

**Map Sponsor:** Councilmember CdeBaca

**Map Narrative:**

I drew this map with an eye toward equity and preserving the communities of interest identified both in the Representable.org maps and through conversations with constituents and the D9 redistricting town halls I held last fall.

The aim of my map is to correct for the huge population shifts over the past ten years that have left us with such a wide disparity in population and representation between Council districts—currently, District 2 is 13% under the target population size of 65,000 constituents, whereas District 9 is 16% over that target population size. The spatial organization of such drastic shifts (population and growth have been consistently pushing northeast) makes it necessary for us to design districts in a way that doesn't isolate southern Council districts, but rather stretches their edges inward toward the city center to more evenly absorb that growth.

These are the equity criteria I used in drawing the districts on my map

- Doesn't crack/dilute historically marginalized voters
- Doesn't pack/concentrate historically marginalized voters
- Doesn't stack power against historically marginalized voters
- Considers Census undercounts in marginalized areas
- Considers past and future growth trends
