Scope of work: The Globeville Levee project was identified as a key project to reduce flood risk in the Globeville/Utah Junction basin. The Globeville Stormwater System Study identified that the height of the existing levee located along the west side of the South Platte River, next to the existing trail, is approximately 2 feet lower than the 3 feet minimum freeboard required by the Federal Emergency Management Agency (FEMA) in most locations, and identified a spill location during a 100-year storm even just south of 38th Street on the west bank of the river, south and upstream of the existing levee. The GSSS evaluated options and provided recommendations for reducing the risk of river flooding to avoid floodplain re-designation from this spill. This IGA will support the design work necessary to complete the final construction plans for the levee improvements, needed to meet FEMA requirements.

City contribution is \$4,050,000 of the total contract value (\$7,100,000).
