutes).
 - b. Upon expiration of the time delay trip Breaker 52M2.
 - c. After an adjustable time delay (.2-60 seconds) close Breaker 52M1.
 - d. System is restored to normal.
5. Service #2 is selected as the preferred service, and Service #2 fails with Service #1 available and Breaker 52M2 not tripped due to a fault (bell alarm lockout), proceed as follows:
 - a. After an adjustable time delay (1.5 - 15 seconds) trip Breaker 52M2.
 - b. Once Breaker 52M2 is open, close Breaker 52M1. Note that this is an open transition transfer with no paralleling.
 - c. Continue to operate entire Switchboard on Service #1.
6. If Service #2 is selected as the preferred service, step "5" has occurred and Service #2 returns to service, proceed as follows:
 - a. Initiate an adjustable time delay (6 - 60 minutes).
 - b. Upon expiration of the time delay trip Breaker 52M1.
 - c. After an adjustable time delay (.2 - 60 seconds) close Breaker 52M2.
 - d. System is restored to normal.
7. Remote service equipment shutdown. (86 relay)
 - a. In case of an emergency, the service equipment main circuit breakers 52 M1 and 52 M2, to be remotely disconnected and to remain in open position until manually reset locally by a trained electrician. Remote indicator lights shall be located at outside entrance to switchgear room to indicate when the (86 relay) is engaged.

B. Additional Features:

1. Provide bell alarm lockouts such that upon a fault in the distribution bus, both main breakers shall be given trip signals and locked out from closing until reset.
2. Provide electrical interlocks to ensure that only one of the two main breakers can be closed at the same time.
3. A manual/auto selector switch to completely disable the automatic throwover scheme.
4. A time delay bypass switch on retransfer to normal to allow immediate return to normal configuration upon restoration of the failed transformer (momentary contact).
5. A selector switch to advise the automatic throwover scheme as to which transformer is preferred.
6. Provide a control power transfer scheme. Control power transformers shall be connected on the line side of each secondary main breaker and the scheme shall

- automatically transfer to the source that is available to supply control power to the switchboard.
7. Provide control switches for Breakers 52M1 and 52M2.
 8. Provide pilot lights for the following conditions:
 - a. Automatic mode.
 - b. Manual mode (flashing).
 - c. Breaker 52M1 open.
 - d. Breaker 52M1 closed.
 - e. Breaker 52M1 trip.
 - f. Breaker 52M2 open.
 - g. Breaker 52M2 closed.
 - h. Breaker 52M2 trip.
 - i. Service #1 preferred.
 - j. Service #2 preferred.
 - k. Service #1 available.
 - l. Service #2 available.
 - m. Switchboard on alternate transformer (flashing).
 - n. Remote indicators outside of main switchgear electrical room:
 - 1) Remote disconnect engaged.
 - 2) M1 open.
 - 3) M2 open.
 9. Push to test feature on all pilot lights.
 10. Dry contact relay outputs for the following conditions:
 - a. Manual-auto switch-auto.
 - b. Manual-auto switch-manual.
 - c. Switchboard on alternate service.
 - d. Alternate service unavailable.
 - e. Preferred service failed.
 - f. Breaker 52M1 tripped (bell alarm).
 - g. Breaker 52M2 tripped (bell alarm).
 - h. Outage on switchboard.
 - i. Control power failed.
 - j. PLC trouble
 11. All necessary relays, selector switches, pilot lights (except for potential transformers and control transformers) and other components for the automatic throwover and emergency remote service equipment shutdown scheme shall be located in a cubicle shown on the drawings.
 12. Mount all control switches and pilot lights on the cubicle door such that they are accessible from outside. Provide suitable nameplates for all devices.
 13. Provide a complete relay schedule listing all relays and controls as well as a complete circuit operation description. Indicate in detail the operation of all relays and contacts for all contingencies.
 14. All device numbering should conform to ANSI/IEEE Standards.

C. Breakers 52M1 and 52M2

1. Provide the following features and accessories on Breakers 52M1 and 52M2 to interface with the automatic throwover control scheme:
 - a. All auxiliary contacts required for the operation of the automatic throwover and emergency remote service equipment shutdown control scheme.
 - b. Four spare sets of Form "C" (normally open/normally closed auxiliary contacts)
 - c. 120 volt electric operators: Note that these breakers will be operated by relay logic. Do not provide local (at breaker) push buttons or controls. In addition, make provisions to block local manual closing to prevent override of interlocking scheme.

3.3 INSTALLATION

- A. Comply with applicable portions of NECA 400.
- B. Anchor switchgear assembly to 4-inch (100-mm), channel-iron floor sill embedded in concrete base and attach by bolting.
 1. Sills: Select to suit switchgear; level and grout flush into concrete base.

Retain subparagraph below if Project is in seismic area.

2. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. See Section 260548.16 "Seismic Controls for Electrical Systems" for seismic-restraint requirements.

Delete subparagraph below if not required. If retaining, coordinate with Drawings.

3. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 3 inches (75 mm) in all directions beyond the maximum dimensions of switchgear unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Section 260529 "Hangers and Supports for Electrical Systems."
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, brackets, and temporary blocking of moving parts from switchgear units and components.

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Section 260553 "Identification for Electrical Systems."
- B. Diagram and Instructions:
 1. Frame and mount under clear acrylic plastic on the front of switchgear.
 - a. Operating Instructions: Printed basic instructions for switchgear, including control and key-interlock sequences and emergency procedures.
 - b. System Power Riser Diagrams: Depict power sources, feeders, distribution components, and major loads.

2. Storage for Maintenance: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

3.5 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.6 FIELD QUALITY CONTROL

Retain paragraph and subparagraphs below to require Contractor to prepare switchgear and related components for manufacturer's field service technician and for acceptance testing.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Prepare for acceptance tests as follows:
 1. Test insulation resistance for each switchgear bus, component, connecting supply, feeder, and control circuit.
 2. Test continuity of each circuit.

Retain paragraph and subparagraphs below to require a factory-authorized service representative to perform, or assist Contractor with, field inspections, tests, and adjustments.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing:
- C. Perform the following field tests and inspections and prepare test reports:

Retain subparagraphs below with either of last two paragraphs above. Edit to suit Project. Delete subparagraphs if testing will be performed by Owner-engaged testing and inspecting agency.

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for each of the following NETA categories:
 - a. Switchgear.
 - b. Circuit breakers.
 - c. Protective relays.
 - d. Instrument transformers.
 - e. Metering and instrumentation.
 - f. Ground-fault systems.
 - g. Battery systems.
 - h. Surge arresters.
 - i. Capacitors.

2. Remove and replace malfunctioning units and retest as specified above.
- D. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchgear. Remove front and rear panels so joints and connections are accessible to portable scanner.
1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchgear 11 months after date of Substantial Completion.
 2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 3. Record of Infrared Scanning: Prepare a certified report that identifies switchgear checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.7 ADJUSTING

Retain one of two paragraphs below. Retain first if coordination study is responsibility of Contractor and is included in Section 260573 "Overcurrent Protective Device Coordination Study."

- A. Set field-adjustable, protective-relay trip characteristics according to results in Section 260573 "Overcurrent Protective Device Coordination Study."
- B. Set field-adjustable, protective-relay trip characteristics.

3.8 CLEANING

- A. On completion of installation, inspect interior and exterior of switchgear. Remove paint splatters and other spots. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Repair exposed surfaces to match original finish.

3.9 PROTECTION

- A. Temporary Heating: Apply temporary heat to switchgear, according to manufacturer's written instructions, throughout periods when switchgear environment is not controlled for temperature and humidity within manufacturer's stipulated service conditions.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain switchgear. Refer to Section 017900 "Demonstration and Training."
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262300

SECTION 262313 - PARALLELING LOW-VOLTAGE SWITCHGEAR

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes metal-clad, [low] [medium]-voltage, circuit-breaker switchgear rated [1000] [5000] [15000] V and less, and associated control systems, for paralleling generators on an isolated bus and for distributing power in ac systems.
- B. Related Sections include the following:

List below only products, construction, and equipment that the reader might expect to find in this Section but are specified elsewhere.

Retain first subparagraph below if Project includes requirements for electrical power monitoring and control.

1. Section 260913 "Electrical Power Monitoring and Control" for interfacing communication and metering requirements.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. ATS: Acceptance Testing Specification.
- B. GFCI: Ground-fault circuit interrupter.
- C. HMI: Human machine interface.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of paralleling low-voltage switchgear.
 - 1. Technical data on features, performance, electrical characteristics, ratings, and finishes.
 - 2. Rated capacities, operating characteristics, furnished specialties, and accessories for individual circuit breakers.
 - 3. Features, characteristics, ratings, factory settings, and time-current characteristic curves for individual relays and overcurrent protective devices.
 - 4. Description of sequence of operation for paralleling controls.
 - 5. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each type of switchgear and related equipment, include the following:
 - 1. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Include the following:
 - a. Tabulation of installed devices with features and ratings.
 - b. Enclosure types and details.
 - c. Outline and general arrangement drawing showing dimensions, shipping sections, and weights of each assembled section.
 - d. Floor plan drawing showing locations for anchor bolts[**and leveling channels**].
 - e. Bus configuration with current rating, size, and number of conductors in each bus run, including phase, neutral, and ground conductors of main and branch buses.
 - f. Short-time and short-circuit current rating of switchgear assembly.
 - g. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
 - h. Nameplate legends.
 - i. Mimic-bus diagram.

Delete first subparagraph below for medium-voltage switchgear or if series rating of overcurrent protective devices is not used for low-voltage switchgear.

- j. UL listing for series rating of installed devices.
2. Wiring Diagrams: For switchgear, paralleling control system, and related equipment, include the following:
 - a. Power, signal, and control wiring.
 - b. Schematic control diagrams.
 - c. Diagrams showing connections of component devices and equipment.

Retain two subparagraphs below and revise to suit Project.

- d. Three-line diagrams of current and future circuits showing device terminal numbers and internal diagrams.
- e. Schematic diagrams showing connections to remote devices[**including SCADA remote terminal unit**].

Retain subparagraph below if products are required to withstand specific seismic loads and DEN Project Manager either has delegated design responsibility to Contractor or wants to review structural data as another way to verify products' compliance with performance requirements. Professional engineer qualifications are specified in Section 014000 "Quality Requirements."

3. Design Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting seismic restraints.

Retain "Samples" Paragraph below if mimic bus is required.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: Representative portion of mimic bus with specified finish. Manufacturer's color charts showing colors available for mimic bus.

1.5 INFORMATIONAL SUBMITTALS

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around switchgear where pipe and ducts are prohibited. Show switchgear layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems."

Coordinate seismic requirements with DEN Project Manager.

- B. Manufacturer Seismic Qualification Certification: Submit certification that switchgear, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:

1. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain one of first two subparagraphs below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Second definition is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- C. Qualification Data: For testing agency.
- D. Source quality-control reports.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- E. Field quality-control reports.

Retain paragraph below if mimic bus is required.

- F. Updated mimic bus diagram reflecting field changes after final switchgear load connections have been made, for record.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For switchgear and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017825 "Operation and Maintenance Data," include the following:
 1. Manufacturer's written instructions for sequence of operation.
 2. Manufacturer's sample system checklists and log sheets.
 3. Manufacturer's written instructions for testing and adjusting relays[**and overcurrent protective devices**].
 4. Time-current curves, including selectable ranges for each type of relay[**and overcurrent protective device**].

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Fuses: **[Six (6)] <Insert number>** of each type and rating used. Include spares for **[potential transformers] [control power circuits] [and] [fusible devices]**. Fuses are specified in Section 262813 "Fuses."
 2. Indicating Lights: **[Six (6)] <Insert number>** of each type installed.
 3. Touchup Paint: **[Three (3)] <Insert number>** containers of paint matching enclosure finish, each **0.5 pint** (250 mL).
- B. Maintenance Tools: Furnish tools and miscellaneous items required for switchgear test, inspection, maintenance, and operation. Include the following:
1. **[Traveling-type lifting device, rail mounted on top of paralleling low-voltage switchgear] [Floor-running transport or dockable dolly with manual lifting mechanism]** and all other items necessary to remove circuit breaker from housing and transport it to remote location.

Retain subparagraph below for optional extra materials for medium-voltage switchgear.

2. Racking handle to move circuit breaker manually between connected and disconnected positions, and a secondary test coupler to permit testing of circuit breaker without removal from switchgear..

1.8 QUALITY ASSURANCE

- A. Factory Testing and Witness Testing:
1. Furnish all test equipment and personnel, and perform all tests as may be required and as specified herein.
 2. The manufacturer shall perform all tests normally conducted in accordance with the manufacturer's standard test procedures for all substations. In addition, the manufacturer shall perform all supplementary testing as defined throughout this specification for all substations. All normal and supplemental testing, which is not witnessed by the DEN Project Manager, shall be documented in certified test reports and shall be submitted to the DEN Project Manager for review within two (2) weeks of the performance of the testing.
 3. The following tests shall be performed at the factory and shall be witnessed by

the Engineer of Record and DEN Project Manager, or their duly authorized representative:

- a. A complete visual inspection of the equipment, both internally and externally.
 - b. A complete test of all automatic transfer schemes including all operation and failure modes.
 - c. A complete test of all control panels and controls including dry contact outputs.
 - d. Verification of proper operation of all metering.
 - e. Verify mechanical operation; interlocks and interchangeability of selected breakers.
4. The testing outlined in item "A" above shall be performed only on one main switchgear. In order to perform such testing, all breakers shall be shipped to the switchboard factory and installed in their respective cubicles in a completely assembled Distribution Section
 5. Test 208 volt and /or 480 volt, 3-phase power sources shall be connected to the incoming side of each secondary main such that the sources may be individually applied and removed to completely simulate and test all features of the distribution sections.
 6. Submit to the DEN Project Manager ninety (90) calendar days prior to scheduled testing all test procedures for approval, and notify the DEN Project Manager four (4) weeks duration of the tests.
 7. Provide four (4) copies of the factory test report within two (2) weeks of the completion of such witness tests.

If an independent testing agency is required, see Section 014000 "Quality Requirements" for general testing and inspecting agency qualification requirements. If additional control is needed, use one of first two paragraphs below to specify 29 CFR 1910.7 or other more specific criteria (e.g., NETA). 29 CFR 1910.7 defines a nationally recognized testing laboratory as it applies to testing and inspecting for safety, and lists, labels, or accepts equipment and materials that meet certain OSHA criteria.

Retain first paragraph and subparagraph below if Contractor selects testing agency.

- B. Source Limitations: Obtain switchgear through one source from a single manufacturer.

Retain first paragraph below to allow drawing details based on one manufacturer's product to establish requirements and still allow competition. Coordinate with Section 016000 "Product Requirements."

- C. Product Options: Drawings indicate size, profiles, and dimensional requirements of switchgear and are based on the specific system indicated. Refer to Section 016000 "Product Requirements."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with NFPA 70.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver switchgear in sections of lengths that can be moved past obstructions in delivery path.

Retain one of two paragraphs below and edit to suit Project.

- B. Store switchgear indoors in clean dry space with uniform temperature to prevent condensation. Protect switchgear from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- C. If stored in areas subjected to weather, cover switchgear to provide protection from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside switchgear; install electric heating (250 W per section) to prevent condensation.

1.10 PROJECT CONDITIONS

Revise paragraph below to describe specific requirements for moving switchgear into place. Where appropriate, indicate alterations to existing facilities that may be required to accommodate an indicated delivery path. Coordinate with Drawings.

- A. Installation Pathway: Remove and replace building components and structures to provide pathway for moving switchgear into place.

Retain paragraph and subparagraphs below if interruption of existing utility service is required.

- B. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 2. Do not proceed with interruption of electrical service without DEN Project Manager's written permission.

Retain paragraph below if installation space for equipment is limited; show maximum dimensions on Drawings.

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchgear, including clearances between switchgear and adjacent surfaces and other items. Comply with indicated maximum dimensions.

Medium-voltage switchgear assemblies are designed for application at rated continuous load current where altitude above sea level does not exceed 3300 feet (1005 m), ambient air temperature does not exceed 40 deg C, and effects of solar radiation do not need to be considered. Switchgear operating at 1000 V and less is designed for same conditions except that altitude above sea level must not exceed 6600 feet (2011 m). Edit paragraph and subparagraphs below for Project conditions exceeding these

parameters. For switchgear located outdoors, include expected humidity range and specify compliance with IEEE C37.24 if solar radiation is a factor.

Consult manufacturer of generator paralleling control equipment for more stringent restrictions on environmental conditions. Edit paragraph and subparagraphs to suit these restrictions.

- D. Environmental Limitations: Rate equipment for continuous operation at indicated ampere ratings for the following conditions:
1. Ambient temperature range -30 deg F (-35 deg C) to 120 deg F (49 deg C) <Insert ambient temperature>.
 2. Altitude of 5,500 feet (1677 m) above sea level.
 3. <Insert unusual service conditions.>

1.11 COORDINATION

Edit first paragraph below to delete or add types of construction that penetrate or are supported by ceilings.

- A. Coordinate layout and installation of switchgear and components with other construction that penetrates ceilings or is supported by them, including conduit, piping, equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels.
- B. Coordinate size and location of concrete bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products.

Edit this Article with other Part 2 articles in which manufacturers are named. See Section 016000 "Product Requirements" for an explanation of the terms "Available Manufacturers" and "Manufacturers" and the effect these terms have on "Comparable Product" and "Product Substitution" requirements.

2.2 GENERATOR PARALLELING MONITOR AND CONTROL SYSTEM

- A. Coordinate paragraph and list below with Part 2 "Manufacturers" Article. Retain "Available" for nonproprietary and delete for semiproprietary specifications.
- B. Subject to compliance with requirements, provide products by one of the following:
1. Caterpillar; Engine Div.
 2. Emerson; ASCO Power Technologies, LP.
 3. GE Zenith Controls.
 4. Kohler Co.; Generator Division.
 5. Onan Corp.; Cummins Inc.; Industrial Business Group.
 6. Russelectric.
 7. **<Insert manufacturer>**
 8. or approved equal.

Type and location of individual control components and manner in which control functions are accomplished vary among manufacturers. Some manufacturers accomplish control functions listed in paragraph and subparagraphs below by locating all control equipment at the generator control panel. Others locate some of the equipment required to accomplish the listed functions in the paralleling switchgear control section. If specific locations are required for individual control components, revise below to suit Project.

Features included for generator control and monitoring panel in paragraph and subparagraphs below partially duplicate, but expand on, those included in Section 263213 "Engine Generators." Coordinate features specified here with that Section.

- C. Individual Generator Control and Monitoring Panel: Provide each generator with a control and monitoring panel that allows the operator to view status and control operation of respective generator. Provide panel with the following features and characteristics:
1. Generator Metering: 1 percent accuracy class or better.
 - a. Ammeter, Voltmeter, Frequency Meter, Wattmeter, Kilowatt-Hour Meter, and Power Factor Meter:
 - 1) For three-phase and four-wire systems, indicate line-to-line and line-to-neutral conditions on voltmeter.
- Retain first subparagraph below if analog meters are preferable to digital devices.
- 2) Provide analog devices for voltmeter and frequency meters.
 - 3) Provide switches or other provisions to allow reading of both generator and bus voltages and frequencies from this metering set.
- b. Synchroscope and "Generator Set Synchronized" Indication:
 - 1) Provide lamp or LED indication of synchronization.
 - 2) Provide 360-degree analog movement synchroscope.
 - c. Engine run-time meter, start counter, rpm meter, and battery voltage meter.

- d. Engine oil temperature gage and engine coolant temperature gage.
2. Generator Protective and Control Switches: Provide oiltight, industrial-grade switches in generator control and monitoring panel.
 - a. Mode Selector Switch (Run/Off/Auto):
 - 1) "Run" mode to start and accelerate unit to rated speed and voltage, but not close paralleling circuit breaker.
 - 2) "Off" mode to prevent generator from starting or to immediately shutdown generator if running.
 - 3) "Auto" mode to allow generator to start on receipt of remote start signal.
 - b. Circuit-Breaker Trip/Close Switch: Interlocked with system control so that circuit-breaker closure is impossible unless the following occurs:
 - 1) Mode selector switch is in "Run" position.
 - 2) Generator set is synchronized with system bus.
 - c. Control/reset push button with flashing lamp to indicate generator is locked out due to fault condition.
 - d. Lamp test push button to simultaneously test all lamps on panel.
 - e. Control Panel Illumination: DC lamps to illuminate panel when lighting from surrounding environment is not available.
 - f. Emergency Stop Push Button: Red mushroom-head switch maintaining its position until manually reset.
 - g. Voltage and Frequency Raise/Lower Switches:
 - 1) Allow plus/minus 5 percent adjustment when generator set is operating but not paralleled.

Some manufacturers accomplish control functions listed in first subparagraph and associated subparagraphs below by means of integrated, microprocessor-based controllers. Others use a series of electronic devices, each of which provides a specific control function. If specific types of devices are required for individual control components, revise below to suit Project.

3. Generator Protective and Control Devices: Solid-state industrial relays, integrated microprocessor-based control devices, and other accessories and devices located either in generator control and monitoring panel or in switchgear control section to provide the following features and functions:
 - a. Kilowatt Load Sharing Control:
 - 1) Operates engine governors during synchronizing and provides isochronous load sharing when paralleled.
 - 2) Allows generator set to ramp up to kilowatt load level signaled by system master controller.
 - b. Load-Demand Governing Control:

- 1) Causes generator set to ramp down to zero load when signaled to shut down in load-demand mode.
 - 2) Causes generator set to ramp up to a proportional share of total bus load.
- c. Kilovolt Ampere Rating Load Sharing Control:
- 1) Operates alternator excitation system while generator set is paralleled.
 - 2) Causes sharing of reactive load among all generator sets to within 1 percent of equal levels without voltage drop.
- d. Sync-Check and Paralleling Monitor and Control:
- 1) Monitors and verifies that generator set has reached 90 percent of nominal voltage and frequency before closing to bus.
 - 2) Prevents out-of-phase paralleling if two or more generator sets reach operating conditions simultaneously, by sending "inhibit" signal to sets not designated by system as "first to close to bus."
 - 3) Recognizes failure of "first-to-close" generator set and signals system paralleling to continue.
 - 4) Prevents out-of-phase closure to bus due to errant manual or automatic operation of synchronizer.
- e. Synchronizer Control:
- 1) Adjusts engine governor to match voltage, frequency, and phase angle of paralleling bus.
 - 2) Maintains generator-set voltage within 1 percent of bus voltage, and phase angle within 20 electrical degrees of paralleling bus for 0.5 seconds before circuit-breaker closing.
 - 3) Provides "fail-to-synchronize time delay" adjustable from 10 to 120 seconds; with field selectivity to either initiate alarm or shut down generator set on failure condition.
- f. Reverse Power Monitor and Control:
- 1) Prevents sustained reverse power flow in generator set.
 - 2) Trips generator circuit breaker and initiates generator set shutdown when reverse power condition exceeds 10 percent of generator set kilowatt for three seconds.
- g. Phase Rotation Monitor and Control:
- 1) Verifies generator set and paralleling bus phase rotation match prior to closing paralleling circuit breaker.

Protection provided in first two subparagraphs and associated subparagraphs below is in addition to that provided by generator-output circuit breaker. Specify generator-output circuit breaker in Section 263213 "Engine Generators."

- h. Electronic Alternator Overcurrent Alarm and Shutdown Control:
 - 1) Monitors current flow at generator-set output terminals.
 - 2) Initiates alarm when load current on generator set is more than 110 percent of rated current for more than 60 seconds.
 - 3) Provides overcurrent shutdown function matched to thermal damage curve of alternator. Provide without instantaneous-trip function.
 - i. Electronic Alternator Short-Circuit Protection:
 - 1) Provides shutdown when load current is more than 175 percent of rated current and combined time/current approaches thermal damage curve of alternator. Provide without instantaneous-trip function.
 - j. Loss of Excitation Monitor:
 - 1) Initiates alarm when sensing loss of excitation to alternator while paralleled to system bus.
 - k. Generator-Set Start Contacts: Redundant system, 10 A at 32-V dc.
 - l. Cool-Down Time-Delay Control: Adjustable, 0 to 600 seconds.
 - m. Start Time-Delay Control: Adjustable, 0 to 300 seconds.
 - n. Paralleling Circuit-Breaker Monitor and Control:
 - 1) Monitors circuit-breaker auxiliary contacts.
 - 2) Initiates fault signal if circuit breaker fails to close within adjustable time-delay period (0.5 to 15 seconds).
 - 3) Trips open and locks out paralleling circuit breaker upon paralleling circuit breaker failure to close, until manually reset.
4. Engine Protection and Local Annunciation:
- a. Provide annunciation and shutdown control modules for alarms indicated.
 - b. Provide visual alarm status indicator and alarm horn with silence/acknowledge push button on generator control and monitoring panel.
 - c. Annunciate the following conditions:
 - 1) Status, Light Only (Nonlatching):
 - a) Generator engine control switch not in auto (red).
 - b) Generator engine control switch in auto (green).
 - c) Emergency mode (red).
 - d) Generator circuit breaker closed (red).
 - e) Generator circuit breaker open (green).
 - f) Engine stopped (green).
 - g) Engine running (red).
 - h) Engine cool-down (amber).

- 2) Pre-Alarm, Light and Horn (Nonlatching):
 - a) Pre-high coolant temperature (amber).
 - b) Pre-low oil pressure (amber).
 - c) Low coolant temperature (amber).
 - d) Engine low battery (amber).
 - e) Engine low fuel (amber).
 - f) Generator fails to synchronize (amber).

- 3) Shutdown Alarm, Light and Horn (Latching):
 - a) Engine overcrank (red).
 - b) Engine overspeed (red).
 - c) Engine low oil pressure (red).
 - d) Engine high coolant temperature (red).
 - e) Engine low coolant level (red).
 - f) Engine remote emergency shutdown (red).
 - g) Generator circuit breaker tripped (red).
 - h) Generator loss of field (red).
 - i) Generator reverse power (red).
 - j) Generator undervoltage (red).
 - k) Generator overvoltage (red).
 - l) Generator underfrequency (red).
 - m) Generator overfrequency (red).

- D. Master Control System and Monitoring Equipment: Paralleling and monitoring equipment, components, and accessories for multiple generators with the following features and characteristics:

Master control system may be located in a separate enclosure. Most manufacturers provide it as a separate cubicle in switchgear lineup. If a separate enclosure is required, revise paragraph above and first subparagraph below to suit Project.

1. Components and devices shall be mounted in the switchgear control section of the switchgear lineup.
2. Paralleled System Metering: 1 percent accuracy class or better to monitor total output of generator bus.
 - a. Ammeter, voltmeter, frequency meter, wattmeter, kilowatt-hour meter, power factor meter, kilovolt ampere, kilovolt ampere rating, and kilowatt demand meters.
 - 1) For three-phase/four-wire systems, indicate line-to-line and line-to-neutral conditions on voltmeter.
 - 2) Display all functions on the HMI device.
3. Full-Color HMI Device: Touchscreen with minimum viewing area of 60 square inches.
 - a. Allows operator to monitor and control the complete system of paralleled generator sets.

- b. Screens shall include the following:
- 1) Main Menu: Include date, time, and system status messages with screen push buttons to access one-line diagram, system controls, load controls, alarms, bus metering, and individual generator-set data.
 - 2) One-Line Diagram Screen: Depicting system configuration and system status by screen animation, screen colors, text messages, or pop-up indicators. Indicate the following minimum system conditions:
 - a) Generator sets, buses, and paralleling circuit breakers energized/de-energized.
 - b) Generator-set mode (run/off/auto).
 - c) Generator-set status (normal/warning/shutdown/load-demand stop).
 - d) Paralleling circuit-breaker status (open/closed/tripped).
 - e) Bus conditions (energized/de-energized).
 - f) Provide access to other screens.
 - 3) AC Metering Screen: Displays the following minimum meter data for the paralleling bus:
 - a) Phase volts and amperes, kilowatt, kilovolt ampere, kilovolt ampere rating, power factor, frequency, kilowatt hour, and kilowatt demand.
 - b) Real-time trend chart for system kilowatts and volts updated on not less than one-second intervals.
 - c) A minimum of one historical trend chart for total system loads with intervals no shorter than five minutes and a minimum duration of four hours.
 - 4) Generator-Set Control Screen: Provides control over individual generator sets from master system control panel. Includes the following minimum functions:
 - a) Generator manual start/stop control (functional only when generator-set mounted control switch is in "Auto" position).
 - b) Generator-set alarm reset.
 - c) Manual paralleling and circuit-breaker controls.
 - 5) Generator-Set Data Display Screen: Provide the following minimum parameters:
 - a) Engine speed, oil pressure and temperature, coolant temperature, and engine operating hours.
 - b) Three-phase voltage and current, kilowatt, power factor, and kilowatt hour.
 - c) Generator control switch position and paralleling circuit-breaker position.
 - d) All generator-set alarms.

- 6) System Control Screen: Password protected and with the following minimum functions:
 - a) System Test Modes: Test with load/test without load/normal/retransfer time-delay override.
 - b) Test with Load: Starts and synchronizes generator sets on paralleling bus; all loads are transferred to bus.
 - c) Test without Load: Starts and synchronizes generator sets on paralleling bus but does not transfer loads to bus.
 - d) Time adjustments for retransfer time delay, transfer time delay, system time delay on stopping, and system time delay on starting.

- 7) Load-Demand Control Screen: Monitors total load on system bus and controls number of generator sets running so that capacity tracks load demand.
 - a) Load-Demand Control: On/off.
 - b) Load-Demand Pickup Set Point: Adjustable from 90 to 40 percent in 5 percent increments.
 - c) Load-Demand Dropout Set Point: Adjustable from 20 to 70 percent in 5 percent increments.

- 8) Manual Load Control Screen: Allows operator to manually add or delete generator sets from paralleled system in response to system load parameters.
 - a) Indication of system available in kilowatts and amperes.
 - b) Control functions allow manual addition/removal of generator sets on system, and activation of load-shed/load-restore functions.

- 9) Load-Add/Load-Shed Sequence Screen: Password protected and with the following minimum functions:
 - a) Assigns "load-add sequence priority" to each load control relay with designation for relay operation after a set number of generator sets are online.
 - b) Assigns "load-shed sequence priority" to each load control relay with designation for relay operation depending on number of generator sets online.

- 10) Alarm Summary and Run Report Screen:
 - a) Lists most recent alarm conditions and status changes.
 - b) Lists a minimum of the most recent 32 alarm conditions by name and time/date; acknowledges alarm conditions with time/date.

- c) For each start signal, lists start time and date, stop time and date, maximum kilowatt and ampere load on system during run time, and start and stop times of individual generator sets.

4. Solid-State System Status Panel:

- a. Provides visual alarm status indicator and alarm horn with silence/acknowledge push button.
- b. Annunciates the following conditions:
 - 1) Status, Light Only:
 - a) Running Status: Display generator set number and "green" running-status light.
 - b) Load demand mode (green).
 - c) Priority Load Status: Display load number and "green" on-status light.
 - d) System test (green).
 - e) Remote system start (red).
 - f) Normal source available (green).
 - g) Connected to normal (green).
 - h) Generator source available (green).
 - i) Connected to generator source (green).
 - 2) Status, Light and Alarm:
 - a) Load-Shed Level Status: Displays load number and red load-shed, status light.
 - b) Generator Alarm Status: Displays generator number and red "Check Generator" status light.
 - c) Controller malfunction (red).
 - d) Check station battery (red).
 - e) Bus overload (red).
 - f) System not in auto (red).

E. Description of System Operation:

1. Loss of Normal Power:
 - a. System receives "start" signal; all generator sets start and achieve rated voltage and frequency.
 - b. System closes the first generator set achieving 90 percent of rated voltage to paralleling bus.
 - c. "Priority load add" controls prevent overloading of system.
 - d. Remaining generator sets switched to synchronizers that control and then allow closure of generator sets to paralleling bus.
 - e. On closure to paralleling bus, each generator set assumes its proportional share of total load.
2. Failure of a Generator Set to Start or Synchronize:

- a. After expiration of overcrank time delay, generator set shuts down and alarm is initiated.
 - b. Priority controller prevents overload of system bus.
 - c. Manual override of priority controller at HMI allows addition of low-priority load to bus.
 - d. Bus overload monitor protects bus from manual overloading.
3. Bus Overload:
- a. On bus overload, load-shed control initiates load shedding.
 - b. If bus does not return to normal frequency within adjustable time period, additional load continues to be shed until bus returns to normal frequency.
 - c. Loads shed can be reconnected to bus only by manual reset at HMI.
4. Load-Demand Mode:
- a. With "load-demand" function activated, controller continuously monitors total bus load.
 - b. If bus load is below preset limits for 15 minutes, demand controller shuts down generator sets in predetermined order until minimum number of sets are operating.
 - c. On sensing available bus capacity diminished to set point, controller starts and closes generator sets to bus to accommodate load.
5. Return to Normal Power:
- a. Process starts on removal of start signals from system.
 - b. When no load remains on paralleling bus, all generator breakers open, go through cool-down period, and shut down.
 - c. If start signal is received during cool-down period, one generator set is reconnected to bus, and system operation follows that of "loss of normal power."

2.3 MANUFACTURED UNITS

Switchgear assemblies described in this Article and in the two articles that follow can be used for paralleling generator sets and for distributing generated power through feeder breakers located in same or separate switchgear lineups.

- A. Description: Factory assembled and tested and complying with IEEE C37.20.1.
 - B. Ratings: Suitable for application in 3-phase, 60-Hz, solidly grounded neutral system.
 - C. Indoor Enclosure Material: Steel.
 - D. Outdoor Enclosure Fabrication Requirements: Galvanized steel, weatherproof; integral structural-steel base frame with factory-applied asphaltic undercoating.
1. Provide each compartment or group of compartments with the following features:

- a. Structural design and anchorage adequate to resist loads imposed by [125-mph (200-km/h)] <Insert wind speed> wind.
- b. Space heater operating at one-half or less of rated voltage, sized to prevent condensation.
- c. Louvers equipped with insect and rodent screen and filter; arranged to permit air circulation while excluding insects, rodents, and exterior dust.

Delete first three subparagraphs below if weatherproof internal aisle construction is specified.

- d. Hinged front door with locking provisions.
- e. Interior light with switch.
- f. Weatherproof GFCI duplex receptacle.
- g. Power for heaters, lights, and receptacles to be provided [by control power transformer] [as indicated].

Retain subparagraph and associated subparagraphs below for weatherproof internal aisle construction.

2. Provide weatherproof internal aisle construction with the following features:
 - a. Common internal aisle of sufficient width to permit protective-device withdrawal, disassembly, and servicing in aisle.
 - b. Aisle access doors with exterior padlocking provisions and interior panic latches.
 - c. Aisle space heaters operating at one-half or less of rated voltage, thermostatically controlled.
 - d. Vaporproof fluorescent aisle lights with low-temperature ballasts, controlled by wall switch at each entrance.
 - e. GFCI duplex receptacles, a minimum of two, located in aisle.

Revise subparagraph below if forced ventilation rather than convection ventilation is required.

- f. Aisle ventilation louvers equipped with insect and rodent screen and filter; arranged to permit air circulation while excluding insects, rodents, and exterior dust.

- E. Access: Fabricate enclosure with hinged, rear cover panels to allow access to rear interior of switchgear.
- F. Finish: Manufacturer's standard gray finish over a rust-inhibiting primer on phosphatizing-treated metal surfaces.
- G. Phase-, Neutral-, and Ground-Bus Materials: Extend full length of switchgear.
 1. Phase and Neutral Bus: Copper, silver plated at connection points.
 2. Ground Bus: Copper, silver plated; minimum size 1/4 by 2 inches (6 by 50 mm).
- H. Switchgear Components: Incorporate components as indicated on Drawings.
 1. Instrument Transformers: Comply with IEEE C57.13.
 - a. Potential Transformers: Secondary-voltage rating of 120 V and NEMA accuracy class of 0.3 with burdens of W, X, and Y.

Coordinate subparagraph below with Drawings.

- b. Current Transformers: Burden and accuracy class suitable for connected relays, meters, and instruments.

Metering in subparagraph and associated subparagraphs below is independent of metering specified above for generator paralleling monitor and control system. Delete below if conventional analog-meter installation is required.

2. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems, listed and labeled by UL, and with the following features:
 - a. Inputs from sensors or 5-A current-transformer secondaries, and potential terminals rated to 600 V.
 - b. Switch-selectable digital display with the following features:
 - 1) Phase Currents, Each Phase: Plus or minus 1 percent.
 - 2) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - 3) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - 4) Three-Phase Real Power: Plus or minus 2 percent.
 - 5) Three-Phase Reactive Power: Plus or minus 2 percent.
 - 6) Power Factor: Plus or minus 2 percent.
 - 7) Frequency: Plus or minus 0.5 percent.
 - 8) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.

Retain subparagraph below to suit Project.

- 9) Accumulated energy, in megawatt hours (joules), plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

Coordinate first subparagraph below with Section 260913 "Electrical Power Monitoring and Control" or with other remote monitoring system.

- c. Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering requirements according to Section 260913 "Electrical Power Monitoring and Control."
- d. Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.

Delete subparagraph and associated subparagraphs below if multifunction digital-metering monitor above is specified.

3. Analog Instruments: Rectangular, 4-1/2 inches (115 mm) square, accurate within 1 percent; semiflush mounting, with antiparallax 250-degree scale and external zero adjustment; complying with ANSI C39.1.

Delete option in first subparagraph below for three-wire systems.

- a. Voltmeter Selector Switch: Rotary type with off position; provides readings of phase-to-phase and phase-to-neutral voltages.

Revise demand interval and other characteristics in two subparagraphs and associated subparagraphs below to suit Project.

Delete subparagraph below unless relays that are not integral with circuit breakers or circuit-breaker trip units are required. Specify relay functions and characteristics below or indicate on Drawings.

4. Relays: Comply with IEEE C37.90, integrated digital type; with test blocks and plugs.

Retain first subparagraph below to suit Project. Coordinate with Drawings.

5. Provision for Future Devices: Equip compartments with rails, mounting brackets, supports, necessary appurtenances, and bus connections.
6. Control Power Supply: Control power transformer supplies 120-V control circuits through secondary disconnect devices. Include the following features:
 - a. Dry-type transformers, in separate compartments for units larger than 3 kVA, including primary and secondary fuses.

Retain subparagraph below for electrically interlocked main and tie circuit breakers.

- b. Two control power transformers in separate compartments with necessary interlocking relays; each transformer connected to line side of associated main circuit breaker.

Retain one of first two subparagraphs below.

- 1) Secondary windings connected through relay(s) to control bus to effect an automatic transfer scheme.
 - 2) Secondary windings connected through an internal automatic transfer switch to switchgear control power bus.
- c. Control Power Fuses: Primary and secondary fuses provide current-limiting and overload protection.
 - d. Fuses are specified in Section 262813 "Fuses."
7. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:
 - a. Flexible conductors for No. 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
 - b. Conductors sized according to NFPA 70 for duty required.

Retain paragraph and subparagraphs below to suit Project.

- I. Identification: Electrical identification devices and installation requirements are specified in Section 260553 "Identification for Electrical Systems."
 1. Identify units, devices, controls, and wiring.
 2. Mimic Bus: Continuous mimic bus, applied to front of switchgear, arranged in one-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.

- a. Mimic-bus segments coordinated with devices in switchgear sections to which applied, to produce a concise visual presentation of principal switchgear components and connections.
- b. Medium: Painted graphics, as selected by DEN Project Manager.
- c. Color: Contrasting with factory-finish background; as selected by DEN Project Manager from manufacturer's full range.

Retain paragraph and subparagraphs below if dc control power source is required for switchgear. Generator paralleling monitor and control system may be powered from this system in lieu of the generator-set batteries. Revise to suit Project. Coordinate with Drawings.

Revise below if battery other than lead-calcium type is specified.

J. Control Battery System:

Coordinate first subparagraph below with Drawings or, preferably, revise to specify number of cells and required minimum ampere-hour capacity of battery.

1. System Requirements: Battery shall have number of cells and ampere-hour capacity based on an initial specific gravity of 1.210 at 25 deg C with electrolyte at normal level and minimum ambient temperature of 13 deg C. Cycle battery before shipment to guarantee rated capacity on installation. Arrange battery to operate ungrounded.
2. Battery: Lead-calcium type in sealed, clear plastic or glass containers, complete with electrolyte, fully charged, and arranged for shipment with electrolyte in cells. Limit weight of each container to not more than 70 lb (32 kg) and cells per container to not more than 3. System batteries shall be suitable for service at an ambient temperature ranging from minus 18 to 25 deg C. Limit variation of current output to 0.8 percent for each degree below 25 deg C down to minus 8 deg C.

Coordinate first two subparagraphs and associated subparagraphs below with Drawings.

3. Rack: Two-step rack with electrical connections between battery cells and between rows of cells; include two flexible connectors with bolted-type terminals for output leads. **[Rate battery rack, cell supports, and anchorage for seismic requirements.]**
4. Accessories:
 - a. Thermometers with specific-gravity correction scales.
 - b. Hydrometer syringes.
 - c. Set of socket wrenches and other tools required for battery maintenance.
 - d. Wall-mounting, nonmetallic storage rack fitted to store above items.
 - e. Set of cell numerals.
5. Charger: Static-type silicon rectifier equipped with automatic regulation and provision for manual and automatic adjustment of charging rate. Unit shall automatically maintain output voltage within 0.5 percent from no load to rated charger output current, with ac input-voltage variation of plus or minus 10 percent and input-frequency variation of plus or minus 3 Hz. Other features of charger include the following:

- a. DC ammeter.
- b. DC Voltmeter: Maximum error of 5 percent at full-charge voltage; operates with toggle switch to select between battery and charger voltages.
- c. Ground Indication: Two appropriately labeled lights to indicate circuit ground, connected in series between negative and positive terminals, and with midpoint junction connected to ground by normally open push-button contact.
- d. Capacity: Sufficient to supply steady load, float-charge battery between 2.20 and 2.25 V per cell and equalizing charge at 2.33 V per cell.
- e. Charging-Rate Switch: Manually operated switch provides for transferring to higher charging rate. Charger operates automatically after switch operation until manually reset.
- f. AC power supply is 120 V, 60 Hz, subject to plus or minus 10 percent variation in voltage and plus or minus 3-Hz variation in frequency. After loss of ac power supply for any interval, charger automatically resumes charging battery. Charger regulates rate of charge to prevent damage due to overload and to prevent fuses or circuit breakers from opening.
- g. Protective Feature: Current-limiting device or circuit, which limits output current to rating of charger but does not disconnect charger from either battery or ac supply; protects charger from damage due to overload, including short circuit on output terminals.
- h. Electrical Filtering: Reduces charger's audible noise to less than 26 dB.

2.4 METAL-CLAD, CIRCUIT-BREAKER SWITCHGEAR (1000 V AND LESS)

Coordinate first paragraph and list below with Part 2 "Manufacturers" Article. Retain "Available" for nonproprietary and delete for semiproprietary specifications.

- A. Subject to compliance with requirements, provide products by one of the following:
 1. ABB Inc.
 2. Cutler-Hammer; Eaton Corporation.
 3. General Electric Company.
 4. Siemens Energy & Automation, Inc.
 5. Square D; Schneider Electric.
 6. <Insert manufacturer>
 7. or approved equal.
- B. Description: Factory assembled and tested, and complying with IEEE C37.20.1.

Delete first three paragraphs below if ratings are indicated on Drawings. Drawings are generally the preferred location for this data.

- C. Nominal System Voltage: 480 V, 3 480/277 V, 4 240 V, 3 208/120 V, 4 wire, 60 Hz.

IEEE C37.20.1 lists main-bus ratings only through 4000 A, but some manufacturers provide bus ratings through 5000 A. However, circuit breakers are available only through 4000 A.

Main-bus rating may vary depending on configuration of paralleling and distribution switchgear. Edit paragraph below accordingly or indicate ratings on Drawings.

D. Main-Bus Continuous: **[4000] [3200] [2000] [1600] <Insert rating> A.**

For isolated bus paralleling of generator sets, ratings in first paragraph below need only accommodate generator fault current plus other sources of fault current available in distribution system. Delete paragraph if values are specified on Drawings.

E. Short-Time and Short-Circuit Current: Match rating of highest-rated circuit breaker in switchgear assembly.

F. Switchgear Fabrication:

1. Bus isolation barriers shall be arranged to isolate line bus from load bus at each main and tie circuit breaker.
2. Circuit-breaker compartments shall be equipped to house drawout-type circuit breakers and shall be fitted with hinged outer doors.

Edit subparagraph and associated subparagraphs below to suit Project.

3. Auxiliary Compartments: Match and align with basic switchgear assembly. Include the following:
 - a. Bus transition sections.
 - b. Pull sections.
 - c. Hinged front panels for access to accessory and blank compartments.
 - d. Pull box on top of switchgear for extra room for pulling cable; with removable top, front, and side covers; and ventilation provisions adequate to maintain air temperature in pull box within same limits as switchgear.

Retain first subparagraph below if top-mounted, circuit-breaker removal mechanism is used.

- 1) Set pull box back from front to clear circuit-breaker lifting mechanism.
- 2) Bottom: Insulating, fire-resistive material with separate holes for cable drops into switchgear.
- 3) Cable Supports: Arranged to ease cabling and adequate to support cables indicated, including those for future installation.

Coordinate first subparagraph and associated subparagraphs below with Drawings.

4. Bus bars connect between vertical sections and between compartments. Cable connections are not permitted.
 - a. Main Phase Bus: Uniform capacity the entire length of assembly.
 - b. Neutral Bus: **[50] [100]** percent of phase-bus ampacity, except as indicated. **[Equip bus with pressure-connector terminations for outgoing neutral conductors] [Include braces for neutral-bus extensions for busway feeders].**
 - c. Vertical Section Bus Size: Comply with IEEE C37.20.1, including allowance for spare circuit breakers and spaces for future circuit breakers.
 - d. Supports and Bracing for Buses: Adequate strength for indicated short-circuit currents.

Retain first subparagraph below if required for distribution sections of switchgear with main service disconnect switches. Edit to suit Project. Coordinate with Drawings.

- e. Neutral Disconnect Link: Bolted, uninsulated, 1/4-by-2-inch (6-by-50-mm) copper bus, arranged to connect neutral bus to ground bus.
- f. Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.

IEEE and UL standards may require air insulation only. Retain first subparagraph and associated subparagraphs below if insulated bus is required.

- g. Bus-Bar Insulation: Individual bus bars wrapped with factory-applied, flame-retardant tape or spray-applied, flame-retardant insulation.
 - 1) Sprayed Insulation Thickness: 3 mils (0.08 mm), minimum.
 - 2) Bolted Bus Joints: Insulate with secure joint covers that can easily be removed and reinstalled.
- 5. Circuit-Breaker Terminals for Cable Connections: Silver-plated copper bus extensions equipped with pressure connectors for conductors.

G. Circuit Breakers: Comply with IEEE C37.13.

Coordinate first subparagraph below with Drawings.

- 1. Ratings: As indicated for continuous, interrupting, and short-time current ratings for each circuit breaker; voltage and frequency ratings same as switchgear.
- 2. Operating Mechanism: Mechanically and electrically trip-free, stored-energy operating mechanism with the following features:
 - a. Normal Closing Speed: Independent of both control and operator.
 - b. Slow Closing Speed: Optional with operator for inspection and adjustment.

Retain one of two options in subparagraph below to specify manual or electrical operation for circuit breakers.

- c. Stored-Energy Mechanism: **[Manually charged] [Electrically charged, with optional manual charging].**

Retain first subparagraph below if applicable.

- d. Operation counter.
- 3. Trip Devices: Solid-state, overcurrent trip-device system consisting of one or two current transformers or sensors per phase, a release mechanism, and the following features:

Select from seven subparagraphs below to suit Project. Requirements may vary depending on whether circuit breakers are used for paralleling generators or for distribution circuits.

- a. Functions: Long-time-delay, short-time-delay, and instantaneous-trip functions, independent of each other in both action and adjustment.
- b. Temperature Compensation: Ensures accuracy and calibration stability from minus 5 to plus 40 deg C.
- c. Field-adjustable, time-current characteristics.

- d. Current Adjustability: Dial settings and rating plugs on trip units or sensors on circuit breakers, or a combination of these methods.
- e. Three bands, minimum, for long-time- and short-time-delay functions; marked "minimum," "intermediate," and "maximum."
- f. Pickup Points: Five minimum, for long-time- and short-time-trip functions. Equip short-time-trip function for switchable I2t operation.
- g. Pickup Points: Five minimum, for instantaneous-trip functions.

Coordinate first subparagraph and associated subparagraphs below with Drawings. Indicate circuits with ground-fault protection. Show type of protection for each circuit where switchgear has more than one type.

- h. Ground-fault protection with at least three short-time-delay settings and three trip-time-delay bands; adjustable current pickup. Arrange to provide protection for the following:
 - 1) Three-wire circuit or system.
 - 2) Four-wire circuit or system.
 - 3) Four-wire, double-ended substation.
- i. Trip Indication: Labeled, battery-powered lights or mechanical targets on trip device to indicate type of fault.

Retain first subparagraph below if applicable. Coordinate with Drawings.

- 4. Auxiliary Contacts: For interlocking or remote indication of circuit-breaker position, with spare auxiliary switches and other auxiliary switches required for normal circuit-breaker operation, quantity as indicated. Each consists of two Type "a" and two Type "b" stages (contacts) wired through secondary disconnect devices to a terminal block in stationary housing.
- 5. Drawout Features: Circuit-breaker mounting assembly equipped with a racking mechanism to position circuit breaker and hold it rigidly in connected, test, and disconnected positions. Include the following features:
 - a. Interlocks: Prevent movement of circuit breaker to or from connected position when it is closed.
 - b. Circuit-Breaker Positioning: An open circuit breaker may be racked to or from connected, test, and disconnected positions only with the associated compartment door closed, unless live parts are covered by a full dead-front shield. An open circuit breaker may be manually withdrawn to a position for removal from the structure with the door open. Status for connection devices for different positions includes the following:
 - 1) Test Position: Primary disconnect devices disengaged, and secondary disconnect devices and ground contact engaged.
 - 2) Disconnected Position: Primary and secondary devices and ground contact disengaged.
- 6. Arc Chutes: Readily removable from associated circuit breaker when it is in disconnected position; arranged to permit inspection of contacts without removing circuit breaker from switchgear.

7. Padlocking Provisions: For installing at least three padlocks on each circuit breaker to secure its enclosure and prevent movement of drawout mechanism.

Retain first subparagraph below if applicable.

8. Operating Handle: One for each circuit breaker capable of manual operation.
9. Electric Close Button: One for each electrically operated circuit breaker.

First subparagraph below limits competition because some manufacturers do not provide mechanical interlocks. Interlocks are normally required for transferring of loads or prohibiting the paralleling of loads. Retain below only if required for specific control function.

10. Mechanical Interlocking of Circuit Breakers: Uses a mechanical tripping lever or equivalent design and electrical interlocks.
11. Key Interlocks: Arranged so keys are attached at devices indicated. Mountings and hardware are included where future installation of key-interlock devices is indicated.
12. Undervoltage Trip Devices: Instantaneous, with adjustable pickup voltage.

Retain subparagraph above or first subparagraph below.

13. Undervoltage Trip Devices: Adjustable time-delay and pickup voltage.
14. Shunt-Trip Devices: Where indicated.
15. Indicating Lights: To indicate circuit breaker is open or closed, for main and bus tie circuit breakers interlocked either with each other or with external devices.

Retain paragraph and subparagraphs below or delete if not applicable.

- H. Accessories: Furnish tools and miscellaneous items required for circuit-breaker and switchgear tests, inspections, maintenance, and operation.
 1. Racking handle to manually move circuit breaker between connected and disconnected positions.
 2. Portable test set for testing all functions of circuit-breaker, solid-state trip devices without removal from switchgear.
 3. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.

Delete one of two, or both, apparatus paragraphs below. Coordinate apparatus space requirements with Drawings.

- I. Circuit-Breaker Removal Apparatus: Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.

If paragraph below is used for outdoor switchgear, it must be walk-in aisle type. Coordinate apparatus space requirements with Drawings.

- J. Circuit-Breaker Removal Apparatus: Overhead-circuit-breaker lifting device, track mounted at top front of switchgear and complete with hoist and lifting yokes matching each size of drawout circuit breaker installed.

Coordinate first paragraph below with Drawings.

- K. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
- L. Storage for Manual: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

2.5 METAL-CLAD, MEDIUM-VOLTAGE, CIRCUIT-BREAKER SWITCHGEAR

Coordinate paragraph and list below with Part 2 "Manufacturers" Article. Retain "Available" for nonproprietary and delete for semiproprietary specifications.

- A. Subject to compliance with requirements, provide products by one of the following:
 - 1. ABB, Inc.
 - 2. Cutler-Hammer; Eaton Corporation.
 - 3. General Electric Company.
 - 4. Siemens Energy & Automation, Inc.
 - 5. Square D; Schneider Electric.
 - 6. **<Insert manufacturer>**
 - 7. or approved equal.

Retain only paragraph below for conventional switchgear; retain first two paragraphs for arc-resistant switchgear.

- B. Comply with IEEE C2 and IEEE C37.20.3.

See Evaluations for description of each switchgear type. Verify availability with manufacturers.

- C. System Voltage: 4.16 kV nominal; 4.76 kV maximum.
- D. Nominal Interrupting-Capacity Class: [250] [350] [500] [750] [1000] MVA.
- E. Ratings: Comply with IEEE C37.04.

Delete subparagraph below if ampere rating is shown on Drawings.

- F. Circuit Breakers: Three-pole, single-throw, electrically operated, drawout-mounting units using three individual, [**vacuum-sealed**] [**sulfur hexafluoride insulated and sealed**] interrupter modules; include the following features:
 - 1. Designed to operate at rated voltage to interrupt fault current within its rating within [**three**] [**five**] cycles of trip initiation. For systems with X/R ratio of 17 or less, transient voltage during interruption shall not exceed twice the rated line-to-ground voltage of system.
 - 2. Contact-Wear Indicator: Readily accessible to field maintenance personnel.
 - 3. Minimum of six Type A and six Type B spare contacts.
 - 4. Interchangeability: Circuit breakers are interchangeable with vacuum circuit breakers of same current and interrupting ratings.

Retain subparagraph below if sulfur hexafluoride circuit breakers are used.

5. Internal sulfur hexafluoride pressure is not to exceed 2.5 bars during normal operation.

Retain first three subparagraphs below and revise to suit Project.

- a. Current Rating of Main Circuit Breaker: 2000 A.
 - b. Continuous Current Rating of Tie Circuit Breaker: 2000 A.
 - c. Continuous Current Rating of Feeder Circuit Breaker: 1200 A.
6. Operating Mechanism: Electrically charged, mechanically and electrically trip-free, stored-energy operated.
 - a. Closing speed of moving contacts to be independent of both control and operator.
 - b. Design mechanism to permit manual charging and slow closing of contacts for inspection or adjustment.

Retain one of first two subparagraphs below and select from control power options. See Evaluations for discussion. Coordinate with requirement for control battery system.

- 1) Control Power: [24] [48] [125] <Insert voltage>-V dc for closing and tripping.

- c. Provide shunt-trip capability independent of overcurrent trip.

- G. Bus Insulation: Covered with flame-retardant insulation.

Retain remaining paragraphs and subparagraphs applicable to Project.

- H. Test Accessories: Relay and meter test plugs.

Coordinate paragraph below with Drawings.

- I. Low-DC-Voltage Alarm: Switchgear shall have a monitor for dc control power voltage with a remote alarm located where indicated. Alarm shall sound if voltage falls to an adjustable value to indicate an impending battery failure. Factory set alarm value at 80 percent of full-charge voltage.

Retain paragraph and subparagraphs below if required by utility company or by medium-voltage maintenance and testing agency serving Project facility. Utility requirements below are examples only; revise to suit Project.

- J. Grounding and Testing Device: Suitable for phasing out, testing, and grounding switchgear bus or feeder if device is installed in place of circuit breaker. Include the following:
 1. Portable Grounding and Testing Device: Interchangeable with drawout-mounting, medium-voltage circuit breakers to provide interlocked electrical access to either bus or feeder; electrically operated.
 2. System control cabinet permanently mounted near switchgear.
 3. Portable Remote-Control Station: For grounding and testing device.

4. Control-Cabinet Coupler Cable: Of adequate length to connect device inserted in any switchgear cubicle and control cabinet.
5. Remote-Control Coupler Cable: **50 feet** (15 m) long to connect control cabinet and portable remote-control station.
6. Permanent Control Power Wiring: From control cabinet to power source.
7. Protective Cover: Fabricated of heavy-duty plastic and fitted to device.
8. Approval of Grounding and Testing Device System: Obtain approval of final system design from utility company and agency designated by Owner to handle future maintenance of medium-voltage switchgear.

Coordinate first paragraph below with Drawings.

- K. Circuit-Breaker Test Cabinet: Separately mounted and containing push buttons for circuit-breaker closing and tripping, control relay, fuses, and secondary coupler with cable approximately **108 inches** (2740 mm) long. Include a set of secondary devices for operating circuit breaker if removed from switchgear and moved near test cabinet. Include provision for storage of test and maintenance accessories in cabinet.
- L. Remote-Tripping Device: Wall-mounting emergency control station to open circuit breakers; located in red cast-metal box with break-glass operation.
- M. Bus Transition Unit: Arranged to suit bus and adjacent units.
- N. Outgoing Feeder Units: Arranged to suit distribution feeders.
- O. Auxiliary Compartments: Arranged to suit house meters, relays, controls, and auxiliary equipment; isolated from medium-voltage components.
- P. Key Interlocks: Arranged to effect interlocking schemes indicated.
- Q. Provisions for Future Key Interlocks: Mountings and hardware required for future installation of locks, where indicated.
- R. Source Quality Control:

Add a subparagraph here if factory testing is to be witnessed by Owner's representative or others. Indicate which portions of testing are to be witnessed.

1. Before shipment of equipment, perform the following tests and prepare test reports:
 - a. Production tests on circuit breakers according to ANSI C37.09.
 - b. Production tests on completed switchgear assembly according to IEEE C37.20.2.
2. Assemble switchgear and equipment in manufacturer's plant and perform the following:
 - a. Functional tests of all relays, instruments, meters, and control devices by application of secondary three-phase voltage to voltage circuits and injection of current in current-transformer secondary circuits.

- b. Functional test of all control and trip circuits. Connect test devices into circuits to simulate operation of controlled remote equipment such as circuit-breaker trip coils, close coils, and auxiliary contacts. Test proper operation of relay targets.
3. Prepare equipment for shipment.
 - a. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - b. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces where switchgear will be installed for compliance with installation tolerances, required clearances, and other conditions affecting performance.
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with applicable portions in NECA 400.
- B. Anchor switchgear assembly to 4-inch (100-mm) channel-iron embedded in concrete base and attach by bolting.
 1. Sills: Select to suit switchgear; level and grout flush into concrete base.

Retain subparagraph below if Project is in seismic area.

2. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. See Section 260548 "Vibration and Seismic Controls for Electrical Systems" for seismic-restraint requirements.

Retain subparagraph below to suit Project. Coordinate with Drawings.

3. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 3 inches (75 mm) in all directions beyond the maximum dimensions of switchgear, unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Section 260529 "Hangers and Supports for Electrical Systems."
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, brackets, and temporary blocking of moving parts from switchgear units and components.

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Section 260553 "Identification for Electrical Systems."
- B. Diagrams and Instructions:
 - 1. Frame and mount under clear acrylic plastic on front of paralleling low-voltage switchgear.
 - a. Operating Instructions: Printed basic instructions for switchgear, including control and key-interlock sequences and emergency procedures.
 - b. System Power Riser Diagrams: Depict power sources, feeders, distribution components, and major loads.
 - 2. Storage for Maintenance: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

3.4 CONNECTIONS

- A. Comply with grounding and bonding requirements in Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Comply with wire and cable requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

Retain paragraph below for medium-voltage switchgear applications.

- C. Cable terminations at switchgear are specified in Section 260513 "Medium-Voltage Cables."

3.5 FIELD QUALITY CONTROL

Retain first paragraph below to require Contractor to prepare switchgear and related components for manufacturer's field service technician and for acceptance testing.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each switchgear bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Perform the following tests and inspections and prepare test reports:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for each of the following NETA categories:
 - a. Switchgear.
 - b. Circuit breakers.
 - c. Protective relays.
 - d. Instrument transformers.
 - e. Metering and instrumentation.
 - f. Ground-fault systems.
 - g. Battery systems.
 - h. Surge arresters.
 - i. Capacitors.
 - 2. Remove and replace malfunctioning units and retest as specified above.

Revise "Infrared Scanning" Paragraph below to suit types of switchgear specified.

- D. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchgear. Remove front and rear panels so joints and connections are accessible to portable scanner.
 - 1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchgear 11 months after date of Substantial Completion.
 - 2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - 3. Record of Infrared Scanning: Prepare a certified report that identifies switchgear checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

Retain one of two paragraphs below. Retain first if coordination study is responsibility of Contractor and is included in Section 260573 "Overcurrent Protective Device Coordination Study."

- A. Set field-adjustable, protective-relay trip characteristics according to results in Section 260573 "Overcurrent Protective Device Coordination Study."
- B. Set field-adjustable, protective-relay trip characteristics.

3.7 CLEANING

- A. On completion of installation, inspect interior and exterior of switchgear. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Repair damaged finishes.

3.8 PROTECTION

- A. Temporary Heating: Apply temporary heat to switchgear, according to manufacturer's written instructions, throughout periods when switchgear environment is not controlled for temperature and humidity within manufacturer's stipulated service conditions.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain paralleling low-voltage switchgear.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262313

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262413 - SWITCHBOARDS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Service and distribution switchboards rated 600 V and less.
 - 2. Surge protection devices.
 - 3. Disconnecting and overcurrent protective devices.
 - 4. Instrumentation.
 - 5. Control power.
 - 6. Accessory components and features.
 - 7. Identification.

Mimic bus is not common for switchboards other than large, drawout-type switchboards; it is normally used for switchgear construction.

- 8. Mimic bus.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in

this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

Retain this article with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Model building codes and SEI/ASCE 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction.

- A. Seismic Performance: Switchboards shall withstand the effects of earthquake motions determined according to [SEI/ASCE 7] <Insert requirement>.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of switchboard, overcurrent protective device, transient voltage suppression device, ground-fault protector, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

1. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Detail short-circuit current rating of switchboards and overcurrent protective devices.

Retain first subparagraph below if optional barriers are specified.

5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
6. Detail utility company's metering provisions with indication of approval by utility company.

Retain first subparagraph below if series rating of overcurrent protective devices is used.

7. Include evidence of NRTL listing for series rating of installed devices.

8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

Retain first subparagraph below if final system short-circuit and coordination studies will be performed by designer or assigned to independent consultant. These curves are also beneficial to Owner for future additions or reevaluations of settings of overcurrent protective devices.

9. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

Retain first subparagraph below if mimic bus is specified.

10. Include diagram and details of proposed mimic bus.
11. Include schematic and wiring diagrams for power, signal, and control wiring.

Retain "Samples" Paragraph below if mimic bus is specified.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: Representative portion of mimic bus with specified material and finish, for color selection.

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article. Both NECA 400 and NEMA PB 2.1 recommend that installers be "qualified," which is defined in NFPA 70.

- A. Qualification Data: For qualified [**Installer**] [**testing agency**].

Retain first paragraph below if required by seismic criteria applicable to Project. Coordinate with Division 26 Section "Vibration and Seismic Controls for Electrical Systems." See SEI/ASCE 7 for certification requirements for equipment and components.

Coordinate seismic requirements with DEN Project Manager.

- B. Seismic Qualification Certificates: Submit certification that switchboards, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For switchboards and components to include in

emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

1. Routine maintenance requirements for switchboards and all installed components.
2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
3. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MAINTENANCE MATERIAL SUBMITTALS

Coordinate this article with Section 262813 "Fuses" for quantities of spare fuses and spare-fuse cabinet to be provided.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Potential Transformer Fuses: Equal to 10 percent of quantity installed for each size and type but no fewer than two (2) of each size and type.
 2. Control-Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two (2) of each size and type.
 3. Fuses and Fusible Devices for Fused Circuit Breakers: Equal to 10 percent of quantity installed for each size and type but no fewer than three (3) of each size and type.
 4. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type but no fewer than three (3) of each size and type.
 5. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type but no fewer than three (3) of each size and type.
 6. Indicating Lights: Equal to 10 percent of quantity installed for each size and type but no less than one (1) of each size and type.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.

Retain first paragraph below if Contractor selects testing agency or if Contractor is required to provide

services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Division 01 Section "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- B. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

Retain first paragraph below to allow drawing details based on one manufacturer's product to establish requirements and still allow competition. Coordinate with Division 01 requirements.

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with NEMA PB 2.
- F. Comply with NFPA 70.
- G. Comply with UL 891.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.

Retain first paragraph below if site conditions require supplemental heating to prevent condensation. Select first option if switchboards do not have factory-installed space heaters. Select second option if switchboards have factory-installed space heaters specified in Part 2.

- B. Remove loose packing and flammable materials from inside switchboards and [**install temporary electric heating (250 W per section)**] [**connect factory-installed space heaters to temporary electrical service**] to prevent condensation.

See "Testing and Inspecting" Article in the Evaluations for guidance on which option to select in paragraph below.

- C. Handle and prepare switchboards for installation according to [**NECA 400**] [**NEMA PB 2.1**].

1.10 PROJECT CONDITIONS

Revise first Paragraph below to describe specific requirements for moving switchboards into place. Where appropriate, indicate alterations to existing facilities that may be required to accommodate an indicated delivery path. Coordinate with Drawings.

- A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

Retain first Paragraph below for switchboards installed in typical environmental conditions. For switchboards installed outdoors or in unusual environmental conditions, revise paragraph to indicate minimum and maximum ambient temperatures and expected humidity range. See "Switchboard Design" Article in the Evaluations.

- B. Environmental Limitations:

1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 - a. Location: Indoors/outdoors.
 - b. Ambient Temperature: Not exceeding 120 deg F (49 deg C).
 - c. Altitude: 5500 feet (1677 m), not exceeding 6600 feet (2000 m).

Retain "Unusual Service Conditions" Paragraph below or revise to accommodate unusual service conditions that cannot be eliminated. See "Switchboard Design" in the Evaluations.

- C. Unusual Service Conditions: NEMA PB 2, usual service conditions, as follows:

1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet (2000 m).

Retain "Interruption of Existing Electric Service" Paragraph below if interruption of existing electric service is required.

- D. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
2. Indicate method of providing temporary electric service.
3. Do not proceed with interruption of electric service without DEN Project Manager's written permission.
4. Comply with NFPA 70E.

1.11 COORDINATION

Revise first paragraph below for types of construction and encumbrances that affect switchboard installation.

- A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3.

1.12 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods with manufacturers listed in Part 2 articles.

1. Warranty Period: Minimum **[five (5)]** <Insert number> years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. **<Insert manufacturer>**
6. or approved equal.

Switchboards described in this article include service and distribution types most commonly applied.

Coordinate type of switchboard with types of overcurrent protective devices and with switchboard arrangement and available space. Consult manufacturer to determine layout requirements. See Evaluations for further discussion. Most switchboards are both front and rear aligned, with the possible exception of units with very large or unusual main cubicles. The Section Text defaults to front and rear alignment; coordinate with manufacturers for unusual conditions.

Retain one or more of first three paragraphs below. If retaining more than one, identify switchboard types on Drawings.

B. Front-Connected, Front-Accessible Switchboards:

1. Main Devices: **[Panel] [Fixed, individually]** mounted.
2. Branch Devices: Panel mounted.
3. Sections front and rear aligned.

C. Front- and Side-Accessible Switchboards:

1. Main Devices: Fixed, individually mounted.
2. Branch Devices: Panel mounted.
3. Sections front and rear aligned.

D. Front- and Rear-Accessible Switchboards:

1. Main Devices: **[Fixed, individually] [Drawout]** mounted.
2. Branch Devices: **[Panel] [Fixed, individually] [Panel and fixed, individually] [Fixed and individually compartmented] [Individually compartmented and drawout]** mounted.
3. Sections **[front and rear] [rear]** aligned.

Retain first two paragraphs below if rating data are not on Drawings.

- E. Nominal System Voltage: **[480Y/277 V] [208Y/120 V] <Insert system voltage>**.
- F. Main-Bus Continuous: **[5000] [4000] [3000] [2500] [2000] [1600] [1200] <Insert ampere rating>** A.

Retain first paragraph below for projects in seismic areas. If retaining, also retain "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article.

- G. Seismic Requirements: Fabricate and test switchboards according to IEEE 344 to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

Switchboards rely on natural convection for dissipating heat; therefore, NEMA 250, Type 12 enclosures are not usually available.

H. Indoor Enclosures: Steel, NEMA 250, [Type 1] [Type 5].

Custom colors, especially for outdoor units, are normally available as an option. Coordinate with Owner to determine if a special color is required. Consider a white or very light color for the roofs of outdoor units for better reflectance.

I. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's [standard gray] [custom color] finish over a rust-inhibiting primer on treated metal surface.

J. Outdoor Enclosures: [Type 3R] [Type 3R, with interior-lighted walk-in aisle].

1. Finish: Factory-applied finish in manufacturer's [standard] [custom] color; undersurfaces treated with corrosion-resistant undercoating.
2. Enclosure: [Flat] [Downward, rearward sloping] roof; [bolt-on rear covers] [rear hinged doors] for each section, with provisions for padlocking.
3. Doors: Personnel door at each end of aisle, minimum width of [30 inches (762 mm)] <Insert value>; opening outwards; with panic hardware and provisions for [padlocking] [cylinder lock].
4. Accessories: Fluorescent lighting fixtures, ceiling mounted; wired to a three-way light switch at each end of aisle; ground-fault circuit interrupter (GFCI) duplex receptacle; emergency battery pack lighting fixture installed on wall of aisle midway between personnel doors.
5. Walk-in Aisle Heating and Ventilating:

See Editing Instruction No. 3 in the Evaluations for temperature range included in NEMA PB 2 to define "usual service conditions." In first two subparagraphs below, optional interior temperatures are based on minimum and maximum ambient temperatures at which derating of fuses and circuit breakers should be considered. Insert higher or lower values if human comfort levels take precedence. Consult ASHRAE tables for recommended maximum and minimum outside design temperatures for locations in which switchboards will be installed.

- a. Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of [40 deg F (5 deg C)] <Insert temperature> with outside design temperature of [minus 30 deg F (minus 35 deg C)] <Insert temperature>.
- b. Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of [100 deg F (38 deg C)] <Insert temperature> with outside design temperature of [120 deg F (49 deg C)] <Insert temperature>.
- c. Ventilating openings[complete with replaceable fiberglass air filters].
- d. Thermostat: Single stage; wired to control heat and exhaust fan.

Retain one of two subparagraphs below. Retain first subparagraph to require switchboard manufacturer to provide power through a control transformer. Retain second if power from a remote source is indicated on Drawings. Coordinate with Drawings.

6. Power for Space Heaters, Ventilation, Lighting, and Receptacle: Include a control-power transformer within the switchboard. Supply voltage shall be [120]

- [120/240] [120/208]-V ac.
7. Power for space heaters, ventilation, lighting, and receptacle provided by a remote source.

K. Barriers: Between adjacent switchboard sections.

Internal barriers and extra insulation are not an ANSI or a UL requirement, and they can interfere with ventilation required for heat dissipation. Insert internal barriers and extra insulation to isolate energized components, such as buses and vertical sections, if required to protect against damage from arcing ground faults; coordinate with manufacturers for restrictions, limitations, and bus-size increases. As another option, consider using low-voltage, metal-clad switchgear. See Evaluations for further discussion.

L. Insulation and isolation for [**main bus of main section and**] main and vertical buses of feeder sections.

Retain first paragraph below for switchboards installed outdoors. Heaters and controls may be required for indoor units in unconditioned spaces.

M. Cubical Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.

Where overcurrent devices are mounted on both sides of a central walk-in corridor, more than one thermostat may be required.

1. Space-Heater Control: [**Thermostats to maintain temperature of each section above expected dew point**] [**Manual switching of branch-circuit protective device**].
2. Space-Heater Power Source: [**Transformer, factory installed in switchboard**] [**120-V external branch circuit**].

N. Utility Metering Compartment: Fabricated, barrier compartment and section complying with utility company's requirements; hinged sealed door; buses provisioned for mounting utility company's current transformers and potential transformers or potential taps as required by utility company. If separate vertical section is required for utility metering, match and align with basic switchboard. Provide service entrance label and necessary applicable service entrance features.

Select option in first paragraph below if metering requires a voltage different from switchboard bus voltage.

O. Customer Metering Compartment: A separate customer metering compartment and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks. [**Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.**]

Pull sections in first paragraph below may be required if incoming supply is beneath switchboard.

P. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

Retain first paragraph below for rear access.

- Q. Removable, Hinged Rear Doors and Compartment Covers: Secured by [**captive thumb screws**] [**standard bolts**], for access to rear interior of switchboard.
- R. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.

A pull box across the entire top of switchboard is usually only required for very large quantities of outgoing feeders and across the main incoming section for very large feeders with multiple large conductors per phase and neutral. Indicate the presence and extent of pull boxes on Drawings.

- S. Pull Box on Top of Switchboard:
 - 1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.

Retain first subparagraph below for top-mounted, circuit-breaker removal mechanism.

- 2. Set back from front to clear circuit-breaker removal mechanism.
 - 3. Removable covers shall form top, front, and sides. Top covers at rear shall be easily removable for drilling and cutting.
 - 4. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into switchboard.
 - 5. Cable supports shall be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.
- T. Buses and Connections: Three phase, four wire unless otherwise indicated.

Retain subparagraph below for main-bus material.

- 1. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity, [**silver-plated**,]with tin-plated copper feeder circuit-breaker line connections.

Retain first subparagraph below if drawout circuit breakers and rear-access sections are specified.

- 2. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with [**mechanical**] [**compression**] connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.
 - 3. Ground Bus: [**1/4-by-2-inch-** (6-by-50-mm-)] [**1/4-by-1-inch-** (6-by-25-mm-)] [**Minimum-size required by UL 891,**] hard-drawn copper of 98 percent conductivity, equipped with [**mechanical**] [**compression**] connectors for feeder and branch-circuit ground conductors. For busway feeders, extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.
 - 4. Main Phase Buses and Equipment Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.

Neutral buses can be reduced in size if a substantial portion of the loads are balanced three-phase types (e.g., motors and transformers). Neutral buses can be deleted if switchboards serve only three-phase balanced loads. For service-entrance rated switchboards, neutral buses need not extend beyond the

switchboard's main incoming section. Retain one of first two subparagraphs below or delete both for three-phase, three-wire systems.

5. Neutral Buses: 50 percent of the ampacity of phase buses unless otherwise indicated, equipped with **[mechanical] [compression]** connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
6. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with **[mechanical] [compression]** connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.

Retain subparagraph below if optional barriers are specified.

7. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.

Retain first paragraph below to require provisions for future expansion.

- U. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.

Insulation on buses retains heat and reduces ampacity, which means larger bus bars are required. Retain first paragraph below if Project conditions require bus insulation; coordinate with manufacturers for restrictions, limitations, and bus-size increases. Uninsulated buses are standard.

- V. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.

Retain paragraph below for installations in humid tropical environments.

- W. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.

2.2 TRANSIENT VOLTAGE SUPPRESSION DEVICES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Siemens Energy & Automation, Inc.
 4. Square D; a brand of Schneider Electric.
 5. **<Insert manufacturer>**
 6. or approved equal.

Selection of options in first paragraph below is a matter of ease of maintenance and replacement; coordinate final choices with Owner's maintenance personnel. Wired-in type offers more safety with a slight reduction in protection; modular types offer the quickest maintenance, but may come at a slightly higher cost. See the Evaluations in Division 26 Section "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits" for guidance on revising this article.

- B. Surge Protection Device Description: IEEE C62.41-compliant, integrally mounted,

[wired-in] [plug-in] [bolt-on], solid-state, parallel-connected, **[modular (with field-replaceable modules)] [non-modular]** type, with sine-wave tracking suppression and filtering modules, UL 1449, second edition, short-circuit current rating matching or exceeding the switchboard short-circuit rating, and with the following features and accessories:

Retain accessories in 10 subparagraphs below to coordinate with options retained in paragraph above; verify availability and compatibility with manufacturer.

If specifying fuses for connecting TVSS devices to distribution system, verify ability of fuses to withstand surges consistent with ultimate surge current rating of device.

1. Fuses, rated at 200-kA interrupting capacity.
2. Fabrication using bolted compression lugs for internal wiring.

Retain first subparagraph below only if a fused switch or circuit breaker is not provided for the TVSS in the switchboard and the TVSS will not have a direct bus connection.

3. Integral disconnect switch.
4. Redundant suppression circuits.
5. Redundant replaceable modules.
6. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
7. LED indicator lights for power and protection status.
8. Audible alarm, with silencing switch, to indicate when protection has failed.
9. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of system operation. Contacts shall reverse position on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
10. **[Four] [Six]**-digit, transient-event counter set to totalize transient surges.

Select first option in first paragraph below for high exposure and cost, second option for medium exposure and cost, and third option for low exposure and cost.

- C. Peak Single-Impulse Surge Current Rating: **[160 kA per mode/320 kA per phase] [120 kA per mode/240 kA per phase] [80 kA per mode/160 kA per phase]**.

Retain first paragraph below for switchboards located at or near Category C locations.

- D. Withstand Capabilities: 12,000 IEEE C62.41, Category C3 (10 kA), 8-by-20-mic.sec. surges with less than 5 percent change in clamping voltage.

Retain one of three paragraphs below. Adjust clamping voltages to comply with Project conditions and verify compatibility of peak surge current rating and clamping voltage. Reference to UL 1449 is to its second edition.

- E. Protection modes and UL 1449 SVR for grounded wye circuits with **[480Y/277] [208Y/120] [600Y/347]**-V, three-phase, four-wire circuits shall be as follows:
1. Line to Neutral: **[800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347]**.
 2. Line to Ground: **[800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347]**.

3. Neutral to Ground: **[800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347]**.
- F. Protection modes and UL 1449 SVR for 240/120-V, three-phase, four-wire circuits with high leg shall be as follows:
1. Line to Neutral: 400 V, 800 V from high leg.
 2. Line to Ground: 400 V.
 3. Neutral to Ground: 400 V.
- G. Protection modes and UL 1449 SVR for 240-, 480-, or 600-V, three-phase, three-wire, delta circuits shall be as follows:
1. Line to Line: **[2000 V for 480 V] [1000 V for 240 V] [2500 V for 600 V]**.
 2. Line to Ground: **[1500 V for 480 V] [800 V for 240 V] [2500 V for 600 V]**.

2.3 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

Coordinate this article with Drawings. See the "Disconnecting and Overcurrent Protective Devices" Article in the Evaluations for guidance on making selections.

- A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with **[series-connected rating] [interrupting capacity]** to meet available fault currents.
1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:

Retain one or more of first four subparagraphs below; coordinate required adjustable settings with Division 26 Section "Overcurrent Protective Device Coordination Study." See "Electronic rms Trip versus MCCBs" Paragraph in "Disconnecting and Overcurrent Protective Devices" Article in the Evaluations for additional guidance on specifying full-or standard-function features.

- a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I₂t response.
4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
 5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.

Retain first subparagraph below for GFCI circuit breakers for personnel ground-fault protection as required by NFPA 70; retain second subparagraph for GFEP circuit breakers (e.g., for self-limiting

heat-trace cables) as required by NFPA 70. GFCI and GFEP circuit breakers are only available fully rated up to interrupting ratings of 22 kA and are not suited to switchboard use. For switchboards subject to fault currents above 22 kA, series ratings must be used. Consider relocating these to downstream panelboards more suited to their application.

6. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
7. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
8. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:

Not all accessories and options listed in subparagraphs below are available for every rating and from every listed manufacturer. Verify availability and unique characteristics with manufacturers selected.

- a. Standard frame sizes, trip ratings, and number of poles.

See Editing Instruction No. 5 in the Evaluations for guidance on using mechanical vs. compression lugs.

- b. Lugs: **[Mechanical]** **[Compression]** style, suitable for number, size, trip ratings, and conductor material.
- c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.

Select first option in first subparagraph below for solid-state trip units; select second option for thermal-magnetic trip units. If selecting second option, also retain "Shunt Trip" Subparagraph below.

- d. Ground-Fault Protection: **[Integrally mounted]** **[Remote-mounted]** relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
- e. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
- f. Communication Capability: **[Circuit-breaker-mounted]** **[Universal-mounted]** **[Integral]** **[Din-rail-mounted]** communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
- g. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at **[55]** **[75]** percent of rated voltage.
- h. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
- i. Auxiliary Contacts: **[One SPDT switch]** **[Two SPDT switches]** with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
- j. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

- B. Insulated-Case Circuit Breaker (ICCB): **[80]** **[100]** percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.

1. **[Fixed]** **[Drawout]** circuit-breaker mounting.
2. Two-step, stored-energy closing.
3. **[Standard]** **[Full]**-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:

Retain one or more of first four subparagraphs below; coordinate required adjustable settings with Division 26 Section "Overcurrent Protective Device Coordination Study." See "Electronic rms Trip versus MCCBs" Paragraph in "Disconnecting and Overcurrent Protective Devices" Article in the Evaluations for additional features available for standard- and full-function trip units.

- a. Instantaneous trip.
 - b. Long- and short-time time adjustments.
 - c. Ground-fault pickup level, time delay, and I_{2t} response.
 - d. **<Insert settings>**.
4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
 5. Remote trip indication and control.
 6. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
 7. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

Retain voltage in subparagraph below to match control-power supply.

8. Control Voltage: [**40-V dc**] [**125-V dc**] [**250-V dc**] [**120-V ac**].

Retain one of first two paragraphs below.

- C. Bolted-Pressure Contact Switch: Operating mechanism uses rotary-mechanical-bolting action to produce and maintain high clamping pressure on the switch blade after it engages the stationary contacts.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Boltswitch, Inc.
 - b. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - c. Pringle Electrical Manufacturing Company, Inc.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. **<Insert manufacturer>**
 - g. or approved equal.
2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.
3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.

Retain one or both of first two subparagraphs below depending on switch applications in Project. First subparagraph is for switches with ground-fault protection and for remotely tripped switches; second is for manually tripped units. See Editing Instruction No. 4 in the Evaluations. Coordinate with Drawings and include notation that identifies electrically and manually tripped switches.

- a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
 - b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
4. Auxiliary Switches: Factory installed, single pole, double throw, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.

Coordinate first subparagraph below with Drawings; include notation "suitable for use as service equipment" for switches that are the main control and means of disconnection for separately derived systems or for separate structures.

5. Service-Rated Switches: Labeled for use as service equipment.

Coordinate first subparagraph below with Drawings; indicate minimum fault-current rating of each switch.

6. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.

Revise first subparagraph below if relays capable of zone-selective interlocking are required.

- a. Configuration: [**Integrally mounted**] [**Remote-mounted**] relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.

Retain first three subparagraphs below to require optional features. Coordinate with Drawings.

- b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
 - c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
 - d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.

- D. High-Pressure, Butt-Type Contact Switch: Operating mechanism uses butt-type contacts and a spring-charged mechanism to produce and maintain high-pressure contact when switch is closed.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first subparagraph and list of manufacturers below. See Division 01 Section "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - b. <Insert manufacturer>
 - c. or approved equal.
2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current

- rating.
3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.

Retain one or both of first two subparagraphs below depending on switch applications in Project. First subparagraph is for switches with ground-fault protection and for remotely tripped switches; second is for manually tripped units. See Editing Instruction No. 4 in the Evaluations. Coordinate with Drawings and include notation that identifies electrically and manually tripped switches.

- a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
 - b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
4. Auxiliary Switches: Factory installed, single pole, double throw, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.

Coordinate first subparagraph below with Drawings; include notation "suitable for use as service equipment" for switches that are the main control and means of disconnection for separately derived systems or for separate structures.

5. Service-Rated Switches: Labeled for use as service equipment.

Coordinate first subparagraph below with Drawings; indicate minimum fault-current rating of each switch.

6. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.

Revise first subparagraph below if relays capable of zone-selective interlocking are required.

- a. Configuration: [**Integrally mounted**] [**Remote-mounted**] relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.

Retain first three subparagraphs below to require optional features. Coordinate with Drawings.

- b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
 - c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
 - d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.
- E. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
 - F. Fuses are specified in Section 262813 "Fuses."

2.4 INSTRUMENTATION

Retain this article for Owner, not utility, metering.

A. Instrument Transformers: IEEE C57.13, NEMA EI 21.1, and the following:

Potential transformers (PTs) are not frequently needed, as most digital meters can be direct-bus connected up to 600 V. Consult manufacturers on need for PTs for instruments and meters selected. Indicate the primary-to-secondary ratio on Drawings.

1. Potential Transformers: IEEE C57.13; 120 V, 60 Hz, [**single**] [**tapped**] [**double**] secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.

Coordinate first subparagraph below with Drawings and indicate specific accuracy classes and burdens required for each application and the primary-to-secondary ratio.

2. Current Transformers: IEEE C57.13; 5 A, 60 Hz, secondary; [**wound**] [**bushing**] [**bar or window**] type; [**single**] [**double**] secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.

Manufacturers typically size control-power transformers, and normally only for equipment and devices integral to switchboards. Consider specifying additional spare capacity if required for operation of remote devices.

3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.

Retain subparagraph below for certain ground-fault protection situations such as double-ended switchboards on four-wire, grounded neutral systems. Coordinate with Drawings.

4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.

Retain first paragraph below if digital metering is required. It offers substantially more capabilities than analog metering in much smaller packages; however, some facility managers still prefer analog devices with large, easy-to-read dials.

B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:

1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:
 - a. Phase Currents, Each Phase: Plus or minus 1 percent.
 - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d. Megawatts: Plus or minus 2 percent.
 - e. Megavars: Plus or minus 2 percent.
 - f. Power Factor: Plus or minus 2 percent.
 - g. Frequency: Plus or minus 0.5 percent.
 - h. Accumulated Energy, Megawatt Hours: Plus or minus 2 percent;

accumulated values unaffected by power outages up to 72 hours.

Retain one or both of first two subparagraphs below. Retain first subparagraph for local recording of demand; retain second for remote recording of demand or if retaining "Impulse-Totalizing Demand Meter" Paragraph below.

- i. Megawatt Demand: Plus or minus 2 percent; demand interval programmable from five to 60 minutes.
 - j. Contact devices to operate remote impulse-totalizing demand meter.
2. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.

Retain first four paragraphs below if analog metering functions are required in lieu of multifunction digital meters specified above.

Retain one of first two subparagraphs below. Retain first subparagraph for local recording of demand; retain second for remote recording of demand or if retaining "Impulse-Totalizing Demand Meter" Paragraph below.

Retain paragraph below if retaining contact devices to operate remote impulse-totalizing of demand in "Multifunction Digital-Metering Monitor" and "Watt-Hour Meters and Wattmeters" paragraphs above. Meter below offers an option for a centralized monitoring or customer metering system if monitoring total demand is required.

C. Impulse-Totalizing Demand Meter:

1. Comply with ANSI C12.1.
2. Suitable for use with switchboard watt-hour meter, including two-circuit totalizing relay.
3. Cyclometer.
4. Four-dial, totalizing kilowatt-hour register.
5. Positive chart drive mechanism.
6. Capillary pen holding a minimum of one month's ink supply.
7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
8. Capable of indicating and recording [5] [15] [30] <Insert time period>-minute integrated demand of totalized system.

2.5 CONTROL POWER

Retain one of first three paragraphs below.

- A. Control Circuits: 120-V ac, supplied through secondary disconnecting devices from control-power transformer.
- B. Control Circuits: 120-V ac, supplied from remote branch circuit.
- C. Control Circuits: <Insert control voltage>-V dc.

Retain three paragraphs below to require an automatic transfer of power using a main-tie-main or two-main scheme. Coordinate with selection of "Control Circuits" paragraphs above. See "Interlocked Main and Tie Circuit Breakers for Automatic and Manual Transfer of Power" Paragraph in "Disconnecting

and Overcurrent Protective Devices" Article in the Evaluations for discussion of other types of available transfer schemes, along with advantages and disadvantages of each type.

- D. Electrically Interlocked Main and Tie Circuit Breakers: Two control-power transformers in separate compartments, with interlocking relays, connected to the primary side of each control-power transformer at the line side of the associated main circuit breaker. 120-V secondaries connected through automatic transfer relays to ensure a fail-safe automatic transfer scheme.
- E. Control-Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.
- F. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

2.6 ACCESSORY COMPONENTS AND FEATURES

Retain first paragraph below for drawout circuit breakers.

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

Retain first paragraph below for circuit breakers with solid-state trip devices.

- B. Portable Test Set: For testing functions of solid-state trip devices without removing from switchboard. Include relay and meter test plugs suitable for testing switchboard meters and switchboard class relays.

Retain one or both of first two paragraphs below for installations with drawout circuit breakers. Coordinate requirements in first paragraph with manufacturers. Type of circuit-breaker lifting device to use depends on type and sizes of drawout circuit breakers or switches specified, on depth of switchboard and frontal protrusion of concrete base on which it sits, and on manufacturer.

- C. Portable Circuit-Breaker Lifting Device: Floor-supported, roller-based, elevating carriage arranged for movement of circuit breakers in and out of compartments for present and future circuit breakers.
- D. Overhead Circuit-Breaker Lifting Device: Mounted at top front of switchboard, with hoist and lifting yokes matching each drawout circuit breaker.

Retain paragraph below if fuse cabinet is not specified in Division 26 Section "Fuses."

- E. Spare-Fuse Cabinet: Suitably identified, wall-mounted, lockable, compartmented steel box or cabinet. Arrange for wall mounting.

2.7 IDENTIFICATION

Retain one of first three paragraphs below. Traditional mimic buses do not lend themselves to switchboard construction, especially for panel-mounted devices.

- A. Mimic Bus: Entire single-line switchboard bus work, as depicted on factory record drawing, on a photoengraved nameplate.
 - 1. Nameplate: At least **0.032-inch-** (0.813-mm-) thick anodized aluminum, located at eye level on front cover of the switchboard incoming service section.
- B. Mimic Bus: Entire single-line switchboard bus work, as depicted on factory record drawing, on an engraved laminated-plastic (Gravoply) nameplate.
 - 1. Nameplate: At least **0.0625-inch-** (1.588 mm-) thick laminated plastic (Gravoply), located at eye level on front cover of the switchboard incoming service section.
- C. Mimic Bus: Continuously integrated mimic bus factory applied to front of switchboard. Arrange in single-line diagram format, using symbols and letter designations consistent with final mimic-bus diagram.
- D. Coordinate mimic-bus segments with devices in switchboard sections to which they are applied. Produce a concise visual presentation of principal switchboard components and connections.

Revise first paragraph below to require other types of presentation media.

- E. Presentation Media: Painted graphics in color contrasting with background color to represent bus and components, complete with lettered designations.

Retain paragraph below for switchboards that incorporate one or more service disconnecting and overcurrent protective devices and that are used as the service entrance, outside feeder, or separately derived source means of disconnect and overcurrent protection.

- F. Service Equipment Label: NRTL labeled for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

PART 3 - EXECUTION

3.1 EXAMINATION

Referenced NECA and NEMA standards in first paragraph below include similar requirements. See "Testing and Inspecting" Article in the Evaluations.

- A. Receive, inspect, handle, and store switchboards according to **[NECA 400] [NEMA PB 2.1]**.
- B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.
- C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

Referenced NECA and NEMA standards in first paragraph below include similar requirements. See "Testing and Inspecting" Article in the Evaluations.

- A. Install switchboards and accessories according to [NECA 400] [NEMA PB 2.1].
- B. Equipment Mounting: Install switchboards on concrete base, 4-inch (100-mm) nominal thickness. Comply with requirements for concrete base specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to switchboards.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, straps and brackets, and temporary blocking of moving parts from switchboard units and components.

Retain first paragraph below if seismic controls are required for Project. Coordinate with Drawings.

- D. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- E. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.
- F. Install filler plates in unused spaces of panel-mounted sections.
- G. Install overcurrent protective devices, surge protection devices, and instrumentation.

Subparagraph below assumes that settings are indicated on Drawings or a coordination report is available for Contractor to use.

- 1. Set field-adjustable switches and circuit-breaker trip ranges.

Retain first paragraph below if spare-fuse cabinets are specified in "Accessory Components and Features" Article.

- H. Install spare-fuse cabinet.
- I. Comply with NECA 1.

3.3 CONNECTIONS

Coordinate this article with Drawings. Show locations and types of grounding connections available and which ones are used for grounding switchboards.

Coordinate busway and cable tray installations and specialty arrangements with schematics on Drawings and with requirements specified for busway and cable tray systems. Ensure that referenced Sections include required interfacing terminations necessary to attach to switchboards. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Comply with requirements for terminating feeder bus specified in Section 262500 "Enclosed Bus Assemblies." Drawings indicate general arrangement of bus, fittings, and specialties.
- B. Comply with requirements for terminating cable trays specified in Section 260536 "Cable Trays for Electrical Systems." Drawings indicate general arrangement of cable trays, fittings, and specialties.

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

Retain paragraph below to identify who shall perform tests and inspections. Coordinate with "Field Quality-Control Reports" Paragraph in "Informational Submittals" Article.

Retain first paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first two paragraphs below to describe tests and inspections to be performed.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:

1. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

See Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.

D. Switchboard will be considered defective if it does not pass tests and inspections.

Retain paragraph below if tests and inspections are performed by Contractor or manufacturer's field-service representative engaged by Contractor.

- E. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

Select first option in paragraph below if settings are included in the Contract Documents; select second option if indicated Section is included in the Contract Documents.

- B. Set field-adjustable circuit-breaker trip ranges [as indicated.] [as specified in Section 260573 "Overcurrent Protective Device Coordination Study."]

3.7 PROTECTION

- A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

3.8 DEMONSTRATION

Select last option in paragraph below if retaining items in "Disconnecting and Overcurrent Protective Devices" Article above.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain switchboards,

overcurrent protective devices, instrumentation, and accessories[, **and to use and reprogram microprocessor-based trip, monitoring, and communication units**].

1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262413

Updated: August 31, 2015

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262416 - PANELBOARDS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Distribution panelboards.
 - 2. Lighting and appliance branch-circuit panelboards.
 - 3. Load centers.
 - 4. Electronic-grade panelboards.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. SVR: Suppressed voltage rating.
- B. TVSS: Transient voltage surge suppressor.

1.4 PERFORMANCE REQUIREMENTS

Retain this article with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Model building codes and SEI/ASCE 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction.

- A. Seismic Performance: Panelboards shall withstand the effects of earthquake motions determined according to **SEI/ASCE 7**.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified **and the unit will be fully operational after the seismic event**]."

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of panelboard, switching and overcurrent protective device, transient voltage suppression device, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each panelboard and related equipment.
 1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
 2. Detail enclosure types and details for types other than NEMA 250, Type 1.
 3. Detail bus configuration, current, and voltage ratings.
 4. Short-circuit current rating of panelboards and overcurrent protective devices.

Retain first subparagraph below if series rating of overcurrent protective devices is used.

5. Include evidence of NRTL listing for series rating of installed devices.
6. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
7. Include wiring diagrams for power, signal, and control wiring.

Retain subparagraph below if final system short-circuit and coordination studies will be performed by designer or assigned to independent consultant. These curves are also beneficial to Owner for future additions or reevaluations of settings of overcurrent protective devices.

8. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graph paper; include selectable ranges for each type of overcurrent protective device.

1.6 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified testing agency.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field Quality-Control Reports:
 1. Test procedures used.
 2. Test results that comply with requirements.
 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

Retain option in paragraph below if retaining "Load Balancing" Paragraph in "Adjusting" Article.

- C. Panelboard Schedules: For installation in panelboards. [**Submit final versions after load balancing.**]

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
 2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

Revise this article to include extra materials that Owner may require, such as GFCI or GFEP circuit breakers or circuit breakers used for switching service, which may fail more frequently due to continuous use.

Coordinate with Division 26 Section "Fuses" for quantities of spare fuses and spare-fuse cabinet to be provided.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Keys: **[Two (2)] <Insert number>** spares for each type of panelboard cabinet lock.
 - 2. Circuit Breakers Including GFCI and Ground Fault Equipment Protection (GFEP) Types: **[Two (2)] <Insert number>** spares for each panelboard.
 - 3. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
 - 4. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
 - 5. **<Insert extra materials>**.

1.9 QUALITY ASSURANCE

Retain first paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Division 01 Section "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- B. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

Retain first paragraph below to allow drawing details based on one manufacturer's product to establish requirements and still allow competition. Coordinate with Division 01 requirements.

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with NEMA PB 1.
- F. Comply with NFPA 70.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

See "Testing and Inspecting" Article in the Evaluations for guidance on which option to select in paragraph below.

- B. Handle and prepare panelboards for installation according to [NECA 407] [NEMA PB 1].

1.11 PROJECT CONDITIONS

Retain first paragraph below for panelboards installed in typical environmental conditions. For panelboards installed outdoors, in unconditioned spaces, or in unusual environmental conditions, revise paragraph to indicate maximum ambient temperature and expected humidity range. See Editing Instruction No. 2 in the Evaluations.

- A. Environmental Limitations:
1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

In first subparagraph below, select first option for panelboards with fused switches; select second option for panelboards with circuit breakers.

- a. Ambient Temperature: Not exceeding minus 30 deg F (minus 35 deg C) to plus 120 deg F (plus 49 deg C).
- b. Altitude: 5500 feet (1677 m), not exceeding 6600 feet (2000 m).

Retain first paragraph below or revise to accommodate unusual service conditions that cannot be eliminated. See Editing Instructions No. 2 and No. 3 in the Evaluations.

- B. Service Conditions: NEMA PB 1, usual service conditions, as follows:
1. Ambient temperatures within limits specified.
 2. Altitude: 5500 feet, not exceeding 6600 feet (2000 m).

Retain paragraph below if interruption of existing electric service is required.

- C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
1. Any power outages necessary to install or test electrical systems and/or

- equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
2. Do not proceed with interruption of electric service without DEN Project Manager's written permission.
 3. Comply with NFPA 70E.

1.12 COORDINATION

Revise first paragraph below for types of equipment that affect panelboard installation.

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

Retain paragraph below if freestanding panelboards are specified.

- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.13 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: for Surge Suppression Devices Manufacturer's standard form in which manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods with manufacturers listed in Part 2 articles.

1. Warranty Period: Minimum [five (5)] <Insert number> years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.14 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PANELBOARDS

Retain first paragraph below for projects in seismic areas. Coordinate with "Informational Submittals" Article for submittal of manufacturer's seismic qualification certification.

- A. Fabricate and test panelboards according to IEEE 344 to withstand seismic forces defined in Section "Vibration and Seismic Controls for Electrical Systems."
- B. Enclosures: **[Flush] [Surface] [Flush- and surface]**-mounted cabinets.
 - 1. Rated for environmental conditions at installed location.

See "Enclosures" Article in the Evaluations for discussion of enclosure types. Coordinate first five subparagraphs below with Drawings (by identifying the designated areas) or schedules (by including the required enclosure type). Availability of some enclosure types are limited by a panelboard's ampacity rating, included devices, or physical size; consult manufacturers for availability of, and limitations on, other than Type 1 enclosures.

- a. Indoor Dry and Clean Locations: NEMA 250, **[Type 1] <Insert type>**.
- b. Outdoor Locations: NEMA 250, **[Type 3R] <Insert type>**.
- c. **[Kitchen] [Wash-Down]** Areas: NEMA 250, **[Type 4X] <Insert type>**, **[stainless steel] <Insert material>**.
- d. Other Wet or Damp Indoor Locations: NEMA 250, **[Type 4] <Insert type>**.

Select first option in first subparagraph below for areas subject to lighter levels of contaminants and second option for areas subject to heavier levels.

- e. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, **[Type 5] [Type 12]**.

Retain one of first two subparagraphs below.

- 2. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box.
- 3. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover.

First two subparagraphs below are optional features. Coordinate with Drawings.

- 4. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.
- 5. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.

Coordinate first subparagraph below with "Enclosures" Paragraph above. Back boxes are also available painted. Revise if required to include special finishes to match, e.g., stainless steel, epoxy, and fiberglass-reinforced polyester.

- 6. Finishes:
 - a. Panels and Trim: **[Steel] [and] [galvanized steel]**, factory finished immediately after cleaning and pretreating with manufacturer's standard

two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.

b. Back Boxes: [**Galvanized steel**] [**Same finish as panels and trim**].

7. Enclosures shall be at least 20 inches wide made from galvanized sheet steel in the sizes and NEMA types indicated, code gauge, minimum 16 gauge thickness

Retain first subparagraph below for use with lighting and appliance branch-circuit and distribution panelboards with doors. With the increasing use of computer-generated directories, metal frames are becoming an expensive option for most manufacturers.

8. Directory Card: Inside panelboard door, mounted in [**transparent card holder**] [**metal frame with transparent protective cover**].

9. <Insert optional features>.

- C. In all cases where the conductor to be connected to the busbar is 1/0 or larger cable, the connection shall be made with a 2-hole compression lug. Torque all lug, wire and bus terminations to the manufacturers recommendation using a micrometer type wrench.

Retain first paragraph below, and coordinate with Drawings and schedules, if Project requirements include identifying specific entry locations for incoming service or feeder raceways.

D. Incoming Mains Location: [**Top**] [**Bottom**] [**Top and bottom**].

E. Phase, Neutral, and Ground Buses:

In first subparagraph below, first option is standard with most manufacturers; second option costs more.

1. Material: Hard-drawn copper, 98 percent conductivity.

Five subparagraphs below are optional features. Ground and neutral buses in lighting and appliance panelboards are also referred to as "bars" in manufacturers' literature. Coordinate with Drawings.

2. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.

Isolated ground bus in first subparagraph below is sometimes physically located above and attached to the equipment ground bus with standoff insulators. Frequently and incorrectly, contractors connect equipment grounding conductors to this bus instead of to the equipment ground bus, which can be hazardous if separate equipment grounding and isolated ground conductors are not both included in the feeder serving the panelboard.

3. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
4. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and UL listed as suitable for nonlinear loads, with a corresponding increase in the size of the grounded conductor back to the supply.
5. Split Bus: Vertical buses divided into individual vertical sections.
6. <Insert optional features>.

Include instructions in first paragraph below if special sizing or oversizing of lugs is required, if allowing optional use of aluminum for circuits sized for copper conductors, or when upsizing conductors for voltage drop.

F. Conductor Connectors: Suitable for use with conductor material and sizes.

1. Material: Hard-drawn copper, 98 percent conductivity.
2. Main and Neutral Lugs: **Mechanical** type.

See Editing Instruction No. 4 in the Evaluations for guidance on using compression versus mechanical lugs in first four subparagraphs below.

3. Ground Lugs and Bus-Configured Terminators: **Mechanical** type.

First three subparagraphs below are optional features.

4. Feed-Through Lugs: **Mechanical** type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.

In first subparagraph below, NEMA PB 1 allows subfeed lugs to be located on the load or line side of main devices or on main-lugs-only panelboards; however, coordinate with specific manufacturers as some have restrictions on which options are available.

5. Subfeed (Double) Lugs: **Mechanical** type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
6. Gutter-Tap Lugs: **Mechanical** type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
7. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.
8. **<Insert optional features>**.

Retain first paragraph below for panelboards that incorporate one or more main service disconnecting and overcurrent protective devices and that are used as the service entrance, outside feeder, or separately derived source means of disconnect and overcurrent protection.

- G. Service Equipment Label: NRTL labeled for use as service equipment for panelboards or load centers with one or more main service disconnecting and overcurrent protective devices.

Retain first paragraph below if future provisions are required.

- H. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

Retain one or both paragraphs below for series-rated system or system that has panelboards and circuit breakers rated for full value of short-circuit current available at location of equipment.

- I. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals.
- J. Breakers shall have built-in test points for testing long delay, and instantaneous functions of the breaker by means of a 120 volt operated test kit.
- K. General Requirements for Branch Circuit Panelboards:
1. Bolt-on type, heavy-duty, quick-make, quick-break, single- and multi-pole circuit breakers, of the types specified herein, shall be provided for each circuit with toggle handles that indicate when unit has tripped.
 2. Circuit breakers shall be thermal magnetic type with common type handle for all

multiple pole circuit breakers. Circuit breakers shall be minimum 100-ampere frame and up through 100-ampere trip sizes shall take up the same pole spacing. Circuit breakers shall be UL listed as Type SWD for lighting circuits.

- a. Circuit breaker handle locks shall be provided for all circuits that supply exit signs, emergency lights, energy management and control system (EMCS) panels and fire alarm panels.
 - b. Main circuit breaker, when shown, shall be vertical mounted top or bottom as required. Chassis mounted reverse fed main circuit breaker is not acceptable.
3. Circuit breakers shall have a minimum interrupting rating of 10,000 amperes symmetrical at 240 volts and 14,000 amperes symmetrical at 480 volts.

2.2 DISTRIBUTION PANELBOARDS

Distribution panelboards, as specified in this article, fall under requirements of "Power Panelboards" in NFPA 70.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Match existing manufacturer in the immediate area, if applicable. Subject to compliance with requirements, provide products by one of the following:
1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Square D; a brand of Schneider Electric.
 4. or approved equal.
- B. Panelboards: NEMA PB 1, power and feeder distribution type.

Distribution panelboards, as standard, do not have doors; consult manufacturers for availability and types of doors. Retain first paragraph below if panelboards have doors.

- C. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
1. For doors more than 36 inches (914 mm) high, provide two latches, keyed alike.

Select one of first two options in first paragraph below for panelboards with main overcurrent protective devices; select third option for panelboards with only main lugs for the incoming feeder. Consult manufacturers for limitations on ratings for each type of device selected.

- D. Mains: [**Circuit breaker**] [**Lugs only**].

Retain one of first three paragraphs below. Allowing only bolt-on circuit breakers will exclude Square D (Schneider Electric), which uses plug-in types with a positive-locking feature, as an approved manufacturer.

- E. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: [**Plug-in**] [**Bolt-on**] circuit breakers.

- F. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers; plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.
- G. Branch Overcurrent Protective Devices: Fused switches.

Contactors can be incorporated to switch the entire panelboard or only a portion of the circuits. Coordinate with Drawings and schedules to indicate contactor connections, type, quantity of circuits controlled, current ratings, external control circuits, and number of poles. Consult manufacturers for their respective limitations on and availability of short-circuit ratings and electrically held contactors, which may not be available from all manufacturers.

- H. Contactors in Main Bus: NEMA ICS 2, Class A, **[electrically] [mechanically]** held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

Retain one of two subparagraphs below. If control-power transformer is used, specify capacity and associated fuses on Drawings. If branch circuit is used, identify circuit on Drawings. Use of branch circuits also requires a warning sign identifying sources of remote circuits.

1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
2. External Control-Power Source: **[120-V branch circuit] [24-V control circuit] <Insert requirement>**.

2.3 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Square D; a brand of Schneider Electric.
 4. or approved equal.
- B. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.

Retain first paragraph below if mains are not indicated on Drawings.

- C. Mains: **[Circuit breaker] [or] [lugs only]**.
- D. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.

Contactors can be incorporated to switch the entire panelboard or only a portion of the circuits. Coordinate with Drawings and schedules to indicate contactor connections, type, quantity of circuits controlled, current ratings, external control circuits, and number of poles. Consult manufacturers for their respective limitations on and availability of short-circuit ratings and electrically held contactors, which may not be available from all manufacturers.

- E. Contactors in Main Bus: NEMA ICS 2, Class A, **[electrically] [mechanically]** held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

Retain one of two subparagraphs below. If control-power transformer is used, specify capacity and associated fuses on Drawings. If branch circuit is used, identify circuit on Drawings. Use of branch circuits also requires a warning sign identifying sources of remote circuits.

1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
 2. External Control-Power Source: **[120-V branch circuit] [24-V control circuit] <Insert requirement>**.
- F. Doors: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.
- G. Column-Type Panelboards: Narrow gutter extension, with cover, to overhead junction box equipped with ground and neutral terminal buses.

2.4 ELECTRONIC-GRADE PANELBOARDS

Electronic-grade panelboards are frequently assembled by integrators or contractors using prefabricated panelboards complying with UL 67 and with TVSS modules installed in them; however, this might negate UL 67 short-circuit current ratings of panelboards if they are not retested after installing TVSS modules. The Section Text requires that electronic-grade panelboards be labeled by an NRTL for compliance with UL 67 after the fabricator installs TVSS modules.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Square D; a brand of Schneider Electric.
 4. or approved equal.
- B. Panelboards: NEMA PB 1; with factory-installed, integral TVSS; labeled by an NRTL for compliance with UL 67 after installing TVSS.
- C. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
- D. Main Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.
- E. Branch Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.
- F. Buses:
1. Copper phase and neutral buses; 200 percent capacity neutral bus and lugs.
 2. Copper equipment and isolated ground buses.

See the Evaluations in Division 26 Section "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits" for guidance on editing paragraph below. Selection of options is a matter of ease of

maintenance and replacement; coordinate final choices with Owner's maintenance personnel. Plug-in and modular types offer the quickest maintenance but may come at a slightly higher cost. Wired-in type offers more safety with a slight reduction in protection and are used for a TVSS installed in a segregated panel extension located above or below the main panel.

- G. Surge Protection Device: IEEE C62.41-compliant, integrally mounted, **[plug-in] [wired-in] [bolt-on]**, solid-state, parallel-connected, **[modular (with field-replaceable modules)]** type, with sine-wave tracking suppression and filtering modules, short-circuit current rating complying with UL 1449, second edition, and matching or exceeding the panelboard short-circuit rating, redundant suppression circuits, with individually fused metal-oxide varistors.

1. Accessories:

Retain accessories in first 10 subparagraphs below to coordinate with options retained in paragraph above; verify availability and compatibility with manufacturer.

If specifying fuses for connecting TVSS devices to distribution system, verify ability of fuses to withstand surges consistent with ultimate surge current rating of device.

- a. Fuses rated at 200-kA interrupting capacity.
- b. Fabrication using bolted compression lugs for internal wiring.

Retain first subparagraph below only if a fused switch or circuit breaker is not provided for the TVSS in the panelboard, and the TVSS will not have a direct bus connection.

- c. Integral disconnect switch.
- d. Redundant suppression circuits.
- e. Redundant replaceable modules.
- f. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
- g. LED indicator lights for power and protection status.
- h. Audible alarm, with silencing switch, to indicate when protection has failed.
- i. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of system operation. Contacts shall reverse position on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
- j. **[Four] [Six]**-digit, transient-event counter set to totalize transient surges.

Select first option in first subparagraph below for high exposure and cost, second option for medium exposure and cost, and third option for low exposure and cost.

2. Peak Single-Impulse Surge Current Rating: **[160 kA per mode/320 kA per phase] [120 kA per mode/240 kA per phase] [80 kA per mode/160 kA per phase]**.
3. Minimum single-impulse current ratings, using 8-by-20-mic.sec. waveform described in IEEE C62.41.2.
 - a. Line to Neutral: **70,000A**.
 - b. Line to Ground: **[70,000] <Insert value> A**.
 - c. Neutral to Ground: **[50,000] <Insert value> A**.

Retain first subparagraph below for panelboards located at or near Category C locations.

4. Withstand Capabilities: 12,000 IEEE C62.41, Category C3 (10 kA), 8-by-20-mic.sec. surges with less than 5 percent change in clamping voltage.

Retain one of four subparagraphs below. Adjust clamping voltages to comply with Project conditions and verify compatibility of peak surge current rating and clamping voltage. Reference to UL 1449 is to its second edition.

5. Protection modes and UL 1449 SVR for grounded wye circuits with [480Y/277] [208Y/120] [600Y/347]-V, three-phase, four-wire circuits shall be as follows:
 - a. Line to Neutral: [800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347].
 - b. Line to Ground: [800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347].
 - c. Neutral to Ground: [800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347].
6. Protection modes and UL 1449 SVR for 240/120-V, single-phase, three-wire circuits shall be as follows:
 - a. Line to Neutral: 400 V.
 - b. Line to Ground: 400 V.
 - c. Neutral to Ground: 400 V.
7. Protection modes and UL 1449 SVR for 240/120-V, three-phase, four-wire circuits with high leg shall be as follows:
 - a. Line to Neutral: 400 V, 800 V from high leg.
 - b. Line to Ground: 400 V.
 - c. Neutral to Ground: 400 V.
8. Protection modes and UL 1449 SVR for 240-, 480-, or 600-V, three-phase, three-wire, delta circuits shall be as follows:
 - a. Line to Line: [2000 V for 480 V] [1000 V for 240 V] [2500 V for 600 V].
 - b. Line to Ground: [1500 V for 480 V] [800 V for 240 V] [2500 V for 600 V].

2.5 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Square D; a brand of Schneider Electric.
 4. or approved equal.

Coordinate two paragraphs below with Drawings. See the "Disconnecting and Overcurrent Protective Devices" Article in the Evaluations for guidance on making selections.

- B. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with fully-rated **interrupting capacity** to meet available fault currents.
1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 600 A and below.
 2. Breakers with frame sizes above 600 amperes shall be solid state trip, complete with built-in current transformers, solid-state trip unit and flux transfer shunt trip. Breakers shall have trip rating plugs with ratings as indicated on the drawings. Rating plugs shall be interlocked so they are NOT interchangeable between frames and interlocked such that a breaker cannot be latched with the rating plug removed.
 3. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 4. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:

Retain one or more of first four subparagraphs below and coordinate required adjustable settings with Division 26 Section "Overcurrent Protective Device Coordination Study." See "Electronic rms Trip versus MCCBs" Paragraph in "Disconnecting and Overcurrent Protective Devices" Article in the Evaluations for additional guidance on specifying full- or standard-function features.

- a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I₂t response.
5. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.

Retain first subparagraph below for GFCI circuit breakers for personnel ground-fault protection as required by NFPA 70; retain second subparagraph for GFEP circuit breakers (e.g., for self-limiting, heat-trace cables) as required by NFPA 70. GFCI, GFEP, and AFCI circuit breakers are only available fully rated up to interrupting ratings of 22 kA. For panelboards subject to fault currents above 22 kA, series ratings must be used.

6. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
7. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
8. Arc-Fault Circuit Interrupter (AFCI) Circuit Breakers: Comply with UL 1699; 120/240-V, single-pole configuration.
9. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:

Not all accessories and options listed in subparagraphs below are available for every rating and from every listed manufacturer. Verify availability and unique characteristics with manufacturers selected.

- a. Standard frame sizes, trip ratings, and number of poles.

See Editing Instruction No. 4 in the Evaluations for guidance on using compression versus mechanical

lugs.

- b. Lugs: **Mechanical** style, suitable for number, size, trip ratings, and conductor materials.
- c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.

Select first option in first subparagraph below for solid-state trip units; select second option for thermal-magnetic units. If selecting second option, also retain "Shunt Trip" Subparagraph below.

- d. Ground-Fault Protection: [**Integrally mounted**] [**Remote-mounted**] relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
- e. Communication Capability: [**Circuit-breaker-mounted**] [**Universal-mounted**] [**Integral**] [**Din-rail-mounted**] communication module with functions and features compatible with power monitoring and control system specified in Division 26 Section "Electrical Power Monitoring and Control."

For first subparagraph below, 120-V units trip at 55 percent or more of rated voltage; all other voltages trip at 75 percent or more of rated voltage.

- f. Shunt Trip: [**120**] [**24**] <Insert voltage>-V trip coil energized from separate circuit, set to trip at [**55**] [**75**] percent of rated voltage.
- g. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage [**without intentional**] [**with field-adjustable 0.1- to 0.6-second**] time delay.
- h. Auxiliary Contacts: [**One SPDT switch**] [**Two SPDT switches**] with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
- i. Alarm Switch: Single-pole, normally open contact that actuates only when circuit breaker trips.
- j. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
- k. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function with other upstream or downstream devices.
- l. Multipole units enclosed in a single housing or factory assembled to operate as a single unit.
- m. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in [**on**] [**off**] [**on or off**] position.

Device defined in subparagraph below is not, and should not be, used as a safety device; it is used for holding the circuit-breaker handle in designated position to avoid accidental interruption of important circuits such as circuits for fire-alarm control panel or emergency lighting.

- n. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.

Some manufacturers offer shunt-trip operators for their fused switches; however, most do not recommend using this feature for providing ground-fault protection on switches rated 1000 A and above in panelboards; they recommend using MCCBs or switches specified in Division 26 Section "Switchboards." Consult manufacturers for availability and limitations if this feature is required.

- C. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
1. Fuses, and Spare-Fuse Cabinet: Comply with requirements specified in Division 26 Section "Fuses."
 2. Fused Switch Features and Accessories: Standard ampere ratings and number of poles.

Accessories and options, in addition to the one in subparagraph below, may be available for some ratings and from some listed manufacturers. Consult manufacturers for availabilities and unique characteristics.

3. Auxiliary Contacts: **[One]** **[Two]** normally open and normally closed contact(s) that operate with switch handle operation.

2.6 PANELBOARD SUPPRESSORS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Division 01 Section "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Current Technology; a subsidiary of Danahar Corporation.
 2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 3. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 4. Liebert Corporation.
 5. Square D; a brand of Schneider Electric.
 6. or approved equal.

Retain one of first two paragraphs below. Comply with manufacturer's written instructions for connecting TVSS devices to distribution system. See the Evaluations in Division 26 Section "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits" for guidance on editing this article.

- B. Surge Protection Device: IEEE C62.41-compliant, integrally mounted, solid-state, parallel-connected, non-modular type, with sine-wave tracking suppression and filtering modules, UL 1449, second edition, short-circuit current rating matching or exceeding the panelboard short-circuit rating, and with the following features and accessories:
1. Accessories:

Retain accessories in three subparagraphs below to suit Project.

- a. LED indicator lights for power and protection status.
- b. Audible alarm, with silencing switch, to indicate when protection has failed.
- c. One set of dry contacts rated at 5 A and 250-V ac, for remote monitoring of protection status.

Selection of options in first paragraph below is a matter of ease of maintenance and replacement; coordinate final choices with Owner's maintenance personnel. Plug-in and modular types offer the quickest maintenance but may come at a slightly higher cost. Wired-in type offers more safety with a slight reduction in protection and are used for a TVSS installed in a segregated panel extension located

above or below the main panel.

- C. Surge Protection Device: IEEE C62.41-compliant, integrally mounted, **[plug-in]** **[wired-in]** **[bolt-on]**, solid-state, parallel-connected, **[modular (with field-replaceable modules)]** **[non-modular]** type, with sine-wave tracking suppression and filtering modules, UL 1449, second edition, short-circuit current rating matching or exceeding the panelboard short-circuit rating, and with the following features and accessories:

1. Accessories:

Retain accessories in 10 subparagraphs below to coordinate with options retained in paragraph above; verify availability and compatibility with manufacturer.

If specifying fuses for connecting TVSS devices to distribution system, verify ability of fuses to withstand surges consistent with ultimate surge current rating of device.

- a. Fuses rated at 200-kA interrupting capacity.
- b. Fabrication using bolted compression lugs for internal wiring.

Retain first subparagraph below only if a fused switch or circuit breaker is not provided for the TVSS in the panelboard, and the TVSS will not have a direct bus connection.

- c. Integral disconnect switch.
- d. Redundant suppression circuits.
- e. Redundant replaceable modules.
- f. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
- g. LED indicator lights for power and protection status.
- h. Audible alarm, with silencing switch, to indicate when protection has failed.
- i. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of system operation. Contacts shall reverse position on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
- j. **[Four]** **[Six]**-digit, transient-event counter set to totalize transient surges.

Select first option in first subparagraph below for high exposure and cost, second option for medium exposure and cost, and third option for low exposure and cost.

2. Peak Single-Impulse Surge Current Rating: **[160 kA per mode/320 kA per phase]** **[120 kA per mode/240 kA per phase]** **[80 kA per mode/160 kA per phase]**.
3. Minimum single-impulse current ratings, using 8-by-20-mic.sec. waveform described in IEEE C62.41.2.
 - a. Line to Neutral: **[70,000]** **<Insert value>** A.
 - b. Line to Ground: **[70,000]** **<Insert value>** A.
 - c. Neutral to Ground: **[50,000]** **<Insert value>** A.

Retain first subparagraph below for panelboards located at or near Category C locations.

4. Withstand Capabilities: 12,000 IEEE C62.41, Category C3 (10 kA),

8-by-20-mic.sec. surges with less than 5 percent change in clamping voltage.

Retain one of four subparagraphs below. Adjust clamping voltages to comply with Project conditions and verify compatibility of peak surge current rating and clamping voltage. Reference to UL 1449 is to its second edition.

5. Protection modes and UL 1449 SVR for grounded wye circuits with [480Y/277] [208Y/120] [600Y/347]-V, three-phase, four-wire circuits shall be as follows:
 - a. Line to Neutral: [800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347].
 - b. Line to Ground: [800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347].
 - c. Neutral to Ground: [800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347].

6. Protection modes and UL 1449 SVR for 240/120-V, single-phase, three-wire circuits shall be as follows:
 - a. Line to Neutral: 400 V.
 - b. Line to Ground: 400 V.
 - c. Neutral to Ground: 400 V.

7. Protection modes and UL 1449 SVR for 240/120-V, three-phase, four-wire circuits with high leg shall be as follows:
 - a. Line to Neutral: 400 V, 800 V from high leg.
 - b. Line to Ground: 400 V.
 - c. Neutral to Ground: 400 V.

8. Protection modes and UL 1449 SVR for 240-, 480-, or 600-V, three-phase, three-wire, delta circuits shall be as follows:
 - a. Line to Line: [2000 V for 480 V] [1000 V for 240 V] [2500 V for 600 V].
 - b. Line to Ground: [1500 V for 480 V] [800 V for 240 V] [2500 V for 600 V].

2.7 ACCESSORY COMPONENTS AND FEATURES

Retain this article for overcurrent protective devices that require items in paragraphs below; delete if these items are specified elsewhere, such as in Division 26 Section "Switchboards."

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

Retain paragraph below for circuit breakers with solid-state trip devices.

- B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 - EXECUTION

3.1 EXAMINATION

Referenced NECA and NEMA standards in first paragraph below include similar requirements. See "Testing and Inspecting" Article in the Evaluations.

- A. Receive, inspect, handle, and store panelboards according to **[NECA 407] [NEMA PB 1.1]**.
- B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.
- C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

Referenced NECA and NEMA standards in first paragraph below include similar requirements. See "Testing and Inspecting" Article in the Evaluations.

- A. Install panelboards and accessories according to **[NECA 407] [NEMA PB 1.1]**.

Retain first paragraph below for floor-mounted distribution panelboards. Even if floor mounted, all panelboard cabinets must still be securely attached to a vertical wall or surface.

- B. Equipment Mounting: Install panelboards on concrete bases, **4-inch (100-mm)** nominal thickness. Comply with requirements for concrete base specified in Section[s] **[03300 "Cast-in-Place Concrete"] [033053 "Miscellaneous Cast-in-Place Concrete"]**.
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch (450-mm)** centers around full perimeter of base.
 - 2. For panelboards, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to panelboards.
 - 5. Attach panelboard to the vertical finished or structural surface behind the panelboard.

Retain first paragraph below for large floor-mounted distribution panelboards.

- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.

Retain first paragraph below if seismic controls are required for Project. Coordinate with Drawings.

- D. Comply with mounting and anchoring requirements specified in Section "Vibration and Seismic Controls for Electrical Systems."

Ensure that, whatever height is selected for top of trim in first paragraph below, the operating handle of top-most switch or circuit breaker, in on position, is not higher than 79 inches (2000 mm) above finished floor or grade.

- E. Mount top of trim [78 inches (1982 mm)] <Insert height> above finished floor unless matching height of existing equipment or approved otherwise.
- F. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
- G. Install overcurrent protective devices and controllers not already factory installed.

Subparagraph below assumes that settings are indicated on Drawings or a coordination report is available for Contractor to use.

1. Set field-adjustable, circuit-breaker trip ranges.
- H. Install filler plates in unused spaces.

Retain first paragraph below if ceilings are accessible or there are raised floors, or when panelboards are located in spaces that will be finished.

- I. Stub five 1-inch (27-GRC) empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub five 1-inch (27-GRC) empty conduits into raised floor space or below slab not on grade.

Retain option in first paragraph below if retaining "Load Balancing" Paragraph in "Adjusting" Article.

- J. Arrange conductors in gutters into groups and bundle and wrap with wire ties[**after completing load balancing**].
- K. Comply with NECA 1.

3.3 PANELBOARD SCHEDULE

- A. Panelboards shall be furnished and equipped as follows, except as otherwise specified:

Manufacturer:	120/208V:	277/480V:	600- 1200A:
Cutler Hammer	PRL-1	PRL-2	PRL-3 or 4
Square-D	NQOD	NEHB	I-LINE
GE	NLAB	NHB	CCB

Or approved equal by other manufacturer.

- B. Panelboards may contain not more than one subfeed breaker with ratings in excess of 100A, but less than 225A.

- C. Distribution panelboard shall be scheduled where more than one subfeed breaker rated in excess of 100A is required, and for any panelboard containing breakers with ratings of 225A or more.

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section "Identification for Electrical Systems."

Retain option in first paragraph below if retaining "Load Balancing" Paragraph in "Adjusting" Article.

- B. Create a directory to indicate installed circuit loads[**after balancing panelboard loads**]; incorporate Owner's final room designations. Clearly identify the load on each circuit, equipment serviced and location. Revise directory to reflect circuiting changes required to balance phase loads. In all instances where a contractor installs or disconnects a circuit in any panel, a newly typed panel schedule shall be furnished. The new or revised panel schedule shall have the date and Contractor's name typed at the top right hand corner. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.
- C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section "Identification for Electrical Systems."

Retain paragraph below if nameplates are required for individual overcurrent devices in distribution panelboards.

- D. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Section "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

Retain paragraph below to identify who shall perform tests and inspections. If retaining option, retain "Field Quality-Control Reports" Paragraph in "Informational Submittals" Article.

Retain first paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first two paragraphs below to describe tests and inspections to be performed.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than sixty (60) days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard eleven (11) months after date of Substantial Completion.
 - c. Instruments and Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

See Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.

D. Panelboards will be considered defective if they do not pass tests and inspections.

Retain paragraph below if tests and inspections are performed by Contractor or manufacturer's field-service representative engaged by Contractor.

E. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

F. Submit torque values for all connections with a torque schedule and witness signature.

3.6 ADJUSTING

A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.

Select first option in first paragraph below if settings are included in the Contract Documents; select second option if indicated Section is included in the Contract Documents.

B. Set field-adjustable circuit-breaker trip ranges [**as indicated**] [**as specified in Section**

"Overcurrent Protective Device Coordination Study."]

Circuit changes made during load balancing may negate color-coding of phases and circuits. If load balancing proves undesirable or is to be performed by others, delete paragraph below.

- C. Load Balancing: After Substantial Completion, but not more than sixty (60) days after Final Acceptance, measure load balancing and make circuit changes.
 - 1. Measure as directed during period of normal system loading.
 - 2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed. Avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
 - 3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.
 - 4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.

3.7 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262416

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262416.16 - ELECTRONICALLY OPERATED CIRCUIT-BREAKER PANELBOARDS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes: Panelboards using electronically controlled, electrically operated circuit breakers.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. BAS: Building automation system.
- B. IP: Internet protocol.

- C. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- D. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- E. PC: Personal computer; sometimes plural as "PCs."
- F. RS-485: A serial network protocol, similar to RS-232, complying with TIA-485-A.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, manual switches and plates, and conductors and cables.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each electronically operated, circuit-breaker panelboard and related equipment.
 - 1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
 - 2. Detail enclosure types and details for types other than NEMA 250, Type 1.
 - 3. Detail bus configuration, current, and voltage ratings.
 - 4. Short-circuit current rating of panelboards and overcurrent protective devices.
 - 5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

Retain first subparagraph below if final system short-circuit and coordination studies will be performed by designer or assigned to independent consultant. These curves are also beneficial to Owner for future additions or reevaluations of overcurrent protective device settings.

- 6. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graph paper; include selectable ranges for each type of overcurrent protective device.
- 7. Include diagrams for power, signal, and control wiring.

Retain "Block Diagram" Subparagraph below when control is digital, PC based, or IP based.

- 8. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data

gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.

1.5 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below if controllers are connected to devices or systems specified in other Sections.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Submit evidence that electronic controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 - 1. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
 - 2. For networked controls, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the network protocol.

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- B. Qualification Data: For testing agency.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 260548.16 "Seismic Controls for Electrical Systems." See ASCE/SEI 7 for certification requirements for equipment and components.

- C. Seismic Qualification Certificates: For panelboards, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- D. Field quality-control reports.

Retain first paragraph below for PC- and IP-based control systems.

- E. Software licenses and upgrades required by and installed for operation and programming of digital and analog devices.
- F. Sample Warranty: For manufacturer's special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electronic controls to include in emergency, operation, and maintenance manuals.

Retain "Software and Firmware Operational Documentation" Paragraph below for PC- and IP-based control systems.

- B. Software and Firmware Operational Documentation:
1. Software operating and upgrade manuals.
 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
 3. Device address list.
 4. Printout of software application and graphic screens.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Electrically Operated, Molded-Case Circuit Breakers: Equal to <Insert number> percent of amount installed [**for each size indicated**], but no fewer than <Insert number>.

1.8 QUALITY ASSURANCE

Retain "Testing Agency Qualifications" Paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also defines "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Handle and prepare panelboards for installation according to **[NECA 407] [NEMA PB 1.1]**.

1.10 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for units and components.

1. Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Products" Paragraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

- A. Products: Subject to compliance with requirements, provide one of the following:
1. Eaton Corporation, Cutler-Hammer Business Unit; Pow-R-Command Control Panelboards.
 2. General Electric Company, GE Consumer & Industrial - Electrical Distribution; A-Series Control Panels.
 3. Siemens Energy & Automation, Inc.; i-3 Control Technology.

4. Square D, a brand of Schneider Electric; PowerLink G3 Control Panelboards.
5. **<Insert manufacturer's name; product name or designation>**.
6. or approved equal.

- B. Source Limitations: Obtain electrically operated circuit breakers and power distribution components from single manufacturer.

2.2 SYSTEM DESCRIPTION

- A. Input signal from field-mounted or on-board signal source shall open or close one or more electrically operated circuit breakers in the electronically operated, circuit-breaker panelboards. Any combination of inputs shall be programmable to any combination outputs.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with 47 CFR, Subpart A and Subpart B, for Class A digital devices.

2.3 PERFORMANCE REQUIREMENTS

Retain "Seismic Performance" Paragraph below with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Delete paragraph if performance requirements are indicated on Drawings. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Coordinate requirements with structural engineer.

- A. Seismic Performance: Panelboards shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] **<Insert requirement>**.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

For life-safety components required to function after an earthquake (such as fire-sprinkler systems, components that contain hazardous content, and storage racks in structures open to the public), the Component Importance Factor is 1.5. For other components, the Component Importance Factor is 1.0 unless the structure is in Seismic Use Group III and component is necessary for continued operation of facility or failure of component could impair continued operation of facility, in which case the Component Importance Factor is 1.5.

2. Component Importance Factor: [1.5] [1.0].

See ASCE/SEI 7, Coefficients for Architectural Component Table and Seismic Coefficients for Mechanical and Electrical Components Table for requirements to be inserted in subparagraph below.

3. **<Insert requirements for Component Amplification Factor and Component Response Modification Factor>.**

- B. Expansion Requirements: Capacity for future expansion of number of control functions by 25 percent of current capacity; to include equipment ratings, housing capacities, spare spaces for circuit breakers, terminals, number of conductors in control cables, and control software.

Retain "BAS Interface" Paragraph below for interface with the BAS. Coordinate with Section 230900 "Instrumentation and Control for HVAC."

- C. BAS Interface: Provide hardware and software to enable the BAS to monitor, control, display, and record data for use in processing reports.

Retain "Hardwired Points" or "Communication Interface" Subparagraph below. Retain first if interface with the BAS is through hardwired points and minimal interface is required. Retain second if extensive interface with the BAS is required and is beyond what hardwired points can provide. Requirement may exclude some manufacturers.

1. Hardwired Points:
 - a. Monitoring: On-off status, **<Insert monitoring point>**.
 - b. Control: On-off operation, **<Insert control point>**.
2. Communication Interface: Comply with [ASHRAE 135] **<Insert type of interface>** communication interface with the BAS shall enable the BAS operator to remotely control and monitor electronically operated circuit breakers from a BAS operator workstation. Control features and monitoring points displayed locally at panelboard controller shall be available through the BAS.

2.4 PANELBOARDS

- A. Electronically operated, circuit-breaker panelboards may contain remotely operated circuit breakers and standard branch circuit breakers specified in Section 262416 "Panelboards."
- B. Assemblies: Comply with UL 67 and NEMA PB 1.

Retain one of two "Surge Protective Device" paragraphs below.

- C. Surge Protective Device: Field mounted, complying with Section 264313 "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits."
- D. Surge Protective Device: Integrally mounted, complying with UL 1449 Type 1.
1. Comply with IEEE C62.41, Category C, 200-kA short-circuit current rating.
 2. Non-modular type with the following features and accessories:
 - a. Digital-display indicator lights for power and protection status.
 - b. **<Insert features and accessories>**.

- E. Enclosures: Comply with UL 50 and NEMA 250.

Retain "Future Devices" Paragraph below if future provisions are required.

- F. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

Retain one of or both "Panelboard Short-Circuit Current Rating" paragraphs below for series-rated system or system that has panelboards and circuit breakers rated for full value of short-circuit current available at location of equipment. Typical short-circuit current rating of electrically operated circuit breakers is 10 kA. If higher values and series ratings are required, verify availability with manufacturers.

- G. Panelboard Short-Circuit Current Rating: Rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by an NRTL. Include size and type of allowable upstream and branch devices, listed and labeled for series-connected, short-circuit rating by an NRTL.
- H. Panelboard Short-Circuit Current Rating: Fully rated to interrupt [**10-kA**] symmetrical short-circuit current available at terminals.
- I. Panelboards shall have a UL-listed interrupting rating[**of 10 kA**], sufficient for the application, or a UL-listed series-connected rating for the maximum available fault current at that point in the system.

2.5 CIRCUIT BREAKERS

- A. Remotely operated branch circuit breakers shall provide branch circuit overcurrent protection.

In "Labeled with SWD and HID Ratings" Paragraph below, SWD rating is only available for 15- and 20-A, single-pole circuit breakers. Retain option if specifying other breaker sizes.

See Editing Instruction No. 2 in the Evaluations for discussion on short-circuit current ratings for equipment complying with UL 489.

- B. Labeled with SWD and HID Ratings: Comply with UL 489 for 15- and 20-A, single-pole branch devices.[**15- and 20-A circuit breakers, if scheduled, shall be a product of same manufacturer, and be of same class as the rated circuit breakers.**]

Retain "Switching Endurance Rating" Paragraph below if endurance in excess of UL 489 SWD test is required. Verify test method and available ratings with manufacturers.

- C. Switching Endurance Rating: Not less than [**50,000**] [**200,000**] <Insert number> full-load open/close/open remote operations.
- D. Remotely Operated Circuit Breakers: Manual override switch or handle position shall enable or disable the remote operation of the device and allow breaker handle to manually control the breaker's on-off status.

Retain "Main" option in article title below if retaining "Slave Panel Controllers" Article.

2.6 [MAIN]CONTROLLERS

- A. Description: Controllers shall contain the power supply and electronic control for operating and monitoring remotely operated branch circuit breakers.

See Editing Instruction No. 2 in the Evaluations for discussion on short-circuit current ratings for equipment complying with UL 916.

1. Comply with UL 916 (CSA C22.2, No. 205); with a microprocessor-based, solid-state, 365-day timing and control unit.
2. Power Supply: Powered from the panelboard, sized to provide control power for the operation of the remotely operated circuit breakers, controller, bus system, low-voltage inputs, and field-installed sensors.
3. Integral keypad and digital-display front panel for local setup, including the following:
 - a. Log and display remotely operated breaker on-time.
 - b. Provision to accept downloadable firmware so that the latest features may be added in the future without replacing the module.
4. Nonvolatile memory shall retain all setup configurations. After a power failure, the controller shall automatically reboot and return to normal system operation.

Retain "Ethernet Communications" Paragraph below if networking electronically operated, circuit-breaker panelboards. Coordinate with "Control Network" Article.

5. Ethernet Communications: Comply with [ASHRAE 135] <Insert network protocol> protocols.
 - a. Each input connected to the controller shall control any remotely operated breaker in any other networked electronically operated, circuit-breaker panelboard.
 - b. A schedule programmed at one controller shall be able to control any remotely operated breaker in any other networked panelboard.

In "Time Synchronization" Subparagraph below, the typical value ranges from one hour to 24 hours.

6. Time Synchronization: The timing unit shall be updated not less than every <Insert number> hour(s) with the network time server.
7. Web Server: Display information listed below over a standard Web-enabled server for displaying information over a standard Web browser.
 - a. A secure, password-protected login screen for modifying operational parameters, accessible to authorized users via Web page interface.
 - b. Separate Web page, showing status of each main and slave electronically operated, circuit-breaker panelboards with the arrangement of breakers on the page matching the physical appearance of the panel. Status shall include breaker nametags, pole configuration, location in panel, actual contact state (on-off/tripped/manual), and breaker on-time.
 - c. Panel summary showing the master and slave panels connected to the controller.

- d. Controller diagnostic information.
 - e. Show front panel mimic screens for setting up controller parameters, input types, zones, and operating schedules. These mimic screens shall also allow direct breaker control and zone overrides.
8. Alarm and E-mail Notification: Automatically initiate alarms based on preconfigured conditions listed below and routing alarm alerts as set at the control panel.
- a. General Alarms: Power loss, non-responding breakers, loss and restoration of sub-net communications, loss and restoration of serial port communications, loss and restoration of BAS commands.
 - b. Specific Alarms: Input status, zone status, breaker status on-time (0 to 99999 hours).
 - c. E-mail Notification: Automatically route e-mail messages to five individual e-mail addresses. Within the body text of the e-mail, include a link that will automatically redirect the user to the associated panels' status Web page.
- B. Timing Unit:
1. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
 2. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
 3. [16] <Insert number> independent schedules, each having [24] <Insert number> time periods.
 4. Schedule periods settable to the minute.
 5. Day of week, day of month, day of year with one-time or repeating capability.
 6. [32] <Insert number> special date periods.
- C. With [8] [16] <Insert number> inputs, each configurable to the following parameters:
1. Normally open, normally closed, two-wire maintained toggle, two-wire momentary toggle, two-wire momentary on, two-wire momentary off, or three-wire momentary operation.
 2. On and off-delay timers for local override operation, adjustable from five minutes to 12 hours. Local override shall be by field-installed, two-wire momentary toggle switch.

2.7 SLAVE PANEL CONTROLLERS

Retain this article if more than one panelboard is under unified control of the main controller.

- A. Slave panels shall contain the necessary busses and network hardware to allow connection of the sub-net wiring between panels, with programming at the main panel controller. Programmable timing unit, Web server, alarm and e-mail notification, and Ethernet connection to the control network is not required provided all of these functions are available for the slave panel from the main panel controller.

- B. Sub-net wiring connections shall allow connection of wiring to a terminal that can be removed from the panel without interrupting communications to other panels.
- C. Slave panels shall contain a nameplate label attached to the deadfront trim indicating the panel designation, panel network address, and panel designation of the associated master panel.

2.8 CONTROL NETWORK

Retain first option in "Panel Controllers" Paragraph below if networking more than one main controller. Retain second option if the network connects controllers associated with other BAS controllers.

- A. Panel Controllers: Networked with other [**electronically operated, circuit-breaker panel controllers**] [**BAS controllers**] in a peer-to-peer configuration using Ethernet [**10Base-T**] [**100Base-T**] network.

Retain "Compliance with ASHRAE 135" Paragraph below for DDC system for HVAC control network. Revise as required for other networks protocols.

See "Communication Networks" Article in the Evaluations for discussion of communication network options.

- B. Compliance with ASHRAE 135: Controllers shall support serial MS/TP and Ethernet IP communications, and shall be able to communicate directly via BAS RS-485 serial networks and Ethernet 10Base-T networks as a native device.

2.9 MANUAL SWITCHES AND PLATES

Coordinate use of manual switches in this article with override functions, with switch and wall-plate finish specified in Section 262726 "Wiring Devices."

- A. Keypads: Programmable, designed to control functions associated with the equipment of this Section. The units shall be able to control any system output device.
- B. Push-Button Switches: Modular, momentary-contact, low-voltage type.
 - 1. Match color specified in Section 262726 "Wiring Devices."

Two subparagraphs below are optional features.

- 2. Integral green [**digital-display**] pilot light to indicate when circuit is on.
 - 3. Internal white [**digital-display**] locator light to illuminate when circuit is off.
- C. Manual, Maintained Contact, Full- or Low-Voltage Switch: Comply with Section 262726 "Wiring Devices."
- D. Wall Plates: Single and multigang plates as specified in Section 262726 "Wiring Devices."

- E. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.10 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Class 2 and Class 3 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 18] [No. 22] [No. 24]** AWG. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 14] [No. 16] [No. 18]** AWG. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Digital and Multiplexed Signal Cables: Unshielded, twisted-pair cable with copper conductors, complying with TIA/EIA-568-B.2, **[Category 5e] [Category 6]** for horizontal copper cable. Comply with requirements in Section 271500 "Communications Horizontal Cabling."

PART 3 - EXECUTION

3.1 EXAMINATION

NECA and NEMA standards in first paragraph below include similar requirements. See "Testing and Inspecting" Article in the Evaluations.

- A. Receive, inspect, handle, and store panelboards according to **[NECA 407] [NEMA PB 1.1]**.
- B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.
- C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WIRING INSTALLATION

- A. Comply with NECA 1.

Retain one of two "Wiring Method" paragraphs below and coordinate with Drawings. Delete both if wiring methods for system are indicated on Drawings.

- B. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters[**and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used**]. Conceal raceway and cables except in unfinished spaces.

Retain first subparagraph below if retaining unenclosed wiring method option in "Wiring Method" Paragraph above.

1. Install plenum cable in environmental air spaces, including plenum ceilings.
2. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
3. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."

- C. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.3 PANELBOARD INSTALLATION

- A. Comply with NECA 1.

NECA and NEMA standards in first paragraph below include similar requirements. See "Testing and Inspecting" Article in the Evaluations.

- B. Install panelboards and accessories according to [**NECA 407**] [**NEMA PB 1.1**].

Retain first paragraph below if seismic controls are required for Project. Coordinate with Drawings.

- C. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

In "Mounting Height" Paragraph below, verify that operating handle of top-most switch or circuit breaker, in on position, is not higher than 79 inches (2000 mm) above finished floor or grade.

- D. Mounting Height: [**90 inches (2286 mm)**] <Insert dimension> to top of trim above finished floor unless otherwise indicated.
- E. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
- F. Install filler plates in unused spaces.

3.4 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section 260553 "Identification for Electrical Systems."
- C. Create a directory to indicate loads served by each circuit; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are unacceptable.
- D. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

Retain "Testing Agency," "Manufacturer's Field Service," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate testing requirements with Section 262416 "Panelboards."

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Perform the following infrared scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.

- b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
- c. Instruments and Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

C. Acceptance Testing Preparation:

- 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
- 2. Test continuity of each circuit.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

D. Panelboard will be considered defective if it does not pass tests and inspections.

Retain paragraph below if tests and inspections are performed by Contractor or manufacturer's field-service representative engaged by Contractor.

E. Prepare test and inspection reports, including a certified report that identifies panelboards included and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Confirm correct communication wiring, initiate communications between panels, and program the control system according to approved time-of-day schedules and input override assignments.
 - 3. **<Insert startup steps if any>**.

3.7 ADJUSTING

- A. Occupancy Adjustments: When requested within [**twelve (12)**] **<Insert number>** months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] **<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.8 SOFTWARE SERVICE AGREEMENT

Services in this article may not be allowed for publicly funded projects.

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for **[two (2)] <Insert number>** years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within **[two (2)] <Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
 - 1. Upgrade Notice: At least **[thirty (30)] <Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain control modules.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262416.16

Copyright 2010 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262419 - MOTOR-CONTROL CENTERS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

If applying for LEED certification, LEED-NC Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1-2004, which requires the use of mechanical or electrical variable-speed drives on fan motors used in VAV system fans that are 15 hp and larger and on motors in variable-flow hydronic systems that are larger than 50 hp.

Energy savings resulting from the use of variable-frequency motor controllers on motors other than required by Prerequisite EA 2 can be combined with other energy-saving measures to meet the requirements of LEED-NC Credit EA 1.

LEED-NC Credit EA 5 requires the development of a Measurement & Verification (M&V) Plan to achieve this credit. Energy used by each VFC can be used in the simulation calibration process required by the International Performance Measurement & Verification Protocol (IPMVP), Volume III, Chapter 4, "Whole Building Calibrated Simulation" (Option D) to verify the building's compliance with this credit.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes MCCs for use with ac circuits rated 600 V and less and having the following factory-installed components:
 - 1. Incoming main lugs and OCPDs.
 - 2. Full-voltage magnetic controllers.

3. Reduced-voltage magnetic controllers.
4. Reduced-voltage, solid-state controllers.
5. Multispeed controllers.
6. VFCs.
7. Feeder-tap units.
8. TVSS.
9. Instrumentation.
10. Auxiliary devices.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. BAS: Building automation system.
- B. CE: Conformance Europeene (European Compliance).
- C. CPT: Control power transformer.
- D. EMI: Electromagnetic interference.
- E. GFCI: Ground fault circuit interrupting.
- F. IGBT: Insulated-gate bipolar transistor.
- G. LAN: Local area network.
- H. LED: Light-emitting diode.
- I. MCC: Motor-control center.
- J. MCCB: Molded-case circuit breaker.
- K. MCP: Motor-circuit protector.
- L. NC: Normally closed.
- M. NO: Normally open.
- N. OCPD: Overcurrent protective device.
- O. PCC: Point of common coupling.
- P. PID: Control action, proportional plus integral plus derivative.
- Q. PT: Potential transformer.
- R. PWM: Pulse-width modulated.
- S. RFI: Radio-frequency interference.

- T. SCR: Silicon-controlled rectifier.
- U. TDD: Total demand (harmonic current) distortion.
- V. THD(V): Total harmonic voltage demand.
- W. TVSS: Transient voltage surge suppressor.
- X. VFC: Variable-frequency controller.

1.4 PERFORMANCE REQUIREMENTS

Retain this article with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction.

- A. Installer Qualifications: Installers shall specialize in installation of medium voltage equipment with a minimum of 5 years of experience
- B. Seismic Performance: MCCs shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

- 1. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event.
- C. Field Conditions: The drawings are diagrammatic and indicate the general arrangement of electrical work. Locations are approximate and shall be subject to minor modifications as dictated by field conditions and as directed by DEN Project Manager.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of controller and each type of MCC. Include shipping and operating weights, features, performance, electrical ratings, operating characteristics, and furnished specialties and accessories.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

LEED-NC Credit EA 5 requires continuous metering equipment for monitoring building energy-consumption performance over time. VFCs providing input to a BAS on energy usage can support this requirement. Coordinate with requirements in "VFC Controls and Indication" Article.

1. Product Data for Credit EA 5: For continuous metering equipment for energy consumption.

See Editing Instructions No. 2 and No. 3 in the Evaluations for discussion of Shop Drawing types defined in UL 845 that are available from manufacturers, including "standard," "approval," "production," and "custom" drawings. If retaining "Shop Drawings" Paragraph below, coordinate with manufacturers for availability of information and include additional information to suit Project. There can be a considerable cost premium for specifying optional drawings, especially if custom. Coordinate below with "Characteristics and Ratings" Article and see "Classification of MCCs" Article in the Evaluations for guidance on which subparagraphs to retain, based on MCC class and type specified.

Retain "Production" option below if optional drawings, representing the MCCs as released for production and shipping, are required from manufacturer. Manufacturers' production drawings are usually not intended for Action Submittals; if requested, they normally are for informational purposes only. If production drawings are required for review, retain "production" option and delete "Production Drawings" Paragraph.

- C. Shop Drawings: For each MCC, manufacturer's **[approval]** **[custom]** **[and]** **[production]** drawings as defined in UL 845. In addition to requirements specified in UL 845, including drawing index, dimensioned plans, elevations, and sections; and conduit entry locations and sizes, mounting arrangements, and details, including required clearances and service space around equipment.
 1. Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a. Each installed unit's type and details.
 - b. Factory-installed devices.
 - c. Enclosure types and details.
 - d. Nameplate legends.
 - e. Short-circuit current (withstand) rating of complete MCC, and for bus structure and each unit.
 - f. Features, characteristics, ratings, and factory settings of each installed controller and feeder device, and installed devices.
 - g. Specified optional features and accessories.
 - h. **<Insert required information>**.
 2. Schematic **[and Connection]** Wiring Diagrams: For power, signal, and control wiring for each installed controller. Provide complete one-line diagram and complete three-line diagram.
 3. Wiring diagrams shall reflect the physical location of components. Destination labeling shall be used.
 4. Relaying and control schematic diagram.
 5. Size and number of bus bars per phase, neutral and ground.
 6. Time-current curves of all equipment and components.
 7. Conduit entry and exit locations and requirements.
 8. Assembly ratings including:

- a. Short-circuit rating.
 - b. Voltage.
 - c. Continuous current.
 - d. Basic impulse level for equipment over 600 volts.
9. Major component ratings including:
- a. Voltage.
 - b. Continuous current.
 - c. Interrupting ratings.
10. Cable terminal sizes.
11. Component list.
12. Nameplate legends.
13. Vertical and horizontal bus capacities.
14. Features, characteristics, ratings, and factory settings of each installed unit.
15. Where applicable, the following additional information shall be submitted to the DEN Project Manager:
- a. Busway connections.
 - b. Connection details between close-coupled assemblies.
 - c. Composite floor plan of close-coupled assemblies.
 - d. Interlock scheme drawing and sequence of operations.
16. **<Insert required information>**.

Retain "Harmonic Analysis Study and Report" Paragraph below if VFCs are included in MCCs and an analysis is required from MCC manufacturer. Ensure that the information necessary for manufacturer to perform the analysis is included in the Construction Documents, including specified TDD and THD(V) limits. See "Harmonic Distortion" Article in the Evaluations and the Drawing Coordination Checklist for additional information.

- D. Harmonic Analysis Study and Report: Comply with IEEE 399 and NETA Acceptance Testing Specification; identify the effects of nonlinear loads and their associated harmonic contributions on the voltages and currents throughout the electrical system. Analyze **[possible]** **[designated]** operating scenarios, including recommendations for VFC input filtering to limit TDD and THD(V) **[at each VFC]** **[at the defined PCC]** to specified levels.

1.6 INFORMATIONAL SUBMITTALS

Manufacturers' "standard" drawings, as defined in UL 845 and NEMA ICS 18, are not intended for Action Submittals; if submitted, they normally are for informational purposes only. If "approval" drawings are required in "Shop Drawings" Paragraph, delete "Standard Drawings" Paragraph below. See Editing Instruction No. 2 in the Evaluations for explanation of these drawings.

- A. Standard Drawings: For each MCC, as defined in UL 845.

Retain "Production Drawings" Paragraph below if optional drawings, representing the MCCs as released for production and shipping, are required from manufacturer. Manufacturers' "production" drawings, as defined in UL 845 and NEMA ICS 18, are not intended for Action Submittals; if requested, they normally

are for informational purposes only. If production drawings are required for review, retain "production" option in "Shop Drawings" Paragraph and delete below. See Editing Instruction No. 3 in the Evaluations for explanation of these drawings.

- B. Production Drawings: For each MCC, as defined in UL 845.

Retain "Coordination Drawings" Paragraph below. See "Installation Considerations" Article in the Evaluations for additional guidance on when to retain paragraph.

Coordinate requirements for coordination drawings with DEN Project Manager.

- C. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around MCCs where pipe and ducts are prohibited. Show MCC layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Sections specifying mechanical vibration, supports, electrical supports, and seismic controls. See ASCE/SEI 7 for certification requirements for equipment and components.

- D. Seismic Qualification Certificates: For MCCs, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- E. Qualification Data: For qualified testing agency.

Retain "Product Certificates" Paragraph below for product certificates from manufacturers.

- F. Product Certificates: For each MCC, from manufacturer.
- G. Source quality-control reports.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- H. Field quality-control reports.

Projects with multiple sizes and types of controllers might include different types of overload relays. Retain one or both of first two paragraphs below to suit type(s) of motor overload protection. See Evaluations for discussion.

- I. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
- J. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor running overload protection suit actual motors to be protected.
- K. Manufacturer's System Start-Up Plan.
- L. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For MCCs, all installed devices, and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

See Editing Instructions No. 2 and No. 3 in the Evaluations for discussion of Shop Drawing types defined in UL 845 available from manufacturers, and which are included as part of operation and maintenance submittals. However, field modifications and wiring identification are typically not included in Record Drawings, but can be incorporated at additional costs. Retain "Manufacturer's Record Drawings" Subparagraph below if drawings of the MCCs, as manufactured and shipped, and including field modifications, are required.

- 1. Manufacturer's Record Drawings: As defined in UL 845. In addition to requirements specified in UL 845, include field modifications [**and field-assigned wiring identification**] incorporated during construction by manufacturer, Contractor, or both. Provide paper copy and electronic copy in format as approved by DEN Project Manager.

Coordinate subparagraphs below with features. Retain first subparagraph if circuit breakers are specified in combination controllers; retain second if field-adjustable overload relays are specified; retain third if reduced-voltage, solid-state controllers are specified; retain fourth if VFCs are specified; retain fifth if specifying optional control features.

- 2. Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.
- 3. Manufacturer's written instructions for setting field-adjustable overload relays.
- 4. Manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage, solid-state controllers.
- 5. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
- 6. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
- 7. Certified production test reports.
- 8. Installation information including equipment anchorage provisions.
- 9. Seismic certification.
- 10. Recommended renewal parts list.

11. Submit torque values for all connections with a torque schedule and witness signature.
- B. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.
- C. The Manufacturer shall provide three (3) certified copies of factory test reports to DEN Project Manager.

Verify requirements for as-built plans with DEN Project Manager.

- D. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

Revise this article to include extra materials that Owner may require, which may fail more frequently due to continual use. Coordinate extra materials with features retained in Part 2.

Coordinate quantity of fuses with Section 262813 "Fuses" for required space in spare-fuse cabinet.

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver maintenance materials as directed by DEN Project Manager.
 1. Power Fuses: Equal to **[ten (10)] <Insert number>** percent of quantity installed for each size and type, but no fewer than **[three (3)] <Insert number>** of each size and type.
 2. Control Power Fuses: Equal to **[ten (ten (10))] <Insert number>** percent of quantity installed for each size and type, but no fewer than **[two (2)] <Insert number>** of each size and type.
 3. Indicating Lights: **[Two (2)] <Insert number>** of each type and color installed.
 4. Auxiliary Contacts: Furnish **[one (1)] <Insert number>** spare(s) for each size and type of magnetic controller installed.
 5. Power Contacts: Furnish **[three (3)] <Insert number>** spares for each size and type of magnetic contactor installed.
 6. **<Insert extra materials>**.
- B. Include spare parts data listing; source and current prices of replacement parts and supplies; and recommended maintenance procedures and intervals.

1.9 QUALITY ASSURANCE

Retain "Testing Agency Qualifications" Paragraph below if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- B. Source Limitations: Obtain MCCs and controllers of a single type from single source from single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70.

Retain "IEEE Compliance" Paragraph below for projects in seismic areas. If retaining, also retain "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article.

- E. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- F. The Manufacturer of this equipment shall have been pre-qualified by Owner.
- G. When requested by the DEN Project Manager, an acceptable list of installations with similar equipment shall be provided demonstrating compliance with this requirement.

1.10 DELIVERY, STORAGE, AND HANDLING

Retain first paragraph below if there are obstacles to movement of normal shipping lengths of MCCs. Coordinate with Drawings.

- A. Deliver MCCs in 60-inch maximum width shipping splits of lengths that can be moved past obstructions in delivery paths, individually wrapped for protection and mounted on shipping skids.
- B. Handle MCCs according to the following:
 - 1. NEMA ICS 2.3, "Instructions for the Handling, Installation, Operation, and Maintenance of Motor Control Centers Rated Not More Than 600 Volts."
 - 2. NECA 402, "Recommended Practice for Installing and Maintaining Motor Control Centers."
- C. Equipment shall be handled and stored in accordance with Manufacturer's instructions.

One (1) copy of these instructions shall be included with the equipment at time of shipment.

- D. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Keep the unit above ambient temperature until energized.
- E. Handle in accordance with manufacturer's written instructions. Lift only with lugs provided for the purpose. Handle carefully to avoid damage to motor control center components, enclosure, and finish.

Retain first option in paragraph below for controllers that are not required to have factory-installed space heaters; otherwise, retain second option.

- F. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside MCCs. Equipment being stored prior to installation shall be stored so as to maintain the equipment in a clean and dry condition. If stored outdoors indoor gear shall be covered and heated, and outdoor gear shall be heated. Install temporary electric heating, with at least 250 W per vertical section, or connect factory-installed space heaters to temporary electrical service.

1.11 PROJECT CONDITIONS

Revise "Environmental Limitations" Paragraph below to specify unusual environmental or service conditions. For equipment installed outdoors, indicate maximum and minimum ambient temperature and expected humidity range. For additional ambient compensation requirements for fuses, MCCBs, and overload relays, see Editing Instructions No. 5, No. 6, and No. 8 in the Evaluations.

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 - 1. Ambient Temperature Range: **Minus 30 deg F** (minus 35 deg C) to **120 deg F** (49 deg C), with an average value exceeding **95 deg F** (35 deg C) over a 24-hour period.
 - 2. Ambient Storage Temperature: **Minus 30 deg F** (minus 35 deg C) and not exceeding **140 deg F** (60 deg C).
 - 3. Humidity: Less than 95 percent (noncondensing).
 - 4. Altitude: **5,500 feet** (1677 m) above sea level..
 - 5. **<Insert unusual service condition>**.

Retain "Interruption of Existing Electrical Service or Distribution Systems" Paragraph below if interruption of existing electrical services or distribution systems is required.

- B. Interruption of Existing Electrical Service or Distribution Systems: Do not interrupt electrical service to, or distribution systems within, a facility occupied by Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport

- Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
2. Indicate method of providing temporary electrical service.
 3. Do not proceed with interruption of electrical service without DEN Project Manager's written permission.
 4. Comply with NFPA 70E.

Dimensions of MCCs, especially those with VFCs and other devices, or various options, can vary considerably in size between manufacturers. Retain "Product Selection for Restricted Space" Paragraph below with "Basis-of-Design Product" Paragraph in "Manufactured Units" Article if installation space for MCCs is limited; show maximum dimensions on Drawings. See "Installation Considerations" and "Large Equipment" articles in the Evaluations for additional guidance.

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for MCCs, including clearances between MCCs and adjacent surfaces and other items.
- D. Field Measurements: Verify existing dimensions by field measurements. Verify clearances and locate obstructions within manufacturing and installation tolerances of enclosed bus assemblies.

1.12 COORDINATION

Retain first paragraph below if required for MCCs.

- A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases.

Revise both paragraphs below to refer to other Sections, such as conveying equipment systems, if control coordination is required.

- B. Coordinate features of MCCs, installed units, and accessory devices with remote pilot devices and control circuits to which they connect.
- C. Coordinate features, accessories, and functions of each MCC, each controller, and each installed unit with ratings and characteristics of supply circuits, motors, required control sequences, and duty cycle of motors and loads.

1.13 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace [TVSS] [VFCs] <Insert devices> that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods with manufacturers listed in Part 2 articles.

1. Warranty Period: Minimum [five (5)] <Insert number> years from date of

Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

B. CONSTRUCTION WASTE MANAGEMENT

1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

- A. Motor Control Centers shall be as designed or approved equal, and shall have been tested in a high power laboratory to prove adequate mechanical and electrical capabilities. All major components shall have been individually design tested and guaranteed by the manufacturer. Wiring shall be as per specified NEMA standards.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain "Manufacturers" Paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. ABB; Control Products.
 2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 3. General Electric Company; GE Industrial Systems.
 4. Rockwell Automation, Inc.; Allen-Bradley Brand.
 5. Siemens Energy & Automation, Inc.; Power Distribution.
 6. Square D; a brand of Schneider Electric.
 7. <Insert manufacturer>
 8. or approved equal.

MCCs in this article include service and distribution types most commonly applied. Coordinate types of MCCs with types of controllers and OCPDs and with MCC arrangements and available spaces. Consult manufacturer to determine layout requirements. See Evaluations. Most MCCs are both front and rear aligned, with the possible exception of units with extremely large or unusual main and fixed branch cubicles. The Section Text defaults to front and rear alignment, with front-only access; coordinate with manufacturers for unusual conditions.

- C. General Requirements for MCCs: Comply with NEMA ICS 18 and [UL 845] <Insert standard>.
- D. The type of enclosure shall be in accordance with NEMA Standards for Type 1A with gasketed doors. All enclosing sheet steel, wireways and unit doors shall be gasketed.

- E. The Motor Control Center shall be 600-volt class suitable for operation on a three phase, 60 Hertz system. The system operating voltage shall be 480 volts, 3-phase, 4-wire unless otherwise indicated on the drawings.
- F. Provide a shunt trip device for the main circuit breaker in the motor control center. The shunt trip shall operate on 120v A.C. Power for the shunt trip shall be provided by the control power for the transformer and capacitor trip device specified under the incoming line metering section of the specification. Undervoltage and single-phase protection for the motor control center shall be provided when the microprocessor metering module output contact energizes the shunt trip of the main circuit breaker.

2.2 FUNCTIONAL FEATURES

In addition to equipment and devices included in the Section Text, UL 845 and various listed manufacturers also allow in MCCs such items as automatic transfer switches, distribution transformers, lighting and appliance and distribution panelboards, combination lighting contactors, etc. Although not included in the Section Text, these items can be added if required. Coordinate with retained unit types and Drawings.

- A. Description: Modular arrangement of main units, controller units, control devices, feeder-tap units, instruments, metering, auxiliary devices, and other items mounted in vertical sections of MCC.

Coordinate "Controller Units" Paragraph below with Drawings.

- B. Controller Units: Combination controller units.
 - 1. Install units up to and including Size 3 on drawout mountings with connectors that automatically line up and connect with vertical-section buses while being racked into their normal, energized positions.
 - 2. Equip units in Type B and Type C MCCs with pull-apart terminal strips for external control connections.

Coordinate "Feeder-Tap Units" Paragraph below with Drawings.

- C. Feeder-Tap Units: Through 225-A rating shall have drawout mountings with connectors that automatically line up and connect with vertical-section buses while being racked into their normal, energized positions.

Coordinate "Future Units" Paragraph below with Drawings. Indicate, in schedule, sizes of future controllers to be accommodated.

- D. Future Units: Compartments fully bused and equipped with guide rails or equivalent, ready for insertion of drawout units.

Coordinate "Spare Units" Paragraph below with Drawings.

- E. Spare Units: Installed in compartments indicated "spare."

2.3 INCOMING MAINS

Not all manufacturers offer all options in this article. Coordinate with manufacturers for available options. Coordinate selection of the disconnecting means and OCPD with short-circuit current ratings required for Project. See the "Main- and Feeder-Tap Disconnecting and Overcurrent Protective Devices" Article and Editing Instructions No. 5, No. 6, and No. 9 in the Evaluations for guidance on making selections.

Retain "Incoming Mains Location" Paragraph below, and coordinate with Drawings and schedules, if Project requirements include identifying specific entry locations for incoming service or feeder raceways.

A. Incoming Mains Location: **[Top]** **[and]** **[bottom]**.

Include instructions in "Main Lugs Only" Paragraph below if special sizing or oversizing of lugs is required, if allowing optional use of aluminum for circuits sized for copper conductors, or when upsizing conductors for voltage drop.

B. Main Lugs Only: Conductor connectors suitable for use with conductor material and sizes.

1. Material: Hard-drawn copper, 98 percent conductivity.
2. Main and Neutral Lugs: **[Compression]** **[Mechanical]** type.

C. MCCB: Comply with UL 489, with interrupting capacity to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:

Retain one or more of first four subparagraphs below; coordinate required adjustable settings with Section 260573 "Overcurrent Protective Device Coordination Study." See "Electronic rms Trip versus MCCBs and ICCBs" Paragraph in "Main- and Feeder-Tap Disconnecting and Overcurrent Protective Devices" Article in the Evaluations for additional guidance on specifying full- or standard-function features.

- a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I^2t response.
4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
 5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
 6. MCCB Features and Accessories:

Not all accessories and options listed in subparagraphs below are available for every rating and from every listed manufacturer. Verify, with manufacturers, availability and unique characteristics.

- a. Standard frame sizes, trip ratings, and number of poles.

See Editing Instruction No. 14 in the Evaluations for guidance on using mechanical versus compression lugs.

- b. Lugs: **[Mechanical]** **[Compression]** style, suitable for number, size, trip ratings, and conductor material.
- c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.

Retain first option in "Ground-Fault Protection" Subparagraph below for solid-state trip units; retain second option for thermal-magnetic trip units. If retaining second option, also retain "Shunt Trip" Subparagraph below.

- d. Ground-Fault Protection: **[Integrally mounted]** **[Remote-mounted]** relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
- e. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
- f. Communication Capability: **[Circuit-breaker-mounted]** **[Universal-mounted]** **[Integral]** **[Din-rail-mounted]** communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
- g. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at **[55]** **[75]** percent of rated voltage.
- h. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
- i. Auxiliary Contacts: **[One SPDT switch]** **[Two SPDT switches]** with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
- j. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

- D. Insulated-Case Circuit Breaker: **[80]** **[100]** percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.

1. **[Fixed]** **[Drawout]** circuit-breaker mounting.
2. Two-step, stored-energy closing.
3. **[Standard]** **[Full]**-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:

Retain one or more of first four subparagraphs below; coordinate required adjustable settings with Section 260573 "Overcurrent Protective Device Coordination Study." See "Electronic rms Trip versus MCCBs and ICCBs" Paragraph in "Main- and Feeder-Tap Disconnecting and Overcurrent Protective Devices" Article in the Evaluations for additional features available for standard- and full-function trip units.

- a. Instantaneous trip.
- b. Long- and short-time time adjustments.
- c. Ground-fault pickup level, time delay, and I²t response.
- d. **<Insert settings>**.

4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
5. Remote trip indication and control.
6. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
7. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

Retain voltage in "Control Voltage" Subparagraph below to match control power supply.

8. Control Voltage: [40-V dc] [125-V dc] [250-V dc] [120-V ac].

2.4 COMBINATION CONTROLLERS

A. Full-Voltage Controllers:

Show controller pole quantities, NEMA size and type, and accessories for each controller on Drawings. See "Full-Voltage Controllers" Article in the Evaluations for selection considerations. See Editing Instructions No. 4 and No. 10 in the Evaluations.

Not all features, accessories, and options in this article are available for every rating, with every type enclosure, and from every listed manufacturer. Verify, with manufacturers, availability and unique characteristics. Show on Drawings those features and accessories that apply to each controller.

1. General Requirements for Full-Voltage Enclosed Controllers: Comply with NEMA ICS 2, general purpose, Class A.

Three-pole, integral horsepower magnetic controllers are suitable for use with three-phase ac motors up to 1600 hp, and from NEMA ICS 2, Size 00 to Size 9; however, not all listed manufacturers offer enclosed controllers up to Size 9. Two- and four-pole models are also available in varying minimum and maximum horsepower ratings and NEMA sizes. See "Magnetic Controllers" Article in the Evaluations for additional guidance on their use.

2. Magnetic Controllers: Full voltage, across the line, electrically held.
 - a. Configuration: [Nonreversing] [and] [reversing] <Insert configuration>.

B. Reduced-Voltage Magnetic Controllers:

Show controller pole quantities, NEMA size and type, and accessories for each controller on Drawings. See "Reduced-Voltage Magnetic Controllers" Article in the Evaluations for selection considerations. See Editing Instructions No. 4 and No. 10 in the Evaluations. Reduced-voltage magnetic controllers are available in either open- or closed-transition modes; however, the Section Text includes only closed-transition mode. Open-transition mode may be added to suit Project.

1. General Requirements for Reduced-Voltage Magnetic Controllers: Comply with NEMA ICS 2, general purpose, Class A; closed transition; adjustable time delay on transition.
2. Reduced-Voltage Magnetic Controllers: Reduced voltage, electrically held.
 - a. Configuration:

- b. Wye-Delta Controller: Four contactors, with a three-phase starting resistor/reactor bank.
- c. Part-Winding Controller: Separate START and RUN contactors, field-selectable for one-half or two-thirds winding start mode, with either six- or nine-lead motors; with separate overload relays for starting and running sequences.
- d. Autotransformer Reduced-Voltage Controller: Medium-duty service, with integral overtemperature protection; taps for starting at 50, 65, and 80 percent of line voltage; two START and one RUN contactors.

C. Reduced-Voltage, Solid-State Controllers:

Show controller pole quantities, NEMA size and type, and accessories for each controller on Drawings. See "Reduced-Voltage Controllers," "Reduced-Voltage, Solid-State Controllers," and "Solid-State Controllers" articles in the Evaluations for selection considerations. See Editing Instructions No. 4 and No. 11 in the Evaluations.

Standard and optional features vary considerably among manufacturers of solid-state controllers. Also, features and options depend on motor characteristics and operating criteria of driven equipment.

1. General Requirements for Reduced-Voltage, Solid-State Controllers: Comply with UL 508.

Three-pole, reduced-voltage, solid-state controllers are available for use with three-phase ac motors 3 to 600 hp, and in voltages from 208- to 575-V ac; however, not all listed manufacturers may offer enclosed controllers in all these ratings and voltage ranges.

2. Reduced-Voltage, Solid-State Controllers: An integrated unit with power SCRs, heat sink, microprocessor logic board, door-mounted digital display and keypad, bypass contactor, and overload relay; suitable for use with NEMA MG 1, Design B, polyphase, medium-induction motors.
 - a. Configuration: [**Standard duty**] [**Severe duty**]; [**nonreversible**] [**reversible**].
 - b. Starting Mode: [**Voltage ramping**] [**Current limit**] [**Torque control**] [**Torque control with voltage boost**]; [**field selectable**].
 - c. Stopping Mode: [**Coast to stop**] [**Adjustable torque deceleration**] [**Adjustable braking**]; [**field selectable**].

Most manufacturers provide shorting contactors to bypass the SCRs at full speed, instead of the controller operating continually through the SCRs. Bypass contactors are usually of less than full-voltage rating, and many are IEC-rated controllers. They are not sized or intended for starting the motor across the line. Some manufacturers, however, offer the alternative of full-voltage bypass contactors for severe-duty applications, to completely bypass the SCRs on failure (allowing use of the controller as a full-voltage controller).

- d. Shorting (Bypass) Contactor: Operates automatically when full voltage is applied to motor, and bypasses the SCRs. Solid-state controller protective features shall remain active when the shorting contactor is in the bypass mode.
- e. Shorting[**and Input Isolation**] Contactor Coils: Pressure-encapsulated type; manufacturer's standard operating voltage, matching control power or line voltage, depending on contactor size and line-voltage rating.[**Provide coil transient suppressors.**]

- f. Logic Board: Identical for all ampere ratings and voltage classes, with environmental protective coating.
- g. Adjustable acceleration-rate control using voltage or current ramp, and adjustable starting torque control with up to **[400]** **<Insert number>** percent current limitation for 20 seconds.
- h. SCR bridge shall consist of at least two SCRs per phase, providing stable and smooth acceleration **[with]** **[without]** external feedback from the motor or driven equipment.
- i. Keypad, front accessible; for programming the controller parameters, functions, and features; shall be manufacturer's standard and include not less than the following functions:
 - 1) Adjusting motor full-load amperes, as a percentage of the controller's rating.
 - 2) Adjusting current limitation on starting, as a percentage of the motor full-load current rating.
 - 3) Adjusting linear acceleration and deceleration ramps, in seconds.
 - 4) Initial torque, as a percentage of the nominal motor torque.
 - 5) Adjusting torque limit, as a percentage of the nominal motor torque.
 - 6) Adjusting maximum start time, in seconds.
 - 7) Adjusting voltage boost, as a percentage of the nominal supply voltage.
 - 8) Selecting stopping mode, and adjusting parameters.
 - 9) Selecting motor thermal-overload protection class between 5 and 30.
 - 10) Activating and de-activating protection modes.
 - 11) Selecting or activating communications modes.
 - 12) **<Insert function>**.
- j. Digital display, front accessible; for showing motor, controller, and fault status; shall be manufacturer's standard and include not less than the following:
 - 1) Controller Condition: Ready, starting, running, stopping.
 - 2) Motor Condition: Amperes, voltage, power factor, power, and thermal state.
 - 3) Fault Conditions: Controller thermal fault, motor overload alarm and trip, motor underload, overcurrent, shorted SCRs, line or phase loss, phase reversal, and line frequency over or under normal.
 - 4) **<Insert items>**.
- k. Controller Diagnostics and Protection:
 - 1) Microprocessor-based thermal protection system for monitoring SCR and motor thermal characteristics, and providing controller overtemperature and motor overload alarm and trip; settings selectable via the keypad.
 - 2) Protection from line-side reverse phasing; line-side and motor-side phase loss; motor jam, stall, and underload conditions; and line frequency over or under normal.

Retain one of first two subparagraphs below to provide motor protection on a controller fault.

- 3) Input isolation contactor that opens when the controller diagnostics detect a faulted solid-state component, or when the motor is stopped.

Retain first subparagraph below only if specifying combination controllers.

- 4) Shunt trip that opens the disconnecting means when the controller diagnostics detect a faulted solid-state component.
- 5) **<Insert items>**.

I. Remote Output Features:

- 1) All outputs prewired to terminal blocks.
- 2) Form C status contacts that change state when controller is running.
- 3) Form C alarm contacts that change state when a fault condition occurs.
- 4) **<Insert items>**.

m. Optional Features:

- 1) Analog output for field-selectable assignment of motor operating characteristics; **[0 to 10-V dc] [4 to 20-mA dc]**.
- 2) Additional field-assignable Form C contacts for alarm outputs.
- 3) Surge suppressors in solid-state power circuits providing three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
- 4) Full-voltage bypass contactor operating **[automatically] [manually, with NORMAL/BYPASS selector switch]**. Power contacts shall be totally enclosed, double break, and silver-cadmium oxide; and assembled to allow inspection and replacement without disturbing line or load wiring.

D. Multispeed Magnetic Controllers:

Show controller pole quantities, NEMA size and type, and accessories for each controller on Drawings. See "Multispeed Controllers" Article in the Evaluations for selection considerations. See Editing Instructions No. 4 and No. 11 in the Evaluations. The Section Text includes two-speed controllers only; however, most manufacturers catalog controllers offering more than two speeds. Multispeed controllers supporting more than two speeds may be added to suit Project.

1. General Requirements for Multispeed Magnetic Controllers: Comply with NEMA ICS 2, general purpose, Class A.
2. Multispeed Magnetic Controllers: Two speed, full voltage, across the line, electrically held. Compelling relay to ensure that motor will start only at low speed.
 - a. Configuration: **[Nonreversing] [Reversing]; [consequent pole] [two winding]**.

Retain one or both of first two subparagraphs below. If retaining both, indicate on Drawings where each type is required. Compelling and accelerating relays cannot be specified together for the same controller.

Compelling, accelerating, and decelerating relays can be used for all multispeed controllers; antiplugging relays are used only for reversing multispeed controllers.

- b. Compelling relays shall ensure that motor starts only at low speed.
- c. Accelerating timer relays shall ensure properly timed acceleration through speeds lower than that selected.
- d. Decelerating timer relays shall ensure automatically timed deceleration through each speed.
- e. Antiplugging timer relays shall ensure a time delay when transferring from FORWARD to REVERSE and back.

E. Disconnecting Means and OCPDs:

Disconnecting means and OCPDs must be closely coordinated with calculated short-circuit current values at the controller locations because they are directly related to short-circuit withstand ratings of their combination controllers. Although fusible switches (with appropriate fuses) can provide Type 2 controller protection from very high short-circuit currents, not all circuit breakers or MCPs can. See Editing Instructions No. 9 and No. 10 in the Evaluations for explanation of protection types and when they should be considered. The Section Text does not include nonfusible disconnecting means because they are usually not an option with MCCs.

1. Fusible Disconnecting Means:

- a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate [Class J] [Class L] <Insert class> fuses.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain "Auxiliary Contacts" Subparagraph below if external control power is used or for remote indication of disconnecting means position.

- c. Auxiliary Contacts: NO/NC, arranged to activate before switch blades open.

MCP disconnecting means must be used in combination with integral overload relays.

2. MCP Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both of first two subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and NO or NC contact requirements on Drawings.

- c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
- d. [NC] [NO] alarm contact that operates only when MCP has tripped.

First subparagraph below is an optional, added-cost feature.

- e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

3. MCCB Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
- b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
- c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both of first two subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and NO or NC contact requirements on Drawings.

- d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
- e. **[NC] [NO]** alarm contact that operates only when MCCB has tripped.

4. Molded-Case Switch Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with in-line fuse block for Class J or L power fuses (depending on ampere rating), providing an interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and NO or NC contact requirements on Drawings.

- c. Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
- d. **[NC] [NO]** alarm contact that operates only when molded-case switch has tripped.

F. Overload Relays:

Manufacturers typically integrate overload functions into solid-state controllers and use separate thermal or solid-state overload relays only if full-voltage bypass controllers are specified. Retain one or more of first three subparagraphs below if specifying full-voltage bypass contactors. If retaining more than one, show on Drawings where each type is required. See Editing Instruction No. 7 and "Overload Protection" Article in the Evaluations for additional guidance.

1. Melting-Alloy Overload Relays:

- a. Inverse-time-current characteristic.
- b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.
- c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

2. Bimetallic Overload Relays:

- a. Inverse-time-current characteristic.
- b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.
- c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

Retain one or both of first two subparagraphs below only if applicable. See Editing Instruction No. 8 and "Bimetallic Overload Relays" Article in the Evaluations for guidance and warnings.

- d. Ambient compensated.
 - e. Automatic resetting.
3. Solid-State Overload Relays:
- a. Switch or dial selectable for motor running overload protection.
 - b. Sensors in each phase.
 - c. **[Class 10] [Class 20] [Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

Retain one or both of first two subparagraphs below if applicable. These are optional, added-cost features.

- d. Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
- e. Analog communication module.

Retain first subparagraph below if alarm contacts on overload relays are required for local or remote alarm indication of a tripped overload relay.

4. **[NC] [NO]** isolated overload alarm contact.
5. External overload reset push button.

G. Control Power:

1. Control Circuits: **[24] [120] <Insert value>-V ac**; obtained from **[integral CPT, with primary and secondary fuses] <Insert source of control power>**, with **[CPT] [control power source]** of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

Retain "CPT Spare Capacity" Subparagraph below if retaining "CPT" option in "Control Circuits" Subparagraph above and spare CPT capacity is required. Spare capacity is usually available in 100-VA increments. Consult manufacturers for maximum spare capacity and available CPT sizes for different NEMA and enclosure sizes because adding spare capacity and an oversized CPT may require using an enlarged enclosure.

- a. CPT Spare Capacity: **[50] [100] [200] <Insert value> VA**.

2.5 VFCS

Show VFC pole quantities, size and type, and accessories for each controller on Drawings. See "Specifying VFCs" Article and Editing Instruction No. 13 in the Evaluations for selection considerations.

Standard and optional features vary considerably among VFC manufacturers. Not all features, accessories, and options in this article are available for every rating, with every type enclosure, and from every listed manufacturer. Also, features and options depend on motor characteristics and operating criteria of driven equipment. Verify, with manufacturer, availability and unique characteristics. Show on Drawings those features and accessories that apply to each VFC.

- A. General Requirements for VFCs: Comply with NEMA ICS 7, NEMA ICS 61800-2, and **[UL 508C]** <Insert standard>.

Retain first option in "Application" Paragraph below for constant-torque loads such as positive-displacement pumps and reciprocating and screw compressors; retain second option for variable-torque loads such as centrifugal blowers, compressors, fans, and pumps. The Section Text does not include VFCs for constant-horsepower loads because they are seldom used in commercial (e.g., plumbing and HVAC) applications; however, they can be added to suit Project.

- B. Application: **[Constant torque]** [and] **[variable torque]** <Insert application>.

Low-voltage VFCs are available for use with three-phase ac motors from 1/2 to 500 hp (depending on voltage rating), and in single- or three-phase input voltages from 200- to 575-V ac; however, not all listed manufacturers may offer VFCs in all these ratings and voltage ranges. Using single-phase voltages for VFCs controlling three-phase motors may require substantial derating of the VFCs; consult manufacturers for limitations and derating requirements. See "Controllers" and "VFCS" articles in the Evaluations for additional information on how VFCs are used as controllers.

- C. VFC Description: Variable-frequency power converter (rectifier, dc bus, and IGBT PWM inverter) factory packaged in an enclosure, with integral disconnecting means and overcurrent and overload protection; listed and labeled by an NRTL as a complete unit; arranged to provide self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency.

Retain one or both of first two subparagraphs below as required to support motors and driven equipment specified in other Divisions. See the "Multispeed and Variable-Speed Considerations" Article in the Evaluations in Section 230513 "Common Motor Requirements for HVAC Equipment," for guidance on motor requirements and applications using VFCs..

1. Units suitable for operation of NEMA MG 1, Design A and Design B motors as defined by NEMA MG 1, Section IV, Part 30, "Application Considerations for Constant Speed Motors Used on a Sinusoidal Bus with Harmonic Content and General Purpose Motors Used with Adjustable-Voltage or Adjustable-Frequency Controls or Both."
2. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
3. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to authorities having jurisdiction.

Retain subparagraph below if specifying units for use on single-phase systems for three-phase motors.

4. Listed and labeled for single-phase use by an NRTL acceptable to authorities having jurisdiction.

- D. Design and Rating: Match load type such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.

Retain first option in "Output Rating" Paragraph below for variable-torque drives; retain second option for constant-torque drives.

- E. Output Rating: Three-phase; 10 to [60 Hz, with voltage proportional to frequency throughout voltage range] [66 Hz, with torque constant as speed changes]; maximum voltage equals input voltage.
- F. Unit Operating Requirements:

Increases in technology are allowing manufacture of VFCs with greater tolerance to system anomalies and better operating performance; most listed manufacturers are offering VFCs that tolerate the greater optional variances, or offer the higher levels of performance included in subparagraphs below. Consult manufacturers if Project system conditions fall outside the selected parameters in first three subparagraphs below, because corrective actions or additional modifications may be required before VFCs can be applied. In "Input AC Voltage Tolerance" Subparagraph below, voltage tolerance is more a factor of voltage limitations for industrial control devices (e.g., magnetic contactors) in an enclosed VFC and not the VFC's power converter, which can usually tolerate greater voltage variations.

- 1. Input AC Voltage Tolerance: Plus 10 and minus [10] [15] percent of VFC input voltage rating.
- 2. Input AC Voltage Unbalance: Not exceeding [3] [5] percent.
- 3. Input Frequency Tolerance: Plus or minus 3 percent of VFC frequency rating.
- 4. Minimum Efficiency: [96] [97] <Insert number> percent at 60 Hz, full load.
- 5. Minimum Displacement Primary-Side Power Factor: [96] [98] <Insert number> percent under any load or speed condition.

Retain first option in "Overload Capability" Subparagraph below for variable-torque VFCs; retain second option for constant-torque VFCs.

- 6. Overload Capability: [1.1] [1.5] times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
- 7. Starting Torque: Minimum of 100 percent of rated torque from 3 to 60 Hz.
- 8. Speed Regulation: Plus or minus [5] [10] percent.

Carrier frequencies much above 2.5 kHz are seldom desired for motors more than 200 hp due to the increased possibility of overheating the motor windings. For large horsepower motors being used with VFCs, consult motor manufacturers for recommended limitations on carrier frequencies to mitigate motor winding overtemperatures.

- 9. Output Carrier Frequency: Selectable; 0.5 to [15] <Insert value> kHz.
- 10. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.

- G. Inverter Logic: Microprocessor based, [16] [32] bit, isolated from all power circuits.
- H. Isolated Control Interface: Allows VFCs to follow remote-control signal over a minimum 40:1 speed range.

Retain one of two "Signal" subparagraphs below with "Isolated Control Interface" Paragraph above. Coordinate retained subparagraph with selections made in "Control Signal Interfaces" Paragraph in "VFC Controls and Indication" Article.

- 1. Signal: Electrical.
- 2. Signal: Pneumatic.

I. Internal Adjustability Capabilities:

1. Minimum Speed: 5 to 25 percent of maximum rpm.
2. Maximum Speed: 80 to 100 percent of maximum rpm.
3. Acceleration: **[0.1 to 999.9]** <Insert range> seconds.
4. Deceleration: **[0.1 to 999.9]** <Insert range> seconds.
5. Current Limit: 30 to a minimum of 150 percent of maximum rating.
6. **<Insert adjustment and parameters>**.

J. Self-Protection and Reliability Features:

Coordinate Project-specific, self-protection and reliability features with manufacturers, because standard and optional features vary considerably among manufacturers.

1. Input transient protection by means of surge suppressors to provide three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
2. Loss of Input Signal Protection: Selectable response strategy including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
3. Under- and overvoltage trips.
4. Inverter overcurrent trips.
5. VFC and Motor Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFCs and motor thermal characteristics, and for providing VFC overtemperature and motor overload alarm and trip; settings selectable via the keypad; NRTL approved.
6. Critical frequency rejection, with **[three (3)]** <Insert number> selectable, adjustable deadbands.
7. Instantaneous line-to-line and line-to-ground overcurrent trips.
8. Loss-of-phase protection.
9. Reverse-phase protection.
10. Short-circuit protection.
11. Motor overtemperature fault.
12. **<Insert additional protection or reliability feature>**.

"Automatic Reset/Restart" and "Power-Interruption Protection" paragraphs below are mutually exclusive in the same VFC. Retain both if required for separate VFCs; indicate on Drawings where each type is required.

K. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.

L. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped, unless "Bidirectional Autospeed Search" feature is available and engaged.

Retain "Bidirectional Autospeed Search" Paragraph below if retaining "Automatic Reset/Restart" Paragraph above, if retaining automatic and manual "Bypass Mode" Paragraph in "VFC Bypass Systems" Article, or both.

- M. Bidirectional Autospeed Search: Capable of starting VFC into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.
- N. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.
- O. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

Not all manufacturers offer all options in "Integral Input Disconnecting Means and OCPD" Paragraph below. Coordinate with manufacturers for available options. Coordinate selection of the disconnecting means and OCPD with short-circuit current (withstand) ratings required for Project. See "Application of Switches and Circuit Breakers" Article and Editing Instructions No. 4, No. 5, and No. 8 in the Evaluations for selection considerations.

- P. Integral Input Disconnecting Means and OCPD: **[NEMA AB 1, instantaneous-trip circuit breaker] [NEMA AB 1, molded-case switch, with power fuse block and current-limiting fuses] [NEMA AB 1, thermal-magnetic circuit breaker] [NEMA KS 1, nonfusible switch, with power fuse block and current-limiting fuses] [NEMA KS 1, fusible switch]** with pad-lockable, door-mounted handle mechanism.

Retain first "Disconnect Rating" Subparagraph below for VFCs without bypass systems; retain second for VFCs with bypass systems.

- 1. Disconnect Rating: Not less than 115 percent of VFC input current rating.
- 2. Disconnect Rating: Not less than 115 percent of NFPA 70 motor full-load current rating or VFC input current rating, whichever is larger.

Retain "Auxiliary Contacts" Subparagraph below if retaining fusible or nonfusible switches in "Integral Input Disconnecting Means and OCPD" Paragraph above and external control power is used; or, use for remote indication of disconnecting means position.

- 3. Auxiliary Contacts: NO/NC, arranged to activate before switch blades open.

Retain one or both of two subparagraphs below if retaining any circuit-breaker-type disconnecting means in "Integral Input Disconnecting Means and OCPD" Paragraph. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and NO or NC contact requirements on Drawings.

- 4. Auxiliary contacts "a" and "b" arranged to activate with circuit-breaker handle.
- 5. **[NC] [NO]** alarm contact that operates only when circuit breaker has tripped.

2.6 VFC CONTROLS AND INDICATION

Coordinate local control and indication requirements with Owner or end users. Most of the indications included in "Status Lights" Paragraph below can be and are accomplished by listed manufacturers through digital displays in their panel-mounted operator stations. However, many operators still prefer the ability to "pass and glance" to determine the status of operating machinery or equipment.

A. Status Lights: Door-mounted LED indicators displaying the following conditions:

1. Power on.
2. Run.
3. Overvoltage.
4. Line fault.
5. Overcurrent.
6. External fault.
7. **<Insert condition>**.

B. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.

1. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
2. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.
 - a. Control Authority: Supports at least four conditions: Off, local manual control at VFC, local automatic control at VFC, and automatic control through a remote source.

C. Historical Logging Information and Displays:

Retain first subparagraph below if time and date stamping is not accomplished through the BAS. This is an added cost option with some listed manufacturers.

1. Running log of total power versus time.
2. Total run time.
3. Fault log, maintaining last [**four (4)**] **<Insert number>** faults with time and date stamp for each.
4. **<Insert information or display>**.

D. Indicating Devices: Digital display[**and additional readout devices as required,**] mounted flush in VFC door and connected to display VFC parameters, including, but not limited to:

1. Output frequency (Hz).
2. Motor speed (rpm).
3. Motor status (running, stop, fault).
4. Motor current (amperes).
5. Motor torque (percent).
6. Fault or alarming status (code).
7. PID feedback signal (percent).
8. DC-link voltage (V dc).
9. Set point frequency (Hz).
10. Motor output voltage (V ac).
11. **<Insert parameter>**.

Coordinate three interface paragraphs below with Section 230900 "Instrumentation and Control for HVAC." Retain paragraphs to suit Project. If retaining more than one paragraph, indicate here or on Drawings where each interface type is required.

E. Control Signal Interfaces:

1. Electric Input Signal Interface:

In first subparagraph below, some manufacturers offer an operator-selectable "x"- to "y"-mA dc signal input.

- a. A minimum of **[two]** <Insert number> programmable analog inputs: **[0- to 10-V dc] [4- to 20-mA dc] [Operator-selectable "x"- to "y"-mA dc]** <Insert signal parameters>.
- b. A minimum of **[six]** <Insert number> multifunction programmable digital inputs.

Retain "Pneumatic Input Signal Interface" Subparagraph below only if Project includes pneumatic controls. Several listed manufacturers now treat this feature as an added-cost option because it is so infrequently used anymore.

2. Pneumatic Input Signal Interface: **3 to 15 psig** (20 to 104 kPa).
3. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the BAS or other control systems:
 - a. 0- to 10-V dc.
 - b. 4- to 20-mA dc.
 - c. Potentiometer using up/down digital inputs.
 - d. Fixed frequencies using digital inputs.
 - e. <Insert signal input>.
4. Output Signal Interface: A minimum of **[one (1)]** <Insert number> programmable analog output signal(s) (**[0- to 10-V dc] [4- to 20-mA dc] [operator-selectable "x"- to "y"-mA dc]** <Insert signal parameters>), which can be configured for any of the following:
 - a. Output frequency (Hz).
 - b. Output current (load).
 - c. DC-link voltage (V dc).
 - d. Motor torque (percent).
 - e. Motor speed (rpm).
 - f. Set point frequency (Hz).
 - g. <Insert indication>.
5. Remote Indication Interface: A minimum of **[two (2)]** <Insert number> programmable dry-circuit relay outputs (120-V ac, 1 A) for remote indication of the following:
 - a. Motor running.
 - b. Set point speed reached.
 - c. Fault and warning indication (overtemperature or overcurrent).

- d. PID high- or low-speed limits reached.
- e. <Insert indication>.

Retain "PID Control Interface" Paragraph below if VFC controls interface directly with local controls and not through a BAS.

- F. PID Control Interface: Provides closed-loop set point, differential feedback control in response to dual feedback signals. Allows for closed-loop control of fans and pumps for pressure, flow, or temperature regulation.

- 1. Number of Loops: [**One (1)**] [**Two (2)**] <Insert number>.

Retain "BAS Interface" Paragraph below if VFC controls interface with the BAS. Retain option if BAS is used to monitor and record energy usage for verification of LEED-NC Credit EA 5.

- G. BAS Interface: Factory-installed hardware and software to enable the BAS to monitor, control, and display VFC status and alarms[**and energy usage**]. Allows VFC to be used with an external system within a multidrop LAN configuration; settings retained within VFC's nonvolatile memory.

- 1. Network Communications Ports: Ethernet and [**RS-422/485**] <Insert port type>.
 - 2. Embedded BAS Protocols for Network Communications: [**ASHRAE 135 BACnet**] [**Echelon LonWorks**] [**Ethernet TCP/IP**] [**Johnson Metasys N2**] [**Modbus/Memobus**] [**Siemens System 600 APOGEE**] <Insert protocol type>; protocols accessible via the communications ports.

2.7 VFC LINE CONDITIONING AND FILTERING

If input voltage or current distortion due to harmonic generation in VFCs is a concern, consult manufacturers for options available to mitigate harmonic distortion. Options may include dc bus link reactors, isolation transformers, active and passive harmonic filters, and 12- or 18-pulse phase-shifting input transformers. Retain first or second "Input Line Conditioning" Paragraph below if retaining "Harmonic Analysis Study and Report" Paragraph in "Action Submittals" Article, if a specific method of mitigation is not important, and if manufacturer is delegated responsibility to incorporate whatever mitigating means are necessary to comply with specified limitations. Otherwise, retain third "Input Line Conditioning" Paragraph below and insert specific requirements. See "Harmonic Distortion" Article in the Evaluations for additional guidance.

- A. Input Line Conditioning: Based on the harmonic analysis study and report, provide input filtering, as required, to limit TDD at input terminals of VFCs to less than [**5**] [**8**] <Insert number> percent and THD(V) to [**3**] [**5**] <Insert number> percent.
- B. Input Line Conditioning: Based on the harmonic analysis study and report, provide input filtering, as required, to limit TDD and THD(V) at the defined PCC per [**IEEE 519**] <Insert standard>.
- C. Input Line Conditioning: <Insert requirements>.

Normally, if the separation between motor and VFC is less than 100 feet (30 m), the motor is designed for use with VFC (see "Motor Application Considerations" Article in the Evaluations), low carrier frequencies are specified, or all three, then output filtering may not be an issue. However, if distances are over 100

feet (30 m) and high carrier frequencies are being used, controller output voltage can exceed motor pulse-withstand capability. Consult motor and VFC manufacturers to determine need for, and options available for, conditioning output voltage. Options may include line inductors, dV/dT filters, output reactors, and motor termination filters. See "Motor and VFC Compatibility" Article in the Evaluations for additional guidance.

D. VFC Output Filtering: <Insert requirements>.

If EMI/RFI generation in VFCs is a concern, consult manufacturers for options available to mitigate it. Specifying compliance with applicable standards and following proper installation methods will usually address EMI/RFI issues. Retain first "EMI/RFI Filtering" Paragraph below if a specific method of mitigation is not important and manufacturer is delegated responsibility to incorporate whatever mitigating means are necessary to comply with specified limitations. Otherwise, retain second "EMI/RFI Filtering" Paragraph. See "Electromagnetic Compatibility" Article in the Evaluations for additional guidance.

E. EMI/RFI Filtering: CE marked; certify compliance with IEC 61800-3 for [Category C2] <Insert category>.

F. EMI/RFI Filtering: <Insert requirements>.

2.8 VFC BYPASS SYSTEMS

Retain this article only if VFCs will require bypass systems. Applying bypass systems to VFCs requires additional consideration of system parameters and code requirements. Additionally, listed manufacturers offer different forms of bypass strategies and different operating characteristics. See "Bypass Systems" Article in the Evaluations for guidance; and coordinate with manufacturers for available selections.

A. Bypass Operation: Safely transfers motor between power converter output and bypass circuit, manually, automatically, or both. Selector switches set modes, and indicator lights indicate mode selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely disconnected from power converter.

Retain one of two "Bypass Mode" paragraphs below, or both if required for separate VFCs, and indicate on Drawings where each type is required. First paragraph is for bypass control where the motor must be at zero speed before the bypass function is performed; second paragraph allows for bypass control whether the motor is at rest or is running. If retaining second paragraph, also retain "Bidirectional Autospeed Search" Paragraph in "VFCS" Article.

B. Bypass Mode: Manual operation only; requires local operator selection at VFC. Transfer between power converter and bypass contactor and retransfer shall only be allowed with the motor at zero speed.

C. Bypass Mode: Field-selectable automatic or manual, allows local and remote transfer between power converter and bypass contactor and retransfer, either via manual operator interface or automatic control system feedback.

Retain one of two "Bypass Controller" paragraphs below. First paragraph is frequently called a "two-contactor-style" bypass - it typically does not allow power converter maintenance while the VFC is operating in bypass, because the power converter input remains energized, unless used with an input isolating switch. Second paragraph is for a "three-contactor-style" bypass - it allows power converter maintenance while the motor continues to operate at full speed in bypass, because the power converter is

de-energized as well as being isolated from input and output power circuits. Either option can be operated in manual or manual/automatic mode.

- D. Bypass Controller: Two-contactor-style bypass allows motor operation via the power converter or the bypass controller[; **with input isolating switch and barrier arranged to isolate the power converter and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode**].

In "Bypass Contactor" Subparagraph below, IEC-rated contactors are most often used for the bypass contactor in HVAC applications and for smaller motors, and they are usually smaller and less costly than equivalent NEMA-rated contactors. NEMA-rated contactors are most often used in industrial applications and for larger motors, where they must carry high motor inrush and full-load running currents. IEC-rated contactors are most often used in all applications for the isolating contactors, because they are only used to isolate the power converter and normally do not carry any current. Consult manufacturers for the types used for each.

1. Bypass Contactor: Load-break, [IEC] [NEMA]-rated contactor.
2. Output Isolating Contactor: Non-load-break, [IEC] [NEMA]-rated contactor.

Retain "Isolating Switch" Subparagraph below if retaining option in "Bypass Controller" Paragraph above.

3. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

There is some concern among various listed manufacturers that the input isolating contactor of the three-contactor bypass, without an isolating switch and a barrier between the power converter and the bypass, may not comply with NFPA 70 requirements for safe isolation of the power converter during energized maintenance, because the contactor is not a positive, lockable disconnecting means, and lack of a barrier can lead to accidental contact with live parts in the bypass. Consult authorities having jurisdiction if this is a concern.

- E. Bypass Controller: Three-contactor-style bypass allows motor operation via the power converter or the bypass controller[; **with input isolating switch and barrier**] arranged to isolate the power converter input and output and permit safe testing[**and troubleshooting**] of the power converter, both energized and de-energized, while motor is operating in bypass mode.

1. Bypass Contactor: Load-break, [IEC] [NEMA]-rated contactor.
2. Input and Output Isolating Contactors: Non-load-break, [IEC] [NEMA]-rated contactors.

Retain "Isolating Switch" Subparagraph below if retaining first option in last "Bypass Controller" Paragraph above.

3. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

First option in "Bypass Contactor Configuration" Paragraph below is for full-voltage starting; second option is for reduced-voltage starting. For large horsepower motors, consider using a reduced-voltage bypass controller instead of a full-voltage controller. See "Full-Voltage Controllers" and "Reduced-Voltage

Controllers" articles in the Evaluations for additional guidance. Some listed manufacturers also offer reduced-voltage, solid-state controllers as a bypass option - consult manufacturers if this is a preference.

F. Bypass Contactor Configuration: **[Full-voltage (across-the-line)] [Reduced-voltage (autotransformer)] <Insert type>** type.

1. NORMAL/BYPASS selector switch.

Retain first subparagraph below only if retaining combined automatic and manual bypass mode in last "Bypass Mode" Paragraph above.

2. HAND/OFF/AUTO selector switch.
3. NORMAL/TEST Selector Switch: Allows testing and adjusting of VFC while the motor is running in the bypass mode.
4. Contactor Coils: Pressure-encapsulated type **[with coil transient suppressors]**.
 - a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
 - b. Power Contacts: Totally enclosed, double break, and silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
5. Control Circuits: **[120] <Insert value>-V ac**; obtained from **[integral CPT, with primary and secondary fuses] <Insert source of control power>**, with **[CPT] [control power source]** of sufficient capacity to operate all integral devices and remotely located pilot, indicating, and control devices.

Retain "CPT Spare Capacity" Subparagraph below if retaining "CPT" option in "Control Circuits" Subparagraph above and spare CPT capacity is required. Spare capacity is normally available in 100-VA increments. Consult manufacturers for maximum spare capacity and available CPT sizes for different NEMA and enclosure sizes because adding spare capacity and an oversized CPT may require using an enlarged cubicle.

6. CPT Spare Capacity: **[50] [100] [200] <Insert value> VA**.

G. Overload Relays: NEMA ICS 2.

Manufacturers typically integrate overload functions into the microprocessors of VFCs and use separate thermal or solid-state overload relays only if specifying a bypass system. Retain one or more of three subparagraphs below if specifying a bypass system. If retaining more than one, show on Drawings where each type is required. See Editing Instruction No. 6 and "Overload Protection" Article in the Evaluations for additional guidance.

1. Melting-Alloy Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
2. Bimetallic Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.

- c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

Retain one or both of first two subparagraphs below if applicable. See Editing Instruction No. 7 and "Bimetallic Overload Relays" Article in the Evaluations for guidance and warnings.

- d. Ambient compensated.
- e. Automatic resetting.

3. Solid-State Overload Relays:

- a. Switch or dial selectable for motor-running overload protection.
- b. Sensors in each phase.
- c. **[Class 10] [Class 20] [Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

Retain one or both of first two subparagraphs below if applicable. These are optional, added-cost features.

- d. Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
- e. Analog communication module.

Retain first subparagraph below if alarm contacts on overload relays are required for local or remote alarm indication of a tripped overload relay.

- f. **[NC] [NO]** isolated overload alarm contact.
- g. External overload reset push button.

2.9 OPTIONAL VFC FEATURES

Optional feature types and quantities vary considerably among VFC manufacturers. Consult manufacturers for availability and limitations. Features vary according to VFC and motor characteristics and driven-equipment operating criteria. Retain applicable features in this article; insert others to suit Project. Indicate requirements for and quantities of optional features on Drawings if not included here. These features are normally added-cost items. See "Optional VFC Features" Article in the Evaluations for additional guidance.

Retain "Multiple-Motor Capability" Paragraph below if Project requires multiple motors controlled from a single VFC and controller redundancy is unnecessary.

- A. **Multiple-Motor Capability:** VFC suitable for variable-speed service to multiple motors. Overload protection shuts down VFC and motors served by it, and generates fault indications, when overload protection activates.

Retain one or more of three subparagraphs below if required for separate VFCs; indicate on Drawings where each type is required. Other multimotor options are available from some listed manufacturers; consult manufacturers if other combinations are required.

- 1. Configure to allow two or more motors to operate simultaneously at the same speed; separate overload relay for each controlled motor.

2. Configure to allow two motors to operate separately; operator selectable via local or remote switch or contact closures; single overload relay for both motors; separate output magnetic contactors for each motor.

Retaining subparagraph below requires retaining and properly revising "VFC Bypass Systems" Article to support this configuration. Consult manufacturers for more information.

3. Configure to allow two motors to operate simultaneously and in a lead/lag mode, with one motor operated at variable speed via the power converter and the other at constant speed via the bypass controller; separate overload relay for each controlled motor.
- B. Damper control circuit with end of travel feedback capability.
- C. Sleep Function: Senses a minimal deviation of a feedback signal and stops the motor. On an increase in speed-command signal deviation, VFC resumes normal operation.
- D. Motor Preheat Function: Preheats motor when idle to prevent moisture accumulation in the motor.
- E. Firefighter's Override (Smoke Purge) Input: On a remote contact closure from **[the firefighter's control station] [smoke-control fan controller] <Insert location>**, this password-protected input:
1. Overrides all other local and external inputs (analog/digital, serial communication, and all keypad commands).

Retain one of first two subparagraphs below. First subparagraph is for VFCs without a bypass system; second subparagraph is for VFCs with a bypass system, and the bypass will be used for this function. In first subparagraph, coordinate preset speed with pressure rating of the ventilation system. Consider requiring final speed setting to be determined during commissioning, testing, and balancing of the ventilation system. Ensure that ducted systems are designed to tolerate the higher pressures generated by the full or preset speed settings.

2. Forces VFC to operate motor, without any other run or speed command, at a field-adjustable, preset speed.
3. Forces VFC to transfer to Bypass Mode and operate motor at full speed.
4. Causes display of Override Mode on the VFC display.
5. Reset VFC to normal operation on removal of override signal **[automatically] [manually]**.

If retaining "Remote Indicating Circuit Terminals" Paragraph below, consider adding Specifications for remote indicating devices.

- F. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.
- G. Remote digital operator kit.
- H. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer **[and a notebook computer]**.
- I. **<Insert optional feature>**.

2.10 FEEDER-TAP UNITS

Not all manufacturers offer all options in this article. Coordinate with manufacturers for available selections. Coordinate selection of the disconnecting means and OCPD with short-circuit current ratings required for Project. See "Main- and Feeder-Tap Disconnecting and Overcurrent Protective Devices" Article and Editing Instructions No. 5, No. 6, and No. 9 in the Evaluations for guidance on making selections.

- A. MCCB: Comply with UL 489, with [**series-connected rating**] [**interrupting capacity**] to meet available fault currents.
1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:

Retain one or more of first four subparagraphs below; coordinate required adjustable settings with Section 260573 "Overcurrent Protective Device Coordination Study." See "Electronic rms Trip versus MCCBs and ICCBs" Paragraph in "Main- and Feeder-Tap Disconnecting and Overcurrent Protective Devices" Article in the Evaluations for additional guidance on specifying full- or standard-function features.

- a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I^2t response.
4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
 5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
 6. MCCB Features and Accessories:

Not all accessories and options listed in subparagraphs below are available for every rating and from every listed manufacturer. Verify, with manufacturers, availability and unique characteristics.

- a. Standard frame sizes, trip ratings, and number of poles.

See Editing Instruction No. 14 in the Evaluations for guidance on using mechanical vs. compression lugs.

- b. Lugs: [**Mechanical**] [**Compression**] style, suitable for number, size, trip ratings, and conductor material.
- c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.

Retain first option in "Ground-Fault Protection" Subparagraph below for solid-state trip units; retain second option for thermal-magnetic trip units. If retaining second option, also retain "Shunt Trip" Subparagraph below.

- d. Ground-Fault Protection: **[Integrally mounted] [Remote-mounted]** relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - e. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
 - f. Communication Capability: **[Circuit-breaker-mounted] [Universal-mounted] [Integral] [Din-rail-mounted]** communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
 - g. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at **[55] [75]** percent of rated voltage.
 - h. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
 - i. Auxiliary Contacts: **[One SPDT switch] [Two SPDT switches]** with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
 - j. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
- B. Fusible Switch: NEMA KS 1, Type HD, clips to accommodate specified fuses with lockable handle.
- C. Fuses are specified in Section 262813 "Fuses."

2.11 TRANSIENT VOLTAGE SUPPRESSION DEVICES

The Section Text addresses only internally mounted TVSS devices, without a separate list of manufacturers, because most listed MCC manufacturers will limit internally mounted TVSS selections to manufacturers with which their MCCs have been tested and listed by NRTLs. For externally mounted TVSS devices, see Section 264313 "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits."

Retaining options in "Surge Protection Device Description" Paragraph below is a matter of ease of maintenance and replacement; coordinate final choices with Owner's maintenance personnel. Wired-in type offers more safety with a slight reduction in protection; modular types offer the quickest maintenance, but may come at a slightly higher cost. See the Evaluations in Section 264313 "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits" for guidance on revising this article.

- A. Surge Protection Device Description: IEEE C62.41-compliant, integrally mounted, **[wired-in] [plug-in] [bolt-on]**, solid-state, parallel-connected, **[modular (with field-replaceable modules)] [non-modular]** type, with sine-wave tracking suppression and filtering modules, UL 1449, second edition, short-circuit current rating matching or exceeding the MCC short-circuit rating, and with the following features and accessories:

Retain accessories in 10 subparagraphs below to coordinate with options retained in "Surge Protection Device Description" Paragraph above; verify availability and compatibility with manufacturer.

If specifying fuses for connecting TVSS devices to distribution system, verify ability of fuses to withstand surges consistent with ultimate surge current rating of device.

1. Fuses, rated at 200-kA interrupting capacity.
2. Fabrication using bolted compression lugs for internal wiring.

Retain first subparagraph below only if a fused switch or circuit breaker is not provided for the TVSS in the MCC and the TVSS will not have a direct bus connection.

3. Integral disconnect switch.
4. Redundant suppression circuits.
5. Redundant replaceable modules.
6. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
7. LED indicator lights for power and protection status.
8. Audible alarm, with silencing switch, to indicate when protection has failed.
9. Form-C contacts rated at 5 A and 250-V ac, one NO and one NC, for remote monitoring of system operation. Contacts shall reverse position on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
10. **[Four] [Six]**-digit, transient-event counter set to totalize transient surges.

Retain first option in "Peak Single-Impulse Surge Current Rating" Paragraph below for high exposure and cost, second option for medium exposure and cost, and third option for low exposure and cost.

- B. Peak Single-Impulse Surge Current Rating: **[160 kA per mode/320 kA per phase] [120 kA per mode/240 kA per phase] [80 kA per mode/160 kA per phase]**.

Retain "Withstand Capabilities" Paragraph below for MCCs located at or near Category C locations.

- C. Withstand Capabilities: 12,000 IEEE C62.41, Category C3 (10 kA), 8-by-20-mic.sec. surges with less than 5 percent change in clamping voltage.

Retain one of three paragraphs below. Adjust clamping voltages to comply with Project conditions and verify compatibility of peak surge current rating and clamping voltage. Reference to UL 1449 is to its second edition.

- D. Protection modes and UL 1449 SVR for grounded wye circuits with **[480Y/277] [208Y/120] [600Y/347]**-V, three-phase, four-wire circuits shall be as follows:
1. Line to Neutral: **[800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347]**.
 2. Line to Ground: **[800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347]**.
 3. Neutral to Ground: **[800 V for 480Y/277] [400 V for 208Y/120] [1200 V for 600Y/347]**.
- E. Protection modes and UL 1449 SVR for 240/120-V, three-phase, four-wire circuits with high leg shall be as follows:
1. Line to Neutral: 400 V, 800 V from high leg.
 2. Line to Ground: 400 V.
 3. Neutral to Ground: 400 V.

- F. Protection modes and UL 1449 SVR for 240-, 480-, or 600-V, three-phase, three-wire, delta circuits shall be as follows:
1. Line to Line: **[2000 V for 480 V] [1000 V for 240 V] [2500 V for 600 V]**.
 2. Line to Ground: **[1500 V for 480 V] [800 V for 240 V] [2500 V for 600 V]**.

2.12 INSTRUMENTATION

Retain this article for Owner, not utility, metering.

- A. Instrument Transformers: IEEE C57.13, NEMA EI 21.1, and the following:

PTs are not frequently needed, as most digital meters can be direct-bus connected up to 600 V. Consult manufacturers on need for PTs for instruments and meters. Indicate the primary-to-secondary ratio on Drawings.

1. PTs: IEEE C57.13; 120 V, 60 Hz, **[single] [tapped] [double]** secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.

Coordinate "Current Transformers" Subparagraph below with Drawings and indicate specific accuracy classes and burdens required for each application and the primary-to-secondary ratio.

2. Current Transformers: IEEE C57.13; 5 A, 60 Hz, secondary; **[wound] [bushing] [bar or window]** type; **[single] [double]** secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.

Manufacturers typically size CPTs and normally only for equipment and devices integral to MCCs. Consider specifying additional spare capacity if required for operation of remote devices.

3. CPTs: Dry type, mounted in separate compartments for units larger than 3 kVA.

Retain "Current Transformers for Neutral and Ground-Fault Current Sensing" Subparagraph below for certain ground-fault protection situations such as double-ended MCCs on four-wire, grounded neutral systems. Coordinate with Drawings.

4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.

Retain "Multifunction Digital-Metering Monitor" Paragraph below if digital metering is required. Digital metering offers substantially more capabilities than analog metering in much smaller packages; however, some facility managers still prefer analog devices with large, easy-to-read dials.

- B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:
1. Listed or recognized by a nationally recognized testing laboratory.
 2. Inputs from sensors or 5-A current-transformer secondaries, and potential terminals rated to 600 V.
 3. Switch-selectable digital display of the following values with the indicated maximum accuracy tolerances:

- a. Phase Currents, Each Phase: Plus or minus 1 percent.
- b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
- c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
- d. Three-Phase Real Power (Megawatts): Plus or minus 2 percent.
- e. Three-Phase Reactive Power (Megavars): Plus or minus 2 percent.
- f. Power Factor: Plus or minus 2 percent.
- g. Frequency: Plus or minus 0.5 percent.
- h. Accumulated Energy, Megawatt Hours: Plus or minus 2 percent; accumulated values unaffected by power outages up to 72 hours.

Retain one or both of first two subparagraphs below. Retain first subparagraph for local recording of demand; retain second for remote recording of demand or if retaining "Impulse-Totalizing Demand Meter" Paragraph.

- i. Megawatt Demand: Plus or minus 2 percent; demand interval programmable from five to 60 minutes.
 - j. Contact devices to operate remote impulse-totalizing demand meter.
4. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.

Retain first four paragraphs below if analog metering functions are required in lieu of multifunction digital meters specified above.

- C. Ammeters, Voltmeters, and Power-Factor Meters: ANSI C39.1.
1. Meters: 4-inch (100-mm) diameter or 6 inches (150 mm) square, flush or semiflush, with antiparallax 250-degree scale and external zero adjustment.
 2. Voltmeters: Cover an expanded-scale range of nominal voltage plus 10 percent.
- D. Instrument Switches: Rotary type with off position.
1. Voltmeter Switches: Permit reading of all phase-to-phase voltages and phase-to-neutral voltages where a neutral is included.
 2. Ammeter Switches: Permit reading of current in each phase and maintain current-transformer secondaries in a closed-circuit condition at all times.
- E. Feeder Ammeters: 2-1/2-inch (64-mm) minimum size with 90- or 120-degree scale. Meter and transfer device with off position, located on overcurrent device door for feeder circuits, unless otherwise indicated.
- F. Watt-Hour Meters and Wattmeters:
1. Comply with ANSI C12.1.
 2. Three-phase induction type with two stators, each with current and potential coil, rated 5 A, 120 V, 60 Hz.
 3. Suitable for connection to three- and four-wire circuits.
 4. Potential indicating lamps.
 5. Adjustments for light and full load, phase balance, and power factor.
 6. Four-dial clock register.

Retain one of first two subparagraphs below. Retain first subparagraph for local recording of demand; retain second for remote recording of demand or if retaining "Impulse-Totalizing Demand Meter" Paragraph.

7. Integral demand indicator.
8. Contact devices to operate remote impulse-totalizing demand meter.
9. Ratchets to prevent reverse rotation.
10. Removable meter with drawout test plug.
11. Semiflush mounted case with matching cover.
12. Appropriate multiplier tag.

Retain "Impulse-Totalizing Demand Meter" Paragraph below if retaining contact devices to operate remote impulse-totalizing of demand in "Multifunction Digital-Metering Monitor" and "Watt-Hour Meters and Wattmeters" paragraphs above. Meter below offers an option for a centralized monitoring or customer metering system if monitoring total demand is required.

G. Impulse-Totalizing Demand Meter:

1. Comply with ANSI C12.1.
2. Suitable for use with MCC watt-hour meter, including two-circuit totalizing relay.
3. Cyclometer.
4. Four-dial, totalizing kilowatt-hour register.
5. Positive chart drive mechanism.
6. Capillary pen holding a minimum of one month's ink supply.
7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
8. Capable of indicating and recording [**five**] [**15**] [**30**] **<Insert time period>**-minute integrated demand of totalized system.

2.13 MCC CONTROL POWER

Retain one of three "Control Circuits" paragraphs below if MCCs require control power for metering and central-control units not associated with combination controllers or VFCs.

- A. Control Circuits: 120-V ac, supplied through secondary disconnecting devices from CPT.
- B. Control Circuits: 120-V ac, supplied from remote branch circuit.
- C. Control Circuits: **<Insert value>**-V dc.

Retain three paragraphs below to require an automatic transfer of power using a main-tie-main or two-main scheme. Coordinate with selection of "Control Circuits" paragraphs. See "Interlocked Main and Tie Circuit Breakers for Automatic and Manual Transfer of Power" Paragraph in "Main- and Feeder-Tap Disconnecting and Overcurrent Protective Devices" Article in the Evaluations for discussion of other types of available transfer schemes, along with advantages and disadvantages of each type.

- D. Electrically Interlocked Main and Tie Circuit Breakers: Two CPTs in separate compartments, with interlocking relays, connected to the primary side of each CPT at the line side of the associated main circuit breaker. 120-V secondaries connected through automatic transfer relays to ensure a fail-safe automatic transfer scheme.

- E. Control Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.
- F. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

2.14 ENCLOSURES

See "Enclosures" Article in the Evaluations for discussion of enclosure types. Coordinate paragraphs below with Drawings by identifying the designated areas on plans or by including the required enclosure types. Enclosure materials and finishes may be added to the Section Text. Availability of some enclosure types is limited by type and rating of MCCs; special accommodations and accessories (e.g., powered/filtered ventilation) may be required for some enclosure types, especially those with solid-state controllers and VFCs. Consult manufacturers for availability of and limitations on enclosures other than NEMA 250, Type 1. MCCs are not usually available in explosion-proof enclosures.

- A. Indoor Enclosures: Freestanding steel cabinets unless otherwise indicated. NEMA 250, **[Type 1] [Type 1A] [Type 2] [Type 12]** unless otherwise indicated to comply with environmental conditions at installed location.

Retain "Space Heaters" Paragraph below if required for MCCs installed in unconditioned indoor spaces.

- B. Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.
 - 1. Space-Heater Control: **[Thermostats to maintain temperature of each section above expected dew point] [Manual switching of branch-circuit protective device]**.
 - 2. Space-Heater Power Source: **[Transformer, factory installed in MCC] [120-V external branch circuit]**.

Custom colors, especially for outdoor units, are normally available as an option. Coordinate with DEN Project Manager to determine if a special color is required. Consider a white or very light color for the roofs of outdoor units for better reflectance.

- C. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's **[standard gray] [custom color]** finish over a rust-inhibiting primer on treated metal surface.
- D. Outdoor Enclosures: **[Type 3R, non-walk-in aisle] [Type 3R, with interior-lighted walk-in aisle]**.
 - 1. Finish: Factory-applied finish in manufacturer's **[standard] [custom]** color; undersurfaces treated with corrosion-resistant undercoating.
 - 2. Enclosure: **[Flat] [Downward, rearward sloping]** roof; **[bolt-on rear covers] [rear hinged doors]** for each section, with provisions for padlocking.
 - 3. Doors: Personnel door at each end of aisle, minimum width of **[30 inches (762 mm)] <Insert dimension>**; opening outwards; with panic hardware and provisions for **[padlocking] [cylinder lock]**.

4. Accessories: Fluorescent lighting fixtures, ceiling mounted; wired to a three-way light switch at each end of aisle; GFCI duplex receptacle; emergency battery pack lighting fixture installed on wall of aisle midway between personnel doors.
5. Walk-in Aisle Heating and Ventilating:

See Editing Instruction No. 12 in the Evaluations for temperature range included in UL 845 to define "usual service conditions." In first two subparagraphs below, optional interior temperatures are based on minimum and maximum ambient temperatures at which derating of fuses and circuit breakers should be considered. Insert higher or lower values if human comfort levels take precedence. Consult ASHRAE tables for recommended maximum and minimum outside design temperatures for locations in which MCCs will be installed.

- a. Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of [40 deg F (5 deg C)] <Insert temperature> with outside design temperature of [104 deg F (40 deg C)] <Insert temperature>.
- b. Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of [100 deg F (38 deg C)] <Insert temperature> with outside design temperature of [23 deg F (minus 5 deg C)] <Insert temperature>.
- c. Ventilating openings[**complete with replaceable fiberglass air filters**].
- d. Thermostat: Single stage; wired to control heat and exhaust fan.

Retain one of two subparagraphs below. Retain first subparagraph to require MCC manufacturers to provide power through a control transformer. Retain second if power from a remote source is indicated on Drawings. Coordinate with Drawings.

6. Power for Space Heaters, Ventilation, Lighting, and Receptacle: Include a CPT within the switchboard. Supply voltage shall be [120] [120/240] [120/208]-V ac.
 7. Power for space heaters, ventilation, lighting, and receptacle provided by a remote source.
- E. Compartments: Modular; individual [**lift-off**] doors with concealed hinges and quick-captive screw fasteners. Interlocks on units requiring disconnecting means in off position before door can be opened or closed, except by operating a permissive release device.
- F. Interchangeability: Compartments constructed to allow for removal of units without opening adjacent doors, disconnecting adjacent compartments, or disturbing operation of other units in MCC; same size compartments to permit interchangeability and ready rearrangement of units, such as replacing three single units with a unit requiring three spaces, without cutting or welding.
- G. Wiring Spaces:
1. Vertical wireways in each vertical section for vertical wiring to each unit compartment; supports to hold wiring in place.
 2. Horizontal wireways in [**bottom**] [**top**] [**bottom and top**] of each vertical section for horizontal wiring between vertical sections; supports to hold wiring in place.

- H. Each unit shall have 1.0 x 2.5 inch hot stamped nameplate. The lettering shall be black, 3/16 inch high in a white background and shall include unit number, load name and number. Provide a typed directory showing the MCC unit and the name and number of the load served on the main section. See section 16195 for additional information.

2.15 AUXILIARY DEVICES

Retain applicable accessories below. Indicate requirements for and quantities of accessories on Drawings. See "Accessories" Article in the Evaluations for additional guidance; consult manufacturers for availability of and limitations on other accessories.

- A. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.
1. Push Buttons, Pilot Lights, and Selector Switches: [**Heavy**] [**Standard**]-duty, [**oiltight**] type.
 - a. Push Buttons: [**Covered**] [**Lockable**] [**Recessed**] [**Shielded**] [**Shrouded**] [**Unguarded**] types; [**maintained**] [**momentary**] contact unless otherwise indicated.
 - b. Pilot Lights: [**Incandescent**] [**LED**] [**Neon**] [**Resistor**] [**Transformer**] types; <Insert color(s)>; **push to test**.
 - c. Selector Switches: [**Rotary**] <Insert description> type.
 2. Elapsed-Time Meters: Heavy duty with digital readout in hours[; **nonresettable**] [; **resettable**].

Retain "Meters" Subparagraph below if metering (for amperes, voltage, frequency, watts, power factor, etc.) is required for controllers. Indicate on Drawings where and which types of metering and selector switches are required. Normally, metering is limited to enclosure Types 1 and 12; consult manufacturers on availability of meters in other types of enclosures. Some listed manufacturers offer digital metering through the communications output of the solid-state overload relays; consult manufacturers for availability.

3. Meters: Panel type, 2-1/2-inch (64-mm) minimum size with 90- or 120-degree scale and plus or minus 2 percent accuracy with selector switches having an off position.
- B. [**NC**] [**NO**] [**Reversible NC/NO**] contactor auxiliary contact(s).
- C. Control Relays: Auxiliary and adjustable [**pneumatic**] [**solid-state**] time-delay relays.

Features in "Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays" Paragraph below are available in individual relays or combined into a single multipurpose relay. Consult manufacturers for availability. Consider specifying phase-failure relays for single-phasing protection in fusible-switch combination controllers if solid-state overload relays are not specified.

- D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.

- E. Space heaters, with NC auxiliary contacts, to mitigate condensation in enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- F. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.
- G. Cover gaskets for Type 1 enclosures.
- H. Terminals for connecting power factor correction capacitors to the **[line]** **[load]** side of overload relays.
- I. Spare control-wiring terminal blocks**;** **unwired** **;** **wired**.

Retain "Spare-Fuse Cabinet" Paragraph below if using fuses for power or control circuits.

- J. Spare-Fuse Cabinet: Identified **[and compartmented steel box]** **[cabinet with hinged lockable door]**.
- K. **<Insert auxiliary device>**.

2.16 CHARACTERISTICS AND RATINGS

NEMA ICS 18 recommends that the information in this article, as a minimum, be provided for manufacturers to adequately and correctly design and furnish an MCC.

Retain one of two "Wiring" paragraphs below to denote MCC wiring "class." Retain first option to accept manufacturer's standard design parameters; retain second option when retaining optional custom drawings in "Shop Drawings" Paragraph in "Action Submittals" Article. Retain one "Type" option to denote MCC wiring type. See "Classification of MCCs" Article in the Evaluations for a discussion of alternatives.

- A. Wiring: NEMA ICS 18, **[Class I]** **[Class I-S]**, **[Type A]** **[Type B, for starters above Size 3]** **[Type B-D, for starter Size 3 and below]** **[Type B-T, for starter Size 3 and below]** **[Type C]**.
- B. Wiring: NEMA ICS 18, **[Class II]** **[Class II-S]**, **[Type B, for starters above Size 3]** **[Type B-D, for starter Size 3 and below]** **[Type B-T, for starter Size 3 and below]** **[Type C]**.

Retain "Control and Load Wiring" Paragraph below for Type B in either "Wiring" Paragraph.

- C. Control and Load Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

Retain one of three "Nominal System Voltage" paragraphs below to denote MCC voltage rating. Retain first option in first or second paragraph when MCC has no phase-to-neutral connections and is not used as service equipment; retain second option when MCC has phase-to-neutral connections or is used as service equipment, or both.

- D. Nominal System Voltage: **[480 V, three phase, three wire] [480Y/277 V, three phase, four wire]**.
- E. Nominal System Voltage: **[208 V, three phase, three wire] [208/120 V, three phase, four wire]**.
- F. Nominal System Voltage: **<Insert voltage and phasing>**.

An MCC's short-circuit current rating and the ratings of its included units are based on a variety of conditions. See Editing Instruction No. 4 in the Evaluations for guidance on revising first two paragraphs below. Retain "Short-Circuit Current Rating for Each Unit" Paragraph below for MCCs without main overcurrent devices or used in series with upstream current-limiting overcurrent devices; retain "Short-Circuit Current Rating of MCC" Paragraph for MCCs with integral current-limiting main overcurrent devices. Although NEMA ICS 18 and UL 845 list short-circuit current ratings from 5 to 100 kA, listed manufacturers seldom, if ever, offer MCCs or units rated below 22 kA. Not all available ratings are included in these two paragraphs; consult manufacturers for available options.

- G. Short-Circuit Current Rating for Each Unit: **[Combination series rated] [Fully rated]; [22] [42] [65] [100] <Insert value> kA.**
- H. Short-Circuit Current Rating of MCC: **[Combination series rated] [Fully rated]** with its main overcurrent device; **[22] [42] [65] [100] <Insert value> kA.**
- I. Environmental Ratings:

MCCs are available that are suitable for use under environmental conditions different than those indicated in four subparagraphs below, which are based on "normal service conditions" specified in UL 845. However, derating, special modifications, or both, may be required, especially if installing VFCs or other solid-state controllers. Coordinate with "Project Conditions" Article, and consult manufacturers for required modifications, derating, or both, to accommodate unusual service conditions.

1. Ambient Temperature Rating: Not less than **0 deg F** (minus 18 deg C) and not exceeding **104 deg F** (40 deg C), with an average value not exceeding **95 deg F** (35 deg C) over a 24-hour period.
2. Ambient Storage Temperature Rating: Not less than minus **4 deg F** (minus 20 deg C) and not exceeding **140 deg F** (60 deg C)
3. Humidity Rating: Less than 95 percent (noncondensing).
4. Altitude Rating: Not exceeding **6600 feet** (2000 m), or **3300 feet** (1000 m) if MCC includes solid-state devices.

Options in "Main-Bus Continuous Rating" Paragraph below are "preferred" ratings from UL 845, with 600 A being the lowest permissible rating.

- J. Main-Bus Continuous Rating: **[600] [800] [1000] [1200] [1600] [2000] <Insert value> A.**

Normally, MCC manufacturers will size vertical buses based on the ratings of the branch devices and controllers in each vertical section and to comply with UL 845, which also specifies a minimum rating of 300 A. Retain options in "Vertical-Bus **[Minimum]** Continuous Rating" Paragraph below only if there is a specific Project requirement to override manufacturers' standard vertical bus ratings, such as for future additions to vertical sections or Owner requirements for a minimum bus size, regardless of actual connected device ratings.

- K. Vertical-Bus **[Minimum]** Continuous Rating: **[300] [600] [1200]** <Insert value> A.

UL 845 lists bus short-circuit current ratings (also called "bus bracing" in manufacturers' literature) from 22 to 200 kA, but the upper limit in NEMA ICS 18 is 100 kA. These values can exceed the individual unit ratings if the MCC rating is based on a series rating. Retain first option in "Horizontal and Vertical Bus Bracing (Short-Circuit Current Rating)" Paragraph below unless a bus rating greater than the MCC short-circuit current rating is required.

- L. Horizontal and Vertical Bus Bracing (Short-Circuit Current Rating): **[Match MCC short-circuit current rating]** <Insert ampere rating>.

In "Main Horizontal and Equipment Ground Buses" Paragraph below, indicate location of future extensions on Drawings if not retaining first option.

- M. Main Horizontal and Equipment Ground Buses: Uniform capacity for entire length of MCC's main and vertical sections. Provide for future extensions[**from both ends**].[**Brace bus extensions for busway feeder bus.**]
- N. Vertical Phase and Equipment Ground Buses: Uniform capacity for entire usable height of vertical sections, except for sections incorporating single units.
- O. Phase-[**and Neutral-**]Bus Material: Hard-drawn copper of 98 percent conductivity, [**silver**] [**tin**] plated.

Neutral buses, when required, can be reduced in size if a substantial portion of the loads are balanced three-phase types (e.g., motors and transformers). See "Neutral buses" Paragraph in "Accessory Components and Features" Article in the Evaluations. Retain one of two "Neutral Buses" paragraphs below or delete both for three-phase, three-wire systems.

- P. Neutral Buses: 50 percent of the ampacity of phase buses unless otherwise indicated, equipped with [**mechanical**] [**compression**] connectors for outgoing circuit neutral cables.[**Brace bus extensions for busway feeder neutral bus.**]
- Q. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with [**mechanical**] [**compression**] connectors for outgoing circuit neutral cables.[**Brace bus extensions for busway feeder neutral bus.**]
- R. Ground Bus: **[Minimum size required by UL 845]** <Insert size>, hard-drawn copper of 98 percent conductivity, equipped with [**mechanical**] [**compression**] connectors for feeder and branch-circuit equipment grounding conductors.[**For busway feeders, extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.**]
- S. Front-Connected, Front-Accessible MCCs:
1. Main Devices: **[Drawout]** **[Fixed]** mounted.
 2. Controller Units: **[Drawout]** **[and]** **[fixed]** mounted.
 3. Feeder-Tap Units: **[Drawout]** **[and]** **[fixed]** mounted.
 4. Sections front and rear aligned.

Retain "Utility Metering Compartment" Paragraph below if MCCs are used for service equipment and utility metering is performed at the MCCs. Utilities require separate isolated compartments for their metering.

- T. Utility Metering Compartment: Fabricated, barrier compartment and section complying with utility company's requirements; hinged sealed door; buses provisioned for mounting utility company's current transformers and potential transformers or potential taps as required by utility company. If separate vertical section is required for utility metering, match and align with basic MCC. Provide service entrance label and necessary applicable service entrance features.

Retain "Owner Metering Compartment" Paragraph below if a separate compartment is required. Retain option if metering requires a voltage different from MCC bus voltage.

- U. Owner Metering Compartment: A separate customer metering compartment and section with front hinged door, metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks. **[Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.]**

Pull sections in "Bus Transition and Incoming Pull Sections" Paragraph below may be required if incoming supply is beneath MCC.

- V. Bus Transition and Incoming Pull Sections: Matched and aligned with basic MCC.

A pull box across the entire top of MCC is usually only required for very many outgoing feeders and across the main incoming section for very large feeders with multiple large conductors per phase and neutral (if used). Indicate the presence and extent of pull boxes on Drawings.

- W. Pull Box on Top of an MCC:

1. Adequate ventilation to maintain temperature in pull box within same limits as MCC.

Retain first subparagraph below for top-mounted, circuit-breaker removal mechanism.

2. Set back from front to clear circuit-breaker removal mechanism.
3. Removable covers forming top, front, and sides. Top covers at rear easily removable for drilling and cutting.
4. Insulated bottom of fire-resistive material with separate holes for cable drops into MCC.
5. Cable supports arranged to facilitate cabling and adequate to support cables, including those for future installation.

Retain subparagraph below if optional barriers are specified.

6. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.

Retain "Future Devices" Paragraph below to require provisions for future expansion.

- X. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of unit.

- Y. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.

Retain "Fungus Proofing" Paragraph below for installations in humid tropical environments.

- Z. Fungus Proofing: Permanent fungicidal treatment for OCPDs and other components including instruments and instrument transformers.

2.17 SOURCE QUALITY CONTROL

- A. MCC Testing: Inspect and test MCCs according to requirements in **[NEMA ICS 18]** <Insert standard>.

NEMA ICS 61800-2 includes acceptance testing by manufacturer of VFCs completely assembled and wired, before shipment from the factory.

- B. VFC Testing: Test and inspect VFCs according to requirements in **[NEMA ICS 61800-2]** <Insert standard>.
 1. Test each VFC while connected to **[its specified motor]** **[a motor that is comparable to that for which the VFC is rated]**.
 2. Verification of Performance: Rate VFCs according to operation of functions and features specified.

- C. The following standard factory tests shall be performed on the contactor element provided under this section. All tests shall be in accordance with the latest version of ANSI standards:

1. Alignment test with master cell to verify all interfaces and interchangeability.
2. Contactors operated over the range of minimum to maximum control voltage.
3. Factory setting of contact gap.
4. One-minute dielectric test per ANSI standards.
5. Final inspections and quality checks.

- D. The following production test shall be performed on each contactor housing:

1. Alignment test with actual equipment to verify interfaces.
2. One-minute dielectric test per ANSI standards on primary and secondary circuits.
3. Operation of wiring, relays and other devices verified by an operational sequence test.
4. Final inspection and quality check.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- E. MCCs will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

- G. The Manufacturer shall provide three (3) certified copies of factory test reports to DEN Project Manager.
- H. Verification of Performance: DEN Project Manager shall be the responsible party in determining if the equipment is satisfactory to be shipped to the site.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and surfaces to receive MCCs, with Installer present, for compliance with requirements for installation tolerances, **<Insert Project-specific conditions,>** and other conditions affecting performance of the Work.
- B. Examine enclosed controllers before installation. Reject enclosed controllers that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 HARMONIC ANALYSIS STUDY

- A. Perform a harmonic analysis study to identify the effects of nonlinear loads and their associated harmonic contributions on the voltages and currents throughout the electrical system. Analyze **[possible] [designated]** operating scenarios, including recommendations for VFC input filtering to limit TDD and THD(V) at the defined PCC to specified levels.
- B. Prepare a harmonic analysis study report complying with IEEE 399 and NETA Acceptance Testing Specification.

3.3 INSTALLATION

- A. Coordinate layout and installation of MCCs with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Site Verification of Conditions:
 - 1. Contractor shall make all necessary field measurements to verify that equipment shall fit in allocated space in full compliance with minimum required clearances specified in local codes and standards.
 - 2. Examine installation area to assure there is enough clearance to install equipment.
 - 3. Check concrete pads for uniformity and level surface.
 - 4. Verify that equipment is ready to install.
 - 5. Verify that required utilities are available, in proper location and ready for use.
 - 6. Beginning of installation means installer accepts conditions.

7. Tighten bus-assembly joints with torque wrench or similar tool recommended by bus assembly manufacturer. Tighten joints again after bus assemblies have been energized for 30 days.
 8. Connect bus assemblies and components to wiring system and to ground as indicated and instructed by manufacturer.
 9. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those in specified standards.
 10. Submit torque values for all connections with a torque schedule and witness signature.
- C. Contractor shall install all equipment per the Manufacturer's recommendations and contract drawings.
- D. Coordinate power factor correction assembly terminations to equipment enclosures to ensure proper phasing, connection, and closure.

Retain "Floor-Mounting Controllers" Paragraph below for equipment supported on concrete bases attached to concrete slabs. If installing MCCs on concrete bases, ensure that main and compartment disconnect operating handles will not be higher than 79 inches (2000 mm) above finished floor.

- E. Floor-Mounting Controllers: Install MCCs on 4-inch (100-mm) nominal thickness concrete base. Comply with requirements for concrete base specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]
1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 4. Install anchor bolts to elevations required for proper attachment to supported equipment.

Retain "Seismic Bracing" Paragraph below if seismic controls are Project requirement. Coordinate with Drawings and Sections specifying vibration and seismic controls.

- F. Seismic Bracing: Comply with requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- G. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

Coordinate first five paragraphs below with product descriptions.

- H. Install fuses in each fusible switch.
- I. Install fuses in control circuits if not factory installed. Comply with requirements in Section 262813 "Fuses."

- J. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.
- K. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.
- L. Install power factor correction capacitors. Connect to the **[line]** **[load]** side of overload relays. If connected to the load side of overload relays, adjust overload heater sizes to accommodate the reduced motor full-load currents.
- M. Torque all connections per manufacturer recommendations. Submit torque values for all connections with a torque schedule and witness signature.
- N. Comply with NECA 1.

3.4 IDENTIFICATION

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for identification of MCC, MCC components, and control wiring.
 - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 - 2. Label MCC and each cubicle with engraved nameplate.
 - 3. Label each enclosure-mounted control and pilot device.

Retain subparagraph below if retaining "Schematic[**and Connection**] Wiring Diagrams" Subparagraph and "Manufacturer's Record Drawings" Subparagraph, and its option for field-installed wiring identification, in "Action Submittals" Article.

- 4. Mark up a set of manufacturer's connection wiring diagrams with field-assigned wiring identifications and return to manufacturer for inclusion in Record Drawings.

Retain "Operating Instructions" Paragraph below if required. Show specific information to be included in framed instructions on Drawings.

- B. Operating Instructions: Frame printed operating instructions for MCCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of MCCs.

3.5 CONTROL WIRING INSTALLATION

Retain this article if remote control or remote status indication is required. Coordinate options retained with wiring type(s) retained in Part 2.

- A. Install wiring between **[enclosed controllers]** **[master terminal boards]** and remote devices[**and facility's BAS**] [**and facility's central-control system**]. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
- B. Bundle, train, and support wiring in enclosures.

- C. Connect selector switches and other automatic-control selection devices where applicable.
 - 1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.
 - 2. Connect selector switches within enclosed controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.6 CONNECTIONS

Coordinate conduit installations and specialty arrangements with schematics on Drawings and with requirements specified. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Comply with requirements for installation of conduit in Section 260533 "Raceways and Boxes for Electrical Systems." Drawings indicate general arrangement of conduit, fittings, and specialties.
- B. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.7 FIELD QUALITY CONTROL

See Editing Instruction No. 15 in the Evaluations for guidance on the level of field quality control that would be appropriate for Project. Retain one of first two paragraphs below to identify who shall perform tests and inspections. Retain and edit "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first two paragraphs below to describe tests and inspections to be performed.

- C. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.

D. Tests and Inspections:

1. Inspect controllers, wiring, components, connections, and equipment installation. [**Test and adjust controllers, components, and equipment.**]
2. Test insulation resistance for each enclosed controller element, component, connecting motor supply, feeder, and control circuits.
3. Test continuity of each circuit.
4. Verify that voltages at controller locations are within 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify DEN Project Manager before starting the motor(s).
5. Test each motor for proper phase rotation.
6. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

NETA Acceptance Testing Specification allows three methods to test and inspect bolted electrical connections for high resistance; the infrared (thermographic) method is the most thorough and costly. Retain "Initial Infrared Scanning" Subparagraph below if this method is preferred.

8. Perform the following infrared (thermographic) scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each multipole enclosed controller. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each multipole enclosed controller 11 months after date of Substantial Completion.
 - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

Retain subparagraph below if retaining "Manufacturer's Record Drawings" Subparagraph in "Closeout Submittals" Article to include field modifications incorporated during construction.

10. Mark up a set of manufacturer's drawings with all field modifications incorporated during construction and return to manufacturer for inclusion in Record Drawings.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

E. Enclosed controllers will be considered defective if they do not pass tests and inspections.

Retain paragraph below if tests and inspections are performed by Contractor or manufacturer's field-service representative engaged by Contractor.

- F. Prepare test and inspection reports, including a certified report that identifies enclosed controllers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor with performing startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. **<Insert startup steps if any>**.

3.9 ADJUSTING

Retain applicable paragraphs below to correspond to selections made in Part 2.

- A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.
- B. Adjust overload relay heaters or settings if power factor correction capacitors are connected to the load side of the overload relays.
- C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to six times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify DEN Project Manager before increasing settings.
- D. Set the taps on reduced-voltage autotransformer controllers at **[50] [65] [80]** percent.
- E. Set field-adjustable switches and program microprocessors for required start and stop sequences in reduced-voltage, solid-state controllers.
- F. Program microprocessors in VFCs for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

Retain option in paragraph below unless settings are included on Drawings.

- G. Set field-adjustable circuit-breaker trip ranges[**as specified in Section 260573 "Overcurrent Protective Device Coordination Study."**]

3.10 PROTECTION

Retain this article if retaining "Delivery, Storage, and Handling" Article and if retaining space heaters in "Auxiliary Devices" Article.

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.
- B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.
- C. Provide final protection to ensure that moisture does not enter bus assembly.

3.11 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris. Repair damaged finish to match original finish.

3.12 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist with training of Owner's maintenance personnel to adjust, operate, and maintain enclosed controllers[, **and to use and reprogram microprocessor-based, reduced-voltage, solid-state controllers**].
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- C. Train Owner's maintenance personnel on procedures and schedules for starting up and shutting down, troubleshooting, servicing, and maintaining equipment and schedules.
- D. Review data in maintenance manuals.

3.13 COMMISSIONING

- A. Infrared Scanning: Two (2) months after Substantial Completion, perform an infrared scan of bus assembly including joints and plug-in units.
- B. Use an infrared scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
- C. Perform two follow-up infrared scans of bus assembly, one at four (4) months and the other at eleven (11) months after Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262419

Copyright 2012 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262500 - ENCLOSED BUS ASSEMBLIES

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FORM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Section includes the following:
 - 1. Feeder-bus assemblies.
 - 2. Plug-in bus assemblies.
 - 3. Bus plug-in devices.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain abbreviation that remains after this Section has been edited.

- A. SPD: Surge Protective Devices.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

A. Shop Drawings: For each type of bus assembly and plug-in device.

1. Show fabrication and installation details for enclosed bus assemblies. Include plans, elevations, and sections of components. Designate components and accessories, including clamps, brackets, hanger rods, connectors, straight lengths, and fittings.

Retain first subparagraph below if Project requires fire-stop or weather barriers.

2. Show fittings, materials, fabrication, and installation methods for listed fire-stop barriers and weather barriers.
3. Indicate required clearances, method of field assembly, and location and size of each field connection.
4. Detail connections to switchgear, switchboards, transformers, and panelboards.
5. Wiring Diagrams: Power[**and signal**] [**and control**] [, **signal, and control**] wiring.

Retain subparagraph and associated subparagraphs below if products are required to withstand specific design loads and DEN Project Manager either has delegated design responsibility to Contractor or wants to review structural data as another way to verify products' compliance with performance requirements. Professional engineer qualifications are specified in Section 014000 "Quality Requirements."

6. Seismic-Restraint Details: Signed and sealed by a qualified professional engineer.
 - a. Design Calculations: Calculate requirements for selecting seismic restraints.
 - b. Detail fabrication, including anchorages and attachments to structure and to supported equipment.

1.5 INFORMATIONAL SUBMITTALS

Retain first paragraph and subparagraphs below if Drawings do not include detailed plans or if Project involves unusual coordination requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- ##### A. Coordination Drawings: Floor plans and sections, drawn to scale. Include scaled bus-assembly layouts and relationships between components and adjacent structural, mechanical, and electrical elements. Show the following:

Revise subparagraphs below to suit Project.

1. Vertical and horizontal enclosed bus-assembly runs, offsets, and transitions.
2. Clearances for access above and to the side of enclosed bus assemblies.
3. Vertical elevation of enclosed bus assemblies above the floor or bottom of structure.
4. Support locations, type of support, and weight on each support.

- B. Location of adjacent construction elements including light fixtures, HVAC and plumbing equipment, fire sprinklers and piping, signal and control devices, and other equipment.

Coordinate paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- C. Qualification Data: For [professional engineer] [and] [testing agency].
- D. Product Certificates: For each type of enclosed bus assembly, signed by product manufacturer.

Retain paragraph below if Contractor is responsible for field quality-control testing.

- E. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For enclosed bus assemblies to include in emergency, operation, and maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

Extra materials may not be allowed for publicly funded projects.

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Revise subparagraph below to suit Project.

1. Plug-in Units: [10] <Insert number> percent of amount installed[for each size indicated], but no fewer than <Insert number> unit(s).
2. [Two (2)] <Insert number> hookstick operators for plug-in units.

1.8 QUALITY ASSURANCE

If an independent testing agency is required, see Section 014000 "Quality Requirements" for general testing and inspecting agency qualification requirements. If additional control is needed, retain one of first two paragraphs below to specify 29 CFR 1910.7 or other more specific criteria (e.g., NETA). 29 CFR 1910.7 defines a nationally recognized testing laboratory as it applies to testing and inspecting for safety, and lists, labels, or accepts equipment and materials that meet certain OSHA criteria.

Retain first paragraph and subparagraph below if Contractor selects testing agency.

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
- C. Source Limitations: Obtain enclosed bus assemblies and plug-in devices through one source from a single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with NEMA BU 1, "Busways."
- F. Comply with NFPA 70.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle enclosed bus assemblies according to NEMA BU 1.1, "General Instructions for Proper Handling, Installation, Operation and Maintenance of Busway Rated 600 Volts or Less."

1.10 PROJECT CONDITIONS

- A. Derate enclosed bus assemblies for continuous operation at indicated ampere ratings for ambient temperature not exceeding [122 deg F (50 deg C)] [140 deg F (60 deg C)] **<Insert ambient temperature>**.

1.11 COORDINATION

Revise paragraph below to delete or add types of construction that penetrate or are supported by ceilings.

- A. Coordinate layout and installation of enclosed bus assemblies and suspension system with other construction that penetrates ceilings or floors or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

Retain paragraph below if required for concrete curbs around vertical floor penetrations.

- B. Coordinate size and location of concrete curbs around openings for vertical bus. Concrete, reinforcement, and formwork requirements are specified with concrete.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain one of two paragraphs and list of manufacturers in this Article. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Calvert Company (The).
 2. Eaton Electrical Inc.; Cutler-Hammer Products.
 3. Electric Busway Corp.
 4. General Electric Company; Electrical Distribution & Control Division.
 5. Siemens Energy & Automation, Inc.
 6. Square D; Schneider Electric.
 7. **<Insert manufacturer's name.>**
 8. or approved equal.

2.2 ENCLOSED BUS ASSEMBLIES

- A. Feeder-Bus Assemblies: NEMA BU 1, low-impedance bus assemblies in nonventilated housing; single-bolt joints; ratings as indicated.

Retain subparagraph below for projects in seismic areas. Coordinate with "Informational Submittals" Article for submittal of manufacturer's seismic qualification certification.

1. Seismic Fabrication Requirements: Fabricate mounting provisions and attachments for feeder-bus assemblies with reinforcement strong enough to withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems" when mounting provisions and attachments are anchored to building structure

Select from options in first subparagraph below and revise to suit Project. Consider 200 percent neutral on 4-wire systems if a significant portion of load is nonlinear (e.g., computers, fluorescent or high-intensity-discharge lighting, variable-frequency drives, etc.) and harmonic cancellation on the neutral conductor is unlikely. If busways with different voltages and neutral capacities are required, delete subparagraph and include a schedule on Drawings. See sample schedule in the Evaluations.

2. Voltage: [120/208] [240] [480] [277/480] V; 3 phase; [100] [200] [percent neutral capacity].

3. Temperature Rise: 55 deg C above 40 deg C ambient maximum for continuous rated current.
4. Bus Materials: Current-carrying copper conductors, fully insulated with Class 130C insulation except at joints; plated surface at joints.
5. Ground:

Retain one or more of three subparagraphs below.

- a. 50 percent capacity integral with housing.
- b. 50 percent capacity internal bus bars of material matching bus material.
- c. 50 percent capacity isolated, internal bus bar of material matching bus material.

If subways with different ground or enclosure types are required, delete "Ground" Subparagraph and associated subparagraphs above or "Enclosure" Subparagraph below, or both, and include a schedule on Drawings. See sample schedule in the Evaluations.

6. Enclosure: [**Steel with manufacturer's standard finish**] [**Aluminum with manufacturer's standard finish**] [**Weatherproof, steel or aluminum with manufacturer's standard finish, sealed seams, drains, and removable closures**].
 7. Fittings and Accessories: Manufacturer's standard.
 8. Mounting: Arranged flat, edgewise, or vertically without derating.
- B. Plug-in Bus Assemblies: NEMA BU 1, low-impedance bus assemblies in nonventilated housing; single-bolt joints; ratings as indicated.

Retain subparagraph below for projects in seismic areas. Coordinate with "Informational Submittals" Article for submittal of manufacturer's seismic qualification certification.

1. Seismic Fabrication Requirements: Fabricate mounting provisions and attachments for switchboards with reinforcement strong enough to withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems" when mounting provisions and attachments are anchored to building structure.

Select from options in first subparagraph below and revise to suit Project. Consider 200 percent neutral on 4-wire systems if a significant portion of load is nonlinear (e.g., computers, fluorescent or high-intensity-discharge lighting, variable-frequency drives, etc.) and harmonic cancellation on the neutral conductor is unlikely. If busways with different voltages and neutral capacities are required, delete subparagraph and include a schedule on Drawings. See sample schedule in the Evaluations.

2. Voltage: [**120/208**] [**240**] [**480**] [**277/480**] V; 3 phase; [**100**] [**200**] [**percent neutral capacity**].
3. Temperature Rise: 55 deg C above 40 deg C ambient maximum for continuous rated current.
4. Bus Materials: Current-carrying copper conductors, fully insulated with Class 130C insulation except at stabs and joints; plated surface at stabs and joints.
5. Ground:

Retain one or more of three subparagraphs below.

- a. 50 percent capacity integral with housing.
- b. 50 percent capacity internal bus bar of material matching bus material.
- c. 50 percent capacity isolated, internal bus bar of material matching bus material.

If subways with different ground or enclosure types are required, delete "Ground" Subparagraph and associated subparagraphs above or "Enclosure" Subparagraph below, or both, and include a schedule on Drawings. See sample schedule in the Evaluations.

6. Enclosure: [**Steel, with manufacturer's standard finish, plug-in openings 24 inches (610 mm) o.c., and hinged covers over unused openings**] [**Aluminum, with manufacturer's standard finish, plug-in openings 24 inches (610 mm) o.c., and hinged covers over unused openings**].
7. Fittings and Accessories: Manufacturer's standard.
8. Mounting: Arranged flat, edgewise, or vertically without derating.

2.3 PLUG-IN DEVICES

Chain-operable handles are available for plug-in devices.

For fusible-switch plug-in devices, R-type rejection fuse clips and J-type fuse clips are available in sizes from 30 to 600 A, rated 600 V. L-type, bolt-on fuse clips are available in 800 to 1600 A, 600-V fusible switches. Coordinate options selected in paragraph below with Section 262813 "Fuses."

- A. Fusible Switches: NEMA KS 1, heavy duty; with [**R-type rejection**] [**J-type**] [**L-type**] fuse clips to accommodate specified fuses; hookstick-operated handle, lockable with two padlocks, and interlocked with cover in closed position. See Section 262813 "Fuses" for fuses and fuse installation requirements.

Indicate in schedule or diagrams on Drawings the frame size, trip rating, number of poles, interrupting-capacity rating, and auxiliary devices.

- B. Molded-Case Circuit Breakers: NEMA AB 1; hookstick-operated handle, lockable with two padlocks, and interlocked with cover in closed position.
- C. TVSS: NEMA 250, Type 1 enclosure with NEMA KS 1, fusible, disconnect switch and external handle to isolate TVSS from busway. TVSS product and installation requirements are specified in Section 264313 "Transient-Voltage Protection for Low-Voltage Electrical Power Circuits."
- D. Motor Controllers: NEMA ICS 2, Class A, full voltage, nonreversing, across the line, unless otherwise indicated.
 1. Control Circuit: 120 V; obtained from [**integral control power transformer**] **<Insert source of control power>** with a control power [**transformer**] [**source**] of enough capacity to operate connected pilot, indicating and control devices, plus 100 percent spare capacity.
 2. Combination Controller: Factory-assembled combination controller and disconnect switch with or without overcurrent protection as indicated.

Retain one of first three subparagraphs below if required.

- a. Fusible Disconnecting Means: NEMA KS 1, heavy-duty, fusible switch with **[R-type rejection] [J-type]** fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 947-4-1, as certified by a nationally recognized testing laboratory (NRTL) acceptable to authorities having jurisdiction. See Section 262813 "Fuses" for fuses and fuse installation requirements.
 - b. Nonfusible Disconnecting Means: NEMA KS 1, heavy-duty, nonfusible switch.
 - c. Circuit-Breaker Disconnecting Means: NEMA AB 1, motor-circuit protector with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
3. Overload Relay: Ambient-compensated type with inverse-time-current characteristic and NEMA ICS 2, **[Class 10] [Class 20] [Class 30]** tripping characteristic. Overload relays shall have heaters or sensors in each phase matched to nameplate full-load current of specific motor to which they connect and with appropriate adjustment for duty cycle.

Retain subparagraph above or below.

4. Adjustable Overload Relay: Dipswitch selected for motor running overload protection with NEMA ICS 2, **[Class 10] [Class 20] [Class 30]** tripping characteristic, and selected to protect motor against voltage and current unbalance and single phasing. Adjustable overload relays shall have Class II ground-fault protection with start and run delays to prevent nuisance trip on starting.

Coordinate paragraph and subparagraphs below with Drawings.

- E. Multispeed Motor Controllers: Match controller to motor type, application, and number of speeds; include the following accessories:
1. Compelling relay ensures motor starts only at low speed.
 2. Accelerating relay ensures properly timed acceleration through speeds lower than that selected.
 3. Decelerating relay ensures automatically timed deceleration through each speed.

Retain paragraph below if required.

- F. Accessories: Hookstick operator, adjustable to maximum extension of **[14 feet (4.3 m)]** **<Insert dimension>**.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Support bus assemblies independent of supports for other elements such as equipment enclosures at connections to panelboards and switchboards, pipes, conduits, ceilings, and ducts.
1. Design each fastener and support to carry load indicated by seismic requirements and to comply with seismic-restraint details according to Section 260548.16 "Seismic Controls for Electrical Systems."

Retain subparagraph above if requirements for seismic control are included in Part 1. Retain four subparagraphs below if seismic restraint is not required. Revise to suit Project.

2. Design each fastener and support to carry 200 lb (90 kg) or 4 times the weight of bus assembly, whichever is greater.
 3. Support bus assembly to prevent twisting from eccentric loading.
 4. Support bus assembly with not less than 3/8-inch (10-mm) steel rods. Install side bracing to prevent swaying or movement of bus assembly. Modify supports after completion to eliminate strains and stresses on bus bars and housings.
 5. Fasten supports securely to building structure according to Section 260529 "Hangers and Supports for Electrical Systems."
- B. Install expansion fittings at locations where bus assemblies cross building expansion joints. Install at other locations so distance between expansion fittings does not exceed manufacturer's recommended distance between fittings.
- C. Construct rated fire-stop assemblies where bus assemblies penetrate fire-rated elements such as walls, floors, and ceilings. Seal around penetrations according to Section 078413 "Penetration Firestopping."
- D. Install weatherseal fittings and flanges where bus assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 079200 "Joint Sealants" for materials and application.

Coordinate floor penetrations with Structural Drawings.

- E. Install a concrete curb at least 4 inches (100 mm) high around bus-assembly floor penetrations.
- F. Coordinate bus-assembly terminations to equipment enclosures to ensure proper phasing, connection, and closure.
- G. Tighten bus-assembly joints with torque wrench or similar tool recommended by bus-assembly manufacturer. Tighten joints again after bus assemblies have been energized for 30 days.
- H. Install bus-assembly, plug-in units. Support connecting conduit independent of plug-in unit.

- I. Connect bus assemblies and components to wiring system and to ground as indicated and instructed by manufacturer.
 1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.2 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

Retain paragraph below to require a factory-authorized service representative to perform inspections, tests, and adjustments.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

Retain paragraph and subparagraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections and prepare test reports.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph and subparagraph below to describe tests and inspections to be performed by any of the entities in three paragraphs above.

- C. Tests and Inspections:

Tests referenced in subparagraph below are from NETA Acceptance Testing Specification and include inspection procedures to verify proper installation. They also include tests and measurements of insulation resistance and turns ratios. Cost of extensive testing may not be warranted for some projects. Revise subparagraph to suit Project.

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

- D. Remove and replace units that do not pass tests and inspections and retest as specified above.
- E. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of bus assembly including joints and plug-in units.
 - 1. Use an infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
 - 2. Perform two (2) follow-up infrared scans of bus assembly, one at four (4) months and the other at eleven (11) months after Substantial Completion.
 - 3. Prepare a certified report identifying bus assembly checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.
- F. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.4 ADJUSTING

- A. Set field-adjustable, circuit-breaker trip ranges[**and overload relay trip settings**] as indicated.

3.5 CLEANING

- A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.6 PROTECTION

- A. Provide final protection to ensure that moisture does not enter bus assembly.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **262500**

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262600 - POWER DISTRIBUTION UNITS

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes freestanding, prepackaged power distribution units for transforming, conditioning, and distributing electrical power.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for Project.

- A. SPD: Surge protection device.
- B. UPS: Uninterrupted power supply.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For power distribution units. Include system description, ratings, capacities, and performance characteristics.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Include dimensioned plans, sections, and elevations. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
- C. Wiring Diagrams: Power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For [manufacturer] [testing agency].
- B. Product Certificates: For each type of power distribution unit, signed by product manufacturer.

Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems."

Coordinate seismic requirements with DEN Project Manager.

- C. Manufacturer Seismic Qualification Certification: Submit certification that power distribution units, accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain one of first two subparagraphs below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Second definition is used for essential facilities where equipment must operate immediately after an earthquake.

Coordinate seismic requirements with DEN Project Manager.

- a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
- 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and

- locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Source quality-control reports.

1. For each factory test of power distribution units.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

E. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For power distribution units to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

If an independent testing agency is required, see Section 014000 "Quality Requirements" for general testing and inspecting agency qualification requirements. If additional control is needed, retain first paragraph below to specify 29 CFR 1910.7 or other more specific criteria (e.g., NETA). 29 CFR 1910.7 defines a nationally recognized testing laboratory as it applies to testing and inspecting for safety, and lists, labels, or accepts equipment and materials that meet certain OSHA criteria.

Retain first paragraph and subparagraph below if Contractor selects testing agency.

- A. Source Limitations: Obtain power distribution unit and associated components specified in this Section from a single manufacturer with responsibility for entire power distribution unit installation.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver equipment in fully enclosed vehicles after specified environmental conditions have been permanently established in spaces where equipment is to be placed.

- B. Store equipment in spaces with environments controlled within manufacturer's ambient temperature and humidity tolerances for non-operating equipment.

1.9 COORDINATION

Retain first paragraph below for power distribution units mounted on concrete bases. Retain second paragraph if power distribution units are located in computer rooms with access flooring systems. Because of their weight, power distribution units are usually mounted on support systems that penetrate the access flooring system and are independent of it.

- A. Coordinate size and location of concrete bases with actual power distribution unit provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
- B. Coordinate layout and installation of power distribution units with access flooring for proper support and seismic restraint of units.

Revise paragraph and subparagraphs below to specify coordination with other parties involved in finalizing electronic equipment arrangement and installation.

- C. Coordinate layout and installation of power distribution units with Owner's equipment.
 - 1. Meet jointly with electronic equipment representatives and Owner's representatives to exchange information and agree on details of equipment arrangements and installation interfaces.
 - 2. Record agreements reached in meetings and distribute record to other participants.
 - 3. Adjust arrangements and locations of power distribution units to accommodate and optimize arrangement and space requirements of equipment.

1.10 PROJECT CONDITIONS

- A. Environmental Conditions: Units shall be capable of operating continuously in the following environmental conditions without mechanical or electrical damage or degradation of operating capability.

Revise requirements in subparagraphs below to suit conditions at equipment installation location; include unusual service conditions.

- 1. Storage Temperature Range: Minus 67 to plus 185 deg F (Minus 55 to plus 85 deg C).
- 2. Operating Temperature Range: 32 to 104 deg F (0 to 40 deg C).
- 3. Relative Humidity Range: 0 to 95 percent, noncondensing.
- 4. Altitude: Sea level to [5500 feet (1677 m)] <Insert dimension> above sea level.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers in this Article. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Eaton Corporation.
 2. Liebert; a brand of Emerson Electric Co.
 3. Myers Power Products, Inc.
 4. PDI; a brand of Smiths Power.
 5. Square D; by Schneider Electric.
 6. United Power Corporation.
 7. **<Insert manufacturer's name>.**
 8. or approved equal.

2.2 MANUFACTURED UNITS

Casters in the "Description" Paragraph below are usually limited to units with a rating of 250 A or less. Verify with manufacturers and consider the effect of casters on the supporting floor before retaining requirement for casters.

- A. Description: Integrated and coordinated assembly of power-line-conditioning and distribution components packaged in a single cabinet or modular assembly of cabinets[**each with full-swivel casters mounted to bottom frame**]. Include the following components:
1. Input-power, circuit-breaker section.
 2. Isolation transformer.
 3. SPD system.
 4. Output panelboard(s).
 5. Alarm, monitoring, and control system.

Retain first paragraph below for projects in seismic areas.

- B. Provide units that are constructed to withstand seismic forces specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

- C. Unit Capacity Rating: Unit shall carry indicated rms kilovolt-ampere load continuously without exceeding rated insulation temperature for the following input voltage and load current:
1. Input Voltage: Within rated input-voltage tolerance band of unit.
 2. Load Current: Minimum of 3.0 crest factor and 85 percent total harmonic distortion.

2.3 INPUT-POWER, CIRCUIT-BREAKER SECTION

Coordinate this article with Drawings.

- A. Description: 3-pole, shunt-tripped, thermal-magnetic-type circuit breaker, rated for indicated interrupting capacity and 125 percent of input current of unit at 100 percent rated load at unit capacity rating.

Retain "Dual-Input Units" Subparagraph below if dual-input section is required.

1. Dual-Input Units:
 - a. Two input circuit breakers arranged to provide transfer between two input-voltage sources.
 - b. Controls and interfaces to allow selecting either open- or closed-transition transfer between two input-voltage sources.
 - c. Use a 120-V permissive signal from both upstream voltage sources to indicate acceptable conditions for closed-transition transfer.
 - d. Open second circuit breaker automatically after closed-transition transfer is completed.

2.4 ISOLATION TRANSFORMER SECTION

- A. Description: Dry-type, electrostatically shielded, three-phase, common-core, convection-air-cooled isolation transformer.

Retain option in first subparagraph below if transformer will supply nonlinear load; designate K-factor on Drawings. Coordinate with Drawings.

1. Comply with UL 1561 including requirements for nonsinusoidal load-current-handling capability defined by designated K-factor.
2. Cores: Electrical grade, non-aging silicon steel with high permeability and low hysteresis losses, one leg per phase.
3. Coil Material and Insulation: Copper windings, 220 deg C insulation class.
4. Temperature Rise: Designed for [80] [115] [150] deg C rise above 40 deg C ambient.
5. Output Impedance: 3.5 plus or minus 0.5 percent.
6. Regulation: 2 to 4 percent maximum, at full-resistive load; 5 percent maximum, at rated nonlinear load.
7. Taps: Six (6) full-capacity compensation taps at 2.5 percent increments; two (2) above and four (4) below nominal voltage.

Retain option in "Full-Load Efficiency" Subparagraph below if transformer is K-factor rated.

8. Full-Load Efficiency: Minimum 96 percent at rated nonlinear load.
9. Magnetic-Field Strength External to Transformer Enclosure: Less than 0.1 gauss at 450 mm.
10. Audible Noise: Comply with NEMA ST 20.
11. Electrostatic Shielding: Independently shield each winding with a full-width, double, copper, electrostatic shield arranged to minimize interwinding capacitance.
 - a. Coil leads and terminal trips shall be arranged to minimize capacitive coupling between input and output connections.
 - b. Shield Terminal: Separate, and marked "Shield" for grounding connection. Shield shall be connected to the reference ground point for the distribution panels.
 - c. Capacitance: Limit capacitance between primary and secondary windings to a maximum of 33 picofarads over a frequency range of 20 Hz to 1 MHz.
 - d. Common-Mode Noise Attenuation: 120 dB minimum, 0.5 to 1.5 kHz; minus 65 dB minimum, 1.5 to 100 kHz.
 - e. Normal-Mode Noise Attenuation: 52 dB minimum, 1.5 to 10 kHz.
12. Neutral Rating: 1.732 times the system full-load ampere rating.

2.5 SPD SYSTEM

Coordinate this article with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."

- A. Description: Integrated SPD system, complying with Section 264313 "Transient-Voltage Protection for Low-Voltage Electrical Power Circuits," to protect unit panelboard, and having the following features:
 1. Disconnect Device: Manual, three-pole, fused disconnect switch to de-energize SPD system while permitting power distribution units to continue operation. Fuses are rated at 200-kA interrupting capacity.
 2. Nonlinear Loading: System shall accommodate rated-load current with a minimum 3.0 crest factor and 85 percent total harmonic distortion.

2.6 OUTPUT PANELBOARDS

- A. Description: Panelboards complying with Section 262416 "Panelboards" except for mounting provisions. Mount in front of power distribution units behind flush doors. Include the following features:
 1. Construction: 42 pole, 208 V, 3 phase; capable of accepting branch circuit breakers rated to 100 A.
 2. Panelboard Rating: 225 A, with main circuit breaker.
 3. Panelboard Phase, Neutral, and Ground Buses: Copper, with neutral bus at least 1.732 times the nominal phase bus rating.

Retain "Isolated Ground Bus" Subparagraph below to suit Project.

4. Isolated Ground Bus: Copper, adequate for branch-circuit equipment ground conductors; insulated from supports.
5. Branch Circuit Breakers: **[Bolt]** **[Plug]** on.
6. Cable Racks: Removable and arranged for supporting and routing cables for panelboard entrance.
7. Access Panels: Arranged so additional branch-circuit wiring can be installed and connected in the future.

2.7 POWER DISTRIBUTION UNIT CONTROLS

A. Include the following control features:

1. Emergency, power-off switch integral with power distribution unit.
2. Emergency, power-off input terminals for connection to remote power-off switch.

Revise first subparagraph and associated subparagraphs below if alarm-only indicator is preferable to automatic shutdown of unit on alarm.

3. Over-under alarm shutdown with automatic unit disconnection for the following alarm conditions:
 - a. High temperature.
 - b. High and low input or output voltage.
 - c. Phase loss.
 - d. Ground fault.
 - e. Reverse phase rotation.
4. Ground-fault protection with automatic system shutdown.
5. Alarm Contacts: Electrically isolated, Form C (one normally open and one normally closed), summary alarm; contact set shall change state if any monitored function goes into alarm mode.
6. Remote Power-Off Control: Control circuit with connection to shunt trip of power distribution unit main power circuit breaker and terminals for connection to one or more remote power-off, push-button stations.
7. Auxiliary Control Outputs: **<Insert control function outputs.>**

2.8 MONITORING, STATUS, AND ALARM ANNUNCIATION

Coordinate this article with Drawings and with remote indication and control provisions.

A. Description: Microprocessor-based monitoring, status, and alarm annunciation panel mounted flush in front of power distribution unit to provide status display and failure-indicating interface for the following:

1. Power Monitoring:
 - a. Input Voltage: Line to line, rms.
 - b. Output Voltage: Line to line, rms.
 - c. Output Voltage: Line to neutral, rms.

- d. Output current.
2. Status Indication: Unit on.
3. Alarm Annunciation:
 - a. High temperature in transformer coil.
 - b. High and low input voltage.
 - c. High and low output voltage.
 - d. Phase loss.
 - e. Ground fault.
 - f. Frequency.
 - g. Phase rotation.
 - h. SPD module failure.
4. Audible Alarm and Silencing Switch: Alarm sounds when alarm indication occurs. Silencing switch shall silence audible alarm but leave visual indication active until alarm condition is corrected.

2.9 SOUND LEVEL

Retain one of two paragraphs in this Article to specify sound-level requirements.

- A. General: Fully assembled products comply with minimum sound-level requirements in NEMA ST 20 for transformers of corresponding ratings when factory tested according to IEEE C57.12.91.
- B. General: Fully assembled products have a minimum of 3 dB less than the maximum sound levels prescribed for transformers of corresponding ratings when factory tested according to IEEE C57.12.91.

2.10 FINISHES

- A. Manufacturer's standard finish over corrosion-resistant pretreatment and primer.

2.11 SOURCE QUALITY CONTROL

- A. Factory Tests: Design and routine tests shall comply with referenced standards.

Retain "Factory Sound-Level Tests" Paragraph below if lower-than-standard sound level is critical. See Editing Instruction No. 2 in the Evaluations.

- B. Factory Sound-Level Tests: Conduct sound-level tests on equipment. Comply with IEEE C57.12.91 and NEMA ST 20.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Arrange power distribution units to provide adequate access to equipment and circulation of cooling air.

If appropriate, retain first paragraph below for projects in areas of seismic activity.

- B. Anchor or restrain floor-mounting power distribution units according to manufacturer's written instructions[, **seismic codes applicable to Project,**] and requirements in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- C. Identify equipment and install warning signs according to Section 260553 "Identification for Electrical Systems."

3.2 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
 - 1. Separately Derived Systems: Make grounding connections to grounding electrodes as indicated; comply with NFPA 70.
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

Retain paragraph and subparagraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections and prepare test reports.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph and subparagraphs below to describe tests and inspections to be performed by any of the entities in three paragraphs above.

- B. Tests and Inspections:

Tests referenced in first subparagraph below are from NETA Acceptance Testing Specification and include inspection procedures to verify proper installation. They also include tests and measurements of

circuit breakers and transformers. Tests include verification of circuit-breaker trip ranges by means of current-injection, insulation-resistance, and turns-ratio tests of transformers and similar items. Cost of extensive testing may not be warranted for some projects. Revise subparagraph to suit Project.

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification for circuit breakers, molded case; and for transformers, dry type, air cooled, low voltage. Certify compliance with test parameters.
 2. Perform functional tests of power distribution units throughout their operating ranges. Test each monitoring, status, and alarm function.
- C. Remove malfunctioning units, replace with new units, and retest as specified above.
- D. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of conductor and bus connections.
1. Use an infrared-scanning device designed to measure temperature or to detect significant deviations from normal values. Provide documentation of device calibration.
 2. Perform two follow-up infrared scans of main breaker, transformer, and panelboards, one at 4 months and the other at 11 months after Substantial Completion.
 3. Prepare a certified report identifying connections checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.
- E. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.4 STARTUP SERVICE

Delete this Article if factory-authorized service representative is not required.

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
1. Verify that power distribution units are installed and connected according to the Contract Documents.
 2. Verify that electrical wiring installation complies with manufacturer's submittal and with written installation requirements in other electrical Sections.
 3. Complete installation and startup checks according to manufacturer's written instructions.

3.5 ADJUSTING

- A. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

- B. Adjust power distribution units to provide optimal voltage to equipment served throughout normal operating cycle of loads served. Record input and output voltages and adjustment settings, and incorporate into test results.

3.6 CLEANING

- A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain power distribution units. Refer to Section 017900 "Demonstration and Training."
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262600

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262713 - ELECTRICITY METERING

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes:
 - 1. Equipment for **[electricity metering by utility company] [and][electricity metering by Owner]**.
 - 2. Service Entrance requirements
 - 3. Secondary Connection Cabinet requirements.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. KY Pulse: Term used by the metering industry to describe a method of measuring consumption of electricity that is based on a relay opening and closing in response to the rotation of the disk in the meter.
- B. PC: Personal computer.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For electricity-metering equipment.
 - 1. Dimensioned plans and sections or elevation layouts.

Retain subparagraph below if equipment includes wiring.

- 2. Wiring Diagrams: For power, signal, and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features.
- 3. Secondary Connection Cabinets: drawings to be provided to the customer must contain the following strict criteria:
 - a. Equipment orientation and placement of the SCC and the transformer. This is an absolute requirement and must be adhered to in order to ensure the safety of our operating personnel.
 - b. Special secondary wire will be used from the transformer secondary enclosure to the SCC. The cable is Series 8000 aluminum alloy.
 - c. 18" maximum depth conduit/cable trough depth, necessary for operating crews to properly train the cable into the SCC.

1.5 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- B. Install service entrance in accordance with Contract Documents, the Utility Company's rules and regulations, and NFPA 70, National Electric Code (NEC) as adopted and amended by the Denver Building Code.
- C. Coordinate with Xcel Energy "Blue Book" for service entrance, metering and SCC requirements.

1.7 DELIVERY, STORAGE, AND HANDLING

Retain this article if modular meter center is specified.

- A. Receive, store, and handle modular meter center according to NECA 400.

1.8 PROJECT CONDITIONS

Retain this article if interruption of existing electrical service is required.

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering.
 - 2. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 - 3. Do not proceed with interruption of electrical service without DEN Project Manager's written permission.

1.9 COORDINATION

- A. Electrical Service Connections: Coordinate with utility companies and components they furnish as follows:
 - 1. Comply with requirements of utilities providing electrical power services.
 - a. Xcel Energy.
 - 2. Coordinate installation and connection of utilities and services, including provision for electricity-metering components.

1.10 SECONDARY CONNECTION CABINET REQUIREMENTS

- A. A Secondary Connection Cabinet (SCC) is required when a customer's need for secondary cable terminations exceeds the number of allowable connections available for customer owned secondary in the transformer secondary compartment. The schedule of allowable runs per phase is published in the "Xcel Energy Standard for Electric Installation and Use" (the Blue Book). That and several drawings from the Blue Book are found on the following Pages.
- B. The SCC will be the customer's responsibility for purchase and installation, which includes the concrete field pour of the pad as a foundation for both the transformer and the SCC. The pad also includes the conduit/trough for the secondary cable between the transformer and the SCC.

1.11 SOFTWARE SERVICE AGREEMENT

Services in this article may not be allowed for publicly funded projects.

Retain article if Owner's metering includes billing software. Note that a PC is not included in this Section and, if needed, should be obtained separately.

- A. Technical Support: Beginning with Substantial Completion, provide software support for **[two (2)] <Insert number>** years.
- B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within **[two (2)] <Insert number>** years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.
 - 1. Provide **[thirty (30)] <Insert number>** days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade his computer equipment if necessary.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 EQUIPMENT FOR ELECTRICITY METERING BY UTILITY COMPANY

- A. Meters will be furnished by utility company.

- B. Meter base will be furnished by the contractor.
- C. Metering Transformer: Furnished by the utility company and installed by the contractor.

Retain and revise the remainder of this article to reflect utility company's requirements for equipment to be provided by Contractor.

- D. Current-Transformer Cabinets: Comply with requirements of electrical-power utility company.

Retain one or both of first two paragraphs below. Retain both if Owner's meter is not in a modular meter center.

- E. Meter Sockets: Comply with requirements of electrical-power utility company.
- F. Meter Sockets: Steady-state and short-circuit current ratings shall meet indicated circuit ratings.
- G. Modular Meter Center: Factory-coordinated assembly of a main service terminal box with lugs only, wireways, tenant meter socket modules, and tenant feeder circuit breakers arranged in adjacent vertical sections. Assembly shall be complete with interconnecting buses and other features as specified below.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Siemens Energy & Automation, Inc.
 - d. Square D; a brand of Schneider Electric.
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.
2. Comply with requirements of utility company for meter center.
3. Housing: NEMA 250, [**Type 1**] [**Type 3R**] enclosure.

Coordinate first subparagraph below with Drawings for indication of available fault current at meter-center supply terminals.

4. Minimum Short-Circuit Rating: [**22,000**] [**42,000**] [**65,000**] [**100,000**] **<Insert number>** A symmetrical at rated voltage.

Retain one of first two subparagraphs below if meter center is specified to have main terminal box with main lugs. Fusible switch may require more space. Consult manufacturers' data. Coordinate with Drawings for indication of poles, frame or size, and trip or fuse.

5. Main Disconnect Device: Circuit breaker, series-combination rated for use with downstream feeder and branch circuit breakers.

6. Main Disconnect Device: Fusible switch, series-combination rated by circuit-breaker manufacturer to protect downstream feeder and branch circuit breakers.

Coordinate first subparagraph below with Drawings for indication of trip setting and interrupting capacity of circuit breakers.

7. Tenant Feeder Circuit Breakers: Series-combination-rated molded-case units, rated to protect circuit breakers in downstream tenant and to house loadcenters and panelboards that have 10,000-A interrupting capacity.
 - a. Identification: Complying with requirements in Section 260553 "Identification for Electrical Systems" with legend identifying tenant's address.
 - b. Physical Protection: Tamper resistant, with hasp for padlock.
8. Meter Socket: Rating coordinated with indicated tenant feeder circuit rating.
9. Surge Protection: For main disconnect device, comply with requirements in Section 264313 "Transient-Voltage Protection for Low-Voltage Electrical Power Circuits."

2.2 EQUIPMENT FOR ELECTRICITY METERING BY OWNER

Retain this article to specify components for Owner's metering of feeders to tenants or designated loads, with or without external alarm, control, and communication capabilities, or other optional features. See Evaluations. Coordinate with Drawings.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton.
2. E-Mon; a division of Hunt Power.
3. National Meter Industries.
4. Osaki Meter Sales, Inc.
5. Square D; a brand of Schneider Electric.
6. **<Insert manufacturer's name>.**
7. or approved equal.

B. General Requirements for Owner's Meters:

1. All submetering equipment shall be compatible with the existing Eaton PowerNet metering network.
2. Comply with UL 1244.

See Evaluations for discussion about meter accuracy.

3. Meters used for billing shall have an accuracy of **[0.2] [0.5] [1.0]** percent of reading, complying with requirements in ANSI C12.20.

4. Meters shall be certified by [**California Type Evaluation Program**] <Insert **agency**> as complying with [**Title 4, California Code of Regulations, Article 2.2**] <Insert **regulatory requirements**>.
5. Enclosure: NEMA 250, [**Type 1**] [**Type 3R**] minimum, with hasp for padlocking or sealing.
6. Identification: Comply with requirements in Section 260553 "Identification for Electrical Systems."
7. Memory Backup: Self-contained to maintain memory throughout power outages of 72 hours, minimum.
8. Sensors: Current-sensing type, with current or voltage output, selected for optimum range and accuracy for meters indicated for this application.

Split-core sensor in first subparagraph below is installed in switchboard or panelboard without disturbing feeder connection but is less accurate. Solid-core sensor is usually installed in a separate compartment or in a separate current-transformer cabinet. Coordinate with Drawings.

- a. Type: [**Split**] [**and**] [**solid**] core.

Current-transformer cabinet in first subparagraph below may be required for some solid-core current sensors. Consult manufacturers' literature. Coordinate with Drawings.

9. Current-Transformer Cabinet: Listed or recommended by metering equipment manufacturer for use with sensors indicated.

Subparagraph below specifies an optional feature for kilowatt-hour and demand meters. Retain subparagraph to have meter provide power consumption and demand information to a building automation system to support demand-limiting action by that system. Coordinate with design of building automation system.

10. Building Automation System (BAS) Interface: One digital KY pulse to a user-definable increment of energy measurement. Match signal to [**BAS**] <Insert **signal destination**> input and arrange to convey the instantaneous, integrated, demand level measured by meter to provide data for processing and possible programmed demand control action by destination system.
- C. Kilowatt-hour Meter: Electronic [**single**] [**three**] [**single- and three**]-phase meters, measuring electricity used.
1. Voltage and Phase Configuration: Meter shall be designed for use on circuits with voltage rating and phase configuration indicated for its application.

Retain one of two subparagraphs below.

2. Display: LCD with characters not less than 0.25 inch (6 mm) high, indicating accumulative kilowatt-hours and current kilowatt load. Retain accumulated kilowatt-hour in a nonvolatile memory, until reset.
3. Display: Digital electromechanical counter, indicating accumulative kilowatt-hours.

The demand interval in first paragraph below should be same as used by the utility.

- D. Kilowatt-hour/Demand Meter: Electronic **[single] [three] [single- and three]**-phase meters, measuring electricity use and demand. Demand shall be integrated over a **[15-minute] <Insert value>** interval.
1. Voltage and Phase Configuration: Meter shall be designed for use on circuits with voltage rating and phase configuration indicated for its application.
 2. Display: LCD with characters not less than **0.25 inch (6 mm)** high, indicating accumulative kilowatt-hours, **[current time and date,]current demand,[and] historic peak demand[, and time and date of historic peak demand]**. Retain accumulated kilowatt-hour and historic peak demand in a nonvolatile memory, until reset.
- E. Data Transmission Cable: Transmit KY pulse data over Class 1 control-circuit conductors in raceway. Comply with Section 260523 "Control-Voltage Electrical Power Cables."

See Evaluations for discussion about using metered data for allocation of utility costs.

- F. Software: PC based, a product of meter manufacturer, suitable for calculation of utility cost allocation **[and billing]**.
1. Utility Cost Allocation: Automatically import energy-usage records to allocate energy costs for the following:
 - a. At least **[15] <Insert number>** departments.
 - b. At least **[30] <Insert number>** tenants.
 - c. At least **[five] <Insert number>** processes.
 - d. At least **[five] <Insert number>** buildings.
 - e. **<Insert entity>**.
 2. Tenant or Activity Billing Software: Automatically import energy-usage records to automatically compute and prepare **[tenant bills] [activity demand and energy-use statements]** based on metering of energy use **[and peak demand]**. Maintain separate directory for each tenant's historical billing information. Prepare summary reports in user-defined formats and time intervals.

2.3 SERVICE CONNECTION CABINETS

- A. A service connection cabinet is required when the total number conductors or size of the conductors exceeds the values listed in Table II in Article 3 of this Section. If a service connection cabinet is required, it shall be purchased, installed and maintained at the expense of the customer. A concrete pad shall also be installed by the customer that will accommodate both the service connection cabinet and the pad-mounted transformer, which feeds the service connection cabinet. Arrangements for the utilization of a service connection cabinet may be made by contacting the assigned Company Area Engineer.

- B. The following are the approved suppliers of specified SCC's. They are available with or without metering provisions. The customers should present their requests to local electrical distributors for purchase from these suppliers. All suppliers will sell their cabinets though out the Xcel Energy service territory. They have specifications on file both for the metered and non-metered cabinets. Erickson sells a unit that has a service disconnect and metering provisions, the use of which is optional depending on the preference of the customer.

Verify that the phone numbers noted below are current.

1. EMI-Electrical Mechanical Industries.
 - a. Phone: 800-536-3678 or 763-588-0536.
2. Erickson Electrical Equipment Company.
 - a. Phone: 847-640-7701.
3. AMP-American Midwest Power.
 - a. Phone: 800-328-8658.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with equipment installation requirements in NECA 1.

Retain first paragraph below to require installation of utility company's equipment. Coordinate with Drawings. Revise to suit utility company's requirements.

- B. Install meters furnished by utility company. Install raceways and equipment according to utility company's written requirements. Provide empty conduits for metering leads and extend grounding connections as required by utility company.

Retain paragraph below if modular meter center is specified.

- C. Install modular meter center according to NECA 400 switchboard installation requirements.
- D. Secondary Connection Cabinets
1. The number of conductors that may be terminated in a pad-mounted transformer is governed by the WA rating of the transformer and the size of the conductors as shown in Table II below. If a customer requires a larger number and/or size of conductors than listed in Table II, a service connection cabinet will be required.

TABLE I
 SECONDARY PEDESTAL

Copper		Aluminum	
Maximum Runs	Maximum Size	Maximum Runs	Maximum Size
5	350	5	350

TABLE II
 PAD MOUNTED TRANSFORMERS

KVA Rating	Copper		Aluminum	
	Maximum Runs	Maximum Size	240/120 Volt 1	Maximum Runs

750	6	500	6	750
1000	6	500	6	750
1500	6	500	6	750
2000	8	500	8	750
2500	8	500	8	750

3.2 IDENTIFICATION

- A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
1. Series Combination Warning Label: Self-adhesive type, with text as required by NFPA 70.
 2. Equipment Identification Labels: Adhesive film labels with clear protective overlay.

3.3 FIELD QUALITY CONTROL

Retain this article if Owner's electricity-metering equipment is specified.

Retain first paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

- B. Tests and Inspections:

1. Connect a load of known kilowatt rating, [1.5] <Insert number> kW minimum, to a circuit supplied by metered feeder.
2. Turn off circuits supplied by metered feeder and secure them in off condition.
3. Run test load continuously for eight hours minimum, or longer, to obtain a measurable meter indication. Use test-load placement and setting that ensures continuous, safe operation.
4. Check and record meter reading at end of test period and compare with actual electricity used, based on test-load rating, duration of test, and sample measurements of supply voltage at test-load connection. Record test results.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- C. Electricity metering will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262713

Updated – 08/25/2015

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262726 - WIRING DEVICES

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Receptacles, receptacles with integral GFCI, and associated device plates.
 - 2. Twist-locking receptacles.
 - 3. Receptacles with integral surge-suppression units.
 - 4. Isolated-ground receptacles.
 - 5. Tamper-resistant receptacles.
 - 6. Weather-resistant receptacles.
 - 7. Snap switches and wall-box dimmers.
 - 8. Solid-state fan speed controls.
 - 9. Wall-switch and exterior occupancy sensors.
 - 10. Pendant cord-connector devices.
 - 11. Cord and plug sets.
 - 12. Floor service outlets, poke-through assemblies, and multioutlet assemblies.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in

this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. EMI: Electromagnetic interference.
- B. GFCI: Ground-fault circuit interrupter.
- C. Pigtail: Short lead used to connect a device to a branch-circuit conductor.
- D. RFI: Radio-frequency interference.
- E. SPD: Surge Protective Device.
- F. UTP: Unshielded twisted pair.

1.4 ADMINISTRATIVE REQUIREMENTS

Retain this article if receptacles for Owner-furnished equipment with plugs have unknown or special configurations.

- A. Coordination:
 - 1. Receptacles for Owner-Furnished Equipment: Match plug configurations.

Retain "Cord and Plug Sets" Subparagraph below if retaining "Cord and Plug Sets" Article.

- 2. Cord and Plug Sets: Match equipment requirements.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.

Retain "Samples" Paragraph below if products have critical features needing hands-on appraisal.

Delete sample requirement in paragraph below if project is of very limited scope, and deletion is approved by DEN Project Manager.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: One for each type of device and wall plate specified, in each color specified.

1.6 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing-label warnings and instruction manuals that include labeling conditions.

1.8 MAINTENANCE MATERIAL SUBMITTALS

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Floor Service-Outlet Assemblies: [**One for every 10**] <Insert quantities>, but no fewer than [**one**] <Insert number>.
 - 2. Poke-Through, Fire-Rated Closure Plugs: [**One for every five**] <Insert quantities> floor service outlets installed, but no fewer than [**two**] <Insert number>.
 - 3. TVSS Receptacles: [**One for every 10**] <Insert quantities> of each type installed, but no fewer than [**two of each type**] <Insert number>.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

- A. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles:

Manufacturers listed below produce an extensive line of nationally distributed wiring devices.

1. Cooper Wiring Devices; Division of Cooper Industries, Inc. (Cooper).
2. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
3. Leviton Mfg. Company Inc. (Leviton).
4. Pass & Seymour/Legrand (Pass & Seymour).
5. <Insert manufacturer>
6. or approved equal.

- B. Source Limitations: Obtain each type of wiring device and associated wall plate from single source from single manufacturer.

2.2 GENERAL WIRING-DEVICE REQUIREMENTS

- A. Wiring Devices, Components, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NFPA 70.

Not all standard devices are available with a modular plug-in configuration. For example, this Section does not include specifications for modular devices.

- C. Devices that are manufactured for use with modular plug-in connectors may be substituted under the following conditions:
1. Connectors shall comply with UL 2459 and shall be made with stranding building wire.
 2. Devices shall comply with the requirements in this Section.

2.3 STRAIGHT-BLADE RECEPTACLES

- A. Unless noted otherwise, all general-use straight blade devices shall be gray.
- B. Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, UL 498, and FS W-C-596.

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:

Catalog numbers in subparagraphs below are for 20-A, heavy-duty, specification-grade, nylon-face devices; revise catalog numbers to require other configurations and ratings.

- a. Cooper; 5351 (single), CR5362 (duplex).
- b. Hubbell; HBL5351 (single), HBL5352 (duplex).
- c. Leviton; 5891 (single), 5352 (duplex).
- d. Pass & Seymour; 5361 (single), 5362 (duplex).
- e. **<Insert manufacturer>**
- f. or approved equal.

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

Isolated-ground receptacles are available in a variety of configurations and ratings including locking-blade types up to 50 A and 250 V. Revise "Isolated-Ground, Duplex Convenience Receptacles, 125 V, 20 A" Paragraph below to suit Project; indicate different types on Drawings.

- C. Isolated-Ground, Duplex Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, UL 498, and FS W-C-596.

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cooper; IG5362RN.
 - b. Hubbell; IG5362.
 - c. Leviton; 5362-IG.
 - d. Pass & Seymour; IG5362.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
2. Description: Straight blade; equipment grounding contacts shall be connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts.

Receptacles in "Tamper-Resistant Convenience Receptacles, 125 V, 20 A" Paragraph below are for installation in pediatric-care locations.

- D. Tamper-Resistant Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, UL 498 Supplement sd, and FS W-C-596.

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cooper; TR8300.
 - b. Hubbell; HBL8300SGA.
 - c. Leviton; 8300-SGG.
 - d. Pass & Seymour; TR63H.
 - e. **<Insert manufacturer>**
 - f. or approved equal.

2.4 GFCI RECEPTACLES

- A. Unless noted otherwise, all GFI receptacles shall be gray.

Non-feed-through-type GFCI unit shall be selected where no protection of downstream receptacles is required.

- B. General Description:

1. Straight blade, feed through type.
2. Comply with NEMA WD 1, NEMA WD 6, UL 498, UL 943 Class A, and FS W-C-596.
3. Include indicator light that shows when the GFCI has malfunctioned and no longer provides proper GFCI protection.

- C. Duplex GFCI Convenience Receptacles, 125 V, 20 A:

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:

Catalog numbers in list below are for feed-through types, arranged to protect receptacles downstream on the same circuit; revise catalog numbers if non-feed-through types are required.

- a. Cooper; VGF20.
- b. Hubbell; GFR5352L.
- c. Pass & Seymour; 2095.
- d. Leviton; 7599.
- e. **<Insert manufacturer>**
- f. or approved equal.

- D. Tamper-Resistant GFCI Convenience Receptacles, 125 V, 20 A:

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:

Catalog numbers in list below are for feed-through types, arranged to protect receptacles downstream on the same circuit; revise catalog numbers if non-feed-through types are required.

- a. Hubbell; GFTR20.
- b. Pass & Seymour; 2095TR.
- c. **<Insert manufacturer>**
- d. or approved equal.

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

2.5 SPD RECEPTACLES

- A. Unless noted otherwise, all SPD receptacles shall be gray.

See Editing Instruction No. 3 in the Evaluations for information on SPD ratings.

- B. General Description: Comply with NEMA WD 1, NEMA WD 6, UL 498, UL 1449, and FS W-C-596, with integral SPD in line to ground, line to neutral, and neutral to ground.

1. SPD Components: Multiple metal-oxide varistors; with a nominal clamp-level rating of 400 V and minimum single transient pulse energy dissipation of 240 J, according to IEEE C62.41.2 and IEEE C62.45.
2. Active SPD Indication: Visual and audible, with light visible in face of device to indicate device is "active" or "no longer in service."

- C. Duplex SPD Convenience Receptacles:

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:

Catalog numbers in list below are for products with visual-only indication.

- a. Cooper; 5362BLS.
- b. Hubbell; HBL5362SA.
- c. Leviton; 5380.
- d. Pass & Seymour; 5362BLSP.
- e. <Insert manufacturer>
- f. or approved equal.

2. Description: Straight blade, 125 V, 20 A; NEMA WD 6 Configuration 5-20R.

- D. Isolated-Ground, Duplex Convenience Receptacles:

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Cooper; IG5362BLS.
- b. Hubbell; IG5362SA.
- c. Leviton; 5380-IG.
- d. Pass & Seymour; IG5362BLSP.
- e. <Insert manufacturer>
- f. or approved equal.

2. Description:

- a. Straight blade, 125 V, 20 A; NEMA WD 6 Configuration 5-20R.

- b. Equipment grounding contacts shall be connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts.

2.6 HAZARDOUS (CLASSIFIED) LOCATION RECEPTACLES

- A. **[Available]** Wiring Devices for Hazardous (Classified) Locations: Comply with NEMA FB 11 and UL 1010.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cooper Crouse-Hinds.
 - b. EGS/Appleton Electric.
 - c. Killark; Division of Hubbell Inc.
 - d. **<Insert manufacturer>**
 - e. or approved equal.

2.7 TWIST-LOCKING RECEPTACLES

- A. Single Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration L5-20R, and UL 498.

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cooper; CWL520R.
 - b. Hubbell; HBL2310.
 - c. Leviton; 2310.
 - d. Pass & Seymour; L520-R.
 - e. **<Insert manufacturer>**
 - f. or approved equal.

- B. Isolated-Ground, Single Convenience Receptacles, 125 V, 20 A:

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cooper; IGL520R.
 - b. Hubbell; IG2310.
 - c. Leviton; 2310-IG.

- d. Pass & Seymour; IG4700.
- e. <Insert manufacturer>
- f. or approved equal.

2. Description:

- a. Comply with NEMA WD 1, NEMA WD 6 Configuration L5-20R, and UL 498.
- b. Equipment grounding contacts shall be connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts.

2.8 PENDANT CORD-CONNECTOR DEVICES

Revise NEMA configuration in "Description" Paragraph below to suit Project. Delete "External Cable Grip" Subparagraph if not required.

A. Description:

- 1. Matching, locking-type plug and receptacle body connector.
- 2. NEMA WD 6 Configurations L5-20P and L5-20R, heavy-duty grade, and FS W-C-596.
- 3. Body: Nylon, with screw-open, cable-gripping jaws and provision for attaching external cable grip.
- 4. External Cable Grip: Woven wire-mesh type made of high-strength, galvanized-steel wire strand, matched to cable diameter, and with attachment provision designed for corresponding connector.

2.9 CORD AND PLUG SETS

Retain this article if cord and plug sets for equipment are furnished by Owner or are specified in other Sections. Coordinate with other Sections and with Part 3.

A. Description:

- 1. Match voltage and current ratings and number of conductors to requirements of equipment being connected.
- 2. Cord: Rubber-insulated, stranded-copper conductors, with Type SOW-A jacket; with green-insulated grounding conductor and ampacity of at least 130 percent of the equipment rating.
- 3. Plug: Nylon body and integral cable-clamping jaws. Match cord and receptacle type for connection.

2.10 TOGGLE SWITCHES

- A. Comply with NEMA WD 1, UL 20, and FS W-S-896.
- B. Unless noted otherwise, toggle switches shall be gray.

C. Switches, 120/277 V, 20 A:

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:

Catalog numbers in lists below are for 20-A devices; revise catalog numbers to require other configurations and ratings.

a. Single Pole:

- 1) Cooper; AH1221.
- 2) Hubbell; HBL1221.
- 3) Leviton; 1221-2.
- 4) Pass & Seymour; CSB20AC1.
- 5) **<Insert manufacturer's name; catalog number(s)>**.
- 6) or approved equal.

b. Two Pole:

- 1) Cooper; AH1222.
- 2) Hubbell; HBL1222.
- 3) Leviton; 1222-2.
- 4) Pass & Seymour; CSB20AC2.
- 5) **<Insert manufacturer's name; catalog number(s)>**.
- 6) or approved equal.

c. Three Way:

- 1) Cooper; AH1223.
- 2) Hubbell; HBL1223.
- 3) Leviton; 1223-2.
- 4) Pass & Seymour; CSB20AC3.
- 5) **<Insert manufacturer's name; catalog number(s)>**.
- 6) or approved equal.

d. Four Way:

- 1) Cooper; AH1224.
- 2) Hubbell; HBL1224.
- 3) Leviton; 1224-2.
- 4) Pass & Seymour; CSB20AC4.
- 5) or approved equal.

D. Pilot-Light Switches, 20 A:

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Cooper; AH1221PL for 120 and 277 V.
 - b. Hubbell; HBL1201PL for 120 and 277 V.
 - c. Leviton; 1221-LH1.
 - d. Pass & Seymour; PS20AC1RPL for 120 V, PS20AC1RPL7 for 277 V.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
2. Description: Single pole, with neon-lighted handle, illuminated when switch is "off."

E. Key-Operated Switches, 120/277 V, 20 A:

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cooper; AH1221L.
 - b. Hubbell; HBL1221L.
 - c. Leviton; 1221-2L.
 - d. Pass & Seymour; PS20AC1-L.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
2. Description: Single pole, with factory-supplied key in lieu of switch handle.

F. Single-Pole, Double-Throw, Momentary-Contact, Center-off Switches: 120/277 V, 20 A; for use with mechanically held lighting contactors.

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cooper; 1995.
 - b. Hubbell; HBL1557.
 - c. Leviton; 1257.
 - d. Pass & Seymour; 1251.
 - e. **<Insert manufacturer>**
 - f. or approved equal.

G. Key-Operated, Single-Pole, Double-Throw, Momentary-Contact, Center-off Switches: 120/277 V, 20 A; for use with mechanically held lighting contactors, with factory-supplied key in lieu of switch handle.

Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cooper; 1995L.

- b. Hubbell; HBL1557L.
- c. Leviton; 1257L.
- d. Pass & Seymour; 1251L.
- e. **<Insert manufacturer>**
- f. or approved equal.

2.11 WALL-BOX DIMMERS

- A. Dimmer Switches: Modular, full-wave, solid-state units with integral, quiet on-off switches, with audible frequency and EMI/RFI suppression filters.

Four-way switching may be added to "Control" Paragraph below after verifying availability with manufacturers.

- B. Control: Continuously adjustable [**slider**] [**toggle switch**] [**rotary knob**]; with single-pole or three-way switching. Comply with UL 1472.
- C. Incandescent Lamp Dimmers: 120 V; control shall follow square-law dimming curve. On-off switch positions shall bypass dimmer module.

Retain one of two subparagraphs below. UL 1472 covers ratings from 300 to 2000 W in increments of 50 W.

- 1. 600 W; dimmers shall require no derating when ganged with other devices. [**Illuminated when "off."**]
- 2. **<Insert wattage ratings and descriptions>**.

Retain "Fluorescent Lamp Dimmer Switches" Paragraph below with compatible dimming-type ballasts. Coordinate with Section 265100 "Interior Lighting." Use uniform ballast and lamp types to obtain consistent dimming characteristics.

- D. Fluorescent Lamp Dimmer Switches: Modular; compatible with dimmer ballasts; trim potentiometer to adjust low-end dimming; dimmer-ballast combination capable of consistent dimming with low end not greater than 20 percent of full brightness.

2.12 WALL PLATES

- A. Single and combination types shall match corresponding wiring devices.
 - 1. Plate-Securing Screws: Metal with head color to match plate finish.
 - 2. Material for Finished Spaces: Type 302/304 stainless steel 0.04 inch (1mm) thick.
 - 3. Material for Unfinished Spaces: Type 302/304 stainless steel 0.04 inch (1mm) thick.
 - 4. Material for Damp Locations: Type 302/304 stainless steel 0.04 inch (1mm) thick.
 - 5. Plastic covers will not be accepted.
- B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with Type 3R, weather-resistant, Type 302/304 satin stainless steel with lockable cover.

2.13 FLOOR SERVICE FITTINGS

Service fittings in "Type" Paragraph below are available for voice and data communication cabling as well as for power.

- A. Type: Modular, **recessed**, dual-service units suitable for wiring method used.
- B. Compartments: Barrier separates power from voice and data communication cabling.
- C. Service Plate: [**Rectangular**] [**Round**], 302/304 stainless steel with satin finish.
 - 1. Plastic covers will not be accepted.
- D. Power Receptacle: NEMA WD 6 Configuration 5-20R, gray finish, unless otherwise indicated.
- E. Voice and Data Communication Outlet: [**Blank cover with bushed cable opening**] [**Two modular, keyed, color-coded, RJ-45 jacks for UTP cable complying with requirements in Section 271500 "Communications Horizontal Cabling."**]
- F. Protrusion above finished floor: 0.15", maximum.

2.14 POKE-THROUGH ASSEMBLIES

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

Coordinate poke-through device size, type, finish, color, and floor protrusion requirements with DEN Project Manager prior to specifying devices."

- A. Manufactures: Subject to compliance with requirements, provide products by one of the following:
 - 1. Hubbell Incorporated; Wiring Device-Kellems.
 - 2. Pass & Seymour/Legrand.
 - 3. Square D/Schneider Electric.
 - 4. Thomas & Betts Corporation.
 - 5. Wiremold/Legrand.
 - 6. **<Insert manufacturer>**
 - 7. or approved equal.
- B. Description:
 - 1. Factory-fabricated and -wired assembly of below-floor junction box with multichanneled, through-floor raceway/firestop unit and detachable matching floor service-outlet assembly.
 - 2. Comply with UL 514 scrub water exclusion requirements.

Coordinate "Service-Outlet Assembly" Subparagraph below with Section 271500 "Communications Horizontal Cabling."

3. Service-Outlet Assembly: [**Recessed type with two simplex receptacles**] [**Recessed type with four simplex receptacles**] [**Recessed type with two simplex receptacles and space for two RJ-45 jacks**] <insert assembly type>complying with requirements in Section 271500 "Communications Horizontal Cabling."

Larger-diameter assembly in "Size" Subparagraph below is available for four simplex receptacles and four voice and data communication outlets in a single, flush-type service outlet.

4. Size: Selected to fit nominal [**3-inch (75-mm)**] [**4-inch (100-mm)**] cored holes in floor and matched to floor thickness.

Revise "Fire Rating" Subparagraph below to coordinate with fire ratings.

5. Fire Rating: Unit is listed and labeled for fire rating of floor-ceiling assembly.
6. Closure Plug: Arranged to close unused [**3-inch (75-mm)**] [**4-inch (100-mm)**] cored openings and reestablish fire rating of floor.
7. Protrusion above finished floor: 0.15", maximum

Coordinate "Wiring Raceways and Compartments" Subparagraph below with Section 271500 "Communications Horizontal Cabling."

8. Wiring Raceways and Compartments: For a minimum of four No. 12 AWG conductors and a minimum of [**two (2)**] [**four (4)**], four-pair cables that comply with requirements in Section 271500 "Communications Horizontal Cabling."
9. Entire cover assembly shall be constructed of [**302/304 satin stainless steel**] [**brass**] [**brushed aluminum**]. Plastic covers will not be accepted.

2.15 PREFABRICATED MULTIOUTLET ASSEMBLIES

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Hubbell Incorporated; Wiring Device-Kellems.
 2. Wiremold/Legrand.
 3. <Insert manufacturer>
 4. or approved equal.

If not indicated on Drawings, add mounting heights, raceway sizes, and types and spacing of receptacle devices to "Description" Paragraph below. Add descriptions of special features in assemblies such as fused receptacles, special-purpose switches, and channels for communication wiring.

- B. Description:
 1. Two-piece surface metal raceway, with factory-wired multioutlet harness.
 2. Components shall be products from single manufacturer designed for use as a complete, matching assembly of raceways and receptacles.
 3. Covers to be 302/304 satin stainless steel. Plastic covers will not be accepted.

Some finish options may be available from manufacturers. Retain "Raceway Material" or "Multioutlet Harness" paragraphs below and revise to suit Project.

- C. Raceway Material: [**Metal, with manufacturer's standard finish**] [**PVC**].
- D. Multioutlet Harness:
 - 1. Receptacles: 15-A, 125-V, NEMA WD 6 Configuration 5-15R receptacles complying with NEMA WD 1, UL 498, and FS W-C-596.
 - 2. Receptacle Spacing: [**6 inches (150 mm)**] [**9 inches (230 mm)**] [**12 inches (300 mm)**] [**18 inches (460 mm)**].
 - 3. Wiring: No. 12 AWG solid, Type THHN copper, [**single circuit**] [**two circuit, connecting alternating receptacles**].

2.16 FINISHES

See Editing Instruction No. 2 in the Evaluations for a discussion of wiring-device colors. Coordinate with Drawings.

A. Device Color:

Retain "Wiring Devices Connected to Normal Power System" Subparagraph below unless colors are indicated or scheduled on Drawings. If retaining subparagraph, revise title if a separate emergency power system serving wiring devices is not provided.

- 1. Wiring Devices Connected to Normal Power System: Gray

Retain "Wiring Devices Connected to Emergency Power System" Subparagraph below if a separate emergency power system serving wiring devices are required.

- 2. Wiring Devices Connected to Emergency Power System: Red
- 3. SPD Devices: Blue.
- 4. Isolated-Ground Receptacles: Orange

B. Wall Plate Finish: 302/304 satin stainless steel. Plastic covers will not be accepted.

PART 3 - EXECUTION

3.1 INSTALLATION

NECA 1 referenced in first paragraph below includes device mounting-height requirements. See "Mounting Heights and Locations" Article in the Evaluations for device mounting heights in that standard.

- A. Comply with NECA 1, including mounting heights listed in that standard, unless otherwise indicated.

See Editing Instruction No. 4 in the Evaluations for timing and sequencing of construction to assist in avoiding contamination of devices during construction.

- B. Coordination with Other Trades:

1. Protect installed devices and their boxes. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of boxes.
2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
4. Install wiring devices after all wall preparation, including painting, is complete.

C. Conductors:

1. Do not strip insulation from conductors until right before they are spliced or terminated on devices.
2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.
4. Existing Conductors:
 - a. Cut back and pigtail, or replace all damaged conductors.
 - b. Straighten conductors that remain and remove corrosion and foreign matter.
 - c. Pigtailling existing conductors is permitted, provided the outlet box is large enough.

D. Device Installation:

1. Replace devices that have been in temporary use during construction and that were installed before building finishing operations were complete.
2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
4. Connect devices to branch circuits using pigtails that are not less than **6 inches (152 mm)** in length.
5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, two-thirds to three-fourths of the way around terminal screw.
6. Use a torque screwdriver when a torque is recommended or required by manufacturer.
7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
8. Tighten unused terminal screws on the device.
9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device-mounting screws in yokes, allowing metal-to-metal contact.
10. Mounting heights shall be as shown on drawings. If no heights noted, standard device heights above finished floor are as follows:

- a. Wall switches: 48"
- b. Convenience receptacles: 18"

E. Receptacle Orientation:

Retain first subparagraph below if the position of the ground pin is important for consistency. Trade and professional literature is inconsistent in recommending benefits of either orientation.

- 1. Install ground pin of vertically mounted receptacles down, and on horizontally mounted receptacles install ground pin to the right.

F. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

G. Dimmers:

- 1. Install dimmers within terms of their listing.
- 2. Verify that dimmers used for fan speed control are listed for that application.
- 3. Install unshared neutral conductors on line and load side of dimmers according to manufacturers' device listing conditions in the written instructions.

Coordinate both paragraphs below with Drawings.

H. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.

I. Adjust locations of floor service outlets to suit arrangement of partitions and furnishings.

3.2 GFCI RECEPTACLES

- A. Install non-feed-through-type GFCI receptacles where protection of downstream receptacles is not required.

3.3 IDENTIFICATION

- A. Comply with Section 260553 "Identification for Electrical Systems."
- B. Identify each receptacle with panelboard identification and circuit number. Use hot, stamped, or engraved machine printing with black filled lettering on face of plate, and durable wire markers or tags inside outlet boxes.

3.4 FIELD QUALITY CONTROL

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Test Instruments: Use instruments that comply with UL 1436.
 - 2. Test Instrument for Convenience Receptacles: Digital wiring analyzer with digital readout or illuminated digital-display indicators of measurement.

- B. Tests for Convenience Receptacles:
 - 1. Line Voltage: Acceptable range is 105 to 132 V.
 - 2. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is unacceptable.
 - 3. Ground Impedance: Values of up to 2 ohms are acceptable.
 - 4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
 - 5. Using the test plug, verify that the device and its outlet box are securely mounted.
 - 6. Tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- C. Wiring device will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262726

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262813 - FUSES

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Cartridge fuses rated 600-V ac and less for use in **[control circuits] [enclosed switches] [panelboards] [switchboards] [enclosed controllers] [and] [motor-control centers]**.
 - 2. Plug fuses rated 125-V ac and less for use in plug-fuse-type **[enclosed switches] [fuseholders] [and] [panelboards]**.

Retain first subparagraph below if retaining rejection-base-type plug fuses and if Project contains fuseholders with Edison-base, plug-fuse sockets.

- 3. Plug-fuse adapters for use in Edison-base, plug-fuse sockets.
- 4. Spare-fuse cabinets.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:

Retain "Ambient Temperature Adjustment Information" Subparagraph if variations in fuse performance due to ambient temperature extremes can affect system performance.

1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.
 - a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
 - b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.
2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.

Retain subparagraphs below if final system short-circuit and coordination studies will be performed by the designer or will be assigned to an independent consultant. These curves are beneficial to Owner for future additions or reevaluations of settings of overcurrent protective devices.

3. Current-limitation curves for fuses with current-limiting characteristics.

Although some manufacturers no longer offer curves on translucent graph paper, curves can normally be downloaded from manufacturers' Web sites or be obtained, in electronic form, from various coordination software vendors as part of a subscription service. Retain option in first subparagraph below only if retained manufacturers offer curves on graph paper.

4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse. Submit **[in electronic format suitable for use in coordination software] [and] [in PDF format]**.
5. Coordination charts and tables and related data.

Retain subparagraph below if Project includes elevators and fused elevator shunt-trip switches.

6. Fuse sizes for elevator feeders and elevator disconnect switches.
7. Include data substantiating that materials comply with requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

1. Ambient temperature adjustment information.

2. Current-limitation curves for fuses with current-limiting characteristics.
3. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse used on the Project. Submit **[in electronic format suitable for use in coordination software] [and] [in PDF format]**.
4. Coordination charts and tables and related data.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.5 MAINTENANCE MATERIAL SUBMITTALS

Coordinate this article with other electrical Sections, and Sections in other Divisions specifying fuses, for quantities of spare fuses to include. Do not include spare fuses in this Section if spare fuses are already specified in other electrical Sections or in Sections in other Divisions.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Fuses: Equal to **[ten (10)] <Insert number>** percent of quantity installed for each size and type, but no fewer than **[three (3)] <Insert number>** of each size and type.

1.6 QUALITY ASSURANCE

- A. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NEMA FU 1 for cartridge fuses.
- D. Comply with NFPA 70.
- E. Comply with UL 248-11 for plug fuses.

1.7 PROJECT CONDITIONS

For fuses installed outdoors or in unusual environmental conditions, revise this article to indicate minimum and maximum ambient temperatures and expected humidity range. See "Ambient Air Temperature Compensation" Paragraph in the Evaluations.

- A. Where ambient temperature to which fuses are directly exposed is less than **[40 deg F (5 deg C)] <Insert temperature>** or more than **[100 deg F (38 deg C)] <Insert temperature>**, apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.8 COORDINATION

- A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Cooper Bussmann.
 2. Edison; a brand of Cooper Bussmann.
 3. Ferraz Shawmut, Inc.
 4. Littelfuse, Inc.
 5. General Electric.
 6. Gould.
 7. Reliance.
 8. **<Insert manufacturer's name>.**
 9. or approved equal.

2.2 CARTRIDGE FUSES

Fuse "Class" defines fuse performance category, including interrupting rating. See Evaluations for more information on fuse characteristics. Include current rating and class for cartridge fuses either on Drawings or in "Fuse Applications" Article.

- A. Characteristics: NEMA FU 1, current-limiting, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.

2.3 PLUG FUSES

Fuse "Type" defines fuse performance category and base types. See Editing Instruction No. 3 and "Plug Fuses" Article in the Evaluations. Include current rating and type designations for plug fuses either on Drawings or in "Fuse Applications" Article.

- A. Characteristics: UL 248-11, nonrenewable plug fuses; 125-V ac.

2.4 PLUG-FUSE ADAPTERS

Retain this article if rejection-base fuse adapters are required to retrofit Edison-base fuseholders or sockets with Type S, rejection-base plug fuses. See "Plug-Fuse Adapters" Article in the Evaluations. Adapters are designed to prevent installing wrong size fuses.

- A. Characteristics: Adapters for using Type S, rejection-base plug fuses in Edison-base fuseholders or sockets; ampere ratings matching fuse ratings; irremovable once installed.

2.5 SPARE-FUSE CABINET

- A. Characteristics: Wall-mounted steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.
 1. Size: Adequate for storage of spare fuses specified with [15] <Insert number> percent spare capacity minimum.
 2. Finish: Gray, baked enamel.
 3. Identification: "SPARE FUSES" in 1-1/2-inch- (38-mm-) high letters on exterior of door.
 4. Fuse Pullers: For each size of fuse, where applicable and available, from fuse manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.
- B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.
- C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FUSE APPLICATIONS

Retain this article if fuse class and type designations are not indicated on Drawings. Indicate fuse ampere ratings on Drawings. See Evaluations for discussions of fuse classes and types. Retain fuse classes and types by coordinating required average melt characteristics and peak let-through currents with Section 260573 "Overcurrent Protective Device Coordination Study." See "Cartridge versus Plug Fuses" Article in the Evaluations for additional guidance in making selections.

A. Cartridge Fuses:

Class T fuses in "Service Entrance" Subparagraph are normally used in main switches ahead of meter banks because of their compact size and excellent current-limiting characteristics. Their current-limiting feature often allows using circuit breakers with 10-kA interrupting rating at tenant meters. See "Cartridge Fuses" Article in the Evaluations for additional guidance in making selections.

1. Service Entrance: Class L, fast acting Class L, time delay Class RK1, fast acting Class RK1, time delay Class J, fast acting Class J, time delay Class T, fast acting.
2. Feeders: Class L, fast acting Class L, time delay Class RK1, fast acting Class RK1, time delay Class RK5, fast acting Class RK5, time delay Class J, fast acting.
3. Motor Branch Circuits: Class RK1 Class RK5, time delay.
4. Other Branch Circuits: Class RK1, time delay Class RK5, time delay Class J, fast acting Class J, time delay.
5. Control Circuits: Class CC, fast acting time delay.

B. Plug Fuses:

NFPA 70 limits types of plug fuses that can be used in new construction and for replacing plug fuses in existing installations. Limited ampere, voltage, and interrupting ratings and limited availability of fuseholders also reduce the feasibility of plug fuses in most new installations. Type S, rejection base and Edison base are two types still available in the U.S. See "Plug Fuses" Article in the Evaluations for additional guidance in making selections.

1. Motor Branch Circuits: Edison-base type, dual Edison-base type, single Type S, dual Type S, single-element time delay.
2. Other Branch Circuits: Edison-base type, single-element fast acting Edison-base type, dual-element time delay Edison-base type, single-element time delay Type S, dual-element time delay Type S, single-element time delay.

3.3 INSTALLATION

- A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.

Retain first paragraph below if Type S, rejection-base plug fuses are required for installation in existing facilities having fuseholders with Edison-base fuse sockets, or when fuseholders with Edison-base fuse sockets are specified for new construction.

- B. Install plug-fuse adapters in Edison-base fuseholders and sockets. Ensure that adapters are irremovable once installed.
- C. Install spare-fuse cabinet(s).

3.4 IDENTIFICATION

- A. Install labels complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems" and indicating fuse replacement information inside of door of each fused switch and adjacent to each fuse block, socket, and holder.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262813

SECTION 262816 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Fusible switches.
 - 2. Nonfusible switches.
 - 3. Receptacle switches.
 - 4. Shunt trip switches.
 - 5. Molded-case circuit breakers (MCCBs).
 - 6. Molded-case switches.
 - 7. Enclosures.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. NC: Normally closed.
- B. NO: Normally open.
- C. SPDT: Single pole, double throw.

1.4 PERFORMANCE REQUIREMENTS

Retain this article with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction.

- A. Seismic Performance: Enclosed switches and circuit breakers shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
 1. Enclosure types and details for types other than NEMA 250, Type 1.
 2. Current and voltage ratings.
 3. Short-circuit current ratings (interrupting and withstand, as appropriate).

Retain first subparagraph below if using series rating of overcurrent protective devices.

4. Include evidence of NRTL listing for series rating of installed devices.
5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.

Retain subparagraph below if final system short-circuit and coordination studies will be performed by the designer or will be assigned to an independent consultant. These curves are also beneficial to Owner for future additions or reevaluations of settings of overcurrent protective devices. Although some

manufacturers no longer offer curves on translucent graph paper, curves can normally be downloaded from manufacturers' Web sites or be obtained, in electronic form, from various coordination software vendors as part of a subscription service. Retain option in subparagraph below only if manufacturers selected offer curves on graph paper.

6. Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. [**Submit on translucent log-log graph paper.**]
 7. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For enclosed switches and circuit breakers. Include plans, elevations, sections, details, and attachments to other work.
1. Wiring Diagrams: For power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified testing agency.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.
1. Test procedures used.
 2. Test results that comply with requirements.
 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

Retain paragraph below if retaining "Manufacturer's Field Service" Paragraph in "Field Quality Control" Article. Consider manufacturer's field services especially when retaining zone-selective interlocking because setting it to operate properly requires factory-trained expertise.

- C. Manufacturer's field service report.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.

Retain option in subparagraph below only if manufacturers selected offer curves on graph paper.

2. Time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. [**Submit on translucent log-log graph paper.**]

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Coordinate first subparagraph below with Section 262813 "Fuses" for quantities of spare fuses and spare-fuse cabinet to be provided.

1. Fuses: Equal to [ten (10)] <Insert number> percent of quantity installed for each size and type, but no fewer than [three (3)] <Insert number> of each size and type.
2. Fuse Pullers: [Two (2)] <Insert number> for each size and type.
3. <Insert extra materials>.

1.9 QUALITY ASSURANCE

Retain first paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- B. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories, within same product category, from single source from single manufacturer.

Retain first paragraph below to allow drawing details based on one manufacturer's product to establish requirements and still allow competition. Coordinate with Section 016000, "Product Requirements."

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- E. Comply with NFPA 70.

1.10 PROJECT CONDITIONS

Specify unusual environmental or service conditions in first paragraph below. For equipment installed outdoors, indicate maximum and minimum ambient temperature and expected humidity range. For additional ambient compensation requirements for fuses, see Editing Instruction No. 5 in the Evaluations.

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
1. Ambient Temperature: Not less than **minus 30 deg F** (minus 35 deg C) and not exceeding **120 deg F** (49 deg C).
 2. Altitude: **5500 feet** (1677 m).

Retain paragraph below if interruption of existing electric service is required.

- B. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 2. Indicate method of providing temporary electric service.
 3. Do not proceed with interruption of electric service without DEN Project Manager's written permission.
 4. Comply with NFPA 70E.

1.11 COORDINATION

Revise this article to delete or insert types of construction and encumbrances that affect switch and circuit-breaker installation.

- A. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FUSIBLE SWITCHES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. **<Insert manufacturer's name>.**
6. or approved equal.

Show pole quantities and voltage and ampere ratings of switches on Drawings. In first two paragraphs below, Type GD is for switches for light-commercial applications, 240-V ac, 30 to 600 A; Type HD is for all other single-throw switch uses. See Editing Instruction No. 2 in the Evaluations.

Retain one of last two options in first paragraph below depending on whether fuse applications and class designations are indicated on Drawings or specified in Section 262813 "Fuses." Show fuse ampere ratings on Drawings. General-duty switches are available with plug fuse interiors.

B. Type GD, General Duty, Single Throw, 240-V ac, 800 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with **[cartridge] [plug]** fuse interiors to accommodate **[specified] [indicated]** fuses, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

Retain one of last two options in first paragraph below depending on whether fuse applications and class designations are indicated on Drawings or specified in Section 262813 "Fuses." Show fuse ampere ratings on Drawings.

C. Type HD, Heavy Duty, Single Throw, **[240] [600]**-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate **[specified] [indicated]** fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

Some listed manufacturers offer the six-pole switch in amperage ratings higher than those in first paragraph below.

Retain one of last two options in first paragraph below depending on whether fuse applications and class designations are indicated on Drawings or specified in Section 262813 "Fuses." Show fuse ampere ratings on Drawings.

D. Type HD, Heavy Duty, Six Pole, Single Throw, **[240] [600]**-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate **[specified] [indicated]** fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

Retain one of last two options in first paragraph below depending on whether fuse applications and class designations are indicated on Drawings or specified in Section 262813 "Fuses." Show fuse ampere ratings on Drawings.

- E. Type HD, Heavy Duty, Double Throw, [240] [600]-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate [specified] [indicated] fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- F. Accessories:

Retain subparagraphs below with applicable switch paragraphs above. Verify that accessories specified are available and applicable to switch types and ratings in this article.

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
4. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
5. Auxiliary Contact Kit: [One (1)] [Two (2)] NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
6. Hookstick Handle: Allows use of a hookstick to operate the handle.

See Editing Instruction No. 7 in the Evaluations for guidance on using mechanical versus compression lugs. Some size lugs (and lugs in other than NEMA 250, Type 1 and NEMA 250, Type 3R enclosures) are frequently available only for copper conductors; coordinate with manufacturers' literature.

7. Lugs: [Mechanical] [Compression] type, suitable for number, size, and conductor material.
8. Service-Rated Switches: Labeled for use as service equipment.

Retain subparagraph below if retaining "Auxiliary Contact Kit" Subparagraph above and if remote-control power for remote indication is not specified in other Sections. See "Control Power Options" Article in the Evaluations for various sources available for control power. Although other voltages are available, the Section Text includes only those that are most frequently encountered and listed in manufacturers' literature. Integrally mounted control power is not available in safety switches.

9. Accessory Control Power Voltage: Remote mounted and powered; [24-V ac] [120-V ac] [208-V ac] [240-V ac] [6-V dc] [12-V dc] [24-V dc].

2.2 NONFUSIBLE SWITCHES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.

3. [Siemens Energy & Automation, Inc.](#)
4. [Square D; a brand of Schneider Electric.](#)
5. **<Insert manufacturer's name>.**
6. or approved equal.

Show pole quantities and voltage and ampere ratings of switches on Drawings. In first two paragraphs below, Type GD is for switches for light-commercial applications, 240-V ac, 30 to 600 A; Type HD is for all other single-throw switch uses. See Editing Instruction No. 2 in the Evaluations.

- B. Type GD, General Duty, Single Throw, 600 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.
- C. Type HD, Heavy Duty, Single Throw, [240] [600]-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

Some listed manufacturers offer the six-pole switch in amperage ratings higher than those in first paragraph below.

- D. Type HD, Heavy Duty, Six Pole, Single Throw, [240] [600]-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- E. Type HD, Heavy Duty, Double Throw, [240] [600]-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- F. Accessories:

Retain subparagraphs below with applicable switch paragraphs above. Verify that accessories specified are available and applicable to switch types and ratings in this article.

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
4. Auxiliary Contact Kit: [One (1)] [Two (2)] NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
5. Hookstick Handle: Allows use of a hookstick to operate the handle.

See Editing Instruction No. 7 in the Evaluations for guidance on using mechanical versus compression lugs. Some size lugs (and lugs in other than NEMA 250, Type 1 and NEMA 250, Type 3R enclosures) are frequently available only for copper conductors; coordinate with manufacturers' literature.

6. Lugs: [Mechanical] [Compression] type, suitable for number, size, and conductor material.

Retain subparagraph below if retaining "Auxiliary Contact Kit" Subparagraph above and if remote-control power for remote indication is not specified in other Sections. See "Control Power Options" Article in the Evaluations for various sources available for control power. Although other voltages are available, the

Section Text includes only those that are most frequently encountered and listed in manufacturers' literature. Integrally mounted control power is not available in safety switches.

7. Accessory Control Power Voltage: Remote mounted and powered; [24-V ac] [120-V ac] [208-V ac] [240-V ac] [6-V dc] [12-V dc] [24-V dc].

2.3 RECEPTACLE SWITCHES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Siemens Energy & Automation, Inc.
 4. Square D; a brand of Schneider Electric.
 5. **<Insert manufacturer's name>.**
 6. or approved equal.

Listed manufacturers offer similar but different options for voltage and ampere ratings and the make and model of receptacles available for factory installation on their switches. See Editing Instruction No. 3 in the Evaluations. Not all listed voltage and ampere ratings and enclosure types listed in "Enclosures" Article are available from all listed manufacturers.

Show pole quantities and voltage and ampere ratings of switches on Drawings. Retain one of last two options in first paragraph below depending on whether fuse applications and class designations are indicated on Drawings or specified in Section 262813 "Fuses." Show fuse ampere ratings on Drawings.

- B. Type HD, Heavy-Duty, Single-Throw Fusible Switch: [240] [600]-V ac, [30] [60] [100] A; UL 98 and NEMA KS 1; horsepower rated, with clips or bolt pads to accommodate [specified] [indicated] fuses; lockable handle with capability to accept three padlocks; interlocked with cover in closed position.
- C. Type HD, Heavy-Duty, Single-Throw Nonfusible Switch: [240] [600]-V ac, [30] [60] [100] A; UL 98 and NEMA KS 1; horsepower rated, lockable handle with capability to accept three padlocks; interlocked with cover in closed position.
- D. Interlocking Linkage: Provided between the receptacle and switch mechanism to prevent inserting or removing plug while switch is in the on position, inserting any plug other than specified, and turning switch on if an incorrect plug is inserted or correct plug has not been fully inserted into the receptacle.
- E. Receptacle: Polarized, three-phase, four-wire receptacle (fourth wire connected to enclosure ground lug).

If more than one type or rating of receptacle-switch combination is required, consider showing location of each on Drawings and deleting subparagraph below; otherwise, insert required information.

1. Receptacle Manufacturer and Catalog Number: **<Insert manufacturer and catalog number>.**

2.4 SHUNT TRIP SWITCHES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Cooper Bussmann, Inc.](#)
2. [Ferraz Shawmut, Inc.](#)
3. [Littelfuse, Inc.](#)
4. **<Insert manufacturer's name>**.
5. or approved equal.

Show voltage and ampere ratings of shunt trip switches and fuses on Drawings. See Editing Instruction No. 4 and "Shunt Trip Switches" Article in the Evaluations for guidance on using shunt trip switches.

Retain option in first paragraph below if shunt trip switches are used as elevator shunt trip disconnects per ASME A17.1 and NFPA 70.

- B. General Requirements: Comply with[**ASME A17.1,**] UL 50, and UL 98, with 200-kA interrupting and short-circuit current rating when fitted with Class J fuses.
- C. Switches: Three-pole, horsepower rated, with integral shunt trip mechanism and Class J fuse block; lockable handle with capability to accept three padlocks; interlocked with cover in closed position.
- D. Control Circuit: 120-V ac; obtained from [**integral control power transformer, with primary and secondary fuses,**] **<Insert source of control power>** with a control power [**transformer**] [**source**] of enough capacity to operate shunt trip, connected pilot, and indicating and control devices.
- E. Accessories:

Not all accessories listed in subparagraphs below are available from every listed manufacturer. Verify availability and unique characteristics with manufacturers selected.

1. Oiltight key switch for key-to-test function.
2. Oiltight [**red**] [**green**] [**white**] [**yellow**] ON pilot light.
3. Isolated neutral lug; [**100**] [**200**] percent rating.

Retain first subparagraph below if using switch for hydraulic elevators with automatic recall. Show required interface wiring on Drawings.

4. Mechanically interlocked auxiliary contacts that change state when switch is opened and closed.
5. Form C alarm contacts that change state when switch is tripped.

Retain two subparagraphs below when interfacing elevators with the facility fire-alarm system is required. In first subparagraph, if retaining 24-V dc coil option, a separate 24-V dc source and an initiating contact must be provided by the facility fire-alarm system.

6. Three-pole, double-throw, fire-safety and alarm relay; [**120-V ac**] [**24-V dc**] coil voltage.

7. Three-pole, double-throw, fire-alarm voltage monitoring relay complying with NFPA 72.

2.5 MOLDED-CASE CIRCUIT BREAKERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Siemens Energy & Automation, Inc.
 4. Square D; a brand of Schneider Electric.
 5. **<Insert manufacturer's name>.**
 6. or approved equal.

Show pole quantities and voltage and ampere ratings of MCCBs and switches on Drawings. See Editing Instruction No. 6 in the Evaluations.

- B. General Requirements: Comply with UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents.
- C. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
- D. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
- E. Electronic Trip Circuit Breakers: Field-replaceable rating plug, rms sensing, with the following field-adjustable settings:

Retain one or more of four subparagraphs below and coordinate required adjustable settings with Section 260573 "Overcurrent Protective Device Coordination Study."

1. Instantaneous trip.
 2. Long- and short-time pickup levels.
 3. Long- and short-time time adjustments.
 4. Ground-fault pickup level, time delay, and I^2t response.
- F. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller, and let-through ratings less than NEMA FU 1, RK-5.
- G. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.

Retain first paragraph below for GFCI circuit breakers for personnel ground-fault protection as required by NFPA 70; retain second paragraph for equipment ground-fault protection (e.g., for self-limiting heat trace cables) as required by NFPA 70. GFCI and GFEP circuit breakers are only available fully rated up to interrupting ratings of 22 kA.

- H. Ground-Fault, Circuit-Interrupter (GFCI) Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
- I. Ground-Fault, Equipment-Protection (GFEP) Circuit Breakers: With Class B ground-fault protection (30-mA trip).
- J. Features and Accessories:

Not all features, accessories, and options in subparagraphs below are available for every rating and from every listed manufacturer. Verify availability and unique characteristics with manufacturers selected.

1. Standard frame sizes, trip ratings, and number of poles.

See Editing Instruction No. 7 in the Evaluations for guidance on using mechanical versus compression lugs.

2. Lugs: **[Mechanical]** **[Compression]** type, suitable for number, size, trip ratings, and conductor material.
3. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge lighting circuits.

Retain first option in first subparagraph below for solid-state trip units; retain second option for thermal-magnetic trip units.

4. Ground-Fault Protection: Comply with UL 1053; **[integrally mounted, self-powered]** **[remote-mounted and powered]** type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.
5. Communication Capability: **[Circuit-breaker-mounted]** **[Universal-mounted]** **[Integral]** **[Din-rail-mounted]** communication module with functions and features compatible with power monitoring and control system, specified in Section 260913 "Electrical Power Monitoring and Control."
6. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.

An optional time-delay unit, which allows an adjustable time delay in release of the trip coil for overriding momentary fluctuations, is available for the undervoltage trip unit in first subparagraph below.

7. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
8. Auxiliary Contacts: **[One SPDT switch]** **[Two SPDT switches]** with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
9. Alarm Switch: One **[NO]** **[NC]** contact that operates only when circuit breaker has tripped.
10. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

Retain first option in first subparagraph below for solid-state trip units; retain second option for thermal-magnetic trip units.

11. Zone-Selective Interlocking: Integral with **[electronic]** **[ground-fault]** trip unit; for interlocking ground-fault protection function.
12. Electrical Operator: Provide remote control for on, off, and reset operations.

Retain subparagraph below if retaining options requiring integral or remote-control power in subparagraphs above and if control power for remote indication or operation is not specified in other Sections. See "Control Power Options" Article in the Evaluations for various sources available for control power. Although other voltages are available, the Section Text includes only those that are most frequently encountered and listed in manufacturers' literature. First option below may not be available in all voltages; coordinate with manufacturers' literature.

13. Accessory Control Power Voltage: **[Integrally mounted, self-powered]** **[Remote mounted and powered]**; **[24-V ac]** **[120-V ac]** **[208-V ac]** **[240-V ac]** **[6-V dc]** **[12-V dc]** **[24-V dc]**.

2.6 MOLDED-CASE SWITCHES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Siemens Energy & Automation, Inc.
 4. Square D; a brand of Schneider Electric.
 5. **<Insert manufacturer's name>.**
 6. or approved equal.
- B. General Requirements: MCCB with fixed, high-set instantaneous trip only, and short-circuit withstand rating equal to equivalent breaker frame size interrupting rating.
- C. Features and Accessories:

Not all features, accessories, and options listed in subparagraphs below are available for every rating and from every listed manufacturer. Verify availability and unique characteristics with manufacturers selected.

1. Standard frame sizes and number of poles.

See Editing Instruction No. 7 in the Evaluations for guidance on using mechanical versus compression lugs.

2. Lugs: **[Mechanical]** **[Compression]** type, suitable for number, size, trip ratings, and conductor material.
3. Ground-Fault Protection: Comply with UL 1053; remote-mounted and powered type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.
4. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.

An optional time-delay unit, which allows an adjustable time delay in release of the trip coil for overriding momentary fluctuations, is available for the undervoltage trip unit in first subparagraph below.

5. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
6. Auxiliary Contacts: [**One SPDT switch**] [**Two SPDT switches**] with "a" and "b" contacts; "a" contacts mimic switch contacts, "b" contacts operate in reverse of switch contacts.
7. Alarm Switch: One [**NO**] [**NC**] contact that operates only when switch has tripped.
8. Key Interlock Kit: Externally mounted to prohibit switch operation; key shall be removable only when switch is in off position.
9. Zone-Selective Interlocking: Integral with ground-fault shunt trip unit; for interlocking ground-fault protection function.
10. Electrical Operator: Provide remote control for on, off, and reset operations.

Retain subparagraph below if retaining options requiring integral or remote-control power in subparagraphs above and if control power for remote indication or operation is not specified in other Sections. See "Control Power Options" Article in the Evaluations for various sources available for control power. Although other voltages are available, the Section Text includes only those that are most frequently encountered and listed in manufacturers' literature. First option below may not be available in all voltages; coordinate with manufacturers' literature.

11. Accessory Control Power Voltage: [**Integrally mounted, self-powered**] [**Remote mounted and powered**]; [**24-V ac**] [**120-V ac**] [**208-V ac**] [**240-V ac**] [**6-V dc**] [**12-V dc**] [**24-V dc**].

2.7 ENCLOSURES

- A. Enclosed Switches and Circuit Breakers: NEMA AB 1, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.

See "Enclosures" Article in the Evaluations for discussion of enclosure types. Coordinate subparagraphs below with Drawings by identifying the designated areas on plans or by including the required enclosure types. Availability of some enclosure types is limited by type of switch or circuit breaker; consult manufacturers for availability of, and limitations on, other than NEMA 250, Type 1 enclosures. General-duty switches are generally only available in NEMA 250, Type 1 or NEMA 250, Type 3R enclosures.

1. Indoor, Dry and Clean Locations: NEMA 250, [**Type 1**] <Insert type>.
2. Outdoor Locations: NEMA 250, [**Type 3R**] <Insert type>.
3. [**Kitchen**] [**Wash-Down**] Areas: NEMA 250, [**Type 4X**] <Insert type>, [**stainless steel**] <Insert material>.
4. Other Wet or Damp, Indoor Locations: NEMA 250, [**Type 4**] <Insert type>.
5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12.

Retain one of two options in subparagraph below to comply with the division and group listing of the environment. Frequently, one enclosure type will accommodate more than one hazardous environment rating. Consult manufacturers for availability of, and limitations on, hazardous environment enclosures. These enclosures do not apply to shunt trip or receptacle switches as specified in the Section Text.

6. Hazardous Areas Indicated on Drawings: NEMA 250, [**Type 7**] [**Type 9**] <Insert type>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.

Retain first paragraph below if seismic controls are required for Project. Coordinate with Drawings.

- B. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- D. Install fuses in fusible devices.
- E. Comply with NECA 1.

3.3 IDENTIFICATION

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems."
 - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 - 2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.4 FIELD QUALITY CONTROL

Retain one of first three paragraphs below to identify who shall perform tests and inspections. If retaining paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Retain first paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first two paragraphs below to describe tests and inspections to be performed.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each enclosed switch and circuit breaker 11 months after date of Substantial Completion.
 - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- D. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.

Retain paragraph below if tests and inspections are performed by Contractor or manufacturer's field-service representative engaged by Contractor.

- E. Prepare test and inspection reports, including a certified report that identifies enclosed switches and circuit breakers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

Retain option in paragraph below if the indicated Section is included in the Contract Documents.

- B. Set field-adjustable circuit-breaker trip ranges[**as specified in Section 260573 "Overcurrent Protective Device Coordination Study."**]

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262816

Copyright 2010 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262913 - ENCLOSED CONTROLLERS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes the following enclosed controllers rated 600 V and less:
 - 1. Full-voltage manual.
 - 2. Full-voltage magnetic.
 - 3. Reduced-voltage magnetic.
 - 4. Reduced-voltage solid state.
 - 5. Multispeed.
- B. Related Section:

Retain subparagraph below for requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 262923 "Variable-Frequency Motor Controllers" for general-purpose, ac, adjustable-frequency, pulse-width-modulated controllers for use on variable torque loads in ranges up to 200 hp.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in

this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. CPT: Control power transformer.
- B. MCCB: Molded-case circuit breaker.
- C. MCP: Motor circuit protector.
- D. N.C.: Normally closed.
- E. N.O.: Normally open.
- F. OCPD: Overcurrent protective device.
- G. SCR: Silicon-controlled rectifier.

1.4 PERFORMANCE REQUIREMENTS

Retain this article with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design; however, several listed manufacturers do not currently offer seismic certificates and they do not all test wall-mounted controllers for their ability to "withstand" a seismic event. Verify availability of seismic testing and certification with manufacturers. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction.

- A. Seismic Performance: Enclosed controllers shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of enclosed controller. Include manufacturer's technical

data on features, performance, electrical characteristics, ratings, and enclosure types and finishes.

1. Include data substantiating that materials comply with requirements.

B. Shop Drawings: For each enclosed controller. Include dimensioned plans, elevations, sections, details, and required clearances and service spaces around controller enclosures.

1. Show tabulations of the following:

- a. Each installed unit's type and details.
- b. Factory-installed devices.
- c. Nameplate legends.
- d. Short-circuit current rating of integrated unit.

Retain first subparagraph below if series rating of OCPDs is used or if combination controllers are specified.

- e. Listed and labeled for integrated short-circuit current (withstand) rating of OCPDs in combination controllers by an NRTL acceptable to authorities having jurisdiction.

Retain first subparagraph below if combination controllers are specified.

- f. Features, characteristics, ratings, and factory settings of individual OCPDs in combination controllers.

2. Wiring Diagrams: For power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

A. Qualification Data: For qualified testing agency.

Retain first paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems." See ASCE/SEI 7 for certification requirements for equipment and components.

B. Seismic Qualification Certificates: For enclosed controllers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

C. Field quality-control reports.

Large projects with multiple sizes and types of controllers might include different types of overload relays. Retain one or both paragraphs below to suit type(s) of motor overload protection. See Evaluations for discussion of types of overload protection.

- D. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
- E. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor running overload protection suit actual motors to be protected.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For enclosed controllers to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

- 1. Routine maintenance requirements for enclosed controllers and installed components.

Retain first subparagraph below if circuit breakers are specified in combination controllers; retain second subparagraph if field-adjustable overload relays are specified; retain third subparagraph if reduced-voltage solid-state controllers are specified.

- 2. Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.
- 3. Manufacturer's written instructions for setting field-adjustable overload relays.
- 4. Manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage solid-state controllers.

- B. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MATERIALS MAINTENANCE SUBMITTALS

Revise this article to include extra materials that Owner may require, which may fail more frequently due to continual use.

Coordinate quantity of fuses with Section 262813 "Fuses" for required space in spare-fuse cabinet.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fuses for Fused Switches: Equal to **[ten (10)] <Insert number>** percent of quantity installed for each size and type, but no fewer than **[three (3)] <Insert number>** of each size and type.
 - 2. Control Power Fuses: Equal to **[ten (10)] <Insert number>** percent of quantity installed for each size and type, but no fewer than **[two (2)] <Insert number>** of each size and type.
 - 3. Indicating Lights: **[Two (2)] <Insert number>** of each type and color installed.
 - 4. Auxiliary Contacts: Furnish **[one (1)] <Insert number>** spare(s) for each size and type of magnetic controller installed.
 - 5. Power Contacts: Furnish **[three (3)] <Insert number>** spares for each size and type of magnetic contactor installed.
 - 6. **<Insert extra materials>**.

1.9 QUALITY ASSURANCE

Retain first paragraph below if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NFPA 70.

Retain paragraph below for projects in seismic areas. If retaining, also retain "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article.

- D. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

1.10 DELIVERY, STORAGE, AND HANDLING

Retain this article for large combination and solid-state controllers.

Retain first paragraph below for enclosed sites with conditioned storage spaces. Retain second paragraph if site conditions require supplemental heating to prevent condensation. If retaining second

paragraph, retain first option for controllers that do not have factory-installed space heaters as specified in Part 2; otherwise, retain second option.

- A. Store enclosed controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- B. If stored in areas subject to weather, cover enclosed controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; **[install temporary electric heating, with at least 250 W per controller] [connect factory-installed space heaters to temporary electrical service].**

1.11 PROJECT CONDITIONS

Revise first paragraph below to specify unusual environmental or service conditions. For equipment installed outdoors, indicate maximum and minimum ambient temperature and expected humidity range. For additional ambient compensation requirements for fuses, MCCBs, and overload relays, see Editing Instructions No. 3, No. 4, and No. 6 in the Evaluations.

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 - 1. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 - 2. Altitude: 5500 feet (2010 m) above sea level.

Retain paragraph below if interruption of existing electrical distribution systems is required.

- B. Interruption of Existing Electrical Systems: Do not interrupt electrical systems in facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 - 2. Indicate method of providing temporary utilities.
 - 3. Do not proceed with interruption of electrical systems without DEN Project Manager's written permission.
 - 4. Comply with NFPA 70E.

1.12 COORDINATION

- A. Coordinate layout and installation of enclosed controllers with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

Retain one or both paragraphs below if required for base-supported enclosed controllers.

- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FULL-VOLTAGE CONTROLLERS

Show controller pole quantities, voltage, NEMA size and type, accessories, short-circuit current rating (or available short-circuit currents), and enclosure type for each controller on Drawings. See "Full-Voltage Controllers" Article in the Evaluations for selection considerations. Enclosed controllers without integral OCPDs (e.g., fuses, MCPs, or thermal-magnetic circuit breakers) may have very low short-circuit current ratings when used in series with upstream devices. See Editing Instruction No. 2 in the Evaluations.

Not all features, accessories, and options in this article are available for every rating, with every enclosure type, and from every listed manufacturer. Verify availability and unique characteristics with manufacturers. Show on Drawings those features and accessories that apply to each controller.

- A. General Requirements for Full-Voltage Controllers: Comply with NEMA ICS 2, general purpose, Class A.

Motor-starting switches do not have integral overload relays. See "Motor-Starting Switches" Article in the Evaluations for additional guidance on their use.

- B. Motor-Starting Switches: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off or on.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.

- d. Siemens Energy & Automation, Inc.
- e. Square D; a brand of Schneider Electric.
- f. <Insert manufacturer>
- g. or approved equal.

2. Configuration: [**Nonreversing**] [**Reversing**] [**Two speed**].

First option in first subparagraph below is available only with NEMA 250, Type 1 enclosures but not from all listed manufacturers. Consult manufacturers for availability of flush enclosures and finishes for flush cover plates because each manufacturer offers different types.

3. [**Flush**] [**Surface**] mounting.

Not all manufacturers offer a green pilot light; pilot lights are not available in hazardous and some cast-type enclosures.

4. [**Red**] [**Green**] pilot light.
5. Additional Nameplates: FORWARD and REVERSE for reversing switches, HIGH and LOW for two-speed switches.

One- and two-pole, fractional horsepower manual controllers are suitable for use with single-phase ac motors up to 1 hp. See "Fractional Horsepower Manual Controllers" Article in the Evaluations for additional guidance on their use.

- C. Fractional Horsepower Manual Controllers: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. <Insert manufacturer>
 - g. or approved equal.
2. Configuration: [**Nonreversing**] [**Two speed**].

See Editing Instruction No. 5 and "Overload Protection" Article in the Evaluations for additional guidance on retaining options in first subparagraph below. Although Class 10 seems to be "standard" for this equipment, some manufacturers may offer others. Retain first option below unless another class is required and available.

3. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, [**Class 10**] <Insert class> tripping characteristics; heaters matched to nameplate full-load current of actual protected motor; external reset push button[; **bimetallic type**] [; **melting alloy type**].

First option in first subparagraph below is available only with NEMA 250, Type 1 enclosures but not from all listed manufacturers. Consult manufacturers for availability of flush enclosures and finishes for flush cover plates because each manufacturer offers different types.

4. **[Flush] [Surface]** mounting.

Not all manufacturers offer a green pilot light; pilot lights are not available in hazardous and some cast-type enclosures.

5. **[Red] [Green]** pilot light.
6. Additional Nameplates: **[HIGH and LOW for two-speed controllers] <Insert special markings>**.

One-, two-, and three-pole integral horsepower manual controllers are suitable for use with single- and three-phase ac motors up to 10 hp at 480-V ac. See "Integral Horsepower Manual Controllers" Article in the Evaluations for additional guidance on their use.

- D. Integral Horsepower Manual Controllers: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. **<Insert manufacturer>**
 - g. or approved equal.
2. Configuration: **[Nonreversing] [Reversing] [Two speed]**.

See Editing Instruction No. 5 and "Overload Protection" Article in the Evaluations for additional guidance on retaining options in first subparagraph below. Although Class 10 seems to be "standard" for this equipment, some manufacturers may offer others. Retain first option below unless another class is required and available.

3. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, **[Class 10] <Insert class>** tripping characteristics; heaters and sensors in each phase, matched to nameplate full-load current of actual protected motor and having appropriate adjustment for duty cycle; external reset push button[; **bimetallic type] [; melting alloy type]**.

First option in first subparagraph below is available only with NEMA 250, Type 1 enclosures but not from all listed manufacturers. Consult manufacturers for availability of flush enclosures and finishes for flush cover plates because each manufacturer offers different types.

4. **[Flush] [Surface]** mounting.

Not all manufacturers offer a green pilot light; pilot lights are not available in hazardous and some cast-type enclosures.

5. **[Red] [Green]** pilot light.
6. Additional Nameplates: **[FORWARD and REVERSE for reversing controllers] [HIGH and LOW for two-speed controllers] <Insert special markings>**.
7. **[N.O.] [N.C.]** auxiliary contact.

Three-pole integral horsepower magnetic controllers are suitable for use with three-phase ac motors up to 1600 hp, and from NEMA ICS 2, Size 00 to Size 9; however, not all listed manufacturers offer enclosed controllers up to Size 9. Two- and four-pole models are also available in varying minimum and maximum horsepower ratings and NEMA sizes. See "Magnetic Controllers" Article in the Evaluations for additional guidance on their use.

E. Magnetic Controllers: Full voltage, across the line, electrically held.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. **<Insert manufacturer>**
 - g. or approved equal.
2. Configuration: **[Nonreversing] [Reversing]**.
3. Contactor Coils: Pressure-encapsulated type **[with coil transient suppressors]**.
 - a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
4. Power Contacts: Totally enclosed, double-break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
5. Control Circuits: **[24] [120] <Insert value>-V ac**; obtained from **[integral CPT, with primary and secondary fuses] <Insert source of control power>**, with **[CPT] [control power source]** of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

Retain first subparagraph below if retaining CPT in last subparagraph above and spare CPT capacity is required. Spare capacity is normally available in 100-VA increments. Consult manufacturers for maximum spare capacity and CPT sizes available for different NEMA and enclosure sizes because adding spare capacity and an oversized CPT may require using an enlarged enclosure.

- a. CPT Spare Capacity: **[50] [100] [200] <Insert number> VA**.

Retain one or more of first three subparagraphs below. If retaining more than one, show on Drawings where each type is required. See Editing Instruction No. 5 and "Overload Protection" Article in the Evaluations for additional guidance.

6. Melting Alloy Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
7. Bimetallic Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

Retain one or both of first two subparagraphs below only if applicable. See Editing Instruction No. 6 and "Bimetallic Overload Relays" Article in the Evaluations for guidance and warnings.

- d. Ambient compensated.
 - e. Automatic resetting.
8. Solid-State Overload Relay:
 - a. Switch or dial selectable for motor running overload protection.
 - b. Sensors in each phase.
 - c. **[Class 10] [Class 20] [Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

Retain one or both of first two subparagraphs below if applicable. These are optional, added-cost features.

- d. Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
 - e. Analog communication module.

Retain first subparagraph below if alarm contacts on overload relays are required for local or remote alarm indication of a tripped overload relay.

9. **[N.C.] [N.O.]**, isolated overload alarm contact.
10. External overload reset push button.

Combination controllers are magnetic controllers combined with a disconnecting means, OCPD, or both. See Editing Instruction No. 2 and "Combination Controllers" Article in the Evaluations for guidance on using combination controllers and the different types of disconnecting means and OCPDs. Indicate requirements for disconnecting means and OCPDs on Drawings. Revise paragraph below if overload relays differ from those indicated in "Magnetic Controllers" Paragraph above.

- F. Combination Magnetic Controller: Factory-assembled combination of magnetic controller, OCPD, and disconnecting means.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by

one of the following:

- a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
- b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
- c. Rockwell Automation, Inc.; Allen-Bradley brand.
- d. Siemens Energy & Automation, Inc.
- e. Square D; a brand of Schneider Electric.
- f. **<Insert manufacturer>**
- g. or approved equal.

Disconnecting means and OCPDs must be closely coordinated with calculated short-circuit current values at the controller locations because they are directly related to the short-circuit withstand ratings of their combination controllers. Although fusible switches (with appropriate fuses) can provide Type 2 controller protection from very high short-circuit currents, not all circuit breakers or MCPs can. See Editing Instruction No. 7 in the Evaluations for explanation of protection types and when they should be considered.

2. Fusible Disconnecting Means:

- a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate [**Class J**] [**Class R**] [**indicated**] fuses.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain first subparagraph below if external control power is used or for remote indication of disconnecting means position.

3. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

Nonfusible switches have no inherent short-circuit or interrupting current ratings and so must be used in series with upstream fuses or specific types and ratings of circuit breakers. See "Application of Switches and Circuit Breakers" Article in the Evaluations.

4. Nonfusible Disconnecting Means:

- a. NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain first subparagraph below if external control power is used or for remote indication of disconnecting means position.

- c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

MCP disconnecting means in first subparagraph below must be used in combination with integral overload relays.

5. MCP Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor

- locked-rotor amperes.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both of first two subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and N.O. or N.C. contact requirements on Drawings.

- c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
- d. [N.C.] [N.O.] alarm contact that operates only when MCP has tripped.

First subparagraph below is an optional, added-cost feature.

- e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

6. MCCB Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
- b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
- c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and N.O. or N.C. contact requirements on Drawings.

- d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
- e. [N.C.] [N.O.] alarm contact that operates only when MCCB has tripped.

2.2 REDUCED-VOLTAGE MAGNETIC CONTROLLERS

Show controller pole quantities, voltage, NEMA size and type, accessories, short-circuit current rating (or available short-circuit currents), and enclosure type for each controller on Drawings. See "Reduced-Voltage Magnetic Controllers" Article in the Evaluations for selection considerations. Enclosed controllers without integral OCPDs (e.g., fuses, MCPs, or thermal-magnetic circuit breakers) may have very low short-circuit current ratings when used in series with upstream devices. See Editing Instruction No. 2 in the Evaluations. Reduced-voltage magnetic controllers are available in either open- or closed-transition modes; however, the Section Text includes closed-transition mode. Open-transition mode may be added to suit Project.

Not all features, accessories, and options in this article are available for every rating, with every enclosure type, and from every listed manufacturer. Verify availability and unique characteristics with manufacturers. Show on Drawings those features and accessories that apply to each controller.

- A. General Requirements for Reduced-Voltage Magnetic Controllers: Comply with NEMA ICS 2, general purpose, Class A; closed-transition; adjustable time delay on transition.

B. Reduced-Voltage Magnetic Controllers: Reduced voltage, electrically held.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. **<Insert manufacturer>**
 - g. or approved equal.
2. Configuration:
 - a. Wye-Delta Controller: Four contactors, with a three-phase starting resistor/reactor bank.
 - b. Part-Winding Controller: Separate START and RUN contactors, field-selectable for 1/2- or 2/3-winding start mode, with either six- or nine-lead motors; with separate overload relays for starting and running sequences.
 - c. Autotransformer Reduced-Voltage Controller: Medium-duty service, with integral overtemperature protection; taps for starting at 50, 65, and 80 percent of line voltage; two START and one RUN contactors.
3. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors**].
 - a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
4. Power Contacts: Totally enclosed, double-break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
5. Control Circuits: [24] [120] **<Insert value>**-V ac; obtained from [integral CPT, **with primary and secondary fuses**] **<Insert source of control power>**, with [CPT] [control power source] of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

Retain first subparagraph below if retaining CPT in last subparagraph above and spare CPT capacity is required. Spare capacity is usually available in 100-VA increments. Consult manufacturers for maximum spare capacity and CPT sizes available for different NEMA and enclosure sizes because adding spare capacity and an oversized CPT may require using an enlarged enclosure.

- a. CPT Spare Capacity: [50] [100] [200] **<Insert number>** VA.

Retain one or more of first three subparagraphs below. If retaining more than one, show on Drawings where each type is required. See Editing Instructions No. 5 and "Overload Protection" Article in the Evaluations for additional guidance.

6. Melting Alloy Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

7. Bimetallic Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

Retain one or both of first two subparagraphs below only if applicable. See Editing Instruction No. 6 and "Bimetallic Overload Relays" Article in the Evaluations for guidance and warnings.

- d. Ambient compensated.
 - e. Automatic resetting.
8. Solid-State Overload Relay:
 - a. Switch or dial selectable for motor running overload protection.
 - b. Sensors in each phase.
 - c. **[Class 10] [Class 20] [Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

Retain one or both of first two subparagraphs below if applicable. These are optional, added-cost features.

- d. Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
 - e. Analog communication module.

Retain first subparagraph below if alarm contacts on overload relays are required for local or remote alarm indication of a tripped overload relay.

9. **[N.C.] [N.O.]**, isolated overload alarm contact.
10. External overload reset push button.

Combination controllers are magnetic controllers combined with a disconnecting means, OCPD, or both. See Editing Instruction No. 2 and "Combination Controllers" Article in the Evaluations for guidance on using combination controllers and the different types of disconnecting means and OCPDs. Indicate requirements for disconnecting means and OCPDs on Drawings. Revise paragraph below if overload relays differ from those indicated in "Reduced-Voltage Magnetic Controllers" Paragraph above.

- C. Combination Reduced-Voltage Magnetic Controller: Factory-assembled combination of reduced-voltage magnetic controller, OCPD, and disconnecting means.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. **<Insert manufacturer>**
 - g. or approved equal.

Disconnecting means and OCPDs must be closely coordinated with calculated short-circuit current values at the controller locations because they are directly related to the short-circuit withstand ratings of their combination controllers. Although fusible switches (with appropriate fuses) can provide Type 2 controller protection from very high short-circuit currents, not all circuit breakers or MCPs can. See Editing Instruction No. 7 in the Evaluations for explanation of protection types and when they should be considered.

2. Fusible Disconnecting Means:
 - a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate **[Class J] [Class R] [indicated]** fuses.
 - b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain first subparagraph below if external control power is used or for remote indication of disconnecting means position.

- c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

Nonfusible switches have no inherent short-circuit or interrupting current ratings and so must be used in series with upstream fuses or specific types and ratings of circuit breakers. See "Application of Switches and Circuit Breakers" Article in the Evaluations.

3. Nonfusible Disconnecting Means:
 - a. NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
 - b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain first subparagraph below if external control power is used or for remote indication of disconnecting means position.

- c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

MCP disconnecting means in first subparagraph below must be used in combination with integral overload relays.

4. MCP Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both of first two subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and N.O. or N.C. contact requirements on Drawings.

- c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
- d. [N.C.] [N.O.] alarm contact that operates only when MCP has tripped.

First subparagraph below is an optional, added-cost feature.

- e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

5. MCCB Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
- b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
- c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and N.O. or N.C. contact requirements on Drawings.

- d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
- e. [N.C.] [N.O.] alarm contact that operates only when MCCB has tripped.

2.3 REDUCED-VOLTAGE SOLID-STATE CONTROLLERS

Show controller pole quantities, voltage, NEMA size and type, accessories, short-circuit current rating (or available short-circuit currents), and enclosure type for each controller on Drawings. See "Reduced-Voltage Controllers," "Reduced-Voltage Solid-State Controllers," and "Solid-State Controllers" articles in the Evaluations for selection considerations. Enclosed controllers without integral OCPDs (e.g., fuses, MCPs, or thermal-magnetic circuit breakers) may have very low short-circuit current ratings when used in series with upstream devices. See Editing Instructions No. 2 and No. 8 in the Evaluations.

Standard and optional features vary considerably among manufacturers of solid-state controllers. Not all features, accessories, and options in this article are available for every rating, with every enclosure type, and from every listed manufacturer. Also, features and options depend on motor characteristics and

operating criteria of driven equipment. Verify availability and unique characteristics with manufacturers. Show on Drawings those features and accessories that apply to each controller.

- A. General Requirements for Reduced-Voltage Solid-State Controllers: Comply with UL 508.

Three-pole, reduced-voltage solid-state controllers are available for use with three-phase ac motors 3 to 600 hp, and in voltages from 208- to 575-V ac; however, not all listed manufacturers may offer enclosed controllers in all these ratings and voltage ranges.

- B. Reduced-Voltage Solid-State Controllers: An integrated unit with power SCRs, heat sink, microprocessor logic board, door-mounted digital display and keypad, bypass contactor, and overload relay; suitable for use with NEMA MG 1, Design B, polyphase, medium induction motors.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. **<Insert manufacturer>**
 - g. or approved equal.
2. Configuration: **[Standard duty] [Severe duty]; [nonreversible] [reversible]**.
3. Starting Mode: **[Voltage ramping] [Current limit] [Torque control] [Torque control with voltage boost][; field selectable]**.
4. Stopping Mode: **[Coast to stop] [Adjustable torque deceleration] [Adjustable braking][; field selectable]**.

Most manufacturers provide shorting contactors to bypass the SCRs at full speed instead of the controller operating continually through the SCRs. Bypass contactors are usually of less than full-voltage rating, and many are IEC-rated controllers. They are not sized nor intended for starting the motor across the line. Some manufacturers, however, offer the alternative of full-voltage bypass contactors for severe-duty applications, to completely bypass the SCRs on failure (allowing use of the controller as a full-voltage controller).

5. Shorting (Bypass) Contactor: Operates automatically when full voltage is applied to motor, and bypasses the SCRs. Solid-state controller protective features shall remain active when the shorting contactor is in the bypass mode.
6. Shorting[**and Input Isolation**] Contactor Coils: Pressure-encapsulated type; manufacturer's standard operating voltage, matching control power or line voltage, depending on contactor size and line-voltage rating.[**Provide coil transient suppressors.**]
7. Logic Board: Identical for all ampere ratings and voltage classes, with environmental protective coating.

8. Control Circuits: [24] [120] <Insert value>-V ac; obtained from [integral CPT, with primary and secondary fuses] <Insert source of control power>, with [CPT] [control power source] of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

Retain first subparagraph below if retaining CPT in last subparagraph above and spare CPT capacity is required. Spare capacity is usually available in 100-VA increments. Consult manufacturers for maximum spare capacity and CPT sizes available for different NEMA and enclosure sizes because adding spare capacity and an oversized CPT may require using an enlarged enclosure.

- a. CPT Spare Capacity: [100] [200] <Insert number> VA.
9. Adjustable acceleration-rate control using voltage or current ramp, and adjustable starting torque control with up to [400] <Insert value> percent current limitation for 20 seconds.
10. SCR bridge shall consist of at least two SCRs per phase, providing stable and smooth acceleration [with] [without] external feedback from the motor or driven equipment.
11. Keypad, front accessible; for programming the controller parameters, functions, and features; shall be manufacturer's standard and include not less than the following functions:
 - a. Adjusting motor full-load amperes, as a percentage of the controller's rating.
 - b. Adjusting current limitation on starting, as a percentage of the motor full-load current rating.
 - c. Adjusting linear acceleration and deceleration ramps, in seconds.
 - d. Initial torque, as a percentage of the nominal motor torque.
 - e. Adjusting torque limit, as a percentage of the nominal motor torque.
 - f. Adjusting maximum start time, in seconds.
 - g. Adjusting voltage boost, as a percentage of the nominal supply voltage.
 - h. Selecting stopping mode, and adjusting parameters.
 - i. Selecting motor thermal overload protection class between 5 and 30.
 - j. Activating and de-activating protection modes.
 - k. Selecting or activating communication modes.
 - l. <Insert function>.
12. Digital display, front accessible; for showing motor, controller, and fault status; shall be manufacturer's standard and include not less than the following:
 - a. Controller Condition: Ready, starting, running, stopping.
 - b. Motor Condition: Amperes, voltage, power factor, power, and thermal state.
 - c. Fault Conditions: Controller thermal fault, motor overload alarm and trip, motor underload, overcurrent, shorted SCRs, line or phase loss, phase reversal, and line frequency over or under normal.
 - d. <Insert items>.
13. Controller Diagnostics and Protection:
 - a. Microprocessor-based thermal protection system for monitoring SCR and motor thermal characteristics, and providing controller overtemperature and motor-overload alarm and trip; settings selectable via the keypad.

- b. Protection from line-side reverse phasing; line-side and motor-side phase loss; motor jam, stall, and underload conditions; and line frequency over or under normal.

Retain one of first two subparagraphs below for providing motor protection on a controller fault.

- c. Input isolation contactor that opens when the controller diagnostics detect a faulted solid-state component or when the motor is stopped.

Retain first subparagraph below if specifying combination controllers.

- d. Shunt trip that opens the disconnecting means when the controller diagnostics detect a faulted solid-state component.
- e. **<Insert items>**.

14. Remote Output Features:

- a. All outputs prewired to terminal blocks.
- b. Form C status contacts that change state when controller is running.
- c. Form C alarm contacts that change state when a fault condition occurs.
- d. **<Insert items>**.

15. Optional Features:

- a. Analog output for field-selectable assignment of motor operating characteristics; **[0 to 10-V dc] [4 to 20-mA dc]**.
- b. Additional field-assignable Form C contacts, as indicated, for alarm outputs.
- c. Surge suppressors in solid-state power circuits providing three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
- d. Full-voltage bypass contactor operating **[automatically] [manually, with NORMAL/BYPASS selector switch]**. Power contacts shall be totally enclosed, double break, and silver-cadmium oxide; and assembled to allow inspection and replacement without disturbing line or load wiring.

Manufacturers typically integrate overload functions into solid-state controllers and use separate thermal or solid-state overload relays only if full-voltage bypass controllers are specified. Retain one or more of first three subparagraphs below if specifying full-voltage bypass contactors. If retaining more than one, show on Drawings where each type is required. See Editing Instruction No. 5 and "Overload Protection" Article in the Evaluations for additional guidance.

- e. Melting Alloy Overload Relays:
 - 1) Inverse-time-current characteristic.
 - 2) **[Class 10] [Class 20] [Class 30]** tripping characteristic.
 - 3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
- f. Bimetallic Overload Relays:
 - 1) Inverse-time-current characteristic.
 - 2) **[Class 10] [Class 20] [Class 30]** tripping characteristic.

- 3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

Retain one or both of first two subparagraphs below only if applicable. See Editing Instruction No. 6 and "Bimetallic Overload Relays" Article in the Evaluations for guidance and warnings.

- 4) Ambient compensated.
- 5) Automatic resetting.

g. Solid-State Overload Relay:

- 1) Switch or dial selectable for motor running overload protection.
- 2) Sensors in each phase.
- 3) **[Class 10] [Class 20] [Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

Retain one or both of first two subparagraphs below if applicable. These are optional, added cost features.

- 4) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
- 5) Analog communication module.

Retain first subparagraph below if alarm contacts on overload relays are required for local or remote alarm indication of a tripped overload relay.

- h. **[N.C.] [N.O.]**, isolated overload alarm contact.
- i. External overload reset push button.

Combination controllers are solid-state controllers combined with a disconnecting means, OCPD, or both. See Editing Instruction No. 2 and "Combination Controllers" Article in the Evaluations for guidance on using combination controllers and the different types of disconnecting means and OCPDs. Indicate requirements for disconnecting means and OCPDs on Drawings. Revise paragraph below if overload relays differ from those indicated in "Reduced-Voltage Solid-State Controllers" Paragraph above.

- C. Combination Reduced-Voltage Solid-State Controller: Factory-assembled combination of reduced-voltage solid-state controller, OCPD, and disconnecting means.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. **<Insert manufacturer>**
 - g. or approved equal.

Disconnecting means and OCPDs must be closely coordinated with calculated short-circuit current values at the controller locations because they are directly related to the short-circuit withstand ratings of their combination controllers. Although fusible switches (with appropriate fuses) can provide Type 2 controller protection from very high short-circuit currents, not all circuit breakers or MCPs can. See Editing Instruction No. 7 in the Evaluations for explanation of protection types and when they should be considered. The Section Text does not include nonfusible disconnecting means because they are usually not an option with solid-state controllers.

2. Fusible Disconnecting Means:

- a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate **[Class J]** **[Class L]** **[indicated]** fuses.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain first subparagraph below if external control power is used or for remote indication of disconnecting means position.

- c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

MCP disconnecting means must be used in combination with integral overload relays.

3. MCP Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both of first two subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and N.O. or N.C. contact requirements on Drawings.

- c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
- d. **[N.C.] [N.O.]** alarm contact that operates only when MCP has tripped.

First subparagraph below is an optional, added-cost feature.

- e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

4. MCCB Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
- b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
- c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both of first two subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and N.O. or N.C. contact requirements on Drawings.

- d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
- e. [N.C.] [N.O.] alarm contact that operates only when MCCB has tripped.

5. Molded-Case Switch Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with in-line fuse block for Class J or L power fuses (depending on ampere rating), providing an interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and N.O. or N.C. contact requirements on Drawings.

- c. Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
- d. [N.C.] [N.O.] alarm contact that operates only when molded-case switch has tripped.

2.4 MULTISPEED MAGNETIC CONTROLLERS

Show controller pole quantities, voltage, NEMA size and type, accessories, short-circuit current rating (or available short-circuit currents), and enclosure type for each controller on Drawings. See "Multispeed Controllers" Article in the Evaluations for selection considerations. Enclosed controllers without integral OCPDs (e.g., fuses, MCPs, or thermal-magnetic circuit breakers) may have very low short-circuit current ratings when used in series with upstream devices. See Editing Instruction No. 2 in the Evaluations. The Section Text includes only two-speed controllers; however, most manufacturers catalog controllers offering more than two speeds. Multispeed controllers supporting more than two speeds may be added to suit Project.

Not all features, accessories, and options in this article are available for every rating, with every enclosure type, and from every listed manufacturer. Verify availability and unique characteristics with manufacturers. Show on Drawings those features and accessories that apply to each controller.

- A. General Requirements for Multispeed Magnetic Controllers: Comply with NEMA ICS 2, general purpose, Class A.
- B. Multispeed Magnetic Controllers: Two speed, full voltage, across the line, electrically held.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. **<Insert manufacturer>**
 - g. or approved equal.
2. Configuration: **[Nonreversing] [Reversing]; [consequent pole] [two winding]**.
 3. Contactor Coils: Pressure-encapsulated type **[with coil transient suppressors]**.
 - a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
 4. Power Contacts: Totally enclosed, double break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
 5. Control Circuits: **[24] [120] <Insert value>-V ac**; obtained from **[integral CPT, with primary and secondary fuses] <Insert source of control power>**, with **[CPT] [control power source]** of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

Retain first subparagraph below if retaining CPT in last subparagraph above and spare CPT capacity is required. Spare capacity is usually available in 100-VA increments. Consult manufacturers for maximum spare capacity and CPT sizes available for different NEMA and enclosure sizes because adding spare capacity and an oversized CPT may require using an enlarged enclosure.

- a. CPT Spare Capacity: **[50] [100] [200] <Insert number> VA**.

Retain one or both of first two subparagraphs below. If retaining both, indicate on Drawings where each type is required. Compelling and accelerating relays cannot be specified together for the same controller. Compelling, accelerating, and decelerating relays can be used for all multispeed controllers; antiplugging relays are used only for reversing multispeed controllers.

6. Compelling relays shall ensure that motor will start only at low speed.
7. Accelerating timer relays shall ensure properly timed acceleration through speeds lower than that selected.
8. Decelerating timer relays shall ensure automatically timed deceleration through each speed.
9. Antiplugging timer relays shall ensure a time delay when transferring from FORWARD to REVERSE and back.

Retain one or more of first three subparagraphs below. If retaining more than one, show on Drawings where each type is required. See Editing Instruction No. 5 and "Overload Protection" Article in the Evaluations for additional guidance.

10. Melting Alloy Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.

- c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

11. Bimetallic Overload Relays:

- a. Inverse-time-current characteristic.
- b. **[Class 10] [Class 20] [Class 30]** tripping characteristic.
- c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

Retain one or both of first two subparagraphs below only if applicable. See Editing Instruction No. 6 and "Bimetallic Overload Relays" Article in the Evaluations for guidance and warnings.

- d. Ambient compensated.
- e. Automatic resetting.

12. Solid-State Overload Relay:

- a. Switch or dial selectable for motor running overload protection.
- b. Sensors in each phase.
- c. **[Class 10] [Class 20] [Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

Retain one or both of first two subparagraphs below if applicable. These are optional, added-cost features.

- d. Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
- e. Analog communication module.

Retain first subparagraph below if alarm contacts on overload relays are required for local or remote alarm indication of a tripped overload relay.

- 13. **[N.C.] [N.O.]**, isolated overload alarm contact.
- 14. External overload reset push button.

Combination controllers are magnetic controllers combined with a disconnecting means, OCPD, or both. See Editing Instruction No. 2 and "Combination Controllers" Article in the Evaluations for guidance on using combination controllers and the different types of disconnecting means and OCPDs. Indicate requirements for disconnecting means and OCPDs on Drawings. Revise paragraph below if overload relays differ from those indicated in "Multispeed Magnetic Controllers" Paragraph above.

- C. Combination Multispeed Magnetic Controller: Factory-assembled combination of reduced-voltage magnetic controller, OCPD, and disconnecting means.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph and list of manufacturers below. See Section 016000 "Product Requirements."

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.

- b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
- c. Rockwell Automation, Inc.; Allen-Bradley brand.
- d. Siemens Energy & Automation, Inc.
- e. Square D; a brand of Schneider Electric.
- f. <Insert manufacturer>
- g. or approved equal.

Disconnecting means and OCPDs must be closely coordinated with calculated short-circuit current values at the controller locations because they are directly related to the short-circuit withstand ratings of their combination controllers. Although fusible switches (with appropriate fuses) can provide Type 2 controller protection from very high short-circuit currents, not all circuit breakers or MCPs can. See Editing Instruction No. 7 in the Evaluations for explanation of protection types and when they should be considered.

2. Fusible Disconnecting Means:

- a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate [Class J] [Class R] [indicated] fuses.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain first subparagraph below if external control power is used or for remote indication of disconnecting means position.

- c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

Nonfusible switches have no inherent short-circuit or interrupting current ratings and so must be used in series with upstream fuses or specific types and ratings of circuit breakers. See "Application of Switches and Circuit Breakers" Article in the Evaluations.

3. Nonfusible Disconnecting Means:

- a. NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain first subparagraph below if external control power is used or for remote indication of disconnecting means position.

- c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

MCP disconnecting means in first subparagraph below must be used in combination with integral overload relays.

4. MCP Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

- b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both of first two subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and N.O. or N.C. contact requirements on Drawings.

- c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
- d. [N.C.] [N.O.] alarm contact that operates only when MCP has tripped.

First subparagraph below is an optional, added-cost feature.

- e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

5. MCCB Disconnecting Means:

- a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
- b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
- c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

Retain one or both subparagraphs below. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and N.O. or N.C. contact requirements on Drawings.

- d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
- e. [N.C.] [N.O.] alarm contact that operates only when MCCB has tripped.

2.5 ENCLOSURES

- A. Enclosed Controllers: NEMA ICS 6, to comply with environmental conditions at installed location.

See "Enclosures" Article in the Evaluations for discussion of enclosure types. Coordinate subparagraphs below with Drawings by identifying the designated areas on plans or by including the required enclosure types. Enclosure materials and finishes may be added to the Section Text. Availability of some enclosure types is limited by type of controller; consult manufacturers for availability of, and limitations on, other than NEMA ICS 6, Type 1 enclosures. Reduced-voltage solid-state controllers are not usually available in other than Types 1, 3R, and 12.

- 1. Dry and Clean Indoor Locations: [Type 1] <Insert type>.
- 2. Outdoor Locations: [Type 3R] [Type 4X] <Insert type>.
- 3. [Kitchen] [Wash-Down] Areas: [Type 4X] <Insert type>, [stainless steel] <Insert material>.
- 4. Other Wet or Damp Indoor Locations: [Type 4] <Insert type>.
- 5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.

Retain one or both options in subparagraph below to comply with the division and group listing of the environment. Frequently, one enclosure type will accommodate more than one hazardous environment rating. Consult manufacturers for availability of, and limitations on, hazardous environment enclosures. These enclosures do not normally apply to reduced-voltage solid-state controllers as specified in the Section Text. If possible, avoid installing combination magnetic controllers in hazardous environments.

6. Hazardous Areas Indicated on Drawings: **[Type 7] [Type 9] <Insert type>**.

2.6 ACCESSORIES

Accessories listed in this article pertain primarily to enclosed magnetic controllers, with limited applications to solid-state controllers and even more limited applications to manual controllers; accessories are also limited in application by controller and enclosure types. Retain applicable accessories below. Indicate requirements for and quantities of accessories on Drawings. See "Accessories" Article in the Evaluations for additional guidance; consult manufacturers for availability of, and limitations on, other accessories.

- A. General Requirements for Control Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.
 1. Push Buttons, Pilot Lights, and Selector Switches: **[Heavy] [Standard]-duty, [oiltight]** type.
 - a. Push Buttons: **[Covered] [Lockable] [Recessed] [Shielded] [Shrouded] [Unguarded]** types; **[maintained] [momentary]** as indicated.
 - b. Pilot Lights: **[Incandescent] [LED] [Neon] [Resistor] [Transformer]** types; colors as indicated; **push to test**.
 - c. Selector Switches: **[Rotary] <Insert description>** type.
 2. Elapsed Time Meters: Heavy duty with digital readout in hours; **nonresettable** [**resettable**].

Retain subparagraph below if metering (for amperes, voltage, frequency, watts, power factor, etc.) is required for controllers. Indicate on Drawings where and which types of metering and selector switches are required. Normally, metering is limited to enclosure Types 1 and 12; consult manufacturers on availability of meters in other types of enclosures. Some listed manufacturers offer digital metering through the communication output of the solid-state overload relays; consult manufacturers for availability.

3. Meters: Panel type, **2-1/2-inch** (64-mm) minimum size with 90- or 120-degree scale and plus or minus two percent accuracy. Where indicated, provide selector switches with an off position.
- B. **[N.C.] [N.O.] [Reversible N.C./N.O.]** auxiliary contact(s).
 - C. Control Relays: Auxiliary and adjustable **[pneumatic] [solid-state]** time-delay relays.

Features in first paragraph below are available in individual relays or combined into a single multipurpose relay. Consult manufacturers for availability. Consider specifying phase-failure relays for single-phasing protection in fusible-switch combination controllers if solid-state overload relays are not specified.

- D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays:
Solid-state sensing circuit with isolated output contacts for hard-wired connections.
Provide adjustable undervoltage, overvoltage, and time-delay settings.
- E. Breather and drain assemblies, to maintain interior pressure and release condensation in [Type 4] [Type 4X] [Type 7] [Type 9] <Insert type> enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- F. Space heaters, with N.C. auxiliary contacts, to mitigate condensation in [Type 3R] [Type 4X] [Type 12] <Insert type> enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- G. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.
- H. Cover gaskets for Type 1 enclosures.
- I. Terminals for connecting power factor correction capacitors to the [line] [load] side of overload relays.
- J. Spare control wiring terminal blocks, quantity as indicated[; **unwired**] [; **wired**].
- K. <Insert accessories>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and surfaces to receive enclosed controllers, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Contractor shall make all necessary field measurements to verify that equipment shall fit in allocated space in full compliance with minimum required clearances specified in local codes and standards.

Retain first paragraph below for large and solid-state controllers requiring protection from condensation.

- C. Examine enclosed controllers before installation. Reject enclosed controllers that are wet, moisture damaged, or mold damaged.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.
- E. Verify that required utilities are available, in proper location and ready for use.
- F. Beginning of installation means installer accepts conditions.

3.2 INSTALLATION

- A. Wall-Mounted Controllers: Install enclosed controllers on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

Retain first paragraph below for equipment supported on slabs-on-grade.

- B. Floor-Mounted Controllers: Install enclosed controllers on 4-inch (100-mm) nominal-thickness concrete base. Comply with requirements for concrete base specified in [Section 033000 "Cast-in-Place Concrete."] [Section 033053 "Miscellaneous Cast-in-Place Concrete."]
1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 4. Install anchor bolts to elevations required for proper attachment to supported equipment.

Retain first paragraph below if seismic controls are Project requirement. Coordinate with Drawings.

- C. Seismic Bracing: Comply with requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

Retain first five paragraphs below, as appropriate, to coincide with selections made in Part 2.

- E. Install fuses in each fusible-switch enclosed controller.
- F. Install fuses in control circuits if not factory installed. Comply with requirements in Section 262813 "Fuses."
- G. Install heaters in thermal overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.
- H. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.
- I. Install power factor correction capacitors. Connect to the [line] [load] side of overload relays. If connected to the load side of overload relays, adjust overload heater sizes to accommodate the reduced motor full-load currents. Connect bus assemblies and components to wiring system and to ground as indicated and instructed by manufacturer.

1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.
2. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

J. Comply with NECA 1.

3.3 IDENTIFICATION

- A. Identify enclosed controllers, components, and control wiring. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 2. Label each enclosure with engraved nameplate.
 3. Label each enclosure-mounted control and pilot device.

3.4 CONTROL WIRING INSTALLATION

Retain this article if remote-control or remote-status indication is required.

- A. Install wiring between enclosed controllers and remote devices[**and facility's central control system**]. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect selector switches and other automatic-control selection devices where applicable.
1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.
 2. Connect selector switches with enclosed-controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.5 FIELD QUALITY CONTROL

See Editing Instruction No. 9 in the Evaluations for guidance on the level of field quality control appropriate for Project. Retain one of first two paragraphs below to identify who shall perform tests and inspections. Retain and edit "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain first paragraph below to require Contractor to perform tests and inspections.

B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first two paragraphs below to describe tests and inspections to be performed.

C. Acceptance Testing Preparation:

1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

D. Tests and Inspections:

1. Inspect controllers, wiring, components, connections, and equipment installation. [**Test and adjust controllers, components, and equipment.**]
2. Test insulation resistance for each enclosed-controller element, component, connecting motor supply, feeder, and control circuits.
3. Test continuity of each circuit.
4. Verify that voltages at controller locations are within plus or minus 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify DEN Project Manager before starting the motor(s).
5. Test each motor for proper phase rotation.
6. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

NETA ATS allows three methods to test and inspect bolted electrical connections for high resistance; the infrared (thermographic) method is the most thorough and costly. Retain first subparagraph below if this method is preferred.

8. Perform the following infrared (thermographic) scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each multi-pole enclosed controller. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each multi-pole enclosed controller 11 months after date of Substantial Completion.
 - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- E. Enclosed controllers will be considered defective if they do not pass tests and inspections.

Retain paragraph below if tests and inspections are performed by Contractor or manufacturer's field-service representative engaged by Contractor.

- F. Prepare test and inspection reports including a certified report that identifies enclosed controllers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

Retain applicable paragraphs below to correspond to selections made in Part 2.

- A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.
- B. Adjust overload-relay heaters or settings if power factor correction capacitors are connected to the load side of the overload relays.
- C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable instantaneous trip elements. Initially adjust to six times the motor nameplate full-load ampere ratings and attempt to start motors several times, allowing for motor cooldown between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify DEN Project Manager before increasing settings.
- D. Set the taps on reduced-voltage autotransformer controllers at [50] [65] [80] percent.
- E. Set field-adjustable switches and program microprocessors for required start and stop sequences in reduced-voltage solid-state controllers.

Retain option in paragraph below unless settings are included on Drawings.

- F. Set field-adjustable circuit-breaker trip ranges[**as specified in Section 260573 "Overcurrent Protective Device Coordination Study."**]

3.7 PROTECTION

Retain this article if retaining "Delivery, Storage, and Handling" Article and if retaining space heaters in "Accessories" Article.

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.
- B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist in training Owner's maintenance personnel to adjust, operate, and maintain enclosed controllers[, **and to use and reprogram microprocessor-based, reduced-voltage solid-state controllers**].
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262913

Copyright 2010 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 262923 - VARIABLE-FREQUENCY MOTOR CONTROLLERS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

If applying for LEED certification, LEED Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1, which requires the use of mechanical or electrical variable-speed drives on fan motors used in VAV system fans that are 15 hp and larger and on motors in variable-flow hydronic systems that are larger than 50 hp.

Energy savings resulting from the use of variable-frequency motor controllers on motors other than required by Prerequisite EA 2 can be combined with other energy-saving measures to meet the requirements of LEED-NC, LEED-CS, and LEED for Schools Credit EA 1.

LEED-NC and LEED for Schools Credit EA 5, LEED-CI Credit EA 3, and LEED-CS Credit EA 5.1 require the development of a Measurement & Verification Plan to achieve this credit. Energy used by each VFC can be used in the simulation calibration process required by the International Performance Measurement & Verification Protocol, Volume III, Chapter 4, "Whole Building Calibrated Simulation" (Option D) to verify the building's compliance with this credit.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

This Section is limited to separately enclosed, pre-assembled, combination VFCs furnished by a VFC manufacturer; it does not include panel-mounted variable-frequency drives intended to be field-installed in separate enclosures by contractors or incorporated into machinery or processes as part of a packaged system. The Section Text does not include VFCs for constant-horsepower loads because they are seldom used in commercial (e.g., plumbing and HVAC) applications; however, they can be added to suit Project.

Edit to suit Project.

- A. Section includes separately enclosed, pre-assembled, combination VFCs, rated 600 V and less, for speed control of three-phase, squirrel-cage induction motors.
- B. Related Sections:

Retain Section in subparagraph below that contains requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 262419 "Motor-Control Centers" for VFCs installed in motor-control centers.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. BAS: Building automation system.
- B. CE: Conformance Europeene (European Compliance).
- C. CPT: Control power transformer.
- D. EMI: Electromagnetic interference.
- E. IGBT: Insulated-gate bipolar transistor.
- F. LAN: Local area network.
- G. LED: Light-emitting diode.
- H. MCP: Motor-circuit protector.
- I. NC: Normally closed.
- J. NO: Normally open.
- K. OCPD: Overcurrent protective device.
- L. PCC: Point of common coupling.
- M. PID: Control action, proportional plus integral plus derivative.
- N. PWM: Pulse-width modulated.

- O. RFI: Radio-frequency interference.
- P. TDD: Total demand (harmonic current) distortion.
- Q. THD(V): Total harmonic voltage demand.
- R. VFC: Variable-frequency motor controller.

1.4 PERFORMANCE REQUIREMENTS

Retain this article with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design; however, several listed manufacturers do not currently offer seismic certificates and some do not test wall-mounted controllers for their ability to "withstand" a seismic event. Verify availability of seismic testing and certification with manufacturers. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction. See "Seismic Considerations" Article in the Evaluations.

- A. Seismic Performance: VFCs shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type and rating of VFC indicated. Include features, performance, electrical ratings, operating characteristics, shipping and operating weights, and furnished specialties and accessories.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

LEED-NC and LEED for Schools Credit EA 5 requires continuous metering equipment for monitoring building energy-consumption performance over time. VFCs providing input to a BAS on energy usage can support this requirement. Coordinate with requirements in "Controls and Indication" Article.

1. Product Data for Credit EA 5: For continuous metering equipment for energy consumption.

- C. Shop Drawings: For each VFC indicated. Include dimensioned plans, elevations, and sections; and conduit entry locations and sizes, mounting arrangements, and details,

including required clearances and service space around equipment.

1. Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a. Each installed unit's type and details.
 - b. Factory-installed devices.
 - c. Enclosure types and details.
 - d. Nameplate legends.
 - e. Short-circuit current (withstand) rating of enclosed unit.
 - f. Features, characteristics, ratings, and factory settings of each VFC and installed devices.

Retain first subparagraph below if specifying modifications in Part 2 articles.

- g. Specified modifications.
2. Schematic and Connection Wiring Diagrams: For power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below if Drawings do not include detailed plans or if Project involves unusual coordination requirements. See "Installation Considerations" Article in the Evaluations for additional guidance on when to retain paragraph.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around VFCs. Show VFC layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- B. Qualification Data: For qualified testing agency.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems." See ASCE/SEI 7 for certification requirements for equipment and components.

- C. Seismic Qualification Certificates: For VFCs, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based, and their installation requirements.

Retain "Product Certificates" Paragraph below for product certificates from manufacturers.

- D. Product Certificates: For each VFC, from manufacturer.

Retain "Harmonic Analysis Study and Report" Paragraph below if an analysis is required from VFC manufacturer. Ensure that the information necessary for manufacturer to perform the analysis is included in the Construction Documents, including specified TDD and THD(V) limits. See "Harmonic Distortion" Article in the Evaluations and the Drawing Coordination Checklist for additional information.

- E. Harmonic Analysis Study and Report: Comply with IEEE 399 and NETA Acceptance Testing Specification; identify the effects of nonlinear loads and their associated harmonic contributions on the voltages and currents throughout the electrical system. Analyze **[possible]** **[designated]** operating scenarios, including recommendations for VFC input filtering to limit TDD and THD(V) **[at each VFC]** **[at the defined PCC]** to specified levels.
- F. Source quality-control reports.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- G. Field quality-control reports.

Large projects with multiple sizes and types of VFCs, with bypass contactors, might include different types of overload relays. Retain one or both paragraphs below to suit type(s) of motor overload protection if retaining motor-running overload protection in "Bypass Systems" Article. See Evaluations for discussion.

- H. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate, full-load currents.
- I. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that switch settings for motor-running overload protection suit actual motors to be protected.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For VFCs to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

Retain first subparagraph below if circuit breakers are specified in VFCs; retain second if field-adjustable overload relays are specified.

1. Manufacturer's written instructions for testing and adjusting thermal-magnetic circuit breaker and MCP trip settings.
2. Manufacturer's written instructions for setting field-adjustable overload relays.

3. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
 4. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
 5. Manufacturer's installation information including equipment anchorage provisions.
- B. Certified production test reports.
- C. Seismic certification.
- D. Recommended renewal parts list.
- E. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

Verify requirements for as-built plans with DEN Project Manager.

- F. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL SUBMITTALS

Revise this article to include extra materials that Owner may require and that may fail more frequently due to continual use. Coordinate extra materials with features retained in Part 2.

Coordinate quantity of fuses with Section 262813 "Fuses" for required space in spare-fuse cabinet.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Power Fuses: Equal to **[ten (10)] <Insert number>** percent of quantity installed for each size and type, but no fewer than **[three (3)] <Insert number>** of each size and type.
 2. Control Power Fuses: Equal to **[ten (10)] <Insert number>** percent of quantity installed for each size and type, but no fewer than **[two (2)] <Insert number>** of each size and type.
 3. Indicating Lights: **[Two (2)] <Insert number>** of each type and color installed.
 4. Auxiliary Contacts: Furnish **[one (1)] <Insert number>** spare(s) for each size and type of magnetic controller installed.
 5. Power Contacts: Furnish **[three (3)] <Insert number>** spares for each size and type of magnetic contactor installed.
 6. **<Insert extra materials>**.

1.9 QUALITY ASSURANCE

Retain "Testing Agency Qualifications" Paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NFPA 70.
- D. The Manufacturer of this equipment shall have been pre-qualified by Owner.
- E. When requested by the DEN Project Manager, an acceptable list of installations with similar equipment shall be provided demonstrating compliance with this requirement.
- F. Installers shall specialize in installation of equipment with a minimum of five (5) years of experience.

Retain "IEEE Compliance" Paragraph below for projects in seismic areas. If retaining, also retain "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article.

- G. IEEE Compliance: Fabricate and test VFC according to IEEE 344 to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

1.10 DELIVERY, STORAGE, AND HANDLING

Retain first option in paragraph below for controllers that are not required to have factory-installed space heaters; otherwise, retain second option.

- A. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside controllers and **[install temporary electric heating, with at least 250 W per controller] [connect factory-installed space heaters to temporary electrical service]**.

1.11 PROJECT CONDITIONS

The conditions listed in "Environmental Limitations" Paragraph below are manufacturers' and industry standards for using VFC without derating or special enclosures and accessories. Revise paragraph to specify unusual environmental or service conditions; consult manufacturers for limitations and coordinate with equipment ratings. For equipment installed outdoors or indoors in unconditioned spaces, indicate maximum and minimum ambient temperature and expected humidity range; see Editing Instruction No. 2

in the Evaluations. For additional ambient compensation requirements for fuses, circuit breakers, and overload relays, see Editing Instructions No. 4, No. 5, and No. 7 in the Evaluations.

- A. Environmental Limitations: Rate equipment for continuous operation, capable of driving full load without derating, under the following conditions unless otherwise indicated:
1. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 2. Ambient Storage Temperature: Minus 30 deg F (minus 35 deg C) to 140 deg F (60 deg C)
 3. Humidity: Less than 95 percent (noncondensing).
 4. Altitude: 5500 feet (1677 m) above sea level.
 5. **<Insert unusual service condition>**.

Retain "Interruption of Existing Electrical Systems" Paragraph below if interruption of existing electrical distribution systems is required.

- B. Interruption of Existing Electrical Systems: Do not interrupt electrical systems in facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown..
 2. Indicate method of providing temporary electrical service.
 3. Do not proceed with interruption of electrical systems without DEN Project Manager's written permission.
 4. Comply with NFPA 70E.

Dimensions of VFCs, especially those with bypass systems, specialty enclosures, or various options, can vary considerably in size between manufacturers. Retain "Product Selection for Restricted Space" Paragraph below with "Basis-of-Design Product" Paragraph in "Manufactured Units" Article if installation space for VFCs is limited; show maximum dimensions on Drawings. See "Installation Considerations" and "Large Equipment" articles in the Evaluations for additional guidance.

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, including clearances between VFCs, and adjacent surfaces and other items.
- D. Field Measurements: Verify existing dimensions by field measurements. Verify clearances and locate obstructions within manufacturing and installation tolerances of enclosed assemblies

1.12 COORDINATION

- A. Coordinate features of motors, load characteristics, installed units, and accessory devices to be compatible with the following:

1. Torque, speed, and horsepower requirements of the load.
2. Ratings and characteristics of supply circuit and required control sequence.
3. Ambient and environmental conditions of installation location.

Frequently, VFCs rated above 30 hp, and especially those incorporating a bypass system, require floor mounting. Retain one or both of two paragraphs below if required for VFCs.

- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.

Installing VFCs on roofs exposed to the weather may amount to "unusual service conditions" for many VFCs. If retaining paragraph below, coordinate with Project conditions in "Environmental Limitations" and "Unit Operating Requirements" paragraphs. See Editing Instruction No. 2 for additional information on unusual service conditions.

- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
- D. The drawings are diagrammatic and indicate the general arrangement of electrical work. Locations are approximate and shall be subject to minor modifications as dictated by field conditions and as directed by DEN Project Manager.

1.13 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace VFCs that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods with manufacturers listed in Part 2 articles.

1. Warranty Period: Minimum **[five (5)]** <Insert number> years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.14 CONSTRUCTION WASTE MANAGEMENT

1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain "Manufacturers" Paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB.
 2. Baldor Electric Company.
 3. Danfoss Inc.; Danfoss Drives Div.
 4. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 5. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 6. Rockwell Automation, Inc.; Allen-Bradley Brand.
 7. Siemens Energy & Automation, Inc.
 8. Square D; a brand of Schneider Electric.
 9. Toshiba International Corporation.
 10. Yaskawa Electric America, Inc; Drives Division.
 11. <Insert manufacturer>
 12. or approved equal.

Show VFC pole quantities, voltage, accessories, size and type, short-circuit current (withstand) rating (or available short-circuit currents), and enclosure type for each controller on Drawings. See "Specifying VFCs" Article and Editing Instruction No. 9 in the Evaluations for selection considerations.

Standard and optional features vary considerably among VFC manufacturers. Not all features, accessories, and options in this article are available for every rating, with every type of enclosure, and from every listed manufacturer. Also, features and options depend on motor characteristics and operating criteria of driven equipment. Verify, with manufacturer, availability and unique characteristics. Show on Drawings the features and accessories that apply to each VFC.

- B. General Requirements for VFCs: Comply with NEMA ICS 7, NEMA ICS 61800-2, and [UL 508C] <Insert standard>.

Retain first option in "Application" Paragraph below for constant-torque loads such as positive-displacement pumps and reciprocating and screw compressors; retain second option for variable-torque loads such as centrifugal blowers, compressors, fans, and pumps.

- C. Application: [Constant torque] [and] [variable torque] <Insert application>.

Low-voltage VFCs are available for use with three-phase ac motors from 1/2 to 500 hp (depending on voltage rating), and in single- or three-phase input voltages from 200- to 575-V ac; however, not all listed manufacturers may offer VFCs in all these ratings and voltage ranges. Using single-phase voltages for VFCs controlling three-phase motors may require substantial derating of the VFCs; consult manufacturers for limitations and derating requirements.

- D. VFC Description: Variable-frequency power converter (rectifier, dc bus, and IGBT, PWM inverter) factory packaged in an enclosure, with integral disconnecting means

and overcurrent and overload protection; listed and labeled by an NRTL as a complete unit; arranged to provide self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency.

Retain one or both of first two subparagraphs below as required to support motors and driven equipment specified in other Divisions. See "Multispeed and Variable-Speed Considerations" Article in the Evaluations in Section 230513 "Common Motor Requirements for HVAC Equipment," for guidance on motor requirements and applications using VFCs.

1. Units suitable for operation of NEMA MG 1, Design A and Design B motors as defined by NEMA MG 1, Section IV, Part 30, "Application Considerations for Constant Speed Motors Used on a Sinusoidal Bus with Harmonic Content and General Purpose Motors Used with Adjustable-Voltage or Adjustable-Frequency Controls or Both."
 2. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
 3. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to authorities having jurisdiction.
- E. Design and Rating: Match load type, such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.

Retain first option in "Output Rating" Paragraph below for variable-torque drives; retain second option for constant-torque drives.

- F. Output Rating: Three-phase; 10 to **[60 Hz, with voltage proportional to frequency throughout voltage range] [66 Hz, with torque constant as speed changes]**; maximum voltage equals input voltage.
- G. Unit Operating Requirements:

Increases in technology are allowing manufacture of VFCs with greater tolerance to system anomalies and better operating performance. Most listed manufacturers offer VFCs that tolerate the greater optional variances, or they offer the higher levels of performance included in subparagraphs below. Consult manufacturers if Project system conditions fall outside the selected parameters in first three subparagraphs because corrective actions or additional modifications may be required before VFCs can be applied. In "Input AC Voltage Tolerance" Subparagraph, voltage tolerance is more a factor of voltage limitations for industrial control devices (e.g., magnetic contactors) in an enclosed VFC and not the VFC's power converter, which can usually tolerate greater voltage variations.

1. Input AC Voltage Tolerance: Plus 10 and minus **[10] [15]** percent of VFC input voltage rating.
2. Input AC Voltage Unbalance: Not exceeding **[3] [5]** percent.
3. Input Frequency Tolerance: Plus or minus 3 percent of VFC frequency rating.
4. Minimum Efficiency: **[96] [97] <Insert number>** percent at 60 Hz, full load.
5. Minimum Displacement Primary-Side Power Factor: **[96] [98] <Insert number>** percent under any load or speed condition.

Retain "Minimum Short-Circuit Current (Withstand) Rating" Subparagraph below if all VFCs on a Project are required to have the same short-circuit current rating. Delete subparagraph if short-circuit ratings vary for individual VFCs, and indicate the ratings on Drawings.

6. Minimum Short-Circuit Current (Withstand) Rating: **[10] [22] [65] [100] <Insert value>** kA.

VFCs are available that are suitable for use under environmental conditions different than those indicated in the four "rating" subparagraphs below; however, derating or special modifications, or both, may be required. Coordinate with "Project Conditions" Article, and consult manufacturers for required modifications or derating, or both, to accommodate unusual service conditions.

7. Ambient Temperature Rating: **Minus 30 deg F** (minus 35 deg C) to 120 deg F (49 deg C).
8. Ambient Storage Temperature Rating: Minus 30 deg F (minus 35 deg C) to 120 **deg F** (49 deg C)
9. Humidity Rating: Less than 95 percent (noncondensing).
10. Altitude Rating: **5500 feet** (1677 m) above sea level.

Retain "Vibration Withstand" Subparagraph below if VFCs are likely to be installed on vibrating equipment such as a built-up air-handling unit or skid-mounted pump assembly.

11. Vibration Withstand: Comply with IEC 60068-2-6.

Retain first option in "Overload Capability" Subparagraph below for variable-torque VFCs; retain second option for constant-torque VFCs.

12. Overload Capability: **[1.1] [1.5]** times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
13. Starting Torque: Minimum 100 percent of rated torque from 3 to 60 Hz.
14. Speed Regulation: Plus or minus **[5] [10]** percent.

Carrier frequencies above 2.5 kHz are seldom desired for motors more than 200 hp due to the increased possibility of overheating the motor windings. For large horsepower motors being used with VFCs, consult motor manufacturers for recommended limitations on carrier frequencies to mitigate motor winding overtemperatures.

15. Output Carrier Frequency: Selectable; 0.5 to **[15] <insert number>** kHz.
16. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.

- H. Inverter Logic: Microprocessor based, **[16] [32]** bit, isolated from all power circuits.
- I. Isolated Control Interface: Allows VFCs to follow remote-control signal over a minimum 40:1 speed range.

Retain one of two "Signal" subparagraphs below with "Isolated Control Interface" Paragraph above. Coordinate retained subparagraph with selections made in "Control Signal Interfaces" Paragraph in "Controls and Indication" Article.

1. Signal: Electrical.
2. Signal: Pneumatic.

- J. Internal Adjustability Capabilities:

1. Minimum Speed: 5 to 25 percent of maximum rpm.
2. Maximum Speed: 80 to 100 percent of maximum rpm.
3. Acceleration: **[0.1 to 999.9] <Insert range>** seconds.
4. Deceleration: **[0.1 to 999.9] <Insert range>** seconds.
5. Current Limit: 30 to minimum of 150 percent of maximum rating.
6. **<Insert adjustment and parameters>**.

K. Self-Protection and Reliability Features:

Coordinate Project-specific self-protection and reliability features with manufacturers, because standard and optional features vary considerably among manufacturers.

1. Input transient protection by means of surge suppressors to provide three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
2. Loss of Input Signal Protection: Selectable response strategy, including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
3. Under- and overvoltage trips.
4. Inverter overcurrent trips.
5. VFC and Motor Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFCs and motor thermal characteristics, and for providing VFC overtemperature and motor overload alarm and trip; settings selectable via the keypad; NRTL approved.
6. Critical frequency rejection, with [**three (3)**] <Insert number> selectable, adjustable deadbands.
7. Instantaneous line-to-line and line-to-ground overcurrent trips.
8. Loss-of-phase protection.
9. Reverse-phase protection.
10. Short-circuit protection.
11. Motor overtemperature fault.
12. <Insert protection or reliability feature>.

"Automatic Reset/Restart" and "Power-Interruption Protection" paragraphs below are mutually exclusive in the same VFC. Retain both paragraphs if required for separate VFCs, and indicate on Drawings where each type is required.

- L. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.
- M. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped, unless "Bidirectional Autospeed Search" feature is available and engaged.

Retain "Bidirectional Autospeed Search" Paragraph below if retaining "Automatic Reset/Restart" Paragraph above or automatic and manual "Bypass Mode" Paragraph in "Bypass Systems" Article, or both.

- N. Bidirectional Autospeed Search: Capable of starting VFC into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.
- O. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.

- P. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

Not all manufacturers offer all options in "Integral Input Disconnecting Means and OCPD" Paragraph below. Coordinate with manufacturers for available options. Coordinate selection of the disconnecting means and OCPD with short-circuit current (withstand) ratings required for Project. See "Application of Switches and Circuit Breakers" Article and Editing Instructions No. 3, No. 4, No. 5, and No. 8 in the Evaluations for selection considerations.

- Q. Integral Input Disconnecting Means and OCPD: [**NEMA AB 1, instantaneous-trip circuit breaker**] [**NEMA AB 1, molded-case switch, with power fuse block and current-limiting fuses**] [**NEMA AB 1, thermal-magnetic circuit breaker**] [**NEMA KS 1, nonfusible switch, with power fuse block and current-limiting fuses**] [**NEMA KS 1, fusible switch**] with pad-lockable, door-mounted handle mechanism.

Retain first "Disconnect Rating" Subparagraph below for VFCs without bypass systems; retain second for VFCs with bypass systems.

1. Disconnect Rating: Not less than 115 percent of VFC input current rating.
2. Disconnect Rating: Not less than 115 percent of NFPA 70 motor full-load current rating or VFC input current rating, whichever is larger.

Retain "Auxiliary Contacts" Subparagraph below if retaining fusible or nonfusible switches in "Integral Input Disconnecting Means and OCPD" Paragraph and external control power is used; or, use for remote indication of disconnecting means position.

3. Auxiliary Contacts: NO/NC, arranged to activate before switch blades open.

Retain one or both of two subparagraphs below if retaining any circuit-breaker-type disconnecting means in "Integral Input Disconnecting Means and OCPD" Paragraph. Retain first subparagraph if external control power is used or for remote indication of disconnecting means position. Retain second subparagraph for remote indication of tripped condition. If retaining auxiliary and alarm contacts, indicate "a" and "b" contact quantities and NO or NC contact requirements on Drawings.

4. Auxiliary contacts "a" and "b" arranged to activate with circuit-breaker handle.
5. [**NC**] [**NO**] alarm contact that operates only when circuit breaker has tripped.

2.2 CONTROLS AND INDICATION

Coordinate local control and indication requirements with Owner or end users. Most of the indications included in "Status Lights" Paragraph below can be and are accomplished by listed manufacturers through digital displays in their panel-mounted operator stations. However, many operators still prefer the ability to "pass and glance" to determine the status of operating machinery or equipment.

- A. Status Lights: Door-mounted LED indicators displaying the following conditions:

1. Power on.
2. Run.
3. Overvoltage.
4. Line fault.
5. Overcurrent.
6. External fault.

7. **<Insert condition>**.

- B. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.
1. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
 2. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.
 - a. Control Authority: Supports at least four conditions: Off, local manual control at VFC, local automatic control at VFC, and automatic control through a remote source.
- C. Historical Logging Information and Displays:

Retain first subparagraph below if time and date stamping is not accomplished through the BAS. This is an added-cost option with some listed manufacturers.

1. Real-time clock with current time and date.
 2. Running log of total power versus time.
 3. Total run time.
 4. Fault log, maintaining last [**four (4)**] **<Insert number>** faults with time and date stamp for each.
 5. **<Insert information or display>**.
- D. Indicating Devices: Digital display[**and additional readout devices as required,**] mounted flush in VFC door and connected to display VFC parameters including, but not limited to:
1. Output frequency (Hz).
 2. Motor speed (rpm).
 3. Motor status (running, stop, fault).
 4. Motor current (amperes).
 5. Motor torque (percent).
 6. Fault or alarming status (code).
 7. PID feedback signal (percent).
 8. DC-link voltage (V dc).
 9. Set point frequency (Hz).
 10. Motor output voltage (V ac).
 11. **<Insert parameter>**.

Coordinate three "interface" paragraphs below with Section 230900 "Instrumentation and Control for HVAC." Retain paragraphs to suit Project. If retaining more than one paragraph, indicate here or on Drawings where each interface type is required.

- E. Control Signal Interfaces:
1. Electric Input Signal Interface:

In first subparagraph below, some manufacturers offer an operator-selectable "x"- to "y"-mA dc signal input.

- a. A minimum of [two] <Insert number> programmable analog inputs: [0- to 10-V dc] [4- to 20-mA dc] [Operator-selectable "x"- to "y"-mA dc] <Insert signal parameters>.
- b. A minimum of [six] <Insert number> multifunction programmable digital inputs.

Retain "Pneumatic Input Signal Interface" Subparagraph below only if Project includes pneumatic controls in another Section. Several listed manufacturers now treat this feature as an added-cost option because it is so infrequently used anymore.

2. Pneumatic Input Signal Interface: 3 to 15 psig (20 to 104 kPa).
3. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the BAS or other control systems:
 - a. 0- to 10-V dc.
 - b. 4- to 20-mA dc.
 - c. Potentiometer using up/down digital inputs.
 - d. Fixed frequencies using digital inputs.
 - e. <Insert signal input>.
4. Output Signal Interface: A minimum of [one] <Insert number> programmable analog output signal(s) ([0- to 10-V dc] [4- to 20-mA dc] [operator-selectable "x"- to "y"-mA dc] <Insert signal parameters>), which can be configured for any of the following:
 - a. Output frequency (Hz).
 - b. Output current (load).
 - c. DC-link voltage (V dc).
 - d. Motor torque (percent).
 - e. Motor speed (rpm).
 - f. Set point frequency (Hz).
 - g. <Insert indication>.
5. Remote Indication Interface: A minimum of [two] <Insert number> programmable dry-circuit relay outputs (120-V ac, 1 A) for remote indication of the following:
 - a. Motor running.
 - b. Set point speed reached.
 - c. Fault and warning indication (overtemperature or overcurrent).
 - d. PID high- or low-speed limits reached.
 - e. <Insert indication>.

Retain "PID Control Interface" Paragraph below if VFC controls interface directly with local controls and not through a BAS.

- F. PID Control Interface: Provides closed-loop set point, differential feedback control in response to dual feedback signals. Allows for closed-loop control of fans and pumps

for pressure, flow, or temperature regulation.

1. Number of Loops: [**One (1)**] [**Two (2)**] <Insert number>.

Retain "BAS Interface" Paragraph below if VFC controls interface with the BAS. Retain option if BAS is used to monitor and record energy usage for verification of LEED-NC and LEED for Schools Credit EA 5, LEED-CI Credit EA 3, and LEED-CS Credit EA 5.1.

- G. BAS Interface: Factory-installed hardware and software to enable the BAS to monitor, control, and display VFC status and alarms[**and energy usage**]. Allows VFC to be used with an external system within a multidrop LAN configuration; settings retained within VFC's nonvolatile memory.
1. Network Communications Ports: Ethernet and [**RS-422/485**] <Insert port type>.
 2. Embedded BAS Protocols for Network Communications: [**ASHRAE 135 BACnet**] [**Echelon LonWorks**] [**Johnson Metasys N2**] [**Modbus/Memobus**] [**Siemens System 600 APOGEE**] <Insert protocol type>; protocols accessible via the communications ports.

2.3 LINE CONDITIONING AND FILTERING

If input current distortion due to harmonic generation in VFCs is a concern, consult manufacturers for options available to mitigate harmonic distortion. Options may include dc bus link reactors, isolation transformers, active and passive harmonic filters, and 12- or 18-pulse phase-shifting input transformers. Retain first or second "Input Line Conditioning" Paragraph below if retaining "Harmonic Analysis Study and Report" Paragraph in "Informational Submittals" Article, if a specific method of mitigation is not important, and if manufacturer is delegated responsibility to incorporate whatever mitigating means are necessary to comply with specified limitations. Otherwise, retain third "Input Line Conditioning" Paragraph and insert specific requirements. See "Harmonic Distortion" Article in the Evaluations for additional guidance.

- A. Input Line Conditioning: Based on the harmonic analysis study and report, provide input filtering, as required, to limit TDD at input terminals of [**all**] [**indicated**] VFCs to less than [**5**] [**8**] <Insert number> percent and THD(V) to [**3**] [**5**] <Insert number> percent.
- B. Input Line Conditioning: Based on the harmonic analysis study and report, provide input filtering, as required, to limit TDD and THD(V) at the defined PCC per [**IEEE 519**] <Insert standard>.
- C. Input Line Conditioning: <Insert requirements>.

Normally if the separation between motor and VFC is less than 100 feet (30 m), the motor is designed for use with VFC, low carrier frequencies are specified, or all three, then output filtering may not be an issue. However, if distances are over 100 feet (30 m) and high carrier frequencies are being used, controller output voltage can exceed motor pulse-withstand capability. Consult motor and VFC manufacturers to determine need for, and options available for, conditioning output voltage. Options may include line inductors, dV/dT filters, output reactors, and motor termination filters. Insert requirements in first paragraph below. See "Motor and VFC Compatibility" Article in the Evaluations for additional guidance.

- D. Output Filtering: <Insert requirements>.

If EMI/RFI generation in VFCs is a concern, consult manufacturers for options available to mitigate it. Specifying compliance with applicable standards and following proper installation methods will usually address EMI/RFI issues. Retain first "EMI/RFI Filtering" Paragraph below if a specific method of mitigation is not important and manufacturer is delegated responsibility to incorporate whatever mitigating means are necessary to comply with specified limitations. Otherwise, retain second "EMI/RFI Filtering" Paragraph and insert specific requirements. See "Electromagnetic Compatibility" Article in the Evaluations for additional guidance.

- E. EMI/RFI Filtering: CE marked; certify compliance with IEC 61800-3 for [Category C2] <Insert category>.
- F. EMI/RFI Filtering: <Insert requirements>.

2.4 BYPASS SYSTEMS

Retain this article only if VFCs will require bypass systems. Applying bypass systems to VFCs requires additional consideration of system parameters and code requirements. Additionally, listed manufacturers offer different forms of bypass strategies and different operating characteristics. See "Bypass Systems" Article in the Evaluations for guidance, and coordinate with manufacturers for available selections.

- A. Bypass Operation: Safely transfers motor between power converter output and bypass circuit, manually, automatically, or both. Selector switches set modes and indicator lights indicate mode selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely disconnected from power converter.

Retain one of two "Bypass Mode" paragraphs below, or retain both if required for separate VFCs, and indicate on Drawings where each type is required. First paragraph is for bypass control where the motor must be at zero speed before the bypass function is performed; second paragraph allows for bypass control whether the motor is at rest or running. If retaining second paragraph, also retain "Bidirectional Autospeed Search" Paragraph in "Manufactured Units" Article.

- B. Bypass Mode: Manual operation only; requires local operator selection at VFC. Transfer between power converter and bypass contactor and retransfer shall only be allowed with the motor at zero speed.
- C. Bypass Mode: Field-selectable automatic or manual, allows local and remote transfer between power converter and bypass contactor and retransfer, either via manual operator interface or automatic control system feedback.

Retain one of two "Bypass Controller" paragraphs below. First paragraph is frequently called a "two-contactor-style" bypass - it typically does not allow power converter maintenance while the VFC is operating in bypass, because the power converter input remains energized, unless used with an input isolating switch and barrier. Second paragraph is for a "three-contactor-style" bypass - it allows power converter testing while the motor continues to operate at full speed in bypass, because the power converter is de-energized as well as being isolated from input and output power circuits. Either controller can be operated in manual or manual/automatic mode.

- D. Bypass Controller: Two-contactor-style bypass allows motor operation via the power converter or the bypass controller[; **with input isolating switch and barrier arranged to isolate the power converter and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode**].

In "Bypass Contactor" Subparagraph below, IEC-rated contactors are most often used for the bypass contactor in HVAC applications and for smaller motors, and they are usually smaller and less costly than equivalent NEMA-rated contactors. NEMA-rated contactors are most often used in industrial applications and for larger motors, where they must carry high motor inrush and full-load running currents. IEC-rated contactors are most often used in all applications for the isolating contactors, because they are only used to isolate the power converter and normally do not carry any current. Consult manufacturers for the types used for each.

1. Bypass Contactor: Load-break, [IEC] [NEMA]-rated contactor.
2. Output Isolating Contactor: Non-load-break, [IEC] [NEMA]-rated contactor.

Retain "Isolating Switch" Subparagraph below if retaining option in "Bypass Controller" Paragraph above.

3. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

There is some concern among various listed manufacturers that the input isolating contactor of the three-contactor bypass, without an isolating switch and a barrier between the power converter and the bypass, may not comply with NFPA 70 requirements for safe isolation of the power converter during energized maintenance, because the contactor is not a positive, lockable disconnecting means, and lack of a barrier can lead to accidental contact with live parts in the bypass. Consult authorities having jurisdiction if this is a concern and if retaining "Bypass Controller" Paragraph below.

- E. Bypass Controller: Three-contactor-style bypass allows motor operation via the power converter or the bypass controller[; **with input isolating switch and barrier**] arranged to isolate the power converter input and output and permit safe testing[**and troubleshooting**] of the power converter, both energized and de-energized, while motor is operating in bypass mode.

1. Bypass Contactor: Load-break, [IEC] [NEMA]-rated contactor.
2. Input and Output Isolating Contactors: Non-load-break, [IEC] [NEMA]-rated contactors.

Retain "Isolating Switch" Subparagraph below if retaining first option in last "Bypass Controller" Paragraph above.

3. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

First option in "Bypass Contactor Configuration" Paragraph below is for full-voltage starting; second option is for reduced-voltage starting. For large horsepower motors, consider using a reduced-voltage bypass controller instead of a full-voltage controller. Some listed manufacturers also offer reduced-voltage, solid-state controllers as a bypass option; consult manufacturers if this is a preference. See "Reduced-Voltage Bypass Contactors" Article in the Evaluations for additional information.

- F. Bypass Contactor Configuration: [**Full-voltage (across-the-line)**] [**Reduced-voltage (autotransformer)**] <Insert type> type.
 1. NORMAL/BYPASS selector switch.

Retain first subparagraph below only if retaining automatic and manual "Bypass Mode" Paragraph above.

2. HAND/OFF/AUTO selector switch.
3. NORMAL/TEST Selector Switch: Allows testing and adjusting of VFC while the motor is running in the bypass mode.
4. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors**].
 - a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
 - b. Power Contacts: Totally enclosed, double break, and silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
5. Control Circuits: [120] <Insert number>-V ac; obtained from [**integral CPT, with primary and secondary fuses**] <Insert source of control power>, with [CPT] [**control power source**] of sufficient capacity to operate all integral devices and remotely located pilot, indicating, and control devices.

Retain "CPT Spare Capacity" Subparagraph below if retaining "CPT" option in "Control Circuits" Subparagraph above and spare CPT capacity is required. Spare capacity is normally available in 100-VA increments. Consult manufacturers for maximum spare capacity and for available CPT sizes for different NEMA and enclosure sizes, because adding spare capacity and an oversized CPT may require using an enlarged enclosure.

- a. CPT Spare Capacity: [50] [100] [200] <Insert number> VA.

Manufacturers typically integrate overload functions into the microprocessors of VFCs and use separate thermal or solid-state overload relays only if specifying a bypass system. Retain one or more of first three subparagraphs below if specifying a bypass system. If retaining more than one, show on Drawings where each type is required. See Editing Instruction No. 6 and "Overload Protection" Article in the Evaluations for additional guidance.

6. Overload Relays: NEMA ICS 2.
 - a. Melting-Alloy Overload Relays:
 - 1) Inverse-time-current characteristic.
 - 2) [**Class 10**] [**Class 20**] [**Class 30**] tripping characteristic.
 - 3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - b. Bimetallic Overload Relays:
 - 1) Inverse-time-current characteristic.
 - 2) [**Class 10**] [**Class 20**] [**Class 30**] tripping characteristic.
 - 3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

Retain one or both of first two subparagraphs below if applicable. See Editing Instruction No. 7 and "Bimetallic Overload Relays" Article in the Evaluations for guidance and warnings.

- 4) Ambient compensated.

- 5) Automatic resetting.
- c. Solid-State Overload Relays:
- 1) Switch or dial selectable for motor-running overload protection.
 - 2) Sensors in each phase.
 - 3) **[Class 10] [Class 20] [Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

Retain one or both of first two subparagraphs below if applicable. These are optional, added-cost features.

- 4) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
- 5) Analog communication module.

Retain first subparagraph below if alarm contacts on overload relays are required for local or remote alarm indication of a tripped overload relay.

- d. **[NC] [NO]** isolated overload alarm contact.
- e. External overload reset push button.

2.5 OPTIONAL FEATURES

Optional feature types and quantities vary considerably among VFC manufacturers. Consult manufacturers for availability and limitations. Features vary according to VFC and motor characteristics and the driven-equipment operating criteria. Retain applicable features in this article; insert others to suit Project. Indicate requirements for and quantities of optional features on Drawings if not included here. These features are normally added-cost items. See "Optional Features" Article in the Evaluations for additional guidance, and consult manufacturers for availability of, and limitations on, other options.

Retain "Multiple-Motor Capability" Paragraph below if Project requires multiple motors controlled from a single VFC and controller redundancy is unnecessary.

- A. Multiple-Motor Capability: VFC suitable for variable-speed service to multiple motors. Overload protection shuts down VFC and motors served by it, and generates fault indications, when overload protection activates.

Retain one of three subparagraphs below, or more than one if required for separate VFCs; indicate on Drawings where each type is required. Other multimotor options are available from some listed manufacturers; consult manufacturers if other combinations are required.

1. Configure to allow two or more motors to operate simultaneously at the same speed; separate overload relay for each controlled motor.
2. Configure to allow two motors to operate separately; operator selectable via local or remote switch or contact closures; single overload relay for both motors; separate output magnetic contactors for each motor.

Retaining subparagraph below requires retaining and properly revising "Bypass Systems" Article to support this configuration. Consult manufacturers for more information.

3. Configure to allow two motors to operate simultaneously and in a lead/lag mode, with one motor operated at variable speed via the power converter and the other at constant speed via the bypass controller; separate overload relay for each controlled motor.
- B. Damper control circuit with end of travel feedback capability.
 - C. Sleep Function: Senses a minimal deviation of a feedback signal and stops the motor. On an increase in speed-command signal deviation, VFC resumes normal operation.
 - D. Motor Preheat Function: Preheats motor when idle to prevent moisture accumulation in the motor.
 - E. Firefighter's Override (Smoke Purge) Input: On a remote contact closure from **[the firefighter's control station] [smoke-control fan controller] <Insert location>**, this password-protected input:
 1. Overrides all other local and external inputs (analog/digital, serial communication, and all keypad commands).

Retain one of first two subparagraphs below. First subparagraph is for VFCs without a bypass system; second is for VFCs with a bypass system and the bypass will be used for this function. In first subparagraph, coordinate preset speed with pressure rating of the ventilation system. Consider requiring final speed setting to be determined during commissioning, testing, and balancing of the ventilation system. Ensure that ducted systems are designed to tolerate the higher pressures generated by the full or preset speed settings.

2. Forces VFC to operate motor, without any other run or speed command, at a field-adjustable, preset speed.
3. Forces VFC to transfer to Bypass Mode and operate motor at full speed.
4. Causes display of Override Mode on the VFC display.
5. Reset VFC to normal operation on removal of override signal [**automatically**] [**manually**].

If retaining "Remote Indicating Circuit Terminals" Paragraph below, consider adding Specifications for remote indicating devices.

- F. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.
- G. Remote digital operator kit.
- H. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer[**and a notebook computer**].
- I. **<Insert optional feature>**.

2.6 ENCLOSURES

- A. VFC Enclosures: NEMA 250, to comply with environmental conditions at installed location.

See "Enclosures" Article in the Evaluations for discussion of enclosure types. Coordinate subparagraphs below with Drawings by identifying the designated areas on plans or by including the required enclosure types. Enclosure materials and finishes may be added to the Section Text. Availability of some enclosure types is limited by type and rating of controller; special accommodations and accessories (e.g., powered/filtered ventilation) may be required for some enclosure types. Consult manufacturers for availability of, and limitations on, enclosures other than NEMA 250, Type 1. VFCs are not usually available in explosion-proof enclosures.

1. Dry and Clean Indoor Locations: **[Type 1] <Insert type>**.
2. Outdoor Locations: **[Type 3R] [Type 4X] <Insert type>**.
3. **[Kitchen] [Wash-Down] Areas: [Type 4X] <Insert type>, [stainless steel] <Insert material>**.
4. Other Wet or Damp Indoor Locations: **[Type 4] <Insert type>**.
5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
6. **<Insert enclosure requirements>**.

Retain "Plenum Rating" Paragraph below when the VFC will be installed in plenums (e.g., in the air stream inside an air-handling unit) or in a space used for environmental air (e.g., above a suspended ceiling used for return air). Some authorities having jurisdiction require that a label verifying the rating be prominently displayed on the VFC enclosure.

- B. Plenum Rating: UL 1995; NRTL certification label on enclosure, clearly identifying VFC as "Plenum Rated."

2.7 ACCESSORIES

Accessories listed in this article are limited in application by VFC and enclosure types; accessories in the first five paragraphs below apply primarily to VFCs with bypass systems. Retain applicable accessories below. Indicate requirements for and quantities of accessories on Drawings. See "Accessories" Article in the Evaluations for additional guidance; consult manufacturers for availability of, and limitations on, other accessories.

- A. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in VFC enclosure cover unless otherwise indicated.
 1. Push Buttons, Pilot Lights, and Selector Switches: **[Heavy] [Standard]-duty, [oiltight] type**.
 - a. Push Buttons: **[Covered] [Lockable] [Recessed] [Shielded] [Shrouded] [Unguarded] types; [maintained] [momentary]**.
 - b. Pilot Lights: **[Incandescent] [LED] [Neon] [Resistor] [Transformer] types; <Insert color(s)>; push to test**.
 - c. Selector Switches: **[Rotary] <Insert description> type**.

Stop and lockout push-button stations are no longer allowed by NFPA 70 as a means of isolating controllers or motors for personnel safety during maintenance; however, they are still required by some end users and Owners. Retain subparagraph below only if required by the end user or Owner.

- d. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.

- B. **[NC] [NO] [Reversible NC/NO]** bypass contactor auxiliary contact(s).
- C. Control Relays: Auxiliary and adjustable **[pneumatic] [solid-state]** time-delay relays.

Features in "Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays" Paragraph below provide one method of protecting against input circuit anomalies while in the bypass mode. They are available in individual relays or combined into a single multipurpose relay, and they would only be required if retaining "Bypass Systems" Article. Because features in paragraph below may not be available from all listed manufacturers, other methods of providing redundant control of motor loads served may be required; consult manufacturers for availability. Consider specifying phase-failure relays for single-phasing protection when fuses are retained with the bypass feature if solid-state overload relays are not specified.

- D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays:
Solid-state sensing circuit with isolated output contacts for hard-wired connections.
Provide adjustable undervoltage, overvoltage, and time-delay settings.
 - 1. Current Transformers: Continuous current rating, basic impulse insulating level (BIL) rating, burden, and accuracy class suitable for connected circuitry. Comply with IEEE C57.13.
- E. Supplemental **[Analog] [Digital]** Meters:
 - 1. Elapsed-time meter.
 - 2. Kilowatt meter.
 - 3. Kilowatt-hour meter.
- F. Breather and drain assemblies, to maintain interior pressure and release condensation in NEMA 250, **[Type 4] [Type 4X] [Type 12] <Insert type>** enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- G. Space heaters, with NC auxiliary contacts, to mitigate condensation in NEMA 250, **[Type 3R] [Type 4X] [Type 12] <Insert type>** enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- H. Cooling Fan and Exhaust System: For NEMA 250, **[Type 1] [Type 12] <Insert enclosure type>**; UL 508 component recognized: Supply fan, with **[composite] [stainless steel] <Insert material>** intake and exhaust grills **[and filters]**; **[120] <Insert number>** -V ac; obtained from **[integral CPT] <Insert source of control power>**.
- I. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.

Indicate quantities of spare control-wiring terminal blocks on Drawings.

- J. Spare control-wiring terminal blocks**;** **unwired]** **;** **wired]**.
 - 1. **<Insert accessory>**.

2.8 SOURCE QUALITY CONTROL

NEMA ICS 61800-2 includes acceptance testing by manufacturer of VFCs completely assembled and wired, before shipment from the factory.

- A. Testing: Test and inspect VFCs according to requirements in [**NEMA ICS 61800-2**] <**insert standard**>.
 - 1. Test each VFC while connected to [**its specified motor**] [**a motor that is comparable to that for which the VFC is rated**].
 - 2. Verification of Performance: Rate VFCs according to operation of functions and features specified.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- B. VFCs will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, surfaces, and substrates to receive VFCs, with Installer present, for compliance with requirements for installation tolerances, <**insert Project-specific conditions**,> and other conditions affecting performance.
- B. Examine VFC before installation. Reject VFCs that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for conduit systems to verify actual locations of conduit connections before VFC installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 HARMONIC ANALYSIS STUDY

- A. Perform a harmonic analysis study to identify the effects of nonlinear loads and their associated harmonic contributions on the voltages and currents throughout the electrical system. Analyze [**possible**] [**designated**] operating scenarios, including recommendations for VFC input filtering to limit TDD and THD(V) [**at each VFC**] [**at the defined PCC**] to specified levels.
- B. Prepare a harmonic analysis study and report complying with IEEE 399 and NETA Acceptance Testing Specification.

3.3 INSTALLATION

- A. Coordinate layout and installation of VFCs with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Contractor shall make all necessary field measurements to verify that equipment shall fit in allocated space in full compliance with minimum required clearances specified in local codes and standards.
- C. Examine installation area to assure there is enough clearance to install equipment.
- D. Verify that equipment is ready to install.
- E. Verify that required utilities are available, in proper location and ready for use.
- F. Beginning of installation means installer accepts conditions.
- G. Wall-Mounting Controllers: Install VFCs on walls with tops at uniform height and with disconnect operating handles not higher than **79 inches (2000 mm)** above finished floor unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

Retain "Floor-Mounting Controllers" Paragraph below for equipment supported on slabs-on-grade. If installing VFCs on concrete bases, ensure that their disconnect operating handles will not be higher than **79 inches (2000 mm)** above finished floor.

- H. Floor-Mounting Controllers: Install VFCs on **4-inch (100-mm)** nominal thickness concrete base. Comply with requirements for concrete base specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch (450-mm)** centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.

Retain first paragraph below for equipment supported on roofs.

- I. Roof-Mounting Controllers: Install VFC on roofs with tops at uniform height and with disconnect operating handles not higher than **79 inches (2000 mm)** above finished roof surface unless otherwise indicated, and by bolting units to curbs or mounting on freestanding, lightweight, structural-steel channels bolted to curbs. Seal roof penetrations after raceways are installed.

1. Curbs and roof penetrations are specified in Section 077200 "Roof Accessories."
2. Structural-steel channels are specified in Section 260529 "Hangers and Supports for Electrical Systems."

Retain "Seismic Bracing" Paragraph below if seismic controls are Project requirement. Coordinate with Drawings and Sections specifying vibration and seismic controls.

- J. Seismic Bracing: Comply with requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- K. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

Retain first four paragraphs below, as appropriate, to coincide with retained VFC features and attributes.

- L. Install fuses in each fusible-switch VFC.
- M. Install fuses in control circuits if not factory installed. Comply with requirements in Section 262813 "Fuses."
- N. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.
- O. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.
- P. Tighten bus-assembly joints with torque wrench or similar tool recommended by bus assembly manufacturer. Tighten joints again after bus assemblies have been energized for 30 days.
- Q. Connect bus assemblies and components to wiring system and to ground as indicated and instructed by manufacturer.
- R. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those in specified standards.
- S. Submit torque values for all connections with a torque schedule and witness signature.
- T. Comply with NECA 1.

3.4 IDENTIFICATION

- A. Identify VFCs, components, and control wiring. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 2. Label each VFC with engraved nameplate.
 3. Label each enclosure-mounted control and pilot device.

If specific operational procedures are required in emergency situations, specify below. Show specific information to be included in framed instructions on Drawings; retain paragraph below if required.

- B. Operating Instructions: Frame printed operating instructions for VFCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VFC units.

3.5 CONTROL WIRING INSTALLATION

Retain this article if applicable or if remote control or indication is required.

- A. Install wiring between VFCs and remote devices[**and facility's central-control system**]. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect selector switches and other automatic control devices where applicable.
 - 1. Connect selector switches to bypass only those manual- and automatic control devices that have no safety functions when switches are in manual-control position.
 - 2. Connect selector switches with control circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.6 FIELD QUALITY CONTROL

See Editing Instruction No. 10 in the Evaluations for guidance on the level of field quality control that would be appropriate for Project. Retain one of first two paragraphs below to identify who shall perform tests and inspections. Retain and edit "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first two paragraphs below to describe tests and inspections to be performed.

C. Acceptance Testing Preparation:

1. Test insulation resistance for each VFC element, bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

D. Tests and Inspections:

1. Inspect VFC, wiring, components, connections, and equipment installation. [**Test and adjust controllers, components, and equipment.**]
2. Test insulation resistance for each VFC element, component, connecting motor supply, feeder, and control circuits.
3. Test continuity of each circuit.

In first subparagraph below, the 10 percent voltage variation is a functional issue. Where ASHRAE 90.1 is Project's applicable energy code, further restrictions in voltage drop are required.

4. Verify that voltages at VFC locations are within 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify DEN Project Manager before starting the motor(s).
5. Test each motor for proper phase rotation.
6. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

NETA Acceptance Testing Specification allows three methods to test and inspect bolted electrical connections for high resistance; the infrared (thermographic) method is the most thorough and costly. Retain "Initial Infrared Scanning" Subparagraph below if this method is preferred.

8. Perform the following infrared (thermographic) scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each VFC. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each VFC 11 months after date of Substantial Completion.
 - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

E. VFCs will be considered defective if they do not pass tests and inspections.

Retain paragraph below if tests and inspections are performed by Contractor or manufacturer's field-service representative engaged by Contractor.

- F. Prepare test and inspection reports, including a certified report that identifies the VFC and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.7 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor in performing startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. **<Insert startup steps if any>**.

3.8 ADJUSTING

Retain applicable paragraphs below to correspond to selections made in Part 2.

- A. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

First two paragraphs below pertain primarily to VFCs with bypass systems. Retain if retaining "Bypass Systems" Article.

- B. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.
- C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to six times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify DEN Project Manager before increasing settings.
- D. Set the taps on reduced-voltage autotransformer controllers.

Retain option in first paragraph below unless settings are included on Drawings.

- E. Set field-adjustable circuit-breaker trip ranges[**as specified in Section 260573 "Overcurrent Protective Device Coordination Study."**]
- F. Set field-adjustable pressure switches.

3.9 PROTECTION

Retain this article if retaining "Delivery, Storage, and Handling" Article and if retaining space heaters in "Accessories" Article.

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until controllers are ready to be energized and placed into service.
- B. Replace VFCs whose interiors have been exposed to water or other liquids prior to Substantial Completion.
- C. Provide final protection to ensure that moisture does not enter assembly.

3.10 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris. Repair damaged finish to match original finish.

3.11 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor with training Owner's maintenance personnel to adjust, operate, reprogram, and maintain VFCs.
 - 1. Train Owner's maintenance personnel on procedures and schedules for starting up and shutting down, troubleshooting, servicing, and maintaining equipment and schedules.
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

3.12 COMISSIONING

- A. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of bus assembly including joints and plug-in units.
 - 1. Use an infrared scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
 - 2. Perform two follow-up infrared scans of bus assembly, one at four months and the other at 11 months after Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 262923

Copyright 2012 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 263100 - PHOTOVOLTAIC COLLECTORS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. PV laminates (cells laminated into rigid sheets, with connecting cables).
 - 2. PV modules (laminates in mounting frames).
 - 3. Charge controllers.
 - 4. Inverters.
 - 5. Mounting structures.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. CEC: California Energy Commission.

- B. ETFE: Ethylene tetrafluoroethylene.
- C. FEP: Fluorinated ethylene propylene.
- D. IP Code: Required ingress protection to comply with IEC 60529.
- E. MPPT: Maximum power point tracking.
- F. PTC: USA standard conditions for PV.
- G. PV: Photovoltaic.
- H. STC: Standard Test Conditions defined in IEC 61215.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for PV panels.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For PV modules.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Detail fabrication and assembly.
 - 4. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Sample Warranty: For manufacturer's special materials and workmanship warranty and minimum power output warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For PV modules to include in operation and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 WARRANTY

When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Manufacturer's Special Materials and Workmanship Warranty: Manufacturer agrees to repair or replace components of PV modules that fail in materials or workmanship within specified warranty period.
 - 1. Manufacturer's materials and workmanship warranties include, but are not limited to, the following:
 - a. Faulty operation of PV modules.
 - b. <Insert failure modes>.

Verify available warranties and warranty periods for modules.

- 2. Warranty Period: Minimum [two (2)] [five (5)] <Insert number> years from date of Substantial Completion.

Verify available warranties and warranty periods for specified minimum power output. The percentage maintained may include two ranges for different time periods.

- B. Manufacturer's Special Minimum Power Output Warranty: Manufacturer agrees to repair or replace components of PV modules that fail to exhibit the minimum power output within specified warranty period. Special warranty, applying to modules only, applies to materials only, on a prorated basis, for period specified.
 - 1. Manufacturer's minimum power output warranties include, but are not limited to, the following warranty periods, from date of Substantial Completion:
 - a. Specified minimum power output to [80] <Insert number> percent or more, for a period of [25] <Insert number> years.
 - b. <Insert additional minimum power output special warranty>.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 MANUFACTURED UNITS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aleo Solar.
2. BP Solar USA.
3. Canadian Solar.
4. ET Solar.
5. Evergreen Solar, Inc.
6. GE Energy; General Electric Company.
7. Kaneka Corporation.
8. Kyocera International, Inc.
9. Mitsubishi Electric Corporation.
10. REC Solar US LLC.
11. Sanyo North America Corporation.
12. Schott Solar.
13. Sharp Electronics Corporation.
14. SunPower Corporation.
15. Suntech Power.
16. Trina Solar Limited.
17. United Solar Ovonic LLC.
18. Yingli Green Energy Holding Co., Ltd.
19. **<Insert manufacturer's name>.**
20. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. NRTL (Nationally Recognized Testing Laboratory) Listing: Entire assembly shall be listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for electrical and fire safety, [**Class A**] [**Class C**], according to UL 1703.
- B. FM approved for NFPA 70, Class 1, Division 2, Group C and Group D hazardous locations.

2.3 SYSTEM DESCRIPTION

Retain "Grid-Tied PV System" Paragraph below if the energy system will be required to be connected to the electrical utility grid. Retain options and delete insert note as required.

A. Grid-Tied PV System:

1. Connected via a utility meter to the electrical utility.
2. An array of [**six (6)**] <Insert number> modules to generate a total nominal [**1000**] <Insert value> rated W.
3. System Components:
 - a. Cell materials.
 - b. PV modules.
 - c. Array frame.
 - d. Charge controller.
 - e. Inverter.
 - f. Overcurrent protection/combiner box.
 - g. Mounting structure.
 - h. Utility meter.
 - i. <Insert component>.

B. Battery-Storage PV System:

1. Connected to a battery bank to provide electricity to Project.
2. An array of [**six (6)**] <Insert number> modules to generate a total nominal [**1000**] <Insert value> rated W.
3. System Components:
 - a. Cell materials.
 - b. PV modules.
 - c. Array frame.
 - d. Charge controller.
 - e. Inverter.
 - f. Overcurrent protection/combiner box.
 - g. Mounting structure.
 - h. Battery charge controller(s).
 - i. Batteries.
 - j. Battery-storage structure.

2.4 MANUFACTURED UNITS

Retain one of six "Cell Materials" paragraphs below. Retain one of first five for thin-film cells; retain sixth for wafer crystalline silicon (c-Si) cells.

- A. Cell Materials: Amorphous silicon (a-Si).
- B. Cell Materials: Copper indium (di)selenide (CIS).
- C. Cell Materials: Copper indium gallium (di)selenide (CIGS).
- D. Cell Materials: Cadmium telluride (CdTe).
- E. Cell Materials: Cadmium sulfide.

- F. Cell Materials: [**Polycrystalline**] [**Monocrystalline**].
 - 1. c-Si.
 - 2. Gallium arsenide (GaAs).
- G. Module Construction:
 - 1. Nominal Size: **32 inches** (800 mm) wide by **64 inches** (1600 mm) long.
 - 2. Weight: **42.8 lb** (19.4 kg).
- H. Insulating Substrate Film: [**Flexible**] [**Rigid**], [**polyester**] [**polyimide**].
- I. Conducting Substrate Film: [**Flexible**] [**Rigid**] [**Fluoropolymer**], [**ETFE**] [**FEP**].
- J. Encapsulant: Ethyl vinyl acetate.

Retain one of six "Front Panel" paragraphs below.

- K. Front Panel: Fully tempered glass.
- L. Front Panel: **0.125-inch-** (3.2-mm-) thick glass.
- M. Front Panel: Low iron glass.
- N. Front Panel: Antireflective coating glass.
- O. Front Panel: Laminating film.
- P. Front Panel: Laminating material.

Retain one of four "Backing Material" paragraphs below.

- Q. Backing Material: Tempered glass.
- R. Backing Material: **0.125-inch-** (3.2-mm-) thick glass; <**Insert color**>.
- S. Backing Material: Polyester film.
 - 1. Layers: <**Insert number**>.
 - 2. Color: [**White**] <**Insert color**>.
- T. Backing Material: PVC film.
 - 1. Layers: <**Insert number**>.
 - 2. Color: [**White**] <**Insert color**>.
- U. Bypass Diode Protection: Internal.
- V. Junction Box:
 - 1. Size: **1.56 by 3.96 by 0.52 inch** (39.6 by 100.6 by 13.2 mm).

2. Fully potted, vandal resistant.
3. IP Code: **[IP65] [IP66] [IP67] <Insert IP code designation>**.
4. Flammability Test: UL 1703.

W. Output Cabling:

1. **[0.158 inch (4 mm)] <Insert dimension>**.
2. Quick, multiconnect, polarized connectors.
3. Two-Conductor Harness: No traditional return wire is needed from the end of a row back to the source combiner.

X. Series Fuse Rating: **<Insert amperage>**.

2.5 CAPACITIES AND CHARACTERISTICS

A. Minimum Electrical Characteristics:

1. Rated Open Circuit Voltage (V_{oc}): **<Insert V dc>**.
2. Maximum System Voltage: **<Insert V dc>**.
3. Maximum Power at Voltage (V_{pm}): **<Insert V dc>**.
4. Short-Circuit Temperature Coefficient: **<Insert mA/deg C>**.
5. Rated Short-Circuit Current (I_{sc}): **<Insert amperage>**.
6. Maximum System: **<Insert V dc>**.
7. Rated Operation Current (I_{mp}): **<Insert amperage>**.
8. Maximum Power at STC (P_{max}): **<Insert watts>**.

B. Additional Electrical Characteristics:

1. PTC Rating: **<Insert watts>**.
2. Peak Power per Unit Area: **<Insert watts>**.
3. Tolerance of Pmax: **<Insert number>** percent.
4. Minimum Peak Power: **<Insert watts>**.
5. Series Fuse Rating: **<Insert amperage>**.
6. Module Efficiency: **<Insert number>** percent.
7. Temperature Cycling Range: **<Insert deg C>**.
8. Humidity, Freeze, Damp Heat Condition: **<Insert number>** percent RH.
9. Wind Loading or Surface Pressure: **<Insert lbf/sq. ft. (N/sq. m)>**.
10. Maximum Distortion Angle: **<Insert degrees>**.
11. Hailstone Impact Withstand: **<Insert inches (mm)>** diameter at **<Insert mph (km/h)>** wind velocity.
12. Series Fuse Rating: **<Insert amperage>**.

C. Normal Operating Temperature Characteristics (NOTC):

1. Temperature at Nominal Operating Cell Temperature: **<Insert deg C>**.
2. Temperature Coefficient (NOTC P_{max}): **<Insert deg C>**.
3. Temperature Coefficient (NOTC V_{oc}): **<Insert deg C>**.
4. Temperature Coefficient (NOTC I_{sc}): **<Insert deg C>**.
5. Temperature Coefficient (NOTC V_{mp}): **<Insert deg C>**.

6. Temperature Coefficient (NOTC I_{mp}): **<Insert deg C>**.

2.6 MODULE FRAMING

- A. PV laminates mounted in anodized extruded-aluminum frames.

1. Entire assembly UL listed for electrical and fire safety, **[Class A] [Class C]**, according to UL 1703, complying with IEC 61215.
2. Frame strength exceeding requirements of certifying agencies in subparagraph above.

Retain one of three "Finish" subparagraphs below.

3. Finish: Anodized aluminum.
 - a. Alloy and temper recommended by framing manufacturer for strength, corrosion resistance, and application of required finish.
 - b. Color: As indicated by manufacturer's designations.
4. Finish: High-performance organic finish.
 - a. Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent PVC resin by weight.
 - b. Color: As indicated by manufacturer's designations.
5. Finish: Baked-enamel finish.
 - a. Color: As indicated by manufacturer's designations.

2.7 ARRAY CONSTRUCTION

- A. Framing:

Retain one of three options in "Material" Subparagraph below.

1. Material: **[Extruded aluminum] [Galvanized steel] [Coated steel]**.
2. Maximum System Weight: Less than **4 lb/sq. ft.** (19.53 kg/sq. m).
3. Minimum Distance to Connectors: **<Insert inches (mm)>**.
4. Raceway Cover Plates: **[Plastic] [Aluminum] [Galvanized steel]**.

- B. Flat-Roof Mounting:

1. No roof penetrations.
2. Self-ballasting.
3. Wind-tunnel tested to **110-mph** (160-km/h) wind.
4. Service Life: **[25] <Insert number>** years.
5. Freestanding system.

2.8 CHARGE CONTROLLER

A. Charge Controller Electrical Characteristics:

1. Output Current Rating: **<Insert amperage>**.
2. Nominal Battery Voltage: **<Insert V dc>**.
3. PV Maximum Open Circuit Voltage: **<Insert V dc>**.
4. Equalization Voltage: **<Insert V dc>**.
5. Voltage Step-Down Capability: **<Insert V dc>**.
6. Power Conversion Efficiency: **<Insert number>** percent.

B. Charge controllers shall have the following:

Retain subparagraphs below to suit Project.

1. Digital display.
2. Data logging.
3. Remote interface.
4. External sensors.
5. Temperature compensation.

2.9 INVERTER

Retain one of two "Control Type" paragraphs below.

- A. Control Type: Pulse width modulation control.
- B. Control Type: Maximum power point tracker control.
- C. Inverter Electrical Characteristics:

Retain inverter characteristics below to suit Project.

1. Maximum Recommended PV Input Power: **<Insert kilowatts>**.
2. Maximum Voc: **<Insert V dc>**.
3. PV Start Voltage: **<Insert V dc>**.
4. MPPT Voltage Range: **<Insert V dc>**.
5. Maximum Input Current: **<Insert amperage>**.
6. Number of String Inputs: **<Insert number>**.
7. Number of Independent MPPT Circuits: **<Insert value>**.
8. Nominal Output Voltage: **<Insert V dc>**.
9. CEC Rated Power: **<Insert kilowatts>**.
10. Nominal Output Voltage: **<Insert V ac>**.
11. Maximum Output Current: **<Insert amperage>**.
12. Peak Efficiency: **<Insert number>** percent.
13. CEC Weighted Efficiency: **<Insert number>** percent.
14. CEC Night Tare Loss: **<Insert watts>**.
15. DC/AC Terminal Range (AWG): **<Insert range of AWG values>**.
16. NEMA 250 Enclosure Rating: **<Insert amperage>**.

D. Operating Conditions:

1. Operating Ambient Temperatures: Minus 30 to plus 122 deg F (minus 35 deg C to plus 50 deg C).
2. Storage Temperature: Minus 40 to plus 122 deg F (minus 40 to plus 50 deg C).
3. Relative Humidity: 0 to 95 percent, noncondensing.
4. Altitude: 5500 feet (1677 m) above sea level.

Retain charge controller characteristics below to suit Project.

E. Charge controllers shall have the following:

1. Overcurrent protection.
2. Generator input breaker box.
3. Automatic transfer relay.
4. Digital display.
5. Transformer.
6. Disconnect switch.
7. Shunt controller.
8. Shunt regulator.
9. Surge overload protection.

F. Enclosure:

1. NEMA 250, Type 3R.
2. Enclosure Material: [**Galvanized steel**] [**Steel**].

Retain "Cooling Methods" Subparagraph below.

3. Cooling Methods:
 - a. Fan convection cooling.
 - b. Passive cooling.
4. Protective Functions:
 - a. AC over/under voltage.
 - b. AC over/under frequency.
 - c. Ground over current.
 - d. Overtemperature.
 - e. AC and dc overcurrent.
 - f. DC over voltage.
5. Standard liquid crystal display, four lines, 20 characters, with user display and on/off toggle switch.
6. Weight: 260 lb (118 kg).
7. Dimensions: 54 by 36 by 19 inches (137 by 91 by 48 cm).

Retain disconnection options below to suit Project.

G. Disconnects:

1. Low-voltage disconnect.
2. Low-voltage reconnect.
3. High-temperature disconnect.
4. High-temperature reconnect.

H. Regulatory Approvals:

1. IEEE 1547.1.
2. IEEE 1547.3.
3. UL 1741.

I. Characteristics:

1. Inverter Dimensions: **<Insert inches (mm)>**.
2. Inverter Weight: **<Insert lb (kg)>**.

2.10 SYSTEM OVERCURRENT PROTECTION

A. Combiner Box:

Retain "Fuses" or "Circuit Breakers" Subparagraph below.

1. Fuses: **<Insert amperage>**.
2. Circuit Breakers: **<Insert amperage>**.

2.11 MOUNTING STRUCTURES

- A. Roof Mount: Extruded aluminum, [**two (2)**] [**four (4)**] rails, tilt legs, and roof standoffs.
- B. Pole Mount: [**Top**] [**Panel tops**] [**Side**].
- C. Tracking Mounts: [**One (1)**] [**Two (2)**] axis.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrate areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Do not begin installation until mounting surfaces have been properly prepared.
- C. If preparation of mounting surfaces is the responsibility of another installer, notify DEN Project Manager of unsatisfactory preparation before proceeding.

- D. Examine modules and array frame before installation. Reject modules and arrays that are wet, moisture damaged, or mold damaged.
- E. Examine roofs, supports, and supporting structures for suitable conditions where PV system will be installed.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FIELD QUALITY CONTROL

Retain "Perform tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections with the assistance of a factory-authorized service representative.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- B. PV module will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

- A. METHOD OF PAYMENT
- B. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 263100

Copyright 2010 by The American Institute of Architects (AIA)

SECTION 263213 - ENGINE GENERATORS

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. The Contractor shall furnish and install all emergency generator system equipment, mounting hardware, etc., as required for complete installation as indicated on the drawings.
- B. Essential electrical system: Connect equipment, lighting and power systems as indicated. These circuits will receive power supply from engine generator unit when normal power fails.
- C. This Section includes packaged engine-generator sets for emergency standby power supply with the following features:

Adjust list below to suit Project.

- 1. **[Gas] [Diesel]** engine.
 - 2. **[Unit-mounted] [Remote-mounting]** cooling system.
 - 3. **[Unit-mounted] [Remote-mounting]** control and monitoring.
 - 4. Performance requirements for sensitive loads.
 - 5. Load banks.
 - 6. Outdoor enclosure.
- D. Related Sections include the following:

List below only products and equipment that the reader might expect to find in this Section but are specified elsewhere.

1. Section 263600 "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine-generator sets.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- E. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain abbreviation and terms that remain after this Section has been edited.

- A. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.
- B. LP: Liquid petroleum.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of packaged engine generator indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. In addition, include the following:
 1. Technical data on all components.
 2. Specification comparison.
 3. Thermal damage curve for generator.
 4. Time-current characteristic curves for generator protective device.
 5. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 1. Submit all components together to permit checking of entire system, coordination between components and coordination of sensing devices required for local and remote derangement signal annunciator.
 2. Dimensioned outline plan and elevation drawings of engine-generator set and other components specified.
 3. Design Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting vibration isolators and seismic restraints and

- for designing vibration isolation bases.
4. Vibration Isolation Base Details: Signed and sealed by a qualified professional engineer. Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include base weights.
 5. Wiring Diagrams: Power, signal, and control wiring.

Coordinate requirements for coordination drawings with DEN Project Manager.

C. Coordination Drawings:

1. Include floor plans and sections to show emergency generator system assembly layouts and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurement.

1.5 INFORMATIONAL SUBMITTALS

Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems."

Retain option below for diesel-engine generators with day tank.

A. Manufacturer Seismic Qualification Certification: Submit certification that **[day tank,]**engine-generator set, batteries, battery racks, accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. This definition is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Coordinate paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

B. Qualification Data: For **[installer] [manufacturer] [and] [testing agency]**.

Coordinate paragraph below with Part 2 "Source Quality Control" Article.

C. Source quality-control test reports.

See Editing Instruction No. 3 in the Evaluations for discussion about prototype-unit testing.

1. Certified summary of prototype-unit test report.
2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.

Retain first subparagraph below for generator sets specified to meet performance requirements and for generator sets serving sensitive loads.

3. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria for sensitive loads.
4. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.
5. Report of sound generation.

Retain first subparagraph below if required by authorities having jurisdiction. See "Application Considerations" Article in the Evaluations for more information.

6. Report of exhaust emissions showing compliance with applicable regulations.
7. Certified Torsional Vibration Compatibility: Comply with NFPA 110.

Retain first paragraph below if Contractor is responsible for field quality-control testing.

- D. Field quality-control test reports.
- E. Warranty: Special warranty specified in this Section.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 1. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.
 2. Owner instruction reports.
 3. Prorata warranty for batteries.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

Extra materials may not be allowed for publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Quantities below are examples only.

1. Fuses: One (1) for every ten (10) of each type and rating, but no fewer than one of each.
2. Indicator Lamps: Two (2) for every six (6) of each type used, but no fewer than two (2) of each.
3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

Revise subparagraph below to suit Project location.

1. Maintenance Proximity: Not more than **[four (4)] <Insert number>** hours' normal travel time from Installer's place of business to Project site.

Retain subparagraph below if Contractor is required to assume responsibility for engineering.

2. Engineering Responsibility: Preparation of data for vibration isolators and seismic restraints of engine skid mounts, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

- B. Manufacturer Qualifications: A qualified manufacturer. Maintain, within **[200 miles (321 km)] <Insert number of miles (kilometers)>** of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.

Retain first paragraph below if Contractor selects testing agency or Contractor is required to provide services of an independent testing agency in Part 3 "Field Quality Control" Article. Qualification requirements supplement those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL), and that is acceptable to authorities having jurisdiction.
1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- D. Source Limitations: Obtain packaged generator sets and auxiliary components through one source from a single manufacturer.

- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. Comply with ASME B15.1.
- G. Comply with NFPA 37.
- H. Comply with NFPA 70.

Retain paragraph below for healthcare facilities.

- I. Comply with NFPA 99.

Retain first paragraph below if generator is automatically started. See Editing Instruction No. 4 in the Evaluations.

- J. Comply with NFPA 110 requirements for Level [1] [2] emergency power supply system.
- K. Comply with UL 2200.

Retain paragraph below for state or local compliance.

- L. Engine Exhaust Emissions: Comply with applicable state and local government requirements.

Retain paragraph below for installations with critical noise-abatement requirements, particularly outdoor generator sets. Coordinate with noise-reduction features in the design, including those relating to cooling-air intake and discharge arrangement and muffler specification and its location and orientation as shown on Drawings.

- M. Noise Emission: Comply with **[applicable state and local government requirements]** <Insert Project criteria> for maximum noise level at **[adjacent property boundaries]** <Insert critical locations> due to sound emitted by generator set including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

1.9 PROJECT CONDITIONS

Delete first paragraph and subparagraphs below if no interruption of existing electrical service is required.

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.

2. Do not proceed with interruption of electrical service without DEN Project Manager's written permission.
- B. Environmental Conditions: Engine-generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:

Retain first option in subparagraph below if generator-set start time must be within NFPA 110 limits. Coordinate with Drawings.

1. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
2. Relative Humidity: 0 to 95 percent.
3. Altitude: 5,500 feet (1677 m) above sea level.

If unusual service conditions for equipment exist and cannot be eliminated, specify them in paragraph below. See Editing Instruction No. 5 in the Evaluations.

- C. Unusual Service Conditions: Engine-generator equipment and installation are required to operate under the following conditions:

Subparagraph below is an example only. Revise to list unusual conditions.

1. <Insert unusual condition>.

1.10 COORDINATION

- A. Coordinate size and location of concrete bases for package engine generators[**and remote radiators mounted on grade**]. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

Retain paragraph below for remote radiators located on roof.

- B. Coordinate size and location of roof curbs, equipment supports, and roof penetrations for remote radiators. These items are specified in Section 077200 "Roof Accessories."

1.11 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this Article are not less than remedies available to Owner under prevailing local laws. Coordinate with Section 016000 "Product Requirements."

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.

Verify available warranties for units and components and insert number below.

1. Warranty Period: Minimum [five (5)] <Insert number> years from date of Substantial Completion. Warranty shall cover unlimited replacement of

emergency generator modules during the warranty period.

2. Provide minimum **[three (3)] <Insert number>** year prorata warranty on engine-starting batteries.

1.12 MAINTENANCE SERVICE

Retain this Article for critical installations and consider including a provision for submitting a continuing maintenance agreement proposal. Revise starting date if required. Obtain a copy of maintenance agreement before retaining or editing below. Maintenance contracts may not be allowed for publicly funded projects.

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide **[twelve (12)] <Insert number>** months' full maintenance by skilled employees of manufacturer's designated service organization. Include quarterly exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for proper operation. Provide parts and supplies same as those used in the manufacture and installation of original equipment.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph below and list of manufacturers in this Article. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Caterpillar; Engine Div.
 2. Onan/Cummins Power Generation; Industrial Business Group.
 3. **<Insert manufacturer>**
 4. or approved equal.

2.2 ENGINE-GENERATOR SET

- A. Factory-assembled and -tested, engine-generator set.

- B. Mounting Frame: Maintain alignment of mounted components without depending on concrete foundation; and have lifting attachments.

Retain subparagraph below if rigging is required.

1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.

Coordinate paragraph and subparagraphs below with prototype test requirements in Part 1 "Informational Submittals" Article and in Part 2 "Source Quality Control" Article.

- C. Capacities and Characteristics:

1. Power Output Ratings: Nominal ratings as indicated[, **with capacity as required to operate as a unit as evidenced by records of prototype testing**].
2. Output Connections: Three-phase, [**three**] [**four**] wire.
3. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.

Retain paragraph and subparagraphs below for loads involving little or no sensitive electronic equipment, adjustable frequency drives, or uninterruptible power supply systems. See Evaluations.

- D. Generator-Set Performance:

1. Steady-State Voltage Operational Bandwidth: 3 percent of rated output voltage from no load to full load.
2. Transient Voltage Performance: Not more than 20 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within three seconds.
3. Steady-State Frequency Operational Bandwidth: 0.5 percent of rated frequency from no load to full load.
4. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
5. Transient Frequency Performance: Less than 5 percent variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within five seconds.
6. Output Waveform: At no load, harmonic content measured line to line or line to neutral shall not exceed 5 percent total and 3 percent for single harmonics. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
7. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 250 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to generator system components.

Below requires 10-second maximum start time under specific conditions and includes startup only, not load assumption.

8. Start Time: Comply with NFPA 110, Type 10, system requirements.

Retain paragraph and subparagraphs below for loads involving sensitive electronic equipment, significant nonlinear load elements, or uninterruptible power supply systems. Coordinate with "Governor" Paragraph in "Engine" Article and with "Generator, Exciter, and Voltage Regulator" Article. See Evaluations.

E. Generator-Set Performance for Sensitive Loads:

1. Oversizing generator compared with the rated power output of the engine is permissible to meet specified performance.
 - a. Nameplate Data for Oversized Generator: Show ratings required by the Contract Documents rather than ratings that would normally be applied to generator size installed.
2. Steady-State Voltage Operational Bandwidth: 1 percent of rated output voltage from no load to full load.

Some manufacturers may be required to provide an oversized engine-generator set in order to meet parameters in first subparagraph below. This could impact space, noise, ventilation, cooling, and other parameters. Verify performance of products if specific manufacturers are listed at the beginning of Part 2. Edit requirements below to suit actual Project load characteristics.

3. Transient Voltage Performance: Not more than 10 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within 0.5 second.
4. Steady-State Frequency Operational Bandwidth: Plus or minus 0.25 percent of rated frequency from no load to full load.
5. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
6. Transient Frequency Performance: Less than 2-Hz variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within three seconds.
7. Output Waveform: At no load, harmonic content measured line to neutral shall not exceed 2 percent total with no slot ripple. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
8. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 300 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to winding insulation or other generator system components.
9. Excitation System: Performance shall be unaffected by voltage distortion caused by nonlinear load.

Permanent magnet excitation in subparagraph below is a standard feature of some manufacturers' engine-generator sets larger than 200 kW.

- a. Provide permanent magnet excitation for power source to voltage regulator.

Retain subparagraph below if required start time is 10 seconds or less.

10. Start Time: Comply with NFPA 110, Type 10, system requirements.

2.3 ENGINE

Depending on NFPA 110 class and local codes, LP-gas standby may not be required for natural gas-fueled systems. Verify requirements with authorities having jurisdiction.

- A. Fuel: **[Fuel oil, Grade DF-2] [Natural gas with automatic LP-gas standby] [Natural gas]**.
 - 1. **<Insert specific fuel grade requirements.>**
- B. Rated Engine Speed: 1800 rpm.
- C. Maximum Piston Speed for Four-Cycle Engines: **2250 fpm** (11.4 m/s).
- D. Capable of operating at idle or light loads for extended periods of time.
- E. Lubrication System: The following items are mounted on engine or skid:
 - 1. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
 - 2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
 - 3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.
- F. Engine Fuel System:

Retain first two subparagraphs below for diesel-fueled engine; retain third subparagraph and associated subparagraphs for natural-gas- and LP-gas-fueled engine.

- 1. Main Fuel Pump: Mounted on engine. Pump ensures adequate primary fuel flow under starting and load conditions.
- 2. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.
- 3. Dual Natural Gas with LP-Gas Backup (Vapor-Withdrawal) System:
 - a. Carburetor.
 - b. Secondary Gas Regulators: One for each fuel type.
 - c. Fuel-Shutoff Solenoid Valves: One for each fuel source.
 - d. Flexible Fuel Connectors: One for each fuel source.
- 4. Equip fuel system with replaceable fuel filter elements arranged for easy removal without breaking any fuel line connections or disturbing fuel pumps or any other part of engine.
- 5. Locate all fuel filters in one accessible housing, ahead of injection pumps to thoroughly filter fuel before it reaches pumps.
- 6. Use no screens or filters requiring cleaning or replacement of injection pumps or valve assemblies.

Retain paragraph below where required by NFPA 110, which prescribes engine water-jacket temperature requirements. Coordinate with Drawings for electrical supply.

- G. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with NFPA 110 requirements for Level 1 equipment for heater capacity.

Retain option in paragraph below that is consistent with steady-state tolerances and transient frequency tolerances of loads supplied. Retain second option for systems with sensitive loads. Coordinate with "Engine-Generator Set" Article.

- H. Governor: Fully enclosed electronic type governor with actuator capable of providing accurate speed control within 1 percent of rated speed, complete with panel-mounted electronic assembly with ramp generator, speed-sensing modules, and load-sharing features.

Retain one of two paragraphs and associated subparagraphs below. Coordinate with Drawings. See Editing Instruction No. 6 in the Evaluations.

- I. Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine-generator-set mounting frame and integral engine-driven coolant pump.
1. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.

Retain one of first two subparagraphs below. Retain second if containment of coolant expansion by radiator is marginal or inadequate. Coordinate with Drawings.

2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
 3. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
 4. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
 5. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.
 - a. Rating: **50-psig** (345-kPa) maximum working pressure with coolant at **180 deg F** (82 deg C), and noncollapsible under vacuum.
 - b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.
- J. Cooling System: Closed loop, liquid cooled, with remote radiator and integral engine-driven coolant pump.
1. Configuration: **[Vertical]** **[Horizontal]** air discharge.
 2. Frame fabricated of heavy-gauge, hot-rolled steel.
 3. Capable of withstanding wind loads of 140 km/h 85 mph and high temperature changes.
 4. Radiator Core Tubes: Core constructed of non-corrosive materials consisting of

- brass tubes, copper fins and headers made of heavy-gauge brass with brass reinforcement plates.
5. Headers bolted to tanks with full neoprene cork gasketing to assure positive sealing.
 6. All exposed surfaces shall be metal treated for protection against corrosion with a zinc chromate prime coat prior to final painting.
 7. Provide venturi-type fan shroud.
 8. TEFC motor.
 9. Provide site glass mounted in top tank for vertical core. Provide surge tank with sight glass mounted horizontal core.

Retain one of first two subparagraphs below. Retain second if containment of coolant expansion by radiator is marginal or inadequate. Coordinate with Drawings.

10. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
11. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
12. Fan: Driven by **[multiple belts from engine shaft] [totally enclosed electric motor with sealed bearings]**.
13. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
14. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
15. Provide heavy duty core and fan guards.
16. Fill system with solution of 50-50 water and ethylene glycol anti-freeze to prevent freezing at temperatures as low as minus 30 degrees F (minus 35 degrees C).

Retain one of three "Muffler/Silencer" paragraphs below. Modify dBA requirement in second subparagraph to accommodate environment in which engine-generator set is operating. If unit is specified with an enclosure, consider specifying sound level requirements at specified distance from enclosure on each of four sides.

- K. Muffler/Silencer: Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements. Seamless, stainless steel, flexible, exhaust adapter for exhaust outlet to silencer.
1. Minimum sound attenuation of 25 dB at 500 Hz.
 2. Sound level measured at a distance of 10 feet (3 m) from exhaust discharge after installation is complete shall be **[85] <Insert number>** dBA or less.

Retain second option in paragraph below if filters may not be serviced as often as recommended. If air contaminant level is excessive, consult manufacturers to determine if special filtration of combustion air is needed.

- L. Air-Intake Filter: Heavy-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.

Select first option in paragraph below for smaller engine-generator sets. Retain second option for units 175 kW and larger.

M. Starting System: [12] [24]-V electric, with negative ground.

1. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in Part 1 "Project Conditions" Article.
2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.

Retain first option in subparagraph below if system description in Part 1 "Quality Assurance" Article specifies NFPA 110, Level 1 or 2; otherwise, retain second. See Editing Instruction No. 7 in the Evaluations.

3. Cranking Cycle: As required by NFPA 110 for system level specified.

First option in subparagraph below complies with NFPA 110 requirements. Second is a more conservative rule used for some industrial applications.

4. Battery: Adequate capacity within ambient temperature range specified in Part 1 "Project Conditions" Article to provide specified cranking cycle at least three times without recharging.

Coordinate subparagraph below with Drawings.

5. Battery Cable: Size as recommended by engine manufacturer for cable length indicated. Include required interconnecting conductors and connection accessories.

Retain first subparagraph below if compartment is required.

6. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater shall be arranged to maintain battery above 10 deg C regardless of external ambient temperature within range specified in Part 1 "Project Conditions" Article. Include accessories required to support and fasten batteries in place.
7. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.

Coordinate first subparagraph below with Section 263600 "Transfer Switches." Retain if battery charger is not specified to be integral with transfer switch.

8. Battery Charger: Current-limiting, automatic-equalizing and float-charging type. Unit shall comply with UL 1236 and include the following features:
 - a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.
 - b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 deg C to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.

- c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
- d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.

First subparagraph below covers sensing for safety indications on control and monitoring panel. NFPA 110 requires sensing for Level 1 systems and makes sensing optional for Level 2 systems. See Editing Instruction No. 4 in the Evaluations.

- e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
- f. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.

2.4 FUEL OIL STORAGE

Retain this Article for diesel-engine units.

- A. Comply with NFPA 30.
- B. Day Tank: Comply with UL 142, freestanding, factory-fabricated fuel tank assembly, with integral, float-controlled transfer pump and the following features:
 - 1. Containment: Integral rupture basin with a capacity of 150 percent of nominal capacity of day tank.
 - a. Leak Detector: Locate in rupture basin and connect to provide audible and visual alarm in the event of day-tank leak.

Revise hours in first subparagraph below or delete subparagraph and indicate capacity on Drawings. Coordinate with Drawings and NFPA 110 requirements.

- 2. Tank Capacity: **[As recommended by engine manufacturer for an uninterrupted period of 4 hours' operation at 100 percent of rated power output of engine-generator system without being refilled]** <Insert gallons (liters)>.
- 3. Fuel level gauge.
- 4. Float switch and solenoid valve to allow tank to fill when level drops below predetermined level.
- 5. Pump: Package unit with duplex fuel pump to provide automatic, self-refilling fuel supply system.
- 6. Pump Capacity: Exceeds maximum flow of fuel drawn by engine-mounted fuel supply pump at 110 percent of rated capacity, including fuel returned from engine.
- 7. Low-Level Alarm Sensor: Liquid-level device operates alarm contacts at 25 percent of normal fuel level.

Revise first subparagraph below or delete if not required. Coordinate with Part 2 "Control and Monitoring" Article.

8. High-Level Alarm Sensor: Liquid-level device operates alarm and redundant fuel shutoff contacts at midpoint between overflow level and 100 percent of normal fuel level.
9. Critical low level shutoff.
10. Piping Connections: Factory-installed fuel supply and return lines from tank to engine; local fuel fill, vent line, overflow line; and tank drain line with shutoff valve.

Subparagraph below is not in NFPA 110 minimum requirements.

11. Redundant High-Level Fuel Shutoff: Actuated by high-level alarm sensor in day tank to operate a separate motor device that disconnects day-tank pump motor. Sensor shall signal solenoid valve, located in fuel suction line between fuel storage tank and day tank, to close. Both actions shall remain in shutoff state until manually reset. Shutoff action shall initiate an alarm signal to control panel but shall not shut down engine-generator set.
12. Day tank construction: All welded steel atmospheric tank built in accordance with local codes and applicable standards.
 - a. Pipe thread connections:
 - 1) Supply to prime mover.
 - 2) Return from prime mover.
 - 3) Vent and drain with ball valve.
 - b. Provide a weatherproof, screened vent cap for field installation.
 - c. Provide inspection port on top.
 - d. Provide with a welded steel channel base.
 - e. Provide a removable steel protection cover for all day tank system components.
 - f. Factory leak test day tank at 5 PSI.
 - g. Steel containment basin:
 - 1) Minimum capacity: 110 percent of day tank.
 - 2) Provide leak detector that shall activate rupture alarm.
 - 3) Provide drain with ball valve.
 - 4) Provide with a welded steel channel base suitable for bolt attachment to concrete pad.
 - h. Provide interior corrosion protection consisting of an epoxy coating.
 - i. Provide exterior of day tank and interior and exterior of containment basin with a heavy duty industrial anti-corrosion coating and finish coat.
13. Solenoid valve, day tank:
 - a. 1 IN NPT, 100 PSI, normally closed, under control of level controller.
 - b. Provide an inlet shutoff valve.
14. Level controller, day tank: Self contained unit within a NEMA 1 box mounted on top of day tank.

- a. Electronic liquid level controller/indicator with functions to include:
 - 1) Adjustable differential pump/valve level control.
 - 2) Tank level indication.
 - 3) System alarms and manual operating controls.
 - b. Provide following control functions:
 - 1) "Auto-Off-Manual" fill control mode switch.
 - 2) "Press to test" fill control pushbutton.
 - 3) Adjustable differential pump/valve level control with output contacts for control of on-board solenoid valve and remote delivery system.
 - 4) Overflow cutout.
 - c. Provide following indication functions:
 - 1) Electric level gauge and condition indicator scaled in percent level and color coded and placarded to indicate system condition verses level.
 - d. LED lamp indicators for:
 - 1) Power available.
 - 2) Fill control not in auto.
 - 3) Tank filling.
 - 4) Low level alarm.
 - 5) High level alarm.
 - 6) Tank rupture.
 - e. Provide following outputs:
 - 1) Fill control start-stop.
 - 2) Low level alarm.
 - 3) High level alarm.
 - 4) Not-in auto.
 - 5) Tank rupture.
15. Duplex pump system: Automatic duplex pump controller and duplex pumps.
- a. Duplex pumps: Consist of two pumps, motors and accessories.
 - 1) Direct drive, positive displacement, hydraulic gear type with pressure loaded mechanical shaft seal.

Insert appropriate pump and motor data.

- 2) Motors: Dripproof, NEMA type B, continuous duty at 40 degC, 1800 RPM.
- 3) Pump pressure relief valve, adjustable type, vented back to tank.
- 4) Pump inlet fuel strainer, 60 mesh.
- 5) Pump shutoff ball valve.
- 6) Pump motor starter, full voltage type, non-reversing, with overload

- 7) relay and circuit breaker.
- 7) Control relays and control power transformer as required to operate pump motor starter from day tank control contacts.
- b. Duplex pump controller: Function to alternate operation of each pump on successive starts.
 - 1) Provide pump running indicators for each pump.
 - 2) Provide pump fail alarm indicator and output contacts.
 - 3) Provide mode control switch and control logic for automatic operation as:
 - 4) Pump 1 lead/pump 2 lag.
 - 5) Pump 2 lead/pump 1 lag.
 - 6) Both run.

Review day tank manufacturer's catalogs for additional accessories that may be necessary for your specific project.

16. Accessories:

- a. Provide 1 GPM hand operated pump with isolation ball valves on inlet and outlet and in-line check valve.
- b. Air cooled fuel oil cooler:
- c. Capacity: Coordinate requirements with Emergency Generator Manufacturer.

C. Base-Mounted Fuel Oil Tank: Factory installed and piped, complying with UL 142 fuel oil tank. Features include the following:

- 1. Tank level indicator.

Consult tank manufacturers about capacities available for size of set in Project.

- 2. Capacity: Fuel for [eight (8)] <Insert number> hours' continuous operation at 100 percent rated power output.
- 3. Vandal-resistant fill cap.

Determine applicable codes and regulations, and coordinate subparagraph below with Drawings.

- 4. Containment Provisions: Comply with requirements of authorities having jurisdiction.
- 5. Heavy gauge steel with top and bottom baffles.
- 6. Heavy gauge steel channel side supports.
- 7. Primer and enamel exterior to match engine generator unit.
- 8. Vent sized to tank. Withstand pressure of day tank shall exceed total developed static head imposed by vent.
- 9. 0.44 L/s 7 gpm pump and motor and float switches to control pump.
- 10. Double wall with alarm contact for rupture basin alarm. Provide contacts for remote alarm.
- 11. Solenoid valve to interface with remote transfer pumps.
- 12. Low level alarm float switch to indicate when operating supply is under 3 hours. Provide contacts for remote monitoring.

13. Provide control wiring in conduit from sub-base tank low level alarm to generator mounted control panel and remote derangement annunciator.

2.5 CONTROL AND MONITORING

This Article specifies the subsystem that monitors, protects, and controls the engine generator. See Editing Instruction No. 8 in the Evaluations.

Retain first paragraph below for automatically starting systems; retain second paragraph for manually starting systems.

- A. Automatic Starting System Sequence of Operation: When mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more separate automatic transfer switches initiate starting and stopping of generator set. When mode-selector switch is switched to the on position, generator set starts. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.
- B. Manual Starting System Sequence of Operation: Switching on-off switch on the generator control panel to the on position starts generator set. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.

Retain one of three paragraphs below to describe control and monitoring unit configuration. Coordinate retained paragraph with Drawings. Retain first paragraph unless special requirements justify significant extra cost of one of the other two configurations. See Evaluations.

- C. Configuration: Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common control and monitoring panel mounted on the generator set. Mounting method shall isolate the control panel from generator-set vibration.
- D. Configuration: Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common wall-mounted control and monitoring panel.
- E. Configuration: Operating and safety indications, protective devices, basic system controls, engine gages, instrument transformers, generator disconnect switch or circuit breaker, and other indicated components shall be grouped in a combination control and power panel. Control and monitoring section of panel shall be isolated from power sections by steel barriers. Panel features shall include the following:

Retain one of first two subparagraphs below to further define control and power panel in last paragraph above.

1. Wall-Mounting Cabinet Construction: Rigid, self-supporting steel unit complying

- with NEMA ICS 6. Power bus shall be copper. Bus, bus supports, control wiring, and temperature rise shall comply with UL 891.
2. Switchboard Construction: Freestanding unit complying with Section 262413 "Switchboards."
 3. Switchgear Construction: Freestanding unit complying with Section 262300 "Low-Voltage Switchgear."
 4. Current and Potential Transformers: Instrument accuracy class.

Retain first paragraph and associated subparagraphs below to specify minimum control and monitoring panel features. First is for standardized panels for automatically starting units. Coordinate with Drawings. See Editing Instruction No. 9 in the Evaluations.

- F. Indicating and Protective Devices and Controls: As required by NFPA 110 for Level [1] [2] system, and the following:

1. AC voltmeter.
2. AC ammeter.
3. AC frequency meter.
4. DC voltmeter (alternator battery charging).
5. Engine-coolant temperature gage.
6. Engine lubricating-oil pressure gage.
7. Running-time meter.
8. Ammeter-voltmeter, phase-selector switch(es).
9. Generator-voltage adjusting rheostat.

Two subparagraphs below are optional devices.

10. Fuel tank derangement alarm.
11. Fuel tank high-level shutdown of fuel supply alarm.
12. Fuel pressure gauge.

Retain subparagraph below for units with "generator-protector" feature.

13. Generator overload.

- G. Supporting Items: Include sensors, transducers, terminals, relays, and other devices and include wiring required to support specified items. Locate sensors and other supporting items on engine or generator, unless otherwise indicated.

Feature in paragraph below facilitates connection to building automation system or building control and monitoring system. Coordinate with Drawings and Section covering data transmission and data terminals.

- H. Connection to Data Link: A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals. Data system connections to terminals are covered in Section 260913 "Electrical Power Monitoring and Control."

Retain one of first two paragraphs and associated subparagraphs below or delete all. The Evaluations discuss what will be obtained by selecting first paragraph and subparagraphs. Coordinate with Drawings.

- I. Common Remote Audible Alarm: Comply with NFPA 110 requirements for Level 1 systems. Include necessary contacts and terminals in control and monitoring panel.

1. Overcrank shutdown.
2. Coolant low-temperature alarm.
3. Control switch not in auto position.
4. Battery-charger malfunction alarm.
5. Battery low-voltage alarm.

Retain paragraph and subparagraphs below and coordinate with Drawings for manually starting systems or for automatically starting systems not specified to comply with NFPA 110, Level 1, but where some remote alarm functions are needed.

- J. Common Remote Audible Alarm: Signal the occurrence of any events listed below without differentiating between event types. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset.
1. Engine high-temperature shutdown.
 2. Lube-oil, low-pressure shutdown.
 3. Overspeed shutdown.
 4. Remote emergency-stop shutdown.
 5. Engine high-temperature prealarm.
 6. Lube-oil, low-pressure prealarm.
 7. Fuel tank, low-fuel level.
 8. Low coolant level.

Retain paragraph below and coordinate with Drawings for systems required to comply with NFPA 99 or where otherwise needed. Revise if all indications required by NFPA 99 are not needed.

2.6 GENERATOR REMOTE DERANGEMENT SIGNAL ANNUNCIATOR:

- A. Comply with NFPA 99. An LED labeled with proper alarm conditions shall identify each alarm event and a common audible signal shall sound for each alarm condition. Silencing switch in face of panel shall silence signal without altering visual indication. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset. Cabinet and faceplate are surface- or flush-mounting type to suit mounting conditions indicated.
- B. Generator remote derangement signal annunciator:
1. Flush mounted, with flush plate of No.4 finish, stainless steel, 20 x 20 IN x 4-1/4 IN deep.
 2. Circuits: 24 volts DC powered from starting batteries. Verify circuit voltage to match battery voltage.
 3. Provide red and green signal lamps, buzzer, silencing switch, lamp test switch, relays, solid-state components, and engraved function identifications.
- C. Annunciator functions:
1. Green light "ON" to indicate generator is operating to supply power to load.
 2. Separate red light for each shutdown or alarm condition and amber light for each prealarm condition and common buzzer with silence/ acknowledge switch.
 3. Shut down indicating lights as follows:

- a. Overcrank.
 - b. Overspeed.
 - c. Low lubricating oil pressure.
 - d. High engine water temperature.
4. Alarm indicator lights as follows:
- a. Low engine water temperature (less than 70 °F).

Coordinate fuel level monitoring requirements with mechanical.

- b. Low fuel in main storage tank.
 - c. Low fuel in day tank.
 - d. Control switch not in auto position.
 - e. Battery charger malfunctioning.
 - f. Low battery voltage.
 - g. Fuel in day tank rupture basin.
5. Prealarm indicator lights as follows:
- a. High engine water temperature.
 - b. Low lubricating oil pressure.

Delete paragraph c. when paralleling gear is provided.

- c. When generator "main breaker" is open.
- d. When main or feeder breaker in essential power switchboard is open (common light).

Delete if generator main breaker is rated less than 1000 amp.

- e. To indicate that an excessive ground fault has been detected on the generator main breaker.

Add the following if main derangement panel is not located at a 24 hour manned location.

6. Generator remote derangement signal annunciator sub-panel:
- a. Flush mounted, with flush plate of No.4 finish, 16 gauge stainless steel, 6 x 6 IN x 4 IN deep maximum.
 - b. Circuits: 24 volts DC powered from generator starting batteries. Verify circuit voltage to match battery voltage.
 - c. Provide signal lamps, buzzer, NORMAL/OFF/TEST silencing switch, relays, solid-state components, and engraved function identifications.
7. Sub-panel functions:
- a. Green light to indicate that generator is supplying load. Label light "STANDBY POWER GENERATION SYSTEM SUPPLYING LOAD".
 - b. Common amber or yellow light to indicate alarm or prealarm condition. Label light "STANDBY POWER GENERATION SYSTEM ALARM OR PREALARM".
 - c. Common red light to indicate shut down. Label light "STANDBY POWER GENERATION SYSTEM SHUTDOWN".

- d. Common buzzer for all conditions.

Indicate sub-panel location if not indicated on plans.

- e. Locate sub-panel at <Insert location>.

Coordinate paragraph below with Drawings.

- D. Remote Emergency-Stop Switch: Flush; wall mounted, unless otherwise indicated; and labeled. Push button shall be protected from accidental operation.

2.7 GENERATOR OVERCURRENT AND FAULT PROTECTION

Retain one or more paragraphs in this Article to specify disconnect switch(es) and protective devices for the generator (alternator) component of generator set. Revise as required to accommodate multiple output devices. See Editing Instruction No. 10 in the Evaluations.

Retain one of first four paragraphs and associated subparagraphs below. Retain first for units smaller than 200 kW where initial cost is a concern. Device provides little or no generator protection and no selectivity with downstream circuit protective devices.

- A. Generator Circuit Breaker: Molded-case, thermal-magnetic type; 100 percent rated; complying with NEMA AB 1 and UL 489.
 - 1. Tripping Characteristic: Designed specifically for generator protection.
 - 2. Trip Rating: Matched to generator rating.
 - 3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
 - 4. Mounting: Adjacent to or integrated with control and monitoring panel.
- B. Generator Circuit Breaker: Molded-case, electronic-trip type; 100 percent rated; complying with UL 489.
 - 1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
 - 2. Trip Settings: Selected to coordinate with generator thermal damage curve.
 - 3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
 - 4. Mounting: Adjacent to or integrated with control and monitoring panel.
- C. Generator Circuit Breaker: Insulated-case, electronic-trip type; 100 percent rated; complying with UL 489.
 - 1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
 - 2. Trip Settings: Selected to coordinate with generator thermal damage curve.
 - 3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
 - 4. Mounting: Adjacent to or integrated with control and monitoring panel.

Retain paragraph and subparagraphs below if generator is protected by "generator-protector" feature.

- D. Generator Disconnect Switch: Molded-case type, 100 percent rated.
1. Rating: Matched to generator output rating.
 2. Shunt Trip: Connected to trip switch when signaled by generator protector or by other protective devices.

Protection scheme specified in paragraph and subparagraphs below may be proprietary. Consult manufacturers.

- E. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch shall open the switch to disconnect the generator from load circuits. Protector shall perform the following functions:
1. Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other generator-set malfunction alarms.
 2. Under single or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to 10 seconds.
 3. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.
 4. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot.

Retain paragraph below and coordinate with Drawings for legally required emergency generator sets rated 1000 A and more at 277/480 V.

- F. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.

2.8 GENERATOR, EXCITER, AND VOLTAGE REGULATOR

- A. Comply with NEMA MG 1.
- B. Generator: 4-pole or 6-pole revolving field type with permanent magnet exciter and magnetic amplifier or SCR voltage regulator. No commutator or commutator brushes allowed.
1. Minimum continuous standby ratings: As indicated, substantiated by manufacturer's standard published curves and conform to NEMA MG-1 specification. Special ratings or maximum ratings are not acceptable.

Increase the percentage of non-linear load if required.

- a. Generator shall be rated to serve up to 50 percent non-linear load without exceeding standard NEMA temperature rise.

- C. Minimum efficiency: 92 percent at 50 to 110 percent of nominal standby rating, less than 30 percent instantaneous voltage dip at full load and rated power factor and suitable for simultaneous operation with other future units connected in parallel.
- D. Drive: Generator shaft shall be directly connected to engine shaft. Exciter shall be rotated integrally with generator rotor.
- E. Electrical Insulation: Class F.
- F. Stator-Winding Leads: Brought out to terminal box to permit future reconnection for other voltages if required.
- G. Stator and rotor: Class F insulated with 100 percent epoxy impregnation and overcoat of resilient insulating material to reduce possible fungus and/or abrasive deterioration.
- H. Directly connect stator to engine flywheel housing.
- I. Drive rotor through semiflexible driving flange to ensure permanent alignment.
- J. Self ventilating with suitable blower, air inlet and outlet openings.
- K. Provide terminal box of adequate size for entrance of flexible conduit for generator leads out bottom from either side.
- L. Generator drive free from critical torsional vibration within operating range.

Delete circuit breaker for generator if provided in essential power switchboard or paralleling gear and essential power switchboard or paralleling gear is in eng-gen. room or near-by.

- M. Provide generator mounted main circuit breaker: Solid state molded case type, rating as indicated.

Delete following if generator main breaker is rated less than 1000a.

- 1. Provide integral ground fault sensor
- 2. Indicate when there is a ground fault on the main breaker.
- 3. Ground fault shall not trip main breaker but shall be indicated at generator remote derangement signal annunciator.
- 4. Include the following:
 - a. Test circuit with cut-off switch.
 - b. Fail safe indicating lamp.
 - c. Terminals for remote alarm.
 - d. Reset controls.
 - e. Adjustable sensitivity from 200 to 1200A; set at 200A.
 - f. Adjustable time delay 3.5 to 30 cycles; set at 3.5 cycles.
 - g. Post a sign at main breaker stating course of action in the event of a ground fault. Verify contents of statement with Owner.
- N. Construction shall prevent mechanical, electrical, and thermal damage due to vibration, overspeed up to 125 percent of rating, and heat during operation at 110

percent of rated capacity.

- O. Enclosure: Dripproof.

Delete first paragraph below if instrument transformers are housed in control and power panel.

- P. Instrument Transformers: Mounted within generator enclosure.

- Q. Voltage Regulator: Voltage regulator: SCR type, to maintain 2 percent voltage regulation from 0 to full load with steady state modulation not exceeding plus 1/2 percent including cross-current compensation to provide maximum of 5 percent unbalance in kva load sharing between this unit and possible future generators.

1. Provide automatic protection against short circuits on system.
2. Permit unit to operate at no load below rated frequency for engine start up and shut down procedures.
3. Provide voltage level and gain controls for normal operating adjustments.
4. Provide voltage level control with minimum range of plus or minus 5 percent from rated voltage.
5. Mount regulator, volts per hertz type, in generator housing on suitable vibration isolators.
6. Provide "series boost" type short-circuit current sustaining attachment to allow downstream circuit breakers to trip sequentially.

Retain paragraph below for high-humidity environments to limit condensation in alternator windings.

- R. Strip Heater: Thermostatically controlled unit arranged to maintain stator windings above dew point.

Retain both paragraphs below for units specified for "critical" performance. Coordinate with generator-set performance Paragraph selected in "Engine-Generator Set" Article. See "Specifying Considerations" Article in the Evaluations for discussions on sensitive electronic equipment and nonlinear generator loads and on supplying significant harmonic currents.

- S. Windings: Two-thirds pitch stator winding and fully linked amortisseur winding.

- T. Subtransient Reactance: [12] <Insert number> percent, maximum.

2.9 LOAD BANK

Retain this Article and revise for resistive load elements only or for another type of load bank. See Editing Instruction No. 11 in the Evaluations. Coordinate with Drawings.

- A. Description: Permanent, outdoor, weatherproof, remote-controlled, forced-air-cooled, [resistive] [resistive and reactive] unit capable of providing a balanced 3-phase, delta-connected load to generator set at [100] <Insert number> percent rated-system capacity, at [80] <Insert number> percent power factor, lagging. Unit may be composed of separate resistive and reactive load banks controlled by a common control panel. Unit shall be capable of selective control of load in 25 percent steps and with minimum step changes of approximately 5 and 10 percent available.

- B. Resistive Load Elements: Corrosion-resistant chromium alloy with ceramic and steel supports. Elements shall be double insulated and designed for repetitive on-off cycling. Elements shall be mounted in removable aluminized-steel heater cases.
- C. Reactive Load Elements: Epoxy-encapsulated reactor coils.
- D. Load-Bank Heat Dissipation: Integral fan with totally enclosed motor shall provide uniform cooling airflow through load elements. Airflow and coil operating current shall be such that, at maximum load, with ambient temperature at the upper end of specified range, load-bank elements operate at not more than 50 percent of maximum continuous temperature rating of resistance elements.
- E. Load Element Switching: Remote-controlled contactors switch groups of load elements. Contactor coils are rated 120 V. Contactors shall be located in a separate NEMA 250, Type 3R enclosure within load-bank enclosure, accessible from exterior through hinged doors with tumbler locks.
- F. Contactor Enclosures: Heated by thermostatically controlled strip heaters to prevent condensation.
- G. Load-Bank Enclosures: NEMA 250, Type 3R, complying with NEMA ICS 6. Louvers at cooling-air intake and discharge openings shall prevent entry of rain and snow. Openings for airflow shall be screened with 1/2-inch- (13-mm-) square, galvanized-steel mesh. Reactive load bank shall include automatic shutters at air intake and discharge.
- H. Protective Devices: Power input circuits to load banks shall be fused, and fuses shall be selected to coordinate with generator circuit breaker. Fuse blocks shall be located in contactor enclosure. Cooling airflow and overtemperature sensors shall automatically shut down and lock out load bank until manually reset. Safety interlocks on access panels and doors shall disconnect load power, control, and heater circuits. Fan motor shall be separately protected by overload and short-circuit devices. Short-circuit devices shall be noninterchangeable fuses with 200,000-A interrupting capacity.

Coordinate two paragraphs below with Drawings.

- I. Remote-Control Panel: Separate from load bank in NEMA 250, Type 1 enclosure with a control power switch and pilot light, and switches controlling groups of load elements.

Retain paragraph below if load bank is used in automatic exercising of generator. Coordinate with Section covering remote-controlled switch, contactor, or electrically operated circuit breaker used to switch load bank to generator output. Switching device is typically not part of equipment specified in this Section.

- J. Control Sequence: Control panel may be preset for adjustable single-step loading of generator during automatic exercising.

2.10 OUTDOOR GENERATOR-SET ENCLOSURE

Retain first paragraph and associated subparagraphs below and coordinate with Drawings to define basic outdoor-enclosure type. Edit to specify enclosure features required.

- A. Description: Vandal-resistant, sound-attenuating, weatherproof steel housing, wind resistant up to 115 mph (184 km/h) with gust factor of 1.3. Multiple panels shall be lockable and provide adequate access to components requiring maintenance. Panels shall be removable by one person without tools. Instruments and control shall be mounted within enclosure. Provide prefabricated or preengineered walk-in enclosure with the following features:
1. Construction: Galvanized-steel, metal-clad, integral structural-steel-framed building erected on concrete foundation.
 - a. Support roof load of 1915 Pa 40 PSF.
 - b. Fiberglass or mineral wool insulation to provide minimum R11 insulation in side walls and roof for thermal transmission, sound attenuation material can be in addition to or include the thermal insulation.

Revise wind speed in first subparagraph below to suit local conditions.

2. Structural Design and Anchorage: Comply with ASCE 7 for wind loads.
3. Space Heater: Thermostatically controlled and sized to prevent condensation to maintain internal temperature at 50 degrees F (10 degrees C). Interlock so unit heaters shut off when generators are running.
4. Louvers: Equipped with bird screen and filter arranged to permit air circulation when engine is not running while excluding exterior dust, birds, and rodents.
5. Hinged Doors: With padlocking provisions.

Revise first subparagraph below if forced ventilation rather than convection ventilation is required.

6. Ventilation: Louvers equipped with bird screen and filter arranged to permit air circulation while excluding exterior dust, birds, and rodents.
7. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine-generator-set components.
8. Muffler Location: **[Within]** **[External to]** enclosure.
9. Attenuate engine-generator produced sound to an A-weighted sound level of 85 dB(A) at 3 FT (915 mm) from enclosure.
10. Space for routine maintenance and service shall be provided on all four sides of generator.
11. Exterior shall be factory finished in color selected by DEN Project Manager. Provide touch-up paint in finish color.
12. Provide anchor bolts for casting into concrete base for attaching enclosure to pad.
13. Provide one 36 IN (915 mm) wide man door in one side and provide either a pair of 36 IN (915 mm) wide doors in one side or removable air intake and louver assembly for removal of large assemblies.
14. Provide space for mounting electrical panel for serving loads inside enclosure to include but not be limited to lights, unit heaters, engine block heaters, battery chargers, ventilation fans, etc.

15. Provision for exit of exhaust stack in roof, flashed and sealed to prevent entry of moisture. Support for critical silencer on roof.
 16. Coordinate enclosure supplied with concrete pad and foundations.
 17. Provide ventilation fan with gravity damper, thermostatically controlled to operate continuously at internal temperatures adjustable from 60 to 90 degrees F. Interlock ventilation fans to prevent them from running when the engine generators are running. Interlock ventilation fan with motorized inlet dampers.
 18. Field test installation under load. Use a precision sound measuring instrument meeting ANSI-S1.4 type 1. Provide measurements to DEN Project Manager.
 19. Enclosure shall be approved for installation in local seismic zone.
- B. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.
1. Louvers: Fixed-engine, cooling-air inlet and discharge. Storm-proof and drainable louvers prevent entry of rain and snow.
 2. Automatic Dampers: At engine cooling-air inlet and discharge. Dampers shall be closed to reduce enclosure heat loss in cold weather when unit is not operating.

Coordinate two paragraphs and associated subparagraphs below with Drawings for lighting types and location, and supply circuits.

- C. Interior Lights with Switch: Factory-wired, vaporproof-type fixtures within housing; arranged to illuminate controls and accessible interior. Arrange for external electrical connection.
1. AC lighting system and connection point for operation when remote source is available.
 2. DC lighting system for operation when remote source and generator are both unavailable.
- D. Convenience Outlets: Factory wired GFCI. Arrange for external electrical connection.

2.11 MOTORS

Retain this Article for generator sets with remote radiators.

Motor characteristics such as NEMA designation, temperature rating, service factor, enclosure type, and efficiency are specified in Section 230513 "Common Motor Requirements for HVAC Equipment." If different characteristics are required, insert additional requirements below.

- A. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 2. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.

2.12 VIBRATION ISOLATION DEVICES

Coordinate paragraph and subparagraphs below with Drawings and with Section 260548 "Vibration and Seismic Controls for Electrical Systems."

- A. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic restraint to control both high and low frequency vibrations between major components, subbase and structural foundation.
 - 1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to wind loads or if weight is removed; factory-drilled baseplate bonded to 1/4-inch- (6-mm-) thick, elastomeric isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
 - 2. Outside Spring Diameter: Not less than 80 percent of compressed height of the spring at rated load.
 - 3. Minimum Additional Travel: 50 percent of required deflection at rated load.
 - 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 - 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 - 6. Spring isolators shall be designed for seismic zone 1.

2.13 FINISHES

- A. Indoor and Outdoor Enclosures and Components: Manufacturer's standard finish over corrosion-resistant pretreatment and compatible primer, in color as selected by DEN Project Manager.

2.14 SOURCE QUALITY CONTROL

- A. Prototype Testing: Factory test engine-generator set using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories.

Consider requiring Level 1 compliance in subparagraph below for other than Level 1 installations to obtain benefits of specific standard requirements.

- 1. Tests: Comply with NFPA 110, Level 1 Energy Converters and with IEEE 115.
- B. Project-Specific Equipment Tests: Before shipment, factory test engine-generator set and other system components and accessories manufactured specifically for this Project. Perform tests at rated load and power factor. Include the following tests:
 - 1. Test components and accessories furnished with installed unit that are not identical to those on tested prototype to demonstrate compatibility and reliability.
 - 2. Full load run.
 - 3. Maximum power.
 - 4. Voltage regulation.
 - 5. Transient and steady-state governing.

6. Single-step load pickup.
7. Safety shutdown.

Retain subparagraph below if factory tests will be witnessed by Owner's representative.

8. Provide fourteen (14) days' advance notice of tests and opportunity for observation of tests by DEN Project Manager.

Coordinate subparagraph below with Part 1 "Informational Submittals" Article.

9. Report factory test results within ten (10) days of completion of test.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.
- B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Power Outages: Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
- B. Comply with packaged engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.
- C. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.
- D. Install packaged engine generator with restrained spring isolators having a minimum deflection of [1 inch (25 mm)] <Insert static deflection> on 4-inch- (100-mm-) high concrete base. Secure sets to anchor bolts installed in concrete bases. Concrete base construction is specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- E. Install remote radiator with restrained spring isolators having a minimum deflection of [1 inch (25 mm)] <Insert static deflection> on [concrete base on grade] [roof equipment supports on roof].

Delete first paragraph below if radiator is engine mounted.

- F. Install Schedule 40, black steel piping with welded joints for cooling water piping between engine-generator set and **[heat exchanger] [remote radiator]**. Piping materials and installation requirements are specified in Section 232113 "Hydronic Piping."
- G. Install Schedule 40, black steel piping with welded joints and connect to engine muffler. Install thimble at wall. Piping shall be same diameter as muffler outlet. Flexible connectors and steel piping materials and installation requirements are specified in Section 232113 "Hydronic Piping."

Coordinate subparagraph below with Drawings.

- 1. Install condensate drain piping to muffler drain outlet full size of drain connection with a shutoff valve, stainless-steel flexible connector, and Schedule 40, black steel pipe with welded joints. Flexible connectors and piping materials and installation requirements are specified in Section 232113 "Hydronic Piping."
- H. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

3.3 CONNECTIONS

Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping and specialties.
- B. Connect fuel, cooling-system, and exhaust-system piping adjacent to packaged engine generator to allow service and maintenance.

Coordinate first paragraph below with Section 232113 "Hydronic Piping."

- C. Connect cooling-system water piping to engine-generator set and **[remote radiator] [heat exchanger]** with flexible connectors.
- D. Connect engine exhaust pipe to engine with flexible connector.
- E. Connect fuel piping to engines with a gate valve and union and flexible connector.
 - 1. Diesel storage tanks, tank accessories, piping, valves, and specialties for fuel systems are specified in Section 231113 "Facility Fuel-Oil Piping."
 - 2. Natural-gas piping, valves, and specialties for gas distribution are specified in Section 231123 "Facility Natural-Gas Piping."
 - 3. LP-gas piping, valves, and specialties for gas piping are specified in Section 231126 "Facility Liquefied-Petroleum Gas Piping."
- F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 IDENTIFICATION

- A. Identify system components according to Section 230553 "Identification for HVAC Piping and Equipment" and Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

Retain one of first two paragraphs below, which identify who shall perform tests and inspections. Retain requirement for field quality-control test reports in Part 1 "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

Retain paragraph and subparagraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections and prepare test reports.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph and subparagraphs below to describe tests and inspections to be performed by any of the entities in three paragraphs above.

- C. Tests and Inspections:

NETA and other testing requirements indicated in subparagraphs below may be in excess of those required for Project. Review NETA and other tests listed and revise subparagraphs below to retain only those tests deemed necessary.

1. Perform tests recommended by manufacturer and each electrical test and visual and mechanical inspection[**(except those indicated to be optional)**] for "AC Generators and for Emergency Systems" specified in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here including, but not limited to, single-step full-load pickup test.
3. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.
 - a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and

- specific gravity under both conditions.
 - b. Test for contact integrity of all connectors. Perform an integrity load test and a capacity load test for the battery.
 - c. Verify acceptance of charge for each element of the battery after discharge.
 - d. Verify that measurements are within manufacturer's specifications.
4. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
5. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.

Retain subparagraph below for long, restricted exhaust systems.

6. Exhaust-System Back-Pressure Test: Use a manometer with a scale exceeding 40-inch wg (120 kPa). Connect to exhaust line close to engine exhaust manifold. Verify that back pressure at full-rated load is within manufacturer's written allowable limits for the engine.

Verify local requirements and delete first subparagraph below for most projects. Few jurisdictions require this test for emergency or standby generator sets.

7. Exhaust Emissions Test: Comply with applicable government test criteria.
8. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases, and verify that performance is as specified.
9. Harmonic-Content Tests: Measure harmonic content of output voltage under 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.

Retain subparagraph below for projects subject to unwanted or illegal generator-set noise intrusion into adjacent properties or activities. Coordinate with Drawings and with requirements in Part 1 "Action Submittals" and "Quality Assurance" articles and in Part 2 "Engine" Article.

10. Noise Level Tests: Measure A-weighted level of noise emanating from generator-set installation, including engine exhaust and cooling-air intake and discharge, at [four] <Insert number> locations [on the property line] <Insert location for measurement>, and compare measured levels with required values.
- D. Coordinate tests with tests for transfer switches and run them concurrently.
- E. Test instruments shall have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of test results. Make calibration records available for examination on request.
- F. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
- G. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
- H. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- I. Remove and replace malfunctioning units and [retest] [reinspect] as specified above.
- J. Retest: Correct deficiencies identified by tests and observations and retest until specified requirements are met.
- K. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- L. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each power wiring termination and each bus connection. Remove all access panels so terminations and connections are accessible to portable scanner.
 - 1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan 11 months after date of Substantial Completion.
 - 2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - 3. Record of Infrared Scanning: Prepare a certified report that identifies terminations and connections checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain packaged engine generators. Refer to Section 017900 "Demonstration and Training."
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 263213

Copyright 2010 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 263323 - CENTRAL BATTERY EQUIPMENT

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Retain one or more options in paragraph below.

- A. This Section includes [**slow-transfer**] [**and**] [**fast-transfer**] UPS central battery inverters with the following features:

Edit to suit Project.

1. Output distribution section.
2. Internal maintenance bypass/isolation switch.
3. External maintenance bypass/isolation switch.
4. Multiple output voltages.
5. Emergency-only circuits.
6. Remote monitoring provisions.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain abbreviations that remain after this Section has been edited.

- A. LCD: Liquid-crystal display.

- B. LED: Light-emitting diode.
- C. THD: Total harmonic distortion.
- D. UPS: Uninterruptible power supply.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Electrical ratings, including the following:
 - a. Capacity to provide power during failure of normal ac.
 - b. Inverter voltage regulation and THD of output current.
 - c. Rectifier data.
 - d. Transfer time of transfer switch.
 - e. Data for specified optional features.
 - 2. Transfer switch.
 - 3. Inverter.
 - 4. Battery charger.
 - 5. Batteries.
 - 6. Battery monitoring.
 - 7. Battery-cycle warranty monitor.
 - 8. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, components, and location and identification of each field connection. Show access, workspace, and clearance requirements; details of control panels; and battery arrangement.
 - 1. Wiring Diagrams: Detail internal and interconnecting wiring; and power, signal, and control wiring.
 - 2. Elevation and details of control and indication displays.
 - 3. Output distribution section.

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For testing agency.

Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems."

Coordinate seismic requirements with DEN Project Manager.

- B. Manufacturer Seismic Qualification Certification: Submit certification that central battery inverter equipment will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain one of first two subparagraphs below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Second definition is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Retain first paragraph below if Contractor is responsible for field quality-control testing.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For central battery inverter equipment to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

Extra materials may not be allowed for publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver extra materials to Owner.

Quantities in subparagraphs below are examples only.

1. Fuses: One for every 10 of each type and rating, but no fewer than **<Insert quantity>** of each.
2. Cabinet Ventilation Filters: One complete set.
3. One spare circuit board for each critical circuit.

1.8 QUALITY ASSURANCE

Retain first paragraph below if Contractor selects testing agency or is required to provide services of an independent testing agency in Part 3 "Field Quality Control" Article. Qualification requirements supplement those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory). Retain option below if Part 3 "Field Quality Control" Article specifies tests with life-safety consequences.

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

Select paragraph above or first paragraph below. See Editing Instruction No. 3 in the Evaluations for discussion of testing laboratory listing of central battery inverter. UL 1778 listing applies only to on-line, UPS central battery inverters.

- B. Central Battery Inverter System: UL 924[**and UL 1778**] listed.
- C. Comply with NFPA 70 and NFPA 101.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver equipment in fully enclosed vehicles.
- B. Store equipment in spaces having environments controlled within manufacturers' written instructions for ambient temperature and humidity conditions for non-operating equipment.

1.10 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this Article are not less than remedies available to Owner under prevailing local laws. Coordinate with Section 016000 "Product Requirements."

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace batteries that fail in materials or workmanship within specified warranty period. Special warranty, applying to batteries only, applies to materials only, on a prorated basis, for period specified.
 1. Warranty Period: Include the following warranty periods, from date of Substantial Completion:

Retain subparagraphs and associated subparagraphs below to match battery types retained in Part 2. See the Alternative Battery Types for Central Battery Inverters Table in the Evaluations for typical warranty periods for battery types listed in this Section. Verify availability of warranties with selected manufacturers.

- a. Premium, Valve-Regulated, Recombinant, Lead-Calcium Batteries:
 - 1) Full Warranty: Minimum [**one (1) year**] [<Insert number>years].
 - 2) Pro Rata: Minimum [**nineteen (19)**] <Insert number> years.
- b. Standard, Valve-Regulated, Recombinant, Lead-Calcium Batteries:
 - 1) Full Warranty: Minimum [**one (1) year**] [<Insert number> years].
 - 2) Pro Rata: Minimum [**nine (9)**] <Insert number> years.
- c. Nickel-Cadmium, Wet-Cell Batteries:
 - 1) Full Warranty: Minimum [**five (5)**] <Insert number> years.
 - 2) Pro Rata: Minimum [**fifteen (15)**] <Insert number> years.
- d. Lead-Calcium, Wet-Cell Batteries:
 - 1) Full Warranty: Minimum [**one (1) year**] [<Insert number> years].
 - 2) Pro Rata: Minimum [**nine (9)**] <Insert number> years.
- e. Lead-Antimony, Wet-Cell Batteries:
 - 1) Full Warranty: Minimum [**one (1) year**] [<Insert number> years].
 - 2) Pro Rata: Minimum [**nine (9)**] <Insert number> years.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. Retain paragraph and list of manufacturers in this Article. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Bigbeam Emergency Systems, Inc.; Siltron Division.

2. Chloride Systems.
3. Cooper Industries, Inc.; Sure-Lites Division.
4. Crucial Power Products.
5. Dual-Lite.
6. Hubbell Incorporated; Hubbell Lighting.
7. Lightguard/Chloride Systems.
8. Lithonia Lighting; Emergency Lighting Systems.
9. Thomas & Betts Corporation; Emergi-Lite Division.
10. Thomas & Betts Corporation; Lightalarms Division.
11. **<Insert manufacturer>**
12. or approved equal.

2.2 INVERTER PERFORMANCE REQUIREMENTS

Inverters for lighting and power are categorized by the speed at which power is restored to the load. Retain paragraphs in this Article that describe basic type of unit required. See Editing Instruction No. 2 in the Evaluations for discussion of transfer time.

- A. Slow-Transfer Central Battery Inverters: Automatically sense loss of normal ac supply and use an electromechanical switch to transfer loads. Transfer in one second or less from normal supply to battery-inverter supply.
 1. Operation: Unit supplies power to output circuits from a single, external, normal supply source. Unit automatically transfers load from normal source to internal battery/inverter source. Retransfer to normal is automatic when normal power is restored.
- B. Fast-Transfer Central Battery Inverters: Automatically sense loss of normal ac supply and use a solid-state switch to transfer loads. Transfer in **[0.004]** **<Insert number>** second or less from normal supply to battery-inverter supply.
 1. Operation: Unit supplies power to output circuits from a single, external, normal supply source. Unit automatically transfers load from normal source to internal battery/inverter source. Retransfer to normal is automatic when normal power is restored.
- C. UPS-Type Central Battery Inverters: Continuously provide ac power to connected electrical system.
 1. Automatic Operation:
 - a. Normal Conditions: Supply the load with ac power flowing from normal ac power input terminals, through rectifier-charger and inverter, with battery connected in parallel with rectifier-charger output.
 - b. Abnormal Supply Conditions: If normal ac supply deviates from specified and adjustable voltage, voltage waveform, or frequency limits, battery supplies constant, regulated, inverter ac power output to the load without switching or disturbance.
 - c. If normal power fails, battery continues supply-regulated ac power through the inverter to the load without switching or disturbance.

- d. When power is restored at normal supply terminals of system, controls automatically synchronize inverter with the external source before transferring the load. Rectifier-charger then supplies power to the load through the inverter and simultaneously recharges battery.
- e. If battery becomes discharged and normal supply is available, rectifier-charger charges battery. When battery is fully charged, rectifier-charger automatically shifts to float-charge mode.
- f. If any element of central battery inverter system fails and power is available at normal supply terminals of system, static bypass transfer switch transfers the load to normal ac supply circuit without disturbance or interruption of supply.
- g. If a fault occurs in system supplied by central battery inverter and current flows in excess of the overload rating of central battery inverter system, static bypass transfer switch operates to bypass fault current to normal ac supply circuit for fault clearing.
- h. When fault has cleared, static bypass transfer switch returns the load to central battery inverter system.
- i. If battery is disconnected, central battery inverter continues to supply power to the load with no degradation of its regulation of voltage and frequency of output bus.

2. Manual Operation:

Revise functional descriptions in both subparagraphs below to suit Project.

- a. Turning inverter off causes static bypass transfer switch to transfer the load directly to normal ac supply circuit without disturbance or interruption.
- b. Turning inverter on causes static bypass transfer switch to transfer the load to inverter.

Insert noise values in paragraph below that are consistent with rated capacity of UPS units specified in this Section. See the Nominal Overall UPS Audible Noise Ratings Table in Editing Instruction No. 8 in the Evaluations.

- D. Maximum Acoustical Noise: <Insert value> dB, "A" weighting, emanating from any UPS component under any condition of normal operation, measured [39 inches (990 mm)] <Insert distance> from nearest surface of component enclosure.

2.3 SERVICE CONDITIONS

- A. Environmental Conditions: Inverter system shall be capable of operating continuously in the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

Conditions in subparagraphs below are standard for most central battery inverters. If unusual service conditions for central battery inverter equipment exist and cannot be eliminated, specify them here by revising below. See Editing Instruction No. 5 in the Evaluations for discussion of environments.

1. Ambient Temperature for Electronic Components: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).

2. Relative Humidity: [0 to 95] <Insert value> percent, noncondensing.
3. Altitude: Sea level to 5500 feet (1677 m).

2.4 INVERTERS

A. Description: Solid-state type, with the following operational features:

1. Automatically regulate output voltage to within plus or minus 5 percent.
2. Automatically regulate output frequency to within plus or minus 1 Hz, from no load to full load at unit power factor over the operating range of battery voltage.

Delete subparagraph below if units only serve incandescent lights. See Editing Instruction No. 4 in the Evaluations for discussion of THD.

3. Output Voltage Waveform of Unit: Sine wave with maximum 10 percent THD throughout battery operating-voltage range, from no load to full load.

Retain first subparagraph below for units serving loads that are sensitive to harmonic distortion.

- a. THD may not exceed 5 percent when serving a resistive load of 100 percent of unit rating.
4. Output Protection: Current-limiting and short-circuit protection.

Select subparagraph above or first subparagraph below. See Editing Instruction No. 6 in the Evaluations for discussion of output protection.

5. Output Protection: Ferroresonant transformer to provide inherent overload and short-circuit protection.
6. Surge Protection: [Panelboard] [Auxiliary panel] suppressors specified in Section 264313 "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits."

Delete optional features in subparagraphs below that are not required for Project.

7. Overload Capability: 125 percent for 10 minutes; 150 percent surge.
8. Brownout Protection: Produces rated power without draining batteries when input voltage is down to 75 percent of normal.

2.5 BATTERY CHARGER

A. Description: Solid-state, automatically maintaining batteries in fully charged condition when normal power is available. With LED indicators for "float" and "high-charge" modes.

2.6 BATTERIES

Select one of five options in paragraph below. Coordinate with "Special Warranty" Paragraph in Part 1 "Warranty" Article. See Editing Instruction No. 7 in the Evaluations for discussion of types of storage batteries.

A. Description: Premium, valve-regulated, recombinant, lead-calcium Standard,

valve-regulated, recombinant, lead-calcium Nickel-cadmium, wet-cell Lead-calcium, wet-cell Lead-antimony, wet-cell batteries.

1. Capable of sustaining full-capacity output of inverter unit for minimum of **[90 minutes]** <Insert duration>.

2.7 ENCLOSURES

Enclosure in this Article is suitable for indoor use to provide a degree of protection to personnel against incidental contact with enclosed equipment and to provide a degree of protection against falling dirt. See Editing Instruction No. 5 in the Evaluations for discussion of unusual service conditions.

Central battery inverters are available in multiple cabinets. Large units may use more than one cabinet to house batteries, electronics, and output equipment.

- A. NEMA 250, Type 1 steel cabinets with access to components through hinged doors with flush tumbler lock and latch.
- B. Finish: Manufacturer's standard baked-enamel finish over corrosion-resistant prime treatment.

2.8 SEISMIC REQUIREMENTS

- A. Central battery inverter assemblies, subassemblies, components, fastenings, supports, and mounting and anchorage devices shall be designed and fabricated to withstand seismic forces. The term "withstand" is defined in the "Manufacturer Seismic Qualification Certification" Paragraph in Part 1 "Informational Submittals" Article.

2.9 CONTROL AND INDICATION

- A. Description: Group displays, indications, and basic system controls on common control panel on front of central battery inverter enclosure.
- B. Minimum displays, indicating devices, and controls shall include those in lists below. Provide sensors, transducers, terminals, relays, and wiring required to support listed items. Alarms shall include an audible signal and a visual display.

LCD messaging in paragraph below may not be available for many models rated 10 kVA and less.

- C. Indications: **[Labeled LED]** **[Plain-language messages on a digital LCD or LED]**.

Delete items in four subparagraphs and associated subparagraphs below that are not required. Coordinate with remote monitoring and alarm functions and with monitoring and alarm functions specified for central battery inverters in other articles in this Section. Consider deleting items that are nonstandard with leading manufacturers in class or size of central battery inverter indicated. Some features may be proprietary. Many features may not be available on units at low end of capacity range covered by this Section. Revise list to suit Project.

1. Quantitative Indications:

- a. Input voltage, each phase, line to line.
 - b. Input current, each phase, line to line.
 - c. System output voltage, each phase, line to line.
 - d. System output current, each phase.
 - e. System output frequency.
 - f. DC bus voltage.
 - g. Battery current and direction (charge/discharge).
 - h. Elapsed time-discharging battery.
2. Basic Status Condition Indications:
- a. Normal operation.
 - b. Load-on bypass.
 - c. Load-on battery.
 - d. Inverter off.
 - e. Alarm condition exists.
3. Alarm Indications:
- a. Battery system alarm.
 - b. Control power failure.
 - c. Fan failure.
 - d. Overload.
 - e. Battery-charging control faulty.
 - f. Input overvoltage or undervoltage.
 - g. Approaching end of battery operation.
 - h. Battery undervoltage shutdown.
 - i. Inverter fuse blown.
 - j. Inverter transformer overtemperature.
 - k. Inverter overtemperature.
 - l. Static bypass transfer switch overtemperature.
 - m. Inverter power supply fault.
 - n. Inverter output overvoltage or undervoltage.
 - o. System overload shutdown.
 - p. Inverter output contactor open.
 - q. Inverter current limit.
4. Controls:
- a. Inverter on-off.
 - b. Start.
 - c. Battery test.
 - d. Alarm silence/reset.
 - e. Output-voltage adjustment.

Retain first paragraph and subparagraphs below, if required, to allow for present or possible future remote inverter system status and alarm panel.

- D. Dry-form "C" contacts shall be available for remote indication of the following conditions:

1. Inverter on battery.
2. Inverter on-line.
3. Inverter load-on bypass.
4. Inverter in alarm condition.
5. Inverter off (maintenance bypass closed).

E. Include the following minimum array:

1. Ready, normal-power on light.
2. Charge light.
3. Inverter supply load light.
4. Battery voltmeter.
5. AC output voltmeter with minimum accuracy of 2 percent of full scale.
6. Load ammeter.
7. Test switch to simulate ac failure.

Generally, enclosures are indoor, ventilated type. Small units (15 kVA and less) are available for outdoor installation from a few manufacturers. Revise paragraph below to suit environment.

F. Enclosure: Steel, with hinged lockable doors, suitable for [wall] [floor] mounting. Manufacturer's standard corrosion-resistant finish.

2.10 OPTIONAL FEATURES

In this Article, delete optional features not required and coordinate those retained with Drawings. See Evaluations for discussion of these items.

- A. Multiple Output Voltages: Supply unit branch circuits at different voltage levels if required. Transform voltages internally as required to produce indicated output voltages.
- B. Emergency-Only Circuits: Automatically energize only when normal supply has failed. Disconnect emergency-only circuits when normal power is restored.
- C. Maintenance Bypass/Isolation Switch: Load is supplied, bypassing central battery inverter system. Normal supply, electromechanical transfer switch, and system load terminals are completely disconnected from external circuits.

Retain paragraph above for slow-transfer systems; retain paragraph and subparagraphs below for fast-transfer and UPS-type systems. See Editing Instruction No. 10 in the Evaluations for a discussion of maintenance bypass/isolation switches.

- D. Maintenance Bypass/Isolation Switch: Switch is interlocked so it cannot be operated unless static bypass transfer switch is in bypass mode. Switch provides manual selection among the following three conditions without interrupting supply to the load during switching:
 1. Full Isolation: Load is supplied, bypassing central battery inverter system. Normal ac input circuit, static bypass transfer switch, and central battery inverter load terminals are completely disconnected from external circuits.

2. Maintenance Bypass: Load is supplied, bypassing central battery inverter system. Central battery inverter ac supply terminals are energized to permit operational checking, but system load terminals are isolated from the load.
3. Normal: Normal central battery inverter ac supply terminals are energized and the load is supplied either through static bypass transfer switch and central battery inverter rectifier-charger and inverter or through battery and inverter.

2.11 OUTPUT DISTRIBUTION SECTION

- A. Panelboard: Comply with Section 262416 "Panelboards" except provide assembly integral to equipment cabinet.

2.12 SYSTEM MONITORING AND ALARMS

Delete paragraph and subparagraph below if optional inverter system monitoring by remote monitoring panel is not required. Coordinate with Part 2 "Control and Indication" Article and with Drawings.

- A. Remote Status and Alarm Panel: Labeled LEDs on panel faceplate shall indicate [**five (5)**] <Insert quantity> basic status conditions. Audible signal indicates alarm conditions. Silencing switch in face of panel silences signal without altering visual indication.
 1. Cabinet and Faceplate: Surface or flush mounted to suit mounting conditions indicated.

Coordinate paragraph and subparagraphs below with Section 260913 "Electrical Power Monitoring and Control." See Evaluations.

Remote computer in paragraph below permits inverter system to communicate with computers to provide capability for remote monitoring and diagnosis and to initiate human and automated responses to inverter system events. Revise to suit Project.

- B. Provisions for Remote Computer Monitoring: Communication module in unit control panel provides capability for remote monitoring of status, parameters, and alarms specified in Part 2 "Control and Indication" Article. Remote computer and connecting signal wiring will be provided by Owner. Include the following features:
 1. Connectors and network interface units or modems for data transmission via RS-232 link.
 2. Software shall be designed to control and monitor inverter system functions and to provide on-screen explanations, interpretations, diagnosis, action guidance, and instructions for use of monitoring indications and development of reports. Include capability for storage and analysis of power-line transient records. Software shall be compatible with requirements in Section 260913 "Electrical Power Monitoring and Control" and the operating system and configuration of Owner-furnished computers.

Paragraph and subparagraph below specify alternatives for optional monitoring of inverter system batteries and cover monitoring for abnormal conditions within battery compartments of cabinet-type housings for sealed batteries.

- C. Battery Ground-Fault Detector: Initiates alarm when resistance to ground of positive or negative bus of battery is less than 5000 ohms.
1. Annunciation of Alarms: At inverter system control panel.

Retain paragraph and subparagraphs below if inverter system battery is covered by warranty specified in Part 1 that is in excess of one year and if warranty offered by specified manufacturer(s) requires continuous monitoring of battery cycling.

- D. Battery-Cycle Warranty Monitoring: Electronic device, acceptable to battery manufacturer as a basis for warranty action, for monitoring charge-discharge cycle history of batteries covered by cycle-life warranty.
1. Basic Functional Performance: Automatically measures and records each discharge event, classifies it according to duration category, and totals discharges according to warranty criteria, displaying remaining warranted battery life on integral LCD.

Functions in subparagraph and associated subparagraphs below are optional features available for battery-cycle monitors. Delete those that are not required or that are provided by separate inverter-system battery-monitoring features specified in this Section.

2. Additional monitoring functions and features shall include the following:
 - a. Measuring and recording of total voltage at battery terminals; providing alarm for excursions outside proper float voltage level.
 - b. Monitoring of ambient temperature at battery and initiating an alarm if temperature deviates from normally acceptable range.
 - c. Keypad on device front panel provides access to monitored data using front panel display.
 - d. Alarm contacts arranged to provide [**local**] [**remote**] alarm for [**battery discharge events**] [**abnormal temperature**] [**abnormal battery voltage or temperature**].
 - e. Memory device to store recorded data in nonvolatile electronic memory.
 - f. RS-232 port to permit downloading of data to a portable personal computer.
 - g. Modem to make measurements and recorded data accessible to remote personal computer via telephone line. Computer will be provided by Owner.

2.13 SOURCE QUALITY CONTROL

Retain factory tests in this Article to suit Project.

- A. Factory test complete inverter system[, **including battery,**] before shipment. Include the following:
1. Functional test and demonstration of all functions, controls, indicators, sensors, and protective devices.

2. Full-load test.
 3. Transient-load response test.
 4. Overload test.
 5. Power failure test.
- B. Observation of Test: Give fourteen (14) days' advance notice of tests and provide access for Owner's representative to observe tests at Owner's option.
- C. Report test results. Include the following data:
1. Description of input source and output loads used. Describe actions required to simulate source load variation and various operating conditions and malfunctions.
 2. List of indications, parameter values, and system responses considered satisfactory for each test action. Include tabulation of actual observations during test.
 3. List of instruments and equipment used in factory tests.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for ventilation, temperature, humidity, and other conditions affecting performance.
1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment will be installed, before installation begins.
- B. Examine roughing-in for electrical connections to verify actual locations of connections before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

Coordinate this Article with Drawings and with seismic-restraint requirements if applicable. If cabinets are to be supported by casters, alternative seismic restraints must be designed.

- A. Install system components on **[floor] [concrete base]** and attach by bolting.

Retain subparagraph below if Project is in seismic area.

1. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. See Section 260548 "Vibration and Seismic Controls for Electrical Systems" for seismic-restraint requirements.

Retain first subparagraph below to suit Project. Coordinate with Drawings.

2. Concrete Bases: **4 inches** (100 mm) high, reinforced, with chamfered edges. Extend base no more than **3 inches** (75 mm) in all directions beyond the maximum dimensions of switchgear unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Section 260529 "Hangers and Supports for Electrical Systems."
3. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
5. Use [**3000-psi** (20.7-MPa)] <Insert value>, 28-day compressive-strength concrete and reinforcement as specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

- B. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.

3.3 CONNECTIONS

- A. Connections: Interconnect system components. Make connections to supply and load circuits according to manufacturer's wiring diagrams, unless otherwise indicated.
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
1. Separately Derived Systems: Make grounding connections to grounding electrodes and bonding connections to metallic piping systems as indicated; comply with NFPA 70.
- C. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 IDENTIFICATION

- A. Identify equipment and components according to Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

Retain paragraph and subparagraph below to require Contractor to perform tests and inspections.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Perform tests and inspections and prepare test reports.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain paragraph and subparagraphs below to describe tests and inspections to be performed by any of the entities in three paragraphs above. See Editing Instruction No. 9 in the Evaluations for discussion of NETA tests.

B. Tests and Inspections:

1. Inspect interiors of enclosures for integrity of mechanical and electrical connections, component type and labeling verification, and ratings of installed components.
2. Test manual and automatic operational features and system protective and alarm functions.

Delete first subparagraph below if not applicable.

3. Test communication of status and alarms to remote monitoring equipment.
4. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specifications. Certify compliance with test parameters.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Remove and replace malfunctioning units and retest as specified above.

3.6 STARTUP SERVICE

Delete first paragraph below if factory-authorized service representative is not required.

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
- B. Verify that central battery inverter is installed and connected according to the Contract Documents.
- C. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements.
- D. Complete installation and startup checks according to manufacturer's written instructions.

3.7 ADJUSTING AND CLEANING

Coordinate first paragraph below with Drawings.

- A. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- B. Install new filters in each equipment cabinet within fourteen (14) days from date of Substantial Completion.

3.8 DEMONSTRATION

Delete this Article if not required.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain central battery inverters. Refer to Section 017900 "Demonstration and Training."
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 263323

Copyright 2012 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 263353 - STATIC UNINTERRUPTIBLE POWER SUPPLY

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Revise this article to describe basic UPS features for this Project. Coordinate these features with corresponding paragraphs in Part 2. See Evaluations and editor's notes in Part 2 for applicability of various items. Some features are not available in lower-rated UPS units, and different manufacturers may treat features differently; an item may be standard with one manufacturer, optional with some, and not offered by others. UPS technology and marketing approaches are constantly changing. Additional information is available on manufacturers' Web sites. Consult two or more manufacturers after revising this Section. Make a preliminary tabulation of UPS loads and draw a single-line diagram of the planned distribution of those loads.

- A. Section Includes:

Edit to suit Project.

1. Three-phase, on-line, double-conversion, static-type, UPS units with the following features:
 - a. Surge suppression.
 - b. Input harmonics reduction.
 - c. Rectifier-charger.
 - d. Inverter.
 - e. Static bypass transfer switch.

- f. Battery and battery disconnect device.
- g. **[Internal] [External]** maintenance bypass/isolation switch.
- h. Output isolation transformer.
- i. Remote UPS monitoring provisions.
- j. Battery monitoring.
- k. Remote monitoring.
- l. **<Insert required major features>**.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. EMI: Electromagnetic interference.
- B. LCD: Liquid-crystal display.
- C. LED: Light-emitting diode.
- D. PC: Personal computer.
- E. THD: Total harmonic distortion.
- F. UPS: Uninterruptible power supply.

1.4 PERFORMANCE REQUIREMENTS

Retain this article with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction.

- A. Seismic Performance: UPS shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

- 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified **[and the unit will be fully operational after the seismic event].**"

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include data on features, components, ratings, and performance.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For UPS. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, components, and location and identification of each field connection. Show access, workspace, and clearance requirements; details of control panels; and battery arrangement.

Retain subparagraph below if UPS installation includes field-installed wiring that is sufficiently extensive to warrant preparation of Shop Drawings.

- 2. Wiring Diagrams: For power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified [**power quality specialist**] [**testing agency**].

Retain first paragraph below if required by seismic criteria applicable to Project. Coordinate with Sections specifying mechanical vibration, supports, electrical supports, and seismic controls. See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: For UPS equipment, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Manufacturer Certificates: For each product, from manufacturer.
- D. Factory Test Reports: Comply with specified requirements.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- E. Field quality-control reports.

Retain first paragraph below if retaining "Performance Testing" Article. See "Performance Testing Considerations" Article in the Evaluations for detailed discussion.

- F. Performance Test Reports: Indicate test results compared with specified performance requirements, and provide justification and resolution of differences if values do not agree.
- G. Warranties: Sample of special warranties.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For UPS units to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

If maintenance contract is specified, delete this article.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Quantities in subparagraphs below are examples only.

1. Fuses: **[One (1)]** <Insert number> for every **[ten (10)]** <Insert number> of each type and rating, but no fewer than **[one (1)]** <Insert number> of each.
2. Cabinet Ventilation Filters: **[One (1)]** <Insert number> complete set(s).

1.9 QUALITY ASSURANCE

Retain first paragraph below if Contractor is required in "Performance Testing" Article to provide the services of a power quality specialist. See "Performance Testing Considerations" Article in the Evaluations for detailed discussion.

- A. Power Quality Specialist Qualifications: A registered professional electrical engineer or engineering technician, currently certified by the National Institute for Certification in Engineering Technologies, NICET Level 4, minimum, experienced in performance testing UPS installations and in performing power quality surveys similar to that required in "Performance Testing" Article.

Retain first paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in

addition to those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- B. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. UL Compliance: Listed and labeled under UL 1778 by an NRTL.

Retain paragraph below if UPS components for this Project are installed in computer rooms.

- E. NFPA Compliance: Mark UPS components as suitable for installation in computer rooms according to NFPA 75.

1.10 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Battery Warranties: Specified form in which manufacturer and Installer agree to repair or replace UPS system storage batteries that fail in materials or workmanship within specified warranty period.

Retain one of three subparagraphs below to specify typical industry UPS battery-life warranty for type of battery specified in Part 2. Consult manufacturers' literature and revise, if applicable, to suit Project. See "Warranties" Article in the Evaluations for detailed discussion.

- 1. Warranted Cycle Life for Valve-Regulated, Lead-Calcium Batteries: Equal to or greater than that represented in manufacturer's published table, including figures corresponding to the following, based on annual average battery temperature of 77 deg F (25 deg C):

Discharge Rate:	Discharge Duration:	Discharge End Voltage:	Cycle Life:
8 hours	8 hours	1.67	6 cycles
30 minutes	30 minutes	1.67	20 cycles
15 minutes	45 seconds	1.67	120 cycles

- 2. Warranted Cycle Life for Premium Valve-Regulated, Lead-calcium Batteries: Equal to or greater than that represented in manufacturer's published table, including figures corresponding to the following, based on annual average battery temperature of 77 deg F (25 deg C):

Discharge Rate:	Discharge Duration:	Discharge End Voltage:	Cycle Life:
8 hours	8 hours	1.67	40 cycles
30 minutes	30 minutes	1.67	125 cycles
15 minutes	1.5 minutes	1.67	750 cycles

3. Warranted Cycle Life for Flooded Batteries: Equal to or greater than that represented in manufacturer's published table, including figures corresponding to the following, based on annual average battery temperature of 77 deg F (25 deg C):

Discharge Rate:	Discharge Duration:	Discharge End Voltage:	Cycle Life:
8 hours	8 hours	1.75	40 cycles
1 hour	1 hour	1.75	80 cycles
15 minutes	45 seconds	1.67	2700 cycles

Retain paragraph below unless standard one-year correction period for overall UPS installation is adequate or if a service contract or other extended service arrangement is required. Consider specifying that Contractor present Owner with a proposal, signed by a factory-authorized service representative, for a full-service contract for a period beginning at the end of the one-year correction period.

- B. Special UPS Warranties: Specified form in which manufacturer and Installer agree to repair or replace components that fail in materials or workmanship within special warranty period.

Verify that manufacturers will honor either option in subparagraph below.

1. Special Warranty Period: Minimum [two (2)] [three (3)] <Insert number> years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 OPERATIONAL REQUIREMENTS

- A. Automatic operation includes the following:
1. Normal Conditions: Load is supplied with power flowing from the normal power input terminals, through the rectifier-charger and inverter, with the battery connected in parallel with the rectifier-charger output.

2. Abnormal Supply Conditions: If normal supply deviates from specified and adjustable voltage, voltage waveform, or frequency limits, the battery supplies energy to maintain constant, regulated inverter power output to the load without switching or disturbance.
3. If normal power fails, energy supplied by the battery through the inverter continues supply-regulated power to the load without switching or disturbance.
4. When power is restored at the normal supply terminals of the system, controls automatically synchronize the inverter with the external source before transferring the load. The rectifier-charger then supplies power to the load through the inverter and simultaneously recharges the battery.
5. If the battery becomes discharged and normal supply is available, the rectifier-charger charges the battery. On reaching full charge, the rectifier-charger automatically shifts to float-charge mode.
6. If any element of the UPS system fails and power is available at the normal supply terminals of the system, the static bypass transfer switch switches the load to the normal ac supply circuit without disturbance or interruption.
7. If a fault occurs in the system supplied by the UPS, and current flows in excess of the overload rating of the UPS system, the static bypass transfer switch operates to bypass the fault current to the normal ac supply circuit for fault clearing.
8. When the fault has cleared, the static bypass transfer switch returns the load to the UPS system.
9. If the battery is disconnected, the UPS continues to supply power to the load with no degradation of its regulation of voltage and frequency of the output bus.

B. Manual operation includes the following:

Revise performance descriptions in both subparagraphs below to suit Project.

1. Turning the inverter off causes the static bypass transfer switch to transfer the load directly to the normal ac supply circuit without disturbance or interruption.
2. Turning the inverter on causes the static bypass transfer switch to transfer the load to the inverter.

Retain first paragraph below if specifying maintenance bypass/isolation switch for UPS units.

C. Maintenance Bypass/Isolation Switch Operation: Switch is interlocked so it cannot be operated unless the static bypass transfer switch is in the bypass mode. Device provides manual selection among the three conditions in subparagraphs below without interrupting supply to the load during switching:

1. Full Isolation: Load is supplied, bypassing the UPS. Normal UPS ac input circuit, static bypass transfer switch, and UPS load terminals are completely disconnected from external circuits.
2. Maintenance Bypass: Load is supplied, bypassing the UPS. UPS ac supply terminals are energized to permit operational checking, but system load terminals are isolated from the load.
3. Normal: Normal UPS ac supply terminals are energized and the load is supplied through either the static bypass transfer switch and the UPS rectifier-charger and inverter, or the battery and the inverter.

- D. Environmental Conditions: The UPS shall be capable of operating continuously in the following environmental conditions without mechanical or electrical damage or degradation of operating capability, except battery performance.

Conditions in four subparagraphs below are standard for commercial UPS equipment. A separate ambient temperature range applies for the UPS battery, and the range of temperature conditions for the battery environment stated here is greater than that allowed by typical special battery warranties. If unusual service conditions for UPS equipment exist and cannot be eliminated, specify them here by revising subparagraphs below. See Editing Instruction No. 2 in the Evaluations.

1. Ambient Temperature for Electronic Components: **32 to 104 deg F** (0 to 40 deg C).

If the battery must operate within the temperature range specified in first subparagraph below rather than in the environment specified in the special battery warranty, special battery selection requirements may apply. Consult battery manufacturers.

2. Ambient Temperature for Battery: **41 to 95 deg F** (5 to 35 deg C).
3. Optimum battery temperature: **68 deg F** (20 deg C)
4. Relative Humidity: 0 to 95 percent, noncondensing.
5. Altitude: **5500 feet** (1677 m) with no derating.

2.2 PERFORMANCE REQUIREMENTS

Revise first paragraph below to specify duration of system supply. See Editing Instruction No. 3 in the Evaluations.

- A. The UPS shall perform as specified in this article while supplying rated full-load current, composed of any combination of linear and nonlinear load, up to 100 percent nonlinear load with a load crest factor of 3.0, under the following conditions or combinations of the following conditions:
1. Inverter is switched to battery source.
 2. Steady-state ac input voltage deviates up to plus or minus 10 percent from nominal voltage.
 3. Steady-state input frequency deviates up to plus or minus 5 percent from nominal frequency.
 4. THD of input voltage is 15 percent or more with a minimum crest factor of 3.0, and the largest single harmonic component is a minimum of 5 percent of the fundamental value.

Choice of alternative performance figure in subparagraph below affects ability of the UPS to maintain specified performance capability under continuous unbalanced load conditions. Retaining a high figure may limit competition and increase cost. Retain lowest percentage of continuous load unbalance reasonably expected to occur for this Project.

5. Load is **[30] [50] [100]** percent unbalanced continuously.
- B. Minimum Duration of Supply: If battery is sole energy source supplying rated full UPS load current at 80 percent power factor, duration of supply is **[five] [10] [15] <Insert duration>** minutes.

- C. Input Voltage Tolerance: System steady-state and transient output performance remains within specified tolerances when steady-state ac input voltage varies plus 10, minus [15] [20] [30] percent from nominal voltage.

Insert efficiency percentages in first paragraph below that are consistent with rated capacity of the UPS unit specified in this Section. See Editing Instruction No. 5 in the Evaluations for table of typical values.

- D. Overall UPS Efficiency: Equal to or greater than <Insert number> percent at 100 percent load, <Insert number> percent at 75 percent load, and <Insert number> percent at 50 percent load.

Insert noise values in first paragraph below that are consistent with rated capacity of UPS units specified in this Section. See Editing Instruction No. 6 in the Evaluations for table of typical values.

- E. Maximum Acoustical Noise: <Insert value>, "A" weighting, emanating from any UPS component under any condition of normal operation, measured <Insert distance> from nearest surface of component enclosure.

Retaining first option in first paragraph below may make it easier to provide good, well-coordinated overcurrent protection for the UPS feeder but may also require manufacturer to add series reactors in input circuit for some models, and it may increase cost.

- F. Maximum Energizing Inrush Current: [Six] [Eight] times the full-load current.
- G. Maximum AC Output-Voltage Regulation for Loads up to 50 Percent Unbalanced: Plus or minus 2 percent over the full range of battery voltage.
- H. Output Frequency: 60 Hz, plus or minus 0.5 percent over the full range of input voltage, load, and battery voltage.
- I. Limitation of harmonic distortion of input current to the UPS shall be as follows:

Retain one of two subparagraphs below to establish maximum harmonic distortion permitted for current drawn by the UPS from its input power source. First subparagraph is desirable for most applications, is vital for many, and commands a cost premium. See Evaluations for discussion.

1. Description: Either a tuned harmonic filter or an arrangement of rectifier-charger circuits shall limit THD to [5] [10] percent, maximum, at rated full UPS load current, for power sources with X/R ratio between 2 and 30.

Delete subparagraph below for a UPS with an engine-generator-set source or for a UPS with a utility source if it may result in excessive distortion of generator load current or in higher harmonic content of current drawn by facility service than is allowed by electric utility according to IEEE 519. See Evaluations.

2. Description: THD is limited to a maximum of 32 percent, at rated full UPS load current, for power sources with X/R ratio between 2 and 30.

Retain first paragraph below for UPS systems with more-sensitive loads; retain second paragraph for systems with less-sensitive loads. First paragraph may command a cost premium; it may also restrict competition or force some manufacturers to use an output isolation transformer with low forward transfer impedance. See Evaluations. Consult manufacturers.

- J. Maximum Harmonic Content of Output-Voltage Waveform: 5 percent rms total and 3 percent rms for any single harmonic, for 100 percent rated nonlinear load current with a load crest factor of 3.0.
- K. Maximum Harmonic Content of Output-Voltage Waveform: 5 percent rms total and 3 percent rms for any single harmonic, for rated full load with THD up to 50 percent, with a load crest factor of 3.0.

First paragraph below is one way of specifying UPS overload performance. Other methods may be used. Consult manufacturers' data and revise paragraph to suit Project. Retain if overload performance is required.

- L. Minimum Overload Capacity of UPS at Rated Voltage: 125 percent of rated full load for 10 minutes, and 150 percent for 30 seconds in all operating modes.
- M. Maximum Output-Voltage Transient Excursions from Rated Value: For the following instantaneous load changes, stated as percentages of rated full UPS load, voltage shall remain within stated percentages of rated value and recover to, and remain within, plus or minus 2 percent of that value within 100 ms:
 - 1. 50 Percent: Plus or minus 5 percent.
 - 2. 100 Percent: Plus or minus 5 percent.
 - 3. Loss of AC Input Power: Plus or minus 1 percent.
 - 4. Restoration of AC Input Power: Plus or minus 1 percent.

For units rated less than 15 kVA, manufacturer's input power factor rating is normally lower. Retain second option in first paragraph below on larger units to maintain adequate battery standby power.

- N. Input Power Factor: A minimum of **[0.70] [0.85]** lagging when supply voltage and current are at nominal rated values and the UPS is supplying rated full-load current.
- O. EMI Emissions: Comply with FCC Rules and Regulations and with 47 CFR 15 for Class A equipment.

2.3 UPS SYSTEMS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Eaton Corporation](#).
 - 2. [Liebert Corporation](#).
 - 3. [MGE UPS SYSTEMS](#).
 - 4. [Mitsubishi Electric Automation, Inc.](#)
 - 5. [Toshiba Corporation](#); Industrial Systems.
 - 6. **<Insert manufacturer's name>**.
 - 7. or approved equal.

- B. Electronic Equipment: Solid-state devices using hermetically sealed, semiconductor elements. Devices include rectifier-charger, inverter, static bypass transfer switch, and system controls.
- C. Enclosures: Comply with NEMA 250, Type 1, unless otherwise indicated.
 - 1. The rectifier/charger, inverter, static transfer switch, input, output, battery, maintenance bypass switches, output isolation transformer and customer load connections shall be housed in a freestanding enclosure. The standard run time battery shall be housed in a separate enclosure. Cabinet doors and covers shall be removable for expedient servicing, adjustments, and installation. Cabinets shall be equipped with casters and leveling feet.
- D. Control Assemblies: Mount on modular plug-ins, readily accessible for maintenance.
- E. Surge Suppression: Protect internal UPS components from surges that enter at each ac power input connection including main disconnect switch, static bypass transfer switch[, and maintenance bypass/isolation switch]. Protect rectifier-charger, inverter, controls, and output components.

For guidance on surge suppressor selection in first subparagraph below, see the Evaluations in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits." Most UPS installations will be in Category B situations, but each should be evaluated independently.

- 1. Use factory-installed surge suppressors tested according to IEEE C62.41.1 and IEEE C62.41.2, [**Category B**] [**Category C**].

Subparagraph above specifies surge protection typically available for all three-phase, on-line UPS units. Surge suppressors that comply with this subparagraph are effective against high-voltage, fast surges (quick, sharp, power-line high-voltage spikes). They do not, however, protect against low-frequency, high-energy surges that may be even more damaging to UPS components than high-voltage spikes. For important mission-critical applications approximately 15- to 20-kVA rating and above, include the capability for handling surges in the 300-cycle, minus 180 percent voltage range specified in subparagraph below. See Evaluations.

- 2. Additional Surge Protection: Protect internal UPS components from low-frequency, high-energy voltage surges described in IEEE C62.41.1 and IEEE C62.41.2. Design the circuits connecting with external power sources and select circuit elements, conductors, conventional surge suppressors, and rectifier components and controls so input assemblies will have adequate mechanical strength and thermal and current-carrying capacity to withstand stresses imposed by 40-Hz, 180 percent voltage surges described in IEEE C62.41.1 and IEEE C62.41.2.

Retain first paragraph below for units rated more than approximately 100 kVA. Consult manufacturers.

- F. Maintainability Features:
 - 1. Mount rectifier-charger and inverter sections and the static bypass transfer switch on modular plug-ins, readily accessible for maintenance.
 - 2. The UPS shall be constructed of replaceable subassemblies. The main control printed circuit board shall be interchangeable across the entire single-phase

product range.

Upgrading existing UPS systems to add capacity is rare. Retain first paragraph below if this method of providing future UPS capacity is applicable. Retaining paragraph may limit competition and increase initial cost; if retaining, consider increasing sizes of conduit, wire, and overcurrent protective devices to accommodate future increased capacity. Additional space may also be required for future equipment cabinets.

- G. Capacity Upgrade Capability: Arrange wiring, controls, and modular component plug-in provisions to permit future [25] <Insert number> percent increase in UPS capacity.

Retain first paragraph below if required by seismic criteria applicable to Project. See "Seismic Considerations" Article in the Evaluations.

- H. Seismic-Restraint Design: UPS assemblies, subassemblies, and components (and fastenings and supports, mounting, and anchorage devices for them) shall be designed and fabricated to withstand static and seismic forces.

Locating UPS cabinets on raised flooring in computer rooms is no longer common due to the high cost of computer room space. However, if locating units on raised flooring, revise first paragraph below to ensure that bottom plane of cabinets is closed. This action prevents the potential of unwanted imbalance in air systems supplying underfloor areas.

- I. UPS Cabinet Ventilation: Redundant fans or blowers draw in ambient air near the bottom of cabinet and discharge it near the top rear.

Retain paragraph below for a UPS with heavy nonlinear loading.

- J. Output Circuit Neutral Bus, Conductor, and Terminal Ampacity: Rated phase current times a multiple of 1.73, minimum.

2.4 RECTIFIER-CHARGER

- A. Capacity: Adequate to supply the inverter during rated full output load conditions and simultaneously recharge the battery from fully discharged condition to 95 percent of full charge within 10 times the rated discharge time for duration of supply under battery power at full load.

Feature in first paragraph below is important for optimum battery life.

- B. Output Ripple: Limited by output filtration to less than 0.5 percent of rated current, peak to peak.
- C. Control Circuits: Immune to frequency variations within rated frequency ranges of normal and emergency power sources.
1. Response Time: Field adjustable for maximum compatibility with local generator-set power source.

- D. Battery Float-Charging Conditions: Comply with battery manufacturer's written instructions for battery terminal voltage and charging current required for maximum battery life.
- E. Automatic Restart: Upon restoration of utility AC power after a power outage, the rectifier/charger shall automatically restart, "walk-in", and gradually assume the inverter and battery recharge loads.
- F. Rectifier/Charger Input Current Limit: The rectifier/charger shall have an "on generator" function, which when activated by an external dry contact opening (user supplied), shall reduce the input current limit to 100%.
- G. Rectifier/Charger Battery Test: The rectifier/charger shall run a weekly diagnostic test of the batteries by briefly placing them under load, this shall be done by reducing the output voltage of the rectifier/charger. The rectifier shall remain on and in the circuit should the battery fail to meet criteria. If any fault is detected an alarm will flash on the diagnostic panel. Measurements taken will be compared with the diagnostic algorithm in the microprocessor to confirm the integrity of the battery.

2.5 INVERTER

Retain one of two paragraphs in this article. Retain second paragraph if the UPS may be supplied power from a standby engine-generator set.

- A. Description: Pulse-width modulated, with sinusoidal output.
- B. Description: Pulse-width modulated, with sinusoidal output. Include a bypass phase synchronization window adjustment to optimize compatibility with local engine-generator-set power source.
- C. Inverter Start-Up: The inverter shall automatically startup when a start command is generated and shall be stable and ready to deliver power to the load within 2 seconds.
- D. Inverter Protection: Inverter transistors shall be protected by fast acting, current limiting fuses and current limiting circuits. The inverter shall be capable of running indefinitely with the batteries disconnected. For rapid removal of the inverter from the critical load, the inverter control electronics shall instantaneously turn off the inverter transistors when the inverters capacity is exceeded. Simultaneously, the static transfer switch shall transfer the load to utility power without interruption to maintain continuous power to the critical load.
- E. Inverter Oscillator: The inverter shall contain an oscillator capable of operating and maintaining the output frequency of the inverter within specified limits. The inverter oscillator shall be capable of frequency synchronization and phase locking to the utility power source frequency. When operating as a slave to the utility power and a failure occurs in the slaving signal, the inverter oscillator shall automatically revert to a free running state and maintain the specified limits. The oscillator shall not drift more than 0.1% while operating at maximum rated operating temperature.
- F. Inverter DC Protection: The inverter shall be automatically protected at the following

DC voltage levels, which shall be independently adjustable for UPS application flexibility.

1. DC Over voltage Shutdown = 2.40 V/cell.
2. DC Under voltage Shutdown = 1.65 V/cell.
3. The DC under voltage shutdown shall be automatically increased when the backup time is longer than one hour to 1.75 V/cell to avoid deep discharge to the battery due to light load.

G. Phase Balance: Electronic controls shall be provided to regulate each phase so that an unbalanced load will not cause the output voltage to go outside of the specified voltage unbalance or phase displacement limits.

H. Inverter performance criteria:

1. Power Rating: UPS ratings are shown at 0.8 pf lagging, other power factor loads can be supported.
2. Input: Shall operate within specification over the nominal rectifier/charger output range and minimum battery voltage of 1.65 volts per cell.
3. Output Voltage: 480 or 208 VAC-60HZ, 3 Phase, 4 wire (plus ground), adjustable by $\pm 5\%$ of nominal.
4. Output Regulation: Balanced Loads: $\pm 1\%$ balanced load - Phase Angle $120^\circ \pm 1^\circ$, Unbalanced Loads: $\pm 3\%$ 100% unbalanced load - Phase Angle $120^\circ \pm 3^\circ$.
5. Output Waveform: Sinusoidal.
6. Frequency Stability: Normally synchronized to utility line over frequency range of $\pm 0.75\%$ or optionally $\pm 1.5\%$, $\pm 3\%$, $\pm 6\%$; free running $\pm 0.05\%$. Slew rate $\square 1.0$ Hz/Sec.
7. Output Dynamic Response: $< \pm 5\%$ maximum deviation, recovering to within 2% of (sudden 100% load steady state in less than 20ms; application or removal).
8. Overload Rating: 150% for 1 minute, 125% for 10 minutes.
9. Harmonic Content: Linear loads: Max. voltage THD $< 3\%$, 100% non-linear load: Max. voltage THD $< 5\%$.

I. Efficiency (AC-AC): Minimum: 90-93% at Full Load.

2.6 STATIC BYPASS TRANSFER SWITCH

A. Description: Solid-state switching device providing uninterrupted transfer. A contactor or electrically operated circuit breaker automatically provides electrical isolation for the switch.

B. Switch Rating: Continuous duty at the rated full UPS load current, minimum.

C. The static switch shall be naturally commutated high speed static devices (SCR) rated to conduct full load current continuously while on inverter or bypass power (reserve source). The reserve portion of the static switch shall be designed to avoid backfeed into the mains. Failure of one SCR shall not effect the operation of the UPS and the failure shall be shown on the LCD display. Over current protection in the bypass mode will be through fuses. The bypass power source can be other than rectifier/charger

input utility source.

- D. Overload Ratings: Continuous 125%, 1 Minute 150%, 30 cycles 1000%, 5 cycles 1500%.
- E. Transfer Characteristics: Transfer time from inverter shall be less than 0.5ms to utility power when both sources are in phase lock, and vice versa and automatic 5 second delay before allowing retransfer from utility power to inverter after transferring from inverter to utility power. Transfer time from inverter to utility when both sources are not in phase lock shall be 20 ms (To prevent damage by phase reversal to the load.)
- F. Separate Reserve Feed: The UPS shall be supplied with a separate reserve feed. This feed eliminates the single point of failure of the primary input by offering two (2) separate paths for the power flow. This feature also allows two or more UPS's to be installed in an isolated redundant configuration.
- G. Reserve Transfer: The static switch shall automatically and successfully transfer the critical load from the inverter to the bypass source (reserve) under the following conditions:
1. DC voltage out-of-limits failure.
 2. Inverter failure.
 3. Critical load current exceeds inverter overload rating.
 4. Over-temperature develops within the inverter.
 5. Manual command is given.
 6. Reserve Transfer shall be automatically inhibited, whenever bypass source conditions are outside predetermined (adjustable) limits, or UPS output and bypass are not synchronized and phase locked.
 7. Retransfer: The static switch shall automatically and successfully retransfer the critical load from the bypass source to the inverter under the following conditions:
 - a. Inverter output voltage returns to within specified limits.
 - b. Critical load current reduces to within inverter overload rating.
- H. Synchronizing Equipment: The static switch shall include all necessary logic circuitry for fully automatic frequency synchronization and phase locking of the UPS inverter output to the bypass/reserve power source.

2.7 BATTERY

Retain one of three "Description" paragraphs in this article. Revise retained paragraph to suit Project requirements for cell type and rack or housing mounting configuration. See Editing Instruction No. 4 and "UPS Batteries" Article in the Evaluations for discussions of battery alternatives. Coordinate with "Warranty" Article and with Drawings.

- A. Description: Valve-regulated, recombinant, lead-calcium units, factory assembled in an isolated compartment of UPS cabinet, complete with battery disconnect switch.

Optional feature in subparagraph below is available from some manufacturers; retain if budget allows, enhanced maintainability is required, and the possibility of reduced competition is acceptable.

1. Arrange for drawout removal of battery assembly from cabinet for testing and inspecting.
- B. Description: Valve-regulated, premium, heavy-duty, recombinant, lead-calcium units; factory assembled in an isolated compartment or in a separate matching cabinet, complete with battery disconnect switch.

Optional feature in subparagraph below is available from some manufacturers; retain if budget allows, enhanced maintainability is required, and the possibility of reduced competition is acceptable.

1. Arrange for drawout removal of battery assembly from cabinet for testing and inspecting.
- C. Description: Flooded, lead-calcium, heavy-duty industrial units in styrene acrylonitrile containers mounted on[**three-tier,**] acid-resistant, painted steel racks. Assembly includes battery disconnect switch, intercell connectors, hydrometer syringe, and thermometer with specific gravity-correction scales.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- D. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [C&D Technologies, Inc.](#)
 2. [Eaton Corporation.](#)
 3. [EnerSys.](#)
 4. [Panasonic Corporation of North America](#); Panasonic Industrial Company.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.

Retain paragraph below if required by seismic criteria applicable to Project. See "Seismic Considerations" Article in the Evaluations.

- E. Seismic-Restraint Design: Battery racks, cabinets, assemblies, subassemblies, and components (and fastenings and supports, mounting, and anchorage devices for them) shall be designed and fabricated to withstand static and seismic forces.

2.8 CONTROLS AND INDICATIONS

- A. Description: Group displays, indications, and basic system controls on a common control panel on front of UPS enclosure.
- B. Minimum displays, indicating devices, and controls include those in lists below. Provide sensors, transducers, terminals, relays, and wiring required to support listed items. Alarms include audible signals and visual displays.

LCD messaging in first paragraph below may not be available for many models rated 10 kVA and less.

- C. Indications: [**Labeled LED**] [**Plain-language messages on a digital LCD or LED**].

Retain lists in subparagraphs below or revise to suit Project. Coordinate with remote monitoring and alarm functions and with monitoring and alarm functions specified for the UPS battery in other articles in this Section. Consider deleting all items that are nonstandard with leading manufacturers in the UPS class or size indicated. Some may be proprietary. Many may not be available on units at low end of capacity range covered by this Section.

1. Quantitative indications shall include the following:
 - a. Input voltage, each phase, line to line.
 - b. Input current, each phase, line to line.
 - c. Bypass input voltage, each phase, line to line.
 - d. Bypass input frequency.
 - e. System output voltage, each phase, line to line.
 - f. System output current, each phase.
 - g. System output frequency.
 - h. DC bus voltage.
 - i. Battery current and direction (charge/discharge).
 - j. Elapsed time discharging battery.

2. Basic status condition indications shall include the following:
 - a. Normal operation.
 - b. Load-on bypass.
 - c. Load-on battery.
 - d. Inverter off.
 - e. Alarm condition.

3. Alarm indications shall include the following:
 - a. Bypass ac input overvoltage or undervoltage.
 - b. Bypass ac input overfrequency or underfrequency.
 - c. Bypass ac input and inverter out of synchronization.
 - d. Bypass ac input wrong-phase rotation.
 - e. Bypass ac input single-phase condition.
 - f. Bypass ac input filter fuse blown.
 - g. Internal frequency standard in use.
 - h. Battery system alarm.
 - i. Control power failure.
 - j. Fan failure.
 - k. UPS overload.
 - l. Battery-charging control faulty.
 - m. Input overvoltage or undervoltage.
 - n. Input transformer overtemperature.
 - o. Input circuit breaker tripped.
 - p. Input wrong-phase rotation.
 - q. Input single-phase condition.
 - r. Approaching end of battery operation.
 - s. Battery undervoltage shutdown.
 - t. Maximum battery voltage.
 - u. Inverter fuse blown.
 - v. Inverter transformer overtemperature.

- w. Inverter overtemperature.
 - x. Static bypass transfer switch overtemperature.
 - y. Inverter power supply fault.
 - z. Inverter transistors out of saturation.
 - aa. Identification of faulty inverter section/leg.
 - bb. Inverter output overvoltage or undervoltage.
 - cc. UPS overload shutdown.
 - dd. Inverter current sensor fault.
 - ee. Inverter output contactor open.
 - ff. Inverter current limit.
4. Controls shall include the following:
- a. Inverter on-off.
 - b. UPS start.
 - c. Battery test.
 - d. Alarm silence/reset.
 - e. Output-voltage adjustment.

Retain first paragraph below if required to allow for present or possible future remote UPS status and alarm panel.

- D. Dry-form "C" contacts shall be available for remote indication of the following conditions:
- 1. UPS on battery.
 - 2. UPS on-line.
 - 3. UPS load-on bypass.
 - 4. UPS in alarm condition.
 - 5. UPS off (maintenance bypass closed).
- E. Emergency Power Off Switch: Capable of local operation and operation by means of activation by external dry contacts.

Of components and features listed in first eight articles below, some are optional and some are standard, depending on manufacturer, model, and rating. For some, a single component functions as two. See Evaluations. Retain those components required for Project.

2.9 MAINTENANCE BYPASS/ISOLATION SWITCH

Many UPS units in the 5- to 125-kVA range do not have devices specified in this article as standard features. Loads of UPS units without these devices must be shut down if UPS units are de-energized for maintenance or repair. See Evaluations.

- A. Description: Manually operated switch or arrangement of switching devices with mechanically actuated contact mechanism arranged to route the flow of power to the load around the rectifier-charger, inverter, and static bypass transfer switch.
- 1. Switch shall be electrically and mechanically interlocked to prevent interrupting power to the load when switching to bypass mode.

2. Switch shall electrically isolate other UPS components to permit safe servicing.

Retain first paragraph below for systems approximately 150 kVA and larger, where this component is often housed in a floor-mounted cabinet.

- B. Comply with NEMA PB 2 and UL 891.
- C. Switch Rating: Continuous duty at rated full UPS load current.

Retain first paragraph below if Drawings do not indicate mounting and location of switch. Coordinate with Drawings.

- D. Mounting Provisions: **[Internal to system cabinet] [Separate wall- or floor-mounted unit]**.

Retain paragraph below for externally mounted switch.

- E. Key interlock requires unlocking maintenance bypass/isolation switch before switching from normal position with key that is released only when the UPS is bypassed by the static bypass transfer switch. Lock is designed specifically for mechanical and electrical component interlocking.

2.10 OUTPUT ISOLATION TRANSFORMER

This article specifies an important feature for UPS units serving loads susceptible to conducted EMI if there are no other provisions for adequate attenuation of EMI. Output isolation transformers have other functions besides mitigation of EMI and may be standard on certain models by some manufacturers. In some applications, a UPS serves loads through one or more power distribution units that contain shielded isolation transformers. In such cases, the output isolation transformer in the UPS does not need to comply with shielding requirements in this article. See Evaluations.

- A. Description: **[Shielded unit] [Unit]** with low forward transfer impedance up to 3 kHz, minimum. Include the following features:

Retain K-factor in first subparagraph below that is appropriate for UPS load in this Project. Consider harmonic diversity and avoid overestimating the K-factor.

1. Comply with applicable portions of UL 1561, including requirements for nonlinear load current-handling capability for a K-factor of approximately **[4] [9] [13] [20]**.
2. Output Impedance at Fundamental Frequency: Between 3 and 4 percent.
3. Regulation: 5 percent, maximum, at rated nonlinear load current.
4. Full-Load Efficiency at Rated Nonlinear Load Current: 96 percent, minimum.
5. Electrostatic Shielding of Windings: Independent for each winding.
6. Coil Leads: Physically arranged for minimum interlead capacitance.
7. Shield Grounding Terminal: Separately mounted; labeled "Shield Ground."
8. Capacitive Coupling between Primary and Secondary: 33 picofarads, maximum, over a frequency range of 20 Hz to 1 MHz.

2.11 OUTPUT DISTRIBUTION SECTION

Retain this article if distribution panels are required to be integral with UPS system cabinets. Coordinate with Drawings and panelboard schedules.

- A. Panelboards: Comply with Section 262416 "Panelboards" except provide assembly integral to UPS cabinet.

2.12 MONITORING BY REMOTE STATUS AND ALARM PANEL

Retain this article if optional UPS monitoring by remote monitoring panel is required. Coordinate with "Controls and Indications" Article and with Drawings.

- A. Description: Labeled LEDs on panel faceplate indicate **[five (5)] <Insert quantity>** basic status conditions. Audible signal indicates alarm conditions. Silencing switch in face of panel silences signal without altering visual indication.
 - 1. Cabinet and Faceplate: Surface or flush mounted to suit mounting conditions indicated.

2.13 MONITORING BY REMOTE COMPUTER

Coordinate this article with "Basic Battery Monitoring" Article if battery monitoring is included. Coordinate with Section 260913 "Electrical Power Monitoring and Control." See Evaluations.

Feature in this article permits the UPS to communicate with computers to provide capability for remote monitoring and diagnosis and to initiate human and automated responses to UPS system events.

- A. Description: Communication module in unit control panel provides capability for remote monitoring of status, parameters, and alarms specified in "Controls and Indications" Article. The remote computer and the connecting signal wiring are not included in this Section. Include the following features:
 - 1. Connectors and network interface units or modems for data transmission via RS-232 link.
 - 2. Software designed for control and monitoring of UPS functions and to provide on-screen explanations, interpretations, diagnosis, action guidance, and instructions for use of monitoring indications and development of meaningful reports. Permit storage and analysis of power-line transient records. Designs for Windows applications, software, and computer are not included in this Section.

Retain subparagraph below if cited Section is included.

- 3. Software and Hardware: Compatible with that specified in Section 260913 "Electrical Power Monitoring and Control."

2.14 BASIC BATTERY MONITORING

This article specifies alternatives for optional monitoring of UPS batteries.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [BTECH, Inc.](#)
 2. [Eaton Corporation.](#)
 3. **<Insert manufacturer's name>**.
 4. or approved equal.

First two paragraphs below cover monitoring for abnormal conditions within battery compartments of cabinet-type housings for sealed batteries. Feature in second paragraph is unavailable from most manufacturers.

- B. Battery Ground-Fault Detector: Initiates alarm when resistance to ground of positive or negative bus of battery is less than 5000 ohms.
- C. Battery compartment smoke/high-temperature detector initiates an alarm when smoke or a temperature greater than 75 deg C occurs within the compartment.
- D. Annunciation of Alarms: At UPS control panel.

2.15 ADDITIONAL BATTERY MONITORING

Retain this article in special situations for large, compartment-mounted, valve-regulated batteries or for rack-mounted, station-type, flooded batteries. Retain only if detailed computerized analysis of battery performance is likely to be used. Do not retain unless separate provision is made for signal transmission to an appropriate computer and budget includes allowance for these costly features. Coordinate with Drawings. See Evaluations.

- A. Monitoring features and components shall include the following:
1. Factory-wired sensing leads to cell and battery terminals and cell temperature sensors.
 2. Connections for data transmission via RS-232 link, [**network interface and**] [**modem and**] external signal wiring to [**computer**] [**electrical power monitoring and control equipment**]. External signal wiring and computer are not specified in this Section.

Revise subparagraph below to include specific computer operating system if required.

3. PC-based software designed to store and analyze battery data. Software compiles reports on individual-cell parameters and total battery performance trends, and provides data for scheduling and prioritizing battery maintenance.
- B. Performance: Automatically measures and electronically records the following parameters on a routine schedule and during battery discharge events. During discharge events, records measurements timed to nearest second; includes measurements of the following parameters:
1. Total battery voltage and ambient temperature.

Retain first subparagraph below if complexity of wiring required for intercell monitoring makes it practical or acceptable.

2. Individual-cell voltage, impedance, and temperature. During battery-discharging events such as utility outages, measures battery and cell voltages timed to nearest second.

Retain subparagraph below for flooded-type battery if frequent visual monitoring of electrolyte levels is not acceptable.

3. Individual-cell electrolyte levels.

2.16 BATTERY-CYCLE WARRANTY MONITORING

Retain this article if UPS battery is covered by a cycle-life warranty specified in Part 1 and warranty requires continuous monitoring of battery cycling.

- A. Description: Electronic device, acceptable to battery manufacturer as a basis for warranty action, for monitoring of charge-discharge cycle history of batteries covered by cycle-life warranties.
- B. Performance: Automatically measures and records each discharge event, classifies it according to duration category, and totals discharges according to warranty criteria, displaying remaining warranted battery life on front panel display.
- C. Additional monitoring functions and features shall include the following:

Functions in seven subparagraphs below represent optional features available for battery-cycle monitors. Retain those required or those that are not provided by separate UPS battery-monitoring features specified in previous articles in this Section.

1. Measuring and Recording: Total voltage at battery terminals; initiates alarm for excursions outside the proper float-voltage level.
2. Monitors: Ambient temperature at battery; initiates alarm if temperature deviates from normally acceptable range.
3. Keypad on Device Front Panel: Provides access to monitored data using front panel display.
4. Alarm Contacts: Arranged to initiate [**local**] [**remote**] alarm for [**battery discharge events**] [**abnormal temperature**] [**abnormal battery voltage or temperature**].
5. Memory: Stores recorded data in nonvolatile electronic memory.
6. RS-232 Port: Permits downloading of data to a portable PC.
7. Modem: Makes measurements and recorded data accessible to a remote PC via telephone line. Computer is not specified in this Section.

2.17 SYSTEM RELIABILITY

- A. The UPS Mean Time Between Failures (MTBF) shall not be less than 35,000 hours for the inverter and 200,000 hours for the load.

2.18 SOURCE QUALITY CONTROL

Simulated battery tests are standard. Consider cost before specifying factory testing with actual batteries that are to be part of final installation.

- A. Factory test complete UPS system before shipment. Use **[actual batteries that are part of final installation] [simulated battery testing]**. Include the following:
1. Test and demonstration of all functions, controls, indicators, sensors, and protective devices.
 2. Full-load test.
 3. Transient-load response test.
 4. Overload test.
 5. Power failure test.

Retain first paragraph below if required.

- B. Observation of Test: Give 14 days' advance notice of tests and provide opportunity for DEN Project Manager to observe tests at DEN Project Manager's choice.

Retain paragraph below if factory test reports are required. Coordinate with Part 1.

- C. Report test results. Include the following data:
1. Description of input source and output loads used. Describe actions required to simulate source load variation and various operating conditions and malfunctions.
 2. List of indications, parameter values, and system responses considered satisfactory for each test action. Include tabulation of actual observations during test.
 3. List of instruments and equipment used in factory tests.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for conditions affecting performance of the UPS.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

Retain first paragraph below if required. Coordinate with Drawings and with seismic-restraint requirements if applicable.

- A. Equipment Mounting: Install UPS on concrete base. Comply with requirements for concrete base specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- B. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.
- C. Connections: Interconnect system components. Make connections to supply and load circuits according to manufacturer's wiring diagrams unless otherwise indicated.

3.3 GROUNDING

See Evaluations for discussion of grounding for separately derived systems created by isolation transformers. Coordinate this article with Drawings.

- A. Separately Derived Systems: If not part of a listed power supply for a data-processing room, comply with NFPA 70 requirements for connecting to grounding electrodes and for bonding to metallic piping near isolation transformer.

3.4 IDENTIFICATION

- A. Identify components and wiring according to Section 260553 "Identification for Electrical Systems."

Retain subparagraph below for rack-mounted, wet-cell batteries.

- 1. Identify each battery cell individually.

3.5 BATTERY EQUALIZATION

- A. Equalize charging of battery cells according to manufacturer's written instructions. Record individual-cell voltages.

3.6 FIELD QUALITY CONTROL

Retain one of first two paragraphs below to identify who shall perform tests and inspections. Retain first paragraph for units rated 150 kVA or more or that are considered mission critical. Coordinate with Part 1.

If retaining either option retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

- C. Tests and Inspections:

1. Comply with manufacturer's written instructions.
2. Inspect interiors of enclosures, including the following:
 - a. Integrity of mechanical and electrical connections.
 - b. Component type and labeling verification.
 - c. Ratings of installed components.

Retain first subparagraph below for flooded lead-calcium and valve-regulated, lead-calcium batteries only.

3. Inspect batteries and chargers according to requirements in NETA Acceptance Testing Specifications.
4. Test manual and automatic operational features and system protective and alarm functions.

Retain first subparagraph below if battery monitoring is required.

5. Test communication of status and alarms to remote monitoring equipment.

Retain subparagraph below for critical units rated 150 to 250 kVA and units rated 300 kVA and more.

6. Load the system using a variable-load bank to simulate kilovolt amperes, kilowatts, and power factor of loads for unit's rating. Use instruments calibrated within the previous [six months] <Insert time> according to NIST standards.

Retain tests in seven subparagraphs below if factory-test results for these items are not adequate.

- a. Simulate malfunctions to verify protective device operation.
- b. Test duration of supply on emergency, low-battery voltage shutdown, and transfers and restoration due to normal source failure.
- c. Test harmonic content of input and output current less than 25, 50, and 100 percent of rated loads.
- d. Test output voltage under specified transient-load conditions.

- e. Test efficiency at 50, 75, and 100 percent of rated loads.

Retain both subparagraphs below if features are specified.

- f. Test remote status and alarm panel functions.
- g. Test battery-monitoring system functions.

Retain first paragraph below for projects subject to seismic criteria.

- D. Seismic-restraint tests and inspections shall include the following:

- 1. Inspect type, size, quantity, arrangement, and proper installation of mounting or anchorage devices.

Retain subparagraph below for projects where anchorage device testing is required by Section 260548.16 "Seismic Controls for Electrical Systems."

- 2. Test mounting and anchorage devices according to requirements in Section 260548.16 "Seismic Controls for Electrical Systems."

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- E. The UPS system will be considered defective if it does not pass tests and inspections.
- F. Record of Tests and Inspections: Maintain and submit documentation of tests and inspections, including references to manufacturers' written instructions and other test and inspection criteria. Include results of tests, inspections, and retests.
- G. Prepare test and inspection reports.

3.7 PERFORMANCE TESTING

Retain this article if performance testing of UPS installation is required. See "Performance Testing Considerations" Article in the Evaluations for detailed discussion.

- A. Engage the services of a qualified power quality specialist to perform tests and activities indicated[**for each UPS system**].

Revise first paragraph below to specify extent and basic schedule for performance testing required for Project. Schedule below provides opportunity to specify single or multiple monitoring periods. Multiple monitoring periods are preferable to increase opportunity for observing UPS performance under conditions that occur randomly or are influenced by seasonal load conditions or by such phenomena as lightning storms.

- B. Monitoring and Testing Schedule: Perform monitoring and testing in [**a single 10-day period**] [**four 10-day periods, each in a different season of the year**] <Insert period>.
 - 1. Schedule monitoring and testing activity with Owner, through DEN Project Manager, with at least 14 days' advance notice.
 - 2. Schedule monitoring and testing after Substantial Completion, when the UPS is supplying power to its intended load.

Coordinate first paragraph below with Drawings.

- C. Monitoring and Testing Instruments: Three-phase, recording, power monitors. Instruments shall provide continuous simultaneous monitoring of electrical parameters at UPS input terminals and at input terminals of loads served by the UPS. Instruments shall monitor, measure, and graph voltage current and frequency simultaneously and provide full-graphic recordings of the values of those parameters before and during power-line disturbances that cause the values to deviate from normal beyond the adjustable threshold values. Instruments shall be capable of recording either on paper or on magnetic media and have a minimum accuracy of plus or minus 2 percent for electrical parameters. Parameters to be monitored include the following:
1. Current: Each phase and neutral and grounding conductors.
 2. Voltage: Phase to phase, phase to neutral, phase to ground, and neutral to ground.
 3. Frequency transients.
 4. Voltage swells and sags.
 5. Voltage Impulses: Phase to phase, phase to neutral, phase to ground, and neutral to ground.
 6. High-frequency noise.
 7. Radio-frequency interference.
 8. THD of the above currents and voltages.
 9. Harmonic content of currents and voltages above.
- D. Monitoring and Testing Procedures[**for Each Test Period**]:
1. Exploratory Period: For the first **[two (2)] <Insert number>** days[**of the first scheduled monitoring and testing period**], make recordings at various circuit locations and with various parameter-threshold and sampling-interval settings. Make these measurements with the objective of identifying optimum UPS, power system, load, and instrumentation setup conditions for subsequent test and monitoring operations.
 2. Remainder of Test Period: Perform continuous monitoring of at least two circuit locations selected on the basis of data obtained during exploratory period.
 - a. Set thresholds and sampling intervals for recording data at values selected to optimize data on performance of the UPS for values indicated, and to highlight the need to adjust, repair, or modify the UPS, distribution system, or load component that may influence its performance or that may require better power quality.
 - b. Perform load and UPS power source switching and operate the UPS on generator power during portions of test period according to directions of Owner's power quality specialist.
 - c. Operate the UPS and its loads in each mode of operation permitted by UPS controls and by the power distribution system design.

Retain one of first two subparagraphs below. Substantial cost is involved in using temporary equipment. Using temporary generator sets may not be necessary if installed power system includes a standby or emergency set. However, because tests are performed when the facility is occupied and operating, tests must be carefully planned to avoid compromising life safety and operational integrity. In many cases, the

need to ensure successful performance testing of vital UPS systems will override other concerns. This is the time to verify that the UPS will perform as required in the Project's unique environment.

- d. Using loads and devices available as part of the facility's installed systems and equipment[**and a temporarily connected portable generator set**], create and simulate unusual operating conditions, including outages, voltage swells and sags, and voltage, current, and frequency transients. Maintain normal operating loads in operation on system to maximum extent possible during tests.
- e. Using temporarily connected resistive/inductive load banks[**and a temporarily connected portable generator set**], create and simulate unusual operating conditions, including outages, voltage swells and sags, and voltage, current, and frequency transients. Maintain normal operating loads in operation on system to maximum extent possible during tests.
- f. Make adjustments and repairs to UPS, distribution, and load equipment to correct deficiencies disclosed by monitoring and testing and repeat appropriate monitoring and testing to verify success of corrective action.

Retain first paragraph below if computerized monitoring is specified for the UPS or its battery in Part 2.

- E. Coordination with Specified UPS Monitoring Functions: Obtain printouts of built-in monitoring functions specified for the UPS and its components in this Section that are simultaneously recorded with portable instruments in this article.
 1. Provide the temporary use of an appropriate PC and printer equipped with required connections and software for recording and printing if such units are not available on-site.
 2. Coordinate printouts with recordings for monitoring performed according to this article, and resolve and report any anomalies in and discrepancies between the two sets of records.
- F. Monitoring and Testing Assistance by Contractor:
 1. Open UPS and electrical distribution and load equipment and wiring enclosures to make monitoring and testing points accessible for temporary monitoring probe and sensor placement and removal as requested.
 2. Observe monitoring and testing operations; ensure that UPS and distribution and load equipment warranties are not compromised.
 3. Perform switching and control of various UPS units, electrical distribution systems, and load components as directed by power quality specialist. Specialist shall design this portion of monitoring and testing operations to expose the UPS to various operating environments, conditions, and events while response is observed, electrical parameters are monitored, and system and equipment deficiencies are identified.
 4. Make repairs and adjustments to the UPS and to electrical distribution system and load components, and retest and repeat monitoring as needed to verify validity of results and correction of deficiencies.
 5. Engage the services of the UPS manufacturer's factory-authorized service representative periodically during performance testing operations for repairs, adjustments, and consultations.

- G. Documentation: Record test point and sensor locations, instrument settings, and circuit and load conditions for each monitoring summary and power disturbance recording. Coordinate simultaneous recordings made on UPS input and load circuits.
- H. Analysis of Recorded Data and Report: Review and analyze test observations and recorded data and submit a detailed written report. Include the following in [each] report:
1. Description of corrective actions performed during monitoring and survey work and their results.
 2. Recommendations for further action to provide optimum performance by the UPS and appropriate power quality for non-UPS loads. Include a statement of priority ranking and a cost estimate for each recommendation that involves system or equipment revisions.
 3. Copies of monitoring summary graphics and graphics illustrating harmonic content of significant voltages and currents.
 4. Copies of graphics of power disturbance recordings that illustrate findings, conclusions, and recommendations.
 5. Recommendations for operating, adjusting, or revising UPS controls.
 6. Recommendation for alterations to the UPS installation.
 7. Recommendations for adjusting or revising generator-set or automatic transfer switch installations or their controls.
 8. Recommendations for power distribution system revisions.
 9. Recommendations for adjusting or revising electrical loads, their connections, or controls.

Retain paragraph below if multiple test periods are specified.

- I. Interim and Final Reports: Provide an interim report at the end of each test period and a final comprehensive report at the end of final test and analysis period.

3.8 DEMONSTRATION

Retain this article if formal training is required.

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain the UPS.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 263353

Copyright 2012 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 263533 - POWER FACTOR CORRECTION EQUIPMENT

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes automatic power factor correction equipment rated 600 V and less.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

Retain this article with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design for associated electrical equipment such as motor-control center, switchboard, or switchgear. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction.

- A. Seismic Performance: Power factor correction equipment shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include[**dimensions, operating characteristics of multiple capacitor cells or elements, and**] data on features, ratings, and performance.

1. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: For automatic power factor correction units.

1. Detail equipment assemblies and indicate dimensions, weights, method of field assembly, components, and location and size of each field connection. Show access and workspace requirements and required clearances.

Retain subparagraph below if equipment includes wiring.

2. Wiring Diagrams: For power, signal, and control wiring. Detail internal and interconnecting wiring and differentiate between manufacturer-installed and field-installed wiring.

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified testing agency.

Retain first paragraph below if required by seismic criteria applicable to Project. Coordinate with Sections specifying mechanical vibration, supports, electrical supports, and seismic controls. See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: For capacitors, accessories, and components, from manufacturer.

1. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.

1. Indicate and interpret test results for compliance with performance requirements, present written documentation to DEN Project Manager.

D. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For equipment to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

1. Lists of spare parts and replacement components recommended for storage at Project site.
2. Detailed instructions covering operation under both normal and abnormal conditions.

Verify requirements for as-built plans with DEN Project Manager.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: **[One (1)]** <Insert number> for every **[three (3)]** <Insert number> of each type and rating, but no fewer than three of each.

1.8 QUALITY ASSURANCE

Retain first paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

A. Testing Agency Qualifications: Member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with IEEE 18 and NEMA CP 1.
- D. Comply with NFPA 70.

1.9 COORDINATION

Retain this article if automatic power factor correction units are to be monitored by equipment specified in Section 260913 "Electrical Power Monitoring and Control."

- A. Coordinate sensor-communication module package with data network and with monitoring equipment specified in Section 260913 "Electrical Power Monitoring and Control" for successful transmission and remote readout of remote monitoring data specified in this Section.
- B. Coordinate with all construction trades and equipment manufacturers the location and installation of equipment supplied under this Section.

1.10 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

See Editing Instruction No. 6 in the Evaluations for guidance about specifying special warranty.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace capacitor-bank components that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for capacitor cells with manufacturers listed in Part 2 articles.

- 1. Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.
- B. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CAPACITORS, GENERAL

This article specifies the requirements for each cell and which are common to fixed and automatic capacitor banks.

- A. Comply with UL 810.

Retain first paragraph below if unusual service conditions for this equipment exist and cannot be eliminated. See Editing Instruction No. 2 in the Evaluations for environmental conditions that might be inserted below.

- B. Service Conditions: Capacitor equipment suitable for the following conditions:

1. Operating Temperature: **Minus 30 to plus 120 deg F** (Minus 35 to plus 49 deg C).
2. Maximum Altitude: **5500 feet** (1677 m).
3. Humidity: 0 to 95 percent, noncondensing.
4. **<Insert conditions>**.

- C. Construction: Multiple capacitor cells or elements, factory wired in three-phase groups and mounted in metal enclosures.

Most capacitor cells for power factor correction on low-voltage power systems are type described in first paragraph below, but other types are available. See Editing Instruction No. 3 in the Evaluations.

- D. Cells: Dry metallized-dielectric, self-healing type. Each cell shall be encapsulated in thermosetting resin inside plastic container.

- E. Rupture Protection: Pressure-sensitive circuit interrupter for each cell.

2.2 FIXED CAPACITORS

Retain this article for shunt capacitors that provide a fixed value of reactive power.

- A. Description: Factory wired, ready for field connection to external circuits at a single set of pressure terminals. Comply with UL 810. Integrally fused, unless otherwise indicated.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

B. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. ABB.
2. Aerovox Corp.
3. ARCO Electric Products.
4. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
5. RONK Electrical Industries, Inc.
6. Square D; a brand of Schneider Electric.
7. Staco Energy Products Co.
8. Steelman Industries, Inc.
9. **<Insert manufacturer's name>.**
10. or approved equal.

Coordinate first paragraph below with Drawings. Retain references to fuses if all fixed capacitors are fused.

C. **Fuses:** Current-limiting, noninterchangeable type; factory installed in each phase and located within the equipment enclosure. Features include the following:

1. Interrupting Capacity: 200,000 A
2. Fuse Ratings and Characteristics: As recommended by capacitor manufacturer.
3. Neon Indicator Lamp for Each Fuse: Connect to illuminate when fuse has opened, but is still in place, and locate so it is visible from outside the enclosure.

Retain first paragraph below for factory-installed discharge resistors. See Editing Instruction No. 7 in the Evaluations for conditions when resistors should be installed.

D. **Discharge Resistors:** Factory installed and wired.

Coordinate paragraph below with the Three-Phase Capacitor-Bank Schedule in the Evaluations. See Editing Instruction No. 4 in the Evaluations.

E. **Enclosure:** NEMA 250, steel or aluminum, arranged to contain the fluid leakage from capacitor cells; factory equipped with mounting brackets suitable for type of mounting indicated.

Retain one of three subparagraphs below, or delete all if enclosure type is indicated in the Three-Phase Capacitor-Bank Schedule in the Evaluations. See Editing Instruction No. 2 in the Evaluations for environmental conditions that might be inserted below.

1. Indoor Enclosures: NEMA 250, Type 12 or as indicated.
2. Outdoor Enclosures: NEMA 250, Type 3R or as indicated.
3. Outdoor Enclosures: NEMA 250, Type 4, equipped with watertight conduit connections.

2.3 AUTOMATIC POWER FACTOR CORRECTION UNITS

A. **Description:** Capacitors, contactors, controls, and accessories factory installed in **[independent enclosures] [motor-control center, with a connection to**

motor-control center bus] complying with NEMA ICS 2. Comply with UL 810. Units include a separately mounted current transformer to sense current in the power circuit being corrected and to provide input to unit controls.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- B. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
1. ABB.
 2. ARCO Electric Products.
 3. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 4. Square D; a brand of Schneider Electric.
 5. Staco Energy Products Co.
 6. Steelman Industries, Inc.
 7. **<Insert manufacturer's name>.**
 8. or approved equal.
- C. Performance Requirements: Controls permit selection of a target power factor, adjustable to any value between unity and 0.80 lagging. Controls continuously sense the power factor on circuits being corrected and, when the power factor differs from the target setting for more than 10 seconds, operate a contractor to switch a capacitor bank into or out of the circuit. Contactors are opened or closed as required to bring the corrected circuit power factor closer to the target setting. Provide number of switching steps indicated on the Three-Phase Capacitor-Bank Schedule.
- D. Current Transformer: Type, configuration, and ratio to suit sensing and mounting conditions.
- E. Main Circuit Breaker: Thermal-magnetic, inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger. Operable from outside the enclosure to disconnect the unit.
- F. Controls: Solid-state, microprocessor-based controls, including the following:
1. Undervoltage relay that interrupts capacitor switching and disconnects capacitors for power-supply interruptions longer than 15 minutes.
 2. "Advance" and "Retard" push buttons on the control panel to permit manually controlled capacitor-bank switching.
- G. Contactors: Three pole; rated for the repetitive high-inrush-switching duty in the capacitor application.
- For fault-current considerations, see Editing Instruction No. 5 in the Evaluations. Indicate on Drawings maximum fault current at capacitor input terminals.
- H. Fuses for Protection of Capacitor Banks: Rated to protect contactor, interconnecting wiring, and capacitors.

1. Spare-Fuse Cabinet: Identified [**and compartmented steel box**] [**cabinet with hinged lockable door**].

Retain first paragraph below for factory-installed discharge resistors. See Editing Instruction No. 7 in the Evaluations for conditions when resistors should be installed.

- I. Discharge Resistors: Factory installed and wired.

Retain one of first two paragraphs below to limit voltage spikes when switching capacitors on or off line.

- J. Inductors: Air-core type, connected in capacitor circuits; rated to limit switching surges to within contactor ratings.

- K. Precharge Capacitor Circuit: Resistive, precharge circuit to charge capacitors prior to switching and to limit switching surges to within contactor ratings.

- L. Enclosure: NEMA 250, [**Type 1**] [**Type 3R**] [**Type 12**], steel or aluminum, with hinged door and hand-operated catch. Door shall be interlocked with controls or main circuit breaker to de-energize capacitors when door is opened.

1. Factory Finish: Manufacturer's standard enamel over corrosion-resistant treatment or primer coat.

- M. Local Display: LED or liquid-crystal digital type, mounted in door of enclosure, indicating the following:

1. Target and actual power factors accurate to plus or minus 1 percent of reading.
2. Steps energized.
3. Step reconnection delay.
4. Real and reactive currents.
5. Voltage total harmonic distortion.
6. Alarm codes.

- N. System Alarms: Alarm relay and local display indication of the following conditions:

1. Low power factor.
2. Leading power factor.
3. Frequency not detected.
4. Overcurrent.
5. Overvoltage.
6. Overtemperature.
7. Excessive voltage total harmonic distortion.
8. Capacitor overload.
9. Loss of capacitance.

Coordinate paragraph below with Drawings and with Section 260913 "Electrical Power Monitoring and Control." Revise to suit Project and to reflect capability of electrical power monitoring and control system specified.

- O. Remote Monitoring Components: Sensors, associated communication modules, and network interface units, matched to and compatible with electrical power monitoring

and control network. Communication module shall have capability to transmit the following data to remote monitoring devices:

1. System in alarm.
2. Power factor set point.
3. Corrected power factor.
4. Number of capacitor steps activated.

P. Buses: Plated copper.

Q. Mechanical Bracing for Current-Carrying Parts: Adequate to withstand the maximum fault current to which they may be exposed.

2.4 SOURCE QUALITY CONTROL

A. Factory test power factor correction equipment before shipment. Comply with NEMA CP 1. Include the following:

1. Routine capacitor production tests, including short-time overvoltage, capacitance, leak, and dissipation-factor tests.

Retain subparagraph below if specifying an automatic system.

2. Functional test of all operations, controls, indicators, sensors, and protective devices.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install freestanding equipment on concrete bases. Cast-in-place concrete is specified in Section 033000 "Cast-In-Place Concrete."

Retain first paragraph below if seismic criteria apply.

B. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

C. Maintain minimum workspace according to manufacturer's written instructions.

Retain first paragraph below if specifying remote monitoring in Part 2.

D. Connect remote monitoring communication module to electrical power monitoring and control data network through appropriate network interface unit.

E. Tighten bus-assembly joints with torque wrench or similar tool recommended by bus assembly manufacturer. Tighten joints again after bus assemblies have been energized for 30 days.

- F. Identify components according to Section 260553 "Identification for Electrical Systems."

3.2 FIELD QUALITY CONTROL

Retain first or second paragraph below to identify who shall perform tests and inspections. If retaining option, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing. Report results in writing to DEN Project Manager. Include the following:
 - a. Operational Test: After electrical circuits have been energized, connect and observe units to confirm proper operation.
 - b. Replace damaged and malfunctioning controls and equipment.
2. Inspection: Perform external and internal inspections of capacitor equipment for damage and for compliance with the Contract Documents and manufacturer's documentation. Check electrical and mechanical bolted connections for bolt torquing requirements.
3. Inspection of Seismic Controls: Check type, size, quantity, arrangement, and installation of equipment mounting and anchorage devices against requirements indicated in manufacturer's certification.
4. Testing: Perform the following and certify compliance with test parameters:
 - a. Test mounting and anchorage devices according to requirements in Section 260548 "Vibration and Seismic Controls for Electrical Work."
 - b. Test insulation resistance between capacitor terminals and case. Follow manufacturer's written instructions or those below:
 - c. Use test voltages 500 V minimum, for equipment rated 250 V and less, and 1000 V minimum, for equipment rated more than 250 V.
 - d. Apply test voltage for 60 seconds.
 - e. Investigate, report, and resolve insulation resistance less than that stated by manufacturer's literature or less than allowable 25 megohms for equipment rated 250 V and less and 100 megohms for equipment rated more than 250 V.
 - f. Measure capacitance of pole-to-pole capacitor combinations and compare with manufacturer's published values. Report readings, and investigate and

- resolve discrepancies more than 10 percent of manufacturer's nominal values.
- g. Energize circuits and demonstrate electrical operating features of automatic power factor correction units according to manufacturer's written instructions.
 - h. Verify accuracy of remotely monitored parameters transmitted from automatic power factor correction units by communication module.
- 5. Correct deficiencies shown by inspections and tests on site where possible, and retest; otherwise, remove and replace with new units and retest.
 - 6. Report of Tests and Inspections: Written record of test results including adjustment settings shall be submitted to DEN Project Manager.

Retain first paragraph below to describe tests and inspections to be performed.

- C. Tests and Inspections: Perform each visual and mechanical inspection and electrical test stated in the following Sections, except optional tests, in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 1. Current Transformers.
 - 2. Capacitors and Reactors, Capacitors.

3.3 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Connect and run installed motors and equipment to verify the automatic switching of the capacitors. Verification shall include automatic switching of the total capacity of installed capacitors.

Retain subparagraph below if there is insufficient permanent capacity to fully test automatic operation.

- a. Provide sufficient inductive/reactive load banks, in combination with resistive load banks, for the test.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain automatic power factor correction units.
 - 1. Demonstrate method of determining optimum settings for system controls.
 - 2. Train Owner's maintenance personnel on procedures and schedules for starting up and shutting down, troubleshooting, servicing, and maintaining equipment and schedules.
 - 3. Review data in maintenance manuals in conformance with Division 01.

4. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days' advance notice.
5. Conduct a minimum of two (2) hours' training in conformance with Division 01.

3.5 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris. Repair damaged finish to match original finish.
- B. Clean components internally, on completion of installation, according to manufacturer's written instructions.

3.6 PROTECTION

- A. Provide final protection to ensure that moisture does not enter bus assembly.

3.7 COMMISSIONING

- A. Infrared Scanning: Two (2) months after Substantial Completion, perform an infrared scan of power factor capacitor assemblies.
 1. Use an infrared scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
 2. Perform two (2) follow-up infrared scans of power factor correction equipment, one (1) at four (4) months and the other at eleven (11) months after Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 263533

Copyright 2016 by the City and County of Denver, Denver International Airport

Exclusively published and distributed by the City and County of Denver for Denver International Airport

SECTION 263544 - AIRCRAFT GROUND POWER UNITS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Designer of Record (DOR)" Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

DEN PROJECT MANAGER SHALL APPROVE DELETION OF ALL NOTES/COMMENTS FOLLOWING DOR FINAL DESIGN REVIEW.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Division 26 Technical Specifications.

Retain or delete section references below as applicable to the project. Do not include references to sections that are not included in the project.

- C. Section 055000 – "Metal Fabrications."
- D. Section 147300 - "Over the Wing Passenger Loading Bridges."
- E. Section 147310 - "Apron Drive Passenger Loading Bridges."
- F. Section 147320 - "Radial Drive Passenger Loading Bridges."

1.2 REFERENCE STANDARDS

- A. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents or the Authority Having Jurisdiction.

Insert reference standards as applicable to the Project. Do not relax adherence to the listed standards unless approved in writing by the DEN Project Manager.

- B. SAE ARP-5015: Requirements for Ground Power Equipment that Supplies 115/200V,

3-Phase, 400Hz Output.

- C. SAE ARP-1940: Solid-State Frequency Converters.
- D. NEMA ST-20: Dry-type Transformers for General Applications.
- E. IEEE 127: Aerospace Equipment and Frequency Rating.
- F. IEC 146: Semiconductor Converters.
- G. ISO-1540: Aerospace Characteristics of Aircraft Electrical Systems.
- H. ATA-101: Ground Equipment Technical Data.
- I. NFPA-70: National Electrical Code.
- J. NFPA-415: Standard on Airport Terminal Buildings, Fueling Ramp Drainage, and Loading Walkways.
- K. UL 1012: Standard for Power Units Other Than Class 2.

1.3 DEFINITIONS

- A. GPU: Aircraft Ground Power Unit.
- B. PLB: Passenger Loading Bridge.

1.4 SUMMARY

- A. This Section specifies the requirements for manufacture, installation, and testing of 400Hz Aircraft Power Distribution Equipment.
- B. Section Includes:
 - 1. Portable Aircraft Ground Power Units.
 - 2. Fixed (Bridge- or stand-mounted) Aircraft Ground Power Units.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated, include the following
 - 1. Product dimensions and weight.
 - 2. Electrical performance and characteristics.
 - 3. Input power requirements.
 - 4. Output ratings.
 - 5. Finishes and enclosure materials.
 - 6. Operating parameters, limitations, and ambient conditions.

- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Wiring Diagrams: Include basic system architecture, input power connections and protection requirements, output cable connection and rating requirements.
 - 2. Include maintenance requirements and a listing of serviceable internal components.
 - 3. Provide details for all assemblies (cables, rack systems, etc.) and components which are to be field assembled or fabricated.

- C. Coordination Drawings: Provide scaled plans indicating coordinated locations and installation details for each GPU.
 - 1. Include location of each passenger loading bridge and associated GPU.
 - 2. Include wiring details with the loading bridge rotunda control room.
 - 3. Include installation details of GPU output cable, including cable type, quantity of conductors, cable length, installation/connection, and storage.
 - 4. Include details for interface/connection with any related equipment.

1.6 INFORMATIONAL SUBMITTALS

Coordinate requirements with the DEN Project Manager.

- A. Product Certificates: Signed by component manufacturers, certifying that the products furnished comply with project requirements.
- B. Qualification Data: For testing agency.
- C. Source quality-control test reports.
- D. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of GPU to include in emergency, operation, and maintenance manuals.
 - 1. Include complete operation and maintenance manual for equipment.
 - 2. Include any factory corrections made to the supplied equipment upon completion of factory testing.
 - 3. Instruction manual shall include, but not be limited to, the following:
 - a. Calibration data curves, wiring diagrams and other pertinent information on each component.
 - b. Operation procedures for both manual and automatic operation.
 - c. Recommended preventative maintenance procedures and schedules.
 - d. Supplied spare parts list.
 - e. Recommended spare parts list.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Edit list of spare parts below to suit project. Add or delete items, and modify quantities to suit project.

- 1. Control PCB: No fewer than **[one (1)] <insert number>**.
 - 2. Fuse and Output Contactor: No fewer than **[one (1)] <insert number>**.
 - 3. Fans: Equal to **[five (5)] <insert number>** percent of quantity installed for each size and type, but no fewer than **[two (2)] <insert number>** of each size and type.
 - 4. Software: No fewer than **[one (1)] <insert number>** copy of all software provided with the equipment, provided on solid-state media (flash drive).
- B. Provide one set of all special tools required for the installation, operation and maintenance of all equipment furnished and installed under this Section.
 - C. Provide one set of all diagnostic tools, including diagnostic software and hardware toolkit to evaluate the performance parameters of the GPU.
 - D. Provide a list of recommended additional spare parts for the GPU, including price and availability for each listed item.

1.9 QUALITY ASSURANCE

- A. The Contractor shall be fully responsible for daily quality control of installation, coordination with other Trades, and coordination with DEN Maintenance and Engineering.
- B. Manufacturer qualifications:
 - 1. GPU Manufacturer shall have a minimum of 5 years' experience in the design, manufacture, and provision of Ground Power Units for aircraft applications.
 - 2. Manufacturer shall demonstrate at least 5 years' experience supplying and supporting GPU installations at a large hub airport.
- C. Source Limitations: Obtain each GPU type through one source from a single manufacturer.
 - 1. Products shall be manufactured in the United States.
- D. Perform Factory Acceptance Test of each GPU prior to shipment to the Project Site. Submit test results to the DEN Project Manager for review prior to commencement of

installation. Tests shall include, but are not limited to:

1. Input Power: Test unit at full output load and verify input power, and verify that it meets the requirements of this Section.
2. Inrush Current: Demonstrate that the inrush current meets the requirements of this Section.
3. Overload: Demonstrate that overload capability meets the requirements of this Section.
4. Input and Output characteristics: Demonstrate the GPU meets the input and output power characteristics in accordance with the requirements of this Section.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Handle using only lift eyes and provided brackets. Protect equipment in inclement weather.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

1.12 WARRANTY

- A. Provide a manufacturer's warranty, covering all product defects for a term of not less than (2) years from the date of start-up and commissioning.

PART 2 - PRODUCTS

Edit to suit project. Products not used in the project may be omitted from the specification. Add products and accessories as needed.

2.1 GENERAL REQUIREMENTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Cavotec, INET Airport Systems business unit.
 2. Aviation Ground Equipment Corp., Hobart Ground Power business unit.
 3. JBT Aerotech, Inc.
 4. **<Insert manufacturer's name>**.
- B. Certification: UL 1012 Certified.
- C. Conversion technology: Pulse-width modulation.

2.2 PERFORMANCE REQUIREMENTS

A. Input power characteristics:

1. Input Voltage: 415-480 VAC +/- 15%.
2. Phase Rotation: 3-Phase, 3-Wire with no phase dependence.
3. Frequency: 47-63 Hz.
4. Inrush Current: Provide equipment with integral soft start circuiting to limit inrush current to no greater than 100% of rated full-load current.
5. Total system Harmonic Distortion: 5% or less.

B. Output power characteristics:

Select a power rating below, or defer to the construction drawings for power rating specification where multiple ratings are to be installed on the Project.

Consult the Electrical Design Standards Manual for guidance on GPU rating selection. In general, the minimum rating for a mainline gate will be 90kW.

Do not reduce the performance characteristics below without written approval from the DEN Project Manager.

1. Output Voltage: 115/200 Volt, 3-Phase, 4-Wire with grounded neutral.
2. Voltage Regulation: No more than 1% of nominal when operated from no-load condition to full-load condition and from full-load condition to no-load condition.
3. Voltage modulation: No more than 2.5 volts, RMS, at any load from 0% to 100%.
4. Power Rating: **[90 kW] [180 kW] <Insert number> [As indicated on Drawings]**.
5. Load capacity: Full power rating at **[1.0] <insert number>** Power Factor.
6. Frequency: 400 Hz, +/- 1 Hz, constant under all load conditions.
7. Phase Rotation: 3-Phase, 4-Wire, ABC (clockwise) rotation.
8. Adjustability: Output voltage adjustable from **[+0% to +15%] <Insert range>** of nominal voltage.
9. Crest Factor: 1.414, +/- 5%.
10. Harmonic Distortion: No greater than **[1.5%]** measured line-to-line and line-to-neutral, under 100% load at 0.8 Power Factor.

C. Overall equipment efficiency: 93% or greater at full load.

D. Overload Capacity:

1. Unit shall be capable of supporting the following overload conditions:

Overload, percentage of rated output	Minimum Duration of Stable Operation
125%	20 minutes
150%	150 seconds
200%	30 seconds
300%	8 seconds
400%	4 seconds
500%	2 seconds

- E. Provide Line Drop Compensation.
- F. Protection
 - 1. Provide overload and short circuit protection on the GPU output, specifically rated for 400Hz operation, to isolate the aircraft from the GPU in the event of an overload or short circuit.
 - 2. Overload/short-circuit protection shall operate instantaneously (less than ½ cycle), at no less than 500% of rated output.
 - 3. Provide over/under voltage protection on the GPU output to electrically isolate the aircraft from the GPU in an over/under voltage event.
- G. Controls
 - 1. Manual Start/stop: Momentary pushbuttons, located on the control door.
 - 2. Provide circuitry for remote control.
 - 3. Interlock: Provide E and F interlock circuit, which instantaneously isolates the converter output from the aircraft in the absence of a 28VDC control signal from the aircraft. Provide indicator LED inside the control compartment displaying interlock status.
 - 4. Bypass Switch: Provide aircraft bypass switch for testing purposes to allow operation in the absence of a 28VDC control signal.
- H. Measurement and Verification
 - 1. Provide TCP/IP connection point for Energy Management Control System (EMCS) integration.
 - a. EMCS Protocol: BACNet.
 - b. Data availability:
 - 1) Emergency Stop.
 - 2) Converter Enable/Disable.
 - 3) GPU ON.
 - 4) GPU OFF.
 - 5) Power Available.
 - 6) Summary Fault.
 - 7) E/F signal present.
 - 8) Power Logic Supply Voltage.
 - 9) 90 percent Cable Inserted.
 - 10) Phase Voltage (volts).
 - 11) Line Voltage (volts).
 - 12) Phase Current (amps).
 - 13) Frequency (Hz).
 - 14) Power Factor per phase (pF).
 - 15) System Power Factor (pF).
 - 16) Kilowatts (kW).
 - 17) Kilo-volt-amps (kVA).
 - 18) Neutral Current.
 - 19) Runtime (hours).

2. Elapsed Time Meter: Non-resettable, 0 to 99,999 hours.
 3. Diagnostic Information: GPU shall have integral diagnostics of all vital functionality, including internal components and external cable monitoring. Include an alarm messaging system and an onboard event log that is capable of export via local USB or Ethernet connection.
- I. Noise level: No greater than 65 dBA at a distance of 2 meters.
 - J. Design service life: Not less than 10 years.
 - K. Environmental Conditions
 1. Ambient Temperature Range: -20° F to 140° F.
 2. Humidity: 10% to 100%.
 3. Altitude: 5,500 Feet.
 4. Design Wind Load: 100 MPH.

2.3 PORTABLE GROUND POWER UNITS

Select applicable power source below.

For diesel-powered units, either utilize the DEN-standard generator specification and edit as needed, or add engine, performance, and testing requirements in this section.

- A. Power source: [**Portable cord and plug connection**] [**Onboard diesel generator set**]
 1. Include integral fuel tank with at least [**6 hours**] [**12 hours**] <Insert time> of fuel capacity.
 2. Diesel engine shall be provided with EPA Tier IV emissions controls and comply with all applicable requirements.
- B. Unit mounting: Trailer.
 1. Hitch type: Standard Class III, 2" Ball.
 2. Weight distribution: Comply with Class III tow rating requirements for a standard vehicle
 3. Trailer weight rating: Sufficient for fully-fueled unit, plus all accessories.
 4. Trailer safety factor: 1.8:1, minimum.

Insert cable requirements for input power, if cord-and-plug connected, as well as output cables.

- C. Cabling
 1. <Insert requirements>

2.4 PLB-MOUNTED GROUND POWER UNITS

- A. GPUs shall be designed for installation in a suspended configuration under a passenger loading bridge.

- B. Provide all installation hardware, mounting brackets, and accessories as required to properly secure the unit to the passenger loading bridge.

Insert requirements for input cable as applicable to the project (pantograph system, cable jacket construction, environmental conditions, etc).

C. Input Cable:

1. Provide bundled, UL type STOW severe-service portable cord for use in pantograph system.
2. All cables that are exposed shall be UV stabilized.
3. Cable length: As required to connect to the power distribution box at the rotunda. Provide sufficient slack at each end of the cable to allow full freedom of movement of the bridge in rotation, height, and extension.
4. **<Insert requirements>**.

Insert cable requirements for output cable. Include any specific cord retraction/storage systems needed for the Project.

Ensure that cable length is specified on the drawings or in the specification to allow for connection to all aircraft types planned in the Project.

D. Output Cabling:

1. Supply output cable that complies with the requirements of Paragraph "CABLE SYSTEMS" below.
2. Provide a cord retraction/storage system to store the output cable when not in use.
3. **<Insert requirements>**

2.5 FIXED, STAND-MOUNTED GROUND POWER UNITS

- A. Fixed, stand-mounted GPUs shall be designed for installation on a fixed stand.
- B. Provide all installation hardware, mounting brackets, and accessories as required to properly secure the unit to the stand.
- C. Coordinate installation location to provide required working clearances about the equipment.

2.6 CABLE SYSTEMS

A. General output cable assembly requirements:

1. Nominal Voltage: U_0/U 115/200V, 400Hz.
2. Test Voltage: 4000 VAC, 50 Hz.
3. Current Overload: 700A / 3 min.

B. 400Hz Output Cable:

1. Highly flexible, twisted with double insulated TPE/PUR.
2. Power conductors: Tinned fine copper strands, VDE 0295, IEC 60228, class-6.
3. Insulation: Polyolefin Copolymer Double insulation.
4. Color: Grey, with numbers printed in Black.
5. Outer Sheath: Abrasion-resistant polyurethane (PUR).
6. Operation Temperature: 72° F to 162° F.
7. Material Properties:
 - a. Halogen Free: IEC 60754-1, EN 50267-2-1 (less than 5mg/g).
 - b. Non-corrosive gases: IEC 60754-2, EN 50267-2-2 (pH less than 5).
 - c. Low Toxic gases: NEC 02-713, NFC 20-454.
 - d. Oil Resistance: EN 60811-2-1 (24 h / 210°F).
 - e. Abrasion resistant.
 - f. UV Resistant.
 - g. Flame Retardant: IEC 60332-1, EN 50265-1f.

C. 400Hz Aircraft Connector:

1. VG 95319, ISO 461, MS 25486.
2. UV resistant, oil resistant, microbe and hydrolysis resistant.
3. Operating temperature range: -85 degrees F to 250 degrees F.
4. Control buttons: 4 (ON/OFF/Reel In/Reel Out).
5. Housing: Cross-linked thermoplastic, abrasion, and chemical resistant, field-replaceable.
6. Ends: Field-replaceable.
7. Contacts: Silver-plated, copper-tellurium alloy, field-replaceable.
8. All contacts shall be sealed with waterproof resin.
9. Push-pull forces: Comply with DIN EN 61984 (\leq 100 lbf).
10. Micro-switch signals contact closed when connector is at least 80% inserted.
11. Micro-switch: Maximum 30VDC, 100mA.

PART 3 - EXECUTION

3.1 DELIVERY, STORAGE AND HANDLING

- A. The GPUs shall be contained in a dust- and moisture-resistant container and shall be adequately packaged to ensure protection from damage and weather exposure during transit.
- B. Packaging shall be labeled to clearly identify each component without opening the package. Items not fully assembled to the unit shall be shipped separately.
- C. Adequate means shall be provided for lifting by forklifts and cranes and for moving the equipment on rollers. Lift points shall be clearly marked. Handle equipment according to manufacturer's written instructions.
- D. Touch up any damage for equipment finishes to match adjacent surfaces.

- E. Equipment shall be transported, unloaded, handled, stored, and installed in accordance with manufacturer's written instructions.

3.2 INSTALLATION

Include any special requirements for installation associated with the Project.

A. General

1. All equipment, wiring, and installation shall be in accordance with current applicable codes and industry standards.
2. Packaged GPUs shall be delivered to the site completely assembled and tested.
3. The electrical contractor shall make final electrical connections from the GPU to the power source.

B. PLB-mount GPU

1. Install fixed GPU using mounting brackets listed and rated for the purpose.
2. Installation of the GPU shall not block or inhibit access to any other bridge equipment.
3. Provide high intensity, 4-inch wide, striped red and yellow prismatic reflective warning tape applied to ALL sides of the equipment along the bottom edge for all GPUs mounted on the underside of PLB

C. Stand-mount GPU

1. Install stand-mount GPU using a stand and associated brackets listed and rated for the purpose.
2. . Provide bollards or guard rail for protection. See Section 0550000 "Metal Fabrications" for requirements. Contractor shall coordinate installation of Protection systems so as not to impede working clearances of GPU.

D. Cabling

1. Install input cable for bridge-mounted GPU according to the PLB manufacturer's written instructions. Make all final connections to the GPU.
2. Install output cable, including cord reel/storage system, according to manufacturer's instructions. Make all final connections to the GPU.

E. Miscellaneous

1. Provide equipment labels in accordance with Section 260553, Identification for Electrical Systems.
 - a. Label shall include source of supply (panel name and circuit number), operating voltage, and kVA rating of the GPU.

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, and to assist in acceptance testing.
 - 2. Verify that equipment and fitting are properly installed, connected, and labelled.
- B. Field Acceptance Testing:
 - 1. Upon completion of installation, perform functional test of the GPU. Include the following:
 - a. Test performance at full load for at least 2 hours, using a load bank.
 - b. Test all protective devices.
 - c. Measure performance parameters including input current, output voltage, output current, harmonic distortion, and output frequency.
 - 2. Provide test results to the DEN Project Manager.

3.4 PROTECTION

- A. Protect GPUs and facilities against damage, mechanical or otherwise and provide maintenance of the equipment until issuance of the certificate of Final Completion. The GPUs shall be kept clean, dry, and protected at all times.

3.5 DEMONSTRATION AND TRAINING

- A. The contractor shall provide start-up of the GPU after installation and conduct on-site operational training.
- B. Engage a Factory-Authorized service representative to conduct training of Owner's maintenance personnel.
 - 1. Provide training for all procedures, maintenance schedules, and service intervals.
 - 2. Review equipment list and data in maintenance manuals.
 - 3. Conduct a minimum of 12 hours of owner training in three sessions: 4 hours each for three work shifts, to be scheduled at times coinciding with the applicable work shifts. Each training session shall be attended by at least 3 representatives from DEN Technical Maintenance, and the DEN Project Manager or their designee.
 - 4. Provide a video recording of all training sessions in accordance with Section 013233 "Photographic Documentation."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this section.

END OF SECTION 263544

Copyright 2012 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 263600 - TRANSFER SWITCHES

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes transfer switches rated 600 V and less, including the following:
 - 1. Automatic transfer switches.
 - 2. Bypass/isolation switches.
 - 3. Remote annunciation systems.
 - 4. Remote annunciation and control systems.
- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 213113 "Electric-Drive, Centrifugal Fire Pumps" for automatic transfer switches for fire pumps.
- 2. Section 213213 "Electric-Drive, Vertical-Turbine Fire Pumps" for automatic transfer switches for fire pumps.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in

this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Dimensioned plans, elevations, sections, and details showing minimum clearances, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified.

Retain subparagraph below if retaining Part 2 "Bypass/Isolation Switches" Article.

- 1. Single-Line Diagram: Show connections between transfer switch, bypass/isolation switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.

1.4 INFORMATIONAL SUBMITTALS

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- A. Qualification Data: For **[manufacturer] [and] [testing agency]**.

Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Section 260548.16 "Seismic Controls for Electrical Systems."

- B. Manufacturer Seismic Qualification Certification: Submit certification that transfer switches accessories, and components will withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems." Include the following:
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

Retain one of first two subparagraphs below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Second definition is used for essential facilities where equipment must operate immediately after an earthquake.

- a. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

- b. The term "withstand" means, "The unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 1. Features and operating sequences, both automatic and manual.
 2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Maintain a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.

If an independent testing agency is required, see Section 014000 "Quality Requirements" for general testing and inspecting agency qualification requirements. If additional control is needed, use first paragraph below to specify 29 CFR 1910.7 or other more specific criteria (e.g., NETA). 29 CFR 1910.7 defines a nationally recognized testing laboratory as it applies to testing and inspecting for safety, and lists, labels, or accepts equipment and materials that meet certain OSHA criteria.

Retain first paragraph and associated subparagraph below if Contractor selects testing agency.

- B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing

laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- C. Source Limitations: Obtain **[automatic transfer switches] [bypass/isolation switches] [nonautomatic transfer switches] [remote annunciators] [and] [remote annunciator and control panels]** through one source from a single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with NEMA ICS 1.
- F. Comply with NFPA 70.

Retain one or both of first two paragraphs below if applicable to Project.

- G. Comply with NFPA 99.
- H. Comply with NFPA 110.
- I. Comply with UL 1008 unless requirements of these Specifications are stricter.

1.7 PROJECT CONDITIONS

Retain this article if interruption of existing electrical service is required.

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service:
1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering.
 2. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 3. Do not proceed with interruption of electrical service without DEN Project Manager's written permission.
- B. Service Conditions:
1. Temperature: minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 2. Altitude: 5,500 feet.

1.8 COORDINATION

Retain this article for floor-mounting equipment.

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-in-Place Concrete."

1.9 AUTOMATIC SEQUENCE OF OPERATION

- A. Initiate adjustable Time Delay (1 to 6 seconds) set at 1 second to Engine start upon loss of normal source. If normal source returns before time delay times out no action will be taken. If normal source power fails to return before the time delay times out, a start signal will be sent to the emergency engine generator.
- B. After the emergency engine generator is started, an adjustable time delay (0 to 5 minutes) set at 0 seconds, will start timing. If normal power returns during the timing of this time delay no action will be taken, and the engine generator will continue to run unloaded until the adjustable cool down time delay expires. If the commit to transfer is enabled, the switch will transfer to emergency even if normal power returns before the adjustable transfer to emergency time delay times out.
- C. If the Automatic transfer switch transfers to emergency power, the transfer switch will monitor the normal source side to see when normal power returns. When normal power returns an adjustable (0 to 30 minutes) time delay set at 20 minutes, starts timing out before re-transfer back to the normal power source. If during the timing of this time delay normal power is lost, the timer will be reset when normal power returns. If the emergency generator fails during this time delay and normal power is available the automatic transfer switch must transfer back to normal. Otherwise normal power must be available for the full duration of the time delay.
- D. After the automatic transfer switch transfers back to normal, an adjustable engine cool down timer (0 to 60 minutes) set at 10 minutes, will start timing. This allows the engine to run unloaded to cool down before shutting the engine down. If normal power fails during this time the automatic transfer switch will transfer to emergency after the transfer to emergency time delay times out and then resets all other time delays. If there is no failure of the normal power source during the cool down timer, the emergency engine generator set will shut down and the transfer switch is set for the next normal source power failure.
- E. An in-phase monitor or a synchronizer should be used when transferring in either direction when both sources are available to prevent excessive inrush currents due to out-of-phase switching of large inductive loads.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Contactor Transfer Switches:
 - a. [AC Data Systems, Inc.](#)
 - b. [Caterpillar; Engine Div.](#)
 - c. [Emerson; ASCO Power Technologies, LP.](#)
 - d. [Generac Power Systems, Inc.](#)
 - e. [GE Zenith Controls.](#)
 - f. [Kohler Power Systems; Generator Division.](#)
 - g. [Onan/Cummins Power Generation; Industrial Business Group.](#)
 - h. [Russelectric, Inc.](#)
 - i. [Spectrum Detroit Diesel.](#)
 - j. **<Insert manufacturer's name>.**
 - k. or approved equal.
 2. Transfer Switches Using Molded-Case Switches or Circuit Breakers:
 - a. [AC Data Systems, Inc.](#)
 - b. [Eaton Electrical Inc.; Cutler-Hammer.](#)
 - c. [GE Zenith Controls.](#)
 - d. [Hubbell Industrial Controls, Inc.](#)
 - e. [Lake Shore Electric Corporation.](#)
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.

2.2 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

Coordinate paragraph below with Drawings and indicate percentage of tungsten filament lamp load for switches where it exceeds 30 percent. This percentage may affect switch selection. Some manufacturers' ratings for some switch lines apply to all classes of load, including tungsten lamps.

- A. Furnish and install automatic transfer and bypass-isolation switch (ATS/BPS) system. Each system shall be of one manufacturer and shall consist of two elements: an automatic transfer switch and a two-way bypass-isolation switch. The Automatic Transfer Switch will be mechanically held electrically operated. The Bypass Switch will be mechanically held. Mechanical interlock will be provided to prevent the simultaneous closing to both the emergency and normal sources.
1. Adjustable time delay to override momentary normal source outages to delay engine-starting signal. (0 to 6 seconds) set at 1 second.
 2. Adjustable time delay on transfer to emergency (0 to 5 minutes) set at 0 seconds.
 3. Adjustable re-transfer to normal time delay (0 to 30 minutes) set at 20 minutes.
 4. Adjustable unloaded engine cool down time delay (0 to 60 minutes) set at 10 minutes.
 5. Close differential voltage monitoring on the normal source with adjustable pickup from 85 to 100% of 208 Volts. And also an adjustable dropout voltage from 75 to 98% of the pickup setting.
 6. Single phase voltage sensing of the emergency source with pickup adjustable from 85 to 100% (and dropout fixed at 84 to 86% of pickup), and frequency sensing with pickup adjustable from 90 to 100% (and dropout fixed at 87 to 89% of pickup).
 7. Test switch mounted in cabinet.
 8. A set of DPDT gold-flashed contacts rated 10 amps, 32VDC shall be provided for a low-voltage engine start signal.
 - a. The start signal shall prevent dry cranking of the generator by requiring the generator to reach proper output, and to run for the duration of the cool down setting regardless of whether the source restores before the load is transferred.
 - b. Provide a "commit/no commit to transfer" selector switch to select whether the load should be transferred to the emergency generator if the normal source restores before the generator is ready to accept the load.
 9. Normal and emergency position indicating LED's (green - normal, red emergency).
 10. Auxiliary contacts; (2) normally open and (2) normally closed for each position, rated at 10 amps, at 480 VAC.
 11. In-Phase monitor with synchronizer connected between the engine and normal source.
 12. A visual position indicator shall be provided to indicate Bypass-Isolation switch position. Pilot lights shall indicate availability of power sources and automatic transfer switch position. A prominent and detailed instruction plate shall be furnished to shall bypass-isolation procedures.

- B. The Automatic Transfer Switch side of the Bypass-Isolation Automatic Transfer Switch shall automatically transfer the load to a second utility source or the emergency standby generator in the event of a normal source failure.
- C. The transfer switch shall consist of completely enclosed contact assemblies and a separate control logic panel. A non-fused unidirectional motor operator or electric operated solenoid shall operate the contact assemblies with stored energy mechanisms. and be energized only momentarily during transfer providing inherently double throw switching action. Control power for all transfer operations shall be derived From the line side of the source to which the load is being transferred.
- D. The Bypass-Isolation switch part of the automatic transfer switch shall be capable of being operated manually under full load conditions. Manual operation shall be accomplished via a permanently affixed manual operator or integrally mounted push button operator located on the face of the contact assemblies. Removable manual operating handles and handles which move in the event electrical operators should suddenly become energized while performing a manual transfer operation shall not be used acceptable. The manual operator shall provide the same contact-to-contact transfer time as provided under automatic operation to prevent possible flashers from switching the main contacts slowly. In addition, provisions shall be provided to allow disconnection of the electrical operator during manual operation.
- E. Inspection and replacement of all separate arcing contacts and main current carrying contacts shall be possible from the front of the transfer switch.
- F. The control module shall direct the operation of the transfer switch. The module's sensing and logic shall be controlled by a built-in solid state or microprocessor control module for maximum reliability, minimum maintenance, and inherent digital communications capability. The control module shall be connected to the transfer switch by an interconnecting wiring harness. The harness shall include a keyed disconnect plug to enable the control module to be disconnected from the transfer switch for routine maintenance.
- G. The control module shall be completely enclosed with a protective cover and be mounted separately from the transfer switch unit for safety and ease of maintenance. Sensing and control logic shall be provided on plug-in printed circuit boards for maximum reliability. Interfacing relays shall be industrial control grade plug-in type with dust covers, rated 10 Amperes with self-cleaning contacts. All relays shall be identical to minimize the number of unique parts.
- H. The control panel shall meet or exceed the impulse withstand voltage test in accordance with the proposed NEMA Standard ICS 1-109.
- I. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.

Indicate required ratings on Drawings. See Editing Instruction No. 3 in the Evaluations.

- J. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.

Retain subparagraph below if this Section includes automatic transfer switches based on molded-case-switch or circuit-breaker products or if design includes fault-current protection internal to transfer switch.

1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.
- K. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.
- L. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.
- M. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.
- N. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.

Delete first subparagraph below if units using switching components designed for molded-case switches or insulated-case circuit breakers are permissible.

1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
2. Switch Action: Double throw; mechanically held in both directions.
3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.

Retain paragraph below and select appropriate option if four-pole transfer switches are required. See Editing Instruction No. 4 in the Evaluations. Coordinate with Drawings.

- O. Neutral Switching. Where four-pole switches are indicated, provide **[neutral pole switched simultaneously with phase poles] [overlapping neutral contacts]**.

Retain paragraph below for single-phase, three-wire systems or three-phase, four-wire systems without neutral switching. Coordinate with Drawings.

- P. Neutral Terminal: Solid and fully rated, unless otherwise indicated.

Retain paragraph below if required for heavy nonlinear loads. This requirement may result in some suppliers' oversizing certain switches to provide an oversize neutral. Coordinate with Drawings.

- Q. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral shall be double the nominal rating of circuit in which switch is installed.

Retain paragraph below if one or more switches are exposed to outdoor temperatures and humidity. Coordinate with Drawings.

- R. Heater: Equip switches exposed to outdoor temperatures and humidity, and other units indicated, with an internal heater. Provide thermostat within enclosure to control heater.

Retain paragraph and subparagraphs below if charger for generator starting batteries is to be located in transfer switch. Select first option in first subparagraph for same generator units; consider second option for units 250 kW and larger.

- S. Battery Charger: For generator starting batteries.
1. Float type rated [2] [10] A.
 2. Ammeter to display charging current.
 3. Fused ac inputs and dc outputs.

Retain first paragraph below if required. Coordinate with Drawings.

- T. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.
- U. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. Color-coding and wire and cable tape markers are specified in Section 260553 "Identification for Electrical Systems."
1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
 2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
 3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.

Use NEMA 250, Type 12 enclosure if environment is generally dusty.

- V. Enclosures: General-purpose NEMA 250, Type [1] [3R] [12], complying with NEMA ICS 6 and UL 508, unless otherwise indicated.
- W. The transfer switch shall consist of completely enclosed contact assemblies and a separate control logic panel. A non-fused unidirectional motor operator or electric operated solenoid shall operate the contact assemblies with stored energy mechanisms. and be energized only momentarily during transfer providing inherently double throw switching action. Control power for all transfer operations shall be derived from the line side of the source to which the load is being transferred.

- X. The Bypass-Isolation switch part of the automatic transfer switch shall be capable of being operated manually under full load conditions. Manual operation shall be accomplished via a permanently affixed manual operator or integrally mounted push button operator located on the face of the contact assemblies. Removable manual operating handles and handles which move in the event electrical operators should suddenly become energized while performing a manual transfer operation shall not be used acceptable. The manual operator shall provide the same contact-to-contact transfer time as provided under automatic operation to prevent possible flashers from switching the main contacts slowly. In addition, provisions shall be provided to allow disconnection of the electrical operator during manual operation.
- Y. Inspection and replacement of all separate arcing contacts and main current carrying contacts shall be possible from the front of the transfer switch.
- Z. The control module shall direct the operation of the transfer switch. The module's sensing and logic shall be controlled by a built-in solid state or microprocessor control module for maximum reliability, minimum maintenance, and inherent digital communications capability. The control module shall be connected to the transfer switch by an interconnecting wiring harness. The harness shall include a keyed disconnect plug to enable the control module to be disconnected from the transfer switch for routine maintenance.
- AA. The control module shall be completely enclosed with a protective cover and be mounted separately from the transfer switch unit for safety and ease of maintenance. Sensing and control logic shall be provided on plug-in printed circuit boards for maximum reliability. Interfacing relays shall be industrial control grade plug-in type with dust covers, rated 10 Amperes with self-cleaning contacts. All relays shall be identical to minimize the number of unique parts.
- BB. The control panel shall meet or exceed the impulse withstand voltage test in accordance with the proposed NEMA Standard ICS 1-109.

2.3 AUTOMATIC TRANSFER SWITCHES

- A. Comply with Level 1 equipment according to NFPA 110.
- B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.

Retain one of two paragraphs below. First is optional feature with some manufacturers.

- C. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.
- D. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.

Retain paragraph below if required for control to minimize elevator disruption or for other purposes.

- E. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.

Retain paragraph below if digital communication system is used for remote annunciation or for remote annunciation and control.

- F. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.

Retain paragraph below if transfer switches based on molded-case-switch or circuit-breaker components are acceptable for Project.

- G. Transfer Switches Based on Molded-Case-Switch Components: Comply with NEMA AB 1, UL 489, and UL 869A.

Retain paragraph and subparagraphs below for loads intolerant of interruptions or for switching large-motor loads. Coordinate with remainder of this Article and with Drawings. See Editing Instruction No. 5 in the Evaluations.

- H. Automatic Closed-Transition Transfer Switches: Include the following functions and characteristics:
1. Fully automatic make-before-break operation.
 2. Load transfer without interruption, through momentary interconnection of both power sources not exceeding 100 ms.
 3. Initiation of No-Interruption Transfer: Controlled by in-phase monitor and sensors confirming both sources are present and acceptable.
 - a. Initiation occurs without active control of generator.
 - b. Controls ensure that closed-transition load transfer closure occurs only when the 2 sources are within plus or minus 5 electrical degrees maximum, and plus or minus 5 percent maximum voltage difference.
 4. Failure of power source serving load initiates automatic break-before-make transfer.

Edit paragraph and subparagraphs below to coordinate terminology for sources, such as "normal," "preferred," "emergency," and "alternate," if such terms are used elsewhere in the Construction Documents.

- I. Automatic Transfer-Switch Features:

Revise pickup, dropout, and time-delay settings in first four subparagraphs below to suit application, and retain required features.

First subparagraph specifies three-phase undervoltage monitor. Retain if loss of one phase of normal source would be a problem for loads downstream from transfer switch. Similar option is available for emergency source.

1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from

- 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.
2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.
 3. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
 4. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
 5. Test Switch: Simulate normal-source failure.
 6. Switch-Position Pilot Lights: Indicate source to which load is connected.
 7. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.
 - a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
 - b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."
 8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
 9. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.

Retain subparagraph below if needed to coordinate with engine generator. Do not duplicate control features furnished with generator. See Editing Instruction No. 6 in the Evaluations.

10. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.

Retain one of first two subparagraphs below.

11. Engine Shutdown Contacts: Instantaneous; shall initiate shutdown sequence at remote engine-generator controls after retransfer of load to normal source.
12. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.
13. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:

- a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
- b. Push-button programming control with digital display of settings.
- c. Integral battery operation of time switch when normal control power is not available.

2.4 BYPASS/ISOLATION SWITCHES

- A. Comply with requirements for Level 1 equipment according to NFPA 110.
- B. Description: Manual type, arranged to select and connect either source of power directly to load, isolating transfer switch from load and from both power sources. Include the following features for each combined automatic transfer switch and bypass/isolation switch:
 1. Means to lock bypass/isolation switch in the position that isolates transfer switch with an arrangement that permits complete electrical testing of transfer switch while isolated. While isolated, interlocks prevent transfer-switch operation, except for testing or maintenance.
 2. Drawout Arrangement for Transfer Switch: Provide physical separation from live parts and accessibility for testing and maintenance operations.
 3. Bypass/Isolation Switch Current, Voltage, Closing, and Short-Circuit Withstand Ratings: Equal to or greater than those of associated automatic transfer switch, and with same phase arrangement and number of poles.
 4. Contact temperatures of bypass/isolation switches shall not exceed those of automatic transfer-switch contacts when they are carrying rated load.
 5. Operability: Constructed so load bypass and transfer-switch isolation can be performed by 1 person in no more than 2 operations in 15 seconds or less.
 6. Legend: Manufacturer's standard legend for control labels and instruction signs shall describe operating instructions.
 7. Maintainability: Fabricate to allow convenient removal of major components from front without removing other parts or main power conductors.
- C. Interconnection of Bypass/Isolation Switches with Automatic Transfer Switches: Factory-installed copper bus bars; plated at connection points and braced for the indicated available short-circuit current. The only field-installed power connections shall be at the service and load terminals of the bypass-isolation switch. All control interwiring shall be provided with disconnect plugs.

Delete one or both of first two articles below. Coordinate location of equipment and wiring with Drawings. Coordinate with transfer-switch description and with Section 263213 "Engine Generators." Edit retained article to specify required system features and functions. See Editing Instruction No. 2 in the Evaluations.

2.5 REMOTE ANNUNCIATOR SYSTEM

- A. Functional Description: Remote annunciator panel shall annunciate conditions for indicated transfer switches. Annunciation shall include the following:

1. Sources available, as defined by actual pickup and dropout settings of transfer-switch controls.
2. Switch position.
3. Switch in test mode.
4. Failure of communication link.

B. Annunciator Panel: LED-lamp type with audible signal and silencing switch.

1. Indicating Lights: Grouped for each transfer switch monitored.
2. Label each group, indicating transfer switch it monitors, location of switch, and identity of load it serves.
3. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.
4. Lamp Test: Push-to-test or lamp-test switch on front panel.

2.6 REMOTE ANNUNCIATOR AND CONTROL SYSTEM

A. Functional Description: Include the following functions for indicated transfer switches:

1. Indication of sources available, as defined by actual pickup and dropout settings of transfer-switch controls.
2. Indication of switch position.
3. Indication of switch in test mode.
4. Indication of failure of digital communication link.
5. Key-switch or user-code access to control functions of panel.
6. Control of switch-test initiation.

Delete one or both subparagraphs below.

7. Control of switch operation in either direction.

Retain first paragraph below with any combination of functions in subparagraphs above.

B. Malfunction of annunciator, annunciation and control panel, or communication link shall not affect functions of automatic transfer switch. In the event of failure of communication link, automatic transfer switch automatically reverts to stand-alone, self-contained operation. Automatic transfer-switch sensing, controlling, or operating function shall not depend on remote panel for proper operation.

C. Remote Annunciation and Control Panel: Solid-state components. Include the following features:

1. Controls and indicating lights grouped together for each transfer switch.
2. Label each indicating light control group. Indicate transfer switch it controls, location of switch, and load it serves.
3. Digital Communication Capability: Matched to that of transfer switches supervised.

Coordinate description in subparagraph below with floor plan representation and details on Drawings.

4. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.

2.7 SOURCE QUALITY CONTROL

- A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

PART 3 - EXECUTION

3.1 INSTALLATION

Retain applicable mounting paragraphs in this article. Coordinate with Drawings.

Retain paragraph below if seismic controls are a project requirement. Coordinate with Drawings.

- A. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. See Section 260548.16 "Seismic Controls for Electrical Systems."

Retain paragraph below for floor-mounting switches and coordinate with Drawings.

- B. Floor-Mounting Switch: Anchor to floor by bolting.

Retain subparagraph below to require floor-mounting switches to be installed on concrete bases. Coordinate with Drawings.

- 1. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 4 inches (100 mm) in all directions beyond the maximum dimensions of switch, unless otherwise indicated or unless required for seismic support. Construct concrete bases according to Section 260529 "Hangers and Supports for Electrical Systems."
- C. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.
- D. Identify components according to Section 260553 "Identification for Electrical Systems."
- E. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

3.2 CONNECTIONS

Retain first paragraph below if connections are to remote annunciator, control panel, or motor controller. Coordinate with Drawings.

- A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.

- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

Retain first or second paragraph below to identify who shall perform tests and inspections. If retaining option, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform the following tests and inspections and prepare test reports.

Retain first subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
2. The transfer switch manufacturers representative shall perform a startup test. The Contractor, DEN Project Manager and DEN Maintenance will witness the test. The test shall be conducted in accordance with the manufacturers recommendations. Operation of the Isolation Bypass Automatic Transfer Switch will be verified. This test will verify the interlocks in all positions and the automatic transfer operation to emergency and back to normal as well as the cool down function.
3. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
4. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
5. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
 - a. Check for electrical continuity of circuits and for short circuits.
 - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
 - c. Verify that manual transfer warnings are properly placed.
 - d. Perform manual transfer operation.

6. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
 - a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.

Retain test in first subparagraph below if three-phase undervoltage sensing is specified in Part 2. Test requires advance preparation by testing agency.

- b. Simulate loss of phase-to-ground voltage for each phase of normal source.
- c. Verify time-delay settings.
- d. Verify pickup and dropout voltages by data readout or inspection of control settings.
- e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.

Usually require test in first subparagraph below only for critical and extensive installations and for switches rated 1600 A and more in other installations.

- f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
- g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

Retain subparagraph and associated subparagraph below if protective devices for circuits connected to transfer switches include ground-fault protection.

7. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
 - a. Verify grounding connections and locations and ratings of sensors.

Retain paragraph and subparagraphs below if retaining "Testing Agency" Paragraph above. Delete if Contractor performs tests and inspections.

C. Testing Agency's Tests and Inspections:

1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
3. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
 - a. Check for electrical continuity of circuits and for short circuits.
 - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
 - c. Verify that manual transfer warnings are properly placed.
 - d. Perform manual transfer operation.

4. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
 - a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.

Retain test in first subparagraph below if three-phase undervoltage sensing is specified in Part 2. Test requires advance preparation by testing agency.

- b. Simulate loss of phase-to-ground voltage for each phase of normal source.
- c. Verify time-delay settings.
- d. Verify pickup and dropout voltages by data readout or inspection of control settings.
- e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.

Usually require test in first subparagraph below only for critical and extensive installations and for switches rated 1600 A and more in other installations.

- f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
- g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

Retain subparagraph and associated subparagraph below if protective devices for circuits connected to transfer switches include ground-fault protection.

5. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
 - a. Verify grounding connections and locations and ratings of sensors.

Observe reaction of circuit-interrupting devices when simulated fault current is applied at sensors. Retain first paragraph below if automatic transfer switch is associated with generator.

- D. Coordinate tests with tests of generator and run them concurrently.
- E. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- F. Remove and replace malfunctioning units and retest as specified above.

Edit paragraph and subparagraphs below to suit types of switches specified.

- G. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.
 1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.

2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment as specified below. Refer to Section 017900 "Demonstration and Training."

Retain paragraph below if generators are in Project.

- B. Coordinate this training with that for generator equipment.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 263600

SECTION 264113 - LIGHTNING PROTECTION FOR STRUCTURES

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes complete lightning protection systems for buildings and associated structures and components.
- B. Complete UL Master Labeled Lightning Protection System, complying with Reference Standards, consisting of, but not limited to: air terminals, down conductors, SPD (TVSS and Surge Arresters) on electrical and other conductive service entrances, bonding of other metal objects; grounding electrodes, perimeter ground conductor and interconnecting conductors.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Submit product data showing dimensions and materials of each component, and include indication of listing in accordance with referenced standards.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Submit shop drawings showing layout of air terminals and roof conductors, ground rods, and conductor sizes, and connection and termination details as well as bonding connections to structure and other metal objects.
 - 1. Layout of the lightning protection system, along with details of the components to be used in the installation.
 - 2. Include indications for use of raceway, data on how concealment requirements will be met, and calculations required by NFPA 780 for bonding of grounded and isolated metal bodies.

1.4 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified Installer and manufacturer. Include data on listing or certification by UL.

Retain first paragraph below for air terminals mounted on single-ply membrane roofing.

- B. Certification, signed by Contractor, that roof adhesive is approved by manufacturer of roofing material.
- C. Field quality-control reports.
- D. Comply with recommendations in NFPA 780, Annex D, "Inspection and Maintenance of Lightning Protection Systems," for maintenance of the lightning protection system.
- E. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features, including the following:
 - 1. Ground rods.
 - 2. Ground loop conductor.
- F. Submit proof that installer is listed and certified as required by Quality Assurance article.
- G. Copies of completed UL inspection forms.
- H. Submit to the DEN Project Manager a copy of all correspondence with UL .
- I. The Contractor is to provide the DEN Project Manager with one copy of the Reference

Standards. Retain one copy of each at the project site throughout construction for reference.

- J. Ground test results.
- K. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.
- L. U.L. Master Label.

1.5 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Comply with the requirements of the Reference Standards noted herein, or the latest successor to those standards, except where more stringent requirements are listed herein or otherwise required by the Contract Documents.
- B. Installer Qualifications: Certified by UL as a Master Installer/Designer, trained and approved for installation of units required for this Project.
- C. System Certificate:

Retain one of two subparagraphs below. See "Lightning Protection Standards and System Certifications" Article in the Evaluations.

- 1. UL Master Label.

Retain subparagraph below if Project includes addition to existing UL Master Label building.

- 2. UL Master Label Recertification.

- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 780, "Definitions" Article.

1.7 COORDINATION

- A. Coordinate installation of lightning protection with installation of other building systems and components, including electrical wiring, supporting structures and building materials, metal bodies requiring bonding to lightning protection components, and building finishes.

- B. Coordinate installation of air terminals attached to roof systems with roofing manufacturer and Installer.
- C. Flashings of through-roof assemblies shall comply with roofing manufacturers' specifications.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 LIGHTNING PROTECTION SYSTEM COMPONENTS

Specified standards stipulate minimum size requirements for components, depending on selected metal and class of building. To require components larger than minimum size, add requirements here.

- A. Comply with UL 96 and NFPA 780.
- B. Lightning protection system materials and components shall be UL Listed for the intended purpose, and comply with manufacturer's standard design, in accordance with published product information. Air terminals, bonding plates, conductors, connectors, conductor straps, fasteners, grounding plates, ground rods, rod clamps, splices, copper cable splices, SPD and all other components required shall be included for a complete system that meets or exceeds Reference Standards.

Retain material classification in NFPA 780; see Table 2 in the Evaluations.

- C. Roof-Mounted Air Terminals: NFPA 780, copper.
- D. Class I or Class II Structures:
 - 1. Class I: For buildings and structures less than 75 feet high, provide Class I rated components.
 - 2. Class II: For buildings and structures 75 feet high or greater, provide Class II rated components. Air terminals, cable, cable connectors and splices for Class II shall be rated as such and conductor cable shall be rated Class II and be continuous from air terminal to ground and interconnected with the balance of the system.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain subparagraph below and list of manufacturers below. See Section 016000 "Product Requirements."

- E. Manufacturers: Subject to compliance with requirements, provide products by one of

the following:

- a. East Coast Lightning Equipment Inc.
 - b. ERICO International Corporation.
 - c. Harger.
 - d. Heary Bros. Lightning Protection Co. Inc.
 - e. Independent Protection Co.
 - f. Preferred Lightning Protection.
 - g. Robbins Lightning, Inc.
 - h. Thompson Lightning Protection, Inc.
 - i. **<Insert manufacturer>**
 - j. or approved equal.
2. Air Terminals More than **24 Inches** (600 mm) Long: With brace attached to the terminal at not less than half the height of the terminal.

Retain subparagraph below for single-membrane roof system.

3. Single-Membrane, Roof-Mounted Air Terminals: Designed specifically for single-membrane roof system materials. Comply with requirements in roofing Sections.

F. Main and Bonding Conductors: Copper.

Retain first paragraph below for structures exceeding 60 feet (18 m) in height. Revise if Project conditions require use of an above-ground, ground-level, potential equalization conductor.

G. Ground Loop Conductor: The same size and type as the main conductor except tinned.

Copper-clad, steel ground rods are the most common grounding electrodes. See Editing Instruction No. 4 in the Evaluations for assistance in selecting ground rod material. UL 94 and NFPA 780 allow the use of ground rods 1/2 inch (12.7 mm) in diameter and 96 inches (2400 mm) long. Sectional rods are used when electrodes longer than 10 feet (3 m) are required.

H. Ground Rods: Copper-clad steel, **3/4 inch** (19 mm) in diameter by **10 feet** (3 m) long.

I. Heavy-Duty, Stack-Mounted, Lightning Protection Components: Solid copper.

J. Above Grade Connectors and Splicers: Bronze.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Lightning protection systems shall be installed in accordance with equipment manufacturer's written instructions, and meet or exceed requirements of the Contract Documents and Reference Standards.
- B. Verify that surfaces are ready to receive work.

- C. Verify that field measurements are as shown on shop drawings.
- D. Beginning of installation means installer accepts existing conditions.
- E. Protect elements surrounding work of this Section from damage or disfiguration.

Specified standards stipulate minimum size requirements for components, depending on selected metal and class of building. To require components larger than minimum size, add requirements here.

- F. Install lightning protection components and systems according to UL 96A and NFPA 780.
- G. Install conductors with direct paths from air terminals to ground connections. Avoid sharp bends.
- H. Air Terminals shall extend least 10" above the object or area to be protected, and shall be placed on a maximum spacing of 20 feet. If Air Terminals extend 24" above the object or area to be protected, the spacing can be increased to a maximum of 25 feet.
- I. Conceal the following conductors:

Retain one or more of four subparagraphs below depending on degree of concealment desired for lightning protection components. If deleting all four subparagraphs, there will be no restrictions on exposed conductors.

- 1. System conductors.
 - 2. Down conductors.
 - 3. Interior conductors.
 - 4. Conductors within normal view of exterior locations at grade within 200 feet (60 m) of building.
- J. When conductors are installed in CMU or concrete walls they shall be installed in nonmetallic PVC raceway, Schedule 40, (minimum), or rigid steel when exposed below eight feet above finished floor or grade. Where steel conduit is used, follow Reference Standards and choke conduit on both ends. All bends shall have a minimum elbow radius of 8 inches. Nonmetallic conduit clamps shall be used on nonmetallic conduit.

Retain paragraph below. Exothermic-welded connections are considered more permanent than crimped or bolted connections.

- K. Cable Connections: Use crimped or bolted connections for all conductor splices and connections between conductors and other components. Use exothermic-welded connections in underground portions of the system.
- L. All metal bodies of inductance, whether that body is grounded or not, located within 6 feet of a lightning conductor or another bonded metal body, shall be bonded to the lightning conductor system.
- M. Attachment to Roofing: Adhesive shall be recommended by manufacturer of air terminals and approved by manufacturer of roofing material. Follow Reference Standards and use all appropriate care to avoid damage to roofing.

Retain first paragraph below for single-ply membrane roofing.

- N. Air Terminals on Single-Ply Membrane Roofing: Comply with roofing membrane and adhesive manufacturer's written instructions.

Delete first two paragraphs below if NFPA 780 compliance is specified; retain if specifying bonding requirements that exceed minimum UL 96A requirements. See Editing Instruction No. 3 in the Evaluations. Coordinate with Drawings for counterpoise requirements if any.

- O. Bond extremities of vertical metal bodies exceeding 60 feet (18 m) in length to lightning protection components.
- P. Ground Loop: Install ground-level, potential equalization conductor and extend around the perimeter of [structure] [area or item indicated].
1. Bury ground ring not less than [24 inches (600 mm)] <Insert dimension> from building foundation.
 2. Bond ground terminals to the ground loop.
 3. Bond grounded building systems to the ground loop conductor within 12 feet (3.6 m) of grade level.

Retain paragraph below for structures exceeding 60 feet (18 m) in height unless the structure is an electrically continuous steel frame. NFPA 70 lists other instances where paragraph below is not required.

- Q. Bond lightning protection components with intermediate-level interconnection loop conductors to grounded metal bodies of building at 60-foot (18-m) intervals.
- R. Below Grade Connections: Connections shall be exothermic welded for all conductor splices and all connections between conductors and other components below grade.
- S. Ground grid cable shall be a minimum of 2/0 cable. The ground grid shall follow the roof outline, and shall be approximately 30 inches below grade and 3 feet outside of foundations.
- T. In addition to the ground rods required by the Reference Standards, ground rods shall be placed on the ground loop at each change of direction and spaced not over 100 feet apart.
- U. On spacings of not more than 100 feet, test wells, with accessible test leads, shall be provided to provide contact with the ground loop for future ground impedance testing. The test well shall have a hand-hole cover of appropriate traffic or aircraft rating.
- V. Due to extensive cathodic protection of and isolation joints on all underground metal pipes at DEN, these systems shall be bonded to the lightning protection system on the building side only.
- W. Power Outages: Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.

3.2 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.3 CORROSION PROTECTION

See Evaluations for discussion of corrosion protection issues.

- A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.
- B. Use conductors with protective coatings where conditions cause deterioration or corrosion of conductors.
- C. It is the intent of this section that only copper lightning protection system components be used. Where roofing system components exist that may be galvanically incompatible with copper lightning protection system components (such as galvalume parapet caps), the lightning protection system shall be designed and configured to prevent direct contact of the copper with such roofing component. Aluminum lightning protection components may be used only to protect aluminum surfaces or equipment where no UL Listed fittings exist to prevent direct contact of the lightning protection component with such surface.
- D. Where galvanically incompatible metals are connected, use bi-metallic fittings. Where conditions exist that may cause deterioration or corrosion of conductors or other components, use components with suitable protective coatings, sleeves, spacers or other UL listed fittings.

3.4 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Notify DEN Project Manager at least 48 hours in advance of inspection before concealing lightning protection components.
- B. Field inspection and testing will be performed according to Reference Standards and Contract Documents.
- C. Test the ground resistance to earth of each ground rod prior to connection to the system and submit test results to the DEN Project Manager. Where the resistance to ground is over 5 ohms, specifically notify the DEN Project Manager.
- D. Document all inspections on required UL inspection forms. One copy of each completed form shall be given to the DEN Project Manager.

- E. On existing structures, if, due to pre-existing conditions beyond control of the Contractor, the UL Master Label cannot be obtained, then the Contractor shall obtain a UL "Letter of Findings" (inspection to NFPA 780). If the Letter of Findings is also not possible, also due only to pre-existing conditions, then all work shall nevertheless comply with all other portions of this Specification and Reference Standards.
- F. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.
- G. UL Inspection: Meet requirements to obtain a UL Master Label for system.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 264200 - CATHODIC PROTECTION

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes passive cathodic protection systems that use [magnesium] [zinc] anodes to protect [iron and steel piping] [and] [tanks].

Retain paragraph below if impressed current systems are included in project and approved by DEN Project Manager.

- B. Section includes impressed current systems, for use only with approval by DEN Project Manager.
- C. The contractor shall furnish and install cathodic protection equipment, mounting hardware, etc., as required for complete installation as indicated in these Specifications and on the Drawings.
- D. The galvanic or sacrificial anode system provides protective current to metals by electrically coupling the metal to be protected with another metal that appears higher in the electromotive force series. This sets up a galvanic coupling, because the medium in which both metals are contained acts as an electrolyte. The metal of higher potential becomes the anode, and sacrificially corrodes to protect installations such as piping or tanks that act as the cathode. The return path for current is through an electrical connection between the anode and the cathode. When sufficient current flows through the electrolyte to suppress all local action currents on the protected metal, cathodic

protection is complete. This type system requires no external power supply; it uses sacrificial anodes.

Retain three (3) paragraphs below if impressed current systems are included in project and approved by DEN Project Manager.

- E. Denver International Airport prefers the application of sacrificial or galvanic corrosion protection systems over the use of impressed current system due to the density of infrastructures and the potential for interference corrosion. There will be localized situations where impressed current systems can be successfully installed and represent advantages over the use of sacrificial or galvanic systems. when this situation occurs, the designer should review the specifics with the DEN Project Manager and get their approval along with the DEN Engineering Design Manager's concurrence that an impressed current system is safe and applicable. Thereafter the designer and installer have the responsibility to design and install a system that will not create interference corrosion problems on any existing facilities. In fact, any alterations required to protect existing facilities from new impressed current systems are the responsibility of the systems designer and installation contractor.
- F. The impressed current system employs the principle of providing direct current from an external source, such as provision of a rectifier or fuel driven direct current generator. The current is driven to ground through a ground bed (which consists of a group of anodes), and then drained from the anode bed to the metallic structures to be protected. This type of system, in a deep well fluidized ground bed configuration, shall be utilized as the main area wide cathodic protection system.
- G. Impressed current systems are more difficult and dangerous to apply due to problems with stray current corrosion and are not preferred throughout the airport. the use of this type of system will require written approval by the airport project engineer in consultation with the dia director of engineering or his/her representative. The installation will require a post construction stray current analysis and any resistance drainage bonds and their maintenance shall be the responsibility of the impressed current system operator.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 PERFORMANCE REQUIREMENTS

Retain first paragraph below if Contractor is required to assume responsibility for design.

- A. Delegated Design: Design, supervise, test, and inspect the installation of cathodic protection systems, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

Retain one or both subparagraphs below. See Evaluations.

1. Design cathodic protection for pipelines according to NACE RP0169.
2. Design cathodic protection for metal underground storage tanks according to NACE RP0285.

- B. Sacrificial anode systems may be used only where current requirements are low. Minimum negative voltage potential between structure and Cu/CuSO₄ reference electrode shall be 0.85 volts.
- C. Survey site and determine soil or water corrosivity (resistivity), current requirements, potential surveys, stray currents, and water chemistry/corrosivity (pH).
- D. Select anodes and accessories relevant to level of protection. Design anodes for an estimated life of forty (40) <Insert number> years before replacement. Provide a twenty (20) <Insert number> year design life for the deep ground bed system
- E. Cathodic protection systems shall provide protective potential that complies with referenced NACE standards. Insulators are required if needed to insulate protected metals from other structures.
- F. The drawings are diagrammatic and indicate the general arrangement of electrical work. Locations are approximate and shall be subject to minor modifications as dictated by field conditions and as directed by DEN Project Manager.
- G. Deliver sufficient current to the facilities and systems to be protected and distribute this current so that the criterion for cathodic protection is efficiently attained.
- H. Minimize the interference currents on neighboring underground structures.
- I. Provide adequate allowance for anticipated changes in current requirements with time.
- J. Placement of anodes where the possibility of disturbance or damage is minimal.
- K. The cathodic protection system shall protect all metallic surfaces presently being installed and providing for expansion capabilities for future installed items.
- L. Provide monitoring and alarm system for protection of DG current generation.
- M. Provide sufficient test stations to check the system's performance.
- N. Cathodic protection shall be provided for, but not limited to the following structures:
 - 1. Metallic pipelines.
 - 2. Metallic underground structures, i.e., tanks, vaults, etc.
 - 3. Grounding mats, rods, etc.
 - 4. Metallic structures in contact with earth.
- O. All systems protected shall be bonded, and be electrically continuous.
- P. All surfaces to be cathodically protected shall be coated in conformance to mechanical standards.
- Q. Stray currents will be avoided.
- R. Contractor Responsibilities: The function of the cathodic protection system shall include the following:

1. Recognition of hazardous conditions prevailing at the site and the selection and specification of materials and installation practices in conformance with these standards and which will assure the safe installation and operation of the cathodic protection system.
2. Perform a pre engineering field survey consisting of determining or measuring the following characteristics of the electrolyte and the structures to be protected:
 - a. Collect and compile soil tests with provision for future testing, as required.
 - b. Resistivity of the electrolyte.
 - c. Structure to electrolyte potential (if new installation, base requirement. on design calculations, field tests can only be run on existing structures).
 - d. Cathodic protection current requirements.
 - e. Electrolyte characteristics such as variations and water content of soils, salinity and oxygen content of water, and maximum and minimum temperature.
 - f. Proximity of structure to be protected to other structures.
 - g. Compile characteristics of pipe coatings utilized.
 - h. Source of magnitude of stray currents including free electricity from electrical transmission lines and. strong RF fields, if any.
 - i. Locations of isolation between the protected structure and other metallic structures.
 - j. Locations of resistance bond stations (drain stations).
 - k. Electrical continuity test requirements for the metallic structures and lines that are to be protected, if available.
 - l. Locations of anode beds and rectifiers.
3. The design of cathodic protection system is for optimum economy of installation, maintenance, and operation.
4. Compliance with specification of materials and installation practices which will assure dependable operation throughout the intended operating life of the cathodic protection system.
5. Operation of a system is to minimize excessive protective currents or earth potential gradients, which can cause detrimental effects on pipe, coating, or neighboring buried or submerged metallic structures.
6. Direction of cooperative investigations to determine mutually satisfactory solution(s) of interference problems.
7. Coordinate with cathodic protection designers and installers involved in a common deep well ground bed system. to insure minimum interference currents between systems.
8. Prepare suitable drawings to designate the over all layout of the piping or other structures to be protected and the location of significant items of structure hardware, corrosion control test stations, electrical bonds, electrical insulators, and neighboring buried or submerged metallic structures.
9. Layout shop drawings shall be prepared for each impressed current cathodic protection installation, showing the details and location of the components of the cathodic protection system with respect to the protected structures and to major physical landmarks.
10. The locations of galvanic anode installations shall be recorded on drawings or in tabular form, with appropriate notes as to anode type, weight, spacing, depth, and backfill.

Retain paragraph and sub-paragraphs below if impressed-current ground bed systems are included in project and approved by DEN Project Manager.

S. Impressed-Current Deep Ground Bed System:

1. An impressed current, deep ground bed, cathodic protection system shall be utilized for all protected structures within the area indicated on drawings. The area referred to as the "terminal corridor" shall include all protected structures around the terminal and parking structures, car rental areas, concourses, airport and airline support areas, air cargo facilities, airline maintenance areas, airline offices, fuel farm and other miscellaneous facilities within the terminal corridor area. The area referred to as the pipeline corridor shall include all pipelines and structures within its limits.
2. Basic electrical requirements for the impressed current system shall include the following using Cu/CuSO₄ reference electrodes:
 - a. A negative potential of at least 0.85 volts with a normal negative potential of 1.0 volts measured between the structure and a reference electrode.
 - b. A polarization decay voltage shift of at least 0.10 volts, after the rectifier is turned off, between the structure and the reference electrode.
 - c. A negative voltage shift of at least 0.30 volts between the structure and reference electrode when the protective current is first applied.

T. Environmental Conditions: The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:

1. Altitude: 5,500 feet (1677 m) above sea level.
2. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
3. Wind Load: 115 mph with gust factor of 1.3.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated, including manufacturer's name and product number, electrical ratings, dimensions, mounting position, mounting method, materials, apply to this Section.
1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For cathodic protection. Include plans, evaluations, sections, details, and attachments to other work.
1. Detail locations of cathodic protection equipment, devices, and outlets, with characteristics and cross-references to products.
 2. Include calculations and details of anode designs.
 3. Include labeling and identifying scheme for wires, cables, and test boxes.

Paragraph below is defined in Section 013300 "Submittal Procedures" as a "Delegated-Design Submittal." Retain if design responsibilities have been delegated to Contractor. Professional engineer qualifications are specified in Section 014000 "Quality Requirements."

- C. Delegated-Design Submittal: For cathodic protection system indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified corrosion engineer responsible for their preparation.
1. Conduct site tests necessary for design, including soil resistivity, close-interval potential surveys, testing during construction, interference testing, and training of Owner's personnel.
 2. Provide system design calculations, stating the maximum recommended anode current output density, and the rate of gaseous production, if any, at that current density.

Coordinate requirements for coordination drawings with DEN Project Manager.

- D. Coordination Drawings: Include plans and sections to show cathodic protection assembly layouts and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified professional engineer. Submit evidence of current license, corporate authorization (if applicable) of the engineering business, and NACE certifications.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.
- C. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
1. Basic system operation, outlining the step-by-step procedures required for system startup, operation, adjustment of current flow, and shutdown.
 2. Instructions for pipe-to-reference cell and tank-to-reference cell potential measurements and frequency of monitoring.
 3. Instructions for dielectric connections, interference and sacrificial-anode bonds; and precautions to ensure safe conditions during repair of pipe, tank or other metallic systems. Instructions shall be neatly bound.
 4. Locations of all anodes, test stations, and insulating joints.
 5. Structure-to-reference cell potentials as measured during the tests required by "Field Quality Control" Article.

6. Recommendations for maintenance testing, including instructions for pipe-to-reference cell potential measurements and frequency of testing.
7. Precautions to ensure safe conditions during repair of pipe system.

B. Post-Installation Report:

1. A report, prepared by the design consultant and contractor, shall be issued to the DEN Project Manager, which will include all data obtained, analysis of data, record drawings, an Operations and Maintenance Manual and any further recommendations.

Retain paragraph below if impressed current systems are included in project and approved by DEN Project Manager.

2. All impressed current systems will be analyzed for stray current interference with any other buried metallic systems. If interferences are located they will be removed by the contractor using good corrosion engineering practices.

- C. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

1.7 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIALS

1. Furnish extra materials including ten (10) percent of installed cathodic protection assemblies and parts to match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
2. Deliver, store, and handle bus assemblies according to manufacturer's requirements. Store extra materials in location as directed by DEN Project Manager.

1.9 QUALITY ASSURANCE

Professional engineer qualifications are specified in Section 014000 "Quality Requirements."

- A. Corrosion Engineer Qualifications: Engage qualified professional engineer who has education and experience in cathodic protection of buried and submerged metal structures and has NACE accreditation or certification as a Corrosion Specialist or

Cathodic Protection Specialist.

- B. The designer of the cathodic protection system shall be a personnel trained in cathodic protection sciences under a registered Professional Engineer with cathodic protection and corrosion prevention expertise or a NACE certified Corrosion Specialist. The design shall be signed and sealed by a Professional Engineer.
- C. Testing Agency Qualifications: Testing agency as a member company of the International Electrical Testing Association that is acceptable to authorities having jurisdiction.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the International Electrical Testing Association or the National Institute for Certification in Engineering Technologies, to supervise on-site testing.
- D. Source Limitations: Obtain enclosed cathodic protection components through one source from a single manufacturer.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Protect anodes from exposure to rain, snow and direct sunlight.

1.11 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace permanent reference electrodes that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for permanent reference electrodes with manufacturers listed in Part 2 articles.

- 1. Warranty Period: Minimum [forty (40)] <Insert number> years for sacrificial anode system.

Retain paragraph below if impressed-current ground bed systems are included in project and approved by DEN Project Manager.

- 2. Warranty Period: Minimum [twenty (20)] <Insert number> years for deep ground bed system.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

Retain one or more of first three articles below for applicable anode materials. Corrosion engineering survey of local conditions will indicate which anode is suitable. Additional adjustment of chemical composition may be indicated to provide adequate and economical service.

2.1 MAGNESIUM ANODES, TYPE II

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Corpro Companies, Inc.
 2. Cott Manufacturing Company.
 3. CPMasters, Inc.
 4. ELTECH Systems Corporation USA; Anode Technologies Group.
 5. Farwest Corrosion Control Company.
 6. Loresco International.
 7. MATCOR.
 8. **<Insert manufacturer>**
 9. or approved equal.
- B. Comply with ASTM B 843.
- C. Chemical composition as percent of weight shall be as follows:
1. Aluminum: 0.010 maximum.
 2. Manganese: 0.50 to 1.3.
 3. Zinc: 0.05 maximum.
 4. Silicon: 0.50 maximum.
 5. Copper: 0.02 maximum.
 6. Nickel: 0.001 maximum.
 7. Iron: 0.03 maximum.
 8. Other Impurities: 0.05 each; 0.3 maximum total.
 9. Magnesium: Remainder.

Typical anode weights and dimensions are listed in the Evaluations and may be inserted here if spacing and size of anodes are not part of delegated design, but are indicated on Drawings.

- D. Anode Core: Galvanized steel with anode wire silver-soldered to the core. Connection shall be recessed and epoxy insulated for 600-V rating. Connection shall be covered

with heat-shrinkable tubing, and insulation shall be extended over connection.

- E. Anode Wires: Factory-installed cables, with copper conductors, suitable for direct burial; not less than No. 10 AWG with Type THWN insulation according to ASTM D 1248 and NEMA WC 70/ICEA S-95-658; long enough to extend to accompanying junction box without splicing.
- F. Anode Backfill: Backfill materials packaged in water-permeable fabric sack or cardboard container. Anodes shall be factory installed in packaged backfill using methods that result in dense packing of fill with factory-installed anode spacers to ensure centering of anode in packaged anode backfill. Backfill material shall have the following chemical composition by weight:
 - 1. Hydrated Gypsum: 75 percent.
 - 2. Bentonite Clay: 20 percent.
 - 3. Anhydrous Sodium Sulfate: 5 percent.

2.2 MAGNESIUM/MANGANESE ALLOY ANODES

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Corpro Companies, Inc.
 - 2. Cott Manufacturing Company.
 - 3. CPMasters, Inc.
 - 4. ELTECH Systems Corporation USA; Anode Technologies Group.
 - 5. Farwest Corrosion Control Company.
 - 6. Loresco International.
 - 7. MATCOR.
 - 8. <Insert manufacturer>
 - 9. or approved equal.
- B. Chemical composition as percent of weight shall be as follows:
 - 1. Aluminum: 0.01 maximum.
 - 2. Manganese: 0.50 to 1.3.
 - 3. Copper: 0.02 maximum.
 - 4. Nickel: 0.001 maximum.
 - 5. Iron: 0.03 maximum.
 - 6. Other Impurities: 0.05 each; 0.3 maximum total.
 - 7. Magnesium: Remainder.
- C. Bare Anode Weight: 40 lb (18 kg), not including core, and a nominal length of 60 inches (1520 mm).
- D. Anode Wires: Factory-installed cables, with copper conductors, suitable for direct burial; not less than No. 10 AWG with Type THWN insulation according to ASTM D

1248 and NEMA WC 70/ICEA S-95-658; long enough to extend to accompanying junction box without splicing.

- E. Anode Backfill: Backfill materials packaged in water-permeable fabric sack or cardboard container. Anodes shall be factory installed in packaged backfill using methods that result in dense packing of fill with factory-installed anode spacers to ensure centering of anode in packaged anode backfill. Backfill material shall have the following chemical composition by weight:
1. Hydrated Gypsum: 75 percent.
 2. Bentonite Clay: 20 percent.
 3. Anhydrous Sodium Sulfate: 5 percent.

2.3 ZINC ANODES FOR BURIED SERVICE, TYPE Z-1

- A. Use: Zinc anodes conforming to the following chemical analysis may be considered only if the use of magnesium anodes is completely unworkable in areas of low soil resistivities (less than 900 ohms per square centimeter). The use of zinc anodes shall be required to be approved by DEN Project Manager.

Retain this article for protection of buried copper pipe and devices.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Corpro Companies, Inc.
 2. Cott Manufacturing Company.
 3. CPMasters, Inc.
 4. ELTECH Systems Corporation USA; Anode Technologies Group.
 5. Farwest Corrosion Control Company.
 6. Loresco International.
 7. MATCOR.
 8. <Insert manufacturer>
 9. or approved equal.
- C. Comply with ASTM B 418, Type II.
- D. Chemical composition as percent of weight shall be as follows:
1. Aluminum: 0.005 maximum.
 2. Cadmium: 0.003 maximum.
 3. Iron: 0.0014 maximum.
 4. Zinc: Remainder.
- E. Bare Anode Ingot Weight: **30 lb** (13.6 kg), **2 inches** (50 mm) square and **30 inches** (760 mm) long. Packaged weight of anode bag shall be **70 lb** (32 kg).

- F. Anode Wires: Factory-installed cables, with copper conductors, suitable for direct burial; not less than No. 10 AWG with Type THWN insulation according to ASTM D 1248 and NEMA WC 70/ICEA S-95-658; long enough to extend to accompanying junction box without splicing.
- G. Anode Backfill: Backfill materials packaged in water-permeable fabric sack or cardboard container. Anodes shall be factory installed in packaged backfill using methods that result in dense packing of fill with factory-installed anode spacers to ensure centering of anode in packaged anode backfill. Backfill material shall have the following chemical composition by weight:
 - 1. Hydrated Gypsum: 75 percent.
 - 2. Bentonite Clay: 20 percent.
 - 3. Anhydrous Sodium Sulfate: 5 percent.

2.4 PERMANENT REFERENCE ELECTRODES

Coordinate reference electrode life with the expected service life of the anodes.

- A. The system shall be equipped with at least two reference electrodes for each rectifier, copper copper sulfate (Cu/CuSO₄) suitable for direct burial. Electrode shall be guaranteed by supplier for min. forty (40) years' service in the installed environment. One electrode shall be installed in a location expecting minimum protection and the other in a location expecting maximum protection.

2.5 WIRE AND CABLE

- A. Anode Header Cable: Single-conductor, Type HMWPE, insulated cable specifically designed for direct-buried dc service in cathodic protection installations.
 - 1. Conductor: Stranded, annealed, uncoated copper, not less than No. 8 AWG, complying with ASTM B 3 and ASTM B 8.
 - 2. Insulation: High-molecular-weight polyethylene, complying with NEMA WC 70/ICEA S-95-658.
 - 3. Minimum Average Thickness of Insulation: **110 mils** (2.8 mm) for Nos. 8 through 2 AWG, and **125 mils** (3.2 mm) for Nos. 1 through 4/0 AWG; rated at 600 V.
 - 4. Connectors: Exothermic welds.
- B. Conductors and Cables: Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - 1. Bonding Conductors for Joint and Continuity Bonds: Not less than No. 8 AWG, stranded, Type THWN copper conductors.
 - 2. Flexible Pipe Coupling Bonds: Flexible copper straps with electrical resistance equal to No. 1/0 AWG stranded copper wire and with five holes for five exothermic welds to pipe.
 - 3. Test Wires: No. 12 AWG, Type THWN copper conductors.
 - 4. Resistance Wires: No. 16 or No. 22 AWG nickel-chromium wire.
 - 5. Cables for Installation in Conduit: Type THWN copper conductors.

- C. Where several anodes are connected to one header cable, compute the allowable voltage drop in that cable. Select the cable size in accordance with standard electrical engineering practice. Directly buried conductors should be properly insulated to prevent current leakage, and of a sufficient size to prevent mechanical damage.
- D. All lead wire conductors shall be exothermic welded at splices and to protected surfaces, and sealed with a protective coating.
- E. All cad welded pipeline leads will include two wires to the test stations to allow for the loss of one line during the life of the installation.
- F. Splicing underground cables should be avoided where possible. Necessary splices be made with manufactured, UL. approved, splice kits.
- G. The DC conductors shall be run in rigid conduits of a size large enough to accommodate 1/0 cable or #8 AWG cable to the anodes to a depth of at least 18" below grade. DC conductors below 18" may be run direct buried. All conduits shall be terminated in the ground with a plastic bushing.
- H. The negative DC lead from the rectifier units shall be connected to the protected structure by a exothermic weld connection. The connection shall be coated with a heavy coat of coal tar enamel, or equal with a plastic backfill shield installed over that.
- I. All underground pipe joints, except welded joints, shall be electrically bonded using a #2 AWG HMWPE insulated conductor, exothermic welded to each pipe section, and all component parts except bolts.

2.6 TEST STATIONS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Corpro Companies, Inc.
 - 2. Cott Manufacturing Company.
 - 3. CPMasters, Inc.
 - 4. <Insert manufacturer>
 - 5. or approved equal.
- B. Plastic Test Stations: Flush-mounted type, manufactured of high-impact-resistant PVC or polycarbonate with watertight conduit connections and cover and removable terminal board having at least five terminals.
- C. Test Station Mounting Enclosures:
 - 1. Non-Traffic-Area Boxes: Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

For traffic boxes in subparagraph below, verify that AASHTO's "Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals," H 20 traffic loads, is adequate, or delete below if boxes are not in traffic areas.

2. Traffic-Area Boxes: Comply with requirements in Section 260543 "Underground Ducts and Raceways for Electrical Systems." Boxes shall have cast-iron covers with a welded bead legend "CP TEST."

D. POTENTIAL STATIONS

1. This subject pertains to those situations where direct and uninterrupted surface contact to the soil surrounding the cathodically protected structure is not available. Examples include piping that is under concrete, piping that is below an environmental geomembrane, piping that is below coarse grade materials (such as gravel) that are not part of the electrolyte body, and above ground storage tank bottoms that have cathodic protection applied. Easy replacement of reference electrodes in the above mentioned location must be addressed in the design of the referenced electrode's installation. Elimination of the access problem for replacement through the use of test stations that allow access to native soil should be used where possible.
2. Potential stations located in areas with soil surface shall consist of a precast concrete housing, which is open at the bottom and shall be furnished with a cast iron traffic cover marked CP on the top of the cover. The station shall be filled to within 3 inches of its top with clean soil.

2.7 SEALING, POTTING, AND DIELECTRIC COMPOUNDS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Chase Corporation - Chase Specialty Coatings; Royston Business Group.
 2. Chase Corporation - Chase Specialty Coatings; Tapecoat Business Group.
 3. Farwest Corrosion Control Company.
 4. 3M; Electrical Products Division.
 5. or approved equal.
- B. Sealing and Dielectric Insulating Compound: Comply with NACE RP0188. Black, rubber based, soft, permanently pliable, tacky, moldable, and unbacked; [0.125 inch (3 mm)] [0.5 inch (13 mm)] thick.
- C. Potting Compound: Comply with NACE RP0188. Cast-epoxy, two-package type; fabricated for this purpose and covered with heat-shrinkable tape.
- D. Pressure-Sensitive, Vinyl-Plastic Electrical Tape: Comply with UL 510.

2.8 EXOTHERMIC WELDING MATERIALS

- A. Exothermic Weld Kits: Specifically designed by manufacturer for welding materials and shapes required.
- B. Exothermic Weld Caps: Dome of high-density polyethylene, **10-mil** (0.254-mm) minimum thickness, filled with mastic and containing a tunnel portion to separate lead wire from exothermic weld.

2.9 COATING REPAIR MATERIALS

Verify that Section 099600 "High-Performance Coatings" is included in Project Specifications.

- A. Touchup Coating Materials: Comply with requirements in Section 099600 "High-Performance Coatings" for coating systems for touchup of factory-applied coatings.
- B. Adhesive-Applied Coating Materials: Coating materials shall be compatible with factory-applied coating system.
 - 1. Nominal thickness of coating materials shall be not less than [**8 mils** (0.2 mm)] [**16 mils** (0.4 mm)] [**24 mils** (0.6 mm)] [**40 mils** (1.0 mm)] [**60 mils** (1.5 mm)] **<Insert value>**, plus or minus 5 percent.
 - 2. Coating materials shall be one of the following supplied by factory-applied coating system manufacturer:
 - a. Polyvinyl-chloride, pressure-sensitive, adhesive tape.
 - b. High-density polyethylene/bituminous rubber compound tape.
 - c. Butyl rubber tape.
 - d. Coal-tar epoxy.
 - e. **<Insert coating material>**.
- C. Resistor Use:
 - 1. In low resistivity media, where current flow must be limited, and anode output current is in excess of the required cathodic protection current, adjustable resistors must be used to limit the flow of current. The value of this resistance can be determined by applying Ohm's law.

Retain entire article including associated paragraphs below if impressed-current systems are included in project and approved by DEN Project Manager.

2.10 IMPRESSED-CURRENT ANODES:

- A. Anodes for deep well impressed current systems shall be specified to be high silicon iron chromium durichlor type CD with the following analysis and requirements:
 - 1. Silicon: 14.5% min.
 - 2. Manganese: 0.75% min.

3. Carbon: 0.95% min.
4. Chromium: 4.5% min.
5. Iron: Remainder
6. The anode lead wire shall be #8 AWG 7/S, I/C copper with HMWPE insulation, and shall be connected to the interior center of the anode. The anode anchoring device shall withstand a 2,000 pound pull and have a maximum anode to anchoring device electrical resistance of .0009 ohms. Anchoring devices shall be covered with a sealing compound.
7. The use of tubular series wired anode assemblies is not recommended. Anodes with individual lead wires extended up to an above grade junction box is recommended.
8. Resistive localized anodes are acceptable if the installation is designed and certified by a registered Corrosion Engineer or NACE certified Corrosion Specialist.

B. Impressed-Current Backfill:

1. The backfill shall be tamped calcined coke breeze material screened to provide a particle size from 1/81' to 3/811. Resistivity shall not exceed 25 ohm cm at a moisture content of not more than 1%, with a bulk density of 46 to 50 lb/ft' and the following composition:
 - a. Fixed Carbon: 99.4% guaranteed typical (99.0% min., dry basis).
 - b. Ash: 0.3% guaranteed typical (0.5% max., dry basis).
 - c. Volatile matter: 0.3% guaranteed typical (0.5% max., dry basis).
 - d. Sulfur: 0.8% guaranteed typical (1.2% max., dry basis).
 - e. Moisture: 0.02% guaranteed typical (1.0 max.).

C. Impressed-Current Anode Shunt Junction Boxes:

1. Enclosures shall be watertight stainless steel or nonmetallic boxes complete with terminal blocks, shunts, copper jumpers, and bus bars. Shunts shall be in accordance with IEEE 316, 0.01 ohms, 8 amperes.

D. Impressed-Current Rectifiers:

1. Rectifier units shall supply the proper voltage and current output as required in Article 2.12. The Design shall factor in "attenuation" determined from attenuation curves, or the total current required to give protection at the points most distant from the drainage point.
2. The rectifier shall be specified to be of the adjustable type, with a minimum of 20 even adjustments, with conveniently accessible taps over the full voltage output range. This will allow for changes in voltage requirements as a result of seasonal variations in soil resistivity. For above ground tank bottom cathodic protection systems located within release control liners, the rectifiers shall be supplied with variable constant current controls.
3. Rectifier shall be specified to be of the silicone type meeting NEMA MR 20 standards. Semiconductors shall be rated to provide adequate margin for over voltage and over current surges. They shall be mounted on a heat sink designed

to maintain junction temperatures well below manufacturer's recommended maximum temperatures when operating in a 120 F (50 C) ambient. The rectifier stack shall be a single three-phase, full wave, bridge connected. Silicone diodes shall be protected on input and output sides with zener type selenium surge plates and lightning arresters.

4. The rectifier unit transformer shall be specified to be a two winding type with 428 F (220 C) insulation to operate at rated kVA with a temperature rise not exceeding 220 F (105 C) above a 120 F (50 C) ambient. The secondary winding shall have minimum of four coarse and five fine voltage control taps to provide adjustable output voltages in equal steps over the entire operating range. Voltage control taps shall be studs and links shall be rated to carry 125 percent of the rectifier full load current. The transformers shall conform to NEMA ST 1. Provisions for remote monitoring and alarms shall also be provided.
5. The efficiency of the basic rectifier shall be a minimum of 70 percent. Each rectifier unit shall be complete with enclosure, transformer, voltage control taps, and necessary appurtenances. Voltage, phase, AC input, and DC output ratings shall be as necessary. The enclosures shall be in accordance with NEMA ICS 6 110. Sunshades shall be provided for each outdoor rectifier.
6. Rectifiers shall be enclosed in sheet metal enclosures with welded seams in accordance with NF14A MR 20. The enclosures shall be provided with hinged doors. Circuit breakers, ammeters, and voltmeter shall be mounted on an inside panel. The rectifier shall have a ground lug for a minimum 67.44mm (No. 2/0 AWG) ground wire and shall be suitable for wall, post, or pad mounting, with knockouts provided for conduit entrance.
7. Each rectifier unit shall have internally mounted meters to read DC current and DC voltage. The ammeter shall be provided with an external shunt. The meters shall be red lined at approximately the three quarter point of the rectifier unit "full scale" rated value. The meters shall have an accuracy of +/- 2 percent.
8. The main circuit breaker shall be molded case, trip free, flush mounted with toggle handle readily accessible. An overload or short circuit through any single pole shall open all poles simultaneously. The circuit breaker shall conform to NEMA AB 1.
9. Fuses of the non renewable type shall be installed in the secondary side of the rectifier and shall be mounted on the front of the rectifier panel.

E. Impressed-Current Deep Ground Bed Hardware:

1. Casings shall be ES ABS pipe sized as required. Pipe shall be supplied with 1 1/4" diameter holes drilled at an angle of approximately 45° from the longitudinal axis of the pipe.
2. Approximately 50 holes per running foot of pipe is required. Holes shall be positioned in a symmetric and distributed manner so as not to reduce the strength of the pipe. On the outside of the drilled portion of the pipe, a 28 gauge metal membrane shall be installed in a secure manner.
3. Vent pipes shall be 1" PVC with 201 couplings and having 3/16" holes on 6" centers drilled from the bottom of the hole to 51" above the top anode.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

- A. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
- B. Install at the locations shown on drawings for anodes and provide for symmetrical spacing to obtain uniform current distribution. Low, poorly drained areas are generally good locations for anodes and are highly desirable for efficient anode operation. Locate anodes in areas having the lowest resistance and nearest those points where corrosion has been determined to be the most severe; space anodes not closer than four (4) feet from the protected structure and space a minimum of twenty (20) feet from foreign structures. Place anodes at a depth that is below the bottom of the structure to be protected. For protection of tank interior or other structure where rod type magnesium anodes are not practicable, zinc anodes can be mounted directly on, but separated by an insulating strip from, the surface of the steel to be protected.
- C. Comply with ANSI/IEEE C2 and NFPA 70.
- D. The cathodic protection equipment installation is to be sequenced and scheduled with other work to reduce possibility of damage and soiling of equipment during the remainder of construction period.
- E. Field Measurements: Verify existing dimensions by field measurements. Verify clearances and locate obstructions within manufacturing and installation tolerances of cathodic protection equipment.
- F. Make connections to ferrous pipe **[and metal tanks]** using exothermic welding.
- G. Coat welds with the coating repair material and apply an exothermic weld cap.
- H. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

3.2 MAGNESIUM ANODE INSTALLATION

- A. Install magnesium anodes at locations that clear obstructions. Install at least **36 inches** (900 mm) and no more than **10 feet** (3 m) from pipe **[or tank]** to be protected. Install in augered holes with top of anode **[24 inches** (600 mm) **below pipe invert elevation]** **[a minimum of 36 inches** (900 mm) **below finished grade]**. In soils that will collapse into augered holes, use casing of galvanized sheet steel.
- B. Install anodes in a dry condition after plastic or waterproof protective covering has been completely removed from water-permeable permanent container that houses anode metal. Anodes shall be lowered into holes by rope sling or by grasping the cloth gather. Do not use anode-connecting wire for lowering anode into hole.

- C. Packaged galvanic anodes shall be wetted and then backfilled with compacted native soil. Where anodes and special chemical backfill are provided separately, anodes shall be centered in special backfill that would be compacted prior to backfilling with native soil. Care should be exercised so that lead wires and connections are not damaged during backfill operations. Sufficient slack should exist in lead wires to avoid strain.
- D. Backfill annular space around anode with fine earth in 6-inch (150-mm) layers; compact each layer using hand tools. Do not strike anode or connecting wire during backfilling and compacting. After backfilling and compacting to within 6 inches (150 mm) of finished grade, pour approximately 5 gal. (20 L) of water into each filled hole. After water has been absorbed by earth, complete backfilling to finished level.
- E. If rock strata are encountered before achieving specified augured hole depth, install anodes horizontally at depth at least as deep as bottom of pipe to be protected.
- F. Install anodes spaced as indicated, **[directly connected] [connected through a test station]** to the pipeline, allowing slack in connecting wire to compensate for movement during backfill operation.
- G. For tank protection, connect groups of anodes to collector cable. Make contact, through a test station, with tank to be protected.
- H. Do not use resistance wires to reduce current output of individual or group anodes.

3.3 ZINC ANODE INSTALLATION

Retain this article if retaining zinc anodes in Part 2, and only if approved by DEN Project Manager. This article is typical for protection of domestic copper water tubing of limited lengths, usually under concrete slabs-on-grade, and should be revised to suit other copper piping and applications.

- A. Install zinc anode horizontally in a hole at least 3 inches (76 mm) larger than anode. Install anode under new copper water tubing, including service lines, blowoffs, and air releases. Separate piping and anode by at least 24 inches (600 mm), but not more than 60 inches (1520 mm).
- B. Install anode midway between both ends of piping. Install anode wire in piping trench and connect to piping at an accessible location. Install anode wire in PVC conduit where rising out of the ground to the aboveground connection.

3.4 INSTALLATION OF REFERENCE ELECTRODES

- A. Install directly beneath the buried metallic component being protected.

3.5 CABLE AND WIRE INSTALLATION

Indicate extent of conduit installation on standard details and plans on Drawings. Revise first paragraph below to require anode wires in conduit. See Editing Instruction No. 3 in the Evaluations for other wiring options.

- A. Install conductors, except anode wires, in PVC conduit with waterproof PVC junction boxes. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for conduit and its installation.
- B. Anode Wire Installation: Cover trench bottom for the anode wire with **3-inch** (76-mm) layer of sand or stone-free earth. Center wire on backfill layer and do not stretch or kink the conductor. Place backfill over wire in layers not exceeding **6 inches** (150 mm) deep, and compact each layer. Use clean fill, free from roots, vegetable matter, and refuse. Place cable underground-line warning tape within **18 inches** (460 mm) of finished grade, above cable and conduit.
- C. Bonding Conductors: Install conductors on metallic pipe and tanks, to and across buried flexible couplings, mechanical joints, and flanged joints except at places where insulating joints are specified. Welded and threaded joints are considered electrically continuous and do not require bonding.
 - 1. Install at least two bonds between parts requiring bonding.
 - 2. Bonding conductors must contain sufficient slack for anticipated movement between structures. Bonding conductors across pipe joints shall have not less than a **4-inch** (100-mm) slack for pipe expansion, contraction, and soil stress.
 - 3. Connect bonding conductors to pipe, coupling follower rings and coupling middle ring or sleeve. Connect bonding conductors with exothermic welds.
- D. For wire splicing, use compression connectors or exothermic welds.

3.6 TEST STATIONS

- A. Install test stations as follows:
 - 1. At max. **1000-foot** (300-m) intervals.
 - 2. At insulating joints.
 - 3. At both ends of casings when casing material is included in the cathodic protection system.
 - 4. Where pipe crosses within 6" of other metal pipes.
 - 5. Where pipe connects to existing piping system.
 - 6. Where pipe connects to dissimilar metal pipe.
 - 7. On each underground storage tank and each buried metallic process tank such as an oil-water separator or grit chamber.
 - 8. At all insulating underground joints (bond site).
 - 9. Where a carrier pipe is used under roads, railroads, etc.
 - 10. For sacrificial anodes added to the fuel system.
- B. Test stations will not be required within 300' of a riser pipe or any place where the pipe may be readily accessible.
- C. Install test stations on backfill complying with requirements for trench bottom fill for anode wires unless otherwise indicated.

- D. Terminate test conductors on terminal boards and install a spare set of test leads at each testing location.
- E. Test stations consist of a weatherproof NEMA: terminal box, with removable cover, test lead wires and five terminals, installed approximately 3 feet above surface. Limit above grade test stations to protected areas only.
- F. Flush type test stations approximately 4" x 18" or 5" x 181 long plastic pipe and heavy cast iron loading covers and collars suitable for both curb and roadway installation shall be installed in all paved areas.
- G. Test station conductors shall be minimum #12 AWG HMWPE insulated, color coded as required.
- H. Test stations shall be labeled with coded identification and shall be carefully located.

3.7 PIPE JOINTS

- A. Insulating Flange Sets: Cover flanges with sealing and dielectric compound.
- B. Insulating Unions: Install electrical isolation at each building entrance and at other locations indicated on approved Delegated-Design Drawings. Cover unions with sealing and dielectric compound.

3.8 INSULATING PIPE SLEEVES

Coordinate requirements in this article with requirements in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment" and with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

- A. Install insulating sleeves between metallic piping and metal buildings, hangers, supports, and other metal structures. Completely surround the metallic pipe for the full length of the steel contact and effectively prevent contact between the cathodically protected metallic pipe and other metallic structures. Support insulating sleeve to prevent damage to coating and to accommodate relative movement, vibrations, and temperature differentials.
- B. Provide electrical isolation between piping systems protected by different cathodic protection systems, at each building riser pipe, and at other points where a short to another pipe or a foreign structure may occur. Provide electrical isolation between anchor plates, leak plates and any other structure penetration.
- C. Electrical isolation shall be provided at the first flange inside any building with the remainder of buried pipe protected. Note the DEN electrical specification which denies the use of water supply up to this flange from the exterior for use as an electrical ground.

3.9 DISSIMILAR METALS

- A. Underground Dissimilar Piping: Coat insulating joint and pipe at joints of dissimilar piping material with sealing and dielectric compound for a minimum distance of 10 pipe diameters on both sides of joint.
- B. Underground Dissimilar Valves: Coat dissimilar ferrous valves and pipe with sealing and dielectric compound for a minimum distance of 10 pipe diameters on both sides of valve.
- C. Aboveground Dissimilar Pipe and Valves: If dissimilar metal pipe joints and valves are not buried and are exposed only to atmosphere, coat connection or valve, including pipe, with sealing and dielectric compound for a minimum distance of three pipe diameters on both sides of junction.

3.10 COATINGS

- A. Field Joints: Apply adhesive-applied coating system in a thickness to achieve corrosion protection equal to adjacent factory-applied coating.

3.11 IDENTIFICATION

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems."
 - 1. Identify anode wires and anode header cables with marker tape.
 - 2. Identify underground wires and cables with underground-line warning tape.
 - 3. Identify text boxes with engraved, laminated acrylic or melamine label, permanently attached to text box.

Retain entire article including associated paragraphs below if impressed-current systems are included in project and approved by DEN Project Manager.

3.12 IMPRESSED-CURRENT INSTALLATION REQUIREMENTS

- A. Deep ground bed anode locations shall be installed as determined by the Design Consultant's Corrosion Engineer's standard design calculations, and field surveys.
- B. The deep ground bed installation shall be of the replaceable type in locations in paved areas, and areas where any construction work may interfere with air traffic operations. In other areas, ground beds may be of the non replaceable type.
- C. The ground beds shall not be placed at a depth greater than 51". The Engineer shall determine if greater limitations are required. The deep ground bed casing shall be positioned at a section of the casing. Upon completing the installation of the perforated and solid plastic casing, enough coke breeze should be pumped to fill the annulus between the casing and the periphery of the drilled hole up to a point 101 above the top anode. The inside casing should then be flushed to remove contaminants until the water is finally clear. The anodes, along with the 1" PVC vent pipe, should then be

lowered down the hole to their respective determined depths. The inside casing should be pumped with the proper amount of coke breeze slurry (51" above the top anodes). After 24 hours of settling, the coke breeze height shall be the annulus of the hole to grade with washed gravel. The top of the plastic casing shall be capped off at grade and a metallic/concrete vault installed.

- D. The individual anode lead wires shall be run to the anode lead junction box mounted adjacent to the hole at the earth surface.
- E. The rectifier units shall be mounted on a concrete pad at least 6" larger and wider than the rectifier base dimensions and 4" thick. The rectifiers shall be located convenient to the deep well ground beds.

3.13 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Comply with NACE RP0169 and NACE RP0285.

Retain first or second paragraph below to identify who shall perform tests and inspections. Retain and edit "Field quality-control reports" Paragraph in "Informational Submittals" Article.

- B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- C. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

- D. Tests and Inspections:
 - 1. Static Pull Test: Choose, at random, one completed anode of each type for this destructive test. Demonstrate that anode wire connections have enough strength to withstand a minimum tensile load of 300 lb (136 kg). If test fails, replace all anodes and repeat test at another randomly selected anode.
 - 2. Insulation Testing: Before anode system is connected to [pipe] [and] [tank], test insulation at each insulating joint and fitting. Demonstrate that no metallic contact, or short circuit, exists between the two insulated sections of [pipe] [and] [tank]. Replace defective joints or fittings.
 - 3. Bonding Tests: Test for electrical continuity across all bonded joints. Repair or add additional bonds until electrical continuity is achieved.

4. Baseline Potentials: After backfilling of **[pipe and] [pipe, tank, and]** anodes is completed, but before anodes are connected to **[pipe] [and] [tank]**, measure the static potential of **[pipe] [and] [tank]** to soil. Record initial measurements.
 5. Anode Output: Measure electrical current as anodes or groups of anodes are connected to **[pipe] [and] [tank]**. Use a low-resistance ammeter. Record current, date, time, and location of each measurement.
 6. **[Pipe-] [and-] [Tank-]**to-Reference Electrode Potential Measurements: On completion of installation of entire cathodic protection system, make electrode potential measurements according to NACE RP0169, using a copper/copper-sulfate reference electrode and a potentiometer-voltmeter, or a dc voltmeter with an internal resistance (sensitivity) of not less than 100,000 ohms per volt and a full scale of 1 or 2 V. Make measurements at same locations as those used for baseline potentials. Record voltage, date, time, and location of each measurement, using one of the following two methods:
 - a. 0.85 V Negative Voltage: With cathodic system in operation, measure a negative voltage of at least minus 0.85 V between **[pipe] [or] [tank]** and a saturated copper/copper-sulfate reference electrode contacting the earth directly over **[pipe] [or] [tank]**.
 - b. 100-mV Polarization Voltage: Determine polarization voltage shift by interrupting protective current and measuring polarization decay. An immediate voltage shift will occur if protective current is interrupted. Use voltage reading, after immediate shift, as base reading from which to measure polarization decay. Measure at least a minimum polarization voltage shift of 100 mV between **[pipe] [or] [tank]** and a saturated copper/copper-sulfate reference electrode contacting the earth directly over **[pipe] [or] [tank]**.
- E. Location of Measurements for Piping: For coated piping or conduit, measure from reference electrode in contact with the earth directly over pipe. Measure at intervals not exceeding **400 feet** (120 m). Make additional measurements at each distribution service riser, with reference electrode placed directly over service line.

Retain first paragraph below if tanks are to be protected.

- F. Location of Measurements for Tanks: For underground tanks, measure from reference electrode located as follows:
1. Directly over center of tank.
 2. At a point directly over tank and midway between each pair of anodes.
 3. At each end of tank.

Retain test in first paragraph below if there is a possibility of adverse effects from foreign pipes and tanks.

- G. Interference Testing: Test interference with cathodic protection from any foreign **[pipes] [and] [tanks]** in cooperation with Owner of foreign **[pipes] [and] [tanks]**. Report results and recommendations.

- H. Stray Current Measurements: Perform at each test station. Mitigate stray currents due to lightning or overhead ac power transmission lines as provided for in NACE standards.

See Editing Instruction No. 2 in the Evaluations for discussion of testing and repair of coatings.

- I. Inspect coatings; comply with NACE RP0188. Repair imperfections of factory-applied coatings as specified in "Coatings" Article.
1. Use electronic holiday detectors to detect coating imperfections.
 2. All damage to the protective coating during transit and handling shall be repaired before installation.
 3. Repair factory-applied coatings to have equal or better corrosion resistance than the factory-applied coating system. Field-repair material shall be of the type approved by, and shall be applied as recommended by, manufacturer of the coating material.

Retain paragraph and associated sub-paragraphs below if impressed-current systems are included in project and approved by DEN Project Manager.

- J. Impressed Current Deep Ground Bed System:
1. After the installation is complete, the deep well anode systems shall be energized and tested to determine that the underground structures are receiving adequate protection in accordance with the criteria as set forth in the National Association of Corrosion Engineers, Standard RP 01 69, Latest Revision. All testing shall be performed under the direct supervision of a Corrosion Specialist as certified by the National Association of Corrosion Engineers.
 2. Interference testing shall be conducted.
 3. Static Potential Measurements: Before the ground beds are energized, a complete set of "static" potential measurements shall be obtained at the following locations:

Edit below to suit project.

- a. Fire Water Line at all hydrant and valves.
 - b. Fuel line at all hydrant and valves.
 - c. Above Ground Storage Tanks four (4) readings per tank with tanks greater than 10 ft diameter.
 - d. Above Ground Storage Tanks two (2) reading per tank with tanks less than or equal to 10 ft diameter.
 - e. Main Pipeline Corridors pipe to soil measurements, minimum of 100 ft apart.
 - f. Anode Output As the anodes are energized, current output shall be measured. The values obtained, date, time, and locations shall be recorded.
4. Interference Testing before final acceptance, interference tests shall be made with respect to any foreign pipelines, tanks or wells in cooperation with the owner of the foreign structure. A full report of the tests giving all details shall be made.

Any methods recommended to eliminate interference shall be reported to DEN Project Manager. It is the responsibility of the new installation designer and contractor to assure the resolution to any electrical interference problems resulting from the cathodic protection prior to system acceptance and to resolve any interferences found post construction that are deemed the result of said construction.

5. Anode Output As the anodes are energized, current output shall be measured. The values obtained, date, time, and locations shall be recorded.

3.14 ADJUSTING

- A. Adjust cathodic current using resistors as recommended by corrosion engineer who prepared the Delegated-Design Submittal in Part 1.
- B. During the first year after Substantial Completion, test, inspect, and adjust cathodic protection system every three months to ensure its continued compliance with specified requirements.

3.15 DEMONSTRATION

- A. Contractor to engage a factory-authorized service representative to assist Contractor and train DEN maintenance personnel to adjust, operate, and maintain cathodic protection system.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 264313 - TRANSIENT-VOLTAGE SUPPRESSION FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section includes field-mounted TVSS for low-voltage (120 to 600 V) power distribution and control equipment.
- B. This specification describes the electrical and mechanical requirements for a multitude of hybrid high-energy power conditioning filter units utilized for a facility-wide protection system. Each unit in the system shall incorporate transient voltage surge suppression (TVSS) and high-frequency electrical line noise filtering. The specified system shall provide effective high-energy transient voltage suppression, surge current diversion, high-frequency attenuation, and line control in all ANSI/IEEE-C62.41 environments connected on the load side of the facility's meter or main overcurrent device. The system shall be connected in parallel with the facility's wiring system and provide minimum attenuation of fast rise-time, high-frequency, error producing transients and electrical line noise as follows:

Attenuation Frequency:	100 kHz	1MHz	10 MHz	100 MHz
Insertion loss(ratio):	355-1	50,000-1	500,000-1	1,000,000-1
Insertion loss(dB):	51	94	114	120

C. In order to assure proven reliability, the facility-wide protection system shall be capable of protecting against and surviving at least 5,000 ANSI/IEEE-C62.41 Category-C surges without failing or degrading the UL-1449 Surge Suppression Rating by more than 5%.

D. Related Sections:

Retain Sections in subparagraphs below that contain requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 262413 "Switchboards" for factory-installed TVSS.
2. Section 262416 "Panelboards" for factory-installed TVSS.
3. Section 262726 "Wiring Devices" for devices with integral TVSS.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

E. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. ATS: Acceptance Testing Specifications.
- B. SVR: Suppressed voltage rating.
- C. TVSS: Transient voltage surge suppressor(s), both singular and plural; also, transient voltage surge suppression.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's name and product number, rated capacities, operating weights, electrical characteristics, furnished specialties, dimensions, mounting position, mounting method, vertical supports, material and accessories.
 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Detail fabrication and installation of transient voltage surge suppression assemblies including plans, elevations, sections, component details, and

attachments to other construction elements. Detail the connections for the TVSS to switchgear, switchboards, transformers, and panelboards. Detail supports and connections to building.

Coordinate requirements for coordination drawings with DEN Project Manager.

- C. Coordination Drawings: Include floor plans and sections to show transient voltage surge suppression assembly layouts and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified testing agency.
- B. Qualification Data: For product manufacturers specified in PART 2- PRODUCTS.

Retain first paragraph below for material or product certificates from manufacturers.

- C. Product Certificates: For TVSS devices, from manufacturer. Indicate what internal or external fusing is incorporated in the TVSS system and what impact the fusing has on the performance of the device. (I.e. surge capacity and clamping levels).

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- D. Field quality-control and test reports. Indicate and interpret test results for compliance with performance requirements.
 - 1. Certify that the TVSS system is UL 1449 listed.
 - 2. System testing requirements shall be as follows:
 - a. System shall be tested to meet ANSI/IEEE C62.41 1991, tested per ANSI/IEEE C62.45 1992. Category A & B – (0.5 μ SEC x 100 kHz Ring Wave) Category B Biwave – (8 x 20 μ SEC at 3,000 Amperes and 1.2 x 50 μ SEC at 6,000 Volts) Category C3 Biwave – (8 x 20 μ SEC at 10,000 Amperes and 1.2 x 50 μ SEC at 20,000 Volts.
 - b. The system shall be tested to 1,000 sequential ANSI/IEEE C62.41 Category C3 combination wave transients. The Category C3 combination wave is defined as a 1.2 x 50 microsecond at 20,000 volt open circuit voltage waveform and 8 x 20 microsecond at 10,000 ampere short circuit current waveform.
- E. Equipment Manual: The manufacturer shall furnish an installation manual with installation, start-up and operating instructions for the specified system.
 - 1. Installation instructions shall clearly state if the system requires an external over

current device to maintain the system's UL 1449 listing.

- F. Warranties: Sample of special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For TVSS devices to include in emergency, operation, and maintenance manuals.
- B. Equipment manual: A list of customer-replaceable spare parts shall be included in the unit's installation, operation and maintenance instructions. All spare parts shall be quickly and easily field-replaceable.
- C. Spare parts: A list of customer-replaceable spare parts shall be included in the unit's installation, operation and maintenance instructions. All spare parts shall be quickly and easily field-replaceable.
- D. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.
- E. Warranties: Complete special warranties for systems.

Verify requirements for as-built plans with DEN Project Manager.

- F. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

Retain this Article only when modular replaceable TVSS is specified in Part 2 of Section Text.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

See Evaluations for discussion of modular and non-modular construction.

1. Replaceable Protection Modules: [**One (1)**] <Insert number> of each size and type installed.

1.8 QUALITY ASSURANCE

Retain first paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in

addition to those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency, and marked for intended location and application.
- C. Comply with IEEE C62.41.2 and test devices according to IEEE C62.45.
- D. Comply with NEMA LS 1.

Retain option in first paragraph below to require compliance with UL 1283 if the TVSS devices are to include electromagnetic and radio frequency interference filters. See Evaluations for explanation of the combination electromagnetic interference and radio frequency interference filters.

- E. Comply with [UL 1283 and]UL 1449.
- F. Comply with NFPA 70.

1.9 PROJECT CONDITIONS

Retain first paragraph below if interruption of existing electrical service is required

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
 - 2. Do not proceed with interruption of electrical service without DEN Project Manager's written permission.
- B. Service Conditions: The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 - 1. Maximum Continuous Operating Voltage: Not less than 115 percent of nominal system operating voltage.
 - 2. Operating Temperature: Operating temperature range shall be minus 40 deg. to 140 deg. F (minus 40 to 60 deg. C).
 - 3. Storage Temperature: Minus 40 deg. to 185 deg. F (minus 40 to 85 deg. C).
 - 4. Relative Humidity: Shall be reliable in an environment with 5 percent to 95 percent non-condensing relative humidity.

5. Operating Altitude: The system shall be capable of operation in altitudes up to 13,000 feet above sea level.
6. Wind Speed: 115 mph wind load with gust factor of 1.3.
7. Audible noise: The system shall not generate any audible noise.
8. Magnetic fields: No appreciable magnetic fields shall be generated. System shall be capable of use directly in computer rooms or in any other location without danger to data storage systems or devices.
9. Location: Indoors/Outdoors.

1.10 COORDINATION

Retain first paragraph below for field-mounted suppressors.

- A. Coordinate location of field-mounted TVSS devices to allow adequate clearances for maintenance.
- B. Coordinate TVSS devices with Section 260913 "Electrical Power Monitoring and Control."

1.11 WARRANTY

Most manufacturers offer five-year extended warranties on their equipment. Some manufacturers of cord-connected, plug-in surge suppressors offer extended warranties that either repair or replace damaged equipment that is protected by the suppressor.

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fail in materials or workmanship within specified warranty period.

Verify available warranties and warranty periods for surge suppressors with manufacturers listed in Part 2 articles.

1. Warranty Period: Minimum [five (5)] <Insert number> years..

Retain paragraph below if equipment repair or replacement is included.

- B. Special Warranty for Cord-Connected, Plug-in Surge Suppressors: Manufacturer's standard form in which manufacturer agrees to repair or replace electronic equipment connected to circuits protected by surge suppressors.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Other manufacturers, who have been engaged in the design and manufacturer of the specified system for a minimum of seven (7) years, desiring approval shall provide detailed compliance or exception statements to all provisions of this specification and shall comply with Division 01.

2.2 SERVICE ENTRANCE SUPPRESSORS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB USA.
 2. AC Data Solutions.
 3. Advanced Protection Technologies Inc. (APT).
 4. Atlantic Scientific.
 5. Current Technology Inc.; Danaher Power Solutions.
 6. Danaher Power Solutions; United Power Products.
 7. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 8. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 9. Intermatic, Inc.
 10. LEA International.
 11. Leviton Mfg. Company Inc.
 12. Liebert Corporation; a division of Emerson Network Power.
 13. Northern Technologies, Inc.; a division of Emerson Network Power.
 14. Siemens Energy & Automation, Inc.
 15. Square D; a brand of Schneider Electric.
 16. Surge Suppression Incorporated.
 17. <Insert manufacturer>
 18. or approved equal.

Retain one of first two paragraphs below. Comply with manufacturer's written recommendations for connecting TVSS devices to distribution system.

- B. Surge Protection Devices:

1. Non-modular.
2. LED indicator lights for power and protection status.
3. Audible alarm, with silencing switch, to indicate when protection has failed.
4. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

C. Surge Protection Devices:

1. Comply with UL 1449.
2. **[Modular design (with field-replaceable modules)] [Non-modular design].**

Retain applicable accessories in subparagraphs below. Not all accessories are available with the modular design, modular design with field-replaceable modules and with non-modular designs. Verify availability and compatibility with manufacturers.

If specifying fuses for connecting TVSS devices to distribution system, verify ability of fuses to withstand surges consistent with ultimate surge current rating of device.

Retain first subparagraph below if fuses are a desired accessory. NFPA 70 requires that the TVSS short-circuit current rating is not exceeded; therefore the short-circuit current ratings should be indicated in schedules or on the Drawings.

3. Fuses, rated at 200-kA interrupting capacity.
4. Fabrication using bolted compression lugs for internal wiring.

Retain first subparagraph below only if a fused switch or circuit breaker is not provided for the TVSS in the panelboard and the TVSS will not have a direct bus bar connection.

5. Integral disconnect switch.
6. Redundant suppression circuits.
7. Redundant replaceable modules.

Retain one of first two subparagraphs below depending on service entrance equipment.

8. Arrangement with copper bus bars and for bolted connections to phase buses, neutral bus, and ground bus.
9. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
10. LED indicator lights for power and protection status.
11. Audible alarm, with silencing switch, to indicate when protection has failed.
12. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
13. **[Four] [Six]-digit transient-event counter set to totalize transient surges.**

Retain first option in first paragraph below for high exposure and cost, second option for medium exposure and cost, third option for low exposure and cost.

- D. Peak Single-Impulse Surge Current Rating: **[320 kA per mode/640 kA] [240 kA per mode/480 kA] [160 kA per mode/320 kA]** per phase.

- E. Minimum single impulse current ratings, using 8-by-20-mic.sec waveform described in IEEE C62.41.2
1. Line to Neutral: **[70,000]<Insert value> A.**
 2. Line to Ground: **[70,000]<Insert value> A.**
 3. Neutral to Ground: **[50,000]<Insert value> A.**

Retain one of four paragraphs below. Verify compatibility of peak surge current rating and clamping voltage. Reference to UL 1449 is to the Second Edition.

- F. Protection modes and UL 1449 SVR for grounded wye circuits with **[480Y/277 V] [208Y/120 V] [600Y/347 V]**, 3-phase, 4-wire circuits shall be as follows:
1. Line to Neutral: **[800 V for 480Y/277 V] [400 V for 208Y/120 V] [1200 V for 600Y/347 V].**
 2. Line to Ground: **[800 V for 480Y/277 V] [400 V for 208Y/120 V] [1200 V for 600Y/347 V].**
 3. Neutral to Ground: **[800 V for 480Y/277 V] [400 V for 208Y/120 V] [1200 V for 600Y/347 V].**
- G. Protection modes and UL 1449 SVR for 240/120 V, single-phase, 3-wire circuits shall be as follows:
1. Line to Neutral: 400 V.
 2. Line to Ground: 400 V.
 3. Neutral to Ground: 400 V.
- H. Protection modes and UL 1449 SVR for 240/120-V, 3-phase, 4-wire circuits with high leg shall be as follows:
1. Line to Neutral: 400 V, 800 V from high leg.
 2. Line to Ground: 400 V.
 3. Neutral to Ground: 400 V.
- I. Protection modes and UL 1449 SVR for 240 V, 480 V, or 600 V, 3-phase, 3-wire, delta circuits shall be as follows:
1. Line to Line: **[2000 V for 480 V] [1000 V for 240 V] [2500 V for 600 V].**
 2. Line to Ground: **[2000 V for 480 V] [1000 V for 240 V] [2500 V for 600 V].**

2.3 PANELBOARD SUPPRESSORS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB USA.

2. AC Data Solutions.
3. Advanced Protection Technologies Inc. (APT).
4. Atlantic Scientific.
5. Current Technology Inc.; Danaher Power Solutions.
6. Danaher Power Solutions; United Power Products.
7. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
8. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
9. Intermatic, Inc.
10. LEA International.
11. Leviton Mfg. Company Inc.
12. Liebert Corporation; a division of Emerson Network Power.
13. Northern Technologies, Inc.; a division of Emerson Network Power.
14. Siemens Energy & Automation, Inc.
15. Square D; a brand of Schneider Electric.
16. Surge Suppression Incorporated.
17. **<Insert manufacturer>**
18. or approved equal.

Retain one of first two paragraphs below. Comply with manufacturer's written recommendations for connecting TVSS devices to distribution system.

B. Surge Protection Devices:

1. Non-modular.
2. LED indicator lights for power and protection status.
3. Audible alarm, with silencing switch, to indicate when protection has failed.
4. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

C. Surge Protection Devices:

1. Comply with UL 1449.
2. **[Modular design (with field-replaceable modules)] [Non-modular design]**.
3. Short-circuit current rating complying with UL 1449, and matching or exceeding the panelboard short-circuit rating and redundant suppression circuits; with individually fused metal-oxide varistors.

Retain applicable accessories in subparagraphs below. Not all accessories are available with the modular design, modular design with field-replaceable modules and with non-modular designs. Verify availability and compatibility with manufacturers.

If specifying fuses for connecting TVSS devices to distribution system, verify ability of fuses to withstand surges consistent with ultimate surge current rating of device.

Retain first subparagraph below if fuses are a desired accessory. NFPA 70 requires that the TVSS short-circuit current rating is not exceeded; therefore the short-circuit current ratings should be indicated in schedules or on the Drawings.

4. Fuses, rated at 200-kA interrupting capacity.

5. Fabrication using bolted compression lugs for internal wiring.

Retain first subparagraph below only if a fused switch or circuit breaker is not provided for the TVSS in the panelboard and the TVSS will not have a direct bus bar connection.

6. Integral disconnect switch.
7. Redundant suppression circuits.
8. Redundant replaceable modules.
9. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
10. LED indicator lights for power and protection status.
11. Audible alarm, with silencing switch, to indicate when protection has failed.
12. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
13. **[Four] [Six]**-digit transient-event counter set to totalize transient surges.

Retain first option in first paragraph below for high exposure and cost, second option for medium exposure and cost, third option for low exposure and cost.

- D. Peak Single-Impulse Surge Current Rating: **[160 kA per mode/320 kA] [120 kA per mode/240 kA] [80 kA per mode/160 kA]** per phase.
- E. Minimum single impulse current ratings, using 8-by-20-mic.sec waveform described in IEEE C62.41.2:
 1. Line to Neutral: **[70,000]<Insert value>** A.
 2. Line to Ground: **[70,000]<Insert value>** A.
 3. Neutral to Ground: **[50,000]<Insert value>** A.

Retain one of four paragraphs below. Verify compatibility of peak surge current rating and clamping voltage. Reference to UL 1449 is to the Second Edition.

- F. Protection modes and UL 1449 SVR for grounded wye circuits with **[480Y/277 V] [208Y/120 V] [600Y/347 V]**, 3-phase, 4-wire circuits shall be as follows:
 1. Line to Neutral: **[800 V for 480Y/277 V] [400 V for 208Y/120 V] [1200 V for 600Y/347 V]**.
 2. Line to Ground: **[800 V for 480Y/277 V] [400 V for 208Y/120 V] [1200 V for 600Y/347 V]**.
 3. Neutral to Ground: **[800 V for 480Y/277 V] [400 V for 208Y/120 V] [1200 V for 600Y/347 V]**.
- G. Protection modes and UL 1449 SVR for 240/120-V, single-phase, 3-wire circuits shall be as follows:
 1. Line to Neutral: 400 V.
 2. Line to Ground: 400 V.
 3. Neutral to Ground: 400 V.
- H. Protection modes and UL 1449 SVR for 240/120-V, 3-phase, 4-wire circuits with high

leg shall be as follows:

1. Line to Neutral: 400 V, 800 V from high leg.
 2. Line to Ground: 400 V.
 3. Neutral to Ground: 400 V.
- I. Protection modes and UL 1449 SVR for 240 V, 480 V, or 600 V, 3-phase, 3-wire, delta circuits shall be as follows:
1. Line to Line: **[2000 V for 480 V] [1000 V for 240 V] [2500 V for 600 V]**.
 2. Line to Ground: **[1500 V for 480 V] [800 V for 240 V] [2500 V for 600 V]**.

2.4 ENCLOSURES

- A. Indoor Enclosures: NEMA 250 **[Type 1] [Type 12]**.
- B. Outdoor Enclosures: NEMA 250 **[Type 3R] [Type 4] [Type 4X]**.

Revise or delete article and paragraphs below to suit project.

2.5 ACCESSORIES (OPTIONAL EQUIPMENT)

- A. Integral fused disconnect switch:
1. The MP, DP and DPA Series surface-mounted units shall include an integral fused and safety interlocked disconnect switch located in each unit enclosure with an externally mounted manual operator. Each switch shall disconnect all ungrounded circuit conductors from the distribution system to enable testing and maintenance without interruption of power to the facility's distribution system. Each switch shall be rated for 600 Vac.
 2. Each current-carrying ungrounded circuit conductor connected to the facility's distribution system shall be individually fused with 200,000 AIC rated fuses in order to provide maximum fault current protection.
 3. Each unit shall be UL-1449 listed with the integral fused disconnect switch and the UL-1449 Suppression Rating for this configuration shall be provided.
 4. An integral Fused Disconnect Switch shall be provided on those units which have a "DF" suffix added to their model number.
- B. Remote status monitor contacts:
1. Each unit shall include Form C dry contacts (N.O. or N.C.) to facilitate connection to a building management system in order to monitor the on-line status of the unit. The contacts shall be normally open or normally closed and shall close or open upon failure of the suppression system and/or fuse.
 2. Remote Status Monitor Contacts shall be provided on those units which have a "FCC" suffix added to their model number.
- C. Diagnostic test set:

1. A diagnostic Test Set shall be provided which verifies the operational integrity of each unit's suppression system. The Diagnostic Test Set shall be self-contained and portable, and shall provide complete assurance of the unit's installation and capability without stressing the suppression system or posing detriment to continued operation.
2. Supply a Diagnostic Test Set (DTS 1000) with each facility-wide protection system.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. The unit(s) shall be installed as close as practical to the facility's wiring system in accordance with applicable national/local electrical codes and the manufacturer's recommended installation instructions.
- B. Install TVSS devices at service entrance on load side, with ground lead bonded to service entrance ground.
- C. Install TVSS devices for panelboards and auxiliary panels with conductors or buses between suppressor and points of attachment as short and straight as possible. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.

Comply with manufacturer's written recommendation for conductor and circuit-breaker size for connecting TVSS devices to distribution system. Match circuit-breaker size to conductor size. Coordinate with Drawings.

1. Provide multiple, [30] [60] [100]-A circuit breaker as a dedicated disconnecting means for TVSS unless otherwise indicated.
- D. Connection shall be with the following size of copper conductor or larger and not be any longer than necessary, avoiding unnecessary bends:
 1. High exposure service entrance (MP) #2 AWG.
 2. Medium exposure distribution panelboard (DP) #4 AWG.
 3. Lower exposure distribution panelboard (DPA) #8 AWG.
- E. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

3.2 FIELD QUALITY CONTROL

Retain one of first two paragraphs below to identify who shall perform tests and inspections. Retain and edit "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain subparagraph below to require factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

Retain first paragraph below to describe tests and inspections to be performed.

- C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS, "Surge Arresters, Low-Voltage Surge Protection Devices" Section. Certify compliance with test parameters.
2. After installing TVSS devices but before electrical circuitry has been energized, test for compliance with requirements.
3. Complete startup checks according to manufacturer's written instructions.

- D. UL-1449 suppression ratings:

1. Documentation of units' UL-1449 suppression rating shall be included as required product data submittal information. Manufacturer shall make available upon request certified documentation of applicable location category testing in full compliance with ANSI/IEEE- C62.41 and ANSI/IEEE-C62.45-1987 Guidelines.

- E. Testing:

1. The unit(s) shall be thoroughly factory-tested before shipment. Testing of each unit shall include but shall not be limited to quality assurance checks, MCOV and clamping verification tests. The MCOV testing shall consist of the unit(s) being burned-in at the applicable MCOV for a minimum of one (1) hour.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- F. TVSS device will be considered defective if it does not pass tests and inspections.

- G. Prepare test and inspection reports.

3.3 STARTUP SERVICE

- A. Do not energize or connect **[service entrance equipment] [panelboards] [control terminals] [data terminals]** to their sources until TVSS devices are installed and connected.

Retain paragraph below if NETA insulation resistance tests are specified in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

- B. Do not perform insulation resistance tests of the distribution wiring equipment with the TVSS installed. Disconnect before conducting insulation resistance tests, and reconnect immediately after the testing is over.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to maintain TVSS devices.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 Method of Measurement:

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 Payment:

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 264313

Copyright 2010 by The American Institute of Architects (AIA)

Updated: August 31, 2015

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 265100 - INTERIOR LIGHTING

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed. All engineer notes shall be deleted from the file or marked as hidden.

If applying for LEED certification, LEED Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1. ASHRAE/IESNA 90.1, Section 9 - "Lighting," sets maximum interior and exterior lighting power densities and minimum requirements for lighting controls. The selection of the lamp and ballast as a system is an important design decision to optimize energy efficiency of the lighting system.

A reduction in lighting energy usage can be combined with other energy-conserving measures to meet the requirements of LEED-NC, LEED-CS, and LEED for Schools Credit EA 1 or LEED-CI Credit EA 1.1.

LEED-NC, LEED-CS, and LEED for Schools Credit SS 8 and LEED-CI Credit SS 1 Option 1F require that the angle of the maximum candela of any of the interior light fixtures not spill through any of the building's transparent and translucent surfaces to the exterior areas, and that all interior, nonemergency lights be automatically turned off after hours with manual override capabilities for after-hours use. Credit SS 8 and Credit SS 1 Option 1F also set requirements for exterior lighting. See Section 265600 "Exterior Lighting."

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. The contractor shall furnish and install all lighting equipment, lighting fixtures, brackets, hangers, lamps, raceway, cable, panels, and transformers as shown in fixture schedule, drawings and as required for all outlets indicated on the drawings.

B. Section Includes:

1. Interior lighting fixtures, lamps, and ballasts.
2. Emergency lighting units.
3. Exit signs.
4. Lighting fixture supports.
5. Retrofit kits for fluorescent lighting fixtures.

C. Related Sections:

Retain Sections in subparagraphs below that contain requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 260923 "Lighting Control Devices" for automatic control of lighting, including time switches, photoelectric relays, occupancy sensors, and multipole lighting relays and contactors.
2. **[Section 260933 "Central Dimming Controls"] [Section 260936 "Modular Dimming Controls"]** for architectural dimming systems.
3. Section 260943 "Network Lighting Controls" for manual or programmable control systems with low-voltage control wiring or data communication circuits.
4. Section 262726 "Wiring Devices" for manual wall-box dimmers for incandescent lamps.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. BF: Ballast factor.
- B. CCT: Correlated color temperature.
- C. CRI: Color-rendering index.
- D. HID: High-intensity discharge.
- E. LED: Light Emitting Diode.
- F. LER: Luminaire efficacy rating.
- G. Lumen: Measured output of lamp and luminaire, or both.
- H. Luminaire: Complete lighting fixture, including ballast housing if provided.

Retain paragraph below if project contains "neon" lighting.

- I. "Neon" lighting: A generic term meaning lighting consisting of a gaseous discharge inside a glass tube with cold-leads, subjected to a high voltage supplied by an external transformer.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of lighting fixture, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:
 1. Physical description of lighting fixture including dimensions.
 2. Emergency lighting units including battery and charger.
 3. Ballast, including BF.
 4. Energy-efficiency data.

Retain first two subparagraphs below for projects with air-handling lighting fixtures.

5. Air and Thermal Performance Data: For air-handling lighting fixtures. Furnish data required in "Action Submittals" Article in Section 233713 "Diffusers, Registers, and Grilles."
6. Sound Performance Data: For air-handling lighting fixtures. Indicate sound power level and sound transmission class in test reports certified according to standards specified in Section 233713 "Diffusers, Registers, and Grilles."
7. Life, output (lumens, CCT, and CRI), and energy-efficiency data for lamps.

Coordinate subparagraph below with testing laboratory qualifications in "Quality Assurance" Article.

8. Photometric data and adjustment factors based on laboratory tests, complying with IESNA Lighting Measurements Testing & Calculation Guides, of each lighting fixture type. The adjustment factors shall be for lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.
 - a. Manufacturer Certified Data: Photometric data shall be certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
9. Illumination data with light fixture efficiency, table of zonal cavity coefficients of utilization, recommended maximum spacing-to-mounting ratio and candlepower distribution curves drawn to scale such that candlepower can be scaled at different angles (or provide candlepower data in tabular form at 10 degree increments).
10. Include data substantiating that materials comply with requirements.

Retain first paragraph below for custom lighting fixtures.

- B. Shop Drawings: For non-standard or custom lighting fixtures. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

Retain subparagraph below if equipment includes wiring.

2. Wiring Diagrams: For power, signal, and control wiring.
3. Light fixture shop drawings shall be in booklet form with a separate sheet for each fixture, assembled in "luminaire type" alphabetical or numerical order, with proposed fixture, lamp type, and accessories clearly indicated on each sheet. Details indicating compatibility with ceiling grid system are required.

Retain first paragraph below if Samples of interior lighting fixtures are required. Coordinate with the Interior Lighting Fixture Schedule on Drawings.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: One complete operating unit for each type of interior light fixture when requested by DEN Project Manager. Each Sample shall include the following:
 1. Lamps and ballasts, installed.
 2. Cords and plugs.
 3. Pendant support system.
- D. Installation instructions.
- E. Substitutions:
 1. Substitutions: Under provisions of Division 01. One sample of each proposed light fixture substitution unless the DEN Project Manager waives requirement.
 2. Printed physical, electrical and photometric data clearly highlighted to show the differences between the proposed substitutions and the specified light fixture.
 3. Photometric information in IES standard format on a disc and printed on 8½" x 11" pages.
 4. Point to point lighting calculation for all typical spaces.

Retain paragraph and sub-paragraphs below if project contains "neon" lighting.

- F. "Neon" Lighting:
 1. Installation of neon lighting is not allowed without written authorization by the DEN Project Manager.

1.5 INFORMATIONAL SUBMITTALS

Retain first paragraph below unless requirement for coordination drawings is waived by DEN Project Manager.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on

which the following items are shown and coordinated with each other, using input from installers of the items involved:

Revise subparagraphs below to suit Project.

1. Lighting fixtures.
2. Suspended ceiling components.
3. Partitions and millwork that penetrate the ceiling or extends to within 12 inches (305 mm) of the plane of the luminaires.
4. Ceiling-mounted projectors.
5. Structural members to which suspension systems for lighting fixtures will be attached.
6. Other items in finished ceiling including the following:
 - a. Air outlets and inlets.
 - b. Speakers.
 - c. Sprinklers.
 - d. Smoke and fire detectors.
 - e. Occupancy sensors.
 - f. Access panels.
 - g. <Insert item>.
7. Perimeter moldings.

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- B. Qualification Data: For qualified agencies providing photometric data for lighting fixtures.

Retain first paragraph below for product certificates from manufacturers.

- C. Product Certificates: For each type of ballast for bi-level and dimmer-controlled fixtures, from manufacturer.
- D. Field quality-control reports.
- E. Maintenance Data: Maintenance data and parts lists for each interior lighting fixture and accessory; including "trouble-shooting" maintenance guide. All data, product data and shop drawings shall be included in a maintenance manual.
- F. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals.
 1. Provide a list of all lamp types used on Project; use ANSI and manufacturers' codes.

- B. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

Verify requirements for as-built plans with DEN Project Manager.

- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

Revise subparagraphs below to suit Project.

1. Lamps: Fifteen (15) for every 100 but not less than four (4) of each type and rating installed.
2. Plastic Diffusers and Lenses: **One for every 100** of each type and rating installed. Furnish at least one of each type.
3. Fluorescent-fixture-mounted, emergency battery pack: One for every **20** emergency lighting unit.
4. Ballasts: **One for every 100** of each type and rating installed. Furnish at least one of each type.
5. Globes and Guards: **One for every 20** of each type and rating installed. Furnish at least one of each type.

1.8 QUALITY ASSURANCE

Retain one of first two paragraphs below, or both, to specify qualifications for laboratories providing photometric data to be submitted for lighting fixtures.

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.

"Luminaire Photometric Data Testing Laboratory Qualifications" Paragraph below is to set qualifications for testing laboratories performing testing, in lighting fixture manufacturer's factory, that are creating the photometric data required in "Action Submittals" Article.

- B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910, complying with the IESNA Lighting Measurements Testing & Calculation Guides.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70.
- E. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents. All equipment furnished under this section shall carry a UL Listing.

Coordinate "FM Global Compliance" Paragraph below with Drawings.

- F. FM Global Compliance: Lighting fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FM Global.

Retain paragraph below if directed by DEN Project Manager. Mockup lighting fixtures are often part of a typical room or module mockup used to evaluate and demonstrate an overall interior concept, not just lighting.

Verify mockup requirements with DEN Project Manager.

- G. Mockups: Provide interior lighting fixtures for room or module mockups, complete with power and control connections.
 - 1. Obtain DEN Project Manager's approval of fixtures for mockups before starting installations.
 - 2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

Retain subparagraph below if mockups are installed as part of building rather than erected separately and the intention is to make an exception to the default requirement in Section 014000 "Quality Requirements" for demolishing and removing mockups when directed unless otherwise indicated.

- 3. Approved fixtures in mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 COORDINATION

- A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire-suppression system, and partition assemblies.
- B. The drawings are diagrammatic and indicate the general arrangement of electrical work. Locations are approximate and shall be subject to minor modifications as dictated by field conditions and as directed by DEN Project Manager.

1.10 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Retain article for rechargeable batteries for emergency lighting equipment. See "Ballast and Lamp Warranties" Article in the Evaluations for a discussion on available warranties.

- A. Special Warranty for Emergency Lighting Batteries: Manufacturer's standard form in which manufacturer of battery-powered emergency lighting unit agrees to repair or replace components of rechargeable batteries that fail in materials or workmanship within specified warranty period.

Subparagraphs below are examples only. Verify available warranties and warranty periods for units and components and insert number below. Coordinate with "Emergency Lighting Units" Article.

1. Warranty Period for Emergency Lighting Unit Batteries: Minimum three (3) years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining two years.
2. Warranty Period for **Emergency Fluorescent Ballast and Self-Powered Exit Sign** Batteries: Minimum Three (3) years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining two (2) years.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

Retain "Products" Paragraph below. Delete this article if no manufacturers and product designations are indicated. See Section 016000 "Product Requirements." See Editing Instruction No. 1 in the Evaluations for discussion on specifying lighting fixtures via the Interior Lighting Fixture Schedule on Drawings.

Retain "Products" Paragraph below. Delete this article if no manufacturers and product designations are indicated. See Section 016000 "Product Requirements."

- A. Products: Subject to compliance with requirements, provide products indicated on drawings, or approved equal.

2.2 GENERAL REQUIREMENTS FOR LIGHTING FIXTURES AND COMPONENTS

- A. General: Lighting fixtures are to be of the sizes, types and ratings required complete with, but not limited to, housings, high power factor ballasts, energy-efficient lamps, lamp holders, reflectors, energy-efficient ballasts, starters, and wiring. Fixtures are to be factory-assembled, with those components required for complete installation. Fixtures with concealed hinges and catches are to have metal parts grounded as a

common unit and be constructed to dampen ballast generated noise. Equipment and materials shall bear the UL label.

- B. Environmental Conditions: The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
1. Location: Indoors.
 2. Altitude 5,500 feet (1677 m) above sea level.
 3. Ambient temperature range minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C), for fixtures in unconditioned locations.
- C. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.

Retain one or more of first three paragraphs below that require compliance with the listed LER. See Editing Instruction No. 5 in the Evaluations for guidance on specifying LER. The numeric value of LER is specified in the Interior Lighting Fixture Schedule on Drawings.

- D. Incandescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5A.
- E. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.
- F. HID Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5B.
- G. LED Fixtures: RoHS compliant. Comply with ANSI C78.377 and UL 8750.
- H. Metal Parts: Free of burrs and sharp corners and edges.
- I. Provide all ferrous metal surfaces with a protective finish having rust inhibiting properties. Painted finishes shall be a minimum of 1.5 mils thick and shall have a balance between hardness and bending properties suitable for the application. White finishes shall have 87% minimum reflectance.
- J. Fixtures to be installed in a damp or wet location shall be constructed with proper gasketing and corrosion resistant materials and/or coatings, and have appropriate UL Listing label for wet locations. Construct steel fixture channels, end caps, interior barriers, reflectors, etc. of adequate gauge.
- K. Sheet Metal Components: Steel unless otherwise indicated. Form and support to prevent warping and sagging.
- L. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.
- M. Diffusers and Globes:

1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation. Minimum unpenetrated thickness shall be 0.35". Polystyrene plastic shall not be permitted. All plastics shall be ETL certified as light stabilized, non-yellowing.
 - a. Lens Thickness: At least 0.125 inch (3.175 mm) minimum unless otherwise indicated.
 - b. UV stabilized.
2. Glass: Annealed crystal glass unless otherwise indicated.

See Editing Instruction No. 8 in the Evaluations for discussion on luminaire labeling.

- N. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps and ballasts. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.

1. Label shall include the following lamp and ballast characteristics:
 - a. "USE ONLY" and include specific lamp type.
 - b. Lamp diameter code (T-4, T-5, T-8, T-12, etc.), tube configuration (twin, quad, triple, etc.), base type, and nominal wattage for fluorescent and compact fluorescent luminaires.
 - c. Lamp type, wattage, bulb type (ED17, BD56, etc.) and coating (clear or coated) for HID luminaires.
 - d. Start type (preheat, rapid start, instant start, etc.) for fluorescent and compact fluorescent luminaires.
 - e. ANSI ballast type (M98, M57, etc.) for HID luminaires.
 - f. CCT and CRI for all luminaires.

Retain "Electromagnetic-Interference Filters" Paragraph below for special applications where freedom from conducted electromagnetic interference is critical. Coordinate with the Interior Lighting Fixture Schedule on Drawings.

- O. Electromagnetic-Interference Filters: Factory installed to suppress conducted electromagnetic interference as required by MIL-STD-461E. Fabricate lighting fixtures with one filter on each ballast indicated to require a filter.

Retain paragraph and sub-paragraphs below if air-handling fluorescent fixtures are used on project.

- P. Air-Handling Fluorescent Fixtures: For use with plenum ceiling for air return and heat extraction and for attaching an air-diffuser-boot assembly specified in Section 233713 "Diffusers, Registers, and Grilles."
1. Air-Supply Units: Slots in one or both side trims join with air-diffuser-boot assemblies.
 2. Heat-Removal Units: Air path leads through lamp cavity.
 3. Combination Heat-Removal and Air-Supply Unit: Heat is removed through lamp cavity at both ends of the fixture door with air supply same as for air-supply units.
 4. Dampers: Operable from outside fixture for control of return-air volume.

5. Static Fixture: Air-supply slots are blanked off, and fixture appearance matches active units.

Q. Color Rendering Index: All luminaires furnished as part of the project shall have a minimum color rendering index (CRI) of 80.

2.3 BALLASTS FOR LINEAR FLUORESCENT LAMPS

For fixtures requiring other than instant-start ballasts, indicate ballast type in the Interior Lighting Fixture Schedule on Drawings. See Editing Instruction No. 6 in the Evaluations for discussion on instant-, rapid-, and programmed-start ballasts.

A. General Requirements for Electronic Ballasts:

1. Comply with UL 935 and with ANSI C82.11.
2. Designed for type and quantity of lamps served.
3. Ballasts shall be designed for full light output unless another BF, dimmer, or bi-level control is indicated.

ANSI C82.11 states that lamp and ballast combinations are for operation at temperatures of 50 to 105.8 deg F (10 to 41 deg C). Applications outside this range should be noted in the Interior Lighting Fixture Schedule on Drawings.

4. Sound Rating: Class A.

See Evaluations for discussion on harmonic considerations.

5. Total Harmonic Distortion Rating: Less than **10** percent.
6. Transient Voltage Protection: IEEE C62.41.1 and IEEE C62.41.2, Category A or better.

Lower operating frequencies are available but may interfere with default ballasts when used in proximity of infrared sensors.

7. Operating Frequency: 42 kHz or higher.

See Editing Instruction No. 4 in the Evaluations for discussion on lamp current crest factor.

8. Lamp Current Crest Factor: **1.7** or less.
9. BF: **0.88** or higher.
10. Power Factor: **0.95** or higher.

Retain "Parallel Lamp Circuits" Subparagraph below if default ballast is programmed-start type and it is important for surviving lamps to operate when one lamp served by that ballast has failed. There may be a cost premium for this little-used option for programmed-start ballasts.

11. Parallel Lamp Circuits: Multiple lamp ballasts shall comply with ANSI C82.11 and shall be connected to maintain full light output on surviving lamps if one or more lamps fail.

B. Luminaires controlled by occupancy sensors shall have programmed-start ballasts.

C. Electronic Programmed-Start Ballasts for **T8, T5 and T5HO** Lamps: Comply with ANSI C82.11 and the following:

1. Lamp end-of-life detection and shutdown circuit for T5 diameter lamps.

2. Automatic lamp starting after lamp replacement.

Retain "Single Ballasts for Multiple Lighting Fixtures" Paragraph below to require ballasts in some fixtures to serve lamps in other fixtures. Indicate fixture types to which this requirement applies in the Interior Lighting Fixture Schedule on Drawings, and indicate connections on lighting plans.

- D. Single Ballasts for Multiple Lighting Fixtures: Factory wired with ballast arrangements and bundled extension wiring to suit final installation conditions without modification or rewiring in the field.
- E. Ballasts for Low-Temperature Environments:

Retain subparagraph below if lamp starting and operating temperature at minus 30 deg F (minus 35 deg C) is a critical requirement. Verify, with manufacturers, the compatibility of ballasts with indicated lamps for low-temperature operation.

- 1. Temperatures minus 30 deg F (minus 35 deg C) and higher: Electronic type rated for minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C) starting and operating temperature with indicated lamp types.

Retain "Ballasts for Low Electromagnetic-Interference Environments" Paragraph below for projects or locations that have higher than normal sensitivity to electromagnetic interference. Coordinate with Drawings. Products for consumer use (usually household) must suit more stringent electromagnetic-interference limitations than those for nonconsumer environments. See "Ballasts" Article in the Evaluations for more information.

- F. Ballasts for Low Electromagnetic-Interference Environments: Comply with 47 CFR 18, Ch. 1, Subpart C, for limitations on electromagnetic and radio-frequency interference for consumer equipment.
- G. Ballasts for Dimmer-Controlled Lighting Fixtures: Electronic type.
 - 1. Dimming Range: 100 to 1 percent of rated lamp lumens.
 - 2. Ballast Input Watts: Can be reduced to 10 percent of normal.
 - 3. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated.

Coordinate "Control" Subparagraph below if lighting control Section(s) is used for Project, which may include either Section 260943 "Network Lighting Controls" or Section 260923 "Lighting Control Devices."

- 4. Control: Coordinate wiring from ballast to control device to ensure that the ballast, controller, and connecting wiring are compatible.

Use of bi-level and tri-level ballasts may comply with state and local energy-conservation code requirements, including Title 24, Part 6, of the California Code of Regulations.

- H. Ballasts for Bi-Level Controlled Lighting Fixtures: Electronic type.
 - 1. Operating Modes: Ballast circuit and leads provide for remote control of the light output of the associated lamp between high- and low-level and off.
 - a. High-Level Operation: 100 percent of rated lamp lumens.
 - b. Low-Level Operation: 30 percent of rated lamp lumens.

2. Ballast shall provide equal current to each lamp in each operating mode.
3. Compatibility: Certified by manufacturer for use with specific bi-level control system and lamp type indicated.

I. Ballasts for Tri-Level Controlled Lighting Fixtures: Electronic type.

1. Operating Modes: Ballast circuit and leads provide for remote control of the light output of the associated lamp between high- and low-level and off.
 - a. High-Level Operation: 100 percent of rated lamp lumens.

In first subparagraph below, edit percentages if required for tri-level ballasts, depending on manufacturer.

- b. Low-Level Operation: **30 and 50** percent of rated lamp lumens.
2. Ballast shall provide equal current to each lamp in each operating mode.
3. Compatibility: Certified by manufacturer for use with specific tri-level control system and lamp type indicated.

2.4 BALLASTS FOR COMPACT FLUORESCENT LAMPS

ANSI C82.11 states that lamp and ballast combinations are for operation at temperatures of 50 to 105.8 deg F (10 to 41 deg C). Applications outside this range should be noted in the Interior Lighting Fixture Schedule on Drawings.

- A. Description: Electronic-programmed rapid-start type, complying with UL 935 and with ANSI C 82.11, designed for type and quantity of lamps indicated. Ballast shall be designed for full light output unless dimmer or bi-level control is indicated:
1. Lamp end-of-life detection and shutdown circuit.
 2. Automatic lamp starting after lamp replacement.
 3. Sound Rating: Class A.
 4. Total Harmonic Distortion Rating: Less than 20 percent.
 5. Transient Voltage Protection: IEEE C62.41.1 and IEEE C62.41.2, Category A or better.
 6. Operating Frequency: 20 kHz or higher.
 7. Lamp Current Crest Factor: 1.7 or less.
 8. BF: 0.95 or higher unless otherwise indicated.
 9. Power Factor: **0.95** or higher.

See "Ballasts" Article in the Evaluations for discussion on CFR compliance required in subparagraph below.

10. Interference: Comply with 47 CFR 18, Ch. 1, Subpart C, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.

2.5 EMERGENCY FLUORESCENT POWER UNIT

Retain one or both paragraphs in this article to specify emergency battery operation of either linear or compact fluorescent fixtures for code-required egress lighting. Indicate fixture types to be equipped with

these devices in the Interior Lighting Fixture Schedule on Drawings, and indicate connections on lighting plans.

- A. Internal Type: Self-contained, modular, battery-inverter unit, factory mounted within lighting fixture body and compatible with ballast. Comply with UL 924.
1. Emergency Connection: Operate two (2) fluorescent lamp(s) continuously at an output of at least 700 lumens each. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture ballast.

Retain "Nightlight Connection" Subparagraph below to require nightlight connections. If used, differentiate two connection modes on Drawings or in the Interior Lighting Fixture Schedule on Drawings.

2. Nightlight Connection: Operate one fluorescent lamp continuously.
3. Test Push Button and Indicator Light: Visible and accessible without opening fixture or entering ceiling space.
 - a. Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 - b. Indicator Light: LED indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
4. Battery: Sealed, maintenance-free, nickel-cadmium type.
5. Charger: Fully automatic, solid-state, constant-current type with sealed power transfer relay.

Retain "Remote Test" Subparagraph below to allow periodic test, as required by codes for emergency equipment, to be performed using a hand-held remote device to trigger simulation of loss of normal power in the tested unit.

6. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.

Retain "Integral Self-Test" Subparagraph below to eliminate necessity to manually perform periodic test required by codes for emergency equipment. Verify requirements of authorities having jurisdiction.

7. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.

- B. External Type: Self-contained, modular, battery-inverter unit, suitable for powering one or more fluorescent lamps, remote mounted from lighting fixture. Comply with UL 924.

1. Emergency Connection: Operate one fluorescent lamp continuously. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture ballast.

Retain "Nightlight Connection" Subparagraph below if nightlight connections are used. If used, differentiate two connection modes on Drawings or in the Interior Lighting Fixture Schedule on Drawings.

2. Nightlight Connection: Operate one fluorescent lamp in a remote fixture continuously.
3. Battery: Sealed, maintenance-free, nickel-cadmium type.
4. Charger: Fully automatic, solid-state, constant-current type.

5. Housing: NEMA 250, Type 1 enclosure.
6. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
7. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

Retain "Remote Test" Subparagraph below to allow periodic test, as required by codes for emergency equipment, to be performed using a hand-held remote device to trigger simulation of loss of normal power in the tested unit.

8. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.

Retain "Integral Self-Test" Subparagraph below to eliminate necessity to manually perform periodic test required by codes for emergency equipment. Verify requirements of authorities having jurisdiction.

9. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.

2.6 DRIVERS FOR SOLID-STATE LAMPS

- A. Description: Listed, electronic, RoHS compliant, meeting the requirements of ANSI C82.77 and UL 8750.
 1. Dimming: Where required. Meet or exceed specified dimming percentage.
 2. Temperature rating: Match or exceed environmental requirements.
 3. Rated Life: 50,000 hours minimum.
 4. Manufacturer's Warranty: Five (5) years minimum.

2.7 EMERGENCY LED POWER UNIT

- A. Self-contained. Comply with UL 924, ANSI C78.377, and UL 8750. Emergency power unit and associated solid-state light source shall be listed as a complete assembly.
 1. Battery: Sealed, maintenance-free, **nickel-cadmium, lithium-ion, or lithium-polymer type**. All batteries supplied for emergency units shall be of the same type.
 2. Charger: Fully automatic, solid-state, constant-current type.
 3. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.

2.8 BALLASTS FOR HID LAMPS

Retain "Electronic Ballast for Metal-Halide Lamps" Paragraph below if Project includes pulse-start, metal-halide fixtures with electronic ballasts. See Evaluations for discussion.

- A. Electronic Ballast for Metal-Halide Lamps: Include the following features unless otherwise indicated:
1. Minimum Starting Temperature: **Minus 30 deg F** (minus 35 deg C) for single-lamp ballasts.
 2. Rated Ambient Operating Temperature: **130 deg F** (54 deg C).
 3. Lamp end-of-life detection and shutdown circuit.
 4. Sound Rating: Class A.
 5. Total Harmonic Distortion Rating: Less than **20** percent.
 6. Transient Voltage Protection: IEEE C62.41.1 and IEEE C62.41.2, Category A or better.
 7. Lamp Current Crest Factor: 1.5 or less.
 8. Power Factor: 0.90 or higher.

See "Ballasts" Article in the Evaluations for discussion on CFR compliance required in "Interference" Subparagraph below.

9. Interference: Comply with 47 CFR 18, Ch. 1, Subpart C, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.
 10. Protection: Class P thermal cutout.
- B. High-Pressure Sodium Ballasts: Electromagnetic type, with solid-state igniter/starter. Igniter/starter shall have an average life in pulsing mode of 10,000 hours at an igniter/starter-case temperature of 90 deg C.

Retain "Instant-Restrike Device" Subparagraph below if extinguishing of high-pressure sodium lamps caused by momentary power interruptions is unacceptable for safety, security, or other reasons. When this Section was updated, this device was available for high-pressure lamps in sizes up to 150 W. Dual-arc tube lamp feature specified in "HID Lamps" Article may also be considered. Verify, with manufacturers, availability of individual ratings before scheduling or specifying.

1. Instant-Restrike Device (where indicated on drawings): Integral with ballast, or solid-state potted module, factory installed within fixture and compatible with lamps, ballasts, and mogul sockets up to 150 W.
2. Minimum Starting Temperature: **Minus 40 deg F** (Minus 40 deg C).

2.9 QUARTZ LAMP LIGHTING CONTROLLER

- A. General Requirements for Controllers: Factory installed by lighting fixture manufacturer. Comply with UL 1598.
- B. Standby (Quartz Restrike): Automatically switches quartz lamp on when a HID lamp in the fixture is initially energized and during the HID lamp restrike period after brief power outages.
- C. Connections: Designed for a single branch -circuit connection.

Retain one of two "Switching Off" paragraphs below.

- D. Switching Off: Automatically switches quartz lamp off when HID lamp strikes.

- E. Switching Off: Automatically switches quartz lamp off when HID lamp reaches approximately 60 percent light output.

2.10 EXIT SIGNS

- A. General Requirements for Exit Signs: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.
 - 1. All exit signs shall have green illuminated lettering on a white background.
- B. Internally Lighted Signs:

Retain "Lamps for AC Operation" subparagraph below. See "Energy Considerations" Article in the Evaluations for discussion.

- 1. Lamps for AC Operation: LEDs, 50,000 hours minimum rated lamp life.
- 2. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.

Revise "Battery" Subparagraph below to specify different battery. See "Emergency Lighting" Article in the Evaluations for discussion on battery types. Verify that battery selection is available as UL-listed unit and coordinate with "Warranty" Article.

- a. Battery: Sealed, maintenance-free, nickel-cadmium type.
- b. Charger: Fully automatic, solid-state type with sealed transfer relay.
- c. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
- d. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
- e. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

Retain "Remote Test" Subparagraph below to allow periodic test, as required by codes for emergency equipment, to be performed using a hand-held remote device to trigger simulation of loss of normal power in the tested unit.

- f. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.

Retain "Integral Self-Test" Subparagraph below to eliminate necessity to manually perform periodic test required by codes for emergency equipment. Verify requirements of authorities having jurisdiction.

- g. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.

Retain "Master/Remote Sign Configurations" Subparagraph below if master/remote sign configurations are required to suit code locations both above and at floor adjacent to exit door. Coordinate with Drawings.

3. Master/Remote Sign Configurations:
 - a. Master Unit: Comply with requirements above for self-powered exit signs, and provide additional capacity in **battery** for power connection to remote unit.
 - b. Remote Unit: Comply with requirements above for self-powered exit signs, except omit power supply, battery, and test features. Arrange to receive full power requirements from master unit. Connect for testing concurrently with master unit as a unified system.

C. Self-Luminous Signs: Prohibited

2.11 EMERGENCY LIGHTING UNITS

- A. The emergency lighting for the means of egress and exit areas shall be accomplished by the following system:
 1. Self-contained, unitized rechargeable battery-powered fixtures shall be connected to existing emergency power supply.
- B. General Requirements for Emergency Lighting Units: Self-contained units complying with UL 924.

Supplement subparagraphs below with data in the Interior Lighting Fixture Schedule or with details on Drawings.

Revise "Battery" Subparagraph below to specify different battery. See "Emergency Lighting" Article in the Evaluations for discussion on battery types. Verify that battery selection is available as UL-listed unit and coordinate with "Warranty" Article.

1. Battery: Sealed, maintenance-free, lead-acid type.
2. Charger: Fully automatic, solid-state type with sealed transfer relay.
3. Operation: Relay automatically turns lamp on when power-supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
5. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

Wire guard in first subparagraph below is optional feature. Coordinate with Drawings.

6. Wire Guard: Heavy-chrome-plated wire guard protects lamp heads or fixtures.

Retain "Integral Time-Delay Relay" Subparagraph below for time-delay option if units are indicated for areas normally lighted by HID fixtures that will not relight for a period after power is restored due to lengthy arc restrike delays.

7. Integral Time-Delay Relay: Holds unit on for fixed interval of **15** minutes when power is restored after an outage.

Retain "Remote Test" Subparagraph below to allow periodic test, as required by codes for emergency equipment, to be performed using a hand-held remote device to trigger simulation of loss of normal power in the tested unit.

8. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.

Retain "Integral Self-Test" Subparagraph below to eliminate necessity to manually perform periodic test required by codes for emergency equipment. Verify requirements of authorities having jurisdiction.

9. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.

2.12 FLUORESCENT LAMPS

Coordinate this article with Drawings. Where color rendition or color uniformity is important and several types of fluorescent lamps are used, provide consistent manufacturer designations or ANSI lamp designations to define requirements.

Paragraphs below are sample specifications for typical lamps, which are a few of the thousands of types and ratings available for building illumination. Indicate here or in the Interior Lighting Fixture Schedule the standard designations of the lamps that meet lumen output, energy rating, CRI, color temperature, lamp life, and other requirements for specific Project applications.

- A. T8 rapid-start lamps, rated 32 W maximum, nominal length of **48 inches** (1220 mm), 2800 initial lumens (minimum), CRI 80 (minimum), color temperature 4,100 degrees Kelvin. 3,500 degrees Kelvin lamps shall be used in selected areas as indicated on drawings, or as directed by DEN Project Manager. Average rated life 20,000 hours unless otherwise indicated.
- B. T8 rapid-start lamps, rated 17 W maximum, nominal length of **24 inches** (610 mm), 1300 initial lumens (minimum), CRI 80 (minimum), color temperature 4,100 degrees Kelvin. 3,500 degrees Kelvin lamps shall be used in selected areas as indicated on drawings, or as directed by DEN Project Manager. Average rated life of 20,000 hours unless otherwise indicated.
- C. T5 rapid-start lamps, rated 28 W maximum, nominal length of **45.2 inches** (1150 mm), 2900 initial lumens (minimum), CRI 85 (minimum), color temperature 3,500 degrees Kelvin. 3,000 degrees Kelvin lamps shall be used in selected areas as indicated on drawings, or as directed by DEN Project Manager. Average rated life of 20,000 hours unless otherwise indicated.
- D. T5HO rapid-start, high-output lamps, rated 54 W maximum, nominal length of **45.2 inches** (1150 mm), 5000 initial lumens (minimum), CRI 85 (minimum), color temperature

3,500 degrees Kelvin. 3,000 degrees Kelvin lamps shall be used in selected areas as indicated on drawings, or as directed by DEN Project Manager. Average rated life of 20,000 hours unless otherwise indicated.

- E. Compact Fluorescent Lamps: 4-Pin, CRI 80 (minimum), color temperature 4,100 degrees Kelvin. 3,500 degrees Kelvin lamps shall be used in selected areas as indicated on drawings, or as directed by DEN Project Manager. Average rated life of 10,000 hours at three hours operation per start[**and suitable for use with dimming ballasts**] unless otherwise indicated.

1. 13 W: T4, double or triple tube, rated 900 initial lumens (minimum).
2. 18 W: T4, double or triple tube, rated 1200 initial lumens (minimum).
3. 26 W: T4, double or triple tube, rated 1800 initial lumens (minimum).
4. 32 W: T4, triple tube, rated 2400 initial lumens (minimum).
5. 42 W: T4, triple tube, rated 3200 initial lumens (minimum).
6. 57 W: T4, triple tube, rated 4300 initial lumens (minimum).
7. 70 W: T4, triple tube, rated 5200 initial lumens (minimum).

2.13 HID LAMPS

Coordinate this article with Drawings. Where color rendition or color uniformity is important and several types of HID lamps are used, provide consistent manufacturer designations or ANSI lamp designations to define requirements.

- A. High-Pressure Sodium Lamps: ANSI C78.42, CRI 21 (minimum), color temperature [1900] <Insert value> K, and average rated life of 24,000 hours, minimum.

Retain "Dual-Arc Tube Lamps" Subparagraph below if extinguishing of high-pressure sodium lamps caused by momentary power interruptions is unacceptable for safety, security, or other reasons. Instant-restrike device specified in "Ballasts for HID Lamps" Article may also be considered. Verify, with manufacturers, availability of individual ratings before scheduling or specifying.

1. Dual-Arc Tube Lamps: Arranged so only one of two arc tubes is lighted at one time and, when power is restored after an outage, the cooler arc tube, with lower internal pressure, lights instantly, providing an immediate 8 to 15 percent of normal light output.

ANSI has a separate standard for each conventional metal-halide lamp, unlike standards for low- and high-pressure sodium lamps. Consider including the standard number in the Interior Lighting Fixture Schedule on Drawings. Wattage and mean lumen output ratings for each lamp may be included in the Interior Lighting Fixture Schedule on Drawings.

- B. Metal-Halide Lamps: ANSI C78.43, with minimum CRI **65**, and color temperature **4000** K.

1. Clear metal halide lamps are to be used for plants, and phosphor coated metal halide lamps (not for plants) are to be used in specified wattage. A self-extinguishing mechanism is to be provided to stop lamp operation if the lamp envelope fails.

Pulse-start, metal-halide lamps in first paragraph below are available in ratings from 30 to 1000 W and provide higher lumen maintenance and reduced color-shift throughout the life of the lamp, compared with basic metal-halide lamps. This may permit use of lower-wattage lamps to provide the same maintained illumination level provided by an equal number of conventional metal-halide lamps. Consult manufacturers to verify compatibility of lamps with ballasts and fixtures.

- C. Pulse-Start, Metal-Halide Lamps: Minimum CRI 65, and color temperature **4000 K**.

Ceramic, pulse-start, metal-halide lamps in first paragraph below are available in ratings from about 40 to 250 W. Besides advantages inherent in pulse-start technology, these lamps have an improved CRI, between 80 and 94, with higher initial and maintained lumen output.

- D. Ceramic, Pulse-Start, Metal-Halide Lamps: Minimum CRI **80**, and color temperature **4000 K**.
E. Low-Pressure Sodium Lamps: ANSI 78.41, CRI 0, and color temperature 1800 K.

2.14 SOLID-STATE LAMPS

- A. LED lamps: ANSI C78.377, listed and rated for the intended environmental conditions.
B. Minimum CRI: 80.
C. Correlated color temperature (CCT): [**3500K**] [**4000K**].
D. Minimum LED life: 60,000 hours at L70.

2.15 LIGHTING FIXTURE SUPPORT COMPONENTS

Coordinate this article with Drawings. See Editing Instruction No. 2 in the Evaluations for discussion on seismic considerations.

- A. All lighting fixture support components to comply with requirements for Seismic Zone 1.
B. Comply with Section 260529 "Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.
C. Single-Stem Hangers: **1/2-inch** (13-mm) steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.
D. Twin-Stem Hangers: Two, **1/2-inch** (13-mm) steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.
E. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, **12 gage** (2.68 mm).

Coordinate "Wires for Humid Spaces" Paragraph below with Drawings to identify humid spaces.

- F. Wires for Humid Spaces: ASTM A 580/A 580M, Composition 302 or 304, annealed stainless steel, 12 gage (2.68 mm).
- G. Rod Hangers: 3/16-inch (5-mm) minimum diameter, cadmium-plated, threaded steel rod.
- H. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

2.16 RETROFIT KITS FOR FLUORESCENT LIGHTING FIXTURES

- A. Reflector Kit: UL 1598, Type I. Suitable for two- to four-lamp, surface-mounted or recessed lighting fixtures by improving reflectivity of fixture surfaces.
- B. Ballast and Lamp Change Kit: UL 1598, Type II. Suitable for changing existing ballast, lamps, and sockets.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Sequencing and scheduling: The interior lighting installation is to be sequenced and scheduled with other work to minimize possibility of interference with pipes, ductwork and conduit. Lighting fixtures shall be protected from damage and soiling during the remainder of construction period.
- B. Power Outages: Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
- C. Lighting fixtures:
 - 1. Set level, plumb, and square with ceilings and walls unless otherwise indicated.
 - 2. Install lamps in each luminaire.
 - 3. Set luminaries true, free of light leaks, warps, dents, or other irregularities. Provide the length of stems as required for the luminaries to be level and in the same horizontal plane. Verify the type of all ceilings before bidding, and provide fixtures and mounting to suit. Mount all outlets at position and height to clear equipment, ductwork, piping, etc., in mechanical equipment rooms, storage rooms, etc. Securely fasten all recessed fixtures in suspended ceiling to the ceiling's framing member, as described below.
 - 4. Surface mounting fixtures containing ballasts shall be mounted with a minimum 1-1/2" spacer where mounted on a combustible material unless specifically approved for the application.
 - 5. Protect wiring with tape or tubing at all points where abrasion is likely to occur. Provide chase nipples where field wiring is through knockouts. Wiring in

fluorescent fixtures shall be suitable for temperature conditions and in no case less than 90 degree C (194 degree F) rating.

6. Connectors and terminals, including screws and bolts, are to be tightened in accordance with equipment manufacturer's published torque tightening values for equipment connectors. Where manufacturer's torquing requirements are not indicated, connectors and terminals are to comply with tightening torques in specified standards and the National Electrical Code. Submit a report of all torquing values with a torque schedule and witness signature to the DEN Project Manager.
7. Surface mounted fixtures greater than 2 feet in length shall be supported at a point in addition to the outlet box fixture stud.
8. Each single phase circuit feeding light fixtures with ballasts shall have a dedicated neutral.
9. Light fixtures in storage areas and fixtures mounted below 8' shall have a guard to protect the lamps.

D. Emergency Lighting:

1. Emergency lighting fixtures are to be installed at locations and heights per applicable codes. Install in accordance with fixture manufacturer's written instructions, applicable requirements of NEC, NECA's "Standard of Installation," NEMA standards, and with recognized industry practices to ensure that lighting fixtures fulfill requirements.
2. All emergency lighting conductors are to be routed in a conduit separate from the normal power circuits.
3. All egress areas shall be served by at least (2) lamps.

E. Temporary Lighting: If it is necessary, and approved by DEN Project Manager, to use permanent luminaires for temporary lighting, install and energize the minimum number of luminaires necessary. When construction is sufficiently complete, remove the temporary luminaires, disassemble, clean thoroughly, install new lamps, and reinstall.

Remote mounting distances might be as short as 60 inches (150 mm) for some pulse-start ballasts.

F. Remote Mounting of Ballasts: Distance between the ballast and fixture shall not exceed that recommended by ballast manufacturer. Verify, with ballast manufacturers, maximum distance between ballast and luminaire.

NFPA 70 requires minimum support for fixtures. Retain "Lay-in Ceiling Lighting Fixtures Supports" Paragraph below for more specific support requirements and for requirements exceeding code minimums. For projects requiring seismic design, additional supports, and restraining devices beyond those specified here may be required. See Editing Instruction No. 2 in the Evaluations.

G. Lay-in Ceiling Lighting Fixtures Supports:

1. Supports shall be designed for Seismic Zone 1.
2. Install ceiling support system rods or wires, independent of the ceiling suspension devices, for each fixture. Locate not more than 6 inches (150 mm) from lighting fixture corners.
3. Support Clips: Fasten to lighting fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.

4. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two **3/4-inch (20-mm)** metal channels spanning and secured to ceiling tees.
5. Install at least one independent support rod or wire from structure to a tab on lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.
6. Fixtures are to be securely fastened to structural supports. Individually mounted pendant fixtures longer than 2 feet shall have twin stem hangers. All stem hangers shall have ball hangers and provisions for minimum 1-inch vertical adjustment. Continuous rows of fixtures shall have one additional stem hanger greater than the number of fixtures in the row.

H. Lay-in Lighting System Wiring:

1. Lay-in lighting system shall be hard-piped to J-box. J-box shall not be attached to light fixture. Installed 6' flexible steel conduit between J-box and fixture. Modular wiring is not permitted. Flex ran from fixture to fixture is not acceptable.

I. Suspended Lighting Fixture Support:

1. Pendants and Rods: Where longer than **48 inches (1200 mm)**, brace to limit swinging.
2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.
4. Do not use grid as support for pendant luminaires. Connect support wires or rods to building structure.

J. Air-Handling Lighting Fixtures: Install with dampers closed and ready for adjustment.

K. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

L. Installation of "Neon" Lighting:

1. Neon lighting is not allowed without written consent from the DEN Project Manager.

3.2 GROUNDING:

- A. Equipment grounding connections are required for interior lighting fixtures. Connections are to comply with tightening torque values specified in UL standards to assure permanent and effective grounds. Submit a report of all torquing values with a torque schedule and witness signature to DEN Project Manager.

3.3 IDENTIFICATION

- A. Install labels with panel and circuit numbers on concealed junction and outlet boxes. Comply with requirements for identification specified in Section 260553 "Identification

for Electrical Systems."

3.4 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.

Retain first paragraph below when retaining photoluminescent signs specified in "Exit Signs" Article. See Editing Instruction No. 7 in the Evaluations for NFPA requirements pertaining to photoluminescent exit signs.

- B. Verify that self-luminous exit signs are installed according to their listing and the requirements in NFPA 101.
- C. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

3.5 STARTUP SERVICE

- A. Burn-in all lamps that require specific aging period to operate properly, prior to occupancy by Owner. Burn-in fluorescent and compact fluorescent lamps intended to be dimmed, for at least 100 hours at full voltage.

3.6 DEMONSTRATION:

- A. Upon completion of the installation of interior lighting fixtures, and after building circuitry has been energized, the interior lighting system and emergency lighting system shall be operated to demonstrate capability and compliance with requirements.
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

3.7 ADJUSTING AND CLEANING:

- A. Interior lighting fixtures are to be cleaned of dust, dirt, fingerprints, smudges, and construction debris upon completion of the installation.
- B. Installed fixtures are to be protected from damage during the remainder of the construction period.
- C. Occupancy Adjustments: When requested within **twelve (12)** months of date of Substantial Completion, provide on-site assistance in adjusting aimable luminaires to suit actual occupied conditions. Provide up to **2** visits to Project during

other-than-normal occupancy hours for this purpose. Some of this work may be required after dark.

1. Adjust aimable luminaires in the presence of DEN Project Manager.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 265100

Copyright 2010 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 265600 - EXTERIOR LIGHTING

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

If applying for LEED certification, LEED Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1. ASHRAE/IESNA 90.1, Section 9 - "Lighting," sets maximum interior and exterior lighting power densities and minimum requirements for lighting controls. The selection of the lamp and ballast as a system is an important design decision to optimize energy efficiency of the lighting system.

A reduction in lighting energy usage can be combined with other energy-conserving measures to meet the requirements of LEED-NC, LEED-CS, and LEED for Schools Credit EA 1.

LEED-NC, LEED-CS, and LEED for Schools Credit SS 8 requires that exterior lights be provided as needed for "safety and comfort" with the lighting power densities for the exterior areas and the building facade and landscape at a minimum of 20 and 50% less than ASHRAE/IESNA 90.1, respectively. In addition, the lighting design must eliminate or minimize any "light trespass" from the site and reduce "sky glow," depending on the zone classification of the site according to IESNA RP-33 requirements. Consider selecting the proper light fixtures, such as low-intensity shielded fixtures, the aiming of the fixtures, and using automatic controllers to turn off nonessential site lighting after a specific hour as defined by this credit. Credit SS 8 also sets requirements for interior lighting. See Section 265100 "Interior Lighting."

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. The contractor shall furnish and install all lighting equipment and lighting fixtures including poles, fixture lowering system, control equipment, etc., or as mentioned in

fixture the schedule and as required for all outlets indicated on the drawings.

B. Section Includes:

1. Exterior luminaires with lamps and ballasts.
2. Luminaire-mounted photoelectric relays.
3. Poles and accessories.
4. Luminaire lowering devices.

C. Related Sections:

Retain Section in subparagraph below that contains requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 265100 "Interior Lighting" for exterior luminaires normally mounted on exterior surfaces of buildings.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. CCT: Correlated color temperature.
- B. CRI: Color-rendering index.
- C. HID: High-intensity discharge.
- D. LER: Luminaire efficacy rating.
- E. Luminaire: Complete lighting fixture, including ballast housing if provided.
- F. Pole: Luminaire support structure, including tower used for large area illumination.
- G. Standard: Same definition as "Pole" above.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION

Retain this article if manufacturer is responsible for selecting poles and other luminaire support components and certifying them to suit wind, ice, and other load conditions as expressed in AASHTO LTS-4-M. Delete if structural considerations have been applied by the design team in selecting

"basis-of-design" or proprietary pole products, and these products have been identified in the Exterior Lighting Device Schedule or in details on Drawings. See Editing Instruction No. 1 in the Evaluations.

- A. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in AASHTO LTS-4-M.

Retain "Live Load" Paragraph below if Project includes pole-mounted walkways or service platforms.

- B. Live Load: Single load of 500 lbf (2224 N), distributed as stated in AASHTO LTS-4-M.

Retain "Ice Load" Paragraph below if Project is inside the area shown in the Ice Load Map, Figure 3-1.

- C. Ice Load: Load of 3 lbf/sq. ft. (145 Pa), applied as stated in AASHTO LTS-4-M Ice Load Map.

See Editing Instruction No. 2 in the Evaluations for discussion of wind-load calculations.

- D. Wind Load: Pressure of wind on pole and luminaire and banners and banner arms, calculated and applied as stated in AASHTO LTS-4-M.

1. Basic wind speed for calculating wind load for poles exceeding 50 feet (15 m) in height is 115 mph.
 - a. Wind Importance Factor: 1.3
 - b. Minimum Design Life: [50 years] <Insert number>.
 - c. Velocity Conversion Factors: 1.3
2. Basic wind speed for calculating wind load for poles 50 feet (15 m) high or less is 115 mph
 - a. Wind Importance Factor: 1.3.
 - b. Minimum Design Life: [25 years] <Insert number>.
 - c. Velocity Conversion Factors: 1.3.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. Product Data: For each luminaire, pole, and support component, arranged in order of lighting unit designation. Include data on features, accessories, finishes, and the following:
1. Physical description of luminaire, including materials, dimensions, effective projected area, and verification of indicated parameters.
 2. Details of attaching luminaires and accessories.
 3. Details of installation and construction.
 4. Luminaire materials.
 5. Wind loading data.

6. Photometric data based on laboratory tests of each luminaire type, complete with indicated lamps, ballasts, and accessories.

Retain one of first two subparagraphs below. Retain "Testing Agency Certified Data" Subparagraph if photometric data for one or more luminaires are based on independent laboratory tests; coordinate with the Exterior Lighting Device Schedule on Drawings to indicate which units are required to meet this requirement. Retain "Manufacturer Certified Data" Subparagraph if photometric data based on testing by accredited manufacturers' laboratories are considered adequate for all exterior luminaires in this Project. See Evaluations.

- a. Testing Agency Certified Data: For indicated luminaires, photometric data shall be certified by a qualified independent testing agency. Photometric data for remaining luminaires shall be certified by manufacturer.
 - b. Manufacturer Certified Data: Photometric data shall be certified by manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
7. Photoelectric relays.
 8. Ballasts, including energy-efficiency data.
 9. Lamps, including life, output, CCT, CRI, lumens, and energy-efficiency data.
 10. Materials, dimensions, and finishes of poles.
 11. Means of attaching luminaires to supports, and indication that attachment is suitable for components involved.
 12. Anchor bolts for poles.

Retain subparagraph below if manufactured pole foundations, including screw foundations, are indicated.

13. Manufactured pole foundations.
14. Include data substantiating that materials comply with requirements.

Retain "Shop Drawings" Paragraph below if foundation-mounted poles are indicated.

- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Anchor-bolt templates keyed to specific poles and certified by manufacturer.

Retain first subparagraph below if screw foundations are indicated.

3. Design calculations, certified by a qualified professional engineer, indicating strength of screw foundations and soil conditions on which they are based.

Retain subparagraph below if equipment includes wiring.

4. Wiring Diagrams: For power, signal, and control wiring.

Retain "Samples" Paragraph below if Samples of exterior luminaires or support components are required for verification purposes. Revise if sample requirements are indicated in other than the Exterior Lighting Device Schedule on Drawings.

Coordinate sample requirements with DEN Project Manager.

- C. Samples: For products designated for sample submission in the Exterior Lighting Device Schedule. Each Sample shall include lamps and ballasts.
- D. Substitutions: For Prebid approval, submit all materials noted in paragraphs A, B and C above.

1.6 INFORMATIONAL SUBMITTALS

Retain "Pole and Support Component Certificates" Paragraph below if retaining "Structural Analysis Criteria for Pole Selection" Article. See Editing Instruction No. 1 in the Evaluations.

- A. Pole and Support Component Certificates: Signed by manufacturers of poles, certifying that products are designed for indicated load requirements in AASHTO LTS-4-M and that load imposed by luminaire and attachments has been included in design. The certification shall be based on design calculations by a professional engineer.

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- B. Qualification Data: For qualified agencies providing photometric data for lighting fixtures.
- C. Field quality-control reports.
- D. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For **[luminaires][and poles] [luminaire lowering devices]** to include in emergency, operation, and maintenance manuals.
- B. Connectors and terminals, including screws and bolts, are to be tightened in accordance with equipment manufacturer's published torque tightening values. Record all torque values for bolts and submit report with witness signature to DEN Project Manager.
- C. Contractor shall provide to the DEN Project Manager a Point by Point report showing the light level readings taken after the parking area has been properly aimed and the fixtures have had at least 50 hours of actual run time in the field. The grid spacing for the readings shall be the same as the calculations submitted prior to start of construction.

Verify requirements for as-built plans with DEN Project Manager.

- D. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL SUBMITTALS

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver extra materials as directed by DEN Project Manager.

Quantities indicated in subparagraphs below are examples only.

1. Lamps: Fifteen (15) percent of the total number of lamps, but not less than four (4) lamps in each case, for each type and rating installed.
2. Glass and Plastic Lenses, Covers, and Other Optical Parts: **[One (1) for every 100] <Insert quantity>** of each type and rating installed. Furnish at least one of each type.
3. Ballasts: **[One (1) for every 100] <Insert quantity>** of each type and rating installed. Furnish at least one of each type.
4. Globes and Guards: **[One (1) for every 20] <Insert quantity>** of each type and rating installed. Furnish at least one of each type.

1.9 QUALITY ASSURANCE

Retain one of first two paragraphs below, or both, to specify qualifications for laboratories providing photometric data to be submitted for luminaires.

- A. Comply with the requirements of the latest edition of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents.
- B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.
- C. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with IEEE C2, "National Electrical Safety Code."
- F. Comply with NFPA 70.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Store poles on decay-resistant-treated skids at least **12 inches** (300 mm) above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.
- B. Retain factory-applied pole wrappings on metal poles until right before pole installation. Handle poles with web fabric straps.

1.11 WARRANTY

When warranties are required, verify with Owner's counsel that special warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

Coordinate warranty requirements with DEN Project Manager.

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or workmanship; that corrode; or that fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation within specified warranty period. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs or alterations from special warranty coverage.

Verify available warranties and warranty periods for units and components and insert number below.

1. Warranty Period for Luminaires: Minimum **[five (5)]** <Insert number> years from date of Substantial Completion.

Coordinate warranty provisions for resistance to corrosion and for color retention with similar warranties for poles and mast arms. Otherwise, delete first two subparagraphs below.

2. Warranty Period for Metal Corrosion: Minimum **[five (5)]** <Insert number> years from date of Substantial Completion.
3. Warranty Period for Color Retention: Minimum **[five (5)]** <Insert number> years from date of Substantial Completion.
4. Warranty Period for Poles: Repair or replace lighting poles and standards that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less than **[three (3)]** <Insert number> years from date of Substantial Completion.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

Retain "Products" Paragraph below. Delete this article if no manufacturers and product designations are indicated. See Section 016000 "Product Requirements."

- A. Products: Subject to compliance with requirements, provide products indicated on Drawings, or approved equal.

2.2 GENERAL REQUIREMENTS FOR LUMINAIRES

- A. Environmental Conditions:
 - 1. The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 - a. Location: Outdoors.
 - b. Altitude: 5,500 feet (1677 m) above sea level.
 - c. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 - d. Wind Load: 115 mph with gust factor of 1.3.
- B. Provide lighting equipment as shown on the drawings and as specified herein. Provide complete lighting equipment, including canopies, poles, supporting brackets, hickey, casing, socket holders, reflectors, ballasts, lamps, as appropriate for the application. Provide special plates, barriers, rings, etc., as required to comply with National Electrical Code. The fixtures to have proper gasketing and made of corrosion resistant materials to be installed in damp and wet locations.
- C. Luminaires shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.

See Editing Instruction No. 6 in the Evaluations for discussion of LER.

- 1. LER Tests Incandescent Fixtures: Where LER is specified, test according to NEMA LE 5A.
- 2. LER Tests Fluorescent Fixtures: Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.
- 3. LER Tests HID Fixtures: Where LER is specified, test according to NEMA LE 5B.

Retain "Lateral Light Distribution Patterns" Paragraph below if some lighting units or luminaires are indicated to have Type I, II, III, IV, or V distribution pattern in the Exterior Lighting Device Schedule or in details on Drawings.

- D. Lateral Light Distribution Patterns: Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.
- E. Metal Parts: Free of burrs and sharp corners and edges.

- F. Sheet Metal Components: Corrosion-resistant aluminum unless otherwise indicated. Form and support to prevent warping and sagging.
- G. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed luminaires.
- H. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lenses. Designed to disconnect ballast when door opens.
- I. Exposed Hardware Material: Stainless steel.
- J. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

Retain "Light Shields" Paragraph below if one or more luminaires require partial shielding of light output to avoid light trespass or to meet other requirements. Coordinate with the Exterior Lighting Device Schedule on Drawings.

- K. Light Shields: Metal baffles, factory installed and field adjustable, arranged to block light distribution to indicated portion of normally illuminated area or field.
- L. Reflecting surfaces shall have minimum reflectance as follows unless otherwise indicated:
 - 1. White Surfaces: 85 percent.
 - 2. Specular Surfaces: 83 percent.
 - 3. Diffusing Specular Surfaces: 75 percent.
- M. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.

Revise "Luminaire Finish" Paragraph below to include custom colors. Coordinate custom-color requirements for luminaires with those for poles and other luminaire support requirements.

- N. Luminaire Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finish process and color of pole or support materials.

Retain "Factory-Applied Finish for Steel Luminaires" Paragraph below when luminaire material is steel that is not to be field painted and is not required to match finish of pole or support materials.

- O. Factory-Applied Finish for Steel Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair

- paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
2. Exterior Surfaces: Manufacturer's hot-dip galvanized finish.

Retain one of three "Color" subparagraphs below.

- a. Color: As selected by DEN Project Manager from manufacturer's standard catalog of colors.
- b. Color: Match DEN Project Manager's sample of [**manufacturer's standard**] [**custom**] color.
- c. Color: As selected by DEN Project Manager from manufacturer's full range.

Retain "Factory-Applied Finish for Aluminum Luminaires" Paragraph below when luminaire material is aluminum that is not to be field painted and is not required to match finish of pole or support materials.

- P. Factory-Applied Finish for Aluminum Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

Retain one of three finish subparagraphs below or revise to suit Project.

2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
 - a. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**].

See Editing Instruction No. 7 in the Evaluations for discussion of luminaire labeling.

- Q. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps and ballasts. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
1. Label shall include the following lamp and ballast characteristics:
 - a. "USES ONLY" and include specific lamp type.
 - b. Lamp diameter code (T-4, T-5, T-8, T-12), tube configuration (twin, quad, triple), base type, and nominal wattage for fluorescent and compact fluorescent luminaires.
 - c. Lamp type, wattage, bulb type (ED17, BD56, etc.) and coating (clear or coated) for HID luminaires.

- d. Start type (preheat, rapid start, instant start) for fluorescent and compact fluorescent luminaires.
- e. ANSI ballast type (M98, M57, etc.) for HID luminaires.
- f. CCT and CRI for all luminaires.

2.3 LUMINAIRE-MOUNTED PHOTOELECTRIC RELAYS

- A. Comply with UL 773 or UL 773A.
- B. Contact Relays: Factory mounted, single throw, designed to fail in the on position, and factory set to turn light unit on at 1.5 to 3 fc (16 to 32 lx) and off at 4.5 to 10 fc (48 to 108 lx) with 15-second minimum time delay. [**Relay shall have directional lens in front of photocell to prevent artificial light sources from causing false turnoff.**]
 1. Relay with locking-type receptacle shall comply with ANSI C136.10.
 2. Adjustable window slide for adjusting on-off set points.

2.4 FLUORESCENT BALLASTS AND LAMPS

See Editing Instruction No. 4 in the Evaluations for discussion of low-temperature application of fluorescent luminaires, lamps, and ballasts.

- A. Ballasts for Low-Temperature Environments:

Retain option in subparagraph below for lamp starting and operating temperature near 30 deg F (minus 35 deg C) is a critical requirement. Verify, with manufacturers, the compatibility of ballasts with indicated lamps for low-temperature operation.

1. Temperatures minus 30 Deg F (minus 35 Deg C) and Higher: Electronic type rated for minus 30 deg F (minus 35 deg C) starting and operating temperature with indicated lamp types.

- B. Ballast Characteristics:

1. Power Factor: 90 percent, minimum.
2. Sound Rating: Class A.

See Evaluations for discussion of harmonic distortion in first subparagraph below.

3. Total Harmonic Distortion Rating: Less than [10] [20] percent.
4. Electromagnetic Ballasts: Comply with ANSI C82.1, energy-saving, high power factor, Class P, automatic-reset thermal protection.
5. Case Temperature for Compact Lamp Ballasts: 65 deg C, maximum.
6. Transient-Voltage Protection: Comply with IEEE C62.41.1 and IEEE C62.41.2, Category A or better.

Coordinate "Low-Temperature Lamp Capability" Paragraph below with Drawings, and indicate lamp type for each fluorescent luminaire in the Exterior Lighting Device Schedule on Drawings or in description in this Section. Where color rendition or color uniformity is important and several types of fluorescent lamps are used, provide consistent manufacturer designations or ANSI lamp designations to define requirements.

For applications at low temperatures, verify that lamp, ballast, and luminaire combinations indicated will start reliably and provide required light output throughout the range of temperatures that may be encountered.

- C. Low-Temperature Lamp Capability: Rated for reliable starting and operation with ballast provided at temperatures minus 30 deg F (minus 35 deg C) and higher.

2.5 DRIVERS FOR SOLID-STATE LAMPS

- A. Description: Listed, electronic, RoHS compliant, meeting the requirements of ANSI C82.77 and UL 8750.
 - 1. Dimming: Where required. Meet or exceed specified dimming percentage.
 - 2. Temperature rating: Match or exceed environmental requirements.
 - 3. Rated Life: 50,000 hours minimum.
 - 4. Manufacturer's Warranty: 5 years minimum.

2.6 BALLASTS FOR HID LAMPS

- A. Comply with ANSI C82.4 and UL 1029 and capable of open-circuit operation without reduction of average lamp life. Include the following features unless otherwise indicated:
 - 1. Ballast Circuit: Constant-wattage autotransformer or regulating high-power-factor type.
 - 2. Minimum Starting Temperature: Minus 30 deg F (minus 35 deg C).
 - 3. Normal Ambient Operating Temperature: 120 deg F (49 deg C).

Retain "Ballast Fuses" Subparagraph below if ballasts are required to be fused. See Editing Instruction No. 3 in the Evaluations for discussion of ballast fusing.

- 4. Ballast Fuses: One in each ungrounded power supply conductor. Voltage and current ratings as recommended by ballast manufacturer.
- B. Auxiliary, Instant-On, Quartz System: Factory-installed feature automatically switches quartz lamp on when fixture is initially energized and when momentary power outages occur. System automatically turns quartz lamp off when HID lamp reaches approximately 60 percent of light output.
- C. High-Pressure Sodium Ballasts: Electromagnetic type with solid-state igniter/starter and capable of open-circuit operation without reduction of average lamp life. Igniter/starter shall have an average life in pulsing mode of 10,000 hours at an igniter/starter-case temperature of 90 deg C.

For lamps up to 150 W, retain "Instant-Restrike Device" Subparagraph below. If unacceptable for safety, security, or other reasons for high-pressure sodium lamps to be extinguished for a lengthy restrike period by momentary power interruptions, dual-arc tube lamp feature in "HID Lamps" Article may also be considered.

- 1. Instant-Restrike Device: Integral with ballast, or solid-state potted module, factory

installed within fixture and compatible with lamps, ballasts, and mogul sockets up to 150 W.

- a. Restrike Range: 105- to 130-V ac.
- b. Maximum Voltage: 250-V peak or 150-V ac rms.

2. Minimum Starting Temperature: **Minus 30 deg F** (minus 35 deg C).

2.7 HID LAMPS

Coordinate this article with Drawings. Where color rendition or color uniformity is important and several types of HID lamps are used, provide consistent manufacturer designations or ANSI designations to define lamp types.

- A. High-Pressure Sodium Lamps: ANSI C78.42, CRI 21 (minimum), CCT color temperature **[1900] <Insert value>** K, and average rated life of 24,000 hours, minimum.

Consider retaining "Dual-Arc Tube Lamp" Subparagraph below if extinguishing of high-pressure sodium lamps caused by momentary power interruptions is unacceptable for safety, security, or other reasons. Instant-restrike device feature specified in "Ballasts for HID Lamps" Article may also be considered. Verify, with manufacturers, availability of individual ratings before scheduling or specifying.

1. Dual-Arc Tube Lamp: Arranged so only one of two arc tubes is lighted at one time and, when power is restored after an outage, the cooler arc tube, with lower internal pressure, lights instantly, providing an immediate 8 to 15 percent of normal light output.

- B. Low-Pressure Sodium Lamps: ANSI C78.43.

ANSI has a separate standard for each conventional metal-halide lamp, unlike standards for low- and high-pressure sodium lamps. Consider including the standard number in the Exterior Lighting Device Schedule on Drawings. Wattage and mean lumen output ratings for each lamp may be included in the Exterior Lighting Device Schedule on Drawings.

- C. Metal-Halide Lamps: ANSI C78.43, with minimum CRI **[65] <Insert value>**, and CCT color temperature **[4000] <Insert value>** K.

Pulse-start, metal-halide lamps in first paragraph below are available in ratings from 30 to 1000 W and provide higher lumen maintenance and reduced color-shift throughout the life of the lamp, compared with basic metal-halide lamps. This may permit use of lower-wattage lamps to provide the same maintained illumination level provided by an equal number of conventional metal-halide lamps. Consult manufacturers to verify compatibility of lamps with ballasts and luminaires.

- D. Pulse-Start, Metal-Halide Lamps: Minimum CRI 65, and CCT color temperature **[4000] <Insert value>** K.

Ceramic, pulse-start, metal-halide lamps in paragraph below are available in ratings from about 40 to 250 W. Besides advantages inherent in pulse-start technology, these lamps have an improved CRI, between 80 and 94, with higher initial and maintained lumen output.

- E. Ceramic, Pulse-Start, Metal-Halide Lamps: Minimum CRI [80] <Insert value>, and CCT color temperature [4000] <Insert value> K.

2.8 SOLID-STATE LAMPS

- A. LED lamps: ANSI C78.377, listed and rated for the intended environmental conditions.
- B. Minimum CRI: 70.
- C. Correlated color temperature (CCT): 5000K.
- D. Minimum LED life: 60,000 hours at L70.

2.9 GENERAL REQUIREMENTS FOR POLES AND SUPPORT COMPONENTS

- A. Structural Characteristics: Comply with AASHTO LTS-4-M.

Retain two subparagraphs below if retaining "Structural Analysis Criteria for Pole Selection" Article and manufacturer is responsible for selecting poles and other luminaire support components and certifying them to suit wind, ice, and other load conditions as expressed in AASHTO LTS-4-M. Delete if structural considerations have been applied by the design team in selecting "basis-of-design" or proprietary pole products, and these products have been identified in the Exterior Lighting Device Schedule or details on Drawings. See Editing Instruction No. 1 in the Evaluations.

- 1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in "Structural Analysis Criteria for Pole Selection" Article.

Retain "Strength Analysis" Subparagraph below to help ensure that poles are stiff enough to avoid excessive flexure and vibration. Alternatively, add requirements for minimum pole wall thickness and other parameters. See Editing Instruction No. 5 in the Evaluations.

- 2. Strength Analysis: For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of 1.3 to obtain the equivalent projected area to be used in pole selection strength analysis.
- B. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts unless otherwise indicated.

Coordinate "Mountings, Fasteners, and Appurtenances" Paragraph below with Drawings.

- C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.
 - 1. Materials: Shall not cause galvanic action at contact points.
 - 2. Anchor bolts shall meet or exceed wind loading and structural requirements.
 - 3. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.
 - 4. Anchor-Bolt Template: Plywood or steel.
 - 5. Ground bolt near the handhole shall be included.

Coordinate "Handhole" Paragraph below with Drawings for indication of concrete foundations suitable for soil conditions and loads imposed by pole, luminaire, and support components.

- D. Handhole: Oval-shaped, reinforced, with minimum clear opening of 3 inches by 5 inches (76 by 130 mm) minimum, with cover secured by stainless-steel captive screws. Provide larger size handholes to suit pole diameter.
- E. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."

Coordinate two paragraphs below with Drawings.

- F. Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A 36/A 36M and hot-dip galvanized according to ASTM A 123/A 123M; and with top-plate and mounting bolts to match pole base flange and strength required to support pole, luminaire, and accessories.

On Drawings, identify poles that require breakaway supports described in paragraph below. Add description if specific type of breakaway support is required.

- G. Breakaway Supports: Frangible breakaway supports, tested by an independent testing agency acceptable to authorities having jurisdiction, according to AASHTO LTS-4-M.

If using support structures other than poles, insert an article here to specify structure materials.

2.10 STEEL POLES

See Editing Instruction No. 5 in the Evaluations for discussion of pole flexure and vibration resistance.

- A. Poles: Comply with ASTM A 500, Grade B, carbon steel with a minimum yield of 46,000 psig (317 MPa); one-piece construction with access handhole in pole wall.
 - 1. Shape: Round, tapered.

Coordinate "Mounting Provisions" Subparagraph below with Drawings.

- 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

Indicate on Drawings the span and rise of mast arms in "Steel Mast Arms" Paragraph below Delete paragraph if mast arms are adequately described in the Exterior Lighting Device Schedule or in details on Drawings.

- B. Steel Mast Arms: [Single-arm] [Truss] [Davit] type, continuously welded to pole attachment plate. Material and finish same as pole.

Indicate on Drawings the span and rise of luminaire brackets in "Brackets for Luminaires" Paragraph below. Delete paragraph if luminaire brackets are adequately described in the Exterior Lighting Device Schedule or in details on Drawings.

- C. Brackets for Luminaires: Detachable, cantilever, without underbrace.

1. Adapter fitting welded to pole, allowing the bracket to be bolted to the pole mounted adapter, then bolted together with hot-dip galvanized steel bolts.
 2. Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire.
 3. Match pole material and finish.
- D. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- E. Steps: Fixed steel, with nonslip treads, positioned for 15-inch (381-mm) vertical spacing, alternating on opposite sides of pole; first step at elevation 10 feet (3 m) above finished grade.

Retain "Intermediate Handhole and Cable Support" Paragraph below for poles more than 90 feet (27 m) in height.

- F. Intermediate Handhole and Cable Support: Weathertight, 3-by-5-inch (76-by-127-mm) minimum handhole located at midpoint of pole with cover for access to internal welded attachment lug for electric cable support grip.
- G. Grounding and Bonding Lugs: Welded 1/2-inch (13-mm) threaded lug, complying with requirements in Section 260526 "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- H. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported cable times a 5.0 safety factor.

Coordinate "Platform for Lamp Ballast Servicing" Paragraph below with Drawings, manufacturer's standard details, and Project's structural engineer.

- I. Platform for Lamp and Ballast Servicing: Factory fabricated of steel with finish matching that of pole.
- J. Hot-Dip Galvanized Finish: After fabrication, hot-dip galvanize complying with ASTM A 123/A 123M. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or with SSPC-SP 8, "Pickling."
 2. Interior Surfaces of Pole: Factory hot-dip galvanized finish.
 3. Exterior Surfaces: Factory hot-dip galvanized finish.
 - a. Color: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**

2.11 DECORATIVE POLES

See Editing Instruction No. 5 in the Evaluations for discussion of pole flexure and vibration resistance. Show plan and elevation views of decorative poles on Drawings.

A. Pole Material:

Retain one or more materials in subparagraphs below. If retaining more than one, indicate specifics on Drawings. Delete materials not used.

1. Cast ductile iron.
2. Cast gray iron, according to ASTM A 48/A 48M, Class 30.
3. Cast aluminum.
4. Cast concrete.
5. Spun concrete.
6. Steel tube, covered with closed-cell polyurethane foam, with a polyethylene exterior.
7. **<Insert material>**.

B. Mounting Provisions:

1. Bolted to concrete foundation.
2. Embedded.

C. Fixture Brackets:

1. Cast ductile iron.
2. Cast gray iron.
3. Cast aluminum.

D. Pole Finish: **<Insert finish>**.

2.12 POLE ACCESSORIES

Revise this article to suit Project, safety codes, and luminaire servicing methods. Add requirement for removable steps if necessary. Coordinate with the Exterior Lighting Device Schedule on Drawings.

A. Duplex Receptacle: 120 V, 20 A in a weatherproof assembly complying with Section 262726 "Wiring Devices" for ground-fault circuit-interrupter type.

1. Recessed, [12 inches (300 mm)] **<Insert dimension>** above finished grade.
2. Nonmetallic polycarbonate plastic or reinforced fiberglass, weatherproof in use, cover, **<Insert color to match pole,>** that when mounted results in NEMA 250, **[Type 3R] [Type 4X]** enclosure.
3. With cord opening.
4. With lockable hasp and latch that complies with OSHA lockout and tag-out requirements.

B. Minimum 1800-W transformer, protected by replaceable fuses, mounted behind access cover.

Coordinate two "base" paragraphs below with "Breakaway Supports" Paragraph in "General Requirements for Poles and Support Components" Article.

- C. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.
- D. Transformer Type Base: Same material and color as pole. Coordinate dimensions to suit pole's base flange and accept [**ballast(s)**] [**indicated accessories**].

Accessories in paragraph below are usually selected for decorative poles only; verify availability for other types of poles.

- E. Decorative accessories, supplied by decorative pole manufacturer, include the following:
 - 1. Banner Arms: <Insert material>.
 - 2. Flag Holders: <Insert material>.
 - 3. Ladder Rests: <Insert material>.

2.13 LOWERING SYSTEM FOR LUMINAIRES

Retain this article to specify lowering system for either ring- or carriage-mounted, high-mast luminaire assemblies or individual pole-mounted luminaires.

- A. Arrange system to lower luminaire[**assembly**] to a servicing position within 36 inches (900 mm) of finished grade in winds up to 40 mph (65 km/h) and to provide for manual plug connection to electrical power in the lowered position for testing.
- B. Coordinate with luminaire and pole manufacturers for assembly details, wind-load and vibration analysis, and compatibility of materials for electrolysis-free attachment and connection for luminaire mounting assembly, lowering device, lowering cable, and portable winch.
- C. Structural and Mechanical Design: Use a minimum safety factor of 5.0 for static and dynamic loads of load-bearing components, including cable.

Retain one of first two paragraphs below to specify basic features and general arrangement of lowering system. Coordinate with Drawings.

- D. Luminaire Mounting and Disconnect Arrangement: Multiple [**ring**] [**carriage**]-mounted luminaires, arranged for lowering and rising as a group.

Retain one of two subparagraphs below to select method of disconnecting normal electrical operating power for luminaire assembly. First subparagraph is method used for group disconnect for luminaire assemblies. Second subparagraph is method used for both individual luminaires and luminaire assemblies.

- 1. Electrical cable for normal operating power to luminaires manually disconnects inside pole base, using weatherproof multipin connector, and shall be arranged to move within the pole during lowering and rising of luminaire assembly.

2. Electrical cable for normal operating power to luminaires automatically disconnects at a weatherproof multipin connector within the pole-top lowering head at the beginning of the lowering cycle and reconnects when luminaire or luminaire assembly is raised to the operating position.
- E. Lowering Device: Weatherproof, cast-aluminum housing and multiple mechanical latches. Moving parts of latching assembly shall be located in the portion of the unit that is lowered to the servicing position. Positive latching in the operating position shall be indicated to the operator at the base of the pole by a clear visual signal, or by other means acceptable to Owner or authorities having jurisdiction.

Stainless-steel cable in "Lowering Cable" Paragraph below may be standard with some manufacturers. Specify stainless-steel cable for corrosive environments.

- F. Lowering Cable: Stainless steel aircraft cable.

Coordinate "Portable Winch" Paragraph below with Drawings.

- G. Portable Winch: **[Manual]** **[120-V electric]** type. **[One]** **<Insert number>** required.

Retain two subparagraphs below if winch is electric.

1. Winch Power Connection: Cord and plug.
2. Winch Raise-Lower Control: Remote-control station with **[15 feet (5 m)]** **<Insert dimension>** of cable.

Retain "Winch Transformer" Paragraph below if using a pole lighting circuit rated above 120 V to power electric winch.

- H. Winch Transformer: Portable, totally enclosed, encapsulated, single-phase, dry type. Primary rated at lighting-circuit voltage; secondary rated at 120 V. Permanent, primary and secondary, twist-locking plug connectors on pigtails shall match pole-base power outlet and winch plug.

PART 3 - EXECUTION

3.1 INSTALLATION GENERAL

- A. Sequence and Schedule: The exterior lighting installation is to be sequenced and scheduled with other work to reduce possibility of damage and soiling of fixtures during the remainder of construction period.
- B. Power Outages: Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.
- C. Photocells and Timers: The fixtures shall operate on the voltage shown. Provide and install all photocells and/or timer devices for automatic operation of the fixtures as

described in the construction documents.

- D. Torque Values: Connectors and terminals, including screws and bolts, are to be tightened in accordance with equipment manufacturer's published torque tightening values. Record all torque values for bolts and submit report with witness signature to DEN Project Manager.

3.2 LUMINAIRE INSTALLATION

- A. Install lamps in each luminaire.
- B. Fasten luminaire to indicated structural supports.

Retain subparagraph below if seismic restraint is required by local code or authorities having jurisdiction. See Evaluations.

- 1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.
- C. Adjust luminaires that require field adjustment or aiming. [**Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources, favoring a north orientation.**]

3.3 POLE INSTALLATION

Retain "Alignment" Paragraph below if luminaire alignment for desired light distribution depends on alignment of pole.

- A. The pole will be installed according to the manufacturer's recommendations.
- B. Grounding will comply with National Electrical Code requirements.
- C. Individual fuses at each pole.
- D. Alignment: Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.

Coordinate "Clearances" Paragraph below with Drawings and revise to suit Project.

- E. Clearances: Maintain the following minimum clear horizontal distances of poles from surface and underground features unless otherwise indicated on Drawings:
 - 1. Fire Hydrants and Storm Drainage Piping: [60 inches (1520 mm)] <Insert dimension>.
 - 2. Water, Gas, Electric, Communication, and Sewer Lines: [10 feet (3 m)] <Insert dimension>.
 - 3. Trees: [15 feet (5 m)] <Insert dimension> from tree trunk.
 - 4. <Insert features and clearance dimensions>.

Coordinate first five paragraphs below with Drawings. See Evaluations for structural- and soil-engineering coordination.

- F. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Section 033000 "Cast-in-Place Concrete."
- G. Foundation-Mounted Poles: Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.

Retain first subparagraph below if seismic restraint is required by local code or authorities having jurisdiction. See Evaluations.

- 1. Use anchor bolts and nuts selected to resist seismic forces defined for the application and approved by manufacturer.
- 2. Grout void between pole base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
- 3. Install base covers unless otherwise indicated.
- 4. Use a short piece of 1/2-inch- (13-mm-) diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.

Retain one of first two paragraphs below for embedded poles and coordinate with Drawings.

- H. Embedded Poles with Tamped Earth Backfill: Set poles to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.
 - 1. Dig holes large enough to permit use of tampers in the full depth of hole.
 - 2. Backfill in 6-inch (150-mm) layers and thoroughly tamp each layer so compaction of backfill is equal to or greater than that of undisturbed earth.
- I. Embedded Poles with Concrete Backfill: Set poles in augered holes to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.
 - 1. Make holes 6 inches (150 mm) in diameter larger than pole diameter.
 - 2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of 3000 psi (20 MPa) at 28 days, and finish in a dome above finished grade.
 - 3. Use a short piece of 1/2-inch- (13-mm-) diameter pipe to make a drain hole through concrete dome. Arrange to drain condensation from interior of pole.
 - 4. Cure concrete a minimum of 72 hours before performing work on pole.

For projects in seismic areas, retain first paragraph below to minimize possible concentration of horizontal forces during seismic events where poles or pole foundations meet the finished grade.

- J. Poles and Pole Foundations Set in Concrete Paved Areas: Install poles with minimum of 6-inch- (150-mm-) wide, unpaved gap between the pole or pole foundation and the edge of adjacent concrete slab. Fill unpaved ring with [pea gravel] <Insert material> to a level 1 inch (25 mm) below top of concrete slab.
- K. Raise and set poles using web fabric slings (not chain or cable).

3.4 BOLLARD LUMINAIRE INSTALLATION

- A. Align units for optimum directional alignment of light distribution.

Retain paragraph below if bollards require protection from damage at base due to landscaping maintenance or snow removal operations. Coordinate with Drawings.

- B. Install on concrete base with top [4 inches (100 mm)] <Insert dimension> above finished grade or surface at bollard location. Cast conduit into base, and shape base to match shape of bollard base. Finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Section 033000 "Cast-in-Place Concrete."

3.5 INSTALLATION OF INDIVIDUAL GROUND-MOUNTING LUMINAIRES

Coordinate this article with Drawings. Delete if installation is detailed on Drawings.

- A. Install on concrete base with top [4 inches (100 mm)] <Insert dimension> above finished grade or surface at luminaire location. Cast conduit into base, and finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Section 033000 "Cast-in-Place Concrete."

3.6 CORROSION PREVENTION

- A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.
- B. Steel Conduits: Comply with Section 260533 "Raceways and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch- (0.254-mm-) thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.7 GROUNDING

Coordinate first paragraph below with Drawings.

- A. Ground metal poles and support structures according to Section 260526 "Grounding and Bonding for Electrical Systems."
1. Install grounding electrode for each pole unless otherwise indicated.
 2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.
- B. Ground nonmetallic poles and support structures according to Section 260526 "Grounding and Bonding for Electrical Systems."

Retain first subparagraph below if lightning damage is of concern.

1. Install grounding electrode for each pole.

2. Install grounding conductor and conductor protector.
3. Ground metallic components of pole accessories and foundations.

3.8 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Inspect each installed fixture for damage. Replace damaged fixtures and components.
- B. Illumination Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.
 1. Verify operation of photoelectric controls.

Retain "Illumination Tests" Paragraph below if specific illumination performance is indicated.

- C. Illumination Tests:
 1. Measure light intensities at night. Use photometers with calibration referenced to NIST standards. Comply with the following IESNA testing guide(s):

Retain one or more of five subparagraphs below.

- a. IESNA LM-5, "Photometric Measurements of Area and Sports Lighting Installations."
 - b. IESNA LM-50, "Photometric Measurements of Roadway Lighting Installations."
 - c. IESNA LM-52, "Photometric Measurements of Roadway Sign Installations."
 - d. IESNA LM-64, "Photometric Measurements of Parking Areas."
 - e. IESNA LM-72, "Directional Positioning of Photometric Data."
- D. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.
 - E. Cleaning: Clean all fixtures of dirt and debris upon completion of the installation and protect fixtures from damage during construction period.

3.9 DEMONSTRATION

- A. Demonstrate capability and compliance with specified requirements upon completion of installation of exterior lighting fixtures and associated circuiting.
- B. All lighting fixtures having an adjustable type beam spread or pole mounted apron ramp area being of the adjustable aiming type shall be field adjusted or aimed at the Contractor's expense and to the satisfaction of the DEN Project Manager.
- C. All fixtures of the above types (refer to drawings) shall be field adjusted (verify final placement of fixtures also) in accordance with the manufacturer's aiming

recommendations, and as indicated on the drawings and as required in the field. Include an allowance in the bid to cover all costs of aiming or adjusting these fixtures. Include an overtime allowance in the bid for aiming or adjusting exterior fixtures at night.

- D. Submit photometric report of light levels in all exterior areas to DEN Project Manager. All photometric readings shall be taken after a minimum of forty (40) hours burn-in of light fixtures.
- E. Contractor shall provide to the DEN Project Manager a Point by Point report showing the light level readings taken after the parking area has been properly aimed and the fixtures have had at least 50 hours of actual run time in the field. The grid spacing for the readings shall be the same as the calculations submitted prior to start of construction.
- F. Training: Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice. Engage a factory-authorized service representative to assist Contractor and train DEN maintenance personnel to adjust, operate, and maintain all exterior lighting components, and luminaire lowering devices, if any.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 265600

Copyright 2012 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 270526 - GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

NFPA 70 and IEEE C2 include basic grounding requirements for electrical safety. This Section supplements those requirements with grounding requirements for communications systems and with optional grounding methods and materials for power and electronic systems that go beyond basic minimum safety requirements.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes:
 - 1. Grounding conductors.
 - 2. Grounding connectors.
 - 3. Grounding busbars.
 - 4. Grounding rods.
 - 5. Grounding labeling.
- B. Related Sections:
 - 1. Section 260526 "Grounding and Bonding for Electrical Systems."

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in

this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. BCT: Bonding conductor for telecommunications.
- B. EMT: Electrical metallic tubing.
- C. TGB: Telecommunications grounding busbar.
- D. TMGB: Telecommunications main grounding busbar.

1.4 SYSTEM DESCRIPTION

- A. Provide each communications room with a ground bar for equipment bonding.
- B. Provide minimum #6 copper grounding conductor from each communications room ground bar and connect to nearest referenced ground bar in the electrical room.
- C. Bond together all communications equipment racks, cable trays, equipment enclosures, and metal raceway systems. Connect to the nearest equipment ground bar.
- D. Requirements of this section shall be considered as a supplement to the requirements of 260526 "Grounding and Bonding for Electrical Systems."

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For communications equipment room signal reference grid. Include plans, elevations, sections, details, and attachments to other work.

1.6 INFORMATIONAL SUBMITTALS

Retain "As-Built Data" Paragraph below to require Contractor to provide Drawings that locate significant grounding features. Section 017823 "Operation and Maintenance Data" and Section 017839 "Project

Record Documents" require submittals to be included in those documents for use by maintenance forces throughout the life of Project.

- A. As-Built Data: Plans showing as-built locations of grounding and bonding infrastructure, including the following:
 - 1. Ground rods.
 - 2. Ground and roof rings.
 - 3. BCT, TMGB, TGBs, and routing of their bonding conductors.

Coordinate two "Qualification Data" paragraphs below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- B. Qualification Data: For [Installer,]installation supervisor, and field inspector.
- C. Qualification Data: For testing agency and testing agency's field supervisor.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- D. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

Retain "Operation and Maintenance Data" Paragraph below if specifying test wells, separately derived systems, or ground ring or other grounding for sensitive electronic equipment. Field quality-control test-result values are important benchmarks for future preventive maintenance tests.

- A. Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals.

Retain subparagraph below when it is anticipated that Owner's preventive maintenance program is likely to include periodic ground- and bonding-resistance tests.

- 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Result of the ground-resistance test, measured at the point of BCT connection.
 - b. Result of the bonding-resistance test at each TGB and its nearest grounding electrode.
 - c. <Insert field quality-control test results>.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

BICSI is an industry trade association. See Editing Instruction No. 2 in the Evaluations for summaries of qualifications for registration.

- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
 - 1. Installation Supervision: Installation shall be under the direct supervision of ITS [Technician] [Installer 2], who shall be present at all times when Work of this Section is performed at Project site.
 - 2. Field Inspector: Currently registered by BICSI as [a registered communications distribution designer] [ITS Installer 2] to perform the on-site inspection.

Edit below to include applicable sections.

- B. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents.
- C. NFPA Compliance: NFPA 70 "National Electrical Code (NEC)," as adopted and amended by the Denver Building Code, Chapter 10.
- D. UL Compliance: Applicable requirements of UL Standards Nos. 467 "Electrical Grounding and Bonding Equipment," and 869, "Electrical Service Equipment," pertaining to grounding and bonding of systems, circuits and equipment. In addition, require compliance with UL Std 486A, "Wire Connectors." Grounding and bonding products shall be UL-listed and labeled for the use.
- E. IEEE Compliance: Applicable requirements and recommended installation practices of IEEE Standards 80, 81, 141 and 142 pertaining to grounding and bonding of systems, circuits and equipment.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Grounding Connection Accessories:

1. Electrical insulating tape, heat-shrinkable insulating tubing, welding materials, bonding straps, as recommended by accessories manufacturers for type of service required.
- B. Exothermic welded connections are required where grounding conductors connect to underground grounding conductors and to underground grounding electrodes, and for bonding to steel. All underground connections shall be exothermic welded.
- C. All ground wires shall be copper except where stainless steel is specified for manholes, sized according to the NEC or as shown on the drawings whichever is larger.

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.2 SYSTEM COMPONENTS

- A. Comply with J-STD-607-A.

2.3 CONDUCTORS

See "Grounding Products" Article in the Evaluations for discussion on alternative conductor materials.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Harger Lightning and Grounding.
 2. Panduit Corp.
 3. Tyco Electronics Corp.
 4. **<Insert manufacturer's name>.**
 5. or approved equal.
- B. Comply with UL 486A-486B.
- C. Insulated Conductors: Stranded copper wire, green or green with yellow stripe insulation, insulated for 600 V, and complying with UL 83.
 1. Ground wire for custom-length equipment ground jumpers shall be No. 6 AWG, 19-strand, UL-listed, Type THHN wire.

Retain "Cable Tray Equipment Grounding Wire" Subparagraph below if an equipment grounding conductor is required. If the ground wire serves as the telecommunications bonding backbone, indicate wire size on Drawings.

If cable tray contains electrical power conductors, then NFPA 70, Article 392 "Cable Trays" governs, and the minimum equipment grounding conductor size is No. 4 AWG.

2. Cable Tray Equipment Grounding Wire: No. 6 AWG.

D. Cable Tray Grounding Jumper:

Retain one of two subparagraphs below depending on the selection of the cable tray in Section 2 Not smaller than No. 6 AWG [26 kcmils (13.3 sq. mm)] and not longer than 12 inches (300 mm). If jumper is a wire, it shall have a crimped grounding lug with one hole and standard barrel for one crimp. If jumper is a flexible braid, it shall have a one- or two-hole ferrule. Attach with grounding screw or connector provided by cable tray manufacturer.

E. Bare Copper Conductors:

1. Solid Conductors: ASTM B 3.
2. Stranded Conductors: ASTM B 8.
3. Tinned Conductors: ASTM B 33.

Sizes and types of conductors in three subparagraphs below are typical examples. 28-kcmil ((14.2-sq. mm)) bonding cable in "Bonding Cable" Subparagraph is slightly larger than No. 6 AWG.

4. Bonding Cable: 28 kcmils (14.2 sq. mm), 14 strands of No. 17 AWG conductor, and 1/4 inch (6.3 mm) in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
6. Bonding Jumper: Tinned-copper tape, braided conductors terminated with two-hole copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.

2.4 CONNECTORS

- A. Irreversible connectors listed for the purpose. Listed by an NRTL as complying with NFPA 70 for specific types, sizes, and combinations of conductors and other items connected. Comply with UL 486A-486B.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Burndy; Part of Hubbell Electrical Systems.
2. Chatsworth Products, Inc.
3. Harger Lightning and Grounding.
4. Panduit Corp.
5. Tyco Electronics Corp.
6. **<Insert manufacturer's name>.**
7. or approved equal.

- C. Compression Wire Connectors: Crimp-and-compress connectors that bond to the conductor when the connector is compressed around the conductor. Comply with UL 467.
 - 1. Electroplated tinned copper, C and H shaped.
- D. Signal Reference Grid Connectors: Combination of compression wire connectors, access floor grounding clamps, bronze U-bolt grounding clamps, and copper split-bolt connectors, designed for the purpose.
- E. Busbar Connectors: Cast silicon bronze, solderless [**compression**] [**or**] [**exothermic**]-type, mechanical connector; with a long barrel and two holes spaced on **5/8- or 1-inch** (15.8- or 25.4-mm) centers for a two-bolt connection to the busbar.
- F. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

2.5 GROUNDING BUSBARS

Retain this article if size of grounding bus and mounting details are not indicated on Drawings. The default dimension is recommended by BICSI for telecommunications busbar.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Chatsworth Products, Inc.](#)
 - 2. [Harger Lightning and Grounding.](#)
 - 3. [Panduit Corp.](#)
 - 4. **<Insert manufacturer's name>**.
 - 5. or approved equal.

Indicate length of TMGB on Drawings.

- B. TMGB: Predrilled, wall-mounted, rectangular bars of hard-drawn solid copper, [**1/4 by 4 inches** (6.3 by 100 mm)] **<Insert dimensions>** in cross section, length as indicated on Drawings. The busbar shall be NRTL listed for use as TMGB and shall comply with J-STD-607-A.
 - 1. Predrilling shall be with holes for use with lugs specified in this Section.

In "Mounting Hardware" Subparagraph below, the minimum required clearance is 2 inches (50 mm). 4 inches (100 mm) is typical in the industry. Indicate busbar length on Drawings.

- 2. Mounting Hardware: Stand-off brackets that provide a [**4-inch** ((100-mm))] **<Insert dimension>** clearance to access the rear of the busbar. Brackets and bolts shall be stainless steel.

3. Stand-off insulators for mounting shall be Lexan or PVC. Comply with UL 891 for use in 600-V switchboards, impulse tested at 5000 V.
- C. TGB: Predrilled rectangular bars of hard-drawn solid copper, [1/4 by 3 inches (6.3 by 50 mm)] <Insert dimensions> in cross section, length as indicated on Drawings. The busbar shall be for wall mounting, shall be NRTL listed as complying with UL 467, and shall comply with J-STD-607-A.
1. Predrilling shall be with holes for use with lugs specified in this Section.
 2. Mounting Hardware: Stand-off brackets that provide at least a 2-inch ((50-mm) clearance to access the rear of the busbar. Brackets and bolts shall be stainless steel.
 3. Stand-off insulators for mounting shall be Lexan or PVC. Comply with UL 891 for use in 600-V switchboards, impulse tested at 5000 V.

Retain "Rack and Cabinet Grounding Busbars" Paragraph below if equipment cabinets and racks are not specified with grounding busbars.

- D. Rack and Cabinet Grounding Busbars: Rectangular bars of hard-drawn solid copper, accepting conductors ranging from No. 14 to No. 2/0 AWG, NRTL listed as complying with UL 467, and complying with J-STD-607-A. Predrilling shall be with holes for use with lugs specified in this Section.
1. Cabinet-Mounted Busbar: Terminal block, with stainless-steel or copper-plated hardware for attachment to the cabinet.
 2. Rack-Mounted Horizontal Busbar: Designed for mounting in 19- or 23-inch (483- or 584-mm) equipment racks. Include a copper splice bar for transitioning to an adjoining rack, and stainless-steel or copper-plated hardware for attachment to the rack.
 3. Rack-Mounted Vertical Busbar: 72 or 36 inches ((1827 or 914 mm) long, with)stainless-steel or copper-plated hardware for attachment to the rack.

2.6 GROUND RODS

Retain this article if ground rods incidental to ground rings and duct banks are required. Indicate ground rod locations and connections on Drawings. See "Grounding Products" Article in the Evaluations for discussion on alternative materials.

The installation of grounding electrode system for the alternating-current (ac) power system, which includes ground rods, ground rings, metal underground water pipes, metal building frames, concrete-encased electrodes, and pipe and plate electrodes, is specified in Section 260526 "Grounding and Bonding for Electrical Systems." The grounding and bonding system of this Section is connected to the grounding and bonding of the ac power system with the BCT from the TMGB specified in "Grounding Electrode System" Article.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. Harger Lightning and Grounding.
2. Tyco Electronics Corp.
3. **<Insert manufacturer's name>.**
4. or approved equal.

B. Ground Rods: Copper-clad steel, **3/4 inch by minimum 10 feet** (19 mm by 3 m) in diameter.

1. In manholes, ground rods shall be stainless steel $\frac{3}{4}$ -inch diameter and a minimum length of 10 feet.

2.7 LABELING

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Brother International Corporation.
 2. HellermannTyton.
 3. Panduit Corp.
 4. **<Insert manufacturer's name>.**
 5. or approved equal.
- B. Comply with TIA/EIA-606-A and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- C. Adhesive Film Label with Clear Protective Overlay: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be **3/8 inch** (10 mm). Overlay shall provide a weatherproof and UV-resistant seal for label.

PART 3 - EXECUTION

3.1 EXAMINATION

See "Ground Resistance" Article in the Evaluations for discussion of ground-resistance levels.

- A. Examine the ac grounding electrode system and equipment grounding for compliance with requirements for maximum ground-resistance level and other conditions affecting performance of grounding and bonding of the electrical system.
- B. Inspect the test results of the ac grounding system measured at the point of BCT connection.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

- D. Proceed with connection of the BCT only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Bonding shall include the ac utility power service entrance, the communications cable entrance, and the grounding electrode system. The bonding of these elements shall form a loop so that each element is connected to at least two others.
- B. Comply with NECA 1.
- C. Comply with J-STD-607-A.
- D. Supplementary Grounding Electrode: Use grounding mats, where indicated, or driven ground rods. Install ground rods in suitable recessed well; fill with gravel after connection is made.
- E. Provide a No. 6 AWG and ground plate to each Communications Room or board. Connect to nearest Electrical Room ground plate.
- F. Provide isolated and insulated ground conductors for all microprocessor and data processing equipment.
- G. Tighten grounding and bonding connectors and terminals, including screws and bolts, in accordance with manufacturer's published torque tightening values for connectors and bolts. Where manufacturer's torquing requirements are not indicated, connections are to be tightened to comply with tightening torque values specified in UL 486A to assure permanent and effective grounding.
- H. Provide code-sized ground cable bonding jumpers, installed with ground clamps, across all conduit expansion couplings and fittings, including flexible steel conduit used as expansion fittings.
- I. Provide a corrosion-resistant finish to field connections, buried metallic bonding products, and where factory applied protective coatings have been destroyed.
- J. All continuous runs of cable tray and all isolated sections of cable tray shall be bonded and grounded.

3.3 APPLICATION

- A. Conductors: Install solid conductor for **[No. 8]** <Insert number> AWG and smaller and stranded conductors for **[No. 6]** <Insert number> AWG and larger unless otherwise indicated.
 - 1. The bonding conductors between the TGB and structural steel of steel-frame buildings shall not be smaller than **[No. 6]** <Insert number> AWG.

2. The bonding conductors between the TMGB and structural steel of steel-frame buildings shall not be smaller than **[No. 6]** <Insert number> AWG.
- B. Underground Grounding Conductors: Install bare [~~tinned-~~]copper conductor, **[No. 2]** <Insert number> AWG minimum.
- C. Conductor Terminations and Connections:
1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
 2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
 3. Connections to Ground Rods at Test Wells: Bolted connectors.
 4. Connections to Structural Steel: Welded connectors.
- D. Conductor Support:
1. Secure grounding and bonding conductors at intervals of not less than **36 inches** ((900 mm).)
- E. Grounding and Bonding Conductors:
1. Install in the straightest and shortest route between the origination and termination point, and no longer than required. The bend radius shall not be smaller than eight times the diameter of the conductor. No one bend may exceed 90 degrees.
 2. Install without splices.
 3. Support at not more than **36-inch** (900-mm) intervals.
 4. Install grounding and bonding conductors in **3/4-inch** (21-mm) PVC conduit until conduit enters a telecommunications room. The grounding and bonding conductor pathway through a plenum shall be in EMT. Conductors shall not be installed in EMT unless otherwise indicated.
 - a. If a grounding and bonding conductor is installed in ferrous metallic conduit, bond the conductor to the conduit using a grounding bushing that complies with requirements in Section 270528 "Pathways for Communications Systems," and bond both ends of the conduit to a TGB.

3.4 GROUNDING ELECTRODE SYSTEM

Retain paragraph below if the size of the BCT between the TMGB and the ac service is not indicated on Drawings. For bonding conductor length up to 52 feet (16 m), use No. 1/0 AWG; if longer, use No. 3/0 AWG. For selection details, see Editing Instruction No. 3 in the Evaluations. The length of the BCT should be less than 30 feet (9 m) because the impedance of this conductor, due to its length, limits its effectiveness.

- A. The BCT between the TMGB and the ac service equipment ground shall not be smaller than **[No. 1/0]** **[No. 3/0]** <Insert number> AWG.

3.5 GROUNDING BUSBARS

- A. Indicate locations of grounding busbars on Drawings. Install busbars horizontally, on insulated spacers **2 inches (50 mm)** minimum from wall, **12 inches (300 mm)** above finished floor unless otherwise indicated.
- B. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down; connect to horizontal bus.

3.6 CONNECTIONS

- A. Bond metallic equipment in a telecommunications equipment room to the grounding busbar in that room, using equipment grounding conductors not smaller than No. 6 AWG.
- B. Stacking of conductors under a single bolt is not permitted when connecting to busbars.
- C. Assemble the wire connector to the conductor, complying with manufacturer's written instructions and as follows:
 - 1. Use crimping tool and the die specific to the connector.
 - 2. Pretwist the conductor.
 - 3. Apply an antioxidant compound to all bolted and compression connections.
- D. Primary Protector: Bond to the TMGB with insulated bonding conductor.

Retain "Interconnections" Paragraph below if all telecommunications backbone and grounding equalizer conductors are not sized on Drawings.

- E. Interconnections: Interconnect all TGBs with the TMGB with the telecommunications backbone conductor. If more than one TMGB is installed, interconnect TMGBs using the grounding equalizer conductor. The telecommunications backbone conductor and grounding equalizer conductor size shall not be less than **2 kcmils/linear foot (1 sq. mm/linear meter)** of conductor length, up to a maximum size of No. 3/0 AWG [**168 kcmils (85 sq. mm)**] unless otherwise indicated.
- F. Telecommunications Enclosures and Equipment Racks: Bond metallic components of enclosures to the telecommunications bonding and grounding system. Install [**top-mounted**] [**vertically mounted**] rack grounding busbar unless the enclosure and rack are manufactured with the busbar. Bond the equipment grounding busbar to the TGB No. 2 AWG bonding conductors.

Retain "Shielded Cable" Paragraph below if screened twisted-pair cables and coaxial cables are installed in communications equipment rooms.

- G. Shielded Cable: Bond the shield of shielded cable to the TGB in communications rooms and spaces. Comply with TIA/EIA-568-B.1 and TIA/EIA-568-B.2 when grounding screened, balanced, twisted-pair cables.

- H. Rack- and Cabinet-Mounted Equipment: Bond powered equipment chassis to the cabinet or rack grounding bar. Power connection shall comply with NFPA 70; the equipment grounding conductor in the power cord of cord- and plug-connected equipment shall be considered as a supplement to bonding requirements in this Section.
- I. Access Floors: Bond all metal parts of access floors to the TGB.

Retain "Equipment Room Signal Reference Grid" Paragraph below for equipment rooms with a raised floor. TIA-942 recommends No. 6 as the minimum bonding network conductor size. Paragraph is for 4-foot (1200-mm) conductive floor tiles; adjust for other sizes.

- J. Equipment Room Signal Reference Grid: Provide a low-impedance path between telecommunications cabinets, equipment racks, and the reference grid, using [No. 6] <Insert number> AWG bonding conductors.
 - 1. Install the conductors in grid pattern on 4-foot (1200-mm) centers, allowing bonding of one pedestal from each access floor tile.
 - 2. Bond the TGB of the equipment room to the reference grid at two or more locations.
 - 3. Bond all conduits and piping entering the equipment room to the TGB at the perimeter of the room.
- K. Towers and Antennas:
 - 1. Ground Ring: Buried at least 30 inches (760 mm) below grade and at least 24 inches (610 mm) from the base of the tower or mounting.
 - 2. Bond each tower base and metallic frame of a dish to the ground ring, buried at least 18 inches (460 mm) below grade.
 - 3. Bond the ground ring and antenna grounds to the equipment room TMGB or TGB, buried at least 30 inches (760 mm) below grade.
 - 4. Bond metallic fences within 6 feet (1.8 m) of towers and antennas to the ground ring, buried at least 18 inches (460 mm) below grade.

When retaining "Special Requirements for Roof-Mounted Towers" Subparagraph below, coordinate the grounding system of the tower with the lightning protection system of the building.

- 5. Special Requirements for Roof-Mounted Towers:
 - a. Roof Ring: Meet requirements for the ground ring except the conductors shall comply with requirements in Section 264113 "Lightning Protection for Structures."
 - b. Bond tower base footings steel, the TGB in the equipment room, and antenna support guys to the roof ring.
 - c. Connect roof ring to the perimeter conductors of the lightning protection system.
- 6. Waveguides and Coaxial Cable:
 - a. Bond cable shields at the point of entry into the building to the TGB and to the cable entrance plate, using No. 2 AWG bonding conductors.

- b. Bond coaxial cable surge arrester to the ground or roof ring using bonding conductor size recommended by surge-arrester manufacturer.

L. **<Insert connections of other equipment>.**

3.7 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

Retain this article if grounding underground distribution system components is not specified in Section 260526 "Grounding and Bonding for Electrical Systems." Coordinate "Duct-Bank Grounding Conductor" Paragraph below with Drawings and with Section 260543 "Underground Ducts and Raceways for Electrical Systems."

- A. Duct-Bank Grounding Conductor: Bury 12 inches (300 mm) above duct bank when indicated as part of duct-bank installation.
- B. Comply with IEEE C2 grounding requirements.
- C. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches (100 mm) extends above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches (50 mm) above to 6 inches (150 mm) below concrete. Seal floor opening with waterproof, nonshrink grout.
- D. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect grounding conductors to cable armor and cable shields according to written instructions by manufacturer of splicing and termination kits.

3.8 IDENTIFICATION

- A. Labels shall be preprinted or computer-printed type.
 - 1. Label TMGB(s) with "fs-TMGB," where "fs" is the telecommunications space identifier for the space containing the TMGB.
 - 2. Label TGB(s) with "fs-TGB," where "fs" is the telecommunications space identifier for the space containing the TGB.
 - 3. Label the BCT and each telecommunications backbone conductor at its attachment point: "WARNING! TELECOMMUNICATIONS BONDING CONDUCTOR. DO NOT REMOVE OR DISCONNECT!"

3.9 FIELD QUALITY CONTROL

Retain "Testing Agency" or "Perform tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph, or if retaining "Perform tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.

Retain "Perform tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- B. Perform tests and inspections.

Retain "Tests and Inspections" Paragraph below to describe tests and inspections to be performed.

The maximum acceptable connection resistance and ac loop current values are based on recommendations of BICSI TDMM.

- C. Tests and Inspections:
1. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
 2. Test the ground resistance to earth of each ground rod prior to connection to the system. Where test show resistance to ground is over 5 OHMS, report to DEN Project Manager locations and values. Submit test results to the DEN Project Manager.
 3. Test the bonding connections of the system using an ac earth ground-resistance tester, taking two-point bonding measurements in each telecommunications equipment room containing a TMGB and a TGB and using the process recommended by BICSI TDMM. Conduct tests with the facility in operation.
 - a. Measure the resistance between the busbar and the nearest available grounding electrode. The maximum acceptable value of this bonding resistance is 100 milliohms.
 4. Test for ground loop currents using a digital clamp-on ammeter, with a full-scale of not more than 10 A, displaying current in increments of 0.01 A at an accuracy of plus/minus 2.0 percent.
 - a. With the grounding infrastructure completed and the communications system electronics operating, measure the current in every conductor connected to the TMGB[**and in each TGB**]. Maximum acceptable ac current level is 1 A.

- D. Excessive Ground Resistance: If resistance to ground at the BCT exceeds [5] <Insert value> ohms, notify DEN Project Manager promptly and include recommendations to reduce ground resistance.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- E. Grounding system will be considered defective if it does not pass tests and inspections. Correct all work that fails testing requirements and re-test system.
- F. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 270528 - PATHWAYS FOR COMMUNICATIONS SYSTEMS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Architect." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

Edit to suit Project.

1. Metal conduits and fittings.
2. Nonmetallic conduits and fittings.
3. Optical-fiber-cable pathways and fittings.
4. Metal wireways and auxiliary gutters.
5. Nonmetallic wireways and auxiliary gutters.
6. Surface pathways.
7. Boxes, enclosures, and cabinets.
8. Handholes and boxes for exterior underground cabling.

- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

Retain one or both of first two subparagraphs below to suit Project. Coordinate with electrical Sections to determine which Section is included in the Project and for the requirements for communications systems.

1. Section 260536 "Cable Trays for Electrical Systems" for cable tray systems.
2. Section 260543 "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.
3. Section 260533 "Raceways and Boxes for Electrical Systems" for conduits, wireways, surface raceways, boxes, enclosures, cabinets, handholes, and faceplate adapters serving electrical systems.
4. Section 280528 "Pathways for Electronic Safety and Security" for conduits, surface pathways, innerduct, boxes, and faceplate adapters serving electronic safety and security.
5. Section 271100 "Communications Equipment Rooms and Fittings".

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. ARC: Aluminum rigid conduit.
- B. GRC: Galvanized rigid steel conduit.
- C. IMC: Intermediate metal conduit.
- D. IDF: Intermediate Distribution Facility
- E. MDF: Main Distribution Facility

1.4 GENERAL

- A. Denver International Airport (DEN) owns and operates a private telecommunications infrastructure that provides voice, data and video services to all airport, airline and tenant facilities throughout the fifty-three square mile site. Tenants developing leasehold spaces or facilities on ground-leased sites are required to design their horizontal wiring pathways in accordance with these guidelines. Horizontal wiring pathways include all types of raceway systems to support voice, data, LAN, CATV and fiber cabling between DEN telecommunications rooms and outlets in the tenant, public or City areas.
- B. Designers are required to submit a complete set of plans and specifications for their projects to the DEN Telecommunications Department for review and approval. Designers are also required to meet with representatives from the DEN Telecommunications Department at one or more times during the course of design to work out specific interface details prior to the final submittal.

- C. Tenants and designers are encouraged to utilize the services of the current DEN Premise Wiring and Communications System (PWCS) contractor for installation of all horizontal cabling, outlets and termination. The City's contract with this contractor stipulates that all wiring and other components installed by the PWCS contractor be serviced and maintained by that contractor as part of the ongoing PWCS system maintenance agreement. The PWCS contractor is permitted to add a fair and reasonable amount to any such work to cover the expected maintenance through the duration of the current contract. The use of the PWCS contractor for this work affords the tenant a single party with end-to-end responsibility for the horizontal cabling system.
- D. A tenant may elect to install a privately owned and maintained system of horizontal wiring within its leasehold space. This wiring would extend from outlets within the leasehold area to a designated point of demarcation with the DEN PWCS system. In this configuration, circuits ordered through the PWCS contractor or regulated telephone company will be terminated and tagged at the designated point of demarcation. Responsibility for cross connecting these circuits from the point of demarcation to their final destination remains the responsibility of the tenant. The PWCS contractor will troubleshoot any reported problems with a circuit only as far as the designated point of demarcation.
- E. Any tenant vacating their leasehold space shall leave any horizontal wiring in place and in serviceable condition. This shall include outlets, horizontal wiring and termination blocks at the telecommunications equipment room.
- F. An effective Design of a building's Horizontal Wiring Pathway System should meet the following criteria:
1. All applicable codes.
 2. Provide flexible cable distribution to workstation locations.
 3. Facilitate ongoing maintenance.
 4. Easily accommodate future changes in equipment and services.
 5. Minimize occupant disruption when horizontal pathways and spaces are accessed.
- G. The horizontal distribution system must be designed to accommodate all types of communications cabling (i.e., UTP, Coax, and Fiber Optic cabling). When determining the type and size of the cable pathway, consider the quantity and size of the cables that the pathway is intended to house, and potential for growth in the area served.
- H. When designing the horizontal distribution system it is important to consider Moves, Adds and Changes (MACs) and minimal disruption to immediate occupants.
- I. Electromagnetic Interference (EMI):
1. EMI causes severe problems with electronic equipment, telecommunications and data communications, avoidance of all potential sources or, electromagnetic interference must be a primary consideration when designing a horizontal distribution system. To avoid electromagnetic interference, all distribution pathways should provide clearances of at least:

- a. Four (4) ft. (1.2 m) from large motors and/or transformers.
 - b. One (1) ft. (0.3 m) from conduit and cables used for electrical power distribution.
 - c. Five (5) in. (12 cm) from fluorescent lighting.
2. Note: Horizontal Distribution Pathways should cross perpendicular to fluorescent lighting and electrical power cables or conduits.
- J. Horizontal Pathways must be grounded and bonded in accordance with the requirements specified in ANSI/NFPA 70, except where other codes or local authorities impose more stringent requirements.
- K. Maximum cable distance between any outlet and the telecommunications room, closet or cabinet shall not exceed ninety **295 feet** (90 meters).
- L. Conduit Entry to Telecommunications Rooms: Horizontal distribution conduits entering a telecommunications closet should terminate above the room's cable ladder system to allow for proper cable racking. If conduits are entering through the floor, they must terminate four (4) inches above the finished floor. Conduits must be reamed, equipped with a bonding bushing and terminated as close as possible to the terminating rack or wall. Provide a #6 AWG bare copper bonding connection between the bonding bushing(s) and cable ladder system or equipment room grounding bar.

1.5 INTERMEDIATE DISTRIBUTION FACILITIES

- A. Intermediate Distribution Facilities shall be provided at locations as required to reach any area of the facility with a 90-meter length of cabling. Reserve fifteen meters of this cabling length for patch cord connections between horizontal cabling terminations in the IDF and tenant LAN equipment in a directly adjacent tenant equipment room space.
- B. The IDF will serve as the demarcation point between the DEN Premise Wiring and Communications System backbone cabling system and horizontal cabling system. In addition to cable terminations, these rooms may contain active electronic equipment for DEN Local Area Network services, data circuit conditioning equipment, DEN access control (card reader) equipment, DEN closed circuit television equipment and other equipment that may be required by DEN Telecommunications to support the building.
- C. Tenant equipment shall not be permitted within any IDF room. Provide a separately accessible tenant equipment room to support tenant LAN equipment in lockable tenant provided cabinets. Cabling for tenant LAN services will be terminated in the DEN IDF room and extended with Category 5e jumpers to the tenant equipment.
- D. IDF rooms shall not be placed in locations that are subject to the effects of water infiltration, steam infiltration, humidity from nearby water or steam, excessive heat (e.g., direct sunlight) or any other corrosive atmospheric or environmental conditions. Avoid locations that are below grade unless preventive measures against water infiltration are employed. The room must be free of plumbing and electrical utilities that

are not directly required to support the equipment room function. A floor drain is required if there is any risk of water entering the facility.

- E. NEC Section 110-16 requires three (3) feet of clear working space around equipment with exposed live parts. This shall apply to all communication equipment in the IDF room.
- F. Telecommunications equipment requires heating, ventilating and air conditioning equipment to functions properly at all times. All IDF spaces shall be designed to maintain a temperature range 64 degrees to 75 degrees F at 30 percent to 55 percent relative humidity. Heat Dissipation 750 to 5000 BTUs per cabinet (number of cabinets to be determined through consultation with DEN Telecommunications).
- G. The floor rating under distributed loading must be greater than 250 lb/ft.2. The floor loading under equipment racks and other concentrated loads must be greater than 1000 lbs per square foot. Floor finish shall be static resistant vinyl tile.
- H. IDF room walls should extend from the finished floor to the structural ceiling (e.g., the slab), be covered with two coats of fire-retardant white or light colored paint, and carry a minimum fire rating of two hours or as required by the applicable codes and regulations. All equipment room walls shall be lined with ¾" fire retardant B/C plywood to a height of 8'-0" above the finished floor. Plywood shall be painted with fire retardant paint to match room finish.
- I. DEN Telecommunications generally does not recommend a finished ceiling in an IDF room as such ceilings impede the installation of raceways and cable pulling. A sealed dust-free concrete finish is acceptable. Where ceilings must be installed, the recommended height of the finished ceiling to the finished floor is a minimum of 8'-6" to allow for cable ladder and cabling above the racks and frames. Any ceiling protrusions (ventilation, sprinklers, etc.) must be placed to assure a minimum clearance height of 8 ft. The ceiling finish must minimize the introduction of dust, and be white to enhance room lighting. Hard, non-accessible ceilings shall not be used in IDF rooms under any circumstance.
- J. IDF rooms shall be provided with adequate and uniform lighting that provides a minimum equivalence of 540 lux (50 footcandles) when measured 3 ft. above the finished floor to illuminate wall mounted equipment and the front and rear surfaces of racks and frames. Locate lighting fixtures a minimum of 8 ft. 6 in. above the finished floor. Locate light switches near the entrance(s) to the equipment room. Power for lighting should not come from the same circuits as power for the communications equipment. Provide emergency lighting as required by applicable building codes.
- K. Each IDF room shall be provided with a 120/208Volt, 3-Phase, 4-wire load center served with a separate feeder. The size of this load center will vary with the size of the building and the type of demarcation equipment installed. Quadplex power receptacles with separate 20 amp circuit and isolated grounds, shall be mounted on every wall in the equipment room. Spacing shall be on six (6) foot centers and receptacles shall be located at 16-inches above the finished floor. Other power requirements (e.g., fluorescent lighting, motors, air conditioning equipment) shall be supplied by a separate feeder, conduit, and branch panel. Provide a UL listed transient voltage surge

suppressor directly adjacent to the IDF load center. Connect suppressor to line buses through spare 3-pole circuit breaker. Connect suppressor ground and neutral conductor from suppressor to panel ground and neutral buses. Keep all leads short and as straight as possible. Nipple between suppressor and panel shall not exceed 3-inches. Provide 12" x 2" x 1/4" isolated ground bar directly below panel. Extend #6AWG bare conductor from ground bus on load center to ground bar. Extend #2AWG bare copper from ground bar to building electrical service ground.

- L. All IDF spaces shall be provided with smoke detector(s) interconnected with the building fire alarm system. Fire alarm components shall conform to applicable DEN standards and local codes. One portable type ABC fire extinguishers shall be located in the room close to the entrance.
- M. All IDF spaces equipped with a DEN access control system card reader inside and outside the IDF door. Equip door with door position switch, electric hinge and solenoid operated lockset which remains operable from inside the room at all times.
- N. A contiguous 12-inch wide cable ladder shall be provided around the full perimeter of all walls of the IDF room at a height of 84-inches measured from the bottom of the cable runway to the finished floor. Wall brackets used to support cable ladder shall be of sufficient length to allow the passage of a 4-inch EMT conduit between the cable ladder and finished wall. Provide bonding strap at all connections between sections of cable ladder. Provide one #6AWG bare copper bond from cable ladder system to IDF ground bar. Two-inch and larger conduits entering the room from above shall be terminated at a height of 24-inches above the cable ladder system. Smaller conduits shall terminate at a height of 12-inches above the cable ladder system. All conduits shall terminate with a bonding bushing which is in turn bonded individually or in groups to the cable ladder.
- O. Conduits entering the IDF from below shall be racked on a unistrut frame and terminated at approximately 8-inches above the floor with a bonding bushing. These bushings shall be bonded either individually or collectively to the IDF grounding bar with a #6AWG bare copper conductor. Provide a 6-inch concrete housekeeping curb around each conduit grouping as shown on the details that accompany this section.
- P. IDF rooms on multiple floors of a building shall be vertically aligned to permit the use of fire-safed sleeves between IDF rooms. Designers may wish to place IDF rooms adjacent to fixed vertical elements of the building such as elevators or stairwells as long as these vertical elements do not unduly restrict the entry of horizontal cabling into the IDF rooms. Do not allow conduit to be embedded in the floor or ceiling slab of any IDF room to allow for future core drilling between floors.
- Q. IDF Room Configuration and Sizes:

Verify if current IDF Room plans are included on Drawings, or attach to the end of this Section. Edit below to suit Project.

Verify if current IDF Room plans are included on Drawings, or attach to this Section. Edit below to suit Project.

1. Reference [**Drawings**] [**Diagram attached at end of Section**] <Insert location>

for DEN IDF Room Configuration plans.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.6 ACTION SUBMITTALS

- A. Product Data: For surface pathways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
- B. LEED Submittals:

"Product Data for Credit IEQ 4.1" Subparagraph below applies to LEED-NC, LEED-CI, and LEED-CS; coordinate with requirements for solvent cements and adhesive primers.

- 1. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.

"Laboratory Test Reports for Credit IEQ 4" Subparagraph below applies to LEED for Schools.

- 2. Laboratory Test Reports for Credit IEQ 4: For solvent cements and adhesive primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

Retain "Shop Drawings" Paragraph below for custom enclosures only.

- C. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

Delete sample requirement in paragraph below if project is of very limited scope, and deletion is approved by DEN Project Manager. Coordinate sample requirements with DEN Project Manager.

- D. Samples: For [wireways] [nonmetallic wireways] [and] [surface pathways] and for each color and texture specified, [12 inches (300 mm)] <Insert dimension> long.

1.7 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below if Drawings do not include detailed conduit routing plans and if Project involves unusual coordination requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Pathway routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
 - 1. Structural members in paths of pathway groups with common supports.
 - 2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

Retain "Qualification Data" Paragraph below if source quality-control tests are required to be certified by a professional engineer. Coordinate with qualification requirements in Section 014000 "Quality Requirements."

- B. Qualification Data: For professional engineer.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems." See ASCE/SEI 7 for certification requirements for equipment and components.

- C. Source quality-control reports.
- D. As built drawings: Provide complete as-built drawings for all IDF rooms, backbone conduit routes and tray routes indicating actual routing.

1.8 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Provide complete as-built drawings for all IDF rooms, backbone conduit routes and tray routes indicating actual routing.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 METAL CONDUITS AND FITTINGS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFC Cable Systems, Inc.
2. Allied Tube & Conduit; a Tyco International Ltd. Co.
3. Alpha Wire Company.
4. Anamet Electrical, Inc.
5. Electri-Flex Company.
6. O-Z/Gedney; a brand of EGS Electrical Group.
7. Picoma Industries; Subsidiary of Mueller Water Products, Inc.
8. Republic Conduit.
9. Robroy Industries.
10. Southwire Company.
11. Thomas & Betts Corporation.
12. Western Tube and Conduit Corporation.
13. Wheatland Tube Company; a division of John Maneely Company.
14. <Insert manufacturer>
15. or approved equal.

B. General Requirements for Metal Conduits and Fittings:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.
3. 4-inch electrical metallic tubing or rigid metallic conduit may be used at above grade locations between MDF and IDF rooms or between IDF rooms. Refer to DEN standards for electrical raceways for the applicability of each type of conduit by location. All conduits shall terminate with bonding bushings at the IDF or MDF rooms that are bonded to the cable ladder system in the room.
4. Conduits entering the IDF from below shall be racked on a unistrut frame and terminated at approximately 8-inches above the floor with a bonding bushing. These bushings shall be bonded either individually or collectively to the IDF grounding bar with a #6 AWG bare copper conductor. Provide a 6-inch concrete housekeeping curb around each conduit grouping.

C. GRC: Comply with ANSI C80.1 and UL 6.

Retain "ARC" Paragraph below for corrosion resistance and other special conditions.

D. ARC: Comply with ANSI C80.5 and UL 6A.

E. IMC: Comply with ANSI C80.6 and UL 1242.

F. PVC-Coated Steel Conduit: PVC-coated [**rigid steel conduit**] [**IMC**].

1. Comply with NEMA RN 1.
2. Coating Thickness: 0.040 inch (1 mm), minimum.

G. EMT: Comply with ANSI C80.3 and UL 797.

H. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.

Coordinate "Conduit Fittings for Hazardous (Classified) Locations" Subparagraph below with Drawings.

1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886 and NFPA 70.
2. Fittings for EMT:
 - a. Material: Steel.
 - b. Type: [**Setscrew**] [**or**] [**compression**].
3. Expansion Fittings: PVC or steel to match conduit type, complying with UL-467, rated for environmental conditions where installed, and including flexible external bonding jumper.
4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.

Retain "Joint Compound for IMC, GRC, or ARC" Paragraph below to require some threaded joints of IMC, GRC, or ARC, or their fittings, to be treated with joint compound for improved conductivity, resistance to oxidation, or ease of assembly and disassembly.

- I. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.
- J. Vertical (Backbone) Communications Pathways - Conduit:
 1. 4-inch electrical metallic tubing or rigid metallic conduit may be used at above grade locations between MDF and IDF rooms or between IDF rooms. Refer to DEN standards for electrical raceways for the applicability of each type of conduit by location. All conduits shall terminate with bonding bushings at the IDF or MDF rooms that are bonded to the cable ladder system in the room.
 2. 4-inch schedule 40 PVC may be used in new construction between communications rooms. Conduit shall transition to PVC coated galvanized rigid steel at all elbows and at terminations at IDF or MDF rooms. Provide 4'-0" minimum radius on all bends. All conduits shall be provided with bonding bushings at equipment room terminations that are bonded either individually or collectively to the equipment room grounding bar.
 3. Conduits used for vertical cabling shall have no more than 270-degrees in bends. Straight-through pull boxes shall be used in conduit runs which exceed this value. Pull boxes shall be sufficiently large to accommodate the number of 4-inch conduits in the run assuming a single cable of 51% fill in each of the raceways. All pull boxes shall be equipped with hinged covers.
 4. All conduit shall be verified after installation by pulling a mandrel through the conduit that is 80% of the internal diameter of the conduit. After completion of the mandrel test install one 3/4" wide woven aramid fiber pull tape in each conduit. Feed tape straight through pull boxes without breaking or splicing. Pull tape shall provide 2500 pounds of tensile strength and be marked with consecutive footage numbers at one-foot intervals. Permanently tie off tapes at both ends.
 5. Upon completion vertical communications conduit shall be left clean, dry and unobstructed. Cap each conduit to prevent entry of debris. Provide a permanent label on the bonding bushing for each conduit indicating the number of the conduit and destination of the remote end.

2.2 NONMETALLIC CONDUITS AND FITTINGS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFC Cable Systems, Inc.
2. Allied Tube & Conduit; a Tyco International Ltd. Co.
3. Anamet Electrical, Inc.
4. Arnco Corporation.
5. CANTEX Inc.
6. CertainTeed Corp.
7. Condux International, Inc.
8. Electri-Flex Company.
9. Kraloy.
10. Lamson & Sessions; Carlon Electrical Products.
11. Niedax-Kleinhuis USA, Inc.
12. RACO; a Hubbell company.
13. Thomas & Betts Corporation.
14. <Insert manufacturer>
15. or approved equal.

B. General Requirements for Nonmetallic Conduits and Fittings:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.
3. 4-inch schedule 40 PVC may be used in new construction between communications rooms. Conduit shall transition to PVC coated galvanized rigid steel at all elbows and at terminations at IDF or MDF rooms. Provide 4'-0" minimum radius on all bends. All conduits shall be provided with bonding bushings at equipment room terminations that are" bonded either individually or collectively to the equipment room grounding bar.

See Evaluations for descriptions of nonmetallic conduit types.

C. RNC: [**Type EPC-40-PVC**] <Insert type>, complying with NEMA TC 2 and UL 651 unless otherwise indicated.

Retain one or both HDPE paragraphs below. See Evaluations for a discussion of both types.

- D. Rigid HDPE: Comply with UL 651A.
- E. Continuous HDPE: Comply with UL 651B.
- F. RTRC: Comply with UL 1684A and NEMA TC 14.
- G. Fittings for RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.

Retain first paragraph below if required for LEED-NC, LEED-CI, or LEED-CS Credit IEQ 4.1. VOC limit is that for PVC welding compounds and adhesive primers for plastic.

- H. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Retain paragraph below if required for LEED for Schools Credit IEQ 4.

- I. Solvent cements and adhesive primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 OPTICAL-FIBER-CABLE PATHWAYS AND FITTINGS

Retain this article to specify special-purpose, flexible, nonmetallic pathways permitted by NFPA 70 in its "Optical Fiber Cables and Raceways" and "Communications Circuits" articles. See Evaluations.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Alpha Wire Company.
 - 2. Arnco Corporation.
 - 3. Endot Industries Inc.
 - 4. IPEX.
 - 5. Lamson & Sessions; Carlon Electrical Products.
 - 6. <Insert manufacturer>
 - 7. or approved equal.

In "Description" Paragraph below, if retaining more than one type of pathway, indicate extent and location of each type on Drawings.

- B. Description: Comply with UL 2024; flexible-type pathway, approved for **[plenum]** **[riser]** **[or]** **[general-use]** installation unless otherwise indicated.
 - 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 2. Comply with TIA-569-B.

2.4 METAL WIREWAYS AND AUXILIARY GUTTERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper B-Line, Inc.
 2. Hoffman; a Pentair company.
 3. Mono-Systems, Inc.
 4. Square D; a brand of Schneider Electric.
 5. **<Insert manufacturer>**
 6. or approved equal.
- B. Description: Sheet metal, complying with UL 870 and NEMA 250, **[Type 1] [Type 3R] [Type 4] [Type 12] <Insert type>** unless otherwise indicated, and sized according to NFPA 70.
1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with TIA-569-B.
- C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

Retain one or more options in "Wireway Covers" Paragraph below. If retaining more than one type, indicate locations of each type on Drawings.

- D. Wireway Covers: **[Hinged type] [Screw-cover type] [Flanged-and-gasketed type]** unless otherwise indicated.
- E. Finish: Manufacturer's standard enamel finish.

2.5 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Allied Moulded Products, Inc.
 2. Hoffman; a Pentair company.
 3. Lamson & Sessions; Carlon Electrical Products.
 4. Niedax-Kleinhuis USA, Inc.
 5. **<Insert manufacturer>**
 6. or approved equal.
- B. General Requirements for Nonmetallic Wireways and Auxiliary Gutters:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with TIA-569-B.

Retain one of two "Description" paragraphs below.

- C. Description: Fiberglass polyester, extruded and fabricated to required size and shape, without holes or knockouts. Cover shall be gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections shall be flanged and have stainless-steel screws and oil-resistant gaskets.
- D. Description: PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.
- E. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.

Retain first paragraph below if required for LEED-NC, LEED-CI, or LEED-CS Credit IEQ 4.1. VOC limit is that for PVC welding compounds and adhesive primers for plastic.

- F. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Retain paragraph below if required for LEED for Schools Credit IEQ 4.

- G. Solvent cements and adhesive primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.6 SURFACE PATHWAYS

- A. General Requirements for Surface Pathways:
 - 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 2. Comply with TIA-569-B.

Insert requirements for finish-coat paint color, if applicable, in "Surface Metal Pathways" Paragraph below. See Section 099123 "Interior Painting" for optional field-finish coats.

- B. Surface Metal Pathways: Galvanized steel with snap-on covers complying with UL 5. **[Manufacturer's standard enamel finish in color selected by DEN Project Manager] [Prime coated, ready for field painting].**

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Mono-Systems, Inc.
 - b. Niedax-Kleinhuis USA, Inc.
 - c. Panduit Corp.

- d. Wiremold / Legrand.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
- C. Surface Nonmetallic Pathways: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC with texture and color selected by DEN Project Manager from [**manufacturer's standard**] [**custom**] colors. Product shall comply with UL-94 V-0 requirements for self-extinguishing characteristics.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hubbell Incorporated; Wiring Device-Kellems Division.
 - b. Lamson & Sessions; Carlon Electrical Products.
 - c. Mono-Systems, Inc.
 - d. Panduit Corp.
 - e. Wiremold / Legrand.
 - f. **<Insert manufacturer>**
 - g. or approved equal.

2.7 BOXES, ENCLOSURES, AND CABINETS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1. Adalet.
 - 2. Cooper Technologies Company; Cooper Crouse-Hinds.
 - 3. EGS/Appleton Electric.
 - 4. Erickson Electrical Equipment Company.
 - 5. Hoffman; a Pentair company.
 - 6. Hubbell Incorporated; Killark Division.
 - 7. Lamson & Sessions; Carlon Electrical Products.
 - 8. Milbank Manufacturing Co.
 - 9. Molex; Woodhead Brand.
 - 10. Mono-Systems, Inc.
 - 11. O-Z/Gedney; a brand of EGS Electrical Group.
 - 12. RACO; a Hubbell company.
 - 13. Robroy Industries.
 - 14. Spring City Electrical Manufacturing Company.
 - 15. Stahlin Non-Metallic Enclosures; a division of Robroy Industries.
 - 16. Thomas & Betts Corporation.
 - 17. Wiremold / Legrand.
 - 18. **<Insert manufacturer>**
 - 19. or approved equal.

- B. General Requirements for Boxes, Enclosures, and Cabinets:
1. Comply with TIA-569-B.
 2. Boxes, enclosures and cabinets installed in wet locations shall be listed for use in wet locations.
 3. Pull boxes shall be sufficiently large to accommodate the number of conduits in the run assuming a single cable of 51% fill in each of the raceways. All pull boxes shall be equipped with hinged covers.
- C. Sheet-Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

In "Cast-Metal Outlet and Device Boxes" Paragraph below, aluminum boxes are suitable for use with steel pathways in most environments. Type FD is a device box with extra depth. Many other configurations are available.

- D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, [**ferrous alloy**] [**aluminum**], Type FD, with gasketed cover.
- E. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

See Editing Instruction No. 2 in the Evaluations for a discussion of floor boxes.

- F. Metal Floor Boxes:
1. Material: [**Cast metal**] [**or**] [**sheet metal**].
 2. Type: [**Fully adjustable**] [**Semi-adjustable**].
 3. Shape: Rectangular.
 4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- G. Nonmetallic Floor Boxes: Nonadjustable, [**round**] [**rectangular**].
1. Listing and Labeling: Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- H. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- I. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, [**cast aluminum**] [**galvanized, cast iron**] with gasketed cover.
- J. Device Box Dimensions: [4 inches square by 2-1/8 inches deep (100 mm square by 60 mm deep)] [4 inches by 2-1/8 inches by 2-1/8 inches deep (100 mm by 60 mm by 60 mm deep)] <Insert other dimension>.
- K. Gangable boxes are allowed.
- L. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.

Coordinate "Hinged-Cover Enclosures" Paragraph below with Drawings if hinged cover enclosures other than NEMA 250, Type 1 are required, such as for very dusty areas; or if consideration should be given to use of NEMA 250, Type 3R or Type 12 enclosures.

- M. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, [Type 1] [Type 3R] [Type 4] [Type 12] <Insert type> with continuous-hinge cover with flush latch unless otherwise indicated.
1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
 2. Nonmetallic Enclosures:
 - a. Material: [Plastic] [Fiberglass].

Retain subparagraph below to require radio-frequency-resistant paint.

- b. Finished inside with radio-frequency-resistant paint.
 3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

N. Cabinets:

1. NEMA 250, [Type 1] [Type 3R] [Type 12] <Insert type>, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
2. Hinged door in front cover with flush latch and concealed hinge.
3. Key latch to match panelboards.
4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.
6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.8 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND CABLING

See Editing Instruction No. 3 in the Evaluations. Verify with manufacturers that units of types specified are available in sizes required. Indicate the size of each enclosure on Drawings, and use a symbol or other notation to differentiate between handholes and pull boxes.

A. General Requirements for Handholes and Boxes:

1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.
2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. Comply with TIA-569-B.

Retain one or more of three paragraphs below to select enclosure type(s) for areas not subject to traffic by vehicles. Indicate location of each type in "Pathway Application" Article. For enclosures with cover options, verify that selected cover is available with load rating specified in "Pathway Application" Article. If retaining more than one type of box and cover combination, indicate location of each type on Drawings.

- B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel, fiberglass, or a combination of the two.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armorcast Products Company.
 - b. Carson Industries LLC.
 - c. CDR Systems Corporation; Hubbell Power Systems.
 - d. NewBasis.
 - e. Oldcastle Precast, Inc.; Christy Concrete Products.
 - f. Synertech Moulded Products; a division of Oldcastle Precast, Inc.
 - g. <Insert manufacturer>
 - h. or approved equal.
2. Standard: Comply with SCTE 77.

First option in "Configuration" Subparagraph below facilitates bottom conduit entry. Second option may be provided by a separate slab placed in the excavation under an open-bottom enclosure; third option is obtained by molding or fabricating the bottom integrally with the body of unit.

3. Configuration: Designed for flush burial with [open] [closed] [integral closed] bottom unless otherwise indicated.
4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
6. Cover Legend: Molded lettering, ["COMMUNICATIONS."] <Insert legend>.

Retain "Conduit Entrance Provisions" Subparagraph below if conduit enters enclosure through the side. Otherwise, entry is made through an open bottom or through side openings cut in the field, as specified in "Installation of Underground Handholes and Boxes" Article. Coordinate with Drawings.

7. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
8. Handholes [12 Inches Wide by 24 Inches Long (300 mm Wide by 600 mm Long)] <Insert dimensions> and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

- C. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with frame and covers of [polymer concrete] [reinforced concrete] [cast iron] [hot-dip galvanized-steel diamond plate] [fiberglass].

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armorcast Products Company.

- b. Carson Industries LLC.
- c. CDR Systems Corporation; Hubbell Power Systems.
- d. NewBasis.
- e. Nordic Fiberglass, Inc.
- f. Oldcastle Precast, Inc.; Christy Concrete Products.
- g. Synertech Moulded Products; a division of Oldcastle Precast, Inc.
- h. **<Insert manufacturer>**
- i. or approved equal.

2. Standard: Comply with SCTE 77.

Retain "Color of Frame and Cover" Subparagraph below if choosing a metal frame and cover; otherwise, delete.

3. Color of Frame and Cover: **[Gray] [Green]**.

First option in "Configuration" Subparagraph below facilitates bottom conduit entry. Second option may be provided by a separate slab placed in the excavation under an open-bottom enclosure; third option is obtained by molding or fabricating the bottom integrally with the body of unit.

4. Configuration: Designed for flush burial with **[open] [closed] [integral closed]** bottom unless otherwise indicated.
5. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
6. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
7. Cover Legend: Molded lettering, **["COMMUNICATIONS."]** **<Insert legend>**.

Retain "Conduit Entrance Provisions" Subparagraph below if conduit enters enclosure through the side. Otherwise, entry is made through an open bottom or through side openings cut in the field, as specified in "Installation of Underground Handholes and Boxes" Article. Coordinate with Drawings.

8. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
9. Handholes **[12 Inches Wide by 24 Inches Long (300 mm Wide by 600 mm Long)]** **<Insert dimensions>** and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.9 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

Retain this article for underground handholes and pull boxes. Delete if handholes and pull boxes are specified only in Section 260543 "Underground Ducts and Raceways for Electrical Systems." See Evaluations.

- A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

Retain one of first two subparagraphs below; retain first subparagraph to require an independent testing agency to test for compliance with SCTE requirements; retain second subparagraph to require testing by manufacturers' laboratories. See Evaluations for a discussion of testing.

1. Tests of materials shall be performed by an independent testing agency.

2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1 PATHWAY APPLICATION

Retain this article to specify the type of pathway to be installed. Coordinate with cabling methods specified in Section 271300 "Communications Backbone Cabling" and Section 271500 "Communications Horizontal Cabling" and in other Sections. See "Writing Guide" Article in the Evaluations for instructions on editing this article.

- A. Outdoors: Apply pathway products as specified below unless otherwise indicated:
 1. Exposed Conduit: [GRC] [IMC] [RNC, Type EPC-40-PVC] [RNC, Type EPC-80-PVC].
 2. Concealed Conduit, Aboveground: [GRC] [IMC] [EMT] [RNC, Type EPC-40-PVC].
 3. Underground Conduit: RNC, [Type EPC-40-PVC] [Type EPC-80-PVC], [direct buried] [concrete encased].
 4. Boxes and Enclosures, Aboveground: NEMA 250, [Type 3R] [Type 4].
- B. Indoors: Apply pathway products as specified below unless otherwise indicated:
 1. Exposed, Not Subject to Physical Damage: [EMT] [or] [RNC].
 2. Exposed, Not Subject to Severe Physical Damage: [EMT] [RNC identified for such use].
 3. Exposed and Subject to Severe Physical Damage: [GRC] [IMC]. Pathway locations include the following:
 - a. Loading dock.
 - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
 - c. Mechanical rooms.
 - d. Gymnasiums
 - e. <Insert designations of applicable spaces or locations>.
 4. Concealed in Ceilings and Interior Walls and Partitions: [EMT] [RNC, Type EPC-40-PVC] [or] [innerduct].
 5. Damp or Wet Locations: [GRC] [IMC].
 6. Pathways for Optical-Fiber or Communications Cable in Spaces Used for Environmental Air: [Plenum-type, optical-fiber-cable pathway] [Plenum-type, communications-cable pathway] [EMT] <Insert pathway type>.
 7. Pathways for Optical-Fiber or Communications-Cable Risers in Vertical Shafts: [Riser-type, optical-fiber-cable pathway] [Riser-type, communications-cable pathway] [EMT] <Insert pathway type>.

8. Pathways for Concealed General-Purpose Distribution of Optical-Fiber or Communications Cable: **[General-use, optical-fiber-cable pathway]** **[Riser-type, optical-fiber-cable pathway]** **[Plenum-type, optical-fiber-cable pathway]** **[General-use, communications-cable pathway]** **[Riser-type, communications-cable pathway]** **[Plenum-type, communications-cable pathway]** **[EMT]** .
 9. Boxes and Enclosures: NEMA 250 Type 1, except use NEMA 250 Type 4 **[stainless steel]** **[nonmetallic]** in institutional and commercial kitchens and damp or wet locations.
- C. Minimum Pathway Size: **3/4-inch** (21-mm) trade size. Minimum size for optical-fiber cables is **1 inch** (27 mm).
- D. Pathway Fittings: Compatible with pathways and suitable for use and location.
1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
 2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
 3. EMT: Use **[setscrew]** **[or]** **[compression]**, **[steel]** **[cast-metal]** fittings. Comply with NEMA FB 2.10.
- E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.
- Coordinate first paragraph below with Drawings.
- F. Install surface pathways only where indicated on Drawings.
- G. Do not install nonmetallic conduit where ambient temperature exceeds **[120 deg F (49 deg C)]** **<Insert temperature>**.

3.2 INSTALLATION

- A. Comply with NECA 1, NECA 101, and TIA-569-B for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum pathways. Comply with NFPA 70 limitations for types of pathways allowed in specific occupancies and number of floors.
- B. Keep pathways at least **6 inches** (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal pathway runs above water and steam piping.
- C. Complete pathway installation before starting conductor installation.
- D. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.
- E. Arrange stub-ups so curved portions of bends are not visible above finished slab.

First paragraph below is more restrictive than NFPA 70, which permits up to four quarter bends in a conduit run. Retain paragraph for more conservative design, in compliance with TIA-569-B, with less stress being placed on conductors being pulled in.

- F. Install no more than the equivalent of three 90-degree bends in any pathway run. Support within **12 inches (300 mm)** of changes in direction. Utilize long radius ells for all optical-fiber cables.
- G. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
- H. Support conduit within **12 inches (300 mm)** of enclosures to which attached.
- I. Communications room penetrations shall be made with a group of 4-inch metallic conduits equivalent in cross sectional area to the tray. Conduits shall be secured to both sides of the equipment room wall with unistrut and 4-inch unistrut clamps. Bonding bushings shall be provided on both sides of penetrating sleeves and bonded to tray/cable ladder on both sides. Firestop between conduits and wall.
- J. Pathways Embedded in Slabs:
 - 1. Run conduit larger than **1-inch (27-mm)** trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure pathways to reinforcement at maximum **10-foot (3-m)** intervals.
 - 2. Arrange pathways to cross building expansion joints at right angles with expansion fittings.
 - 3. Arrange pathways to keep a minimum of [**1 inch (25 mm)**] [**2 inches (50 mm)**] **<Insert dimension>** of concrete cover in all directions.
 - 4. Do not embed threadless fittings in concrete unless specifically approved by DEN Project Manager for each specific location.

Some authorities having jurisdiction may not permit nonmetallic tubing in fire-rated slabs in subparagraph below.

- 5. Change from ENT to [**RNC, Type EPC-40-PVC,**] [**GRC**] [**or**] [**IMC**] before rising above floor.
- K. Stub-ups to Above Recessed Ceilings:
 - 1. Use EMT, IMC, or RMC for pathways.
 - 2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

Retain "Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions" Paragraph below to require application of protective joint compound to threads of rigid steel conduit or IMC and to their fittings where these pathways are installed outdoors or in wet, damp, or corrosive conditions. This optional requirement exceeds NFPA 70 rules. If retaining, coordinate with Drawings indicating wet, damp, or corrosive indoor locations.

- L. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of pathway and fittings before making up joints. Follow compound manufacturer's written instructions.
- M. Coat field-cut threads on PVC-coated pathway with a corrosion-preventing conductive compound prior to assembly.

Retain one of first two paragraphs below to exceed NFPA 70 requirements. NFPA 70 does not require insulated bushings for communications cables, but TIA-569-B does.

- N. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install insulated bushings on conduits terminated with locknuts.
- O. Install pathways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.
- P. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.
- Q. Cut conduit perpendicular to the length. For conduits of 2-inch (53-mm) trade size and larger, use roll cutter or a guide to ensure cut is straight and perpendicular to the length.
- R. All conduit shall be verified after installation by pulling a mandrel through the conduit that is 80% of the internal diameter of the conduit. After completion of the mandrel test install one 3/4" wide woven aramid fiber pull tape in each conduit. Feed tape straight through pull boxes without breaking or splicing. Pull tape shall provide 2500 pounds of tensile strength and be marked with consecutive footage numbers at one-foot intervals. Permanently tie off tapes at both ends
- S. Install pull wires in empty pathways. Use polypropylene or monofilament plastic line with not less than 200-lb (90-kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each end of pull wire. Cap underground pathways designated as spare above grade alongside pathways in use.

Retain "Surface Pathways" Paragraph below if applicable.

- T. Surface Pathways:
 - 1. Install surface pathway for surface telecommunications outlet boxes only where indicated on Drawings.
 - 2. Install surface pathway with a minimum 2-inch (50-mm) radius control at bend points.
 - 3. Secure surface pathway with screws or other anchor-type devices at intervals not exceeding 48 inches (1200 mm) and with no less than two supports per straight pathway section. Support surface pathway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.

"Pathways for Optical-Fiber and Communications Cable" Paragraph below is applicable for EMT, IMC, RMC, RNC, and optical-fiber- or communications-cable pathways.

- U. Pathways for Optical-Fiber and Communications Cable: Install pathways, metal and nonmetallic, rigid and flexible, as follows:
1. **3/4-Inch (21-mm) Trade Size and Smaller:** Install pathways in maximum lengths of **50 feet (15 m)**.
 2. **1-Inch (27-mm) Trade Size and Larger:** Install pathways in maximum lengths of **75 feet (23 m)**.
 3. Install with a maximum of two 90-degree bends or equivalent for each length of pathway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.
- V. Install pathway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed pathways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install pathway sealing fittings according to NFPA 70.

See Evaluations for discussion of types of and locations for pathway seals.

- W. Install devices to seal pathway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all pathways at the following points:
1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
 2. Where an underground service pathway enters a building or structure.
 3. Where otherwise required by NFPA 70.
- X. Comply with manufacturer's written instructions for solvent welding PVC conduit and fittings.

Retain "Expansion-Joint Fittings" Paragraph below unless locations for expansion fittings for PVC conduits are indicated on Drawings. See Evaluations.

- Y. Expansion-Joint Fittings:
1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed **30 deg F (17 deg C)**, and that has straight-run length that exceeds **25 feet (7.6 m)**. Install in each run of aboveground RMC[**and EMT**] conduit that is located where environmental temperature change may exceed **100 deg F (55 deg C)** and that has straight-run length that exceeds **100 feet (30 m)**.
 2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:

Revise list below to include all locations in Project with environmental conditions that require considering expansion-joint fittings in conduit runs. For each Project, consider only locations with PVC conduit with straight-run length exceeding 25 feet (7.6 m) or metal conduit in lengths over 100 feet (30 m). Also revise temperature change for each location so it safely represents conditions anticipated. Temperature-change figures below are examples of maximum total swings from the lowest to the highest environmental temperatures at the indicated types of locations and must be revised to represent temperature swings or

changes that may occur at Project locations.

- a. Outdoor Locations Not Exposed to Direct Sunlight: [125 deg F (70 deg C)] <Insert temperature> temperature change.
- b. Outdoor Locations Exposed to Direct Sunlight: [155 deg F (86 deg C)] <Insert temperature> temperature change.
- c. Indoor Spaces Connected with Outdoors without Physical Separation: [125 deg F (70 deg C)] <Insert temperature> temperature change.
- d. Attics: [135 deg F (75 deg C)] <Insert temperature> temperature change.
- e. <Insert location and corresponding temperature change>.

Formula in first subparagraph below provides about 15 percent safety factor (extra expansion-contraction capability).

3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F (0.06 mm per meter of length of straight run per deg C) of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F (0.0115 mm per meter of length of straight run per deg C) of temperature change for metal conduits.
 4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
 5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.
- Z. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to [center] [top] [bottom] of box unless otherwise indicated.
- AA. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surface to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
- BB. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.
- CC. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
- DD. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
- EE. Set metal floor boxes level and flush with finished floor surface.
- FF. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.3 INSTALLATION OF UNDERGROUND CONDUIT

Retain this article if Project includes small amounts of exterior underground cabling 600 V and less. Delete if Section 260543 "Underground Ducts and Raceways for Electrical Systems" is included in the Project Manual.

A. Direct-Buried Conduit:

1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 312000 "Earth Moving" for pipe less than 6 inches (150 mm) in nominal diameter.
2. Install backfill as specified in Section 312000 "Earth Moving."
3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches (300 mm) of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 312000 "Earth Moving."

Retain one of first two subparagraphs below to specify type of stub-up for direct-buried conduits in Project.

4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through floor unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
5. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through floor.

Retain first two subparagraphs below with either of last two subparagraphs above.

- a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete for a minimum of 12 inches (300 mm) on each side of the coupling.
- b. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment.

Retain "Warning Planks" or "Underground Warning Tape" Subparagraph below to specify type of underground warning for direct-buried conduits in Project.

6. Warning Planks: Bury warning planks approximately 12 inches (300 mm) above direct-buried conduits, but a minimum of 6 inches (150 mm) below grade. Align planks along centerline of conduit.
7. Underground Warning Tape: Comply with requirements in Section 260553 "Identification for Electrical Systems."

3.4 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

Retain this article if Project includes small amounts of exterior underground cabling 600 V and less.

Delete if Section 260543 "Underground Ducts and Raceways for Electrical Systems" is included in the Project Manual. See Editing Instruction No. 3 in the Evaluations.

- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.
- B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch (25 mm) above finished grade.
- D. Install handholes with bottom below frost line, <Insert depth of frost line below grade at Project site> below grade.

First paragraph below requires Contractor to select hardware to install and support cable. Delete if cable support is not required. If required, revise paragraph to refer Contractor to Drawings, and show specific requirements on Drawings for each enclosure.

- E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.

Delete paragraph below if conduits enter enclosure through open bottom.

- F. Field cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.5 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR COMMUNICATIONS PENETRATIONS

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling."

3.6 FIRESTOPPING

- A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.7 PROTECTION

- A. Protect coatings, finishes, and cabinets from damage or deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 270536 - CABLE TRAYS FOR COMMUNICATIONS SYSTEMS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Ladder cable trays.
 - 2. Wire-basket cable trays.
 - 3. Single-rail cable trays.
 - 4. Trough cable trays.
 - 5. Fiberglass cable trays.
- B. Related Requirements:

Retain subparagraph below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 260536 "Cable Trays for Electrical Systems" for cable trays and accessories serving electrical systems.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of cable tray.
 - 1. Include data indicating dimensions and finishes for each type of cable tray indicated.
- B. Shop Drawings: For each type of cable tray.

1. Show fabrication and installation details of cable trays, including plans, elevations, and sections of components and attachments to other construction elements. Designate components and accessories, including clamps, brackets, hanger rods, splice-plate connectors, expansion-joint assemblies, straight lengths, and fittings.

Retain "Delegated-Design Submittal" Paragraph below if design services have been delegated to Contractor.

- C. Delegated-Design Submittal: For seismic restraints.
 1. Seismic-Restraint Details: Signed and sealed by a qualified professional engineer, licensed in the state where Project is located, who is responsible for their preparation.
 2. Design Calculations: Calculate requirements for selecting seismic restraints.
 3. Detail fabrication, including anchorages and attachments to structure and to supported cable trays.

1.4 INFORMATIONAL SUBMITTALS

Retain "Coordination Drawings" Paragraph below for situations where limited space necessitates maximum utilization for efficient installation of different components or if coordination is required for installation of products and materials by separate installers. Preparation of coordination drawings requires the participation of each trade involved in installations within the limited space.

- A. Coordination Drawings: Floor plans and sections, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 1. Include scaled cable tray layout and relationships between components and adjacent structural, electrical, and mechanical elements.
 2. Vertical and horizontal offsets and transitions.
 3. Clearances for access above and to side of cable trays.
 4. Vertical elevation of cable trays above the floor or below bottom of ceiling structure.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Section 260548 "Vibration and Seismic Controls for Electrical Systems." See ASCE/SEI 7 for certification requirements for equipment and components.

- B. Seismic Qualification Certificates: For cable trays, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- C. Field quality-control reports.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 PERFORMANCE REQUIREMENTS

Retain "Delegated Design" Paragraph below if Contractor is required to assume responsibility for design.

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cable tray supports and seismic bracing.

Retain "Seismic Performance" Paragraph below with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Delete paragraph if performance requirements are indicated on Drawings. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Coordinate requirements with structural engineer.

- B. Seismic Performance: Cable trays and supports shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain first subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification.

1. The term "withstand" means "the cable trays will remain in place without separation of any parts when subjected to the seismic forces specified."

For life-safety components required to function after an earthquake (such as fire-sprinkler systems, components that contain hazardous content, and storage racks in structures open to the public), the Component Importance Factor is 1.5. For other components, the Component Importance Factor is 1.0 unless the structure is in Seismic Use Group III and component is necessary for continued operation of facility or failure of component could impair continued operation of facility, in which case the Component Importance Factor is 1.5.

2. Component Importance Factor: [1.5] [1.0].

See ASCE/SEI 7, Coefficients for Architectural Component Table and Seismic Coefficients for Mechanical and Electrical Components Table for requirements to be inserted in subparagraph below.

3. <Insert requirements for Component Amplification Factor and Component Response Modification Factor>.

- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes in cable tray installed outdoors.

Differential values in "Temperature Change" Subparagraph below (for aluminum in particular) are suitable for most of the U.S.

1. Temperature Change: [120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces] <Insert temperature change>.

2.2 GENERAL REQUIREMENTS FOR CABLE TRAYS

If cable trays are identified for use via listing, then follow listing requirements. This may require that all interconnected cable trays be from single manufacturer. Some tray types may not be capable of being interconnected.

- A. Cable Trays and Accessories: Identified as defined in NFPA 70 and marked for intended location, application, and grounding.
 - 1. Source Limitations: Obtain cable trays and components from single manufacturer.

If using multiple types, sizes, or ratings of cable trays on a project, consider adding a table to Drawings.

- B. Sizes and Configurations: See the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.

Wire-basket cable trays cannot support the concentrated loads imposed on other tray types and can only support spans of 72 to 96 inches (1800 to 2400 mm) maximum.

- C. Structural Performance: See articles for individual cable tray types for specific values for the following parameters:

See "Load/Span Classification System" Article in the Evaluations.

- 1. Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
- 2. Concentrated Load: A load applied at midpoint of span and centerline of tray.
- 3. Load and Safety Factors: Applicable to both side rails and rung capacities.

2.3 LADDER CABLE TRAYS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

Retain "Basis-of-Design Product" Paragraph and list of manufacturers below to identify a specific product or a comparable product from manufacturers listed. Retain option and delete insert note if manufacturer's name and model number are indicated on Drawings.

- B. Basis-of-Design Product: Subject to compliance with requirements, provide **[product indicated on Drawings] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. Allied Tube & Conduit; a Tyco International Ltd. Co.
 - 2. Chalfant Manufacturing Company.

3. Cooper B-Line, Inc.
4. Mono-Systems, Inc.
5. MP Husky.
6. Niedax-Kleinhuis USA, Inc.
7. <Insert manufacturer's name>.

C. Description:

1. Configuration: Two I-beam side rails with transverse rungs welded to side rails.
2. Rung Spacing: [6 inches (150 mm)] [9 inches (225 mm)] [12 inches (300 mm)] [18 inches (450 mm)] o.c.
3. Radius-Fitting Rung Spacing: 9 inches (225 mm) at center of tray's width.
4. Minimum Cable-Bearing Surface for Rungs: 7/8-inch (22-mm) width with radius edges.
5. No portion of the rungs shall protrude below the bottom plane of side rails.
6. Structural Performance of Each Rung: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb (90-kg) concentrated load, when tested according to NEMA VE 1.
7. Minimum Usable Load Depth: [3 inches (75 mm)] [4 inches (100 mm)] [5 inches (125 mm)] [6 inches (150 mm)].
8. Straight Section Lengths: [10 feet (3 m)] [12 feet (3.6 m)] [20 feet (6 m)] [24 feet (7.4 m)] except where shorter lengths are required to facilitate tray assembly.
9. Width: [6 inches (150 mm)] [9 inches (225 mm)] [12 inches (300 mm)] [18 inches (450 mm)] [24 inches (600 mm)] [30 inches (750 mm)] [36 inches (900 mm)] unless otherwise indicated on Drawings.
10. Fitting Minimum Radius: [12 inches (300 mm)] [24 inches (600 mm)] [36 inches (900 mm)] [48 inches (1200 mm)].

The maximum uniform load and the support span are indicated by the cable tray class.

11. Class Designation: Comply with NEMA VE 1, [Class 12B] [Class 12C] [Class 20B] [Class 20C] <Insert designation>.
12. Splicing Assemblies: Bolted type using serrated flange locknuts.
13. Hardware and Fasteners: [ASTM F 593 and ASTM F 594 stainless steel, Type 316] [Steel, zinc plated according to ASTM B 633].
14. Splice Plate Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.

2.4 WIRE-BASKET CABLE TRAYS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

Retain "Basis-of-Design Product" Paragraph and list of manufacturers below to identify a specific product or a comparable product from manufacturers listed. Retain option and delete insert note if manufacturer's name and model number are indicated on Drawings.

B. Basis-of-Design Product: Subject to compliance with requirements, provide [**product indicated on Drawings**] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. Allied Tube & Conduit; a Tyco International Ltd. Co.
2. Cablofil/Legrande.
3. Chalfant Manufacturing Company.
4. Cooper B-Line, Inc.
5. Enduro Systems, Inc.
6. Mono-Systems, Inc.
7. MP Husky.
8. Niedax-Kleinhuis USA, Inc.
9. Snaketray.
10. Wiremaid Products Division; Vutec Corporation.
11. <Insert manufacturer's name>.

C. Description:

1. Configuration: Wires are formed into a standard **2-by-4-inch** (50-by-100-mm) wire mesh pattern with intersecting wires welded together. Mesh sections must have at least one bottom longitudinal wire along entire length of section.
2. Materials: High-strength-steel longitudinal wires with no bends.
3. Safety Provisions: Wire ends along wire-basket sides (flanges) rounded during manufacturing to maintain integrity of cables and installer safety.
4. Sizes:
 - a. Straight sections shall be furnished in standard **118-inch** (3000-mm) lengths.

Retain one or more of four "Wire-Basket Depth" subparagraphs below. If retaining more than one, show tray depth on Drawings.

- b. Wire-Basket Depth: **1-inch** (25-mm) usable loading depth by [**4 inches** (100 mm)] [**12 inches** (300 mm)] wide.
 - c. Wire-Basket Depth: **2-inch** (50-mm) usable loading depth by [**4 inches** (100 mm)] [**6 inches** (150 mm)] [**8 inches** (200 mm)] [**12 inches** (300 mm)] [**18 inches** (450 mm)] [**24 inches** (600 mm)] wide.
 - d. Wire-Basket Depth: **4-inch** (100-mm) usable loading depth by [**8 inches** (200 mm)] [**12 inches** (300 mm)] [**18 inches** (450 mm)] [**24 inches** (600 mm)] wide.
 - e. Wire-Basket Depth: **6-inch** (150-mm) usable loading depth by [**8 inches** (200 mm)] [**12 inches** (300 mm)] [**18 inches** (450 mm)] [**24 inches** (600 mm)] wide.
5. Connector Assemblies: Bolt welded to plate shaped to fit around adjoining tray wires and mating plate. Mechanically joins adjacent tray wires to splice sections together or to create horizontal fittings.
 6. Connector Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
 7. Hardware and Fasteners: [**ASTM F 593 and ASTM F 594 stainless steel, Type 316**] [**Steel, zinc plated according to ASTM B 633**].

2.5 SINGLE-RAIL CABLE TRAYS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

Retain "Basis-of-Design Product" Paragraph and list of manufacturers below to identify a specific product or a comparable product from manufacturers listed. Retain option and delete insert note if manufacturer's name and model number are indicated on Drawings.

- B. Basis-of-Design Product: Subject to compliance with requirements, provide **[product indicated on Drawings] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. Allied Tube & Conduit; a Tyco International Ltd. Co.
2. Cooper B-Line, Inc.
3. Mono-Systems, Inc.
4. MP Husky.
5. **<Insert manufacturer's name>**.

- C. Description:

1. Configuration: Center rail with extruded-aluminum rungs arranged symmetrically about the center rail.
2. Construction: Aluminum rungs mechanically connected to aluminum center rail in at least two places, with ends finished to protect installers and cables.
3. Rung Spacing: **[6 inches (150 mm)] [9 inches (225 mm)] [12 inches (300 mm)]** o.c.
4. Radius-Fitting Rung Spacing: **9 inches (225 mm)** at center of tray's width.
5. Straight Section Lengths: **[10 feet (3 m)] [12 feet (3.6 m)]** except where shorter lengths are required to facilitate tray assembly.
6. Width: **[6 inches (150 mm)] [9 inches (225 mm)] [12 inches (300 mm)] [18 inches (450 mm)] [24 inches (600 mm)]** unless otherwise indicated on Drawings.
7. Support Point: Splice fittings shall be hanger support point.
8. Support Spacing: Support each section at midpoint. Support wall-mounted sections a maximum of one-sixth of the section length from each end.
9. Loading Depth: **[3 inches (75 mm)] [4 inches (100 mm)] [6 inches (150 mm)]**.
10. Maximum Loads: **[25 lb/ft. (37 kg/m)] [50 lb/ft. (74 kg/m)]**.

Maintaining cable tray rungs within six degrees of horizontal is for aesthetic reasons. The tray looks uneven when tilted more than this. Support variations are available to allow varying levels of unbalanced loads while not exceeding the maximum tilt.

11. Unbalanced Loads: Maintain cable tray rungs within six degrees of horizontal under all loading conditions.
12. Splicing Assemblies: Bolted type using serrated flange locknuts.
13. Splicing Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
14. Hardware and Fasteners: **[ASTM F 593 and ASTM F 594 stainless steel, Type**

316] [Steel, zinc plated according to ASTM B 633].

15. Splices and Connectors: Protect cables from edges of center rail and do not intrude into cable fill area.

2.6 TROUGH CABLE TRAYS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

Retain "Basis-of-Design Product" Paragraph and list of manufacturers below to identify a specific product or a comparable product from manufacturers listed. Retain option and delete insert note if manufacturer's name and model number are indicated on Drawings.

- B. Basis-of-Design Product: Subject to compliance with requirements, provide **[product indicated on Drawings] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. Allied Tube & Conduit; a Tyco International Ltd. Co.
2. Chalfant Manufacturing Company.
3. Cooper B-Line, Inc.
4. Mono-Systems, Inc.
5. MP Husky.
6. Niedax-Kleinhuis USA, Inc.
7. **<Insert manufacturer's name>**.

- C. Description:

1. Configuration: Two longitudinal members (side rails) with a solid sheet over rungs exposed on the interior of the trough, or corrugated sheet with both edges welded to the side rails.
2. Rung Spacing: Rungs or corrugations shall be spaced a maximum of **6 inches** (150 mm) o.c. and have a minimum flat bearing surface of **2 inches** (50 mm).
3. Radius-Fitting Rung Spacing: **9 inches** (225 mm) at center of tray's width.
4. Structural Performance: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a**200-lb** (90-kg) concentrated load, when tested according to NEMA VE 1.
5. Minimum Usable Load Depth: **[3 inches** (75 mm)] **[4 inches** (100 mm)] **[5 inches** (125 mm)] **[6 inches** (150 mm)].
6. Straight Section Lengths: **[10 feet** (3 m)] **[12 feet** (3.6 m)] **[20 feet** (6 m)] **[24 feet** (7.4 m)] except where shorter lengths are required to facilitate tray assembly.
7. Width: **[6 inches** (150 mm)] **[9 inches** (225 mm)] **[12 inches** (300 mm)] **[18 inches** (450 mm)] **[24 inches** (600 mm)] **[30 inches** (750 mm)] **[36 inches** (900 mm)] unless otherwise indicated on Drawings.
8. Fitting Minimum Radius: **[12 inches** (300 mm)] **[24 inches** (600 mm)] **[36 inches** (900 mm)] **[48 inches** (1200 mm)].

The maximum uniform load and the support span are indicated by the cable tray class.

9. Class Designation: Comply with NEMA VE 1, [**Class 12B**] [**Class 12C**] [**Class 20B**] [**Class 20C**] <Insert designation>.
10. Splicing Assemblies: Bolted type using serrated flange locknuts.
11. Splicing Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
12. Hardware and Fasteners: [**ASTM F 593 and ASTM F 594 stainless steel, Type 316**] [**Steel, zinc plated according to ASTM B 633**].

2.7 FIBERGLASS CABLE TRAYS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**] [**provide products by one of the following**] [**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

Retain "Basis-of-Design Product" Paragraph and list of manufacturers below to identify a specific product or a comparable product from manufacturers listed. Retain option and delete insert note if manufacturer's name and model number are indicated on Drawings.

- B. Basis-of-Design Product: Subject to compliance with requirements, provide [**product indicated on Drawings**] <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. Allied Tube & Conduit; a Tyco International Ltd. Co.
2. Cooper B-Line, Inc.
3. Enduro Systems, Inc.
4. Mono-Systems, Inc.
5. MP Husky.
6. <Insert manufacturer's name>.

- C. Description:

1. Configuration: Two longitudinal members with rounded edges and smooth surfaces, complying with NEMA FG 1.
2. Materials: Straight section structural elements; side rails, rungs, and splice plates shall be pultruded from glass-fiber-reinforced [**polyester**] [**vinyl ester**] resin, complying with NEMA FG 1 and UL 568.
3. Fasteners: Fiberglass-encapsulated, ASTM F 593 and ASTM F 594 stainless steel, Type 316. Design fasteners so that no metal is visible when fully assembled and tightened. Fastener encapsulation shall not be damaged when torqued to manufacturer's recommended value.
4. Minimum Usable Load Depth: [**1 inch** (25 mm)] [**2 inches** (50 mm)] [**3 inches** (75 mm)] [**5 inches** (125 mm)] [**7 inches** (175 mm)] according to NEMA FG 1.
5. Straight Section Lengths: [**10 feet** (3 m)] [**20 feet** (6 m)].
6. Width: [**6 inches** (150 mm)] [**9 inches** (225 mm)] [**12 inches** (300 mm)] [**18 inches** (450 mm)] [**24 inches** (600 mm)] [**30 inches** (750 mm)] [**36 inches** (900 mm)] unless

otherwise indicated on Drawings.

The maximum uniform load and the support span are indicated by the cable tray class.

7. Class Designation: Comply with NEMA VE 1, [Class 12B] [Class 12C] [Class 20B] [Class 20C] <Insert designation>.

See "Load/Span Classification System" Article in the Evaluations for discussion of temperature effects.

8. Temperature Rating: Reduce the load rating of tray exposed to temperatures above 75 deg F (24 deg C) according to Table 4-3, "Working Loads," in NEMA FG 1.
9. Fitting Minimum Radius: [12 inches (300 mm)] [24 inches (600 mm)].
10. Splicing Assemblies: Minimum four nuts and bolts per plate. Splice plates shall be furnished with straight sections and fittings.
11. Splicing Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.

2.8 MATERIALS AND FINISHES

Retain one or more of "Steel," "Aluminum," and "Stainless Steel" paragraphs below. If using more than one type of cable tray material for Project, consider using a schedule to detail the specific requirements in each area. See "Cable Tray Materials" Article in the Evaluations.

A. Steel:

ASTM A 1011/A 1011M is for 14 gage and thicker; ASTM A 1008/A 1008M is for 16 gage and thinner. Both have structural-steel (SS) and high-strength, low-alloy steel (HSLAS) designations.

1. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of [ASTM A 1011/A 1011M, SS, Grade 33] [ASTM A 1008/A 1008M, Grade 33, Type 2].
2. Steel Tray Splice Plates: ASTM A 1011/A 1011M, HSLAS, Grade 50, Class 1.
3. Fasteners: Steel complies with the minimum mechanical properties of ASTM A 510/A 510M, Grade 1008.

Retain one of six "Finish" subparagraphs below or insert a different finish.

4. Finish: Mill galvanized before fabrication.
 - a. Standard: Comply with ASTM A 653/A 653M, G90 (Z275).

Retain one option in "Hardware" Subparagraph below.

- b. Hardware: [Galvanized, ASTM B 633] [Chromium-zinc plated, ASTM F 1136].
5. Finish: Electrogalvanized before fabrication.
 - a. Standard: Comply with ASTM B 633.
 - b. Hardware: Galvanized, ASTM B 633.
6. Finish: Hot-dip galvanized after fabrication.

- a. Standard: Comply with ASTM A 123/A 123M, Class B2.

Retain one option in "Hardware" Subparagraph below.

- b. Hardware: [**Chromium-zinc plated, ASTM F 1136**] [**Stainless steel, Type 316, ASTM F 593 and ASTM F 594**].

7. Finish: [**Epoxy-resin**] [**Powder-coat enamel**] paint.

- a. Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
- b. Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
- c. Epoxy-Resin Topcoat: Epoxy, cold-cured, gloss, MPI# 77.

Retain one option in "Hardware" Subparagraph below.

- d. Hardware: [**Chromium-zinc plated, ASTM F 1136**] [**Stainless steel, Type 316, ASTM F 593 and ASTM F 594**].

8. Finish: Factory-standard primer, ready for field painting, with chromium-zinc-plated hardware according to ASTM F 1136.
9. Finish: Black oxide finish for support accessories and miscellaneous hardware according to ASTM D 769.
10. <Insert finish>.

B. Aluminum:

1. Materials: Alloy 6063-T6 according to ANSI H 35.1/H 35.1M for extruded components and [**Alloy 5052-H32**] [or] [**Alloy 6061-T6**] according to ANSI H 35.1/H 35.1M for fabricated parts.
2. Hardware: [**Chromium-zinc-plated steel, ASTM F 1136**] [**Stainless steel, Type 316, ASTM F 593 and ASTM F 594**].
3. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F 593 and ASTM F 594.

C. Stainless Steel:

1. Materials: Low-carbon, passivated, stainless steel, [**Type 304L**] [or] [**Type 316L**], ASTM F 593 and ASTM F 594.
2. Hardware for Stainless-Steel Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F 593 and ASTM F 594.

2.9 CABLE TRAY ACCESSORIES

- A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.

If more than one cable tray cover type is required, delete "Covers" Paragraph below and indicate type on Drawings or in a schedule. Retain paragraph if cable tray covers are required. See "Cable Tray Covers" Article in the Evaluations.

- B. Covers: [**Solid**] [**Louvered**] [**Ventilated-hat**] [**2-in-3 pitch**] type made of same

materials and with same finishes as cable tray.

Indicate required locations for barrier strips on Drawings.

- C. Barrier Strips: Same materials and finishes as for cable tray.
- D. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.10 WARNING SIGNS

Insert different lettering size in "Lettering" Paragraph below to suit 25-foot (7.6-m) viewing distance.

- A. Lettering: [1-1/2-inch- (40-mm-)] <Insert dimension> high, black letters on yellow background with legend "Warning! Not To Be Used as Walkway, Ladder, or Support for Ladders or Personnel."
- B. Comply with requirements for fasteners in Section 260553 "Identification for Electrical Systems."

2.11 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect cable trays according to [NEMA FG 1] [NEMA VE 1].

PART 3 - EXECUTION

3.1 CABLE TRAY INSTALLATION

NEMA FG 1 applies to fiberglass cable trays only. NEMA VE 2 applies to all metallic cable trays.

- A. Install cable trays according to [NEMA FG 1] [NEMA VE 2].
- B. Install cable trays as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.
- C. Install cable trays so that the tray is accessible for cable installation and all splices are accessible for inspection and adjustment.
- D. Remove burrs and sharp edges from cable trays.
- E. Join aluminum cable tray with splice plates; use four square neck-carriage bolts and locknuts.
- F. Fasten cable tray supports to building structure[and install seismic restraints].

Retain first paragraph below if deleting "Delegated Design" Paragraph in "Performance Requirements" Article. Delete below if retaining "Delegated Design" Paragraph.

- G. Design fasteners and supports to carry cable tray, the cables, and a concentrated load of 200 lb (90 kg). Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems." [**Comply with seismic-restraint details according to Section 260548 "Vibration and Seismic Controls for Electrical Systems."**]
- H. Place supports so that spans do not exceed maximum spans on schedules and provide clearances shown on Drawings. Install intermediate supports when cable weight exceeds the load-carrying capacity of the tray rungs.
- I. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.
- J. Support bus assembly to prevent twisting from eccentric loading.
- K. Install center-hung supports for single-rail trays designed for 60 versus 40 percent eccentric loading condition, with a safety factor of 3.
- L. Locate and install supports according to [**NEMA FG 1**] [**NEMA VE 2**]. Do not install more than one cable tray splice between supports.

Retain one of first two paragraphs below.

- M. Support wire-basket cable trays with [**center support hangers**] [**trapeze hangers**] [**wall brackets**].
- N. Support [**center support hangers**] [**trapeze hangers**] for wire-basket trays with [1/4-inch- (6-mm-)] [3/8-inch- (10-mm-)] diameter rods.

Retain first paragraph below if cable trays connect to equipment.

- O. Make connections to equipment with flanged fittings fastened to cable trays and to equipment. Support cable trays independent of fittings. Do not carry weight of cable trays on equipment enclosure.

Retain first paragraph below if expansion fittings are required.

- P. Install expansion connectors where cable trays cross building expansion joints and in cable tray runs that exceed dimensions recommended in [**NEMA FG 1**] [**NEMA VE 2**]. Space connectors and set gaps according to applicable standard.
- Q. Make changes in direction and elevation using manufacturer's recommended fittings.
- R. Make cable tray connections using manufacturer's recommended fittings.
- S. Seal penetrations through fire and smoke barriers. Comply with requirements in Section 078413 "Penetration Firestopping."

If cable trays are sized for future cables, specify provisions for penetrations with sleeves through fire-rated partitions or use "repairable" firestop-sealing material. Include this Section's specific firestopping requirements in a schedule developed in Section 078413 "Penetration Firestopping."

- T. Install capped metal sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.
- U. Install cable trays with enough workspace to permit access for installing cables.

Retain first paragraph below if systems are mixed in a single cable tray.

- V. Install barriers to separate cables of different systems, such as power, communications, and data processing; or of different insulation levels, such as 600, 5000, and 15 000 V.

See "Cable Tray Covers" Article in the Evaluations.

- W. Install permanent covers, if used, after installing cable. Install cover clamps according to NEMA VE 2.
- X. Clamp covers on cable trays installed outdoors with heavy-duty clamps.
- Y. Install warning signs in visible locations on or near cable trays after cable tray installation.

3.2 CABLE TRAY GROUNDING

- A. Ground cable trays according to NFPA 70 unless additional grounding is specified. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Cable trays with communications cable shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.
- C. Cable trays with control conductors shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.
- D. When using epoxy- or powder-coat painted cable trays as a grounding conductor, completely remove coating at all splice contact points or ground connector attachment. After completing splice-to-grounding bolt attachment, repair the coated surfaces with coating materials recommended by cable tray manufacturer.
- E. Bond cable trays to power source for cables contained within with bonding conductors sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors."

3.3 CABLE INSTALLATION

- A. Install cables only when each cable tray run has been completed and inspected.

Fastening cables on horizontal runs is beyond the requirements of NFPA 70 in most cases. See Evaluations.

- B. Fasten cables on horizontal runs with cable clamps or cable ties according to NEMA VE 2. Tighten clamps only enough to secure the cable, without indenting the cable jacket. Install cable ties with a tool that includes an automatic pressure-limiting device.
- C. Fasten cables on vertical runs to cable trays every 18 inches (450 mm).

Length of unsupported cable is dependent on the cable diameter. See "Cable Installations" Article in the Evaluations.

- D. Fasten and support cables that pass from one cable tray to another or drop from cable trays to equipment enclosures. Fasten cables to the cable tray at the point of exit and support cables independent of the enclosure. The cable length between cable trays or between cable tray and enclosure shall be no more than 72 inches (1800 mm).
- E. Tie MI cables down every 36 inches (900 mm) where required to provide a 2-hour fire rating and every 72 inches (1800 mm) elsewhere.
- F. In existing construction, remove inactive or dead cables from cable trays.

3.4 CONNECTIONS

- A. Remove paint from all connection points before making connections. Repair paint after the connections are completed.
- B. Connect pathways to cable trays according to requirements in NEMA VE 2 and NEMA FG 1.

3.5 FIELD QUALITY CONTROL

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 1. After installing cable trays and after electrical circuitry has been energized, survey for compliance with requirements.
 2. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in cable trays, vibrations, and thermal expansion and contraction conditions, which may cause or have caused damage.
 3. Verify that the number, size, and voltage of cables in cable trays do not exceed that permitted by NFPA 70. Verify that communications or data-processing circuits are separated from power circuits by barriers or are installed in separate cable trays.
 4. Verify that there are no intruding items such as pipes, hangers, or other equipment in the cable tray.

5. Remove dust deposits, industrial process materials, trash of any description, and any blockage of tray ventilation.
6. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorque in suspect areas.
7. Check for improperly sized or installed bonding jumpers.
8. Check for missing, incorrect, or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
9. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable trays. Test entire cable tray system for continuity. Maximum allowable resistance is 1 ohm.

B. Prepare test and inspection reports.

3.6 PROTECTION

A. Protect installed cable trays and cables.

1. Install temporary protection for cables in open trays to safeguard exposed cables against falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials and shall remain in place until the risk of damage is over.
2. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
3. Repair damage to paint finishes with matching touchup coating recommended by cable tray manufacturer.

END OF SECTION 270536

SECTION 270544 - SLEEVES AND SLEEVE SEALS FOR COMMUNICATIONS PATHWAYS AND CABLING

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

Edit to suit Project.

- 1. Sleeves for pathway and cable penetration of non-fire-rated construction walls and floors.
- 2. Sleeve-seal systems.
- 3. Sleeve-seal fittings.
- 4. Grout.
- 5. Silicone sealants.

- B. Related Requirements:

Retain subparagraph below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 078413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in

this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

"Product Data for Credit EQ 4.1" Subparagraph below applies to LEED-NC, LEED-CI, and LEED-CS; coordinate with requirements for sealants.

- 1. Product Data for Credit EQ 4.1: For sealants, documentation including printed statement of VOC content.

"Laboratory Test Reports for Credit EQ 4" Subparagraph below applies to LEED for Schools.

- 2. Laboratory Test Reports for Credit EQ 4: For sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

C. CONSTRUCTION WASTE MANAGEMENT

- 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 SLEEVES

- A. Wall Sleeves:

Retain "Steel Pipe Sleeves" or "Cast-Iron Pipe Sleeves" Subparagraph below for penetrations through

exterior walls above and below grade.

1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.
2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

Retain "Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies" Paragraph below when required by authorities having jurisdiction. NFPA 70 does not contain requirements for sleeves. The requirement below is from International Building Code, Section 712, "Penetrations."

- B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

PVC sleeves in "PVC-Pipe Sleeves" and "Molded-PVC Sleeves" paragraphs below may be prohibited by authorities having jurisdiction.

- C. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
- D. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.
- E. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
- F. Sleeves for Rectangular Openings:
1. Material: Galvanized-steel sheet.
 2. Minimum Metal Thickness:
 - a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and with no side larger than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
 - b. For sleeve cross-section rectangle perimeter 50 inches (1270 mm) or more and one or more sides larger than 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).
- G. Sleeves for Vertical (Backbone) Communications Pathways:
1. Vertical Communications Pathways are facilities used to distribute and support cable between MDF and IDF rooms. These pathways may include conduit, cable tray and sleeves between vertically aligned rooms.
 2. Sleeves -Vertically aligned IDF and MDF rooms shall be linked with a series of 4-inch rigid metallic sleeves. Sleeves shall be attached to the wall above and below the floor slab with length of unistrut and appropriate clamp. Sleeves must not obstruct wall terminating space. All sleeves must be constructed in accordance with the National Electrical Code (NEC) and local fire codes. Sleeves shall be provided with a minimum of a 4 inch high chamfered curb as measured from the finished floor. All sleeves shall be fire safed in accordance with DEN standards.

3. The following table provides general guidelines for determining the number of 4 in. sleeves required, based on ANSI/EIA/TIAA-569:

Total Square Feet Served	Qty of Sleeves
Up to 50,000	3
50,000 to 100,000	4
100,000 to 300,000	5-8
300,000 to 500,000	9-12

2.2 SLEEVE-SEAL SYSTEMS

Sleeve-seal systems in this article are used for conduit penetrations in slabs-on-grade and below grade in exterior walls.

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and pathway or cable.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. CALPICO, Inc.
 - c. Metraflex Company (The).
 - d. Pipeline Seal and Insulator, Inc.
 - e. Proco Products, Inc.
 - f. <Insert manufacturer>
 - g. or approved equal.

Retain first option in "Sealing Elements" Subparagraph below unless Nitrile (Buna N) rubber gasket material is required because hydrocarbons are present in the soil.

2. Sealing Elements: [EPDM] [Nitrile (Buna N)] rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: [Carbon steel] [Plastic] [Stainless steel].
4. Connecting Bolts and Nuts: [Carbon steel, with corrosion-resistant coating,] [Stainless steel] of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

Sleeve-seal fittings in this article are used for conduit penetrations in slabs-on-grade and in exterior walls. These fittings are made to match conduit OD, so they must be selected to match the penetrating piping size. They are available for NPS 1/2 to 6 (DN 15 to 150) piping.

- A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.

Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Presealed Systems.
 - b. <Insert manufacturer>
 - c. or approved equal.

2.4 GROUT

- A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.
- B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

Retain "Silicone Sealants" Article below when use of silicone sealants and silicone foams is permitted as an alternative to grout in sealing of conduit or cable penetrations in gypsum wallboard walls.

2.5 SILICONE SEALANTS

- A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.
1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.

Retain first subparagraph below if required for LEED-NC, LEED-CI, or LEED-CS Credit EQ 4.1.

2. Sealant shall have VOC content of [250] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

Retain subparagraph below if required for LEED for Schools Credit EQ 4.

3. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- B. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

2.6 CABLE TRAY PENETRATIONS THROUGH FIRE RATED PARTITIONS

- A. Cable trays requiring penetration through fire rated partitions shall terminate on each side of the rated partition. Furnish and install STI EZ-PATH series re-enterable fire and smoke seal modules through rated partition with an area equal to the capacity of the cable tray. Modules shall be UL classified and/or FM Systems Approved and tested to the requirements of ASTM E814 (UL 1479).

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

- A. Comply with NECA 1.
- B. Comply with NEMA VE 2 for cable tray and cable penetrations.
- C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:
1. Interior Penetrations of Non-Fire-Rated Walls and Floors:
 - a. Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Joint Sealants."
 - b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.
 2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
 3. Size pipe sleeves to provide [1/4-inch (6.4-mm)] **<Insert dimension>** annular clear space between sleeve and pathway or cable unless sleeve seal is to be installed[**or unless seismic criteria require different clearance**].
 4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.

Retain subparagraph below when unsleeved core-drilled openings in concrete floors are not allowed.

5. Install sleeves for floor penetrations. Extend sleeves installed in floors [2 inches (50 mm)] **<Insert dimension>** above finished floor level. Install sleeves during erection of floors.
- D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:
1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
 2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.

3. 4" Conduits shall be secured to both sides of the wall with unistrut and 4-inch unistrut clamps.
- E. Roof-Penetration Sleeves: Seal penetration of individual pathways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- F. Aboveground, Exterior-Wall Penetrations: Seal penetrations using [steel] [cast-iron] pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- G. Underground, Exterior-Wall and Floor Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between pathway or cable and sleeve for installing sleeve-seal system.

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

Sleeve-seal systems in this article are used in slabs-on-grade and in below-grade exterior concrete walls for a watertight seal around service-piping entries into the building. These systems require installation in a sleeve for proper operation.

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at pathway entries into building.
- B. Install type and number of sealing elements recommended by manufacturer for pathway or cable material and size. Position pathway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pathway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

Sleeve-seal fittings in this article are used above and below grade in concrete slabs and in concrete walls for a watertight seal around piping. These fittings do not require a sleeve.

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 271100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

Edit to suit Project.

- 1. Telecommunications mounting elements.
- 2. Backboards.
- 3. Telecommunications equipment racks and cabinets.
- 4. Grounding.

- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 260536 "Cable Trays for Electrical Systems" for cable trays and accessories.
- 2. Section 271300 "Communications Backbone Cabling" for voice and data cabling associated with system panels and devices, and Intermediate Distribution Facilities.
- 3. Section 271500 "Communications Horizontal Cabling" for voice and data cabling associated with system panels and devices.
- 4. Section 280513 "Conductors and Cables for Electronic Safety and Security" for voice and data cabling associated with system panels and devices.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. BICSI: Building Industry Consulting Service International.
- B. IDF: Intermediate Distribution Facility.
- C. LAN: Local area network.
- D. RCDD: Registered Communications Distribution Designer.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for equipment racks and cabinets.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For communications equipment room fittings. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Equipment Racks and Cabinets: Include workspace requirements and access for cable connections.
 - 3. Grounding: Indicate location of grounding bus bar and its mounting detail showing standoff insulators and wall mounting brackets.

1.5 INFORMATIONAL SUBMITTALS

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- A. Qualification Data: For **[Contractor]** **[Installer]**, qualified layout technician, installation

supervisor, and field inspector.

Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. Coordinate with Sections specifying telecommunications equipment supports and seismic controls. See ASCE/SEI 7 for certification requirements for equipment and components.

Coordinate seismic requirements with DEN Project Manager.

- B. Seismic Qualification Certificates: For equipment frames from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions. Base certification on the maximum number of components capable of being mounted in each rack type. Identify components on which certification is based.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 CLOSEOUT SUBMITTALS

Verify requirements for as-built plans with DEN Project Manager.

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

BICSI is an industry trade association. See Editing Instruction No. 2 in the Evaluations for summaries of qualifications for registration.

- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
1. Layout Responsibility: Preparation of Shop Drawings shall be under the direct supervision of [RCDD] [RCDD/NTS] **[Commercial Installer, Level 2]**.
 2. Installation Supervision: Installation shall be under the direct supervision of **[Registered Technician] [Level 2 Installer]**, who shall be present at all times when Work of this Section is performed at Project site.
 3. Field Inspector: Currently registered by BICSI as [RCDD] **[Commercial Installer, Level 2]** to perform the on-site inspection.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

B. CONSTRUCTION WASTE MANAGEMENT

1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall

be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 PERFORMANCE REQUIREMENTS

Retain "Seismic Performance" Paragraph below with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. Delete paragraph if performance requirements are indicated on Drawings. Model building codes and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Coordinate seismic requirements with structural engineer and DEN Project Manager.

- A. Seismic Performance: Equipment frames shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

Retain subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

2.2 BACKBOARDS

- A. Backboards: Plywood, [fire-retardant treated,]3/4 by 48 by 96 inches (19 by 1220 by 2440 mm). Comply with requirements for plywood backing panels specified in Section 061000 "Rough Carpentry."

2.3 EQUIPMENT FRAMES

Delete this article if all cross-connects and patch panels are mounted on backboards.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ADC.
 2. Belden Inc.
 3. Cooper B-Line.
 4. Emerson Network Power Connectivity Solutions.
 5. Hubbell Premise Wiring.

6. Leviton Commercial Networks Division.
 7. Middle Atlantic Products, Inc.
 8. Ortronics, Inc.
 9. Panduit Corp.
 10. Siemon Co. (The).
 11. Tyco Electronics Corporation; AMP Products.
 12. **<Insert manufacturer>**
 13. or approved equal.
- B. General Frame Requirements:
1. Distribution Frames: Freestanding and wall-mounting, modular-steel units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
 2. Module Dimension: Width compatible with EIA 310-D standard, **19-inch** (480-mm) panel mounting.
 3. Finish: Manufacturer's standard, baked-polyester powder coat.
- C. Floor-Mounted Racks: Modular-type, steel construction.
1. Vertical and horizontal cable management channels, top and bottom cable troughs, grounding lug[, **and a power strip**].
 2. Baked-polyester powder coat finish.
- D. Modular Freestanding Cabinets:
1. Removable and lockable side panels.
 2. Hinged and lockable front and rear doors.
 3. Adjustable feet for leveling.
 4. Screened ventilation openings in the roof and rear door.
 5. Cable access provisions in the roof and base.
 6. Grounding bus bar.
 7. **[Rack] [Roof]**-mounted, **550-cfm** (260-L/s) fan with filter.
 8. Power strip.
 9. Baked-polyester powder coat finish.
 10. All cabinets keyed alike.
- E. Modular Wall Cabinets:
1. Wall mounting.
 2. **[Steel] [Aluminum] [Steel or aluminum]** construction.
 3. Treated to resist corrosion.
 4. Lockable front[**and rear**] doors.
 5. Louvered side panels.
 6. Cable access provisions top and bottom.
 7. Grounding lug.
 8. **[Rack] [Roof]**-mounted, **250-cfm** (118-L/s) fan.
 9. Power strip.
 10. All cabinets keyed alike.

F. Cable Management for Equipment Frames:

1. Metal, with integral wire retaining fingers.
2. Baked-polyester powder coat finish.
3. Vertical cable management panels shall have front and rear channels, with covers.
4. Provide horizontal crossover cable manager at the top of each relay rack, with a minimum height of two rack units each.

2.4 POWER STRIPS

A. Power Strips: Comply with UL 1363.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Rack mounting.
3. **[Six] <Insert number>, [15-A, 120-V ac, NEMA WD 6, Configuration 5-15R] [20-A, 120-V ac, NEMA WD 6, Configuration 5-20R]** receptacles.
4. LED indicator lights for power and protection status.
5. LED indicator lights for reverse polarity and open outlet ground.

Retain one of first two subparagraphs below.

6. Circuit Breaker and Thermal Fusing: When protection is lost, circuit opens and cannot be reset.
7. Circuit Breaker and Thermal Fusing: Unit continues to supply power if protection is lost.
8. **[Close-coupled, direct plug-in] [Cord connected with 15-foot (4.5-m)]** line cord.
9. Rocker-type on-off switch, illuminated when in on position.

Retain two subparagraphs below if power strips contain surge protection. In first subparagraph, retain 33 kA for high exposure and cost, 26 kA for medium exposure and cost, and 13 kA for low exposure and cost.

10. Peak Single-Impulse Surge Current Rating: **[33] [26] [13]** kA per phase.
11. Protection modes shall be line to neutral, line to ground, and neutral to ground. UL 1449 clamping voltage for all three modes shall be not more than **[330 V] <Insert value>**.

2.5 GROUNDING

A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.

B. Telecommunications Main Bus Bar:

1. Connectors: Mechanical type, cast silicon bronze, solderless **[compression] [exothermic]**-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.
2. Ground Bus Bar: Copper, minimum **1/4 inch thick by 4 inches wide** (6 mm thick by 100 mm wide) with **9/32-inch (7.14-mm)** holes spaced **1-1/8 inches (28 mm)** apart.

3. Stand-Off Insulators: Comply with UL 891 for use in switchboards, 600 V. Lexan or PVC, impulse tested at 5000 V.

- C. Comply with J-STD-607-A.

2.6 LABELING

- A. Comply with TIA/EIA-606-A and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

PART 3 - EXECUTION

3.1 ENTRANCE FACILITIES

Retain first paragraph below if demarcation point and service entrance cabling are by telecommunications service provider.

- A. Contact DEN Project Manager and arrange for installation of demarcation point, protected entrance terminals, and a housing when so directed by DEN Project Manager.
- B. Comply with requirements in Section 270528 "Pathways for Communications Systems" for materials and installation requirements for **[underground]** **[buried]** **[aerial]** pathways.

3.2 INSTALLATION

- A. Comply with NECA 1.
- B. Comply with BICSI TDMM for layout and installation of communications equipment rooms.
- C. Bundle, lace, and train conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

Revise two paragraphs below to specify coordination with other parties involved in finalizing communications equipment room work. See Editing Instruction No. 3 in the Evaluations.

- D. Coordinate layout and installation of communications equipment with Owner's telecommunications and LAN equipment and service suppliers. Coordinate service entrance arrangement with local exchange carrier.
 1. Meet jointly with telecommunications and LAN equipment suppliers, local exchange carrier representatives, and Owner to exchange information and agree on details of equipment arrangements and installation interfaces.
 2. Record agreements reached in meetings and distribute them to other participants.

3. Adjust arrangements and locations of distribution frames, cross-connects, and patch panels in equipment rooms to accommodate and optimize arrangement and space requirements of telephone switch and LAN equipment.
 4. Adjust arrangements and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in the equipment room.
- E. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.

3.3 SLEEVE AND SLEEVE SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling."

3.4 FIRESTOPPING

- A. Comply with requirements in Section 078413 "Penetration Firestopping."
- B. Comply with TIA-569-B, Annex A, "Firestopping."
- C. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.5 GROUNDING

- A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. Comply with J-STD-607-A.
- C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least **2-inch (50-mm)** clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.
- D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

Retain subparagraph below if screened twisted-pair cables and coaxial cables are in communications equipment rooms.

1. Bond the shield of shielded cable to the grounding bus bar in communications rooms and spaces.

3.6 IDENTIFICATION

- A. Identify system components, wiring, and cabling complying with TIA/EIA-606-A. Comply with requirements in Section 260553 "Identification for Electrical Systems."
- B. Comply with requirements in Section 099123 "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.

See Section 271500 "Communications Horizontal Cabling" for additional identification requirements. See Evaluations for discussion of TIA/EIA standard as it applies to this Section.

- C. Paint and label colors for equipment identification shall comply with TIA/EIA-606-A for [Class 2] [Class 3] [Class 4] level of administration[**including optional identification requirements of this standard**].
- D. Labels shall be preprinted or computer-printed type.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 271100

Copyright 2010 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 271300 - COMMUNICATIONS BACKBONE CABLING

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

Edit to suit Project.

- 1. Pathways.
- 2. UTP cable.
- 3. Single Mode Fiber Optic Cable 9/125 micrometer.
- 4. Cable connecting hardware, patch panels, and cross-connects.
- 5. Cabling identification products.

- B. Related Sections:

Retain subparagraph below for requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 260536 "Cable Trays for Electrical Systems" for cable trays.
- 2. Section 260553 "Identification for Electrical Systems" for identification of cable systems and components.
- 3. Section 270528 "Pathways for Communication Systems" for wire pathways, wireways, conduit and fittings.
- 4. Section 280513 "Conductors and Cables for Electronic Safety and Security" for voice and data cabling associated with system panels and devices.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. BICSI: Building Industry Consulting Service International.
- B. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.
- C. EMI: Electromagnetic interference.
- D. IDC: Insulation displacement connector.
- E. LAN: Local area network.
- F. RCDD: Registered Communications Distribution Designer.
- G. UTP: Unshielded twisted pair.

1.4 BACKBONE CABLING DESCRIPTION

- A. Backbone cabling system shall provide interconnections between communications equipment rooms, main terminal space, and entrance facilities in the telecommunications cabling system structure. Cabling system consists of backbone cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for backbone-to-backbone cross-connection.
- B. Backbone cabling cross-connects may be located in communications equipment rooms or at entrance facilities. Bridged taps and splitters shall not be used as part of backbone cabling.
- C. All work designed and constructed under this section shall comply with EIA/TIA 568, 569, 606 and relevant Building Industry Construction Service, Inc. (BICSI Standards).
- D. Designers are required to submit a complete set of plans and specifications for their projects to the DEN Telecommunications Department for review and approval. Designers are also required to meet with representatives from the DEN Telecommunications Department at one or more times during the course of design to work out specific interface details prior to the final submittal.
- E. Work shall consist of furnishing all labor, equipment, supplies, and materials, unless otherwise specified, necessary for the installation of complete system of telecommunications pathways, spaces and cabling as required by the specifications

and as shown on the Drawings, subject to the terms and conditions of the contract. The Work shall also include the completion of those details of work not mentioned or shown which are necessary for the successful operation of all telecommunications systems.

- F. Backbone copper and fiber cabling at DEN are assigned unique numbers that allow cabling pair and strand assignments to be managed by the DEN cable management system. Backbone (BB) and Inter-Building (IB) cable number assignments shall be coordinated with the DEN Technologies to ensure that numerical assignments do not conflict with existing cable designations used elsewhere in the airport.

1.5 PERFORMANCE REQUIREMENTS

- A. General Performance: Backbone cabling system shall comply with transmission standards in TIA/EIA-568-B.1, when tested according to test procedures of this standard.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.6 ACTION SUBMITTALS

- A. Product Data: Provide complete product data for each element of cabling, and equipment proposed. Where a data sheet covers multiple items specifically mark items proposed for use on the Project.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:

Retain one of first two subparagraphs below.

- 1. System Labeling Schedules: Electronic copy of labeling schedules, in software and format selected by Owner.
- 2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
- 3. Cabling administration drawings and printouts.
- 4. Wiring diagrams to show typical wiring schematics including the following:
 - a. Cross-connects.
 - b. Patch panels.
 - c. Patch cords.
- 5. Cross-connects and patch panels. Detail mounting assemblies, and show elevations and physical relationship between the installed components.
- 6. Cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:

- a. Vertical and horizontal offsets and transitions.
- b. Clearances for access above and to side of cable trays.
- c. Vertical elevation of cable trays above the floor or bottom of ceiling structure.
- d. Load calculations to show dead and live loads as not exceeding manufacturer's rating for tray and its support elements.

1.7 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For Contractor, installer, qualified layout technician, installation supervisor, and field inspector.
- B. Source quality-control reports.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.
- D. Maintenance Data: For splices and connectors to include in maintenance manuals.

1.8 CLOSEOUT SUBMITTALS

Retain paragraph below for PC-based, cabling administration systems.

- A. Software and Firmware Operational Documentation:
 1. Complete test records for all cable tests.
 2. Diagrams indicating route, cable types, pair or strand count and cable ID numbers used in the Project.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 1. Provide complete as-built drawings for all IDF rooms, backbone conduit routes and tray routes indicating actual routing.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.9 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with

protective covering for storage and identified with labels describing contents.

1. Patch-Panel Units: **[One (1)] <Insert number>** of each type.
2. Connecting Blocks: **[One (1)] <Insert number>** of each type.

1.10 QUALITY ASSURANCE

BICSI is an industry trade association. See Editing Instruction No. 2 in the Evaluations for summaries of qualifications for registration.

- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
1. Layout Responsibility: Preparation of Shop Drawings[**and Cabling Administration Drawings**][, **Cabling Administration Drawings, and field testing program development**] by an RCDD.
 2. Installation Supervision: Installation shall be under the direct supervision of **[Registered Technician] [Level 2 Installer]**, who shall be present at all times when Work of this Section is performed at Project site.

Delete subparagraph below if Contractor performs field quality-control testing.

3. Testing Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

Retain first paragraph below if Contractor or manufacturer selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- B. Testing Agency Qualifications: An NRTL.
1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.
- C. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Flame-Spread Index: **[25] <Insert value>** or less.
 2. Smoke-Developed Index: **[50] [450] <Insert value>** or less.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Telecommunications Pathways and Spaces: Comply with TIA/EIA-569-A.
- F. Grounding: Comply with ANSI-J-STD-607-A.

1.11 DELIVERY, STORAGE, AND HANDLING

According to BICSI ITSIM, cables should be tested upon receipt.

- A. Test cables upon receipt at Project site.

Retain one or both of first two subparagraphs below.

1. Test optical fiber cable to determine the continuity of the strand end to end. Use **[optical fiber flashlight] [or] [optical loss test set] <Insert test instrument>**.
2. Test optical fiber cable while on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector, including the loss value of each. Retain test data and include the record in maintenance data.
3. Test each pair of UTP cable for open and short circuits.

1.12 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Verify that field measurements are as shown on Drawings.
- C. Where wire and cable routing is not shown, and destination only is indicated, determine exact routing and lengths required by field verification.

1.13 COORDINATION

Revise this article to specify coordination with other parties involved in finalizing communications equipment room work. See Editing Instruction No. 3 in the Evaluations.

- A. Coordinate layout and installation of telecommunications pathways and cabling with Owner's telecommunications and LAN equipment and service suppliers, and with DEN Project Manager.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

B. CONSTRUCTION WASTE MANAGEMENT

1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. All metal conductors shall be copper.
- B. All building wire and cable shall be installed in approved raceways.
- C. Materials and Equipment: Acceptable to the authority having jurisdiction and suitable for the use intended, except where more stringent requirements are indicated as described herein.

2.2 PATHWAYS

- A. General Requirements: Comply with TIA/EIA-569-A.
- B. Reference Section 270528 "Pathways for Communication Systems" for wire pathways, wireways, conduit and fittings.

Retain first paragraph below if cable support brackets are used in communications equipment rooms.

- C. Cable Support: NRTL labeled for support of Category 6 cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.
 - 1. Support brackets with cable tie slots for fastening cable ties to brackets.
 - 2. Lacing bars, spools, J-hooks, and D-rings.
 - 3. Straps and other devices.
- D. Cable Trays:
 - 1. Comply with requirements in Section 260536 "Cable Trays for Electrical Systems"
- E. Conduit and Boxes: Comply with requirements in Section 260533 "Raceway and Boxes for Electrical Systems." [**Flexible metal conduit shall not be used.**]
 - 1. Outlet boxes shall be no smaller than **2 inches** (50 mm) wide, **3 inches** (75 mm) high, and **2-1/2 inches** (64 mm) deep.

2.3 BACKBOARDS

- A. Backboards: Plywood, fire-retardant treated, **3/4 by 48 by 96 inches** (19 by 1220 by 2440 mm). Comply with requirements in Section 061000 "Rough Carpentry" for plywood backing panels.

2.4 UTP CABLE

Copy this article and re-edit for each product.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Belden CDT Inc.; Electronics Division.
 2. Berk-Tek; a Nexans company.
 3. CommScope, Inc.
 4. Draka USA.
 5. Genesis Cable Products; Honeywell International, Inc.
 6. KRONE Incorporated.
 7. Mohawk; a division of Belden CDT.
 8. Nordex/CDT; a subsidiary of Cable Design Technologies.
 9. Superior Essex Inc.
 10. SYSTIMAX Solutions; a CommScope Inc. brand.
 11. 3M.
 12. Tyco Electronics/AMP Netconnect; Tyco International Ltd.
 13. <Insert manufacturer's name>.
 14. or approved equal.
- B. Description: 100-ohm, [100] <Insert number>-pair UTP, formed into 25-pair binder groups covered with a[gray] thermoplastic jacket[and overall metallic shield].
1. Comply with ICEA S-90-661 for mechanical properties.
 2. Comply with TIA/EIA-568-B.1 for performance specifications.
 3. Comply with TIA/EIA-568-B.2, [Category 5e] [Category 6].
 4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:

Type requirements in subparagraphs below are minimum requirements and may be revised to suit Project. Retain options if "permitted substitutions," as defined in NFPA 70, are appropriate for this Project.

- a. Communications, General Purpose: Type CM or CMG[; or **MPP, CMP, MPR, CMR, MP, or MPG**].
- b. Communications, Plenum Rated: Type CMP[or **MPP**], complying with NFPA 262.
- c. Communications, Riser Rated: Type CMR[; or **MPP, CMP, or MPR**], complying with UL 1666.
- d. Communications, Limited Purpose: Type CMX[; or **MPP, CMP, MPR, CMR, MP, MPG, CM, or CMG**].
- e. Multipurpose: Type MP or MPG[; or **MPP or MPR**].
- f. Multipurpose, Plenum Rated: Type MPP, complying with NFPA 262.
- g. Multipurpose, Riser Rated: Type MPR[or **MPP**], complying with UL 1666.

2.5 UTP CABLE HARDWARE

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Technology Systems Industries, Inc.
 2. Dynacom Corporation.
 3. Hubbell Premise Wiring.
 4. KRONE Incorporated.
 5. Leviton Voice & Data Division.
 6. Molex Premise Networks; a division of Molex, Inc.
 7. Nordex/CDT; a subsidiary of Cable Design Technologies.
 8. Panduit Corp.
 9. Siemon Co. (The).
 10. Tyco Electronics/AMP Netconnect; Tyco International Ltd.
 11. **<Insert manufacturer's name>**.
 12. or approved equal.

See Editing Instruction No. 4 in the Evaluations for discussion about 110-style IDC connectors and connector blocks.

- B. General Requirements for Cable Connecting Hardware: Comply with TIA/EIA-568-B.2, IDC type, with modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of same category or higher.
- C. Connecting Blocks: **[110-style IDC for Category 5e] [110-style IDC for Category 5E or Category 6]** . Provide blocks for the number of cables terminated on the block, plus **[25] <Insert number>** percent spare. Integral with connector bodies, including plugs and jacks where indicated.

Delete first paragraph below if cross-connection is accomplished exclusively on patch panels.

- D. Cross-Connect: Modular array of connecting blocks arranged to terminate building cables and permit interconnection between cables.

Coordinate subparagraph below with Drawings for quantity of fields.

1. Number of Terminals per Field: **[One] <Insert number>** for each conductor in assigned cables.
- E. Patch Panel: Modular panels housing multiple-numbered jack units with IDC-type connectors at each jack for permanent termination of pair groups of installed cables.

Coordinate subparagraph below with Drawings for quantity of fields.

1. Number of Jacks per Field: One for each four-pair **[UTP cable indicated] [conductor group of indicated cables, plus spares and blank positions adequate to suit specified expansion criteria]**.

- F. Jacks and Jack Assemblies: Modular, color-coded, eight-position modular receptacle units with integral IDC-type terminals.

Cords are generally available in lengths to 20 feet (6 m) and longer in 24-inch (600-mm) increments.

- G. Patch Cords: Factory-made, 4-pair cables in [36-inch (900-mm)] [48-inch 1200-mm] <Insert length> lengths; terminated with 8-position modular plug at each end. Termination sequence shall be EIA/TIA 568B.

Retain one of two subparagraphs below; retain first for Category 6, second for Category 5e patch cords.

1. Patch cords shall have bend-relief-compliant boots and color-coded icons to ensure Category 6 performance. Patch cords shall have latch guards to protect against snagging.
2. Patch cords shall have color-coded boots for circuit identification.

2.6 OPTICAL FIBER CABLE

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Berk-Tek; a Nexans company.
 2. CommScope, Inc.
 3. Corning Cable Systems.
 4. General Cable Technologies Corporation.
 5. Mohawk; a division of Belden CDT.
 6. Nordex/CDT; a subsidiary of Cable Design Technologies.
 7. Optical Connectivity Solutions Division; Emerson Network Power.
 8. Superior Essex Inc.
 9. SYSTIMAX Solutions; a CommScope Inc. brand.
 10. 3M.
 11. Tyco Electronics/AMP Netconnect; Tyco International Ltd.
 12. <Insert manufacturer's name>.
 13. or approved equal.
- B. Description: Multimode, [50/125] [62.5/125]-micrometer, [24] <Insert number>-fiber, [nonconductive,]tight buffer, optical fiber cable.

Retain first subparagraph below for indoor cable. ICEA standard for outside plant is ICEA S-87-640.

1. Comply with ICEA S-83-596 for mechanical properties.
2. Comply with TIA/EIA-568-B.3 for performance specifications.

Retain first option in first subparagraph below for 50/125-micrometer cable; retain second for 62.5/125-micrometer cable.

3. Comply with [TIA/EIA-492AAAA-B] [TIA/EIA-492AAAA-A] for detailed specifications.

4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:

Type requirements in first six subparagraphs below are minimum requirements and may need to be revised to suit Project. OFC, OFCR, OFCG, and OFCP are conductive optical fiber cables that might have application in industrial settings. Retain options if "permitted substitutions," as defined in NFPA 70, are appropriate for this Project.

- a. General Purpose, Nonconductive: Type OFN or OFNG[, or **OFNR, OFNP**].
- b. Plenum Rated, Nonconductive: Type OFNP, complying with NFPA 262.
- c. Riser Rated, Nonconductive: Type OFNR[or **OFNP**], complying with UL 1666.
- d. General Purpose, Conductive: Type OFC or OFCG[; or **OFNG, OFN, OFCR, OFNR, OFCP, or OFNP**].
- e. Plenum Rated, Conductive: Type OFCP[or **OFNP**], complying with NFPA 262.
- f. Riser Rated, Conductive: Type OFCR[; or **OFNR, OFCP, or OFNP**], complying with UL 1666.

Retain first subparagraph below even if nonconductive cable is specified above. If both conductive and nonconductive cables are specified, indicate locations of each on Drawings.

5. Conductive cable shall be [**steel**] [**aluminum**] armored type.
6. Maximum Attenuation: <Insert number> dB/km at 850 nm; [**1.5**] <Insert number> dB/km at 1300 nm for multi-mode fiber.
7. Single Mode fiber shall be type SMF28E.
8. Minimum Modal Bandwidth: 160 MHz-km at 850 nm; 500 MHz-km at 1300 nm for multi-mode fiber.

C. Jacket:

1. Jacket Color: [**Aqua for 50/125-micrometer cable**][**Orange for 62.5/125-micrometer cable**] [**Yellow for Single Mode Fiber**].
2. Cable cordage jacket, fiber, unit, and group color shall be according to TIA/EIA-598-B.
3. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed **40 inches** (1000 mm).

2.7 OPTICAL FIBER CABLE HARDWARE

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain first paragraph and list of manufacturers below. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. ADC.
 2. American Technology Systems Industries, Inc.
 3. Berk-Tek; a Nexans company.
 4. Corning Cable Systems.

5. Dynacom Corporation.
6. Hubbell Premise Wiring.
7. Molex Premise Networks; a division of Molex, Inc.
8. Nordex/CDT; a subsidiary of Cable Design Technologies.
9. Optical Connectivity Solutions Division; Emerson Network Power.
10. Siemon Co. (The).
11. Superior Modular Products.
12. **<Insert manufacturer's name>**.
13. or approved equal.

- B. Cross-Connects and Patch Panels: Modular panels housing multiple-numbered cable connectors. Connector type for all strands except those used for analog services shall be type LC. Strands used for analog services such as DEN TV and Distributed Antenna Systems shall be terminated with APC high return loss terminations.

Coordinate subparagraph below with Drawings for quantity of fields.

1. Number of Connectors per Field: **[One (1)] <Insert number>** for each fiber of cable or cables assigned to field, plus spares and blank positions adequate to suit specified expansion criteria.
- C. Patch Cords: Factory-made, single or dual-fiber cables in **36-inch** (900-mm) incremental lengths.
- D. Cable Connecting Hardware:
1. Comply with Optical Fiber Connector Intermateability Standards (FOCIS) specifications of TIA/EIA-604-2, TIA/EIA-604-3-A, and TIA/EIA-604-12. Comply with TIA/EIA-568-B.3.

Type SC is a subscriber connector and Type ST is a straight-tip, single-fiber connector; both are in common use. Recently developed connectors are Type LC, which is an upgraded version of either Type SC or Type ST with a lower insertion loss, and Type MT-RJ, which is a no-epoxy, no-polish connector.

2. Quick-connect, simplex and duplex, **[Type SC] [Type ST] [Type LC]** connectors. Insertion loss not more than 0.75 dB.
3. Type SFF connectors may be used in termination racks, panels, and equipment packages.

2.8 GROUNDING

- A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.
- B. Comply with ANSI-J-STD-607-A.

2.9 IDENTIFICATION PRODUCTS

- A. Comply with TIA/EIA-606-A and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

- B. Reference Section 260553 "Identification for Electrical Systems" for identification of cable systems and components.

2.10 SOURCE QUALITY CONTROL

Retain first paragraph below if required. Independent certification may be acceptable to authorities having jurisdiction without further monitoring of plant's quality-control and testing program by Owner.

- A. Testing Agency: Engage a qualified testing agency to evaluate cables.
- B. Factory test cables on reels according to TIA/EIA-568-B.1.
- C. Factory test UTP cables according to TIA/EIA-568-B.2.
- D. Factory test multimode optical fiber cables according to TIA/EIA-526-14-A and TIA/EIA-568-B.3.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- E. Cable will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 GENERAL

- A. All Work to be coordinated with and approved by DEN Telecommunications Department and DEN Project Manager.
- B. All Work to be coordinated with existing systems at DEN.

3.2 ENTRANCE FACILITIES

Retain this article if service entrance cabling and demarcation point are provided by communications service provider.

- A. Coordinate backbone cabling with the protectors and demarcation point provided by communications service provider.

3.3 WIRING METHODS

Retain one of first two paragraphs below and coordinate with Drawings. Delete both if wiring methods for system are indicated on Drawings.

- A. Verify pathways are open, continuous and clear of debris before installing cables.

- B. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.

Retain first subparagraph below if retaining unenclosed wiring method option in paragraph above.

1. Install plenum cable in environmental air spaces, including plenum ceilings.
2. Comply with requirements for raceways and boxes specified in Section 260533 "Raceway and Boxes for Electrical Systems."
3. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems".

- C. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

- D. Wiring within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

3.4 INSTALLATION OF PATHWAYS

- A. Cable Trays:

1. Comply with NEMA VE 2 and TIA/EIA-569-A.
2. Comply with Section 260536 "Cable Trays for Electrical Systems".

Coordinate cable connection hardware installations and specialty arrangements with layout drawings and with requirements specified for communications equipment rooms. If Drawings are explicit enough, these requirements may be reduced or omitted.

- B. Comply with requirements for demarcation point, pathways, cabinets, and racks specified in Section 271100 "Communications Equipment Room Fittings." Drawings indicate general arrangement of pathways and fittings.

- C. Comply with TIA/EIA-569-A for pull-box sizing and length of conduit and number of bends between pull points.

- D. Comply with requirements in Section 260533 "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.

- E. Install manufactured conduit sweeps and long-radius elbows whenever possible.

- F. Pathway Installation in Communications Equipment Rooms:

1. Secure conduits to backboard when entering room from overhead.
2. Extend conduits [3 inches (76 mm)] <Insert dimension> above finished floor.
3. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

- G. Backboards: Install backboards with 96-inch (2440-mm) dimension vertical. Butt

adjacent sheets tightly, and form smooth gap-free corners and joints.

- H. Install wire in raceway after interior of building has been physically protected from the weather and all mechanical work likely to injure conductors has been completed.
- I. Completely and thoroughly swab raceway system before installing conductors.
- J. Conductors shall not be pulled in concrete encased conduits before concrete is placed.

3.5 INSTALLATION OF CABLES

- A. Comply with NECA 1.
- B. Provide protection for exposed cables where subject to damage.
- C. Use suitable cable fittings and connectors.
- D. All cable shall be racked and supported in manholes.
- E. Pulling winches and other necessary pulling equipment shall be of adequate capacity to ensure a continuous pull on the cable. Strain gages shall be used to monitor the cable pulling tension.
- F. Cable and Wire pulling lubricants that are non-corrosive and harmless to hands and clothes shall be used. Lubricants shall be compatible with cable jackets and insulation.
- G. General Requirements for Cabling:
 - 1. Comply with TIA/EIA-568-B.1.
 - 2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
 - 3. Install 110-style IDC termination hardware unless otherwise indicated.
 - 4. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
 - 5. Cables may not be spliced except at locations noted on the contract drawings.
 - 6. Secure and support cables at intervals not exceeding **30 inches** (760 mm) and not more than **6 inches** (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
 - 7. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
 - 8. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Use lacing bars and distribution spools.
 - 9. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
 - 10. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.

11. In the communications equipment room, install a **10-foot-** (3-m-) long service loop on each end of cable.
12. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.

H. UTP Cable Installation:

1. Comply with TIA/EIA-568-B.2.
2. Do not untwist UTP cables more than **1/2 inch** (12 mm) from the point of termination to maintain cable geometry.

I. Optical Fiber Cable Installation:

1. Comply with TIA/EIA-568-B.3.
2. Cable may be terminated on connecting hardware that is rack or cabinet mounted.

J. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

K. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Coil cable [**6 feet** (1800 mm)] **<Insert size>** long not less than [**12 inches** (300 mm)] **<Insert size>** in diameter below each feed point.

L. Group connecting hardware for cables into separate logical fields.

See Editing Instruction No. 5 in the Evaluations for discussion about EMI.

M. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA/EIA-569-A recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **5 inches** (127 mm).
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **12 inches** (300 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of **24 inches** (610 mm).

3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **2-1/2 inches** (64 mm).
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **6 inches** (150 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of **12 inches** (300 mm).
4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **3 inches** (76 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of **6 inches** (150 mm).
5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of **48 inches** (1200 mm).
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of **5 inches** (127 mm).

3.6 FIRESTOPPING

- A. Comply with requirements in Section 078413 "Penetration Firestopping."
- B. Comply with TIA/EIA-569-A, Annex A, "Firestopping."
- C. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.7 GROUNDING

- A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. Comply with ANSI-J-STD-607-A.
- C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least **2-inch** (50-mm) clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.
- D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

3.8 IDENTIFICATION

- A. Identify system components, wiring, and cabling using backbone and inter-building cable numbers as assigned by DEN Technologies Premise Wiring & Communications.
 - 1. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.
- B. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- C. Comply with requirements in Section 099123 "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.

See Section 271500 "Communications Horizontal Cabling" for additional identification requirements. See Evaluations for discussion about TIA/EIA standard as it applies to this Section.

- D. Paint and label colors for equipment identification shall comply with TIA/EIA-606-A for [Class 2] [Class 3] [Class 4] level of administration[**including optional identification requirements of this standard**].
- E. Comply with requirements in Section 271500 "Communications Horizontal Cabling" for cable and asset management software.
- F. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, [**backbone pathways and cables,**] [**entrance pathways and cables,**] terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors.
- G. Cable and Wire Identification:
 - 1. Label each cable within 4 inches (100 mm) of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
 - 2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
 - 3. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
 - a. Individually number wiring conductors connected to terminal strips and identify each cable or wiring group being extended from a panel or cabinet to a building-mounted device with name and number of particular device as shown.
 - b. Label each unit and field within distribution racks and frames.
 - 4. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware.
- H. Labels shall be preprinted or computer-printed type with printing area and font color

that contrasts with cable jacket color but still complies with requirements in TIA/EIA 606-A, for the following:

1. Cables use flexible vinyl or polyester that flexes as cables are bent.

3.9 FIELD QUALITY CONTROL

- A. Inspect wire and cable for physical damage and proper connection.
- B. Torque conductor connections and terminations to manufacturer's recommended values. Provide torque report if requested by DEN Project Manager.
- C. Verify cables are colored coded and labeled according to contract documents.

Retain one of first two paragraphs below to identify who shall perform tests and inspections. If retaining second option in first paragraph, or if retaining second paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

- D. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.

Retain first paragraph below to require Contractor to perform tests and inspections.

- E. Perform tests and inspections.

Retain first paragraph below to describe tests and inspections to be performed.

- F. Tests and Inspections:
 1. Visually inspect UTP and optical fiber jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments, and inspect cabling connections for compliance with TIA/EIA-568-B.1.
 2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.

Retain first subparagraph below if verification of quality is to be performed before completing horizontal cabling. Otherwise, specify testing of the transmission performance of cabling system in Section 271500 "Communications Horizontal Cabling"

3. Test UTP copper cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.
 - a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

Retain subparagraph below if verification of quality is to be performed before completing horizontal cabling. Otherwise, specify testing of the transmission performance of cabling system in Section 271500 "Communications Horizontal Cabling" for voice and data cabling associated with system panels and devices.

4. Optical Fiber Cable Tests:

- a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
- b. Link End-to-End Attenuation Tests - Single Mode:
 - 1) Perform an optical loss test of each strand using an optical power meter and calibrated light source at both 1310nm and 1550nm..
 - 2) Perform an Optical Time Domain Reflectometer test from both ends of each fiber strand at both 1310nm and 1550nm.

- G. Data for each measurement shall be documented. Data for submittals shall be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.
- H. Remove and replace cabling where test results indicate that they do not comply with specified requirements.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- I. End-to-end cabling will be considered defective if it does not pass tests and inspections.
- J. Prepare test and inspection reports.

PART 4 - PART 4- MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PART 5- PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 271300

SECTION 271500 - COMMUNICATIONS HORIZONTAL CABLING

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

Edit to suit Project.

1. UTP cabling.
2. **[50/125] [62.5/125]**-micrometer, optical fiber cabling.
3. Coaxial cable.
4. Multiuser telecommunications outlet assemblies.
5. Cable connecting hardware, patch panels, and cross-connects.
6. Telecommunications outlet/connectors.
7. Cabling system identification products.
8. Cable management system.

- B. Related Requirements:

Retain subparagraphs below to cross-reference requirements Contractor might expect to find in this Section but are specified in other Sections.

1. Section 270528 "Pathways for Communications Systems" for pathways.
2. Section 260536 "Cable Trays for Electrical Systems" for cable tray systems.
3. Section 271300 "Communications Backbone Cabling" for voice and data cabling associated with system panels and devices.
4. Section 280513 "Conductors and Cables for Electronic Safety and Security" for voice and data cabling associated with system panels and devices.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 GENERAL DESCRIPTION

- A. Denver International Airport (DEN) owns and operates a private telecommunications infrastructure that provides voice, data and video services to all airport, airline and tenant facilities throughout the fifty-three square mile site. Tenants developing leasehold spaces or facilities on ground-leased sites are required to design their horizontal wiring pathways in accordance with these guidelines. Horizontal wiring pathways include all types of raceway systems to support voice, data, LAN, CATV and fiber cabling between DEN telecommunications rooms and outlets in the tenant, public or City areas
- B. Designers are required to submit a complete set of plans and specifications for their projects to the DEN Telecommunications Department for review and approval. Designers are also encouraged to meet with representatives from the DEN Telecommunications Department at one or more times during the course of design to work out specific interface details prior to the final submittal.

1.4 DEN TELECOMMUNICATIONS HORIZONTAL CABLING POLICY

- A. Tenants and designers of new DEN facilities are required to install raceways, outlet boxes and pull cords for all communications outlets in accordance with the worksheets that accompany these guidelines.
- B. Tenants and designers are encouraged to utilize the services of the current DEN Premise Wiring and Communications System (PWCS) contractor for installation of all horizontal cabling, outlets and termination. The City's contract with this contractor stipulates that all wiring and other components installed by the PWCS contractor be serviced and maintained by that contractor as part of the ongoing PWCS system maintenance agreement.
- C. A tenant may elect to install a privately owned and maintained system of horizontal wiring within it's leasehold space. This wiring would extend from outlets within the leasehold area to a designated point of demarcation with the DEN PWCS system. In this configuration, circuits ordered through the PWCS contractor or regulated telephone company will be terminated and tagged at the designated point of demarcation. Responsibility for cross connecting these circuits from the point of demarcation to their final destination remains the responsibility of the tenant. The PWCS contractor will troubleshoot any reported problems with a circuit only as far as the designated point of demarcation.
- D. Any tenant vacating their leasehold space shall leave any horizontal wiring in place and in serviceable condition. This shall include outlets, horizontal wiring and termination blocks at the telecommunications equipment room.

1.5 HORIZONTAL WIRING PATHWAYS

- A. Reference Section 270528 "Pathways for Communication Systems" and Section 260536 "Cable Trays for Electrical Systems" for pathways and cable trays for communication systems.
- B. Horizontal wiring pathways consist of structures that conceal, protect, and support horizontal cables between the communications workstation outlet and the horizontal cross-connect in the serving telecommunications room, cabinet or closet. Horizontal communications pathways are used to distribute and support horizontal cable and connecting hardware between the workstation outlet and the telecommunications closet. These pathways & spaces are the "container" for the horizontal cabling.
- C. It is the responsibility of the designer to review all proposed Horizontal Distribution Systems with the DEN Telecommunications Department to ensure the systems design:
 - 1. Makes optimum use of the ability of the horizontal cabling system to accommodate change.
 - 2. Is as unconstrained as possible by vendor-dependence.
 - 3. Compliance with ANSI/NFPA 70 Local, State, and Federal Codes.
 - 4. Compliance with ANSI/EIA-TIA-568 and 569.

1.6 ELECTROMAGNETIC INTERFERENCE (EMI)

- A. EMI causes severe problems with electronic equipment, telecommunications and data communications, avoidance of all potential sources or, electromagnetic interference must be a primary consideration when designing a horizontal distribution system. To avoid electromagnetic interference, all distribution pathways should provide clearances of at least:
 - 1. Four (4) ft. (1.2 m) from large motors and/or transformers.
 - 2. One (1) ft. (0.3 m) from conduit and cables used for electrical power distribution.
 - 3. Five (5) in. (12 cm) from fluorescent lighting
- B. Note: Horizontal Distribution Pathways should cross perpendicular to fluorescent lighting and electrical power cables or conduits.
- C. For additional clearance requirements, see ANSI/EIA-TIA-569 and ANSI/NFPA 70.

1.7 TYPES OF HORIZONTAL WIRING PATHWAY SYSTEMS

- A. Many types of horizontal wiring pathway systems are acceptable for installation at DEN. Many buildings may require two or more of the following systems to meet all distribution needs. The acceptable types of horizontal pathways are:
 - 1. Unlimited access (raised floors).
 - 2. Conduit.
 - 3. Cable tray.

1.8 OTHER HORIZONTAL DISTRIBUTION SYSTEMS

- A. Other types of horizontal distribution systems may be used. These include, but are not limited to:
 - 1. Unlimited access (raised floors).
 - 2. Conduit.
- B. Due to the individuality, complexity and the broad scope of requirements for these systems, DEN Telecommunications will review each of these specified systems on a case-by-case basis.

1.9 DEFINITIONS

Retain terms that remain after this Section has been edited for a project.

- A. BICSI: Building Industry Consulting Service International.
- B. Consolidation Point: A location for interconnection between horizontal cables extending from building pathways and horizontal cables extending into furniture pathways.
- C. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.
- D. EMI: Electromagnetic interference.
- E. IDC: Insulation displacement connector.
- F. LAN: Local area network.
- G. MUTOA: Multiuser telecommunications outlet assembly, a grouping in one location of several telecommunications outlet/connectors.
- H. Outlet/Connectors: A connecting device in the work area on which horizontal cable or outlet cable terminates.
- I. RCDD: Registered Communications Distribution Designer.
- J. UTP: Unshielded twisted pair.

1.10 ADMINISTRATIVE REQUIREMENTS

Revise this article to specify coordination with other parties involved in finalizing communications equipment room work. See Editing Instruction No. 3 in the Evaluations.

- A. Coordinate layout and installation of telecommunications cabling with Owner's telecommunications and LAN equipment and service suppliers.

- B. Coordinate telecommunications outlet/connector locations with location of power receptacles at each work area.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.11 ACTION SUBMITTALS

- A. Product Data: For each type of product submit a complete data sheet indicating physical properties and performance characteristics.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:

Retain one of two "System Labeling Schedules" subparagraphs below.

- 1. System Labeling Schedules: Electronic copy of labeling schedules, in software and format selected by Owner.
- 2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
- 3. Cabling administration drawings and printouts.
- 4. Wiring diagrams to show typical wiring schematics, including the following:
 - a. Cross-connects.
 - b. Patch panels.
 - c. Patch cords.
- 5. Cross-connects and patch panels. Detail mounting assemblies, and show elevations and physical relationship between the installed components.

Retain "Samples" Paragraph below when workstation outlet faceplates have critical features needing hands-on appraisal.

Delete sample requirement in paragraph below if project is of very limited scope, and deletion is approved by DEN Project Manager. Coordinate sample requirements with DEN Project Manager.

- C. Samples: For workstation outlets, jacks, jack assemblies, **[in specified finish, one for each size and outlet configuration] [and faceplates for color selection and evaluation of technical features].**

1.12 INFORMATIONAL SUBMITTALS

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- A. Qualification Data: For **[Installer,]**qualified layout technician, installation supervisor, and field inspector.
- B. Source quality-control reports.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.

1.13 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For splices and connectors to include in maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.14 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Patch-Panel Units: **[One (1)] <Insert number>** of each type.
 2. Connecting Blocks: **[One (1)] <Insert number>** of each type.
 3. Device Plates: **[One (1)] <Insert number>** of each type.
 4. Multiuser Telecommunications Outlet Assemblies: **[One (1)] <Insert number>** of each type.

1.15 QUALITY ASSURANCE

BICSI is an industry trade association. See Editing Instruction No. 2 in the Evaluations for summaries of qualifications for registration.

- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
 1. Layout Responsibility: Preparation of Shop Drawings[**and Cabling Administration Drawings**][, **Cabling Administration Drawings, and field testing program development**] by an RCDD.
 2. Installation Supervision: Installation shall be under the direct supervision of **[Registered Technician] [Level 2 Installer]**, who shall be present at all times when Work of this Section is performed at Project site.

Delete "Testing Supervisor" Subparagraph below if Contractor performs field quality control.

3. Testing Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

Retain "Testing Agency Qualifications" Paragraph below if Contractor or manufacturer selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also defines "NRTL" (nationally recognized testing laboratory).

- B. Testing Agency Qualifications: An NRTL.
 - 1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

1.16 PROJECT CONDITIONS

- A. Verify that field measurements are as shown on Drawings.
- B. Where wire and cable routing is not shown, and destination only is indicated, determine exact routing and lengths required by field verification.

1.17 DELIVERY, STORAGE, AND HANDLING

According to BICSI ITSIM, cables should be tested upon receipt.

- A. Test cables upon receipt at Project site.

Retain one or both of first two subparagraphs below.

- 1. Test optical fiber cables to determine the continuity of the strand end to end. Use **[optical loss test set]** <Insert test>.
- 2. Test optical fiber cables while on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector; including the loss value of each. Retain test data and include the record in maintenance data.
- 3. Test each pair of UTP cable for open and short circuits.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

- B. CONSTRUCTION WASTE MANAGEMENT
 - 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 HORIZONTAL CABLING DESCRIPTION

- A. Horizontal cable and its connecting hardware provide the means of transporting signals between the telecommunications outlet/connector and the horizontal cross-connect located in the communications equipment room. This cabling and its connecting hardware are called a "permanent link," a term that is used in the testing protocols.
1. TIA/EIA-568-B.1 requires that a minimum of two telecommunications outlet/connectors be installed for each work area.
 2. Horizontal cabling shall contain no more than one transition point or consolidation point between the horizontal cross-connect and the telecommunications outlet/connector.
 3. Bridged taps and splices shall not be installed in the horizontal cabling.
 4. Splitters shall not be installed as part of the optical fiber cabling.
- B. The maximum allowable horizontal cable length is **295 feet (90 m)**. This maximum allowable length does not include an allowance for the length of **16 feet (4.9 m)** to the workstation equipment or in the horizontal cross-connect.
- C. All metal conductors shall be copper.
- D. All building wire and cable shall be installed in an approved raceway.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Horizontal cabling system shall comply with transmission standards in TIA/EIA-568-B.1 when tested according to test procedures of this standard.
- B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Flame-Spread Index: **[25] <Insert value>** or less.
 2. Smoke-Developed Index: **[50] [450] <Insert value>** or less.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Grounding: Comply with J-STD-607-A.

2.3 BACKBOARDS

- A. Backboards: Plywood, **[fire-retardant treated,]3/4 by 48 by 96 inches (19 by 1220 by 2440 mm)**. Comply with requirements in Section 061000 "Rough Carpentry" for plywood backing panels.

2.4 UTP CABLE

Copy this article and re-edit for each product.

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [ADC](#).
 2. [Belden Inc.](#)
 3. [Berk-Tek; a Nexans company](#).
 4. [CommScope, Inc.](#)
 5. [Draka Cableteq USA](#).
 6. [Genesis Cable Products; Honeywell International, Inc.](#)
 7. [Mohawk; a division of Belden Networking, Inc.](#)
 8. [Superior Essex Inc.](#)
 9. [SYSTIMAX Solutions; a CommScope, Inc. brand](#).
 10. [3M Communication Markets Division](#).
 11. [Tyco Electronics Corporation; AMP Products](#).
 12. <Insert manufacturer's name>.
 13. or approved equal.
- B. Description: 100-ohm, four-pair UTP, formed into 25-pair, binder groups covered with a blue thermoplastic jacket.
1. Comply with ICEA S-90-661 for mechanical properties.
 2. Comply with TIA/EIA-568-B.1 for performance specifications.
 3. Comply with TIA/EIA-568-B.2, [**Category 5e**] [**Category 6**].
 4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:

Type requirements in subparagraphs below are minimum requirements and may be revised to suit Project. Retain options if "permitted substitutions," as defined in NFPA 70, are appropriate for this Project.

- a. Communications, General Purpose: Type CM or CMG[; or **MPP, CMP, MPR, CMR, MP, or MPG**].
- b. Communications, Plenum Rated: Type CMP[or **MPP**], complying with NFPA 262.
- c. Communications, Riser Rated: Type CMR[; or **MPP, CMP, or MPR**], complying with UL 1666.
- d. Communications, Limited Purpose: Type CMX[; or **MPP, CMP, MPR, CMR, MP, MPG, CM, or CMG**].
- e. Multipurpose: Type MP or MPG[; or **MPP or MPR**].
- f. Multipurpose, Plenum Rated: Type MPP, complying with NFPA 262.
- g. Multipurpose, Riser Rated: Type MPR[or **MPP**], complying with UL 1666.

2.5 UTP CABLE HARDWARE

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [ADC](#).
 2. [American Technology Systems Industries, Inc.](#)
 3. [Belden Inc.](#)
 4. [Dynacom Inc.](#)
 5. [Hubbell Premise Wiring](#).
 6. [Leviton Commercial Networks Division](#).
 7. [Molex Premise Networks; a division of Molex, Inc.](#)
 8. [Panduit Corp.](#)
 9. [Siemon Co. \(The\)](#).
 10. [Tyco Electronics Corporation; AMP Products](#).
 11. **<Insert manufacturer's name>**.
 12. or approved equal.

See Editing Instruction No. 4 in the Evaluations for discussion about 110-style IDC connectors and connector blocks.

- B. General Requirements for Cable Connecting Hardware: Comply with TIA/EIA-568-B.2, IDC type, with modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of same category or higher.
- C. Connecting Blocks: **[110-style IDC for Category 5e] [110-style IDC for Category 6] [66-style IDC for Category 5e]**. Provide blocks for the number of cables terminated on the block, plus **[25] <Insert number>** percent spare. Integral with connector bodies, including plugs and jacks where indicated.

Delete "Cross-Connect" Paragraph below if cross-connection is accomplished exclusively on patch panels.

- D. Cross-Connect: Modular array of connecting blocks arranged to terminate building cables and permit interconnection between cables.

Coordinate "Number of Terminals per Field" Subparagraph below with Drawings for quantity of terminals.

1. Number of Terminals per Field: **[One] <Insert number>** for each conductor in assigned cables.
- E. Patch Panel: Modular panels housing multiple-numbered jack units with IDC-type connectors at each jack for permanent termination of pair groups of installed cables.

Coordinate "Number of Jacks per Field" Subparagraph below with Drawings for quantity of fields.

1. Number of Jacks per Field: **[One]** <Insert number> for each four-pair **[UTP cable indicated]** **[conductor group of indicated cables, plus spares and blank positions adequate to suit specified expansion criteria]**.

- F. Jacks and Jack Assemblies: Modular, color-coded, eight-position modular receptacle units with integral IDC-type terminals.

Cords are generally available in lengths to 20 feet (6 m) and longer in 24-inch (600-mm) increments.

- G. Patch Cords: Factory-made, four-pair cables in **[36-inch (900 mm)]** **[48-inch 1200-mm]** <Insert length> lengths; terminated with eight-position modular plug at each end.

Retain one of two subparagraphs below; retain first for Category 6, second for Category 5e patch cords.

1. Patch cords shall have bend-relief-compliant boots and color-coded icons to ensure Category 6 performance. Patch cords shall have latch guards to protect against snagging.
2. Patch cords shall have color-coded boots for circuit identification.

2.6 OPTICAL FIBER CABLE

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Belden Inc.](#)
2. [Berk-Tek; a Nexans company.](#)
3. [CommScope, Inc.](#)
4. [Corning Cable Systems.](#)
5. [CSI Technologies Inc.](#)
6. [General Cable Technologies Corporation.](#)
7. [Mohawk; a division of Belden Networking, Inc.](#)
8. [Superior Essex Inc.](#)
9. [SYSTIMAX Solutions; a CommScope, Inc. brand.](#)
10. [3M Communication Markets Division.](#)
11. [Tyco Electronics Corporation; AMP Products.](#)
12. <Insert manufacturer's name>.
13. or approved equal.

- B. Description: Multimode, **[50/125]** **[62.5/125]**-micrometer, **[24]** <Insert number>-fiber, **[nonconductive,**]tight buffer, optical fiber cable.

Retain first subparagraph below for indoor cable. ICEA standard for outside plant is ICEA S-87-640.

1. Comply with ICEA S-83-596 for mechanical properties.
2. Comply with TIA/EIA-568-B.3 for performance specifications.

Retain first option in first subparagraph below for 50/125-micrometer cable; retain second for 62.5/125-micrometer cable.

3. Comply with [TIA-492AAAB] [TIA-492AAAA-A] for detailed specifications.
4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:

Type requirements in first six subparagraphs below are minimum requirements and may need to be revised to suit Project. Types OFC, OFCR, OFCG, and OFCP are conductive optical fiber cables that might have application in industrial settings. Retain options if "permitted substitutions," as defined in NFPA 70, are appropriate for this Project.

- a. General Purpose, Nonconductive: Type OFN or OFNG[, or **OFNR, OFNP**].
- b. Plenum Rated, Nonconductive: Type OFNP, complying with NFPA 262.
- c. Riser Rated, Nonconductive: Type OFNR[or **OFNP**], complying with UL 1666.
- d. General Purpose, Conductive: Type OFC or OFCG[; or **OFNG, OFN, OFCR, OFNR, OFCP, or OFNP**].
- e. Plenum Rated, Conductive: Type OFCP[or **OFNP**], complying with NFPA 262.
- f. Riser Rated, Conductive: Type OFCR[; or **OFNR, OFCP, or OFNP**], complying with UL 1666.

Retain first subparagraph below even if nonconductive cable is specified in subparagraphs above. If both conductive and nonconductive cables are specified, indicate locations of each on Drawings.

5. Conductive cable shall be [**steel**] [**aluminum**] armored type.
6. Maximum Attenuation: [**3.50**] <Insert number> dB/km at 850 nm; [**1.5**] <Insert number> dB/km at 1300 nm.
7. Minimum Modal Bandwidth: 160 MHz-km at 850 nm; 500 MHz-km at 1300 nm.

C. Jacket:

1. Jacket Color: [**Aqua for 50/125-micrometer cable**] [**Orange for 62.5/125-micrometer cable**].
2. Cable cordage jacket, fiber, unit, and group color shall be according to TIA-598-C.
3. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inches (1000 mm).

2.7 OPTICAL FIBER CABLE HARDWARE

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. ADC.
 2. American Technology Systems Industries, Inc.
 3. Belden Inc.

4. [Berk-Tek; a Nexans company.](#)
5. [Corning Cable Systems.](#)
6. [CSI Technologies Inc.](#)
7. [Dynacom Inc.](#)
8. [Hubbell Premise Wiring.](#)
9. [Molex Premise Networks; a division of Molex, Inc.](#)
10. [Siemon Co. \(The\).](#)
11. **<Insert manufacturer's name>.**
12. or approved equal.

- B. Cross-Connects and Patch Panels: Modular panels housing multiple-numbered, duplex cable connectors.

Coordinate "Number of Connectors per Field" Subparagraph below with Drawings for quantity of connectors.

1. Number of Connectors per Field: [**One**] **<Insert number>** for each fiber of cable or cables assigned to field, plus spares and blank positions adequate to suit specified expansion criteria.

- C. Patch Cords: Factory-made, single or dual-fiber cables in **36-inch** (900-mm) incremental lengths.

- D. Cable Connecting Hardware:

1. Comply with Optical Fiber Connector Intermateability Standards (FOCIS) specifications of TIA-604-2-B, TIA-604-3-B, and TIA/EIA-604-12. Comply with TIA/EIA-568-B.3.

Type SC is a subscriber connector, Type ST is a straight-tip, single-fiber connector; both are in common use. Recently developed connectors are Type LC, which is an upgraded version of either Type SC or ST connector with a lower insertion loss, and Type MT-RJ, which is a no-epoxy, no-polish connector.

2. Quick-connect, simplex and duplex, [**Type SC**] [**Type ST**] [**Type LC**] [**Type MT-RJ**] connectors. Insertion loss not more than 0.75 dB.
3. Type SFF connectors may be used in termination racks, panels, and equipment packages.

2.8 COAXIAL CABLE

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Alpha Wire Company.](#)
2. [Belden Inc.](#)
3. [Coleman Cable, Inc.](#)
4. [CommScope, Inc.](#)
5. [Draka Cableteq USA.](#)

6. <Insert manufacturer's name>.
7. or approved equal.

See Evaluations for discussion about coaxial cables. Indicate location of each type on Drawings.

- B. Cable Characteristics: Broadband type, recommended by cable manufacturer specifically for broadband data transmission applications. Coaxial cable and accessories shall have 75-ohm nominal impedance with a return loss of 20 dB maximum from 7 to 806 MHz.

Cable types in first five paragraphs below are typical.

- C. RG-11/U: NFPA 70, Type CATV.

1. [No. 14] <Insert size> AWG, solid, copper-covered steel conductor.
2. Gas-injected, foam-PE insulation.
3. Double shielded with 100 percent aluminum polyester tape and 60 percent aluminum braid.
4. Jacketed with sunlight-resistant, black PVC or PE.
5. Suitable for outdoor installations in ambient temperatures ranging from minus 40 to plus 85 deg C.

- D. RG-6/U: NFPA 70, Type CATV or CM.

1. [No. 16] <Insert size> AWG, solid, copper-covered steel conductor; gas-injected, foam-PE insulation.
2. Double shielded with 100 percent aluminum-foil shield and 60 percent aluminum braid.
3. Jacketed with black PVC or PE.
4. Suitable for indoor installations.

Paragraph below is typical of NFPA 70 cable types. See NFPA 70, "Community Antenna Television and Radio Distribution Systems" and "Network-Powered Broadband Communications Systems" Articles for other types that may be added to the list.

- E. NFPA and UL compliance, listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 1655 and with NFPA 70 "Radio and Television Equipment" and "Community Antenna Television and Radio Distribution" Articles. Types are as follows:

1. CATV Cable: Type CATV[, or **CATVP** or **CATVR**].
2. CATV Plenum Rated: Type CATVP, complying with NFPA 262.
3. CATV Riser Rated: Type CATVR[; or **CATVP**, **CATVR**, or **CATV**], complying with UL 1666.
4. CATV Limited Rating: Type CATVX.

2.9 COAXIAL CABLE HARDWARE

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Emerson Network Power Connectivity Solutions.
 2. [Leviton Commercial Networks Division](#).
 3. [Siemon Co. \(The\)](#).
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. Coaxial-Cable Connectors: Type BNC, 75 ohms.

2.10 CONSOLIDATION POINTS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [American Technology Systems Industries, Inc.](#)
 2. [Belden Inc.](#)
 3. [Chatsworth Products, Inc.](#)
 4. [Dynacom Inc.](#)
 5. [Hubbell Premise Wiring](#).
 6. [Molex Premise Networks; a division of Molex, Inc.](#)
 7. [Ortronics, Inc.; a subsidiary of Legrand Group](#).
 8. [Panduit Corp.](#)
 9. [Siemon Co. \(The\)](#).
 10. **<Insert manufacturer's name>**.
 11. or approved equal.
- B. Description: Consolidation points shall comply with requirements for cable connecting hardware.

Coordinate "Number of Terminals per Field" Subparagraph below with Drawings for quantity of terminals.

1. Number of Terminals per Field: **[One (1)] <Insert number>** for each conductor in assigned cables.

Coordinate "Number of Connectors per Field" Subparagraph below with Drawings for quantity of connectors.

2. Number of Connectors per Field:
 - a. **[One (1)] <Insert number>** for each four-pair UTP cable indicated.
 - b. **[One (1)] <Insert number>** for each four-pair conductor group of indicated cables, plus **[25] <Insert number>** percent spare positions.
3. Mounting: **[Recessed in ceiling] [Wall] [Desk] [Furniture]**.
4. NRTL listed as complying with UL 50 and UL 1863.

5. When installed in plenums used for environmental air, NRTL listed as complying with UL 2043.

2.11 MULTIUSER TELECOMMUNICATIONS OUTLET ASSEMBLY (MUTOA)

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Belden Inc.](#)
 2. [Chatsworth Products, Inc.](#)
 3. [Hubbell Premise Wiring.](#)
 4. [Molex Premise Networks; a division of Molex, Inc.](#)
 5. [Ortronics, Inc.; a subsidiary of Legrand Group.](#)
 6. [Panduit Corp.](#)
 7. [Siemon Co. \(The\).](#)
 8. **<Insert manufacturer's name>.**
 9. or approved equal.
- B. Description: MUTOAs shall meet the requirements for cable connecting hardware.

Coordinate "Number of Terminals per Field" Subparagraph below with Drawings for quantity of terminals.

1. Number of Terminals per Field: **[One (1)] <Insert number>** for each conductor in assigned cables.

Coordinate "Number of Connectors per Field" Subparagraph below with Drawings for quantity of connectors.

2. Number of Connectors per Field:
 - a. **[One (1)] <Insert number>** for each four-pair UTP cable indicated.
 - b. **[One (1)] <Insert number>** for each four-pair conductor group of indicated cables, plus **[25] <Insert number>** percent spare positions.
3. Mounting: **[Recessed in ceiling] [Wall] [Desk] [Furniture]**.
4. NRTL listed as complying with UL 50 and UL 1863.
5. Label shall include maximum length of work area cords, based on TIA/EIA-568-B.1.
6. When installed in plenums used for environmental air, NRTL listed as complying with UL 2043.

2.12 TELECOMMUNICATIONS OUTLET/CONNECTORS

- A. Jacks: 100-ohm, balanced, twisted-pair connector; four-pair, eight-position modular. Comply with TIA/EIA-568-B.1.

Coordinate "Workstation Outlets" Paragraph below with other items specified to be mounted in workstation faceplates. Revise paragraph if faceplate elevations are on Drawings.

- B. Workstation Outlets: **[Two (2)][Four (4)]<Insert number of ports>**-port-connector assemblies mounted in **[single] [or] [multigang]** faceplate.

Retain "Plastic Faceplate" or "Metal Faceplate" Subparagraph below, or retain both as required to match Section 262726 "Wiring Devices."

1. Plastic Faceplate: High-impact plastic. Coordinate color with Section 262726 "Wiring Devices."
2. Metal Faceplate: **[Stainless steel] [Brass] <Insert description>**, complying with requirements in Section 262726 "Wiring Devices."
3. For use with snap-in jacks accommodating any combination of UTP, optical fiber, and coaxial work area cords.
 - a. Flush mounting jacks, positioning the cord at a 45-degree angle.

Retain one of three "Legend" subparagraphs below; retain first for metal faceplates.

4. Legend: Factory labeled by silk-screening or engraving **[for] [stainless steel] [brass] <Insert description> [faceplates]**.
5. Legend: Machine printed, in the field, using adhesive-tape label.
6. Legend: Snap-in, clear-label covers and machine-printed paper inserts.

2.13 GROUNDING

- A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.
- B. Comply with J-STD-607-A.
- C. Horizontal Pathways must be grounded and bonded in accordance with the requirements specified in ANSI/NFPA 70, except where other codes or local authorities impose more stringent requirements.

2.14 IDENTIFICATION PRODUCTS

- A. Comply with TIA/EIA-606-A and UL 969 for labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- B. Comply with requirements in Section 260553 "Identification for Electrical Systems."
- C. Standard schematic methods and procedures for labeling and managing horizontal pathways. Locate markings so that they are clearly visible after installation, and easily distinguishable from any markings that appear on individual components. For more details on guidelines and requirements for the administration of horizontal pathways and spaces, see BICSI TDM Manual Chapter 4 and ANSI/TIA/EIA-606.

- D. Electrical or telecommunications drawings produced as part of any tenant or facility design shall include labeling for each outlet location. Labeling shall include the room number, outlet letter designator and outlet type. Please refer to the details that accompany this guideline for a complete listing of standard outlet types and their designations.

2.15 CABLE MANAGEMENT SYSTEM

- A. Provide a spreadsheet list of all horizontal cabling in Microsoft Excel format suitable for importation into the DEN cable management system. Data shall include outlet location by building and room, connected device type and other information as requested by DEN Telecommunications.

2.16 SOURCE QUALITY CONTROL

Retain "Testing Agency" Paragraph below if required. Independent certification may be acceptable to authorities having jurisdiction without further monitoring of plant's quality-control and testing program by Owner.

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to evaluate cables.
- B. Factory test UTP and optical fiber cables on reels according to TIA/EIA-568-B.1.
- C. Factory test UTP cables according to TIA/EIA-568-B.2.
- D. Factory test multimode optical fiber cables according to TIA-526-14-A and TIA/EIA-568-B.3.

See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.

- E. Factory-sweep test coaxial cables at frequencies from 5 MHz to 1 GHz. Sweep test shall test the frequency response, or attenuation over frequency, of a cable by generating a voltage whose frequency is varied through the specified frequency range and graphing the results.
- F. Cable will be considered defective if it does not pass tests and inspections.
- G. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 GENERAL

- A. Coordinate Work with DEN Telecommunications Department and DEN Project Manager.

- B. Coordinate Work with existing systems at DEN.

3.2 ENTRANCE FACILITIES

Retain this article if service entrance cabling and demarcation point are provided by communications service provider and horizontal cabling connects to the demarcation point. Normally, unless this is for a small single-story facility, communications horizontal cable interfaces with backbone cabling in communications rooms or spaces at cross-connects and patch panels.

- A. Coordinate backbone cabling with the protectors and demarcation point provided by communications service provider.

3.3 WIRING METHODS

Retain one of first two paragraphs below and coordinate with Drawings. Delete both if wiring methods for system are indicated on Drawings.

- A. Verify cable pathways are open, continuous and clear of debris before installing cables.
- B. Install cables in pathways and cable trays except within consoles, cabinets, desks, and counters. Conceal pathways and cables except in unfinished spaces.

Retain first subparagraph below if retaining unenclosed wiring method option in paragraph above.

- 1. Install plenum cable in environmental air spaces, including plenum ceilings.
- 2. Comply with requirements in Section 260536 "Cable Trays for Electrical Systems" for cable trays.
- 3. Comply with requirements in Section 270528 "Pathways for Communications Systems."
- C. Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- D. Wiring within Enclosures:
 - 1. Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
 - 2. Install lacing bars and distribution spools.
 - 3. Install conductors parallel with or at right angles to sides and back of enclosure.

3.4 INSTALLATION OF CABLES

- A. Comply with NECA 1.
- B. General Requirements for Cabling:
 - 1. Comply with TIA/EIA-568-B.1.

2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
 3. Install 110-style IDC termination hardware unless otherwise indicated.
 4. MUTOA shall not be used as a cross-connect point.
 5. Consolidation points may be used only for making a direct connection to telecommunications outlet/connectors:
 - a. Do not use consolidation point as a cross-connect point, as a patch connection, or for direct connection to workstation equipment.
 - b. Locate consolidation points for UTP at least **49 feet (15 m)** from communications equipment room.
 6. Terminate conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
 7. Cables may not be spliced. Secure and support cables at intervals not exceeding **30 inches (760 mm)** and not more than **6 inches (150 mm)** from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
 8. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
 9. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
 10. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
 11. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
 12. In the communications equipment room, install a **10-foot- (3-m-)** long service loop on each end of cable.
 13. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
- C. UTP Cable Installation:
1. Comply with TIA/EIA-568-B.2.
 2. Do not untwist UTP cables more than **1/2 inch (12 mm)** from the point of termination to maintain cable geometry.
- D. Optical Fiber Cable Installation:
1. Comply with TIA/EIA-568-B.3.
 2. Cable may be terminated on connecting hardware that is rack or cabinet mounted.
- E. Open-Cable Installation:
1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.

2. Suspend UTP cable not in a wireway or pathway a minimum of **8 inches** (200 mm) above ceilings by cable supports not more than [**60 inches** (1524 mm)] **<Insert dimension>** apart.
3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

F. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Coil cable [**6 feet** (1800 mm)] **<Insert size>** long not less than [**12 inches** (300 mm)] **<Insert size>** in diameter below each feed point.

G. Group connecting hardware for cables into separate logical fields.

See Editing Instruction No. 5 in the Evaluations for discussion about EMI.

H. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA-569-B for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **5 inches** (127 mm).
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **12 inches** (300 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of **24 inches** (610 mm).
3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **2-1/2 inches** (64 mm).
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **6 inches** (150 mm).
 - c. Electrical Equipment Rating More Than 5 kVA: A minimum of **12 inches** (300 mm).
4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
 - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
 - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of **3 inches** (76 mm).

- c. Electrical Equipment Rating More Than 5 kVA: A minimum of **6 inches** (150 mm).
5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of **48 inches** (1200 mm).
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of **5 inches** (127 mm).

3.5 FIRESTOPPING

- A. Comply with requirements in Section 078413 "Penetration Firestopping."
- B. Comply with TIA-569-B, Annex A, "Firestopping."
- C. Comply with BICSI TDMM, "Firestopping Systems" Article.
- D. All horizontal pathways that penetrate fire-rated barriers must be firestopped in accordance with DEN standards and all applicable codes.

3.6 GROUNDING

- A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. Comply with J-STD-607-A.
- C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least **2-inch** (50-mm) clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.
- D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

3.7 IDENTIFICATION

Retain one of first two paragraphs below.

- A. Identify system components, wiring, and cabling complying with TIA/EIA-606-A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

See Evaluations for discussion about designating the class of cabling plant administration and color-coding of cross-connect fields.

1. Administration Class: **[1] [2] [3] [4]**.
2. Color-code cross-connect fields. Apply colors to voice and data service backboards, connections, covers, and labels.

- B. Comply with requirements in Section 099123 "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.

See Evaluations for discussion about TIA/EIA standard as it applies to this Section.

- C. Paint and label colors for equipment identification shall comply with TIA/EIA-606-A for [Class 2] [Class 3] [Class 4] level of administration[, **including optional identification requirements of this standard**].
- D. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, [**backbone pathways and cables,**] [**entrance pathways and cables,**] terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors. Follow convention of TIA/EIA-606-A. Furnish electronic record of all drawings, in software and format selected by Owner.
- E. Cable and Wire Identification:
1. Label each cable within 4 inches (100 mm) of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
 2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
 3. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
 - a. Individually number wiring conductors connected to terminal strips, and identify each cable or wiring group being extended from a panel or cabinet to a building-mounted device shall be identified with name and number of particular device as shown.
 - b. Label each unit and field within distribution racks and frames.
 4. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use a different color for jacks and plugs of each service.
 5. Uniquely identify and label work area cables extending from the MUTOA to the work area. These cables may not exceed the length stated on the MUTOA label.
- F. Labels shall be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in TIA/EIA-606-A.
1. Cables use flexible vinyl or polyester that flex as cables are bent.

3.8 FIELD QUALITY CONTROL

- A. General:
1. Inspect wire and cable for physical damage and proper connections.

2. Torque conductor connections and terminations to manufacturer's recommended values. Provide torque report if requested by DEN Project Manager.
3. Verify cables are colored coded and labeled according to contract documents.

Retain "Testing Agency," "Manufacturer's Field Service," and "Perform the following tests and inspections" paragraphs below to identify who shall perform tests and inspections. If retaining second option in "Testing Agency" Paragraph or if retaining "Manufacturer's Field Service" or "Perform the following tests and inspections" Paragraph, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

- B. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.

Retain "Manufacturer's Field Service" Paragraph below to require a factory-authorized service representative to perform tests and inspections.

- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

- D. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
1. Visually inspect UTP and optical fiber cable jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments, and inspect cabling connections for compliance with TIA/EIA-568-B.1.
 2. Visually confirm [**Category 5e,**] [**Category 6,**] marking of outlets, cover plates, outlet/connectors, and patch panels.
 3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
 4. Test UTP backbone copper cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.
 - a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
 5. Optical Fiber Cable Tests:
 - a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

- b. Link End-to-End Attenuation Tests:
 - 1) Horizontal multimode link measurements: Test at 850 or 1300 nm in 1 direction according to TIA-526-14-A, Method B, One Reference Jumper.
 - 2) Attenuation test results for backbone links shall be less than 2.0 dB. Attenuation test results shall be less than that calculated according to equation in TIA/EIA-568-B.1.
6. UTP Performance Tests:
 - a. Test for each outlet and MUTOA. Perform the following tests according to TIA/EIA-568-B.1 and TIA/EIA-568-B.2:
 - 1) Wire map.
 - 2) Length (physical vs. electrical, and length requirements).
 - 3) Insertion loss.
 - 4) Near-end crosstalk (NEXT) loss.
 - 5) Power sum near-end crosstalk (PSNEXT) loss.
 - 6) Equal-level far-end crosstalk (ELFEXT).
 - 7) Power sum equal-level far-end crosstalk (PSELFEXT).
 - 8) Return loss.
 - 9) Propagation delay.
 - 10) Delay skew.
7. Optical Fiber Cable Performance Tests: Perform optical fiber end-to-end link tests according to TIA/EIA-568-B.1 and TIA/EIA-568-B.3.

Retain "Coaxial Cable Tests" Subparagraph below when cable is used for broadband closed-circuit television applications. Revise to suit tests to verify cable performance for other systems using coaxial cable.

8. Coaxial Cable Tests: Conduct tests according to Section 274133 "Master Antenna Television System."

Retain "Final Verification Tests" Subparagraph below if Owner intends to use Contractor in final testing after its personnel have assumed the operation of communications system.

9. Final Verification Tests: Perform verification tests for UTP[**and optical fiber**] systems after the complete communications cabling and workstation outlet/connectors are installed.
- E. Document data for each measurement. Data for submittals shall be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.
- See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- F. End-to-end cabling will be considered defective if it does not pass tests and inspections.
 - G. Prepare test and inspection reports.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel in cable-plant management operations, including changing signal pathways for different workstations, rerouting signals in failed cables, and keeping records of cabling assignments and revisions when extending wiring to establish new workstation outlets. **[Include training in cabling administration software.]**
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - PART 4- MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PART 5- PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 272100 - LOCAL AREA NETWORKS (LANS)

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

IMPORTANT: PARTS LISTS MUST BE SPECIFICALLY COORDINATED FOR ALL PROJECTS. ENSURE THAT ALL REQUIRED COORDINATION WITH DEN STAFF IS COMPLETED IN A TIMELY MANNER. REFER TO DESIGNER NOTES CONTAINED IN PART 2 OF THIS SECTION FOR MORE INFORMATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Denver International Airport operates three Local Area Networks (LANs). The enterprise network is the largest of these networks supporting services ranging from city desktops, flight information, common use departure control equipment to building automation and in some cases tenant networks. The enterprise network is a large three layer network consisting of core switches, pairs of distribution switches in each major building and access layer switches located in Intermediate Distribution Frame (IDF) rooms throughout the buildings.
- B. The Emergency Communications System, or ECS, is a stand-alone network that supports public address communications. This network utilizes smaller switches in a core, distribution and access layer configuration that allows public address CobraNet audio to traverse locally in each network region while allowing client to server communications to traverse between buildings to reach the system servers. The ECS network also utilizes a small layer two network to allow inter-building CobraNet audio to traverse between buildings.

- C. The Security Access Control Network, or SACN, is also a separate network. This network is dedicated exclusively to security access control including communications to door controllers, door related intercom and door security cameras.
- D. Work Includes:
1. Enterprise Network Distribution and Access Layer Switches.
 2. ECS Network Distribution and Access Layer Switches.
 3. SACN Network Distribution and Access Layer Switches.
- E. Contractors shall be required to purchase specific equipment as listed on the bill of materials including SmartNet warranty coverage where indicated. All equipment shall be procured through a Cisco certified value added reseller. Gray market equipment procured through non-certified sources shall not be acceptable.
- F. This equipment shall be assembled and installed at designated locations throughout the project with fiber uplinks to distribution and core switches. DEN Technologies will provide a basic configuration to be applied to each switch by the contractor. The contractor shall apply this configuration to each network device including the IP address, subnet mask and default gateway.
- G. Once the network devices are installed and connectivity is tested, DEN Technologies will activate core and/ or distribution switch ports to join the new network devices to the production networks. The DEN Technologies staff will then apply a permanent configuration on each network device and will thereafter operate and maintain these devices.
- H. Related Sections:
1. Section 260400 "Basic Electrical Requirements".
 2. Section 270526 "Grounding and Bonding for Telecommunications Systems".
 3. Section 270528 "Pathways for Communications Systems".
 4. Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling".
 5. Section 271100 "Communications Equipment Room Fittings".
 6. Section 271300 "Communications Backbone Cabling".
 7. Section 271500 "Communications Horizontal Cabling".

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- I. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 SCOPE OF WORK

Retain terms that remain after this Section has been edited for a project.

- A. Furnish and install, complete with all accessories the network equipment for each network. Include all optical modules, stackwise and stack power links for a fully

functional extension of the respective networks

- B. Provide all required fiber jumpers and patching to join the new network components to assigned ports on the DEN production networks.
- C. Test connectivity of all new network devices by capturing a "Show CDP Neighbor" output from each network device. Once testing is complete, provide this output to the DEN Technologies' network staff.

1.4 REFERENCE STANDARDS

- A. General: The latest version of the following codes and standards shall be applicable:
 - 1. Code of Federal Regulations (CFR).
 - 2. 47 CFR 15 et seq.: Radio Frequency Devices.
 - 3. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE C2: National Electrical Safety Code.
 - b. IEEE 142: IEEE Recommended Practice for Grounding of Industrial and Commercial Power Systems.
 - c. IEEE C62.41-1991: Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits.
 - d. IEEE 802.3: Information Technology - Local and Metropolitan Area Networks - Part 3; Carrier Sense with Collision Detection (CSMA/CD) Access Methods and Physical Layer Specification.
 - e. IEEE 802.3u: Carrier Sense Multiple Access with Collision Detection (CSMA/CD) Access Method & Physical Layer Specifications: Mac Parameters, Physical Layer, Medium Attachment Units and Repeater for 100 Mb/s Operation.
 - f. IEEE 802.3x: Supplement to Carrier Sense Multiple Access with Collision Detection (CSMA/CD) Access Method & Physical Layer Specifications: Specification for 802.3 Full Duplex Operation Detection (CSMA/CD) Access Method & Physical Layer Specifications:
 - 1) Specification for 802.3 Full Duplex Operation.
 - 4. National Fire Protection Association (NFPA):
 - a. NFPA 70: National Electrical Code (NEC).
 - 5. Telecommunications Industry Association/Electronics Industry Association (TIA/EIA):
 - a. EIA-170: Electrical Performance Standards - Monochrome Television Studio Facilities.
 - b. EIA-310-D: Cabinets, Racks, Panels, and Associated Equipment
 - c. TIA/EIA-568-B: Commercial Building Telecommunications Cabling Standard.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT

PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. General: Comply with requirements of Section 013300 "Submittal Procedures"
- B. Product Data: For each type of product.
 - 1. Submit catalog cut sheets, technical data sheets, manufacturer's specifications and/or diagrams necessary to illustrate a product, material or system for some portion of the work. Product data literature is required on all items of material and equipment and should be clearly marked; identifying specific items proposed with a reference to the specification requirement(s) the item is being submitted for.
 - 2. Product data shall include adequate descriptive literature and catalog cut sheets required for the DEN Project Manager to ascertain that the proposed equipment and materials comply with Specifications requirements.
 - 3. Include data substantiating that materials comply with requirements.
- C. Shop Drawings:
 - 1. The shop drawings shall be approved by the DEN Project Manager prior to system installation.
 - 2. Floor plans detailing all devices, conduit and raceway systems.
 - 3. Equipment room layouts to scale including equipment cabinet elevations.
 - 4. Point-to-point wiring diagrams.

1.6 INFORMATIONAL SUBMITTALS

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- A. Qualification Data: For installer.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For Local Area Networks to include in emergency, operation, and maintenance manuals.
 - 1. Include operating instructions, and maintenance and repair procedures. Procedures shall include shop manuals and schematic drawings to allow repair of equipment.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Contractor shall maintain on site accurate as-built drawings indicating dimensioned locations of constructed raceway, box and device locations. Any modifications to work depicted on the Engineered shop drawings shall be noted. Documents shall be updated daily and shall at all times be available for DEN review.

Edit below to suit Project, or delete Article if no maintenance material submittals.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Contractor shall be fully responsible for daily quality control of all system installation, coordination with trades, and coordination with DEN Maintenance and Engineering.

1.10 DELIVERY, STORAGE AND HANDLING

- A. Deliver products to site under provisions of Division 1.
- B. Store and protect products under provisions of Division 1.

1.11 WARRANTY

Coordinate warranty requirements with DEN Project Manager.

- A. All components, parts and assemblies provided by the Contractor shall be guaranteed against defects in materials and workmanship for a period of 24 months following acceptance. Submit warranty per Division 1 requirements.
- B. Warranty service shall be provided by a trained specialist of the equipment manufacturer, who shall be based in a fully staffed, fully stocked (replacement parts and test equipment) office, located within 50 miles of the site.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

1.1 Bill of Materials

- A. Consultants are required to provide a complete bill of materials specific to the project, and coordinated with DEN technologies staff. The consultant shall produce a spreadsheet for submission to DEN for each of the three networks that includes the following information for each item of network connected equipment:
 - 1. Item Number.
 - 2. System Name.
 - 3. Device Type.
 - 4. Device Name.
 - 5. Room Number.
 - 6. Outlet & Jack Number.
 - 7. Serving IDF Room.
 - 8. Network (Enterprise, ECS or SACN).
 - 9. Power over Ethernet Required in Watts.
- B. Once the information above is compiled, submit the spreadsheet to the DEN Project Manager and request to arrange a meeting with DEN Technologies Network staff. The DEN Technologies staff will compile a detailed bill of materials for inclusion in the project specifications based on the equipment that is currently being procured and provide the bill of materials to the consultant. Designers shall include this bill of material in the network specifications for each of the three networks.
- C. DEN Technologies will also complete the network spreadsheet for each of the three networks including the following for each item of network connected equipment:
 - 1. Circuit ID Number.
 - 2. Switch Name.
 - 3. Switch Port Assignment.
 - 4. VLAN ID.
 - 5. IP Address.
 - 6. Subnet Mask.
 - 7. Default Gateway.
 - 8. Port Speed and Duplex.
 - 9. Circuit Cut Sheet.

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 ENTERPRISE NETWORK

- A. Enterprise network distribution switches shall be provided in any new network region in a "red / blue configuration in physically diverse rooms. Each distribution switch shall be provided with 10G-Base-LR modules to support uplinks to the red and blue DEN enterprise core switches and between the distribution switches. Switches shall be provided with a supervisor engine to allow routing using Cisco EIGRP protocol.
- B. Enterprise Network Distribution Switches shall be configured using sufficient modules to support uplinks to the Enterprise Network core switches and redundant downlinks to the region access layer switches.
- C. Acceptable products for the distribution switches are listed below:

CISCO	C6807-XL	Catalyst 6807-XL 7-slot chassis, 10RU
CISCO	CON-SNT-C6807XLC	SMARTNET 8X5XNBD Catalyst 6807-XL7-s
CISCO	MEM-C6K-INTFL1GB	Internal 1G Compact Flash
CISCO	VS-F6K-PFC4	Cat 6k 80G Sys Daughter Board Sup2T PFC4
CISCO	VS-SUP2T-10G	Catalyst 6500 Supervisor Engine 2T
CISCO	MEM-SUP2T-2GB	Catalyst 6500 2GB memory for Sup2T and Sup2TXL
CISCO	S2TAEK9-15102SY	Cisco CAT6000-VS-S2T IOS ADV ENT SERVULL ENCRYPT
CISCO	WS-X6724-SFP	Catalyst 6500 24-port GigE Mod: fabric-enabled (Req. SFPs)
CISCO	MEM-XCEF720-256M	Catalyst 6500 256MB DDR, xCEF720 (67xx interface, DFC3A)
CISCO	WS-F6700-CFC	Catalyst 6500 Central Fwd Card for WS-X67xx modules
CISCO	WS-X6724-SFP	Catalyst 6500 24-port GigE Mod: fabric-enabled (Req. SFPs)
CISCO	MEM-XCEF720-256M	Catalyst 6500 256MB DDR, xCEF720 (67xx interface, DFC3A)
CISCO	WS-F6700-CFC	Catalyst 6500 Central Fwd Card for WS-X67xx modules
CISCO	WS-X6908-10G-2T	C6K 8 port 10 Gigabit Ethernet module with DFC4 (Trustsec)
CISCO	WS-F6K-DFC4-E	Cat 6k 80G Sys Daughter Board DFC4E
CISCO	WS-X6908-10G	Catalyst 6500 8 Port 10G SFP Baseboard
CISCO	C6800-XL-3KW-AC	Catalyst 6807-XL 3000W Power Supply
CISCO	CAB-C19-CBN	Cabinet Jumper Power Cord, 250 VAC 16A, C20-C19 Connectors
CISCO	C6807-XL-FAN	Catalyst 6807-XL Chassis Fan Tray
CISCO	C6800-XL-CVR	Catalyst 6807-XL line card slot cover
CISCO	C6800-CAMPUS-CORE	Catalyst 6800 Campus Core Deployment; For Tracking Only

CISCO	VS-S2T-10G	Cat 6500 Sup 2T with 2 x 10GbE and 3 x 1GbE with MSFC5 PFC4
CISCO	GLC-T 1000-Base-T	Copper SFP for Firewall Connections
CISCO	X2-10GB-LR	10GBASE-LR X2 Module

D. Enterprise Network access layer switches shall be provided in either a 24-port or 48-port configuration at each IDF room. Each access layer switch shall be provided with one 1000-base-LX/LH uplink to the red distribution switch with a second 1000-base-LX/LH uplink to the blue distribution switch. Locations requiring more than one switch shall be configured with stackwise and stackpower cables. Switches shall support Power over Ethernet

E. Acceptable components for 24-port access layer switches are:

CISCO	WS-C3850-24U-S	Cisco Catalyst 3850 24 Port UPOE IP Base
CISCO	PWR-C1-1100WAC	1100W AC Config 1 Power Supply
CISCO	CAB-C15-CBN	Cabinet Jumper Power Cord, 250 VAC 13A, C14-C15 Connectors
CISCO	PWR-C1-1100WAC/2	1100W AC Config 1 Secondary Power Supply
CISCO	C3850-NM-2-10G	Cisco Catalyst 3850 2 x 10GE Network Module
CISCO	GLC-LH-SMD=	1000BASE-LX/LH SFP transceiver module, MMF/SMF, 1310nm, DOM
CISCO	S3850UK9-33SE	CAT3850 Universal k9 image
CISCO	STACK-T1-50CM	50CM Type 1 Stacking Cable
CISCO	CAB-SPWR-30CM	Catalyst 3750X and 3850 Stack Power Cable 30 CM
CISCO	N/A	Limited Lifetime Warranty

F. Acceptable components for 48-port access layer switches are:

CISCO	WS-C3850-48U-S	Cisco Catalyst 3850 48 Port UPOE IP Base
CISCO	CAB-C15-CBN	Cabinet Jumper Power Cord, 250 VAC 13A, C14-C15 Connectors
CISCO	PWR-C1-1100WAC/2	1100W AC Config 1 Secondary Power Supply
CISCO	C3850-NM-2-10G	Cisco Catalyst 3850 2 x 10GE Network Module
CISCO	S3850UK9-33SE	CAT3850 Universal k9 image
CISCO	STACK-T1-50CM	50CM Type 1 Stacking Cable
CISCO	GLC-LH-SMD=	1000BASE-LX/LH SFP transceiver module, MMF/SMF, 1310nm, DOM
CISCO	CAB-SPWR-30CM	Catalyst 3750X and 3850 Stack Power Cable 30 CM
CISCO	PWR-C1-1100WAC	1100W AC Config 1 Power Supply
CISCO	N/A	Limited Lifetime Warranty

G. Enterprise network access layer switches at un-conditioned spaces such as roadway cabinets, exterior parking locations, etc. shall be environmentally hardened. Acceptable components for switches in these locations are:

CISCO	IE-3000-8TC-E	IE 3000 8-Port Base Switch w/ Layer 3
CISCO	SIESISK9T-15002EY	Cisco IE 3000 IP SERVICES WITH WEB BASED DEV MGR

CISCO	PWR-IE3000-AC=	IE 3000 Power transformer
CISCO	STK-RACKMNT-2955=	19 in Rack mount kit for Catalyst 2955
CISCO	GLC-LH-SMD=	1000BASE-LX/LH SFP transceiver module, MMF/SMF, 1310nm, DOM
CISCO	CON-SNT-IE30008	Smartnet 8x5xNBD

2.2 ECS NETWORK

A. ECS distribution switches shall be deployed in a red / blue configuration in physically separate rooms. Switches shall be 12-port SFP based configuration with 1000-base-BXU uplinks from each switch to the ECS “red” core switch and “blue” core switch. 1000-base-BXD downlink modules shall be provided for the core switch interfaces. An additional pair of BXU BXD modules shall be used for a link between distribution switches. In locations requiring more than nine (9) ECS access layer switches more than one 12-port SFP switch shall be utilized in a stackwise configuration.

B. Acceptable components for ECS distribution switches are:

CISCO	WS-C3750X-12S-E	Catalyst 3750X 12 Port GE SFP IP Services
CISCO	CAB-C15-CBN	Cabinet Jumper Power Cord, 250 VAC 13A, C14-C15 Connectors
CISCO	C3KX-PWR-350WAC/2	Catalyst 3K-X 350W AC Secondary Power Supply
CISCO	S375XVK9T-15002SE	CAT 3750X IOS UNIVERSAL WITH WEB BASE DEV MGR
CISCO	C3KX-NM-10G	Catalyst 3K-X 10G Network Module option PID
CISCO	CAB-STACK-50CM	Cisco StackWise 50CM Stacking Cable
CISCO	CAB-SPWR-30CM	Catalyst 3750X and 3850 Stack Power Cable 30 CM
CISCO	C3KX-PWR-350WAC	Catalyst 3K-X 350W AC Power Supply

C. ECS access layer switches shall be provided at IDF rooms that support public address microphone stations and other items of public address equipment. These switches shall provide PoE power to operate microphone stations. Switches shall be provided with 1000-base-BXU uplink modules to link to the red and blue ECS distribution switches with 1000-base-BXD modules at the distribution switch location.

D. Acceptable components for the ECS access layer switches are:

CISCO	WS-C3850-24U-S	Cisco Catalyst 3850 24 Port UPOE IP Base
CISCO	CAB-C15-CBN	Cabinet Jumper Power Cord, 250 VAC 13A, C14-C15 Connectors
CISCO	PWR-C1-1100WAC/2	1100W AC Config 1 Secondary Power Supply
CISCO	C3850-NM-2-10G	Cisco Catalyst 3850 2 x 10GE Network Module
CISCO	S3850UK9-33SE	CAT3850 Universal k9 image
CISCO	STACK-T1-50CM	50CM Type 1 Stacking Cable
CISCO	CAB-SPWR-30CM	Catalyst 3750X and 3850 Stack Power Cable 30 CM
CISCO	PWR-C1-1100WAC	1100W AC Config 1 Power Supply
CISCO	GLC-LH-BXU	1000-BASE-BXU Uplink Module 1-strand SM

CISCO	GLC-LH-BXD	1000-BASE-BXD Downlink Module 1-strand SM
-------	------------	---

2.3 SACN NETWORK

- A. SACN distribution switches shall be deployed in a red / blue configuration in physically separate rooms. Switches shall be 12-port SFP based configuration with 1000-base-LX/LH uplinks from each switch to the SACN “red” core switch and “blue” core switch. 1000-base-LX/LH downlink modules shall be provided for the core switch interfaces. An additional pair of 1000-base-LX/LH modules shall be used for a link between distribution switches. In locations requiring more than nine (9) SACN access layer switches more than one 12-port SFP switch shall be utilized in a stackwise configuration.
- B. Acceptable components for SACN distribution switches are:

CISCO	WS-C3750X-12S-E	Catalyst 3750X 12 Port GE SFP IP Services
CISCO	CAB-C15-CBN	Cabinet Jumper Power Cord, 250 VAC 13A, C14-C15 Connectors
CISCO	C3KX-PWR-350WAC/2	Catalyst 3K-X 350W AC Secondary Power Supply
CISCO	S375XVK9T-15002SE	CAT 3750X IOS UNIVERSAL WITH WEB BASE DEV MGR
CISCO	C3KX-NM-10G	Catalyst 3K-X 10G Network Module option PID
CISCO	CAB-STACK-50CM	Cisco StackWise 50CM Stacking Cable
CISCO	CAB-SPWR-30CM	Catalyst 3750X and 3850 Stack Power Cable 30 CM
CISCO	C3KX-PWR-350WAC	Catalyst 3K-X 350W AC Power Supply

- C. SACN access layer switches shall be provided at IDF rooms that support access control equipment. These switches shall be provided in pairs of two switches in a stackwise configuration. The top switch in the stack is considered the active switch and cables from access control equipment are normally connected to this switch. The bottom switch is configured as a hot spare for security to use in the event the top switch fails. . Switches shall be provided with 1000-base-BXU uplink modules to link to the red and blue ECS distribution switches with 1000-base-BXD modules at the distribution switch location.
- D. Acceptable components for the SACN access layer switches are:

CISCO	WS-C3850-24U-S	Cisco Catalyst 3850 24 Port UPOE IP Base
CISCO	CAB-C15-CBN	Cabinet Jumper Power Cord, 250 VAC 13A, C14 -C15 Connectors
CISCO	PWR-C1-1100WAC/2	1100W AC Config 1 Secondary Power Supply
CISCO	C3850-NM-2-10G	Cisco Catalyst 3850 2 x 10GE Network Module
CISCO	S3850UK9-33SE	CAT3850 Universal k9 image
CISCO	STACK-T1-50CM	50CM Type 1 Stacking Cable
CISCO	CAB-SPWR-30CM	Catalyst 3750X and 3850 Stack Power Cable 30 CM
CISCO	PWR-C1-1100WAC	1100W AC Config 1 Power Supply
CISCO	GLC-LH-BXU	1000-BASE-BXU Uplink Module 1-strand SM
CISCO	GLC-LH-BXD	1000-BASE-BXD Downlink Module 1-strand SM

- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Comply with NFPA 70.

2.4 NO SUBSTITUTIONS

- A. Substitution on network equipment is not permitted as these devices must interoperate with existing DEN networks.
- B. Source Limitations: Obtain Local Area Network components from single source and from single manufacturer for each component type.

PART 3 - EXECUTION

3.1 GENERAL

- A. The Work shall be performed by skilled technicians under the direction of experienced engineers, all of whom shall be properly factory trained and qualified for this Work.
- B. Raceways: Raceways shall be installed in accordance with Division 26 and as augmented by applicable Division 27 sections.

3.2 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing and Reports:
 - 1. The Contractor shall provide all personnel, equipment, instrumentation, and supplies necessary to perform all testing.
 - 2. Design Engineer and Airport representatives will witness all field tests.
 - 3. When installation is complete, the system shall be tested by the Contractor and DEN representatives. A representative of the installing Contractor shall submit a written report of the findings to the DEN Project Manager.
 - 4. Report shall consist of a complete listing of every device and feature, the date it was tested and by whom, the results, and the date retested (if failure occurred during any previous tests). The final test reports shall indicate that every device tested successfully.
 - 5. Submit two (2) typed copies of the test reports in a neatly bound folder to the Owner's Representative for approval.
 - 6. Also, submit electronic copies of test reports in pdf format.
 - 7. Failure to comply will result in a delay of final testing and acceptance.
- B. The field testing shall as a minimum include:

1. Verification that the data transmission media and any signal or control cabling has been installed, tested, and approved.
2. Verification that the new equipment is fully functional and that all other ancillary equipment is functioning properly.

3.3 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 1. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements.
 2. Complete installation and startup checks according to manufacturer's written instructions.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain the local area network (LANS) and equipment. Refer to Section 017900 "Demonstration and Training."
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 272100

Copyright 2013 by The American Institute of Architects (AIA)

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 272101 - PUBLIC WIRELESS LAN (WIFI)

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

IMPORTANT: TECHNOLOGIES PARTS LISTS MUST BE SPECIFICALLY COORDINATED FOR ALL PROJECTS. ENSURE THAT ALL REQUIRED COORDINATION WITH DEN STAFF IS COMPLETED IN A TIMELY MANNER. REFER TO DESIGNER NOTES CONTAINED IN THIS SECTION FOR MORE INFORMATION.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Consultant Coordination Requirements

1. Consultants are required to coordinate WiFi design with DEN during design as described below.
 - a. Consultant shall review the general design guidelines below and develop a preliminary design. After preliminary design is complete, coordinate with the DEN Project Manager to arrange a meeting with the consultant and DEN Technologies WIFI group to review the preliminary design and confirm the specific locations and configuration of WIFI access points, antennas and pods.
 - b. Low density areas such as curbside, bag claim and similar areas will require individual 802.11a/b/g/n access points and patch antennas. A WIFI device coming into the proximity of the access point will be queried by the WIFI network controller to determine whether the device is 802.11a capable. If so, the controller will assign the device to one of several 802.11a channels. If not the device will be assigned to one of the 802.11b/g/n channels. High density locations will require pods of WIFI access points. A

pod consists of three 802.11a/b/g/n antennas and access points. Antennas are ceiling mounted in an equilateral triangular arrangement that is seven (7) feet on a side. A WIFI device coming into a high density area will be queried to verify 802.11a compatibility and if so, assigned to an 802.11a channel in the nearest pod. If not, the network.

Edit to suit Project.

- B. The Contractor shall provide a physically complete and fully functional extension of the airport public wireless LAN system throughout all public areas of the project. This equipment shall fully integrate with the DEN enterprise wired network and with existing airport WIFI controllers. Provide all labor and products required for installation of the equipment. Programming shall be performed by Denver International Airport (DEN) representatives. Test and checkout of the WIFI equipment shall be done jointly with the Contractor and DEN personnel. Coordinate all work by DEN staff through the DEN Project Manager.
- C. Work Includes:
 - 1. WIFI Access Points.
 - 2. WIFI Antennas.
 - 3. Cabling from access points to DEN enterprise network switches.
 - 4. Power Injectors for non-PoE switch connections.
 - 5. Access Point enclosures, access panels and other misc. hardware.
- D. Provide system documentation, submittals and warranty support.
- E. Comply with codes, ordinances, regulations, and other legal requirements of public authorities that bear on installation and performance of Work.
- F. The Work described in this section includes engineering, design, labor, materials, equipment, installation and services necessary for physically complete and functional system. Materials, equipment, appurtenances, or labor not specifically mentioned in this specification, or not shown on the Contract Drawings, but required for proper installation, performance, and operation of the equipment or systems, shall be provided by the Contractor.
- G. The Work shown in the Contract Drawings is diagrammatic in nature and the Contractor is responsible for determining the final equipment locations, arrangements, and installation to meet site-specific requirements.
- H. Related Sections:
 - 1. Section 260400 "Basic Electrical Requirements".
 - 2. Section 270526 "Grounding and Bonding for Telecommunications Systems".
 - 3. Section 270528 "Pathways for Communications Systems".
 - 4. Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling".
 - 5. Section 271100 "Communications Equipment Room Fittings".
 - 6. Section 271300 "Communications Backbone Cabling".

7. Section 271500 "Communications Horizontal Cabling".

Verify requirements for as-built plans with DEN Project Manager.

- I. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.3 SCOPE OF WORK

- A. The Contractor shall provide in-ceiling or above-ceiling enclosures for access points. Access points are not plenum rated. It is essential that the access points be readily accessible after installation for maintenance purposes.
- B. Ethernet communications between the access points and enterprise network access layer switches using a PoE Ethernet connection. Refer to the Contract Drawings for the location of each Ethernet access layer switch.
- C. Once access points are installed and connected to the public WIFI network DEN Technologies will configure the access points to work with the existing DEN WIFI controllers. DEN Technologies will provide an IP address, subnet mask and default gateway address for each access point. These must be configured on the access points prior to their installation.

1.4 REFERENCE STANDARDS

- A. General: The latest version of the following codes and standards shall be applicable:
 1. Code of Federal Regulations (CFR).
 2. 47 CFR 15 et seq.: Radio Frequency Devices.
 3. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE C2: National Electrical Safety Code.
 - b. IEEE 142: IEEE Recommended Practice for Grounding of Industrial and Commercial Power Systems.
 - c. IEEE C62.41-1991: Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits.
 - d. IEEE 802.3: Information Technology - Local and Metropolitan Area Networks - Part 3; Carrier Sense with Collision Detection (CSMA/CD) Access Methods and Physical Layer Specification.
 - e. IEEE 802.3u: Carrier Sense Multiple Access with Collision Detection (CSMA/CD) Access Method & Physical Layer Specifications: Mac Parameters, Physical Layer, Medium Attachment Units and Repeater for 100 Mb/s Operation.
 - f. IEEE 802.3x: Supplement to Carrier Sense Multiple Access with Collision Detection (CSMA/CD) Access Method & Physical Layer Specifications: Specification for 802.3 Full Duplex Operation Detection (CSMA/CD) Access Method & Physical Layer Specifications:

- 1) Specification for 802.3 Full Duplex Operation.
4. National Fire Protection Association (NFPA):
 - a. NFPA 70: National Electrical Code (NEC).
5. Telecommunications Industry Association/Electronics Industry Association (TIA/EIA):
 - a. EIA-170: Electrical Performance Standards - Monochrome Television Studio Facilities.
 - b. EIA-310-D: Cabinets, Racks, Panels, and Associated Equipment
 - c. TIA/EIA-568-B: Commercial Building Telecommunications Cabling Standard.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. General: Comply with requirements of Section 013300 "Submittal Procedures".
- B. Product Data: For each type of product.
 1. Submit catalog cut sheets, technical data sheets, manufacturer's specifications and/or diagrams necessary to illustrate a product, material or system for some portion of the work. Product data literature is required on all items of material and equipment and should be clearly marked; identifying specific items proposed with a reference to the specification requirement(s) the item is being submitted for.
 2. Product data shall include adequate descriptive literature and catalog cut sheets required for the DEN Project Manager to ascertain that the proposed equipment and materials comply with Specifications requirements.
 3. Include data substantiating that materials comply with requirements.
- C. Shop Drawings:
 1. The shop drawings shall be approved by the DEN Project Manager prior to system installation.
 2. Floor plans detailing all devices, conduit and raceway systems.
 3. Equipment room layouts to scale including equipment cabinet elevations.
 4. Point-to-point wiring diagrams.

1.6 INFORMATIONAL SUBMITTALS

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- A. Qualification Data: For installer.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For public wireless LAN (WIFI) systems to include in emergency, operation, and maintenance manuals.
 - 1. Include operating instructions, and maintenance and repair procedures. Procedures shall include shop manuals and schematic drawings to allow repair of equipment.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Contractor shall maintain on site accurate as-built drawings indicating dimensioned locations of constructed raceway, box and device locations. Any modifications to work depicted on the Engineered shop drawings shall be noted. Documents shall be updated daily and shall at all times be available for DEN review.

Edit below to suit Project, or delete Article if no maintenance material submittals.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1.9 QUALITY ASSURANCE

- A. Contractor shall be fully responsible for daily quality control of all system installation, coordination with trades, and coordination with DEN Maintenance and Engineering.

1.10 DELIVERY, STORAGE AND HANDLING

- A. Deliver products to site under provisions of Division 1.
- B. Store and protect products under provisions of Division 1.

1.11 WARRANTY

- A. All components, parts and assemblies provided by the Contractor shall be guaranteed against defects in materials and workmanship for a period of 24 months following acceptance. Submit warranty per Division 1 requirements.
- B. Warranty service shall be provided by a trained specialist of the equipment manufacturer, who shall be based in a fully staffed, fully stocked (replacement parts and test equipment) office, located within 50 miles of the site.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

Designers are required to coordinate all equipment lists with DEN Technologies staff during design. Edit this section as required to suit project. Refer to designer notes contained in Part 1 for more information.

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.1 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - 1. WIFI Access Point:
 - a. Meru AP332 Dual Radio, Dual Band Three Stream Radio with six external antenna connections.
 - 2. WIFI Antenna (One per Access Point):
 - a. Meru ANT-6ABGN Dual band mini-MIMO ceiling mount omnidirectional antenna. Each antenna is equipped with six (6) 36-inch cables with RP-SMA plugs for connection to the associated access point.
 - 3. Substitutions:

- a. Substitution on WIFI equipment is not permitted, as these devices must interoperate with existing DEN WIFI controllers.
 - b. Designers are required to meet with DEN Technologies WIFI staff during the design phase of the Project to ensure there have been no changes in equipment types.
- B. Source Limitations: Obtain public wireless LAN (WIFI) system from single source from single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70.

PART 3 - EXECUTION

3.1 GENERAL

- A. The Work shall be performed by skilled technicians under the direction of experienced engineers, all of whom shall be properly factory trained and qualified for this Work.
- B. Programming of the system WIFI controllers shall be performed by DEN Technologies.
- C. Raceways: Raceways shall be installed in accordance with Division 26 and as augmented by applicable Division 27 sections.

3.2 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing and Reports:
 - 1. The Contractor shall provide all personnel, equipment, instrumentation, and supplies necessary to perform all testing.
 - 2. Design Engineer and Airport representatives will witness all field tests.
 - 3. When installation is complete, the system shall be tested by the Contractor and DEN representatives. A representative of the installing Contractor shall submit a written report of the findings to the DEN Project Manager.
 - 4. Report shall consist of a complete listing of every device and feature, the date it was tested and by whom, the results, and the date retested (if failure occurred during any previous tests). The final test reports shall indicate that every device tested successfully.
 - 5. Submit two (2) typed copies of the test reports in a neatly bound folder to the Owner's Representative for approval.
 - 6. Also submit electronic copies of test reports in pdf format.
 - 7. Failure to comply will result in a delay of final testing and acceptance.

- B. The field testing shall as a minimum include:
1. Verification that the data transmission media and any signal or control cabling has been installed, tested, and approved.
 2. Verification that the new equipment is fully functional and that all other ancillary equipment is functioning properly.

3.3 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
1. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements.
 2. Complete installation and startup checks according to manufacturer's written instructions.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain the public wireless LAN (WIFI) system and equipment. Refer to Section 017900 "Demonstration and Training."
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 272101

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 273200 - TELEPHONE SYSTEM

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes:

Edit to suit Project.

- 1. Tenant and Airline PABX Systems.
- 2. Courtesy Telephones.
- 3. Elevator Telephones.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DESCRIPTION

- A. Telephone service will consist of a variety of regulated services, airport PABX service and airline / tenant PABX services. These services will be provisioned over the DEN Premise Wiring and Communications backbone and horizontal cabling system to various outlets located throughout the facility.

- B. This section describes the general configuration required for airline / tenant telephone systems and specialized telephones that will interconnect to the DEN PABX system.
- C. Designers are required to submit a complete set of plans and specifications for their projects to the DEN Telecommunications Department for review and approval. Designers are also required to meet with representatives from the DEN Telecommunications Department at one or more times during the course of design to work out specific interface details prior to the final submittal.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment cabinets and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Cabling Diagrams: Single-line block diagrams showing cabling interconnection of all components for this specific equipment. Include cable type for each interconnection.
 - 3. Installation Details: For built-in equipment, dimensioned and to scale.

1.5 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- A. Qualification Data: For qualified Installer.
- B. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For telephone equipment to include operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Compatibility: System shall be capable of integration with any brand of phone system (wired or wireless), CCTV, and fire-alarm system.
- C. Electrical Components, Devices, and Accessories: Listed and labeled according to UL 1069 as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

D. CONSTRUCTION WASTE MANAGEMENT

- 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 TENANT AND AIRLINE PABX SYSTEMS

- A. Tenant and Airline PABX systems shall be located within the Tenant or Airline leasehold area or, where space permits, in a locked cabinet within the tenant equipment room immediately adjacent to the DEN IDF room.
- B. Tie cables shall be utilized between the PABX location and the DEN IDF room. These cables shall be provided and installed by the DEN Premise Wiring and Communications System (PWCS) contractor at the expense of the airline or tenant. Incoming trunks and outgoing station circuits shall be extended to the PABX via this tie cable by the DEN PWCS contractor at airline or tenant expense under the airport's Move / Add / Change process.

2.2 COURTESY TELEPHONES

- A. Courtesy telephones shall be provided at pay telephone banks and other locations in a pattern matching courtesy telephone locations throughout existing portions of the facility.
- B. These telephones will connect as analog extensions on the DEN PABX system. All cross connects to support these telephones will be provided by the DEN PWCS contractor. All programming necessary to activate these telephones will be by the DEN Telecommunications staff.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ceeco Model: SSP 361-F, with optional white handset.
2. <Insert manufacturer>
3. or approved equal.

Retain first paragraph below if equipment connects with an existing system. Insert descriptions of specific operational sequences that must be achieved.

- D. Existing System Compatibility: Functionally and electrically compatible with existing system so components and wiring operate as an extension or upgrade of the existing system and existing or upgraded functional performance of the existing system applies to the entire final system. Colors, tones, and types, shall be common among new and existing systems.

2.3 ELEVATOR TELEPHONES

- A. Elevators installed at DEN must be equipped with an ADA compliant hands-free elevator telephone. These telephones are to be mounted inside the control station panel in each elevator cab. Special perforations are required for the telephone loudspeaker, microphone element and LED indicator.
- B. Provide one normally open auxiliary dry contact on the elevator alarm button in each elevator cab. The primary contact on this button shall ring the elevator alarm bell. The second contact shall cause the telephone to go off-hook causing the PABX to ring down the call to a designated receiving location.
- C. The standard DEN telephone also includes an ADA compliant legend plate that must be installed inside each elevator cab.
- D. The horizontal wiring distribution system shall include one ¾" conduit from the nearest IDF room to an interface cabinet near each elevator controller to support these telephones. Where multiple controllers are located in the same machine room, a single larger conduit may be utilized to a junction box in the machine room with separate ¾" conduits extending from this box to each elevator controller.
- E. Coordinate shielded traveling cable pair requirements with the elevator contractor
- F. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Talk-A-Phone ETP-103.
 2. Substitutions on these units shall not be considered as the telephones are polled several times per day by the Airport's Talk-A-Lert software and EB-200 base station.

2.4 AREA OF REFUGE TELEPHONES

- A. Furnish and install flush mount single button ADA compliant area of refuge telephones where shown on the contract drawings. These telephones shall flush mount in a flush backbox. Area of refuge telephones shall be provided with a front panel red button

marked emergency, call connected indicator and braille placard to assist the blind. Area of refuge telephones shall be connected to the airport PABX as analog stations. DEN Telecommunications will program the PABX to ring these telephones into the airport communications center when a call is placed.fl

B. Area of Refuge telephones shall be Talk-a-Phone model ETP-400

1. Substitutions on these units shall not be considered as the telephones are polled several times per day by the Airport's Talk-A-Lert software and EB-200 base station

2.5 GARAGE BLUE LIGHT TELEPHONES

A. Blue Light phones used at DEN shall be Talk-a-Phone model ETP-400D dual button hands free phones. The red button on the phone shall be marked Emergency with an ADA compliant braille label placard. This button is programmed to call the Denver Police position in the airport communications center. The black button on the phones are marked "Info" with an ADA compliant braille placard. This button is programmed to call the parking operator operations office. Phones connect to a standard analog PABX circuit.

B. Blue light phones shall be located adjacent to each stairwell. On lower levels of the garage Blue Light phones shall be installed in a Talk-a-Phone ETP-WM wall mount blue light enclosure. On the upper level of the garage, phones shall be mounted in a Talk-a-Phone ETP-MTE-72 tower enclosure. All phones will require both a telephone line connection and 120VAC power to power the blue light and strobe.

1. Substitutions on these units shall not be considered as the telephones are polled several times per day by the Airport's Talk-A-Lert software and EB-200 base station

2.6 HARDWARE, CONDUCTORS AND CABLE

A. Data Cable and Hardware: [**Category 5e**] UTP and UTP hardware. Comply with requirements in Section 271500 "Communications Horizontal Cabling."

B. Power Conductors and Cables: Power circuits and raceway to powered blue light telephones shall comply with relevant electrical sections of these specifications.

C. Grounding Conductors and Cables: Copper, stranded, No. 16 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 INSTALLATION

A. Wiring Method:

1. Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters.
 - a. Install plenum cable in environmental air spaces, including plenum ceilings.
 - b. Conceal raceway and cables except in unfinished spaces.
2. Cable Trays: Comply with requirements in Section 260536 "Cable Trays for Electrical Systems" and Section 271500 "Communications Horizontal Cabling."
3. Conduit and Boxes: Comply with requirements in Section 260533 "Raceway and Boxes for Electrical Systems." [**Flexible metal conduit shall not be used.**]
 - a. Outlet boxes shall be no smaller than **2 inches (50 mm)** wide, **3 inches (75 mm)** high, and **2-1/2 inches (64 mm)** deep.

B. Install cables without damaging conductors, shield, or jacket.

C. Do not bend cables, while handling or installing, to radii smaller than as recommended by manufacturer.

D. Pull cables without exceeding cable manufacturer's recommended pulling tensions.

1. Pull cables simultaneously if more than one is being installed in same raceway.
2. Use pulling compound or lubricant if necessary. Use compounds that will not damage conductor or insulation.
3. Use pulling means, including fish tape, cable, rope, and basket-weave wire or cable grips, that will not damage media or raceway.

E. Install exposed raceways and cables parallel and perpendicular to surfaces or exposed structural members, and follow surface contours. Secure and support cables by straps, staples, or similar fittings designed and installed so as not to damage cables. Secure cable at intervals not exceeding **30 inches (760 mm)** and not more than **6 inches (150 mm)** from cabinets, boxes, or fittings.

F. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

G. Separation of Wires: Provide separation as recommended by equipment manufacturer for other conductors.

H. Splices, Taps, and Terminations: Make splices, taps, and terminations on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Install terminal cabinets where there are splices, taps, or terminations for eight or more conductors.

- I. Identification of Conductors and Cables: Comply with requirements in Section 271500 "Communications Horizontal Cabling" for cable administration, cable schedule, and cable and wire identification.
- J. Equipment Identification:
 - 1. Comply with requirements in Section 260553 "Identification for Electrical Systems" for equipment labels and signs and labeling installation requirements.
 - 2. Label stations, controls, and indications using approved consistent nomenclature.

3.2 EXISTING SYSTEMS

Retain this article if equipment being specified is to connect with existing equipment.

- A. Examine existing systems for proper operation, compatibility with new equipment, and deficiencies. If discrepancies or impairments to successful connection and operation of interconnected equipment are found, report them and do not proceed with installation until directed. Schedule existing systems' examination so there is reasonable time to resolve problems without delaying construction.

3.3 GROUNDING

- A. Ground cable shields and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other signal impairments.
- B. Signal Ground Terminal: Locate at main equipment cabinet. Isolate from power system and equipment grounding except at connection to main building ground bus.
- C. Grounding Provisions: Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.4 FIELD QUALITY CONTROL

Retain first paragraph below to require Contractor to perform tests and inspections.

- A. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

- 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist Contractor in testing.

Retain first paragraph below to describe tests and inspections to be performed.

- B. Tests and Inspections:

1. Schedule tests a minimum of seven days in advance.
 2. Report: Submit a written record of test results.
 3. Operational Test: Perform an operational system test and demonstrate proper operations of each installation.
- C. Inspection: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified.
- D. Prepare test and inspection reports.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain telephone system.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 274111 - VIDEO SURVEILLANCE AND ENVIRONMENTAL MONITORING SYSTEM (VSEMS)

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Consultant to provide responsibility matrix on drawings delineating scope of work for all parties.

Edit to suit Project.

- A. The Contractor shall provide a physically complete and fully functional Video Surveillance and Environmental Monitoring System (VSEMS) for monitoring of the DEM Intermediate Distribution Frame (IDF) rooms, the DEM MDF and other DEM Telecommunications as specified herein and detailed on the Contract Drawings. Provide all labor and products required for installation of the equipment. Programming shall be performed by Denver International Airport (DEM) representatives. Test and checkout of the VSEMS shall be done jointly with the Contractor and DEM personnel. Refer to the Contract Drawings including the responsibility matrix for further detail and delineation of the scope of work. Coordinate all work by DEM staff through the DEM Project Manager. Work of this Section Includes:

1. Monitoring Appliance.
2. Camera Pod.
3. Temperature Sensor.
4. Fluid Detector.
5. Cabling.
6. Software and License.

- B. The VSEMS communicates over the DEM Local Area Network on a dedicated Virtual Local Area Network (VLAN).
- C. Where the work of several trades is involved, coordinate all related work to provide each system complete and in proper operating order.
- D. Cooperate with all others involved in the Project, with due regard to their work, to promote rapid completion of the entire Project.
- E. Local conditions: The Contractor shall thoroughly familiarize itself with the work as well as the local conditions under which the work is to be performed. Schedule work with regard to seasons, weather, climatic conditions, and all other local conditions, which may affect the progress and quality of the Work.
- F. Provide system documentation, submittals and warranty support.
- G. Comply with all applicable codes, ordinances, regulations, and other legal requirements of public authorities that bear on installation and performance of Work.
- H. The Work described in this Section includes engineering, design, labor, materials, equipment, installation and services necessary for physically complete and functional system. Materials, equipment, appurtenances, or labor not specifically mentioned in this specification, or not shown on the Contract Drawings, but required for proper installation, performance, and operation of the equipment or systems, shall be provided by the Contractor.
- I. The Work shown in the Contract Drawings is diagrammatic in nature and the Contractor is responsible for determining the final equipment locations, arrangements, and installation to meet site-specific requirements.
- J. Related Sections:
 - 1. Section 260400 "Basic Electrical Requirements".
 - 2. Section 270526 "Grounding and Bonding for Telecommunications Systems".
 - 3. Section 270528 "Pathways for Communications Systems".
 - 4. Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling".
 - 5. Section 271100 "Communications Equipment Room Fittings".
 - 6. Section 271300 "Communications Backbone Cabling".

Verify requirements for as-built plans with DEM Project Manager.

- K. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.3 SCOPE OF WORK

Retain terms that remain after this Section has been edited for a Project.

- A. The Contractor shall provide a VSEMS for the video and environmental monitoring of the Intermediate Distribution Frame (IDF) rooms, the DEM MDF and other communications spaces as detailed on the Contract Drawings. The system shall consist of video and environmental monitoring appliances, software and all ancillary equipment and devices for a physically complete and fully functional system.
- B. Ethernet communications between the monitoring appliance and the existing server shall be via an Ethernet edge switch, provided by others, located within an equipment rack within each communications space. Refer to the Contract Drawings for the location of each Ethernet edge switch.
- C. The Contractor shall install a monitoring appliance with all accessories within each TR at a location as field coordinated with the Owner and Engineer. The monitoring device shall be connected to the Ethernet edge switch via a CAT 6 cable provided by the Premise Wiring and Communications (PWCS) Contractor. The Contractor shall provide all required power supplies and mounting hardware for installation of the monitoring appliance.
- D. The TR appliance shall provide monitoring of the following:
 - 1. Video.
 - 2. Ambient Room Temperature.
 - 3. Fluid Detection.
- E. System shall consist of the following:
 - 1. Monitoring Appliance.
 - 2. Camera Pod.
 - 3. Camera Lens - Varifocal.
 - 4. Temperature Sensor.
 - 5. Fluid Detector.
 - 6. Category 5e Jumper Cable, by PWCS Contractor.
 - 7. Ethernet Switch, by PWCS Contractor.
 - 8. Cable, Wire and Labels.

1.4 REFERENCE STANDARDS

- A. General: The latest version of the following codes and standards shall be applicable.
- B. Code of Federal Regulations (CFR).
 - 1. 47 CFR 15 et seq: Radio Frequency Devices
- C. Institute of Electrical and Electronics Engineers (IEEE):
 - 1. IEEE C2: National Electrical Safety Code.
 - 2. IEEE 142: IEEE Recommended Practice for Grounding of Industrial and Commercial Power Systems.
 - 3. IEEE C62.41-1991: Recommended Practice on Surge Voltages in Low-Voltage

- AC Power Circuits.
4. IEEE 802.3: Information Technology - Local and Metropolitan Area Networks - Part 3; Carrier Sense with Collision Detection (CSMA/CD) Access Methods and Physical Layer Specification.
 5. IEEE 802.3u: Carrier Sense Multiple Access with Collision Detection (CSMA/CD) Access Method & Physical Layer Specifications: Mac Parameters, Physical Layer, Medium Attachment Units and Repeater for 100 Mb/s Operation
 6. IEEE 802.3x: Supplement to Carrier Sense Multiple Access with Collision Detection (CSMA/CD) Access Method & Physical Layer Specifications:
 - a. Specification for 802.3 Full Duplex Operation.
- D. National Fire Protection Association (NFPA).
1. NFPA 70: National Electrical Code (NEC).
- E. Telecommunications Industry Association/Electronics Industry Association (TIA/EIA).
1. EIA-170: Electrical Performance Standards - Monochrome Television Studio Facilities.
 2. EIA-310-D: Cabinets, Racks, Panels, and Associated Equipment
 3. TIA/EIA-568-B: Commercial Building Telecommunications Cabling Standard

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEM PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. General: Comply with requirements of Section 013300 "Submittal Procedures".
- B. Product Data: For each type of product.
1. Submit catalog cut sheets, technical data sheets, manufacturer's specifications and/or diagrams necessary to illustrate a product, material or system for some portion of the work. Product data literature is required on all items of material and equipment and should be clearly marked; identifying specific items proposed with a reference to the specification requirement(s) the item is being submitted for.
 2. Product data shall include adequate descriptive literature and catalog cut sheets required for the DEM Project Manager to ascertain that the proposed equipment and materials comply with Specifications requirements.
 3. Include data substantiating that materials comply with requirements.
- C. Shop Drawings:
1. The shop drawings shall be approved by the DEM Project Manager prior to system installation.
 2. Floor plans detailing all devices, conduit and raceway systems.
 3. Equipment room layouts to scale including equipment cabinet elevations.
 4. Point-to-point wiring diagrams.

1.6 INFORMATIONAL SUBMITTALS

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- A. Qualification Data: For installer.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- B. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For video surveillance and environmental monitoring systems to include in emergency, operation, and maintenance manuals.

- 1. Include operating instructions, and maintenance and repair procedures. Procedures shall include shop manuals and schematic drawings to allow repair of equipment.

Verify requirements for as-built plans with DEM Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Contractor shall maintain on site accurate as-built drawings indicating dimensioned locations of constructed raceway, box and device locations. Any modifications to work depicted on the Engineered shop drawings shall be noted. Documents shall be updated daily and shall at all times be available for DEM review.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEM Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. The Contractor shall provide spare equipment as indicated in this Section.
- C. Spare parts shall be delivered in factory sealed cartons or packages with clearly marked model, part and serial numbers that match the invoice, packing slip and indication on packing carton, packages or container.
- D. Spare equipment and parts shall be new and unused and unopened.

- E. Spare equipment and parts shall be covered under the manufacturers 1 year warranty.
- F. Prior to delivery to the Owner, spare parts shall be stored in a controlled temperature and humidity environmental that meets the manufacturers recommendations.

Edit to suit project. Provide 5% spare for all equipment, minimum qty 1 per equipment type.

- G. Provide the following spare equipment:
 - 1. One (1) Netbotz 450 (1U Rack Mount Form Factor)

1.9 QUALITY ASSURANCE

- A. Contractor shall be fully responsible for daily quality control of all system installation, coordination with trades, and coordination with DEM Maintenance and Engineering.

1.10 DELIVERY, STORAGE AND HANDLING

- A. Deliver products to site under provisions of Division 1.
- B. Store and protect products under provisions of Division 1.

1.11 WARRANTY

Coordinate warranty requirements with DEM Project Manager.

- A. All components, parts and assemblies provided by the Contractor shall be guaranteed against defects in materials and workmanship for a period of 24 months following acceptance.
- B. Provide 21-month Bridge software and support agreement from the manufacturer for all devices and software licenses provided. Submit warranty per Division 1 requirements.
- C. Warranty service shall be provided by a trained specialist of the equipment manufacturer, who shall be based in a fully staffed, fully stocked (replacement parts and test equipment) office, located within 50 miles of the site.

Retain article below if required for Project. Coordinate requirements with DEM Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Each DEM IDF and the Main Distribution Frame Room (MDF) shall be equipped with a monitoring system that provides environmental and video monitoring of each space.
- B. Monitoring equipment deployed as part of the project shall be networked together over the DEM local area network.

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.2 MANUFACTURERS

Retain "Manufacturers" Paragraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.

Edit equipment to suit Project.

- A. **Manufacturers: Subject to compliance with requirements, provide products by the following:**
 - 1. **Base Station:**
 - a. Netbotz 450 rack mounted base station: Netbotz NBRK0451.
 - 1) Remote camera, including hardware for mounting camera to the cable ladder, shall meet the following requirements:
 - a) Resolution: 640 x 480.
 - b) Frame Rates: Up to 20 FPS.
 - c) Design Selection: Netbotz Camera Pod 160 #NBPD0160.
 - b. **<Insert manufacturer's name>.**
 - c. or approved equal.
 - 2. **Sensors:**
 - a. Fluid Detector: NBES0301.
 - b. Temperature Sensor: AP9335T.
 - c. **<Insert manufacturer's name>.**
 - d. or approved equal.
 - 3. **Software:**
 - a. Provide One (1) software license for each appliance, Model No. NBSP0131. Programming to be performed by others.

- b. Provide ISX Central Surveillance licenses, Model No. NBSV1005. Programming to be performed by others.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
- B. Provide connecting cables and mounting hardware to deploy and connect sensors to the base station.
- C. Source Limitations: Obtain system from single source from single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with NFPA 70.

PART 3 - EXECUTION

3.1 GENERAL

- A. Installation shall be supervised and tested by a representative of the manufacturer of the system equipment. The Work shall be performed by skilled technicians under the direction of experienced engineers, all of whom shall be properly factory trained and qualified for this Work.
- B. Programming of the system headend and appliance settings shall be by DEM personnel.
- C. Raceways: Raceways shall be installed in accordance with Division 26 and as augmented by applicable Division 27 sections.

3.2 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEM Project Manager.

- A. Testing and Reports:
 - 1. The Contractor shall provide all personnel, equipment, instrumentation, and supplies necessary to perform all testing.
 - 2. Design Engineer and Airport representatives will witness all field tests.
 - 3. When installation is complete, the system shall be tested by the Contractor and DEM representatives. A representative of the installing Contractor shall submit a written report of the findings to the DEM Project Manager.
 - 4. Report shall consist of a complete listing of every device and feature, the date it was tested and by whom, the results, and the date retested (if failure occurred during any previous tests). The final test reports shall indicate that every device tested successfully.

5. Submit two (2) typed copies of the test reports in a neatly bound folder to the Owner's Representative for approval.
6. Also submit electronic copies of test reports in pdf format.
7. Failure to comply will result in a delay of final testing and acceptance.

B. The field testing shall as a minimum include:

1. Verification that the data transmission media and any signal or control cabling has been installed, tested, and approved.
2. Verification that the new equipment is fully functional.
3. Operation of all electrical, mechanical, and software controls and verification that the control performs the designed function.
4. Verification that all other ancillary equipment is functioning properly.

3.3 STARTUP SERVICE

A. Engage a factory-authorized service representative to assist Contractor and perform startup service.

1. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements.
2. Complete installation and startup checks according to manufacturer's written instructions.

3.4 DEMONSTRATION

A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain the video surveillance and environmental monitoring system (VSEMS) and equipment. Refer to Section 017900 "Demonstration and Training."

1. Schedule training with Owner, through DEM Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 274133 - MASTER ANTENNA TELEVISION SYSTEM

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

Edit to suit Project.

- 1. Headend Description.
- 2. Optical Distribution.
- 3. IDF Room Nodes.
- 4. RF Distribution

- B. Related Sections:

Retain Sections in subparagraphs below that contain requirements Contractor might expect to find in this Section but are specified in other Sections.

- 1. Section 271300 "Communications Backbone Cabling" for coaxial, UTP, and fiber-optic cables and connectors.
- 2. Section 271500 "Communications Horizontal Cabling" for coaxial, UTP, and fiber-optic cables and connectors.
- 3. Section 282300 "Video Surveillance" for cameras, monitors, computers, and cabling for video surveillance systems.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. dBm: Decibels relative to one milliwatt (optical).
- B. dBmV: Decibels relative to 1 mV across 75 ohms. Zero dBmV is defined as 1 mV across 75 ohms. $\text{dBmV} = 20 \log_{10}(V_1/V_2)$ where V_1 is the measurement of voltage at a point having identical impedance to V_2 (0.001 V across 75 ohms).
- C. EDFA: Erbium Doped Fiber Amplifier.
- D. Headend: The central equipment for the DEN TV system, where incoming signals are amplified, converted, processed, and combined into a common cable along with any locally originated television signals, for transmission to user-interface points.
- E. L-Band: Frequencies down-converted at satellite antennas and fed to satellite receivers.
- F. MHz: Megahertz.
- G. Nm: Nanometers (wavelength of light).
- H. Optical Node: An appliance, generally located in DEN IDF rooms that accepts an optical input from the DEN TV Headend and provides a broadband radio frequency output to feed television receivers.
- I. QAM: Quadrature Amplitude Modulation (Cable TV Signal Format).

1.4 SYSTEM DESCRIPTION

Revise this article if locally originated television programs or CATV signals are to be added to headend.

- A. The DEN TV system is a two-tiered system fed from Dish Network equipment at the north terminal. The lower tier is a bulk, standard definition channel lineup to serve City and other non-tenant spaces such as conference rooms, break rooms and private offices. The second tier is a four channel L-band QAM feed which is run through the system above the lower tier channel lineup. Tenants such as bars and restaurants will utilize specialized satellite receivers at their television receivers to tune channels in this upper tier. High pass filters are installed on each tenant drop to prevent tenants from receiving the lower tier channels.

Retain one or more of four subparagraphs below based on type of system selected above. Revise to specify off-air signal reception and direct broadcast satellite service.

1. The headend for the system utilizes an optical transmitter that accepts the

- 50-860 MHz radio frequency output from the Dish Network equipment and from modulators that support locally originated channels. Operating wavelength from the transmitter is 1550nm.
2. Two Erbium Doped Fiber Amplifiers (EDFA) are used at the headend to amplify the forward television signal. Each EDFA provides eight (8) optical outputs at +21dBm.
 3. Outputs from the EDFA amplifiers are routed over APC terminated single mode fiber strands to 1 x 16 optical dividing networks located at the center core of each concourse, east and west side of the terminal and at other locations throughout the campus. These dividing networks attenuate the optical signal by 14.3 dB providing outputs for up to sixteen (16) optical nodes.
 4. IDF rooms shall be provided with optical nodes that accept an optical signal from the dividing networks. Optical input level for the nodes shall be attenuated to a level of 0dBm using a male-to-female fixed optical attenuator. The nodes will display a green LED bar on the center of the built-in optical power meter with red bars for power levels above and below 0dBm. Nodes are reverse path capable, however reverse path is not being used on the DEN TV system.
 5. Gain and slope controls on the optical nodes shall be adjusted to provide a sloped output of +37dBmV at 54mHz and 45dBmV at 860mHz.
 6. Optical nodes shall be connected through an 8dB fixed attenuator to the input of a sixteen-way splitter. At locations requiring more than sixteen coaxial drops the 8dB attenuator shall be replaced with a four-way splitter (also 8dB loss) which in turn feeds up to four sixteen-way splitters.
 7. Coaxial cable drops from the IDF splitters shall be either Quad shielded RG-6 (Circuit type TV06) or RG-11 (Circuit type TV11) depending on drop length. Tamper resistant 75-ohm terminators shall be installed on all unused splitter ports.
- B. Hardware Requirements: Optical dividing networks shall be one rack unit high and installed in existing 19-inch EIA racks at fiber aggregation points for each facility. IDF room optical nodes and splitters shall be wall mounted to plywood walls in the IDF room.

1.5 PERFORMANCE REQUIREMENTS

- A. Minimum acceptable performance of distribution system at all user-interface points shall be as follows:
1. RF Video-Carrier Level: Between 3 and 12 dBmV.
 2. Relative Video-Carrier Level: Within 3 dB to adjacent channel.
 3. Carrier Level Stability, Short Term: Level shall not change more than 0.5 dB during a 60-minute period.
 4. Carrier Level Stability, Long Term: Level shall not change more than 2 dB during a 24-hour period.
 5. Channel Frequency Response: Across any 6-MHz channel in the 54- to 860-MHz frequency range, referenced to video; signal amplitude shall be plus or minus 1 dB, maximum.
 6. Carrier-to-Noise Ratio: 45 dB or more.
 7. RF Visual Signal-to-Noise Ratio: 43 dB or more.

8. Antenna Combiner Insertion Loss: 40 dB maximum.
9. Signal Power Splitter and Isolation Tap Return Loss: 17 dB maximum.
10. Cable Connectors Attenuation: Less than 0.1 dB.

Tests in subparagraphs below require more expensive equipment than tests in subparagraphs above. Retain tests below for high-fidelity or high-definition systems.

11. Cross Modulation: Less than minus 50 dB.
12. Carrier-to-Echo Ratio: More than 40 dB.
13. Composite Triple Beat: Less than minus 53 dB.
14. Second Order Beat: Less than minus 60 dB.
15. Terminal Isolation from Television to Television: 25 dB, minimum.
16. Terminal Isolation between Television and FM: 35 dB, minimum.
17. Hum Modulation: 2 percent, maximum.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For headend and distribution system. Include plans, elevations, sections, details, and attachments to other work.
 1. Show fabrication and installation details for television equipment.
 2. Functional Block Diagram: Show single-line interconnections between components for headend and distribution system to user-interface points. Show cable types and sizes.

Retain first paragraph below if appearance and texture of device plate are important.

Delete sample requirement in paragraph below if project is of very limited scope, and deletion is approved by DEN Project Manager. Coordinate sample requirements with DEN Project Manager.

- C. Samples: Full size for each outlet device plate in required colors and textures.

Paragraph below is defined in Section 013300 "Submittal Procedures" as a "Delegated-Design Submittal." Retain if design responsibilities have been delegated to Contractor. Delete below if signal attenuation budget and losses are indicated on Drawings or if signal strength to user interfaces is indicated.

- D. Design Calculations: Calculate signal attenuation budget and show calculated line and equipment losses for the system based on the functional block diagram, to show that proposed system layout can be expected to perform up to specification.

1.7 INFORMATIONAL SUBMITTALS

Retain first paragraph below if Drawings do not include detailed plans or if Project involves unusual coordination requirements.

Coordinate requirements for coordination drawings with DEN Project Manager.

- A. Coordination Drawings: Include dimensioned plan and elevation views of components and enclosures. Show access and workspace requirements.
- B. Equipment List: Include each piece of equipment and include model number, manufacturer, serial number, location, and date of original installation. Insert testing record of each piece of adjustable equipment, listing name of person testing, date of test, and description of as-left set points.
- C. Field quality-control reports.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For headend and distribution system to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: System components shall be equipped and rated for the environments in which they are installed.

Coordinate space conditioning requirements with mechanical engineer.

- B. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

Revise to suit Project and specify features required to provide satisfactory service.

Coordinate requirements with DEN Project Manager.

1. Interior, Controlled Environment: System components, except central-station control unit, installed in interior environments shall be rated for continuous operation in ambient conditions of [36 to 122 deg F (2 to 50 deg C)] dry bulb and 20 to 90 percent relative humidity, noncondensing.
2. Interior, Uncontrolled Environment: System components installed in non- interior environments shall be rated for continuous operation in ambient conditions of [0 to 122 deg F (minus 18 to plus 50 deg C)] dry bulb and 20 to 90 percent relative humidity, noncondensing.
3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient conditions of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C)] dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 115 mph with gust factor of 1.3, [and snow cover up to 24 inches (610 mm) thick].
4. Altitude: 5,500 feet (1677 m) above sea level.

1.11 COORDINATION

- A. Coordinate size and location of raceway system and provisions for electrical power to equipment specified in this Section.
- B. Coordinate all work with existing DEN Systems.

1.12 MAINTENANCE SERVICE

Consider deleting this article for light or residential use; usually retain for critical units.

Review requirements with DEN Project Manager.

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide twelve (12) months full maintenance by skilled employees of MATV system Installer. Include quarterly adjusting as required for optimum system performance. Provide parts and supplies the same as those used in the manufacture and installation of original equipment.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

B. CONSTRUCTION WASTE MANAGEMENT

1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 OPTICAL DIVIDING NETWORK

- A. 1-input, x 16-output 19-inch rack mount.
- B. Connector type: SC/APC.
- C. Maximum Insertion Loss: 14.8dB 1310nm & 1550nm.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. See Section 016000 "Product Requirements".

- D. Basis of Design: Blonder Tongue Laboratories FOC-116U-SA.

2.2 OPTICAL ATTENUATORS

- A. Type: SC/APC Male to SC/APC Female.

Coordinate first paragraph below with the Drawings. Clear descriptions of signal sources used and programs distributed are critical to obtaining meaningful Contractor response to MATV system requirements.

- B. Attenuation: Fixed values from 1dB to 25dB in 1dB increments. Select value to provide 0dBm input to optical node
- C. Minimum Return Loss: 55dB.

2.3 OPTICAL NODES

- A. Forward Bandpass: 54-870mHz.
- B. Reverse Bandpass: 5-42 mHz.

Coordinate paragraph below with Drawings.

- C. Output Level: +37dBmV at 54mHz, +45dBmV at 870mHz.
- D. Composite Triple Beat: -72dB minimum.
- E. Composite Second Order Distortion: -65dBmv.
- F. Carrier to Noise: 53dB.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. See Section 016000 "Product Requirements".

- G. Basis of Design: ATX Networks QFMN870A-45G2W.

2.4 16-WAY SPLITTERS

- A. Bandpass: 5-1000mHz.
- B. Insertion Loss: 15dB maximum.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. See Section 016000 "Product Requirements".

- C. Basis of Design: Channel Vision HS-16.

2.5 TAMPER RESISTANT TERMINATORS

- A. Terminator Resistance: 75-ohm.

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. See Section 016000 "Product Requirements".

- B. Basis of Design: Arrris/Regal

2.6 FIBER JUMPERS

- A. Fiber Type: Single Mode 9.5/125 single strand.
- B. Connector Type: SC/APC to FC/APC or other APC combination.

PART 3 - EXECUTION

3.1 OPTICAL LEVELS

- A. Measure and record 1550nm optical level at input to any new optical dividing network, at output of dividing network and at input to each optical node.
- B. Install correct value SC/APC optical attenuator to present exactly 0dBm to node forward path input.

3.2 RF LEVEL ADJUSTMENT

- A. Adjust gain and slope controls on each optical node to provide +37dBmV output at 54mHz and +45dBmV output at 870 mHz or on the highest visual carrier.

Coordinate paragraph below with Drawings and verify that Drawings properly indicate mounting heights.

- B. TERMINATORS
- C. Insure that tamper resistant terminators are installed and tightened on all unused splitter ports.

3.3 FIELD QUALITY CONTROL

Retain first paragraph below to require Contractor to perform tests and inspections.

- A. Distribution System Acceptance Tests:
1. Field-Strength Instrument: Rated for minus 40-dBmV measuring sensitivity and a frequency range of 54 to 1000 MHz, minimum. Provide documentation of recent calibration against recognized standards.
 2. Signal Level and Picture Quality: Use a field-strength meter or spectrum analyzer, and a standard television receiver to measure signal levels and check picture quality at **[100 percent of]** user-interface outlets.
 - a. Test the signal strength in dBmV at 55[, **151, 547,**] and 750 MHz.
 - b. Minimum acceptable signal level is +3 dBmV .
 - c. Maximum acceptable signal level over the entire bandwidth is 15 dBmV.
 - d. Television receiver shall show no evidence of cross-channel intermodulation, ghost images, or beat interference.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 274133

SECTION 274219 - MULTI-USER FLIGHT INFORMATION SYSTEM (MUFIDS)

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Scope of Work provides installation of new flight information arrival and departure displays in locations as indicated on the Project Drawings.
- B. The extension of the MUFIDS systems will be an extension of the existing airport wide Multi User Flight Information Display System. The existing DEN MUFIDS system is based upon display software provided by SITA Com-Net™. All hardware and software for the extension of the MUFIDS expansion will be provided and installed as part of this Project. To maintain system compatibility and functionality with the existing MUFIDS system, software, software configuration, computer hardware, and all equipment and vendor specific equipment shall be provided by SITA Com-Net. MUFIDS signal carriage shall be over the DEN PWCS and the DEN Local Area Network.
- C. Related Sections:
 - 1. Section 272100 "Local Area Networks (LANs)".
 - 2. Section 260400 "Basic Electrical Requirements".
 - 3. Section 270526 "Grounding and Bonding for Telecommunications Systems".
 - 4. Section 270528 "Pathways for Communications Systems".
 - 5. Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling".

6. Section 271100 "Communications Equipment Room Fittings".
7. Section 271300 "Communications Backbone Cabling".
8. Section 271500 "Communications Horizontal Cabling".

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 SCOPE OF WORK

Edit to suit Project.

- A. MUFIDS System Expansion: The MUFIDS system expansion work defined under this project scope shall require provision of MUFIDS equipment, coordination with DEN and other trades, and installation tasks including, but not limited to:
 1. Coordinate with DEN IT, and the MUFIDS Design Team for equipment selections, installations, scheduling and related topics.
 2. Coordinate the detail design of mounting attachments and millwork fit with millwork trades, DEN IT, and the MUFIDS Design Team.
 3. Coordinate quantities, loads, outlet types and placement detail at MUFIDS equipment locations for communications (PWCS) and electrical power.

Note to Designer: DEN will normally purchase and pre-configure MUFIDS monitors and their associated OPS slot mounted computers. These will be made available to the Contractor for installation. The Contractor is responsible for all mounts, brackets and other hardware to successfully mount these monitors. Costs for the monitors and computers are normally encumbered to the project.

- B. Install MUFIDS equipment sets at display locations. Typical MUFIDS display types and locations planned for this project include:
 1. MUFIDS Video Display Banks: Arrival and Departure flight schedule information displays for the project as indicated on the drawings. Contents shall be displayed on multiple video flat screens, configured to operate as a single, continuous display using 46-inch LCD video screens.

Note to Designer: On projects that expand the terminal or concourses no action is required for display of emergency information on MUFIDS monitors as the fire alarm interface is existing. On a completely new facility a supplemental fire alarm interface may be required

- C. The MUFIDS system is interfaced to the Simplex Grinnell fire alarm system at room 45B08 at the terminal and at the center core public address room at each concourse. During an emergency one of eight fire alarm relay contacts closes at individual buildings or at all buildings. The MUFIDS system senses the contact closure and transmits the associated textual emergency message to all MUFIDS monitors in the selected building(s). When the emergency event is over the fire alarm contact opens and the MUFIDS displays return to normal operation.

Note to Designer: If video advertising is part of the project, DEN may elect to have the video advertising

company provide the emergency communications system interface to the MUFIDS system at the advertising company's expense.

- D. Video advertising display locations are equipped with both a Clear Channel advertising computer and a MUFIDS Direct Digital Control computer. A Lantronix Ethernet to serial server drives a DVI video switch to take the display away from the advertising computer and connect it to the MUFIDS computer. The advertising displays then display the emergency message for the duration of the event. When the event has passed the switch returns the display to the advertising computer.

1.4 REFERENCE STANDARDS

- A. Comply with the requirements of the reference standards and practices noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents. A listing of applicable reference standards is contained in Section 014225 "Referenced Standards".
 - 1. National Electrical Code.
 - 2. Conform to requirements of NFPA applicable sections.
 - 3. BICSI (Building Industry Consulting Service International, Inc.).

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product. Provide product cutsheets indicating each type of equipment, accessories and associated materials planned for installation.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Shop drawings of MUFIDS equipment showing layout, mounting hardware, accessories, and dimensions of all components and accessories. For displays intended for mounting inside millwork or casework designed and provided by others, the Contractor shall coordinate with those providers to ensure proper fit and functionality.

Retain "Wiring Diagrams" Subparagraph below if equipment includes wiring.

- 2. Wiring Diagrams: For power, signal, and control wiring, indicating component connection between equipment.

1.6 INFORMATIONAL SUBMITTALS

- A. Network interfaces including final and coordinated IP addresses coordinated with the DEN Technologies network staff.

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- B. Qualification Data: For installer.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For multi-user flight informatin system (MUFIDS) to include in emergency, operation, and maintenance manuals.
 - 1. Include operating instructions, and maintenance and repair procedures. Procedures shall include shop manuals and schematic drawings to allow repair of equipment.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Contractor shall maintain on site accurate as-built drawings indicating dimensioned locations of constructed raceway, box and device locations. Any modifications to work depicted on the Engineered shop drawings shall be noted. Documents shall be updated daily and shall at all times be available for DEN review.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1.9 QUALITY ASSURANCE

- A. Contractor shall be fully responsible for daily quality control of all system installation, coordination with trades, and coordination with DEN Maintenance and Engineering.
- B. Installer: A qualified company with personnel specializing in installation of electronic display equipment.
 - 1. Related Works and Project Coordination Requirements:

- a. Coordinate the Local Area Network transport requirements, VLAN requirements and implementation strategy with DEN technologies network staff.
 - b. As specified in Section 270500 "Basic Telecommunication Requirements" and Section 271000 "Premise Wiring Distribution System".
 - c. Coordinate the work of this Section with that of other Divisions as required to ensure that the entire Work of this project will be carried out in an orderly, complete and coordinated fashion.
2. Architectural Coordination:
- a. Coordinate the general installation of 46" video displays, displays mounting systems, Ethernet switch and power and communications cabling in environmental enclosures with architectural drawings. Develop shop drawings as required for approval by the Architect, DEN Project Manager and the Engineer.

1.10 DELIVERY, STORAGE AND HANDLING

- A. Inspect all products prior to installation. Any defects or damage shall be reported to DEN representative prior to transport of equipment to installation site.
- B. Deliver products to site under provisions of Division 1.
- C. Store and protect products under provisions of Division 1.

1.11 WARRANTY

- A. All installation shall be guaranteed against defects in workmanship for a period of 12 months following acceptance. Submit warranty per Division 1 requirements.
- B. Warranty service shall be provided by a trained specialist, experienced in installation of electronic equipment.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

Consultant shall coordinate with the DEN Project Manager to arrange a meeting with the DEN Technologies Passenger Services group during the design process to ensure that no changes have been made to standard equipment.

2.1 GENERAL

- A. All products shall be in new and undamaged condition, prior to acceptance by the Airport.
- B. Products shall be shipped, stored and installed in full compliance with the manufacturer's recommendations.

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

2.2 SOFTWARE

- A. The existing DEN MUFIDS system is based upon display software provided by SITA Com-Net™. This MUFIDS systems expansion shall utilize the existing product, configured to accommodate the additional displays being deployed as part of this project
- B. The Contractor shall carry in the price all work by SITA COM-Net to manipulate and configure the existing software and assign pages to the new display devices to meet the operational intent based on the number of displays being deployed including:
 - 1. Visual Paging.
 - 2. Display Windows in Hours.
 - 3. Display content.
 - 4. Advertising / other content.

2.3 46-INCH LCD VIDEO DISPLAYS

- A. The following video display types planned for this project shall be provisioned with 46-inch LCD Flat Screen units:
 - 1. MUFIDS Video Banks posting Arrival and Departure information.
- B. 46-inch LED backlit LCD video screens shall meet the following minimal specifications:
 - 1. Viewable image size: 46-inches.
 - 2. Pixel pitch: .53mm.
 - 3. 47 pixels per inch.
 - 4. Contrast Ratio: 3500:1.
 - 5. Brightness: 700 cd/m2 Maximum.
 - 6. Viewing angle: 178° vertical and horizontal.
 - 7. Response Time: 8ms.
 - 8. Refresh Rate: 60Hz.
 - 9. Aspect Ratio: 16: 9.
 - 10. 1Design Selection: DEN Standard NEC463 with NEC OPS-PCAFQ-PH plug-in Computer.

- C. 40-inch Podium Backwall LED backlit LCD video screens shall meet the following minimal specifications:
1. Viewable image size: 40-inches.
 2. Pixel pitch: .53mm.
 3. 47 pixels per inch.
 4. Contrast Ratio: 3500:1.
 5. Brightness: 700 cd/m2 Maximum.
 6. Viewing angle 178° vertical and horizontal.
 7. Response Time: 8ms.
 8. Refresh Rate: 60Hz.
 9. Aspect Ratio: 16 : 9.
 10. Design Selection: DEN Standard NEC403 with NEC OPS-PCAFQ-PH plug-in Computer.
- D. The Contractor shall coordinate with millwork, power and communication trades to assure proper fit and functionality of the display equipment, which includes, but is not limited to:
1. Proper structural mounting of video display.
 2. Proper power interface.
 3. Proper communication interface.
- E. Built In PC for NEC LCD Video Displays:
1. Single Board Computer (SBC) –NEC Compatible.
 2. 1.6 GHz Dual Core ATOM processor.
 3. RAM 1 GB DDR2.
 4. HDD 120GB, 2.5-inch.
 5. DVI-I Output.
- F. 46-inch video displays shall be provided with the following accessories:
1. Environmental Housing(s) if in an unconditioned space.
 2. VESA compliant flat screen display tilt mounting brackets, Single and dual screen mount attachments as indicated in the Project Drawings.
 3. Ceiling mount and structural support piping.
 4. CAT 6 Patch cables.
 5. Power cords.
- G. Design Selection:
1. NEC-463 with NEC OPS-PCAFQ-PH plug-in Computer.
- H. Designers are instructed to meet with the DEN Technologies Passenger Services group during the design process to ensure that no changes have been made to standard equipment.

2.4 MOUNTS AND ACCESSORIES

- A. Provide adjustable VESA 300 x 300mm pattern compliant mounts for all displays that meet the following criteria:
1. Orientation: Portrait.
 2. Extension: Up to 10.7".
 3. Stud Pattern: 16".
 4. Max Weight: 150 LBS.
 5. Plumb Adjustment: to 2.5 Deg.
 6. Design Selection: Chief Manufacturing LSMVPU, or approved equal.
- B. Displays and mounting brackets will be incorporated into an environmental enclosure specified by the Architect. Contractor shall be required to work with the DEN Project Manager to coordinate the placement of displays, mounts electronic equipment (Ethernet switch) and the routing of to coordinate cables in the enclosure.

PART 3 - EXECUTION

3.1 PRE-WORK MEETING

- A. The Contractor shall coordinate and arrange a pre-work meeting with the DEN Project Manager, and DEN Technical Maintenance one (1) week in advance of the beginning of any Work. The DEN Project Manager shall review the Contractor's construction, phasing, implementation and testing plans and schedule.
- B. Meeting Minutes: Meeting minutes shall be accurately recorded by the contractor and distributed within five (5) working days after the meeting.

3.2 GENERAL

- A. Installation shall be supervised and tested by a representative of the installing contractor.
- B. Displays and mounting brackets will be incorporated into an environmental enclosure specified by the Architect. Contractor shall be required to work with the DEN Project Manager and the Architect to coordinate the placement of displays, mounts, electronic equipment (Ethernet switches, etc.) and to coordinate the routing of cables in the enclosure.

3.3 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing and Reports:
1. The Contractor shall provide all personnel, equipment, instrumentation, and

- supplies necessary to perform all inspections, and testing.
2. Design Engineer and Airport representatives will witness all field tests.
 3. When installation is complete, the system shall be tested by the Contractor. A representative of the installing Contractor shall submit a written report of the findings to the DEN Project Manager.
 4. The MUFIDS contractor shall be required to develop a comprehensive test plan to be utilized in the testing and acceptance of the MUFIDS system. The plan is to be submitted to the Systems Manager and DEN IT for review and approval prior to testing. The Plan shall consist of a complete listing of all equipment. The Plan shall consist of a complete listing of all equipment, every device and feature, the date to be tested and witnessed by whom, the results, and the date retested (if failure occurred during any previous tests). The final test reports shall indicate that every device tested successfully.
 - a. Submit two (2) typed copies of the test reports in a neatly bound folder and a soft copy to the DEN Project Manager for approval.
 - b. Submit electronic copy of test reports in pdf format.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 1. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements.
 2. Complete installation and startup checks according to manufacturer's written instructions.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain the multi-user flight information system (MUFIDS) system and equipment. Refer to Section 017900 "Demonstration and Training."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 274219

SECTION 274220 - COMMON USE PASSENGER PROCESSING SYSTEMS (CUPPS)

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. This Scope of Work provides installation of specialized IT equipment as an extension of the existing site wide Common Use Passenger Processing System (CUPPS) within the areas indicated in the Project Drawings.
- B. CUTE/CUPPS are industry descriptions for systems which allow an airport to support the use of facilities such as boarding gates and ticket counters, by multiple airline tenants at various times throughout the day. CUPPS will be an extension of the DEN Common Use System currently installed in select locations of the Terminal Building and Concourse A. DEN utilizes the Ultra CUSE Product as the site provider of Common Use, therefore the systems specified herein shall be a functional extension of the existing Ultra MUSE product installed at DEN.
- C. CUTE equipment types will be restricted to sole source manufacture and model selection, based upon compatibility with the site wide Ultra CUSE Common Use System. CUPPS equipment, software, equipment deployment and software configuration and system activation tasks will be provided and installed by the Contractor. Communication signaling for CUPPS equipment will be supported by the DEN Premise Wiring Communications System (PWCS) and the DEN Local Area Network.

D. Related Sections:

1. Section 272100 "Local Area Networks (LANs)".
2. Section 260400 "Basic Electrical Requirements".
3. Section 270526 "Grounding and Bonding for Telecommunications Systems".
4. Section 270528 "Pathways for Communications Systems".
5. Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling".
6. Section 271100 "Communications Equipment Room Fittings".
7. Section 271300 "Communications Backbone Cabling".
8. Section 271500 "Communications Horizontal Cabling".

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- E. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 SCOPE OF WORK

Edit to suit Project.

- A. The CUPPS system expansion work defined under this project scope shall require provision of CUPPS equipment, coordination with DEN and other trades, and installation tasks including, but not limited to:
1. Coordinate with DEN IT, CUPPS Design Team and the selected CUPPS Contractor for equipment selections, installations, scheduling and related topics.
 2. Coordinate the detail design of check-in desk millwork inserts with millwork trades, DEN IT, CUPPS Design Team and the selected CUPPS Contractor.
 3. Coordinate outlet types and placement detail at CUPPS equipment locations for communications (PWCS) and electrical power.
- B. Furnish and install CUPPS equipment sets at each new check-in location. Typical CUPPS equipment sets for check-in desks shall include:
- a. CUPPS Agent Workstations: Typical for **[Insert number]** Agent Positions configured as shown on the drawings including:
 - 1) CUPPS Workstation complete with CPU, Display Keyboard with bar code /magnetic stripe reader.
 - 2) Boarding Pass Printer.
 - 3) Bag Tag Printer.
 - 4) VoIP Phone.
 - 5) Manifest Printer.
 2. Common Use Self Service Kiosks: Typical for **[Insert number]** Kiosk Positions. Coordinate millwork, placement of Kiosks and finishes with architectural work.

1.4 REFERENCED STANDARDS

- A. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents. A listing of applicable reference standards is contained in Section 270500 "Basic Telecommunications Requirements".
 - 1. National Electrical Code.
 - 2. Conform to requirements of NFPA applicable sections.
 - 3. BICSI (Building Industry Consulting Service International, Inc.).
 - 4. IATA RP 1797 and/or newest release.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product. Provide product cutsheets indicating each type of equipment, accessories and associated materials planned for installation.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Shop drawings of CUPPS equipment showing layout and dimensions of all components and accessories.
- C. Wiring diagrams indicating component connection between equipment.

1.6 INFORMATIONAL SUBMITTALS

- A. Network interfaces included final and coordinated IP addresses coordinated with the Systems Manager.

Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- B. Qualification Data: For installer.

Retain "Field quality-control reports" Paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For common use passenger processing systems (CUPPS) to include in emergency, operation, and maintenance manuals.

1. Include operating instructions, and maintenance and repair procedures. Procedures shall include shop manuals and schematic drawings to allow repair of equipment.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 1. Contractor shall maintain on site accurate as-built drawings indicating dimensioned locations of constructed raceway, box and device locations. Any modifications to work depicted on the Engineered shop drawings shall be noted. Documents shall be updated daily and shall at all times be available for DEN review.

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1.9 RELATED WORKS AND PROJECT COORDINATION REQUIREMENTS

- A. Coordinate the Local Area Network transport requirements, VLAN requirements and implementation strategy with the Systems Manager as specified in Section 271333 "Communications Systems Interfaces (Legacy Systems)".
- B. As specified in Section 270500 "Basic Telecommunication Requirements" and Section 271000 "Premise Wiring Distribution System".
- C. Coordinate the work of this Section with that of other Divisions as required to ensure that the entire work of this project will be carried out in an orderly, complete and coordinated fashion.

1.10 MOCKUPS

- A. Mock-Up Equipment: The Contractor shall be required to provide a mock-up, in location determined by DEN Project Manager, of the equipment for a typical CUPPS Workstation position and the hardware associated with a kiosk position for millwork, placement and coordination purposes. Coordinate timely delivery of Mock-up products to meet mock-up team development schedule. Following use in Mock-up, turn equipment over to DEN (CUPPS/IT) for use as spares which is in addition to the quantity of equipment indicated in this Section above. Specific equipment to be

provided for Mock-up includes:

1. CUPPS Workstation as defined in Part 2 of this Section: Provide one (1) unit.
2. CUPPS Boarding Pass Printer as defined in Part 2 of this Section: Provide one (1) unit.
3. CUPPS Boarding Pass Reader as defined in Part 2 of this Section: Provide one (1) unit.
4. CUPPS Document Printer as defined in Part 2 of this Section: Provide one (1) unit.
5. CUPPS Keyboard as defined in Part 2 of this Section: One (1) unit.
6. CUPPS Kiosk Components: One (1) Unit.

1.11 QUALITY ASSURANCE

- A. Contractor shall be fully responsible for daily quality control of all system installation, coordination with trades, and coordination with DEN Maintenance and Engineering.
- B. Installer: Company with personnel specializing in installation of electronic equipment and specifically Common Use systems.
- C. As specified in Section 270500 "Basic Telecommunication Requirements".

1.12 DELIVERY, STORAGE AND HANDLING

- A. Inspect all products prior to installation. Any defects or damage shall be reported to DEN representative prior to transport of equipment to installation site.
- B. Deliver products to site under provisions of Division 1.
- C. Store and protect products under provisions of Division 1.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. All equipment shall be new and undamaged by shipping or installation.

- B. CUPPS hardware shall be fully compatible with the DEN Common Use System equipment and software.

2.2 COMMON USE WORKSTATIONS (ATTENDANT CHECK-IN WORKSTATIONS):
Quantity [**Insert number**] and including accessory items in Articles and paragraphs below.

- A. Common Use Workstation shall be provided in PC format and be provisioned with a Serial Gear 8 port serial to port extender.
- B. Common Use PC Workstations shall be provisioned to meet the following minimal specifications:
 1. The DEN workstation product standard is manufactured by DELL OPTIPLEX 760.
 2. CPU: Intel Core 1333 MHz or newer processor.
 3. RAM: 1 GB or better.
 4. HDD: 80 GB or larger.
 5. CD/R.
 6. 19-Inch LCD Flat Screen Video Display with articulated arm mount.
 7. Patch cables as required to interface local data outlets.
 8. Software package and License: XP Pro
 9. Common Use System specialty software shall be provided by "Others".
 10. Workstation Design Selection: Dell Model Optiplex 760.
 11. Design Selection for 19-inch LCD display: NEC LCDSNXM.

2.3 COMMON USE BOARDING PASS PRINTERS

- A. Boarding Pass Printer: Printers shall meet or exceed the following minimal specifications:
 1. 1D/2D bar code compliant with IATA RP 722c, d and e.
 2. Graphics capable per AEA 99.
 3. Thermal transfer and direct printing.
 4. 200 dpi minimum resolution.
 5. Manufacturer: IER Model 400 with Ultra configuration.

2.4 COMMON USE BOARDING GATE READERS

- A. As Follows:
 1. Compliance: AEA2009.
 2. 1D Symbologies: Code 128, Code 2 of 5, IATA 2 of 5, Code 39.
 3. 2D Symbologies: IATA res 792, PDF417, Aztec, Datamatrix, QR Will Read from SmartPhone.
 4. Performance: Less than one second read time.
 5. Display: VFD 2 x 16 Characters.

6. Access Interfacing Solutions BGR120S.

2.5 COMMON USE DOCUMENT PRINTERS

A. Document Printers: The Printers shall meet or exceed the following requirements:

1. Production: 570 cpi or faster.
2. Resolution of: 420x216.
3. Memory: 128Kb or greater.
4. Paper stock: Continuous form.
5. Design Selection: Okidata Microline 420.

2.6 COMMON USE KEYBOARDS

A. Specialty Keyboards with Magnetic strip and Optical readers shall be provisioned with each Common Use Workstation. Keyboards shall be designed for commercial application and include specialized features including the following:

1. US Keyboard Layout -104 Keys.
2. Magnetic keyboard swipe supporting credit cards 1, 2 & 3 tracks. Compliant with ISO 7811/2-5.
3. Optical wand type reader compatible with Passports and ATB's. Conforming with ICAO 9303, IATA RP 1720a and 792 bar code formats.
4. Signal interface: USB, Serial and Ethernet.
5. Manufacturer: Desko BMOL 5000.

2.7 BAGGAGE TAG PRINTER

A. Bag Tag Printer: Printers shall meet or exceed the following requirements:

1. 1D/2D bar code compliant with IATA RP 1722 and 1740c with ability to process both Bar code and RFID tag stock.
2. 200 dpi resolution minimum (compliant with the 2D barcode PDF417).
3. Thermal direct printing.
4. Signal interface: Serial, USB, or Ethernet network.
5. Remotely monitored with project NMS.
6. Refer to Spares and Consumables Section of this document for additional requirements related to printers.
7. Design Selection: IER 560 or approved equal.

2.8 COMMON USE KIOSKS: Qty **[Insert number]** (Provide **[Insert number]** Kiosks with built in Bag Tag printers and **[Insert number]** without).

A. Common Use Self Service Kiosks shall be provided in quantities as noted on Project Drawings.

- B. Kiosks shall support passenger interface requirements for each airline designated as a DEN Common use participant.
- C. Kiosks shall be provisioned in the standalone unit form factor. Kiosk units shall be approximately 50" H x 20" D x 18" W. All kiosks shall meet the following minimal requirements:
 - 1. User Interface screen shall be a minimum 17-inch diagonal, touch screen with tactile/acoustic wave touch response.
 - 2. Full page passport reader with RF reader compatible with e-passports.
 - 3. Manual credit card reader.
 - 4. Modular 10/100BaseTX Network Interface Card providing system transactions and monitoring using Ethernet LAN, units shall be capable of modular network interface change to support future modem and wireless 802.11 interface.
 - 5. Omni-directional 1D/2D bar code reader, PDF 417, Datamatrix, Aztec and QR code products.
 - 6. IATA compliant boarding pass printer – direct thermal 300 dpi 2D bar code, Code 39,128 and PDF 417, minimum speed of 2" per second, auto cutter adjusted to coupon stock.
 - 7. On Board PC with Pentium processor and 2 GB Ram.
 - 8. Windows 7 Pro OS (or approved equal).
 - 9. Modular slot for Bag Tag printer. Built in printer shall meet the specifications built-in 2. 7 above and be suitable for mounting in the Kiosk. . Baggage tag printers shall be compliant with IATA CUSS using roll stock bar code.
 - 10. Integrated with the DEN for alerts on low stock, maintenance schedules and tamper.
- D. Each Kiosk shall be provisioned with consumable stock 3500 coupon roll of ATB size board pass stock.
- E. CUSS kiosks shall be networked to an on-site Core of redundant servers, software provided with software licenses, and have networked monitoring of each CUSS kiosk from Common Use NMS.
- F. Design Selection: IER 918 or approved equal

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

PART 3 - EXECUTION

3.1 PRE WORK MEETING

- A. The Contractor shall coordinate and arrange a pre work meeting with the Systems Manager, DEN Project Manager, and DEN Technical Maintenance one (1) week in advance of the beginning of any work. The Systems Manger shall review the Contractor's construction, phasing, implementation and testing plans and schedule.

- B. Meeting Minutes: Meeting Minutes shall be accurately recorded by the DEN Project Manager and distributed after the meeting.
- C. Manager and distributed within five (5) working days after the meeting.

3.2 COORDINATION MEETINGS

- A. Prior to ordering any equipment intended for the CUPPS scope of work, the Contractor shall participate in Coordination Meetings with the DEN Project Manager, DEN IT, the Systems Manager, Common Use staff and the Common Use Contractor. The Coordination meetings will be held for the purpose of reviewing each equipment type, model number and manufacture to assure compatibility with the DEN Common Use Program.
- B. The Contractor shall participate in meetings as required to coordinate with network, power and millwork trades to assure proper fit, functionality and ergonomics for Common Use workstations and associated peripherals planned for the project.

3.3 EXECUTION GENERAL

- A. Installation shall be supervised and tested by a representative of the installing contractor.

3.4 FIELD QUALITY CONTROL

Coordinate inspection and testing requirements with DEN Project Manager.

- A. Testing and Reports:
 - 1. The Contractor shall provide all personnel, equipment, instrumentation, and supplies necessary to perform all inspections, and testing.
 - 2. Design engineer and Airport representatives will witness all field tests.
 - 3. When installation is complete, the system shall be tested by the Contractor. A representative of the installing Contractor shall submit a written report of the findings to the DEN Project Manager.
 - 4. The Common Use Self Service contractor shall be required to develop a comprehensive test plan to be utilized in the testing and acceptance of the CUPPS system. The plan is to be submitted to the Systems Manager and DEN IT for review and approval prior to testing. The Plan shall consist of a complete listing of all equipment, every device and feature, the date to be tested and witnessed by whom. And the results, and the date retested (if failure occurred during any previous tests). The final test reports shall indicate that every device tested successfully.
 - 5. Submit two (2) typed copies of the test reports in a neatly bound folder and a soft copy to the Owner's Representative for approval.
 - 6. Submit electronic copy of test reports in pdf format.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements.
 - 2. Complete installation and startup checks according to manufacturer's written instructions.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain the common use passenger processing systems (CUPPS) and equipment. Refer to Section 017900 "Demonstration and Training."
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 274220

Copyright 2016 by City of Denver, Denver International Airport

Modified March 2017

Exclusively published and distributed by Denver International Airport

SECTION 275114 - EMERGENCY COMMUNICATIONS SYSTEM, PUBLIC ADDRESS SYSTEM AND VIDEO INTERFACE - TENANT PROJECT REQUIREMENTS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

This Section uses the term "Designer of Record (DOR)." Change this term to match that used to identify the design professional as defined in the General and Supplementary Conditions.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

DEN PROJECT MANAGER SHALL APPROVE DELETION OF ALL NOTES/COMMENTS FOLLOWING DOR FINAL DESIGN REVIEW.

PART 1 - GENERAL

For any projects installing audio head end equipment, including amplifiers, control units, etc. use Specification 275123. Do not use both this section and 275123 in the same project; they are redundant.

The engineer shall contact DEN Project Manager for the location of the nearest Denver International Airport Emergency Communication System (ECS) terminal cabinet or a junction box in the front of the tenant space with ECS speaker circuit(s) connections. The engineer shall designate the ECS terminal in the contract documents.

The engineer shall review the ECS loudspeaker layout with IED certified designer prior to issuing the drawings for bid and construction.

1.1 SUMMARY

- A. This specification is applicable to tenant and concession spaces that may or may not be equipped with a professionally installed background music or public address system. This type of space shall include tenant food service, retail establishments, airline tenant spaces, and other tenant leasehold areas used for other purposes. The tenant can provide their own music or PA system separate from the Denver International Airport Emergency Communication System (ECS) speakers and equipment. ECS speakers are required as part of the tenants project to allow ECS audio to be broadcast in the space.

1.2 SCOPE

- A. The ECS is utilized throughout public and private areas of the terminal and concourses for public emergency notification announcements. It is therefore required that all new

or renovated facilities within the terminal and concourses are equipped for emergency voice paging. This specification describes materials and methods that shall be utilized in all such extensions to the ECS.

- B. The ECS is also used for routine public and airline announcements utilizing the same equipment.
- C. Tenant audio systems cannot utilize ECS speakers. If tenant audio systems are installed, ECS audio must take priority and shunt all tenant audio during emergency messaging.
- D. ECS utilizes some tenant video displays for visual notification as defined within this specification. These video displays shall be capable of capture or shunt by the ECS.
- E. The work to be performed under this section shall include provision of one or more loudspeakers within the tenant or concessions space connected to the ECS. Each area within the tenant or concessions space shall be provided with at least one loudspeaker. Larger areas shall be equipped with multiple loudspeakers to provide uniform coverage and intelligibility throughout the space.
- F. DEN Life Safety Approved drawings and Denver Fire Department (DFD) permit is required for all work affecting audio and/or video ECS equipment.
- G. The contractor shall engage the services of a factory-certified audio designer certified by Innovative Electronic Designs (IED) (502-267-7436) for final design elements of the ECS tenant interface.

1.3 ACTION SUBMITTALS

- A. Shop drawings shall be legible and of scale suitable for review. They shall show materials, finishes and panel/control markings. Contractor shall provide the following shop drawing submittals:
 - 1. A complete list of equipment for installation.
 - 2. A complete set of detailed technical descriptions describing and illustrating all components and materials.
 - 3. A complete set of coordinated reflected ceiling plans with all ceiling devices shown including sprinklers, HVAC, lighting, fire alarm, speakers, etc.
 - 4. The audio designer shall indicate raceways and cabling to interconnect these loudspeaker(s) to the ECS at the designated ECS terminal cabinet location or J box location.
 - 5. System block diagrams including any muting/shunt system details.
 - 6. Equipment rack and console layouts.
 - 7. Details of cable installation, routing, support, and termination in: terminal boxes, junction boxes, and equipment racks.
 - 8. Wiring diagram, including:
 - a. The exact manner in which the Installer proposes to install the system.
 - b. All switches, equipment, control circuits, and equipment rack layouts.

- c. All equipment/apparatus items necessary for performance of the required functions.
 - d. Identification of all terminals, wire color-coding and control functions.
- B. Manufacturer equipment cut sheets of all equipment provided.
- C. All submitted documents shall be stamped by a licensed professional engineer registered in the state of Colorado.

1.4 CLOSEOUT SUBMITTALS

- A. Provide as-builts of tenant changes to the systems and building on the existing DEN Auto Cadd ECS as-built when available. If existing as-builts are not available to modify then Contractor shall modify documents for the project either in CADD or Building Information Modeling (BIM) model as required.
- B. Closeout Documents: Two weeks prior to final acceptance testing, the Installer shall provide two sets of record drawings and electronic copies of the following:
- 1. System block diagrams.
 - 2. System wiring diagrams.
 - 3. Test reports, as specified herein.
 - 4. Documentation, as specified herein.
 - 5. Written warranty, as specified herein.
 - 6. Drawings in Auto CADD shall have project specific layer(s) showing new work or modifications on its own layer(s) with the project name. The intent is to provide a clear record of the final installation, which will allow DEN to import the new layer(s) into their master ECS diagrams.

1.5 RELATED DOCUMENTS

- A. Drawings, general and special conditions, Division 1 – General Requirements and other applicable technical specifications apply to this Section.

1.6 RELATED SECTIONS

- A. Technical Specification Division 1 - General Requirements
- B. Division 26 - Electrical
- C. Division 27 - Communications
- D. Section 283100 – Intelligent Life Safety Fire Management System

THE DOR SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT WRITTEN PERMISSION FROM THE DEN PROJECT MANAGER.

1.7 REFERENCE STANDARDS

- A. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents.
- B. National Fire Protection Association (NFPA):
- C. NFPA 70, National Electrical Code® edition as adopted by the State of Colorado.
- D. NFPA 72, National Fire Alarm and Signaling Code® (2016 Edition).
- E. 2015 International Building Code (IBC).
- F. 2015 International Fire Code (IFC).
- G. Currently adopted City and County of Denver Building and Fire Codes as amended.
- H. Underwriters Laboratories (UL):
 - 1. UL 6, Electrical Rigid Metal Conduit – Steel.
 - 2. UL 464, Standard for Audible Signal Appliances.
 - 3. UL 521, Standard for Heat Detectors for Fire Protective Signaling Systems.
 - 4. UL 797, Electrical Metallic Tubing – Steel.
 - 5. UL 1242, Standard for Electrical Intermediate Metal Conduit – Steel.
 - 6. UL 1480, Standard for Speakers for Fire Alarm, Emergency, and Commercial and Professional Use.
 - 7. UL 2572, Standard for Mass Notification Systems.
 - 8. Other UL Standards shall be applied to ensure that all materials are listed for their intended purpose.
- I. United States Access Board (USAB) – Americans with Disabilities Act (ADA) and the 2010 ADA Standards for Accessible Design.

1.8 QUALITY CONTROL

- A. Contractor shall be fully responsible for daily quality control of all system installation, coordination with trades, and coordination with DEN Airport Infrastructure Management (AIM).
- B. Installer for ECS system components shall have either an ECS Installer License or a Fire Alarm Installer License from the City and County of Denver Fire Department in addition to a manufacturer certification.
 - 1. For work within amplifier racks, an ECS installer license is required
- C. Pre-work conference shall be mandatory for all contractors and sub-contractors. Coordinate with DEN Project Manager.

- D. Contractor shall maintain on the site accurate as-built drawings indicating locations and details of installed equipment, constructed raceways, boxes, and devices. Any modifications to work depicted on the permitted shop drawings shall be noted. On-site drawings shall be updated daily.

1.9 SPARE PARTS

- A. Contractor shall at the time of system testing, maintain on-site spare stock adequate to replace any non-functional device.
- B. Required spare stock shall be determined by DEN Project Team prior to notice-to-proceed.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Loudspeakers, enclosures, line transformers, grilles and cabling utilized in this work shall be UL-Listed.
- B. All products utilized in the Tenant sound system shall be commercial grade.

Engineer shall verify that the product numbers listed below are manufacturer's current product.

2.2 SPEAKERS

- A. 6.5 inch Speaker – [**Atlas FAP62T with integrated backcan, grill and suspension system**] <insert product> or approved equal.
 - 1. Full Range Speaker, Flush mount with grill.
 - 2. Loudspeakers shall be 70 volt ceiling speaker with mounting hardware.
 - 3. Ninety (90) conical coverage with 88dB sensitivity, 63 to 16 kHz frequency response.
 - 4. Loudspeaker shall have selectable taps at 2, 4, 8, 16, and 32 watts.
- B. 4 inch Speaker – [**Atlas FAP42T or FAP42T-C with integrated backcan, grill and suspension system**] <insert product > or approved equal.
 - 1. Coaxial in-ceiling loudspeaker with 16-Watt 70V transformer
 - 2. One hundred thirty (130) degree conical coverage with 88dB sensitivity, 75Hz to 200kHz frequency response
 - 3. Loudspeakers shall have selectable taps at 1,2,4,8, and 16 watts.
- C. 4 inch Pendant speaker – [**JBL Control 64P/T with integrated backcan, grill, and suspension system**] <insert product> or approved equal.

1. Full range Paging speaker, pendant mount.
2. Loudspeakers shall be 70 volt.
3. 120 degree coverage angle, 65 to 15 kHz frequency response.
4. Loudspeaker shall have selectable taps at 3.7, 7.5, 15, and 30 Watts.

These loudspeakers below shall be utilized in the tenant spaces where ceilings are not provided.

D. Surface Mount, Full-range Paging Loudspeaker – **[Atlas SM52T (B, Black, or W, White)] <insert product>** or approved equal.

1. Loudspeaker shall be a full-range device with a frequency response of ± 3 dB, 80 Hz to 20 kHz and input sensitivity of 90 db at 1 meter with 1-watt input at 500 Hz to 2500 Hz. The coverage shall be nominal 100 degrees horizontal from 500 Hz to 2.5 kHz. The power rating shall be 100 W minimum, and a 70-volt line matching transformer with 7.5, 15 and 30 watt taps and a maximum insertion loss of 0.5 dB from 100 Hz to 15 kHz shall be provided. The loudspeaker shall be surface mounted and enclosed in a UL 94V-0 rated injection molded or metal enclosure with integral metal grille and mounting bracket to allow aiming. A cover plate for a 4- inch square electrical box shall be provided with grommets wire access hole.

E. Other Speaker – Provide other speaker types as required for project design.

2.3 LOUDSPEAKER CABLING

A. Trunk loudspeaker cable:

1. Manufacturer: Smartwire, #001260-11BR or Equal.
2. Size: #12 AWG, stranded.
3. Type: Unshielded twisted pair.
4. Insulation Color: Red (positive), black (negative).
5. Jacket Color: Dark green.
6. Cable shall be plenum rated.
7. All cable shall be installed in conduit.

B. Branch loudspeaker cable:

1. Manufacturer: West Penn, #25226B or Equal.
2. Size: #14 AWG, stranded.
3. Type: Unshielded twisted pair.
4. Insulation Color: Red (positive), black (negative).
5. Jacket Color: Dark green.
6. Cable shall be plenum rated.
7. All cable shall be installed in conduit.

2.4 RACEWAY

A. Refer to 260533 – “Raceways and Boxes for Electrical Systems” for additional

requirements.

B. Conduit

1. Type: EMT for all indoor installation locations.
2. Color: Green.
3. Minimum size: 3/4" trade size.

2.5 SYSTEM INTERFACES AND ELECTRONICS

Power shunt system shall provide system power sequencing and immediate shutdown for circuits feeding the audio and video systems. Power Shunt system shall be located and designed with the electrical panel for the tenant. In addition, audio mute function as described below shall also be provided.

A. Audio Mute/shunt requirements: Audio equipment shall be provided with shunt and mute equipment as follows:

1. Fire alarm control module: Provide fire alarm control module with control relay per Specification 283100 to shunt power to all tenant-provided audio systems.
2. Audio Mute: Provide Priority Paging Relay Controller, Atlas Sound AA-PPRC or approved Equal, with RDL TX-70A isolation transformer, to mute owner-furnished audio upon ECS activation.

B. Video capture/shunt requirements:

1. For dynamic video displays larger than 60" (diagonal), provide power shunt equipment as follows:
 - a. Fire alarm control module: Provide fire alarm control module with control relay per Specification 283100 to shunt power.
2. For static video displays (i.e. menu boards, POS devices, etc.), and dynamic video displays smaller than 60" (diagonal), except MUFIDS, shunting is not required.
3. For FIDS/BIDS/GIDS within tenant spaces, provide ECS capture equipment as defined in 274219 "Multi-User Flight Information Display Systems (MUFIDS)".

2.6 CONNECTORS AND TERMINATIONS

A. Connectors utilized to interconnect loudspeakers to cabling shall be nylon insulated butt crimp devices with a protective shell to contain exposed conductors. The crimping tool used with these connectors shall be specifically designed for use with the type of connector being utilized.

B. Wiring terminations to terminal blocks and loudspeaker screw terminal terminations shall be made using the correctly sized insulated spade lug connection.

1. Spade Lugs: Thomas and Betts or approved equal.

Retain paragraph below for concession tenants only.

- C. Tenant ECS terminal box shall provide speaker connection points and be a minimum 12" x 12" x 6". Provide Amp flex terminal strips or other approved method of connection that is field serviceable for testing and troubleshooting in the terminal box for speaker connections.

2.7 MISCELLANEOUS

A. Cable Labels:

- 1. Self-adhesive, pre-printed labels with black text on white background, as produced by Brady BMP21 or equal.

B. Loudspeaker Labels:

- 1. Self-adhesive, pre-printed 1" x 0.5" labels with red text on white background, printed with the following text: "FIRE ALARM DO NOT DISCONNECT"

Figure 1 - Sample Loudspeaker Label

PART 3 - EXECUTION

3.1 GENERAL

- A. Pre-Work Meeting: The Contractor shall coordinate and arrange a pre-work meeting with the DEN Project Manager and DEN Life Safety one week in advance of the beginning of any work. The Contractor shall assure attendance of trades installing the ECS including any electrical, telecommunications, and audio- and video-related trades involved. The Contractor shall present the Contractor's construction, demolition, phasing, implementation, and testing plans and schedule. Meeting notes shall be accurately recorded by the DEN Project Manager and distributed within three (3) working days.
- B. All work shall be provided complete, and the voice paging systems shall be fully operational as shown and described herein. DEN Life Safety will witness all final connections to existing circuits.

- C. Modifications and additions to the existing ECS: Contractors must give DEN Life Safety 5 working days notice before making any connections, deletions, or modifications to the existing ECS. DEN Life Safety Shutdown Request form must be used for this purpose.
- D. Electrical Related Work:
 - 1. Furnish and install all electrical conduit, wiring, and outlets for electrical power to ECS equipment.
 - 2. Furnish and install raceway, conduit, and junction boxes for audio signal and control wiring. Junction box covers for this system shall be painted green and labeled with circuit ID.
 - 3. Furnish and install loudspeaker junction boxes and enclosures.

3.2 PREPARATION

- A. Prior to any demolition, all ECS speakers and circuits in construction area must be protected in accordance with DEN Life Safety. This work requires a mandatory shutdown request.

3.3 INSTALLATION

- A. A Fire Alarm Permit is required for any work on the ECS system. No Exceptions.
- B. Exposed components such as grilles may be painted for aesthetic purposes prior to assembly with the loudspeaker.
- C. Emergency paging audibility and intelligibility shall conform to requirements of the currently adopted version of NFPA 72:
- D. Pre-tone: 15dBA above ambient noise level.
- E. Identification:
 - 1. All speaker cables shall be labelled with circuit ID using an approved Cable Label at all connections, junction boxes, and splices.
- F. Secure equipment firmly in place. Make fastenings and supports adequate to support their loads with a safety factor of three.
- G. Exercise care in wiring, to avoid damage to the cables and to the equipment. Make all joints and connections with rosin-core solder or with mechanical connectors approved for NEC Class 1 power-limited wiring.
- H. Phasing shall be observed on all loudspeaker wiring interconnections. For example, in junction boxes, all positive conductors shall be joined together and all negative conductors shall be joined together. At loudspeakers, the negative conductor shall be connected to the transformer common terminal or lead with the positive conductor

used for the remaining terminal or appropriate transformer tap lead.

- I. All unused transformer tap leads shall be separated and capped to prevent shorting to each other or to ground.
- J. DEN Life Safety will witness all final connections to existing circuits.

3.4 TESTING AND CERTIFICATION

- A. Refer to Appendix A - "ECS Pre-Inspection Checklist" for installation sequencing.
- B. When the tenant sound system and all interfaces to the ECS are complete, the contractor shall schedule a functional test of the system with DEN Life Safety. This notification shall occur a minimum of 5 days prior to the desired time of the test. DEN Life Safety will establish a time of day (or night) for the test that is least disruptive to normal airport and tenant operations.
- C. Demonstration Test: Upon completion of installation, and at a time established by DEN Life Safety, demonstrate the operation of each major component of the system and the completed installation. Assist as required in the following acceptance tests:
 - 1. Reference Appendix A for checklist items required for the Demonstration Test.
 - 2. Prior to connection to the ECS, DEN Life Safety will test the loudspeaker system for impedance, shorts, and grounds. The contractor shall perform a basic short and ground test of the completed wiring system in advance of this test. Any anomalies noted in either test shall be corrected by the contractor before the loudspeaker(s) will be connected to the ECS.
 - 3. Upon completion of the ECS installation, the contractor shall arrange with DEN Life Safety to review programming and conduct a test of the emergency paging within the tenant or concession area. This test may be scheduled during a period of low airport activity at night at the discretion of DEN Life Safety.
 - 4. This work requires a mandatory shutdown request.
 - 5. Listening Tests: These tests shall include speech intelligibility survey and subjective aural evaluations by observers at various positions under various operating conditions, using live speech and/or recorded speech.
 - 6. If the need for adjustment or modification becomes evident during demonstration and testing, accomplish adjustments or alterations until the installation operates fully in accordance with the requirements of this specification.
- D. DFD Acceptance Test:
 - 1. Reference Appendix A for checklist items required for the DFD Acceptance Test.
 - 2. Upon satisfactory completion of the demonstration test, DEN Life Safety will schedule DFD Acceptance Test. This notification shall occur a minimum of 5 days prior to the desired time of the test. This test may be scheduled during a period of low airport activity at night at the discretion of DEN Life Safety.
 - 3. This work requires a mandatory shutdown request.
- E. All work shall be provided complete, and the ECS shall be fully operational as shown

and described herein.

3.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction Waste Management: Construction Waste shall be managed in accordance with provisions of Section 017419 – “Construction Waste Management”. Documentation shall be submitted to satisfy the requirements of that section.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this section. The cost of the work described in this section shall be included in the applicable unit price item, work order of lump sum bid item.

END OF SECTION 275114

APPENDIX A: ECS Pre-Inspection Checklist

#	Yes	No	TO BE COMPLETED PRIOR TO DEMONSTRATION TEST	Initials
1			A shutdown request is in place and approved prior to working on any part of the Fire Alarm/ECS.	
2			The Approved construction drawings, shop drawings, and permit card are on site prior to inspection.	
3			The "Tie-in" points for the ECS speaker circuits are clearly shown on the shop drawings.	
4			All ECS conduits are green per specifications.	
5			All ECS conductors match the Wire Schedule provided on ECS shop drawings.	
6			Speaker cables are labeled with speaker circuit ID at all terminations and junction boxes.	
7			Where an end of line branch monitor is used, the device(s) and their enclosures must be marked ECS EOL.	
8			Audio Contractor and Installing Contractor both have licensed representatives present during Demonstration Test.	
#	Yes	No	TO BE COMPLETED PRIOR TO FIRE ALARM TIE-IN	Initials
9			A ground fault test has been completed in the presence of a DEN Life Safety representative.	
10			An impedance test has been completed in the presence of a DEN Life Safety representative.	
11			All deficiencies identified in the Demonstration Test have been corrected and system was successfully tested in the presence of DEN Life Safety.	
12			Audio Contractor and Installing Contractor both have representatives present during fire alarm tie-in. Representatives must possess a current CCD Fire Alarm Installer's license or CCD Mass Notification license.	
#	Yes	No	AT FIRE ALARM INSPECTION	Initials
13			Stamped & Signed set of ECS plans, Permit card, & payment for DFD on hand at the time of the final test.	
14			All required testing materials are available for the test, including but not limited to: Ladders, extension cords, impedance meter, multimeter, sound pressure level meter.	
15			All appropriate parties are present & access to the area being inspected has been arranged. These include Owner Rep; Licensed contractor holding a current CCD Fire Alarm Installers or CCD Mass Notification Installers license.	
16			All required Spare Parts delivered to DEN Life Safety.	
17			ECS Supplementary Record of Completion is on-site, completed and signed. This form may be obtained from DEN Life Safety.

SECTION 275119 - SOUND MASKING SYSTEMS

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

Edit to suit Project.

1. Electronic noise generators.
2. Amplifiers.
3. Wiring.
4. Masking speaker assemblies.
5. Controls.
6. Component mounting racks.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. Covered Spaces: Spaces above which masking speakers are installed.

1.4 SYSTEM DESCRIPTION

Revise this article to indicate extent of system coverage required. Coordinate with Drawings to indicate extent of system or individual zones to be covered. Revise number of channels and modify number of zones to suit Project. See Evaluations.

- A. Zones: [**Single**] [**Multiple**]-zone coverage.

Retain one of first two paragraphs below to specify number of channels. See Evaluations.

- B. Channels: Single channel of masking sound to each zone.
- C. Channels: Separate channel of masking sound to each of [**two**] [**three**] groups of speakers in each zone.
- D. Signal Levels: Individually adjustable for each of 14 one-third octave bands centered at 200 through 4000 Hz, for sound-masking noise channels.

Options in first paragraph below specify system performance for typical office occupancies. Revise to suit Project.

- E. Sound-Power Level Produced by System: Match [**NC 40**] <Insert value> contour between [**400 and 2000 Hz**] <Insert value>, with smooth roll-off above and below those frequencies.
1. Initial Level: [**40 dB**] <Insert value>, A-weighted.
 2. Final Adjusted Level: [**40 to 50 dB**] <Insert value>, A-weighted. Determine final level for each space individually by measurement as specified in Part 3.
 3. Measurements: Made under calibration conditions.
- F. Maximum Local Variance of Sound-Power Level: [**6 dB**] <Insert value> for the 500-Hz octave band and [**3 dB**] <Insert value> for the 1000-, 2000-, and 4000-Hz octave bands for 75 percent of the locations in covered spaces.
- G. Maximum Average Range of Sound-Power-Level Deviation: [**2 dB**] <Insert value> in the 250-, 2000-, and 4000-Hz octave bands and [**1.5 dB**] <Insert value> for the 500- and 1000-Hz octave bands for all locations.
- H. Directional Effect: People in covered spaces under calibration conditions cannot determine source of masking sound.
- I. Uniformity with Respect to Time: One-minute time-averaged sound-pressure level of any octave band of masking sound from [**250 to 8000 Hz**] <Insert value> remains constant in any space to within a standard deviation of [**2 dB**] <Insert value> when measured over a 30-minute period.
- J. Sound Quality: No audible hum or noise from this system in covered spaces when noise generators are off and power amplifiers are on with input volume controls set at [**50**] <Insert number> percent.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT

PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include nationally recognized testing laboratory listing data.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Dimensioned plans and elevations showing minimum clearances and installed features and devices for system components. Include the following:
 - a. Show types and locations of masking speakers and their wiring connections, channel assignments, and axis orientations.
 - b. Show ducts, beams, and other significant sound-reflecting and -absorbing elements in ceiling space and show locations of partitions below ceiling.
 - c. Include a diagram showing interconnection of major system components for each zone and channel and indicating grounding connections.

Retain subparagraph below if equipment includes wiring.

- 2. Wiring Diagrams: For power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

Coordinate first paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as supplemented in "Quality Assurance" Article. Edit to suit Project.

- A. Qualification Data: For qualified [**Installer**] [**manufacturer**] [**and**] [**testing agency**].

Retain first paragraph below for product certificates from manufacturers.

- B. Product Certificates: For sound-masking equipment and components, signed by product manufacturer.

Retain first paragraph below if Contractor is responsible for field quality-control testing and inspecting.

- C. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sound-masking equipment and components to include in emergency, operation, and maintenance manuals.

Verify requirements for as-built plans with DEN Project Manager.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with

other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

Maintenance materials may not be allowed on publicly funded projects.

Coordinate maintenance material submittal requirements with DEN Project Manager.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Sound-Masking Speaker Assemblies: **[One (1)] <Insert number>** for each 10 of each type used, but no fewer than one.
 - 2. Fuses: **[One (1)] <Insert number>** for each type used, but no fewer than one.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer trained and approved by manufacturer of sound-masking equipment.

Retain first paragraph below if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Section 014000 "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

- B. Testing Agency Qualifications: An independent agency with the experience and capability to conduct testing of sound-masking systems according to ASTM E 1130. Required experience includes having tested a minimum of five different systems within the last five years, each system similar in size and complexity to Project system.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70.
- E. Comply with UL 813 unless a more stringent standard is specified in Part 2.

1.10 COORDINATION

- A. Coordinate quantity and arrangement of speaker assemblies with ceiling space configuration and with components occupying ceiling space, including structural members, pipes, air-distribution components, raceways, cable trays, recessed lighting fixtures, and other items.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Sound Masking, LLC.
 2. Atlas Sound LP.
 3. Dynasound, Inc.
 4. GE Security, Sound and Communications.
 5. Lencore.
 6. LynTec, Inc.
 7. Moeller, K. R. Associates Ltd.
 8. Proudfoot Company, Inc. (The).
 9. Sound Advance.
 10. <Insert manufacturer>
 11. or approved equal.

2.2 GENERAL REQUIREMENTS FOR SOUND-MASKING EQUIPMENT

- A. Components: Modular plug-in, heavy-duty, industrial-grade integrated circuit devices.
- B. AC Supply Voltage Tolerance: 105 to 130 V with no degradation of system performance.
- C. Protection from Power Line Surges: Integral surge protection devices listed in UL 1449; with the following features:
1. Suppression Level: 300 V.
 2. Maximum Response Time: 5 nanoseconds.
 3. Circuit: Multistage, using inductors and silicon-avalanche zener diodes or equivalent.
 4. Indicator Lamp: Neon or light-emitting diode located on control panel and arranged to extinguish on failure of protection.
 5. Fuses: Externally accessible.
- D. Component Housings: Suitable for mounting in standard 19-inch (480-mm) relay racks, with connections at rear and controls either on rear panel or protected by a

screw-fastened security cover.

2.3 NOISE GENERATOR AND FILTER UNITS

- A. Digital Masking Generator Spectra: Pink, white, and superwhite.
- B. Pink Noise Generator: Output octave bands from 30 to 4000 Hz.
- C. Filters for One-Third Octave Bands: Adjustable from 10 dB of boost to 10 dB of cut at each center frequency.
- D. Mixer Inputs: Two high level and one microphone level.
- E. High-Pass Filter: Approximate range of cutoff adjustment is 37 to 400 Hz.
- F. Low-Pass Filter: Adjustable roll-off frequency 100 Hz to 10 kHz.
- G. High-Cut Filter: Approximate range of cutoff adjustment is 180 to 9000 Hz with slope varying to 12 dB per octave.
- H. Auxiliary Inputs: Able to accept two, high-level, auxiliary signals such as music and telephone paging as well as general paging.
- I. Mounting: Shelf or rack **3-1/2 inches** (90 mm) high.

2.4 PROGRAMMABLE AUDIO-LEVEL CONTROL UNIT

This article specifies an optional feature providing automatic adjustment of masking sound to suit predictably recurring changes in occupancy patterns.

- A. Automatic Sound-Power-Level Changes: Six system channel changes, four times per day, and capable of different time settings for each day of week.
- B. Level Changes: Programmable from front panel of unit, and automatically incremented over a period long enough for sound-level variations to be imperceptible to occupants of covered spaces.
- C. Muting: Control unit shall be programmed to permit muting for emergency paging.
- D. Built-in zone-level control shall drive other amplifiers and provide minimum [7] **<Insert number>**-position level control.
- E. Program Memory: Nonvolatile for at least one year without power. When re-energized after a power outage, control starts at zero level and automatically advances system sound level at same rate used for programmed level changes.

2.5 POWER AMPLIFIERS

- A. Power Amplifiers: Comply with CEA-426, and have the following minimum features:
1. Mounting: Rack mounted.
 2. Output Regulation: Less than 2 dB from zero to full load.
 3. Total Harmonic Distortion: Less than 3 percent, at rated power output from 50 to 12,000 Hz.
 4. Signal-to-Noise Ratio: 60 dB or greater, at rated output.
 5. Frequency Response: Within plus or minus 2 dB from 50 to 12,000 Hz.
 6. Input: From internal masking or mixer board, or from an exterior source such as an automatic level control or other mixer.

2.6 MASKING SPEAKER ASSEMBLIES

- A. Speakers: Cone type, with the following minimum features:
1. Minimum Axial Sensitivity: 45 dB.
 2. Frequency Response: Within plus or minus 3 dB from 50 to 15,000 Hz.
 3. Size: 8 inches (200 mm) with 1-inch (25-mm) voice coil and minimum 5-oz. (142-g) ceramic magnet unless otherwise indicated.
 4. Dispersion Angle: 100 degrees.
 5. Rated Output Level: 10 W.
- B. Configuration: Dual 8-inch (200-mm) and dual 5-inch (125-mm) units mounted on metal baffles and arranged for optimum, multidirectional, angular sound distribution. Arrange units for suspension from the building structure above the ceiling.
- C. Matching Transformers: Full-power rated with 4 standard taps, and a maximum insertion loss of 0.5 dB.
- D. Assemblies installed in air-handling spaces shall comply with NFPA 70 requirements for rate of heat-release and rate of smoke-release characteristics. Tests for these requirements shall be according to UL 2043.

2.7 WIRE

- A. Speaker Wire: UTP cable complying with manufacturer's requirements; listed and labeled for environmental air plenums where cable is indicated in cable trays and is not indicated to be in raceway. Comply with requirements in Section 271500 "Communications Horizontal Cabling." All cables must be installed in an approved raceway or cable tray.

2.8 COMPONENT MOUNTING RACKS

- A. Configuration: Comply with CEA-310-E. Factory-fabricated units designed for interchangeable mounting, forced or convection air cooling, wiring connection, and enclosure of standard 19-inch (482-mm) relay rack modules.

Coordinate first paragraph below with Drawings.

- B. Mounting Provisions: Equipped for freestanding floor mounting.
- C. Cabinet: Factory-finished steel with component mounting rails and prewired plug strips for component power connections. Full front and rear doors with continuous hinges, handles, and cylindrical keyed locks.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Speaker Assemblies: Suspend with chains from building structure above ceilings so bottom of assembly is 6 to 8 inches (150 to 200 mm) above upper plane of finished ceiling material. Use eyebolts on speaker assemblies for attachment. Suspend independently of supports for components of other building systems.

Retain first paragraph below if piping is required to withstand seismic design loads.

- B. Install seismic restraints on speakers. Comply with requirements for seismic-restraint devices specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- C. Speaker Connections: For two- or three-channel systems, connect speaker assemblies alternatively so masking sound is redundant throughout zones of coverage.

Retain one of first two paragraphs below and coordinate with Drawings. Delete both paragraphs if wiring methods for system are indicated on Drawings.

- D. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters and unless otherwise indicated.

Retain one or both of first two subparagraphs below to make exceptions to the wiring method specified above.

- 1. Where cables are installed within consoles, cabinets, desks, and counters, the maximum cable length outside raceway is 6 feet (2 m).
- 2. Conceal raceways and wiring except in unfinished spaces.
- E. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

Retain first subparagraph below if retaining option for unenclosed wiring method.

- 1. Install plenum cable in environmental air spaces, including cable trays.
- 2. Comply with requirements specified in Section 260536 "Cable Trays for Electrical Systems" and Section 271500 "Communications Horizontal Cabling" for cable trays

3. Comply with requirements for raceways and boxes specified in Section 260533 "Raceway and Boxes for Electrical Systems."
4. Comply with requirements in Section 271500 "Communications Horizontal Cabling."

F. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

Retain first paragraph below for cable wiring method.

G. Exposed Cable: Install parallel to building lines, follow surface contours, and support as recommended by manufacturer.

Coordinate first paragraph below with Drawings.

H. Grounding: As recommended by manufacturers unless more stringent requirements are indicated. Ground equipment and conductors to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments with a maximum of 5-ohm to ground at main equipment location. Measure, record, and report ground resistance.

I. Impedance Matching: For system components, including connecting cable, provide end-to-end level and impedance-matched signal paths. Use matching networks and balancing devices at connections where necessary to avoid mismatches.

J. Splices, Taps, and Terminations: Make splices, taps, and terminations on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.2 IDENTIFICATION

A. Use color-coded conductors and apply wire and cable marking tape to designate wires and cables so media are identified in coordination with system wiring diagrams. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Label speaker assemblies as to channel, zone, and address.

3.3 FIELD QUALITY CONTROL

Retain first paragraph below to identify who shall perform tests and inspections. If retaining second option, retain "Field quality-control reports" Paragraph in "Informational Submittals" Article.

Coordinate inspection and testing requirements with DEN Project Manager.

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

Retain first paragraph below to require Contractor to perform tests and inspections.

B. Perform tests and inspections.

Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist Contractor in testing.

Retain first paragraph below to describe tests and inspections to be performed.

C. Tests and Inspections:

1. Operational Test: Start system to confirm proper operation. Remove malfunctioning units, replace with new units, and retest. Make initial sound-spectrum and -level adjustments for each zone.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Inspection: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified.
4. Pretesting: Tune, align, and adjust system and pretest components, wiring, and functions to verify they comply with specified material, installation, and performance requirements. Correct deficiencies and retest until satisfactory performance and conditions are achieved.
5. Masking Sound-Power-Level Adjustments: Adjust independently for each space to minimum level between 40 and 50 dB that will provide speech privacy between adjacent workstations while complying with other system requirements.

D. Final Acceptance Testing: Provide a minimum of 10 days' notice of acceptance test performance schedule. Schedule tests after pretesting has been successfully completed.

1. Tests and Calibration Conditions: Spaces shall be completely furnished but unoccupied; lights and HVAC systems shall be on; HVAC system testing and balancing shall be completed; and electronic ballasts, lighting relay panels, and low voltage transformers shall be in place.
2. Test Conditions: Complying with ASTM E 1130 and calculated according to ANSI S3.5.
3. Instrumentation: Use a professional-quality, sound-level meter with octave-band filters and documentation of recent calibration against recognized standards.
4. Record test observations, readings, and corrective actions.
5. System Tests: Include the following for each system zone:
 - a. Speaker Circuit Impedance Test: Measure impedance at 1000 Hz with amplifier disconnected, using a professional impedance meter or bridge. Locate and correct faults denoted by abnormal readings.
 - b. Ambient Sound-Level Tests: With system off, measure ambient sound level in one-third octave bands. Also measure ambient sound level as a single, wide-band, A-weighted reading.
 - c. Amplifier Noise Test: Check for performance specified in "System Description" Article with masking noise generator off and amplifiers on.

- d. System Noise Test: With masking noise signal on and amplifiers adjusted at a working level 10 dB above ambient sound level, check for hum, buzz, rattle, or other operating deficiencies.
 - e. Spatial Uniformity Test: Measure sound level at locations no greater than **15 feet** (4.6 m) o.c. throughout covered spaces to determine compliance with specified performance level.
 - f. Frequency Response Adjustment and Test: Adjust one-third octave frequency bands and other unit filters to provide response. Adjust to meet requirement of space speech intelligibility and quality of background sound. Comply with ANSI S3.2, CEA 426, and ASTM E 1110.
6. Adjust level of masking sound for each space so one-third octave band centered at 500 Hz has final selected sound-power level for that space. Measure deviation from listed values in one-third octave bands from 100 to 1000 Hz. Measured values must not deviate from those listed by more than 4 dB for open plan areas and 8 dB for enclosed offices. The total of individual band deviations in eight bands must not exceed 16 dB for open plan areas and 30 dB for enclosed offices.
 7. Walk-through Test: People in covered spaces cannot discern speaker locations.
 8. Temporal Stability Test: Check for uniformity of time by measuring sound level in each of 14 octave bands at one-minute intervals over a 30-minute test period. Deviations must not exceed limits specified in "System Description" Article.
 9. Where required, space shall meet the Health Insurance Portability and Accountability Act for privacy and the Gramm-Leach Bliley Act to protect consumer personal and financial information in open office layouts.
- E. Retest: Correct deficiencies identified by tests and observations and retest until meeting specified requirements.
- F. Recording Control Settings and System Adjustments: Record final control settings and programming, and final tap setting of speaker matching transformers. Record final sound-level measurements and observations.
- ### 3.4 ADJUSTING
- A. Occupancy Adjustments: When requested within [**twelve (12)**] <Insert number> months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two (2)**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.
- ### 3.5 DEMONSTRATION
- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain services.
1. Schedule training with Owner, through DEN Project Manager, with at least (7) seven days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 275119

Exclusively published and distributed by Architectural Computer Services, Inc. (ARCOM) for the AIA

SECTION 275123 - EMERGENCY COMMUNICATIONS SYSTEM

THIS SECTION INCLUDES GENERAL REQUIREMENTS FOR THE VOICE PAGING SYSTEM.

NOTE: THIS SECTION COVERS WORK TO BE PERFORMED AT DENVER INTERNATIONAL AIRPORT. THE DESIGN CONSULTANT IS RESPONSIBLE FOR PROVIDING A COMPLETE SPECIFICATION AND CORRELATIVE SPECIFICATIONS AND DRAWINGS, ETC. THE CONSULTANT SHALL ADD TO OR CORRECT INFORMATION CONTAINED HEREIN TO ASSURE THEY AUTHOR A COMPLETE AND CONSTRUCTIBLE SPECIFICATION. CONSULTANT MAY MODIFY TESTING INFORMATION CONTAINED HEREIN, SUBJECT TO REVIEW AND APPROVAL BY DEN.

Revise this Section by deleting and inserting text to meet Project-specific requirements. Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. Section Includes: Microprocessor-switched intercommunications and program systems with the following components:
 - 1. Announcement Control System.
 - 2. Software.
 - 3. Server.
 - 4. Workstation.
 - 5. Visual Display Devices.
 - 6. Monitoring and Testing Systems.
 - 7. Ambient Noise Sensing System.
 - 8. Flight Announcement System.
 - 9. Master Emergency Communication Microphone stations.
 - 10. Microphone stations.

11. Amplifiers.
12. Loudspeakers.
13. Conductors and cables.
14. Raceways.

B. Related Sections:

1. Sections of Division 01 "General Requirements".
2. Sections of Division 26 "Electrical".
3. Sections of Division 27 "Communications".
4. Sections of Division 28 "Electronic Safety and Security".

- C. This section covers the voice paging system, and associated equipment for use in all projects. The Contractor shall provide all skilled labor, material, and equipment for the complete installation of the voice paging system as shown on the drawings and specified herein. The extent of work shall be as shown on drawings, including locations, elevations and details of construction.

Retain paragraph below if Alternates are specified in Division 01 Section 012300 "Alternates" for work in this Section. Coordinate requirements for Alternates with DEN Project Manager.

- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 REFERENCE STANDARDS

- A. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents.
- B. A listing of the applicable reference standards is contained in Section 014225 "Reference Standards".
- C. In addition to all applicable local and state codes, the work shall be in accordance with the latest revisions of all applicable standards and specifications, including the following:
1. NFPA: National Fire Protection Association.
 2. NAB: National Association of Broadcasters.
 3. UL: Underwriters Laboratories.
 4. EIA: Electrical Industries Association.
 5. NEC: National Electrical Code.

1.4 PERMITS

Verify that permit and code information below is current.

- A. Any work performed on the DEN PA System shall be permitted as a 3A Permit to the CCD consistent with Appendix K of the 2011 Denver Amendments to the 2009

International Fire Code.

ENGINEER SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS

- A. Provide Submittals in accordance with requirements of Division 01.
- B. Product Data: For each type of product indicated.
 - 1. Technical data on each component.
 - 2. Materials list and backbox schedule (including unique backboxes).
 - 3. Include data substantiating that materials comply with requirements.
- C. Shop Drawings: For emergency communications system. Include plans, elevations, sections, details, spreadsheets and attachments to other work.
 - 1. Shop drawings shall be stamped by an RCCD as part of the submittal.
 - 2. Shop drawing submittals shall be done on the existing DEN as-builts and clouded to show the scope of work. Shop drawings in Auto CADD shall have project specific layer(s) showing new work or modifications on its own layer(s) with the project name.
 - 3. Shop drawings shall be of scale suitable for use for fabrication. They shall show materials, finishes and panel/control markings. Contractor shall make the following shop drawing submittals:
 - a. A complete list of equipment for the systems, including that required for items that are to be fabricated by the Contractor.
 - b. A complete set of detailed technical descriptions describing and illustrating all components and materials.
 - c. A complete set of shop drawings of items that are to be fabricated by the Contractor and/or which the Contractor intends to fabricate or has fabricated, including but not limited to, the custom panels and receptacle plates.
 - d. System block diagrams with provisions for entry of future test results.
 - e. Equipment rack and console layouts.
 - f. Details of cable management and termination in terminal boxes junction boxes and equipment racks.
 - g. Wiring diagrams showing the exact manner in which the Contractor proposes to install the system. Show all switches, modifications to equipment, control circuits, and equipment rack layouts. Show all equipment/apparatus items that are required for performance of the required functions. Include the following:
 - 1) Single-line diagram showing interconnection of components.
 - 2) Cabling diagram showing cable routing.
 - h. Drawings identifying all terminals, wiring color-coding and control functions.

4. Detail equipment assemblies and indicate dimensions, weights, required clearances, method of field assembly, components, and location and size of each field connection. They shall show materials, finishes and panel/control markings.

Retain first subparagraph below for systems with built-in equipment.

5. Include scaled drawings for master microphone station located in fire operation control centers as well as other locations as required that detail built-in equipment.
6. Microphone Station Schedule including the following information:
 - a. Station number.
 - b. Location.
 - c. Station type.
 - d. Station mounting.
 - e. Handset type.
 - f. IP or Analog.
 - g. Identity of associated parent station.
7. Equipment design considerations for future expansion, when indicated.
8. Description of system operation.
9. A complete list of equipment for the systems, including that required for items that are to be fabricated by the Contractor.
10. Equipment rack and console layouts.
11. Zone programming table with microphone station programming for each location.
12. Details of cable management and termination in terminal boxes, junction boxes, and equipment racks.

- D. The data submitted by the Contractor shall be sufficiently detailed to enable the Owner's Representative to determine whether or not the equipment, materials and installation that the Contractor proposes to furnish comply with the requirements of this specification, and whether or not the Contractor's organization is qualified by experience, and by capability of personnel, to execute the work described herein.

1.6 INFORMATIONAL SUBMITTALS

- A. Spreadsheet of all IP devices, their functionality, model number and location with placeholders for Owner to provide IP address, Masking, port assignment, switch name and default gateway assignments. Also include POE power requirements and the equipment room that the supporting network switch is located

Coordinate first paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article.

- B. Qualification Data:
 1. Qualifications shall be provided for installer as required in Qualifications paragraph 1.8.A.
- C. Field Quality-Control Reports. Submit quality reports throughout project as decided in Pre-Construction Meeting. Include communication room conditions, speaker testing

information, infrastructure connectivity quality and power outage coordination to prevent power issues from damaging installed equipment.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For intercommunications and program systems to include in operation and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

Retain subparagraph below for microprocessor-switched equipment.

1. A record of Owner's equipment-programming option decisions.
2. Factory-prepared operation and service manual for each system.
3. Contractor shall provide technical information for all electronic apparatus, including but not limited to schematic diagrams and parts lists, manufacturer's installation instructions, operating instructions and technical specifications.
4. Contractor submittal shall include all system spreadsheets, as-built drawings and, shop drawings prepared and used by the Contractor, as well as those that were not required to be submitted for approval. This shall include, but not be limited to, wiring diagrams, schedules for identification of building wiring and installation details useful to a maintenance technician.
5. Instruction Manuals:
 - a. Provide five (5) hard copies and one (1) electronic copy of an Instruction Manual containing the following:
 - 1) Table of Contents.
 - 2) Instructions for operating the system in all modes of operation and for fulfilling all functional requirements.
 - 3) List of settings and adjustments for semi-fixed controls.
 - 4) Manufacturer's sheets of specifications, operating instructions and service information arranged alphabetically by manufacturer and then by model number.
 - 5) Complete detailed wiring diagrams and one-line diagrams for the "as-built" system in reproducible format.
 - 6) Recommended preventive and remedial maintenance.
 - 7) Complete parts list.
6. Tenant User Manuals:
 - a. Provide ten (10) hard copies and one (1) electronic copy of Tenant User Manual. They shall include the following information:
 - 1) Basic description of equipment and its functions.
7. As-Built Documents: Two (2) weeks prior to final acceptance testing, the Contractor shall provide two (2) sets of "as-built" prints and one (1) electronic copy of the following:
 - a. System block diagrams.

- b. Equipment rack and console layouts.
 - c. System wiring diagrams.
 - d. Test reports, as specified herein.
 - e. Written warranty, as specified herein.
 - f. Asbuilt drawings in Auto CADD shall have project specific layer(s) showing new work or modifications on its own layer(s) with the project name. The intent is to provide a clear asbuilt of what is new, review the information and then allow DEN to import the new layer(s) into their master ECS asbuilts.
8. Project Record:
- a. Provide As-Built drawings.
 - b. Provide four (4) cd's, or format as requested by DEN Project Manager with electronic files of project information to DEN.
 - c. Provide one-half sized set to keep in the equipment room, three (3) full-size sets and four (4) cd's, or format as requested by DEN Project Manager with electronic files to DEN.
9. Field Documentation:
- a. Provide system drawings for each new communication room for simple troubleshooting of system during break in period.
 - b. Provide laminated information sheets of new zone or message information for new operating positions at the gates. Include simple microphone station use directions.

1.8 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturers' Qualifications: Paging control system, microphone stations, amplifiers, ambient noise system equipment, monitoring hardware: Innovative Electronic Designs, Inc. (IED).
2. Contractor's Qualifications: The ECS shall be installed by a Contractor who has been regularly engaged in the installation of electronic equipment for at least five (5) years and certified to install IED Voice Paging Systems. The Contractor shall be experienced in all aspects of this work and shall be required to demonstrate direct experience on recent systems of similar type and size.
3. A resume of qualification shall be submitted with the Contractor's bid indicating the following:
 - a. A list of recently completed projects of similar type and size with contact names and telephone numbers for each.
 - b. A technical resume of experience for the Contractor's Engineer and on-site installation foreman who will be assigned to this project.
 - c. Similar documentation will be required of any subcontractor who will assist the Contractor in performance of this work. All proposed subcontractors must demonstrate equal or superior experience or technical qualifications to the Special Systems Contractor in order to contract for any part of the

installation or testing of the system.

4. Contractor shall be an authorized installer and dealer of the specified equipment with a service facility within 100 miles of the project site.
5. Contractor shall submit proof that the primary system programmer to be used in the programming of the systems has attended a programming school hosted by the manufacturer of the computerized systems to be provided under this section within the past two years. Attendance shall have been within one (1) year prior to the date of project notice to proceed.

If an independent testing agency is required, see Division 01 Section "Quality Requirements" for general testing and inspecting agency qualification requirements.

Retain first paragraph below if Contractor selects testing agency or if Contractor is required to provide services of a qualified testing agency in "Field Quality Control" Article. Qualification requirements are in addition to those specified in Division 01 Section "Quality Requirements," which also includes the definition for "NRTL" (nationally recognized testing laboratory).

6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
7. Comply with NFPA 70.
8. Microprocessors, transistors, capacitors, resistors, integrated circuits, printed circuit boards and other components shall not be operated to exceed their rated values. Design system for 24-HR continuous operation.

Coordinate warranty requirements with DEN Project Manager.

B. Warranty:

1. Provide a written two (2) year warranty, signed by the Contractor, due on the date of the final acceptance.
2. Include the following provisions:
 - a. Warrant all equipment and the installation to be free of faulty workmanship.
 - b. Warrant all components, including solid state devices, to be free of defects for a period of two (2) years from the date of final acceptance.
 - c. Paint and exterior finishes, fuses and lamps are excluded from the above warranty, except when damage or failure results from defective materials or workmanship covered by the warranty.

1.9 COORDINATION

- A. Coordinate layout and installation of ceiling-mounted speaker and ambient noise sensor microphones with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.
- B. Coordinate installation with existing DEN Fiber Optics network(s), and all other existing DEN systems. Notify DEN Project Manager promptly of any conflicts that are identified.

Extra stock materials may not be allowed on publicly funded projects.

Coordinate extra stock submittal requirements with DEN Project Manager.

1.10 EXTRA STOCK

- A. Contractor shall supply spare parts to the Owner in the amount of 10% of the equipment installed under this contract or one of each item, whichever is greater.
- B. All spare stock shall be delivered in the manufacturer's standard shipment packaging and turned over to the DEN Project Manager, and each item shall be clearly identified as to the package contents and what project or area the item was used. Speaker types used that are not listed shall be provided with a unique identifier. Include the following:
 - 1. Storage cabinets.
 - 2. Controller Plug-in Cards (each type).
 - 3. Microphone Stations (of each type, Podium, Jetway, Main).
 - 4. Microphone Handsets.
 - 5. Type S1 Loudspeaker.
 - 6. Type S2 Loudspeaker.
 - 7. Type S3 Loudspeaker.
 - 8. Type S4 Loudspeaker.
 - 9. Type S5 Loudspeaker High Frequency Horn Driver Diaphragm Replacement Kits.
 - 10. Type S5 Loudspeaker 10-inch Midrange Cone Drivers.
 - 11. Type S6 Loudspeaker.
 - 12. Type S7 Loudspeaker.
 - 13. Type S8 Loudspeaker.
 - 14. Type S9 Loudspeaker.
 - 15. Type S10 Loudspeaker.
 - 16. Type S11 Loudspeaker.
 - 17. Other type of loudspeakers.
 - 18. Amplifier Cards (of each type used).
 - 19. Fuses (of each type/size used in system).
 - 20. Connectors (of each type used in system).

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. All materials, equipment and apparatus provided shall be new and of the latest design or model offered for sale by the manufacturer.
- B. Acceptability for use in the systems shall be determined by the DEN Project Manager. Such items shall be installed only after receipt of written approval of the DEN Project Manager.

2.2 ENVIRONMENTAL CONDITIONS

- A. The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 - 1. Location: (Indoors/Outdoors).
 - 2. Altitude: 5,500 feet (1677 m) above sea level.
 - 3. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).

2.3 SYSTEM DESCRIPTION

- A. Components provided under this Contract shall be compatible with and connected to the existing Innovative Electronic Designs, Inc. (IED, Inc.) IED 500 Mainframe located in the center core of each concourse, Concourse B RJ facility, South Terminal, and Room 45B08 in the Terminal.
- B. Remote amplification rooms shall be configured to match existing rooms.
- C. The Emergency Communications System (ECS) provides paging and background music to all public areas of the airport facilities with the exception of the existing AGTS platforms that the IED system interfaces through the existing train announcement system. A line level output and dry contact closure cause tenant sound system announcements to mute and allow an emergency message to be sent. Voice paging must be provided to all non-public support areas and parking areas. The system is used for general announcements and emergency announcements throughout Concourses A, B, and C, Terminal, AGTS Tunnel, Office Tower and Central Plant.
- D. The emergency announcements functions of the system provide audio evacuation messaging and announcements for the airport. All changes to the system shall be coordinated with the airport and Denver Fire Department before the work begins. A pre-construction meeting shall be required to coordinate outages, schedules, hours of work, backup plans, system faults and system sets and all other aspects of the work. All ECS projects require Fire Alarm Permits as per article 1.4.
- E. The system provides ambient noise sensors and monitoring which allow automatic level control of individual loudspeaker zones located in public areas.

- F. The monitor/test system is capable of monitoring and/or testing all audio or DC signal, speaker level outputs, or system wiring to insure integrity and reliable operation. All line-level zone inputs and outputs, equalizer inputs and outputs, and amplifier inputs and outputs must be monitored for correct operation.
- G. The ECS shall be integrated with and supplement the facility Fire Alarm System (FAS). The interface with the FAS will enable the use of the ECS's power amplifiers, and loudspeakers in public areas. The FAS provides the messages via FAS contact closures that enable the ECS to broadcast incident-specific messages into pre-designated audio zones.
- H. The output of each amplifier must go through a terminal cabinet. This network allows loudspeaker loads to be disconnected from the amplifier outputs for manual measurement of load impedances by maintenance personnel. This shall serve as a demarcation point for trades to test their portion of the work independent of each other.
- I. All loudspeakers operate on a 70 Volt distributed system. The loudspeakers shall be grouped in modular zones allowing maximum flexibility for paging area assignment. Loudspeaker types shall match DEN current standards to the greatest extent possible allowing existing service stock to be utilized.
- J. All Podium microphone stations must be manufactured by IED, Inc., and equipped with microphone, twelve-button control input, alphanumeric display or LCD display, and accept up to three optional slave microphone handset stations. Airline Ticketing counters and Baggage Claim Office microphone stations must be equipped with a single microphone handset, twelve-button control input and alphanumeric or LCD display. Jetway microphones shall be either a single handset microphone station with limited four-button control and status indicators or, a sidekick microphone handset station that is connected to the Podium microphone station. Match existing configurations for operator continuity between areas.
- K. All microphone stations, ambient noise sensors, and loudspeakers shall be hardwired to the local P.A. Rooms. Local P.A. Rooms within a building are interconnected via copper and fiber-optic cable to the building ECS Control Room. Spare copper and fiber-optic cable for new installations may not exist. Contractor to verify the existence of available cable and cable raceways/conduit. Verify cable requirements with the understanding that fiber optic cabling used for the system is a hardened, redundant cable infrastructure designated as the part of the fire alarm infrastructure .
- L. Network Equipment and Design (Directions to Designers) Designers shall meet with DEN Technologies network engineers to determine specific network equipment, architecture and attachment points that are specific to the Project. The DEN network engineers shall provide a specific bill of material for the ECS network expansion including manufacturer, model number and description for each device. The DEN network engineers shall also work with the designer to create a diagram showing fiber interconnections between new network devices and attachment points to the existing ECS network. The architecture of the ECS equipment shall be shown on the contract drawings including uplinks to specific ports in the existing ECS network. The network bill of material shall be included in the Part 2 Products section of this Section. First year Cisco SmartNet coverage shall be included for all devices not covered under

Cisco's limited lifetime warranty. No substitutions shall be allowed unless approved by DEN Technologies. Designer shall instruct Contractor to deliver Switches and other network equipment to DEN Technologies with signed receipt. DEN Technologies shall configure this equipment, label equipment with switch names and place equipment back in original factory boxes. City asset tags shall be applied to equipment where applicable. Once configuration work is complete, the Contractor shall pick up the equipment and provide a signed receipt to DEN Technologies network staff. The Contractor shall then install the equipment in the relevant room(s) and interconnect the equipment as indicated in the architecture diagram in the contract drawings.

- M. DEN Network Engineer will inspect the installed equipment and activate ports to join the new network equipment to the production ECS network. Once this occurs the DEN Technologies network staff will operate and maintain the new devices as an integral part of the production ECS network.
- N. Terminal cabinets are and shall be used for breakout of speaker wiring home to the equipment racks.
- O. Tenant ECS requirements: Refer to Emergency Voice Paging System Tenant Revision 275114. It is mandatory for at least one loudspeaker be located in every room and corridor with uniform coverage required in larger spaces.
- P. Visual Information System (VIS) shall be provided as required. VIS shall provide visual features of the system to be utilized for Visual paging, way finding, advertising, Emergency visual communications, Flight Information System, Train Information Display System, baggage information display systems and gate information display systems.
- Q. Flight Announcement System (FAS) shall be provided as required. System shall interface to Owner provided AIDX feed for data to populate the Flight Announcement System with information to automatically or manually announce flight messages at gate areas. System shall support Visual paging and graphics that are synchronized with the announcement in multiple languages as identified in these specifications.

2.4 SYSTEM OPERATION

- A. The following functional capabilities are required for the DEN ECS:
 - 1. The system is capable of automatic or manual audible testing of microphone inputs, IED headend audio outputs, ambient noise sensor frame outputs, equalizer outputs amplifiers and loudspeaker systems.
 - 2. In all Public Areas, the system has the capability of sensing ambient noise sound levels and adjusting loudspeaker zone signal levels up or down accordingly to maintain good speech intelligibility.
 - 3. All inputs and outputs shall be monitored for correct operation. Audio levels of each logical system parameter shall be monitored including but not limited to Microphone Stations, DSP, Amplifiers, Speaker lines with impedance and ground faults, and ambient noise system. Other data information of equipment and power monitoring shall be included in monitoring when available. All detected

faults shall be displayed on the ECS standard and remote CPU's.

2.5 ANNOUNCEMENT CONTROL SYSTEM

- A. The ACS shall provide system setup, control and messaging for the PA system and integrate with the existing systems at DEN in order to provide a fully functioning and monitored system.
- B. ACS shall be capable of managing 240 microphone stations and 65,536 zone outputs per unit.
- C. ACS shall provide 8 x 8 message system expandable to 64 x 64 of pre-recorded messages via the use of additional message controller(s).
- D. ACS shall provide up to 180 simultaneous announcements and messages over a single LAN or VLAN.
- E. ACS shall provide the following:
 - 1. Fully redundant architecture over standard LAN.
 - 2. System backup and restoration configuration files.
 - 3. Built-in wizards for initial setup.
 - 4. Integrated visual paging support.
 - 5. Seamless integration to legacy 510/520ACS.
 - 6. Event messaging allowing multiple actions or events to be triggered.
 - 7. Multi-Language support for different language packages or second language requirements as defined in the specification.
- F. Manufacturer:
 - 1. IED 1100 Or 1200 GlobalCom with vACS1000 Software. Include IED Lifeline Backup GlobalCom for each primary Globalcom.
 - 2. **<Insert manufacturer>**
 - 3. or approved equal.

2.6 DIGITAL AUDIO BRIDGE (DAB)

- A. The DAB shall provide Cobranet audio to two separate networks. The DAB shall include:
 - 1. Redundant connections for both networks.
 - 2. 8 channels of bidirectional Cobranet audio.
 - 3. Cobranet expansion beyond layer 2 network.
- B. Manufacturer:
 - 1. IED 100DAB.
 - 2. **<Insert manufacturer>**
 - 3. Or approved equal

2.7 AMBIENT NOISE SENSING SYSTEM

A. Ambient Noise Sensor Collector shall be provided for noise sensor termination from the field devices. Collector shall be used with Titan 9160 amplifier system exclusively. Collector shall:

1. Be PoE device or connect to local 48Vdc power supply.
2. Connect 32 ambient noise sensors on each frame.
3. 1 RU and rack mountable.

B. Manufacturer:

1. IED T9032NS with IED 540S-2 Sensor on 2-Gang Plate.
2. **<Insert manufacturer>**
3. or approved equal.

2.8 AUTOMATIC TEST AND MONITOR SYSTEM (New System)

A. The Automatic Test and Monitor System shall provide for self-diagnostics that operate in real time under software control. This self-testing shall include testing of logic, audio operation, power supplies and power amplifiers. This test shall be automatic and utilize only one system as the interface for the test. Results shall be logged on the PC and a fault list generated that can be printed for the Owner Maintenance staff.

B. System shall report results of actual audio signals being routed through the entire system as well as speaker impedance load changes, speaker ground faults and End of Line speaker faults.

C. System faults shall be reported through software with clearly labeled information and through external interfaces to other systems, via RSS feeds, contact closures or network messages.

D. System shall collect information from internal IED test and monitoring devices in hardware and report faults or settings.

E. System shall allow circuit testing and reset of corrected fault.

F. Manufacturer:

1. 610 Monitor/Test Software for the system server.
2. 596SGFI Dual Channel sensors for speaker lines.
3. 596EOL Speaker end-of-line sensor as required by Designer.
4. **<Insert manufacturer>**
5. or approved equal.

2.9 MICROPHONE PAGING STATIONS (New Installations)

A. General:

1. Microphone stations shall originate announcements into zone groups as determined by the DEN Project Manager. Any microphone page station shall be capable of being programmed into any zone group. Microphone stations shall be capable, when so programmed, of making emergency zone group announcements, terminal zone group announcements, local zone group announcements, and multi-local group announcements. When so programmed, they shall also be capable of performing any or all of the control functions for pre-recorded and assembled messages. These control functions shall include initiating a playback sequence, interrupting a playback sequence, recording a message, monitoring a message, or playing back a message to its own multi local group, or to a terminal zone group instead of to the zone map assigned to that message. The microphone stations shall include a microphone; either handheld, handset or gooseneck-mounted type. Each microphone station shall have buttons for zone group selection to activate that microphone station for announcements into pre-programmed zones. Green and Red LED's shall indicate ready or busy respectively. Any 5 second pause after the green LED has illuminated shall terminate the announcement. Each station shall include its own microphone preamplifier, test oscillator, compressor, and balanced output line amplifier for driving long lines without appreciable high frequency loss. The ACS microprocessor, under software control shall continuously interrogate all active microphone and telephone page stations for requests.
 2. Specifications – Total System, Direct Microphone Station input to Zone Output:
 - a. Frequency Response: 0.5dB 20Hz - 20kHz.
 - b. Total Harmonic Distortion (THD): < .05% @ +24dBm 20Hz - 20kHz.
 - c. Noise Referred to Input: -125dBv 20Hz - 20kHz.
 - d. Signal-to-Noise (limited by input amp): > 80dB.
 - e. Gain, Adjustable at each paging station: 65dB Maximum.
 - f. Maximum Output Level: +24.0dBm.
 - g. Normal Output Level: +2.0dBm.
 - h. High-pass filter in mic station defeated.
- B. Full function Communication Stations: Stations shall have a 12-button keypad for data entry, (8) soft function keys and a color graphical LCD. The station shall be a network appliance with control and CobraNet audio communicating on the audio network. Connection to the system shall be 100BaseT with power provided by a PoE switch port or PoE mid span power. Microphones shall be provided as handheld or gooseneck as required. Each microphone shall utilize a magnetic mount and include a line amplifier in the microphone shell to eliminate microphone signal levels beyond the microphones. Each station shall support the connection of up to three 528SK Sidekick, or 500FMC-H remote stations. Stations shall be provided in vertical, horizontal, surface, flush, or desktop as noted on the drawings and based on the mounting situation required.
1. Acceptable Products:
 - a. Horizontal Communications Station:
 - 1) IED 528HFM-H.
 - 2) <Insert manufacturer>
 - 3) or approved equal.

- b. Vertical Communications Station:
 - 1) IED 528VFM-H.
 - 2) **<Insert manufacturer>**
 - 3) or approved equal.

- C. Microphone Communication Station Enclosures: For station mounting locations requiring desktop, angled vertical, or angled horizontal, provide factory enclosures to match the finish of the station. Enclosures shall be non-metallic and include rubber feet.
 1. Acceptable Products:
 - a. IED 528VBB or 528HBB.
 - b. **<Inset manufacturer>**
 - c. or approved equal.

- D. Master Emergency Communications Systems Microphone Station: Microphone station shall be complete with integral 17- inch touchscreen monitor computer workstation and graphics user interface per DEN Standards. MECSMS shall provide:
 1. Standard Microphone station as required.
 2. Software GUI developed for project.
 3. "A" panel software application for microphone zone selection and message playback.
 4. Message selection and de-selection.
 5. Live page capabilities.
 6. Match Existing Units.
 7. Acceptable Products:
 - a. IED 528 series with touchscreen workstation IED 591D.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

- E. Expansion Microphone Communication Station: Expansion stations shall act as an intelligent slave station to a full function station. Expansion stations shall include (4) soft function keys that can be programmed for operations independent of the master station to which it is connected. This shall allow flight announcements and other cued messages to be controlled from the expansion location. Microphones shall be provided as handheld and include a line amplifier in the microphone shell to eliminate microphone signal levels beyond the microphone. The station shall mount in a standard 2-gang wall box and connect to the full function station with Cat5e cable and RJ45 modular connectors.
 1. Acceptable Products:
 - a. Expansion Communications Station IED 528SK.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

- F. Rack Communications Station: Rack Communication Stations shall have a 12-button keypad for data entry, eight (8) soft function keys and a color graphical LCD. The station shall be a network appliance with control and CobraNet audio communicating on the audio network. Connection to the system shall be 100BaseT with power provided by a PoE switch port or PoE mid span power. Microphones shall be handheld and utilize a magnetic mount. It shall include a line amplifier in the microphone shell to eliminate microphone signal levels beyond the microphones. The station shall include a flush speaker for monitoring selected audio. The speaker shall be powered by an 8-watt power amplifier and include a panel volume control. The station shall use no more than four (4) standard rack units.

1. Acceptable Products:
 - a. IED 528SRM-H Rack Communications Station.
 - b. <Insert manufacturer>
 - c. or approved equal.

2.10 EXTERNAL SYSTEM INTERFACE

- A. An external interface shall be provided to allow interfacing contact inputs or outputs into the ACS system from the Fire Alarm System, Voice Evacuation System, or other systems. Each interface shall provide 64 input closures and output closures or voltage ports in groups of 8.
- B. Acceptable Products:
1. IED 508BI/O Interface Station (Existing System Modification).
 2. or IED T9032LVIO, T9064LVIO, PoE required.
 3. or IED T9040NLR.
 4. <Insert manufacturer>
 5. or approved equal (model and quantity as required).

2.11 POWER AMPLIFIERS

- A. Integrated Digital Power Amplifier System (IDPAS): The Integrated Power Amplifier System shall provide DSP processing and power amplification for up to (16) zones in a single modular mainframe.
1. Digital Audio Network Interface: The network interface shall receive (32) dynamic assigned audio channels from the ACS via the Ethernet Network. Control for the IDPAS and monitoring shall be included on the network. The NIC shall provide dual outputs to support a redundant network.
 2. Zone Manager: The IDPAS shall provide zone management for (16) channels as directed by the ACS. Channel management shall be structured to utilize the minimum channels necessary on the network to support paging, messaging and background music activity for any combination of zones.
 3. DSP Processing: The IDPAS shall include digital signal processing for (16) channels of audio. Each channel shall include (9) bands of parametric

- equalization, time delay, ambient analysis control, (7) monitoring points, and (7) testing points. Complete setup and control software shall be integrated within the Enterprise Software and available on the network for configuring, controlling, monitoring, and testing the DSP for each channel.
4. Ambient Analysis and Control: The Ambient Analysis System shall adjust signal levels in response to either ambient noise levels or computer commands. The system shall operate in real time and shall not be a "sample and hold" system. The system shall include an automatic calibration sequence. All setup, configuration and monitoring controls shall be software based with the ability for multiple sensors averaged to control a single channel(s) or for a single sensor to control multiple channels. The sensors shall utilize control signaling and levels that allow co-locating with the speaker cable for cable routing efficiency. Three (3) modes of operation shall be possible:
 - a. Automatic: Changes attenuation levels in response to noise levels reported by remote sensors.
 - b. Slaved: Changes attenuation levels based on remote sensors of an automatic channel.
 - c. Fixed: Fixed attenuation as set by the computer and user.
 5. Power Amplifier Cards: Each IDPAS mainframe shall be designed to accept (9) amplifier cards. Each card shall be removable and replaceable without disabling or interfering with the operation of the DSP or other power amplifier cards. The amplifier cards shall be available as dual 200-watt cards or single 400-watt cards, and shall be of a high efficiency design to maintain a minimum of 78% efficiency at 100% output. The mainframe shall support simultaneous use of (8) amplifier cards (16 channels) plus the hot spare card. Provide appropriate card models as required.
 6. Automatic Backup Amplifier Switching: The 9th power amplifier slot shall be reserved for automatic backup amplifier switching. A matching amplifier card shall be installed as a hot spare amplifier in the event of failure of one of the primary amplifiers. The system shall detect a failure of an amplifier card and shall electronically replace that amplifier without loss of service. Switching shall result in no loss or change of source or destination routing. Detection and switching shall take place in less than 2 seconds. A failure shall be reported immediately to the fault logging system.
 7. Internal Monitoring: Each IDPAS shall include an internal audio monitoring buss with software selected switching. This monitor shall allow selection of a monitor point from the control software to allow visual and audio monitoring of the channel network input, channel direct input, ambient channel output, EQ output, amplifier input, amplifier output, and speaker load monitor for each of the (16) channels. This feature shall operate simultaneously and independent of the automatic testing.
 8. Automatic Testing: The automatic testing system shall locally test and process audio test signals through the IDPAS. These tests may be done manually on demand for any single test point as well as globally in the mainframe on a completely automated basis during the day. The test points duplicate those of the monitoring points above with a testing resolution of 0.5 dB.
 9. Local Inputs: The IDPAS shall include (16) analog inputs for local zone program sources or BGM. One channel shall be configurable as a backup emergency

input usable in the event of a network failure.

a. Acceptable Products:

- 1) Integrated Amplifier Mainframe: IED T9160L, or approved equal.
- 2) Dual 200 Watt 70-Volt Amplifier Card: IED T6472L, or approved equal.
- 3) 400 Watt 70-Volt Amplifier Card: IED T6471L, or approved equal.
- 4) **<Insert manufacturer>**
- 5) or approved equal.

2.12 END OF BRANCH SUPERVISION

A. The end of branch supervision module shall enhance the speaker line supervision functions of the system. The module shall be capable of monitoring multiple end of branch locations on a single circuit. Module shall include:

1. Supervision of 70 and 100 volt speaker lines without the need for a return wire.
2. Unique ID number for identification in the system monitoring software.
3. Proof that cable is intact to the end of the circuit.

B. Manufacturer:

1. IED T597EOB, IED T596EOL (for end of Line).
2. **<Insert manufacturer>**
3. Or approved equal.

2.13 UNINTERRUPTABLE POWER SUPPLY (UPS)

A. Provide UPS in accordance with Section 263353 "Static Uninterruptible Power Supply".

B. A UPS shall be supplied for critical components of the PA system including the ACS to insure uninterrupted service and control of the system.

C. UPS shall be rack mounted device with four (4) hours of operation of full load and monitor LAN connection for supervision of unit.

1. Manufacturer:

Verify requirements specified in Section noted in paragraph below.

- a. See Section 263353 "Static Uninterruptible Power Supply" for latest standard.

2.14 VISUAL DISPLAY DEVICES

A. General: Provide server, Visual system software, updates to Enterprise Software,

initial content, hardware and all components as required for a fully operating visual information system based on requirements in specification and on contract drawings.

- B. System Server: Server shall provide information to visual displays through the network. Server shall include all software and interfaces as required to access AIDX database and operate Visual Systems. Server shall include:
1. Window 2008 Server software 32 bit.
 2. Intel Quad Core processor 2.93Mhz.
 3. Minimum 4GB- expandable to16GB memory.
 4. Raid 5 with 1TB 7.2K RPM Sata drives.
 5. Acceptable Products:
 - a. Dell R710 or latest.
 - b. **<Insert manufacturer>**
 - c. or approved equal.
- C. Visual Display Device (VDD) Type 1: The VDD shall be a 40- inch LCD flat screen display and meet the following minimum specifications:
1. Size: 40- inch Diagonal.
 2. Resolution: WXGA.
 3. Pixels: 1,366 x 768.
 4. Pixel Pitch: 0.648 mm.
 5. Number of colors: 16.7 Million.
 6. Contrast Ratio: 2,000:1.
 7. Brightness (cd/m2): 700.
 8. Response Time (ms at 25 degrees C): 8.
 9. Viewing Angle: 89 degrees.
 10. Acceptable Products:
 - a. Samsung M40C 40-inch LCD Display.
 - b. **<Insert manufacturer>**
 - c. or approved equal.
- D. Visual Display Device Mount: Provide a display mount for each VDD. The mount shall provide a secure and solid installation to minimize the chance of tampering. The mount shall allow positioning and tilting to optimize the viewing angle at each installation location. The mount shall provide for easy removal of the display by authorized personnel and provide for integral installation of the DDC if applicable.
- E. Acceptable Products:
1. Chief Manufacturing MCS Series Ceiling Mount, or approved equal.
 2. Chief Manufacturing MTR Series Ceiling Mount, or approved equal.
 3. Chief Manufacturing MAC-251 Flat Panel CPU Mount, or approved equal.
- F. Visual Display Device Controller (DDC): The DDC shall be a PC based controller equipped to control one or two (as designated on the drawings).

- G. Visual Display Devices. Provide the most recent configuration as recommended by the system manufacturer meeting the following minimum specifications:
1. Intel Pentium D Processor 925 (3.00GHz, 2X2M, 800MHz FSB).
 2. File System: NTFS File System for all Operating Systems.
 3. Memory: 2.0GB DDR2 Non-ECC SDRAM, 667MHz, (2DIMM).
 4. Video Card: 256MB ATI Radeon X1300PRO, Dual Monitor, DVI to dual VGA.
 5. Boot Hard Drives: 80GB SATA 3.0Gb/s and 8MB DataBurst Cache.
 6. Operating System: Genuine Windows(tm) XP Professional, SP2, x32.
 7. Removable Media Storage Devices: 24X Slimline CDRW/DVD Combo.
 8. Acceptable Products:
 - a. Dell OptiPlex Small Form Factor PC.
 - b. <Insert manufacturer>
 - c. or approved equal.

2.15 LOUDSPEAKERS

- A. General: Loudspeaker design shall be provided to meet the requirements of the 2010 Edition of NFPA72 - 18.4.10. Match Existing speakers in areas if Project includes additions or remodels.
- B. Type S1, Full-Range Paging Loudspeaker, Flush Mount with grille:
1. Loudspeaker Type S1 shall be a 6.5- inch diameter coaxial device UL 2043 with a minimum input sensitivity of 88 dB measured at 1 meter with 1 watt input from 500 Hz to 2.5 kHz, frequency response shall be ± 7 dB, 63 Hz to 20 kHz and the coverage angle shall be a nominal 90 degrees conical from 500 Hz to 2.5 kHz. The loudspeakers shall be rated for 32 W minimum and shall include a 70 V line matching transformer, with 0.5 dB maximum insertion loss over the frequency range of 100 Hz to 15 kHz and selectable level taps at 2, 4, 8, 16 and 32 watts, which shall be wired in parallel with the voice coil. Type S1 loudspeakers shall be suitable for mounting in suspended tile or drywall and shall be an integrated flush mounted loudspeaker enclosure, 8.5- inches minimum depth x 12.5- inches wide.
 2. These loudspeakers shall be utilized in public areas with suspended tile or drywall ceiling height of 15 ft. or less.
 3. Manufacturer:
 - a. Atlas FAP62T with integrated back can, grill and suspension system.
 - b. <Insert manufacturer>
 - c. or approved equal.
- C. Type S2, Full-range Paging Loudspeaker, Flush Mount behind perforated metal ceiling:
1. Loudspeaker Type S2 shall be a 4- inch diameter coaxial device with a minimum input sensitivity of 88 dB measured at 1 meter with 1 watt input from 500 Hz to 2.5 kHz, frequency response shall be ± 7 dB, 75 Hz to 20 kHz and the coverage angle shall be a nominal 90 degrees conical from 500 Hz to 2.5 kHz. The

loudspeakers shall be rated for 16 W minimum and shall include a 70 V line matching transformer, with 0.5 dB maximum insertion loss over the frequency range of 100 Hz to 15 kHz and selectable level taps at 1, 2, 4, 8 and 16 watts, which shall be wired in parallel with the voice coil. A mounting ring shall be provided to secure the loudspeaker to the enclosure. Standard grilles will not be used behind perforated metal. All other specified requirements apply as stated.

2. These loudspeakers shall be utilized in public areas with perforated metal ceiling at a height of 15 ft. or less.
3. Manufacturer:
 - a. Atlas FAp42T and support.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

D. Type S3, Two-way Curbside Paging Horn:

1. Loudspeaker Type S3 shall be a two-way device with a compression driver and folded high frequency horn, coupled through a crossover network to a horn-loaded woofer. The frequency response shall be ± 5 dB, 190 Hz to 18 kHz with low frequency cut-off at 200 Hz. The input sensitivity shall be 111 dB at 1 meter with 1 watt pink noise input from 400 Hz to 5 kHz. The loudspeaker shall be rated for 30 W with 250 Hz to 5 kHz pink noise signal with a 6 dB crest factor for a period of eight hours. The low-frequency horn shall be constructed of reinforced fiberglass and the high frequency horn of die-cast aluminum finished in white. The horn shall produce a 63 degree horizontal by 85 degree vertical coverage pattern at 2 kHz. The loudspeaker shall be provided with a 70 Volt line matching transformer with 3.75, 7.5, 15 and 30 watt taps and bracket to allow aiming. The loudspeaker shall be suitable for mounting to a 4- inch octagonal electrical box.
2. These loudspeakers shall be utilized on Terminal levels 4, 5 and 6 curbsides.
3. Manufacturer:
 - a. Penton MSH30T.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

E. Type S4, 12- inch Coaxial Loudspeaker:

1. Loudspeaker Type S4 shall be a high quality two-way loudspeaker system, consisting of a constant directivity horn, coaxially mounted in front of a cone transducer. The overall frequency response shall be ± 3 dB, 100 Hz to 15 kHz and the loudspeaker shall be rated for 150 W continuous pink noise. The low frequency transducer shall be 12- inches in diameter with an input sensitivity of 99 dB at 1 meter with 1 watt averaged from 500 Hz to 2.5 kHz. The high frequency driver/horn shall have a symmetrical coverage pattern of 90 degrees between 1 kHz and 10 kHz and a sensitivity of 110 dB at 1 meter with 1 watt input averaged from 2 kHz to 10 kHz. Type S4 assemblies shall be provided with a passive crossover with a crossover frequency of 1.5 kHz. A 70 Volt line matching transformer, with 0.5 dB maximum insertion loss over the frequency range of 100 Hz to 15 kHz and 7.5, 15, 30 and 60 watt taps, shall be wired in

parallel with the voice coil. The assembly shall be suitable for mounting in a (3) cubic foot square enclosure provided under another contract. A square 22 gauge steel grille shall be provided which can be mounted to enclosures in the Terminal airline ticketing areas or in the Concourse ceilings.

2. These loudspeakers shall be flush mounted above the airline ticket counters in the Terminal and flush mounted in the Mezzanine level ceiling structure down the center of the Concourses at a height of approximately 32 ft.
3. Manufacturer:
 - a. Atlas 12CX with Q4812 Back box and mounting hardware.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

F. Type S5, Ceiling Loudspeaker

1. Loudspeaker Type 5 shall be a two-way coaxial loudspeaker with a constant directivity horn mounted in a backcan with supports and grill assembly. Unit shall be flush mounted in ceiling and supported with a safety cable to structure above besides normal means and methods. Speaker shall be 92dB 1W/1M with a frequency response of 60Hz 0- 15kHz +/- 5 dB. Speaker shall have a an internal 70/100 volt transformer with taps of 7.5, 15, 30 and 60 watts including an 8 ohm setting.
2. These speakers shall be installed in new high ceiling areas in lieu of the 12- inch speakers in the center of the concourses.
3. Manufacturer:
 - a. Atlas FAP8CXT with mounting hardware.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

G. Type S6, Paging Horn:

1. Loudspeaker Type S6 shall be a high power paging horn consisting of a compression driver and an aluminum re-entrant horn flare with a symmetrical dispersion angle of 100 degrees. The frequency response shall be ± 10 dB, 300 Hz to 6,500 Hz at the minimum, with a sensitivity of 107 dB at 1 meter with 1 watt 1 kHz input. Type S6 units shall have a power rating of 30 W and shall be supplied with a transformer with 4, , 7.7, 15 and 30 watt taps. An adjustable mounting bracket shall be provided which is suitable for mounting to a 4- inch octagonal electrical box and allows aiming of the device.
2. These loudspeakers shall be used in the Terminal Parking Garage, the AGTS Tunnel, Central Plant, mechanical rooms and other high noise environments.
3. Manufacturer:
 - a. Atlas AP30T with APXB-N Base.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

H. Type S7, Paging Horn with Dual Horn Flares:

1. Loudspeaker Type S7 shall be a high power paging horn consisting of a single compression driver, coupler and two aluminum re-entrant horn flares with a symmetrical dispersion angle of 100 degrees. The frequency response shall be ± 10 dB, 250 Hz to 12,500 Hz with a sensitivity of 101 dB at 1 meter with 1 watt input swept from 500 Hz to 2.5 kHz. The loudspeakers shall have a minimum power rating of 30 W and shall be provided with a 70 Volt line matching transformer wired in parallel with the voice coil with 4, 7.5, 15 and 30 watt taps. An adjustable mounting bracket shall be provided that is suitable for mounting to a 4-inch octagonal electrical box and allows aiming of the device.
 2. These loudspeakers shall be used in the AGTS Tunnel and in the Central Plant.
 3. Manufacturer:
 - a. Atlas APT-34AT with APXB-N Base.
 - b. **<Insert manufacturer>**
 - c. or approved equal.
- I. Type S8, 4-inch Paging Loudspeaker, Flush Mount:
1. Loudspeaker Type S8 shall be a 4- inch general paging loudspeaker with a frequency response of ± 1.5 dB, 100 Hz to 10 kHz, an input sensitivity of 94 dB at 1 meter with 1 watt input swept from 500 Hz to 2.5 kHz. The loudspeaker shall be rated for 15 W minimum and shall be supplied with a 70 Volt line matching transformer with 0.5, 1, 2 and 4 watt taps. The insertion loss of the 70 Volt transformer shall be 1 dB maximum over the frequency range of 100 Hz to 12 kHz. The loudspeakers shall be suitable for recess mounting in a standard 4-inch recessed mounted loudspeaker round enclosures provided under another contract. A white, 22 gauge steel loudspeaker grille shall be provided.
 2. These loudspeakers shall be flush mounted in suspended tile and drywall ceilings in non-public areas of the Airport buildings.
 3. Manufacturer:
 - a. Atlas FC104T72 with Backcan, support mounting hardware and baffle.
 - b. **<Insert manufacturer>**
 - c. or approved equal.
- J. Type S9, 4-inch Paging Loudspeaker, Surface Mount:
1. Loudspeaker Type S8 shall be a 4-inch general paging loudspeaker with a frequency response of ± 1.5 dB, 100 Hz to 10 kHz, an input sensitivity of 94 dB at 1 meter with 1 watt input swept from 500 Hz to 2.5 kHz. The loudspeaker shall be rated for 15 W minimum and shall be supplied with a 70 Volt line matching transformer with 0.5, 1, 2 and 4 watt taps. The insertion loss of the 70 Volt transformer shall be 1 dB maximum over the frequency range of 100 Hz to 12 kHz. The loudspeakers shall be suitable for recess mounting in a standard 4-inch recessed mounted loudspeaker round enclosures provided under another contract. A white, 22 gauge steel loudspeaker grille shall be provided.
 2. These loudspeakers shall be surface mounted in non-public areas of the Airport buildings that do not have ceilings.
 3. Manufacturer:

- a. Atlas FC104T72 with Aluminum Housing 410-4 and support mounting hardware.
- b. **<Insert manufacturer>**
- c. or approved equal.

K. Type S10, Full-range Paging Loudspeaker, Surface Mount:

1. Loudspeaker Type S10 shall be a full-range device with a frequency response of ± 3 dB, 80 Hz to 20 kHz and input sensitivity of 90 db at 1 meter with 1 watt input at 500 Hz to 2500 Hz. The coverage shall be nominal 100 degrees horizontal from 500 Hz to 2.5 kHz. The power rating shall be 100 W minimum, and a 70 volt line matching transformer with 7.5, 15 and 30 watt taps and a maximum insertion loss of 0.5 dB from 100 Hz to 15 kHz shall be provided. The loudspeaker shall be surface mounted and enclosed in a UL 94V-0 rated injection molded or metal enclosure with integral metal grille and mounting bracket to allow aiming. A cover plate for a 4- inch square electrical box shall be provided with grommets wire access hole.
2. These loudspeakers shall be utilized in the public areas of the Concourses, and shall be surface mounted on the sides of crossover bridges and walkways where the ceiling heights exceed 20 ft.
3. Manufacturer:
 - a. Atlas SM52TB.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

L. Type S11, Full-range Paging Loudspeaker, Pendant Hung:

1. Loudspeaker Type S11 shall be a white 8- inch diameter coaxial device with a minimum input sensitivity of 90 dB minimum measured at 1 meter with 1 watt input from 500 Hz to 2.5 kHz, frequency response shall be ± 5 dB, 60 Hz to 20 kHz and the coverage angle shall be a nominal 100 degrees conical from 500 Hz to 2.5 kHz. The loudspeakers shall be rated for 60 W minimum, and a 70 Volt line matching transformer with 0.5 dB maximum insertion loss over the frequency range of 100 Hz to 15 kHz and selectable level taps at 1.9, 3.8, 7.5, 15, 30 and 60 watts shall be wired in parallel with the voice coil. Type S11 loudspeakers shall be suitable for mounting in a 8- inch suspended round pendant enclosure. Suspension hangers shall be provided to lower loudspeaker within 15 ft. of the floor.
2. These loudspeakers shall be mounted to down pipe suspended from structure above with safety cable concealed in the down pipe in the ceiling of public areas of the Concourses where ceiling heights exceed 15 ft.
3. Manufacturer:
 - a. Atlas PM8FA-W.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

Edit the following paragraph to suit Project.

- M. Type <Insert> Loudspeaker <as required for the design>.

2.16 OTHER DEVICES

A. Equipment Racks:

1. Vertical floor equipment racks shall be located in P.A. Rooms and shall be constructed of heavy gauge steel frame with removable sides and rear door. Racks shall be equipped with 11 gage CRS adjustable mounting rails plated, drilled and tapped 10-32 thread on E.I.A. standard hole spacing, and shall accept standard 19" rack-mountable equipment. Cabinet depth shall be 25-1/2" and provide 77-1/8" rack space mounting. Racks shall allow opening on sides and bottom to facilitate wiring of components, shall have a rear door equipped with a cylinder lock and shall have louvered top and side panels. Base shall be tapped to accept leg levelers, and the frame shall be finished in textured black. The top and side panels, rear door, and all trim shall be finished as directed by the DEN Project Manager.
2. Except as otherwise specified or shown, ECS equipment shall be installed in equipment racks. Include racks for facilities for which racks are not shown on the drawings, and provide an adequate number of sections, at all locations, for installation of the equipment which the Contractor will provide.

B. Sound System Terminal Cabinets:

1. Wall mounted terminal cabinets shall be provided in each P.A. Room and ECS Control Room to allow breakout of wiring from conduit to the equipment racks. The terminal cabinets shall be 36"H by 24"W by 9"D and constructed of 14 gauge CRS throughout. Rear section shall be of one-piece construction with all welded seams. Cabinet finish shall be as selected by DEN Project Manager from standards available. Cabinet shall include AMP Flexiblocks with track and end stops for cable termination and connection points.
2. Manufacturer:
 - a. Hoffman T series cabinet.
 - b. <Insert manufacturer>
 - c. or approved equal.

C. Wiring and Conductors:

1. Microphone and Line Level Cable:
 - a. Microphone, line level, and ambient sensor cable, when installed in conduit, shall be NEC Type CM cable consisting of ASTM stranded tinned copper, 22 AWG, 100% aluminum polyester foil shielded twisted pair with tinned copper drain wire and 75 degree Centigrade rated polypropylene insulation. The cable shall have a nominal O.D. of 0.135" with a green outer jacket, nominal capacitance of 34 pF/ft. between conductors and nominal capacitance of 67 pF/ft. between one conductor and other conductors connected to shield.

- b. Where cable is installed in cable trays, it shall be NEC Type PLTC stranded tinned copper, 22 AWG, 100% aluminum polyester foil shielded twisted pair with tinned copper drain wire. The insulation shall be PVC with nylon and rated for 105 degrees Centigrade. The cable shall have a nominal O.D. of 0.201" with a green outer jacket, a nominal capacitance of 50 pF/ft. conductor to conductor and a nominal capacitance of 90 pF/ft. between one conductor and the others connected to the shield.
 - c. Manufacturer of all cable:
 - 1) Belden.
 - 2) Liberty.
 - 3) **<Insert manufacturer>**
 - 4) or approved equal.
 2. Trunk loudspeaker cable, when installed in conduit, shall be 12 AWG stranded Green/White twisted pair.
 - a. Branch loudspeaker cable shall be 12 AWG stranded green/white twisted pair to the first loudspeaker in the home run. No overall jacket is required.
 - b. Cable thereafter shall be sized to provide no more than 0.5 dB loss but shall be no smaller than 14 AWG. Color code and jacket requirements shall be the same as used on trunk cable.
 - c. Where installed in cable tray, loudspeaker cable shall be plenum rated.
 - d. Manufacturer:
 - 1) 12 AWG Cable – Tappan PLN1202TC GN.
 - 2) 14 AWG Cable – Tappan PLN1402TC.
 - 3) **<Insert manufacturer>**
 - 4) or approved equal.
 3. Control cable shall be installed in conduit and shall be low capacitance 22 AWG stranded four twisted pair with 100% aluminum polyester overall shield and drain wire. The nominal O.D. shall be 0.325" with a green outer jacket, nominal conductor D.C.R. shall be 24 ohm/1000 ft., the nominal capacitance shall be 15.5 pF/ft. between conductors and the nominal capacitance shall be 27.5 pF/ft. between one conductor and other conductors connected to shield.
 4. The installation may involve localized conditions in which metallic-conductor cable systems will transition from conduit to tray installation, and vice versa, for limited lengths of run. If a cable is transitioning from a room via tray into conduit for the remaining distance of the run, the wiring should be the type rated for use in conduit. If the majority of the cable run is in conduit, use cable rated for such use. If the majority of the cable run is in cable tray, use cable rated for use in tray.
 5. Speaker Test Panels: Provide speaker circuit test panels matching existing. Panel shall house IED speaker load modules, disconnect switch and banana jack test points. Match existing panels including engraving. Provide one panel for every 8 amplifier channels.

2.17 RACEWAYS

Retain one of first three paragraphs below. Coordinate selection with "Wiring Methods" Article and with Section 260533 "Raceways and Boxes for Electrical Systems." Retain first paragraph to allow Contractor to choose any material specified in Section 260533 "Raceways and Boxes for Electrical Systems."

- A. Intercommunication and Program System Raceways and Boxes: Comply with requirements in Section 260533 "Raceway and Boxes for Electrical Systems."
- B. All cabling shall be housed in conduit raceway
- C. Provide a complete raceway system for the ECS. Emergency signal infrastructure from Master Microphone stations or network connections for amplifier frames shall not be allowed in cable trays. They must be provided in conduit. Raceways shall be installed utilizing the most efficient route.
- D. Outlet boxes shall be not less than 2- inches (50 mm) wide, 3- inches (75 mm) high, and 2-1/2- inches (64 mm) deep.

Retain paragraph below to prohibit use of flexible metal conduit.

- E. Flexible metal conduit is allowed where other conduit will not suffice.

PART 3 - EXECUTION

3.1 GENERAL

- A. All work shall be provided complete, and the ECS shall be fully operational as shown and described herein.
- B. Modifications and additions to the existing ECS:
 - 1. Work Meeting: The Contractor shall coordinate and arrange a pre-work meeting with the DEN Project Manager and DEN Technical Maintenance one week in advance of the beginning of any work. The Contractor shall assure attendance of trades installing the ECS including any electrical, telecommunications, and audio-related trades involved. The Contractor shall present the contractor's construction, demolition, phasing, implementation, and testing plans and schedule. Meeting notes shall be accurately recorded by the DEN Project Manager and distributed within three (3) working days.
 - 2. All Work shall be provided complete, and the voice paging systems shall be fully operational as shown and described herein. DEN Technical Maintenance will make all final connections to existing circuits.
 - 3. Modifications and additions to the existing ECS: Contractors must give DEN AIM five (5) working days notice before making any connections, deletions, or modifications to the existing sound system. DEN System Shutdown Request form must be used for this purpose.

C. Electrical Related Work:

1. Furnish and install all electrical conduit, wiring and outlets for electrical power to paging and announcement control equipment.
2. Furnish and install raceway, conduit, junction boxes and for audio signal and control wiring.
3. Furnish and install loudspeaker junction boxes and enclosures.
4. Furnish and install ground conductor from building earth ground to each group of equipment racks in accordance with requirements of Section 260526 "Grounding and Bonding for Electrical Systems". The insulated ground conductor shall be installed in conduit and sized for a DC resistance of 0.1 ohm or less to ground. For example, a 15 ft. run would be 8 AWG or larger.

D. Power or ECS System Outages:

1. Power or ECS System Outages: Any power or ECS System outages necessary to install or test systems and/or equipment shall be coordinated with Denver International Airport Project Manager. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown.

3.2 DELIVERY, STORAGE AND HANDLING

- A. Deliver products to site and store and protect under provisions of Division 01.
- B. Store products in secure locations as approved and directed by DEN Project Manager.

3.3 FABRICATION

- A. Designation/Engraving: All equipment controls, receptacles and all indicators shall have, unless otherwise noted, permanently engraved or silk screened, fully descriptive identification labels. The resolution of silk screened labels shall not be less than 90,000 dots/sq. in.
- B. Terminals and Terminations:
 1. Cables shall not be spliced or otherwise interrupted from termination to termination. All cables shall have visible heat-shrink identifying markers on each end in compliance with DEN labeling standards.
 2. Wiring in terminal cabinets shall be tied and clamped neatly to backboards or cable forms.
 3. Terminal blocks shall be fully insulated, rated for the wire size to be terminated, suitable for mounting inside an electrical enclosure and, unless otherwise specified, be one of the following types:
 - a. Terminal strips with interposing barriers between screw terminals.
 - b. Terminal strips with gas-tight screw type clamp connectors.
 4. Each terminal strip shall have a legibly marked permanent identification strip.

C. Structural Assemblies:

1. Loudspeaker mounting frames and brackets shall be fabricated and assembled in shop to the greatest extent possible. Fabricate items of structural steel in accordance with AISC Specifications and as indicated on final shop drawings.
2. Provide high-strength threaded fasteners for bolted connections and comply with AWS code for procedures, appearance and quality of welds and for methods used in correcting welding work.
3. Provide holes required for securing other components or assemblies to structural steel framing and for passage of other components through steel framing members as shown on final shop drawings. Cut, drill or punch holes perpendicular to metal surfaces. Do not flame cut holes or enlarge holes by burning.
4. In fabricating mounting brackets and other steel components requiring bends, the radii of the bends shall not be less than three times the thickness of the steel being bent.

3.4 REDUNDANCY

- A. The PA System shall be a fully redundant system with the minimum basic requirements of the following:
1. Redundant Globalcom equipment shall be implemented into the system for full redundancy. Locate redundant Lifeline Globalcom as shown on contract documents.
 2. Utilize redundant Cobranet connections on amplifier frames.
- B. System shall be connected via a physically separated fiber optic premise wiring system designed for the Fire Alarm System. Redundancy shall include redundant core and intermediate switches with redundant connections to the edge switch as shown on contract drawings.
- C. IP Microphone stations shall connect to each regional Announcement Control System (ACS) over Owner provided network. The remainder of the ECS equipment Ethernet connectivity shall be provided by a stand-alone Ethernet network consisting of access layer switches, pairs of regional distribution switches and core switches. Connectivity of access layer to distribution switches shall be done using diversely routed fire alarm system single mode fiber provided by Owner. Inter-Building connectivity shall use DEN Premise Wiring and Distribution System Fiber Strands.
- D. Cabling required for network infrastructure shall be provided by the Owners Premise Wiring Contractor Services (PWCS). PWCS shall be provided with the drawings and shall then provide pricing to be included in the Project for the network cabling and connectivity.

3.5 INTERFACES

- A. Several interfaces to other system shall be required for both physical hardware and

software. These systems include, but are not limited to Fire Alarm System, AIDX Database, Tenant PA systems and DEN Networks. Specific requirements for each shall be as follows:

1. Fire Alarm System Interfaces shall be connected to ACS and Globalcom locations throughout the airport. Provide interfaces through dry contacts to allow required functionality to occur including tenant areas. System sequence of operation shall be defined by Section 283100 "Intelligent Life Safety Fire Management System" and Section 283112 and the fire alarm documentation. Critical faults from the ECS shall be faulted to the fire alarm system through the interface.
2. Airport Information Data Exchange (AIDX) Database shall provide information for the Flight Announcement System. System shall be interfaced at IED Server locations.
3. DEN Networks: DEN networks work and interfaces shall be coordinated at the Pre-construction meeting. DEN network representatives shall be available during any scheduled work with regard to interfaces or LAN, VLAN modifications of the PA system.

3.6 WIRING METHODS

Retain one of first two paragraphs below and coordinate with Drawings. Delete both if wiring methods for system are indicated on Drawings. Coordinate selection with "Raceways" Article.

- A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters, and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal raceway and cables except in unfinished spaces.

Retain first subparagraph below if retaining option in paragraph above.

1. Install plenum cable in environmental air spaces, including plenum ceilings.
 2. Comply with requirements for raceways and boxes specified in Division 26 Section "Raceway and Boxes for Electrical Systems."
- B. Wiring within Enclosures: Bundle, lace, and train cables to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

3.7 INSTALLATION OF RACEWAYS

- A. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for installation of conduits and wireways.
- B. Install manufactured conduit sweeps and long-radius elbows whenever possible.

3.8 INSTALLATION OF CABLES

A. Comply with NECA 1.

B. General Requirements:

1. Terminate conductors; no cable shall contain unterminated elements. Make terminations only at outlets and terminals.
2. Splices, Taps, and Terminations: Arrange on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Cables may not be spliced.
3. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
4. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
5. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
6. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used.

C. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunication spaces with terminating hardware and interconnection equipment.
2. Suspend speaker cable not in a wireway or pathway a minimum of 8 inches (200 mm) above ceiling by cable supports not more than [60 inches (1524 mm)] **<Insert dimension>** apart.
3. Cable shall not be run through structural members or be in contact with pipes, ducts, or other potentially damaging items.

D. Separation of Wires: Separate speaker-microphone, line-level, speaker-level, and power wiring runs. Install in separate raceways or, where exposed or in same enclosure, separate conductors at least 12 inches (300 mm) apart for speaker microphones and adjacent parallel power and telephone wiring. Separate other intercommunication equipment conductors as recommended by equipment manufacturer.

3.9 INSTALLATION

A. Identification of Conductors and Cables: Color-code conductors and apply wire and cable marking tape to designate wires and cables so they identify media in coordination with system wiring diagrams. Clearly, logically and permanently mark switches, connectors, jacks, relays, and receptacles.

B. Weatherproof Equipment: For units that are mounted outdoors, in damp locations, or where exposed to weather, install consistent with requirements of weatherproof rating.

- C. Speaker-Line Matching Transformer Connections: Make initial connections using tap settings indicated on Drawings.
- D. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- E. Mount equipment firmly in place, including loudspeakers, amplifiers and cables in accordance with manufacturer's instructions. Make fastenings and supports adequate to support their loads with a safety factor of three. Appliances shall be mounted independently of their attachments to the circuit conductors.
- F. Appliances subject to mechanical damage shall be suitably protected. If guards, covers, or lenses are employed, they shall be listed for use with the appliance.
- G. Secure equipment firmly in place, including loudspeakers, amplifiers and cables. Make fastenings and supports adequate to support their loads with a safety factor of three
- H. Clearly, logically and permanently mark switches, connectors, jacks, relays, receptacles, cables and cable terminations.
- I. The Contractor shall take precautions to prevent electromagnetic and electrostatic hum. Install the equipment to provide safe operation. Provide ventilation as required to maintain equipment within the manufacturer's specified temperature limits.
- J. Provide all cables necessary for interconnection of permanently mounted equipment. Use terminations required to achieve full function of equipment as specified herein.
- K. Exercise care in wiring, to avoid damage to the cables and to the equipment. Make all joints and connections with rosin-core solder or with mechanical connectors approved for Class I wiring. Execute all wiring in strict adherence to standard broadcast procedures.
- L. Run lines in separate metallic conduits or install cable tray dividers for microphone level circuits (up to -20 dBm), line level circuits (up to +30 dBm), loudspeaker circuits (above +30 dBm) and power circuits. Ground power conduits with heavy wire to the power system ground. Use only cables which are insulated from the conduit and from each other for the entire conduit length. Connect conduits mechanically and electrically to the sound system ground point. Do not splice lines in conduit.
- M. The Installer shall coordinate all sound equipment panel and control locations with the DEN Project Manager prior to installation.
- N. Speaker circuits shall be run in continuous line to provide circuit supervision utilizing End of Line Module.
- O. Speaker circuits, speakers, and control equipment shall be installed to meet the pathway survivability requirements of NFPA 72, Chapter 24. Specifically, Level 1 Pathway Survivability shall be provided.

3.10 GROUNDING

- A. Ground cable shields and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.
- B. Signal Ground Terminal: Locate at main equipment cabinet. Isolate from power system and equipment grounding.

Retain paragraph below for special applications only.

- C. Install grounding electrodes as specified in Section 260526 "Grounding and Bonding for Electrical Systems."

3.11 SYSTEM PROGRAMMING

Retain this article for microprocessor-switched systems.

- A. Programming: Fully brief Owner on available programming options. Record Owner's decisions and set up initial system program. Provide all programming required for a fully functioning system and associated interfaces. Prepare a written record of decisions, implementation methodology, and final results.

3.12 FIELD QUALITY CONTROL

Retain first paragraph below to describe tests and inspections to be performed.

- A. Electrical/Electronic Tests and Inspections: At the job site, the Contractor shall perform tests not conducted and certified by the manufacturer and, be prepared to repeat any or all tests as may be directed by the DEN Project Manager during the period of final inspection and checkout. Furthermore, the Contractor shall be prepared to perform work required to modify the performance of the system in accordance with this specification. Test all electrical circuits before plugging ECS equipment into the circuit.
 - 1. Schedule tests with DEN Project Manager with at least seven (7) days' advance notice of test performance. Do not proceed with testing without written approval from DEN Project Manager.
 - 2. General Inspection and Adjustment: Make all measurements, and subsequently deliver documentation, to demonstrate that all individual components, not previously measured and certified by the manufacturer, are performing in accordance with each manufacturer's published specifications. Specifically, examine frequency response, total harmonic distortion and signal-to-noise ratio. Replace any components found to be defective.
 - 3. Operational Test: Test microphone stations at each area that the microphone station is installed. Verify proper routing and volume levels and that system is free of noise and distortion. Test each available message path from each station on system.
 - 4. Redundancy Test: Test redundancy and back up amplifier switching for all redundant components including a power loss scenario. Determine that system components are configured for automatic boot up recovery as part of redundancy

- and that the appropriate files are correctly backed up for system configurations.
5. Distortion Test: If distorted signal is present, measure distortion at normal gain settings and rated power. Feed signals at frequencies of 150, 200, 400, 1000, and 2500 Hz into selected amplifiers. For each frequency, measure distortion in the system outputs. Maximum acceptable distortion at any frequency is 5 percent total harmonics. Replace defective equipment
 6. Acoustic Coverage Test: Feed pink noise into system. Use sound-level RTA meter with octave-band filters to measure level at three locations in each paging zone. Equalize and delay loudspeakers with Pink Noise and sufficient analyzer to maximize audio quality and intelligibility in every instance. Consultant shall spot check these loudspeaker systems with the Contractor in the field during test out. Maximum permissible variation in level is plus or minus 3 dB; in levels between adjacent zones, plus or minus 5 dB. Set equalization for maximum flat response of loudspeaker system. Use filters to cut, if possible, rather than boost frequencies. If 6dB of boost or cut is required, verify position of test microphone, speaker polarity issues or reflections that may be skewing the test. Slight repositioning of the test Microphone may be required

Retain first subparagraph below if paging is specified.

7. Power Output Test: If loudspeaker performance is not producing the required and calculated level in a zone, measure electrical power output of each paging amplifier at normal gain settings of 150, 1000, and 2500 Hz. Maximum variation in power output at these frequencies is plus or minus 3 dB. Replace defective equipment or verify speakers are tapped and performing correctly.
8. Signal Ground Test: Measure and report ground resistance at system signal ground. Comply with testing requirements in Section 260526 "Grounding and Bonding for Electrical Systems."
9. Loudspeaker Line Impedance: Measure the impedance and the resistance of each loudspeaker line leaving the sound equipment racks with the line disconnected from its normal driving source. Maintain values within $\pm 10\%$ of the value calculated for that circuit based upon the parallel impedances of the loudspeakers connected plus the resistance of the loudspeakers. Measure loudspeaker impedance at multiple frequencies according to the speaker type. Measure for ground faults on each leg of the speaker system. Correct any faults found for both impedance and ground faults. .
10. Hum and Noise Level: If hum or noise is present, measure the hum and noise levels of the overall system. Adjust gain controls for optimum signal-to-noise ratio. The adjustment shall also be such that full amplifier output would be achieved with 0 dBm input. Terminate inputs with shielded resistors of 600 ohms, and disconnect the loudspeaker lines, terminating the power amplifier outputs with power resistors for these measurements. The load resistors shall match the rated load impedance and output power of the amplifiers.
11. Power Output and Signal Level Adjustments: Adjust gain controls as for the hum and noise level test. Set variable equalizers for flat response. Apply 1,000 Hz sinewave signal at the input tested, at a level required to produce a full amplifier output. Use a distortion analyzer to measure the output level and total harmonic distortion of the amplification equipment. Make all measurements with loads actually incurred in system operation. Power amplifier loads shall be resistors equal to the nominal impedance of the output terminals used in the system.
12. Gain Control Settings: Establish tentative normal settings for all gain controls. All

- gain controls on rack-mounted equipment shall be adjusted for optimum signal-to-noise ratio and signal balance. Settings may require further adjustment by the Contractor as a result of testing by the DEN Project Manager. Programmed settings shall be recorded in hardcopy format.
13. Provide System Set with no faults. System shall run fault free from the Contractors work for a minimum of 30 days with no issues for final closeout of work.
 14. Freedom from Switching Transient Noise: Operate all control switches and relays, while listening for clicks and pops in the system outputs. Eliminate any found.
 15. Listening Tests: These tests shall include speech intelligibility surveys and subjective aural evaluations by observers at various positions under various operating conditions, using live speech and/or recorded music material.
 16. Equipment Tests: Any measurements of frequency response, distortion, noise or other characteristics and any operational tests deemed necessary may be performed on any item or group of items to determine conformity with these requirements. Measurements of system performance shall be made using a calibrated ANSI S1.4, Type 1 sound level meter set for "slow" meter damping and flat response. The microphone shall be positioned 5 feet above the floor within the area served by the system. All interior finishes and furnishings shall be in place, and the system gain shall be set to provide octave band levels at least 10 dB above background noise levels in any octave band at the measuring locations.
 17. Identification: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified. Prepare a list of final tap settings of paging speaker-line matching transformers.

See Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.

- B. The ECS shall be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.
- D. Report: Upon completion of the above tests and any necessary adjustments, submit two (2) copies of a written report presenting test results, including numerical values where necessary, for review by the DEN Project Manager prior to acceptance testing, final tuning and demonstration. With this report, submit written certification that the installation conforms to the requirements stated herein, is complete in all respects, and is ready for inspection, testing and final tuning.

3.13 STARTUP SERVICE

- A. Engage an IED factory-authorized service representative to assist Contractor and perform startup service and initial system programming and final commissioning.
 1. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements.
 2. Complete installation and startup checks according to manufacturer's written

instructions.

3.14 ADJUSTING

Delete this article if Owner contracts separately for this service. Consider including a provision for submitting a continuing maintenance agreement proposal.

- A. On-Site Assistance: Engage a factory-authorized service representative to provide on-site assistance in adjusting sound levels, resetting transformer taps, and adjusting controls to meet occupancy conditions.
- B. Occupancy Adjustments: When requested within [twelve (12)] <Insert number> months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [two (2)] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.15 MAINTENANCE SERVICE

- A. Replace defective materials and repair faulty workmanship within 48 hours of discovery during the period of the warranty.

3.16 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain the intercommunications and program systems.
 - 1. Train Owner's maintenance personnel on programming equipment for starting up and shutting down, troubleshooting, servicing, and maintaining the system and equipment.
 - 2. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- B. Upon approval of the test report by the DEN Project Manager, and at a time established by the DEN Project Manager, demonstrate the operation of each major component of the system and the completed installation. After demonstration, assist as required in the following acceptance tests:
 - 1. Listening Tests: These tests shall include speech intelligibility survey and subjective aural evaluations by observers at various positions under various operating conditions, using live speech and/or recorded music material.
 - 2. Equipment Tests: Any measurements of frequency response, distortion, noise or other characteristics and any operational tests deemed necessary may be performed on any item or group of items to determine conformity with these requirements.
 - 3. If the need for adjustment or modification becomes evident during demonstration and testing, accomplish adjustments or alterations until the installation operates fully in accordance with the requirement of this specification.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 275313 - DEN STANDARDS FOR TIME SYNCHRONIZATION

Revise this Section by deleting and inserting text to meet Project-specific requirements.

Verify that Section titles referenced in this Section are correct for this Project's Specifications; Section titles may have changed.

ALL ENGINEER NOTES SHALL BE DELETED FROM THE FILE OR MARKED AS HIDDEN.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Retain or delete this article in all Sections of Project Manual.

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Edit to suit Project.

- A. DEN was constructed with a Simplex Time Recorder master clock systems. Over the years slave clocks have subsequently been removed, largely due to the prevalence of time displayed on flight information monitors and passenger cell phones. Once the last of the slave clocks is removed the master clock will be retired.
- B. DEN operates two Stratum One GPS time servers. One server is located in the data center on Concourse A. The other server is located at the Airport Office Building (AOB). These servers synchronize time with the US GPS constellation.
- C. DEN systems connecting to the DEN enterprise network, Emergency Communications System network or Security Access Control Network may obtain time synchronization by periodically forwarding a Network Time Protocol (NTP) request to the default gateway on their respective subnets. The networks have been configured to relay this information to the NTP servers
- D. Systems and Computers that are not network connected may also receive time synchronization directly from the time servers. The primary and secondary time servers at DEN are equipped to provide an IRIG-B output. IRIG-B is a 1000 hertz modulated tone that can be extended to various locations on the airport over copper telephone pairs. IRIG-B interface cards are available from a number of manufacturers for various bus configurations and operating systems.

1.3 DEFINITIONS

Retain definition(s) remaining after this Section has been edited.

- A. GPS: Global Positioning System.
- B. IRIG-B: Inter-Range Instrument Group Protocol B.
- C. NIST: The National Institute of Science and Technology.
- D. NTP: Network Time Protocol.
- E. PC: Personal computer.
- F. UTC: Universal Time Coordinated. The precisely measured time at zero degrees longitude; a worldwide standard for time synchronization.

1.4 PERFORMANCE REQUIREMENTS

- A. Devices utilizing the airport time reference system with either Network time protocol or IRIG-B shall display time synchronization of one second or less with the time servers.

ENGINEER/ARCHITECT SHALL NOT REDUCE THE REQUIREMENTS BELOW WITHOUT PERMISSION FROM THE DEN PROJECT MANAGER.

1.5 ACTION SUBMITTALS (NOT APPLICABLE.)

1.6 INFORMATIONAL SUBMITTALS (NOT APPLICABLE.)

1.7 CLOSEOUT SUBMITTALS (NOT APPLICABLE.)

1.8 QUALITY ASSURANCE

- A. Comply with NFPA 70.

Retain article below if required for Project. Coordinate requirements with DEN Project Manager.

B. CONSTRUCTION WASTE MANAGEMENT

- 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 IRG-B PRODUCTS

See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. See Section 016000 "Product Requirements."

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Symmetricom.
 - 2. Spectracom.
 - 3. Brandywine Communications.
 - 4. **<Insert manufacturer>**
 - 5. or approved equal.

PART 3 - EXECUTION (NOT APPLICABLE)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 275313
